A description and analysis of the principal features of the American economic experience, including the colonial relationship with England, and the nation's rapid industrialization and urbanization. Attention also is given to the insight into contemporary problems from examination of our historical experience.

Prerequisite(s): ECON 1010 and (ECON 1020 or 1040).

ECON 3500 Economics and Health Care Reform (3)
The objective of this course is for students to examine health care issues and reforms from an economic perspective. The course will first provide students with an overview of the U.S. health care system and then discuss important problems such as high health care costs and the high number of uninsured. Much attention will focus on various provisions of the 2010 Patient Protection and Affordable Care Act (PPACA), also known as Obamacare. Topics covered will include the expansion of private and public health insurance, individual mandate, measures to control health care costs and spending, the regulation of the health insurance industry, the politics and ongoing debates surrounding health care reform, and the impact of health care reform on the economy.

Prerequisite(s): ECON 1010.

ECON 3530 Global Food Economy (3)
We focus on the challenge of feeding a growing world population with limited natural resources. Using real-world data, we examine both demand and supply side factors that influence food security, focusing on food insecurity in developing nations.

Prerequisite(s): ECON 1010 or 1020.

ECON 3540 Development Economics (3)
An analysis of the problems of generating economic growth in less developed countries. Alternative strategies for promoting economic growth. The impact of the industrialized Western World on the economic development of poor countries.

Prerequisite(s): ECON 1010 or 1030.

ECON 3610 Games & Strategic Behavior (3)
This course provides an introduction to game theory -- the formal study of strategic situations -- and its applications. The course will cover the basic analysis of simultaneous and sequential move games with perfect and imperfect information. This material will be followed by a number of applications, such as price competition, election competition among political candidates, and civil unrest, which illustrate how the use of game theory can help us to improve our understanding of strategic behavior in economic, political, and social situations.

Prerequisite(s): ECON 1010 and (MATH 1220 or 1310).

ECON 3710 Economics of Education (3)
An introduction to theory and evidence regarding economics of elementary, secondary, and higher education. Topics may include the generally positive economic benefits to education for students, signaling versus human capital explanations behind those benefits, the rationale for government subsidies and regulation of education, the design of accountability performance incentives for educators, and the rising cost of schools and colleges.

Prerequisite(s): ECON 1010 and 1020.
Course Limit: 1

ECON 3810 Labor Economics (3)
Why do people choose to work? What factors contribute to wage differences among workers? How do firms navigate hiring and compensation decisions? This course will give students an introduction to labor economics with an emphasis on applied microeconomic theory and hands-on data exploration that addresses these and other questions. We are especially interested in the link between the labor market and public policy. While some concepts may be more familiar to students who have taken Intermediate Microeconomics (Econ 3010), the course is tailored to accommodate both early and advanced students. Topics may include labor supply and demands, taxes and transfers, minimum wages, immigration, human capital, education production, inequality, discrimination, and unemployment, among others.

Prerequisite(s): ECON 1010.

ECON 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 3910 Independent Study (1-3)
Independent Study in Economics. Course may be repeated up to unlimited credit hours

Maximum Hours: 99

ECON 3920 Independent Study (1-3)
Independent Study in Economics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 3970 Special Studies (1-3)
Special Topics in Economics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 3980 Special Studies (3-4)
Special Topics in Economics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 3981 Special Studies (3)

Maximum Hours: 99

ECON 3982 Special Studies (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 3983 Special Studies (1-4)
Special Topics in Economics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 3984 Special Studies (1-4)
Special Topics in Economics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 4230 Econometrics (3)
Building on the statistical techniques learned in Economics 3230, the course concentrates on the principal methods used to correct violations of the basic assumptions of ordinary least squares. ECON 6230 is the master's-level equivalent.

Prerequisite(s): ECON 3230 or MATH 3070.

ECON 4250 Decisions Under Uncertainty (3)
The theory and practice of decision-making under uncertain conditions. Applications and examples are drawn from the realm of personal, business, medical and environmental decision-making. ECON 6250 is the master's-level equivalent.

ECON 4300 Regulation (3)
Provides students with an overview of government regulation and the regulatory process, particularly those regulations focusing on health, safety and the environment. We will use theories and evidence from economics, law and policy to help students answer five questions relating to regulation: Why regulate? How are regulatory rules made? How are regulations enforced? How do we determine whether regulations are successful? What alternatives exist to regulation? Students will have an opportunity to apply what they have learned to a regulatory area of their own choosing. ECON 6300 is the master's-level equivalent.

Prerequisite(s): ECON 3010.

ECON 4330 International Trading Relations (3)
An examination of the principles of international trade and the international arrangements that have been established to guide international trade. Specific topics include comparative advantage, the effects of tariffs and quotas, and the substitution of the movement of goods for the movement of capital and labor. ECON 6330 is the master's level equivalent.

Prerequisite(s): ECON 3010.

ECON 4410 Topics-Mathematical Econ (3)
A mathematical approach to microeconomic theory with an emphasis on static and dynamic optimization. ECON 6410 is the master's-level equivalent.

Prerequisite(s): ECON 3010 and (MATH 1220 or 1310).

ECON 4500 Health Econ & Policy (3)
Provides an overview of the field of health economics. Economic theories and tools will be used to study behavior and outcomes in health care markets. Institutional features of the U.S. health care system will be examined. General topics include the demand for health care, determinants and consequences of health, medical technology, the role of health insurance, the behavior of health providers, managed care, comparative health care systems and health policy and reforms. ECON 6500 is the master's-level equivalent.

Prerequisite(s): ECON 3010.

ECON 4510 Advanced Topics In Macroeconomics (3,4)
Structure and operation of macroeconomic system, covering both closed and open economies. ECON 6510 is the master's-level equivalent.

Prerequisite(s): ECON 3020.

ECON 4540 Public Finance and Public Policy (3-4)
When should the government intervene in the economy and how might it do so? Why do governments choose to intervene in the ways they do and what are the effects of those interventions. This course provides an advanced exploration of the field of public finance and public policy using applied microeconomic theory and engaging with academic research and data analysis. Topics may include externalities and public goods; the efficiency, distributional, and revenue effects of taxation; social insurance programs such as Social Security and unemployment insurance; voting and political economy; and health insurance, among others. ECON 6540 is the masters level equivalent and is open to graduate students only.

Prerequisite(s): ECON 3010 or 3030.

ECON 4550 Using Big Data to Solve Economic Problems (3)
This course will show how "big data" can be used to understand and address some of the most important social and economic problems of our time. The course will give students an introduction to frontier research and policy applications in economics and social science in a non-technical manner that does not require prior coursework in economics or statistics, making it suitable both for students exploring economics for the first time, as well as for more advanced students. Topics include equality of opportunity, education, racial disparities, innovation and entrepreneurship, health care, climate change, criminal justice, and tax policy. In the context of these topics, the course will also provide an introduction to basic methods in data science, including regression, causal inference, and machine learning.

ECON 4560 Comparative Economic Systems (3,4)
This is a seminar course in the comparative economic systems analysis. The course studies economic outcomes in different institutional, geographic, and political settings.

Prerequisite(s): ECON 3010.

ECON 4570 Internship (1-3)
Course may be repeated up to unlimited credit hours.

Corequisite(s): SRVC 4890.

Maximum Hours: 99

ECON 4590 Economic Development of Latin America (3-4)
An introduction to economic issues that are of particular concern in Latin America. Topics include understanding the position of Latin America within the world economy by studying measures of development and poverty, discussing theoretical models of structural economic change, and examining changes in international trading relations.

Prerequisite(s): ECON 3010.

ECON 4600 Inequality & Poverty in Latin America (3,4)
Latin America is the region with the highest levels of income inequality and where inequality has been most persistent. Through comparative and in-depth country studies this course analyzes the dynamics of income inequality and poverty in the region focusing on the role of markets and the state. The course includes a review of quantitative methods to measure inequality and poverty and the theories and methods to analyze their determinants. Using a qualitative scorecard, students will learn to assess government efforts to reduce inequality and poverty. The course is largely non-technical and open to graduate and undergraduate students in the social sciences. ECON 6600 is the master's-level equivalent.

Prerequisite(s): (ECON 1010 or 1030) and ECON 1020.

ECON 4610 Game Theory (3)
A formal introduction to the use of game theory in diverse areas such as modern economic research, political science, sociology, and evolutionary processes. The mathematical content and the depth of the analysis distinguish this class from Econ 3610. ECON 6610 is the master's-level equivalent.

Prerequisite(s): (ECON 3010 or 3030) and (MATH 1220 or 1310).

ECON 4650 Labor & Population in Latin America (3-4)
An examination of labor markets and demographic problems in Latin America. Topics include dual labor markets, education and human capital, fertility change, health, and the demographic experiences of selected Latin American countries.

Prerequisite(s): ECON 3010.

ECON 4660 Sem On Lat Am Countries (3,4)
A complement to other courses in the Latin American economics sequence focusing on a particular country or sub-region. ECON 6660 is the master's-level equivalent.

ECON 4680 Economics of Poverty (3,4)
This course presents an overview of inequality and poverty analysis with a focus on two main themes: measurement challenges and fiscal policy. Students will learn how government policies affect poverty (i.e., fiscal incidence) and learn how to apply them to actual countries. Students will also learn basic inequality and poverty analysis techniques. The course is open to graduate and undergraduate students in the social sciences. ECON 6680 is the master's-level equivalent.

Prerequisite(s): ECON 3010 and 3020.

ECON 4710 Econ of Education Policy and Reform (3-4)
An exploration of more advanced theories and evidence regarding economics of education and their application to education policy, especially the role of markets and government regulation in improving education outcomes. The course covers a full range of school system designs ranging from traditional public schools that are directly operated and overseen by the government to charter schools and vouchers where the market plays a greater role. The advantages and disadvantages of each are discussed from economic and other perspectives and students carry out their own research.

Prerequisite(s): ECON 1010, 1020 and 3230.

ECON 4810 Economics of Slavery (3)
An analysis and description of the economic history of slavery, with particular focus on the United States. Topics include the slave trade, profitability, the efficiency of slave labor, emancipation, slavery and economic growth, the treatment of slaves (diets, housing, and medical care) and demographic effects of slavery.

Prerequisite(s): ECON 3010 and 3230.

ECON 4910 Independent Study (1-3)
Independent Study in Economics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 4920 Independent Study (1-3)
Independent Study in Economics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 4950 Corporate Finance (3)
Study of the sources of funding, capital structure, and decision making of firms.

ECON 4961 Senior Seminar (3)

ECON 4962 Senior Seminar (3)
Prerequisite(s): ECON 3010.

Prerequisite(s): ECON 3010.

ECON 4970 Special Studies In Economics (1-4)
Special Topics in Economics. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ECON 3010.

Maximum Hours: 99

ECON 4971 Special Studies in Econ (1-4)
Independent Study in Economics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 4980 Special Studies In Econ (1-4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 4981 Special Studies in Economics (3,4)

ECON 4990 Honors Thesis (3)
Honors Thesis in Economics.

Prerequisite(s): ECON 3230*.
* May be taken concurrently.

ECON 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): ECON 3230* and 4990.
* May be taken concurrently.

ECON 5190 Semester Abroad (1-20)
Does not count toward major; must be matched with other ECON elective. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 5380 Junior Year Abroad (1-20)
Does not count toward major; must be matched with other ECON elective. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 5390 Junior Year Abroad (1-20)
Does not count toward major; must be matched with other ECON elective. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 6010 Adv Topics In Microecon (3)
Enrollment limited to students in the Economics department.

ECON 6070 Intro Mathematical Econ (3)
A presentation of the primary mathematical techniques used in modern economics: calculus, linear algebra, and set theory.

Enrollment limited to students in the Economics department.

ECON 6230 Econometrics (3)
Building on the statistical techniques learned in Economics 3230, the course concentrates on the principal methods used to correct violations of the basic assumptions of ordinary least squares. Master's-level version of ECON 4230. Students should consult with Professor for additional assignments & different grading criteria.

ECON 6300 Regulation (3)
This course will provide students with an overview of government regulation and the regulatory process, particularly those regulations focusing on health, safety, and the environment. We will use theories and evidence from economics, law, and policy. Master's-level version of ECON 4300. Students should consult with Professor for additional assignments & different grading criteria.

ECON 6330 Intl Trading Relations (3)
An examination of the principles of international trade and the international arrangements that have been established to guide international trade. Specific topics include comparative advantage, the effects of tariffs and quotas. Master's-level version of ECON 4330. Students should consult with Professor for additional assignments & different grading criteria.

Enrollment limited to students in the Economics department.

ECON 6410 Topics-Mathematical Econ (3)
A mathematical approach to microeconomic theory with an emphasis on static and dynamic optimization. Master's-level version of ECON 4410. Students should consult with Professor for additional assignments & different grading criteria.

ECON 6500 Health Econ & Policy (3)
Provides an overview of the field of health economics. Economic theories and tools will be used to study behavior and outcomes in health care markets. Institutional features of the U.S. health care system will be examined. Master's-level version of ECON 4500. Students should consult with Professor for additional assignments & different grading criteria.

ECON 6510 Advanced Topics In Macroeconomics (3)
Structure and operation of macroeconomic system, covering both closed and open economies. Master's-level version of ECON 4510. Students should consult with Professor for additional assignments & different grading criteria.

ECON 6520 Econ Public Expenditures (3)
An examination of the economic bases for and evaluation of government expenditure programs. Topics include the rationale for government intervention into the economy, difficulties involved in setting appropriate levels of government activity. Master's-level version of ECON 4520. Students should consult with Professor for additional assignments & different grading criteria.

Enrollment limited to students in the Economics department.

ECON 6530 Economics of Taxation (3)
An analysis of major tax structures used in or proposed for the U.S. Economy. Each tax and the system as a whole will be judged according to the criteria of economic efficiency and tax equity. Master's-level version of ECON 4530. Students should consult with Professor for additional assignments & different grading criteria.

ECON 6540 Public Finance & Public Policy (3)
When should the government intervene in the economy and how might it do so? Why do governments choose to intervene in the ways they do and what are the effects of those interventions. This course provides an advanced exploration of the field of public finance and public policy using applied microeconomic theory and engaging with academic research and data analysis. Topics may include externalities and public goods; the efficiency, distributional, and revenue effects of taxation; social insurance programs such as Social Security and unemployment insurance; voting and political economy; and health insurance, among others. Open to graduate students only.

ECON 6550 Using Big Data to Solve Economic Problems (3)
This course will show how "big data" can be used to understand and address some of the most important social and economic problems of our time. The course will give students an introduction to frontier research and policy applications in economics and social science in a non-technical manner that does not require prior coursework in economics or statistics, making it suitable both for students exploring economics for the first time, as well as for more advanced students. Topics include equality of opportunity, education, racial disparities, innovation and entrepreneurship, health care, climate change, criminal justice, and tax policy. In the context of these topics, the course will also provide an introduction to basic methods in data science, including regression, causal inference, and machine learning.

Enrollment limited to students in the Economics department.

ECON 6560 Comparative Economic Systems (3)
This is a seminar course in the comparative economic systems analysis. The course studies economic outcomes in different institutional, geographic, and political settings.

Enrollment limited to students in the Economics department.

ECON 6580 Labor & Pop In L.A. (3)
An analysis of the economic relation between labor markets, population movements, poverty, and human capital formation. Theoretical foundations are developed and applied in several Latin America contexts.

Students in the Economics department may **not** enroll.

ECON 6590 Econ Devel of Latin America (3)
An introduction to economic issues that are of particular concern in Latin America. Topics include understanding the position of Latin America within the world economy by studying measures of development and poverty, discussing theoretical models of structural economic change, and examining changes in international trading relations.

ECON 6600 Inequality and Poverty in Latin America (3)
Comparative analysis and in-depth country studies of inequality and poverty in Latin America. Topics include measures of inequality and poverty; causes and consequences of inequality and poverty; and, assessment of public policies and their effectiveness. Master's-level version of ECON 4600. Students should consult with Professor for additional assignments & different grading criteria.

Enrollment limited to students in the Economics department.

ECON 6610 Game Theory (3)
A formal introduction to the use of game theory in diverse areas such as modern economic research, political science, sociology, and evolutionary processes. The mathematical content and the depth of the analysis distinguish this class from Econ 4610. Open to graduate students only.

ECON 6650 Labor & Population in Lat Amer (3)
An examination of labor markets and demographic problems in Latin America. Topics include dual labor markets, education and human capital, fertility change, health, and the demographic experiences of selected Latin American countries.

ECON 6660 Seminar On Latin American Countries (3)
A complement to other courses in the Latin American economics sequence focusing on a particular country or sub-region. Master's-level version of ECON 4660. Students should consult with Professor for additional assignments & different grading criteria.

Enrollment limited to students in the Economics department.

ECON 6680 Economics of Poverty (3)
This course presents an overview of inequality and poverty analysis with a focus on two main themes: measurement challenges and fiscal policy. Students will learn how government policies affect poverty (i.e., fiscal incidence) and learn how to apply them to actual countries. Students will also learn basic inequality and poverty analysis techniques. Open to graduate students only.

ECON 6710 Econ of Educ Policy and Reform (3)
An exploration of more advanced theories and evidence regarding economics of education and their application to education policy, especially the role of markets and government regulation in improving education outcomes.

Course Limit: 1

ECON 6810 Economics of Slavery (3)
An analysis and description of the economic history of slavery, with particular focus on the United States. Topics include the slave trade, profitability, the efficiency of slave labor, emancipation, slavery and economic growth, the treatment of slaves (diets, housing, and medical care) and demographic effects of slavery.

ECON 6910 Independent Studies (1-3)
Independent Study in Economics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 6970 Special Topics In Econ (1-3)
Special Topics in Economics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 6971 Special Topics in Economics (1-3)
Special Topics in Economics.

ECON 6972 Special Topics in Economics (1-3)
Special Topics in Economics.

ECON 6973 Special Topics in Economics (1-3)
Special Topics in Economics.

Enrollment limited to students in the Economics department.

ECON 6980 Special Studies In Econ (1-3)
Special Studies in Economics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 6981 Special Studies in Economics (1-3)
Special Studies in Economics.

ECON 7130 Spec Prob In Economics I (3)
Special Studies in Economics.

ECON 7140 Spec Prob In Econ II (3)
Special Studies in Economics.

ECON 7160 Econometrics I (3)
As the first course of the econometrics sequence (the other two are Econometric II (ECON7170) and Econometrics III (ECON7175)), this course mainly aims to cover mathematical fundamentals (probability theory, distribution theory, statistical inference and asymptotic theory) and help the students to prepare for more advanced topics and econometric models for their future independent research.

Enrollment limited to students in the Economics department.

ECON 7170 Econometrics II (3)
This course will begin with an overview of the classic linear regression model. We will cover both finite sample and large sample properties of OLS method, as well as the hypothesis test associated with OLS. We will also discuss the maximum likelihood method (ML), generalized least squares (GLS), endogeneity problem and its solution (instrument variable (IV)), generalized method of moments (GMM), panel data model. We will also briefly introduce the popular logit/probit model and the numerical methods used to estimate them. Finally, we will introduce several useful time series model, such as moving average (MA) and autoregressive (AR) model.

Enrollment limited to students in the Economics department.

ECON 7175 Econometrics III (3)
This course builds somewhat on the content of PhD Econometrics I and II. The course covers methodologies that would be in any applied microeconometricians "toolbox". These include regression control, instrumental variables, experiments, panel methods, difference-in-differences, and regression discontinuity design. The course will cover the basic theory, applications, and best practices. Students will put this into practice with actual data sets and applications.

Enrollment limited to students in the Economics department.

ECON 7180 Mathematical Economics I (3)

ECON 7460 Urban Economics (3)
Introduction to the use of economical analysis tools to examine topics like crime, education, property taxation, transportation, and housing that are of particular interest to urban areas.

ECON 7510 Adv Price Theory I (3)
This course presents the main theoretical tools and mathematical modeling techniques used in microeconomics, with particular focus on consumer and producer theory, partial equilibrium analysis and monopoly, and choice under uncertainty.

Enrollment limited to students in the Economics department.

ECON 7520 Adv Price Theory II (3)
Introduction to the main concepts and tools of game theory and mechanism design with the aim to enable students to read original game-theoretic literature and to prepare them to do research in the field.

Enrollment limited to students in the Economics department.

ECON 7525 Game Theory (3)
Game theory is the mathematical modeling of strategic interaction among rational (and irrational) agents. Beyond what we call 'games' in common language, such as chess, poker, soccer, etc., it includes the modeling of conflict among nations, political campaigns, competition among firms, and trading behavior in markets. This course develops the main concepts and tools of game theory with the aim to enable you to read original game-theoretic literature and to prepare you to do research in the field. The course first examines the foundations of game theory, using simple examples familiar from introductory microeconomics classes. Then, we will study how to derive equilibrium predictions for the following situations: 1) Static games of complete information; 2) Dynamic games of complete information; 3) Static games of incomplete information; and 4) Dynamic games of incomplete information.

ECON 7530 Adv Inc and Emp Theory I (3)
A one-semester introduction to modern macroeconomic theory. The first part of the course will develop models of growth and optimal growth with alternative micro foundations. The second part of the course will consider models of economic fluctuations including real business cycle models and New Keynesian models. The last part of the course will focus on modern theories of consumption, investment, and unemployment.

Enrollment limited to students in the Economics department.

ECON 7540 Adv Inc and Emp Theoryii (3)
Advanced study of the performance, structure, behavior, and decision-making of an economy as a whole.

ECON 7670 Public Finance I (3)
Advanced study of the role of government in the economy. Public finance is classically divided into taxation, expenditures, and local public finance.

Enrollment limited to students in the Economics department.

ECON 7680 Public Finance II (3)
This version of the course might be best described as one in "the role of government in markets." Debates about the role of government increasingly center on the specific ways in which the four main forms of government involvement—expenditures/subsidies, regulation, mandates, and public provision—are designed and implemented. The optimal policy design (i.e., the optimal role of government in these four areas), in turn, depends on the characteristics of the good/service in question.

Enrollment limited to students in the Economics department.

ECON 7710 Econ Develop.Theory I (3)
This course will introduce some of the classic approaches to understanding economic development as a process and then quickly move on to examine the literature on poverty, income distribution, income determination and then look at some special issues, like education, child labor, poverty traps and structural rigidities peculiar to developing countries, and the place of women in development.

ECON 7720 Econ Develop.Theory II (3)
This course covers the quantitative analysis of inequality and poverty measures; theories of income distribution; decomposition methods; and, the theory and practice of fiscal incidence analysis. Students will learn theories and methods, and apply them to a particular country.

Enrollment limited to students in the Economics department.

ECON 7980 Special Studies In Econ (1-3)
Special Studies in Economics.

Enrollment limited to students in the Economics department.

ECON 7981 Special Studies in Econ (1-3)
Special Studies in Economics.

Maximum Hours: 99

ECON 7982 Special Topics in Econ (1-3)
Special Topics in Economics.

ECON 7983 Special Topics in Econ (1-3)
This course designation is reserved for topics that are not on the regular curriculum taught by regular faculty and for one-time offerings by visitors.

Enrollment limited to students in the Economics department.

ECON 7984 Special Studies In Econ (1-3)
Special Studies in Economics.

Enrollment limited to students in the Economics department.

ECON 7985 Special Studies In Econ (1-3)
Special Studies in Economics.

Enrollment limited to students in the Economics department.

ECON 7990 Independent Studies (1-3)
Independent Study in Economics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 9980 Masters Research (0)
Masters Research in Economics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ECON 9990 Dissertation Research (0)
Dissertation Research in Economics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Education (EDUC)

EDUC 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

EDUC 2000 Education In A Diverse Society (3)
Education in a Diverse Society is an introductory course for those preparing for certification to teach. The overarching goal is to catalyze and refine innate skills for developing social change in the context of the current educational systems locally, nationally, and internationally. This course examines the historical, philosophical, sociological, psychological, organizational, and socio-cultural bases of American education and the political influences as they relate to contemporary issues in education in the United States. It is designed to assist students in determining if they want to pursue teaching as a career and it helps prospective teachers to gain a valid and comprehensive knowledge of what is involved in a teaching career. Emphasis is placed upon reflection, inquiry, and personal involvement in planning an effective and successful career in education.

Corequisite(s): EDUC 2890.

EDUC 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EDUC 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

EDUC 3100 Theories of Learning (3)
This course will focus on how people learn. There are many factors that influence learning among infants, toddlers, middle childhood, adolescents, and adults. This course will introduce you to the various theories of learning that address each stage. We will examine the ideas of learning theorists and practitioners in the field as well as explore the advantages and limitations of various learning theories. You will also develop, design, implement, and test a learning experience of your own.

Prerequisite(s): EDLA 2000 and 2890.

EDUC 3160 Child & Adolescent Lit (3)
This course is designed to provide prospective teachers with an overview of the field of children's literature with a focus on works appropriate for children and young adults. The history, philosophy, significant authors and texts, and major genres of children's literature will be explored.

Prerequisite(s): EDLA 2000 and 2890.
Corequisite(s): EDUC 3890.

EDUC 3220 Linguistics for English Language Learning (3)
This course introduces educators to English language structures, English language use, second language development, and language processes to support and ensure the success of multilingual learners of English. Educators will examine and assess how, when, and why core concepts and ideas from language acquisition and linguistics impact the teaching and learning of multilingual learners of English. At the completion of this course, educators will be able to identify, understand, and explain the nature of language learning challenges arising in the use of reading, writing, speaking, and listening skills across different content areas. They will be able to develop and elaborate plans for instructional and learning techniques and strategies to address those language learning challenges.

EDUC 3230 Intercultural Communication & Language Pedagogy. (3)
This course introduces educators to the sociocultural contexts that impact language teaching, learning and acquisition to support and ensure the development of equitable and inclusive classroom and school environments for multilingual learners of English. Educators will examine and assess the role that intercultural communication plays in how and why teachers and learners behave and communicate as they do. At the completion of this course, educators will be able to identify, understand, and explain real and potential communication breakdowns in instructional and assessment practices that impact language learning and acquisition. They will be able to recommend and design instructional and assessment strategies that demonstrate and build intercultural awareness and communication skills in teachers of multilingual learners of English and learners themselves.

EDUC 3240 Inclusive Curriculum & Materials Design for Multicultural Classrooms (3)
This course introduces students to the concept of English learner (EL)-inclusive curriculum and materials design for multicultural classrooms. Students survey the steps of the curriculum and materials design process to identify opportunities for instructional decision-making that lead to greater inclusivity for multilingual learners of English. They also examine and explain the ways in which curricula and materials create or do not create inclusive learning experiences for multilingual learners of English in multicultural classrooms. At the completion of this course, students propose and enact modifications to curricula and materials that create greater EL-inclusivity in multicultural classrooms. For students pursuing an MEd, this course also includes investigation into the academic research on the lack of inclusivity and bias in standardized tests and other curriculum-mandated assessments. Through the lens of this research, students pursuing an MEd analyze the assessments for a specific curriculum, prepare suggestions for an alternative assessment plan, and develop instructor guidelines for creating inclusivity and eliminating bias in their classroom assessment.

Prerequisite(s): EDUC 3220* and 3230*.
* May be taken concurrently.

EDUC 3250 Methods for Teaching Multilingual Learners of English (3)
This course introduces educators to evidence-based approaches, techniques and instructional strategies used to create supportive, learner-centered environments for multilingual learners of English. Educators will develop and apply an understanding of how and why the principles and instructional strategies of content-based language learning can be effectively used to provide grade-level, standards-based instruction for multilingual learners of English. At the completion of this course, educators will be able to analyze and evaluate the appropriateness of materials and resources for multilingual learners of English, as well as use scaffolding strategies to provide comprehensible input for multilingual learners of English. They will be able to design content-based, grade-level, standards-based lessons for multilingual learners of English using the Sheltered Instruction Observation Protocol (SIOP) model.

Prerequisite(s): EDUC 3220* and 3230*.
* May be taken concurrently.

EDUC 3410 The Craft of Teaching (3)
This course examines (a) the process by which students learn and teachers teach including the instructional design process of Understanding by Design (UbD) and effective teaching strategies; (b) the importance of assessment and student work analysis on the learning and teaching process. Teacher candidates will learn to plan lessons and units that are focused, organized, and develop student understanding of knowledge or skills. Candidates will learn to design assessments that provide feedback to students on their learning and to teachers on the impact of their teaching. Candidates will example theories of behavior management and strategies for organizing and maintaining an optimal learning environment. Project requirements and readings will emphasize grade levels and content field for which pre-service teachers are seeking certification. The study begun in this course lays the foundation for understanding the learning and teaching process which later Methods classes will further develop.

Prerequisite(s): EDLA 2000 or EDUC 2000.

EDUC 3420 Foundations of Emergent Literacy (3)
Emergent Literacy provides an introduction to children's speech and language development, appropriate methodologies for building the communication skills of young children, the overall scope of emergent literacy issues - with a heavy emphasis on phonemic awareness/ phonics, and guided practice using children's books and appropriate technology for young readers in the classroom. Evidence-based reading research will form the foundation when studying effective strategies for teaching reading.

Prerequisite(s): (EDLA 2000 and 2890) or (EDUC 2000 and 2890).

EDUC 3422 Foundations of Elementary Literacy (3)
Foundations of Elementary Literacy provides an introduction to children's speech and language development, appropriate methodologies for building the communication skills of children, the overall scope of elementary literacy issues emphasizing the five pillars of literacy: phonemic awareness, phonics, fluency, vocabulary, and comprehension. Evidence-based reading research will form the foundation when studying effective strategies for teaching reading including and guided reading practice using multi-genre grade-level texts and appropriate technology for readers in the elementary classroom.

Prerequisite(s): EDLA 2000.

EDUC 3510 Teaching ECE Sci & Soc Studies (3)
This course will prepare prospective teachers to teach science and social studies in the early childhood setting (preschool through 3rd grade). This course covers methods for teaching developmentally appropriate topics in science (earth space science, physical science, life science, and engineering/technology/ and social studies (civics, history, geography, and economics). Emphasis will be placed on developmentally appropriate instruction and active learning strategies, including the use of technology in instruction, and on performance-based assessment. Students work with manipulatives and technology to explore science and social studies, solve problems, and learn ways to teach this content to children. Students will also practice creating and refining age-appropriate unit and lesson plans based on Understanding by Design model (Wiggins & McTighe).

Prerequisite(s): (EDLA 2000 and 2890) or (EDUC 2000 and 2890) and (EDUC 3410, 3893, 3420 and 3801).

EDUC 3801 Early Childhood Reading Methods (3)
This course addresses evidence-based approaches for the effective teaching of literacy. The five essential components of reading instruction, as identified by the National Reading Panel, of this class include: Phonemic awareness skills, phonics skills, reading fluency, vocabulary development, and comprehension strategies. Additionally, the concepts of reading and writing connections, assessment, and content area skills and strategies needed for reading to learn, thinking and written discourse are emphasized. The teacher candidate observes and learns to create rich literate environments which foster reading, writing, speaking, listening and technological literacies through the integration of their foundation knowledge, use of instructional practices, approaches and methods, curriculum materials, and the appropriate use of assessment. For those taking this course at a graduate level, an emphasis will be placed on examining research and data that support reading instructional models that address the five essential components of reading instruction. Students will use their practicum placement to observe reading instruction, assessment, and curriculum.

Prerequisite(s): EDUC 3420.

EDUC 3802 Reading Methods Secondary Ed (3)
This course addresses evidence-based reading research while studying the effective teaching of content area literacy. An emphasis will be placed on developing adaptations of well-known strategies in addressing disciplinary ways of thinking, reading, and writing in the content areas. Additionally, students will understand and be able to apply the disciplinary literacies associated with vocabulary and comprehension in a variety of disciplines by utilizing assessments and new literacies needed for Twenty-First Century content area instruction. This course includes a practicum placement in a school setting.

Prerequisite(s): (EDUC 3410 and 3893).

EDUC 3803 Elementary Education Reading Methods (3)
This course addresses evidence-based approaches for the effective teaching of literacy in 1st-5th grade. The five essential components of reading instruction, as identified by the National Reading Panel, of this class include: phonemic awareness skills, phonics skills, reading fluency, vocabulary development, and comprehension strategies. Additionally, reading and writing assessment, content-area skills and strategies for reading to learn, and the reading-writing-thinking connection are emphasized. This course includes a practicum placement in a school setting. The teacher candidate observes and learns to create rich literate environments which foster reading, writing, speaking, listening and technological literacies through the integration of their foundation knowledge, use of instructional practices, approaches and methods, curriculum materials, and the appropriate use of assessment. This course includes a practicum placement in a school setting.

Prerequisite(s): EDUC 3422.

EDUC 3804 Early Childhood Reading Instruction for All Learners (3)
Students will learn key reading concepts effective for all children including those with language delays, dyslexia, and other reading difficulties. The course will provide students with knowledge about reading screeners and continuous diagnostic assessments that inform differentiated reading instruction and monitor progress. Students will learn how to deliver structured literacy lessons that include the five components of reading according to the National Reading Panel, with an emphasis on phonology and other essential components like sound-symbol association, oral language, fluency, and writing. The course will provide students with resources that teach reading using explicit instruction and daily student-teacher interaction to monitor reading progression.

Prerequisite(s): EDUC 3801.

EDUC 3805 Elementary Reading Instruction for All Learners (3)
Students will learn key reading concepts effective for all 1st-5th grade children including those with language delays, dyslexia, and other reading difficulties. The course will provide students with knowledge about reading screeners and continuous diagnostic assessments that inform differentiated reading instruction and monitor progress. Students will learn how to deliver structured and differentiated literacy lessons that include the five components of reading according to the National Reading Panel, with an emphasis on fluency, vocabulary, comprehension, and writing. The course will provide students with resources that teach reading using explicit instruction and daily student-teacher interaction to monitor reading progression.

Prerequisite(s): EDUC 3803.

EDUC 3806 Effective Reading Instruction for Developing Adolescent Readers (3)
This course provides a comprehensive overview of the current knowledge on best practices for teaching older students with reading difficulties. The focus of reading instruction for adolescent readers is word study, fluency, vocabulary, and motivation. The course materials will describe in depth these critical skills adolescent readers need to become proficient readers. Students will study research-based practices that help struggling students improve their skills in the areas listed above. They will present a culturally diverse professional development plan for teachers and school personnel to allocate time and resources so that students receive appropriate, engaging interventions that improve their overall reading. For those taking this course at a graduate level, the emphasis will be placed on remediating a small group of students with reading difficulties. Graduate students will administer assessments to identify their students' reading difficulties, create and implement a research-informed reading remediation plan, utilize progress monitoring to adjust to their students' needs, and present their completed work.

Prerequisite(s): EDUC 3802.

EDUC 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EDUC 3892 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EDUC 3893 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Prerequisite(s): EDUC 2000.

Maximum Hours: 99

EDUC 4100 Critical Trends and Issues in Education (3)
This course is an inquiry-based capstone seminar, designed for the Teaching, Learning, and Training minor, which synthesizes political, theoretical, social, and practical topics in a modern context and addresses multicultural education, technology, and gender issues, among other topics and issues. In this course, students will grapple with issues facing education and educators today, such as demographics; changing perceptions and research in human development and learning, equity and social justice; global awareness and interdependence; nature and the environment; aesthetics and creative endeavors; and education in nontraditional settings. This seminar will provide opportunities for students to engage in wide-range reading, intensive writing, critical analysis, respectful debate and thoughtful discussion of topics related to education in the 21st century.

Prerequisite(s): (EDLA 2000 and 2890) or (EDUC 2000 and 2890) and EDUC 3100, 3410 and 3893.

EDUC 4110 Teaching Social Studies in ECE (3)
This course will focus on the pedagogy and methods of teaching social studies and various genres of writing in the PreK-3rd grade classroom. This course covers methods for teaching developmentally appropriate social studies (civics, history, geography, and economics). Emphasis will be placed on developmentally appropriate instruction and active learning strategies, including the use of technology in instruction, and on performance-based assessment. Students will work with manipulatives and technology to explore social studies, solve problems, and learn ways to teach this content to children. They will also learn the importance of the reading/writing connection, traits of effective writing, how to analyze and respond to early childhood writing, and how to conduct writing workshops. The class will also explore new literacies and innovative ways to integrate technology in writing with connections to social studies.

Prerequisite(s): EDUC 3801.

EDUC 4120 Teaching Science in the Early Childhood Classroom (3)
This course will prepare prospective teachers to teach science and social studies in the early childhood setting (preschool through 3rd grade). This course covers methods for teaching developmentally appropriate topics in science (earth space science, physical science, life science, and engineering/technology/ and social studies (civics, history, geography, and economics). Emphasis will be placed on developmentally appropriate instruction and active learning strategies, including the use of technology in instruction, inquiry-based learning and on performance-based assessment. Students will work with manipulatives and technology to explore science and social studies, solve problems, and learn ways to teach this content to children. They will also practice creating and refining age-appropriate unit and lesson plans based on the Understanding by Design model (Wiggins & McTighe).

Prerequisite(s): EDUC 3801.

EDUC 4130 Teaching Mathematics in ECE (3)
This course will prepare prospective teachers to teach mathematics in the early childhood setting (preschool through 3rd grade). This course covers both mathematical content and methods for teaching developmentally appropriate topics in arithmetic, geometry, algebra, probability and statistics, and measurement, data collection and analysis. Emphasis will be placed on developmentally appropriate instruction and active learning strategies, including the use of technology in instruction, and on performance-based assessment. Students work with manipulatives and technology to explore mathematics, solve problems, and learn ways to teach mathematics content to children. Course includes practice in creating and refining age appropriate unit and lesson plans based on Understanding by Design model (Wiggins & McTighe).

Prerequisite(s): EDUC 3801.

EDUC 4210 Secondary Method I: General (3)
This course focuses on prominent methodological issues and the development of core teaching skills. Students will analyze different instructional methods; design comprehensive unit and lesson plans using the Understanding by Design model; develop integrated technology strategies and develop skills in differentiated instruction. Emphasis is placed on development of skills of self-analysis, reflection, and research-based decision-making. Students will interpret, refine, and demonstrate their understanding and mastery of general teaching practices through forty hours of field experience in a middle or high school setting. The course is designed to be very practicum-oriented; therefore, it is organized to provide time for one-on-one conferences in which the professor will advise on upcoming lessons and give detailed feedback on classroom observations. The regular class sessions are designed to be experiential, in which students will learn and participate in specific lessons and activities to use for classroom teaching, employing a variety of materials.

Prerequisite(s): (EDUC 3410 and 3893).

EDUC 4220 Methods II Social Studies (3)
This is a seminar and practicum course providing opportunities for secondary teacher candidates to acquire skills in teaching methodologies and strategies specific to secondary social studies instruction. Topics include organization of subject matter, weekly and unit lesson planning, development of assessments, utilizing information technology for instruction, and working with diverse populations of students. Clinical experience/field placement in a classroom setting are required. Course activities include teaching in a field site classroom, professional development workshops, discussion/ reflections, and demonstration of effective use of standards documents, inquiry activities, and a review of effective pedagogical literature.

Prerequisite(s): EDUC 4210.

EDUC 4230 Methods II Science (3)
This is a seminar and practicum course providing opportunities for secondary teacher candidates to acquire skills in teaching methodologies and strategies specific to the science content area in which they are seeking certification. Topics include organization of subject matter, weekly and unit lesson planning, development of assessments, utilizing information technology for instruction, and working with diverse populations of students. Clinical experience/ field placement in a classroom setting are required. Course activities include teaching in a field site classroom, professional development workshops, discussion/reflections, and demonstration of effective use of standards documents, inquiry activities and a review of effective pedagogical literature.

Prerequisite(s): EDUC 4210.

EDUC 4240 Methods II English (3)
This is a seminar and practicum course providing opportunities for secondary teacher candidates to acquire skills in teaching methodologies and strategies specific to secondary English Language Arts instruction. Topics include organization of subject matter, weekly and unit lesson planning, development of assessments, utilizing information technology for instruction, and working with diverse populations of students. Clinical experience/field experiences in a classroom setting are required. Course activities include teaching in a field site classroom, professional development workshops, discussion/ reflections, and demonstration of effective use of standards documents, inquiry activities, and a review of effective pedagogical literature.

Prerequisite(s): EDUC 4210.

EDUC 4250 Methods II Mathematics (3)
This is a seminar and practicum course providing opportunities for secondary teacher candidates to acquire skills in teaching methodologies and strategies specific to the secondary mathematics instruction in which they are seeking certification. Topics include organization of subject matter, weekly and unit lesson planning, development of assessments, utilizing information technology for instruction, and working with diverse populations of students. Clinical experience/field placement in a classroom setting are required. Course activities include teaching in a field site classroom, professional development workshops, discussion/ reflections, and demonstration of effective use of standards documents, inquiry activities, and a review of effective pedagogical literature.

Prerequisite(s): EDUC 4210.

EDUC 4260 Methods II: Foreign Language (3)
This is a seminar and practicum course providing opportunities for secondary teacher candidates to acquire skills in teaching methodologies and strategies specific to the secondary foreign language instruction in which they are seeking certification. Topics include organization of subject matter, weekly and unit lesson planning, development of assessments, utilizing information technology for instruction, and working with diverse populations of students. Clinical experience/field placement in a classroom setting are required. Course activities include teaching in a field site classroom, professional development workshops, discussion/ reflections, and demonstration of effective use of standards documents, inquiry activities, and a review of effective pedagogical literature.

Prerequisite(s): EDUC 4210.

EDUC 4310 Teaching Social Studies in the Elementary Education (3)
This course will focus on the pedagogy and methods of teaching social studies in the 1st-5th grade classroom. This course covers methods for teaching developmentally appropriate social studies (civics, history, geography, and economics) and the ten NCSS themes. Emphasis will be placed on teaching the roles and responsibilities of individuals in our democracy. Students will learn how to explore and teach complex social studies issues in the elementary classroom.

Prerequisite(s): EDUC 3803.

EDUC 4320 Teaching Science in the Elementary Classroom (3)
This course will prepare prospective teachers to teach science in the early childhood setting (preschool through 3rd grade). This course covers methods for teaching developmentally appropriate topics in science (earth space science, physical science, life science, and engineering/technology. Emphasis will be placed on developmentally appropriate instruction and active learning strategies, including the use of technology in instruction, inquiry-based learning and performance-based assessment. Students will work with manipulatives and technology to explore science, solve problems, and learn ways to teach science content 12 to children. They will also practice creating and refining age-appropriate unit and lesson plans based on the Understanding by Design model (Wiggins & McTighe).

Prerequisite(s): EDUC 3803.

EDUC 4330 Teaching Math in Elementary Classrooms (3)
This course will prepare prospective teachers to teach mathematics in the early childhood setting (preschool through 3rd grade). This course covers both mathematical content and methods for teaching developmentally appropriate topics in arithmetic, geometry, algebra, probability and statistics, and measurement, data collection and analysis. Emphasis will be placed on developmentally appropriate instruction and active learning strategies, including the use of technology in instruction, and on performance-based assessment. Students work with manipulatives and technology to explore mathematics, solve problems, and learn ways to teach mathematics content to children. Course includes practice in creating and refining age-appropriate unit and lesson plans based on Understanding by Design model (Wiggins & McTighe).

Prerequisite(s): EDUC 3803.

EDUC 4910 Independent Study (1-3)
Independent Study in Education.

EDUC 5210 Residency Student Teach PK-3 (3)
Part one. The yearlong residency (2 semesters) is the culminating experience of the Early Childhood Education program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, and participate in professional development opportunities offered by the university. A candidate may complete residency as a student teacher or practitioner resident. When a candidate completes residency as a practitioner resident, they must be hired as a full-time teacher in a school and remain under supervision of a mentor teacher and university faculty member. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE.

Prerequisite(s): (EDLA 2000 and 2890) or (EDUC 2000 and 2890) and (EDLA 3160 or EDUC 3160) and EDUC 3410, 3893, 3420, 3801, 4110, 4120 and 4130.

EDUC 5220 Residency Student Teach PK-3 (3)
Part two. The yearlong residency (2 semesters) is the culminating experience the Early Childhood Education program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, and participate in professional development opportunities offered by the university. A candidate may complete residency as a student teacher or practitioner resident. When a candidate completes residency as a practitioner resident, they must be hired as a full-time teacher in a school and remain under supervision of a mentor teacher and university faculty member. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE.

Prerequisite(s): (EDLA 2000 and 2890) or (EDUC 2000 and 2890) and (EDLA 3160 or EDUC 3160) and EDUC 3410, 3893, 3420, 3801, 4110, 4120, 4130 and 5210.

EDUC 5230 Pract Resid Early Child PK-3 (3)
Part one. The yearlong residency (2 semesters) is the culminating experience the Early Childhood Education program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, and participate in professional development opportunities offered by the university. When a candidate completes residency as a student teacher resident, they are directly supervised and supported by a classroom mentor teacher and a university faculty member. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE.

Prerequisite(s): (EDLA 2000 and 2890) or (EDUC 2000 and 2890) and (EDLA 3160 or EDUC 3160) and EDUC 3410, 3893, 3420, 3801, 4110, 4120 and 4130.

EDUC 5240 Pract Resid Early Child PK-3 (3)
The yearlong residency (2 semesters) is the culminating course of Tulane's Teacher Preparation & Certification Program and occurs the year following the completion of the first 27 hours of professional coursework. The candidate will blend theory and practice in the actual activity of teaching all day, attend a series of seminars, and complete projects directly related to their teaching assignment. Candidate must be hired as a full-time teacher in a school system and will be under the supervision of a mentor teacher at the school site as well as university faculty.

Prerequisite(s): (EDLA 2000 and 2890) or (EDUC 2000 and 2890) and (EDLA 3160 or EDUC 3160) and EDUC 3410, 3420, 3893, 3801, 4110, 4120, 4130 and 5230.

EDUC 5250 Residency Student Teach 6-12 (3)
The yearlong residency (2 semesters) is the culminating experience the Secondary Education (SE) program. It occurs only upon completion of all professional coursework associated with the SE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, 24 assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor 17 teacher and university faculty member throughout the semester, attend a series of seminars, and participate in professional development opportunities offered by the university. A candidate may complete residency as a student teacher or practitioner resident. When a candidate completes residency as a practitioner resident, they must be hired as a full-time teacher in a school and remain under the supervision of a mentor teacher and university faculty member. Candidates who have completed at least three years of classroom teaching may be eligible for a waiver from the residency. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE.

Prerequisite(s): (EDLA 2000 and 2890) or (EDUC 2000 and 2890) and EDUC 3410, 3893, 3802 and 4210 and (EDUC 4220, 4230, 4240, 4250 or 4260).

EDUC 5260 Residency Student Teach 6-12 (3)
The year-long student teaching residency (2 semesters) is the culminating experience of Tulane's Teacher Preparation & Certification Program and occurs the year following the completion of the first 24 hours of professional coursework. The candidate will blend theory and practice in the actual activity of teaching. Students will attend a series of seminars and complete assignments directly related to their teaching assignment. Candidates will be placed in a school and will be under the direct supervision of a mentor teacher at the school site as well as university faculty.

Prerequisite(s): (EDLA 2000 and 2890) or (EDUC 2000 and 2890) and EDUC 3410, 3893, 3802 and 4210 and (EDUC 4220, 4230, 4240, 4250 or 4260) and EDUC 5250.

EDUC 5270 Practitioner Residency 6-12 (3)
The yearlong residency (2 semesters) is the culminating experience the Secondary Education (SE) program. It occurs only upon completion of all professional coursework associated with the SE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, and participate in professional development opportunities offered by the university. When a 25 candidate completes residency as a student teacher resident, they are directly supervised and supported by a classroom mentor teacher and a university faculty member. Candidates who have completed at least three years of classroom teaching may be eligible for a waiver from residency. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE.

Prerequisite(s): (EDLA 2000 and 2890) or (EDUC 2000 and 2890) and EDUC 3410, 3893, 3802 and 4210 and (EDUC 4220, 4230, 4240, 4250 or 4260).

EDUC 5271 Applied Research Project I (3)
The yearlong applied research project (2 semesters) is the culminating experience for students not seeking certification in the Teacher Preparation and Certification Program. It occurs only upon completion of all professional coursework associated with the program. The candidate will blend theory and practice in the identification of an important and existing educational problem, data analysis, research-based recommendations and action plans, and reflection on the results of the intervention. The project option is available for students who do not intend to pursue Louisiana teacher certification upon graduation. UG Pre-Requisites: all courses in the program preceding residency courses or permission of Director. EDUC 5281 Applied Research Project (3) The yearlong applied research project (2 semesters) is the culminating experience for students not seeking certification in the Teacher Preparation and Certification Program. It occurs only upon completion of all professional coursework associated with the program. The candidate will blend theory and practice in the identification of an important and existing educational problem, data analysis, research-based 26 recommendations and action plans, and reflection on the results of the intervention. The project option is available for students who do not intend to pursue Louisiana teacher certification upon graduation. 5271 is Semester 1 of the year long capstone.

EDUC 5280 Practitioner Residency 6-12 (3)
The yearlong student teaching residency (2 semesters) is the culminating experience of Tulane's Teacher Preparation & Certification Program and occurs the year following the completion of the first 24 hours of professional coursework. The candidate will blend theory and practice in the actual activity of teaching. Students will attend a series of seminars and complete assignments directly related to their teaching assignment. Candidates will be placed in a school and will be under the direct supervision of a mentor teacher at the school site as well as university faculty. Candidates who have completed at least three years of classroom teaching may be eligible for a waiver from the residency.

Prerequisite(s): (EDLA 2000 and 2890) or (EDUC 2000 and 2890) and EDUC 3410, 3893, 3802 and 4210 and (EDUC 4220, 4230, 4240, 4250 or 4260) and EDUC 5270.

EDUC 5281 Applied Research Project II (3)
The yearlong applied research project (2 semesters) is the culminating experience for students not seeking certification in the Teacher Preparation and Certification Program. It occurs only upon completion of all professional coursework associated with the program. The candidate will blend theory and practice in the identification of an important and existing educational problem, data analysis, research-based 26 recommendations and action plans, and reflection on the results of the intervention. The project option is available for students who do not intend to pursue Louisiana teacher certification upon graduation. 5281 is the second semester of the yearlong capstone.

Prerequisite(s): EDUC 5271.

EDUC 5310 Residency I - EE Student Residency (3)
Part one. The yearlong residency (2 semesters) is the culminating experience of the Elementary Education program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, sill, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, and participate in professional development opportunities offered by the university. A candidate may complete residency as a student teacher or practitioner resident. When a candidate completes residency as a practitioner resident, they must be hired as a full-time teacher in a school and remain under supervision of a mentor teacher and university faculty member. All residency requirements are within the guidelines of Bulletin 745 - Louisiana Standards for State Certification of School Personnel approved by BESE. Prerequisites: all courses in Elementary Ed program preceding residency courses or permission of Director

EDUC 5320 Residency II - EE Student Residency (3)
Part two. The yearlong residency (2 semesters) is the culminating experience the Elementary Education program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, and participate in professional development opportunities offered by the university. A candidate may complete residency as a student teacher of practitioner resident. When a candidate completes residency as a practitioner resident, they must be hired as a full-time teacher in a school and remain under supervision of a mentor teacher and university faculty member. All residency requirements are within the guidelines of Bulletin 746 - Louisiana Standards for State Certification of School Personnel approved by BESE. Prerequisites: All courses in Elementary Ed program preceding residency courses or permission of Director.

EDUC 5330 Residency I - EE Practitioner Residency (3)
Part one. The yearlong residency (2 semesters) is the culminating experience the Early Childhood Education 27 program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, and participate in professional development opportunities offered by the university. When a candidate completes residency as a student teacher resident, they are directly supervised and supported by a classroom mentor teacher and a university faculty member. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE. UG Pre-Requisites: all courses in the program preceding residency courses or permission of Director. MAT Prerequisites: all courses in MAT program preceding residency courses or permission of Director.

EDUC 5340 Residency II - EE Practitioner Residency (3)
Part two. The yearlong residency (2 semesters) is the culminating experience the Early Childhood Education program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, and participate in professional development opportunities offered by the university. When a candidate 14 completes residency as a student teacher resident, they are directly supervised and supported by a classroom mentor teacher and a university faculty member. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE. UG Pre-Requisites: all courses in the program preceding residency courses or permission of Director. MAT Pre-Requisites: all courses in MAT program preceding residency courses or permission of Director.

EDUC 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

EDUC 6000 Historical and Philosophical Foundations of Education (3)
With the mindset of equity as its central organizing theme, this course provides a foundation for understanding the various aims, systems, and issues central to the development of American education over time. The course surveys major developments, landmark cases, and a variety of philosophical perspectives that underpin PreK12 education in its current manifestations with the systems across Greater New Orleans serving as the central case study.#Emphasis is placed on schools' ever-widening umbrella to provide for greater measures of inclusivity and choice for all learners.# The course culminates in an examination and "stabilization" of foundational concepts in American education, with a specific eye for the impact on schools and communities over time.

Enrollment limited to students in the Center for Teacher Education or Education departments.

EDUC 6010 Special Topics (3)
Special Topics in Education. Course may be repeated unlimited times for credit.

Course Limit: 99

EDUC 6020 Learning Processes Across the Lifespan (3)
This course examines theoretical and empirical perspectives from the field of education regarding how infants, toddlers, children, adolescents, and adults learn. Factors that influence and structure learning are a primary focus, as are the advantages and limitations of various theories of learning. The course spotlights the current emphasis on "trauma-informed practices" across Greater New Orleans, adopting an inductive approach that ultimately examines how theory informs practice. The course culminates in students developing, designing, implementing, assessing, and critiquing a learning experience from multiple student perspectives to ensure equity in access, opportunity, and success.

EDUC 6040 Curriculum, Instruction, & Assessment for All Learners (3)
This course provides the foundation for narrowing the gap between the intended, implemented, and achieved curriculum in a given educational context. The course examines definitions and models for high-quality curricula while unearthing the aims of education implied by the standards for excellence used; it also examines approaches to learning standards and their relationship with learner-centered educational approaches to teaching. Instructionally, the course surveys foundational mindsets, classroom management, instructional strategies, and student motivation through the lens of culturally-relevant practices. It also examines the best avenues for assessment for and of learning particularly in the on-going high-stakes environments of public education. With New Orleans as a learning laboratory of differing approaches, the course culminates in an examination of current realities versus ideal practices with respect to the question: Does all really mean all?

EDUC 6060 Methods of Educational Research (3)
This course provides an introduction to empirical research and a variety of research approaches common to the field of education. Throughout the course, students locate, understand, evaluate, and interpret qualitative as well as quantitative educational research. Readings include studies from different research paradigms and a variety of educational contexts, including the research basis for equity-focused instruction. The course culminates in applying what we know from research and best practice to explore and/or evaluate a targeted aspect of education in Greater New Orleans.

Enrollment limited to students in the Center for Teacher Education or Education departments.

EDUC 6080 Culminating Capstone Project (3)
In this course, students apply concepts, theories, best practices, knowledge, and principles as learned throughout the program. Students grapple with the complexities of teaching and learning by testing concepts, strategies, and approaches in real-world contexts. Through a site-based immersion project completed through options such as fieldwork, internships, or simulations, students demonstrate master of the program competencies and learning objectives. Students present findings through written reports and presentations that are subject- and context-specific, tailored to the appropriate audiences, and clear on the implications for teaching and learning. M.Ed. program students with less than three years of relevant work experience participate in a capstone with an experiential, site-based component where a project is shaped and applied on-site. Elements include problem identification, standards of excellence, key stakeholders, facilitating and hindering factors, strategic recommendations, implementation, analysis, interpretation, and implications.

Prerequisite(s): (EDUC 6000, 6020, 6040 and 6060).

EDUC 6100 Reimagining and Leading Equitable Education Systems for the Future (3)
This course supports education leaders in developing and communicating a vision and strategy for student success centered on excellence and equity for all. The early part of the course includes the influence of history on the features and limitations of the current system, including the educational implications of race, poverty, and "difference" writ large. The course investigates shifts in learning, management, and equity, as well as a survey of promising systemic reforms and strategies such as integrated student supports, collective impact, and cross-sector collaboration. Key skills of effective education leaders include communicating and building support for vision and change. Students develop a public narrative and strategic communication plan around their educational vision and strategy.

EDUC 6120 Leading Learning (3)
This course examines leading learning of students and adults. Focus areas include the nexus of Dewey's "child and the curriculum"; the centrality of the instructional task as predictive of student learning; the challenges of improving instruction for each learner; developing, enacting, and scaling vision for learning and then managing for it; and the role of evidence in making decisions about instructional practice. The course also addresses the role of the leader's identity and previous learning experiences in leading the learning of others, and the implications for guarding against bias. Throughout the course, students examine current systems of learning through classroom observations, interviews with leaders in the field, and case studies.

Prerequisite(s): EDUC 6100 or MPAD 7120.

EDUC 6140 Managing Effective Equity-Centered Educational Organizations (3)
This course surveys system-wide leadership in terms of organizational design, planning, oversight, and progress monitoring through the specific aspects of governance, operations, development, finance, and management. These components of organizational viability impact all aspects of programming and are therefore critical to education leadership at all levels. Becoming an effective and sustainable education leader lies at the center of this course with an emphasis on growing the ability to understand, engage, and effectively support and challenge others and create conditions for equitable school and system management, governance, and transformation. The course uses case studies and simulations from both traditional public and charter settings from the New Orleans context.

Prerequisite(s): EDUC 6100.

EDUC 6150 An Introduction to Education Finance and Budgeting: Implications for Strategy, Equity, and Change (3)
This course is an introduction to public school finance and budgeting systems in the United States. Budgeting and finance impact all aspects of schooling and education and are therefore critical to education leadership at all levels. Focus areas include the budgeting process; the politics of budgeting; district and school cost drivers; revenue generation including federal, state, and local funding sources; norm-based budgeting; weighted-student funding; cost-benefit analysis; benchmarking; and "key performance indicators" (KPIs) and "objectives and key results" (OKRs). Questions include: How can budgeting reflect the values and priorities of schools and systems? What are the equity implications of education budgeting and finance? What are the economic and financial drivers that maintain or disrupt the status quo? The course will use case studies and simulations from both traditional public and charter settings with special emphasis on the New Orleans context.

EDUC 6160 Engaging Family and Community Stakeholders (3)
This course provides the foundation for equity-centered educational leadership and the primacy of effective communication. With the school as the central organizing body, we examine the connections among school personnel, students and families, and community members and groups and the difficulties associated with balancing policy dictates with widespread participation in the educational enterprise. We investigate channels for identifying, gathering, and using data to inform programming, whether through needs analyses, action research, or participatory processes that serve to disrupt the status quo and empower individuals to thrive. A series of cases highlight the urgency of making the implicit explicit with respect to the hidden agenda of schooling and unpacking false narratives around difference.

EDUC 6180 Driving Change and Transformation for Impact (3)
This course supports education leaders in managing change and leading transformation in ways that create the conditions for discernable impact: excellence for all. We begin with a survey of how law and policy drive change over time and the role education leaders play in policy enactment and advocacy. With change as the one anticipated constant, the course investigates shifting priorities that affect the outcomes and impact we seek. An examination of systemic reforms and strategies that have failed helps future leaders to determine what went wrong and highlight promising practices that emerge from effective change management. We put data – mining for, gathering, analyzing, using to drive improvement – front and center, as well as standards of excellence for guiding and gauging success. The course recaps the previous four to pressure test that the vision, talent and learning systems, organizational function, and impactful participation are in place and driving the organization toward achieving results. Students will develop a public narrative and strategic communication plan around their vision and strategy for change.

Prerequisite(s): EDUC 6100, 6120 and 6140.

EDUC 6190 Educational Leadership & Policy for Changemakers (3)
This course provides an overview of leadership and policy topics especially relevant to leadership in the education sector through four modules. For the policy module, topics include federal, state, and local education policy development; the influence of law and policy on schooling over time; and the role of education leaders in policy advocacy and enactment. The course includes a module on the politics and contextual factors involved in leading in collaboration with a school board. A third module on school law provides an overview of the most significant legal issues in public elementary and secondary schools and implications for leading and decision-making. The final module centers on the effective and sustainable education leader with an emphasis on growing the ability to understand, engage, and effectively support and challenge others and creating conditions for equitable school and system transformation and governance. The course will use case studies and live cases with current education leaders to engage students authentically in the field.

EDUC 6220 Linguistics for English Language Learning (3)
This course introduces students to English language structures, English language use, second language development, and language processes to support and ensure the success of multilingual learners of English. Students examine and assess how, when, and why core concepts and ideas from language acquisition and linguistics, impact the teaching and learning of multilingual learners of English. At the completion of this course, students identify, understand, and explain the nature of language learning challenges arising in the use of reading, writing, speaking, and listening skills across different content areas. They develop and elaborate plans for instructional and learning techniques and strategies to address those language learning challenges. For students pursuing an M.Ed., this course also includes an in-depth examination of the grammar of spoken and written English. This in-depth examination of grammar results in students having the ability to analyze and explain language use and language use errors from a discourse perspective that considers the authentic use of language in context versus the prescribed use of decontextualized language. Students pursuing an M.Ed. also investigate the research techniques and tools of corpus linguistics and develop plans, strategies, and techniques for applying and sharing their knowledge with learners and colleagues.

EDUC 6230 Intercultural Communication & Language Pedagogy (3)
This course introduces students to English language structures, English language use, second language development, and language processes to support and ensure the success of multilingual learners of English. Students examine and assess how, when, and why core concepts and ideas from language acquisition and linguistics, impact the teaching and learning of multilingual learners of English. At the completion of this course, students identify, understand, and explain the nature of language learning challenges arising in the use of reading, writing, speaking, and listening skills across different content areas. They develop and elaborate plans for instructional and learning techniques and strategies to address those language learning challenges. For students pursuing an M.Ed., this course also includes an in-depth examination of the grammar of spoken and written English. This in-depth examination of grammar results in students having the ability to analyze and explain language use and language use errors from a discourse perspective that considers the authentic use of language in context versus the prescribed use of decontextualized language. Students pursuing an M.Ed. also investigate the research techniques and tools of corpus linguistics and develop plans, strategies, and techniques for applying and sharing their knowledge with learners and colleagues.

EDUC 6240 Inclusive Curriculum & Materials Design for Multicultural Classrooms (3)
This course introduces students to the concept of English learner (EL)-inclusive curriculum and materials design for multicultural classrooms. Students survey the steps of the curriculum and materials design process to identify opportunities for instructional decision-making that lead to greater inclusivity for multilingual learners of English. They also examine and explain the ways in which curricula and materials create or do not create inclusive learning experiences for multilingual learners of English in multicultural classrooms. At the completion of this course, students propose and enact modifications to curricula and materials that create greater EL-inclusivity in multicultural classrooms. For students pursuing an M.Ed., this course also includes investigation into the academic research on the lack of inclusivity and bias in standardized tests and other curriculum-mandated assessments. Through the lens of this research, students pursing an M.Ed. analyze the assessments for a specific curriculum, prepare suggestions for an alternative assessment plan, and develop instructor guidelines for creating inclusivity and eliminating bias in their classroom assessments.

Prerequisite(s): EDUC 6220 and 6320.

EDUC 6250 Methods for Teaching Multilingual Learners of English (3)
This course introduces students to evidence-based approaches, techniques and instructional strategies used to create supportive, learner-centered environments for multilingual learners of English. Students develop and apply an understanding of how and why the principles and instructional strategies of content-based language learning can be effectively used to provide grade-level, standards-based instruction for multilingual learners of English. At the completion of this course, students analyze and evaluate the appropriateness of materials and resources for multilingual learners of English, as well as use scaffolding strategies to provide comprehensible input for multilingual learners of English. They design content-based, grade-level, standards-based lessons for multilingual learners of English using the Sheltered Instruction Observation Protocol (SIOP) model. Students pursuing an M.Ed. examine academic research on the use of two different pedagogies associated with culturally responsive or culturally relevant education (e.g., trauma-informed pedagogy, funds of knowledge approach, equity pedagogy, indigenous pedagogy, etc.) and evaluate the impact that combining the principles/practices of these pedagogies with the use of the SIOP model might have on multilingual learners of English. Students pursuing an M.Ed. develop a webinar on how to integrate culturally responsive pedagogies into the use of the SIOP model.

Prerequisite(s): EDUC 6220 and 6230.

EDUC 6310 Teaching Social Studies in the Elementary Education Classroom (3)
This course will focus on the pedagogy and methods of teaching social studies in first-through-fifth grade classrooms. This course covers methods for teaching developmentally appropriate social studies (civics, history, geography, and economics). Emphasis will be placed on developmentally appropriate instruction and active learning strategies, including the use of technology in instruction, and on performance-based assessment. Students will work with manipulatives and technology to explore social studies, solve problems, and learn ways to teach this content to children. For those taking this course at a graduate level, students will research and identify seminal articles about social concepts introduced and embedded in children's learning through various means including children's books, conversations, dialogic reading, and explicit instruction. Students will learn how to teach social studies as part of an inquiry-based learning experience and demonstrate this type of learning by constructing a social studies unit.

Prerequisite(s): EDUC 6000, 6810 and 6830.
Enrollment limited to students in the Center for Teacher Education or Education departments.

EDUC 6320 Teaching Science in the Elementary Education Classroom (3)
This course will prepare prospective teachers to teach science in first-through-fifth grade classrooms. This course covers methods for teaching developmentally appropriate topics in science (earth space science, physical science, life science, and engineering/technology. Emphasis will be placed on developmentally appropriate instruction and active learning strategies, including the use of technology in instruction, inquiry-based learning and performance-based assessment. Students will work with manipulatives and technology to explore science, solve problems, and learn ways to teach science content to children. They will also practice creating and refining age-appropriate unit and lesson plans based on the Understanding by Design model (Wiggins & McTighe). For those taking this course at a graduate level, students have opportunities to utilize best practices to inform lesson planning and review researchbased pedagogical strategies to teach diverse learners. Students will have the opportunity to research and find curriculum with lessons that teach concepts and skills through case studies, practical tasks, and reflective activities. Students will be able to create a comprehensive list of curricula materials and then critique an elementary age-appropriate science lesson that examines problems in real-world settings.

Prerequisite(s): EDUC 6000, 6830 and 6840.
Enrollment limited to students in the Center for Teacher Education or Education departments.

EDUC 6330 Math in the Elementary Education Classroom (3)
This course will prepare prospective teachers to teach science in first-through-fifth grade classrooms. This course covers methods for teaching developmentally appropriate topics in science (earth space science, physical science, life science, and engineering/technology. Emphasis will be placed on developmentally appropriate instruction and active learning strategies, including the use of technology in instruction, inquiry-based learning and performance-based assessment. Students will work with manipulatives and technology to explore science, solve problems, and learn ways to teach science content to children. They will also practice creating and refining age-appropriate unit and lesson plans based on the Understanding by Design model (Wiggins & McTighe). For those taking this course at a graduate level, students have opportunities to utilize best practices to inform lesson planning and review researchbased pedagogical strategies to teach diverse learners. Students will have the opportunity to research and find curriculum with lessons that teach concepts and skills through case studies, practical tasks, and reflective activities. Students will be able to create a comprehensive list of curricula materials and then critique an elementary age-appropriate science lesson that examines problems in real-world settings.

Prerequisite(s): EDUC 6000, 6810, 6840 and 6850.
Enrollment limited to students in the Center for Teacher Education or Education departments.

EDUC 6400 Foundations of Instructional Design and Applications (3)
This course will introduce students to historical and contemporary learning theories, frameworks, and models; instruction systems design, processes, and analysis; learning technology innovations; ethics and equity, diversity, and inclusion within the field of Instructional Design. Using a practice-oriented approach and real-world case studies, students will gain experience applying instructional design principles to solve learner-centered design challenges.

EDUC 6410 Trends and Issues in Learning Experience Design and Learner Equity (3)
This course uses an experience-design lens to explore trends and issues in learning experience design. Students will be introduced to Learner Experience Design (LXD) principles and processes as examine strategies to create more equitable student outcomes in learning design. Students will research, read, reflect and discuss problems and viable solutions for current issues in learning design.

EDUC 6420 Learning Experience and Interaction Design Studio (3)
This course examines a range of theories, skills, and processes for designing and developing interactive, learner-centered educational materials. Using a practice-oriented approach and real-world case studies, students will learn to apply Learner Experience Design (LXD) principles and process to create authentic, inclusive learning experiences using an interactive design studio while developing their design thinking skills.

Prerequisite(s): EDUC 6410.

EDUC 6430 Emerging Technologies and Learning Perspectives (3)
This course examines emerging learning technologies and their application to learning and education. Some included technologies are the Internet of Things (IoT), Augmented Reality (AR), Virtual Reality (VR), Artificial Intelligence (AI), and Machine Learning (ML). Emerging learning theories and methodologies, and emerging learning behavior models for inclusive learning design in fast-changing, innovated digital spaces are explored. Using case studies, students will research, read, reflect and discuss real-world learning challenges and viable solutions founded in emerging learning technologies and theories.

Prerequisite(s): EDUC 6400 and 6410.

EDUC 6440 Learning Technology Principles and Applications (3)
This course is an introduction to learning technologies, surveying current tools, applications, software, and hardware, and Learner Experience Design applications, including interactive media, video, editing, and digital design. Students gain hands-on experience in identifying, creating, implementing, and evaluating learning technologies for inclusive learner-centered design. Using a practice-oriented approach and real-world case studies, students will begin to learn design thinking to change the way we engage diversified learners in online education.

EDUC 6450 Game-Based Learning Technology and Design (3)
This course investigates game-based learning (GBL) and gamification applications, including game-design elements and principles, GBL technologies, gaming literacies, gaming models, simulations, immersive learning and virtual reality, and augmented reality from a diversified learner experience lens, including adult learners in higher education and corporate environments and K-12. Students explore the potential of current GBL and analyze the role of game-based learning from a historical perspective.

Prerequisite(s): EDUC 6400 or 5410.

EDUC 6460 Mobile Learning Design and Studio (3)
This course investigates mobile learning principles and strategies through the lens of learning equity. Students will research, read, reflect and discuss mobile learning applications in online learning. Using a practice-oriented approach and real-world case studies, students will apply Learner Experience Design principles and process to their own mobile learning design project using an interactive design studio.

Prerequisite(s): EDUC 6400 or 6410.

EDUC 6500 Assessment and Evaluation of Students with Disabilities (3)
This course introduces students to the collection and use of comprehensive assessment and evaluation data to ensure the success of students with high incidence disabilities. Students analyze frameworks for assessment and evaluation to underscore the sequence, procedures, and decisions involved in a comprehensive process. Topics include collecting data through multiple measures to drive informed decisions about identification, eligibility, IEP creation, services, and instruction; it also targets curriculum resources and intervention strategies with an emphasis on tiered planning and implementation. At the completion of this course, students identify, understand, and implement evidence-based practices on data usage with a particular emphasis on using data to design instructional and behavioral interventions necessary for building on individual strengths and addressing the needs of students with disabilities. Graduate students will deepen these understandings of assessment and evaluation through extensive review of the latest research from the field and apply these understandings in a culminating task based on the assessment and evaluation of two actual students found in a case study scenario.

EDUC 6510 Collaborative Teaming (3)
This course focuses on the knowledge and skills necessary to form productive, collaborative relationships with the adults in a student with disabilities ecosystem: family, para-educators, general educators, building leaders, and service providers. Emphasis is placed on building and maintaining relationships with all stakeholders while adhering to federal and state policies and effectively implementing special education programming. Course topics include culturally-proficient collaboration in schools, community systems and families; vision setting and high expectations for all students; emotional intelligent partnership; and transforming historical and philosophical perspectives and practices of education students with differing needs. At the completion of this course, students describe, plan for, and implement best practices in team collaboration and communication for the benefit of students. Graduate students also conduct a literature review on collaborative and participatory practices in education and design a model and set of recommendations for improving teaming models in a real-life context.

EDUC 6520 Instructional Practices in Special Education (3)
This course examines various ways of assessing student knowledge and identifying and implementing evidence-based practices to increase the success of students with disabilities in mathematics, social studies, science, and English language arts, primarily in grades 3-12. Students learn best practices for understanding and evaluating curricular demands, monitoring student progress in content-area courses, providing tiered supports and accommodations in teaching, using assessment and grading alternatives, and incorporating the principles of explicit and strategic instruction to design methods that promote and enhance content-area learning. This course also presents the needs for specialized services to meet specific learning and/or behavioral needs and provides the basic frameworks for conceptualizing best practices, including the principles of Universal Design for Learning and Multi-Tier Systems of Support (MTSS). At the completion of this course, students evaluate and design initial instructional accommodations and interventions for meeting the needs of students with high incidence disabilities. Graduate students extend their understandings by researching broad-based instructional practices that benefit diverse learners in whole group instruction; they also conduct an audit of classroom instruction across a grade level or content area in an actual school and devise practical recommendations based on their findings.

Prerequisite(s): EDUC 6500.

EDUC 6530 Reading and Literacy (3)
This course provides in-depth learning experiences targeting literacy. Students learn about assessment tools and assessment systems used in tiered support frameworks to determine the required intensity of literacy support and instruction needed by children/adolescents with high-incidence special education needs. The course also provides evidence-based instructional approaches and effective curricula that have been developed for students with disabilities and students who are struggling in general. At the completion of this course, students evaluate and design specialized literacy instruction tailored to the specific strengths and needs of their students. Graduate students conduct and write a review of related research, survey a living reading and literacy school environment, and create recommendations aimed at improving practice overall.

Prerequisite(s): EDUC 6500.

EDUC 6540 Functional Behavioral Assessment and Individualized Behavioral Intervention Planning (3)
This course provides a framework for individualizing behavioral supports using a functional behavioral paradigm. Students learn theory, core concepts, and applied methods involved in functional behavioral assessment that translate into evidence-based prevention and intervention planning. Special attention is given to the student-in-context: Ecological systems, intraindividual factors such as trauma, medical considerations, and family phenomenologies, and school initiatives such as multi-tiered systems of support. At the completion of the course, participants conduct functional behavioral assessments, create evidence-based and individualized support plans, and critique the theory and practice of this specific and specialized form of behavioral support planning vis-a-vis cultural, theoretical, and practical experiences of themselves as practitioners and the students they serve. Graduate students explicate research and then design and deliver a professional development seminar to schools they identify as needing improvement in the area of FBA and behavioral intervention planning. Note: This course is part of the required course sequence for the elementary grades “mild-moderate add-on special education certification” in the state of Louisiana.

Prerequisite(s): EDUC 6520.

EDUC 6550 Self-Determination and Transition (3)
This course develops students' proficiency in career development and self-determined transition planning and education for persons with disabilities from middle school through adulthood. Emphasis is placed on IDEA requirements for transition services, career development, and best practices in the transition processes; key time and IEP team decision points to foster positive life outcomes; transition services assessment; secondary special education curricular implications; career development and transition service needs; collaborative services in schools and communities to promote quality transition services; and best practices in student-centered transition planning. At the completion of this course, educators develop a background and framework for fostering post-secondary success necessary for leading IEP teams through the development of student-centered plan focused on the knowledge and skills necessary for successful transition to college, career, and independent living. Graduate students explicate research and then design and deliver a professional development seminar to schools they identify as needing improvement in the area of FBA and behavioral intervention planning. Note: This course is part of the required course sequence for the grades 4-8 and 6-12 “mild-moderate add-on special education certification” in the state of Louisiana.

Prerequisite(s): EDUC 6520.

EDUC 6560 Fundamentals of Instructional Technology for Students with Disabilities (3)
This course explores the use of technology, services, and accessible design principles that serve to support students with disabilities in meeting their goals. Students are introduced to instructional technology, explore a variety of low- and high-technology tools and services, and apply accessible design principles to create effective and meaningful instruction for all students. At the conclusion of this course, students apply a problem-solving approach for identifying and selecting appropriate technological tools and services based on student need; they also identify and plan for instructional practices that provide access and promote success for students with disabilities. Graduate students conduct a review of related research for to identify the most promising practices in assistive technology and then design and deliver a professional development seminar to schools they identify as needing improvement in the area of FBA and behavioral intervention planning.

Prerequisite(s): EDUC 6520.

EDUC 6790 Residency I (Student) Elementary Education (3)
The yearlong residency (2 semesters) is the culminating experience of the Early Childhood Education program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, participate in professional development opportunities offered by the university, and engage in action research over their course of study. A candidate may complete residency as a student teacher or practitioner resident. When a candidate completes residency as a practitioner resident, they must be hired as a full-time teacher in a school and remain under supervision of a mentor teacher and university faculty member. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE.

Prerequisite(s): EDUC 6000, 6060, 6810, 6822, 6870, 6832, 6836, 6310, 6320 and 6330.

EDUC 6791 Residency II (Student) (3)
The yearlong residency (2 semesters) is the culminating experience the Early Childhood Education program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, participate in professional development opportunities offered by the university, and engage in action research over their course of study. A candidate may complete residency as a student teacher or practitioner resident. When a candidate completes residency as a practitioner resident, they must be hired as a full-time teacher in a school and remain under supervision of a mentor teacher and university faculty member. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE. Prerequisites: All courses in the program preceding residency courses or permission of Director.

Prerequisite(s): (EDUC 6000, 6810, 6060, 6910, 6970, 6980 and 6900) and (EDUC 6920, 6930, 6940, 6950 or 6960).

EDUC 6792 Residency I (Practitioner) (3)
The yearlong residency (2 semesters) is the culminating experience the Early Childhood Education 27 program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. I In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, participate in professional development opportunities offered by the university, and engage in action research over their course of study. When a candidate completes residency as a student teacher resident, they are directly supervised and supported by a classroom mentor teacher and a university faculty member. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE. Prerequisites: All courses in the program preceding residency courses or permission of Director.

Prerequisite(s): (EDUC 6000, 6810, 6060, 6910, 6970, 6980 and 6900) and (EDUC 6920, 6930, 6940, 6950 or 6960).

EDUC 6793 Residency II (Practitioner) (3)
The yearlong residency (2 semesters) is the culminating experience the Early Childhood Education program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, participate in professional development opportunities offered by the university, and engage in action research over their course of study. When a candidate completes residency as a student teacher resident, they are directly supervised and supported by a classroom mentor teacher and a university faculty member. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE. Prerequisites: All courses in the program preceding residency courses or permission of Director.

Prerequisite(s): EDUC 6792.

EDUC 6810 The Craft of Teaching (3)
This course examines (a) the process by which students learn and teachers teach including the instructional design process of Understanding by Design (UbD) and effective teaching strategies; (b) the importance of assessment and student work analysis on the learning and teaching process. Teacher candidates will learn to plan lessons and units that are focused, organized, and develop student understanding of knowledge or skills. Candidates will learn to design assessments that provide feedback to students on their learning and to teachers on the impact of their teaching. Candidates will example theories of behavior management and strategies for organizing and maintaining an optimal learning environment. Project requirements and readings will emphasize grade levels and content field for which pre-service teachers are seeking certification. The study begun in this course lays the foundation for understanding the learning and teaching process which later Methods classes will further develop.

Prerequisite(s): EDUC 6000.

EDUC 6820 Foundations of Emergent Literacy (3)
Emergent Literacy provides an introduction to children's speech and language development, appropriate methodologies for building the communication skills of young children, the overall scope of emergent literacy issues - with a heavy emphasis on phonemic awareness/ phonics, and guided practice using children's books and appropriate technology for young readers in the classroom. Evidence-based reading research will form the foundation when studying effective strategies for teaching reading.

Enrollment limited to students in the Center for Teacher Education or Education departments.

EDUC 6822 Foundations of Elementary Literacy (3)
Foundations of Elementary Literacy provides an introduction to children's speech and language development, appropriate methodologies for building the communication skills of children, the overall scope of elementary literacy issues emphasizing the five pillars of literacy: phonemic awareness, phonics, fluency, vocabulary, and comprehension. Evidence-based reading research will form the foundation when studying effective strategies for teaching r4eading including and guided reading practice using multi-genre grade-level texts and appropriate technology for readers in the elementary classroom. Those students taking this course at a graduate level will examine recent theory and research regarding elementary literacy and translate the findings into practical strategies to increase language skills in the classroom. Students will analyze assessments and use the data to create instructional plans that address the skills that need improvement to ultimately obtain knowledge mastery. Students will design and present a professional development workshop for early elementary teachers that describe how to determine appropriate literacy strategies and their associated assessments.

Prerequisite(s): EDUC 6000.

