Preface xiii

1 Foundations of Newtonian gravity 1
1.1 Newtonian gravity 2
1.2 Equations of Newtonian gravity 3
1.3 Newtonian field equation 7
1.4 Equations of hydrodynamics 9
1.4.1 Motion of fluid elements 9
1.4.2 Thermodynamics of fluid elements 11
1.4.3 Global conservation laws 15
1.4.4 Mass-momentum tensor 21
1.5 Spherical and nearly spherical bodies 24
1.5.1 Spherical bodies 25
1.5.2 Nonspherical bodies 26
1.5.3 Symmetric tracefree tensors 33
1.6 Motion of extended fluid bodies 39
1.6.1 From fluid configurations to isolated bodies 40
1.6.2 Center-of-mass variables 41
1.6.3 Internal and external potential 43
1.6.4 Taylor expansion of the external potential 43
1.6.5 Equations of motion for isolated bodies 45
1.6.6 Conserved quantities 46
1.6.7 Equations of motion for binary systems 48
1.6.8 Spin dynamics 50
1.7 Bibliographical notes 52
1.8 Exercises 53

2 Structure of self-gravitating bodies 55
2.1 Equations of internal structure 56
2.2 Equilibrium structure of a spherical body 58
2.2.1 Equations of body structure 58
2.2.2 Incompressible fluid 61
2.2.3 Polytropes and the Lane-Emden equation 62
2.2.4 Isothermal spheres 69
2.2.5 White dwarfs 71
2.3 Rotating self-gravitating bodies 77
2.3.1 Foundations of the theory of rotating bodies 78
2.3.2 Rotating bodies of uniform density 83
2.4 General theory of deformed bodies 91
2.4.1 Fluid equations 92
2.4.2 Unperturbed configuration 93
2.4.3 Fluid perturbations 93
2.4.4 Perturbed equilibrium 95
2.4.5 Rotational deformations 103
2.5 Tidally deformed bodies 104

2.5.1 Static tides 105
2.5.2 Tidal dissipation 107
2.5.3 Dynamical tides 111
2.6 Bibliographical notes 117
2.7 Exercises 118

3 Newtonian orbital dynamics 121
3.1 Celestial mechanics from Newton to Einstein 122
3.2 Two bodies: Kepler's problem 123
3.2.1 Effective one-body description 123
3.2.2 Orbital plane 124
3.2.3 First integrals 125
3.2.4 Solution to Kepler's problem 127
3.2.5 Keplerian orbits in space 132
3.3 Perturbed Kepler problem 135
3.3.1 Perturbing force 136
3.3.2 Osculating orbits 137
3.4 Case studies of perturbed Keplerian motion 141
3.4.1 Perturbations by a third body 142
3.4.2 The Kozai mechanism 144
3.4.3 Effects of oblateness 146
3.4.4 Tidally interacting bodies 149
3.4.5 Luni-solar precession of the Earth 151
3.5 More bodies 152
3.5.1 The 3-body problem 152
3.5.2 The N-body problem 157
3.6 Lagrangian formulation of Newtonian dynamics 158
3.6.1 Lagrangian and action principle 159
3.6.2 Lagrangian mechanics of a two-body system 160
3.6.3 Lagrangian mechanics of a test mass 161
3.7 Bibliographical notes 161
3.8 Exercises 162

4 Minkowski spacetime 167
4.1 Spacetime 168
4.1.1 Lorentz transformation and spacetime 168
4.1.2 Metric tensor 170
4.1.3 Kinematics of particles 171
4.1.4 Momentum and energy 173
4.1.5 Particle rest-frame 174
4.1.6 Photons 175
4.1.7 Particle dynamics 177
4.1.8 Free particle motion and maximum proper time 178
4.2 Relativistic hydrodynamics 179
4.2.1 Fluid variables 179
4.2.2 Mass current 180
4.2.3 Energy-momentum tensor 181
4.2.4 Fluid dynamics 182
4.3 Electrodynamics 183
4.3.1 Maxwell's equations 183
4.3.2 Vector potential 184
4.3.3 Energy-momentum tensor 185
4.4 Point particles in spacetime 186
4.5 Bibliographical notes 189