EDUC 6830 Early Childhood Reading Methods (3)
This course addresses evidence-based approaches for the effective teaching of literacy. The five essential components of reading instruction, as identified by the National Reading Panel, of this class include: Phonemic awareness skills, phonics skills, reading fluency, vocabulary development, and comprehension strategies. Additionally, the concepts of reading and writing connections, assessment, and content area skills and strategies needed for reading to learn, thinking and written discourse are emphasized. This course includes a practicum placement in a school setting. The Education Candidate observes and learns to create rich literate environments which foster reading, writing, speaking, listening and technological literacies through the integration of their foundation knowledge, use of instructional practices, approaches and methods, curriculum materials, and the appropriate use of assessment.

EDUC 6832 Elementary Education Reading Methods (3)
This course addresses evidence-based approaches for the effective teaching of literacy in 1st-5th grade. The five essential components of reading instruction, as identified by the National Reading Panel, of this class include: phonemic awareness skills, phonics skills, reading fluency, vocabulary development, and comprehension strategies. Additionally, reading and writing assessment, content-area skills and strategies for reading to learn, and the reading-writing-thinking connection are emphasized. This course includes a practicum placement in a school setting. The teacher candidate observes and learns to create rich literate environments which foster reading, writing, speaking, listening and technological literacies through the integration of their foundation knowledge, use of instructional practices, approaches and methods, curriculum materials, and the appropriate use of assessment. For those taking this course at a graduate level, an emphasis is placed on examining research and data that support reading instructional models that address the five essential components of reading instruction. This course includes a practicum placement in a school setting.

Prerequisite(s): EDUC 6822.

EDUC 6834 Early Childhood Reading Instruction for All Learners (3)
Students will learn key reading concepts effective for all children including those with language delays, dyslexia, and other reading difficulties. The course will provide students with knowledge about reading screeners and continuous diagnostic assessments that inform differentiated reading instruction and monitor progress. Students will learn how to deliver structured literacy lessons that include the five components of reading according to the National Reading Panel, with an emphasis on phonology and other essential components like sound-symbol association, oral language, fluency, and writing. The course will provide students with resources that teach reading using explicit instruction and daily student-teacher interaction to monitor reading progression. For those taking this course at a graduate level, the emphasis is placed on remediating a small group of students with reading difficulties. Graduate students administer assessments to identify their students' reading difficulties, create and implement a research-informed reading remediation plan, utilize progress monitoring to adjust to their students' needs, and present their completed work.

Prerequisite(s): EDUC 6830.

EDUC 6836 Elementary Reading Instruction for All Learners (3)
Students will learn key reading concepts effective for all 1st-5th grade children including those with language delays, dyslexia, and other reading difficulties. The course will provide students with knowledge about reading screeners and continuous diagnostic assessments that will inform differentiated reading instruction and monitor progress. Students will learn how to deliver structured and differentiated literacy lessons that include the five components of reading according to the National Reading Panel, with an emphasis on fluency, vocabulary, comprehension, and writing. The course will provide students with resources that teach reading using explicit instruction and daily student-teacher interaction to monitor reading progression. For those taking this course at a graduate level, the emphasis will be placed on remediating a small group of students with reading difficulties. Graduate students will administer assessments to identify their students' reading difficulties, create and implement a research-informed reading remediation plan, utilize progress monitoring to adjust to their students' needs, and present their completed work.

Prerequisite(s): EDUC 6832.

EDUC 6840 Teaching Social Studies in ECE (3)
This course will focus on the pedagogy and methods of teaching social studies and various genres of writing in the PreK-3rd grade classroom. This course covers methods for teaching developmentally appropriate social studies (civics, history, geography, and economics). Emphasis will be placed on developmentally appropriate instruction and active learning strategies, including the use of technology in instruction, and on performance-based assessment. Students will work with manipulatives and technology to explore social studies, solve problems, and learn way to teach this content to children. They will also learn the importance of the reading/writing connection, traits of effective writing, how to analyze and respond to early childhood writing, and how to conduct writing workshops. The class will also explore new literacies and innovative ways to integrate technology in writing with connections to social studies.

Prerequisite(s): EDUC 6830.

EDUC 6850 Teaching Science in Early Childhood Classroom (3)
This course will prepare prospective teachers to teach science in the early childhood setting (preschool through 3rd grade). This course covers methods for teaching developmentally appropriate topics in science (earth space science, physical science, life science, and engineering/technology. Emphasis will be placed on developmentally appropriate instruction and active learning strategies, including the use of technology in instruction, inquiry-based learning and performance-based assessment. Students will work with manipulatives and technology to explore science, solve problems, and learn ways to teach the three dimensions of science to children. They will also practice creating and refining age-appropriate unit and lesson plans based on the Understanding by Design model (Wiggins & McTighe). For those taking this course at a graduate level, students have opportunities to utilize best practices to inform lesson planning and review research-based pedagogical strategies to teach diverse learners. Students will have the opportunity to research and find curriculum with lessons that teach concepts and skills through case studies, practical tasks, and reflective activities. Students will be able to create a comprehensive list of curricula materials. Then critique an elementary age-appropriate science lesson that examines problems in real-world settings.

Prerequisite(s): EDUC 6830.

EDUC 6860 Teaching Mathematics in ECE (3)
This course will prepare prospective teachers to teach mathematics in the early childhood setting (preschool through third grade). This course covers both mathematical content and methods for teaching developmentally appropriate topics in arithmetic, geometry, probability and statistics, and measurement, data collection, and analysis. Emphasis will be placed on developmentally appropriate instruction and on performance-based assessment. [Candidates] work with manipulatives and technology to explore mathematics, solve problems, and learn ways to teach mathematics content to children. The course includes practice in creating and refining age-appropriate unit and lesson plans based on the Understanding by Design model (Wiggins and McTighe).

Prerequisite(s): EDUC 6830.

EDUC 6870 Childhood Development (3)
This course presents the stages of childhood development. Emphasis is placed on development which enables one to reach physical, mental, emotional, and social maturity. Students will learn how child development intersects with teaching and learning. Research and data on current practices and philosophies are compared and discussed. Assessment of learning environments from an equity perspective will inform students how childhood development may wax and wane throughout developmental milestones.

EDUC 6890 Residency I_Student_ECE (3)
Part one. The yearlong residency (2 semesters) is the culminating experience of the Early Childhood Education program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, participate in professional development opportunities offered by the university, and engage in action research over their course of study. A candidate may complete residency as a student teacher or practitioner resident. When a candidate completes residency as a practitioner resident, they must be hired as a full-time teacher in a school and remain under supervision of a mentor teacher and university faculty member. All residency requirements are within the guidelines of Bulletin 746 - Louisiana Standards for State Certification of School Personnel approved by BESE.

Prerequisite(s): (EDUC 6000, 6810, 6060, 6910, 6970, 6980 and 6900) and (EDUC 6920, 6930, 6940, 6950 or 6960).

EDUC 6891 Residency II_Student_ECE (3)
Part two. The yearlong residency (2 semesters) is the culminating experience the Early Childhood Education program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, participate in professional development opportunities offered by the university, and engage in action research over their course of study. A candidate may complete residency as a student teacher or practitioner resident. When a candidate completes residency as a practitioner resident, they must be hired as a full-time teacher in a school and remain under supervision of a mentor teacher and university faculty member. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE. Pre-Requisites: all courses in the program preceding residency courses or permission of 23 Director.

Prerequisite(s): (EDUC 6000, 6810, 6060, 6910, 6970, 6980 and 6900) and (EDUC 6920, 6930, 6940, 6950 or 6960).

EDUC 6892 Residency I_Practitioner_ECE (3)
The yearlong residency (2 semesters) is the culminating experience the Early Childhood Education program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, participate in professional development opportunities offered by the university, and engage in action research over their course of study. When a candidate completes residency as a student teacher resident, they are directly supervised and supported by a classroom mentor teacher and a university faculty member. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE. Pre-Requisites: all courses in the program preceding residency courses or permission of Director.

Prerequisite(s): (EDUC 6000, 6810, 6060, 6820, 6830, 6834, 6840, 6850, 6860 and 6870).

EDUC 6893 Residency II_Practitioner_ECE (3)
Part two. The yearlong residency (2 semesters) is the culminating experience the Early Childhood Education program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, and participate in professional development opportunities offered by the university. When a candidate completes residency as a student teacher resident, they are directly supervised and supported by a classroom mentor teacher and a university faculty member. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE. Pre-Requisites: all courses in MAT program preceding residency courses or permission of Director.

Prerequisite(s): (EDUC 6000, 6810, 6060, 6820, 6830, 6834, 6840, 6850, 6860, 6870 and 6891).

EDUC 6894 Residency I (Student) - Elementary Education (3)
Part one. The yearlong residency (2 semesters) is the culminating experience of the Early Childhood Education program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, and participate in professional development opportunities offered by the university. A candidate may complete residency as a student teacher or practitioner resident. When a candidate completes residency as a practitioner resident, they must be hired as a full-time teacher in a school and remain under supervision of a mentor teacher and university faculty member. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE. UG Pre-Requisites: all courses in the program preceding residency courses or permission of Director. MAT Prerequisites: all courses in MAT program preceding residency courses or permission of Director.

EDUC 6895 Residency II (Student) - Elementary Education (3)
Part two. The yearlong residency (2 semesters) is the culminating experience the Early Childhood Education program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, and participate in professional development opportunities offered by the university. A candidate may complete residency as a student teacher or practitioner resident. When a candidate completes residency as a practitioner resident, they must be hired as a full-time teacher in a school and remain under supervision of a mentor teacher and university faculty member. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE. UG Pre-Requisites: all courses in the program preceding residency courses or permission of Director. MAT Prerequisites: all courses in MAT program preceding residency courses or permission of Director.

EDUC 6896 Residency I (Practitioner) - Elementary Education (3)
Part one. The yearlong residency (2 semesters) is the culminating experience the Early Childhood Education 27 program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, and participate in professional development opportunities offered by the university. When a candidate completes residency as a student teacher resident, they are directly supervised and supported by a classroom mentor teacher and a university faculty member. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE. UG Pre-Requisites: all courses in the program preceding residency courses or permission of Director. MAT Prerequisites: all courses in MAT program preceding residency courses or permission of Director.

EDUC 6897 Residency II (Practitioner) - Elementary Education (3)
Part two. The yearlong residency (2 semesters) is the culminating experience the Early Childhood Education program. It occurs only upon completion of all professional coursework associated with the ECE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, and participate in professional development opportunities offered by the university. When a candidate 14 completes residency as a student teacher resident, they are directly supervised and supported by a classroom mentor teacher and a university faculty member. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE. UG Pre-Requisites: all courses in the program preceding residency courses or permission of Director. MAT Prerequisites: all courses in MAT program preceding residency courses or permission of Director.

EDUC 6900 Secondary Methods I: General (3)
This course focuses on prominent methodological issues and the development of core teaching skills. Students will analyze different instructional methods; design comprehensive unit and lesson plans using the Understanding by Design model; develop integrated technology strategies and develop skills in differentiated instruction. Emphasis is placed on development of skills of self-analysis, reflection, and research-based decision-making. Students will interpret, refine, and demonstrate their understanding and mastery of general teaching practices through field experience in a middle or high school setting. The course is designed with an emphasis on the practicum; therefore, it is organized to provide time for one-on-one conferences in which the professor will advise on upcoming lessons and give detailed feedback on classroom observations. The regular class sessions are designed to be experiential, in which students will learn and participate in specific lessons and activities to use for classroom teaching, employing a variety of materials.

Prerequisite(s): EDUC 6810.

EDUC 6910 Reading Methods Secondary Education (3)
This course addresses evidence-based reading research while studying the effective teaching of content area literacy. An emphasis will be placed on developing adaptations of well-known strategies in addressing disciplinary ways of thinking, reading, and writing in the content areas. Additionally, students will understand and be able to apply the disciplinary literacies associated with vocabulary and comprehension in a variety of disciplines by utilizing assessments and new literacies needed for Twenty-First Century content area instruction. For those taking this course at a graduate level, the emphasis will be placed on inquiry of content area literacy. Students will research content literacy, extrapolate effective strategies for teaching reading in a content area, and share an analysis on those that are most effective.

Prerequisite(s): EDUC 6810.

EDUC 6920 Methods II Social Studies (3)
This is a seminar and practicum course providing opportunities for secondary teacher candidates to acquire skills in teaching methodologies and strategies specific to secondary social studies instruction. Topics include organization of subject matter, weekly and unit lesson planning, development of assessments, utilizing information technology for instruction, and working with diverse populations of students. Course activities include teaching in a secondary classroom, professional development workshops, discussion/reflections, and demonstration of effective use of standards documents, inquiry activities, and a review of effective pedagogical literature. Clinical experience/field placement is required in the classroom setting. For those taking this course at the graduate level, students will read research about strategies necessary for success in teaching culturally and linguistically diverse students with diverse learning needs and strengths. Using data and research, students will develop inquiry-based curriculum activities addressing community-based issues relevant to New Orleans. The design of the activities is within the context of social studies and aligned to LA Standards.

Prerequisite(s): EDUC 6900.

EDUC 6930 Methods II Science (3)
This is a seminar and practicum course providing opportunities for secondary teacher candidates to acquire skills in teaching methodologies and strategies specific to the science content area in which they are seeking certification. Topics include organization of subject matter, weekly and unit lesson planning, development of assessments, utilizing information technology for instruction, and working with diverse populations of students. Course activities include teaching in a field site classroom, professional development workshops, discussion/reflections, and demonstration of effective use of standards documents, inquiry activities and a review of effective pedagogical literature. Clinical experience/field placement is required in the classroom setting. For those taking this course at the graduate level, this course will include a research and analysis component. Students will research their specific science content area and examine the alignment of the Next Generation Science Standards and LA Content Standards. The information gained from these standards will be used to develop a science scope and sequence that provides a crosswalk of the national and state standards, including gaps that may exist in the current LA Science Standards. Students will share this crosswalk with peers and facilitate a discussion about teaching standards through inquiry and problem-solving across all specific sciences.

Prerequisite(s): EDUC 6900.

EDUC 6940 Methods II English (3)
In this seminar and practicum course, candidates will study the various components of the English Language Arts curriculum along with a broad range of research-based instructional strategies, key theories and debates in the field of English education. Topics include strategies for integrating all language arts into the curriculum, lesson planning based on the Understanding by Design (UbD) model, and development of effective assessments. Students will learn how to utilize information technology for instruction, how to align curriculum with state and national literacy standards, and how to integrate strategies for working with diverse populations of students. Course activities include observations in secondary (6-12) English classrooms, development of lesson plans, teaching in a field-site classroom, discussion/reflections, inquiry activities, and a review of effective pedagogical literature. Clinical experience/field placement in a classroom setting is required. For those taking this course at a graduate level, students will have the opportunity to expand on a review of effective pedagogical literature regarding English Language Arts instruction. They will analyze the findings and data that provide the rationale of effective pedagogy. Students will research pedagogies of different points of view and identify similarities and differences while determining how both pedagogies are considered effective.

Prerequisite(s): EDUC 6900.

EDUC 6950 Methods II Mathematics (3)
This is a seminar and practicum course providing opportunities for secondary teacher candidates to acquire skills in teaching methodologies and strategies specific to the math content area in which they are seeking certification. Topics include organization of subject matter, weekly and unit lesson planning using the Understanding by Design model, development of assessments, utilizing information technology for instruction, and working with diverse populations of students. Course activities include teaching in a field site classroom, discussion/reflections, and demonstration of effective use of standards documents, inquiry activities and a review of effective pedagogical literature. Clinical experience/field placement is required in the classroom setting. Professional development experiences are also required. For those taking this course at a graduate level, students will demonstrate their understanding of the secondary mathematics curriculum by using effective pedagogical literature to develop and facilitate a professional development session to peers. The professional development module and facilitation is expected to validate the student's competencies at the level of instructional implementation in one's own classroom and others that may require modifications.

Prerequisite(s): EDUC 6900.

EDUC 6960 Methods II Foreign Language (3)
This is a seminar and practicum course providing opportunities for secondary teacher candidates to acquire skills in teaching methodologies and strategies specific to foreign language instruction (Latin, French, Spanish, Italian, or German). Topics include lesson planning based on the Understanding by Design (UbD) model, and development of effective assessments, utilizing information technology for instruction, and working with diverse populations of students. Course activities include observations in secondary (6-12) foreign language classrooms, development of lesson plans, teaching in a field-site classroom, discussion/reflections, inquiry activities, and a review of effective pedagogical literature. Clinical experience/field placement in a classroom is required. For those taking this course at a graduate level, students will make connections between theories and classroom practice through additional research. The course will ask students to review the literature regarding meaningful assessments and instruction used in classrooms to teach specific language skills. Students will select a specific language and develop a unit that teachers can use in the secondary classroom. The student must include proficiency-based instruction and include strategies for social justice and equity.

Prerequisite(s): EDUC 6900.

EDUC 6965 Content Knowledge for Secondary Education (3)
This course is designed to strengthen teacher candidates' mastery of content knowledge in their chosen discipline. Strong content knowledge will support our teacher candidates in mastering two program learning outcomes: construct learning experiences which ensure mastery and illustrate the central concepts of the discipline and develop instructional experiences that provide students opportunities to think critically, work collaboratively, and transfer their knowledge across various contexts. The course is designed for partial fulfillment of the requirements for State licensure eligibility at the secondary level.

EDUC 6970 Adolescent Development (3)
This course provides an overview of the important developmental changes adolescents experience as they transition to adulthood. Throughout the course students will learn theories related to adolescent development. Students will learn about the risks prevalent for adolescents and why they are more evident during this stage. The course will outline preventions and interventions that support adolescents and how social context is relevant. Students will explore research-based practices that support all adolescents who may struggle in a school setting.

EDUC 6980 Effective Reading Instruction for Developing Adolescent Readers (3)
This course provides a comprehensive overview of the current knowledge on best practices for teaching older students with reading difficulties. The focus of reading instruction for adolescent readers is word study, fluency, vocabulary, and motivation. The course materials will describe in depth these critical skills adolescent readers need to become proficient readers. Students will study research-based practices that help struggling students improve their skills in the areas listed above. They will present a culturally diverse professional development plan for teachers and school personnel to allocate time and resources so that students receive appropriate, engaging interventions that improve their overall reading. For those taking this course at a graduate level, the emphasis will be placed on remediating a small group of students with reading difficulties. Graduate students will administer assessments to identify their students' reading difficulties, create and implement a research-informed reading remediation plan, utilize progress monitoring to adjust to their students' needs, and present their completed work.

EDUC 6990 Residency I_Student_SE (3)
The yearlong residency (2 semesters) is the culminating experience the Secondary Education (SE) program. It occurs only upon completion of all professional coursework associated with the SE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor 17 teacher and university faculty member throughout the semester, attend a series of seminars, and participate in professional development opportunities offered by the university. A candidate may complete residency as a student teacher or practitioner resident. When a candidate completes residency as a practitioner resident, they must be hired as a full-time teacher in a school and remain under the supervision of a mentor teacher and university faculty member. Candidates who have completed at least three years of classroom teaching may be eligible for a waiver from the residency. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE.

Prerequisite(s): (EDUC 6000, 6810, 6060, 6970, 6910, 6980 and 6900) and (EDUC 6920, 6930, 6940, 6950 or 6960).

EDUC 6991 Residency II_Student_SE (3)
Part two. The yearlong residency (2 semesters) is the culminating experience the Secondary Education (SE) program. It occurs only upon completion of all professional coursework associated with the SE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, and participate in professional development opportunities offered by the university. A candidate may complete residency as a student teacher or practitioner resident. When a candidate completes residency as a practitioner resident, they must be hired as a full-time teacher in a school and remain under the supervision of a mentor teacher and university faculty member. Candidates who have completed at least three years of classroom teaching may be eligible for a waiver from the residency. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE. MAT Pre-Requisites: all courses in MAT program preceding residency courses or permission of Director.

Prerequisite(s): (EDUC 6000, 6810, 6060, 6970, 6910, 6980 and 6900 and (EDUC 6920) or EDUC 6930, 6940, 6950 or 6960) and EDUC 6990.

EDUC 6992 Residency I_Practitioner_SE (3)
Part one. The yearlong residency (2 semesters) is the culminating experience the Secondary Education (SE) program. It occurs only upon completion of all professional coursework associated with the SE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, and participate in professional development opportunities offered by the university. When a candidate completes residency as a student teacher resident, they are directly supervised and supported by a classroom mentor teacher and a university faculty member. Candidates who have completed at least three years of classroom teaching may be eligible for a waiver from residency. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE. Pre-Requisites: all courses in MAT program preceding residency courses or permission of Director.

Prerequisite(s): (EDUC 6000, 6810, 6060, 6970, 6910, 6980 and 6900) and (EDUC 6920, 6930, 6940, 6950 or 6960).

EDUC 6993 Residency II_Practitioner_SE (3)
Part two. The yearlong residency (2 semesters) is the culminating experience the Secondary Education (SE) program. It occurs only upon completion of all professional coursework associated with the SE specialization. In a school setting, residents demonstrate the knowledge, skills, and dispositions they have learned throughout the program for which they are seeking certification and/or degree. Residents observe, assess, plan, teach using differentiated instruction, reflect on teaching practices, and analyze the impact on student achievement while adhering to all the State's guidelines for residency. In addition, residents meet with their mentor teacher and university faculty member throughout the semester, attend a series of seminars, and participate in professional development opportunities offered by the university. When a candidate completes residency as a student teacher resident, they are directly supervised and supported by a classroom mentor teacher and a university faculty member. Candidates who have completed at least three years of classroom teaching may be eligible for a waiver from the residency. All residency requirements are within the guidelines of Bulletin 746 – Louisiana Standards for State Certification of School Personnel approved by BESE. Pre-Requisites: all courses in MAT program preceding residency courses or permission of Director.

Prerequisite(s): (EDUC 6000, 6810, 6060, 6970, 6910, 6980 and 6900) and (EDUC 6920, 6930, 6940, 6950 or 6960) and EDUC 6992.

EDUC 7790 Topics in Education Research (1-3)
This course examines (a) the process by which students learn and teachers teach including the instructional design process of Understanding by Design (UbD) and effective teaching strategies; (b) the importance of assessment and student work analysis on the learning and teaching process. Teacher candidates will learn to plan lessons and units that are focused, organized, and develop student understanding of knowledge or skills. Candidates will learn to design assessments that provide feedback to students on their learning and to teachers on the impact of their teaching. Candidates will example theories of behavior management and strategies for organizing and maintaining an optimal learning environment. Project requirements and readings will emphasize grade levels and content field for which pre-service teachers are seeking certification. The study begun in this course lays the foundation for understanding the learning and teaching process which later Methods classes will further develop.

Maximum Hours: 99

EDUC 7791 Topics in Education Research (1-3)
Education research toward completion of master's degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EDUC 7792 Topics in Education Research (1-3)
Education research toward completion of master's degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EDUC 7793 Topics in Education Research (1-3)
Education research toward completion of master's degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EDUC 7794 Topics in Education Research (1-3)
Education research toward completion of master's degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EDUC 7795 Topics in Education Research (1-3)
Education research toward completion of master's degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EDUC 7796 Topics in Education Research (1-3)
Education research toward completion of master's degree. Course may be repeated up to unlimited credit hours.

Education research toward completion of master's degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Emergency and Security Studies (ESSC)

ESSC 6000 Advanced Standing (1-9)
Advanced Standing course for Master of Professional Studies in Homeland Security Studies or Emergency Management program.

ESSC 6001 Introduction to Emergency Management (3)
This course will be an advanced examination of modern emergency management concepts, trends nationally and internationally, practical and political issues and policies, technological applications to emergency management, and the development and practical implementation of sound emergency management practices designed to protect people, communities, critical infrastructure and key assets. Included will be a brief review of emergency management policy and procedures in the United States and other countries, legal issues, social science perspectives, planning concepts and techniques, disaster modeling, operational problems, analytical methods, special populations, and management styles. Additionally, case studies will be examined to determine the extent of effective or ineffective planning, responding, and recovering from natural and technological disasters.

ESSC 6002 Critical Infrastructure Protection (3)
This course closely examines the Critical Infrastructure Protection process to secure the effective protection of people, physical entities, and critical information and support systems in the event of natural disasters, and accidental or intentional man-made incidents of major destruction. The course will provide an analysis of a time-efficient and resource-restrained practice that ensures the protection of those critical infrastructures upon which survivability, continuity of operations, and mission success depend. The course will guide students in the theories of physical protection and conducting vulnerability assessments of critical infrastructure elements. We will examine the critical sectors identified by the United States Department of Homeland Security and how disruption of these sectors could effect the civil population and the national economy.

ESSC 6003 Geospatial Information Systems (3)
Applied Geographic Information Systems (GIS) is designed to provide students with a solid foundation in both GIS concepts and the use of GIS. Applied Geographic Information Systems strikes a careful balance between GIS concepts and hands-on applications. GIS is an emergent technological domain utilized by all U.S. Federal Departments and Agencies and many private sector organizations for defense and national security (including intelligence), transportation and logistics, and telecommunications practical application and analysis. GIS allows you to use satellite imagery to conduct geospatial analysis by using data to build maps and graphs. This course is an introductory geospatial intelligence analysis course that will provide the learner with basic technological and industry-relevant skills (no technical background required). The learner will utilize industry software to develop maps and map layers to address multiple real-world practical case studies.

ESSC 6004 Military/Civilian Interface During Response (3)
This course is designed to give the students a broad overview of the National Preparedness Guidelines, National Planning Scenarios, and the National Incident Management System as it relates to Defense Support of Civil Authorities in the instances of key risks such as; Natural Hazards, Pandemics, Technological and Accidental Hazards, Terrorist acts, and Cyber Attacks. This course will further educate students on what kind of support the Department of Defense (DoD) can provide civilian authorities, the legality of such support, as well as explain the authorities, appropriateness and extent of DoD support.

ESSC 6005 Border Security (3)
This course is designed to enhance the student's ability to think critically about border security and our nation's approach to securing its borders. It will equip the student with the necessary knowledge to effectively evaluate current border security strategies as well as propose policy changes related to border security in order to enhance the nation's homeland security posture.

ESSC 6006 Intel Analysis and Critical Thinking (3)
This course is designed to give students an advanced understanding of intelligence-gathering and analysis as it relates to critical thinking; linkages to money laundering, risk management, risk assessment factors, operational concepts and strategic implications. It is a logical follow-on study that further examines the collaborative process of intelligence analysis and will provide homeland security professionals tools, framework and concepts to further develop their leadership skills by understanding how the synthesis and utilization of intelligence impacts decision making in tactical, operational and strategic settings while emphasizing the principles of holistic, all-hazards approach to preparedness.

ESSC 6007 Health and Medical Issues in Emergency Management (3)
An advanced study of the important health and medical management issues involved in crises and emergencies presented for the non-medical emergency manager. The wide range of medical and health issues inherent to a crisis including biological, radiological, nuclear events and emergencies are described. Students will focus on innovative response and recovery including long term public health recovery issues methods for integrating medical, public health, and psychological processes into emergency management.

Prerequisite(s): ESSC 6001.

ESSC 6008 Risk Management and Threat Assessment (3)
This course examines the concepts, methods, and practices associated with risk management and threat assessment from an all-hazard perspective. Students will learn how to conduct hazard and risk analysis for both the public and private sectors. This course will include identifying and profiling hazards, analyzing and assessing hazard risk developing tactics to manage risk, examining multiple risk assessment tools, and communicating risk to the public. Participants will examine critical infrastructure sectors and associated interdependencies, cascading consequences, and shared vulnerabilities. Students will perform their own risk analysis and develop recommendations for policy makers as part of this curriculum.

ESSC 6009 Emergency Planning (3)
Through a whole-community approach, this course provides an in-depth analysis of the processes and methods used throughout the entire federally-designated preparedness cycle. Planning is the backbone of the emergency management process. Steps required to develop a comprehensive emergency plan from the strategic, tactical, and operational approach will be discussed. Students will learn the skills to complete plans, develop training programs, and write after action reports and improvement plans. This course prepares students to develop plans that address vulnerabilities and promote community resiliency. Students will complete a draft plan for a local community organization as part of this curriculum.

ESSC 6010 Disaster Communications (3)
This is an advanced examination of modern emergency management concepts, national and international trends, practical and political issues and policies, technological applications to emergency management, and the development and practical implementation of sound emergency management practices designed to protect people, communities, critical infrastructure and key assets. Course content includes reviews of emergency management policy and procedures in the U.S. and other countries, legal issues, social science perspectives, planning concepts and techniques, disaster modeling, operational problems, analytical methods, special populations, and management styles. Case studies are used to examine examples of effective and ineffective plans, responses, and recoveries from natural and technological disasters.

ESSC 6011 Emergency Management Administration (3)
Modern emergency managers are required to perform an ever-increasing number of administrative tasks. Their workload exceeds activities associated with operational emergency management. This course provides students the skills required for those tasks, including grant management and principles of managing an effective staff. Students will develop the capabilities necessary to successfully complete these administrative requirements.

ESSC 6012 Physical Protection Systems (3)
An introductory course to the systematic discipline of Physical Protection System design, implementation, and testing. The methodology presented is scalable for small, medium, and large security applications ranging from home security systems to safeguarding and securing sensitive nuclear facilities.

ESSC 6013 Business Continuity (3)
With global business stretched across extended supply chains, productivity has increased, but it has come at a cost of increased vulnerability. Businesses cannot afford to be unprepared for traditional and emerging threats. Business continuity is a fast-growing area of emergency and security management focused on the private sector. This specialty works to ensure continuous business operations before, during, and after disasters or other normal disruptions. It is designed to provide strategies tied to national and international standards for the development of detailed business continuity plans. Students will discuss managing disruptions, maintaining continuity of critical operations, and mitigating losses that occur when interrupted. Based on the all-hazard framework, students will learn about the current threats, including political instability and cyber attacks. Regardless of the impetus for such disruptive events, students will be prepared to train employees to both mitigate and recover from such events. Students will also discuss best practices in the ongoing recovery efforts after an event.

ESSC 6014 Corporate Security (3)
The intent of this course is to give students an overview of the varied objectives and duties associated with Corporate Security. The goal is to present the multiple levels, tasks and duties associated with Corporate Security as it applies to a U.S. based corporation, relative to employee safety and security as well as what is known as Executive Protection, and offering insight into the different career opportunities associated with this line of work.

ESSC 6015 Financial Institution Security (3)
This course introduces the theory of providing security for financial institutions. Financial institution security refers to the various security measures for the purpose of protecting life and property, protecting the confidentiality of critical data and information and other financial assets. The course also reviews laws and regulations that guide security practices such as those promulgated by the Federal Trade Commission (FTC) and its Safeguards Rule amongst many other designs. This class will analyze the basics of this industry and review practical approaches to protecting them against threats such as theft, both internal and external, vandalism, data center security, cyber-crimes and fraud. Topics include the value of conducting security audits, conducting a business impact analysis, implementing security systems and interfacing with the public.

ESSC 6016 Leadership in Emergency and Security Management (3)
Emergency and Security management practitioners must use leadership and influence effectively to lead organizations and their community in planning for, preventing, and responding to emergencies. This type of leadership encompasses vision, direction, coordination, and motivation toward achieving emergency management goals. Leadership skills are necessary whether dealing with senior agency officials, emergency management partners, or the public. A lack of leadership during an emergency can result in the loss of life, property, and the public trust. This course will expose students to the major factors, theories, and strategies for leadership, influence, and decision making. The traits, skills, and behaviors of effective leaders will also be discussed.

ESSC 6017 Sport/Event Security and Response (3)
This course provides an overview of security planning, risk assessment methodologies, and emergency response considerations for sport and special events. Students will learn how to identify threats and vulnerabilities, analyze and mitigate risk, and harden events and venues through security countermeasure proposals and emergency response/recovery initiatives.

ESSC 6018 Approaches to Counter Terrorism (3)
Students will employ critical analysis to examine key policy issues and balances that must be addressed in strategic counterterrorism planning, particularly in the use of applied technology within the context of civil jurisdiction and rule of law. The course will examine terrorist threats to the homeland and how these threats can be met by the application of science and technology. Policy issues that address the balance between security and civil liberties that must be resolved to effectively counter terrorism will be discussed. These issues will be addressed from the governance perspective of a liberal democracy. Strategic planning principles that integrate capabilities of current and future applied technology and the key legal and policy issues that must be resolved in order to make effective use of information as balanced against civil liberties will be explored as well.

ESSC 7001 Cyber Threats and Homeland Security (3)
This course takes an in-depth look at cyber threats in relation to personal, organizational, economic and national security. Students will apply their understanding of the variety and nature of cyber threats from the perspective of a cybersecurity manager by gaining an understanding of the commercial and national security cross-threats posed by hackers. This includes studying the impact and relationship of digital espionage, cyber war, cyber terrorism, computer hacking, viruses, communications eavesdropping, forgery, and disruption to information flow to the enterprise. The course also covers legal challenges to national policies for securing cyberspace and their relationship to, and impact on, privacy and civil liberties.

ESSC 7002 Intelligence Research, Methods & Analysis (3)
This course presents students with an analysis of how intelligence is collected and processed and how the resulting estimates contribute to the formation of national policy and homeland security. This course examines the collaborative process of intelligence analysis and is designed to provide students the tools, framework and concepts required to develop leadership skills through understanding how the synthesis and utilization of intelligence impacts decision making in tactical, operational and strategic settings within the framework of the principles of all hazards preparedness. Students will gain an understanding of the history and fundamental concepts of intelligence-gathering and analysis. In addition to tracing the development of intelligence organizations, it examines both the disciplines of intelligence (signals intelligence and espionage, for example) and its products. Case studies will be employed to illustrate enduring issues or problems in the study of intelligence.

ESSC 7003 Human Intelligence & Counter Intelligence (3)
A course that explores the world of espionage, its importance in world history, the psychology behind the recruitment of human sources, the nature of clandestine operations, and the principals involved in counterintelligence. The course includes a wide range of historical case studies and an examination of the potential future role of espionage in an increasingly unstable and dangerous world.

Prerequisite(s): ESSC 7002.

ESSC 7004 Narco-Terrorism (3)
This course will expose the narcotics nexus to terrorist organizations and how they affect the United States and foreign terrorist organizations threatening within our borders. A recommended proactive approach to terrorism investigations in all communities will be illustrated with an emphasis on drug-related issues. These tactics can be carried out by any law enforcement officer and will be successful in the fight against terrorism affecting the United States on the mainland. Foreign terrorist organizations such as Al Qaeda, Hamas, Hezbollah, ARC, domestic terrorist organizations, and localized (U.S) narco-terrorists will be discussed. Identifying and investigating terrorist cells in the United States is the main focus of this course. Every type of U.S. law enforcement officer will be shown how to use these methods to fight against terrorism within our borders.

ESSC 7005 Domestic and International Terrorism (3)
The course will provide insight and analysis into the ideology, structure, financing, and driving forces behind terrorist individuals and groups inside the United States (homegrown) and international (foreign) groups. The course will offer a critical analysis of the governmental response to the war on terrorism, including contemporary models of counterterrorism. Students will also explore the published works of leading thinkers regarding the concept of terrorism and will discuss and analyze the goals, motivational factors, targets, and tactics of terrorist organizations regardless of ideology. Additionally, students will learn techniques for evaluating vulnerability to all forms of attack, as well as the threat terrorism poses to modern society, while staying abreast of the current roles, and responsibilities of all levels of government agencies in countering terrorism.

ESSC 7006 Maritime and Border Security (3)
This course will examine key policy issues and balances that must be addressed in all aspects of Maritime Homeland Security. The current paradigm of security on the world's waterways and in the ports of the United States is one of overlapping layers of security. Each layer is specific to a particular port, commodity, state government, governmental agency, maritime classification society, and other maritime agencies, shipping routes, intermodal transportation nodes and shipping methods and end user requirements. It is this intricate and overlapping series of security measures that provides protection and security within the maritime transportation infrastructure against a wide variety of threats.

ESSC 7007 Human Trafficking & Smuggling (3)
Course

ESSC 7008 Public-Private Partnerships (3)
As communities prepare and respond to events that are more extreme, complex and frequent, it is clear that all resources have to be utilized to ensure resilience. The development of public and private partnerships provides resources in many forms to address these needs. In this course, students gain knowledge of the importance of these partnerships in the planning process. They will learn approaches to team and partnership building utilizing gap analysis to bring these partnerships together. They will incorporate and apply the elements of communication and information sharing, leadership and social responsibility through case studies. Finally, they will describe employment of systems analysis to evaluate partnerships.

ESSC 7009 Transportation and Border Security (3)
This course closely examines the complexities of protecting the borders of the United States and ensuring the safety and security of the U.S. transportation system, including intermodal connections. Fundamentally, the course considers the relationship between security and the need to maintain supply chain flow and how certain strategic approaches can buy down risk. The course also analyzes the changes in security arrangements from pre- to post-9/11 policies, relative to border and transportation security, with a synthesis of the organization of the U.S. Department of Homeland Security and national policy processes. In so doing, the course assesses the inadequacies of extant national strategies and implementing plans that address the spectrum of policies involving protection, detection, deterrence, defense, recovery and reconstitution of border and transportation systems. Issues concerning border and transportation security are inextricably linked with global security policies affecting the international supply chain and the cross-border transportation of goods and passengers. Therefore, class discussions and readings will examine the international framework and context of border and transportation security policies.

ESSC 7010 Homeland Security: The National Challenge (3)
The goal of this course is to explore the published works of leading thinkers regarding the evolving nature of Homeland Security and assist students with the tools and resources necessary to gain an understanding of the principles prescribed. Students will learn techniques oriented toward understanding the threats posed to modern society, while staying abreast of the current and future roles and responsibilities of all levels of government agencies in countering threats from the prospective of all hazards preparedness. The political, economic, and practical issues of implementation are thoroughly examined. The course will examine responses to the terrorist threat as well as natural and manmade disasters to include public policy legislation and documents, such as national security strategies, homeland security decision directives, the National Response Framework and National Incident Management System. An overview of the history of The Department of Homeland Security model of planning, protecting, responding, and recovering from a natural disaster and terrorist attack is analyzed. This course provides an overview of Terrorism, Homeland Security, and risk assessment methodologies. Students will learn how to identify vulnerabilities, analyze and mitigate risk, and harden critical infrastructure sites through countermeasure proposals. This course also includes an examination of the basic legislation and operations of the U.S. Department of Homeland Security and its role in protecting the United States by detecting, deterring, preventing, and responding to potential threats, current and future.

ESSC 7011 Law and National Security (3)
This course will survey and explore domestic laws (constitutional, statutory, and regulatory), executive branch decisions and many of their corresponding judicial interpretations that authorize, expand or constrain the U.S. government's pursuit of its national security policy objectives. This course is organized into four categories: (I) the foundations of U.S. national security powers, (II) the use of force abroad, (III)intelligence gathering and (IV)detaining, interrogating and prosecuting terrorist suspects. This graduate-level course is conducted as a lecture class and in seminar fashion with an emphasis on encouraging and incorporating robust dialogue, engagement and sharing of insights and ideas, integrating and correlating assigned course readings and selected media resources with real world events. Students should expect to acquire a substantive understanding of the balance of liberty and security struck by the executive, legislative and judicial branches to combat threats to the homeland. Course may be repeated unlimited times for credit.

ESSC 7012 Defense Support to Civilian Authority (3)
It is vital for emergency managers at every jurisdictional level to possess a rudimentary understanding (at a minimum) of military resources; their capabilities and limitations; and, how to access and integrate them in their respective jurisdiction's disaster response and recovery operations. Without this understanding, there are significant risks of missed opportunities to save lives mitigate human suffering, and mitigate significant property and/or environmental damage.

ESSC 7013 Information Operations and Open Source Intelligence (3)
This course explores Information Operations and the increasing role it plays in military, political, and international affairs. It provides a detailed understanding of the history, tools, and methods employed by U.S. and its adversaries to influence the thinking of target audiences, including the role cyber plays in enabling its transmission and feedback. The course examines these operations from the military, civilian, business, and internet paradigms, as well as the continuous information collection of individuals by governments and corporations. Additionally, this course will provide an understanding of Information Operations at all levels of implementation, including strategic communication and public diplomacy. The course also provides students an understanding of the importance of and how to analyze Open-Source Intelligence (OSINT). Students will apply their knowledge of Information Operations to the analysis of open-source materials to better prepare them to develop assessments of the validity, perspective, and accuracy of such reports.

Prerequisite(s): ESSC 6006.

ESSC 7014 Ethics in OSINT (3)
This course will provide an intellectual framework for students to discuss the moral implications and understand the foundations of the use of ethics in Open Source Intelligence during its collection, analysis, intelligence use, and practices.

ESSC 7015 Open Source Collection and Techniques (3)
This course will provide students with an overview of the fundamentals and most effective methodologies used by Open Source Intelligence analysts to collect data from various publicly available information.

ESSC 7016 Open Source Information Analysis (3)
This course will provide students with the most effective methodologies used by Open Source Intelligence professionals to analyze publicaly available information in developing highly detailed intelligence products.

ESSC 7200 Special Topics (3)
Special Topics in Homeland Security Studies.

Maximum Hours: 99

ESSC 7501 Independent Study (1-3)
Independent study in Homeland Security Studies.

Maximum Hours: 99

ESSC 7900 Capstone (3)
This course synthesizes the full range of knowledge, skills, and abilities students developed over the entirety of their homeland security studies. Students will integrate and apply key concepts through a community based project, developing a proposal and conducting this project at a public or non-profit sector entity. At the end of the semester, the project will be presented both to the chosen organization and their class colleagues. Students will integrate critical decision making skills with a unique and local hands-on learning experience. A written report documenting all aspects of the project will be presented for faculty approval.

Enrollment limited to students in the Emergency Security Studies department.

ESSC 7940 Transfer Coursework (3)

Maximum Hours: 99

ESSC 7941 Transfer Coursework (3)

Maximum Hours: 99

Energy (ENRG)

ENRG 4100 Energy Markets, Economics, and Policy (3)
The course covers a range of energy-related topics including major challenges and policy issues facing the industry and the energy transition underway. The course includes learning energy business models across the spectrum of conventional and renewable energy production, energy economics, the energy policy environment, energy markets, energy technology, and the environment and sustainable development. Students complete group projects including a business case supported debate on high profile energy policies and an individual paper on the future energy systems. The course prepares students to take additional energy business courses to be able to obtain an energy specialization to select undergraduate degrees. Sophomore Standing or Above.

Prerequisite(s): ECON 1020.

ENRG 4110 Energy Financial Modeling (3)
This course makes the connection between learning textbook finance principles and doing real-world valuations and modeling on public companies. The applications are particularly appropriate in equity research, buy side (hedge fund) financial modeling and investment banking. The course focuses on applications in the energy industry, with an emphasis on financial modeling of renewable energy companies (solar industry), energy transition (electric vehicle) companies, as well as traditional energy companies (oil and gas exploration and production). The course focuses on generating pro-forma financial statements and discounted cash flow valuations using excel based spreadsheets. Class members will generate their own financial models and the professor will guide each student, step-by-step, through the models, showing how they can be best approached in Excel. While the course focuses on the energy industry, its focus on the growth area of the energy transition has should help students to also analyze other growth oriented industries or companies. The traditional energy portion is applicable to other cyclical industries such as mining or metals. Students must have a good grasp of Excel before taking this class.

Prerequisite(s): MGSC 3010 and FINE 3010*.
* May be taken concurrently.

ENRG 4150 Electric Vehicles and the Supply Chain (3)
The course covers the businesses, economics, policies, and technologies enabling the electrification of various modes of transportation—road, railroad, marine, air. Sub-segments within each of these modes are adopting electric drivetrains at varying speeds. Currently in the US, transportation accounts for C. 25% of energy consumption and is over 90% fueled by petroleum as its primary energy source. The transition from internal combustion to electric drivetrains is not only capital intensive, but also involves building and scaling new supply chains involving various critical minerals spanning geopolitically sensitive regions of the world. The automotive industry intercepts a wide range of industries—batteries; chemicals and materials; electrical, electronic and mechanical components and parts; engines; fuels; semiconductors; software; among many others such as dealerships, insurance and other service providers—and are subject to several disruptive forces. The pathways legacy players and new entrants take to be aligned with their stakeholders' (communities, consumers, employees, investors, policymakers, etc.) expectations will involve numerous tradeoffs to arrive at good business decisions and investments. The supply chain will likely see a fair number of mergers and acquisitions in the near-term.

Prerequisite(s): FINE 3010.

ENRG 4200 Energy Fundamentals and Trading (3)
The course will cover the fundamentals of renewable and conventional energy production, transportation, processing, power, and the related marketing and trading activities. Structure of physical and financial markets, risk management practices, and portfolio modeling will be covered. The course will cover how the energy markets have evolved as more U.S. federal and local government incentives and mandates have increased the demand of renewable energy sources such as wind, solar, and biomass. The course will include interactive trading in the Freeman School's state-of-the-art trading room, which will focus on the futures market of the New York Mercantile Exchange (NYMEX) to test student-developed trading strategies, mark-to-market models, and risk management tactics used in today's fast-paced energy trading environment. Junior Standing or Above.

Prerequisite(s): MGSC 3010 and FINE 3010.

ENRG 4410 Special Topics (1-3)
This course is based on Industry Projects and gives undergraduate juniors and seniors the opportunity to learn first-hand about the energy industry by participating in a company-sponsored project. During the course, students will work in teams to analyze and research an industry issue, topic or company and prepare a written project report and accompanying presentation. Research material may include company-provided proprietary data which requires students to sign non-disclosure agreements. The final presentation, project reports and case analyses will be judged by both project sponsors and faculty. Students will be assigned to a team to work together on a project which will be their focus throughout the semester. Weekly progress meetings will allow faculty and sponsors to track the progress of the individual projects and allow the students to make "midcourse" corrections.

Prerequisite(s): ECON 1010 and ENRG 4100*.
* May be taken concurrently.

ENRG 4610 Energy Trends: Electric Power Markets (3)
This course covers the fundamental concepts necessary to maintain and operate an efficient, wholesale electric power market. Through in-class simulations, students will apply concepts from operations management, economics, risk management and negotiations to manage physical and financial power portfolios. Lecture topics will include deregulation/industry segmentation, security constrained economic dispatch (including unit commitment and scheduling), locational marginal pricing, resource development (including traditional thermal and renewable resources), and contract negotiation. Instructor-led case studies will review historic successes and failures of deregulated energy firms. Successful completion of this course will provide students with a firm understanding of electric power market operations and portfolio management.

Prerequisite(s): ECON 1010 and FINE 3010 and (ENRG 4100, 4110 or 4120).

ENRG 4710 Energy Portfolio Management (3)
This course teaches students how to select and analyze companies in the Energy sector and use this knowledge to study and build investment portfolios of energy assets (an Energy sector fund). After taking this course, students should be able to apply to Energy stocks the same key investment concepts and theories that asset management professionals use. Students wil learn how professional equity analysts value energy companies; be able to accurately calculate and interpret key quantitative values and evaluate energy assets; apply stock selection criteria to identify investments suitable for an energy sector fund; study and build portfolios using different energy assets and investment styles; and evaluate portfolios against benchmarks and other metrics, including expected return, risk, and other financial measures.

Prerequisite(s): FINE 4110 and 4120.

ENRG 4730 Energy Investment Banking (3)
Energy Investment Banking is designed for students who wish to learn about the concepts and practice the methodologies of investment banking with companies in the energy industry. The course builds on the core finance topics covered in Financial Management and covers financial analysis and modeling, valuation, capital raising in the public markets including initial public offerings and bond financings, private placements of debt and equity securities, mergers, acquisitions, and financial advisory services. Students will apply their newly acquired knowledge in practical assignments and presentations that utilize information from publicly traded energy companies operating in a variety of industry segments including renewables, storage, exploration and production, oilfield services, utilities, transportation, and others.

Prerequisite(s): FINE 3010 and MGSC 3010.

ENRG 4840 Energy Industry Projects (3)
Students work in teams on energy projects sponsored by energy industry companies. Each team is expected to analyze and research the energy industry issue, topic, or problem and to prepare a written project report and presentation. The analysis done on the project will demonstrate student ability to digest a great amount of information that needs to then be analyzed and used to create a deliverable that will meet the parameters and goals laid out by the project sponsor. These same project sponsors and faculty will evaluate the final project reports.

ENRG 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): ENRG 4411.

Maximum Hours: 99

ENRG 4910 Independent Study (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENRG 5380 Business Study Abroad - ENRG (1-20)

ENRG 5390 Business Study Abroad - ENRG (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENRG 7000 Introduction to Energy Markets and Policy (3)
This course serves as the baseline for the Master of Management in Energy degree and introduces multiple aspects of the domestic and international energy industry. The course covers energy fundamentals as well as the business structure for energy production, transportation, and ultimate consumption. Specific energy sources include conventional and unconventional oil and gas resources as well as renewables, such as wind, solar, and hydroelectric. Field trips to multiple energy facilities and plants in the area are integral to the course. This course takes the place of ENRG 7100 for MME students; therefore, ENRG 7100 cannot be taken as an elective for MMEs.

ENRG 7100 Energy Markets, Institutions & Policy (3)
The course covers a range of energy-related topics including major challenges and policy issues facing the industry and the energy transition underway. The course includes learning energy business models across the spectrum of conventional and renewable energy production, energy economics, the energy policy environment, energy markets, energy technology, and the environment and sustainable development. Students complete group projects including a business case supported debate on high profile energy policies and an individual paper on the future energy systems.

ENRG 7110 Energy Modeling (3)
This course makes the connection between learning textbook finance principles and doing real-world valuations and modeling on public companies. The applications are particularly appropriate in equity research, buy side (hedge fund) financial modeling and investment banking. The course focuses on applications in the energy industry, with an emphasis on financial modeling of renewable energy companies (solar industry), energy transition (electric vehicle) companies, as well as traditional energy companies (oil and gas exploration and production). The course focuses on generating pro-forma financial statements and discounted cash flow valuations using excel based spreadsheets. Class members will generate their own financial models and the professor will guide each student, step-by-step, through the models, showing how they can be best approached in Excel. While the course focuses on energy industry, its focus on the growth area of the energy transition should help students to also analyze other growth-oriented industries or companies. The traditional energy portion is applicable to other cyclical industries such as mining or metals. Students must have a good grasp of Excel before taking this class.

Prerequisite(s): ENRG 7000, FINE 6020, 6030 or 6050.

ENRG 7120 Energy Data Analysis (3)
This course emphasizes the analysis of different forms of quantitative data in energy markets, energy production, demand, and supply. The course introduces various interpretive analytic approaches, explores their uses, and guides students in applying them to energy data. The danger of using quantitative methods lies in the lack of fundamental understanding of the justification for the use of a procedure, how to use it correctly, and how to properly interpret results. This course addresses these pitfalls. The course covers the process of extracting meaning from data to support evaluation and decision making by using modern spreadsheet technology such as Microsoft Excel. The class explores data sets from Thomson Reuters and LIM and covers their key technical charting tools, employs statistical thinking to provide understanding of the variation in data, and draws insights into relationships that may exist among underlying factors. The course also covers the basics of cash flow analysis and introduces the elements of financial data interpretation.

Prerequisite(s): ENRG 7000.

ENRG 7130 Energy & Environmental Economics (3)
In this course, students apply analytical skills to solving problems in energy markets and environmental issues. Students will address business and public policy issues involved in the oil, natural gas, and electric industries including renewable and demand-side resources. Students will analyze capital intensive investment decisions in an era of uncertainty using the At Risk modeling tool. This allows analysts to compute the probability of success of a large investment decision and to identify the key sources of risks that need to be mitigated. Students will study how negative externalities in energy industries are mitigated through regulations. Positive externalities are also studied from the network effects which are the basis of many platform companies. This course is designed to apply micro- and macro-economic principles used in the Chartered Financial Analyst (CFA) Level 1 exam.

Prerequisite(s): ENRG 7000, FINE 6010, 6060 or 6470.

ENRG 7150 Electric Vehicles and the Supply Chain (3)
The course covers the businesses, economics, policies, and technologies enabling the electrification of various modes of transportation—road, railroad, marine, air. Sub-segments within each of these modes are adopting electric drivetrains at varying speeds. Currently in the US, transportation accounts for C. 25% of energy consumption and is over 90% fueled by petroleum as its primary energy source. The transition from internal combustion to electric drivetrains is not only capital intensive, but also involves building and scaling new supply chains involving various critical minerals spanning geopolitically sensitive regions of the world. The automotive industry intercepts a wide range of industries—batteries; chemicals and materials; electrical, electronic and mechanical components and parts; engines; fuels; semiconductors; software; among many others such as dealerships, insurance and other service providers—and are subject to several disruptive forces. The pathways legacy players and new entrants take to be aligned with their stakeholders' (communities, consumers, employees, investors, policymakers, etc.) expectations will involve numerous tradeoffs to arrive at good business decisions and investments. The supply chain will likely see a fair number of mergers and acquisitions in the near-term.

Prerequisite(s): ENRG 7000, 7100, FINE 6010, 6060 or 6470.

ENRG 7200 Energy Fundamentals & Trading (3,4)
The course will cover the fundamentals of renewable and conventional energy production, transportation, processing, power, storage, and the related marketing and trading activities. Structure of physical and financial markets, risk management practices, and portfolio modeling will be covered. The course will cover how the energy markets have evolved as more U.S. federal and local government incentives and mandates have increased the demand of renewable energy sources such as wind, solar, and biomass. The course will include interactive trading in the Freeman School's state-of-the-art trading room, which will focus on the futures market of the Chicago Mercantile Exchange (CME) to test student-developed trading strategies, mark-to-market models, and risk management tactics used in today's fast-paced energy trading environment.

ENRG 7220 Energy Accounting & Financing (3)
This course covers the fundamentals of the oil and natural gas exploration and production process (E&P or upstream) and the key financial decisions and metrics. The various operational steps and related financial decisions are followed through to their ultimate impact to a public E&P company's external financial statements. Students are able to understand the immediate impact of various decisions on a company's cash and non-cash financial performance which in turn lead to future financial and operational flexibility and success.

ENRG 7310 Adv Energy Trading & Finance (3)
The course covers advanced energy trading techniques, including technical analysis, electronic trading algorithms, and the trading of energy derivatives. In addition, the course considers the use of energy derivatives in the area of energy finance, valuations, planning, credit and risk management, and interactive trading in the school's state-of-the-art trading facility.

ENRG 7500 Energy Risk Management (3)
The course begins with an introduction to the primary participants in the energy (and commodities) sphere; upstream producers, market-makers/marketers, brokers, and downstream consumers and processors, and how they prioritize risks. The course addresses the qualitative as well as the quantitative aspects of a broad range of physical and financial risk factors. These risks include pricing, corporate compliance and public reporting requirements, transportation issues, environmental obligations, management of emission allowance, renewable energy, and carbon credits portfolios. Further topics include the understanding and use of VAR models and environmental/climate change considerations. Guest speakers from the industry will provide current real-life insights. Quantitative aspects of the course include trading techniques for both physical commodities and financial instruments, including basis trading, swaps, cross commodity hedging, and the trading of various option derivative structures. The course addresses the application of energy derivatives in the areas of finance, planning, credit and risk management for energy producers and consumers. After discussing in detail how and why options are used by energy traders/consumers/producers, the course concludes with a multi-week trading exercise. In this exercise, students trade a paper portfolio of energy equities, commodities, and options.

Prerequisite(s): ENRG 7110, FINE 6020 or 6030.

ENRG 7610 Energy Trading: Wholesale Electric Markets (3)
This course covers the fundamental concepts necessary to maintain and operate an efficient wholesale electric power market. Through in-class simulations, students will apply concepts from operations management, economics, risk management, and negotiations to manage physical and financial power portfolios. Lecture topics will include deregulation/industry segmentation, security constrained economic dispatch (including unit commitment and scheduling), locational marginal pricing, resource development (including traditional thermal and renewable resources), and contract negotiation. Instructor-led case studies will review historic successes and failures of deregulated energy firms. Successful completion of this course will provide students with a firm understanding of electric power market operations and portfolio management.

ENRG 7730 Energy Investment Banking (3)
Energy Investment Banking is intended for students who wish to be introduced to, to learn about, and to implement the concepts and methodologies of energy investment banking as currently practiced in the investment banking industry. It builds on the core finance topics covered in financial management. Corporate financial strategy will be covered in the context of capital raising alternatives available to actual E&P and oilfield services companies operating in the energy industry. Concepts and methods of valuing energy companies and analyzing, proposing, and completing financing for energy companies will be covered. The financings that will be examined and thoroughly discussed include initial public offerings, follow-on equity offerings, merger and acquisition engagements, long-term debt issuance, and strategic financial advisory services. Students will be required to develop, present, and discuss financing alternatives for selected companies operating in the energy space.

Prerequisite(s): ENRG 7000, FINE 6020, 6030 or 6050.

ENRG 7830 Energy Regulation (3)
This course covers a range of energy regulation related topics including major challenges and policy issues facing the industry, the history of the industry, energy economics, energy regulatory environment, energy markets, energy technology, and sustainable development.

ENRG 7840 Energy Industry Projects (3)
Students work in teams on energy projects sponsored by energy industry companies. Each team is expected to analyze and research the energy industry issue, topic, or problem and to prepare a written project report and presentation. The analysis done on the project will demonstrate application of skills and knowledge developed in prior coursework. Project sponsors and faculty evaluate the final project reports.

Prerequisite(s): ENRG 7000 or 7100.

ENRG 7850 Renewable & Electric Power Mkt (3)
This seminar-style course provides an in-depth analysis of the wholesale power markets and how the demand for renewables is changing the way the industry operates. Students will analyze key models used in the power sector. These include models of load forecasting, power dispatch with renewables, rate design, and regulatory strategies. Students will gain an understanding of the various ISO/RTO wholesale markets and how changing market rules affect wholesale market performance. Students will also research the current challenges and opportunities for sustainable development in energy use and present case studies in class.

ENRG 7860 Renewable Energy Project Development & Finance (3)
This seminar provides a practical introduction to the concepts and analytical frameworks currently utilized in project finance. The course will focus on the renewable energy sub-sector, which is the fastest-growing segment of project finance and is the area with the most numerous current investment opportunities. The course takes a hands-on approach, exposing students wherever possible to real-world investment scenarios and issues confronting practitioners in the sector.

Prerequisite(s): ENRG 7000, FINE 6020, 6030 or 6050.

ENRG 7960 Independent Study (1-3)
Independent study: Energy.

ENRG 8010 Energy Economics and Markets (3)
This course discusses global and national markets for oil, natural gas, coal, and renewable energy; examines public policies affecting energy markets including taxation, price regulation and deregulation, and investigates energy efficiency and energy security. Its objective is to help students to develop an understanding of the underlying economics of energy demand, energy supply, energy market structure, energy price mechanisms, and the relationships among energy and politics.

ENRG 8020 Economics of Energy, Env & Mkt (3)
The curriculum is aimed to enable students to systematically grasp basic concepts, basic principles and basic analysis methods of climate economics, environmental economics, and energy economics. Keep abreast of the latest developments and major research directions in the current economics on energy, environment and climate change, new ideas, new methods and new dynamics in various relevant directions; develop the ability to solve practical problems to some extent, and lay a solid foundation for future research and innovation in the field of energy and environmental management.

ENRG 8030 China Enrg System & Transition (3)
This course aims to help students understand the changing trends of the energy sector, the transformation of the energy system and the logic of the evolution of China's energy system by learning basic concepts, theories and methods of energy transition and energy systems. It also aims to provide the “big energy” system thinking and analytical framework for students to understand the trends of China's energy industry in the process of technological change and energy transition.

Energy Law (ERGL)

ERGL 5800 Dispute Resolution (2)
This course is designed to expose students to a variety of alternative (to litigation) dispute resolution mechanisms. These include mediation, administrative conciliation, and arbitration. Students will be instructed both in the legal doctrines governing the manner in which these mechanisms are implemented and enforced as well as the skills attendant to participation as a party to one or more of these mechanisms. Particular focus will be put on instructing students in the preparation and participation in these alternative mechanisms. This will be accomplished through drafting of documents and participation in simulated exercises.

ERGL 6000 Energy Law Regulation & Policy (3)
This course introduces students to the general field of energy law. It begins with an overview of the global energy situation in terms of supply and demand as well as balanced projections for the coming decades both in the U.S. and abroad. It then will proceed to examine the primary sources of energy along with the multi-faceted role of electricity as the central source of secondary energy in our economy. This portion of the course will offer a survey view of how these energy sources are used and regulated from economic, reliability, and environmental perspectives. This will include an overview of legal and regulatory principles governing fossil fuel extraction and use, the coal industry, nuclear power, a range of renewable energy sources, and finally the regulation of electricity generation, transmission, and distribution. The course will conclude with a brief review of the growing role of conservation and climate change in energy markets here and to some extent abroad

ERGL 6100 Clean Air Law (2)
This course will expand on the materials introduced in the Environmental Law, Regulation and Policy Survey from Term 2 relative to water pollution. The focus of this course will be a comprehensive and detailed examination of the content of the federal Clear Air Act and the role of the federal Environmental Protection Agency in interpreting, applying, and enforcing the terms of this statute. But as there is also a large body of state and local regulation of air pollution, students will also be exposed to the issues addressed by this legislation and their methods of enforcement. Attention will also be given to drafting or amending emissions standards, greenhouse gas regulation, and environmental justice issues.

ERGL 6150 Clean Water Law (2)
This course will cover the role and influence of the legal system on the use, allocation, and steward-ship of water resources in the United States. Since the field of water resources management is rapidly evolving to accommodate storm protection, ecosystem restoration and sea level rise an understanding of the policies that underlay our current laws and the factors that are influencing current policy and lawmaking will be an important part of the course's focus. Students will be required to participate in one group project in which they will be asked to develop, present and defend a position paper on some aspect of the water resources management challenges arising in a coastal region of the United States.

ERGL 6200 Law & Climate Change (2)
This course will examine legal efforts to address climate change, both at the national and international level. It will include detailed examination of the 1992 United Nations Framework Convention on Climate Change and the Kyoto Protocol and the extent to which these policies have been adopted in the U.S. at the national and local levels. Attention will also be given to non-statutory responses in the U.S. to the addressing climate change including judicial decisions that have attempted to mitigate the effects of climate change. Among the specific aspects of climate change that will be examined are coastline impact, auto emissions, greenhouse gas emissions, limitations on fossil fuel development and utilization, and human rights issues including environmental justice. Students will be asked to develop climate change policies and assess the U.S. response to the global impact of climate change.

ERGL 6250 Federal Regulation of Electric Public Utilities (3)
This course provides an overview of the Federal Power Act (FPA) and the agency charged with its implementation, the Federal Energy Regulatory Commission (FERC). Students will learn how "electric public utilities" are defined under the FPA, and which of their activities are regulated by the federal government under the FPA. They will also learn the rules that govern FERC's regulation of various utility activities, from rates and services to mergers and acquisitions. Students will explore the differences between types of public utilities (including independent power providers, regional transmission organizations, and vertically integrated utilities). The course will also address FERC's policymaking procedures and will include a discussion of ongoing public policy initiatives. Please note that the course does not cover the Natural Gas Act (gas pipelines and related facilities) or the Interstate Commerce Act (oil pipelines).

ERGL 6360 Alternative Energy Source (3)
This course will expand on the materials briefly examined in the introductory Energy Law, Regulation and Policy Survey course taught in Term 1. This course will provide a more detailed and comprehensive examination of the legal issues and legal rules and regulations relevant to the development and utilization of alternative energy sources. It will also examine the calculations that business do and should undertake in determining whether or not to invest in these sources. It will also examine the policy issues underlying governmental decision making concerning the encouragement of developing alternative energy sources.

ERGL 6400 Intro Leg Study Rsh & Writing (2)
This foundational course introduces students to sources and functions of law in our society relating to energy law. The course begins with an overview of the American legal system and sources of law and introduces students to statutory interpretation and plain language analysis. In Legal Analysis I, students will learn to read and interpret statutory law and regulations, read and brief cases, and develop basic legal writing and analysis skills. Students will also learn to find and research legal information through multiple short research assignments focusing on energy law issues. Through multiple short writing assignments such as a case brief, an IRAC essay analyzing a statutory issue, and an e-memo interpreting statutory & regulatory law relating to an energy law topic, students learn to apply statutes and regulations to analyze legal issues relating to energy law.

ERGL 6401 Int Leg Study Rsh & Writing II (2)
This course builds on Legal Analysis I to introduce students to the relationship between enacted & administrative law and common law. The course continues instruction on legal research methods in finding and analyzing cases and common law. Students learn to read and synthesize multiple cases and learn analogical and policy-based reasoning. Through multiple short writing assignments, such as an e-memo analyzing a statutory issue in the context of a litigated issue arising out of administrative enforcement action, students learn to apply statutes, regulations, administrative materials, and case law to analyze complex legal issues relating to energy law.

ERGL 6500 Natural Resources Law (3)
This course will expand on then materials introduced in the Environmental Law, Regulation and Policy Survey course from Term 2. It will begin by examining the definition of natural resources and then examine such issues as alternative methods of conservation, preservation, the public trust doctrine, relative merits of private ownership versus governmental regulation of common areas, fragmentation, riparianism, threatened species, and bioregionalism. Special attention will be given to the National Environmental Policy Act, the Endangered Species Act, the Forest Service Organic Act, and the property and takings clauses of the U.S. Constitution.

ERGL 6510 Administrative Law (3)
The course explores the history, present status, and nature of administrative agencies. The main emphasis is placed on administrative procedure, contrasting it with the judicial process, as well as constitutional limits on administrative action and the due process rights of persons who are adversely affected by agency action. Topics covered will include delegation of powers, the law of judicial review of agency actions, and procedural requirements of administrative rulemaking and adjudication.

ERGL 6520 Fossil Fuel: Reg & Development (3)
This course will expand on the materials introduced in the Energy Law, Regulation and Policy Survey course taught in Term 1. It will examine the various statutory and administrative regulations of fossil fuel, business concepts relevant to the continued development of fossil fuel sources, as well as other issues arising out of the development and utilization of fossil fuel including environmental impact, human rights concerns, racial injustice considerations, impact on forest ecosystems, alternative methods of obtaining fossil fuels, and the acquisition and retention of permits.

ERGL 6535 Utility Vegetation Management (2)
This course will encourage broad thinking into the nature and purpose of utilities and will overlay this with an understanding of the driving forces behind the protection and enhancement of the natural environment. We will investigate the failures and successes of laws and policies that have influenced the establishment of one of the most ambitious public works projects ever attempted, as well as some of the most significant disasters in American history. In addition to learning the advantages and shortcomings of current and historic law, regulation and policy, students will also learn how to investigate and prepare for a mass tort action and to understand the underpinnings of corporate criminal liability for personal injury, death, property damage and environmental crimes. Students will also cover the basis for safety law, policy and practice in the context of one of America's most lethal professions. The importance of nature, and particularly trees, to society and the economy will also be reviewed, particularly in connection with the disparate impacts on communities of different economic levels (energy justice and environmental justice). The study will include the practical role of administrative proceedings and procedures, including permitting.

Prerequisite(s): EVRL 6000 or ERGL 6000.

ERGL 6990 Capstone Course (3)
This course will require the students to draw upon the knowledge and skills learned in the previously taken courses by applying that knowledge and technique to four separate projects. Three of these projects will require the student to prepare a detailed paper consisting of a position statement in response to energy law-based administrative enforcement inquiry, documentation relevant to participation in a mediation or arbitration of an energy law-based dispute, a business plan for the development of an alternative energy source. Two of these projects will be done an individual basis. The third will be a collaborative effort by members of a team assigned by the instructor. The fourth project will consist of participation in the negotiation of, and subsequent drafting of, a contract between commercial entities in the energy industry.

ERGL 9000 Immersion Weekend (0)
All students enrolled in the online MJ program must attend one EIW to be eligible to receive the Masters degree. Students are welcome to attend more than the one EIW session. Each session is composed of two days of academic and other programming at the Law School during the summer. The EIW is designed to (a) supplement the online curriculum by involving students and faculty in discussion of new developments and unique other issues not addressed in the online curriculum; (2) provide students with networking opportunities by meeting their peers; (3) provide students and faculty opportunities to meet face-to-face; and (4) provide a tangible link between the students and the law school to promote their continued relationship to the school. The course is not offered for credit but attendance is required for program completion.

Engineering Physics (ENGP)

ENGP 1005 Introduction to Electronics with Lab (3)
Introductory course designed for high school students enrolled in the TSSP summer program.

ENGP 1015 Introduction to Engineering Design (3)
The objective of this courses is to introduce high school students to the product design process. Through team projects geared toward creating physical solutions for real world problems, students will be challenged to begin thinking critically and applying physical fundamentals to complex systems. Daily lectures will highlight phases of the design process, including problem identification, conceptual design, and early prototyping. Additionally students will gain experience with computer-aided design and be provided an introduction to rapid prototyping. This will be a 2 week course, and will only be open to high school students.

ENGP 1410 Statics (3)
Statics of particles and rigid bodies. Concepts of force, moments, free body diagrams, equilibrium and friction with engineering applications.

Prerequisite(s): PHYS 1310.

ENGP 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

ENGP 2010 Electric Circuits (3)
A fundamental course dealing with electric charge, current, voltage, power, energy, and passive and active circuit elements. Response of linear circuits to steady state and time dependent signals, differential equations, circuit laws, network analysis, frequency response, phasors, and transfer functions.

Prerequisite(s): PHYS 1320 and (MATH 1220 or 1310).
Corequisite(s): ENGP 2011.

ENGP 2011 Electric Circuits Lab (1)
This course is intended to provide an understanding of the basic principles of electronics, including the design and application of electronic projects to real-world objectives. The course will focus on practical application and a "hands-on" lab approach to electronics. Some computer programming will also be included.

Prerequisite(s): ENGP 2010*.
* May be taken concurrently.

ENGP 2020 Computing Concepts and Applications (4)
This course introduces students to the foundations of algorithm development and programming, the basics of matrix algebra, numerical analysis, and solving ordinary differential equations.

Corequisite(s): ENGP 2021.

ENGP 2021 Computing Concepts and Applications Lab (0)
Lab for ENGP 2020.

ENGP 2120 Thermodynamics I (3)
Concepts of energy, equilibrium, and reversibility are presented in the setting of the theoretical development of classical thermodynamics. Energy conversion cycles and elementary fluid mechanics are used to illustrate applied thermodynamics in chemical process technology. Optional co-requisite: CENG 2320.

Prerequisite(s): MATH 2210*, CHEM 1070 and PHYS 1310.
* May be taken concurrently.

ENGP 2310 Product and Experimental Design (3)
The objective of this course is to introduce students to the design process as they are starting their engineering studies. Through team projects geared toward translating bench research into product development, students will be challenged to begin thinking critically and applying physical fundamentals to complex systems. Weekly lectures will highlight phases of the design process, including problem identification, conceptual design, and early prototyping. Additionally, in the context of product and experimental design, students will gain experience with computer aided design and be provided an introduction to statistics. Course restricted to ENGP and PHYS majors, or by permission of the instructors.

Corequisite(s): ENGP 2311.

ENGP 2311 Product and Experimental Design Lab (0)
Lab section for ENGP 2310.

Corequisite(s): ENGP 2310.

ENGP 2420 Engineering Dynamics (3)
Kinematics and kinetics of particles and rigid bodies. Work-energy and impulse-momentum methods applied to particles and rigid bodies. Mechanical vibrations.

Prerequisite(s): (MATH 1220 or 1310) and ENGP 1410.

ENGP 2430 Mechanics of Materials (3)
Concepts of stress and strain. Generalized Hooke's Law. Mohr's circle. Formulations for axial, shear, bending, torsion, and combined stresses applied to tension members, pinned points, symmetric and unsymmetric beams, and shafts. Euler buckling criteria for columns.

Prerequisite(s): ENGP 1410 and (MATH 1220 or 1310).

ENGP 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENGP 2940 Transfer Course Work (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENGP 3120 Materials Science and Engineering (3)
The structure and properties of engineering materials are considered. Coverage includes basic atomic and microscopic structure, testing methods, phase relationships, and strengthening techniques. Emphasis is placed on common industrial materials. Thermodynamics and kinetics aspects of material science are discussed.

Prerequisite(s): CHEM 1070 and PHYS 1320.

ENGP 3130 Introduction to Power Systems (3)
This course is an introduction to electric power systems. It covers basic elements of power system calculations, including three phase circuit analysis, transformers, synchronous machines, and transmission lines. This course also focuses on the basic theories and numerical techniques for understanding the fundamental design of smart power grid renewable energy systems.

Prerequisite(s): ENGP 2010.

ENGP 3140 Digital Logic Systems (3)
An introduction to digital circuits, logic and system design. Topics include digital representation of information, logic circuits, combinational logic design, logic building blocks, arithmetic design, sequential logic and timing analysis, clocks and synchronization, finite state machines, and digital system design.

Prerequisite(s): ENGP 2010.

ENGP 3160 Probabilistic Systems and Signal Processing (3)
Many real-world phenomena and systems are probabilistic in nature, where the outcome of an experiment has uncertainty. Examples can be found everywhere including medical diagnosis and spread of disease, electronic devices, communication and information systems, internet traffic and social networks, gambling, financial markets, polling and elections, renewable energy, sports, etc. The modeling and analysis of probabilistic systems involve the fields of probability theory, statistics, machine learning, and statistical signal processing. This course covers the basic concepts and techniques of probability theory with application to statistics, machine learning, and statistical signal processing. Topics include probability and counting, conditional probability, Bayes rule, independence, random variables and processes, expectation and correlation, variance and covariance, conditional expectation, signal estimation, limit theorems, minimum mean square error estimation, linear estimation, and confidence intervals. Coursework includes computational problems in MATLAB with automatically generated and real data.

Prerequisite(s): (BMEN 2020 or ENGP 2020) and MATH 1220.

ENGP 3170 Computnl Physics & Engr (3)
An introduction to the use of computational methods in physics and engineering. Writing computer code and using data visualization techniques to solve experimental and theoretical problems.
Data analysis and modeling, Monte Carlo simulations, numerical differentiation and integration, ordinary and partial differential equations, electrostatics, nonlinear dynamics and chaos, fast Fourier transform, noisy signal processing, quantum spectra, thermodynamics.

Prerequisite(s): PHYS 2350 and (MATH 2210 or 2240).

ENGP 3180 Introduction to Feedback Control and Control Theory (3)
This course introduces tools for controlling systems via a feedback loop, which power the world around us – from consumer products to ecological and economic systems. The presented mathematical principles are illustrated using MATLAB and a variety of examples. No prior experience with MATLAB and programming is required. The topics covered include the control of nonlinear systems via Lyapunov theory, linearization of nonlinear dynamics, controllability and observability, the Kalman filter, transfer functions, stability, and robustness, as well as the proportional-integral-derivative controller.

Prerequisite(s): MATH 2210.

ENGP 3230 Quantum information Sci & Eng (3)
This survey course introduces students to the new world of quantum information, quantum communication, and quantum computing. The course is intended for advanced undergraduates and beginning graduate students in physics, engineering, and mathematics. Topics include: Quantum states, operators, and linear algebra; Bits and qubits; Ensembles and density operators; Unitary transformations; Gates and circuits; Information and entropy; POVM measurement; Multipartite systems; Bell inequality, Bell states, and non-locality; Measures of entanglement; Quantum communication and cryptography; Teleportation; Superdense coding; Quantum noise and error correction; Classical and quantum computational complexity; Quantum algorithms: Deutsch-Jozsa, Grover, Shor; DiVincenzo criteria; Physical realizations of quantum computers: trapped ions, solid state qubits; Quantum optics and quantum internet; Topological quantum computation; Quantum biology.

Prerequisite(s): PHYS 2350 and (MATH 2210 or 2240).

ENGP 3290 Computational Materials Scienc (3)
Computational Materials Science and Engineering: This course will cover theories, implementations, and applications of common quantum mechanical software for computational study of materials. State-of-the-art computational methods will be introduced for materials research with emphasis on the atomic and nano scales and hands-on modeling on PCs and supercomputers. The class is aimed at beginning graduate students and upper level undergraduate students, and will introduce a variety of computational methods used in different fields of materials science. The main focus is quantum mechanical methods with a short overview of atomistic methods for modeling materials. These methods will be applied to the properties of real materials, such as electronic structure, mechanical behavior, diffusion and phase transformations. Computational design of materials using materials database via high-throughput and machine learning methods will also be covered.

Prerequisite(s): PHYS 2350 and 2360.

ENGP 3350 Kinetics of Material Systems (3)
This course covers all aspects of kinetics in material systems. Topics include thermodynamics, steady state and time dependent diffusion, phase transformations, statistical mechanics, structure evolution, boundaries and interfaces, solidification, and precipitation effects.

Prerequisite(s): ENGP 3120.

ENGP 3360 Structure of Materials (3)
The properties of matter depend on which of the about 100 different kinds of atoms they are made of and how they are bonded together in different crystal structures; specifically, the atomic structure primarily affects the chemical, physical, thermal, electrical, magnetic, and optical properties of materials. Metals behave differently than ceramics, and ceramics behave differently than polymers. Students will learn the different states of condensed matter and develop a set of tools for describing the crystalline structure of all of them. They will gain a better understanding of the principles of structure common to all materials. Key concepts, such as symmetry theory will be introduced and applied to provide a common viewpoint for describing structures of ceramic, metallic, and polymeric materials and the latter includes optical microscopy, electron optics, x-ray diffraction and some surface analytical techniques. Structure-sensitive properties of real materials will also be introduced.

ENGP 3370 Processing of Biomaterials (3)
Processing of biomaterials gives an overview of the most advanced techniques to process biomaterials into structures that satisfy next generation applications. All materials classes will be covered including polymers, ceramics, metals, composites and cells and tissues. In each case, the material-specific processing and the properties and potential applications will be covered.

ENGP 3380 Materials for Energy (3)
The course begins with a history of our understanding and utilization of different sources of energy and a review of thermodynamics. In all cases, the most effective materials used are discussed as well as the relevant fundamental equations used and approaches for improving the figure-of-merit. The 5 different forms of energy are introduced - mechanical, electromagnetic, thermal, chemical, and nuclear - and discussed. Materials and techniques used for energy applications are discussed including thermoelectrics, fossil fuels, nanoparticles, different approaches for energy storage, fuel cells, nuclear energy (fission and fusion), energy biological systems - from cellular scale and ATP and catabolism/anabolism to biomass conversion, and magnetohydrodynamics. Techniques for energy conversion, biomimetics, energy and the environment and material issues for energy transformation are discussed. The sun is also discussed as a source of energy for photosynthesis, photovoltaics, and photothermal power generation.

Prerequisite(s): ENGP 3120.

ENGP 3390 Synthesis of Nanomaterials (3)
This course focuses on the fundamentals of nanomaterials synthesis mechanisms and characterization. The course gives an introduction for nanomaterials classes and their importance for today's world, followed by basics of physical chemistry of solid surfaces. Then, top-down and bottom-up synthesis approaches for nanomaterials systems including gas, liquid and solid phase processes are covered. Characterization techniques of special importance for nanomaterials are taught. During the semester students will study and review scientific articles focused on nanomaterials synthesis and characterization.

Prerequisite(s): ENGP 3120.

ENGP 3430 Prof Develop Engineers I (2)
This course is designed to inform students in engineering physics of the wide variety of career paths available in engineering and related fields, and help with development of professional skills essential for building a productive and fulfilling career. Overview of career profiles, portfolio building, elements of project management, economic analysis, professional certifications, intellectual property, entrepreneurship, ethics, research and professional communication.

ENGP 3440 Prof Develop Engineers II (1)
This course is designed to inform students in engineering physics of the wide variety of career paths available in engineering and related fields, and help with development of professional skills essential for building a productive and fulfilling career.

Prerequisite(s): ENGP 3430.

ENGP 3530 Advanced Laboratory I (3)
Advanced experiments in modern physics and engineering, particularly nuclear physics and engineering, emphasizing research techniques and analysis of data using computers.

Prerequisite(s): PHYS 2350.

ENGP 3560 Photonic Materials & Devices (3)
This course will cover the theory, design, fabrication, characterization, and application of photonic materials and devices. The course will start with a review of the fundamentals of photonics, including ray optics, wave optics, and nanophotonics/quantum optics. The course will then focus on light-matter interactions and photonic materials, including dielectrics, semiconductors, metals, metamaterials, and photonic crystals. Using these principles and materials, we will explore a number of device architectures, including LEDs, lasers, photodetectors, photovoltaics, etc. We will then discuss fabrication methods for making these materials and devices and common optoelectronic characterization techniques. The course will conclude with exploration of cutting edge topics in photonics research.