4.6 Exercises 189

5 Curved spacetime 193
5.1 Gravitation as curved spacetime 193
5.1.1 Principle of equivalence 193
5.1.2 Metric theory of gravitation 197
5.1.3 Newtonian gravity as warped time 198
5.2 Mathematics of curved spacetime 200
5.2.1 Metric 200
5.2.2 Tensor calculus 201
5.2.3 Parallel transport and geodesic equation 205
5.2.4 Curvature tensors 207
5.2.5 Curvature and the local inertial frame 210
5.3 Physics in curved spacetime 216
5.3.1 From flat to curved spacetime 216
5.3.2 Hydrodynamics in curved spacetime 218
5.3.3 Electrodynamics in curved spacetime 220
5.3.4 Point particles in curved spacetime 222
5.4 Einstein field equations 223
5.5 Linearized theory 225
5.5.1 Metric and coordinate freedom 225
5.5.2 Curvature and field equations 226
5.5.3 Lorenz gauge 227
5.5.4 Decomposition of the metric into irreducible pieces 228
5.5.5 Coulomb gauge and gauge-invariant potentials 231
5.5.6 Curvature and field equations (revisited) 232
5.5.7 Newtonian limit 233
5.6 Spherical bodies and Schwarzschild spacetime 235
5.6.1 Spherically symmetric spacetimes 235
5.6.2 The vacuum Schwarzschild metric 237
5.6.3 Motion of a test mass 242
5.6.4 Motion of light 246
5.6.5 Spherical bodies in hydrostatic equilibrium 248
5.7 Bibliographical notes 253
5.8 Exercises 253

6 Post-Minkowskian theory: Formulation 259
6.1 Landau-Lifshitz formulation of general relativity 260
6.1.1 New formulation of the field equations 260
6.1.2 Coordinate freedom 263
6.1.3 Integral conservation identities 263
6.1.4 Total mass, momentum, and angular momentum 266
6.2 Relaxed Einstein equations 269
6.2.1 Harmonic coordinates and a wave equation 269
6.2.2 Formal solution to the wave equation 271
6.2.3 Iteration of the relaxed field equations 272
6.3 Integration of the wave equation 274
6.3.1 Retarded Green's function 275
6.3.2 Near zone and wave zone; slow-motion condition 277
6.3.3 Integration domains 279
6.3.4 Integration over the near zone 280
6.3.5 Integration over the wave zone 283
6.4 Bibliographical notes 289
6.5 Exercises 290

7 Post-Minkowskian theory: Implementation 293
7.1 Assembling the tools 294
7.1.1 Fluid variables 294
7.1.2 General structure of the potentials: Near zone 295
7.1.3 Near-zone metric 300
7.1.4 General structure of the potentials: Wave zone 302
7.1.5 Toward two iterations of the field equations 304
7.2 First iteration 305
7.2.1 Energy-momentum tensor 305
7.2.2 Near zone 305
7.2.3 Wave zone 307
7.3 Second iteration: Near zone 307
7.3.1 Effective energy momentum pseudotensor 308
7.3.2 Energy-momentum conservation 310
7.3.3 Near-zone contribution to potentials 312
7.3.4 Wave-zone contribution to potentials 319
7.3.5 Near-zone potentials: Final answer 320
7.4 Second iteration: Wave zone 323
7.4.1 Near-zone contribution to potentials 323
7.4.2 Wave-zone contribution to potentials 324
7.5 Bibliographical notes 326
7.6 Exercises 326

8 Post-Newtonian theory: Fundamentals 331
8.1 Equations of post-Newtonian theory 332
8.1.1 Post-Newtonian metric 332
8.1.2 Energy-momentum tensor 333
8.1.3 Auxiliary potentials 334
8.1.4 Geodesic equations 335
8.2 Classic approach to post-Newtonian theory 337
8.3 Coordinate transformations 340
8.3.1 Introduction 340
8.3.2 Newtonian transformations 343
8.3.3 Post-Newtonian transformations 345
8.3.4 Harmonic transformations 348
8.3.5 Comoving frame of a moving body 348
8.3.6 Post-Galilean transformations 350
8.3.7 Pure-gauge transformations 355
8.4 Post-Newtonian hydrodynamics 356
8.4.1 Introduction 356
8.4.2 Energy-momentum conservation 357
8.4.3 Post-Newtonian Euler equation 358
8.4.4 Interlude: Integral identities 359
8.4.5 Conservation of mass-energy 362
8.4.6 Conservation of momentum 363
8.4.7 Center-of-mass 364
8.5 Bibliographical remarks 365
8.6 Exercises 365