Prerequisite(s): PHYS 2350 and 2360.

ENGP 3570 Semiconductor Devices (3)
An introduction to the physics and technology underlying semiconductor electronic and optoelectronic devices, including electrons and holes in semiconductors, energy-band diagrams, carrier transport, metal-semiconductor contacts, p-n junctions, and heterostructures. Device examples include bipolar transistors, MOSFETs, LEDs, and solar cells.

Prerequisite(s): PHYS 1320, MATH 1220 and PHYS 2350.

ENGP 3600 Nanoscience & Technology (3)
Nanoscience and technology is often branded the science of the 21st century. It has been promised that nanotechnology will have similar stimulating effects on the world's economy and society as the industrial-and microelectronics- revolution. Nanoscience is an interdisciplinary effort with the aim to manipulate and control matter at length scales down to single molecules and atoms and thus to create materials and devices with novel properties. With diminishing dimensions material properties are being governed by quantum mechanics. The description and exploitation of quantum phenomena in novel devices is the quintessence of nanophysics. Consequently, the main emphasis of this course is to give an overview of the physics of low dimensional solid state systems. This course is supplementary to courses in solid state physics and surface science but can be taken independently.

Prerequisite(s): PHYS 2350.

ENGP 3620 MicroFab and Nanotech (3)
Nano/micro-electromechanical devices (N/MEMS) require knowledge of a broad range of disciplines, from the fundamental physics of mechanics andelectromagnetism to practical nano/microfabrication processes and techniques. This course is opened for the introduction of this interdisciplinaryengineering field, using examples and design projects drawn from real-word N/MEMS applications. Lectures will cover nano/micro-fabricationtechnologies, material properties at different scaling, physical principle and behaviors of nano/microstructural behavior, piezoresistive and capacitivesensing, electrostatic actuation, fluid damping, noise, and feedback systems.

Prerequisite(s): PHYS 2360.

ENGP 3660 Special Topics (1-3)
Special Topics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENGP 3665 Special Topics Lab (1-3)
Special Topics Lab.

Maximum Hours: 99

ENGP 3700 Electrnc Prop of Materls (3)
Quantum physics, electronics and energy bands in crystals, electronic transport in materials, photoconductivity, Hall effect, quantum Hall effect, superconductors and their applications, magnetic properties of material and their applications, thermal properties of materials and dielectric properties of materials.

Prerequisite(s): PHYS 2350.

ENGP 3720 Mechanic Behavior of Materials (3)
The course covers the general foundations of elasticity and plasticity theory, dislocation theory, and strengthening mechanisms. Basics of materials forming processes are studied. An overview for non-destructive testing of materials is taught. The course emphasis is on destructive mechanical testing of materials including; tension, torsion, hardness, fatigue and creep tests, in addition to fracture mechanics and failure analysis.

Prerequisite(s): ENGP 3120, 2430 and MATH 2210.

ENGP 3730 Signals and Systems (3)
Fundamentals of systems and signals analysis, and introduction to control systems. Topics include Laplace and Fourier transforms, the convolution theorem, time- and space-frequency-domain systems analysis, signal analysis, signals and noise, the mathematics of imaging, and examples and applications. The use of MATLAB and Simulink to analyze signals and systems will be reinforced.

ENGP 3760 Thermodynamics of Materials (3)
The course covers the general foundation of both statistical thermodynamics and classical thermodynamics, including thermodynamics laws, auxiliary functions, and behavior of gases and solutions. In addition, special attention is dedicated to equilibria of reactions and phase diagrams of materials. Computer-based programs will be used to solve thermodynamics problems for complicated materials.

Prerequisite(s): ENGP 3120.

ENGP 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): ENGP 3120.

Maximum Hours: 99

ENGP 3892 Materials Engineering for Sustainable Development (1)
In this service-learning course students will learn and apply the principles of sustainable development in materials engineering to serve local communities. The topics covered include assessing sustainable developments, social responsibility and sustainability, materials supply-chain risk, a circular materials economy. The service options include working with communities to recycle materials, as well as designing and conducting K-12 STEM activities to educate students about materials and sustainability.

ENGP 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

ENGP 3950 Engineers for Int'l Deve (1)
Engineers for International Development at Tulane University exists for students to participate in community-driven development programs worldwide through the design and implementation of sustainable engineering projects, while fostering responsible leadership. We work both internationally and locally to build and educate communities about their basic infrastructure systems such as drinking water, sanitation, and safe homes.

ENGP 4310 Team Design Project & Prf Pr I (3)
Design project taken in the fourth year of study with student teams. Advanced treatment of engineering design principles and project management. Students are presented with a choice of project proposals, and they must build teams, prepare a project plan, develop a prototype, and iterate on the design process. Prerequisites: senior standing, 22 hours of ENGP coursework, or approval of instructor.

Prerequisite(s): ENGP 2020, 2310 and 3440.

ENGP 4320 Team Design Project & Prf P II (3)
Design project taken in the fourth year of study with student teams. Continuation of ENGP 4310. Notes: Capstone requirement for majors.

Prerequisite(s): ENGP 4310.

ENGP 4660 Special Topics (1-3)
Special Topics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENGP 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): ENGP 4320.

Maximum Hours: 99

ENGP 4910 Independent Study (1-3)
Independent Studies. Prerequisites: Approval of instructor and chair of department. Course may be repeated for up to 6 credits.

Maximum Hours: 6

ENGP 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

ENGP 4990 Honors Thesis (3)
Honors Thesis. Notes: Open only to candidates for honors degrees with departmental approval.

ENGP 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): ENGP 4990.

ENGP 5380 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours

Maximum Hours: 99

ENGP 5390 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

English (ENGL)

ENGL 1010 Writing (4)
ENGL1010 is a 4-credit course that satisfies the freshman writing requirement and should be taken in the fall or spring of the first year. The purpose of English 1010 is to teach students to write clearly and to organize complex arguments that engage in a scholarly way with expert knowledge. Students learn to conduct independent bibliographic research and to incorporate that material appropriately into clear, complex, coherent arguments that characterize academic discourse. Students with an AP credit score of 4 or 5 or an IB credit score of 6 or 7 in English do not have to take ENGL 1010. Questions should be directed to the student advisor and the Director of Freshman Writing in the Department of English.

ENGL 1011 Writing for Academic Purposes (4)
ENGL1011 is a 4-credit hour course that satisfies the freshman writing requirement and must be taken in the fall or spring of the freshman year. It introduces students to the writing of academic arguments, including analytic reading and research techniques for a variety of disciplines in the humanities, sciences, and social sciences, including business. Some entering students will be required to take CESL 1000 before taking ENGL 1011. Focus on the goals and skills appropriate to international students and speakers of other languages. Questions should be directed to the student advisor and the Director of English for Academic and Professional Purposes in the Center for Global Education.

ENGL 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENGL 1940 Transfer Coursework (0)

Maximum Hours: 99

ENGL 2390 Semester Abroad (0)
Study Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENGL 3620 Creative Writing Workshop (3)
Intensive workshop in creative writing, usually with a visiting professor. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENGL 1010, 1011 or 1020.

Maximum Hours: 99

ENGL 3890 Service Learning (0-1)

Maximum Hours: 99

ENGL 3891 Service Learning (0-1)
Corequisite(s): ENGL 3620.

Maximum Hours: 99

ENGL 5380 Junior Year Abroad (0-3)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENGL 5390 Junior Year Abroad (1-10)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

English (ENLS)

ENLS 1290 Semester Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENGL 1010, 1011 or 1020.

Maximum Hours: 99

ENLS 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Prerequisite(s): ENGL 1010 or 1020.

Maximum Hours: 99

ENLS 2000 Literary Investigations (3)
An introduction to the analysis and interpretation of literary texts; the relevance of literature to individuals, communities, and nations; and the critical thinking, writing, and research skills used in literary study. Topics include critical approaches to interpretation; formal qualities of texts; historical, political, and social contexts; and relationships to other forms of expression. Each section investigates literature through specific issues, themes, or topics. 4000-level courses assume familiarity with skills, methods, and terms of literary analysis covered in ENLS 2000.

Prerequisite(s): ENGL 1010*, 1011 or 1020.
* May be taken concurrently.

ENLS 2010 Intro To British Literature I (3)
An introduction to the history of British literature from the Anglo-Saxon and medieval periods through the 18th century. Emphasis on the development of genres, literary conventions, and the relations between historical conditions and literary production.

ENLS 2020 Intro To British Literature II (3,4)
An introduction to the history of British literature from the 19th century to the present. Emphasis on the development of genres, literary conventions, and the relations between historical conditions and literary production.

ENLS 2030 Intro To American Literature (3)
An introduction to the history of American literature from the colonial period to the present. Emphasis on the development of genres, literary conventions, and the relations between historical conditions and literary production.

ENLS 2040 Introduction to Anglophone Literature (3)
Survey of anglophone literature.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 2100 Special Topics (3)
Specific topics announced each semester, such as science fiction, literature and war, etc. Course may be repeated 3 times for credit.

Course Limit: 3

ENLS 2101 Special Topics in English (3)
Specific topics announced each semester, such as science fiction, literature and war, etc.

Prerequisite(s): ENGL 1010 or 1011.

ENLS 2102 Special Topics in English (3)
Specific topics announced each semester, such as science fiction, literature and war, etc.

Prerequisite(s): ENGL 1010 or 1011.

ENLS 2103 Special Topics in English (3)
Specific topics announced each semester, such as science fiction, literature and war, etc.

ENLS 2104 Special Topics in English (3)
Specific topics announced each semester, such as science fiction, literature and war, etc.

ENLS 2110 Introduction to the Novel (3)
A study of novels written in English representing the variety of fictional techniques and structures.

ENLS 2120 Intro to the Short Story (3)
A study of the short story as a genre. Some attention to theories of the short story and to the elements that distinguish it from other forms of narrative prose.

Prerequisite(s): ENGL 1010.

ENLS 2130 Introduction to Drama (3)
A study of plays written in English representing the variety of dramatic types and forms.

Prerequisite(s): ENGL 1010.

ENLS 2140 Introduction to Poetry (3)
A study of poems, selected from the whole range of poetry in English representing the variety of poetic techniques and structures.

ENLS 2150 Intro Fiction:Race & Inclusion (3)
A study of U.S. fiction, including short stories and novels, with an emphasis on race and inclusion.

ENLS 2155 Literatures of Tourism (3)
This course examines novels, performances, films, and short stories that offer a critical take on tourism, arguably one of the most influential industries that shape the way we understand the rest of the world. These texts we read will become the interpretive lens through which we analyze commodified representations of the places we visit for pleasure.

ENLS 2230 Introduction to Shakespeare (3)
A study of plays in a variety of genres, including tragedy, history, comedy, and romance.

ENLS 2390 Semester Abroad (1-20)
Study Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENLS 2400 Topics: Lit, Race & Inclusion (3)
Special topics in literary and cultural studies, with an emphasis on race and inclusion in the US. Course may be repeated 2 times for credit.

Course Limit: 2

ENLS 2450 Introduction to Postcolonial Literature and Theory (3)
This course offers an introduction to postcolonial literature and theory through a variety of geo-political contexts, including the Caribbean, Asia, Africa, Latin America, and the Pacific.

ENLS 2730 Intro to Black Literature (3)
Introduction to Black literary traditions. Emphasis on historical development, with varying focus on contexts such as the antebellum period, Reconstruction, the New Negro Renaissance, the Black Arts movement, and more.

ENLS 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENLS 2920 Intro to Women's Literature (3)
Study of works by women-identifying writers. Historical and national context will vary.

Prerequisite(s): ENGL 1010, 1020 or 1011.

ENLS 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

ENLS 3010 Topics: Writing Intensive (4)
A course in written analysis, focused on specific topics announced each semester. Includes emphasis on revision. Fulfills Writing Intensive/Tier-2 requirement. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENGL 1010.

Maximum Hours: 99

ENLS 3011 Topics: Writing Intensive (4)
A course in written analysis, focused on specific topics announced each semester. Includes emphasis on revision. Fulfills Writing Intensive/Tier-2 requirement. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENGL 1010.

Maximum Hours: 99

ENLS 3012 Topics: Writing Intensive (4)
A course in written analysis, focused on specific topics announced each semester. Includes emphasis on revision. Fulfills Writing Intensive/Tier-2 requirement. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENGL 1010.

Maximum Hours: 99

ENLS 3610 Creative Writing (3)
A craft class in the writing of short fiction and poetry. Exercises to develop each student's personal voice. Group criticism of student work.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 3630 Expository Writing (4)
A course in written analysis on social and cultural concerns.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 3635 Writing, Race, & New Media (4)
A writing course focused on methods of written analysis of social and cultural concerns, with an emphasis on racial politics in literary and new media contexts. Fulfills the Writing Intensive/Tier 2 requirement, Textural and Historical Perspectives distribution requirement, and the Race and Inclusion requirement.

Prerequisite(s): ENGL 1010.

ENLS 3640 Screenwriting (3)
Expressive strategies and formal considerations relevant to writing for television and cinema. Workshop format requires sustained analysis of professional screenplays as well as student work.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 3650 Persuasive Writing (4)
Emphasis on principles of reasoning and strategies of written argument. This course satisfies the Louisiana State Department of Education's requirement of advanced composition for certification in English.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 3670 Technical Writing (3)
Communicating technical information in abstracts, executive summaries, technical memoranda, process descriptions, amplified technical definitions, progress reports, feasibility studies and proposals. Major emphasis given to research reports and editing procedures.

Prerequisite(s): ENGL 1010, 1020 or 1011.

ENLS 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENLS 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENLS 3892 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENLS 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

ENLS 4010 Special Topics (3)
Specific subjects are announced each semester. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENGL 1010, 1011 or 1020.

Maximum Hours: 99

ENLS 4011 Special Topics (3,4)
Specific subjects are announced each semester. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENGL 1010, 1011 or 1020.

Maximum Hours: 99

ENLS 4012 Special Topics (3,4)
Specific subjects are announced each semester. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENGL 1010, 1011 or 1020.

Maximum Hours: 99

ENLS 4013 Special Topics (3)
Specific subjects are announced each semester. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENGL 1010, 1011 or 1020.

Maximum Hours: 99

ENLS 4014 Special Topics (3)
Specific subjects are announced each semester. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENGL 1010, 1011 or 1020.

Maximum Hours: 99

ENLS 4030 Literary New Orleans (3,4)
A study of literary works which are set in New Orleans or otherwise have connections with the city.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4040 Early Modern Transatlantic Lit (3)
Early Modern Transatlantic Literature focuses on the literature and cultural history of the Early Modern English Atlantic (1492-1800), inclusive of England, New England, Africa, South America, and the Caribbean. The course also considers the English Atlantic in the context of other European colonial projects across the globe. The course will typically involve archival works and make use of Tulane's special collections as well as the resources of The Historic New Orleans Collection.

Prerequisite(s): ENGL 1010, 1020 or 1011.

ENLS 4050 History of the Language (3)
Consideration of general linguistic processes and the social history of the language in the earlier periods.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4070 Intro To Old English (3)
A brief introduction to the grammar of Old English and a study of Old English poetry and prose in their cultural contexts. Readings in both Old English and translations.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4080 Modern Literature (3)
Study of poets, novelists, and dramatists writing in English since 1900.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4090 Contemporary Literature (3)
British, American, and continental poetry, prose, and drama since 1945.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4100 Literature and Film (3)
Study of the relationship between written narratives (principally short stories and novels) and film, with special attention to the distinctive effects and limitations of each medium and to the problems that screenwriters and directors encounter in adapting a written work to a visual form. Consideration of theoretical literature on the problem of adaptation.

Prerequisite(s): ENGL 1010.

ENLS 4110 Middle English Literature (3)
Major works of Middle English literature 1100-1500, exclusive of Chaucer, from The Owl and the Nightingale through the works of Sir Thomas Malory. Readings in Middle English.

ENLS 4120 Medieval Literature (3)
Major works in Old and Middle English literature, as well as relevant continental literature. Readings in translation.

ENLS 4130 Renaissance Literature (3,4)
British poetry, prose, and drama of the 16th and early 17th centuries.

Prerequisite(s): ENGL 1010 or 1011.

ENLS 4135 Early Women Writers (pre-1700) (3,4)
This course focuses on 16th and 17th century women writers -- martyrs, prophets, translators, poets, dramatists, and polemicists. The recovery of women's writing from the early modern period has posed a significant challenge to notions of canonicity while at the same time providing a fuller understanding of gender, class, religion, and politics in the early modern period.

Prerequisite(s): ENGL 1010.

ENLS 4140 17th-Century Literature (3)
British poetry, prose, and drama to 1660.

ENLS 4150 Early Modern Drama (3)
Study of drama, one of the chief genres of the period, from late medieval to late 17th century.

Prerequisite(s): ENLS 2000.

ENLS 4160 Restoration & 18th-C Drama (3)
This course will cover some of the major works in British drama written between 1660 and 1780.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4170 18th-Century Novel (3)
The novel from Defoe through Austen.

Prerequisite(s): ENGL 1010 or 1011.

ENLS 4190 Enlightenment Literature and Culture (3)
British poetry, prose, and drama from 1660 through 1800.

Prerequisite(s): ENGL 1010 or 1011.

ENLS 4210 19th-Century Novel (3)
The major authors of the 19th-century British novel, including Austen, Scott, Dickens, Collins, Eliot, Thackeray, Hardy, and Conrad. The course emphasizes the invention and transformation of genres (domestic, Gothic, historical sensation, realist) in historical and cultural context.

Prerequisite(s): ENGL 1010 or 1011.

ENLS 4220 19th-Century Literature (3)
Emphasizes the dominant literary modes of the period, including cross-cultural and transnational relationships contributing to their development.

ENLS 4230 Romantic Literature (3)
Representative works of the period from the French Revolution to the ascension of Queen Victoria by major authors such as Radcliffe, Blake, Paine, Austen, Wollstonecraft, Wordsworth, Coleridge, Edgeworth, Keats, Percy Shelley, Mary Wollstonecraft Shelley, Byron, and Scott in historical and cultural context.

ENLS 4240 Victorian Studies (3)
British poetry, prose, and drama from 1830-1914. Representative works treated in the historical and cultural context of the Victorian expansion of the British Empire and its aftermath.

ENLS 4250 Modern British Literature (3,4)
Twentieth-century British fiction, poetry, and drama.

ENLS 4260 Modern Irish Literature (3)
This course will concentrate for about half the semester on the poetry and plays of W.B. Yeats and the fiction of James Joyce. The remainder of the term will be devoted to the plays of J.M. Synge, Lady Gregory, and Sean O'Casey as well as one or two other writers, such as George Bernard Shaw, James Stephen, Samuel Beckett, or Seamus Heaney. Attention will be given not only to the works themselves but also to their cultural and historical contexts.

ENLS 4300 African Literature (3)
A study of the literatures from Africa, primarily Anglophone, with some texts in translation included.

Prerequisite(s): ENGL 1010.

ENLS 4310 American Literature to 1820 (3)
Representative works from the colonial period to 1820.

Prerequisite(s): ENGL 1010.

ENLS 4320 Jewish-American Literature (3,4)
An in-depth inquiry and analysis into the nature of the Ashkenazi Jewish-American experience from the early period of immigration to the present through literature and history, and as contextualized by popular culture, sociology, and theories of race, ethnicity, and gender.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4324 The Jewish People: From Racial Other to White Americans (3)
The experience of the Jewish people in Europe and America provides the best historical example for understanding the effect of racial frameworks on a single social group. The Jews were the first people in history to be treated by Europeans as a distinct, inferior group – as a race – and to suffer racial oppression. The keywords "ghetto" and "diaspora" both originate in the Jewish experience; in fact, Jews have often defined themselves as a race. The course begins with "the Jew" as Europe's racial Other in the early modern era then moves to a comparative analysis of Jewish experience in the nineteenth century during a period of white racial pride in Europe and America. This course will then interrogate the concepts of race, ethnicity, and nationality, as they continue to impact Jewish thought, contemporary society, and American culture.

Prerequisite(s): ENGL 1010.

ENLS 4360 Antebellum American Lit (3)
American literature of the mid-19th century.

ENLS 4370 19th-C American Literature (3)
American literature of the 19th century.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4375 19th Century US Poetry/Poetics (3,4)
A study of 19th-century US poetry and poetics. Topics may include the transcendentalists(Emerson and Margaret Fuller); poetic responses to slavery, racism, and the Civil War (George Moses Horton, Frances Ellen Watkins Harper, Herman Melville, etc.);the circulation of poetry in media and manuscript; Walt Whitman's Leaves of Grass; Emily Dickinson's unpublished corpus of poems;Reconstruction poetics;and late-19th-century proto-modernisms(Sarah Piatt, Stephen Crane, Paul Laurence Dunbar). The course emphasizes both the sociopolitical work of 19th-century poetry and the skill of reading poetry.

Prerequisite(s): ENGL 1010.

ENLS 4380 Asian American Literature (3)
A study of Asian American literature from the late-19th century to the present.

Prerequisite(s): ENGL 1010.

ENLS 4390 Topics: Race & Inclu in US Lit (3,4)
Special topics in literary and cultural studies, with an emphasis on race and inclusion in the US. May be repeated for credit with different subjects. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENGL 1010.

Maximum Hours: 99

ENLS 4391 Topics: Race & Inclu in US Lit (3)
Special topics in literary and cultural studies, with an emphasis on race and inclusion in the US. May be repeated for credit with different subjects. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENGL 1010.

Maximum Hours: 99

ENLS 4392 Topics: Race & Inclu in US Lit (3)
Special topics in literary and cultural studies, with an emphasis on race and inclusion in the US. May be repeated for credit with different subjects. Course may be repeated up to unlimited credit hours. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENGL 1010.

Maximum Hours: 99

ENLS 4400 Modern American Literature (3)
Representative works of the 20th century. May be repeated for credit with different content. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENGL 1010, 1011 or 1020.

Maximum Hours: 99

ENLS 4410 Topics: Contemp American Lit (3)
Major tendencies in American poetry, fiction, and drama since 1945.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4411 Topics: Contemp American Lit (3)
Major tendencies in American poetry, fiction, and drama since 1945.

ENLS 4420 Southern Literature (3)
A survey of Southern writers and their works from the period of exploration and settlement to the present.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4430 Caribbean Literature (3)
A study of the literatures from the Caribbean, primarily Anglophone, although texts from other areas of the Caribbean may be studied in translation. The Caribbean will be explored as part of the Americas, and connections will be made with New Orleans in particular and the American South in general.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4440 Black Cultural Studies (3)
Interdisciplinary study of topics relating to Black cultural experience and expression, drawing together Black literary, theoretical, political, and philosophical writing.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4441 Black Genres (3)
Study of how Black writers have approached specific genres such as poetry, the novel, the short story, the essay, life writing, comic books, film.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4442 Black Literature, Gender, and Sexuality (3)
Explorations of gender and sexuality in works by Black writers.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4443 Black Literature and the Law (3)
Study of Black literature in conjunction with legal culture. Topics may include critical race theory, literary representations of specific legal structures and their effects, the literariness of legal texts, and more.

Prerequisite(s): ENLS 1010, 1020 or 1011.

ENLS 4444 Black Literature and Politics (3)
Study of Black literature in conjunction with political movements and events. Topics may include anti-slavery reform, suffragism, the civil rights movement, Black Lives Matter, and more.

Prerequisite(s): ENGL 1010, 1020 or 1011.

ENLS 4445 Black Literature, Film, and Media (3)
Study of Black literature in intersection with film and new media.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4450 Chaucer (3)
A study of Chaucer's major works, with emphasis on The Canterbury Tales.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4460 Shakespeare I (3)
Treatment of plays from different genres and in different historical, literary, and cultural contexts.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4470 Shakespeare II (3)
Treatment of plays from different genres and in different historical, literary, and cultural contexts.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4475 Topics in Shakespeare Studies (3)
Sustained study of topics related to Shakespeare such as "Shakespeare and Gender Studies," "Global Shakespeare," or offerings from the Summer Shakespeare Festival.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4480 Milton (3)
A study of Milton's major works in poetry and prose.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4490 Early Major Authors (3)
Study of one or two major authors active before 1800, such as Malory, Spenser, Pope, Fielding, Wheatley, and Austen.

Prerequisite(s): ENGL 1010, 1011 or 1020.

Maximum Hours: 99

ENLS 4500 Later Major Authors (3)
Study of one or two major authors active after 1800, such as Wordsworth, Dickens, Douglass, Dickinson, Melville, Chesnutt, Dunbar-Nelson, Yeats, Woolf, Baldwin, Faulkner, and Morrison.

Prerequisite(s): ENGL 1010, 1011 or 1020.

Maximum Hours: 99

ENLS 4501 Later Major Authors (3)
Study of one or two major authors of the period, such as Wordsworth, Dickens, Dickinson, Melville, Eliot, Yeats, Woolf, Faulkner, and Morrison.

Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.

ENLS 4502 Later Major Authors (3)
Study of one or two major authors of the period, such as Wordsworth, Dickens, Dickinson, Melville, Eliot, Yeats, Woolf, Faulkner, and Morrison.

Prerequisite(s): ENGL 1010.

ENLS 4503 Later Major Authors (3)
Study of one or two major authors of the period, such as Wordsworth, Dickens, Dickinson, Melville, Eliot, Yeats, Woolf, Faulkner, and Morrison.

Prerequisite(s): ENGL 1010.

ENLS 4560 Internship (1-3)
An experiential learning process coupled with pertinent academic coursework. Open only to juniors and seniors in good standing. Contact the Director of Undergraduate Studies in English for registration and coursework information. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENGL 1010, 1011 or 1020.

Maximum Hours: 99

ENLS 4570 Public Service Internship (1-3)
Experiential learning paired with academic coursework. Open only to juniors and seniors in good standing. Apply to the CPS internship program to enroll (application available here: https://cps.tulane.edu/academics/public-service-internship/application-process). Register in the English Department.

Prerequisite(s): ENGL 1010, 1011 or 1020.

Maximum Hours: 99

ENLS 4610 Adv Fiction Wrtg Workshop (3)
A seminar focused on production and criticism of student work, including reading and analysis of fictional models. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENLS 3610.

Maximum Hours: 99

ENLS 4620 Adv Poetry Wrtg Workshop (3)
A seminar focused on production and criticism of student work, including reading and analysis of poetic models. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENLS 3610.

Maximum Hours: 99

ENLS 4660 Topics in Adv Creative Writing (3)
A workshop emphasizing the writing of creative nonfiction, biography, autobiography, screenplays, long poems, or novels. The class is designed to allow students to work in genres not emphasized in ENLS 4610 Advanced Fiction Writing or ENLS 4620 Advanced Poetry Writing. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENLS 3610.

Maximum Hours: 99

ENLS 4661 Topics in Adv Creative Writing (3)
A workshop emphasizing the writing of creative nonfiction, biography, autobiography, screenplays, long poems, or novels. The class is designed to allow students to work in genres not emphasized in ENLS 4610 Advanced Fiction Writing or ENLS 4620 Advanced Poetry Writing. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENLS 3610*.
* May be taken concurrently.

Maximum Hours: 99

ENLS 4665 Art & Artifact: Jewish Life & Literature (3)
Advanced creative writing workshop focused on the way that personal archives -- souvenirs, letters, photographs, and other personal artifacts -- are valuable memento mori that can serve as pathways for both creative writing and guideposts for historical research. The reading material focuses on the experience of Jewish immigration in the 20th century and includes texts by notable Jewish authors. Students will write a critical paper, but most of the student writing will be creative non-fiction explorations of personal history and the objects that have survived the past.

Prerequisite(s): ENGL 1010.

ENLS 4710 Intro To Literary Theory (3)
Investigation of assumptions and methods of selected ancient and modern critics. Some practical criticism to allow the students to become more aware of the implications of their own assumptions about literature and criticism.

ENLS 4720 Feminist Literary Theory (3)
An examination of the major projects of feminist literary theory: uncovering or rediscovering women's literature; engaging in feminist re-readings of canonical texts; describing a feminist poetics. Attention to the history of feminist criticism.

Prerequisite(s): ENGL 1010 or 1011.

ENLS 4750 New Media Theory (3)
This course will explore the conceptual frameworks and theories that are essential to an understanding of modern media, including photography, film, and digital media.

Prerequisite(s): ENGL 1010.

ENLS 4760 Topics In Literary Theory (3)
Sustained study of topics such as representation, interpretation, intention, theories of language, and literary theory and philosophy. May be repeated for credit with different content.

Prerequisite(s): ENLS 2000.

ENLS 4810 Cultural Criticism (3)
Examination of the major concepts of culture from the late 19th century to the present as they relate to the analysis of cultural practices and literary texts. Specific emphasis on the interdisciplinary nature of cultural analysis, the relation between elite and popular cultures, dominant formations and the resistance to them, and intercultural encounters.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4820 Col/ Postcolonial Discourse (3)
Methods of analysis appropriate to the study of the literature produced by intercultural exchanges between Western and non-Western cultures. Specific emphasis on the Anglophone literature of the Caribbean, Africa, and India.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4830 Women Writers and the Künstlerroman (3)
Explorations of gender, race, sexuality, and creative practice in works by women-identified writers and artists. Prerequisite(s): ENGL 1010, 1011, or 1020.

Prerequisite(s): ENGL 1010, 1020 or 1011.

ENLS 4840 Performance Studies (3)
Study of the various categories that encompass performance, such as dance, drama, ritual, festival, and parade, and of texts that embody, describe, or enact performances.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4850 Cultural Politics & Practice (3)
Study of the intersections and negotiations between cultural production and political institutions. Specific topics include literary representations of disease or poverty, and literature and the law.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4852 Feminism after Trumplandia (3)
Historical approach to contemporary feminist questions.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4854 The History of Cool (3)
The concept of cool is arguably America's most influential cultural export in globalization and it is inextricable from our understanding of popular music, Hollywood film, celebrity, marketing, and iconography. This course explores the roots, origins, and contemporary resonance of cool through a range of literature and media texts: detective novels, Beat Generation writers, song lyrics, memoirs of jazz, rock and hip hop, and theories of popular culture.

Prerequisite(s): ENGL 1010.

ENLS 4855 Literature and the Environment (3)
Study of ecocritical theory; analysis of representations of environments in literature and film; topics include climate change, sustainability, posthumanism, animal studies, environmental justice, science fiction, and environmental precarity in southern Louisiana.

Prerequisite(s): ENGL 1010, 1011 or 1020.

ENLS 4857 Literature and Technology (3)
A study of the relationship between literature and technology. Topics may include writers' responses to technological change; science fiction; the relationship between literature and media technologies; reading technologies; or games and other forms of electronic fiction/ storytelling.

Prerequisite(s): ENGL 1010.

ENLS 4860 Topics in Cultural Studies (3)
Sustained study of topics such as nationality, popular culture, cultural institutions, and postmodernism. May be repeated for credit with different content. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENGL 1010, 1011 or 1020.

Maximum Hours: 99

ENLS 4861 Topics: Cultural Studies (3)
Sustained study of topics such as nationality, popular culture, cultural institutions, and post-modernism.

ENLS 4870 Global Literatures (3)
The Global Literatures course explores several major literary traditions as they come in contact with one another: the course typically includes Western, Arabic-Islamic, Chinese, and Latin American Literatures in historical and cultural context.

Prerequisite(s): ENGL 1010.

ENLS 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENLS 4891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENLS 4910 Independent Study (1-4)
Independent Study. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENLS 4920 Independent Study (1-4)
Independent Study. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENLS 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

ENLS 4990 Senior Honors Thesis (3)
Senior Honors Thesis.

ENLS 4991 Senior Honors Project in Fine Arts (3)
Senior Honors Project in Fine Arts

ENLS 5000 Senior Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): ENLS 4990.

ENLS 5001 Senior Honors Project in Fine Arts (3)
Senior Honors Project in Fine Arts

Prerequisite(s): ENLS 4991.

ENLS 5010 Capstone Seminars (4)
Specific subjects are announced each semester. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ENLS 2000.

Maximum Hours: 99

ENLS 5190 Semester Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENLS 5380 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENLS 5390 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENLS 5890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENLS 7050 Bibliography & Research Method (3)
Seminar in bibliography, methods of literary research, history of the book, and archival methods.

ENLS 7060 Pro British Lit to 1660 (3)
Proseminar in British literature to 1660.

ENLS 7070 Pro British Lit since 1660 (3)
Proseminar in British literature after 1660.

ENLS 7080 Pro American Lit to 1865 (3)
Proseminar in American literature to 1865.

ENLS 7090 Pro American Lit since 1865 (3)
Proseminar in American literature since 1865.

ENLS 7100 Pro Modern & Contemp Lit (3)
Proseminar in Modern and contemporary literature.

ENLS 7110 Pro Anglophone Literature (3)
Proseminar in Anglophone literature.

ENLS 7120 Pro African-American Lit (3)
Proseminar in African-American literature.

ENLS 7130 Sem: Cross-Cultural Lit Study (3)
Topics in cross-cultural literary study.

ENLS 7140 Seminar: Anglophone Literature (3)
Topics in Anglophone literature and culture.

ENLS 7150 Theories of Rhetoric & Comp (3)
Theories of rhetoric and composition, including composition pedagogy.

ENLS 7170 Sem: Comparative Literature (3)
Topics in comparative literary studies.

ENLS 7180 Sem: Interdisciplinary Study (3)
Topics in interdisciplinary literary study.

ENLS 7250 Seminar: Medieval Literature (3)
Topics in Old and Middle English literature and culture.

ENLS 7260 Seminar: Medieval Literature (3)
Topics in Old and Middle English literature and culture.

ENLS 7350 Seminar: Renaissance Lit (3)
Topics in Renaissance literature and culture.

ENLS 7360 Sem: Renaissance Literature (3)
Topics in Renaissance literature and culture.

ENLS 7450 Seminar: 18th-C Literature (3)
Topics in 18th-century literature and culture.

ENLS 7460 Seminar: 18th-C Literature (3)
Topics in 18th-century literature and culture.

ENLS 7550 Seminar: 19th-C Literature (3)
Topics in 19th-century literature and culture.

ENLS 7560 Seminar: 19th-C Literature (3)
Topics in 19th-century literature and culture.

ENLS 7650 Language, Writing & Rhetoric (3)
Topics in language, writing, & rhetoric.

ENLS 7660 Language, Writing & Rhetoric (3)
Topics in language, writing, & rhetoric.

ENLS 7710 Seminar: American Literature (3)
Topics in American literature and culture.

ENLS 7720 Seminar: American Literature (3)
Topics in American literature and culture.

ENLS 7730 Seminar: Colonial Amer Lit (3)
Topics in colonial American literature and culture.

ENLS 7740 Seminar: Central American Lit (3)
Topics in early-19th-century American literature and culture.

ENLS 7750 Sem: Late-19th-C American Lit (3)
Topics in late-19th-century American literature and culture.

ENLS 7760 Seminar: Modern American Lit (3)
Topics in Modern American literature and culture. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENLS 7770 Seminar: Contemporary Amer Lit (3)
Topics in contemporary American literature and culture. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENLS 7780 Seminar: African American Lit (3)
Topics in African-American literature and culture.

ENLS 7790 Seminar: Southern Literature (3)
Topics in Southern US literature and culture.

ENLS 7810 Seminar: British Literature (3)
Topics in British literature and culture.

ENLS 7820 Seminar: British Literature (3)
Topics in British literature and culture.

ENLS 7850 Seminar: Modern Literature (3)
Topics in Modern literature and culture. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENLS 7860 Seminar: Modern Literature (3)
Topics in Modern literature and culture.

ENLS 7890 Fundamentals: Literary Theory (3)
Seminar in the fundamentals of literary theory.

ENLS 7900 Seminar: Advanced Theory (3)
Topics in advanced theory.

ENLS 7920 Independent Study (0-3)
Independent Study. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENLS 7990 Research (3)
Research.

ENLS 9980 Masters Research (0)
Masters Research. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ENLS 9990 Dissertation Research (0)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

English (PAEN)

PAEN 1000 Academic Writing and Reading (3)
This course covers the fundamentals of academic reading and writing, including communicating clearly on the page and over the internet, both in college and beyond.

PAEN 2500 Rewriting America: Multi-Ethnic Literature in the United States (3)
This course will explore how BIPOC thinkers have challenged the domination narratives of nationhood in the United States by studying poetry and prose by Black, Indigenous, Latinx, and migrant authors. While the focus will be on more recent literatures (from the mid-twentieth century through the present), the syllabus will also include samples of earlier texts by writers like W.E.B. DuBois, or Sarah Winnemucca Hopkins. Other texts may include those written by Gloria Anzaldúa, Achy Obejas, Luci Tapahonso, Maxine Hong Kingston, Nnedi Okorafor, and Jhumpa Lahiri, among others. Students will interact with these texts through guided reading, discussion, presentations, and written analysis. They will also be challenged to expand their learning beyond the classroom by applying the concepts discussed to something they encounter in their own lives.

PAEN 2630 Expository Writing (4)
This course situates the critical skills and strategies of expository writing within the larger framework of academic writing. The course builds on the concepts and approaches to argumentation that students have learned from PAEN or ENGL 1010.

Prerequisite(s): ENGL 1010.

PAEN 2910 Special Topics (3)
Special topics in English.

Course Limit: 99

PAEN 2911 Special Topics (3)
Special topics in English.

Course Limit: 99

PAEN 2912 Special Topics (3)
Special topics in English.

Course Limit: 99

PAEN 2913 Special Topics (3)
Special topics in English.

Course Limit: 99

PAEN 3010 Special Topics (3)
Special topic in English.

Maximum Hours: 99

PAEN 3020 Special Topics (3)
Special topics in English. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PAEN 3100 Introduction to Poetry Writing (3)
Introductory to poetry writing is a workshop course in poetry writing. We will be reading and writing poetry. Students will be introduced to the writing workshop format. Classes are primarily devoted to roundtable discussion of both outside reading and student work. Close reading, in which we note structure, style, tone, and the development of individual voice and point of view, will be the insignia of the class. Through writing exercises, critical readings of both professional and peer writing, constructive reviews, forum discussions, and writing workshops, students will develop the skills necessary to write then revise their own poems. We workshop peer writing where students receive constructive feedback on their own creative writing, participate in the critique of peer work and engage fully in the processes of revision.

PAEN 3310 Business Report Writing (3)
This course addresses skills for writing in the business environment. Students learn to differentiate various styles and voice and the documents and occasions appropriate for them.

Prerequisite(s): ENGL 1010.

PAEN 3349 Mad Men A Critical Analysis (3)
Students will use the first season of the critically acclaimed AMC television series Mad Men as a springboard for imaginative critical analysis. Additionally, students will reflect on the larger critical issues explored within the show, such as the changing gender politics of the 1960s, the emerging sexual revolution, and the conflict that arises from the cultural expectations and identities that many Americans adopted for themselves in the early 1960s. We will also study basic cinematic elements, as Mad Men is obviously more visual than a standard literary text. Altogether, Mad Men is worth studying because it is a well-made, intricately designed piece of art that rewards in-depth analysis as it keenly attempts to document modern life in America.

PAEN 3350 Coming of Age Movies (3)
This course is not a film appreciation course. Rather, students will use the assigned coming-of-age films as a springboard for imaginative critical analysis and general film study. It's not necessary to be a fan, per se, of the assigned films; you just have to think about them, critically, from wide-ranging perspectives. We will also study cinematic elements, given the obvious visual nature of the course.

PAEN 3910 Special Topics (3)
Special topics in English.

Course Limit: 99

PAEN 3911 Special Topics (3)
Special topics in English.

Course Limit: 99

English for Academic/Professional Purposes (EAPP)

EAPP 1000 Composition and Reading (3)
This course prepares students to subsequently master their college writing requirements. In addition to developing an advanced understanding of English syntax, morphology, and semantics, students explore the process of composing, revising, and editing in English and the expectations of academic writing to different audience expectations in Global Perspectives.

EAPP 1050 Multicultural Speech (3)
This course prepares students to master public speaking and interpersonal dynamics with a focus on Race and Inclusion in the USA. In addition to developing an advanced understanding of English phonology, semantics, and pragmatics, students focus on the communication strategies hat make presentations and interpersonal interactions memorable and smooth.

EAPP 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level.

Maximum Hours: 99

EAPP 3010 Academic and Professional Rhetoric (1)
In this six-week course, students will develop an advanced understanding of English syntax, semantics and mechanics. They will engage with both spoken and written academic documents that engage expert knowledge in a scholarly manner. Additionally, students will understand the rhetoric necessary for intellectual inquiry and independent research in both academic and professional environments, and they will incorporate these skills into their current university courses. The course includes an optional service-learning component. The service learning will enhance students understanding and development of citizenship skills within the context of their local, national, and global communities.

Prerequisite(s): EAPP 1000*, 1050* or ENGL 1011*.
* May be taken concurrently.

EAPP 3510 Teaching and Working Abroad (3)
This course is designed to develop students with little teaching and working experience with the academic and practical skills needed to teach and work abroad, especially English in a foreign language environment. Students are encouraged but not required to also enroll in EAPP 3520: Living and Working Abroad in order to complete the two-course series.

EAPP 3520 Living and Working Abroad (3)
This 3-credit course is designed to give students a practical working knowledge of the linguistics of English and intercultural skills needed to live and work abroad, especially when teaching English as a foreign language. Students are encouraged but not required to also enroll in EAPP 3510: Teaching and Working Abroad in order to complete the two-course series.

EAPP 3530 Global English in Business (3)
'Global English in Business' focusses on enhancing communicative and cultural competency skills as they apply to the use of World Englishes in business contexts. It is designed to explore one of the World Englishes' variations used in Business as a profession and social practice. The course seeks to analyze the interdiscursive texts of professionals in the business world to understand how language builds new relationships that are unique within their own spaces. Precisely, we examine varied samples of global business literature and theories written in World Englishes to critically evaluate how English as a professional communicative language vary in different business cultures around the world. Lastly, learners in this course are tasked with interrogating the role of World Englishes and how it generally applies to multiple business cultures around the globe. Language skills addressed in this course include business communicative competency, writing and speaking fluency in World Englishes, and business vocabulary development skills. This course is open to students who are interested in studying, working or interning in a business-related environment abroad. The course has a service-learning component that fulfills both tier I and II Tulane service-learning requirement. The course is open to all undergraduate students.

Environmental Health Sciences (ENHS)

ENHS 6030 Survey of Environmental Health (3)
This course is designed as a survey course which introduces students to basic environmental health topics and it fulfills the school core requirement. The course focuses on environmental factors impacting human health and the environment. Sources of these factors, methods of identification, recognition, evaluation and regulatory framework control are discussed. Factors might include health hazards associated with contaminated water, food and air, vectors of disease, exposure to toxic chemicals, environmental justice, regulations, and safety in the work place.

ENHS 6080 Fundamentals of Environmental Health Sciences (3)
This course introduces students to environmental health concepts and principles used to anticipate, evaluate, and reduce health risks posed by chemical, biological or physical agents in their environment with an emphasis on our changing climate. The course will be taught as a series of modules and assignments designed to provide a framework of fundamental environmental health sciences from which to expand upon to understanding how environmental hazards and our changing climate affect health. Case studies and discussions will bridge the gap between concepts and application to real world scenarios. Contemporary examples of environmental issues will be discussed. After completing this course, students are expected to be able to apply fundamental environmental health paradigms to the critical public health need for understanding the impact of environmental agents in a complex and changing world.

ENHS 6300 Radiological Health (3)
This course is an introductory course in health physics, medical uses and university uses of ionizing radiation. The course includes radiation protection for both workers and general public. The course is designed to meet the needs Industrial Hygienists. Topics include nuclear reaction terminology, the interaction of alpha particles, electrons, and photons with matter, basic instrumentation for radiation protection, and the use of Poisson counting statistics, radiation medicine issues including radiation epidemiology, internal dissymmetry, use of the LLNL code Hotspot for dispersion calculations, and various advanced topics, including nuclear weapons effects.

ENHS 6320 Workplace Wellness (3)
Health, as it relates to the workplace, is created by two major forces; what employees bring with them into the workplace (e.g. personal resources, health practices, beliefs and attitudes) and the impact of the workplace on employees (e.g. organization of work in both a physical and psychological sense). Health promotion focuses on the elements that make up a healthy workplace and includes the physical environment, health practices and social environment & personal resources. This course focuses on the total well-being of individuals and groups within a corporate and community context. It emphasizes a holistic approach to achieving workplace, community, and personal wellness.

ENHS 6420 Global Food Safety and Public Health (3)
This course introduces students to local, national, and international food safety. Food resources, production, biological, chemical and radiological contaminants are discussed. Focus will be on health effects resulting from exposure to contaminated food. Sanitary regulations/codes addressing food safety including inspection of food establishments, investigation of food outbreak diseases will also be discussed. Genetically modified foods will also be addressed.

ENHS 6430 Disaster & Emergency Communication (3)
This course presents the application of evidence-based principles that help leaders in government and public health persuade, inform, and ensure the health of a population in a crisis. This interactive course will use a combination of site visits, case studies, and interactive examples to highlight the principles when dealing with uncertainty, communication, building trust and empathy, cross-cultural communication, and leadership ethics. Students will also learn key skills that will give them the tools to apply these principles in the field of public health.

ENHS 6450 Climate Change and Public Health (3)
Future public health professionals should be aware of and understand the impact of climate on the health and well being of populations around the world. In this introductory level course, students will examine what climate change is, the environmental factors it influences, how those environmental factors impact health, who are the most vulnerable, how to deal with climate change from a public health perspective, and how we might answer future questions through evidence-based research. Current literature, reports, and relevant case studies inform class lectures, student-directed dialogue, and final presentations. The course will utilize experts on various topics in addition the primary instructor. This course is an elective for all SPHTM students.

ENHS 6510 Water Quality Management (3)
This is an introductory course in Water Quality Management. Students will explore the link between water quality and public health. Topics cover the foundations of surface water quality, groundwater quality, and stormwater quality. Students will learn the principals of potable water and wastewater treatment permitting and treatment as well as the scientific causes, consequences, and solutions of pollution in lakes, rivers, wetlands, and groundwater. At the completion of this course, students should be able to discuss nonpoint and point source pollution and interpret the physical, chemical, and biological indicators of water quality.

ENHS 6540 Principles of Occupational Health (3)
The course addresses occupational health topics including some of the leading occupational disease hazards, their evaluation and control. Concepts of exposure in the workplace and related health outcomes, toxicological updates on selected chemical and physical agents, as well as exposure evaluation are discussed.

ENHS 6550 Environmental Health Management (3)
This course examines the relevance of sustainable management of natural resources to public health. It explores the science of natural and built environmental stressors and their impacts on human health along with a number of model environmental health and natural resources management best practices from policy and management perspectives. Students learn to develop and apply appropriate natural resources management plans, environmental health plans, and environmental management systems to a number of problem scenarios including disaster scenarios. Topics include key environmental media as sell as forests, wetlands, and agricultural land management. Emphasis will be placed on interventions for environmental toxins and vectors of diseases and the impact of global climate change on environmental public health. Students are given case-study based assignments to develop skills in applied environmental health management.

ENHS 6560 Environmental Health Microbiology (3)
This course is designed to provide understanding about microbial pathogens of public health concern and the role of the environment, including water, waste, air and food, in the transmission of infectious diseases. We will explore specific pathogens that cause environmentally transmitted diseases, their detection using both conventional and advanced molecular methods, their prevention and control by technological and other measures, and how the health risks posed by these pathogens are assessed. This course focuses on emerging issues of pathogens in the environment at both local and global levels.

Prerequisite(s): ENHS 6030 or GEHS 6030.

ENHS 6600 Principles of Toxicology (3)
This course presents the fundamental principles of toxicology and the mechanisms by which environmental and occupational chemical agents may alter human health. There are three major themes in this course: 1) General principles: chemical exposure, route, dose response; absorption, distribution, storage, metabolism and excretion; 2) Non-organ toxicology, e.g. epigenetic, mutagenic, carcinogenic, and developmental effects of chemicals. 3) Systemic toxicity of chemicals to liver, kidney, blood, lung, etc.

ENHS 6620 Physical Agents & Ergonomic Hazards in the Workplace (3)
Occupational exposure to temperature extremes, abnormal pressure, noise, mechanical vibration, non-ionizing radiation, and cumulative trauma/ergonomics are discussed in lecture sessions. The fundamental physics, health effects, and occurrence of these agents, along with methods for evaluating the extent of exposure and approaches to controlling them are discussed in lectures and appropriate measurement instrumentation is demonstrated. A laboratory session on noise measurement is included. Applicable exposure standards, regulations, and guidelines are covered in detail.

Prerequisite(s): ENHS 6720 or GEHS 6720.

ENHS 6700 Principles of Safety (3)
This course provides an overview of safety fundamentals in the workplace and focuses on the safety management programs; applicable laws, regulations and standards; hazards and controls; safety training; emergency operations planning; and human performance elements of safety improvement. The student will gain a basic understanding of programmatic safety management as well as applied safety engineering principles related to areas including, but not limited to: electrical safety, fire protection and prevention, heat and cold, transportation safety, noise and vibration, personal protective equipment, etc. Class assignments will focus on application of safety principles in the student's workplace. Students, through individual, collective and peer review contributions, will develop a safety walkthrough checklist linking items important to safety in multiple key technical areas.

ENHS 6720 Principles of Industrial Hygiene (3)
This course is designed to introduce the field of Industrial Hygiene. The objective of the course is to present an overview and historical perspective of Industrial Hygiene, anatomy and physiology of the skin and lungs, occupational diseases, inhalation toxicology, chemical agents, biohazards, ergonomics, noise, thermal stress, indoor air quality, ventilation systems, laboratory safety, radiation safety, personal protective equipment, Hazard Communication and other OSHA standards and community exposures and emergency planning.

ENHS 6910 Environmental Aspects of Disaster Management (3)
Students will gain a cross-disciplinary knowledge of the practical, interrelated aspects of public health preparedness, homeland security and disaster management. Emphasis will be placed on developing an understanding of these fields through the lens of real-world case studies and scenarios. Students should become well prepared for future study in this dynamic and evolving discipline.

ENHS 6920 Environmental, Monitoring, Sampling & Analysis in a Disaster (3)
Utilizing a strong person-in-environment and ecosystems focus, this course addresses the unique dimensions of mental health issues in disaster or complex community emergencies. The course provides instruction in the Incident Command System, including systemic planning, activation, and evaluation of the functions of psychosocial health services when dealing with a disaster. The course integrates interdisciplinary knowledge and skills from micro, mezzo and macro levels for addressing psychosocial reactions and needs prior to and in the wake of a disaster or major crisis. Students experience a variety of learning activities including online FEMA instruction; live lecture with class discussion, case simulations, field visits, exams, reflection, labs and papers focused on response models that integrate the psychosocial dimension.

ENHS 6930 Planning and Implementation in Disaster Management (3)
The United States is among other global communities that attempt to prepare its citizens for potential mass casualty events such as natural disasters, terrorism, or a pandemic flu outbreak. This course introduces disaster theory and overviews the United States' National Response Framework. Core population health issues that present during the management of disasters are examined. Developing preparedness at the local level is emphasized. Fundamental concepts of emergency management and leadership are discussed.

ENHS 6950 Psychosocial Aspects of Disaster (3)
The course covers the theoretical development, history, and empirical studies of the psychosocial dynamics and sequelae of disasters. Characteristics of environmental health disasters, reactions and risk factors, as well as trends in disaster mental health are examined. Emphasis is placed on inclusion of psychosocial considerations in the planning, preparation, and very early intervention phases of a disaster. Vulnerable populations are of particular interest in highly interactive case-based learning through reflection labs for application in situations such as natural disaster, environmental health crises, pandemic illness, or threats to national security. Baseline resilience planning is required of all students planning to work in disaster or emergency response fields.

ENHS 6960 Public Health Law (3)
Public health law speaks to the legal aspects of delivering public health interventions to the society. This course introduces students to the functions and outcomes of public health law from local to global and provides a hands-on legal tool for public health protection and practice. It covers a variety of topics such as civil liberties in matters such as quarantine, isolation and mandated medical testing; access to healthcare and health disparities; incentives to vaccine makers, authorization of drugs in declared public health disaster/emergency situations, international law on controlling spread of infectious diseases, the role of the World Health Organization and other global entities in protecting public health, and public health issues arising from migrants and refugee problems.

ENHS 7110 Industrial Ventilation & Chemical Hazard Control (3)
This course covers the control and management of chemical hazards in the workplace and indoor environments through engineering, administrative change, and personal protective equipment. The selection, use, and limitations of respiratory protective equipment are discussed. Engineering controls covered include product substitution, process isolation, and ventilation. The fundamentals of design and operation of local exhaust and general dilution ventilation systems are covered in detail and include basic air flow, general dilution ventilation, exhaust hood design, duct design, fans, air cleaning and recirculation, system balancing, system evaluation and special ventilation systems. A laboratory session on evaluating ventilation system performance is included.

Prerequisite(s): ENHS 6720 or GEHS 6720.

ENHS 7230 Fundamentals of Project Management for Environmental Sciences (3)
This course focuses on management of environmental health and safety risks, as well as measurement and evaluation of industrial hygiene and safety performance. Specific course topics include environmental and hazardous materials management, emergency planning and response, crisis communication, accident investigation, the development and interpretation of risk assessments, risk perception and communication, economics and risk/benefit analysis, comparative risk assessment, laws and regulations pertaining to risk assessment, and management and the design of risk management plans. Report writing and interpretation are emphasized.

ENHS 7240 Applying Systems Thinking to Environmental Health and Sciences (3)
This course complements and supplements ENHS 7230, Fundamentals of Project Management for EH&S. It is an introduction to methods of systematically integrating health and safety programs into standard management systems used by organizations. Topics emphasized include leadership, strategic planning, project management, management of multidisciplinary teams, regulatory affairs management, voluntary standards systems, professional ethics, labor relations, and "selling" health and safety initiatives to all levels of the organization and the public. Systems thinking is emphasized throughout the course. No prerequisites required.

ENHS 7260 Financial Aspects ES&H (3)
The purpose of this class is to teach students how to use economic and financial analyses to manage EHS programs by developing analytic and inductive reasoning skills that are prerequisites for becoming a successful manager. The course will address some basic financial managing concepts that mid-level EHS managers and professionals will commonly use or be exposed to in a business setting. These concepts include cost behaviors, profit analysis, budgeting, financial ratios, project economics and return investment analysis.

ENHS 7310 Occupational Laws and Compliance (2)
This course helps students understand regulation of workplace safety and health under the Occupational Safety and Health Act of 1970 ("OSH Act") primarily covering employer responsibilities, employee rights, and regulatory compliance efforts. The course provides an overview of the history of occupational safety policies culminating in the creation of the OSH Act. Students learn the roles of the (1) Occupational Safety and Health Administration ("OSHA"), (2) National Institute of Occupational Safety and Health ("NIOSH"), and (3) Occupational Safety and Health Review Commission ("OSHRC"). Important federal statutes, regulations, court decisions and OSHA's rulemaking, standard interpretations, and resources to assure occupational safety compliance are covered.

ENHS 7400 Field/Lab Applications of Environmental Health Practice (3)
This course consists of field and laboratory work dealing with the identification, assessment and isolation of environmental health problems. It is designed to provide the students an opportunity to observe and work with real-life settings of environmental health problems in the field, i.e. food establishments, schools, water, sewage, etc. Students conduct environmental health exercises and make analysis of problems situations on-site . Students collect and analyze environmental samples when possible. Written reports of each exercise are required. All reports will be discussed and methods of remedies for environmental health violation corrections will also be discussed.

ENHS 7500 Air Sampling & Analysis (3)
This course helps students understand regulation of workplace safety and health under the Occupational Safety and Health Act of 1970 ("OSH Act") primarily covering employer The principles and techniques for measuring and evaluating airborne contaminants in the work and community environments are presented in lectures and practiced in laboratory sessions. Covered topics include air flow measurements, aerosol science, particulate sampling with and without size separation, optical microscopy, active and passive sampling of gases and vapors, direct reading instruments, stack sampling, atmospheric dispersion modeling, and sampling strategy and statistical data analysis.

Prerequisite(s): BIOS 6030*, SPHL 6050* or 6850.
* May be taken concurrently.

ENHS 7510 Emerging Issues in Water Quality (3)
Burgeoning human population and urbanization is creating increased demands on fresh water resources and generating larger and more concentrated waste streams. Droughts throughout many parts of the world also have placed unique challenges on historically abundant river systems. Therefore, many communities are considering the utilization of alternative water resources, including desalination of brackish waters and the reuse of wastewater for potable and non-potable applications. This course will investigate, discuss, and debate major emerging water quality issues which threaten our water sustainability and the regulatory paradigms to address these challenges. Specific issues include emerging opportunistic premise plumbing pathogens, endocrine disrupting chemicals, pharmaceuticals, unregulated disinfection by-products, perfluorinated organic compounds, algal toxins, and others.

Prerequisite(s): ENHS 6030 and 6510.

ENHS 7550 Human Biomonitoring & Health (3)
The environment plays a major role in human health and disease. Exposure to chemicals and other stressors such as lifestyle factors are intrinsically linked with adverse health outcomes. This advanced course discusses the role human biomonitoring (HBM) in epidemiological studies to assess the occurrence, extent of chemical exposures and identify populations at risk of adverse health outcomes by measuring biomarkers in biological samples, such as in urine, blood, and nails. The course introduces HBM concepts and approaches for understanding the myriad ways human interact with the environment, primarily from the perspective of chemical exposures. Students will gain the knowledge needed to design and conduct population-level biomonitoring studies to understand public health risks of chemicals exposure and for better policy makings to protecting health.

Prerequisite(s): ENHS 6030 and 6600.

ENHS 7610 Applied Data Science for Climate and Health (3)
This course is designed to provide students with the knowledge and practical skills to use data science techniques in addressing the complex challenges at the intersection of climate change and health. With a strong focus on practical applications, the course first introduces fundamental concepts in climate change, epidemiology, and biostatistics and follows with data science methods for collecting, analyzing, and interpreting climate and health data, enabling students to identify climate change-related environmental risk factors and to engage in evidence-based decision-making and policy development. Lectures focus on the statistical methods and data science application to evaluate the health impacts of climate change-related exposures such as wildfires, extreme temperature events, tropical cyclones, and drought etc. It is open to MS, MPH, and PhD graduate students at the School of Public Health and Tropical Medicine and other Schools with appropriate permissions.

Prerequisite(s): SPHL 6050 and 6060.

ENHS 7620 Health Risk Assessment (3)
This course develops the qualitative and quantitative skills necessary to evaluate the probability of adverse health effects resulting from exposure to environmental contaminants/chemicals. Basic concepts of qualitative and quantitative risk assessment are demonstrated using practical case studies and review of the primary literature. Emphasis is placed on hazard identification, dose-response evaluation, exposure assessment, and risk characterization. Integration of risk assessment with risk management and communicating risks to the public are discussed. Regulatory aspects of risk assessment in the promulgation of environmental standards are presented. Disaster risk estimation and assessment is not a content area covered in this course (e.g. probability of a catastrophic storm event and flood risks under specific scenarios) nor is microbial risk assessment (e.g. foodborne or waterborne pathogen risk assessment).

Prerequisite(s): ENHS 6600 or GEHS 6600.

ENHS 7750 Environmental Policy (3)
The course introduces students to the concepts of public health policy with an emphasis on environmental health. The course describes the relationship among public science, policy, and practice and demonstrates the application of this relationship through a series of real cases in environmental health laws, polices, regulations and statutes in the context of public health. Through "hands-on" experience, students examine the policy implications of contemporary environmental public health issues.

ENHS 7990 Independent Study (1-3)
Masters students and advisor select a topic for independent study and develop learning objectives and the expected written final product.

ENHS 8100 Advanced Environmental Health (3)
Advanced Environmental Health is a doctoral level course that is restricted to students who are admitted to doctoral programs. The course is taught by the departmental members who have extensive research experience. Students will be challenged with contemporary research problems in the field of environmental health that span topics that include environmental health in disaster situations, identifying effects of environmental chemicals, and biological contaminants in the water supply. The course is designed to provide a unified, broad, and advanced experience in environmental health issues for doctoral students.

ENHS 8200 Environmental Health Methods (3)
Environmental Health Methods is a doctoral level course for students enrolled in doctoral programs. The course is taught by the departmental members with active environmental health research programs. Students select an area for study and work closely with a faculty member to 1) identify an environmental health research question that can be approached within a semester, 2) review the pertinent literature on the topic and form a testable hypothesis, 3) develop and employ the appropriate methodological approaches, 4) prepare and analyze data, 5) identify an appropriate journal or other publication forum, and 6) complete a manuscript or report in the appropriate format.

Prerequisite(s): BIOS 6040, EPID 7120 and ENHS 8100.

ENHS 8990 Doctoral Independent Study (1-3)
Doctoral students and advisor select a topic for independent study and develop learning objectives and the expected final written product.

Environmental Studies (EVST)

EVST 1010 Intro To Enviromentl Stu (3)
This course introduces students to the field of environmental studies and the diverse topics of environmental research being conducted at Tulane. This interdisciplinary area of study explores environmental problems through a multitude of perspectives and complementing scientific analyses with considerations of philosophical, historical, economic, political, and cultural factors. Major concepts to be examined include: the state of scientific research, the role of the natural and social sciences in environmental decision-making, and the importance of history, ethics and justice in approaches to addressing contemporary environmental issues, such as biodiversity loss, global climate change, and natural resource depletion.

EVST 1030 Introduction to Environmental Humanities (3)
This seminar will examine the history of environmental thought as represented in works of literature and art, from the Epic of Gilgamesh to photographic portraits of Louisiana's Cancer Alley. How do the stories we tell about the natural world shape our relationship to it? We will explore the traditions of romanticism, naturalism, activist writing, environmental justice, climate fiction, and the literature of the Anthropocene. A series of writing assignments will culminate with a longer work that may take the form of a critical essay, a work of narrative journalism, or a short story.

EVST 1810 Special Topics (3)
Special topics course as designed by visiting or permanent Environmental Studies faculty. For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

EVST 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EVST 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

EVST 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

EVST 3010 Food System Leadership in the Gulf South (3)
A food system is a dynamic system of interrelated processes that impacts a diverse base of individuals, businesses, and communities economically, socially, politically, and environmentally across the Gulf South. This 3-credit-hour undergraduate course, through academic-community partnership, offers a unique opportunity for students to understand food systems and cultures across the Gulf South through interdisciplinary forums that engage diverse academic, industry, grassroots, and community perspectives. Students will also participate in community-based research to explore opportunities and threats related to food system distribution and resiliency in the Gulf South.

EVST 3310 Approaches to Environ Studies (3)
Approaches in Environmental Studies is a required core course for all EVST majors. The interdisciplinary nature of Environmental Studies requires the ability to understand the complex interrelationships between human society and natural ecosystems. Throughout this course we will focus on how to identify research questions, design research methodologies, carry out research, and analyze research findings. Students will gain competency in the four levels necessary for environmental analysis (data, methods, theories, and frameworks), skills that are key to doing environmental research and analysis. This course will enable students to build both empirical (data-based) and conceptual (idea-based) tools to shed scholarly light on environmental issues.

EVST 3350 Urban Farming (3)
Course will introduce students to the practices of urban farming and agriculture through a study of the basic skills and understandings involved in its practice and through employing those skills and understandings in the development and maintenance of urban gardens of various kinds.Ethical questions related to issues of sustainability, climate impact and use of chemicals in the garden will be discussed. Students will work in gardens of their own making as well as working with community partners in the New Orleans community.

EVST 3500 Climate Fact/Climate Fiction (3)
How did we come to understand climate change? How has our evolving understanding of the phenomenon changed our understanding of ourselves? By studying the history of the science, the political reaction to it, and the literature it has inspired, this course will encourage students to think more deeply about the ways in which climate change has transformed our culture.

EVST 3570 Mississippi River Colloquium (3)

EVST 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EVST 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course in Environmental Studies. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EVST 3930 Spec Topics Problems (3)
Special Topics in Environmental Studies. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EVST 3933 Urban Gardening (3)
Students will study the practice of, and acquire the skills for urban gardening and farming via the development and maintenance of urban gardens. including indoor. potted. raised bed and small plot gardens. Skills developed throughout this course may include garden design, plant and crop selection, composting, irrigation, soil maintenance, and urban animal husbandry practices. Students will work in gardens of their own making and with community partners across greater New Orleans. Throughout the course. students will acquire a deeper awareness of their place as part of the earth community and the critical role this plays in community betterment as well as overall human happiness and well-being.

EVST 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

EVST 3950 Special Topics Environmental Thought (3-4)
Special Topics in Environmental Studies. Course may be repeated unlimited times for credit.

Course Limit: 99

EVST 3951 Spec Topics Enviro Thought (3-4)
Special Topics in Environmental Studies. Course may be repeated unlimited times for credit.

Maximum Hours: 99

EVST 3952 Spec Topics Enviro Thought (3)
Special Topics in Environmental Studies. Course may be repeated unlimited times for credit.

Course Limit: 99

EVST 3959 Measuring Sustainability (3)
Students will review and critically assess the practice of measuring the environmental and sustainable attributes of a product. institution or community. We will study key frameworks and tools used by sustainability professionals today. including greenhouse gas emissions inventories. the U.S. Green Building Council's LEED Green Building Rating system. ENERGY STAR Portfolio Manager. and Life Cycle Assessment. Through a critical examination of the tools used to assess sustainability. the course seeks to help students understand key sustainability concepts and to develop their own definition of a sustainable institution or community.

EVST 4190 Environmental Crime & Security (3)
Students will learn about environmental crime, green criminology, and environmental security in our society, including key concepts and definitions, theoretical foundations and approaches, and how those concepts and theories can be - or are being - applied to a range of environmental crime and security issues. We will examine social interactions and activities associated with these issues and explore various policy approaches used to address them.

EVST 4210 Environmental and Social Justice in New Orleans (3-4)
Examination of theoretical and conceptual frameworks for analyzing issues of environmental and social justice in the US and New Orleans through a combination of classroom instruction, guest speakers/ practitioner demonstrations, applied field instruction, and professional development activities.

EVST 4400 Urban Political Ecology (3)
The primary objective of this course is to provide students with an understanding of urban political ecology and the study of environmental issues from an interdisciplinary perspective. Additionally we will explore the practices of inquiry and analysis associated with environmental studies from a liberal arts perspective.

EVST 4410 Senior Seminar in Environmental Studies (3,4)
This is the capstone course required of all environmental studies majors. The course will emphasize three main areas: an overview of the fundamental contemporary environmental themes, issues, theories, concepts, and methods within the field of environment.

Prerequisite(s): EVST 1010 and 3310.

EVST 4510 Environ Justice in Action (4)
This service-learning course enriches student understanding of doing environmental justice in the local community. Students will sharpen their environmental activism and advocacy skills in collaboration with environmentally focused organizations and nonprofits in the greater New Orleans area. May be repeated once for credit.

Corequisite(s): SOCI 4610.

EVST 4560 Enviro Stud Internship (0-4)
Internship. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EVST 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EVST 4891 Service Learning (1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EVST 4910 Independent Study (1-3)
Independent Study.

EVST 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

EVST 4990 Honor's Thesis (3)
Honor's Thesis.

EVST 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): EVST 4990.

EVST 5110 EVST Capstone: EVST 4410 (0)
Corequisite(s): EVST 4410.

Corequisite(s): EVST 4410.

EVST 5380 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EVST 5390 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Epidemiology (EPID)

EPID 6090 Epidemiology of Infectious Diseases (3)
This course focuses students on the knowledge needed for the investigation, control, and prevention of a variety of infectious diseases. Students will explore the characteristics of a range of specific disease agents, compare their impact on populations, review approaches used to investigate disease outbreaks, and examine local and global efforts to monitor, control, and eradicate selected infectious diseases. Zoonotic and human-reservoir diseases are included in the course content.

Prerequisite(s): EPID 6030, SPHL 6060 or 6860 and BIOS 6030, SPHL 6050 or 6850.

EPID 6210 Cancer Epidemiology (3)
This course will explore current and historical trends in cancer incidence and mortality and evaluate the current state of the science regarding cancer etiology, detection, and treatment. Students will critically evaluate the methodological tools commonly employed in the practice of cancer epidemiology, and explore current controversies in the field, including the relative contributions of genes and the environment in cancer susceptibility, and the tradeoffs associated with cancer screening decisions. Students will develop an understanding of the known contributors to cancer risk and progression, and will appreciate the barriers to progress in cancer prevention and control.

Prerequisite(s): EPID 6030*, SPHL 6060* or 6860.
* May be taken concurrently.

EPID 6220 Cardiovascular Disease Epidemiology (3)
This is an introductory course designed to provide the student with a summary of the present knowledge of distribution, natural history, and risk factors for major cardiovascular diseases. Also, methodologic issues in epidemiologic studies unique to cardiovascular diseases will be discussed. The course format consists of lecture, discussion of current literature and the epidemiologic constructs as they are applied to population-based research of cardiovascular diseases.

Prerequisite(s): (EPID 6030*, SPHL 6860 or 6060*).
* May be taken concurrently.

EPID 6230 Computer Packages for Epidemiology (3)
This course consists of data management and data analysis using SAS and STATA. The student will learn to browse and create mock data in REDCap. The student will be able to get different formats of data into SAS and STATA, manipulate data, generate figures and tables for reports, run basic analyses, and interpret the result. This course will prepare the student with the technical skills necessary to complete subsequent quantitative course work such as EPID7120, 7130, and 7220.

EPID 6290 Genetic Epidemiology (3)
This introductory course will cover fundamental concepts, terminologies and principles of human population genetics and molecular biology relevant to understanding approaches in genetic epidemiology. Study designs and analytical methods for genetic epidemiological studies of human disease in families and unrelated individuals will be discussed in detail. Issues related to genetic studies, such as genetic heterogeneity, population stratification and multiple testing will also be covered.

Prerequisite(s): EPID 6030*, SPHL 6060* or 6860 and BIOS 6030*, SPHL 6050* or 6850.
* May be taken concurrently.

EPID 6320 Molecular Epidemiology (3)
The course introduces the concepts, principles, and molecular tools used in epidemiologic research to evaluate both genetic susceptibility and the effects of environmental exposures underlying human disease. Class topics include: introduction to biomarkers of exposures, etiology and effect (including those used in infectious diseases) the theoretical advantages and limitations of biomarkers, criteria for evaluating and selection of potential markers, biological sample collection and storage (banking), methods for evaluation of gene-environment interactions, laboratory quality control considerations, issues in epidemiologic study design and analysis, ethical/legal concerns. Current methods and newly emerging technologies ('omics) will also be discussed.

Prerequisite(s): (EPID 6030, SPHL 6860 or 6060).

EPID 6340 Clinical and Translational Research Methods (3)
This course is an introduction to clinical and translational research methods. Emphasis is placed on maximizing study internal and external validity for observational cohort studies, case-control studies and clinical trials. Selected topics covered include study design options, sources of bias, confounding, effect modification, data analysis techniques, measures of disease frequency, association, and causal inference, sampling methods, design, conduct, analyses, and interpretation of clinical trials, preparation and submission of manuscripts, and funding opportunities for support of clinical and translational research.

EPID 6350 Implementation Science in Public Health (3)
Implementation science is a rapidly growing field in public health that is focused on moving scientific findings from controlled settings into clinical practice and community settings. This course will introduce the concepts, theories, frameworks, and methods needed for implementing evidence-based interventions and programs in a variety of settings. Students will learn the role of implementation science from bringing public health research and practice closer together and will gain the skills needed to support implementation across health conditions and various real-world settings. Topics will include implementation strategies, frameworks, study designs, methods, measurements, evaluation, sustainability and the importance of stakeholder partnerships.

Prerequisite(s): (SPHL 6050*, 6850 or BIOS 6030*) and (SPHL 6060*, 6860 or EPID 6030*).
* May be taken concurrently.

EPID 6420 Clinical Epidemiology (3)
This course will help students learn or refine the skills of clinical epidemiology, defined as the study and management of illness in individuals as well as populations using population methods. Individual and group sessions will develop techniques of constructive critical appraisal of the medical literature, illustrated by examples from general health, cardiovascular disease and diabetes. Students will learn how to assess studies of prognosis or outcomes of illness, treatments, diagnostic tests, and screening programs, as well as the basic requirements for randomized clinical trials.

Prerequisite(s): EPID 6030, SPHL 6060 or 6860 and BIOS 6030, SPHL 6050 or 6850.

EPID 6480 Reproductive Epidemiology (3)
This course provides students analytical skills necessary to conduct epidemiological studies in reproductive health in human populations. Reproductive Epidemiology covers broad reproductive health issues from the pre-conception, prenatal, delivery and post-natal periods, and emphasizes health issues affecting both women and infants. Relevant methodological, clinical, policy and programmatic issues will be presented with practical illustrations from domestic and international settings. Students will be able to design a reproductive epidemiology study, discuss relevant methodological issues in reproductive health epidemiology studies, and apply reproductive/perinatal health data to improve reproductive programs and policy.

Prerequisite(s): EPID 6030, SPHL 6060 or 6860 and BIOS 6030, SPHL 6050 or 6850.

EPID 6490 Environmental Epidemiology (3)
Environmental Epidemiology will introduce students to epidemiologic research designs and methods used to study health impacts of environmental exposures. The course will provide an overview of the major study designs used in environmental epidemiology, outcomes related to environmental exposure, challenges related to exposure assessment and policy-related issues.

Prerequisite(s): SPHL 6060.

EPID 6500 Nutritional Epidemiology (3)
Nutritional Epidemiology is a rapidly evolving field of epidemiologic research that utilizes highly specialized epidemiological methods to identify dietary and lifestyle factors that are related to human diseases especially non-communicable, chronic diseases such as obesity, diabetes, cardiovascular disease and cancer. This introductory course will cover fundamental concepts, terminologies and principles in Nutritional Epidemiology and analytical approaches particularly used in studying relations of dietary factors with human health. The lectures include study designs, nutritional assessment, and analytical methods for nutritional epidemiological studies in population-based settings such as case-control studies, cohort studies, and randomized clinical trials (RCTs). The course will also cover new advances in the fields of Nutritional Epidemiology, such as gene-diet interactions, metabolomics, epigenomics, and microbiome research.

Prerequisite(s): EPID 6030*, SPHL 6060* or 6860.
* May be taken concurrently.

EPID 6600 Social Epidemiology: Mechanisms of Disparities (3)
This course will examine the major patterning of health related to social factors, including race, gender, and socioeconomic status. Effects from the microsystem (individual experience, family) to the macrosystem (neighborhood, community, nation) will be examined. Upon completion of the course, students will be familiar with how these factors affect health and the mechanisms by which health inequities are created.

Prerequisite(s): (SPHL 6050 or 6850 and SPHL 6060 or 6860) or (EPID 6030 and BIOS 6030).

EPID 6750 Outbreak Epidemiology (3)
This course is designed to provide students with the knowledge and skills required for the investigation, control and prevention of disease outbreaks in a variety of settings and due to a variety of infectious agents. Students will explore and practice the approaches used to investigate disease outbreaks, and examine local and global efforts to monitor, control and mitigate the effects of infectious disease outbreaks.

Prerequisite(s): (EPID 6030, SPHL 6860 or 6060) and (BIOS 6030, SPHL 6850 or 6050).

EPID 7000 Departmental Seminar (0-1)
The Epidemiology Seminar Series provides a forum in which faculty, guest faculty, and doctoral students present their research on topics relevant to epidemiologic principles, methods, and applications. Students who take this course for one credit will need to write a review article on one of the research topics presented during the semester. The review article should follow a scientific journal format (abstract, introduction, methods, results, discussion, tables, figures, and references). Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EPID 7110 Spatial Epidemiology (3)
This course introduces students to a range of spatial techniques in social epidemiology, including geospatial approaches to exposure and outcome measurement as well as analyses and integration between Geographical Information System (GIS) and traditional software packages. Students will apply problem solving abilities, critical thinking skills, and creative thinking to diverse examples of social and spatial epidemiology. Content will build upon existing GIS courses and will focus on teaching methods and interpretation of spatial analyses for research and programming, including emerging areas such as working with global positioning system (GPS) data or geotagged social media data. Non-content objectives are for students to develop a critical and creative approach to questions in public health which can benefit from spatial epidemiology.

Prerequisite(s): (EPID 6030, SPHL 6860 or 6060) and (BIOS 6030, SPHL 6850 or 6050).

EPID 7120 Epidemiologic Methods II (3)
This course is intended to enhance student understanding of observational epidemiologic research methods. The course emphasizes critical thinking and approaches to design, analysis and interpretation of observational studies. Emphasis is placed on maximizing study internal validity. Selected topics covered include measures of disease frequency, association, and impact; study design options, sources of bias, and data analysis techniques.

Prerequisite(s): (EPID 6030, SPHL 6860 or 6060) and (BIOS 6030, SPHL 6850 or 6050) and (EPID 6230, BIOS 6290 or SPHU 4160).

EPID 7130 Observational Epidemiology (3)
The goal of this course is to present the conceptual basis for the design, conduct, and analysis of cohort and case-control studies. The course will review the application of case-control and cohort studies in the context of epidemiological research and public health. Students will gain hands-on experience in designing and analyzing observational studies through classroom sessions and homework assignments. By the completion of the course, each student will have the skills to design, develop data collection methods for, and analyze data from case-control and cohort studies.

Prerequisite(s): (EPID 6030, SPHL 6860 or 6060) and (BIOS 6030, SPHL 6850 or 6050) and (EPID 6230, BIOS 6290 or SPHU 4160) and EPID 7120 and BIOS 6040.

EPID 7160 Survey Methodology (3)
This course is designed to prepare the student to undertake survey research addressing a wide variety of public health topics in national and international settings. Focus is on the collection of information from primary sources such as individuals or groups. Survey approaches include questionnaires for mail or group administration and personal interviews in institutional and household settings. Although attention is given to principles of overall research design, the major emphasis is on principles and techniques of data collection procedures including instrument design and preparation for analysis.

Prerequisite(s): EPID 6030, SPHL 6060 or 6860 and BIOS 6030, SPHL 6050 or 6850.

EPID 7170 Clinical Trials: Design, Conduct & Interpretation (3)
This course covers various topics in the design, conduct, analysis and interpretation of clinical trials and uses published and on-going studies to illustrate these issues. Topics include the definition and history of clinical trials; trial designs, including phase I-IV, parallel, crossover, factorial, and large multicenter trials; internal and external validity; selection of intervention, control, and study population; randomization and masking; selection of trial outcome variables; data collection and quality control; ethical issues; data analysis principles; and issues related to publication and dissemination.

Prerequisite(s): (BIOS 6030, SPHL 6050 or 6850 and SPHL 6060, 6860 or EPID 6030).

EPID 7210 Epidemiology of Sexual Health (3)
This course is designed to provide students with the skills to conduct epidemiologic research in HIV and other sexually acquired infections. This course will cover the biology of these infections, methodological issues of surveillance, clinical and behavioral research and ethical aspects of the epidemiology of HIV/STI. Students meet experts in the field and learn of the most up-to-date issues and state-of-the-art epidemiologic methods surrounding HIV and other STIs.

Prerequisite(s): EPID 6030, SPHL 6060 or 6860 and BIOS 6030, SPHL 6050 or 6850.

EPID 7220 Analytic Epidemiology (3)
This course is designed for doctoral students and advanced master students to help them develop data analysis, interpretation, and presentation skills. The course covers common statistical models for continuous, categorical and count data from both cross-sectional and longitudinal studies. Both parametric and semi-parametric models are covered. The statistical models are illustrated by case studies throughout the class. During this course, students will analyze data from several different studies and discuss advanced epidemiologic methods issues that one may encounter during data analysis with guidance from the professor. After successfully completing the course, students are expected to be able to conduct statistical analysis independently based on the type of outcome and study design, and interpret the results and present the findings.

Prerequisite(s): (EPID 6030, SPHL 6060 or 6860 and SPHL 6050, 6850 or BIOS 6030 and BIOS 6040, EPID 6230, 7120 and 7130).

EPID 7310 Meta-Analysis (3)
This course is designed to provide students with qualitative and quantitative skills to conduct meta-analysis. The course covers the formulation of study hypothesis, literature search, evaluation of study quality, and statistical methods for meta-analysis. In addition, the potential problems and biases in meta-analysis will be addressed.

Prerequisite(s): EPID 7120* and BIOS 6030 or SPHL 6050 or 6850 and EPID 6030, SPHL 6060 or 6860.
* May be taken concurrently.