9 Post-Newtonian theory: System of isolated bodies 369
9.1 From fluid configurations to isolated bodies 369
9.1.1 Center-of-mass variables 370
9.1.2 Relative variables; reflection symmetry 370
9.1.3 Structure integrals; equilibrium conditions 371
9.1.4 Multipole structure 372
9.1.5 Internal and external potentials 373
9.1.6 Total mass-energy 374
9.1.7 Virial identities 375
9.2 Inter-body metric 377
9.2.1 Introduction 377
9.2.2 Potentials 378
9.2.3 At long last, the metric 383
9.3 Motion of isolated bodies 384
9.3.1 Strategy 384
9.3.2 Results and sample computations 386
9.3.3 Equations of motion (in terms of external potentials) 388
9.3.4 Evaluation of the external potentials 389
9.3.5 Equations of motion (final form) 392
9.3.6 Conserved quantities 394
9.3.7 Binary systems 396
9.4 Motion of compact bodies 397
9.4.1 Zones and matching strategy 397
9.4.2 Body metric 398
9.4.3 Post-Newtonian metric 400
9.4.4 Transformation to the comoving frame 401
9.4.5 Matching 402
9.4.6 Equations of motion 403
9.5 Motion of spinning bodies 404
9.5.1 Definitions of spin 405
9.5.2 Equilibrium conditions 405
9.5.3 Inter-body metric of spinning bodies 406
9.5.4 Spin-orbit and spin-spin accelerations 408
9.5.5 Conserved quantities 410
9.5.6 Spin precession 410
9.5.7 Comoving frame and proper spin 414
9.5.8 Choice of representative world line 418
9.5.9 Binary systems 420
9.6 Point particles 422
9.6.1 Energy-momentum tensor 422
9.6.2 Regularization 423
9.6.3 Potentials 424
9.7 Bibliographical notes 425
9.8 Exercises 425

10 Post-Newtonian celestial mechanics, astrometry and navigation 427
10.1 Post-Newtonian two-body problem 428
10.1.1 Equations of motion 429
10.1.2 Circular orbits 431
10.1.3 Perturbed Keplerian orbits 431
10.1.4 Pericenter advance 432
10.1.5 Integration of the equations of motion 433
10.1.6 de Sitter precession 436
10.2 Motion of light in post-Newtonian gravity 438

10.2.1 Motion of a photon 438
10.2.2 Deflection by a spherical body 440
10.2.3 Measurement of light deflection 441
10.2.4 Gravitational lenses 446
10.2.5 Shapiro time delay 451
10.3 Post-Newtonian gravity in timekeeping and navigation 453
10.3.1 "A brief history of time" 453
10.3.2 Reference frames 455
10.3.3 Geoid 456
10.3.4 Temps Atomique International 457
10.3.5 Orbiting clocks 459
10.3.6 Timing of binary pulsars 461
10.4 Spinning bodies 463
10.4.1 Frame dragging and Gravity Probe B 464
10.4.2 Frame dragging and LAGEOS satellites 468
10.4.3 Binary systems of spinning bodies 470
10.5 Bibliographical notes 475
10.6 Exercises 476

11 Gravitational waves 481
11.1 Gravitational-wave field and polarizations 482
11.1.1 Far-away wave zone 482
11.1.2 Gravitational potentials in the far-away wave zone 483
11.1.3 Decomposition into irreducible components 483
11.1.4 Harmonic gauge conditions 484
11.1.5 Transformation to the TT gauge 485
11.1.6 Geodesic deviation 486
11.1.7 Extraction of the TT part 487
11.1.8 Distortion of a ring of particles by a gravitational wave 489
11.2 The quadrupole formula 491
11.2.1 Formulation 491
11.2.2 Application: Binary system 495
11.2.3 Application: Rotating neutron star 499
11.2.4 Application: Tidally deformed star 502
11.3 Beyond the quadrupole formula: Waves at 1.5PN order 504
11.3.1 Requirements and strategy 505
11.3.2 Integration techniques for field integrals 507
11.3.3 Radiative quadrupole moment 513
11.3.4 Radiative octupole moment 516
11.3.5 Radiative 4-pole and 5-pole moments 523
11.3.6 Surface integrals 526
11.3.7 Tails: Wave-zone contribution to the gravitational waves 527
11.3.8 Summary: Gravitational-wave field 535
11.4 Gravitational waves emitted by a two-body system 536
11.4.1 Motion in the barycentric frame 536
11.4.2 Radiative multipole moments 537
11.4.3 Computation of retarded-time derivatives 538
11.4.4 Gravitational-wave field 540
11.4.5 Polarizations 541
11.4.6 Specialization to circular orbits 543
11.4.7 Beyond 1.5PN order 547
11.5 Gravitational waves and laser interferometers 547
11.6 Bibliographical notes 551
11.7 Exercises 551