EPID 7410 Pharmacoepidemiology (2)
This course provides an introduction to the concepts and methods of Pharmacoepidemiology through 30 in-class credit hours (including lecture, case studies, computer laboratory, group project and final exam). It begins with an overview of how epidemiology is applied to study the safety of drugs, medical devices and vaccines in academia, industry and regulatory agencies. Epidemiologic study designs, methodologies and techniques for pharmacoepidemiologic research, including commonly used data sources, are then discussed. Lastly, common biases and methodological challenges encountered in pharmacoepidemiology and approaches for addressing these are illustrated through case studies and computer laboratories.

Prerequisite(s): (EPID 6030 or SPHL 6060) and (BIOS 6030 or SPHL 6050) and EPID 7120.

EPID 7810 Human Molecular Genetics (3)
This course is designed to prepare students for the study of human health in the post-genome era. The goal of the course is to provide students the fundamental skills and knowledge on the molecular aspects of human genetics, the most current technologies, experimental design, interpretation of genetic data and the use of genomic information for the study of human disease. The information will be integrated into a big picture of how each component relates to human health both individually (precision medicine) and in a population perspective, relating genetic instability to genetic variation and disease risk. Cancer, gene therapy and stem cell research will be used as an example of disease-related questions.

Prerequisite(s): EPID 6030, SPHL 6060 or 6860.

EPID 7990 Master's Independent Studies (1-3)
Masters students and advisor select a topic for independent study and develop learning objectives and the expected written final product.

EPID 8000 Doctoral Journal Club (0)
This course is required for all doctoral students in the Department of Epidemiology until successful completion of the comprehensive exam and optional for the duration of their tenure as doctoral candidates. It is intended to increase students' knowledge in design, conduct, analysis, interpretation, and dissemination of epidemiologic studies. In journal club, students develop critical evaluation and discussion skills as they become familiar with epidemiologic literature. These discussions are a great way of preparing students for their comprehensive exam and to create an active research environment.

Maximum Hours: 99

EPID 8300 Advanced Epidemiologic Methods (3)
This course covers a wide variety of topics in epidemiological methodology. Topics will include concepts of epidemiological study design, causality in biomedical research, bias, confounding, interaction, and statistical modeling of epidemiology data. In addition, students will learn how to develop and critically review a research proposal and scientific articles.

Prerequisite(s): (EPID 6030, SPHL 6060 or 6860 and EPID 7120 and 7130).

EPID 8990 Doctoral Independent Study (1-3)
Doctoral students and advisor select a topic for independent study and develop learning objectives and the expected final written product.

EPID 9910 Epidemiology Research Experience (0)
MS students engaging in epidemiology research experience.

EPID 9980 MS Thesis Research (0)
MS Students engaging in thesis research. Course may be repeated up to unlimited credit hours.

Course Limit: 99

Executive MBA (EMBA)

EMBA 6160 Managing People Internationally (2)
This course will consider the critical issues necessary for effectively managing people both at home and abroad and help students understand how to effectively manage in a multicultural setting. We will discuss the critical role that culture plays in shaping the success or failure of an international organization. In addition, we will discuss how the subtle nuances of culture can lead to conflict, especially in multi-cultural teams. We will also explore critical skills for global management: problem-solving and conflict management in multicultural settings and the leadership and management of geographically dispersed teams. Finally, we will discuss the role of HR during mergers & acquisitions.

EMBA 6180 Accounting for Managers (2)
Accounting for Managers focuses mainly on the set of frameworks and methods which serve to measure, analyze, and interpret internal information to support managerial decision making as well as performance evaluation and control. Unlike financial accounting, there is no set of rules and regulations that dictate how internally generated information is reported to management. Therefore, this course focuses on methods of data measurement and interpretation, with particular emphases on: 1) the design of appropriate costing systems; 2) the use of internal information to support managerial decisions; 3) the array of evaluation tools to monitor managerial incentives and performance. The course will also provide a brief review of the financial accounting principles as needed.

EMBA 6220 Decision Models (2)
Examines the art of solving problems under uncertainty. Course topics include descriptive statistics, probability, sampling distributions, confidence intervals, hypothesis testing and simple and multiple regressions. Methods are applied to management problems drawn from marketing, finance, economics, organizational behavior, and operations management.

EMBA 6230 Marketing Management (2)
Analyzes the market-driven corporation with respect to the marketing mix (product, promotion, price and distribution strategy) as it applies to consumer and industrial goods and services in the private and public sectors. Emphasis is placed on the application of the marketing mix through real-world projects.

EMBA 6240 Operations Management (2)

EMBA 6260 Financial Management I (3)
This course will provide a sound understanding of the theory of corporate finance. We will cover a wide range of topics including the time value of money, stock and bond valuation, the calculation of cash flows for a project, capital budgeting, the relationship between risk and return, and the cost of capital. By the end of the course students will have the basic tools used in analyzing the investment and financing decisions made within firms.

EMBA 6270 Financial Management II (2-3)
This course builds directly on the material covered in Financial Management I. The course focuses on the key policy decisions made in corporate finance and discusses their impact on firm and shareholder value. The course will include an in-depth analysis of firms' financing choices and capital structure and their role in capital budgeting decisions. The course also introduces the different discounted cash flow valuation techniques for the valuation of corporate cash flows. The last third of the course focuses on options, option pricing, and applications of option pricing in corporate finance including warrant and convertible bond valuation.

EMBA 6280 Business Analytics (2)

EMBA 6310 Strategy Formulation (2-2.5)
Increases understanding of the functions and responsibilities of general management. It examines the problems that affect the character and success of an entire enterprise, whether an entrepreneurial venture or a multinational conglomerate.

EMBA 6420 Leadership & Ethics (2-3)

EMBA 6460 Legal Environ/Business (2)
Introduces the basic concepts of contracts, labor laws, discrimination, torts, partnership, corporations, securities, and bankruptcy and gives students an understanding of the relationships between parties in a typical business setting. Tax consequences relative to various entities used in business transactions are also examined.

EMBA 7090 Managing The Global Entr (2-4)
Focuses on the structure and processes of management, particularly those of a global organization, and simulates upper-level management activities of the global enterprise. Course objectives include developing an integrated understanding of strategic and operational decision-making in a global enterprise from a general management perspective.

EMBA 7120 Managerial Perspective (1-2)
Provides a framework for analyzing and identifying key management issues and developing plans for action. Study focuses on identifying what managers do, what distinguishes effective management, how managers make decisions, and what makes a company excellent.

EMBA 7160 Economics for Managers (2)

EMBA 7260 Supply Chain Management (2.5-3)

EMBA 7320 Negotiations (2-3)
Explores the behavioral processes and phenomena which are inherent in virtually all types of negotiations. Emphasis is on systematic preparation of a negotiating strategy. In-class negotiation exercises and extensive debriefings are used by participants to test and evaluate their strategies and tactics.

EMBA 7370 Cases In Finance (2)
Through case analysis, this course explores ways to value different types of business enterprises. The course emphasizes discounted cash flow methods of valuation, though other methods, such as the method of multiples, the venture capital method, and real options are also introduced. Students develop and practice valuation skills, such as financial forecasting, cash flow measurement, discount rate estimation and continuing value calculation. In addition, students work with a variety of corporate situations, such as LBO's, IPO's, spin-offs, and mergers, in which valuation plays a key role.

EMBA 7380 Intl Business Management (1-3)

EMBA 7390 Financial Statemt Analys (2)
Explores the principles and techniques for understanding and interpreting financial statements, including statement comparability, income measurement and disclosure, cash flow analysis, ratio analysis and the disaggregation of ratios, quality of earnings, account analysis, and footnote disclosures. The financial relationships of the accounting model are applied to published financial statements. Cases are used extensively.

EMBA 7410 Change Management (2)
Examines the key aspects of leading a successful organizational change. The course analyzes both successful and unsuccessful change management efforts, allowing students to practically apply readings and discussions to individual organizational experiences. The course will build a framework for leading a successful organizational change.

EMBA 7430 Global Strategy (2-3)
This course provides a basis for understanding the international business environment and the mode of entry to foreign markets. The course is organized around three major topics: (1) The differences in the business environment across nations from a social, cultural, and political perspective as well as the effect of the business context on managerial decisions, (2) The methodology to select foreign markets for a firm's expansion, and (3) Foreign market entry strategies and management implications for operating overseas.

EMBA 7450 Management Communications (2-3)
Recognizing that effectiveness in managerial communication continuously ranks as the single most important skill for managers and executives, this course focuses on the different ways managers communicate within organizations and on the different ways companies communicate with both internal and external constituencies, including employees, shareholders, regulators, and the public. The practical emphasis is on student exercises and includes informal individual briefings, formal group presentations, and media events during crisis situations. Students are encouraged to draw on their experiences and materials from their own backgrounds and companies.

EMBA 7460 Entrepreneurship Mgmt. (2)
Conveys skills and modes of analysis that will be used directly in initiating or acquiring, managing, and harvesting a new venture. Concepts are also applicable to venturing within an existing corporation. Students will be expected to apply tools and theories learned in functional area core courses and additional knowledge gained from this class to the analysis of cases, a venture feasibility analysis process, and the formulation of a business plan.

EMBA 7510 Portfolio Theory (1.5-2)
This course examines the foundations of investment theory and practice. It begins by elaborating the concepts of risk and risk aversion, wealth allocation between risky and riskfree assets, and optimally risky portfolios. The course proceeds to develop various asset-pricing models, paying special attention to the CAPM and APT. The course will also examine the concept of market efficiency and review the empirical evidence for and against efficiency. The second half of the course examines theories and strategies for managing investment portfolios. This includes surveying how securities are actually traded and cleared. It then examines theories of active portfolio management ranging from the Peter Lynch approach to more formal models such as the Treynor-Black model. Issues of asset allocation, extended (e.g. global and real asset) diversification, and investment company organization and policy formation are studied. The course concludes with a study of portfolio performance measurement.

EMBA 7520 Leadership and Ethics (2)
This course examines the psychological, cognitive, and social processes that facilitate (or undermine) effective influence in organizations. The course seeks to develop cognitive, interpersonal, and strategic skills of business leaders, and relies on an organizing framework that examines leadership and ethics at three levels-of-analysis: leadership of (1) self, (2) others, (3) groups and organizations. Classroom activities will examine, discuss, and demonstrate how core concepts in class are realized at each level.

EMBA 7550 Performance Management (2)
One of the cornerstones of human resource practice in any organization, performance management shifts the common focus on an annual evaluation of employee performance to an ongoing process that includes establishing an organizational climate for success, setting and aligning goals, coaching and developing employees, formally evaluating performance, and linking performance to recognition and rewards. This course will expose students to current thinking, strategies, and evidence-based best practices in these areas of performance management by incorporating perspectives of leading practitioners, consultants, and researchers in the field. The course will be conducted in an interactive and participative manner. Learning will be facilitated through lecture and discussion, case studies, interactive exercises, and student presentations.

EMBA 7570 Global Business Envirnmt (2-3)

EMBA 7590 Corporate Strategy (2)
This course is designed to provide experienced executives with practice-oriented, nuanced, in-depth knowledge of the various aspects of the corporate strategy of the firm. "Corporate strategy" means managing the firm's scope – in other words, managing a corporation as a portfolio of businesses: What business units should the company have in order to maximize the shareholders' value? How should it acquire new lines of business? How should it divest the units it no longer wants? What should be the extent of the units' autonomy? In this class, students will improve their understanding of what makes a portfolio of businesses under a single corporate umbrella more or less valuable. Students will also develop and hone the decision-making tools for properly structuring and executing acquisitions and alliances under different business situations.

EMBA 7610 Options (2)
This course will develop state-of-the-art quantitative tools for evaluating large, complex investment projects that cannot be evaluated in a satisfactory manner with standard discounted cash flow techniques. Issues covered include risk-adjusted probability measures and an introduction to modeling project cash flows as financial options. The course will also address financing and distribution policies and restructuring strategies with a special focus on the energy industry. The second half of the course will include valuing capital projects using discrete time and continuous time option pricing models. Special attention will be paid to actual and strategic real option problems in energy finance such as off-shore exploration and power plant management. (2 credit hours)

EMBA 7620 Corp Risk Management (2)
Corporations face a variety of risks including interest rate risk, commodity price risk, foreign exchange rate risk, counter party default risk and political risk in addition to the usual business risks of their chosen fields of operation. This course analyzes the corporate decision to hedge (or not to hedge) focusing on how these decisions maximize shareholder value. The course explores ways in which firms manage their exposure to product market and financial risk and provides a balanced treatment of commodity price, interest rate, and currency risks. Topics include swaps, financial futures, FRAs, options and other recent innovations in the derivatives markets. The issue of counter party default risk and risk management approaches such as VAR (value-at risk) are also studied.

EMBA 7630 International Finance (1-3)

EMBA 7660 Managing Innovation (2)
This course provides experienced executives with practice-oriented, powerful analytical frameworks for better managing their company's innovation process and increasing its success rate of bringing innovations to market. "Managing innovation" means creating effective internal processes to sense innovation trends, to invest in the "right" portfolio of innovation projects, and to better understand the factors causing innovations to succeed or fail in the market. How can companies sense future innovations and shape these innovation opportunities to their advantage? Which projects should we invest in to create a portfolio that balances our company's needs for both short-term profits and long-term growth? What implications do disruptive technologies have for our company and its industry? How likely is an innovation to restructure the basis of competition in our industry and threaten our current competitive advantage?

EMBA 7920 Independent Study (2-3)

EMBA 7960 Global Business Project (0-1)

Finance (EFIN)

EFIN 6110 Accounting for Managers (2)

EFIN 6120 Fincl Statement Analysis (2)
This course explores the principles and techniques for understanding and interpreting financial statements, including statement comparability, income measurement and disclosure, cash flow analysis, ratio analysis and the disaggregation of ratios, quality of earnings, account analysis, and footnote disclosures. The financial relationships of the accounting model are applied to published financial statements. Cases are used extensively.

EFIN 6200 Decision Models (2)
This course examines the art of solving problems under uncertainty. Course topics include descriptive statistics, probability, sampling distributions, confidence intervals, hypothesis testing and simple and multiple regressions. Methods are applied to management problems drawn from marketing, finance, economics, organizational behavior, and operations management.

EFIN 6300 Financial Management I (2)
This course provides a rigorous introduction to the field of financial economics. The first section of the course develops an analytical understanding of the time value of money concept, and applies it through basic techniques for the valuation of stocks, bonds, and investment projects. Various capital budgeting rules are also discussed in this section. The second section focuses on capital markets including the statistical concepts of covariance and diversification and the capital asset pricing model. The third section introduces capital structure policy and discusses the impact of the different financing choices on risk and required return on firm's equity. This section also introduces the notion of weighted average cost of capital.

EFIN 6310 Financial Management II (2)
This course builds directly on the material covered in Financial Management I. The course focuses on the key policy decisions made in corporate finance and discusses their impact on firm and shareholder value. The course will include an in-depth analysis of firms' financing choices and capital structure and their role in capital budgeting decisions. The course also introduces the different discounted cash flow valuation techniques for the valuation of corporate cash flows. The last third of the course focuses on options, option pricing, and applications of option pricing in corporate finance including warrant and convertible bond valuation.

EFIN 7100 Options (2)

EFIN 7110 Portfolio Theory (2)
This course is concerned with the choice of investment strategies with differing risk/return characteristics, in the presence of uncertainty. We will examine the risk/return characteristics of both equities and fixed-income instruments. We will begin by looking at the market structure within which equities are traded, how market indexes are derived, and the various styles of professional asset management. Within the context of fixed-income investments, we will discuss the various theories of the term structure of interest rates, how to derive implied forward rates, and how to measure and manage interest rate risk using duration and convexity. Interest rate futures, options and swaps will also be discussed as instruments for managing interest rate risk in a fixed-income portfolio. Finally, we will discuss several equity valuation measurements and the concept of market efficiency. Empirical evidence for and against efficient markets will be examined, and the basic tenants of Behavioral Finance will be introduced.

EFIN 7130 Fixed Income Analytics (2)
This course examines the pricing and yield determinants of various fixed income securities including Treasury bills, notes and bonds, strips, corporate bonds, munis, mortgages, and asset-backed securities. Topics include the term structure of interest rates, duration, convexity, immunization, and the various types of risk that can affect the pricing of fixed income securities. Arbitrage-free pricing methods are explained. The course is designed to give students the quantitative tools they need to evaluate streams of fixed-income cash flows.

EFIN 7140 International Finance (2)
International Finance is the sub-area of finance that studies the international investment decisions concerning real and financial assets. This course considers the concepts and theories of modern multinational financial management and gives participants a solid theoretical and practical background that serves to better understand the importance of risk management in a Multinational Corporation (MNCs) and the particularities of corporate finance and corporate governance in a global context.

EFIN 7160 Corporate Risk Management (2)

EFIN 7190 Energy Investment Banking (2)

EFIN 7200 Game Theory & Finance (2)
This course is an introduction to strategic models of decision-making and equilibrium with applications to economics and finance. Topics to be covered are: Nash Equilibrium, game theory, auctions, dominant strategies, coordination games, extensive form applications, subgame perfection, mixed strategies, applications of mixtures, asymmetric information, moral hazard, evolutionary games and dynamics. The use of critical thinking skills and mathematical analysis will be at the master's-level. Students completing this course will be able to understand the current issues in game theory and finance.

EFIN 7210 Financial Engineering (2)
This course is designed to introduce students to financial innovation and strengthen the ability to tackle more structured financial problems. While the course is grounded solidly in theory, it also provides a thoroughly applied perspective of the topics: equity and debt, default and credit derivatives and interest rate models.

EFIN 7220 Financial Modeling (2)
This course is about financial models and their use and simulation using Microsoft Excel. The models covered include Fixed Income Securities, Portfolio Optimization, and Option Pricing. The course content consists of a mix of theoretical models and model application.

EFIN 7310 Econometrics (2)
Topics covered include econometrics basics, regression, formulas, statistics, variable bias, models, multicollinearity, hypothesis testing, binary variables heteroskedasticity, endogeneity, instrument variables, forecasting and speculation.

EFIN 7500 Venture Cap & Private Equity (2)

Finance (FINE)

FINE 3000 Personal Finance (3)
This course is for students who want to increase their understanding of personal finance concepts. The course focuses on personal financial decisions such as investments, taxes, insurance, inflation, mortgages and credit, and it examines basic financial and economic concepts the media covers. The course objective is to make students financially literate, with the knowledge, skills and confidence to take charge of their financial futures. Enrollment is limited to business minor students only, and the course does not count toward the BSM degree.

FINE 3010 Financial Management (3)
This course provides an introduction to finance for students aspiring to careers in financial management. It also provides a general understanding of finance for other students. The course covers time value of money and the valuation of stocks, bonds, and real investment projects.

Prerequisite(s): ACCN 2010, ECON 1010, 1020*, MATH 1230, MGSC 3010* and MATH 1210 or (MATH 1150 and 1160).
* May be taken concurrently.

FINE 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course.

Maximum Hours: 99

FINE 4001 Private Equity Seminar (3)
The Private Equity Seminar will provide undergraduate students with a comprehensive overview of the private equity industry. Students will have the opportunity to hear from and interact with professionals in the industry. Speakers will include practitioners from private equity funds, family offices, independent sponsors and limited partners. Topics covered will include fundraising, sourcing and analyzing investment opportunities, valuation, financial modeling, deal structuring, letters of intent, due diligence, portfolio company monitoring, board representation, evaluating investment performance and liquidity options. The class will be a mix of panel discussions, lectures, case studies, exercises and student presentations. Students will complete team projects as well as individual assignments.

Prerequisite(s): ACCN 3010, FINE 3010, LGST 3010, MCOM 3010, MGMT 3010, MGSC 3010 and MKTG 3010.

FINE 4002 Industry Real Estate Projects Seminar (3)
The Industry Real Estate Projects Seminar will provide "a real estate experience" to expand a student's understanding of the industry and will assist students to appreciate that the industry's dynamics are based on applications of finance and economics principles. The course is a combination of classroom instruction and intensive exploration of one real estate property via a case competition.

Prerequisite(s): ACCN 3010, FINE 3010, LGST 3010, MCOM 3010, MGMT 3010, MGSC 3010 and MKTG 3010.

FINE 4010 Financial Modeling for Real Estate (3)
The course in Real Estate Financial Modeling provides students with the knowledge and skills required to analyze and make informed financial decisions in the real estate industry. Students will learn the fundamentals of real estate financial modeling, including key concepts, techniques, and tools used to evaluate investment opportunities and assess the financial feasibility of real estate projects. Through a combination of theoretical instruction, hands-on exercises, and real-world case studies, students will develop proficiency in modeling several types of real estate-related financial transactions and gain insights into the dynamics of the real estate market.

Prerequisite(s): FINE 3010, MGSC 3010 and INFO 1010.

FINE 4100 Advanced Financial Management (3)
This course is intended for students who wish to learn and analyze the concepts, theories and applications of modern corporate finance. The course builds on the topics of FINE 3010 and covers a wide range of topics related to corporate finance. Specific topics include in-depth analyses of firms' financing choices and their impact on value, advanced capital budgeting, agency costs, dividend policy, stock splits/repurchases, mergers and acquisitions, and financial distress. The course will also cover stock option characteristics, valuation and applications.

Prerequisite(s): FINE 3010.

FINE 4110 Investments in Equities (3)
This course focuses on equity investing. The major topic areas are equity markets, valuation and portfolio management. Course content consists of descriptive material, theoretical models and the practical application of theory. Topics include stock market exchanges, indexes, risk and return, diversification, market efficiency, portfolio theory and management, portfolio evaluation, mutual funds, and fundamental market, industry and company analysis.

Prerequisite(s): FINE 3010.

FINE 4120 Analysis of Fixed Income Securities (3)
This course deals with the analysis of fixed income securities. Topics include valuation of different bond types, calculation of yield to maturity and total returns, accrued interest, day-counting rules, measurement of interest rate risk (duration and convexity), term structure of interest rates, money markets, mortgages and the concept of pass-through securities, and management of interest rate risk through fixed income derivatives. Students will explore theoretical aspects and applications of theory. The professor may also introduce spreadsheet modeling in the above areas.

Prerequisite(s): FINE 3010.

FINE 4130 Venture Capital and Private Equity (3)
This course analyzes the concepts and theories of entrepreneurial finance, which includes venture capital and private equity. The course builds on the core finance topics covered in FINE 3010 and covers a wide range of topics related to entrepreneurial finance. Apart from an in-depth analysis of new venture financing, the course also covers the financial aspects of strategic and business planning, financial forecasting, valuation, organization design and financial contracting, and financing and harvesting choices.

Prerequisite(s): FINE 3010 and 4100.

FINE 4140 Risk Management (3)
This course focuses on (1) identifying financial risks associated with interest rates, currencies and commodities (2) the properties, payoff structures, trading mechanisms, and valuation of key financial derivatives, such as forwards, futures and options (3) understanding why and how firms hedge risk using derivatives.

Prerequisite(s): FINE 4100, 4110 and 4120.

FINE 4145 Advanced Trading (3)
This course is about trading financial assets. It is intended for students who expect to take trading jobs, but is also relevant for all students who expect to trade securities. The course examines the application of technology to implement financial theories and models. It uses a combination of lectures and exercises conducted in the school's state-of-the-art trading facility to make students comfortable with how to construct trading strategies and how to use contemporary models to price and hedge derivative securities.

Prerequisite(s): FINE 4140*.
* May be taken concurrently.

FINE 4150 International Finance (3)
This course provides an integrated view of international financial markets and the management of multinational firms. It introduces students to markets for spot currency transactions, currency forwards, options and swaps. Students are familiarized with tools for valuing instruments traded in these markets. The course then focuses on the opportunities and challenges these markets present to multinational managers attempting to manage exposure to exchange rates, raise capital in international capital markets and evaluate international capital budgeting projects.

Prerequisite(s): FINE 4100 and 4120.

FINE 4160 Equity Analysis/Burkenroad Reports (3)
Students must apply to Burkenroad Reports, and enrollment is by invitation only. Enrollment is limited to Finance majors who are in the second semester of their junior year or first semester of their senior year, and who have minimum 3.000 cumulative and business grade-point averages. In this valuable hands-on course, teams of three or four students meet with top management, visit company sites, develop financial models and publish in-depth investment research reports on public companies. The reports become available at www.burkenroad.org and are distributed to more than 20,000 institutional and individual investors. Students are also responsible for introducing company management at the Burkenroad Reports Investment Conference each spring. The companies are located in Alabama, Florida, Georgia, Louisiana, Mississippi and Texas.

Prerequisite(s): ACCN 3100* and FINE 4110*.
* May be taken concurrently.

FINE 4170 Financial Modeling (3)
This course makes the connection between studying textbook finance theory and solving real-world business problems. The course provides students with a "nuts and bolts" guide to solving common financial problems by building financial models in spreadsheets. Topics include pro-forma financial forecasts, modeling stock prices, user-defined functions in VBA and Monte Carlo simulation. In addition, the professor may explore other finance problems.

Prerequisite(s): FINE 3010 and MGSC 3010.

FINE 4190 Commercial Bank Management (3)
FINE 4190 explores emerging institutional changes as they relate to the structure of commercial banks. Topics include asset and liability management, loan evaluations and policies, investment policies and management, and financial analysis of banks.

Prerequisite(s): FINE 3010.

FINE 4210 Real Estate Planning and Development (3)
FINE 4210 places the student in the role of real estate project manager, using the tools of the developer, entrepreneur and business person. The primary responsibility of the principal or consultant in a real estate venture is to manage all resources efficiently and effectively. The course will examine current professional development in real estate and the decision-making process under changing economic conditions, environmental expectations, and federal and state tax legislation.

Prerequisite(s): FINE 3010 and MGSC 3010.

FINE 4240 Special Offering (1-3)
This is a topics-oriented approach to the history of pre-industrial, industrializing and industrialized economies with a focus on on the United States and Western Europe. Particular emphasis is placed on the historical conditions that caused major changes in financial markets. Topics covered includes the roles of elites in the development of new mediums and mechanisms of exchange; the evolution of modern fiscal systems to finance territorial expansion, geopolitical strategies and subsequent military operations; the articulation of new financial networks in the wake of the world wars of the twentieth century; and the deployment of globalized systems of finance and trade at the conclusion of the Cold War and at the start of the new century. This course discusses who, what, where, when and how various financial instruments evolved, ranging from clay tablet receipts for grain in ancient Sumer to the deployment of government bonds in England during the Napoleonic Wars, and it includes the birth of statistics-based insurance markets in 18th century Scotland. We will place particular emphasis on assessing the historical conditions that caused these major additions to the portfolio of available financial instruments.

Prerequisite(s): ECON 1010 and 1020.

FINE 4250 Applied Portfolio Management (3)
The course provides a practical introduction to applied portfolio management and trading, using a combination of lectures and the software platform, ALPHABETA. The software has been developed to provide a common platform for students and professionals, and everything students will learn in this course is used by leading real-world portfolio managers. Portfolio managers make their decisions based on strong academic theory and research. In this sense, the course is for students who wish to learn modern and real world portfolio management strategies.

Prerequisite(s): FINE 4100 and 4110.

FINE 4260 Financial Intermediaries (3)
This course is designed to give students a thorough understanding of the financial intermediaries that allow capital markets to function efficiently. Topics will include (but may not necessarily be limited to) the Federal Reserve, commercial banking, insurance companies, mutual funds, ETFs, hedge funds and investment banking. Students who meet the course requirements will leave with a clear understanding of what intermediaries do, how to evaluate or value intermediaries, and what issues they currently face. Junior standing and above.

Prerequisite(s): FINE 3010 and 4110.

FINE 4270 FinTech and Blockchain: Transforming the Financial Landscape (3)
This course aims to provide an in-depth examination of the innovative technologies shaping the financial world today. Starting with a foundational module on the evolution of 20th-century payment systems, the course provides essential context for today's digital financial innovations. Students will delve into key areas of fintech, such as crowdfunding, robo-advisors, and insurtech, as well as foundational elements of blockchain, including cryptocurrencies and smart contracts. The course also navigates the regulatory landscape and examines real-world applications across multiple sectors. Intended for participants from varied backgrounds, the course blends theoretical lectures with practical assignments and culminates in a final project aimed at applying the skills and knowledge gained.

Prerequisite(s): FINE 3010 or ECON 3010.

FINE 4310 Cases in Real Estate Finance (3)
This "high touch" course combines case study pedagogical methodology with experiential learning to give students the knowledge and skills to succeed as a real estate finance professional. The course builds upon the fundamental principles, concepts, and methods used in real estate finance and investment analysis. Using a holistic approach, students combine case study analysis, in-class exercises, and guest lectures to gain real-time perspectives on current trends and important developments in the industry. While we will have several guest lectures throughout the semester, many class sessions will follow an informal "studio" format, with students expected to take considerable initiative. Adding to the excitement, student teams will be assigned an actual client working within the real estate field, whom they will assist with a real-time business problem. This critical engagement allows students to step outside the classroom and into the exciting and dynamic world of the real estate analyst.

Prerequisite(s): FINE 3010.

FINE 4340 A Selber Jr on Distressed Debt (3)
This course introduces students to the broader field of alternative investing through an in-depth analysis of distressed debt investment opportunities. As part of the course, students will study a variety of applied case studies as well as relevant academic research papers on the subject. Leading practitioners in the alternative investment industry will visit the class as guest lecturers and mentors as students build their foundation of knowledge. Ultimately, students will work in teams to develop a pitch book that will analyze a distressed company and "pitch" an idea for investment in that company's debt and/or equity through a variety of strategies that will be discussed during the course. Note: Students must apply for enrollment in this course.

Prerequisite(s): FINE 4100 and 4110.

FINE 4350 Aaron Selber Jr on Hedge Funds (3)
This course introduces students to the broad field of alternative investing through an in-depth analysis of hedge fund investments. As part of the course, students will study a variety of applied case studies and relevant academic research papers on the subject. Leading practitioners in the hedge fund investment industry will visit the class as guest lecturers and mentors to students to help them build their foundations of knowledge. Ultimately, students will work in teams to develop a prospectus for a hypothetical new hedge fund. Students will compete in a simulated conference to raise committed capital for their newly created hedge fund. Students must apply for enrollment in this course. Senior standing.

Prerequisite(s): FINE 4110.

FINE 4380 Climate Change, ESG, and Financial Markets (3)
This course focuses on understanding how climate change risk could impact the economy and financial markets. We discuss Milton Friedman's influential article, which outlines why the only objective of a business should be to increase profits for its shareholders, and then review recent critiques of this argument. Although the course focuses on the E (Environment), we also discuss the S (Social) and G (Governance) aspects of ESG. We discuss motivations to invest in ESG assets, including shareholder preferences, screening bad investments, and constructing optimal portfolios for investors with climate risk exposures. We examine the macroeconomic effects of climate change, and its impact on specific markets such as equity, bonds, loans, and real estate. The course also covers methods of quantifying and measuring climate exposures. Students will read recent research that examines whether investor ESG preferences affect a firm's cost of capital and whether investors can do well while doing good. Students will also develop quantitative equity trading strategies related to climate risks and ESG. As part of a group project, students will develop and test a trading strategy designed to hedge climate risks or make greater returns by investing in climate or, more broadly, ESG-friendly assets. Finally, new "green" financial products, the emerging carbon offsets market, and regulatory efforts to limit climate change are discussed.

Prerequisite(s): FINE 3010.

FINE 4410 Special Topics (1-3)
Special topics course as designed by visiting or permanent Finance faculty. For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

FINE 4550 Finance Internship (1)
Freeman School majors may elect to do a business internship that will appear as a one-credit, 4000-level course on their transcripts; however, the credit does not apply towards the 122 minimum hours required for a BSM degree. The internship must be related to one of the majors offered through the BSM program, and it must apply (within an ongoing business organization) the intellectual capital obtained from first- through third-year Freeman School courses. To obtain approval for the internship, the student must visit the Career Management Center for instructions. Students receive a grade of Satisfactory/Unsatisfactory for the internship upon submitting a paper/evaluation to a supervising faculty member in the Career Management Center. This course is normally offered during the summer and fulfills the "curricular practical training" option for students with F-1 visa status.

FINE 4600 Cases In Valuation & Financing (3)
An applications course, FINE 4600 typically deals with cases involving working capital, mergers, corporate valuation and capital budgeting analysis and planning. The course reinforces and applies concepts and techniques from Accounting and Financial Economics in a practical setting. Senior standing.

Prerequisite(s): FINE 4100 and 4110.

FINE 4610 Darwin Fenner Student Managed Fund Honors Seminar (3)
This course satisfies the upper level honors course requirement for students in the honors program. The course combines academic study with actual investing. As part of the course, students manage a portfolio of stocks called the Darwin Fenner Student Managed Fund. Students study academic research papers and classic writings that have influenced equity investing. Through reading and discussing academic research papers, students develop a critical thinking process and proprietary investment models. Working in groups, students analyze all stock in their assigned sector of the stock market and make buy, sell and hold recommendations to the class. In addition, the class evaluates the historic performance of the fund. Enrollment is by invitation only. Invitation by Finance faculty; senior standing and Finance major – invitation only

Prerequisite(s): FINE 4100, 4110 and 4120*.
* May be taken concurrently.

FINE 4620 Invest Banking-Financial Firms (3)
This applications-oriented course builds upon the valuation concepts students learned in FINE 4100 (Advanced Financial Management) and applies them to investment- banking-style analysis for financial firms. Financial firms have unique asset, liability, risk and regulatory attributes that make them fundamentally different from other firms; as a result, they are often challenging to value. In this course, students will construct financial firm valuation models to later integrate into full-scale merger and acquisition analyses. Additionally, the instructor will use case studies based on banks, insurance companies, real estate investment trusts (REITs), asset management companies and other financial services companies to demonstrate varying business models, proper valuation and the overall acquisition and integration of financial firms. The course will be particularly helpful for students with an interest in working as buy-side or sell-side financial analysts covering the financial sector. It will also provide insights into understanding the business models of financial firms, which should be valuable to students who aspire to work for firms in the financial sector. Junior standing.

Prerequisite(s): FINE 4100.

FINE 4630 Financial Planning and Analysis (3)
The objective of this course is to provide a comprehensive, practical, hands-on understanding of Financial Planning & Analysis, one of the most critical functions of a firm's Finance team. Largely mirroring the expanding role of the CFO, the FP&A organization is called upon to lead the development of strategic initiatives, plans and projections, evaluate internal and competitive trends and variances, evaluate complex investment decisions, assess the firm's intrinsic value and analyze, promote ways to grow shareholder value and be a trusted partner of a firm's CFO and operating group leadership. The course will focus on developing an understanding of (1) overall financial drivers and essential analytical capabilities, (2) performance management, (3) projections and planning, (4) planning and analysis of critical value drivers including capital investments, and (5) intrinsic valuation and value creation.

Prerequisite(s): FINE 4100.

FINE 4910 Independent Study (0.5-3)
Freeman School seniors who have demonstrated academic excellence are allowed to pursue an independent study. The work may take the form of directed readings, laboratory or library research, or original composition. Instead of traditional class attendance, the student substitutes conferences with the supervising faculty, as needed. An Independent Study requires the approval of the supervising instructor and the Associate Dean for Undergraduate Education. The credit does not apply towards the Finance major requirements for a BSM degree; the Independent Study counts as Business elective credit only. Interested students should contact the Office of Undergraduate Education at the Freeman School. Prerequisites: Minimum cumulative GPA of 3.333 or higher; senior standing. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FINE 4990 Finance Honors Thesis (3)
This course is the traditional thesis option for the Finance area. Students enrolled in this course will begin their theses in the fall semester. They will conclude their theses in FINE 5000 in the spring semester.

FINE 5000 Finance Honors Thesie (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): FINE 4990.

FINE 5380 Business Study Abroad - FINE (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FINE 5390 Business Study Abroad - FINE (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FINE 6000 Fundamentals of Finance (1)
This course provides students with a fundamental understanding of the discipline of finance and prepares students for advanced finance coursework. The course covers time value of money and the basics of valuation of stocks and bonds. The course also introduces students to financial modeling techniques in Excel.

FINE 6010 Economics for Managers (2)
This course focuses on the economic principles and knowledge necessary for effective enterprise management in the modern business environment. The course is divided into two modules, one focused on applied microeconomics, the other focused on the macroeconomic foundations of the U.S. and world economy. The microeconomic module applies the economic theory of the firm and consumer behavior to analyze household and firm behavior. Applications include market demand analysis and marketing strategy, production and cost efficiency, pricing, product quality and other competitive strategies. The macroeconomic module examines the U.S. and world economy in relation to national income, international trade, and patterns of investment. Topics include the determination of interest rates, inflation, investment, wage levels, real output growth, exchange rates, and international trade and investment patterns. Also included is a study of the role of financial and governmental institutions in domestic and world commerce.

FINE 6020 Analysis for Financial Mgmt (3)
This course provides an introduction to the discipline of finance and gives students the tools they need to make capital budgeting decisions for firms. It begins with the study of the time value of money and how to value stocks and bonds. From there, it moves into capital budgeting techniques including net present value and internal rate of return. Students will learn how to evaluate an asset's risk and expected return within the context of a portfolio, leading to the fundamentals of asset pricing theory. Cash flow analysis, inflation, and a firm's cost of capital are all topics that are covered. The course concludes with a discussion of market efficiency and its implications. By the end of the course, students will be familiar with the basic tools used to analyze the investment and financing decisions made within firms.

FINE 6030 Managerial Finance (2)
This course introduces the discipline of finance and gives students the tools they need to make capital budgeting decisions for firms. It begins with the study of the time value of money and how to value stocks and bonds. From there, it moves into capital budgeting techniques including net present value and internal rate of return. Students will learn how to evaluate an asset's risk and expected return within the context of a portfolio, leading to the fundamentals of asset pricing theory. Cash flow analysis, inflation, and a firm's cost of capital are all topics that are covered. By the end of the course, students will be familiar with the basic tools used to analyze the investment and financing decisions made within firms.

FINE 6040 Financial Models for Business Decisions (2)
While finance provides clear guidelines on corporate and investor decision-making in theory, applying these ideas to real-world settings is difficult because real data is noisy and outcomes often depend on implementation choices. We begin by examining complications in calculating the present value of uncertain future cash flows, a key input to valuations and project go/no-go decisions. We study how to forecast future financial statements and cash flows, incorporate uncertainty in growth assumptions using scenarios and Monte Carlo simulations, and implementation choices in calculating discount rates. We then study decisions that investors make: how to build optimal portfolios and assess mutual fund performance.

Prerequisite(s): MGSC 6010, 6030 and FINE 6030.

FINE 6050 Corporate Finance (3)
Building on concepts learned in Fundamentals of Finance, this intermediate level course continues discussion of valuing cash flow streams and introduces risk, return, and the capital asset pricing model. Following which, the course will move on to an in-depth analysis of firms' financing choices and capital structure, basics of estimation and valuation of corporate cash flows, dividend policy, mergers and acquisitions, options and option pricing, and applications of option pricing in corporate finance including valuation of convertible bonds. While the course is grounded in solid theory, it will provide a thoroughly applied perspective on the topics covered.

Prerequisite(s): FINE 6000.

FINE 6070 Advanced Managerial Finance (2)
The focus of the course is firm's financing activities, both long-term and short term. Long-term financing includes raising cash through issuance of debt, equity, preferred stock, and convertible bonds. For short-term finance, the course investigates working capital management, including bank loan, cash, credit, and inventory management. The course concludes by discussing techniques for firms to maximize value by minimizing their cost of capital through appropriate financial structure policies.

FINE 6080 Financial Policy & Valuation (3)
The course builds on the core finance sequence by focusing on the practical applications of the tools learned in the earlier courses. In addition to lectures, the course will utilize case studies focusing on real-world financial analysis and decision making. Topics may include forecasting cash flows, business valuation, financing, mergers and acquisitions, dividend policy, IPOs, etc. Students will be expected to work in teams on projects throughout the term and to present their work to class.

FINE 6470 Managerial Economics (3)
The purpose of this course is to apply the economic theory of the firm and consumer behavior to management decision making. This involves the development of a conceptual framework to analyze household and firm decisions related to product and factor markets and the application of that framework to managerial decisions. Applications focus on market demand analysis and marketing strategy, production and cost efficiency, pricing, product quality and other competitive strategies, optimization under regulatory constraint, optimal employment decisions, and incentive structures. The applications are developed with cases and problems.

FINE 7110 Investments (3)
The first half of this course takes students through an in-depth study of portfolio theory. The foundations of modern portfolio theory are rigorously developed and its principles are used to create mean/variance efficient portfolios. Students critically examine the assumptions of modern portfolio theory and its implications. Alternative multifactor pricing models including the Fama/French Three-Factor Model are also explored. The second half of the course focuses on fixed income analytics. Students learn how to price various types of fixed income securities and how to measure their interest rate risk. They learn how to hedge interest rate risk for fixed income portfolios, and how to incorporate call and conversion features into the price of a bond. Students learn how to derive implied forward interest rates, how to bootstrap a yield curve, and the implications of various theories of the term structure. Finally, students will have the opportunity to conduct an event study, learn the basics of options, and discuss how behavioral finance is changing the way asset pricing is viewed. Case studies will be used to learn how hedge funds, mutual funds, exchange-traded funds, and various other investment managers operate. Note: This course is a prerequisite for students who wish to apply for participation in Aaron Selber Jr. Course on Distressed Debt (FINE 7340) or Darwin Fenner Student-Managed Fund (FINE 7610), and a co-requisite for participation in Aaron Selber Jr. Course on Hedge Funds (FINE 7350).

Prerequisite(s): FINE 6020 or 6030.

FINE 7130 Advanced Financial Management (3)
This course builds on the topics covered in the core finance class. The course will cover advanced corporate finance theory and how one translates theory into financial decisions. Topics include firm capital structure, including Jensen's free cash flow (moral hazard), pecking order (adverse selection), and agency conflicts between stockholders and bondholders; capital budgeting when financing considerations are included; external financing, including leasing and security issuance to the public; working capital management, including cash, credit, and inventory management; dividend policy and share repurchases; mergers and acquisitions; corporate governance; options valuation in the context of convertible bonds and warrants; the valuation of real options; and corporate risk management. Special topics such as international finance may also be covered.

Prerequisite(s): FINE 6020 or 6030.

FINE 7140 Venture Capital & Private Equity (3)
Entrepreneurial firms face financial issues that are significantly different from those facing established companies. This course focuses on analyzing the special finance issues faced by such companies and on the knowledge and tools needed by managers of these firms. Topics covered will include stages of venture capital development, start-up financing (venture capital, leasing, bank loans), financial management of rapidly growing firms, deal structuring for entrepreneurial firms, and financial distress issues and concerns. Initial public offerings will also be examined as a culminating event for entrepreneurial firms. The course also covers the broader topic of private equity. The course investigates why firms seek private rather than public equity and identifies differences between private and public equity investments. The recent trend of investment in emerging economies by private equity funds is also examined. Students will create a deal or pitch book as part of the class.

Prerequisite(s): FINE 6020, 6030, 6050 or ENRG 7000.

FINE 7160 Investments & Asset Pricing (3)
The first half of the course covers security analysis, portfolio theory, and equilibrium models of capital markets. The second half of the course is devoted to an introduction to fixed income analysis and derivatives (futures, options, and swaps). The course will cover security analysis (including valuation models), equilibrium models of capital markets, and portfolio theory including the statistical backdrop for portfolio models. The class will cover bond pricing and the term structure of interest rates as well as methods for determining expected future rates off of the term structure. Then the course will move to an introduction to derivative securities. The use of options to construct various payoff schemes generally unavailable with stocks and bonds will also be covered along with option pricing models such as the Black-Scholes Option Pricing Model and the Binomial Option Pricing Model. The course will cover the mathematics behind the derivation of the Black-Scholes model and the use of stochastic processes. The course will include an ongoing group portfolio project and a project that uses simulation to implement a hedging strategy for a stock.

Prerequisite(s): FINE 6020* or 6050*.
* May be taken concurrently.

FINE 7180 Financial Modeling (3)
This hands-on course focuses on the applications of quantitative models in finance. Course topics include: mathematical and computational models of stock price movements involving stochastic processes; applications of probability theory to portfolio risk analysis; modeling of cash flows and valuation; Monte Carlo simulation applied to both investments and cash flow modeling; applications of numerical optimization in finance; and use of Excel and Python for computation, statistics, and graphics in finance.

Prerequisite(s): FINE 6020, 6050 or MGSC 7330.

FINE 7210 Real Estate Planning, Finance, and Development (3)
This course focuses on the real estate development process including: land acquisition, zoning, environmental impacts, valuation, financing alternatives, risk assessment, construction, management, leasing, and sale. Real estate decision making under changing economic conditions, environmental expectations, and tax legislation is also discussed.

Prerequisite(s): FINE 6020, 6030 or 6050.

FINE 7250 Real Estate Indus Sem (3)
This intensive seminar provides a "deep dive" into the real estate industry. It expands students' understanding of the industry and helps students to appreciate that the industry's dynamics are based on applications of finance and economics principles. The course is a combination of classroom instruction and intensive exploration of one real estate property through an experiential learning project.

FINE 7270 FinTech and Blockchain: Transforming the Financial Landscape (3)
This course aims to provide an in-depth examination of the innovative technologies shaping the financial world today. Starting with a foundational module on the evolution of 20th-century payment systems, the course provides essential context for today's digital financial innovations. Students will delve into key areas of fintech, such as crowdfunding, robo-advisors, and insurtech, as well as foundational elements of blockchain, including cryptocurrencies and smart contracts. The course also navigates the regulatory landscape and examines real-world applications across multiple sectors. Intended for participants from varied backgrounds, the course blends theoretical lectures with practical assignments and culminates in a final project aimed at applying the skills and knowledge gained.

FINE 7340 Aaron Selber Jr Course on Distressed Debt (3)
This course introduces students to the broader field of alternative investing through an in-depth analysis of distressed debt investment opportunities. As part of the course, students will study a variety of applied case studies, while leading practitioners in the alternative investment industry will visit the class as guest lecturers and mentors to the students as they build their foundation of knowledge. Ultimately, students will work in teams to develop a pitch book that will analyze a distressed company and "pitch" an idea for investment in that company's securities through a variety of strategies that will be discussed during the course. Note: Students must apply for enrollment in this course.

Prerequisite(s): FINE 7110 or 7160.

FINE 7350 Aaron Selber Jr on Hedge Funds (3)
This course introduces students to the broader field of alternative investing through an in-depth analysis of hedge fund investments. As part of the course, students will study a variety of applied case studies as well as relevant academic research papers on the subject. Leading practitioners in the hedge fund investment industry will visit the class as guest lecturers and mentors as students build their foundation of knowledge. Ultimately, students will work in teams to develop a prospectus for a hypothetical new hedge fund. Students will compete in a simulated conference to raise committed capital for their newly-created hedge fund. Note: Students must apply for enrollment in this course.

Prerequisite(s): (FINE 7110* and 7130*) or FINE 7160.
* May be taken concurrently.

FINE 7370 Algorithmic Trading and Quantitative Strategies (3)
This course is an introduction to financial trading strategies based on methods of statistical arbitrage. Topics include methodologies related to high frequency data, momentum strategies, pairs trading, technical analysis, models of order book dynamics and multi-exchange order placement and routing and dynamic trade planning with feedback. Emphasis is on developing, automating and empirically evaluating the models that reflect the market and behavioral patterns. The course will be balanced between theory and practice with a sufficient theory to understand practical applications. Although the methodologies could be applied to various financial markets, the course will mostly focus on stock and equity markets.

Prerequisite(s): FINE 7110 or 7160.

FINE 7380 Climate Change, ESG, and Financial Markets (3)
This course focuses on understanding how climate change risk could impact the economy and financial markets. We discuss Milton Friedman's influential article, which outlines why the only objective of a business should be to increase profits for its shareholders, and then review recent critiques of this argument. Although the course focuses on the E (Environment), we also discuss the S (Social) and G (Governance) aspects of ESG. We discuss motivations to invest in ESG assets, including shareholder preferences, screening bad investments, and constructing optimal portfolios for investors with climate risk exposures. We examine the macroeconomic effects of climate change, and its impact on specific markets such as equity, bonds, loans, and real estate. The course also covers methods of quantifying and measuring climate exposures. Students will read recent research that examines whether investor ESG preferences affect a firm's cost of capital and whether investors can do well while doing good. Students will also develop quantitative equity trading strategies related to climate risks and ESG. As part of a group project, students will develop and test a trading strategy designed to hedge climate risks or make greater returns by investing in climate or, more broadly, ESG-friendly assets. Finally, new "green" financial products, the emerging carbon offsets market, and regulatory efforts to limit climate change are discussed.

Prerequisite(s): FINE 6020, 6030, 6050 or ENRG 7110*.
* May be taken concurrently.

FINE 7510 Econometrics and Forecasting (3)
This course covers advanced regression techniques. The basic regression model is reviewed in the first week, and then more advanced techniques are covered. Topics include testing the assumptions of the regression model, multicollinearity, serial correlation, heteroskedasticity, endogeneity, stability, instrument variables, binary variables, ARCH, forecasting, and basic time-series regression models for both stationary and nonstationary data.

Prerequisite(s): FINE 6050, MGSC 7330, ENRG 7120, MGSC 6020 or 6010.

FINE 7530 Burkenroad Reports for Financial Analysts (3)
In this course, students will review the fundamentals of equity valuation, including dividend discount and discounted cash flow models, rational analysis of performance, and evaluation of future growth prospects. The course provides students with a valuable opportunity to gain hands-on experience in equity analysis by participating in Burkenroad Reports. Student analysts work in small teams, visit company sites, meet with top management, conduct financial analysis, and prepare an in-depth research report on selected under-followed companies in the region. Students also participate in the annual Burkenroad Reports Investment Conference. Note: Students must apply for enrollment in this course.

FINE 7610 Darwin Fenner Student Managed Investment Fund (3)
This course combines academic study with actual investing. As part of the course, students manage a portfolio of stocks for the university endowment. The following topics are discussed in the course: market efficiency, abnormal returns, factor models, interpretation of multiple regression outputs, relative valuation, portfolio theory, portfolio performance evaluation, and portfolio mean-variance optimization. State-of-the-art academic research papers and classic writings that have significantly influenced equity investing are studied. The assigned readings focus on empirical evidence regarding security and portfolio risk and returns. Through reading and discussing research papers and classic writings, students develop a critical thinking process and build proprietary investment models. Using their models, students analyze stocks in their assigned sector and give a buy, do not buy, hold, or sell recommendation on each stock. Students are also free to develop market-wide investment models to use across market sectors. Note: Students must apply and be invited by the finance faculty to enroll in this course.

Prerequisite(s): FINE 7160 or 7110.

FINE 7630 Equity Analysis/Freeman Reports (3)
Teams of students will create a sell side analyst report for a publicly traded company. This will include building a proforma model of the financial statements of a firm in Excel. The report will include all of the pertinent components seen in a typical Wall Street analyst report (industry overview, company description, risk analysis, management performance, valuation and forecasting models, and investment thesis). Students will work with writing coaches to reinforce skills in financial communication. The firms that are chosen will be in the energy industry or the financial industry. Students will have an opportunity to pose questions to management of the firms they cover. Students must attend a mandatory modeling weekend program run by an industry leader in such training. Students use Bloomberg terminals, and/or S&P Capital IQ, and/or ThomsonOne, and/or Thomson Reuters databases as part of the course. Note: Burkenroad Reports does NOT serve as a substitute for this course.

Prerequisite(s): FINE 7160 and 7640*.
* May be taken concurrently.

FINE 7640 Valuation (3)
This course strives to advance graduate students' knowledge and comprehension of corporate valuation using discounted cash flow, valuation multiples, and option techniques. The first part of the course focuses on valuation methods, including net present value/weighted average cost of capital, adjusted present value, economic value added model, relative valuation, and real option valuation. These valuation methods will then be applied to various forms of corporate investment, including new investment decisions, IPOs, restructuring transactions including mergers and acquisitions, divestitures, and LBOs, and projects with real option features.

Prerequisite(s): FINE 6050, 6020 or 6030.

FINE 7650 Fixed Income Analytics & Modeling (3)
This course will cover the following topics: (1) Surveys of markets (money market, fixed income, repos, federal funds), (2) Fixed income analytics (yield curves, term structure, spot and forward curves), (3) Models of term structure (such as Gauss X model, Nelson Siegel model), (4) Analytical models (1 factor, multi-factor), and (5) Credit derivatives (swaps, structured products, and credit derivatives).

Prerequisite(s): FINE 6020, 6030 or 6050*.
* May be taken concurrently.

FINE 7660 Financial Risk Management (3)
In this course, we will first study the properties, payoff structures, trading mechanisms, and valuation of key financial derivatives, such as forwards, futures, and options. Then we will study why and how firms manage risk using derivatives. We will also study the kinds of risk, regulatory structure, and risk management mechanisms in financial institutions. We will discuss what went wrong in terms of risk management in the 2007 financial crisis and what lessons we can learn. We will cover an introduction to stochastic processes such as Geometric Brownian Motion, Monte Carlo simulations of stochastic processes, and valuing options using the Black-Scholes analytical formula. We will also study analytical tools such as Value-at-Risk that apply concepts of probability theory to measuring risk in financial markets.

Prerequisite(s): FINE 7110 or 7160.

FINE 7690 Topics In Int'L Finance (3)

FINE 7810 Special Topics (1-3)
Special topics course as designed by visiting or permanent Finance faculty. For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

FINE 7950 Independent Study (1-3)
Independent Study: Finance

Fine Art - Interdisciplinary (FNAR)

FNAR 1500 Fine Arts (3)

Foreign Language (FRLN)

FRLN 1290 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FRLN 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

FRLN 2030 Foreign Lang Require (0-4)

FRLN 2390 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FRLN 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

French (FREN)

FREN 0100 France Summer Program, Paris (0)
France Summer Program, Paris.

FREN 1010 Elementary French I (4)
An introduction to the five skills of language acquisition: reading, writing, listening, speaking, and cultural understanding. This course should be taken before FREN 1020, and according to the French placement guidelines: https://liberalarts.tulane.edu/departments/french-italian/academics/undergrad/french/placement

FREN 1020 Elementary French II (4)
A continuation of the objectives presented in French I. This course should be taken after FREN 1010 and before FREN 2030, and according to the French placement guidelines: https://liberalarts.tulane.edu/departments/french-italian/academics/undergrad/french/placement

FREN 1290 Semester Abroad (1-20)
Semester abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 1891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

FREN 2030 Intermediate French (4)
Intermediate French language with emphasis on reading, conversation, and composition. This course should be taken after FREN 1020 and before FREN 3150, and according to the French placement guidelines: https://liberalarts.tulane.edu/departments/french-italian/academics/undergrad/french/placement

FREN 2040 Advanced French (3)
This course aims to reinforce intercultural communicative skills in French toward the advanced proficiency level. Students will practice the written and spoken interpretive, interpersonal, and presentational modes of communication, study the linguistic systems of the varieties of French, and develop their intercultural competence and knowledge of Francophone cultures. This course should be taken after FREN 2030 and before FREN 3000-level courses, and according to the French placement guidelines: https://liberalarts.tulane.edu/departments/french-italian/academics/undergrad/french/placement

FREN 2130 Intermediate French Conversation (2)
Intermediate French conversation.

FREN 2390 Semester Abroad (1-20)
Semester abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): FREN 2030.

Maximum Hours: 99

FREN 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

FREN 2990 Foreign Language Exemption (0)
Foreign Language Exemption.

FREN 3010 Topics French Cultr Stud (3)
Topics in French Cultural Studies. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 3011 Topics French Cultr Stud (3)
Topics in French Cultural Studies.

FREN 3030 French and/or Francophone Women Writers in Translation (3)
Introduction to works by major French and/or Francophone women writers in translation. The course may focus on works by contemporary women writers or examine texts from a range of historical periods. The issues raised in this course may include: the material conditions in which women have written; problems of publication; the specificity of women's writing; the conceptualization of gender; gender, race, and class.

FREN 3040 African and Caribbean Literature (3)
An introduction to African and Caribbean literature, cinema, and other forms of cultural production and an exploration of movements and concepts such as Négritude, Créolité, diaspora, and hybridity. Readings and discussion entirely in English.

FREN 3050 Literature In Exile (3,4)
A presentation of recent works by writers born in the French-speaking former colonies of Africa and the Caribbean, but living and writing elsewhere (e.g., Paris, Montreal, Brooklyn). Some of the questions the course will endeavor to answer are: What happens to cultures when they are displaced? How does one conceive of home when in exile, and is it possible to return? Is rootlessness a source of creativity, or a detriment to it? Reading and discussions entirely in English.

FREN 3060 Business French (3)
Practical reading, writing, speaking, and listening comprehension skills at an advanced level will be developed toward the use of French for business purposes. Emphasis will be placed on oral and written communication in simulated business situations.

Prerequisite(s): FREN 2040, 3150 or minimum score of PASS in 'FREN 3000 Level Placement'.

FREN 3110 French Cinema (3)
French film from its origins in 1895 to the present. Early film, technology, and physiology: the Lumière, Marey, Méliès; classic French cinema: Renoir, Gance. The French New Wave: Resnais, Truffaut, Godard, and others. Avant-garde, surrealist, and science.

FREN 3120 Paris, City of Immigrants (3)
Paris is often thought of as the quintessentially French city, the epicenter of government and culture in the highly centralized nation that is France. As a common French saying has it, "Paris, c'est la France" - "Paris is France." Yet for generations the face of Paris has been shaped not just by the French of the Hexagon, but by diverse groups of immigrants, ranging from East European emigres to inhabitants of France's former colonies in Africa, the Caribbean, and Southeast Asia. Indeed, immigration has made Paris so cosmopolitan that we might ask to what degree it truly embodies "Frenchness" today. Through course readings, lectures, and visits to key Parisian sites such as the Museum of the History of Immigration and immigrant neighborhoods such as Belleville and la Goutte d'Or, we will examine the most important waves of immigration to Paris and how they have helped to make the city what it is today.

FREN 3140 French Phonetics (3)
The study of the sound system of French for improving pronunciation. Students learn the fundamental concepts of phonetics, phonemics, and contrastive analysis while also practicing French pronunciation and learning to convert French spelling into phonetic transcription using the International Phonetic Alphabet. Independent work in the language laboratory is an important component of the course.

Prerequisite(s): FREN 2040, 3150 or minimum score of PASS in 'FREN 3000 Level Placement'.

FREN 3150 Advanced French Through Media I (3)
This course is designed to reinforce communicative skills in French at the advanced level through exposure to authentic written, visual, and oral documents dealing with French and Francophone cultures. The course offers a thorough review of French grammar, vocabulary, and pronunciation, while introducing students to media analysis. This course should be taken after FREN 2030, and according to the French placement guidelines: https://liberalarts.tulane.edu/departments/french-italian/academics/undergrad/french/placement

FREN 3160 Advanced French Through Media II (3)
This course is a continuation of the objectives set in FREN 3150: it is designed to reinforce communicative skills in French at the advanced level through exposure to authentic written, visual, and oral documents dealing with French and Francophone cultures. The course offers a thorough review of French grammar, vocabulary, and pronunciation, while further developing students' media analysis skills.

Prerequisite(s): FREN 3150* or minimum score of PASS in 'FREN 3160 Placement'.
* May be taken concurrently.

FREN 3170 French Pop Culture (3)
Students will improve their listening comprehension of French, improve their oral performance, and gain familiarity with aspects of French and Francophone cultures through art, cinema, photography, comics, social media, and performance (theater, dance, music).

Prerequisite(s): FREN 2040*, 3160 or minimum score of PASS in 'FREN 3170 Placement'.
* May be taken concurrently.
Course Limit: 2

FREN 3180 French for World Affairs (3)
"French for World Affairs" is designed to improve students' listening, reading, speaking, and writing skills in French, with a special emphasis on current global affairs. Students will engage with various French media sources to explore and analyze current events, political policies, cultural practices, and historical contexts within the French-speaking world. The course aims to enhance students' French listening and comprehension skills by utilizing a wide variety of audio-visual resources. It encourages critical thinking and discussion of global events, fostering a broader understanding of the world. Students will also develop insights into the complexities and dynamics of contemporary issues within the Francophone community, all while exploring the rich cultural diversity within French-speaking regions and anchoring their understanding in the relevant historical contexts that have shaped France and the Francophone world. By providing a comprehensive and in-depth exploration of French language and world affairs, this course bridges linguistic proficiency with a nuanced understanding of global issues. It is suitable for students with interests ranging from diplomacy and international business to French culture and global politics.

Prerequisite(s): FREN 2040.

FREN 3210 Topics in French and Francophone Literature (3)
The course provides students with the requisite tools of literary interpretation and analysis. By reading closely a variety of literary texts drawn from different periods and genres, students will become familiar with the fundamentals of criticism and poetics.

Prerequisite(s): (FREN 2040 and 3170 or FREN 3180 or 3250) or (minimum score of PASS in 'FREN 3000 Level Placement' or minimum score of PASS in 'FREN 3210 Placement').
Course Limit: 2

FREN 3250 Topics in French Society & Institutions (3-4)
An introduction to French society and the institutions that shaped it. Using periodization to define particular historical movements such as the Gallo-Roman period, the Middle Ages, the Renaissance, Enlightenment, revolutionary France, and the Third Republic, the course focuses on historical and architectural sites in Paris and the provinces to consider issues of French identity.

Prerequisite(s): minimum score of PASS in 'FREN 3250 Placement' or (FREN 2040 and 3160 or FREN 3170, 3180 or 3350).
Course Limit: 2

FREN 3330 Special Topics in French Literature in Translation (3)
Subject varies with instructor. May treat a particular literary period, a genre, or a subject, e.g., fatal love in French literature.

FREN 3350 The Secrets of French Grammar (3)
This course offers a systematic review of French grammar and delves into the nuances and intricacies of the French language. Students will horn their communicative skills with a focus on accuracy and style and will learn about the sociological and geographical specificities of French varieties. An optional Service Learning component is offered for this course.

Prerequisite(s): FREN 2040, minimum score of PASS in 'FREN 3000 Level Placement' or minimum score of PASS in 'FREN 3210 Placement'.

FREN 3710 Revitalizing French in Louisiana (3)
This course is designed to reinforce communicative skills at the advanced level by playing an active part in the efforts to revitalize French in Louisiana. Students will learn about Francophone identities in Louisiana, about their language and culture, and how to analyze and produce a variety of media products that will be shared with the Francophone communities in Louisiana to promote and grow Louisianan Francophonie. This course has a mandatory 20-hour Service Learning component for which students will be working with actors of French revitalization in Louisiana.

Prerequisite(s): FREN 2040.

FREN 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

FREN 4010 French Short Story (4)
Selected stories by significant authors of the genre: Marie de France, Bonaventure des Periers, Charles Perrault, Voltaire, Guy de Maupassant, Albert Camus. The emphasis in this course will be placed on reading comprehension, vocabulary building, and development of oral and written proficiency as well as on the application of the analytic skills learned in French 3210. Prerequisite(s): FREN 3210

Prerequisite(s): FREN 3210.

FREN 4050 Teaching French (3)
“Teaching French” is a seminar and practicum course providing opportunities for Teaching Assistants (TAs) and advanced undergraduates considering a career in teaching to acquire skills in teaching methodologies and strategies specific to teaching French.

Prerequisite(s): FREN 3210.

FREN 4060 Professional French (3)
This course is an advanced course in professional French. It is designed for French majors or for students in the 5-year combined B.A. and M.A. program in French. To gain further professional experience, students at the 6000 level have the possibility to undertake an optional 60-hour, 3-credit internship (FREN 6560) with a local French or French-related company.

Prerequisite(s): FREN 2040 or 3150.

FREN 4080 French Around the World (3)
A linguistic survey of the Francophone world, with particular focus on French outside of France. The course begins with a historical look at the spread of French within and beyond Europe, then examines in turn the major French-speaking populations of Europe, North America, the Caribbean, Africa, the Indian Ocean, Southeast Asia, and the Pacific. While linguistic variation in each region will be considered, the main emphasis will be on sociolinguistic issues such as bilingualism and language contact, language politics and planning, linguistic insecurity, and language in education. Option for the major and minor in French.

Prerequisite(s): minimum score of PASS in 'FREN 4000 Level Placement' or FREN 4010.

FREN 4100 French In Louisiana (3)
An introduction to the French-related language varieties spoken in Louisiana: Cajun, Creole, and Colonial French. Examines the history of their implantation and development in Louisiana, their basic structural features, and the main sociolinguistic issues surrounding their use. Attention will also be given to language planning measures currently being taken to revitalize the French language in the state.

Prerequisite(s): FREN 3210.

FREN 4110 Field Research on French in Louisiana (3)
Students will interview and record speakers of Cajun, Creole, and Colonial French in various parts of Louisiana. Working individually and in groups, they will then transcribe the recordings for purposes of linguistic description and analysis.

Prerequisite(s): FREN 3140.
Corequisite(s): FREN 4891.

FREN 4160 Translation Theory & Practice (3)
This course will provide students with the tools to translate a variety of types of texts (mostly literary, but also legal, journalistic, commercial, etc.) and to introduce them to translation theory as it relates to the problem of translating cultural difference and to the issues of originality, authorship, and the ownership of the text. Students will translate from French to English as well as from English to French. Course taught principally in English. Reading knowledge of French required.

Prerequisite(s): FREN 3210.

FREN 4180 French Poetry (3)
Develop literacy in poetic genres, historical movements, figurative language, and interpretation.

Prerequisite(s): FREN 3210.

FREN 4210 History of French Language (3)
This course traces the history of the development of the French language from Latin into francien of the 12th and 13th centuries. It also serves as an introduction to Old French (francien).

Prerequisite(s): FREN 2040 or 3150.

FREN 4220 Medieval French Literature (3)
Readings in modern translation of such works as La Chanson de Roland, the lais of Marie de France, Chrétien de Troyes' Lancelot, Béroul's Tristan, Aucassin et Nicolette and the poetry of François Villon.

Prerequisite(s): FREN 3210.

FREN 4320 Renaissance Literature (3)
A survey of representative works of outstanding authors of the period: Marot, Rabelais, Ronsard, Du Bellay, Montaigne, and D'Aubigné. Both poetry and prose will be studied against the backdrop of the history and civilization of the Renaissance in France.

Prerequisite(s): FREN 3210.

FREN 4400 Sustainable Development in the Francophone World (3)
Sustainable development in the Francophone World, taught in both French and English, focuses on political, economic, and social aspects of development in francophone developing areas, especially in Africa. We also discuss disaster relief issues with a focus on Haiti. Topics of discussion include: historical and political heritage; French and European development practices in terms of trade, investment, and foreign aid; entrepreneurship as a tool of development; and the impact of globalization and migration on the regions in question. We examine development programs in areas such as poverty, food security, education, human rights and gender equity, health, and the environment, and assess the performance and prospects of the United Nations Millennium Development Goals (2000-2015) and Sustainable Development Goals (2016-2030).

Prerequisite(s): PSDV 2400 and (FREN 3060, 3110, 3140, 3150, 3160, 3210, 3210, 3350 or 3710).

FREN 4410 17th-Century French Literature (3)
Currents of French Classicism, with particular emphasis on Moralists and aesthetics. Authors include Boileau, Descartes, Pascal, La Bruyère, La Fontaine, and La Rochefoucauld.

Prerequisite(s): FREN 3210.

FREN 4420 17th-Century Drama (3)
Corneille, Molière, Racine. Utilizes videos of Comédie-Française performances. Development of critical sense through discussion.

Prerequisite(s): FREN 3210.

FREN 4510 Topics In 18th-Century Literature (3)
Advanced study of 18th-century literature and culture focusing on a specific theme, genre, or problematic. In addition to addressing a specific theme or area of study, this course offers fairly broad coverage of the canonical works of the period. A writing practicum is available in conjunction with this course. Taught in French unless otherwise noted in the Schedule of Classes.

Prerequisite(s): FREN 3210.

FREN 4520 18th-Century Literature (3)
An introduction to the Enlightenment through readings in the experimental genres developed in the 18th century. Authors include Marivaux, Prévost, Montesquieu, Rousseau, Voltaire, Diderot, and Beaumarchais.

Prerequisite(s): FREN 4010.

FREN 4530 Islam and Enlightenment (3)
An introduction to representations of Islam in Enlightenment French literature, the role of of Muslim thinkers in shaping the European Enlightenment and the possibility of an Enlightenment in current Muslim thought.

Prerequisite(s): FREN 4010.

FREN 4560 Internship (1-3)
An experiential learning process coupled with pertinent academic course work. Registration is completed in the academic department sponsoring the internship on TUTOR. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 4570 Internship (1-6)
An experiential learning process coupled with pertinent academic course work. Registration is completed in the academic department sponsoring the internship on TUTOR. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 4620 19th-Century Novel (3)
Representative novels of such authors as Chateaubriand, Constant, Stael, Stendhal, Balzac, Sand, Hugo, Nerval, Flaubert, the Goncourt brothers, Zola. Course may be repeated up to unlimited credit hours.

Prerequisite(s): minimum score of PASS in 'FREN 4000 Level Placement' or FREN 4010.

Maximum Hours: 99

FREN 4720 20th-Century French Literature (3)
An exploration of the prose and poetic inventions of the 20th century, read within the contexts of contemporary literary and art movements (modernisms, surrealisms, formalisms), political and social history, and French post-structuralist theory.

Prerequisite(s): FREN 4010.

FREN 4740 20th-Century Drama (3)
An exploration of French theater writing and practice from the turn-of-the-century avant-garde through the new theater forms invented across the century, including the so-called Theater of the Absurd, film scenarios, and post-modern. Readings include works by Jarry, Artaud, Cocteau, Sartre, Ionesco, Beckett, Genet, Duras, and Cixous.

Prerequisite(s): FREN 3210.

FREN 4750 The Avant-Garde (3)
The history and theory of the avant-garde, from the movements of the early 20th century to today. We will explore the art, performances, poetics and manifestos of the so-called "historic" avant-gardes of a century ago, including the well-known antics of Dada (Zurich and Paris), Surrealist practices based first in Paris and eventually all over the world, Italian Futurism, visual arts and cinema (Cubism, etc.) and the London-based groups of writers working in Imagism and Vorticism.

Prerequisite(s): FREN 3210.

FREN 4800 Survey of Francophone Literature (3)
A lecture and discussion course on the historical and aesthetic evolution of the Francophone literature of Africa, the Maghreb, and the Caribbean. The creative works will be explored in the socio-political framework of colonization and decolonization as well as in terms of their own intrinsic qualities.

Prerequisite(s): FREN 3210.

FREN 4810 Special Topics (3)
Special Topics in French. Note: A writing practicum is available. French majors may use it to fulfill the college intensive-writing requirement. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 4811 Special Topics (3)
Special Topics in French

FREN 4820 Special Topics (3)
Special topics in French. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 4830 Francophone Literature of the Maghreb (3)
An introduction to contemporary culture and literature written in French in the three countries of the Maghreb (Tunisia, Algeria, Morocco) from the eve of independence to our global, transnational era. Themes include exile and cosmopolitanism, language, nationalism, memory, the relation to France, feminism, trauma and amnesia, terrorism. Course is taught in French.

Prerequisite(s): FREN 4010.

FREN 4831 Writing Algeria (3)
This course explores representations of trauma and processes of memorialization in postcolonial Algeria. Through a study of literary, cinematic, and cultural texts, we will examine multiple challenges to FLN-sponsored readings of national history. Starting in the years directly preceding the 1962 Independence, these texts and cultural objects produce new sites of memory running counter to official narratives of the history of colonization and the myth of the national liberation struggle.

Prerequisite(s): FREN 4010.

FREN 4840 Philosophy, Francophone Literature, and Politics: Imagination and Institutions (3)
This course examines the role of the imagination in the constitution and renewal of institutions as those modalities of institutions are represented in Francophone literature and in postcolonial politics. The course draws on literary, philosophical, and political texts.

Prerequisite(s): FREN 3210.

FREN 4850 Morocco in Film and Literature (3)
In this course, we will read texts and discuss films that stage questions of relations between North Africa, Africa, the Middle East and US/Europe; colonial and post-independence art, migration and exile; evolving Islam; Jewish and Berber minority identities; circulation and dislocation in contemporary global and local cultures. While we will be reading, screening, and discussing in English, your competence in Arabic, French, Spanish, Hebrew or Berber can be helpful as you research your midterm and final papers for the course. We will be paying attention to the history and theory of literature and film as well as the specificity of the examples from Morocco. Films and readings are often paired in order to cover the politics, social and artistic movements and events of historical periods, as well as of contemporary cultural production.

FREN 4870 Women Writers of the Arab World (3)
This seminar proposes to investigate the ways in which the related discourses of nationalism, Islam and feminism can fruitfully intersect to illuminate the corpus of women's literature from the former French colonies and Protectorates in the Arab world. With an emphasis on issues of social justice, citizenship, and feminism, both locally and transnationally, we will interrogate the ways in which literature mediates the construction of women as historical subjects.

Prerequisite(s): FREN 4010.

FREN 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 4891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 4910 Independent Study FREN Ling (1-3)
Subject varies with instructor. Principally reading and research. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 4920 Independent Studies (1-4)
Subject varies with instructor. Principally reading and research. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 4990 Honors Thesis (3)
Honors Thesis

FREN 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): FREN 4990.

FREN 5190 Semester Abroad (1-20)
Semester abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 5380 Junior Year Abroad (1-20)
Junior year abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 5390 Junior Year Abroad (1-20)
Junior year abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

FREN 5950 Special Topics in French (3,4)
Content is consistently broad in scope and either thematic or generic in orientation, e.g., theme of the quest from the Middle Ages to the 20th century; the evolution of genre, i.e., the lyric poem, from its medieval beginnings to the present. Offered each spring. Required for the major. Course may be repeated up to unlimited credit hours.

Prerequisite(s): FREN 4010.

Maximum Hours: 99

FREN 5990 French for Reading Knowledge (0)
French for Reading Knowledge.

FREN 6010 Graduate Writing Workshop (3)
This 3-credit course helps students enrolled in the graduate program of the Department of French and Italian sharpen their skills in academic writing by studying the argumentation and style of French- and English-language critical texts, independently developing an article-length scholarly work of publishable quality for a specific journal, and workshopping drafts of this project.

FREN 6020 MA Thesis Project (3)
This course is for 5th-year MA 4+1 students in French only. It is compulsory both semesters for those 5th -year MA 4+1 students in French. The project must be a full thesis or a portfolio of the equivalent length and thoroughness.

Course Limit: 2

FREN 6050 Teaching French (3)
Teaching French is a seminar and practicum course providing opportunities for Teaching Assistants (TAs) and advanced undergraduates considering a career in teaching to acquire skills in teaching methodologies and strategies specific to teaching French.

FREN 6060 Professional French (3)
FREN 6060-01 is an advanced course in Professional French. It is designed for French majors or for students in the 5-year combined B.A. and M.A. program in French.

FREN 6070 Survey of French Linguistics (3)
This course introduces students to the field of linguistics as applied to French. Taking a broad approach, we will examine the major structural components of the language—phonological, morphosyntactic, and lexical—as well as sociolinguistic matters such as variation in the language (based on region, social group, style, or other factors), French speakers' attitudes towards their language, and the question of a linguistic norm in French. No prior study of linguistics is required for this course.

FREN 6085 Pidgins and Creoles (3)
An overview of the world's pidgin and creole languages and a survey of the theories of their origins.

FREN 6100 French In Louisiana (3)
An introduction to the French-related language varieties spoken in Louisiana: Cajun, Creole and Colonial French. Examines the history of their implantation and development in Louisiana, their basic structural features, and the main sociolinguistic issues surrounding their use. Attention will also be given to language planning measures currently being taken to revitalize the French language in the state.

FREN 6110 Field Research on French in Louisiana (3)
Students will interview and record speakers of Cajun, Creole, and Colonial French in various parts of Louisiana. Working individually and in groups, they will then transcribe the recordings for purposes of linguistic description and analysis.

FREN 6150 Introduction to Critical Theory (3)
Exploration of some of the principal linguistic, anthropological, psychoanalytic, philosophical, and sociological currents informing recent approaches of literature and culture.

FREN 6160 Translation Theory and Practice (3)
This course will provide students with the tools to translate a variety of types of texts (mostly literary, but also legal, journalistic, commercial, etc.) and to introduce them to translation theory as it relates to the problem of translating cultural difference and to the issues of originality, authorship, and the ownership of the text. Students will translate from French to English as well as from English to French. Course taught principally in English. Reading knowledge of French required.

FREN 6180 French Poetry (3)
Develop literacy in poetic genres, historical movements, figurative language, and interpretation. In French.

FREN 6210 History of French Language (3)
The development of Latin into French and subsequent evolution of the latter through the Old French period.

FREN 6220 Medieval French Literature (3)
Readings in modern translation of such works as La Chanson de Roland, the lais of Marie de France, Chrétien de Troyes' Lancelot, Béroul's Tristan, Aucassin et Nicolette and the poetry of François Villon.

FREN 6310 Renaissance Poetry & Drama (3)
Careful analysis of the works of the major poets: Marot, the Ecole Lyonnaise, the Pléiade, and D'Aubigny. Special attention is devoted to lyric poetry and to the defense of the French language as a viable literary medium. Special attention is given to poetic violence as experienced in desire, national conquest, and religious strife, so that verse is defined in tension with poetic form. The course privileges Renaissance sonnets, while also including the genres of elegy, dizain, epic, epigrams and political satire.

FREN 6320 Renaissance Literature (3)
A survey of representative works of outstanding authors of the period: Marot, Rabelais, Ronsard, Du Bellay, Montaigne, and D'Aubigné. Both poetry and prose will be studied against the backdrop of the history and civilization of the Renaissance in France.

FREN 6410 17th-Century French Literature (3)
Currents of French Classicism, with particular emphasis on Moralists and aesthetics. Authors include Boileau, Descartes, Pascal, La Bruyère, La Fontaine, and La Rochefoucauld.

FREN 6510 Topics in 18th-Century Literature (3)
Advanced study of 18th-century literature and culture focusing on a specific theme, genre, or problematic. In addition to addressing a specific theme or area of study, this course offers fairly broad coverage of the canonical works of the period. A writing practicum is available in conjunction with this course. Taught in French unless otherwise noted in the Schedule of Classes.

FREN 6520 18th-Century Literature (3)
An introduction to the Enlightenment through readings in the experimental genres developed in the 18th century. Authors include Marivaux, Prévost, Montesquieu, Rousseau, Voltaire, Diderot, and Beaumarchais.

FREN 6530 Islam and Enlightenment (3)
An introduction to representations of Islam in Enlightenment French literature, the role of of Muslim thinkers in shaping the European Enlightenment and the possibility of an Enlightenment in current Muslim thought.

FREN 6610 19th-Century Prose (3)
Prose writers of the first half of the 19th century. Emphasis on the social and political context of post-revolutionary France, theories of fiction and the concurrent rise of the novel, history, and autobiography.

FREN 6620 19th-Century Novel (3)
Representative novels of such authors as Chateaubriand, Constant, Stael, Stendhal, Balzac, Sand, Hugo, Nerval, Flaubert, the Goncourt, Zola. Course may be repeated up to unlimited credit hours.

FREN 6630 19th-Century Poetry (3)
Romantic, Parnassian, and Symbolist movements, with emphasis on Lamartine, Hugo, Musset, Vigny, Gautier, Heredia, Baudelaire, Verlaine, Rimbaud, Mallarmé, and Laforgue.

FREN 6650 Romanticism (3)
Study of the Romantic Movement and authors such as Bernardin de Saint-Pierre, Stael, Chateaubriand, Desbordes-Valmore, Laurantine, Balzac, Tristan, and Sand.

FREN 6720 20th-Century French Literature (3)
An exploration of the prose and poetic inventions of the 20th century, read within the contexts of contemporary literary and art movements (modernisms surrealisms, formalisms), political and social history, and French post-structuralist theory.

FREN 6750 The Avant-Garde (3)
The history and theory of the avant-garde, from the movements of the early 20th century to today. We will explore the art, performances, poetics and manifestos of the so-called "historic" avant-gardes of a century ago, including the well-known antics of Dada (Zurich and Paris), Surrealist practices based first in Paris and eventually all over the world, Italian Futurism, visual arts and cinema (Cubism, etc.) and the London-based groups of writers working in Imagism and Vorticism.

FREN 6800 Survey of Francophone Literature (3)
A lecture and discussion course on the historical and aesthetic evolution of the Francophone literature of Africa, the Maghreb, and the Caribbean. The creative works will be explored in the socio-political framework of colonization and decolonization as well as in terms of their own intrinsic qualities.