12 Radiative losses and radiation reaction 557
12.1 Radiation reaction in electromagnetism 558
12.1.1 System of charged bodies 558
12.1.2 Motion of charged bodies 560
12.1.3 Radiative losses 561
12.1.4 Radiation reaction 562
12.1.5 Energy balance 563
12.1.6 Looking ahead: gravity 565
12.2 Radiative losses in gravitating systems 566
12.2.1 Balance equations 566
12.2.2 The shortwave approximation 567
12.2.3 Energy and momentum fluxes 568
12.2.4 Angular-momentum flux 569
12.2.5 Isaacson's effective energy-momentum tensor 572
12.3 Radiative losses in slowly-moving systems 573
12.3.1 Leading-order multipole radiation 573
12.3.2 Leading-order fluxes 574
12.3.3 Application: Newtonian binary system 575
12.4 Astrophysical implications of radiative losses 581
12.4.1 Binary pulsars 581
12.4.2 Inspiralling compact binaries 583
12.4.3 "How black holes get their kicks" 585
12.5 Radiation-reaction potentials 586
12.5.1 Near-zone potentials 587
12.5.2 Odd terms in the potentials 588
12.5.3 Odd terms in the effective energy-momentum tensor 589
12.5.4 Radiation-reaction potentials: Final expressions 592
12.6 Radiation reaction of fluid systems 594
12.6.1 Metric, Christoffel symbols, and matter variables 594
12.6.2 Radiation-reaction force density 595
12.6.3 Energy balance 595
12.6.4 Momentum balance 598
12.6.5 Angular-momentum balance 599
12.7 Radiation reaction of N-body systems 600
12.7.1 N bodies 600
12.7.2 Two bodies 602
12.8 Radiation reaction in alternative gauges 602
12.8.1 Coordinate transformation 603
12.8.2 Two-parameter family of radiation-reaction gauges 604
12.8.3 Radiation-reaction force 606
12.8.4 Balance equations 608
12.9 Orbital evolution under radiation reaction 609
12.9.1 Evolution of orbital elements 609
12.9.2 Multi-scale analysis of orbital evolution 611
12.10Bibliographical notes 617
12.11Exercises 618

13 Alternative theories of gravity 623
13.1 Metric theories and the strong equivalence principle 625
13.2 Parametrized post-Newtonian framework 627
13.2.1 A class of post-Newtonian theories 627
13.2.2 Parametrized post-Newtonian metric 628
13.2.3 Equations of hydrodynamics 632
13.2.4 Motion of isolated bodies 633

13.2.5 Motion of light 638
13.2.6 Metric near a moving body and local gravitational constant 639
13.2.7 Spin dynamics 640
13.3 Experimental tests of gravitational theories 643
13.3.1 Two-body problem and pericenter advance 643
13.3.2 Light deflection and Shapiro time delay 644
13.3.3 Tests of the strong equivalence principle: Nordtvedt effect 645
13.3.4 Tests of the strong equivalence principle: Preferred-frame and preferred-location effects 651
13.4 Gravitational radiation in alternative theories of gravity 652
13.4.1 Gravitational potentials in the far-away wave zone 653
13.4.2 Polarizations 655
13.4.3 Interaction with a laser interferometer 658
13.4.4 Multipolar structure of gravitational waves 659
13.5 Scalar-tensor gravity 659
13.5.1 Field equations 659
13.5.2 Post-Minkowskian formulation 661
13.5.3 Slow-motion condition 662
13.5.4 Near-zone solution: PPN metric 665
13.5.5 Wave-zone solution: gravitational waves 669
13.6 Bibliographical notes 673
13.7 Exercises 674
References 677