FREN 6810 Special Topics (3,4)
Special Topics in French. Note: A writing practicum is available. French majors may use it to fulfill the college intensive-writing requirement. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 6811 Special Topics (3)
Special Topics in French.

FREN 6812 Special Topics (3)
Special topics in French.

FREN 6820 Special Topics (3)
Special topics in French. Course may be repeated up to unlimited credit hours.

FREN 6830 Francophone Literature of the Maghreb (3)
An introduction to contemporary culture and literature written in French in the three countries of the Maghreb (Tunisia, Algeria, Morocco) from the eve of independence to our global, transnational era. Themes include exile and cosmopolitanism, language, nationalism, memory, the relation to France, feminism, trauma and amnesia, terrorism. In French.

FREN 6831 Writing Algeria (3)
This course explores representations of trauma and processes of memorialization in postcolonial Algeria. Through a study of literary, cinematic, and cultural texts, we will examine multiple challenges to FLN-sponsored readings of national history. Starting in the years directly preceding the 1962 Independence, these texts and cultural objects produce new sites of memory running counter to official narratives of the history of colonization and the myth of the national liberation struggle.

FREN 6850 Morocco in Film and Literature (3)
In this course, we will read texts and discuss films that stage questions of relations between North Africa, Africa. the Middle East and US/ Europe; colonial and post-independence art, migration and exile; evolving Islam; Jewish and Berber minority identities; circulation and dislocation in contemporary global and local cultures. While we will be reading, screening, and discussing in English, your competence in Arabic, French, Spanish, Hebrew or Berber can be helpful as you research your midterm and final papers for the course. We will be paying attention to the history and theory of literature and film as well as the specificity of the examples from Morocco. Films and readings are often paired in order to cover the politics, social and artistic movements and events of historical periods, as well as of contemporary cultural production.

FREN 6860 Francophone Art, Literature, and Politics (3)
This course examines the status of representation in three fields: art, literature, and politics. We will consider the relation of those three fields by reading selected essays of Adorno, Bourdieu, Bachelard, Foucault and Walter Benjamin as well as representative Francophone novels.

FREN 6870 Women Writers of the Arab World (3)
This seminar proposes to investigate the ways in which the related discourses of nationalism, Islam and feminism can fruitfully intersect to illuminate the corpus of women's literature from the former French colonies and Protectorates in the Arab world. With an emphasis on issues of social justice, citizenship, and feminism, both locally and transnationally, we will interrogate the ways in which literature mediates the construction of women as historical subjects.

FREN 6890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 6910 Independent Study FREN Ling (1-3)
Subject varies with instructor. Principally reading and research. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 6920 Independent Study FREN Lit (1-3)
Subject varies with instructor. Primarily reading and research. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 7230 Studies in the Middle Ages (3)
Studies in the Middle Ages.

FREN 7370 16th-Century Studies (3)
16th-Century Studies.

FREN 7510 18th-Century Studies (3)
18th-Century Studies.

FREN 7670 19th-Century Studies (3)
19th-Century Studies.

Enrollment limited to students in the French department.

FREN 7770 20th-Century French Literature (3)
20th-Century French Literature.

FREN 7800 Topics Francophone Lit (3)
Topics in Francophone Literature.

Course Limit: 3

FREN 9980 Master's Research (0)
Master's Research. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FREN 9990 Dissertation Research (0)
Dissertation Research. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Gender & Sexuality Studies (GESS)

GESS 1900 Sex, Power and Culture (3)
This course invites students to learn the skills necessary to identify, analyze, and ultimately transform the cultural, social, and political forces that shape and are shaped by sex and sexuality. Approaching sexuality as a system of norms, values, beliefs, and patterns of interaction, students will learn how sexuality intersects with with gender, race, age, ethnicity, religion, ability, and other axes of power and privilege. Students will be introduced to the current body of empirical data and theory to identify how these intersecting systems of power take shape in patterns of human interaction such as forming relationships, dating rituals and sexual scripts, and interpersonal conflict and violence. In sum, students will develop the skills to 1) analyze how their own interpersonal and intimate relationships are embedded within and constitutive of broader systems of power and 2) how to work individually and collectively to change them.

Corequisite(s): GESS 1901.

GESS 1901 Sex, Power and Culture-discuss (0)
Discussion section for GESS 1900.

Corequisite(s): GESS 1900.

GESS 2190 Special Topics (3)
Covers topics pertaining to the study of gender and/or sexuality

GESS 2900 Intro to Gender & Sex Studies (3)
This course is an interdisciplinary introduction to gender and sexuality studies. Its primary focus is critical perspectives on the social construction of gender and sexuality, inequalities on the basis of gender and sexuality, activism around issues of gender and sexuality, and how gender and sexuality shape and are shaped by other systems of inequality such as race, ethnicity, class, religion, nation, region, and age.

GESS 3500 Critical Inquiry and Praxis (3)
This course is an intersectional exploration of how feminist thinkers, activists, and culture workers have reconceptualized knowledge production and praxis, the place where theory and practice meet. Informed by the study of feminist inquiry and praxis, it is also designed to equip students with the skills needed to think critically and collaboratively, conduct original research, participate in public discourse, and apply material beyond the classroom.

Prerequisite(s): GESS 1900 or 2900.

GESS 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GESS 4500 Gender and Archives (3)
This course focuses on developing knowledge of major theories of archives, on fostering research skills by engaging with materials, and on involving students in archival work that will allow questions about gender. Exploring theories and practices of archives, the course takes students through the history of archives, with special attention to women as keeping, and represented in, scholarly collections.

Prerequisite(s): GESS 2900.

GESS 4560 Internship (1-3)
"This course focuses on developing knowledge of major theories of archives, on fostering research skills by engaging with materials, and on involving students in archival work that will allow questions about gender. Exploring theories and practices of archives, the course takes students through the history of archives, with special attention to women as keeping, and represented in, scholarly collections. Notes: The course offers a service learning project. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GESS 4700 Sexuality in US History (3)
In this course we will examine the ways in which sex, gender and sexuality have been fundamentally reorganized since the 18th century. Focusing primarily on the formation and development of the United States, this seminar aims to deepen your understanding of the distinctive constructions of sexuality in various historical, political, and cultural contexts, how those constructions have transformed over time, and what factors account for those changes. All of our critical inquiries will attend to the ways in which race, class, gender, religion, market cultures, and governments intersect with the history of sexuality.

GESS 4800 Bad Moms: Ideologies of Maternal Selfhood in 20/21st Century Media (3,4)
In this course we will attend to media--including films, advertising, TV, digital, and literature - that help to constitute, perpetuate, and challenge normative scripts of what constitutes good mothering. This seminar asks students to critically analyze the varied factors that shape and define contemporary motherhood as an embodied ideology, both in the U.S. and across the globe. And we will investigate how good mothers are centrally linked to the imagination of a healthy and civilized nation. Our seminar's key themes include the institutionalization of motherhood, motherhood as subjectivity, agency and performance, technologies of reproduction, narratives of adoption, and the politicization of motherhood, and the perpetual return to good motherhood as an ideal.

GESS 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GESS 4910 Independent Study (1-3)
Qualified students may arrange for independent study with an instructor to pursue a project of interest to the student. Ordinarily, independent study earns three credits. Requirements will vary depending on the project but will involve some combination of readings, oral reports, and written work. A maximum of four credits of independent studies may be applied toward the major in Gender and Sexuality Studiesand three credits toward the minor.

Course Limit: 99

GESS 4920 Independent Study (1-3)
Qualified students may arrange for independent study with an instructor to pursue a project of interest to the student. Ordinarily, independent study earns three credits. Requirements will vary depending on the project but will involve some combination of readings, oral reports, and written work. A maximum of four credits of independent studies may be applied toward the major in Gender and Sexuality Studies and three credits toward the minor. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GESS 4930 Special Topics (3,4)
An in-depth examination of a particular topic relevant to gender and sexuality studies. Topics for discussion focus on a theme or question that is best understood within an interdisciplinary framework. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GESS 4931 Special Topics Gender Studies (3)

GESS 4940 Gender & Sexuality Theory I (3,4)
This course is the first in a sequence of two courses (see GESS 4/6950) on feminist and queer theory. The primary goals of this course are 1) to provide an introduction to early feminist theories of patriarchy, women's oppression, and gender inequality, 2) map the emergence of subsequent theories of the social construction of gender and gender difference including the sources, causes, and effects of gender inequality and strategies for reducing or eradicating inequality, and 3) identify how intersectional, postmodern, and queer thinkers enter into dialogue with and critique early feminist theorizing. Course may be repeated up to unlimited credit hours. Prerequisite(s): GESS 3500.

Prerequisite(s): GESS 3500.

Maximum Hours: 99

GESS 4950 Gender & Sexuality Theory II (3,4)
This course is the second in a sequence of two courses on feminist and queer theory. The primary goals of this course are 1) to map the expansion of feminist and queer theory in recent decades, 2) critically engage with theories of gender, sexuality, race, and class to gain understanding of inequality and social change.

Prerequisite(s): GESS 4940*.
* May be taken concurrently.

GESS 4990 Honors Thesis (3)
Honors Thesis.

GESS 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): GESS 4990.

GESS 5380 Junior Year Abroad (1-20)

Maximum Hours: 99

GESS 5390 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GESS 6940 Gender & Sexuality Theory I (3)
This course is an advanced seminar in feminist and gender theory. The primary focus is critical engagement with social, political, and cultural theories of the social construction of gender and gender difference, and of the sources, causes, and effects of gender inequality and strategies for reducing or eradicating inequality. While emphasis will be placed on gender difference and inequality, substantial time will be spent on theories of how gender is implicated in and supported by other forms of inequality such as sexuality, race, ethnicity, and class.

GESS 6950 Adv Sexualty & Queer Theory II (3)
This course is the second in a sequence of two courses on feminist and queer theory. The primary goals of this course are 1) to map the expansion of feminist and queer theory in recent decades, 2) critically engage with theories of gender, sexuality, race, and class to gain understanding of inequality and social change.

Prerequisite(s): GESS 6940.

General Legal Studies (GLSP)

GLSP 1940 Transfer Coursework (0-4)

Maximum Hours: 99

GLSP 2010 Intro to the Legal System (3)
Through lectures and practical exercises, students to examine the American legal system, including both civil and common law, focusing upon the role of the paralegal; master skills in vocabulary, interviewing and investigation, law office administration, legal document drafting, and litigation support; and recognize and apply principles of legal and professional ethics. Note: Satisfies one Social Science requirement for School of Professional Advancement majors. credit hours: 3

Prerequisite(s): ENGL 1010.

GLSP 2940 Transfer Coursework (0-4)

Maximum Hours: 99

GLSP 3020 Legal Research I (3)
Through lectures and hands-on exercises, students master efficient, effective legal research strategies for use in the law school library and on Westlaw and other online and print resources; and then analyze and compile research results in legal memoranda.

Prerequisite(s): ENGL 1010.

GLSP 3030 Legal Writing I (3)
Building upon the research and analytical skills developed in GLSP 3020 - Legal Research, students complete written assignments and practical exercises, drafting motions, pleadings, correspondence, and other legal documents.

Prerequisite(s): GLSP 3020 and 2010.

GLSP 3050 Litigation I (3)
Through lectures and practical exercises, students explore litigation in the U.S. federal and state courts, including both the civil and common law systems; recognize and apply terminology; analyze jurisdiction and venue; perform client interviews and investigations; draft initial pleadings, motions, memoranda, and discovery documents; evaluate and plan for motion practice; and develop skills in calendaring, file management, document production, depositions, and other aspects of discovery. credit hours: 3

Prerequisite(s): ENGL 1010 and GLSP 2010*.
* May be taken concurrently.

GLSP 3060 Litigation II (3)
Building upon the knowledge and skills developed in GLSP 3050 - Litigation I, students examine the U.S. state and federal court systems in greater depth, using the theory-of-the-case approach to assess the procedural, evidentiary, and substantive rules governing civil litigation; and develop skills in legal analysis, critical thinking, formal and informal advocacy, legal writing, rules of evidence, investigative techniques, post-trial rules and procedures. Lectures are supplemented with practical exercises in the drafting of effective pleadings, motions, memoranda, and discovery documents. credit hours: 3

Prerequisite(s): GLSP 3050 and 2010.

GLSP 3070 Legal Technology I (3)
Through hands-on exercises and tutorials created by the National Society for Legal Technology (NSLT)®, and Relativity®, students develop skills and knowledge in the use of the software applications and methods that law offices use to support litigation and transactional practices, perform discovery and e-discovery, due diligence, case management, time-keeping, billing, and other vital law office functions. Students also have the option of pursuing NSLT Certification.

Prerequisite(s): ENGL 1010.

GLSP 4010 Busn & Corporate Practice (3)
Through lectures and practical exercises, students examine the laws governing various business organizations and relationships, including sole proprietorships, agencies, partnerships, corporations; assess the responsibilities of businesses toward their consumers; evaluate the requirements, rights, and obligations that contracts create; evaluate the consequences of willful and negligent acts; and identify the role of the paralegal in successful corporate and business transactions. Cross-listed with BSLS 3400 – Legal Aspects of Business (online) Credit hours: 3

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4030 Louisiana Succession Practice (3)
Through lectures and practical exercises, students explore Louisiana's substantive law of successions and donations and the role of the paralegal within a successions practice; master the drafting of simple wills and the pleadings necessary to probate wills, appoint executors, pay estate debts, sell or lease estate property, and transfer possession of inheritance to heirs; identify and perform the actions necessary to estate administration, including collection, legal description, appraisal of assets, and preparation of documents to transfer estate assets; and preparation and filing of Louisiana Inheritance Tax and Federal Estate Tax Returns.

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4040 Real Property Practice (3)
Through lectures and practical exercises, students examine the laws governing real property and the tenets of real estate practice, including the role of the paralegal in real estate transactions; retrieving and compiling property information; performing title searches; preparing preliminary abstracts and opinions of title, mortgages and transfer of ownership; requisitioning deeds and leases; and other functions associated with real estate negotiations and closings. Cross-listed with BSLS 2500 – Principles & Practices of Real Estate. credit hours: 3

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4050 Family Law (3)
Through lectures and practical exercises, students in this online class analyze current and projected issues in family law; evaluate the role of the paralegal in disputes arising from marriage, children, and property; identify and apply the components of effective client interviews; analyze child support obligations; prepare pleadings for dissolution, support, and division of property; prepare cases for trial; supervise case progress; draft property settlements; trace assets; and perform other related functions. credit hours: 3 Note: Satisfies one Social Science requirement for School of Professional Advancement majors.

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4060 Advanced Discovery and Evidence (3)
Through lectures, case law, exercises in the use of legal technology, and practical case studies, students will identify the types of electronically stored information that are subject to discovery; draft and assess the effective use of preservation notices; draft effective discovery requests to obtain information; distinguish between document management and spoliation; analyze key cases illustrating recent developments in evidentiary laws; draft pre-trial motions, including motions in limine; evaluate cases involving late disclosure of evidence; and examine the ethical issues surrounding discovery and admissibility of evidence in the 21st century. credit hours: 3

Prerequisite(s): (PARA 3030 or GLSP 3030) and (PARA 3050 or GLSP 3050) and (PARA 3060 or GLSP 3060).

GLSP 4070 Immigration Law Practice (3)
Through practical exercises and online discussions, students in this online course explore the development and enforcement of immigration law in the U.S., based upon the Constitution, federal laws, and social policies; identify the social institutions involved in immigration; and evaluate the administration of immigration benefits, including determination of citizenship, naturalization, and other types of immigration status. credit hours: 3 Notes: Satisfies one Social Science requirement for School of Professional Advancement majors.

Prerequisite(s): ENGL 1010.

GLSP 4080 Criminal Law (3)
Through lectures and practical exercises, students explore the practice of criminal law, including criminal procedure and court rules, prosecutorial functions, probation, juvenile courts, mental commitment procedures, bail, and sentencing; and develop the skills necessary to perform investigations, discovery, alternative dispositions, and trial preparation. credit hours: 3

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4090 Administrative Practice (3)
Through lectures and practical exercises, students examine the U.S. governmental agencies that promulgate and enforce the rules through which state and federal statutes have practical application; identify and analyze applicable rules; investigate facts, draft responses, and inquiries; submit requests under the Freedom of Information Act; review agency files, and perform other paralegal functions. credit hours: 3

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4100 Legal Technology II (3)
Through lectures and hands-on exercises, students define the paralegal's role in the organization and efficient operation of law offices, examining key administrative functions, including accounting and billing procedures; hiring, scheduling, and managing non-attorney personnel; operating information storage and retrieval systems; maintaining office equipment; fostering client relations; and fulfilling other administrative needs. credit hours: 3

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4120 Admiralty Practice (3)
Through lectures, case law readings, and practical exercises, students examine the substantive laws governing maritime matters, as applied through federal and state regulations; identify issues arising from marine insurance, personal injury rights and liabilities, salvage, ship mortgages, and domestic and foreign towage regulations; and draft bills of lading, limitations of liability, and other documents. credit hours: 3

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4140 Oil and Gas Law (3)
Through lectures and practical exercises, students analyze the state and federal laws governing the fossil fuel industry and other forms of regulated energy, addressing drilling, storage, transportation, and environmental and societal impacts, with a focus upon the role of the paralegal in the litigation, transactional, and regulatory matters that arise under energy laws.

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4150 Commercial Law (3)
Through lectures and practical exercises, students evaluate the concepts, principles, and laws that govern business transactions; examine the role of the paralegal in the drafting, execution, and enforcement of contracts, mortgages, pledge assignments, and other security devices; explore the allocation of liability; identify legal procedures for enforcement and collection; and develop the professional skills and judgment necessary to function ethically and successfully in a commercial practice. Cross-listed with BSLS 3450 – Commercial Law. credit hours: 3

Prerequisite(s): GLSP 3030, 3060 or 3070.

GLSP 4160 Interviewing & Investigation (3)
Through lectures and practical exercises, students learn principles, methods, techniques for identifying, obtaining, documenting, and disseminating information in civil and criminal actions; and develop the interviewing skills necessary to communicate effectively while avoiding ethical pitfalls. credit hours: 3

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4180 Bankruptcy Practice (3)
Through practical exercises and online discussions, students in this online course explore the U.S. Bankruptcy system, including the development of the U.S. Bankruptcy Code, Federal Rules of Bankruptcy Procedure, the Bankruptcy Court, and the U.S. Trustee system. Assignments focus upon the practical role of the paralegal in cases arising under Chapter 7, Chapter 13, and Chapter 11 of the Bankruptcy Code, including the drafting of pleadings and use of the electronic filing system; and ethical issues, such as a debtor's right to a fresh start versus a creditor's right to a meaningful distribution. credit hours: 3

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4190 Legal Ethics (3)
Through practical exercises, lectures, discussions, and visual media, students examine the professional and ethical dilemmas legal professionals face and compare the ethical rules and professional standards developed by the American Bar Association, adopted by Louisiana, and presented as guidelines by the two major paralegal associations. Notes: Satisfies one Humanities course requirement for School of Professional Advancement majors. credit hours: 3

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4200 Legal Research & Writing II (3)
This course builds upon skills acquired in GLSP 3020 – Legal Research and GLSP 3030 – Legal Writing I. Through lectures, practical legal research assignments, case studies, and hands-on exercises, students will compare and evaluate primary and secondary sources, legislative history research, administrative law research, practice materials, and specialized topical resources research sources; distinguish and apply legal citation forms; and synthesize the steps for researching specific legal issues to formulate arguments. Students will draft and revise a variety of legal documents, including law office memoranda, briefs, and reports, and complete a project and oral presentation. credit hours: 3

Prerequisite(s): (GLSP 3030 or PARA 3030) and (GLSP 3020 or PARA 3020).

GLSP 4220 Insurance Law Practice (3)
In this asynchronous online course, students examine the state and federal laws governing the insurance industry and the legal actions arising under insurance contracts in Louisiana and other states. Through practical exercises and online discussions, students develop the skills to perform the tasks typically assigned to paralegals in the claims handling process, litigation defense, and case management; and identify the issues of ethics and professionalism that arise in insurance matters. credit hours: 3

Prerequisite(s): GLSP 3030, 3050 and 3060.

GLSP 4230 Pro Bono Practice (3)
Through lectures, on-site interviews, and practical exercises, students identify and evaluate the governmental and private agencies that provide free or low-cost legal services to lower-income persons and develop the skills required for the tasks typically assigned to paralegals in pro bono practice.

Prerequisite(s): GLSP 3030, 3050 and 3060.

GLSP 4240 Intellectual Prop & Entertain (3)
Through lectures and practical exercises, students examine the state and federal laws governing intellectual property, including trade secrets, patents, copyrights, and trademarks; evaluate the respective roles of lawyers and paralegals in researching, monitoring, enforcing, and otherwise maintaining intellectual property protection; and analyze intellectual property issues in the context of the mass media and entertainment industries. credit hours: 3

Prerequisite(s): GLSP 3030, 3050 and 3060.

GLSP 4250 Civil Rights Law (3)
Through lectures, case law, and drafting exercises, students will evaluate the historical development of race as an issue in the context of the American legal system; analyze the constitutional and statutory issues resulting from state and/or private interference with the rights of persons; compare the civil rights statutes that allow citizens to sue for violations of civil rights; Identify the competing visions of racial equality reflected in civil rights legislation, case law, and the concept of discrimination; evaluate the laws forbidding discrimination in education, voting, employment, and housing; investigate methods by which power and social reform may be exercised through the law; and evaluate the conflicts between the protections afforded to citizens and the doctrines protecting police officers in performance of their official functions. credit hours: 3 Notes: Satisfies one Race and Inclusion course requirement for School of Professional Advancement majors.

Prerequisite(s): (GLSP 3030* or PARA 3030) and (GLSP 3050* or PARA 3050) and (GLSP 3060* or PARA 3060).
* May be taken concurrently.

GLSP 4280 Personal Injury - Malpractice (3)
Through practical exercises and online discussions, this online course addresses the prosecution and defense of personal injury and medical malpractice actions under tort and insurance laws, the Louisiana Medical Malpractice Act, and other applicable laws. Practical exercises develop the skills necessary for assisting in personal injury law practice, including organizing and maintaining files, drafting pleadings, obtaining, and summarizing medical records, performing factual investigations and other necessary functions. credit hours: 3

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4290 Medical Records Analysis (3)
Through lectures and hands-on exercises, students master the skills and substantive knowledge necessary to obtain, review, summarize, and prepare medical records for use as evidence in litigation.

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4300 Louisiana Notary Law (3)
Through lectures and practical drafting exercises, students evaluate the laws governing Notary Publics in Louisiana, focusing upon duties and powers and the specific documents notaries may draft or authenticate in adoptions, emancipations, tutorships, interdictions, successions, wills, real estate transactions, mortgages, security interests, and other legal actions. credit hours: 3

Prerequisite(s): (GLSP 3030* or PARA 3030) and (GLSP 3060* or PARA 3060) and (GLSP 3070* or PARA 3070).
* May be taken concurrently.

GLSP 4310 Employment Law (3)
Through lectures and in-class discussions, students identify and investigate the state and federal laws governing employment in the U.S., focusing upon the disputes that may arise in the workplace. Practical exercises guide students in identifying and applying best practices for establishing, maintaining, and terminating the employment relationship; evaluating employment claims; and adhering to ethical practices. Cross-listed with BSLS 3390 – Employment & Labor Law (online). credit hours: 3

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4320 Health Care Compliance (3)
Through lectures and practical exercises, students investigate the relationships action among insurance, physicians and their patients; evaluate the laws and principles governing medical records, bioethics, privacy and security; and medical ethics, and the healthcare industry as a whole; compare the state and federal laws creating Medicare, Medicaid, and other programs; and assess the role of the paralegal in law firms, governmental agencies, healthcare corporations, and other businesses in the healthcare industry.

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4330 White Collar Crime (3)
Through lectures, reading assignments, and practical exercises, students break down applicable state and federal laws; examine the nature, investigation, and prosecution of white-collar crimes; compare the types of corporate, governmental, environmental, and economic crimes that arise; and assess their economic and sociological impacts. Practical exercises define the inter-related roles of prosecutors, defense attorneys, and paralegals in the investigation and prosecution of white-collar crimes. credit hours: 3

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4340 Social Security Disability Law (3)
Through lectures and practical exercises, students examine U.S. Social Security disability laws and legal actions, including the claims evaluation process, the claimant's right to representation, disability benefits for children, SSI benefits during the application process, proof of disability, and the duties and responsibilities of Administrative Law Judges (ALJs); and define the paralegal's role in preparing applications and assisting clients throughout the disability claims process.

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4350 Law and Government in American Society (3)
Through practical exercises and online discussions, students in this online course examine the three branches of U.S. Government; assess the interplay between America's legal system and social structure; and analyze the impact of the legal system upon social, economic, and political relationships. Via interactive assignments, students analyze the functions of the federal and state courts and the availability of justice to citizens of varying socioeconomic means. Notes: Satisfies one Social Science and/or American Government course requirement for School of Professional Advancement majors.

Prerequisite(s): ENGL 1010.

GLSP 4370 Workers Compensation Law (3)
Through lectures and practical assignments, students analyze the history and structure of Workers Compensation Law; examine the hearings and appeals system, the nature and types of litigation arising from Workers Compensation claims, and define the role of the paralegal in assisting clients in submitting applications for Workers Compensation benefits and participating in other aspects of the claims process.

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 4380 Evidence Law (3)
Through lectures, practical exercises, and media, students examine the Federal Rules of Evidence and related common law rules and identify and analyze the underlying constitutional provisions and evolving caselaw governing the procurement, development, and admissibility of evidence in civil and criminal matters. credit hours: 3

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 5500 Selected Topics (3)
These upper-level General Legal Studies courses introduce new legal specialty courses to the curriculum. Topics are chosen based upon levels of legal activity, interest in practice areas, and new and evolving trends in law practice. credit hours: 3

Prerequisite(s): GLSP 3030, 3060 and 3070.

GLSP 5900 Gen Legal Studies Practicum (3)
General Legal Studies majors in or nearing their final semester of GLSP study may seek Director approval to register for the Practicum. This course includes both performance of a supervised 100-hour internship in a legal services office and a classroom component. Written assignments and lectures focus upon applying technical skills in the workplace, identifying, and resolving ethical and professional issues, enhancing career development, and other aspects of law office practice and employment. credit hours: 3

Prerequisite(s): GLSP 3030, 3060 and 3070.

German (GERM)

GERM 1010 Elementary German I (4)
Development of basic language skills (listening, reading, speaking, and writing) with particular emphasis on the active use of present-day German. Cultural exploration of the German-speaking countries.

GERM 1020 Elementary German II (4)
Continuation of GERM 101. Continues the development of basic language skills (listening, reading, speaking, and writing) with particular emphasis on the active use of present-day German. Further exploration of the German-speaking countries.

Prerequisite(s): minimum score of PASS in 'GERM 1020 Placement' or GERM 1010.

GERM 1120 Elem German Grammar Revw (4)
In place of GERM 1010 and GERM 1020. Accelerated development of basic language skills (listening, reading, speaking, and writing) with particular emphasis on the active use of present-day German. Cultural exploration of the German-speaking countries.

GERM 1190 Freshman Writing Seminar (4)
Freshman Writing Seminar on varying topics. Consult department for details.

GERM 1290 Semester Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 1470 German For Beginners (1-4)
An Introduction to the fundamentals of the German language.

GERM 1910 Independent Study (1-3)
Independent Study in German or German Studies.

Maximum Hours: 99

GERM 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

GERM 2030 Intermediate German (4)
Continues to develop proficiency in the four language skills (listening, reading, speaking, and writing) at the intermediate level. Further introduces students to contemporary German culture.

Prerequisite(s): GERM 1020 or minimum score of PASS in 'GERM 2030 Placement'.

GERM 2040 Intermed German II (4)
German 204 is the fourth semester of intermediate language study, following 203, and is the first required course for German majors and minors. Advanced practice in all discourse skills. Conducted entirely in German. Class discussion of readings, grammar review, composition, theatrical exercises. Student-driven communicative approach.

GERM 2390 Semester Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 2893 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

GERM 2990 Foreign Language Exemption (0)

GERM 3030 Intro To Literature (3)
Conducted in German. An introduction to representative works of prose, drama, and poetry of the German-speaking world.

GERM 3040 Intro To Literature (3)
Conducted in German. An introduction to representative works of prose, drama, and poetry of the German-speaking world (follows GERM 3030).

GERM 3050 Advanced Grammar & Composition (3)
Course combines language acquisition with content-based instruction for varying topics. With respect to language learning, the course aims at reinforcing and expanding students' proficiency primarily in writing.

Prerequisite(s): minimum score of PASS in 'GERM 3050 Placement' or GERM 2030.

GERM 3160 Readings In German Literature (3)
Conducted in German. Reading of representative works of German prose, drama, and poetry. Designed to introduce the student to fundamentals of literary analysis and to strategies for enhanced reading comprehension.

Prerequisite(s): minimum score of PASS in 'GERM 3000 Level Placement' or GERM 3050.

GERM 3250 German Lang & Culture I (3)
Conducted in German. Survey of German history from its beginning through the Age of Enlightenment, with emphasis on cultural and social aspects unique to Germany. Significant emphasis on the continued development of linguistic skills.

Prerequisite(s): minimum score of PASS in 'GERM 3000 Level Placement' or GERM 3050.

GERM 3260 German Lang & Culture II (3)
Conducted in German. Survey of German history from the end of the 18th century to the present including a discussion of institutions and problems of contemporary German life and civilization. Significant emphasis on the continued development of linguistic skills.

Prerequisite(s): GERM 3050 or minimum score of PASS in 'GERM 3000 Level Placement'.

GERM 3270 German Literature & Culture 1871-present (3)
This course traces significant events and developments in Germany from its beginning as a nation to its reunification at the end of the Cold War. Through close examination and discussion of selected literary, documentary, and filmic texts.

Prerequisite(s): minimum score of PASS in 'GERM 3000 Level Placement' or GERM 3050.

GERM 3360 Translatn:Theory & Pract (3)
Proficiency in German required. Course introduces students to both practical and theoretical problems posed by translation in general and by English-German translation in particular. This class will learn by practicing translation and by reading theoretical texts about translation. Texts will include literature, news reports, and film subtitles.

GERM 3440 Representing Holocaust (3)
This course examines the Holocaust from various perspectives, disciplines, and media (including history, literature, and film) to investigate the conditions and limitations of representations of the Holocaust.

GERM 3510 Ger Cult & Civilization (3)
The emergence of art, music, and philosophy of the German-speaking peoples, primarily as reflected in their national literatures.

Course Limit: 99

GERM 3530 Rehearsing Revolution (3)
The course examines major turning points in German history. How have German writers represented political revolutions and social upheavals from the French Revolution, the weavers' revolt of 1844, to the peaceful revolution of 1989? Conversely, to what extent has literature, especially drama, had an impact on revolutionary events? Authors and theorists considered include such classics as Goethe, Schiller, Kleist, Büchner , Marx, Hannah Arendt, Brecht, Müller , and Weiss. Films by Riefenstahl, Fassbinder, and Becker.

GERM 3540 Marx, Nietzsche, & Freud (3)
Course introduces three philosophical revolutionaries who have exerted enormous influence on literature, philosophy, psychology, and politics. With its intellectual-historical approach, the course will examine key terms and analytical models in these thinkers as well as the intersection points among them.

GERM 3550 Germ Lit In Translation (3)
Subject varies and is announced each semester. Typically a study of literary movements, genres, individual authors, or themes, e.g., the treatment of the Faust theme in German literature. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 3560 The Devil's Pact (3)
The Devil's Pact in Literature, Film, Music.

GERM 3660 Love, Death & Sexuality (3)
The focus of this course will be the representation of love, death and sexuality in German culture from the Middle Ages to the Thirty Years War. Selected works of literature, music and art will be examined.

GERM 3670 Grimm: Devel German Fairy Tale (3)
This course will examine the Brothers Grimm and the classic fairy tales: their origins, development and later adaptations (and will include tales from other cultures and traditions as well).

GERM 3710 Intro To German Film (3)
This course explores the trajectory of German film from its Expressionist beginnings to the present. How do the narratives presented aid in understanding the specific historical, social, cultural, and political moments in which they were produced?

GERM 3720 Weimar Cinema (3)
This course traces the development of the filmic production of Weimar Germany, as well as its influence on classic and contemporary Hollywood film noir. Analyzing significant films from the era, we trace the stylistic, generic, and thematic trends.

GERM 3730 Nazi Cinema (3)
Nazi Cinema and Nazis in Cinema: Fascist Imaginary, Imagined Fascists.

GERM 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): GERM 3050.

Maximum Hours: 99

GERM 3910 Special Topics (3)
Special topics course as designed by visiting or permanent German faculty. For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

GERM 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

GERM 4250 Adv Comp Convr Phonetics (3)
Advanced Composition, Conversation, and Phonetics for advanced German students.

GERM 4400 Advanced Undergrad Sem (3)
Advanced Undergraduate Seminar on varying topics. For course description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 4410 The German Novelle (3)
Study of Novellas by Goethe, Kleist, Arnim, E.T.A. Hoffmann, Gotthelf, Droste-Hü lshoff, Keller, Storm, Hauptmann, Hofmannsthal, Zweig, and Th. Mann, illustrating the historical development of the German Novella as a literary form.

GERM 4430 German Drama (3)
A study of the German dramatic tradition through close analysis of representative plays by such writers as Lessing, Schiller, Goethe, Kleist, Hebbel, Grillparzer, and Bü chner.

GERM 4490 Shorter Forms Ger Prose (3)
Shorter forms of German prose, including essays and short stories from different time periods

GERM 4710 Special Topics (3,4)
Special Topics in German Literature. Consult course schedule for current topic. Course may be repeated up to#unlimited credit hours.

Maximum Hours: 99

GERM 4720 Special Topics (3)
Special Topics in German. For description, consult department.

GERM 4800 Advanced Undergrad Sem (3)
Topics vary from year to year. Typically an intensive study of an individual writer, a limited genre, a literary movement or a thematic problem. The Experience of War; Germany's Roaring 1920s; German Culture after WW II; Youth and the German Nation; Post-1989 Literary and Visual Culture; Travels to Foreign Lands; Early Modern Maps and Images. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 4801 Orient und Okzident: Interkulturelle Begegnungen Im Mittelalter Und Der Frühen Neuzeit (3)
This course will examine medieval and early modern travel accounts in the German-speaking world from ca. 1200-1800 CE. Using a blend of primary and secondary sources in literature (including journals, theater, poetry) and visual sources (maps, costume books, material objects) we will explore the concepts of “East” and “West” and the development of stereotypes in the representation of foreign peoples and places.

GERM 4810 Special Topics Germn Lit (3)
Special Topics in German Literature. Consult course schedule for current topic. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 4820 Special Topics Germn Lit (3)
Special Topics in German literature. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 4910 Independent Study (1-3)
An independent research project in any advanced area of German language, literature or culture. Open to superior students with the approval of the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 4920 Independent Study (1-3)
An independent research project in any advanced area of German language, literature or culture. Open to superior students with the approval of the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 4990 Honors Thesis (3)
Research and writing in conjunction with Honors Thesis (first semester).

GERM 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): GERM 4990.

GERM 5190 Semester Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 5380 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 5390 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

GERM 6030 Survey of German Lit I (3)
Literary documents from the Middle Ages through the 17th century. Selected readings and study of early literary movements.

GERM 6040 Survey of German Lit II (3)
Readings and study of literary history from the Enlightenment to the present day.

GERM 6150 Studies In 19th Cen Lit. (3)
Topic varies and is announced each semester. Study of a genre, a literary movement, or an author.

GERM 6180 Age of Goethe & Schiller (3)
The literature of German classicism.

GERM 6400 Advanced Undergrad Sem (3)
Advanced Undergraduate Seminar on varying topics. For course description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 6800 Advanced Undergraduate Seminar (3-4)
See GERM 4800 for description. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 6910 Independent Study (3)
Open to superior students with the approval of the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 6940 Transfer Coursework (0-20)
Transfer coursework at the 6000 level. Departmental approval required.

Maximum Hours: 99

GERM 7001 German for Graduate Students (0)
Limited to graduate level students in the School of Liberal Arts. The course is designed for graduate students who want to learn how to read German at an advanced level. The course will train students in a set of tools that allow them to read German journalistic and academic prose. No prior knowledge of German is required. The only prerequisite is complete competence in English grammar and syntax.

GERM 7030 Seminar (3)
Graduate seminar on varying topics. For course description, consult department.

GERM 7130 Old High German (3)
Graduate course on Old High German, with emphasis on the history of the German language.

GERM 7190 Reformation & Ren Lit (3)
Graduate seminar on the Reformation and on German Renaissance Literature.

GERM 7980 Research (1-6)
Graduate-level research in German. For description, consult department.

GERM 7990 Research (1-6)
Graduate-level research in German. For description, consult department.

GERM 9980 Masters Research (0)
Masters Research for M.A. candidates. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GERM 9990 Dissertation Research (0)
Dissertation Research for Ph.D. candidates. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Global Business (GMBA)

GMBA 7110 International Leadership & Teambuilding (3)
This course concerns leadership and team development in multi-cultural settings. Leadership is analyzed in terms of personal characteristics of effective leaders. What are the qualities that great leaders possess? How can we develop those qualities in ourselves and in others? Are there cultural differences in leadership? Leadership is also examined from a functional point of view. What are the most important functions of a leader in an organization? What are the best ways for accomplishing those functions? Special attention is paid to decision making and strategic change. The course also covers team performance. How should we form teams? What are the factors that influence team effectiveness? When do teams realize synergies from differences that exist between members? How can a leader foster team effectiveness?

GMBA 7120 Intl. Lead., Ethics, & Teambui (3)

GMBA 7210 Global Environment of Business (3)
This course provides a basis for understanding the international business environment and the mode of entry to foreign markets. The course is organized around three major topics: (1) The differences in the business environment across nations from a social, cultural, and political perspective as well as the effect of business context on managerial decisions, (2) The methodology to select foreign markets for a firm's expansion, and (3) Foreign market entry strategies and management implications of operating overseas. We will also explore the challenges of today's changing world.

GMBA 7220 Strategy for Emerging Markets (3)

GMBA 7310 Global Strategy & Competition (3)
This course focuses on two main objectives: (1) understanding the patterns of global competition in a given industry, the forces pushing toward globalization, how they affect the players, and the factors underpinning the success of global competitors in the industry; and (2) examining the ways to design a strategy for competing efficiently in global markets, how to redesign the value chain of the firm across the globe, and how to successfully enter foreign markets. Although "global" in design, methods and concepts taught, the course will have a "European touch" (textbook, cases selected and lectures dedicated to Europe).

GMBA 7400 Entrepreneurship and Business Venture (3)
This course is designed to help students develop insights on what it takes to be a successful entrepreneur. Entrepreneurship can be defined as the discovery, enactment, and pursuit of new business opportunities. Students will learn how all the major functions of a business come together in a new venture. Discussion will include how to generate new ideas, recognize opportunities, form a venture team, evaluate opportunities, and design a firm to bring the ideas to life.

GMBA 7410 International Entrepreneurship (3)
This course utilizes the knowledge and skills obtained in the MBA program to help students identify an opportunity, start up, and run a new business venture in an international environment. It gives students the opportunity to apply these skills by developing a new venture opportunity project in which participants will identify a promising international opportunity, gather evidence to examine the feasibility of the idea, and develop a mini plan to capture the opportunity.

GMBA 7420 Global Negotiations (3)
This course provides students with theories, models, and especially skills required to negotiate effectively in a global environment. The course will consider various theories of cultural differences, emphasizing differences in values and communication styles. It will also cover basic notions of negotiations including strategies and tactics for both distributive and integrative bargaining situations. Negotiation situations will go from simple prisoner dilemma games to complex negotiations requiring coalitions. Students will engage in many negotiations with counterparts from their country, and with counterparts from different countries, and all will participate in critiquing the negotiations and providing feedback.

GMBA 7430 Entrepreneurial Finance (3)
This class encompasses the fundamental financial knowledge and skills necessary for entrepreneurs to successfully manage their business from start up through sale of the company or an initial public offering. The student will learn to employ financial tools to evaluate business performance, forecast future expected results, and make business decisions. The student will also be able to demonstrate an understanding of the process of raising capital from early stage and later stage investors. This course is composed of several modules of entrepreneurial finance. In each section, the student will have access to lectures, lecture slides, recorded interviews, financial models and templates, and articles pertaining to the topics of the course.

GMBA 7440 Healthcare in Cent America (3)

GMBA 7500 Bus Modeling and Marketing (3)

GMBA 7510 International Finance (3)
International Finance is the sub-area of finance that studies corporations' international investment decisions concerning real and financial assets. This course is intended for participants who wish to learn modern multinational financial management concepts and theories. International Finance gives participants a solid theoretical and practical background that serves to understand better (1) the potential benefits and risks that a Multinational Corporation (MNC) faces when operating globally and (2) the specifics of corporate finance and corporate governance in a global context, including the effect of dealing with different currencies.

GMBA 7610 Global Supply Chains (3)
This course provides an introduction to global operations and supply chain concepts, tools, and strategies. The teaching methodology will consist primarily of the case method and will be complemented by readings and lectures. Students will be expected to prepare case write-ups individually and as members of teams. Cases will be selected to illustrate the challenges and opportunities of operating in international markets in Europe and the Americas.

GMBA 7710 International Marketing (3)
This course covers a broad range of topics related to global marketing. The course begins with a review of important market concepts and a discussion of the implications an international setting has on these core concepts. Building on that, the course addresses the challenges that firms face across the different stages of their international expansion efforts, from the initial steps of international firm expansion to the complexity of organizing a truly global marketing effort that orchestrates activities across multiple countries. The course is organized around four topics. First, international marketing in the early stages of firm international expansion. This entails analyzing and understanding the factors in the business environment (e.g., culture, politics, and legal issues) that affect marketing decisions. Second, the role of marketing research for detecting marketing opportunities, specifically as it relates to growth while accounting for differences across markets. A market selection method will be explored during this session and marketing entry strategies will be discussed. Third, explore the dilemma of adaptation vs. standardization. In other words, should a marketing program be customized (adapted) based on differences between specific countries, or should it be standardized across international markets? The fourth and final topic deals with the global marketing program. Specifically, it discusses how to plan, organize, and implement a global marketing operation that orchestrates marketing activities across multiple countries.

GMBA 7720 New Venture Creation (3)
This course is designed to help participants develop insights on what it takes to be a successful entrepreneur. Our focus will be on entrepreneurial opportunity identification, evaluation, and new business venture creation. Some of the questions that will be addressed are: Where do high potential business ideas come from? How can a mediocre idea be improved to be a good opportunity? How to build a founding team for a new venture? How to develop customers for a new business? How to decide what external financing option is more appropriate at different stages of development? How to scale-up a venture? Why the founder-CEO succession could be crucial for a venture's growth.

GMBA 7730 Negotiations (3)
This course addresses the theoretical foundations and practical skills used in resolving differences and negotiating mutually satisfying outcomes. Students develop skills through simulated negotiations in a variety of contexts. Class topics include the nature of negotiations, different negotiating styles, distributive versus integrative bargaining, repeated negotiations, and multi-party bargaining. Self-reflection and giving and receiving feedback are key aspects in developing negotiation skills.

GMBA 7740 Cross-Cultural Managemnt (3)

GMBA 7750 Intl Business Management (1-4)

GMBA 7760 Global Consulting (4)
This course aims to prepare students for internal and external management consulting positions in the global environment. Topics include industry analysis, consulting skills development, consultant-client relationships, stages of consulting (contracting, data collection and diagnosis, feedback and the decision to act, developing client commitment, implementation, results, and accountability), ethics of consulting, differences between internal and external consulting, understanding resistance, managing meetings, project management, and management of consulting firms.

GMBA 7950 Independent Study (1-4)

GMBA 7960 Global Business Project (0-3)
This course is designed to integrate and summarize Global MBA coursework. The material of this course is developed at an advanced Global MBA level with the goal of utilizing the collective experience of the graduate students to enhance the learning experience. The course uses the Business Strategy Game (BSG), a global simulation where the focus is on competitive global business strategy. Through this online simulation, teams of students run an athletic footwear company in head-to-head competition against companies run by other class members.

Global Development (GDEV)

GDEV 9990 Dissertation Research (0)
Research topics for Global Development PhD students. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Global Finance (GFIN)

GFIN 7010 Corporate Finance (3)
Corporate Finance is a graduate course designed to cover the learning needs of participants who must manage the concepts and theories of modern corporate finance. During the sessions, we will discuss different topics related to corporate financial management that directly affect the value of a corporation, among them: (1) the intrinsic relationship between risk and return, (2) modeling project and corporate valuation, (3) identifying the determinants of the cost of capital, capital structure policy, and dividend policy, and (4) issues in raising new capital and short-term financial management. The ultimate goal is that you get a clear understanding how the concepts are applied by a corporate CFO.

GFIN 7020 Intl Financial Managemnt (1-3)

GFIN 7030 Investments (3)
This course will focus on the fundamental principles of risk and return, as they relate to equities and portfolios. Students will learn about financial decision-making from the perspective of an investor and/or a portfolio manager. We will start with a rigorous development of modern portfolio theory and how it leads to the development of both the Capital Asset Pricing Model and some multifactor pricing models. From there, we will study a variety of topics such as Market Indexes, Professional Asset Management, and Market Efficiency.

GFIN 7040 Fixed Income Analytics (3)
This course is designed to familiarize students with fixed income securities, as well as contemporary models and techniques used to price and hedge them. This course will cover: (1) Fixed income markets, instruments, and derivatives (including swaps), (2) Fixed income analytics (such as yield, duration, and convexity), (3) Models of the term structure, (4) Analytical models (single and multi-factor), and (5) Credit Risk: Structured products and credit derivatives.

GFIN 7050 Options, Futures & Derivatives (3)
This course covers the pricing and use of derivative securities, including forward contracts, swaps, futures, and options. The course emphasizes the role of derivatives in managing risks.

GFIN 7060 Valuation & Financing Enterprises (3)
This course analyzes the concepts and theories of valuation. The course builds on the core finance topics covered in fundamental finance and covers a wide range of topics related to valuation.

GFIN 7110 Financial Institutes & Markets (3)

GFIN 7120 Cases in Financial Management (3)

GFIN 7130 Financial Law & Regulation (3)

GFIN 7140 Portfolio Management (3)
This course covers the theoretical and practical frameworks to understand portfolio management. The course will present portfolio management as a dynamic process involving several non-linear stages: development of the investment policy statement–a general framework with explicit objectives and constraints; formulation of expectations about capital markets returns; define the strategic and the tactical asset allocation; execution of portfolio decisions; monitoring and portfolio rebalancing; measurement–performance, attribution, and appraisal.

GFIN 7660 Risk Management (3)
This course includes the key elements of classic corporate risk management and covers the pricing and use of derivative securities to manage corporate risk. Applications of the use of derivative securities to manage risk will have an emphasis on the use of derivative securities to manage the corporate risk of financial institutions. Business cases and simulations reinforce key concepts and focus on the practical application of risk management tools. Topics will include Value-at risk (VaR), sensitivity analysis (and its connection to regulatory capital requirements), stress testing, and credit risk management. Students will complete an empirical project that will include a VaR Analysis Report utilizing stress testing.

Greek (GREK)

GREK 1010 Elementary Greek (4)
The study of ancient Greek language offers students an exciting opportunity to gain a nuanced sense of how language works as well as develop the skills to read Homer, Plato, the New Testament, etc. without the filter of translation. Designed to get students reading Attic Greek with facility, this course follows a grammar-based approach that moves students from learning the alphabet to reading real Greek as quickly as possible. This course requires no language background.

GREK 1020 Intermediate Greek (4)
This course is a continuation of GREK 1010 in which students will continue to acquire greater facility in reading unabridged passages of ancient Greek.

Prerequisite(s): minimum score of PASS in 'GREK 1020 Placement' or GREK 1010.

GREK 1290 Semester Abroad (1-20)
Study abroad course in ancient Greek language. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GREK 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

GREK 2030 Attic Prose (4)
This course focuses on reading selections from a range of prose authors, e.g., Plato, Herodotus, Xenophon. In addition to improving their proficiency in reading Greek, students develop further familiarity with prose styles and begin to acquire skills in literary, historical, or philosophical analysis.

Prerequisite(s): minimum score of PASS in 'GREK 2030 Placement' or GREK 1020.

GREK 2390 Semester Abroad (1-20)
Study abroad in ancient Greek language. Department approval required. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GREK 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

GREK 3070 Select Authors (3)
This course focuses on reading selections from a range of authors in prose and/or poetry. In addition to improving their proficiency in reading Greek, students develop further familiarity with prose styles and begin to acquire skills in literary, historical, or philosophical analysis. Course may be repeated 2 times for credit.

Prerequisite(s): GREK 2030.
Course Limit: 2

GREK 3910 Independent Study (1-3)
Students wishing to maintain and improve their skill in reading Greek may enroll in a reading course for one, two, or three credits. Requires departmental approval and an appropriate faculty supervisor. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GREK 3920 Independent Study (1-3)
Students wishing to maintain and improve their skill in reading Greek may enroll in a reading course for one, two, or three credits. Requires departmental approval and an appropriate faculty supervisor. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GREK 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

GREK 4030 Greek Tragedy (3)
This course offers students the opportunity to study Athenian tragedy through an in-depth study of the work of Aeschylus, Sophocles, and/or Euripides. Seminars will usually focus on a single author and work, but in some instances will investigate important themes across multiple works to give students a nuanced understanding of Athenian tragedy in comparative perspective. Course may be repeated unlimited times for credit.

Course Limit: 99

GREK 4040 Greek Comedy (3)
Comedy of the fifth century B.C.E., known as Old Comedy, focused on political issues, while Greek comedy of the fourth century B.C.E., known as New Comedy, focused on domestic entanglements. Eleven plays of Aristophanes survive from Old Comedy, and large fragments of seven plays by Menander survive from New Comedy. Students will study one or more of these plays at the discretion of the instructor. Course may be repeated up to unlimited credit hours.

Course Limit: 99

GREK 4050 Plato (3)
In this course students will study one or more works of Plato to gain a sense of his style and argumentation, as well as his place in ancient literary, cultural, political, and/or philosophical traditions. Work(s) read will be chosen at the discretion of the instructor. Course may be repeated up to unlimited credit hours.

Course Limit: 99

GREK 4060 Greek Historians (3)
This course offers students an in-depth study of one or more major figures in the Greek historiographical tradition, e.g., Herodotus, Thucydides, Xenophon. Course may be repeated up to unlimited credit hours.

Course Limit: 99

GREK 4070 Greek Lyric Poetry (3)
Greek Lyric includes a wide range of non-hexameter poetry composed throughout the ancient Greek world in a variety of genres and dialects from the 7th century onward. This category of poetry includes laments and celebrations for every occasion from war to love. Major authors include Alcman, Sappho, Theognis, Solon, and Pindar. Course may be repeated up to unlimited credit hours.

Course Limit: 99

GREK 4080 Greek Orators (3)
Greek orators of the fifth and fourth centuries B.C.E. wrote speeches for the law courts, for political assemblies, and for display. Readings for this course will be selected from the speeches of Gorgias, Antiphon, Andocides, Lysias, Isokrates, Demosthenes and Aischines. Course may be repeated up to unlimited credit hours.

Course Limit: 99

GREK 4090 Greek Epic Poetry (3)
Readings in Greek epic poetry, typically Homer or Hesiod, but other authors may be included, depending upon the desires and needs of the students enrolled. Course may be repeated up to unlimited credit hours.

Course Limit: 99

GREK 4110 Special Authors (3)
Readings from ancient Greek authors not covered in other courses. Course may be repeated up to unlimited credit hours.

Prerequisite(s): GREK 2030.
Course Limit: 99

GREK 4910 Independent Study (1-3)
Students wishing to maintain and improve their skill in reading Greek may enroll in a reading course for one, two, or three credits. Requires departmental approval and an appropriate faculty supervisor. Course may be repeated up to unlimited credit hours.

Prerequisite(s): GREK 2030.

Maximum Hours: 99

GREK 4920 Independent Study (1-3)
Students wishing to maintain and improve their skill in reading Greek may enroll in a reading course for one, two, or three credits. Requires departmental approval and an appropriate faculty supervisor. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GREK 4990 Honors Thesis (3)
Course reserved for students writing an honors thesis for a major in Greek. Requires approval of the department and an appropriate faculty director.

Prerequisite(s): GREK 2030.

GREK 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): GREK 4990.

GREK 5190 Semester Abroad (1-20)
Study abroad course in ancient Greek language. Requires department approval. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GREK 5370 Washington Semester (1-20)
For transfer of credit. Department approval required. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GREK 5380 Junior Year Abroad (1-20)
Study abroad course in ancient Greek language. Requires department approval. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GREK 5390 Junior Year Abroad (1-20)
Study abroad course in ancient Greek language. Requires department approval. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GREK 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

GREK 6030 Greek Tragedy (3)
This course offers students the opportunity to study Athenian tragedy through an in-depth study of the work of Aeschylus, Sophocles, and/or Euripides. Seminars will usually focus on a single author and work, but in some instances will investigate important themes across multiple works to give students a nuanced understanding of Athenian tragedy in comparative perspective. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

GREK 6040 Greek Comedy (3)
Comedy of the fifth century B.C.E., known as Old Comedy, focused on political issues, while Greek comedy of the fourth century B.C.E., known as New Comedy, focused on domestic entanglements. Eleven plays of Aristophanes survive from Old Comedy, and large fragements of seven plays by Menander survive from New Comedy. Several comedies of Aristophanes and selected fragments of Menander will be read in this course in the original Greek. Course may be repeated unlimited times for credit.

Course Limit: 99

GREK 6050 Plato (3)
In this course students will study one or more works of Plato to gain a sense of his style and argumentation, as well as his place in ancient literary, cultural, political, and/or philosophical traditions. Work(s) read will be chosen at the discretion of the instructor. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

GREK 6060 Greek Historians (3)
This course offers students an in-depth study of one or more major figures in the Greek historiographical tradition, e.g., Herodotus, Thucydides, Xenophon. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

GREK 6070 Greek Lyric Poetry (3)
Greek Lyric includes a wide range of non-hexameter poetry composed throughout the ancient Greek world in a variety of genres and dialects from the 7th century onward. This category of poetry includes laments and celebrations for every occasion from war to love. Major authors include Alcman, Sappho, Theognis, Solon, and Pindar. Course may be repeated unlimited times for credit.

Course Limit: 99

GREK 6080 Greek Orators (3)
Greek orators of the fifth and fourth centuries B.C.E. wrote speeches for the law courts, for political assemblies, and for display. Readings for this course will be selected from the speeches of Gorgias, Antiphon, Andocides, Lysias, Isokrates, Demosthenes, and Aischines. Course may be repeated unlimited times for credit.

Course Limit: 99

GREK 6090 Greek Epic Poetry (3)
Greek Epic originated in the archaic period and is the oldest surviving Greek poetry (e.g., Homer, Hesiod, and the Homeric Hymns). It remained one of the most influential genres through to the Byzantine period. Students in this seminar will investigate the epic tradition through the careful study of one or more text. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

GREK 6110 Special Authors (3)
Readings from ancient Greek authors not covered in other courses. Course may be repeated up to unlimited credit hours.

Prerequisite(s): GREK 2030.

Maximum Hours: 99

GREK 6910 Independent Study (1-3)
Students wishing to maintain and improve their skill in reading Greek may enroll in a reading course for one, two, or three credits. Requires departmental approval and an appropriate faculty supervisor.

Prerequisite(s): GREK 2030.

GREK 6920 Independent Study (1-3)
Students wishing to maintain and improve their skill in reading Greek may enroll in a reading course for one, two, or three credits. Requires departmental approval and an appropriate faculty supervisor.

GREK 7040 Selected Readings (1-9)
Students wishing to maintain and improve their skill in reading Greek may enroll in a reading course for up to nine credits. Requires Graduate Student Status, departmental approval, and an appropriate faculty supervisor.

GREK 9980 Masters Research (0)
Course reserved for students writing a thesis for the Master's degree in ancient Greek. Requires approval of the department and an appropriate faculty director. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Haitian Creole (HACR)

HACR 1010 Elementary Haitian Creole I (4)
Designed for students with little or no knowledge of Haitian Creole, this class introduces students to the language and the culture of the creole speech community of the francophone Caribbean region, with emphasis on the Haitian speech community. Students will acquire competencies in Haitian Creole that prepare them for more advanced studies in Haitian language and culture. The course emphasizes the development of multiple language skills (listening, speaking, reading, writing, as well as interacting).

HACR 1020 Elementary Haitian Creole II (4)
This class is intended for students who have taken HACR 1010 (Elementary Haitian Creole I) or who have already acquired competencies in Haitian Creole (e.g. high school, junior college, or exposure to Creole at home or abroad). Students will be exposed to more complex linguistic forms and longer texts. They will develop skills to participate in conversation related to real events in Haiti, and they will improve their ability to work on longer writing assignments. Communicative contexts and grammatical guides are introduced in class through a variety of activities, and acquisition is reinforced by interactive use of new structures and vocabulary.

Prerequisite(s): HACR 1010.

HACR 2030 Intermediate Haitian Creole (4)
This class is designed for students who have already taken two semesters of Haitian Creole or who have been exposed to the language. The main objective is to develop ease, fluidity, and efficiency in oral and written expression. Emphasis is put on reading, writing, listening, speaking, and interacting. The class will provide a broad introduction to Haitian culture and literature through the study of excerpts from novels, poems, and songs. We will review and deepen selected grammatical structures in close coordination with topics and activities taught in class.

Prerequisite(s): HACR 1020.

HACR 2810 Special Projects (3)
This course will provide students with a broader knowledge of Haitian language and culture. Emphasis will be placed on research, essays, and discussion.

HACR 2820 Special Projects (3)
This course will provide students with a broader knowledge of Haitian language and culture. Emphasis will be placed on research, essays, and discussion.

Health Policy & Management (HPAM)

HPAM 6050 Health Systems Concepts (3)
This course introduces students to the historical development, current structure, operation, and future direction of the U.S. health care system. The primary topics include public health activity and health care delivery systems, the factors that determine allocation of health care resources, and the relationship of health care costs to benefits. Students learn to assess organized efforts to influence health delivery and policy formulation, the impact of these efforts on leaders of health care organizations, and the role of societal values and individual behaviors on health system performance, reform efforts, and the health status of our population. Class time is devoted to open discussion of these complex and value-laden issues.

HPAM 6140 Leadership for Clinical Improvement (3)
The course offers students the knowledge, skills, and personal mastery tools that are a prerequisite to assuming leadership positions in the delivery of health services that improve the health status of the individuals and populations. Building on the perspective of clinical education and practice, the student begins his or her leadership journey, integrating and implementing the key structures and processes leading to clinical process improvement and the improvement of health outcomes. By grounding fundamental principles of organizational learning in experimental activities, this course enhances the student's mastery of the core competencies: setting direction, enrolling participation, quality measurement and improvement, personal and team learning, effective health care design, clinical change and organizational design.

HPAM 6170 Quality Management in Health Care (3)
This course introduces students to the concept of continuous process improvement and to the discipline of healthcare quality management. This practical course also introduces the tools to examine, evaluate, and implement the key structures and processes of quality management programs in health care organizations. An integrative approach to improvement and organizational learning is taken, combining topics and methods from diverse improvement approaches in the development of an organization-wide commitment to continuous improvement. Through case analysis and experiential learning, the course emphasizes practical applications that prepare the participants to use the theory and techniques of quality management in situations with complex clinical and managerial implications. Course topics include measurement systems, quality improvement tools, and the design of programs for change management.

HPAM 6200 Intro to Healthcare Analytics (3)
Vast amounts of diagnostic, procedural, pharmacy, administrative and financial data are collated and generated within the health care system. To support the financial health, operational efficiency and quality of care, stakeholders must transform this data into actionable information to support decision-making. Students in this introductory graduate-level course will utilize industry standard analytical tools, particularly Microsoft Excel© to analyze large institutional data commonly found in health care.

HPAM 6210 Health Law and Regulation (3)
This course is a graduate-level course that introduces students to a wide range of topics in the area of health law and regulation including a number of relevant statutes. Students learn to recognize potential legal problems in various health care settings, identify the issues and rights that are implicated, and propose solutions or plans of action. They also learn to differentiate between legal problems and problems which can more appropriately be solved in other ways. There is an emphasis on formulating analyses clearly, both orally and in writing.

HPAM 6300 Data Visualization and Communication (3)
Health organizations increasingly rely on data-driven decisions, requiring students to analyze and communicate pertinent information to inform stakeholders. HPAM 6300 is an applied analytics course that focuses on data-centered communication by emphasizing best practices in data visualization and storytelling. Students will build on the analytical skills developed in HPAM 6200 by creating key performance indicators and generating dashboards to monitor performance. Students will apply these skills by using cases and data visualization software, particularly Microsoft Excel and Tableau.

Prerequisite(s): HPAM 6200.

HPAM 6320 Managerial Communications (3)
The purpose of HPAM 6320 – Managerial Communications is to develop the written and oral communication skills that students will need as leaders to accomplish organizational objectives. To function effectively in complex professional environments, leaders must understand and use different communication behaviors and strategies. Students will strengthen interpersonal communication skills by sharing and receiving feedback and learn how to navigate conflict and other difficult conversations. This course will provide both underlying concepts and skill-building exercises to allow students to develop, improve, and perfect their communication skills

HPAM 6380 Organizational Behavior (3)
This offering provides theoretical and practical content for managers of health care organizations. The course allows students to learn organizational theory and then to apply it to organizational settings. Broad topical areas include psychological and cultural processes affecting recruitment and selection, factors influencing training and development, the scientific method as applied to health care organizations, theories and practices influencing employee performance, effective management theory and practice, engaging and involving employees in organizational processes, employee well-being, and managing change.

HPAM 6450 Health Economics (3)
This course introduces basic economic concepts and analytical tools used to address questions concerning the efficient and effective production of health and health services in the context of a market economy. The course emphasizes the application of economic tools of analysis to the management of health-related organizations and to health policy development. Students will study current research on the health care industry and the ways in which economic analysis is employed in the development of public policy on issues related to population health and healthcare.

HPAM 6500 Intro to Health Care Fiscal Management (3)
This course is an introduction to the principles that have evolved governing how private-sector health care organizations report standardized financial information to persons external to the organization (though obviously also available to internal parties as well). The course will emphasize reporting of (a) organizational fiscal posture, (b) organizational activity and performance, and (c) basic interpretation and analysis of the fiscal information reported. The course assumes students have no prior study of or experience in accounting or finance.

Prerequisite(s): HPAM 6540.

HPAM 6540 Managerial Accounting for Health Care Managers (3)
The main purpose of the Managerial Accounting course is to expose health management students to managerial accounting concepts within healthcare organizations. Mastering the fundamentals of fixed and variable costs, cost allocation, price setting strategies, budgeting, revenue cycle management and supply chain management will provide students with a foundational knowledge of the business side of healthcare allowing for improved decision making and outcomes. This foundational knowledge of said topics will be achieved through lectures, assigned readings, case studies, group projects and examinations.

HPAM 6550 Dynamics of Payment systems - Policy & Function (3)
This course introduces students to the ways providers of health care services have been, are, and will be paid for the services by private-sector payers and public-sector programs. Knowledge of economic concepts and of financial/managerial accounting will be used to analyze public policy issues as well as implementation and reporting issues. Topics include (1) the macro-economic environment within which current payment systems have evolved and continue to evolve; (2) payment mechanisms for institutionally based care, both acute and sub-acute, and for ambulatory care over a range of settings; (3) regulatory processes determining payment for services in entitlement programs; (4) the policy objectives furthered or impeded by public-sector and private-sector payment mechanisms; and (5) analysis of provider responses to payment systems incentives.

HPAM 6710 Quantitative Decision Models (3)
This course encompasses a body of knowledge, a set of quantitative skills, and an orientation towards managerial situations which provide managers greater insight and analytic opportunities for improving the managerial process. Focuses on the systematic planning, direction, and control of the organizational processes that turn resources such as labor, equipment, and materials into services and the quantitative analysis that supports these decisions. In this environment, the processes involve allocation, scheduling, and procedural decisions that result in the effective and efficient utilization of resources for the delivery of health care services.

HPAM 6890 Health Mkt Analysis (3)
Health Market Analysis introduces students to the concepts of market analysis, marketing, strategic planning, and research presentation management; all of which are vital to successful health care organizations. This course integrates knowledge of marketing, statistics and planning. The course also incorporates understanding of the health care environment in the United States and its effect on the development, presentation and use of a strategic plan. This integration is accomplished through the use of cases and the performance of a strategic assessment and plan for a health care delivery organization.

HPAM 6910 Leadership & Ethics (3)
HPAM 6910 introduces students to leadership and ethics with an emphasis on the managerial application in the healthcare environment. Activities include assessing personal values and biases, examining relationships to personal and professional integrity, and critiquing classic and contemporary leadership theories. Students will generate a leadership platform that will serve as a basis to examine ethical challenges faced in contemporary health care environments. Students will analyze ethical duties owed to patients and stakeholders, social responsibility, and organizational culture and their influence on ethical behavior in organizations. This class will use case analyses and class discussion to expose students to diverse perspectives, challenges, and application of best practices.

HPAM 6920 Leadership, Improvement, and Innovation (3)
Within the context that the healthcare ecosystem is undergoing a profound transformation towards a new consumer-driven market, often with increasingly constrained resources, this course offers students an open learning and design space to foster positive healthcare businesses through human-cantered design of the work of care, while improving patient experience, health outcomes, workforce engagement, and revenue. This leadership focus is on successfully reaching key performance metrics and goals through innovation and improvement, while restoring humanity to healthcare.

HPAM 6930 Leadership and Innovation (3)
This course is designed to provide current and emerging physician leaders the knowledge, skills, abilities, and personal mastery tools, which are requisite to assuming leadership roles in the delivery of health services in the consumer-driven healthcare market. By grounding fundamental principles of individual, team, and organizational learning in experiential activities, simulations, and hands-on learn-by-doing exercises, this course will enhance the student's mastery of the core competencies: assessment of current reality, creation of shared vision and purpose, understanding systems and complexity, teaching and learning, design thinking, dialogue, authenticity and personal mastery, positive-relationships and culture, innovation, and organizational transformation.

HPAM 6940 Business Trends, Models & Payment Systems (3)
This course offers physician leaders an introduction to strategic thinking within a business planning framework using a case-based and experience based analysis of environmental trends, business models and payment systems. The course helps the student understand and prepare for the continuously changing health care business environment in the US and prepares the student for future strategic planning responsibilities.

HPAM 6950 Relational Communication and Professionalism (3)
This course provides current and emerging healthcare leaders the knowledge, skills, and personal mastery of tools necessary for using human conversation and connection to navigate and positively impact complex systems, structures, and cultures of healthcare organizations. Students in this course will continue their leadership development journey by enhancing skills that allow for stronger relationships with all people present in health and healthcare organizations in order to create and sustain a positive, high-performance culture. By grounding fundamental principles of individual, team, and organizational conversation in experiential activities, simulations, and real-time feedback, this course will enhance each student's mastery of core competencies in relational communication and professionalism—habits for fostering positive human connection, inquiry, skillful discussion, shared sense-making, empathy, and cultural transformation.

HPAM 6960 Accounting and Financial Management (3)
This course explores selected principles of financial accounting, managerial accounting and applied micro-economics (managerial finance) in nonprofit health care delivery organizations. The course focuses on learning and applying key tools and concepts to problems faced by clinicians and administrators. Topics include, but are not limited to: financial statement structure and analysis, cost concepts used in budgeting, approaches to resource allocation including incremental/marginal analysis, assessing economic viability using cost of capital concepts and adjusting for project risk.

Prerequisite(s): HPAM 6940.

HPAM 6970 Leading and Designing Innovative Learning Organizations (3)
This course leverages the organizational mission, vision, values, through student leadership activities to support those who want to bring their core purpose and values into their organizations and communities. The course helps build capacity for sustainable cultural and operational change through the activation of curiosity, the deployment of new design tools and skills, positive-change initiatives through the application of appreciative business practices to real-world challenges, and by assisting in the spread throughout the student's organizations. The course focuses on four key design areas: patient-centered interprofessional collaborative care, humanization of acute/complex/specialty care, consumer-driven digitally supported primary care, and workforce wellbeing and positive culture transformation.

Prerequisite(s): HPAM 6050 and 6910.

HPAM 6980 Health Sytem of China: An Applied Perspective (3)
This course introduces students to various aspects (epidemiology, social, economic, cultural) of China's healthcare system. The course will be delivered in China so that the materials learned in the classroom can be observed in the real world through field visits and field observations. Health reform strategies of China in recent years will be critically examined through directed readings, seminar lectures, and a number of sites including primary care centers, tertiary hospitals, public health entities, and research organizations. Financing of health care and system for paying the providers will also be evaluated and analyzed.

HPAM 7100 Population Health Analytics (3)
There is a wealth of publicly available healthcare, public health, and census data in the United States that can be used for strategic planning, policy research, and advocacy. This intermediate course will teach students to analyze, synthesize, manage, interpret, and communicate these data for decision-making. Students will use publicly available data to evaluate current needs of a patient population and inform decisions on current and future policies and services. The focus will go beyond data from electronic health records and use population level data to analyze social, environmental, and economic issues that impact access to and outcomes of health care. At the complication of this course, students will be expected to produce a high-quality empirical paper that can be submitted for publication or presentation at a conference.

HPAM 7170 Strategic Management of Healthcare Organizations (3)
Strategic Management of Health Care Organizations will introduce you to strategic thinking, strategic planning and strategic management, which are vital to successful health care organizations. This course integrates students' knowledge of management, marketing, organizational behavior, human resources, finance, accounting, health policy, and economics. The course also incorporates your grasp of the health care environment in the United States and its effects on the development of a strategic plan. Integration is accomplished through the use of cases and the performance of a strategic assessment and plan for a health care related organization.

Prerequisite(s): HPAM 6050 and 6500.

HPAM 7200 Behavioral Economics, Health Law, and Policy (3)
Healthcare leaders in the new consumer-driven environment require a conversant understanding of macro, micro, and behavioral economics for successful innovations and positive-change. This course content will offer the applicable concepts of economic analysis that applies psychological insights into human behavior to explain economic decision making, including utility, engagement, and direct and indirect economic impact of behavioral interventions. Within this framework, key legal and policy implications will be reviewed with a focused on intrapreneurial or entrepreneurial change initiatives. In addition, the underlying relationships of current economic incentives, required transparencies, intellectual properties, compliance, and controls, as well as future economic and social trends will be reviewed.

Prerequisite(s): HPAM 6940.

HPAM 7210 Quality Outcome Analytics and Business Statistics (3)
The healthcare industry now recognizes the key quality outcomes aims – the Quadruple Aim of enhancing patient experiences and engagement, improving the health of the population, reducing costs while offering value and creating the conditions for the workforce to find joy and meaning in their work. This measurement environment requires leaders to evaluate data sets of market-referenced utilization, cost, satisfaction, and quality outcomes. Within the new consumer-driven environment, positive change metrics must be defined, measured, and included in the leaders' new balanced scorecard. This course offers the necessary analytic methodology supported by business statistics for accountable care, utilizing quantitative tools for causality, pay for performance, quality improvement, and measures of success for innovation initiatives.

Prerequisite(s): HPAM 6930, 6940, 6950 and 6960.

HPAM 7220 Positive Organization Design and Development (3)
Healthcare delivery organizations are complex and often defy reductionistic models offered by much of management theory. While leadership and management training often focuses on enabling better performance through structural alignment, process control, and workforce compliance, human behaviors are the fundamental ingredient enabling positive organizational culture and outstanding performance. This course builds upon individual and team-based skills introduced in Relational Communication and Professionalism (HPAM 6950), and focuses on broader questions of organizational design through the lens of human behavior, narrative, and culture, with an emphasis on creating enabling factors (trust, distributed responsibility, shared mental models, and leverage points for systemic change). Participants will engage with new ways of seeing common systems within their own organizations and will work to redesign them.

Prerequisite(s): HPAM 6930, 6940, 6950 and 6960.

HPAM 7230 Decision Models, Informatics, and Market Analysis (3)
Critical thinking skills and data-driven decisions and planning capacities are essential in the complex consumer-driven health care ecosystem. This course supports the leader's development of decision models to predict future trends and demands, including the application of simulations determining the probability of success, as well as an analytical framework for building innovative business plans. This course has three foci. First, this course will improve physician leader's ability to analyze complex and sophisticated decision problems and to design models of individual choice behavior, probability, and statistical decision theory. Second, this course will introduce the concepts of market analysis with emphasis on population health management. Third, this course integrates knowledge of data analytics, including statistics and epidemiology.

Prerequisite(s): HPAM 6930, 6940, 6950 and 6960.

HPAM 7240 Strategy and Transformational Change (3)
Students will use a suite of tools based on positive psychology, business models innovation, design thinking, high-performing teams, consumer-driven networks, and the creation and deployment of the organizational learning spiral to develop an organizational strategy plan. By introducing students to a variety of strategy and change theories and practices, with a focus on matching practice to organizational characteristics, the course builds flexibility and agility to ensure solutions are appropriate to the challenge addressed. Examining one approach more deeply, while surfacing commonalities with other models, the course provides a different lens through which to consider strategic options. The course continues to build capacity within four key design areas: consumer-driven care, inter-professional teaming, workforce wellbeing and humanizing care and services.

Prerequisite(s): HPAM 6930, 6940, 6950 and 6960.

HPAM 7250 Masters of Medical Management Capstone (3)
With the guidance and mentorship of program faculty. building on student course assignments throughout the Masters of Medical Management program, this culminating experience is based on a completed three-part management application paper. which details a proposed innovation and the creation of a positive-change intrapreneurial or entrepreneurial business plan for the prototype. This business plan includes a defined business model, applicable enabling social-change technology, plans for creation of a value network, identified consumer markets, the required inter-professional and inter-organizational collaboration, with deployment plans for iteration, ramp and scale deployment, and potential return on investment. The fully implementable business plan will be presented in an innovation competition to appropriate leaders, stakeholder and prospective investors.

Prerequisite(s): (SPHL 6020 or minimum score of PASS in 'SPHL 6020 Exemption') and HPAM 6930, 6940, 6950, 6960, 6970, 7200, 7210, 7220, 7230 and 7240.

HPAM 7330 Negotiation Analysis (2)
Strategic Management of Health Care Organizations will introduce you to strategic thinking, strategic planning and strategic management, which are vital to successful health care organizations. This course integrates students' knowledge of management.

HPAM 7460 Managerial Economics for Public Health Leaders (3)
This managerial economics course bridges and integrates basic economic and financial management concepts with practical application to improve problem-solving skills and inform effective leadership decision-making in dynamic public health and healthcare organizations. Students apply financial management analysis tools and techniques (e.g., forecasting, budgeting, time value analysis, risk analysis) through the lens of common economic principles, including scarcity and choice, risk and uncertainty, demand and supply, and incentives. The emphasis within a market-based economy considers stakeholders (e.g., public, patients, providers, policymakers) and market imperfections, such as third-party payers, regulation, principal-agent relationship, and externalities in a global context.

HPAM 7580 Financial Management (3)
This is a course on financial management focused on making good decisions at the institutional level about investments/divestments (primarily real assets) and about the financing choices (raising and servicing capital).

Prerequisite(s): HPAM 6500, 6540 and 6450.

HPAM 7660 Health Policy Analysis (3)
The primary aim of this elective course is to present an overview of health policy in American government, its scope, dynamics, and conceptual and practical dilemmas. It is designed to acquaint students with major issues involved in formulating, implementing, and assessing patterns of decisions established by government. Because the study of policy is essentially interdisciplinary, readings for the course have been drawn from several fields, including sociology, political science, and economics. Specific areas of consideration will be addressed during the seminar through analysis and discussion of the functions of state and local government and various stakeholder groups that attempt to influence governmental action.

HPAM 7740 Economic Evaluation & Modeling (3)
This course introduces economics concepts and modeling tools applied to economic evaluation in health care. Topics include: cost analysis, effectiveness measures, cost-effectiveness, cost-utility analysis, and cost-benefit analysis. The course will use case studies to illustrate the use of economic evaluation. Students will develop skills in software to build decision tree models, and Markov models for economic evaluation. There are no prerequisites but the students should be familiar with basic geometry, algebra and statistics.

HPAM 7800 Health Policy Capstone (3)
In the Health Policy Capstone students identify a health issue with a potential policy solution and then research and advocate for a health policy that addresses that issue. Students will gather research on impacts of potential solutions, develop criteria for judging among the solutions, assess the relative merits of policies, and then advocate for their chosen health policy. In class activities include breaking down the steps of policy analysis in response to selection of health policy applications. In addition to these aspects of the course, students in the Health Policy MPH program will complete the Integrated Learning Experience (ILE) by selecting competencies, developing objectives, and writing the ILE paper during this course.

Prerequisite(s): HPAM 6210*, 6450*, 7100*, 7660* and 7740*.
* May be taken concurrently.

HPAM 7990 Master's Independent Study (0-3)
Masters students and advisor select a topic for independent study and develop learning objectives and the expected written final product.

HPAM 8310 Organizational Theory And Assessment (3)
HPAM 8310 is a required course for doctoral students in the Health Policy and Management PhD program. The purpose of this course is to develop the ability to conduct theory-based research on health care organizations. To foster this development, we will examine theoretical literature along with contemporary empirical studies of health care organizations. Special focus is placed on exploring in depth the link between theory and research exhibited in this empirical work to enable students to develop the capability of using theory to guide their own research.

HPAM 8350 Policy Analysis with Natural Experiments and Panel Data (3)
This course is intended for doctoral students interested in policy analysis. It will focus on when to apply the various econometric methods to panel data. Discussion will focus on how each technique is applied in practice. Techniques will include differences-in-differences, synthetic controls, regression discontinuity, and quantile regression.

Prerequisite(s): (IHSD 8250 or ECON 7170).

HPAM 8410 Cost Benefit and Cost Effective Analysis (3)
The purpose of the course is to introduce techniques of economic evaluation applied to health interventions and clinical decision making. Topics covered include: cost analysis, effectiveness measures, cost-effectiveness, utility measures and cost-utility analysis, benefits of health interventions and cost-benefit analysis. The course will discuss a number of case studies in clinical health economics to illustrate the use of economic evaluation techniques in the health sector. There are no prerequisites for the course but eh student should be familiar with basic geometry, algebra and statistics.

HPAM 8770 Health Services Research Methods (3)
This course develops theoretical knowledge and applied skills in designing and conducting research in heath systems. You will utilize and build upon knowledge gained in prerequisite courses as you learn to carry out each step of the research process. You will study textbooks, and articles, present reports to the class in a seminar setting, and complete a number of assignments with contribute to the experience of research design and analysis. You will develop and understanding of factors which, unless planned and accounted for, sometimes result in serious flaws in the research project.

HPAM 8990 Doctoral Independent Study (1-3)
Doctoral students and advisor select a topic for independent study and develop learning objectives and the expected final product.

Hebrew (HBRW)

HBRW 1010 Elementary Hebrew I (4)
An introduction to the Hebrew language.

HBRW 1020 Elementary Hebrew II (4)
A continuation of Hebrew 1010.

Prerequisite(s): minimum score of PASS in 'HBRW 1020 Placement' or HBRW 1010.

HBRW 1100 Readings In Hebrew (1)
This course allows students with a background in Hebrew to read texts from their current JWST class in the original language.

HBRW 1290 Semester Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HBRW 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

HBRW 2030 Intermediate Hebrew I (4)
An introduction to Hebrew prose and poetry. A continuation of 1020 with emphasis on reading and Hebrew conversation.

Prerequisite(s): minimum score of PASS in 'HBRW 2030 Placement' or HBRW 1020.

HBRW 2130 Intermediate Hebrew II (3)
A continuation of Hebrew 2030 with an emphasis of reading and discussion of texts in Hebrew.

Prerequisite(s): minimum score of PASS in 'HBRW 2130 Placement' or HBRW 2030.

HBRW 2140 Reading In Hebrew (1)
This course allows students with a background in Hebrew to read texts from their current JWST class in the original language. Texts read will vary according to the concurrent course. For example, a student enrolled in JWST 4110 Rabbinic Judaism would read

HBRW 2230 Biblical Hebrew I (3)
This course will involve reading various texts of the Hebrew Bible (Old Testament) and the study of biblical Hebrew.

HBRW 2390 Semester Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HBRW 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

HBRW 2990 Foreign Language Exempt (0)
Foreign Language Exempt.

HBRW 3100 Advanced Hebrew I (3)
An advanced class for students interested in pursuing further Hebrew studies. Class will read and discuss modern Hebrew literature as well as study advanced grammar and syntax. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HBRW 3110 Advanced Hebrew II (3)
A continuation of Hebrew 3100 with emphasis on deepening and expanding oral, aural, reading and writing skills in modern conversational Hebrew making extensive use of content and culture to develop language skills.

Prerequisite(s): minimum score of PASS in 'HBRW 3110 Placement' or HBRW 3100.

HBRW 3230 Biblical Hebrew II (3)
This course is a continuation of Hebrew 2230 Biblical Hebrew I and involves reading various texts from the Hebrew Bible. Biblical Hebrew grammar will be reviewed as appropriate.

HBRW 4910 Independent Study (1-3)
Independent Study. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HBRW 4920 Independent Study (1-4)
Independent Study. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HBRW 5190 Semester Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HBRW 5380 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HBRW 5390 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HBRW 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

Historic Preservation (PRES)

PRES 2100 Intro to Historic Preservation (3)
This course offers an overview of cultural heritage management, in particular architectural preservation, in different parts of the world. Coursework will chart the evolution of the preservation field from a lay interest to discipline and profession and address its prevailing theories, accomplishments, and their effects. The course examines motives for preservation, its benefits, how preservation valorizes heritage sites, and how heritage protection is now truly a global concern.

PRES 2120 History of American Architecture I (3)
This course is an investigation of indigenous, vernacular, and historical American architecture from 1500 to 1860; evolution of construction technologies, changing building forms, and finish treatments; identification of historic architectural styles and their influence on 21st-century American architecture.

Prerequisite(s): PRES 2100*.
* May be taken concurrently.

PRES 2220 Conservation Techology (3)
Conservation Technology is an introduction to the composition and properties of historic building materials and the techniques used for their conservation. Lectures, readings and demonstrations are presented focusing on the basics of conservation science, historic building materials and preservation treatments. Students will participate in hands-on demonstrations and exercises to gain a better understanding of the materials and techniques used for architectural conservation.

Prerequisite(s): PRES 2100*.
* May be taken concurrently.

PRES 2930 Special Topics (3)
The Special Topics course is used for introductory level new and onetime offerings in the Historic Preservation Program. Course content will vary from semester to semester. Contact the program for information on particular offerings. Course may be repeated unlimited times for credit.

Maximum Hours: 99

PRES 2931 Special Topics (3)
The Special Topics course is used for introductory level new and onetime offerings in the Historic Preservation Program. Course content will vary from semester to semester. Contact the program for information on particular offerings. Course may be repeated unlimited times for credit.

Maximum Hours: 99

PRES 4105 Architecture, Heritage, and Culture (3)
In utilizing case studies for analysis and discourse, students will investigate relationships between the built environment and those of tangible and intangible heritage and culture. Studies presenting the complexities of the topics will be presented in an effort to better understand what informs notions of place and how architecture exists in accordance with, or as a reaction against, in place social norms set forth by the intrinsic cultural heritage of an environment.

Prerequisite(s): PRES 2100.

PRES 4110 Heritage Documentation (3)
This course is an introduction to documentation techniques focused on the historic built environment. Through site visits and classroom-based seminars students will learn the fundamentals of creating hand-drafted measured drawings in addition to the basics of computer-aided documentation methods. Other recording techniques such as photography and various forms of field notations will also be explored.

Prerequisite(s): PRES 2100.

PRES 4120 History of American Architecture II (3)
This course is an investigation of indigenous, vernacular, and historical American architecture from 1860 to 1980; evolution of construction technologies, changing building forms, and finish treatments; identification of historic architectural styles and their influence on twenty-first century American architecture.

Prerequisite(s): PRES 2100 and 2120.

PRES 4560 Preservation Internship (3)
The Historic Preservation Internship course requires 200 hours of work for a preservation agency, a suitable non- profit, or a restoration firm. An internship may be a special project or daily work for the organization, but the activities must be meaningful and contribute to the student's professional development. Students gain practical experience by working in a professional situation and are required to submit a diary and a report about their work.

PRES 4910 Independent Study (1-6)
The Independent Study course gives upper-level undergraduate students an opportunity to work with a faculty advisor to pursue a personal academic interest with greater focus. Qualified students must develop a syllabus and schedule with the help of the faculty advisor. The course must be approved by the Historic Preservation Program Director prior to registration. Course may be repeated up to two times

Course Limit: 2

PRES 4930 Special Topics (3)
The Special Topics course is used for new and onetime offerings in the Historic Preservation Program. Course content will vary from semester to semester. Contact the program for information on particular offerings. Course may be repeated unlimited times for credit.

Maximum Hours: 99

PRES 6041 Preservation Studio I (6)
This studio is the beginning orientation course that examines all aspects of preservation concerns related to the individual building or group of buildings. The student will learn how to analyze the condition of the building(s) and its (their) context. The studio will examine the differences between building stabilization, adaptive reuse, renovation and restoration. A travel and research component will use real life experiences to illustrate the interdisciplinary nature of preservation in the Americas. An internship in an area of personal choice (such as house museum, community action organization, governmental agency, heritage education or community renewal program) will be developed during this studio.

PRES 6042 Preservation Studio II (6)
Preservation Studio II concentrates on documenting, analyzing and planning for the preservation of groups of buildings and their settings as a basis for understanding the technical, theoretical and procedural aspects of urban conservation. The course includes intensive study of representative historic residential and commercial districts including streetscapes in the New Orleans region where students work both as independent researchers and in teams to learn professional preservation planning concepts and methods. This studio examines sites comprising historic buildings representing different styles and periods in various conditions where choices in restoration versus rehabilitation versus new work must be considered. Solutions for such situations will be explored with respect to current architectural preservation planning principles and procedures.

PRES 6050 Heritage Risk Lab (1-6)
The Heritage Risk Lab builds expertise in understanding, planning for, and mitigating the impacts of climate change as one of the greatest societal challenges of the 21st century. Heritage resources are a vital category of cultural assets that will be affected by these global events and trends. Cultural heritage--encompassing a broad array of materials and spaces, including archaeological sites, historic buildings and structures, and cultural landscapes--provides tangible connections to the past for communities, a sense of a shared identity, and crucial economic development opportunities. Ensuring their durability for future generations is pivotal for healthy, sustainable communities.

PRES 6100 Introduction to Historic Preservation (3)
This course offers an introduction to the field of Historic Preservation in the United States through an exploration of its historical evolution, principles, ethics, theory, methodology, and contemporary practice. It further introduces components of the discipline and explains the role of each through dialogue with active practitioners and case study assessments.

PRES 6120 History American Architecture (3)
This course examines the development of vernacular architectural forms from the 17th to 19th centuries in North America. The course covers a wide range of buildings and landscapes, ranging from domestic structures, public sites, and urban landscapes to churches. Taking a thematic and critical approach, this course will also explore the development of construction technologies and the evolution of building forms. Most importantly, the material will probe the differing meanings of architectural forms and spaces by people in the past. Students will read scholarship written by preeminent scholars in vernacular architectural studies and be asked to critically evaluate the field's methods and interpretations. Class meetings will include lectures, discussions on selected topics, and student presentations.

PRES 6130 Archival and Historical Research Methods (3)
This course serves as an introduction to the core elements of archival and documentary research with a strong focus on property records and tracking architectural modifications over time through historic and contemporary documentation. The course includes site-based visits to local archival repositories as well as an exploration of digital resources, and discussions on the interpretation and reliability of primary and secondary source data. Students will complete short assignments focused on archival literacy and proficiency, additionally they will undertake a final research project that explores the history of a property in New Orleans by utilizing the resources presented throughout the course.

PRES 6151 New Orleans Architecture (3)
This illustrated course examines New Orleans architecture from the city's founding in 1718 to the present time, as well as its historic neighborhoods. The city's architectural legacy will be explored from the standpoint of broad architectural stylistic trends, their relationship to national and international trends, the forces and architects that helped shape the styles, and local building types. Thirty-eight architectural styles will be examined, including Colonial, Revivals, Aesthetic, Eclectic, Arts and Crafts, and Modern Movements. Identifying characteristics and materials of each style will be discussed through numerous illustrations demonstrating the variety of each style based on the most current research.

PRES 6210 Architectural Conservation Lab (6)
This course will focus on detailed analysis of architectural building materials. Through hands-on experiences, lectures, readings, and laboratory exercises students will better understand the performance and physical properties of historic building materials and traditional building systems, providing a basic knowledge so that they might be able to identify deterioration mechanisms and formulate interventions.

PRES 6220 Conservation Technology (3)
This course will provide an overview of preservation technology and building materials conservation. This is the study of historic building materials and the technical means used to document, diagnose, analyze, and design interventions to preserve these materials. It is, in the most basic sense, the technical means by which to accomplish preservation. It involves the examination and treatment of historic and cultural resources utilizing an established system of principles and procedures based on a foundation of preservation theory and methodology.

PRES 6310 Digital Tools in Historic Preservation (3)
The course provides advanced training in digital documentation technology, geographic information systems (GIS), and database platforms for the collection, management, and dissemination of preservation data and interpretation.

PRES 6510 Preservation Professional Development (1)
A one-credit professional development course will prepare students to enter the preservation workforce through the development of practical skills. Course content includes professional development workshops and guest lectures from practitioners discussing their career paths and informing students on the breadth of the field of preservation.

PRES 6520 Environmental Law: Historic Preservation (2)
This course provides an in-depth examination of historic preservation legislation at the Federal, State, and Local levels including its origins, effects, and application for use in contemporary preservation practice. After an introduction of the subject including special instruction to Preservation students on how to read case law, the course reviews a variety of law cases including their precedents and results.

PRES 6530 Preservation Economics (3)
This course concentrates on the financial aspects of historic architectural preservation including its economic benefits, methods of valuation, and tax incentives. The course involves several guest speakers and considers the perspectives of the key players involved in preservation practice. The latter half of the course analyzes the professional practice of preservation including current trends and future directions. Strategies for entering and succeeding in the cultural heritage management profession conclude this course.

PRES 6540 Preservation Advocacy (3)
This course will examine preservation advocacy using readings, lectures, and field trips as the primary teaching tools. It is meant to be a complement to the Intro to Preservation course, where students learn about the inner workings and practice of historic preservation – this course allows them to see it in action – and as preparation for Spring's Internship course. Students will learn about methods for the application of historic preservation practice within the United States and its effects from the individuals and organizations pursuing those methods.

PRES 6550 Preservation Policy and Planning in the United States (3)
This course introduces American policy and planning that shape and affect historic districts, sites, and registries, both locally and nationally. Past, present and emergent policies and plans discussed include: federal legislation, state master plans, and municipal preservation ordinances but also the rules, rubrics, and reviews by which various governmental bodies and their consultants and citizen commissions influence development, design, demolition, removal and/or relocation of buildings and other features of the built environment. The course assignments prepare students to meet US employer expectations of experience with Section 106 review and National Register eligibility evaluation and nomination.

PRES 6560 Preservation Internship (3)
The MSHP course requires 200 hours of work for a preservation agency, a suitable non- profit, or a restoration firm. An internship may be a special project or daily work for the organization, but the activities must be meaningful and contribute to the student's professional development. Students gain practical experience by working in a professional situation and are required to submit a report about their work.

PRES 6570 Historic Tax Credits (3)
The Preservation Economics course explores the business of financing preservation projects through the lens of real estate development. Students will learn the language of the development community with the goal of using preservation as a tool for mindful, financially feasible projects. With an understanding of tax credits, grants, other incentive programs, and data metrics, students will be able to quantify the value of preservation and be equipped to argue for its economic benefits.

PRES 6910 Independent Study (1-6)
The Independent Study course gives graduate students an opportunity to work with a faculty advisor to pursue a personal academic interest with greater focus. Qualified students must develop a syllabus and schedule with the help of the faculty advisor. The course must be approved by the Historic Preservation Program Director prior to registration. Course may be repeated up to two times.

Course Limit: 2

PRES 6930 Special Topics (1-6)
The Special Topics course is used for new and onetime offerings in the Historic Preservation Program. Course content will vary from semester to semester. Contact the program for information on particular offerings. Course may be repeated unlimited times for credit.

Maximum Hours: 99

PRES 6980 Preservation Research Seminar (3)
The Preservation Research Seminar trains students in the methodological process of undertaking preservation research. Students write drafts of core elements of the Historic Preservation Program's capstone project, and gain feedback from faculty, committee members, and peers.

PRES 6985 Preservation Practicum (6)
The Practicum for the Historic Preservation Program is an alternative option to the Thesis requirement and is an important part of the MPS course of study. The Practicum is expected to be a concentrated and valuable work experience that the student chooses that must relate to the field of historic preservation. Its accomplishment must entail 480 hours (three months, full-time) work with an organization. There is wide scope with regard to the possible organizations and locations for students to pursue their practicum experience. With prior approval, students may receive a small stipend or honorarium.

PRES 6990 Preservation Thesis (6)
The Thesis is a major course within the MPS program since it calls upon most of what a student has learned during his or her graduate school experience. There is wide scope with regard to possible topic choices and the location of a thesis subject can be anywhere, although if your thesis is site-specific, you must have some firsthand knowledge of the place by the end of the preceding semester. The thesis topic must relate to the field of historic preservation and its contents should be based mostly on primary research.

PRES 9980 Thesis Research (0)
Thesis research in Preservation Studies.

History (HIST)

HIST 1500 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HIST 1520 Pain & Torture Through History (3)
A seminar course for first year students designed to introduce college level reading, discussion and writing. The UN Convention against Torture and Other Cruel and Inhuman or Degrading Treatment or Punishment in 1987 unequivocally banned the use of torture. Nevertheless torture still occurs, even in the 130 countries that ratified the agreement.There is a great deal of controversy about what constitutes torture and some claim that it is justified in special situations like the War on Terror.This course will examine the goals and methods of torture through history, as it moved from a focus of inflicting pain to the use of psychological torture and sensory deprivation. We will explore how to study pain in history - does pain exist as an entity; unravel the changing relationships between the state, law, and torture; look at the torturers themselves - who they are, how they learn the techniques, and the effects on them. We will also consider what it says about us when we pursue "enhanced" quasi-torture interrogation techniques.

HIST 1750 Disasters in History (3)
Disasters have taken many forms in human history, from earthquakes, fires, tsunamis and hurricanes to famine and epidemic disease. Nor should we forget manmade tragedies such as the terrorist attacks on 9/11 or the devastation produced by a combination of human and technological failures, such as the explosions at Chernobyl and Bhopal or the more recent BP oil spill just off of our own coast. Disasters are an important focus for historical inquiry for quite varied reasons. This is a unique course. It will be team-taught by 12 professors. Each professor will teach a 1-week unit on a historical disaster related to their area of specialization. In addition to an excellent learning experience, you will get to sample the teaching of more than half of the faculty members in the History Department.

HIST 1760 Eating & Drinking in History (3)
Eating and Drinking are part of our everyday lives and experiences, and in that respect, these processes can seem natural rather than historical. However, if we stop and think about it, the politics, economics, and culture of food production and consumption have shaped communities and cultures in specific, and often divergent, ways. In this course, we will take the overarching rubric of eating and drinking to explore the multiple ways in which studying food can illuminate our understanding of the past. This course will include units on food, war, and hunger; commodity chains and trade; cultural relationships with alcohol; and labor and food production in the pre-industrial, industrial and post-industrial era. This is a team taught class taught by the History faculty. Each professor will teach a 1-week unit on eating and drinking related to their area of specialization.

HIST 1910 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HIST 1911 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Course Limit: 99

HIST 1912 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Course Limit: 99

HIST 2910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HIST 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

HIST 3000 Historical Methods (1)
Historical Methods Lab. For description, consult the department.

HIST 3210 Visual History & Filmmaking (3)
In this course students will explore the relationship between history and documentary filmmaking through parallel practices: the critical analysis of historical documentaries and the creation of short historical documentaries as members of small production teams. We will explore questions of narrative form, visual and aural evidence, expertise and authority, and the ethics of representation. Collaboration will also be a central theme of this course since students will have to work together to determine their research subject, carry out research, shoot video, and edit together the final cut.

HIST 3230 Art and Craft of History (3)
Introduction to researching and writing history. We will develop these skills by studying scholars' investigations of the past, conducting archived research, and writing original essays.

HIST 3240 Public History Lab: Exhibits (3)
Most students have visited a historical museum and/or exhibit at some point, perhaps on a school field trip or a family trip. However, what goes into making an exhibit? What are the politics involved? Who decides what is included and what is not? And what is at stake in these decisions?

HIST 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HIST 3910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HIST 3911 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HIST 3920 Special Offerings: History (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HIST 4004 Mkts Money Trde PreIndust Econ (3)
This course takes a comparative approach to major issues in the economies of imperial Rome, and the Early Modern European overseas empires. The topics include an introduction to the main features of the these two pre-industrial macro-economies, and then a series of topics that are of interest to both students of history and business majors. Students will also gain knowledge of the sources and historical methods for the study of these economies, many of which differ from those of the modern era. Stress is on analysis and writing, and so the ability of a student to assimilate and synthesize data into coherent essays.

HIST 4560 Internship and Independent Study (1-3)
Students will complete a 60-70 hour internship with a community partner. In addition, the student will work with a faculty member in the History Department who will advise the student and provide pertinent academic course work to complement the student's experiential learning. Pre-requistites: Approval of instructor. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HIST 4570 Internship and Public History Seminar (4)
What is public history? What do public historians do? What does history look like outside of the classroom? What are the public debates about the telling of history, and what are the consequences? This is a hands-on course which requires both an internship and seminar participation. Students will have an internship with a community partner and intern for 60-70 hours for the course of the semester. In addition, we will have regular seminar meetings as well as guest lectures and field trips. This course does have a Co-Requisite for service learning -- it is SRVC 4890. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HIST 4890 Service Learning (1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): HIST 4910.

Maximum Hours: 99

HIST 4910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Corequisite(s): HIST 4890.

Maximum Hours: 99

HIST 4920 Independent Study (1-4)
Qualified students may arrange for independent study with approval of an instructor (dependent upon area of study) and their faculty adviser. Details of each student's program will vary, but all will involve some combination of readings, oral reports, and written work. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HIST 4990 Honors Thesis (3)
Intensive reading, research, and writing in a selected field of history. Students should discuss their honors thesis with a prospective director during the semester prior to that in which they take 4990.

HIST 5000 Honors Thesis (3-4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): HIST 4990.

HIST 5380 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HIST 5390 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HIST 6660 Photography & Historical Persp (3)
This class aims to explore the relationship between historical memory and photographic practice.

HIST 6910 Special Offerings: History (3-4)
For specific offering, see the Schedule of Classes. For description, consult department. Course may be repeated unlimited times for credit.

Course Limit: 99

HIST 7001 Seminar in Historical Practice (3)
This course serves as an introduction for History graduate students to historical practice and the Department of History.

HIST 7003 Historiography & Methods I (3)
Historiography tutorial in the major field of study for M.A. and Ph.D. students in History.

HIST 7005 Historiography & Methods II (3)
Historiography tutorial in the minor field of study for M.A. and Ph.D. students in History.

HIST 7006 Intermediate Historical Writing (3)
Required writing course for doctoral students leading to a substantive research paper of publishable quality.

HIST 7007 Advanced Hist. Writing (3)
Required writing course for doctoral students leading to a substantive dissertation prospectus.

HIST 7008 Prof. Deve. and Documentation (3)
Required course for doctoral students leading to the creation of a successful doctoral portfolio.

HIST 7210 Visual History & Filmmaking (3)
In this course students will explore the relationship between history and documentary filmmaking through parallel practices: the critical analysis of historical documentaries and the creation of short historical documentaries as members of small production teams.

HIST 7900 Directed Readings (1-3)
Focused readings and weekly meetings with a qualified instructor, tutorial-style. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HIST 7901 Directed Readings (1-3)
Focused readings and weekly meetings with a qualified instructor, tutorial-style.

HIST 7910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

Maximum Hours: 99

HIST 7920 Independent Study (3)
Qualified students may arrange for independent study with approval of an instructor (dependent upon area of study) and their faculty adviser. Details of each student's program will vary, but all will involve some combination of readings, oral reports, and written work.

HIST 7921 Independent Study (3)
Qualified students may arrange for independent study with approval of an instructor (dependent upon area of study) and their faculty adviser. Details of each student's program will vary, but all will involve some combination of readings, oral reports, and written work.

HIST 7930 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HIST 9980 Master's Research (0)
Master's Research. Consult Department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HIST 9990 Dissertation Research (0)
Dissertation Research. Consult Department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

History (PAHS)

PAHS 1510 Survey of Latin American History: Pre-Columbian America to Present Day (3)
This course introduces students to the main currents of Latin American civilization from European conquest to the present, with special attention to the historical background of present controversies. Attention will be paid not only to such dramatic events as Conquest, Independence, and Revolution, but also to such long-term processes as state formation, rural-urban migration, industrialization, national identity, and changing gender roles. The historical roots of problems such as persistent poverty, racism, and political repression will be examined. The lectures and readings will emphasize both the continuity of the historical development of Latin America as well as the differences between diverse epochs and cultures. Our concentration will be on the political, socio-economic, and cultural life of the region throughout the past six centuries. Lectures will analyze the historical forces at work in a chronological order and focus on a variety of themes from race, class, gender, and the region's relationship to its more powerful neighbors to the north.

PAHS 2200 History of the British Monarchy (3)
This course focuses on the ways in which British monarchs have shaped political, social, economic, religious, and intellectual developments in Great Britain from the Romans to the present. Students will study historical, artistic, and literary portraits of Britain's kings and queens, and view various media created about Britain's Monarchs in order to gain a context for their reading. Students will also explore the Monarchy's influence on the evolution of the English constitution over the millennia.

PAHS 2910 Special Topics (3)
Special topics in history.

PAHS 2911 Special Topics (3)
Special topic in history.

PAHS 3201 Warrior Kings of Medieval England (3)
The Plantagenet dynasty reigned over a blood-soaked era of English history from the Norman Conquest to the cusp of the Wars of the Roses. In this course students will explore this turbulent period, from the anarchy of King Stephen's reign to the usurpation of the Crown by Henry of Bolingbroke. Along the way, the class will be introduced to the adventures of Eleanor of Aquitaine; her sons, Richard the Lionheart and bad King John; the Black Prince; John of Gaunt; and Henry V, the hero of Agincourt. As their tales unfold, England will experience Magna Carta, revolting barons and peasants, the Black Death, and the Crusades; emerging from the dark ages to become a vibrant kingdom on an international stage with the rise of parliamentary democracy and the power of the common man.

PAHS 3202 Wars of the Roses (3)
A series of civil wars that took place in England during the fifteenth century, the Wars of the Roses were the historical inspiration for George R.R. Martin's book series which became HBO's mega hit "Game of Thrones." This course will help to explain the causes of the wars, the outcomes of the fighting, and the subsequent impact on society. Students will be introduced to a number of fascinating personalities, including Edward IV, Warwick the Kingmaker, and the enigmatic Richard III, Sources for discussion will include, among others, The Croyland Chronicle and the famous Paston Letters. This course will also provide an opportunity to consider the importance of archaeological evidence, in the light of recent excavations at Bosworth, Towton, and Leicester.

PAHS 3300 French Revolution & Napoleon (3)
This course surveys the political, social, economic, and cultural history of France from the origins of the French Revolution to the collapse of the First Empire in 1815. French society experienced more varied and radical changes during this period than at any other time in its history. These changes, expressed in ideas, inventions, and politics, went on to reshape the face of Europe.

PAHS 3750 History of Rock & Roll (3)
The purpose of this course is to examine the place that rock 'n' roll has occupied in American culture. The central question is why a musical and cultural form once dismissed as a "passing fad" has been a very visible (and audible) part of our culture for over sixty years, despite considerable resistance.

PAHS 3830 Special Topics (3)
Special topics in history.

Maximum Hours: 99

PAHS 3831 Special Topics (3)
Special topics in history. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PAHS 3930 Special Topics (3)
Special topics in history.

PAHS 4010 Special Topics- History (3)
Special topics in history.

History - Africa (HISB)

HISB 1140 Freshman Seminar-Africa (3)
Freshman seminar. For description, consult the department.

HISB 1290 Semester Abroad (1-20)
Semester abroad. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISB 1300 African Hist To 1800 (3)
This course examines selected topics in the history of sub-Saharan Africa from antiquity to the period immediately preceding colonial conquest. It provides an overview of historical developments in particular regions, considers the implications of Africa as a unit of analysis, and provides a point of departure for more specialized courses in African history.

HISB 1310 Africa Since 1800 (3)
This course considers the history of sub-Saharan Africa under colonialism and after: the responses of people to governments very different from those they had previously, changes in African societies, the challenges of the postcolonial period. Topics covered include gender relations, peasant agriculture, wage labor, politics, and development.

HISB 1500 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISB 1890 Service Learning (0-1)
Course Limit: 99

HISB 1910 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISB 1940 Transfer Credit (3)
Transfer credit. Consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISB 2120 History of Western Africa (3)
This course is a historical introduction to the themes and events in western and northern Africa from prehistoric times and the peopling of Africa through the advent of Islam; North and West African empires and states in the medieval period; the arrival and departure of European colonial powers; and the re-emergence of independent African states. We will trace topical themes through case studies, exploring the political, cultural, social aspects and the inter-regional dynamics of Saharan Africa.

HISB 2130 History of Southern Africa (3)
This course examines southern African history from 1652 to the present. It explores the particular political and cultural patterns which arose in the region as a result of contact and conflict between indigenous African societies and European settler communities.

HISB 2140 History of Eastern Africa (3)
This course provides an historical survey of eastern Africa which examines the role of bantu migrations, the rise of state-building in the 17th and 18th centuries and a primary emphasis on the 19th and 20th centuries. The course highlights the social, cultural and economic dynamics of both African and settler societies as it explores the historical processes of slavery, migrations in the region, the imposition of colonialism, nationalism and the rise of the independent states of Kenya, Tanzania, Uganda, Ethiopia, Eritrea, Somalia, Rwanda and Burundi. We will use primary sources written or created by Africans and others to explore the developments that affected the region in recent history. This course devotes equal time to lecture and discussion.

HISB 2890 Service Learning (0-3)
Course Limit: 99

HISB 2910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISB 3000 Historical Methods:HISB 3250 (1)
Historical Methods Lab. For description, consult the department.

HISB 3240 Human Rights/Genocide-Africa (3)
The notions of human rights" and "genocide" are modern constructions of the twentieth century. What is defined as genocide in the present was simply a good military tactic in previous centuries. Likewise

HISB 3250 Archiving Africa (3,4)
This is an advanced course in historical methods that uses a service-learning component to enhance student understanding of historical materials, archives and how these connect with the larger community. In this course, students will focus in particular on materials related to African history found in New Orleans archives, allowing students to develop an understanding of the historical links between the local community and the continent of Africa. Moreover, students will consider the methodologies used to preserve the various histories of Africa and consider how these methods can be used for other under-represented communities, such as found in New Orleans.

HISB 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISB 3910 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISB 4210 Hist of Development in Africa (3,4)
This course explores the concept of "development" as it was brought to Africa by Europeans in the 19th century and how Africans have responded until the 21st century.

HISB 4250 Topics in the History of the Atlantic Slave Trade (3-4)
This course will explore the history of the Atlantic slave trade that brought captive Africans as exploitable laborers to North, South, Central America and the Caribbean between the 1500s and the 1800s. This human traffic has long been recognized as foundational for the economic growth of the Americas and Europe, and the making of the modern world. It has also been recognized for its extreme inhumanity, its global reach and its complex effects on the African continent. Course also covers inter-regional slave trafficking within the United States and around Latin America and the Caribbean. The course also addresses this forced migration as a unique process of cultural interaction and cultural change. Sometimes the course will focus more narrowly on specific themes such as the role of gender in shaping Atlantic slave trade history, or the formal and customary and laws and regulations which permitted, regulated and later prohibited this form of human trafficking.

HISB 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISB 4910 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISB 5380 Junior Year Abroad (1-20)

Maximum Hours: 99

HISB 5390 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISB 6070 Gender in African History (4)
This seminar will consider the question of how recent forms of gender theory might be applied to African societies. Readings will include Foucauldian, psychoanalytic, and political theory, as well as historical and ethnographic studies of particular societies.

HISB 6110 Slavery/Emancipation in Africa (4)
This course focuses on the legacy of colonialism for key political concepts such as citizenship and freedom. We will consider the construction of categories of difference like race, gender, and ethnicity and look at their changing meaning in the context of colonialism, slave emancipation, and freedom struggles in Africa and elsewhere in the colonial world.

HISB 6910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISB 6981 Service 20-hours: (0)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISB 7910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

History - Ancient & Medieval Europe (HISA)

HISA 1020 After Rome: The Early Medieval World (3)
A survey of major developments in the political, religious, and social history of Europe from the 5th through the 10th century. Topics to be explored include the transformation of the Mediterranean world in late Antiquity; the development of the institutions and forms of religious expression of European Christianity; the emergence of kingdoms in Europe; the Rise of Islam; the Carolingian Renaissance; and the Viking invasions.

HISA 1030 Medieval Europe 1100-1450 (3)
A survey of the period in which Western Europe became the center of medieval civilization.

HISA 1500 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISA 1910 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISA 2000 Cities Empires and Gods (3)
This survey course introduces the early civilizations and religious traditions of the Near East and India that are the institutional and cultural basis of the Middle East today. The course begins with the first, literate, urban civilizations of the Tigris-Euphrates, Nile, and Indus. Stress is on the institutions of ancient kingships and the religious traditions of Mesopotamia, Egypt, the Hebrews, Persia (Zoroastrianism and Manichaeism), and Early India (Hinduism, Buddhism, and Jainism).

HISA 2001 Warring States of Greece (3)
This lecture course introduces the achievements of Greek civilization from its origins on Crete in the Bronze Age (2800-1400 B.C.) down to the conquest of the Greek world by the Romans. Greek civilization is the foundation of Western civilization. The intense inter-city rivalries shaped political thought with its stress on the consent of citizens and rule of law, artistic and literary achievements stressing the human condition, and inquiry based on scientific reasoning and analysis of cause and effect. Stress is on the Archaic (750-480 B.C.), Classical (480-323 B.C.), and Early Hellenistic Ages (323-200 B.C.)

HISA 2002 Rome the Imperial Republic (3)
This lecture course introduces the political and cultural achievements of the Roman Republic, and Rome's enduring legacy to Western political thought. Emphasis is on the evolution of the Roman Republic's political institutions, the Roman conquest of the Mediterranean world, the Hellenization of Roman society, the emergence of a Mediterranean economy, the demise of the Republic in the Roman Revolution, and the legacy of the Republic to the Western tradition.

HISA 2020 The High Roman Empire (3)
This lecture course explains the political, institutional, and cultural achievements of the Roman Empire that are the foundations of Western civilization. Emphasis is on transformation of he Roman Republic into the monarchy of the Principate by Augustus (27 B.C.-14 A.D.), the imperial army and frontier policies, economic growth and social mobility under the Roman peace, the crisis of the third century (235-305), the rise of Christianity, and the creation of the Christian monarchy by Constantine (306-337)

HISA 2030 Byz & Early Med Civilization (3)
This course covers the transformation of the late Roman world into the Christian civilization of the Byzantine Empire and early Medieval West. Emphasis is on changes in late Roman state and society, the barbarian invasions and fall of the Western Roman Empire, the failure to restore the Roman order by Justinian (527-565), the emergence of the Middle Byzantine state and Orthodox tradition, the inversion of Eastern Europe, the impact of the Crusades, and the Byzantine transmission of the Classical heritage to Western Europe.

HISA 2310 Medieval England (3)
A survey of the political, social, and intellectual development of England from the Anglo-Saxon period to 1485.

HISA 2350 Medieval Italy (3)
A survey of the political, social, and cultural developments in Italy from the eleventh century to the early fifteenth century, with special attention to the development of institutions and culture in the city-states of central and northern Italy.

HISA 2360 History of Christianity, From the Jesus Movement to the Reformation (3)
A historical overview of the Church and society in Western Europe from the origins of Christianity through the end of the Middle Ages and the beginning of the Protestant Reformation. This course will examine the development of early Christianities in the period following the birth of the Jesus movement; the emergence of normative or "Catholic" Christian belief and practice; and the institutions and culture of Christianity as it developed in Western Europe in the Middle Ages. Themes will include the varieties of monasticism; relationships with Judaism and Islam; the development of Roman primacy and Papal government; scholasticism and other intellectual movements; and late-medieval attempts at institutional and intellectual reform. The course will introduce students to major themes and ideas through the reading of survey texts, and to historical interpretation through the analysis of primary sources.

HISA 2910 Special Topics (1-3)
Courses offered by visiting faculty or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISA 3000 Historical Methods: (1)
Historical Methods Lab. For description, consult the department.

HISA 3020 Anatolian Civilization (3)
Interdisciplinary seminar on the study of the history, historical geology, and cultural achievements of Anatolia (modern Turkey). Anatolia has acted as the cultural bridge between Europe and the Near East. Stress is on the achievements of Hittite civilization, the Iron Age civilizations, the impact of Hellenic civilization, the Roman and Byzantine empires, Turkish Muslim civilization under the Seljuks and Ottomans, and the Turkish Republic.

HISA 3070 Topics Medieval & Renais Hist (3)
A reading seminar designed to explore in depth some aspect of late medieval history that is of interest to students and instructor.

HISA 3100 Spec Topics Greek Hist (3)
Readings and discussion of select topics in classical Greek history: Homer and the Trojan War; The Birth of City-States in Greece and the Near East (1000-500 B.C.E.); Athenian Empire (480-404 B.C.E.); Sparta and Macedon in the Age of Hegemonies (404-323 B.C.E.); or Greek Cities Leagues, and Macedonian Kings (323-133 B.C.E.). Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISA 3110 Spec Topics Roman Hist (3)
Readings and discussion of select topics in Roman history: The Making of Roman Italy (509-264 B.C.E.); The Punic Wars (264-146 B.C.E.); Roman Revolution (133-27 B.C.E.); Rome and the Jews (167 B.C.E.- 135 C.E.), or Money, Market, and Trade from Antiquity to the Middle Ages. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISA 3170 Medieval Spain (3)
Readings, discussion, and essays examine the sweep of Iberian history from the late Roman empire until the early 16th century, with particular attention to the Visigothic monarchy, the society and culture of Islamic al-Andalus, the reconquest and development of the Christian kingdoms of Castile-León, Portugal, and Aragon, and the interaction of Christians, Jews, and Muslims in peninsular society. The development of a distinctive Castilian culture, later transplanted in large part to Spanish America, will be studied through close attention to legal codes, domestic arrangements, military organization, the Inquisition, and the classics of medieval Castilian literature.

HISA 3230 Great Capts Alexander-Patton (3)
Interdisciplinary colloquium on how the careers of great commanders have altered warfare and society. Stress is on changes in political, economic, and social institutions that stood behind these careers as well as the impact of innovations in technology, tactics, and strategy. Commanders include Alexander the Great, Hannibal, Scipio Africanus, Belisarius, Gustavus Adolphus, Frederick the Great, and Napoleon.

HISA 3250 Jews, Christians, Muslims (3,4)
This seminar explores the relationships between the three Abrahamic religions during the Middle Ages. It examines the experience of Jews as minorities in both Christian and Muslim territories, encounters between Christians and Muslims both violent and peaceful in the Mediterranean and in Europe, and the ways in which each community was shaped by its encounters with the others.

HISA 3910 Special Topics (1-3)
Courses offered by visiting faculty or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISA 3970 Spec offr: Ancient Med (3)
For specific offering, see the Schedule of Classes. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISA 4140 The Crusades 1095-1291 (3)
This course traces the origins of crusading in Western Europe and events that led to the launching of Crusades to recover Jerusalem for the next two centuries. Emphasis is on how the Crusades shifted the political and economic axis in the Medieval world as well as led to innovations in arts and letters for Western Europe, the Byzantine world and the Muslim Near East.

HISA 4150 The Age of the Vikings (3,4)
This course deals with the evolution of a distinct civilization in Scandinavia on the eve of the Viking Age (790-1100) and its impact on early Medieval civilization. Through archaeology, coins, and the sagas and verse of Iceland, the course examines how Viking raids transformed states and societies across Europe and how the Scandinavians were assimilated into Latin Christendom from the eleventh through thirteenth centuries.

HISA 4200 Dante's Worlds: The Divine Comedy and History (4)
This mixed lecture/seminar will explore the world Dante created in his masterwork, the Comedy. and the world that created Dante: the vibrant intellectual. political. and religious culture of medieval Italy. The course will combine a close reading of the Comedy with exploration of important issues engaged by Dante in politics and government; religion and morality; economic theory and social order; gender and social relations; and creativity and the arts.

HISA 4910 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISA 5380 Junior Year Abroad (1-20)

Maximum Hours: 99

HISA 5390 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISA 6000 Select Topics Greek History (3,4)
Research seminar on select topics of Greek History: Archaic Greece (750-480 B.C.E); Athenian Constitutional History; Alexander the Great; Greeks, Macedonians, and Persians: Birth of the Hellenistic World (600-250 B.C.E.); or Greeks in Iran and India (500 B.C.E.- 200 C.E.) Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISA 6010 Sem Sel Topic Roman Hist (3,4)
Research seminar on select topics in Roman History: Roman Imperialism and Transmarine Expansion (264-30 B.C.E.); Roman Principate; Later Roman Empire; Peloponnesian and Punic Wars; Rome and the Raj: Imperial Armies, Frontiers, and Societies; Imperial Rome and Imperial China (200 B.C.E.- 200 C.E.); Rome and Iran (100 B.C.E -650 C.E.); The Conflict of Pagans and Christians in the Roman Empire (30-565), Rome's Mediterranean Economy or Rome and the Northern Barbarians. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISA 6050 The Italian Renaissance (3)
An examination of cultural, religious, and political developments in Renaissance Italy and their impact on the rest of Europe.

HISA 6060 Later Medieval Spain (3,4)
Examines the political, religious, social, and cultural history of the Iberian Peninsula from the rise of the Caliphate of Cordoba in the tenth century through the reign of the Catholic Monarchs Isabel of Castile (1479-1504) and Ferdinand of Aragon (1479-1516). Among other topics, readings and discussion will address: the evolution of Islamic and Christian polities, and their centuries-long military confrontation (the 'Reconquest'); convivencia, or the interaction of Christians, Muslims, and Jews within medieval peninsular societies, and the reflections of this coexistence in culture, commerce and law; the partial political unification of Spain under the Catholic Monarchs; mounting religious and ethnic tensions within the Christian states, the rise of the Spanish Inquisition, expulsions of Jews and Muslims, and the imposition of Christian orthodoxy.

HISA 6090 Sem Sel Topics Byzan Hist (3,4)
Research seminar on select topics in Byzantine history: The Age of Justinian (518-565); The Byzantine Dark Age (610-1025); or Byzantium and the Crusades (1025-1204). Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISA 6190 Special Topics: Mediev+Ancient (3)
Courses offered by visiting faculty or permanent faculty. For description, consult the department.

HISA 6230 Medieval Cities (3)
This seminar explores the cities of medieval Europe, particularly in the high and late medieval period (roughly 1100-1500), and the ways in which urban space shaped the social, political, and cultural experience of medieval city-dwellers. Themes for readings and discussions include the idea of the city; sacred space and civic religious culture; governments, their institutions and physical sites; commerce and guilds; the gendering of urban space; and poverty and disease.

HISA 6250 Medieval Religious Culture (3-4)
This seminar explores a variety of aspects of medieval religious beliefs and practices, raising questions about the specific character of medieval religious culture and about how historians study it. Themes addressed include the cult of the saints; monastic life and intellectual culture; gender and models of sanctity; art and religious meaning; relations between majorities and minorities; and popular religion.

HISA 6270 Women&Gender Middle Ages (3)
This seminar addresses the construction of gendered identities in the Middle Ages, and the experience of medieval women and men in relation to those identities. Seminar readings and discussions explore topics such as changes in attitudes towards women's authority during the Middle Ages; the experience of religious women and the meaning of female imagery in religious writings; women's opportunities and experiences in politics and the economy; the lives and writings of illustrious medieval women; and the relationship between medieval conceptions of femininity and masculinity, and their articulation of gender differences in medieval literature and science.

HISA 6910 Special Topics (1-4)

Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

HISC 2010 History of China to 1800 (3)
This survey course introduces the main themes of Chinese history, from Neolithic times down to the end of the pre-modern era (marked, both by tradition and for sake of convenience, at 1800 CE). Key topics include the exploration of the religious, moral, and social beliefs of early China as well as the assessment of the significance of the institutions of state and family, which have left such a striking imprint on the whole of Chinese history. This course is intended for those with little or no prior study of Chinese history; by the end of the semester, students should have a rounded perspective on the diversity as well as the essential continuities of Chinese culture in its formative stages.

HISC 2020 History of China since 1800 (3)
This survey course introduces the main themes in Chinese history from the height of the Qing dynasty to the end of the twentieth century. The first half of the course explores the political, social, economic, and cultural trends of the late imperial era. The second half of the course examines twentieth-century China, from the turbulent years of the Republican period to the traumatic events of the Cultural Revolution and beyond. This course is intended for those with little or no prior study of Chinese history.

HISC 2120 History of Modern India (3)
This is an introductory survey of the major cultural, social, political thought, traditions, and institutions of the Indian subcontinent or South Asia from 1500 to the present. No prior knowledge of the area or the culture is assumed or expected from the students.

HISC 2910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISC 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

HISC 3000 Historical Methods: HISC 3910 (1)
Historical Methods Lab. For description, consult the department.

Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISC 3970 Special Topics - Asia (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISC 4910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISC 5380 Junior Year Abroad (1-20)

Maximum Hours: 99

HISC 6110 Women in East Asian History (3,4)
Historically, women in East Asia had to negotiate with a highly patriarchal and Confucian world. This course aims at exploring the lives of women in East Asia, hoping to gain a further understanding of the challenges they faced under traditional Confucian regimes as well as the modernizing states of the 19th and 20th centuries. Special attention will be placed on the roles of personal agency and state power in shaping female lives and identity

HISC 6120 Women In China & Japan (3)
This course examines women's history and gender relations in both traditional and modern China and Japan. Themes to be explored include the constantly evolving roles of women in the family and as workers, artists, writers, and revolutionaries.

HISC 6210 The PRC: China under Communism (3,4)
In 1949, as Mao Zedong declared the founding of the People's Republic of China, the Chinese people were once again under a united government, ending decades of civil strife and foreign aggression. Yet the year 1949 represented only the military victory of the CCP, and in the following decades the new rulers of China would attempt to recreate state and society on a previously unimaginable scale. This course explores the dramatic years following the establishment of the PRC and follows the mass campaigns and political upheavals that marked Chinese history under the rule of the Communist Party. Attention will be given to both mass movements in the countryside and events that largely affected urban dwellers and intellectuals. Overall, this course aims at understanding the large-scale structural changes of the revolutionary era of 1949 to 1976 and its aftermath, as well as what these changes meant for the lives of individual Chinese citizens.

HISC 6310 China Revolution 1900-1949 (3)
China's twentieth century was irrevocably and profoundly marked by the Chinese Revolution. But how are historians to define the Chinese Revolution, both in setting its temporal boundaries and interpreting the meaning behind the event? Is it possible to determine the causes of the Revolution, or to elucidate why it took the path that it did? What did the Revolution mean for different social groups, as well as the individual? This course, an intensive reading seminar, is designed to address these issues by engaging a wide range of scholarship. Key topics include the legacy of the Republican Era, the rise of the Chinese Communist Party, land reform, and the impact of the revolutionary era on the lives of women.

HISC 6410 Empire and Rebellion in China (3)
During the Ming and Oing dynasties, Chinese emperors faced the enormous challenge of maintaining control over a vast and populous polity. This seminar will explore the methods utilized in the late imperial age to control the populace. These methods-most notably the state, legal, and family systems-were never fully effective in enforcing the will of dynastic rulers. As such, we will also investigate the possibilities for resistance against imperial rule and the Confucian worldview. While control and resistance will be the main themes for this seminar, other topics such as the roles of the environment and identity in history will add to our understanding of the late imperial age. Please note that this is a reading and writing intensive course that will rely heavily on the peer-review process.

HISC 6610 Seminar on Modern Japan (3-4)
Japan's rapid transformation from a traditional agrarian society to a modern nation-state has been one of the most intensely studied and debated topics in the historiography of Asia. This course explores the continuities and contrasts in Japanese history from the late Shogunate period to the disasters of the Pacific War; particular emphasis will be placed on how Japan came to be defined as a modern nation. Please note that this is a reading and writing intensive course that will utilize both peer-collaboration and peer-review.

HISC 6910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISC 7910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

History - Latin America & Caribbean (HISL)

HISL 1140 Freshman Seminar-Lat Amr (3)
Freshman Seminar in Latin American History.

HISL 1500 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISL 1710 Intro Latin Americn Hist (3)
Main currents of Latin American civilization from the European conquest to the present, with special attention to the historical background of present controversies.

HISL 1720 Intro Caribbean History (3)
This course provides a survey introduction to the history of the Caribbean basin including the island territories located in the Caribbean Sea as well as those Atlantic islands and regions of mainland Central and South America which have shared similar historical experience with the Caribbean basin. The course covers the period from the mid fifteenth century immediately before European arrival up to the present day. Major themes will include European conquest and colonialism, African enslavement, East Asian immigration, the development of multi ethnic societies, U.S. relations with the Caribbean region, and the role of tourism in recent Caribbean history.

HISL 1890 Service Learning (0-1)

Maximum Hours: 99

HISL 1910 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISL 2100 Latin Am Independence Movement (3)
Independence movements swept the Americas in an age of radical social and political transformations. New ideas about individual rights, democracy, the public sphere, and equality shaped debates across the region. This class explores how issues of race, gender, and religion influenced these debates and the development of these new nations.

HISL 2110 Colonial Latin America (3)
The year 1492 marked a major watershed in global history, as Europeans began a process of colonial expansion in the Americas that would continue for several centuries. This course explores the long and complex colonial history of Latin America that began in 1492 and ended in most of the region in the 1810s and 1820s. Main themes include the long processes of material and spiritual conquest; indigenous resistance and accommodation; the Columbian Exchange of plants, animals, and diseases; the creation of colonial economies of extraction and regional articulation; the rise of mixed-race societies; and the development of colonial institutions of church and state. The course also treats the expansion of slavery and the transatlantic slave trade, along with the rise of resistance movements and frontier challenges to colonial rule. We end with the responses to new crown demands in the eighteenth century and the collective struggle for independence that began in 1808.

HISL 2112 Modern Latin America (3)
This 3-credit course examines the history of Latin America from Independence in the 1810s and 1820s to the present. Main themes include nationalism, regional solidarity, revolutionary movements, extractive economies, and Indigenous and populist politics.

HISL 2120 Making the Modern Caribbean (3)

HISL 2500 History of Medicine & Public Health in Latin America (3)
In this course, we explore Latin America's fascinating history of medicine and public health - from the colonial encounter of indigenous, African and European healing practices to the unique ways in which Latin American nations faced the greatest public health challenges of the 20th century. The course explores a variety of subjects beginning in the early colonial era: African healing in the Americas, the evolution of tropical medicine, international public health missions, midwifery and the rise of obstetrics, funerary practices, miasma theory, and disease epidemics ranging from malaria to the HIV/AIDS crisis. We will focus heavily on how both patients and practitioners of alternative forms of healing reacted to treatments, sometimes with resistance, and in turn shaped the very nature of medicine in the region. The course approaches the history of medicine from a transnational perspective, seeing how practitioners and researchers in Latin America interacted with the global scientific community.

HISL 2760 Colonial Mexico (3)
Social, intellectual, and institutional history of colonial Mexico.

HISL 2770 Modern Mexico (3)
Political, economic, and social history of Mexico during the national period.

HISL 2790 Central America (3)
The history of Central America since 1800 with particular attention to the establishment of political independence, economic colonialism, the transfer of hegemony over the region from Europe to North America, problems of chronic political and social instability, and popular revolutions in the 20th century.

HISL 2810 Colonial Brazil (3)
Brazilian colonial history from 1500 to 1822. Emphasis on major economic, social, and political developments in the context of the Portuguese Empire. Contrasts and similarities with other imperial systems receive particular attention.

HISL 2820 Modern Brazil (3)
Brazilian history from 1822, including the first and second empires and the republic. Attention is given to the liquidation of slavery, the replacement of imperial values by the establishment of the republic, and the military question.

HISL 2822 Environmental History of Latin America (3)
This 3-credit course examines the environmental history of Latin America from c.1492 to the present, treating biological exchange, deforestation, resource extraction, urbanism, food ways, climate change, and conservation. No prerequisites.

HISL 2830 The Andean Nations (3)
A survey of the development of South America's Andean region beginning with the Inca Empire, through the establishment of the vice-royalty of New Castile and emphasizing the modern nations of Chile, Peru, and Bolivia.

HISL 2840 History of Argentina (3)
Political, economic, and social history of Argentina from 1516 to the present.

HISL 2850 Central America Radicals (3)
Central Americans have engaged in some of the most important radical and democratic movements of the 20th century. Especially after the triumph of the Nicaraguan revolution in 1979, Central America became the news story of the 1980s. Radical movements and civil wars in Guatemala and El Salvador intensified over this decade. While some saw these battles as the "twilight struggle" of the so-called Cold War between the United States and the Soviet Union, a battle over a supposed Soviet beachhead in "our backyard" these events have a much longer legacy. dating at least to the late-nineteenth century and involving domestic issues as much as international ones.

HISL 2910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISL 2911 Special topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISL 2912 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISL 2914 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISL 2929 Piracy in the Americas, 1500-1750 (3)
This 3-credit course examines the phenomenon of sea raiding in the Atlantic and Pacific Oceans from the time of Columbus to the great anti-piracy campaigns of the early eighteenth century. We explore the phenomenon from multiple perspectives in order to understand both victims and perpetrators.

HISL 3000 Historical Methods (1)
Historical Methods Lab. For description, consult the department.

HISL 3100 Explorers, Liars and Travelers (3)
This course focuses on teaching historical methods-the tools we use, as historians, to interpret and represent the past. Travelers provide an excellent and accessible body of historical sources across a wide range of time and places. But traveling is also a great metaphor for being a historian: like travelers, we lack perfect knowledge, we have questionable cultural understanding, and we try to make sense of the world we live in. This course has a required co-requisite Methods Lab.

HISL 3200 History of Voodoo (3)
Using works of anthropology, folklore, history, and literature, this course examines the history of voodoo in both New Orleans and Haiti, as well as the history of similar religions such as Brazilian candomble, Cuban santeria and Trinidadian orisha worship. Students will explore the development of these religious systems from slavery to the present day.

HISL 3361 Slave Rebellions (3)
The white supremacist who attacked Emmanuel AME church in Charleston studied slave rebellions. Why? How important were slave uprisings in the history of slavery? What do we really know about them? What should we know?

HISL 3390 The Cuban Revolution (3)
This course explores the histories, myths, and memories of the Cuban Revolution of 1959, from Fidel Castro to the Miami expatriate communities.

HISL 3710 Colonial Latin America (3)
Readings and research on topics in the Hispanic period aimed at developing an understanding of Latin American society and institutions as they developed from the 16th to the 19th century.

HISL 3720 Mod Lat Amer. & Carib. (3)
Selected topics in Latin American and Caribbean history from 1800 to the present. Religion in Latin America; Dictators; Evita. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISL 3721 Mod Lat Amer. & Carib. (3)
Selected topics in Latin American and Caribbean history from 1800 to the present. Religion in Latin America; Dictators; Evita.

HISL 3750 Caribbean Slavery (3)

HISL 3800 Caribbean Revolutions (3)
Weekly readings and discussions of popular revolutions in the Caribbean region. Some attention is paid to the revolutionary tradition in Middle America before concentrating on the 20th-century revolutions there. In a search for common factors, attention is devoted not only to countries where significant revolutions have occurred already, such as Guatemala, Cuba, and Nicaragua, but also to others where revolutionary potential exists.

HISL 3890 Service Learning (0-1)
Course Limit: 99

HISL 3910 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISL 3911 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISL 3912 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISL 3914 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISL 3950 Spec offering: Lat Amer (3)
For specific offering, see the Schedule of Classes. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISL 4630 Sex/Gender Colonial Latin Amer (3)
This course examines conquest and colonialism through the lens of gender and sexuality. It looks at the relationships that emerged among indigenous, African, and mestizo populations and how systems of beliefs about sex, gender, and sexuality facilitated the practice of empire.

HISL 4740 Caribbean Cultural History (3-4)
This course explores the development of distinctive cultural forms and patterns in the Caribbean basin from the arrival of Europeans at the end of the 15th century up to the present day. Emphasis will be placed on understanding the diverse origins and particular social contexts from which different aspects of Caribbean culture have developed.

Corequisite(s): HISL 4890.

HISL 4780 Women in Latin Am History (3)
An exploration of the pivotal role Latin American women have played in the area's historical development. Attention is given to how women acquired and exercised power in a male-dominated society and how class, race, sex and sex roles, and traditions have influenced and shaped women's roles.

HISL 4840 Piracy in the Americas to 1750 (3)
Who were the "golden age" pirates and who were their main victims? What tactics did pirates use and what was done to stop them? How was piracy related to imperial expansion and resistance to it? How did the golden age pirates come to be lasting iconic cultural figures? Piracy in the Americas traces the rise and fall of sea predators in the Atlantic and Pacific Oceans from the 16th to 18th centuries.

HISL 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): HISL 4740.

Maximum Hours: 99

HISL 4910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISL 4911 Special topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISL 5380 Junior Year Abroad (1-20)

Maximum Hours: 99

HISL 5390 Junior Year Abroad (1-20)

Maximum Hours: 99

HISL 6600 Peasants, Rebellion & the State (3,4)
This seminar explores the history of peasants, rebellions and revolution in modern Lain America. Attention will focus on peasant desires and motivations as Latin America has become increasingly urban and states have grown in size and strength.

HISL 6610 Latin American Modernity (3,4)
This class explores the history of modernity, modernization and underdevelopment in Latin America since the 19th century. Key themes will include labor and industrialization; urbanization and the middle class; citizenship and ethnicity; and state formation.

HISL 6620 Crime, Violence and Rebellion in Latin America (3-4)
In this seminar, we will explore several forms of resistance and rebellion throughout Latin America - from rebellions by the enslaved and armed insurgencies to everyday forms of resistance against oppression. In the context of understanding how Latin American governments have maintained social order, we investigate the history of crime, policing, and other forms of state control.

HISL 6740 Latin American Social Hist (3)
A specific topic is chosen each year. The course has dealt with slavery, race relations, and social revolutions in previous years. Future topics include the history of the peasantry and peasant movements in Latin America and the development of the Latin American urban working class. Lectures, readings and discussions.

HISL 6750 Africans In The Americas (3)
This seminar will explore the dispersion and fate of African peoples and their descendants in the United States, the Caribbean, and Central and South America with a view to developing an understanding of African-American culture as a diverse regional phenomenon rather than one confined to the United States.

HISL 6780 Caribbean Hist: Major Themes (3,4)
A historiographical course focusing on major texts, major themes, and major trends in the historical literature of the Caribbean, including the island territories along with Belize and the Guianas.

HISL 6850 U.S.- Latin American Relations (3,4)
Traces the diplomatic, economic, and cultural relations between the United States and Latin America from the American Revolution to the present. This course seeks to demonstrate the interrelated roles of diplomacy, commerce, and inter-American cultural relations throughout the 19th and 20th centuries.

HISL 6870 Race & Nation in Latin America (3)

HISL 6890 Service Learning (0-1)
Corequisite(s): HISL 6780.

Maximum Hours: 99

HISL 6910 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISL 6911 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISL 7610 Seminar-Comp Hist of Americas (3)
This graduate seminar approaches a range of issues of comparative interest in the Americas while also exploring questions around the frameworks of comparative history, Atlantic World history, the African Diaspora, and transnational history.

HISL 7620 The City in Latin America (3)
This seminar explores the forces, mechanisms, and intellectual currents that define 'the city' in Latin America past & present. It also introduces students to various theoretical and methodological ways of approaching urban Latin America.

HISL 7710 Seminar In Mexico (3)
Seminar In Mexico.

HISL 7720 Sem Modern Lat America (3)
Seminar in Modern Latin America. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISL 7750 Sem In Central America (3)
Seminar In Central America.

HISL 7830 Historiography Col Lat America (3)
This advanced seminar traces major trends in colonial Latin American historiography.

HISL 7840 Historiography Mod Lat Am (3)
This course traces major trends in scholarship on modern Latin American history.

HISL 7910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

History - Middle East & North Africa (HISM)

HISM 1500 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISM 1910 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISM 2200 Pre-Modern Islamic World (3)
This survey course introduces the rich history of the pre-modern Islamic world from the 7th to 17th century. It explores the intricate political, social, and cultural tapestry of Islamic civilization.

HISM 2210 History of Modern Middle East since 18th Century (3)
This survey course revisits the significant transitions from the 18th century to the present in the Middle East and North Africa. These transitions include the reform and collapse of old empires, European colonization and modernization, independent movements and models of self-governance, and the reinvention of political Islam under authoritarian regimes.

HISM 2910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISM 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

HISM 3000 Historical Methods: (1)
Historical Methods Lab. For description, consult the department.

HISM 3220 Arab/Israeli Conflict (3)
This seminar traces the course of the Arab-Israeli conflict from the rise of Zionism, through the various Arab-Israeli wars, and up to the recent peace negotiations. Emphasis is on presenting the perspectives of all the parties to the Arab-Israeli conflict, and placing it in the context of the history of the Middle East as a whole.

HISM 3910 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISM 4910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISM 5380 Junior Year Abroad (1-20)

Maximum Hours: 99

HISM 5390 Junior Year Abroad (1-20)

Maximum Hours: 99

HISM 6060 Sem:Modern Middle E & N Africa (3)
Readings and research on the society, economy, and politics of the Middle East and North Africa since the 16th century.

HISM 6110 Religion&Nationalism Mid East (3,4)
This seminar concentrates on the crucial role that nationalism and religion played in the history of the Modern Middle East during the period between the late nineteenth century and the present day. It explores the general questions of how the "nation" came to dominate both political thought and political reality in the region and how various nationalist movements and ideologies have imagined and constructed national identities. The seminar also critically considers how religions have contributed to and/or challenged these complex processes. Students will read secondary monographs on various Middle Eastern contexts and become familiar with key historical debates on nationalism and religion. The discussions will not only focus on the intellectual and political elites but we will also examine how non-elite individuals and groups influenced nation-building processes.

HISM 6140 Islam & W Med World, 1000-1900 (3)
Islam and the Western Mediterranean World, 1000-1900.

HISM 6210 Modern Turkey: Past & Present (3-4)
This seminar introduces students to the past and present of modern Turkey. We will explore the complex processes of the disintegration of the Ottoman Empire in the aftermath of World War I, the formation of a secular, republican Turkish nation-state, and its dramatic socio-political transformation since the 1950s in response to domestic, regional, and international challenges. We will also discuss how religion has contributed to and/or challenged these processes and how these processes have affected ethno-religious minorities, gender, and class relations.

HISM 6310 Ottomans & Middle East (3,4)
This seminar is on the history of the late Ottoman Empire. It addresses the complex social and political transformations that the empire went through in the nineteenth- and twentieth centuries. Over the semester we will travel along the long arc of the late Ottoman history, observing the many overlapping identities that shaped it. More specifically, the subjects we will discuss include the changing relationship between the Ottoman state and society, ethno-national and religious conflicts, political revolutions and their far-reaching implications, women, Ottoman cities and the countryside. We will also examine the dynamics of the empire's disintegration into independent nation states in the aftermath of World War I and the legacy that the Ottomans left behind.

HISM 6410 State & Soc in Mod Middle East (3)
This seminar addresses how the emergence of modern states in the Middle East reshaped various aspects of the region's politics, economy, social relations, and culture to create distinct adaptations to modernity. It provides an opportunity for in-depth exploration of the last two centuries of the Middle East through the formation of modern state institutions and practices. Temporally, the course moves from the late 1700s to the first half of the twentieth century. Geographically, the area includes the region from Egypt to Iran, the Balkans to Arabia and Eastern Anatolia, in short, those regions under the dominion of the Ottoman and Qajar Empires and successive nation states.

HISM 6910 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

History - Modern Europe (HISE)

HISE 1210 Eur & Wider World To 1789 (3)
European history from the Middle Ages to the French Revolution: the Renaissance and the Reformation, the origin of the modern state and of capitalism, the beginnings of colonialism, the scientific revolution, and the Enlightenment.

HISE 1220 Emerg Cont World 1789- (3)
The impact of the French Revolution and Napoleon; reaction and revolt; the growth of nationalism; the industrial revolution and the rise of socialism; international rivalry, imperialism, and the coming of World War I; rise of totalitarianism and the failure of international security; World War II and postwar developments.

HISE 1500 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISE 1510 Napoleon in Russia 1812 (3)
This seminar is a close study of Napoleon's invasion of Russia in 1812, the impact it had upon the Russian empire, and the place that it came to occupy in Russia's historical memory. The seminar, which meets twice per week, emphasizes the timely reading of assigned readings and active participation in class discussions.

HISE 1910 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

HISE 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

HISE 2160 Europe in the 18th Century (3)
Examines developments in human ecology and power, critiques of tradition from diverse groups, and efforts to implement novel models, both cosmopolitan and nationalistic, for a rational and just society.

HISE 2170 Europe in the 19th Century (3)
Explores the quest for popular and national security in an age of radically shifting material circumstances deeply influenced by concepts of political and social equality.

HISE 2210 Modern Germany (3)
A survey of the political, social, and economic development of Germany from the revolution of 1848 to the aftermath of the Second World War. Topics include unification, Bismarckian Germany, the Weimar Republic, and the Third Reich.

HISE 2220 France in the Tropics (3)
A survey of the French colonial empire in the 19th and 20th c, with a focus on Africa and Asia. Topics will include the role of race, class, and gender in colonial society, colonial medicine, education, urban planning, among others.

HISE 2230 France since 1789 (3)
A survey of French history since 1789, with particular attention to social, cultural, and political change. Among other topics, we will examine political upheaval, imperialism, class dynamics, changing gender roles, and questions of French identity in the modern era.

HISE 2240 Rus Rulers & Tyrants, 900-1825 (3)
Political, social, and economic developments in Russia from the earliest times to the mid-19th century. Kievan and Muscovite background, reforms of Peter the Great, and the effects of westernization.

HISE 2250 Russia Since 1825- Present (3)
This lecture course covers the last decades of the Tsarist regime, the Russian revolution of 1917, the Soviet Regime from Lenin and Stalin, the collapse of the Soviet Regime in 1991, and the Putin era.

HISE 2260 Paris Since Antiquity (3)
This course traces the evolution of the city of Paris from its origins as a backwater of the Roman Empire, to its importance as a center of Enlightenment thought in the 18th century, its emergence as the 'capital of modernity' in the 19th century, and on through its contested status in the 20th and 21st centuries. We will explore the city through the lenses of protest and revolution, leisure and consumption, public health and urban planning policies, and immigration and multiculturalism, amongst others.

HISE 2320 Early Modern England (3,4)
A survey of the political, social, economic, and cultural development of England from the founding of the Tudor dynasty to the rebellion of the American colonies (1485-1776). Topics include the Reformation, the civil war, relations with Scotland and Ireland, political thought, crime and riot, education, and domestic industry.

HISE 2330 History of Scotland (3)
An introductory lecture course on the history of Scotland from earliest times to the present day, covering social, political and economic topics.

HISE 2410 Spain, 1369-1716 (3)
Surveys the course of Spanish history from the completion of the medieval Reconquest and the rise of the Trastamara dynasty in the fourteenth century until the end of Habsburg Spain in the early eighteenth century, with particular attention to state formation and the role of Spain as a great European power in the sixteenth and seventeenth centuries. Besides politics, the course examines central topics in the social, religious and cultural history of late medieval and early modern Spain.

HISE 2420 The Age of Reformation (3)
Surveys the transformation of Western Christendom (c. 1400-1700), with emphasis on: late medieval religious practice; discontent and reform currents within the Church; the Protestant Reformations of Luther, Zwingli, Calvin, anabaptists, and others; and Catholic response and Counter-Reformation.

HISE 2430 Modern Spain since 1700 (3)
Examines the course of modern Spanish history from the Bourbon succession through the loss of overseas empire, the political and social evolution culminating in the bloody civil war of 1936-39, and the subsequent dictatorship of Franco, to contemporary democratic Spain and the challenges it faces.

HISE 2500 Memories of Violence 20th Cent (3)
Among the many instances of violent and traumatic collective experiences in 20th century Europe, this class will focus on three particular case studies, the Holocaust in Germany, the bombing of Guernica in Spain, and the siege of Saraievo during the Bosnian War. These cases are not chosen at random, but for their ability to shape how we narrate individual and collective responses to most traumatic experiences of state imposed violence in 20th century Europe.

HISE 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISE 2910 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISE 2911 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISE 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

HISE 3000 Historical Methods: HISE 3190 (1)
Historical Methods Lab. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISE 3190 The Spanish Civil War (3,4)
The Civil War of 1936-39 considered both as the watershed of modern Spanish history and as an event of major international significance. Readings and discussion focus on the causes and course of the conflict, and on its consequences down to the present.

HISE 3220 WWII In French Film (3-4)
This seminar examines the representation of the era of Nazi occupation and the Vichy Regime (1940-44) in films produced between the 1940s and the 2000s. We will focus on depictions of daily life, the politics of collaboration and resistance, and the French role in the Holocaust.

HISE 3230 The French Revolution (3)
The French Revolution is among the most written-about historical subjects, and for good reason. Along with the American and Haitian Revolutions, it prompted dramatic shifts in ideas and practices of governance, politics, law, as well as social, racial, and gender hierarchies. These shifts radically transformed French society, had a lasting impact on the rest of Europe, and also had significant global repercussions. This seminar will pursue two major objectives: understanding the events of the Revolution, and engaging with historians' interpretations of those events.

HISE 3250 Russia at War, 1939-1945 (3-4)
This seminar provides an overview and analysis of the Second World War on the Eastern front. The Nazi invasion of the Soviet Union on June 22, 1941, inaugurated one of the bloodiest wars in history. The Soviet victory following devastating defeats and losses at the war's outset, was indispensable to the overall Allied victory. The Soviet victory was won at enormous cost, whether in human lives lost or in the physical devastation of the country. The victory also transformed the Soviet Union into a superpower and left the Soviet Union in control of much of Eastern Europe. The course requires reading, discussion, and the writing of a research paper.

HISE 3260 Putin's Russia (3-4)
The period between the collapse of the Soviet Union in 1991 and the present in Russia has witnessed dramatic changes in every dimension of Russian life, from political ideology and institutions to the transformation of economy, society, and broader culture. This seminar seeks to illuminate the nature of these transformative changes, focusing particular attention on Vladimir Putin's rise to power, the character of his rule, and the reasons for his popularity in Russia. The reasons for the growth in popular as well as state hostility to the West and Western culture forms a particularly important part of the course.

HISE 3270 Lit/Soc In Russ To 1917 (3)
An exploration of the central role that writers and literature played in the culture and society of nineteenth and early twentieth-century Russia. Readings include selected novels, poetry, critical essays, and memoirs as well as secondary historical literature. The course focuses upon the role of literature in Russian society and the relationship between literary representations and history.

HISE 3280 Lit/Soc In Russ To 1991 (3)
An exploration of the role that literature and writers played in the history and culture of the Soviet Union from its inception to its collapse in 1991. Readings include selected novels, poetry, and memoirs as well as secondary historical literature. The course focuses on the relationship between writers and the state and society in the Soviet period and the relationship between literary representations and history.

HISE 3290 Origins WWII 1919-1939 (3)
European international affairs from the treaty of Versailles to Hitler's invasion of Poland, emphasizing the diplomatic, political, and military forces that contributed to the outbreak of the Second World War.

HISE 3300 Death Disease Destitution (3-4)
Death, Disease, Destitution and Despair in Early Modern Europe Readings, discussion, and a research paper examining the experience of and social reaction to illness, insanity, poverty, and death in Western Europe.

HISE 3311 Gardens Parks and Green Spaces (3,4)
This course examines the creation of gardens, parks and public space in Europe and the Americas from 1500 to the present day. We will study the historical evolution, technology and art form of gardens and public parks as well as their social significance, taking into account issues of race, ethnicity, gender and class.

Corequisite(s): HISE 3890.

HISE 3390 Europe Since 1939 (3)
A survey of European history since the outbreak of the Second World War, covering all major states. Topics will include the war and its aftermath, the division of the continent in the Cold War, the development of welfare states and socialist systems, the emergence of the idea of a united European community, and the collapse of Communism in eastern Europe.

HISE 3513 Hist of Jews in Russ 1772-2000 (3)
This course studies the history of the Jews in Russia from the First Partition of Poland in 1772 until the beginning of the twenty-first century. The course examines the evolution of that Jewish community itself and the issues that divided that community.

HISE 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): HISE 3311.

Maximum Hours: 99

HISE 3910 Special offering: Europe (3,4)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISE 3911 Spec Offering Europe (3)
For specific offering, see the Schedule of Classes. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISE 3921 Special Offering Europe (3)
For specific offering, see the Schedule of Classes. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISE 3922 Special Offering Europe (3)
For specific offering, see the Schedule of Classes. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISE 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

HISE 4140 Household Gender Sexuality (3,4)
This course examines the structure, function, and emotional content of families in Europe from the Renaissance to the 18th century. The construction of gender as well as attitudes to and the regulation of sexuality will also be discussed.

HISE 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISE 4910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISE 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

HISE 5380 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISE 5390 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISE 6050 The Italian Renaissance (3-4)
An examination of cultural, religious, and political developments in Renaissance Italy and their impact on the rest of Europe.

HISE 6100 Ren & Ref 1450 to1660 (3)
Examines religious and secular aspects of the breakdown of Christian unity from the Renaissance to the mid-seventeenth century. Topics include the decline of the Church; philosophical and doctrinal conflict; dissent and renewal in the Protestant Reformation; the Catholic Reformation; ideology, politics, and wars of religion; Counter-Reformation; and foreign intervention in France and the Netherlands.

HISE 6140 Rev-Napol Eur 1789-1815 (3)
This course explores the questioning of traditions throughout Europe, the exchange of concepts of social organization among regions, and the emergence of an imperial power that redirected civilization.

HISE 6330 Imperial Spain 1469-1659 (3,4)
Examines the rise and decline of Spanish power in Europe and the Atlantic world and the internal development of the Spanish kingdoms from unification under Fernando and Isabel through the reigns of Charles V and Philip II to the end of the Habsburg dynasty. Besides politics and diplomacy, reading and discussions will address religious practice and the Spanish Inquisition, the art and literature of the Golden Age, and the cult of honor with its consequences for social structure, economic life and gender relations.

HISE 6350 Crime/Punish Hanov Engln (3,4)
This in depth seminar focuses on crime, punishment and the justice system in eighteenth-century England. We will investigate such topics as the rise of defense lawyers, the goals of punishment and the development of a system of police. Students will also make use of a digitized data base, theoldbaileyonline, which contains the transcripts of trials held at the Old Bailey courthouse in London to write a research paper.

HISE 6370 Seminar Early Mod Englnd (3)
Readings, discussion, and research paper will focus on a selected topic of English history between 1485 and 1789. Topics will include Religion and Society and Georgian England, 1714-1783. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISE 6380 Sem Mod British History (4)
Readings, discussion, and a research paper focusing on one of the following periods of modern British history: Britain in the Age of Revolution, 1760-1850; The Victorian Era, 1830-1900; Britain in the Age of World War, 1900-1945. On occasion, the seminar might focus on a topic rather than a period. Course may be repeated 4 times for credit.

Course Limit: 4

HISE 6420 Readings In Holocaust (3-4)
Examines the origins and development of the Nazi Final Solution; the experience of the victims, perpetrators, rescuers, and bystanders; and the relationship between history and memory.

HISE 6430 Religion & Society in Golden Age Spain (3,4)
Examines Spanish religious history from the late fifteenth through the seventeenth centuries. Among other topics, readings and discussions will focus on: the collapse of religious pluralism and the end of convivencia (the coexistence of Christians, Jews, and Muslims); the Spanish Inquisition (its purposes, process, personnel, and consequences); varieties of religious practice in early modern Spain; and the characteristics of Spanish Catholicism in the Counter-Reformation.

HISE 6510 The Russian Revolution:1900-24 (3,4)
The course explores the origins and nature of the Russian revolutions of 1905 and 1917. It focuses equal attention upon the policies of the tsarist regime and the various social movements, political parties, and ideologies that arose in opposition to that regime. The reasons for the Bolshevik victory in October 1917 and the character of the early Bolshevik regime from 1917 through the Civil War are problems the course addresses. The contentious debates historians have conducted on almost every aspect of the revolution are an important part of the course's readings and discussions.

HISE 6511 Stalin's Russia, 1924-1953 (3,4)
This seminar addresses four major questions: 1) What was the nature of the political, social, and cultural system that came into existence under Stalin and how did that system evolve during his lifetime? 2) What was the scope and nature of political repression and state terror under Stalin? Given the reality of state terror, how can we explain the geniune enthusiasm that the regime was able to mobilize for so many of its initiatives? 3) What was the Soviet experience during World War II, and how did the war affect Soviet society and politics? 4) What was the range of experiences that ordinary individuals and families encountered in their private lives during the Stalin era? A major question throughout the course is the character of Stalin's personal rule and the extent of his responsibility for the major developments under his leadership.

HISE 6512 Stalins Shadow: Soviet 1953-91 (3)
This course examines the evolution of the Soviet Union from Stalin's death until its collapse in 1991. Its primary focus is on the important changes that occurred in the political, cultural, and social spheres within the Soviet Union itself and in the stances that the Soviet Union adopted toward the rest of the world. The initial changes, which contemporaries described as the thaw, witnessed a liberalization that culminated in an explicit denunciation of many of Stalin's policies. The course concludes with an inquiry into the Gorbachev reforms of glasnost and perestroika, which culminated in the collapse of the Soviet Union in 1991.

HISE 6520 Immigr & Identity in France (3,4)
This seminar will explore the history of immigration to France since the late 19th century and attendant debates over national identity, secularism, and race. We will examine colonial and postcolonial migration, the rise of xenophobic extremist political parties, minority activism, and controversies over the place of Islam in French society.

HISE 6600 Photography & Historical Imagi (3-4)
This class aims to explore the relationship between historical memory and photographic practice.

HISE 6601 Jewish Life & Culture Ctr Euro (3)
This course explores the many facets of Jewish life and culture in Germany and other Central European nations. We will focus on the relationship of various Jewish communities with their Gentile neighbors, local and state authorities and trace the course and success of the Haskalah movement (the Jewish enlightenment). We will be particularly sensitive to the daily life experience of women in their struggles to find a voice and acceptance as women and as Jews, as well as the dramatic rise of a Jewish middle class in the realm of science, finance and industry.

HISE 6610 Postwar Cultures: Divided Cont (3)
This course explores the many ways daily practices and political ideologies have intersected in the lives of ordinary European citizens in the era of the Iron Curtain.

HISE 6660 Private Violence, Public Consequences (3-4)
Examines and analyzes private violence in a variety of forms that opposed, contested, supplemented, or substituted for state power from the Renaissance through the twentieth century in Europe. Separate multi-week sections of the course will concentrate on vendettas and blood feuds, dueling, piracy and banditry, and the Sicilian mafia.

HISE 6910 Spec offerings: European (3,4)
For specific offering, see the Schedule of Classes. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISE 6911 Spec offerings: European (3)
For specific offering, see the Schedule of Classes. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISE 6913 Spec offering: European (3,4)
For specific offering, see the Schedule of Classes. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISE 7910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes.

History - United States (HISU)

HISU 1410 US Hist - Colonization to 1865 (3)
An analysis of the major forces and events that shaped American history from its beginnings through the Civil War.

HISU 1420 US Hist 1865 To The Present (3)
An analysis of the forces and events that shaped American history from the Civil War to the present.

HISU 1500 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

HISU 1800 Early New Orleans (3)
This course explores the history of New Orleans during the colonial and early national periods, when the city was a crossroads of the Atlantic World that linked Africa, the Americas, and Europe. It locates the city's past in a transnational Atlantic context that reaches back to the fifteenth century and concludes with the emergence of New Orleans as a major American city in the early nineteenth century.

HISU 1910 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISU 1911 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISU 1912 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISU 2100 History of Medicine in the US (3)
Students in this course will study the social dimensions of medicine, disease, and health in U.S. history. We will examine how ordinary people were affected by pandemics, advances in medical technologies, and changing ideas about health care. Students will consider how ideas about medicine have been shaped by economic, military, political, and social transformations in U.S. history.

HISU 2200 History of Digital Revolution (3)
This course will explore the history of the digital revolution from the 1830s to the present. It will begin with Ada Lovelace and the conception of a general-purpose computer, and it will culminate with the creation of social networks and the sharing economy. Special attention will be paid to the three great inventions that combined to create the digital age: the computer, the microchip, and the internet. The themes will include the importance of collaboration in innovation, the need to connect the humanities and the sciences, and how networked digital technology disrupts traditional hierarchies. In that context, we will look at what makes a successful digital business.

HISU 2400 Women & Gender US Hist to 1865 (3)
This course introduces students to the history of women in North America from 1400 to 1865. Over the course of the semester, we will examine how women were affected by and also influenced historical change. We will consider whether key events and issues, including European colonization, the American Revolution, slavery, and the Civil War look differently when we integrate women into the historical narrative. We will study how women's interactions with work, religious practices, and family life were influenced by race, class and ethnicity. One of the guiding questions of the course will be: how has gender-understood as the meanings attached to being male and female-changed over time?

HISU 2410 Women & Gender Since 1861 (3)
This course examines U.S. history from 1861 to the present using the history of women and gender as the primary analysis. This course will be framed around a consideration of how the history of women intersects with ideas about human rights. We will explore how transformations in American laws, politics, customs, economic and military policies affected and were influenced by women. We will also consider how race, class, region, ethnicity, and age facilitated or prevented women from being able to exercise the full rights and obligations of citizenship.

HISU 2480 Louisiana History (3)
A survey of the history of Louisiana from its settlement to the present.

HISU 2500 Legal Hist US Gender Sex (3)
Survey of U.S. legal history, with a focus on how laws shaped understandings of gender and sexuality from the colonial period to the present. Through a study of scholarly monographs and legal decisions, we will evaluate how ideas about marriage, divorce, sexual practices, inheritance, sexual assault, and sexual identity have changed over time. Students will write an original research essay, complete a midterm and final exam, and offer one in-class presentation.

HISU 2510 Atlantic World (3)
The Atlantic world has emerged as an important field in early modern western history in the past ten years. It is now especially important for students of United States history to have an opportunity to become familiar with the transnational origins of the nation that are rooted in the Atlantic context. Atlantic world history does not replace traditional colonial history, but is now a necessary complement to it.

HISU 2520 Early America to 1800 (3)
This course surveys the development of the North American mainland before 1800 with focus on the thirteen British colonies in mainland North America that chose to declare their independence in 1776, and attention to the broader continental and Atlantic contexts in which they were embedded, including colonial Louisiana.

HISU 2605 Twentieth Century America (3)
A survey of twentieth century U.S. history, focused on politics, culture, and the environment. Topics include immigration, imperialism, suffrage, Jim Crow, the Great Depression, the New Deal, world wars, the Civil Rights Movement, conservatism, the War on Terror, climate change, and America's future.

HISU 2610 The Old South (3)
Economic, cultural and political history of the South from the settlement of Jamestown through the Civil War. Emphasis is on those factors that made the South a unique section of the nation.

HISU 2620 The New South, 1865-Present (3,4)
An examination of the economic, political, cultural, and intellectual forces that have shaped the American South since the Civil War. Central themes include the rise of sharecropping and tenancy, the struggle for civil rights, the emergence of two-party politics, and the metamorphosis of popular values and social norms triggered by the events of the 1960s. The course will explore the paradox of continued self-conscious regional identity in the face of constant internal change.

HISU 2630 US Foreign Relations Pre-WWII (3)
This course will investigate the history of U.S. foreign relations from the early republic until World War II. The class will span more than a century and students will be asked to consider the economic and ideological objectives embedded in U.S. foreign relations and the growth of the United States as a world power. Topics will include: the Mexican-American war, westward expansion, U.S.-Hawaii relations, the War of 1898, U.S. interventions in the Caribbean, late 19th and early 20th century immigration, World War I, and World War II. In addition, this course will consider representations of the world in domestic culture by examining the histories of world fairs tourism, travel literature, and missionaries.

HISU 2640 US Foreign Rltns Since WWII (3)
Foreign relations is front page news every day: the ongoing wars in Iraq and Afghanistan, the threat of terrorism and nuclear proliferation, rising food and oil prices, global warming, debates over human rights practices, and even the Olympics. Although each of these topics has strong contemporary resonance, the United States role in the world has a long and complex history. In this course, we will study US foreign relations from the end of World War II through the present. The course will define US foreign relations broadly and include diplomatic policy makers, military interventions, economic policy, and non-state actors engaged in international relations. Students will learn to analyze opposing historical interpretations, evaluate primary sources, ask analytic questions, and develop arguments.

HISU 2650 US Immigration: Law & Politics (3)
In this class students will gain a solid foundation in mid-19th and 20th century immigration in the United States and grapple with the following themes: immigrant community formation, the interplay between immigration and American labor, the changing immigration law, the intersection of immigration and U.S. racial formations, and the prominence of immigrant narratives in American culture. The course will also ask that students grapple with contemporary problems and recognize the historic antecedents and struggles behind today's current events.

HISU 2670 American Environmental History (3)
A survey of American environmental history from 1491 to the present, focused on how politics, culture, and the economy have changed the way people interact with the world around them over time. Topics include Native America, capitalism, colonialism, democracy, the industrial revolution, wilderness, race, class, gender, justice, and climate change.

HISU 2680 Working in America (3)
Students will gain a solid foundation in mid-19th and 20th century labor history and analyze the following themes: the rise of corporate capitalism, the development of a labor movement, agricultural, industrial, and service economies, the interplay between immigration and American labor, the decline of labor protections, and the emergence of the 'gig' economy. The course will also ask that students grapple with contemporary problems and recognize the historic antecedents and struggles behind today's current events.

HISU 2690 Intro Afro-American History (3)
A survey of the history of people of African descent in the United States from the 17th century to the end of the Civil War. The course will explore the development of a distinct African-American experience within the context of colonial North America and the early United States. Emphasis will be placed on understanding the origins and nature of slavery not simply as a system of forced labor, but as a system of unique cultural relationships.

HISU 2700 Modern African-American (3)
This course surveys the history of people of African descent in the United States from the end of the Civil War until the late twentieth century. A central theme of the course will be the varying ways in which African-Americans sought, both successfully and unsuccessfully, to achieve political, social, and economic freedom in the wake of emancipation.

HISU 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): HISU 2610.

Maximum Hours: 99

HISU 2891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISU 2900 The Digital Revolution, From Ada to Zuckerberg (3)
This course will explore the history of the digital revolution from the 1830s to the present. It will begin with Ada Lovelace and the conception of a general-purpose computer and culminate with the creation of social networks and the sharing economy. Special attention will be paid to the three inventions that created the digital age: the computer, the microchip, and the internet. The themes will include the importance of collaboration in innovation, the need to connect the humanities and the sciences, and how networked digital technology disrupts traditional hierarchies. We will look at what makes a successful digital business. We will also debate two schools of thought that have developed since Alan Turing asked whether machines would ever be able to think like humans: those who pursue artificial intelligence versus those who focus on ways to use machines to augment human intelligence.

HISU 2910 Special Topics (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISU 2911 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISU 2912 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISU 2913 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISU 2915 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISU 2920 Special Topics: Us Hist (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISU 2921 Special Topics-U.S. History (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISU 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

HISU 3000 Historical Methods: HISU 3913 (1)
Historical Methods Lab. For description, consult the department.

HISU 3001 Historical Methods: HISU 3911 (1)
Historical Methods Lab. For description, consult the department.

HISU 3100 New Orleans and Senegal (3)
This course explores the connected and comparative histories and cultures of New Orleans and Senegal. The two were both founded as French colonies. They share histories, cultural traditions, and, by virtue of their geographic location at the edge of threatened estuarian landscapes, a common challenge to their future.

HISU 3120 NOLA Free People of Color (3,4)
This methods seminar examines the origins and experience of the large population of free people of color in New Orleans from 1718-1865. Although most Africans and African-descended inhabitants of New Orleans during this period were enslaved, many attained freedom or were born free. In 1800 fully 1/4 of the free people in New Orleans were free people of color. They joined militias, acquired property, ran businesses, and produced a vibrant body of literature.

HISU 3220 Autobio & Southern Identity (3)
An interdepartmental seminar that employs autobiography to explore the relationship between regional culture and individual experience in the 20th-century American South. While recognizing the place of autobiography as a literary genre, the seminar will subordinate the concerns of critical theory to the more immediate task of evaluating the strengths and limitations of autobiographical testimony as a form of historical evidence. Class members will read and discuss one book-length autobiography each week.

HISU 3260 America on Trial (3-4)
From the Salem Witchcraft trials to the trial of 0. J. Simpson, some sensational legal contests have captured the public imagination and resonated in American history and culture. Why do some trials garner such attention while others, perhaps equally sensational, do not? Clearly, they reflect deeper anxieties and tap into larger themes in American culture. This course will focus on trials like these that have captured the public imagination and ask what these trials reveal about the larger society. Other trials, though not as sensational, also reveal important aspects of American culture. We will also explore the law itself, how it functions in society, and what sort of society it aims to foster and protect.

HISU 3300 Katrina and Popular Memory (3)
This reading seminar will explore the impact of Hurricane Katrina on New Orleans through the lens of popular memory. Readings will be drawn primarily from first-hand accounts of the storm. These memoirs, personal narratives, and biographies can enrich our understanding of human experience and social issues and provide insights into the larger social, economic, and cultural forces that shaped how individuals experienced the tragedy. We will also consider how individuals experienced those forces differently depending on such factors as race, gender, and class. Through careful readings of the texts, we will examine the extent to which the speakers live. We will also consider the use of first-hand accounts as historical sources and the benefits and pitfalls inherent in these sources. Other readings explore how Katrina was and continues to be understood collectively.

HISU 3340 Early American Jewish History (3)
This class focuses on the period from the earliest Jewish settlers in mid-seventeenth century colonial America through the establishment of viable Jewish communities and institutions by the latter part of the nineteenth century. It covers the so-called Sephardic and Germanic periods of American Jewish history, prior to the wave of Eastern European immigration. Among the themes explored are the tension between Jewish identity and the pressures of assimilation; the transformation of the synagogue; the emergence of Jewish social and cultural institutions; changing religious practices and the rise of Reform Judaism. Events and themes are placed within the broader context of American history.

HISU 3360 Slavery Pub Hist & Pub Memory (3)
This course will explore the history and public memory of slavery and the slave trade in New Orleans and southern Louisiana, as well as regions of North American. Some attention will also be paid to the Atlantic slave trade and areas of the Caribbean and Latin America which shared the history of black enslavement. The focus here will be on major themes in slavery history and memory and the challenge of studying and portraying those themes in various public history venues in the present day. The course will also address debates about reparations for slavery and other contemporary public policy questions related to the history of black enslavement. The Service Learning component of the course, when offered, will involve working with local public history agencies in the preparation and presentation of slavery-related materials at their individual venues.

HISU 3361 Slave Rebellions: Am Reg Hist (3)
What happened when enslaved Africans, African-Americans and other people of African descent used organized armed resistance to fight the institution of slavery? This course will explore six different slave rebellions in the United States, the Caribbean and Latin America using documents, films and different kinds of history text books. Only in the case of the Haitian Revolution (1791-1804) did a slave rebellion actually succeed. But all slave uprisings left behind fascinating stories--filled with heroism, tragedy, violence; disputed evidence, and angry historical debate. This seminar-style class will delve into all of these questions mostly through weekly readings in both documents and other texts. The class will also focus significantly on questions of historical evidence: What can historians really know, especially when slave rebels themselves left behind relatively few documents? When Methods Practicum is added, this course fulfills Methods Requirement of the History Major.

HISU 3440 African Amer Religious History (3)
This course surveys the history of African-American religious institutions, leaders, and beliefs from slavery to the present. The course examines the diversity of African-American religious expressions within the larger context of black social and political life. Topics include the transmission of African culture to the New World, slave religion, independent black churches, race relations, black nationalism, as well as gender and class, social reform and everyday resistance.

HISU 3500 Contagious Surveillance: A History of Surveillance and Public Health (3)
This seminar examines the historical and contemporary relationships between contagions and practices of surveillance. This course will introduce students to the interdisciplinary theories of surveillance studies using historical frameworks such as discipline, control, capitalism, media, and privacy during times of crisis, as it relates to race, gender, and class. Seminar discussions will include cases where patriarchal power and racialized systems were used to promote perceptions of security, fear, exposure, and control, while constructing medical knowledge. As praxis, students will use historical research strategies to design and produce a digital history project that uses technology tools such as maps, visualizations, textual analysis, and/or audio-visual production. All digital history skills will be taught in this course. All technical skill-levels are welcome.

HISU 3541 Reproductive Health in the US (3)
This course will explore the history of reproductive health in the United States from the seventeenth century to the present. Students will read scholarly books and articles, memoirs, and films about Americans' encounters with gynecology, midwifery and obstetrics, birth control devices, abortion, and reproductive technologies. Additionally, students will have opportunities to engage with guest lecturers who study reproductive health issues in the United States and around the world. Students will learn about the history of voluntary and coercive sterilization programs, the history of gynecological and obstetrical care, legal and illegal birth control and abortion practices, and the mobilization of the anti-abortion and pro-choice movements.

HISU 3605 Wilderness and Wastelands (3)
An examination of the changing meanings of "wilderness" and "wastelands" in American culture from 1492 to the present in order to explore the changing ways Americans have imagined and valued the natural world. Topics include capitalism, colonialism, race, class, gender, democracy, national parks, sacrifice zones, post-industrialism, and the anthropocene idea.

HISU 3642 US War in Vietnam (3)
Although in the United States, the US conflict in Vietnam is most commonly referred to as the Vietnam War, in Vietnam, it is known as the American War. In this class, we will study the history of the war in Vietnam and the United States through primary sources and US historians' debates over the Cold War and decolonization. We will be reading works by both US and Vietnamese authors, including policy makers, military personnel, anti-war activists, and immigrants. In addition, students will learn to analyze opposing historical interpretations, evaluate primary sources, ask analytic questions, and develop arguments.

HISU 3776 What is an American? (3,4)
What does it mean to be an American? This course explores a substantial part of the long, complicated, and interesting history of answers that Americans have given this question over time. Does American have a national identity uniquely its own, or is it best understood as a container of diverse identites defined by separate ethnic and racial groups?

HISU 3830 The Fifties (3)
This course examines the intersection between the Cold War, domestic politics, and cultural change in America during the decade of the 1950s. Topics will include McCarthyism, conformity and rebellion, youth culture, the beginnings of the civil rights movement, the rise of television, and the transformation of the American family.

HISU 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): HISU 3910.

Maximum Hours: 99

HISU 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISU 3910 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISU 3911 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISU 3912 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISU 3913 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISU 3914 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISU 3915 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISU 3930 Spec offr: United States (3)
For specific offering, see the Schedule of Classes. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISU 3937 Special Topics U.S. History (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISU 3941 Special topics in US History (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISU 3942 Special Topics US History (3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISU 4430 History of American Religion (3)
This lecture course surveys the development of the many different religious traditions in the United States from the seventeenth through the twentieth centuries. The diverse origins of America's early settlers and the guarantees of religious freedom embedded in the Constitution encouraged the development in the United States of the most religiously diverse society in the Western world. We will explore that diversity and also seek commonalities between religious movements and their impact on the larger society. In such a survey, the emphasis will necessarily be on those formal religious movements that have made a major impact on American culture, but the importance of less mainline groups and popular belief will also be discussed. The course is non-denominational, non-creedal, and taught as cultural/intellectual/social history.

HISU 4500 Civil War & Reconstruction (3)
The course treats military, political and economic developments during the American Civil War, and examines the postwar consequences of emancipation for Southern and American history.

HISU 4580 Slavery & Freedom Antebellum S (3)
The course surveys the colonial origins of American racial attitudes; African adaptations to bondage; the historical evolution of plantation slavery as a social institution, labor system, and method of racial control; the nature of white antislavery sentiment; the content and meaning of proslavery ideology; and the status of free blacks in slave society.

HISU 4694 Creation of Jazz in NOLA (3)
This course explores the cultural dynamics associated with the origins of jazz in New Orleans and related historiography.

HISU 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISU 4910 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISU 6260 New Directions in Womens Hist (3-4)
Until recently, most historians paid little attention to social relationships, race, or to the experiences of the poor. Beginning in the 1960s, scholars began to question the assumption that rituals. customs, and social practices were fixed or experienced the same by everyone. By inserting women into their analysis of U.S. history, historians quickly determined that our understanding of key historical events, economic change, and social customs was incomplete and often failed to capture the lived experiences of most Americans. Historians of women and gender have reimagined the ways we might think about the past, causing us to reconsider assumptions about labor, sex, and politics. In this course, you join the enterprise committed to enlarging our sense of what it has meant to live in or engage with the United States by investigating the experiences of women and men.

HISU 6270 American Disasters (3,4)
A seminar on the political, cultural, and environmental history of disasters in modern America. Topics include race, class, gender, capitalism, democracy, justice, risk, flood control, terrorism, nuclear power, climate change, fate, free will, structure, and agency.

HISU 6350 History of Gender Based Violence in the United States (3,4)
This course draws upon historical and theoretical literature, memoir, film, and fiction to examine the history of gender-based violence in the United States. Topics will include domestic violence, sexual assault and rape, forced sterilization, and violence against LGBTQ+ people. We will study power relations related to race, ethnicity, class, sexuality, gender. We will analyze resistance to violence, systems that enable violence, and the legal, medical, and social discourses that have resisted and enabled gender-based violence. This course does not have any pre- or co-requisites.

HISU 6420 American Revolutions (3-4)
The American War of Independence was one of many revolutionary movements that rocked the Atlantic world between 1760 and the 1820s. This course familiarizes students with the major interpretations of the American revolution and situates it within the larger spasm of freedom struggles that characterized the period, including Caribbean slave rebellions and the Latin American wars of independence.

HISU 6510 Recent US 1945 To Presnt (3)
U.S. domestic history and role in world affairs from 1945 to the present. Topics include the Cold War at home; the Vietnam War; politics and protest in the turbulent 60's; the civil rights and women's movements; and the presidency from Truman to Clinton.

HISU 6540 African-American Culture (3,4)
An exploration of the formation of distinctive African-American cultural forms in the United States from the years of African enslavement up to the present day. The course will embrace a broad definition of culture to include religion and other community institutions, folklore and folk belief, various leisure activities as well as more obvious cultural manifestations such as music and the arts.

HISU 6560 Rise and Fall Plantation South (3,4)
This reading and research seminar will explore major topics in the social, cultural, economic, and political history of the plantation South. The course will begin with the origins of the plantation system in the colonial era to its eventual decline in the 20th century. We will consider regional variations tied to the production of export crops including tobacco, rice, cotton, and sugar. Major themes will include issues of race and class, changing labor systems, comparative history, and the impact of the planting system on the region's history.

HISU 6580 Prophets, Sects, & Cults (3,4)
Prophet or charlatan? True faith or madness? What separates a cult from any other religious movement? How do new religious movements arise? Why do some fail while others succeed? These questions have surrounded American religious movements from the colonial era to the present.

HISU 6630 U S Labor and Migration (3)
This course is an advanced seminar on the relationships between labor, capital, and migrant populations to (and within) the United States in the twentieth century. Globalization and migration are not new phenomenon. This course will begin in the late nineteenth century and explore the role of labor, industrial capitalism, and markets in the early twentieth century. It will challenge students to recognize the antecedents to today's immigration debates and consider continuities as well as changes in the US economy.

HISU 6750 Africans In The Americas (3)
This seminar will explore the dispersion and fate of African peoples and their descendants in the United States, the Caribbean, and Central and South America with a view to developing an understanding of African-American culture as a diverse regional phenomenon rather than one confined to the United States.

HISU 6840 United States Empire (3-4)
What is an empire, who defines it, and does the United States have one? This class will begin by studying sites of formal US control of overseas territories, namely Cuba, Puerto Rico, and the Philippines. It will then consider definitions of economic and cultural empire, particularly after the end of World War II. The course aims to provide students with several case studies in the early twentieth century and to ask students to ponder their legacies in the present.

HISU 6850 U.S. Latin American Relations (3)
Traces the diplomatic, economic, and cultural relations between the United States and Latin America from the American Revolution to the present. This course seeks to demonstrate the interrelated roles of diplomacy, commerce, and inter-American cultural relations throughout the 19th and 20th centuries.

HISU 6890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): HISU 6540.

Maximum Hours: 99

HISU 6891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISU 6910 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HISU 6911 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISU 6912 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISU 6913 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department. Notes: For special offering, see the Schedule of Classes. Course may be repeated unlimited times for credit.

Course Limit: 99

HISU 6920 Independent Study (1-3)

Maximum Hours: 99

HISU 7410 Seminar in Amer Colonial Hist (3)
Seminar in American Colonial History.

HISU 7450 Seminar in Amer Political Hist (3)
This is a graduate-level course aimed it graduate students who will be teaching and researching in 20th century U.S. history. The course involves substantial reading in secondary sources, and its goal is to provide a foundation in 20th century political history and new trends in the historiography.

HISU 7470 Seminar in Colonial Louisiana (3)
Seminar in Colonial Louisiana.

HISU 7510 Seminar in 20th Century U.S. (3)
Seminar in 20th Century U.S.

HISU 7550 Seminar Cultural Hist U.S. (3)
Seminar Cultural Hist U.S.

HISU 7570 Seminar U.S. Diplomatic Hist (3)
Seminar U.S. Diplomatic Hist.

HISU 7610 Seminar Comparative Hist Amers (3)
Seminar Comparative Hist Amers.

HISU 7620 Atlantic World Historiography (3)
This pro-seminar offers a comprehensive exploration of the scholarship on the Atlantic world and is designed to expose graduate students to the major currents, themes and problems in the field.

HISU 7910 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty. For description, consult the department.

Homeland Security (HMLS)

HMLS 1940 Transfer Credit (1-25)
Transfer credit. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HMLS 2750 Homeland Security Challenge (3)
The evolution of homeland security as a concept, and a legal framework, a redirection of national policies and priorities is described. The political, economic, and practical issues of implementation are examined. An overview of the history of the terrorist threat and U.S. responses and an introduction to fundamental policy legislation and documents, such as national security strategies, homeland security decision directives, the National Response Plan, and National Incident Management System is provided. The Department of Homeland Security model of planning, protecting, responding, and recovering from a natural disaster and terrorist attacks is described.

HMLS 2940 Transfer Credit (4)
Transfer credit. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HMLS 2950 Basic EMT Training (3)
The Emergency Medical Technician course prepares the student to able to render care for patients of all ages with a variety of medical conditions and traumatic injuries. Students do not need a background of prehospital experience for this course. Topics that are covered in this course include patient assessment, medical and trauma-specific emergencies, mass casualty response, basic anatomy and physiology of the body, and communication skills. After completion of this course, the student will be prepared to sit for the national certification exam. Formerly listed as WLHP 2950.

HMLS 3150 Health and Medical Issues (3)
A study of the important health and medical management issues involved in crises and emergencies presented for the non-medical emergency manager. The wide range of medical and health issues inherent to crisis including biological, radiological, nuclear events and emergencies are described. Methods for integrating medical, public health, and psychological processes into emergency management programs are discussed.

HMLS 3200 Domestic & Intl Terrorism (3)
This course introduces participants to various aspects of domestic and international terrorist organizations. The student will be introduced to basic principles of terrorist investigations, international and domestic security threats, and the goals, motivational factors, targets, and tactics of terrorist organizations. The student will learn techniques for evaluating an organization's vulnerability to attacks that involve chemical, biological, explosive, radioactive weapons or sabotage. Students will learn the current models, roles, and responsibilities of local, state, and federal agencies in counter-terrorism investigations.

HMLS 3250 Emergency Management (3)
This course will examine core elements of emergency management in the context of the science, law, medicine, and economics that confront 21st Century leaders in business and government. Case studies, including that of Hurricane Katrina, will serve as the focus for readings, class discussion and policy research to improve this vital function of government. Key consideration will be given to asymmetrical problems presented to emergency managers, the established authorities and programs, their effectiveness and how to improve them.

HMLS 3500 Intellignce Rsrch &Anlys (3)
This course is designed to give students an understanding of the history and fundamental concepts of intelligence-gathering and analysis. In addition to tracing the development of intelligence organizations, it examines both the disciplines of intelligence (signals intelligence and espionage, for example) and its products. It focuses on the effects intelligence exercises on decision making, particularly, but not exclusively, in the realm of national security and military policy. It uses case studies to illustrate enduring issues or problems in the study of intelligence.

HMLS 3550 Human Intel & Counter Intel (3)
This course will examine the history of HUMINT and CI within the United States Intelligence Community (USIC) as well as the HUMINT and CI activities of key allies and adversaries. The course will be divided into thirds. The first portion will focus on the structure and functions of intelligence apparatuses throughout the world. In the second portion students will take an in-depth examination of numerous important case studies of successful HUMINT and CI operations. In the final section students will participate in a mock intelligence operation and class discussions regarding the ethics and future of human-based espionage.

HMLS 3555 History & Role of Intel Comm (3)
This course will focus on key periods in the development of the modern US intelligence community, (1) Revolution to World War One, (2) World War Two, (3) the post World War Two reorganization, (4) the post-Cold War Period, and (5) post 9/11 reforms. Additionally, the different intelligence disciplines and major intelligence agencies will be examined.

HMLS 3600 Critical Infrastructure (3)
This course introduces participants to the Critical Infrastructure Protection (CIP) process to secure the effective protection of the people, physical entities, and critical information systems. This course will introduce a time-efficient and resource-restrained practice that ensures the protection of only those infrastructures upon which survivability, continuity of operations, and mission success depend. The CIP course will guide leaders in the theories of physical protection and conducting vulnerability assessments of critical infrastructures. This course will also introduce the critical sectors currently identified by the United States Department of Homeland Security and how disruption of these sectors affects civilians and the economy.

HMLS 3700 Transport & Border Secur (3)
This course provides a student with an analysis of issues that concern the protection of the borders of the United States and U.S. policies regarding the safety of the U.S. transportation system. The course analyses the changes in security arrangements from pre to post 9-11 policies, relative to border and transportation security, with a synthesis of the impact of the formation of the U.S. Department of Homeland Security and on the issues concerning internal CONUS security relative to these two security concerns.

HMLS 3910 Special Topics (1-3)
Special Topics in Homeland Security Studies. Course may be repeated unlimited times for credit.

Course Limit: 99

HMLS 3911 Special Topics (1-3)
Special Topics in Homeland Security Studies. Course may be repeated unlimited times for credit.

Course Limit: 99

HMLS 3912 Special Topics (1-3)

Maximum Hours: 99

HMLS 3913 Special Topics (1-3)

Maximum Hours: 99

HMLS 3914 Special Topics (1-3)

Maximum Hours: 99

HMLS 3915 Special Topics (1-3)

Maximum Hours: 99

HMLS 3940 Transfer Credit (1-4)

Maximum Hours: 99

HMLS 4500 Intelligence Analysis (3)
This course presents an in-depth analysis of the methods used by terrorist organizations to finance global operations and the investigative techniques used to counter such measures. The means used by terrorist organizations to generate, transfer, and spend terrorist funding will be analyzed. It will also include research of public source, information sharing, and other information that can be used to connect the dots."" During the computer lab portion to this course.

Prerequisite(s): HMLS 3500.

HMLS 4560 Internship (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HMLS 4600 Counter-Terrorism (3)
This course will examine key policy issues and balances that must be addressed in strategic counterterrorism planning, particularly in the use of applied technology within the context of civil jurisdiction and rule of law. The course will examine terrorist threats to the homeland and how these threats can be met by the application of science and technology. Policy issues that address the balance between security and civil liberties that must be resolved to effectively counter terrorism will be discussed. These issues will be addressed from the governance perspective of a liberal democracy. Strategic planning principles that integrate capabilities of current and future applied technology and the key legal and policy issues that must be resolved in order to make effective use of information as balanced against civil liberties will be explored as well.

Prerequisite(s): HMLS 3200.

HMLS 4700 Maritime & Border Security (3)
This course will examine the role of maritime security in terms of protecting the homeland of the United States and other countries who are members of the International Maritime Organization (IMO). The primary focus will be on the ISPS Code and the Maritime Transportation Security Act.

Prerequisite(s): HMLS 3700.

HMLS 4910 Independent Study (1-3)
Independent study in Homeland Security Studies.

HMLS 4920 Independent Study (1-3)
Independent study in Homeland Security Studies.

Human Genetics (HMGN)

HMGN 7010 Grand Rounds in Human Genetics (1)
This class meets weekly for one hour. Human Genetics faculty, other Tulane faculty and guests from other institutions, as well as graduate students, and medical residents are invited to speak on topics of interest. Topics include basic, applied, and clinical research and reviews to canvass the latest developments in the field of genetics.

Course Limit: 2

HMGN 7020 Intro to Human Genetics (3)
This class is an overview of basic disciplines and content areas within human genetics. The emphasis is clinical application of this knowledge within selected topic areas in biochemical, molecular, and population genetics as well as cytogenetics.

HMGN 7030 Clinical Aspects of Human Genetics I / Clinical Aspects of Human Genetics II (3)
This is a class taught by genetic counselors that reviews the clinical aspects of genetic disorders seen in clinic, and provides tools for assessing patients with these conditions. The class is meant to convey to the student the problems of diagnosing and managing genetic disease from the physician's and patient's standpoint. Students are also allowed to attend a limited number of genetics clinics as observers.

Course Limit: 2

HMGN 7040 Human Cytogenetics (3)
This course provides the student an overview of the field of cytogenetics. Topics include laboratory diagnostic procedures, mechanisms of chromosomal rearrangement, loss, and duplication, classical and recently described chromosomal abnormalities leading to disease, and molecular cytogenetics including fluorescent in situ hybridization techniques (FISH) and other molecular techniques.

HMGN 7050 Medical Biochemistry (3)
This course is an overview of genetic metabolic diseases. It concentrates on inborn errors of metabolism and lysosomal storage diseases. The student is presented with the clinical phenotypes, current methods of treatment, diagnostic procedures, and the biochemical defects resulting in the specific clinical presentation of selected metabolic diseases.

HMGN 7060 Human Mol. Genetics & Genomics (4)
This course will take a detailed look at molecular genetics in humans. It will cover the structure and organization of the human genome; DNA replication, DNA mutation and repair; current molecular techniques used in research; the details of gene expression including transcription, RNA processing, translation and how expression is regulated at the various levels; and the molecular basis of human disease.

Course Limit: 2

HMGN 7100 Population Genetics & Genetic Epidemiology (3)
This class will acquaint the student with the various theories and methods used in population genetics and genetic epidemiology. Topics include Hardy-Weinberg theory, Baysian theory, forensics, paternity testing, segregation, linkage and association analyses.

HMGN 7950 Advanced Topics in Genomics (3)
This course focuses on teaching students to become proficient in reading, understanding and presenting published research. Students will be exposed to several important topics in the field of Medical Genetics and Genomics. Students will be required to read current literature articles related to these topics and present the findings to the class in the form of short presentations.

HMGN 7980 Special Topics (1-6)

HMGN 7990 Special Topics (1-6)

HMGN 9990 Dissertation Research (0)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Humanities (PAHM)

PAHM 1940 Humanities Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Course Limit: 99

PAHM 2940 Humanities Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Course Limit: 99

Humanities - Interdisciplinary (HUMA)

HUMA 1010 Humanities Foundations (3)
The purpose of this course is to provide students with an introduction to the humanities through opportunities to examine encounters between peoples and cultures and the formation and transformation of dominant and competing worldviews. The humanities, itself an interdisciplinary field, looks at human outputs. It includes literature, history, religious studies, linguistics, the arts, and philosophy. Students will be introduced to these interdisciplinary materials, concerns and skillsets through a series of chronologically organized case studies. The fundamental questions we ask concern how different sociohistorical visions of community interact with equally diverse ideas of the notion of the individual, how these visions are explored by cultures and individuals through different modes of literature, philosophy, religion and the visual arts, and what it means to create something new out of the traditions we are all formed by and grounded in. In addressing these questions through the humanities, students learn to think critically, speak clearly, write convincingly and ask questions, which prepares students for a wide range of contemporary work environments and professions.

HUMA 1500 Humanities (4)
Course designated for transfer credit. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

HUMA 2941 Humanities Writing Transfer Coursework (2-4)
Humanities writing transfer coursework.

Maximum Hours: 99

HUMA 4980 Capstone Seminar (3)
The Capstone seminar will allow students majoring in the social sciences and/or humanities to integrate the knowledge and skills gained through their interdisciplinary degree and apply them to a range of professional settings through case study examples. The students will explore relationships between the different content areas, while examining how their communication, writing, and critical thinking skills apply to issues and challenges commonly experienced in various professional settings. The seminar will culminate in a substantial written or a creative project (e.g., op-ed, website, podcast, etc.) that will highlight the interdisciplinary connections between the students' prior coursework. Creative projects will be accompanied by a shorter academic narrative.

HUMA 4990 Capstone Independent Study (3)
The Capstone Independent Study will allow humanities majors to integrate the knowledge and skills gained through their interdisciplinary degree and apply them to a range of professional settings through case study examples. The students will explore the relationships between the different areas of the humanities, while examining how their communication, writing, and critical thinking skills apply to issues and challenges commonly experienced in various professional settings. The independent study will culminate in a substantial written or a creative project (e.g., artwork, website, podcast, etc.) that will highlight the interdisciplinary connections between the students' prior coursework. Creative projects will be accompanied by a shorter academic narrative.

Immunology (IMMU)

IMMU 1111 Immunology Summer Course (1)
T1 & T2 summer courses may be required for students who need to remediate pre-clinical coursework. Contact your course director for more information.

IMMU 2001 Immunology (1)
The Immunology course is designed to provide a basis of terminology relevant to the basic concepts of immunology. It commences with the important components (cell, tissues; antibodies; immunoglobulin) involved in host defense against infectious agents. Introductory lectures serve to describe and differentiate between natural defense (innate) mechanisms and adaptive immunity mediated by functional B and T lymphocytes and their products. Subsequently, cellular interactions, especially the differentiation of helper T cells subsets and the production of relevant cytokines, will be described. This will include the mechanisms of T cell activation and regulation. Finally, clinical immunology will be discussed: autoimmunity and autoimmune diseases; hypersensitivity reactions, including atopic disorders and asthma; mechanisms of transplant rejection; and immunodeficiency disorders.

Information Systems (INFO)

INFO 1010 Intro to Business Computing (1.5)
The goal of INFO 1010 is to ensure that all business minors have the computing skills necessary to support subsequent courses in their college careers and to prepare students for internships in the business world. The course focuses on teaching students to use the Microsoft Excel application programs needed to ultimately pass the Microsoft Office certification test for Excel. The certification tests are given as part of the coursework. Students who earn the MO-200 Microsoft Excel 365/2019 Associate Certification may waive this course requirement; please consult with the course instructor to apply for a waiver.

INFO 5380 Business Study Abroad - INFO (1-20)

INFO 5390 Business Study Abroad - INFO (1-20)

Information Technology (CPST)

CPST 1000 Intro To Office Applications (3)
This course introduces students to the microcomputer and some popular micro applications. Special attention is given to essential concepts, word processing, spreadsheets, and database management. The course also provides a preface to operating environments such as Windows. Includes hands-on laboratory sessions; currently, Microsoft Office tools are used for this course. Note: This course does not count toward the requirements for a major or minor in Information Technology but can be used to satisfy a science distribution requirement for the School of Professional Advancement.

CPST 1070 Discrete Math for Information Technology (3)
This course provides an introduction to discrete mathematical structures and themes with an emphasis on applications to computing and information technology. It develops analytical skills used to solve problems concerning the speed and logical structure of computer software, computer hardware, and computer networks. Note: This course does not count toward the requirements for a major or minor in Information Technology but can be used to satisfy one of the mathematics requirements for the School of Professional Advancement.

CPST 1200 Fund of Info Systems & Tech (3)
This survey course provides a broad foundation in the concepts of modern information systems, information processing, and information technologies. It provides an overview of the key technology components that make up modern information systems and the processes and issues involved in the development of information systems.

CPST 1400 Internet Collaboration (3)
This course acquaints the students with the Internet, its uses and history, and a wide variety of tools and applications for effectively accessing information. Students will have the opportunity to learn classic text-based Internet applications, as well as graphical and multimedia capabilities of the World Wide Web. Coverage of basic technologies (e.g., hardware, protocols, authoring software) is included. Note: This course does not count toward the requirements for a major or minor in Information Technology but can be used to satisfy a science distribution requirement for the School of Professional Advancement.

CPST 2200 Application Dev Fundamentals (3)
This course presents a structured approach to problem analysis, algorithm design and solution implementation in a high level computer language. Students will learn how to analyze problems and represent solutions in pseudo-code. Students will study the basic concepts of programming, internal representation of data, simple data types, searching and sorting techniques.

Prerequisite(s): CPST 1200.

CPST 2300 Database Fundamentals (3)
Introduction to database management systems with an emphasis on relational database concepts, database processing, data modeling, database design, development and implementation. Includes implementation of current DBMS tools and SQL.

Prerequisite(s): CPST 1200.

CPST 2400 Webpage Design & Develpm (3)
This course goes beyond mere use of the Internet into the tools and techniques needed to successfully publish digital media. Through lectures, class discussions, and hands-on lab work, you will become acquainted with the hardware, software (on workstations, on servers, and on the Internet), and tool management techniques needed to create and maintain web documents and sites. The course includes coverage of HTML and CSS.

Prerequisite(s): CPST 2200.

CPST 2500 IT Infrastructure Fundamentals (3)
This course covers the basic principles and applications of technology architecture including hardware, software, virtualization of servers, storage, and networking. Utility servers/appliances, server environments, and Cloud architecture will be presented in the course. Software to be studied includes Operating Systems, virtualization software, application software, and hardware appliance management software. Key concepts such as security, redundancy, reliability, maintainability, and availability will be discussed. Students will be provided with an overview of technology architectures, data systems, and the applications that manage system resources.

CPST 2600 Networking Fundamentals (3)
This course covers topics related to wired/wireless connectivity and data exchange between digital devices. In addition to learning common networking terminology, students will examine and perform hands-on exercises using existing and emerging networking standards and architectures. Also covered are network operating systems, topologies, structed cabling, communications protocols, LAN-to-LAN interconnectivity and WAN fundamentals. This course is intended to provide a solid foundation for further study of IT networking connectivity principles.

Prerequisite(s): CPST 1200.

CPST 2700 Fund of Cybersecurity (3)
This course provides the student with an overview of the field of cybersecurity and assurance, and a foundation for understanding the key issues associated with protecting information assets, and designing a consistent, robust cybersecurity posture. Students will be exposed to the spectrum of cybersecurity activities, devices, methods, methodologies, and procedures. Coverage will include inspection and prevention, detection, and response to cybersecurity threats, and an overview of the cybersecurity planning and staffing functions.

Prerequisite(s): CPST 1200.

CPST 2910 Documentation & Tech Writing (3)
This course provides a complete process for planning, creating, and editing technical content, for both internal and external audiences including assessing the needs of users, selecting appropriate formats, making effective use of media, and selecting the best content organization and delivery platform Students demonstrate proficiency in written content creation and presentation skills by producing different technical writing products, including formal research reports and workplace writing (e.g., technical reports, manuals, explanations of how to understand or use a product or service, proposals, etc.). Students will be exposed to software applications to architect, organize, and publish technical content and media. This course will also address the job duties of technical writers/editors. Topics include establishing positive working relationships with writers, management, and subject matter experts.

Prerequisite(s): ENGL 1010 and CPST 3050.

CPST 2940 Information Tech Trans Credit (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CPST 3050 Technology & Ethics (3)
This course examines the ethical and social aspects of information technology with emphasis on computing. Pertinent issues include acquisition, access, stewardship, liability, freedom, privacy, control and security. Note: This course can be used to satisfy a School of Professional Advancement? Humanities Distribution Requirement.

Prerequisite(s): ENGL 1010 and CPST 1200.

CPST 3100 Ethics & Tech thru SciFi (3)
The primary goal of this course is to introduce the theories, concepts, and vocabulary of philosophical ethics and to apply these notions to contemporary moral issues of technology use including human enhancement, artificial environments, the treatment of non-human animals, personal identity, and artificial intelligence. The course investigates ethical topics through the prism of classic science fiction stories that raise ethical questions and engender discussion of modern philosophical views of human values, ideals, and morality as they relate to applied technology use. The course further provides a survey of current ethical dilemmas and problems that arise in technology use.

Prerequisite(s): ENGL 1010 and CPST 1200.

CPST 3200 Automation & Bot Development (3)
Robotic Process Automation (RPA) is a technology that is transforming the way modern businesses operate. The same way the advent of computers shifted people from using paper to using computers, the arrival of RPA is bringing another shift in the workplace, causing people to perform their jobs using information instead of computers. Over time, mundane and repetitive computer software tasks that humans perform will be replaced by software "bots". As RPA shifts work from computers to information, one of the new jobs that will emerge across most industries will be that of a "bot developer". Learning this technology positions students for job opportunities in this field. A bot developer must be able to design and create software robots by translating work people perform on computers into automated "scripts", or sets of instructions, that are then programmed into robots.

Prerequisite(s): CPST 2200.

CPST 3220 O-O Programming w/ Java (3)
This course presents the fundamentals of the JAVA programming language. Topics include JAVA syntax, data types, design of classes, class libraries, data structures, exception handling, threads, input and output, and applet programming.

Prerequisite(s): CPST 2200.

CPST 3230 Application Development In C++ (3)
This course presents the fundamentals of the C++ programming language. It covers development of computer-based solutions in C++, using object-oriented and event-driven techniques, and accessing databases with open database connectivity.

Prerequisite(s): CPST 2200 and 2300.

CPST 3240 Python Game Development (3)
This course provides introduction to both fundamental programming concepts and the Python programming language. Students will be exposed to hands-on exercises including creating a 2D game using Python and Pygame.

Prerequisite(s): CPST 2200.

CPST 3250 User Interface/Experience Dsgn (3)
This course examines topics related to developing and evaluating user interfaces for interactive computer systems. Topics covered include usability goals and principles, user interface design principles, managing design processes, prototyping and construction, interface metaphors, interaction styles, interaction devices, software tools, user interface builders, evaluation paradigms and techniques, usability testing, user manuals, tutorials, computer-supported collaborative work.

Prerequisite(s): CPST 2200.

CPST 3260 Virtualization and Cloud (3)
This course focuses on the skills and knowledge necessary for provisioning and managing virtualized services in cloud Infrastructure as a Services (IaaS) environments including: virtual networks, virtual machines, containers, web and mobile apps, and storage; planning and managing cloud resources, and configuring Azure AD integration with on-premises Active Directory domain.

Prerequisite(s): CPST 1200.

CPST 3270 Cloud Foundations (3)
This course provides a detailed overview of cloud concepts, services, security, architecture, pricing, and support. Students will receive an overview of the fundamental concepts of cloud computing independent of specific technical roles. Students will be exposed to cloud infrastructure and will deploy basic cloud services.

Prerequisite(s): CPST 4610.

CPST 3280 Cloud Architecture (3)
This course covers the concepts of building IT infrastructure on a public cloud service provider's infrastructure. The course is designed to teach students how to optimize the use of the cloud by understanding a variety of service solutions and how these services fit into cloud-based solutions. Because cloud-based architectural solutions, and related costs, can differ depending on environment, type of applications, and size of business, this course emphasizes best practices for cloud computing architecture, and it recommends various design patterns to help the student think through the process of architecting optimal IT solutions.

Prerequisite(s): CPST 3270.

CPST 3290 Linux Admin & Hybrid Cloud (3)
This course teaches students about the nature, benefits and drawbacks of using a Hybrid Cloud solution and how to install, administrate, and maintain a secure Linux server to manage hybrid cloud. The course will introduce students to Linux utilities while applying this knowledge towards more advanced hybrid cloud principles. Students will learn to implement a hybrid cloud computing environment using industry standard cloud service provider tools. Students will learn how to install, configure, use, and maintain a hybrid cloud environment. Students will be exposed to the myriad of decisions and actions required when implementing a hybrid cloud solution. This course covers core hybrid cloud services: identity, storage, image, networking, compute, memory, and management dashboards.

Prerequisite(s): CPST 3260.

CPST 3300 Mobile Application Development (3)
This course focus on developing hybrid mobile applications using the web technologies (HTML5, CSS and JavaScript). This course makes use of the Ionic framework that is built with mobile-optimized HTML5 and CSS based components and Angular (JavaScript framework). Students will learn about UI development with Ionic and then using Apache Cordova's modules to access the native mobile platform's capabilities from JavaScript. Students will finish an in-class project by following along with the Instructor step by step throughout a complete mobile app project in class, then build their individual mobile app (as homework) by finishing their individual project supervised under the instructor. At the end of this course students will be able to (1) Build mobile applications targeting multiple platforms with a single codebase, (2) Use various features of the Ionic framework to build hybrid mobile applications, (3) Leverage their HTML5, CSS, JavaScript and Angular skills.

Prerequisite(s): CPST 2200.

CPST 3310 Rel DB Design & Develpmt (3)
This course covers design and development concepts for relational database systems. The students will work on the design and development of a database application by analyzing organizational data needs, model and present those needs using diagrams and specifications, exploring different database designs, and implementing the design in a working system. Topics include normalization, entity-relationship modeling, database application design, data base processing using internet technology, managing multi-user data bases, accessing the database server, and sharing enterprise data.

Prerequisite(s): CPST 2300.

CPST 3400 Website Developmt w/ XML/XHTML (3)
This course is designed to provide students with an introduction to programming using XML. Students taking this course should have a working knowledge of HTML and FTP as gained by completing the course Webpage Design and Development course. Students should have a basic understanding of programming concepts and a relational database including relationships of primary and secondary tables via keys and foreign keys. Some sample learning activities are: author XML documents using a given Document Type Definition (DTD); create a DTD; create a CSS and/or XSLT style sheet; create an XML-based information system that brings together the skills learned throughout the course.

Prerequisite(s): CPST 2400.

CPST 3410 Website Dev w/ Javascipt (3)
This course provides the opportunity to obtain a solid understanding of some of the tools and techniques, beyond basic HTML, used to publish on the Internet via the World Wide Web. Through online 'lectures' and posted materials, electronic discussions, and hands-on 'lab' work you will become acquainted with the computer hardware, software (both used on your machine and the Net), and programming techniques needed to design, create and maintain fully interactive Web documents and sites. This course will focus primarily on JavaScript programming and some additional advanced techniques and concepts.

Prerequisite(s): CPST 2400.

CPST 3500 IT Project Management (3)
This course provides an introduction to the principles and application of project management techniques with an emphasis on the design and management of Information Systems. Topics include project planning, work team design, project estimation techniques, project reporting, identifying and controlling project risks, budgets, and quality assurance.

Prerequisite(s): CPST 1200.

CPST 3550 Systems Analysis & Design (3)
Examines the concepts, tools, and techniques used to develop and support computer-based information systems. Systems planning, analysis, design, and implementation are covered. Techniques for studying, documenting, specifying, designing, implementing and testing small and/or enterprise-wide business systems. Analysis and design includes structured and object-oriented methods, using CASE tools.

Prerequisite(s): CPST 1200.

CPST 3610 Internet Server Admin with IIS (3)
This course will provide students with a comprehensive understanding of all facets of Microsoft Windows server based Web service installation, configuration, administration, and maintenance. The course will focus on hardware, software, Internet protocols, and advanced Web server hosting and services. It provides students with the understandings and skills needed to effectively plan, implement, and deploy valuable World Wide Web services in a professional or personal capacity.

Prerequisite(s): CPST 2600 and 2400.

CPST 3650 Linux Administration & Security (3)
This course will provide students with a comprehensive understanding of all facets of Linux/Unix server based Web service installation, configuration, administration, and maintenance. The course will focus on hardware, software, Internet protocols, and advanced Web server hosting and services. It provides students with the understandings and skills needed to effectively plan, implement, and deploy valuable World Wide Web services in a professional or personal capacity.

Prerequisite(s): CPST 2500.

CPST 3750 Cyber Defense (3)
This course offers an overview of security issues in networks, applications, and operating systems and demonstrates how current and future commercial systems may be designed to ensure confidentiality, integrity, and availability. It covers principles and methods of discovering and exploiting security vulnerabilities. This course provides students with real world cybersecurity scenarios in a virtual lab environment. Students will learn to apply academically sound cyber defense strategies to mitigate cyber vulnerabilities in simulated environments. Best practices in securing systems, applications, and networks will be reviewed in depth after students complete the virtual lab assignments.

Prerequisite(s): CPST 2700, 2500 and 2600.

CPST 3930 Cyber Threats & Cybersecurity (3)
Cyberspace has become a pervasive presence in modern society, and a healthy functioning cyberspace is essential to our economy and to national security. Along with benefits, however, there exist threats and malicious actors who seek to exploit cyberspace vulnerabilities. This course will study the nature of cyber threats, including computer and digital crimes, information warfare and cyber terrorism, and related threats to personal, organizational, economic and national security. Students will gain an understanding of the variety and nature of cyber threats including digital espionage, computer break-ins, computer hacking, viruses, communications eavesdropping, forgery, disruption to information flow, electronic bombs and the growing presence of terrorist organizations on the Internet, and how the Internet is used to further terrorist activities. The course will also cover countermeasures to cyber threats; cybersecurity investigations, evidence gathering, and legal challenges; and current and national policies for securing cyberspace and the impact of cybersecurity on privacy and civil liberties.

CPST 4000 Independent Studies (1-4)
Independent Study course

Course Limit: 2

CPST 4100 Special Topics (3)
Special Topics in Information Technology.

Prerequisite(s): CPST 2300.

CPST 4101 SCRUM Development Method (3)

CPST 4200 PHP & Data Structures (3)
This course is for anyone who wants to learn how to build and maintain websites that use PHP with Data Structures. The prerequisites for this course is that you have basic HTML and CSS skills. This course gets you started with PHP and Data Structures as quickly as possible and then builds out your skills in a professional way. This course presents an array of PHP and Data Structure skills in a manageable progression designed to allow you to develop websites. Ever since it was created in 1995, PHP has been a favorite of developers for server-side web programming. In some surveys, it stands as today's most popular web programming language. By most counts, over a million websites have been written in PHP, including portions of today's largest, most recognizable sites, and often in tandem with databases.

Prerequisite(s): CPST 2200 and 2300.

CPST 4270 Advanced Application Development for Industry (3)
The purpose of this course is to build upon fundamental programming concepts learned in prerequisite courses and provide students with advanced application development skills needed for industry employment including source version control, database connectivity, incorporating SQL into applications, and utilizing code libraries in the development process.

Prerequisite(s): CPST 3220, 2300 and 2200.

CPST 4320 Business Intelligence (3)
This course introduces students to structures and techniques used to transform data into information for decision-making. Business intelligence is an increasingly important part of both small and large organizations, as well as government. Business intelligence can be used across a wide spectrum of enterprises, such as health care, exploration, security, identifying markets, predicting behavior and forecasting demand. The materials in this course are designed to give the student important new tools to assist in business decision making, whether this involves identifying new markets, extracting data to better understand current markets and forecasting demand using simple statistical methodologies.

Prerequisite(s): CPST 1200.

CPST 4340 Database Administration- SQL (3)
A technical overview for SQL Server administration. SQL Server offers a platform for enterprise data management, robust development, and implementation of modern databases. Students will be exposed to how to install, administer, maintain and troubleshoot Microsoft SQL Server Databases. This course also provides students with the technical skills required to write basic Transact-SQL queries for Microsoft SQL Server. Server Students will work in a lab environment to install SQL Server 2016 and will then work through a series of various activities to learn the crucial tasks of an SQL Server administrator.

Prerequisite(s): CPST 2300.

CPST 4350 Database Administration-Oracle (3)
This course provides the student with a fundamental understanding of the tasks and issues associated with database administration. Topics and activities include: installation and management of a database system; ensuring data integrity; managing users, privileges, and resources, implementing of basic backup and recovery procedures and identifying tuning opportunities. Students will work in a lab environment to install a database management system, and will then work their way through a series of crucial system-side activities to learn the various tasks of a database administrator.

Prerequisite(s): CPST 2300.

CPST 4500 System Reqs Devel & Testing (3)
This course provides a study of concepts and techniques for planning and developing high quality information systems. Fundamentals of specification (including formal models and representations, documents, and standards) are examined. Methods of specifying and developing requirement for generating information systems are discussed. It covers the tools, methods, and current practices for assessing the quality and correctness of information systems. Topics include the roles of testing and formal verification, fundamentals and formal models of program verification, planning and documentation for quality assurance, methods of performing technical reviews, strategies of system testing and integration planning, and principles and practices used in conducting tests. Projects using these techniques are included.

Prerequisite(s): CPST 1200.

CPST 4610 Windows Server Administration (3)
This course is designed to prepare the student for the challenges faced by network administrators, helpdesk technicians, and network analysts. Individuals working in these areas have the responsibility for installing and maintaining local area networks based on Microsoft Windows and other network operating systems. This course provides hands-on experience planning, deploying, and administering a network using Microsoft Windows Server based systems.

Prerequisite(s): CPST 1200 and 2500.

CPST 4640 TCP/IP Protocol (3)
This course will focus primarily on the TCP/IP protocol suite and a set of related network services. It is designed to help students understand networks that use TCP/IP, the suite of protocols that is used today for the Internet and most modern networks.

Prerequisite(s): CPST 2600.

CPST 4650 Unix System Administration (3)
The Solaris Operating System (Solaris OS) is the foundation on which some of the world's leading companies are built. Offering high levels of reliability, availability, security, and scalability, Solaris systems meet today's demands while anticipating tomorrow's innovation. The objective of this course is to provide a comprehensive understanding of the administrative aspects of the Solaris operating system. At the end of the course students will have the skills required to administer a Solaris system, including user management, disk management, backing up procedures, startup and shutdown procedures, and process management. The course provides students with the opportunity to integrate and apply administration in a comprehensive manner indicative of Information Technology programs of study.

Prerequisite(s): CPST 1200 and 2500.

CPST 4670 Identity & Access Management (3)
This course is designed to familiarize students with the skills needed to administer a Microsoft network in the enterprise. The course provides an in-depth look at the features of Active Directory, including Group Policy, scripting, replication, and disaster recovery, plus the use of Exchange Server in the enterprise for reliable messaging services.

Prerequisite(s): CPST 4610.

CPST 4710 Information Technology Program Capstone (3)
Required Capstone course for all Cloud & Virtualization (ITCL) and Cybersecurity (ITCS) students – all Major/concentration required courses must be completed prior to taking this course. The purpose of this course is to provide a summative crowning achievement towards the undergraduate concentration. This workshop style course involves major semester-long deliverables; the capstone project. The capstone project allows students to apply theoretical and practical knowledge acquired during the Info Tech program. The capstone project will require a student to leverage their previous body of work to successfully complete. The capstone portfolio should demonstrate student mastery for each of the Program Learning Outcomes.

Prerequisite(s): CPST 1200, 2200, 2300, 2500, 2600, 2700, 3050, 4610 and 4930.

CPST 4750 IP Routing & Switching (3)
The TCP/IP suite of protocols is the de facto standard for multi-vendor connectivity within corporations and serves as the basis for Internet connectivity. This course focuses on Internet communications architecture and the internetworking between autonomous systems that is facilitated by IP routing. Layer 2 and Layer 3 (IP Switching) architectures will also be examined in relation to interLAN and VLAN routing.

Prerequisite(s): CPST 2600.

CPST 4770 Advanced IP Networking (3)
A comprehensive overview of networking topics, at an advanced level. Students will focus on core concepts that will allow the experienced network individual to understand the “why” behind the protocols they work with every day and see the big picture of networking. This course explores advanced switching concepts such as Spanning Tree and link aggregation. Dynamic Routing Protocols are covered in detail. Students will be exposed to advanced hands-on routing and real-world switching exercises.

Prerequisite(s): CPST 4750.

CPST 4800 Virtualization Administration (3)
Prerequisite(s): CPST 4610.

Prerequisite(s): CPST 4610.

CPST 4810 Windows Security (3)
In this course, students learn to apply security industry best practices and to harden the Windows operating system in a variety of configurations and roles. Students learn how to protect Windows-based systems from attacks, reconfigure the operating system to fully protect it, and scan hosts for known security problems. By the end of the course, students have a solid understanding of the security architecture of Windows operating systems.

Prerequisite(s): CPST 4610.

CPST 4850 Penetration Testing (3)
This course provides an introduction to computer and network security penetration testing techniques, tools, and methodologies.? It will provide an overview of activities that are used during the planning, reconnaissance, scanning, exploitation, post-exploitation, and reporting phases of a penetration testing process.

Prerequisite(s): CPST 2600 and 2700.

CPST 4870 Forensics, Investigate & Resp (3)
This course provides forensics analysis skills through use of forensics tools and techniques, and forensic lab practices. The course also covers investigation and response to cyber-attacks. Students will be exposed to forensic evaluation of evidence, and determination of breach impact as essential components in a cyber security response plan. Methods of planning, documenting and implementing a practical cyber security forensics approach for information systems are discussed. The course uses case study and subject matter expert best practices to provide insight and learning on modern computer system forensics.

Prerequisite(s): CPST 2700 and 2500.

CPST 4910 Special Topics (3)
This course is a special offering in the Information Technology program.

Prerequisite(s): CPST 1200.

CPST 4911 Special Topics (3)
This course is a special offering in the Information Technology program. Course may be repeated up to unlimited credit hours.

Prerequisite(s): CPST 1200.

Maximum Hours: 99

CPST 4912 Special Topics (3)
This course is a special offering in the Information Technology program. Course may be repeated up to unlimited credit hours.

Prerequisite(s): CPST 1200.

Maximum Hours: 99

CPST 4913 Special Topics (3)
This course is a special offering in the Information Technology program. Course may be repeated up to unlimited credit hours.

Prerequisite(s): CPST 1200.

Maximum Hours: 99

CPST 4914 Special Topics (3)
This course is a special offering in the Information Technology program. Course may be repeated up to unlimited credit hours.

Prerequisite(s): CPST 1200.

Maximum Hours: 99

CPST 4915 Special Topics (3)
This course is a special offering in the Information Technology program. Course may be repeated up to unlimited credit hours.

Prerequisite(s): CPST 1200.

Maximum Hours: 99

CPST 4916 Special Topics (3)
This course is a special offering in the Information Technology program. Course may be repeated up to unlimited credit hours.

Prerequisite(s): CPST 1200.

Maximum Hours: 99

CPST 4917 Special Topics (3)
This course is a special offering in the Information Technology program. Course may be repeated up to unlimited credit hours.

Prerequisite(s): CPST 1200.

Maximum Hours: 99

CPST 4918 Special Topics (3)
This course is a special offering in the Information Technology program. Course may be repeated up to unlimited credit hours.

Prerequisite(s): CPST 1200.

Maximum Hours: 99

CPST 4919 Special Topics (3)
This course is a special offering in the Information Technology program. Course may be repeated up to unlimited credit hours.

Prerequisite(s): CPST 1200.

Maximum Hours: 99

CPST 4920 Special Topics (3)
This course is a special offering in the Information Technology program.

Prerequisite(s): CPST 1200.

CPST 4930 Network Security (3)
This course is designed to provide fundamental skills needed to analyze the internal and external security threats against a network, and to develop security policies that will protect an organization?s information. Students will learn how to evaluate network and Internet security issues and design, and how to implement successful security policies and firewall strategies. In addition, they will learn how to expose system and network vulnerabilities and defend against them.

Prerequisite(s): CPST 2600 and 2700.

CPST 4950 Website Security (3)
This course is designed to provide students with an introduction to Website security and privacy issues. Students will understand how to identify security/privacy issues, recognize security issues involving JAVA, the Internet and email. Students will also explore techniques and best practices for limiting risk.

Prerequisite(s): CPST 2200, 2500 and 2700.

CPST 5001 Internship (0-3)
This internship will relate course academic concepts to industry employment. All Information Technology internships must be approved by Program Director.

Enrollment limited to students in the Information Technology department.

CPST 6010 Information Technology Fundamentals (3)
This course provides an overview of the concepts of modern information systems, information processing, data storage, critical infrastructure and information security and how these systems and aspects inter-relate. The course includes the key technologies and components that make up modern information systems as well as professional and ethical considerations when managing an Information Technology environment.

CPST 6050 Application Development Foundations (3)
This course provides an overview of application development principles. Core concepts include code constructs, problem analysis, algorithm design and solution implementation in a computer development language. Students will learn how to analyze business problems and create solutions through the development of technology applications. Students will study the basic concepts of development, internal representation of data, simple data types, searching and sorting techniques. Topics include software development methodology, data types, control structures, functions, arrays, and the mechanics of running, testing, and debugging.

CPST 6100 Networks & Systems (3)
This course covers topics related to computer network connectivity and data exchange between digital devices. Students will examine common networking terminology, and perform hands-on exercises using existing and emerging networking standards, protocols and architectures. Also covered are network operating systems, topologies, structured cabling, communications protocols, virtualization of servers, storage and enterprise technology infrastructure, including cloud. This course is intended to provide a solid foundation for further study of IT networking connectivity, IT infrastructure, and cloud computing principles.

CPST 6110 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 6111 Special Topics (3)
This course is a special offering in the Information Technology program. Course may be repeated unlimited times for credit.

Course Limit: 99

CPST 6112 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 6113 Special Topics (3)
This course is a special offering in the Information Technology program.

Maximum Hours: 99

CPST 6114 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 6115 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 6116 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 6117 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 6118 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 6119 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 6120 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 6150 Database, Data Analysis, Data Structures (3)
This course provides an introduction to common database management systems with an emphasis on relational database concepts, database processing, data modeling, database design, development and implementation. Students will be exposed to relational database concepts, database design and modeling, database query using SQL, DDL and DML. This course provides a solid foundation to database administration, data warehouses and cloud services, including Data as a Service (DaaS) and Platform as a Service (PaaS).

CPST 6200 Cybersecurity/InfoSec (3)
This survey course provides the student with an overview of cybersecurity and a foundation for understanding the key issues associated with protecting digital and information assets. Students will be exposed to techniques needed to design a consistent, robust architecture that improves an organization's cybersecurity posture. Students will be exposed to the spectrum of cybersecurity activities, devices, methods, methodologies, tools and procedures. Coverage will include auditing, inspection, prevention, detection, and response to cybersecurity threats, an overview of cybersecurity governance, and common cybersecurity roles.

CPST 6250 Enterprise Information Technology (3)
This course covers the basic principles and applications of information technology infrastructure that is used in large enterprises. Utility servers/appliances, server environments, enterprise applications, and cloud architecture will be presented in the course. Key concepts such as security, redundancy, reliability, maintainability, disaster recovery, and availability will be discussed. Students will be provided with an overview of technology architectures, data systems, and the applications that manage enterprise IT system resources.

CPST 6320 Business Intelligence (3)
This course is designed as an upper level undergraduate and graduate level course.This course introduces students to structures and techniques used to transform data into information for decision-making. Business intelligence is an increasingly important part of both small and large organizations, as well as government. Business intelligence can be used across a wide spectrum of enterprises, such as health care, exploration, security, identifying markets, predicting behavior and forecasting demand. The materials in this course are designed to give the student important new tools to assist in business decision making, whether this involves identifying new markets, extracting data to better understand current markets and forecasting demand using simple statistical methodologies.

CPST 6500 Systems Req Dev and Test (3)
This course provides a study of concepts and techniques for planning and developing high quality requirements management processes and hardware/software testing processes. Fundamentals of requirements analysis are examined, highlighting the importance and value of good requirements. Methods of planning and implementing a practical requirements gathering approach for information systems are discussed. Testing roles, techniques, and processes will be covered and it will be shown where and how the software testing process fits into the overall development methodology. Formal models of program verification, planning and documentation for quality assurance and methods of performing technical reviews will also be detailed. Strategies of system testing and integration planning including principles and practices used in conducting tests will be covered.Subject matter experts will be brought in to share with the class project examples and how they use these requirements management and test techniques in these projects.

CPST 6501 IT Project Management (3)
This course provides an exploration into the tools and techniques of project management as they relate to information technology (IT) projects and software development. The course concepts adhere to the Project Management Body of Knowledge® (PMBOK®) description of best practices, and it covers the project management life cycle with its processes of initiating, planning, executing, monitoring and controlling the project. Emphasis is placed on areas of project planning and project management that are unique to software development projects and other IT projects.

CPST 6750 Cyber Defense (3)
This course offers an overview of security issues in networks, applications, and operating systems and demonstrates how current and future commercial systems may be designed to ensure confidentiality, integrity, and availability. It covers principles and methods of discovering and exploiting security vulnerabilities. This course provides students with real world cybersecurity scenarios in a virtual lab environment. Students will learn to apply academically sound cyber defense strategies to mitigate cyber vulnerabilities in simulated environments. Best practices in securing systems, applications, and networks will be reviewed in depth after students complete the virtual lab assignments.

CPST 7000 IT Governance and Policy (3)
The managing of information has become critical to the success of a business or enterprise and the governance of the Information technology (IT) resource has become an integral part of most organizations and is fundamental to support, operate, sustain, innovate and grow a business. IT Governance focuses on delivering value to the business by the proper management of the IT resource. It is an integrated approach consisting of the leadership, organizational structures and processes that ensures the effective alignment of IT with the organizations strategies and objectives. This course presents an inter-disciplinary approach to IT Governance. In the course students will learn about specific objectives of IT Governance, along with standards, frameworks, tools and techniques used in the planning, deploying, managing, monitoring, measuring and sustaining a successful IT governance plan. The course leverages and integrates current and emerging industry best practices, standards, guidelines and governance case studies.

CPST 7100 Managing the IT Department (3)
This course is designed for graduate students who are, or aspire to be, either business managers or Information Systems (IS) managers, as well as those who are, or aspire to be, primarily technology specialists who will work in and for different types of businesses—including consultant firms and other firms competing in an information technology (IT) services industry. This course presents the tools necessary to best exploit information technology. By using case studies and the coverage of the key technology issues it will provide a perspective on how to evaluate the IS organization, and how to be a partner in managing data, information, and systems. It will prepare the student to be effective exploiters of computing technologies now and in the future by focusing on the information technology resources that organizations need and providing alternative approaches to managing them. Students will study the opportunities and pitfalls provided by these technologies and what they need to know to manage and make effective use of these technologies.

Prerequisite(s): CPST 7000, 7150, 7200, 7600, 7800 and 7900.

CPST 7150 The Business of IT (3)
The goal of this course is to provide MPS candidates with experience in handling business processes that are necessary to successfully manage the business aspects of Information Technology. It covers business concepts and processes that are germane to the management and use of Information Technology including Accounting and Finance, Human Capital and Payroll, Budget, Contract Management, Proposals/Requests for Proposals, Statements of Work, and Service Level Agreements. Additionally, methods and approaches for performing cost-benefit analysis, procurement, making business cases for technology/cybersecurity, IT budgeting, and working with contractors and consultants will be reviewed.

CPST 7200 Enterprise Application Arch (3)
The goal of this course is to prepare CIOs, CTOs, and senior managers with progressive approaches for state-of-the-art Information Technology (IT) infrastructures. IT systems exist in an abstraction of an Operating Environment with identifiable system capabilities – physical properties, characteristics, strategies, tactics, and security. This course explores the analysis, design, implementation, evaluation, and management of enterprise IT solutions including interaction with other enterprise applications. Topics include planning/modeling, Conceptual/Logical/Physical design, and management considerations. This course also examines modern trends and approaches in enterprise application architecture design.

CPST 7250 SW Development Methods (3)
A Software Development Methodology is a framework that is used to structure, plan, and control the process of developing an information system - this includes the pre-definition of specific deliverables and artifacts that are created and completed by a project team to develop or maintain an application. A wide variety of such frameworks have evolved over the years, each with its own recognized strengths and weaknesses. This course explores the many methodologies available for developing software. The business culture and requirements are presented as the center for evaluation of the most effective mix of methodologies for a specific development project. Students will study the software lifecycle from the identification of a need to the retirement of the software product that satisfies that need. They will learn about the strength and weakness of the various development methodologies and the appropriate situations in which to use them.

CPST 7310 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 7311 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 7312 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 7313 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 7314 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 7315 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 7316 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 7317 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 7318 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 7319 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 7320 Special Topics (3)
This course is a special offering in the Information Technology program.

CPST 7600 Enterprise Infrastructure Arch (3)
Enterprise Hardware Architecture (EHA) maximizes business functionality, minimizes risk, simplifies operations, and complies with regulatory requirements. This course will provide students with the knowledge to build an open/standards-based Enterprise Hardware Architecture that utilizes virtualization of servers, storage area networks (SAN), and network capabilities. Utility servers/appliances, Multi-tier server environments, and Cloud architecture will be researched and presented in the course. Key performance parameters, such as security, redundancy, reliability, maintainability, and availability, will be major considerations in the designs. A decision based approach and iterative improvement processes based on service fulfillment and technology trends will be utilized by students to design individual class projects.

CPST 7760 Cloud-based Data Analytics (3)
As industry's move to increased use of cloud-based "data as a service" offerings, including Data Platform (PaaS), Infrastructure (IaaS), and Software (SaaS), Information technologists including IT Managers and Cybersecurity Managers need to understand how to leverage cloud in the enterprise to enable data analytics at scale, at speed and to enable wide access. This course will introduce data analytics in conjunction with leveraging cloud-based services.

CPST 7770 Cloud-based Machine Learning and Artificial Intelligence (3)
As industries move to increased use of cloud-based data "as a service" offerings, including Data Platform (PaaS), Infrastructure (IaaS), and Software (SaaS), this course will help IT Managers and Cybersecurity Managers understand how to enable functional machine learning and AI by leveraging cloud solutions.

CPST 7800 Cyber Law and Policy (3)
This course is designed to analyze legal issues related to the management of information in contexts in which information professionals are likely to be involved. In an age defined by information, knowledge of the legal issues that establish how information is required to be protected, maintained, collected, stored, and accessed is extremely important. Information Security policies must be evaluated in light of current laws and regulations This course will provide an overview of some of the most important legal issues in managing information so that students will be able to apply the information to particular professional situations that they may encounter. Topics will include such issues as US and international jurisdiction, computer security, intellectual property, electronic commerce, information privacy, freedom of expression, and cyber-crime. Included are analyses of significant legal case studies plus review of applicable federal and state legislation as applied to compliance of standards such as those found in the Health Insurance Portability and Accountability Act (HIPPA), Sarbanes Oxley, the Federal Information Security Management Act (FISMA), and the National Institute of Standards and Technology, Minimum Security Requirements for Federal Information and Information Systems (FIPS 200).

CPST 7850 Leading Transformational Change in IT (3)
Technology can serve as a catalyst for change in an organization. In today's work environments, almost every organizational change is accompanied by a change in the of the organization. In this course, students will learn the difference between leadership and management generally and also specifically within IT. They will learn how IT can affect positive change and, most importantly, how to minimize the chance of project failures. The course begins with the journey of technology and the speed of change in this industry. With the context set, students then learn about the organizational (individual and macro) and commercial implications of change. The course will also cover topics from major milestones in IT, organizational behavior at the individual and organizational level, and change management to include budgeting for change, vendor management, vision setting, and execution.

CPST 7875 Independent Study (1-3)

CPST 7900 Sec & Cyber Threats - IT Mgrs (3)
This course provides an overview of the need for, and the technology, algorithms, and standards used in providing computer and communications security. It is concerned with the fundamentals of computer security. Topics in this class can be divided into three main parts: cryptography (with a focus on single-key and public key); computer system security (database and operating systems issues including authentication, access control, malicious software, and network security (including intrusion prevention/firewalls, intrusion detection, Denial of Service attacks, etc.); and the develop of secure programs and applications.

Interdisciplinary Newcomb-Tulane College (INTU)

INTU 1000 Hist &Phil of Higher Education (3)
This course examines the social and political history of higher education with special emphasis on the transformation of women and the college landscape from the early 20th century to present day. Using historical and literary frameworks to generate and address and answer questions about college women today, this course will provide Newcomb Scholars with the opportunity to examine the social and political culture of various decades and its influence on college culture, women's colleges, women in college, and narratives about college life.

INTU 1010 Special Topics (0-4)

Maximum Hours: 99

INTU 1011 Special Topics (0-4)

Maximum Hours: 99

INTU 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): INTU 1000.

Maximum Hours: 99

INTU 2000 Women Leading Change (4)
The Harvard Business School originated and developed the phenomenon of the teaching case to simulate business experience in novices, to create a concrete vehicle for applying abstract theories to real world situations, and to engender engaged classroom discussion while fostering critical thinking skills as students were forced to wrestle with actual business dilemmas that had no easy answer. Cases marry learning about real world policy and organizational problems with critical thinking, abstract reasoning, and theorizing valued in all academic disciplines. The objective of this course is to engage students in drawing leadership lessons from the real-world dilemmas of women leading organizations to bring about social change. The course will also teach how to write and evaluate the usefulness of cases; each student will write a case linked to her field of study which engages the concepts of gender and leadership. The course teaches critical thinking and problem solving through immersion in the stories of women leaders. The course outcomes are an enhanced appreciation of the dilemmas that are encountered by women leading change; the ability to evaluate and compose case studies at the intersection of leadership and gender; and the demonstration of strategic thinking and problem-solving skill.

Prerequisite(s): INTU 1000.

INTU 2020 Wellness & Resilience for College & Beyond (1)
College is an exciting and stressful time for everyone. The increased freedom and independence are both exciting and daunting, leading many students to struggle in new ways or with emotions that seem to have increased in intensity. Conversely, research has shown that individuals who develop and use resilience strategies and emotion regulation skills (such as opposite action, relaxation strategies, mindfulness, and practicing gratitude) as well as build positive routines (for example, good eating and sleep habits, daily exercising, scheduling fun activities) are more likely to be effective in their job roles, involved in strong relationships, physically and mentally healthy, and satisfied with their lives overall.

INTU 2500 Digital Scholarship (1)
This course examines practices for designing research communications across a variety of digital mediums. It also examines how gender, often intersecting with race, class, and sexuality, affects the interpretation of research in digital forums and the treatment of researchers online. This interdisciplinary course will engage in a variety of fields including data visualization, digital media practices, technology studies, gender studies, and digital scholarship. Seminar discussions will include examining creative methods for developing digital research projects, ethical considerations when promoting research through digital mediums, and critically analyzing computational methods in research that supports social justice and gender/racial equity. As praxis, students will design, storyboard, create, peer review, revise and present digital research products that include visual, audio, and narrative components. All technical skill-levels are welcome.

Prerequisite(s): INTU 1000.

INTU 3000 Feminist Epistemologies and Research Design (3)
In this course, students will read and discuss key texts that outline philosophies and methods of feminist knowledge production. Students will engage with foundational feminist epistemologies, such as standpoint theory, situated knowledges, and intersectionality, to understand the complex relationships between gender, race, class, and other categories that shape the distribution of power both within and outside the academy. They will explore research methods across fields while examining important debates about a researcher's role and responsibilities to her/his/their subjects and the public. Research ethics regarding data collection, interpretation, and dissemination will be discussed through the lens of feminist and antiracist commitments. Applying these interdisciplinary theories of knowledge production, students will develop a research proposal. During weekly writing workshops, students will draft, peer-review, and revise portions of a research proposal that address the question, methods, literature review, and significance of that project.

Prerequisite(s): INTU 2000.
Course Limit: 1

INTU 3010 Global Culture Awareness (1)
Course Limit: 99

INTU 3020 Cross Cultural Engagement (1)
Prerequisite(s): INTU 3010.
Course Limit: 99

INTU 3030 Post Study Abroad Re-Entry (1)
Prerequisite(s): INTU 3020.
Course Limit: 99

INTU 3040 Community Engaged Conservation Research Design (3)
This 3 credit course builds student capacity to conceptualize, design and articulate community engaged research projects. Along with research design, the course trains students to think and communicate across disciplines via readings, assignments and workshops. Over the course of the semester, students will develop research questions and methodological approaches to produce an ethical, independent research proposal to investigate a problem or question related to rainforest conservation. In addition, students will learn to provide feedback and constructive criticism to the work of their peers and engage with critical perspectives on issues that arise in community engaged conservation. The expectation is that students will go on to implement the research projects that they develop in the context of this course. This course fulfills the Newcomb-Tulane College intensive writing requirement and provides an optional service-learning component.

Prerequisite(s): EBIO 3780.

INTU 3050 Grant-Funded Research (1)
This course is designed for students participating in a faculty-mentored research project who have received a grant through NTC and/or other campus entities. The goal of this course is to offer opportunities for students to present the outcomes of their research in a structured forum at the Tulane Idea and Research Symposium.

Course Limit: 3

INTU 3060 Grant-funded Internship Course (1)
This course is designed for students participating in a summer internship who have received a grant through NTC and other campus entities. The goal of this course is to offer students opportunities to present the outcomes of their internship in a structured forum at the Tulane Idea and Research Symposium.

Course Limit: 3

INTU 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): INTU 3030.

Maximum Hours: 99

INTU 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

INTU 3910 Special Topics (0-4)

Maximum Hours: 99

INTU 3920 Special Topics (0-3)

Maximum Hours: 99

INTU 4000 Newcomb Research Seminar (1)
This course is designed to provide support and resources from the professor for students in the Newcomb Scholars Program to complete their independent research project. In this course, Newcomb Scholars will incorporate what they have researched and written in the previous seminars, finalize their research question, determine the appropriate research methods, and begin to answer that question in a comprehensive and systematic way that would be recognized by the relevant scholarly community as constituting original and important research. Each Scholar is expected to understand the work that has previously been done in her field and find a place for her research in that body of knowledge. Students will use their skills of analysis, criticism, and synthesis to address or respond to any relevant issues in their fields of study. Each student will present their research project at a campus conference in the Spring semester.

Prerequisite(s): INTU 3000.

INTU 4310 LSAT Review (1)

INTU 4340 MCAT Review (1)

INTU 4560 Study Abroad Internship (1-4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

INTU 5380 Junior Year Abroad (1-6)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

INTU 6850 Reproductive Rights, Law, and Policy (1)
This course will focus on the Louisiana Legislative Session as a means of understanding the legislative process, civic engagement with that process, and policy and legal concerns that proposed legislation can raise – all within the context of understanding the legal framework surrounding abortion access and reproductive rights. The course will include legal and policy analysis of the most significant U.S. Supreme Court cases involving abortion rights, as well as an overview of the statutory and regulatory landscape applicable to abortion in Louisiana. With that backdrop, the course will then take a hands-on approach to the Louisiana Legislative Session, focusing on proposed bills that will impact reproductive justice. Guest speakers will help students to understand the policy implications – both intended and unintended – related to the proposed bills, as well as other legislation proposed or passed during recent legislative sessions.

INTU 7000 Year of Service Fall (0-12)

Maximum Hours: 99

INTU 7010 Year of Service Spring (0-12)

Interdisciplinary Studies (INTD)

INTD 2000 Interdisciplinary Liberal Arts Seminar (4)
Topics to be co-taught from different perspectives by faculty in different disciplines. Limited to sophomores by application. Students must register for INTD 2010 in the subsequent semester. Enrollment by permission of the Dean's Office of the School of Liberal Arts.

INTD 2810 Special Topics (3)
Special topics course as designed by visiting or permanent Liberal Arts faculty offering an interdisciplinary course. For description, consult the School of Liberal Arts Dean's Office. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

INTD 2910 Interdisciplinary Study (4)
Permission for this course must be granted by the Dean of Liberal Arts.

INTD 6010 Responsible Conduct of Research (0)
A series of seminars which covers various important protocols of research.

INTD 7010 Community Engagement I (1)

INTD 7020 Sem in Comm Engagement II (1)

INTD 7030 Capstone Sem Comm Engagement (1)

INTD 7070 Community Engaged Scholarship (0)
Course may be repeated 3 times for credit.

Course Limit: 3

INTD 7990 Independent Study (1-9)

INTD 9980 Master's Research (0)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

INTD 9990 Dissertation Research (0)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

International Business (INBS)

INBS 3100 International Business (3)
This course deals with the management of global expansion and strategies of firms. To be successful in global business ventures, managers must be prepared to acknowledge and experience the complexities of operating in an international context. This task requires understanding how the world political and economic systems operate and knowing how the unique challenges of different business cultures and institutions affect the development and implementation of business strategies. This course introduces the student to some special business cases set in an international context: managing human resources, international finance, global operations, international team building and leadership, and business strategy.

Prerequisite(s): ECON 1010, 1020 and PSYC 1000 and (MATH 1150 or 1210) and MATH 1230.

INBS 4100 International Business Practices (1-4)
INBS 4100 introduces students to international business practices as experienced in the context of a specific region or country. The course gives students international business exposure and a unique cultural experience with an opportunity to encounter, first-hand, a global business environment. The location, content and schedule for this course vary each year.

INBS 4200 International Business Environment (1-4)
INBS 4200 provides students with an understanding of the international environment in which businesses must operate. The course examines business practices abroad, patterns of international interdependence, international finance, global operations, and/or the effect of culture on conducting business internationally. The goal is to improve students' critical, analytical and creative thinking skills in international business operations.

INBS 5380 Business Study Abroad - INBS (1-20)

INBS 5390 Business Study Abroad - INBS (1-20)

INBS 6610 Latin Amer Busn Environ (3)

INBS 7000 Business Modeling and Marketing (3)
This course will develop in the student the balance between creative and analytical marketing skills needed to identify, design and fine-tune a business idea, either within a corporation or a start-up. The creative mindset will be developed through hands-on experience while proposing, iterating, and zooming into a business idea, and translating it into a coherent business model and its value proposition for a specific target audience. In conjunction with the business modeling experience, the student will analytically understand key concepts of strategic and operational marketing including market segmentation, targeting, and positioning, in addition to the basic steps of an integrated marketing communications strategy.

INBS 7100 Healthcare in Cent America (3)
This course exposes students to the healthcare delivery and financing system in Guatemala and more broadly in Latin America. The class is structured as an immersion experience in Guatemala City and will draw on extant healthcare delivery and financing structures in both the United States and Latin America. Physicians, physician leaders, and healthcare managers will experience various delivery and academic sites in Guatemala and explore issues related to healthcare structure, education, financing, medical tourism, and cultural competency, among others. Students will engage in a variety of site visits, exercises, and projects which will require the application of course materials and insights.

INBS 7200 Global Strategy & Competition (3)

INBS 7300 International Finance (3)

International Health & Sustainable Development (IHSD)

IHSD 6010 Comparative Health Systems (3)
Health systems around the world face the challenge of ensuring continued improvement in population health with a limited availability of resources. Despite their common challenges, no two health systems are identical. This course introduces comparative analysis of health system design and performance, both at the population level and through an equity lens. The course consists of 30 sessions. Readings, videos, and activities will be assigned to add to the student's knowledge and facilitate discussions. Students will be assessed through exams and reflection papers, and a group health system analysis which they will present verbally and in a report. There are no prerequisites for this course. This course is required for the Master's in Public Health sustainability track in the Department of International Health and Sustainable Development.

IHSD 6130 Health Economics for Developing Countries (3)
This course provides students with the background and tools to understand, analyze, and evaluate economic aspects of health systems problems of low- and middle-income countries. The course covers the following topics: health and economic development, micro-economic aspects of health care services, health care financing, and economic evaluation. Most examples used in the class will pertain to health system interventions that aim to improve the availability and quality of health services. Lectures will be combined with problem sets, class discussions, and group presentations that focus on issues affecting the demand for and supply of health care services as well as financial and payment interventions that aim to improve the performance of health systems.

IHSD 6200 Evaluation of Program Interventions in Global Health (3)
This course provides in-depth training in basic concepts, principles, and practices for impact evaluation of public health interventions in international settings. Examples focus on sexual and reproductive health interventions (including HIV-prevention), but the skills learned apply to all health areas. A team-based project allows students to apply impact evaluation skills (e.g., identification of study designs, indicators, data, analytical approach) to real-life settings. The course provides grounding in evaluation study designs, develops skills in designing evaluation plans, and is a basis for specialized courses on data analysis, sampling, and advanced evaluation research. This course is designed for students interested in program monitoring and evaluation jobs in global contexts and should be taken in lieu of SBPS-6340 and TRMD-6200.

Prerequisite(s): SPHL 6080 or 6880.

IHSD 6240 Health Problems of Developing Societies (3)
Health Problems of Developing Societies is tailored to and intended for students entering the MPH program in International Health and Sustainable Development at Tulane University's School of Public Health and Tropical Medicine. The course provides an overview of the major health problems facing low-and-middle income countries (LMIC); the divergent historical patterns of public health in economically rich versus poor societies; the links among public health, development, and culture; and strategies for improving public health in LMIC. There is no prerequisite for the course.

IHSD 6300 Monitoring of Global Health Programs (3)
This course equips students with program monitoring principles and skills for tracking the performance and results in public health programs. The course will focus on programs and interventions in global settings, although the skills can also be applicable in the domestic context. Students will learn to develop frameworks and models for program monitoring and evaluation, develop appropriate indicators and plans to measure program implementation and results, and apply them to actual programs. This course is required for MPH students in IHSD and to be followed by a course on program evaluation. It is designed for students who are interested in program monitoring and evaluation jobs in global contexts, and should be taken in lieu of SBPS 6340.

Prerequisite(s): SPHL 6080 or 6880.

IHSD 6331 Public Health and Nutrition in Complex Emergencies (3)
The goal of this course is to familiarize students with the approaches, field methods, and selected technical knowledge required to mitigate the nutritional and public health effects of complex humanitarian emergencies and disasters. Lectures and discussions will be provided by experienced faculty from university partners, government officials, and field-based practitioners with experience working in emergency contexts. Because of the unique opportunity to access guest speakers and materials from the Epidemiologic Intelligence Service at CDC and the applied nature of this course, it is offered in intensive format.

IHSD 6760 International Family Planning: Policies and Programs (3)
This course is designed to equip students with a knowledge and skills to work in international family planning, one of the most successful initiatives to date in the field of international development. Organized around the six pillars of the WHO framework, it covers the fundamentals of family planning programming through the lens of health systems strengthening. It reviews the landmark events in the history of family planning that shape policy today. Students will develop presentation skills and will learn to use "tools of the trade" in this field (reference materials, software tools). They will analyze the family planning situation and make recommendations for improvements in a country of their choice. Recommended for those intending to work in reproductive health.

IHSD 6790 Food Security and Resilience (3)
Students will examine the impacts of rapidly globalizing food systems on food and nutrition security at local, household, and intra-household levels in this course. This topic is especially relevant now because of the increased policy attention and resources for programming that are focused on promoting improved food security, nutrition and sustainability. This course will provide students with the analytical skills for identifying the elements of resilient food systems and the outcomes of food and nutrition security, access to organizations prominent in international food security policy discussions, and a background in readings relative to this debate.

IHSD 6830 International Health Policy (3)
The primary aim of this course is to present an overview of health policy issues in low- and middle-income countries and to provide skills in analyzing the health policy process. In addition to providing an overview of policies at the country level to improve health systems performance, the course also looks at the role governments, the private sector, and international health partners play within national health policy frameworks. Factors such as power, context, and governance are analyzed with both the practical and the ethical considerations of how the policy process operates in different cultures. This course helps students develop their own capacities to analyze, criticize, evaluate, and construct policy-oriented arguments.

IHSD 6860 Public Health in Cuba (3)
The course addresses how the Cuban government has prioritized the development of universal health care in the last five decades, with a special emphasis on the efforts to strengthen primary health care (PHC) and to articulate PHC with more complex levels of care. The course contextualizes and analyzes the programs to prevent infant mortality and to prevent and control infectious diseases such as polio, malaria, tuberculosis, dengue, and HIV, as well as the economic and political context in which these public health initiatives developed. The course takes place in Havana in partnership with the National School of Public Health of Cuba. It includes site visits to health facilities and community-based organizations.

IHSD 6870 Adolescent Health Policies and Programs (3)
This course serves to: (1) increase knowledge and awareness of the context, design, and effectiveness of interventions to prevent and respond to adolescent health risk taking; and (2) develop professional skills in the use of quantitative methodologies to determine the health needs/problems of adolescents and in the formulation of workable strategies to respond to identified needs. The course includes discussion of major policy issues and controversies surrounding specific adolescent health program approaches. Students will compare interventions for addressing common health problems in adolescence and meeting the needs of special youth populations in low- and middle-income countries with similar interventions in developed countries. The key components of successful and unsuccessful programs in specific health areas will be addressed.

IHSD 7020 Communication Research for HIV/AIDS and Reproductive Health (3)
This course constitutes a practical introduction to the research methodologies used in planning a communication program for promoting desirable health behaviors, designing appropriate messages, pre-testing communications and evaluating program effectiveness for changing behaviors. Most examples and datasets will pertain to international reproductive healthor HIV/STI prevention, but skills learned will be applicable to other areas of public health. Lectures will be combined with exercises in which students carry out communication pre-testing, conduct qualitative research (focus group discussions or in-depth interviews) and analyze the results, and conduct secondary analyses of existing survey data using statistical software. These skills are basic to the systematic approach in designing, implementing and evaluating a health communication program aimed at changing health behaviors.

IHSD 7070 The Social Determinants of HIV/AIDS (3)
HIV/AIDS is the fifth leading cause of disease burden and the sixth leading cause of death globally. Patterns of infection serve as a vehicle for understanding social disparities. The goal of this course is to provide students with the skills to critically assess the social determinants of HIV and public health strategies to mitigate their effect on the epidemic. Students will participate in group work and individual assignments that apply concepts discussed in class and challenge students to map causal mechanisms to interventions. The course format combines readings, presentations, group activities, mini-assignments and a final paper. By completion of the course, students will gain the knowledge, skills and agency to become active participants in the global response.

IHSD 7140 Monitoring and Evaluation of HIV/AIDS Programs (3)
This course serves to: (1) increase knowledge and awareness of the context, design, and effectiveness of HIV/AIDS prevention, care and treatment programs; (2) strengthen skills in the application of methods and tools for global- and national-level monitoring and evaluation of the HIV epidemic and response. The course focuses on low and middle-income countries and addresses monitoring and evaluation (M&E) approaches for specific HIV/AIDS programmatic areas. These programmatic areas may include: HIV prevention; HIV treatment; social and behavioral change communication; community mobilization; and tuberculosis/HIV integration. Students will develop professional skills in M&E of programs to address the needs of key populations and in utilization of M&E results to prioritize options for improving the HIV/AIDS response.

Prerequisite(s): SPHL 6050*.
* May be taken concurrently.

IHSD 7200 Sustainable Human Development: Theory and Practice (3)
The purpose of this course is to gain an in-depth understanding of the origins, evolution, and characteristics of Sustainable Human Development (SHD) both in terms of formulation and implementation. SHD is a holistic approach to development, encompassing economic, political, social, and environmental issues that are interdependent and complementary. We will first present an introduction to the notion and history of global development and examine different theories and strategies that have dominated the field since the 1950s, with a particular emphasis on SHD. We will then address various thematic issues and goals of development, such as understanding multifaceted poverty, improving health and education outcomes, striving for social inclusion, addressing the many consequences of climate change, and managing today's migrations.

IHSD 7210 Survey Data Analysis in Family Planning/Reproductive Health Research (3)
This course is intended for doctoral and advanced Masters students. The course will introduce students to key concepts and measures used in the monitoring and evaluation of family planning and reproductive health (FP/RH) programs. Students will gain an understanding of reproductive health and health service indicators, data sources and their strengths and limitations. This course also provides basic hands-on quantitative skills that are essential in conducting monitoring and evaluation exercises in FP/RHprograms. Students will learn how to use the Stata statistical software package to manage and analyze survey data and to construct reproductive health indicators. Students will also learn to interpret and present quantitative data, using graphs and tables, in ways that are suitable for scientific manuscripts.

Prerequisite(s): (SPHL 6050 or 6850) and (SPHL 6060 or 6860).

IHSD 7300 Implementation Practice (3)
Public health programs continually implement new interventions to improve health outcomes and achieve sustainable change. This course focuses on what, why, and how interventions work in real world settings. The course builds students' knowledge of key steps and tasks needed for moving through the program implementation process: from problem exploration and root-cause analysis through intervention selection, adaptation, piloting, and testing, to using the findings to adapt the program, and developing a scale-up strategy. Students will: (a) apply a step-by-step approach to implementation research; (b) analyze factors influencing the successful adoption of health interventions; (c) describe how to carry out each phase of the implementation process; (d) analyze indicators of implementation success; and (d) propose approaches for developing a scale-up strategy.

IHSD 7340 Population Mobility and Health (3)
This course introduces students to the relationships between population mobility and health. It spans various mobile populations, including refugees, immigrants, those displaced due to conflict, climate change, and human trafficking, as well as individuals experiencing homelessness. Beyond examining the impact of political, economic, and cultural factors on mobility and health at global and local levels, each student will develop a policy brief addressing critical health challenges faced by a group experiencing displacement or some other form of mobility. The course is organized around three themes: 1) current patterns and trends in population mobility; 2) theoretical models linking different types of mobility with associated health outcomes; and 3) public health challenges to meeting routine and exceptional health needs of mobile populations. Previously listed as SBPS 7340.

IHSD 7440 Household Sampling Applications in Resource-poor Settings (3)
The course focuses on a wide variety of public health applications and is applicable to virtually all academic and professional settings where mapping is used. Each lecture begins with a PowerPoint presentation to introduce fundamental mapping concepts and is followed with in-class exercises to reinforce hands-on application. Two in-class, paper-based exams are given to monitor and assess students' understanding of the course concepts.

Prerequisite(s): (SPHL 6060* or 6860) and (SPHL 6050* or 6850).
* May be taken concurrently.

IHSD 7990 Independent Study (1-3)

IHSD 8250 Advanced Research Methods in Global Health (3)
This course is intended for upper-level masters students interested in applied research methods and doctoral students working towards their dissertations. The focus is on providing skills for conducting program, impact or other forms of evaluation using econometric methods to analyze health, population, and nutrition data. Of particular focus will be analyses of population-based household surveys using the Stata 16.0 statistical software package. Key topics that will be covered are: research methods and designs, linear regression models with their assumptions and limitations, limited dependent variable models (logit, probit tobit, multinomial logit), instrumental variables and two-stage least squares, sample selection and censored regression models, multilevel models, propensity score matching, applications of program evaluations, and time series analysis with pooled and longitudinal data.

Prerequisite(s): (SPHL 6050, 6850 or BIOS 6030) and BIOS 6040 and (SPHL 6060, 6860 or EPID 6030).

IHSD 8990 Independent Study (1-3)

International Studies & Business (ISIB)

ISIB 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ISIB 1910 Study Abroad Pre-Dep (1)
This course is designed to give Altman Scholars the information and skills necessary to make the most out of their Rising Sophomore Study Abroad Experience. Through this experience, students will cultivate intercultural communication skills, enhance their knowledge of an important emerging market, be pushed out of their comfort zone, and provide meaningful public service in an international context. This course will equip students with the skills to maximize these outcomes through classroom learning, experiential reflection assignments, and research projects.

ISIB 2020 Special Topics (3)
Special Topics

Maximum Hours: 99

ISIB 2030 Perspectives on Global Citizenship (3)
Perspectives on Global Citizenship urges students to consider their role in their local environments as they prepare for and embark on their education abroad journey. Together, we will examine the methods available to study abroad students to learn about and exist within the various cultures that comprise our everyday locales. We will also deconstruct the notion of a "global citizen" in order to redefine the many ways that one can become a global citizen in our modern, interconnected world. In addition to identifying and sharpening the tools and skills available to Altman Scholars in their quest to become global citizens, the course also considers the various assets and limits all people have as they work, migrate, travel and live in the world. By the conclusion of the course, students will define their specific goals in terms of becoming a global citizen. They will also understand how geography, socioeconomics, media, politics and history all converge to shift the tools to which people around the world have access, including the scholars themselves, on the quest for global citizenship.

ISIB 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ISIB 3010 Introduction to Globalization (3)
Open to Altman scholars only, this course will utilize interdisciplinary and experiential approaches to explore of debates surrounding globalization. PSDV majors or minors may substitute ISIB 3010 for PSDV 2400.

ISIB 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ISIB 6010 Approaches to Global Dilemmas (3)
Utilizing approaches to learning that are theoretical, empirical, and interdisciplinary, this course will assess contemporary global dilemmas in a variety of developing and developed world regions and the corresponding role of the states in combatting political, ecological, economic insecurity. The course is taught by faculty in various social sciences and humanities disciplines.

ISIB 6020 Altman Senior Seminar (1)
The course an experiential quasi-independent study that affords graduating seniors an opportunity to critically reflect upon the knowledge and skills gained through the Altman curriculum and their study abroad experiences. Students will assess the "higher level learning" and personal transformation that took place during their junior year abroad experiences. They will also attend scholarly events rooted in liberal arts and business disciplines and utilize the methodological approaches and theoretical content gained through the Altman Program to critically the theoretical and empirical questions presented at these events.

Internship (INTR)

INTR 1990 Liberal Arts Internship (1)
Registration with instructor/department approval only. Can be taken multiple times but only counts once towards degree.

INTR 1991 Liberal Arts Internship (1)
Registration with instructor/department approval only. Can be taken multiple times but only counts once towards degree.

INTR 5380 Study Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

INTR 5390 Liberal Arts Internship (1-20)

Italian (ITAL)

ITAL 1010 Elementary Italian I (4)
Development of the skills of speaking, listening, reading, and writing Italian both in the classroom and through audio work.

ITAL 1020 Elementary Italian II (4)
A continuation of the objectives presented in Italian I.

Prerequisite(s): minimum score of PASS in 'ITAL 1020 Placement', ITAL 1010 or 1030.

ITAL 1030 Elem Ital For Romnc Lang I (4)
Same material as ITAL 1010 but designed for students whose previous knowledge of another Romance language or Latin enables them to grasp the principles of Italian grammar and Italian vocabulary more efficiently. Development of the skills of speaking, understanding, reading, and writing Italian, both in the classroom and the language laboratory.

Prerequisite(s): minimum score of PASS in 'ITAL 1030 Placement'.

ITAL 1040 Elem Ital Romnc Lang II (4)
A continuation of the objectives of Italian for Romance Language Students I, with special emphasis on reading.

Prerequisite(s): minimum score of PASS in 'ITAL 1040 Placement', ITAL 1010 or 1030.

ITAL 1050 Experiencing Rome: Conversational Language and Culture (3)
This course is designed for the Tulane Summer program, and it aims to provide students with the possibility to learn the Italian language while taking advantage of the fully immersive environment of the City of Rome.

ITAL 1280 Junior Semester (0)
Junior Semester.

ITAL 1290 Semester Abroad (1-20)
Semester abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ITAL 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

ITAL 2030 Intermediate Italian (4)
A complete second-year course. Intensive grammar review with readings from standard Italian texts. Comprehension and conversational skills are stressed. Written expression also emphasized.

Prerequisite(s): minimum score of PASS in 'ITAL 2030 Placement', ITAL 1020 or 1040.

ITAL 2040 Intermed Ital Romnc Lang (4)
A complete second-year course, covering the same material as ITAL 2030, but designed for students whose previous knowledge of another Romance language or Latin enables them to grasp the principles of Italian grammar and Italian vocabulary more efficiently. Intensive grammar review with readings from standard Italian texts. Comprehension and conversational skills are stressed. Written expression also emphasized.

ITAL 2390 Semester Abroad (1-20)
Semester abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ITAL 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

ITAL 3000 Intro Italian Lit (3)
An introduction to Italian literature, including readings from Dante, Petrarch, Boccaccio, Poliziano, Machiavelli, Ariosto, Castiglione, Goldoni, Manzoni, Pirandello, Calvino, among others.

Prerequisite(s): minimum score of PASS in 'ITAL 3000 Placement' or ITAL 3130.

ITAL 3060 Rome Capital of Italy (3)
The course will focus on the central role and importance of Rome inside Italian culture and history along 150 years from the Italian Risorgimento (1871) to the present days, In particular, it will analyze specific social and cultural phenomena related to the 'Eternal City' such as the movie industry in the 50's, the students' revolution in the 60's, the overpopulation and outgrowing of the outskirts in the 70's, the new symbol of the parasitic government in the 90's, the new migration waves in the last 20 years. Lectures in English, reading and writing in Italian.

ITAL 3130 Advanced Convers & Comp (3)
The course aims primarily at perfecting the student's speaking and writing ability. Articles taken from newspapers, periodicals, the Internet, etc., serve as a basis for discussion and familiarize students with contemporary Italy. The course presupposes a solid grammatical foundation and any grammar review is given only on an individual basis.

Prerequisite(s): ITAL 2030 or minimum score of PASS in 'ITAL 3130 Placement'.

ITAL 3200 Italian for business (3)
Italian for Business is a communicative course designed for students who wish to be prepared in professional areas related to international trade and organizations. It focuses on vocabulary, topics, and cultural aspects specific to an Italian-speaking professional environment. It reinforces the skills of listening, speaking, reading, and writing through the practice of simulated professional situations. The first part of the course will place more emphasis on the practice of communicative activities pertaining to professional functions. The second part of the course will place more emphasis on the student's understanding of company structures and operations. Taught in Italian.

Prerequisite(s): ITAL 2030, 3000, 3060, 3130, 3250, 3300, 4010, 4020, 4030, 4040, 4510, minimum score of PASS in 'ITAL 4000 Level Placement', minimum score of PASS in 'ITAL 3000 Placement', minimum score of PASS in 'ITAL 3130 Placement', minimum score of PASS in 'ITAL 3250 Placement' or minimum score of PASS in 'ITAL 3200 Placement'.
Corequisite(s): ITAL 3890.

ITAL 3250 Italian Language through History and Culture (3)
The course aims at improving the speaking and writing ability of students while familiarizing them with the development of Italian culture and history from the Middle Ages to the 21st century. Students discuss historical event and answer questions using the grammar and idioms learned in the grammar review. Writing assignments are based on the historical and cultural component of the course.

Prerequisite(s): ITAL 3130*, 3200 or minimum score of PASS in 'ITAL 3250 Placement'.
* May be taken concurrently.

ITAL 3300 Topics Ital Lit & Cinema (3)
Subject varies with instructor. An introductory study of the major contributions of Italian literature to Western thought. The course emphasizes particularly those authors whose works have interdisciplinary ramifications, e.g. Dante, Petrarch, Machiavelli, Galileo, Pirandello, Calvino. The course may also focus on the history of Italian cinema or a special topic in Italian cinema, such as the silent era, neorealism, the work of a major director, and the relationship between literature and film. Notes: May be repeated for credit provided that a different topic is covered. The course counts for Film Studies credit only when the focus is on cinema.

Course Limit: 99

ITAL 3330 Ital Lit In Translation (3)
Subject varies with instructor. A study of the major contributions of Italian literature to Western thought. The course emphasizes particularly those authors whose works have interdisciplinary ramifications, e.g., Dante, Petrarch, Machiavelli, Galileo, Pirandello, Calvino. The course may also focus on the history of Italian cinema or a special topic in Italian cinema, such as the silent era, neorealism, the work of a major director, and the relationship between literature and film. Notes: May be repeated for credit, provided that a different topic is covered. The course counts for FMST credit only when the focus is on cinema.

Course Limit: 99

ITAL 3360 Rome Capital of Italy (3)
The course will focus on the central role and importance of Rome inside Italian culture and history along 150 years from the Italian Risorgimento (1871) to the present days, In particular, it will analyze specific social and cultural phenomena related to the 'Eternal City' such as the movie industry in the 50's, the students' revolution in the 60's, the overpopulation and outgrowing of the outskirts in the 70's, the new symbol of the parasitic government in the 90's, the new migration waves in the last 20 years. The course is taught in English. including reading and writing.

ITAL 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): ITAL 3200.

Maximum Hours: 99

ITAL 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

ITAL 4010 Topics 13 & 14 Central Italian Literature (3)
Topics may include St. Francis and early minor authors, Dante's Divine Comedy and early works, Boccaccio's Decameron and minor works, Petrarca's Canzoniere and minor works. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ITAL 3000, 3130, 3200, 3250, 3300 or minimum score of PASS in 'ITAL 4000 Level Placement'.

Maximum Hours: 99

ITAL 4020 Topics In Ren Lit (3)
Topics may include the literati of the Medici court, lyric poetry of the Petrarchisti, the drama, the epic poem, political and social treatises. Course may be repeated up to unlimited credit hours.

Prerequisite(s): minimum score of PASS in 'ITAL 4000 Level Placement', ITAL 3000, 3130, 3200, 3250 or 3300.

Maximum Hours: 99

ITAL 4030 Topics 17th & 18th C Lit (3)
Works of various literary and philosophical writers will be studied. Topics may include the effect of the Inquisition, the Petrarchan and Arcadian traditions, theater as social and political laboratory, Galileo, Bruno, Campanella, Marino, Vico, Metastasio, Gozzi, Goldoni, the beginnings of the Risorgimento in the works of such authors as Alfieri, Parini, and Foscolo. Course may be repeated up to unlimited credit hours.

Prerequisite(s): ITAL 3000, 3130, 3200, 3250, 3300 or minimum score of PASS in 'ITAL 4000 Level Placement'.

Maximum Hours: 99

ITAL 4040 Topics 19 & 20 Cent Ital Lit (3,4)
Topics may include Leopardi, Manzoni, Carducci, Verga, Pascoli, D'Annunzio, Pirandello, Calvino, Pasolini; the avant-garde; contemporary poetry, novel or drama; the history of Italian cinema and special topics in Italian cinema, such as the silent era, neorealism, the work of a major director, and the relationship between literature and film. Notes: May be repeated for credit provided a different topic is covered. Course may be repeated up to unlimited credit hours.

Prerequisite(s): minimum score of PASS in 'ITAL 4000 Level Placement', ITAL 3000, 3130, 3200, 3250 or 3300.

Maximum Hours: 99

ITAL 4440 Topics Lit/Cinema Transl (3,4)
Subject varies with instructor. An advanced study of the major contributions of Italian literature to Western thought. The course emphasizes particularly those authors whose works have interdisciplinary ramifications, e.g. Dante, Petrarch, Machiavelli, Galileo, Pirandello, Calvino. The course may also focus on the history of Italian cinema or a special topic in Italian cinema, such as the silent era, neorealism, the work of a major director, and the relationship between literature and film. May be repeated for credit provided that a different topic is covered. Taught in English. Fulfills capstone requirement for FMST when the course is a film topic. For capstone credit, students should also register for FMST 5110 with 0 credits. Notes: May be repeated for credit provided that a different topic is covered.

ITAL 4510 Narrazioni della migrazione in Italia: nuove face di una nazione (3,4)
The course provide an overview on the last thirty years of migration's crisis in the Mediterranean Sea, with a focus on the immigration waves to Italy. Particular attention will be paid to the literary migrant voices.

Prerequisite(s): minimum score of PASS in 'ITAL 4000 Level Placement', ITAL 3000, 3130, 3200, 3250 or 3300.

ITAL 4515 Narratives of Migration in Italy: New Facets of a Nation (3,4)
The course provide an overview on the last thirty years of migration's crisis in the Mediterranean Sea, with a particular focus on the immigration to Italy. In particular, it will focus on the literary voices of the migrants, while unpacking its social, political, anthropological contexts. Taught in English.

ITAL 4560 Internship (1-2)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Registration is completed in the academic department sponsoring the internship on TUTOR. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ITAL 4570 Internship (1-2)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Registration is completed in the academic department sponsoring the internship on TUTOR. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ITAL 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ITAL 4891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ITAL 4910 Independent Study (1-3)
Independent study. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ITAL 4920 Independent Study (3)
Independent study. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ITAL 4990 Honors Thesis (3)
Honors Thesis.

ITAL 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): ITAL 4990.

ITAL 5190 Semester Abroad (1-20)
Semester abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ITAL 5380 Junior Year Abroad (1-20)
Junior year abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ITAL 5390 Junior Year Abroad (1-20)
Junior year abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ITAL 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

ITAL 6010 Topics:13th&14th Cen Lit (3)
See ITAL 4010 for description.

ITAL 6020 Topics:Renaissance Lit. (3)
See ITAL 4020 for description.

ITAL 6040 Topics:19th&20th Cen Lit (3)
See ITAL 4040 for description.

ITAL 6150 Concepts of Lit Crit (3)
Theories of literature and their application in practical criticism: textual, historical, structural, thematic, etc. Emphasis on contemporary schools of criticism.

ITAL 6910 Spec Prob In Ital Lit (3)
Subject varies. Principally reading and research. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ITAL 6920 Spec Prob Itl Lang & Lit (3)
Subject varies. Principally reading and research. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Japanese Language (ASTJ)

ASTJ 1010 Beginning Japanese I (4)
Emphasizes conversational Japanese. Includes study of basic grammar and introduction of hiragana, and katakana.

ASTJ 1020 Beginning Japanese II (4)
Emphasizes conversational Japanese based on text in hiragana, katakana, kanji. Includes study of complex grammar and introduction of approximately 100 kanji.

Prerequisite(s): minimum score of PASS in 'ASTJ 1020 Placement' or ASTJ 1010.

ASTJ 2030 Intermediate Japanese I (4)
Conversation, reading, and writing based on text in hiragana, katakana and kanji. Continuation of study of complex grammar and introduction of approximately 100 additional kanji.

Prerequisite(s): minimum score of PASS in 'ASTJ 2030 Placement' or ASTJ 1020.

ASTJ 2040 Intermediate Japanese II (4)
Conversation, reading, and writing based on text in hiragana, katakana, and kanji. Continuation of study of complex grammar and introduction of approximately 150 additional kanji.

Prerequisite(s): minimum score of PASS in 'ASTJ 2040 Placement' or ASTJ 2030.

ASTJ 3050 Advanced Japanese Speaking I (3)
Development of conversational, reading and writing skills in Japanese.

Prerequisite(s): ASTJ 2040 or minimum score of PASS in 'ASTJ 3050 Placement'.

ASTJ 3051 Advanced Japanese Speaking II (3)
ASTJ 3051 is a continuation of ASTJ 3050, reinforcing previously learned grammar points as well as deepening knowledge of Japanese culture and society through discussion and reading.

Prerequisite(s): ASTJ 3050 or minimum score of PASS in 'ASTJ 3051 Placement'.

ASTJ 3060 Advanced Japanese Reading II (3)
A continuation of objectives in ASTJ 2040, intended to provide an advanced level of skills in Japanese.

Prerequisite(s): ASTJ 2040.

ASTJ 3910 Special Topics (3)

Maximum Hours: 99

ASTJ 4060 Advanced Japanese Comp & Pres (3)
This is a fourth-year advanced Japanese composition and presentation course that will help students develop their vocabulary, writing, and oral presentation skills. The students will learn about effective communication strategies in different types of linguistic situations. The course will also expose students to various aspects of Japanese culture and society.

Prerequisite(s): minimum score of PASS in 'ASTJ 4000 Level Placement' or ASTJ 3051.

ASTJ 4070 Advanced Japanese Composition & Presentation II (3)
This class is a continuation of its prerequisite, ASTJ 4060. It is designed to equip the students with an ability to participate in Japanese conversation, exchange information and express feelings. The course also aims at deepening an understanding and developing appreciation for Japanese tradition as well as for the students' own culture.

Prerequisite(s): ASTJ 4060 or minimum score of PASS in 'ASTJ 4000 Level Placement'.

ASTJ 4910 Independent Study (1-3)
Independent study in Japanese language. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ASTJ 5190 Semester Abroad (1-20)
Semester abroad in Asian studies. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ASTJ 5380 Junior Year Abroad (1-20)

Maximum Hours: 99

ASTJ 5390 Junior Year Abroad (1-20)

Maximum Hours: 99

Jewish Studies (JWST)

JWST 1010 Introduction to Jewish Civilization: Foundations (3)
Judaism is a 3,500-year-old tradition that has developed over time as Jewish communities all over the world creatively interacted with the different cultural and historical milieus in which they lived. This course explores the origins of this first of the great Abrahamic faiths. Where does Judaism come from? What is the relationship between Judaism and the Hebrew Bible (also called the Tanakh or Old Testament)? Who holds power in Judaism, and where does this authority originate? How does Judaism understand gender and sexuality, both now and in ancient times? What are the essential texts and teachings of Israelite religion and later Judaism? We will take up these and other questions through study of diverse types of religious literature and historical evidence. No previous knowledge of Judaism or religious studies is required.

JWST 1020 Intro to Jewish Civ:Modern Era (3)
This course will introduce the students to the variety of religious expression and understanding in the Jewish tradition in the early modern and modern eras.The focus of the course will begin with biblical texts and then use writings from medieval, early modern, and the modern period to explore how the definitions of Jewishness and conceptions of Jewish belonging change over time. We will also study the social, literary, historical and cultural influences that helped shape the varieties of Jewish traditions across 1,000 years.

JWST 1110 Introduction To Judaism (3)
This course provides an overview of Jews and Judaism from religious, historical, and contemporary perspectives, including the study of Jewish practices, rituals, beliefs, and the holiday structure.

JWST 1250 Building Jewish Identity (3)
The starting point for our investigation of a distinctively secular Jewish conception of the world will be the fact that roughly on behalf of the American Jewish population possesses a secular non-religious orientation (American Jewish Identity Survey, 2001). How did this non-religious orientation arise amongst what many people consider to be a religious community? We will explore how certain non-religious features, such as shared culture, language, custom, dress, and education played an integral part in the definition of Jews and Judaism from their inception, and the role played by these features in the constitution of variant secular forms of Judaism and secular Jewish orientations in the modern period.

JWST 1290 Semester Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 1895 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

JWST 2100 Intro To Hebrew Bible (3)
In this course we will attempt to understand the Hebrew Bible better by examining samples of each of the major genres represented while at the same time placing each within its historical context. We will also focus upon questions of interpretation. By taking a general survey of the ways in which the Hebrew Bible has been read and interpreted in the past we will begin to understand how these ancient texts continue to live and speak to so many.

JWST 2390 Semester Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 2700 Jews and American Pop Culture (3)
Examines contributions Jews have made to American popular culture of the past two-and-a-half centuries. Analyzes the roles American media have played in relation to Jewish and American social, cultural, and political concerns. Unearths and historically contextualizes Jewish sensibilities, aspirations, anxieties, and negotiations in American graphic arts, comedy, music, film, theater, and other popular forms.

JWST 2710 Race, Class, and Jews (3)
This course explores the complex interplay between social class, race, and Jewish identity in the contemporary American context. By examining historical, sociological, and cultural perspectives, students will gain a comprehensive understanding of how social class and race intersect with the experiences of American Jews and shape their identities, interactions, and communities.

JWST 2810 Special Topics (1-3)
Special topic in Jewish Studies. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 2811 Special Topics (1-3)
Special topic in Jewish Studies.

JWST 2812 Special Topics (1-3)
Special topic in Jewish Studies.

JWST 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

JWST 3100 Select Topics (1-3)
This course will cover special offerings in Jewish history, religious thought and literature. It will be taught by various permanent and visiting Jewish Studies instructors. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 3101 Special Topics (3)
Special topic in Jewish Studies. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 3102 Select Topics (3)
Select topic in Jewish Studies. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 3103 Select Topics (3)
Select topic in Jewish Studies. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 3104 Select Topics (3)
Select Topic in Jewish Studies. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 3120 Jewish Leadership (3)
Considering leadership from a Jewish perspective means looking at how Jewish values guide our behavior as leaders. n this course, we will examine how leadership intersects with American Jewish Life. Throughout the course, we will interrogate the idea of Jewish leadership by drawing on Jewish and non-Jewish texts. We will also meet (virtually) with various Jewish leaders who run organizations, lead communities, or work in philanthropy to understand how they approach their work through the lens of Jewish leadership. This course also has an optional service learning component.

Corequisite(s): JWST 3890.

JWST 3130 Jewish Comics and Graphic Novels (3)
Historically contextualizes and closely examines Jewish contributions to the comics form through theoretical lenses of ethnicity, gender, trauma, and postmodern subjectivity. Explores Jewish aesthetic, textual, and intertextual concerns through the form's evolution from turn-of-the-century newspaper strips to contemporary graphic novels.

JWST 3140 Selected Readings Hebrew Bible (3)
In this course we will read specific books from the Hebrew Bible (in translation). The books read will rotate within three topics: Genesis; The Five Scrolls: Song of Songs, Ruth, Lamentations, Ecclesiastes, and Esther; The Prophets. The aim of this course is to provide the student with the opportunity to read portions of the Hebrew Bible in detail and how they have been read, interpreted, and explained throughout the centuries. The student will also learn to read the texts critically and begin to form his/her own understanding of the text.

JWST 3150 Second Temple Judaisms (3)
Starting with the return from Babylonia up until the destruction of the Jerusalem Temple in 70 C.E., Judaism was transformed from a local ethnic religious cult to a broad-based, diverse, and often fragmented sectarian religion. Many outside cultures and civilizations, from the ancient Persians to the Imperial Romans, influenced the Jews and Judaism through language, culture, and political contacts. We will study these cultural contracts and conflicts that caused Jews in the Second Commonwealth to develop competing understandings of Judaism.

JWST 3200 Modern Judaism (3)
This course will explore Jewish life and thought in the modern world.

JWST 3210 American Jewish History (3,4)
The course examines the nature of religion in modern and contemporary times, using Judaism in America as an example. How did the American Jewish community come into being? What is American about it? What is Judaic, that is, carrying forward aspects of classical Judaism? What is the meaning of the ethnic, social, and cultural traits emergent in contemporary Jewish life? Answers to these questions provide a picture of the character of American Judaism and of the complexities of contemporary religious life.

JWST 3220 Arab/Israeli Conflict (3,4)
This seminar traces the course of the Arab-Israeli conflict from the rise of Zionism, through the various Arab-Israeli wars, and up to the recent peace negotiations. Emphasis is on presenting the perspectives of all the parties to the Arab-Israeli conflict, and placing it in the context of the history of the Middle East as a whole.

JWST 3240 The Historical Jesus (3)
This course portrays Jesus in historical terms.

JWST 3310 Jewish Latin Amer Expressions (3)
An introduction to the cultural expressions of Jewish communities throughout Latin America.

JWST 3330 Jewish Music (3)
Survey of Jewish liturgical music from Biblical times to the present, and of Jewish popular, theatre, and folk music. Emphasis on European, Israeli, Sephardic, and American traditions.

JWST 3340 Early Amer. Jewish Hist. (3)
This class focuses on the period from the earliest Jewish settlers in mid-seventeenth century colonial America through the establishment of viable Jewish communities and institutions by the latter part of the nineteenth century. It covers the so-called Sephardic and Germanic periods of American-Jewish history, prior to the wave of Eastern European immigration. Among the themes explored are the tension between Jewish identity and the pressures of assimilation; the transformation of the synagogue; the emergence of Jewish social and cultural institutions; changing religious practices and the rise of Reform Judaism. Events and themes are placed within the broader context of American history.

JWST 3440 Holocaust In Film & Lit (3,4)
This course examines the Holocaust from various perspectives, disciplines, and media (including history, literature, and film) to investigate the conditions and limitations of representations of the Holocaust. May be counted toward a major in German only with departmental approval and provided all reading is done in German.

JWST 3500 Goldn Age Spansh Jewry I (3,4)
An examination of the cultural, political, and intellectual history of Spanish Jewry from the beginnings of Jewish settlement through the early reconquest. Special attention is given to the contributions of Hasdai ibn Shaprut and Samuel Ha-Nagid.

JWST 3520 Goldn Age Span Jewry II (3)
A study of the transition of Spanish Jewry from Moslem rule to Christian rule. The course includes an analysis of the several disputations of this period as well as the impact of the inquisition and expulsion. Special attention is given to the literature and philosophy of Maimonides, Crescas, and Solomon ibn Adret.

JWST 3530 Jewish Middle Ages (3)
The medieval period was perhaps the most prolific age for Jewish exploration and interpretation of Jewish religious texts and sources. We will examine a number of these philosophical, mystical, poetic, liturgic, and juridical in order to better appreciate the context and content of medieval concerns and solutions.

JWST 3540 Jewish Renaissance to Age Reas (3)
Cromwell's England, Florence, Vilna, Prague, and Spinoza's Amsterdam.

JWST 3590 Greek Philo & Jewish Tht (3)
Western culture has a double source, the Bible and Greek philosophy, or Jerusalem and Athens. Are the two traditions harmonious or do they stand in some essential tension with each other? While this was an especially vital challenge to thinkers of the Medieval period, it expresses a fundamental question about the relation between revelation and reason. This course will approach that question by examining the response of some important Jewish thinkers in the encounter with the teachings of Plato and Aristotle.

JWST 3600 Women In Hebrew Bible (3)
Women play a significant role in the Bible, one that is often at best misunderstood and at worst ignored. In this class we will examine the biblical stories and their historical context in order to understand the role of women in the biblical period as well as the role of the figures within the biblical text. We will also examine modern interpretations of these tests (including feminist readings and creative fiction based upon the biblical text) to see how modern scholars have understood these ancient texts in modern times.

JWST 3740 Israel: Culture, Pol, and Hist (3,4)
This course reviews various aspects of Israeli history, politics, society, and culture.

JWST 3750 Jewish ID in Modern Literature (3,4)
In this course we will examine novels, short stories, essays, and other literary works by European Jewish authors and study their literary, cultural and political context. We trace the development of literary forms that provide the basis for a modern Jewish self-consciousness and a sense of cultural identity. We compare the concepts of community and individualism, religious reform, and cultural notions of identity in the writings of authors from Eastern European and Western Europe. We also examine the differences of Jews in Europe in the period before the Holocaust.

JWST 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): JWST 3120.

Maximum Hours: 99

JWST 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 3931 Special Topics (3)
Special Topic in Jewish Studies.

JWST 4110 Rabbinic Judaism (3)
This course will focus on the literature and culture of the Rabbinic period (c. 200-600 C.E.). We will concentrate on reading and analyzing primary texts (Midrash, Mishnah and Talmud) as well as studying the historical context and methodological issues. This course will discuss the various literatures' styles, methods and contents as well as their internal and external cultural influences.

JWST 4120 Sexuality in Jewish Culture (3,4)
Examines conceptions of sexuality in Judaism and Jewish literature, art, and culture from antiquity to the present, with greatest emphasis on the twentieth and twenty-first centuries. Explores historic, aesthetic, and religious questions of ritual purity, embodied power and vulnerability, reproductive values, antisemitism, race and ethnicity, and self-expression.

JWST 4150 Women,Judiasm,Jewish Cul (3)
Women's roles in Judaism and Jewish life have been defined by the religious precepts and civil laws described in the Bible and interpreted by the rabbis in a patriarchal age. Nevertheless, throughout the ages, women have carved out areas for themselves within the Jewish religious, social, and political systems as well as fulfilled the roles prescribed to them. This course will study the women of Jewish history and how they have participated in, developed and shaped Jewish religious, social, and cultural life.

JWST 4210 American Jewish Movements (3)
This course will build upon the themes of American Jewish History, JWST 3210, and seek to understand how American Jews balanced their Jewish identity with their desire to be Americans.

JWST 4250 Dead Sea Scrolls (3)
It has been just over 50 years since a group of Bedouin shepherds found several clay jars containing ancient scrolls. The documents include copies of the Hebrew Bible, apocryphal works, and sectarian works written to provide order and meaning to the readers lives. But who wrote the scrolls and who were they writing for? This course will investigate these questions and others by focusing on the texts themselves and the archaeological evidence from the site of Khirbet Qumran. Secondary sources will also be consulted and read critically.

JWST 4300 Conflict In Cult & Lit (3)
This course will focus on the literary and cultural response to the Israeli-Palestinian conflict since the beginning of the Zionist settlement to our time. We will ask questions such as how each culture, the Israeli and Palestinian, has represented the other? Has each depiction been a unified cultural portraiture or can we identify multifarious delineations? What constitutes national identity and what role have national, religious, racial and gender perspectives played in the construction of the Israeli and Palestinian identities? How has the various formation of the other contributed to the identity creation of each culture? And finally, can we point out significant historical changes in these representations? We will examination of both Palestinian and Israeli experiences as reflected in various texts including fiction, poetry, philosophical and historical treatises, editorials, caricatures, film and the like, all in English translation. Last but not least, we will try to understand both the stable and the changing parameters of national identity on the background of universal intellectual and political movements such as nationalism, multiculturalism, and globalization.

JWST 4310 Jewish Youth and Cultural Chng (3)
This course will analyze the modern Jewish experience by focusing on the seminal role of Jews in their teens and twenties, examining how this group has affected social change.

JWST 4330 Jew Imm Exp, 1881-Present (3,4)
This course will examine the transnational migration of Jews to six different continents - North America, South America, Asia, Africa, Australia and Europe - focusing on key components of the migration.

JWST 4350 Rashi, Halevi, Maimonide (3)
An exploration of the lives and major works of Judaism's most significant religious writers of the Jewish Middle Ages. Rashi, the prince of Biblical commentators; Judah Halevi, poet laureate of the Jewish people and author of The Kuzari; Moses Maimonides, the supreme Jewish thinker of all ages, and author of The Guide for the Perplexed.

JWST 4420 Topics Jewish Lit/Histor (3)
In this course we will study the work of one pathbreaking Jewish intellectual studying both his/her oeuvre and intellectual context. Of particular importance is the relationship of the intellectual's work as part of a dialogue with the works of Jewish and non-Jewish contemporaries. Among our subjects are Heinrich Graetz, Simon Dubnov, Israel Zinberg, Jacob Katz, and Salo Baron. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 4500 The History of Zionism (3-4)
This course aims to teach students about significant historical moments and cultural developments in Zionist history and culture. It will help students acquire knowledge of important approaches to the study of Jewish civilization and the presuppositions underlying them: various analytical techniques employed in the humanities and the social sciences for the study of Jewish civilization, the Jews, and their representation.

JWST 4560 Internship (1-3)
Internship. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 4570 Internship (1,3)
Internship. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 4610 Bible As Politicl Theory (3)
A study of the Bible from the prospective of political theory, which analyzes the similarities and differences between the political perspectives of classical (Greek and Roman) thinkers those of the Bible.

JWST 4670 Israeli Jewish & Arab Israeli (3)
This course explores major themes in Israeli cinema and fiction in the context of the social and historical backdrop of the Arab-Israeli conflict and the painful emergence of a new Jewish-Israeli identity in the shadow of the Holocaust and unremitting warfare. Examining in depth a number of Hebrew and Arabic films, short stories and novels, all in English translation, the course situates them in the evolution of Israeli cinema and fiction.

JWST 4810 Special Topics In Jwst (3-4)
This course will cover special offerings in Jewish history, religious thought, and literature. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 4811 Special Topics Jewish Studies (3-4)
Special topic in Jewish Studies. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 4812 Special Topics (3,4)
Special topic in Jewish Studies. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 4881 Writing Practicum: JWST 4400 (1)
Writing practicum attached to JWST 4400.

JWST 4882 Writing Practicum: JWST 4330 (1)
Writing practicum attached to JWST 4330.

Corequisite(s): JWST 4330.

JWST 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 4892 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 4893 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 4910 Independent Study (1-4)
Independent Study. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 4920 Independent Studies (1-3)
Independent Studies. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 4990 Honors Thesis (3)
Honors Thesis.

JWST 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): JWST 4990.

JWST 5190 Semester Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 5370 Washington Semester (1-20)
Washington Semester. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 5380 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 5390 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

JWST 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

JWST 6420 Readings In Holocaust (3)
Examines the origins and development of the Nazi Final Solution; the experience of the victims, perpetrators, rescuers, and bystanders; and the relationship between history and memory.

JWST 6900 Grad Independent Study (1-3)
Graduate Independent Study.

Kinesiology (KINE)

KINE 1400 Intro to Health Sciences (3)
This course offers a basic overview of human health. Topics to be addressed include the following: the historical development of public health and ways that health affects daily life; explain the basic principles of epidemiology, including rates, risk factors, disease determinants, causation and surveillance; explain the manner in which health information and communications can be used to improve health; identify how social and behavioral interventions affect health; explain how policy and law affect health; identify the impact of the environment; describe the manner in which communicable diseases affect health; and, describe the basic organization of health care and public health systems.

KINE 1500 Intro to Kinesiology (3)
This course will introduce students to the academic discipline of Kinesiology, including fundamental components of fitness & exercise, health & wellness and topics within sport/exercise science. Additional topics will include current issues in the field, and options for career and professional development.

KINE 1800 Wellness in Contemporary Am (3)
A holistic approach to wellness is presented via the components of total fitness, e.g., physical, social, emotional, and intellectual. Emphasis is placed on behaviors that serve to prevent illness and injury rather than rehabilitative strategies that are implemented after the fact. Content addresses both theoretical and applied perspectives of wellness that should be used in developing personalized exercise programs and healthy lifestyles. Additional topics to be covered include (but are not limited to): strategies for optimal nutrition, global versus national health and fitness trends, comparative analysis of healthcare systems, alternative forms of preventive/rehabilitative medicine, and environmental impact on wellness.

KINE 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

KINE 2010 Social Aspects of Health (3)
The course is designed to provide students with an overview of the theoretical and empirical bases of social aspects as applied to health sciences, so that students can both apply and communicate this material in the context of their health-related careers. This course explores the social and behavioral connections between health and health-related matters. The challenges/incentives are to promote health through societal and behavioral change.

KINE 2220 Mind/Body Health (3)
Health is influenced by physical, intellectual, social, spiritual and emotional determinants. In this course, the interaction of these determinants is explored as they relate to the prevention, onset, and progression of, and recovery from, disease. The aim is to provide an overview of the mind/body connection in relation to overall wellness using established theoretical and applied perspectives, e.g., cognitive behaviorism, psychoneuroimmunology, and guidelines for healthy lifestyles.

KINE 2230 Stress Management (3)
This course examines stress from psycho-physiological and behavioral perspectives. It will afford each student the opportunity to experience various strategies used in coping with stress, e.g., self-mastery, meditation, imagery, exercise, nutrition, and cognitive restructuring. Various theories are discussed that serve as the foundation for the understanding of and coping with everyday stressors as well as those that occur unexpectedly.

KINE 2330 Nutrition and Behavior (3)
This course is intended to bridge the gap between the theory and practice of nutritional science. Emphasis is given to the basic food constituents and their physiological relationships within the body. Topics will include but not limited to: the fundamental principles of normal nutrition; the interactions between diet and energy expenditure; gender differences; changes in nutrient needs throughout the life cycle; computer-assisted nutritional analyses; and, web-based nutritional sites. Includes the investigation of optimal health, allergies, hyperactivity, hypoglycemia, learning disabilities, eating disorders, delinquency, mental disorders and senility as they pertain to nutritional practices.

KINE 2910 Independent Study (1-3)
Open to students with approval of Program chair. Student can work with a faculty member on an independent project.

KINE 3001 Special Topics (1-3)
Special Topics in Kinesiology.

KINE 3002 Special Topics (1-3)
Special Topics in Kinesiology.

KINE 3003 Special Topics (1-3)
Special Topics in Kinesiology.

KINE 3004 Special Topics (1-3)
Special Topics in Kinesiology.

KINE 3110 Exercise & Sport Psychology (3)
This course will examine the psychological and social-psychological antecedents and consequences of exercise, physical activity and sports participation. Emphasis will be on theory and research on personality, motivation, arousal, cognition, attributions, leadership, and group dynamics.

KINE 3120 Biomechanics (4)
This course is designed to develop an understanding of the application of mechanical principles to human movement and methods of motion analysis.

KINE 3130 Lifespan Motor Development (3)
This course is designed to provide the student with a knowledge base in the study of changes in motor behavior across the lifespan, the process that underlie these changes, and factors that affect them.

KINE 3200 The Human Body (3)
The understanding of the structure and functional significance of the human body is imperative for each individual to possess. The Human Body course will focus on such structural and functional significance with emphasis on the specific systems of the body, including but not limited to skeletal, muscular, neurological, endocrine, respiratory, reproductive, and integumentary systems. This course will cover an introduction to common illnesses/disease processes/injuries specific to each body system. Exercise, wellness, health, and sports performance will be topics of concentration as they relate to the body and its functions. The Human Body course also concentrates on environmental, ethical, and health issues related to the biology of humans.

KINE 3220 Global Health (3)
This course introduces students to critical issues in the current global health scene. Emphasis is placed on the main principles of global health, including an analysis of global health systems, diseases, programs, health governance and policies, identification and interpretation of current relevant data sources.

KINE 3250 Gender Based Issues in Health (3)
The course will explore health concepts as they apply to particular needs of men and women within the context of a gender-based health care system in the United States. The course will address epidemiological and sociological analysis of the major causes of morbidity and mortality on the basis of gender; impact of social and behavioral influences; relationship of social, economic, and political inequality trends based on gender.

KINE 3330 Epidemiology of Aging (3)
This course will introduce students to critical issues in the aging population. The course provides a comprehensive overview of the most important topics in health and aging, taking a "whole person" epidemiological approach to health, including attention to cultural differences, psychosocial, economic, and population factors affecting aging. The study of aging and health enhances professional opportunities in the fields of gerontology, wellness, and other medical and health related fields.

KINE 3500 Cultural Difference in Healing (3)
This course is designed to explore the impact of culture on the perception of health and illness, and how this translates into health-seeking behaviors and broader health systems. The course will present an anthropological view of health and illness through its various cultural markers, such as pain, stress, care vs. cure, diet, gender, doctor/patient relationships, mental health among others.

KINE 3600 Economics of Health & Wellness (3)
This course provides an introduction to the application of economic theory to the field of health and wellness. In particular, students will study the individual as a producer of health/wellness and as a consumer of healthcare services. Also, the role of physicians, hospitals, insurance providers, and the government in the health and medical care marketplace will be examined. Finally, the role of universal insurance and international comparisons of the efficiency and effectiveness of health care systems will be studied.

KINE 3650 Childhood Obesity (3)
This course will examine the prevalence and impact of obese conditions on disease development in childhood and adolescence. Students will analyze current evidence focused on interventions used in the behavior and clinical management of overweight and obese youth in community and clinical settings.

KINE 3910 Independent Study (1-3)
Students complete an independent project under the supervision of a faculty member. Approval is required by the Program Director.

KINE 4010 Catastrophic Illness & Injury (3)
This course reviews the many catastrophic diseases and epidemics that have ravaged human populations, past and present, and how societies have understood and responded to these challenges over time. Possible changes in social conventions, information sharing and healthcare practices which may be necessary to deal with current and future epidemics are discussed. Lessons learned from previous catastrophes may help to deal with future ones.

KINE 4030 Exercise Physiology (4)
Basic human physiology with emphasis on the physiological changes associated with exercise and overload that affect the underlying function of cells and organ systems of the human body.

Prerequisite(s): (SCEN 2030 and 2035) and (SCEN 2040 and 2045).

KINE 4050 Mass Media and Health (3)
This course examines the effects of mass media on population health, from the negative impact of advertising of unhealthy products (e.g., cigarettes, alcohol and junk food), to the positive impact of public-health campaigns. Content includes an overview of behavioral science theory, themes and approaches to advertising, mass media prevention, and health promotion campaigns. Case studies of current media coverage and advertising campaigns will be used to demonstrate the effects of media on health and social behavior.

KINE 4070 Motor Learning (3)
This course is an introduction to applied and basic theoretical aspects of motor learning as they apply to exercise science and related professions. It also includes a major hands-on component introducing the student to the experimental study of motor learning principles.

KINE 4110 Sports Medicine (3)
This course will examine therapeutic modalities and the advanced care, prevention, and treatment of athletic injuries.

KINE 4120 Strength & Conditioning (3)
This course will examine the development and evaluation of training principles and programs for diverse populations. Emphasis is placed on physiological adaptations and mechanical principles related to the application of resistance training.

KINE 4150 Exercise Prescription (3)
This course presents students with the most current information on health-related physical fitness testing and exercise programming for individuals of all ages, fitness levels, and disease states.

Prerequisite(s): KINE 4030.

KINE 4200 Mental Health (3)
This course examines mental health issues in the context of social, environmental, governmental and legal conditions. Specific attention will be given to: identifying historical and current developments in mental health policy in the United States; explaining the significance of stigma in society regarding mental illness and how it affects individuals with mental illness; explaining the manner in which the legal system copes with the mentally ill; analyzing the etiology of some major mental illnesses (e.g., schizophrenia, bipolar disorder, eating disorders, PTSD, and childhood disorders) and how these disorders affect an individual's ability to function in society; identifying risk factors and protective factors related to mental disorders/illness; identifying public health efforts for prevention and intervention of mental disorders in the U.S.; and, access to public health programs, support services, medication costs, and insurance coverage for those with mental illnesses/conditions.

KINE 4250 Environmental Health (3)
This course provides students with an introduction to scientific approaches to the investigation and modification of the effects of environmental factors on human health. Contributions of the fields of toxicology and epidemiology and the implications of research findings for policy and regulation are examined. Topic areas include toxic metals, pesticides and other organic chemicals, ionizing and non-ionizing radiation, vector-borne diseases, pollution of air and water, occupational exposures, and the health effects of global warming. The roles of local, state, and federal governments in environmental health are critically evaluated, as are initiatives by non-governmental organizations.

KINE 4600 Wellness Coaching: Resist Chng (3)
This course will explore the trans-theoretical model of behavior change as it pertains to any desired individual behavioral shift. In addition, motivational interviewing strategies to include non-confrontation, reflective listening, client self-efficacy, and risk reduction will be emphasized in this course. Participants will become knowledgeable in the philosophies, practices, and outcomes of models of behavior change.

KINE 4650 Grant Writing (3)
This course is designed to teach students basic skills in granting writing. In this course students will learn the different types of grants, components of grants, potential funders and how to search for grants. Emphasis will be placed on learning to break down complex applications into manageable steps. Students will write a practice grant.

KINE 4910 Independent Study (1-3)
Students complete an independent project under the supervision of a faculty member. Approval is required by the Program Director.

KINE 5001 Internship (3)
This course will help students bridge between college or work or between current careers and the next. Students complete a minimum of 100 hours field experience in a Health and Wellness related facility. This course is to be taken during the senior year of study for the student or with approval of the Program Director. Students are required to turn in a weekly timesheet and weekly journal summaries detailing their duties and experiences on the internship site. Upon completion of the internship, students will submit a final paper and an evaluation from the internship site supervisor. A 2.5 grade point average is required for enrollment in the internship. All internships must be approved by Program Director.

KINE 6001 Special Topics (1-3)
Special Topics in Kinesiology. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

KINE 6100 Cross Disciplinary Aspects Mgm (3)
This course examines overall management of wellness programs and facilities with an emphasis on human resource management. Future wellness professionals will enhance their knowledge of how these elements can be applied to wellness management settings. Topics include organizational structure, training and managing staff, financial management, legal and ethical concerns and customer service relations.

KINE 6200 Health Informatics (3)
Health informatics is the analysis and collection of health information. Topics include data science, data analytics, digital health, health information technology and decision support systems.

KINE 6250 Leadership in HEWE Professions (3)
This course surveys major concepts, examples, practices, and theories of organizational leadership with a special emphasis on analyzing and developing personal leadership skills. It is designed to build upon fundamental leadership theories, e.g. situational, charismatic, servant, transactional/transformational, path-goal, trait leadership, skill-based, and the life cycle theory. Participants will study the theoretical and applied nature of administration and leadership with an organizational context in efforts to develop their personal and philosophical framework, e.g. understanding individuals as followers and leaders, decision-making, promoting diversity and respect for all individuals.

KINE 6300 Communication Skills for Wellness Professionals (3)
This course provides the student with an overview of health and wellness communication in research, industry, and practice. The role of communication in health care delivery, health promotion, disease prevention, environmental risks, media and technology will be examined.

KINE 6310 Sport Psychology (3)
This course will provide the student with an advanced understanding of the principles and methods necessary to design comprehensive strength and conditioning programs that enhance fitness and athletic performance.

KINE 6320 Strength & Conditioning (3)
This course will provide the student with an advanced understanding of the principles and methods necessary to design comprehensive strength and conditioning programs that enhance fitness and athletic performance.

KINE 6330 Stages of Athletic Development (3)
The course introduces the student to the art and science of coaching with an emphasis on relating theory and practice. This includes discussions on principles of coaching, behavior management, physical conditioning, legal issues, diversity and inclusion, safety, staffing, and public relations and their application toward sports program design and careers in coaching.

KINE 6340 Sport Nutrition (3)
This course will provide the student with an understanding of nutrition as it pertains to training and performance of athletic activities. Within the course students will learn basic concepts of energy metabolism as well as nutrient requirements for a variety of physical activities including endurance, strength, speed and weight management. Evaluation of dietary supplements and ergogenic aids will also be discussed.

KINE 6450 Legal Ethical Principl in Mgmt (3)
This course provides students with the opportunity to gain insight and understanding about the law and its implications on professionals in the fields of health, wellness, sport, education, leisure, and fitness. This course will examine federal, state, and local health care regulations impacting ethical decision-making; the rapidly expanding Codes of Professional Ethics for health care service providers in the fields of health, wellness, sports, education, leisure, insurance, and management; the legal aspects of health information management; and the HIPAA Privacy Standards and rules concerning the use and disclosure of medical and health information.

KINE 6500 Strategic Management for Wellness Professionals (3)
This course provides the student with an overview of strategic healthcare management. The course explores the development and implementation of strategy to achieve business goals. As healthcare continues through rapid iterative changes, healthcare leaders must develop skillful use of strategic planning and execution. This course explores concepts such as value-based care, healthcare reform, healthcare business models, innovation in healthcare, and stakeholder engagement.

KINE 6510 Sport Marketing and Finance (3)
This course will examine theories, principles, fundamentals, applications and challenges of marketing and financing in exercise, sport, and recreation industries.

KINE 6520 Fundraising & Capital Dev Plan (3)
This course will provide an overview of fundraising, donor relations, and non-profit associations. Topics will include major gift fundraising, annual funds, booster club organizations, priority seating programs, and the importance of donor research in the fundraising process.

KINE 6530 Ethical & Legal Iss in Sport (3)
This course will examine the legal principles, business models and rules governing the sports industry and the legal controversies and policies surrounding those rules.

KINE 6540 Sport Media and Communication (3)
This course will provide the student with an introduction to and overview of the sports communication field, including media organizations, marketing and advertising. Topics covered include sports media; digital media including print and electronic media and social media, college sports information and marketing and promoting sports teams.

KINE 6550 Financial Management for Wellness Professionals (3)
This course provides an overview of financial management in health services delivery. The course examines the importance of financial management in health-related fields as well as the financial skills leaders need to make important financial decisions that contribute to the success of a healthcare delivery organization, such as financial analysis, tax laws, cost accounting, and strategic financial planning.

KINE 6620 Sport in Society (3)
This course will examine the institution of sport from a sociological perspective. Sport will be examined as a social and cultural phenomena using sociological concepts to investigate such issues as social identities (race/ethnicity, class, gender, sexuality), mass media, youth sport, high school and intercollegiate athletics, and violence in sport.

KINE 6650 Res Methods in Kinesiology (3)
In this course, students will investigate research methodology, experimental design and scientific writing, research literature and conduct research. Students will also be introduced to concepts in probability, basic statistical inference procedures of estimation, confidence intervals and hypothesis testing directed toward applications in science.

KINE 7001 Independent Study in KINE (1-3)
Approval of Kinesiology program director required. Students may arrange for independent study with an instructor to pursue a project or complete a study of interest in Kinesiology. In general, independent study earns three credits. Requirements will vary depending on the project and will involve some combination of readings, orals reports, and written work.

KINE 7100 Exerc & Nutrition Hlth Disease (3)
This course addresses the key health concerns and core differences in programming needs of various populations throughout the life cycle. An examination of nutritional concerns, requirements and metabolism from psychosocial, physical, and economic factors affecting nutritional status through the life span. Preparation of the health professional in assessing and providing services to clients and populations will be addressed. Students will also learn the roles that physical activity and nutritional practices play in the prevention, management, and treatment of chronic diseases and conditions, such as obesity, cardiovascular disease, cancer, diabetes, COPD, arthritis, depression, and anxiety. Populations of focus include children, adolescents, adults, and senior citizens. Methods of physical activity and nutritional assessment for each stage of the life cycle will be examined.

KINE 7150 Programming Approaches (3)
This course provides an overview of leading health program planning theories including PRECEDE/PROCEDE and intervention mapping. Organizational and administrative approaches utilized in the conduct of health/wellness promotion programs will be described. Emphasis will be placed upon the selection, development, promotion, conduct, and evaluation of the various components of health/wellness promotion programs.

KINE 7200 Intervention Strategies (3)
This course will provide students with an understanding of the process involved in planning health interventions in health education and health promotion environments. Practical applications of the needs assessment process, program development and implementation will be executed including the skills, theory and practice involved in assessing clients to develop health related life skills.

KINE 7250 Motivational Interviewing HEWE (3)
Motivational Interviewing (MI) is a consumer centered instruction method for improving inherent motivation to change by exploring and resolving uncertainty. This course will include content of exploration into the attitudes and motivations of personal health behavior and an in-depth exploration of motivational interviewing principles and applications.

KINE 7300 Employee and Hlth & Wellness (3)
Successful companies must understand the importance of workplace involvement in health. The relationship of employee health to healthcare costs and productivity will be discussed as a return on investment (ROI) and an investment in human capital. Strategic and product management planning are developed in relationship to disease management versus population wellness theory. Assessments of employer needs, organizational culture, environmental policy, and procedures supportive to desired outcomes are practiced. Professionals learn about aligning client needs and wants with best practice programs design, implementation, and evaluation for successful results. Age, gender, race, and issues that affect participation in wellness programs are reviewed.

KINE 7350 Integrating Hlth Promo Sch Set (3)
This course addresses the growing demand for wellness initiatives for students, their families, and school staff. The coordination of teachers, school nurses, school administrators, and community health promotion professionals will set the stage for a comprehensive approach to building wellness programming within the school community.

KINE 7400 Health Systems and Policy (3)
This course provides information pertaining to the U.S. healthcare system with emphasis on health and wellness. It provides an overview of the major public and private stakeholders including public health, insurance, and healthcare providers. Participants will examine how health policy impacts the design and financing of wellness programs.

KINE 7450 Health Equity & Determinants (3)
This course is designed to examine the impact of social, economic, and environmental determinants of health on various populations. Health inequities found among marginalized groups due to socioeconomic status, race/ethnicity, sexual orientation, gender, disability status, geographic location, or some combination of these factors will be highlighted. This course will explore health outcomes found among these populations and will address health promotion policies required to attend to these issues.

KINE 7800 Internship/Capstone (3)
The goal of this experience is to provide graduate students in Health Promotion and Wellness Management with an opportunity to apply the professional knowledge they have gained in their coursework to a professional setting. In addition to participating in the daily operation of the site, the student will complete a major project on site and submit a document that describes the learning experience.

Enrollment limited to students in the Kinesiology department.

Labor & Employment Law (EMPL)

EMPL 4920 Advanced Employment Discrimination (2)
First passed in 1990, and later amended in 2008, the Americans with Disabilities Act (ADA) is the central piece of legislation advancing civil rights for persons with disabilities in the United States, on a national scale. In this course, we will learn about the major sections of the ADA (also known as "Titles"), and about the key concepts embodied in the legislation, and created through subsequent federal court cases. Our primary focus is the application of the ADA in private and public employment, although we will also more briefly review the application of the ADA in other spheres. Topics include, but are not limited to: definition of disability, definition of employer, prohibited acts, reasonable accommodation, qualified individuals, essential job functions, substance abuse, defenses to the charge of disability discrimination (including direct threat, undue hardship, and fundamental alteration), the Equal Employment Opportunity Commission, and interactive process.

EMPL 5000 Developing & Manage Workforce (2)
Human resources (HR) management can be defined as the effective use of human capital in an organization through the management of people-related activities. It involves leadership, values, workforce planning, recruitment and selection, training and compensation, and performance evaluation and management. HR also significantly influences the corporate culture and values/mission of the company. To thrive in a competitive business environment, organizations need more than just strategic plans in place. They need the right talent to implement those plans. Those who manage human resources—not just HR departments, but all managers—have a critical task in front of them. They have to identify, recruit and retain employees who have both the skill sets and determination to effectively implement strategic objectives in their individual departments, so the business plan succeeds as a whole. In this course, you'll learn to align workforce management with the overall strategic goals of the business and how to navigate the opportunities and pitfalls that can arise from that challenge. You'll also learn results-based strategies for finding, motivating and rewarding individual employees as well as successful work teams. With the skills developed through this course and through this master's program at Tulane, you can better position yourself to manage human resources responsibilities and find employees who will positively impact your company.

EMPL 5410 IP Issues in the Workplace (3)
Intellectual property issues arise in the employment context from the moment an employee is hired, whether a fulltime employee or an independent contractor. If employees create works—websites, inventions, newsletters, etc. within their job, additional issues will arise, both in terms of who owns the creations, but also what materials the employee is using to create those works. Copyrights, trademarks, trade secrets, patents, and right of publicity are implicated in the hiring and employing of both individuals and other companies. IP policies related to social media also are important to establish, both for the company in general, and individuals within the company, which should be communicated to employees in an effective way. Finally, situations come up where employees are using equipment at work to create afterhours creations, or are creating commercially viable creations at home. Human resources, in administering hiring documents both for employees and independent contractors should be aware of the legal issues that arise, as well as the policy behind the choices.

EMPL 5710 Intro to Labor Law Principles (3)
This course is designed to provide the students with a thorough understanding of the federal and state laws and regulations governing the relationship between the employer, employee and labor union. The material will be presented in a very practical way designed to focus on specific problems and issues that human resource professionals experience in dealing with organized and unorganized workforces and offer very specific and detailed instruction on the proper way to deal with these issues. The topics that will be examined include approaches toward a union organizing campaign, a union's request for voluntary recognition; creation of joint employer/employee advisory committees; the role of the NLRB and how to avoid and deal with unfair labor practice charges; proper and improper bases for discipline and discharge; lawful and unlawful responses to strikes, picketing, and sickouts; scope and approaches towards the duty to engage in collective bargaining with a union; methods of enforcing or modifying the terms of a collective bargaining agreement; impact of state right-to-work laws; union security agreements; and the use of arbitration and/or mediation as alternative methods of resolving contractual and statutory disputes.

EMPL 5800 Negotiating Skills (2)
Negotiation is a skill. This course sharpens those skills. It focuses on such matters as negotiation styles, emphasis on interests rather than positions, and psychological biases that hinder effective negotiations. Students will be instructed on the use of the negotiation tools and asked to complete negotiation exercises and then called upon to reflect on their experience. These exercises require the students to negotiate with each other. All of the students in the classroom sessions will discuss their experiences and receive input from the instructor.

EMPL 6000 Social Media Issues in Wkplace (3)
This course will look at legal issues arising out of social media, branding and advertising in the workplace. This includes the use of social media platforms by companies, the relationship between social media and employees, fan and gripe sites, and other issues arising from the use of social media. The course will examine key issues arising in the protection of a company's name, reputation and goodwill. This portion builds off of the introductory materials in the IP survey to think through practical and policy questions that arise within the workplace and, in particular, what HR may encounter. The course will also look at the National Labor Board, social media and hiring practices. The course covers social networking as well, including email, and monitoring computer and internet activities. The course looks at First Amendment issues related to social media, both by employees as well as the public. The course also looks at the issue of the right to be forgotten and the impact of this concept with regard to employees and former employees. The course explores questions of advertising, including puffery, verifiable facts, surveys, advertisements for employees, contests and other issues that arise within the workplace.

EMPL 6050 Sex & Gender Issues in Work (3)
This course will build on the employment discrimination course by delving into the particularities of human resources law as it relates to sex discrimination. The course will combine in-depth lectures and examinations of contemporary current events in this area with practical exercises and projects designed to prepare HR professionals for the complexities that may emerge for their employers under sex discrimination law. The course will cover pregnancy discrimination and accommodations in the workplace, personal appearance policies, sexual harassment, transgender persons in the workplace, and affirmative action/diversity in hiring. Each substantive module will be accompanied by a graded project designed to prepare students to aid in employer compliance and ensure positive employee relations. Pre-requisite: employment discrimination law.

EMPL 6100 Investigat Employee Complaints (2)
This course combines substantive law and practical exercises that students will discuss and work through during classroom sessions. The course will provide an overview of what the law requires when responding to employee complaints, what actions to take (or not take) and the various methods of alternative dispute resolution that may be necessary to resolve the matter. Students will apply knowledge gained from the lecture presentations and readings to analyze hypothetical situations involving employee complaints. These hypothetical scenarios will be built upon each week, giving students the opportunity to guide fictional companies all the way through the investigative process, including EEOC investigations, mediation and arbitration. Heavy emphasis will be placed on studying and understanding the arbitration process in particular.

EMPL 6400 Legal Analysis I (2)
Legal Analysis I is taught by Professor Jennifer Cooper. This foundational course introduces students to sources and functions of law in our society relating to labor and employment law. The course begins with an overview of the American legal system and sources of law and introduces students to statutory interpretation and plain language analysis. In Legal Analysis I, students will learn to read and interpret statutory law and regulations, read and brief cases, and develop basic legal writing and analysis skills. Students will also learn to find and research legal information through multiple short research assignments focusing on labor and employment law issues. Through multiple short writing assignments such as a case brief, an IRAC essay analyzing a statutory issue, and an e-memo interpreting statutory & regulatory law relating to a labor and employment law topic, students learn to apply statutes and regulations to analyze legal issues relating to labor and employment law.

EMPL 6401 Legal Analysis II (2)
This course builds on Legal Analysis I to introduce students to the relationship between enacted & administrative law and common law. The course continues instruction on legal research methods in finding and analyzing cases and common law. Students learn to read and synthesize multiple cases and learn analogical and policy-based reasoning. Through multiple short writing assignments, such as an e-memo analyzing a statutory issue with caselaw and a client letter, students learn to apply statutes, regulations, administrative materials, and caselaw to analyze complex legal issues relating to labor and employment law.

EMPL 6410 Introduction to Contract Law and Working with Contracts (2)
This course is intended to equip the non-legal business professional with skills to understand and work with written, negotiated business agreements. We will discuss fundamental principles and sources of contract law, but we will approach all aspects of the course from the practical perspective of transactional lawyers and business professionals who must work collaboratively to negotiate, draft, implement, and manage written business contracts. Students will learn how to translate business deal terms into contract provisions that achieve appropriate legal consequences and manage risk. Students will analyze different types of negotiated business agreements and provisions (with a focus on employment-related contracts) and learn contemporary commercial drafting techniques to manage risk, minimize ambiguity, and solve problems through effective drafting.

Prerequisite(s): EMPL 6400 and 6401.

EMPL 6460 Employment Law (2)
This course will provide students with an understanding of the legal underpinnings of the employer-employee relationship, including the employment-at-will doctrine which is the default setting for the relationship. The course will discuss the limits of the employment-at-will doctrine as well as common legal claims brought in the employment context. It will also explore issues such as privacy expectations of employees and the enforceability of covenants not to compete as well as laws impacting employee compensation and leave.

EMPL 6500 Employee Medical Leaves (2)
An employee comes to you with a doctor's note asking for time off from work. Sounds simple, right? Not really. That request could be covered by the Family and Medical Leave Act, the Americans with Disabilities Act, your state's workers' compensation law, your policies, and more. In this class you will learn how to navigate the often-overlapping legal requirements for medical leave and reinstatement issues. You will also learn how to discuss and document key decisions about the leave in a way that minimizes the risk of litigation.

EMPL 6510 Administrative Law (2)
The course explores the history, present status and nature of administrative agencies. The main emphasis is placed on administrative procedure, contrasting it with the judicial process, as well as constitutional limits on administrative action and the due process rights of persons who are adversely affected by agency action. Topics covered will include delegation of powers, the law of judicial review of agency actions, and procedural requirements of administrative rule-making and adjudication.

EMPL 6600 Privacy in the Workplace (2)
Privacy is a dynamic issue of concern in essentially every modern workplace. However, there is no comprehensive statute governing workplace privacy. Existing laws usually address (or marginally relate to) one discreet area of privacy law. Because privacy law is decentralized by nature, you must understand its general framework to properly address privacy questions that arise in the workplace. You must also be familiar with, or at least capable of referencing, a wide array of federal, state and local privacy laws. This course will cover both the general framework of privacy law and the most notable statutes addressing workplace privacy. The course begins with an overview of the origins and legal sources of privacy law. The course then covers specific areas of workplace privacy, including medical inquiries; background and misconduct investigations; monitoring and surveillance; honesty, psychological, drug and alcohol testing; medical and personnel records; off-duty conduct; employer information; and privacy tort claims. As to each topic, you will gain an understanding of governing legal standards and best practices through reading materials, examples, and when appropriate, checklists and sample policies.

EMPL 6910 Intro to Employment Discrimination (3)
This course is designed to provide students with a thorough understanding of all of the legal rules and concepts created by federal and state laws prohibiting discrimination on the bases of race, sex, age, disability, religion, sexual orientation, and national origin in a very practical way. The materials will be presented in a manner dedicated to enhancing the ability of present or future human resource professionals to deal with specific problems that continually arise in the workplace. Instruction will be directed towards providing advice on how to deal with and avoid problems in areas including racial and sexual harassment, religious accommodation, pregnancy and family leave, LBGT concerns, handling EEOC investigations, drafting personnel manuals, avoiding retaliation claims, mandatory and voluntary retirement, disability-based accommodation, and drug testing.

EMPL 6920 Introduction to Employee Benefits Law (2)
In this course we will examine the legal regulation of employee benefits with a focus on health care benefits, retirement benefits, employee stock options, and other employee welfare benefits. In addition to providing information about the legal operation of various types of employee benefits, we will also examine what such plans require in terms of fiduciaries and how these plans are to be regulated in the event of bankruptcy. The bulk of our engagement will be with the federal law. Throughout the course we will engage with the current legal and political frameworks, as well as legislative developments in this field and discuss where things are headed.

Prerequisite(s): EMPL 5710 and 6910.

EMPL 6990 Capstone Course (3)
This course is designed to build upon the doctrinal and practical and strategic knowledge and skills students have acquired during their first five semesters. Students will be assigned to groups of three or four so that they can gain experience in team building, group dynamics, and collegial decision-making. Each team will be required to negotiate a collective bargaining agreement with the course instructor who will provide the basic underlying materials and will represent the interests of the fictional labor union. Once that agreement has been executed, each student will be responsible for drafting each of the four additional projects: (a) a grievance and arbitration policy and procedure: (b) a personnel policy; (c) a sexual harassment policy and enforcement mechanism; (d) a drug testing policy and enforcement mechanism.

EMPL 9000 Immersion Weekend (0)
Students will need to attend at least one Immersion Weekend during their time in the program. These sessions are held every summer, so students can plan to attend during either their first or second year in the program, but the experience of prior students indicates that the session is most beneficial to those who attend in their first year. It is both an academic and networking opportunity for students to meet their classmates, professors, and other professionals working in the area of labor and employment law. The occasion will include a keynote speaker, lectures and workshops from industry experts, and a variety of social activities.

Latin (LATN)

LATN 1010 Elementary Latin (4)
In this course, students learn the fundamentals of Latin grammar and syntax so that they can begin reading snippets of Latin literature.

LATN 1020 Intermediate Latin (4)
This course continues the introduction to the Latin language begun in LATN 1010, including pronunciation, vocabulary, grammar, style, and translation. In addition to learning a lot of Latin, you can also anticipate learning about English grammar and vocabulary. Studying Latin is also an important way to learn about ancient Roman culture, especially Latin literature.

Prerequisite(s): minimum score of PASS in 'LATN 1020 Placement' or LATN 1010.

LATN 1290 Semester Abroad (1-20)
Study abroad in Latin language. Department approval required. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LATN 1390 Junior Semester Abroad (1-20)
Study abroad in Latin language. Department approval required.

LATN 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

LATN 2030 Intro to Latin Literature (4)
This course provides an introduction to Latin prose and poetry through readings from some of the great works of Latin literature. While reading a broad selection of Latin texts, we will consider how Roman literature evolved along with the changing culture and politics of the city. We will also learn about important authors, historical figures, and events that you are likely to encounter again later in your studies. The class emphasizes precise and accurate translation, vocabulary building, and grammatical understanding. This course only taught in the fall semesters.

Prerequisite(s): minimum score of PASS in 'LATN 2030 Placement' or LATN 1020.

LATN 2390 Semester Abroad (1-20)
Study abroad in Latin language. Department approval required. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LATN 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

LATN 3030 Readings In Latin Poetry (3)
Selections from Latin poets such as Catullus, Virgil, Ovid, Horace, and others. Prerequisite: LATN 2030 or equivalent. Course may be repeated 2 times for credit.

Course Limit: 2

LATN 3070 Readings In Latin Prose (3)
Selections from such authors as Cicero, Sallust, Nepos, and Apuleius. Practice in Latin prose composition. Course may be repeated 2 times for credit.

Prerequisite(s): minimum score of PASS in 'LATN 3070 Level Placement', minimum score of PASS in 'LATN 3000 Level Placement' or LATN 2030.
Course Limit: 2

LATN 3890 Service Learning: LATN 3030 or 3070 (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LATN 3910 Independent Study (1-3)
Prerequisite: Approval of department. Students wishing to maintain and improve their skill in reading Latin may enroll in a reading course for one, two, or three credits. The reading normally will be part or all, depending on the amount of credit sought, of the assigned reading in an existing 3000-level course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LATN 3920 Independent Study (1-3)
Students wishing to maintain and improve their skill in reading Latin may enroll in a reading course for one, two, or three credits. Requires departmental approval and an appropriate faculty supervisor. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LATN 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

LATN 4010 Roman Comedy (3)
Selected plays of Plautus and Terence to suit the needs and desires of the students enrolled.

LATN 4020 Catullus & Elegiac Poets (3)
Readings in Catullus, and the elegies of Propertius, Tibullus, and Ovid.

LATN 4030 Virgil (3)
Selected readings in Latin from the Aeneid, Eclogues, and/or Georgics.

LATN 4040 Roman Philosophy (3)
Readings in Latin from Lucretius, Seneca, and other authors.

LATN 4070 Medieval Latin (3)
Survey of medieval Latin literature with special attention to the various styles and literary types, and to the cultural background. Course may be repeated unlimited times for credit.

Course Limit: 99

LATN 4080 Literature of The Age Of Nero (3)
This course examines the reign of the emperor Nero through readings in the literature of that period. Particular focus will be placed upon the changing status of the emperor, the role of the emperor as patron of the arts, and the development of intellectual and political resistance to Nero and the principate.

LATN 4110 Special Authors (3)
Readings in Latin from a Roman author.

LATN 4130 Rom Historians of the Republic (3)
Readings in Livy's History or Sallust's Catiline and Jugurtha.

LATN 4140 Roman Satire (3)
Readings in the satires of Horace, Persius, or Juvenal. Course may be repeated unlimited times for credit.

Course Limit: 99

LATN 4150 Roman Historians of the Empire (3)
Readings in the historical works of Tacitus and other historians of the Roman empire.

LATN 4170 Cicero (3)
Close study of the Cicero's work. Course may be repeated unlimited times for credit.

Course Limit: 99

LATN 4180 Horace (3)
Close study of Horace's work.

LATN 4910 Independent Study (1-3)
Prerequisite: Approval of department. Students wishing to maintain and improve their skill in reading Latin may enroll in a reading course for one, two, or three credits. The reading will normally be part or all, depending on the amount of credit sought, of the assigned reading in an existing 4000-level course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LATN 4920 Independent Study (1-3)
Prerequisite: Approval of department. Students wishing to maintain and improve their skill in reading Latin may enroll in a reading course for one, two, or three credits. The reading will normally be part or all, depending on the amount of credit sought, of the assigned reading in an existing 4000-level course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LATN 4990 Honors Thesis (3)
Course reserved for students writing an honors thesis for a major in Latin. Requires approval of the department and an appropriate faculty director.

LATN 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): LATN 4990.

LATN 5190 Semester Abroad (1-20)
Study abroad course in Latin language. Requires department approval. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LATN 5370 Washington Semester (1-20)
For transfer of credit. Department approval required. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LATN 5380 Junior Year Abroad (1-20)
Study abroad course in Latin language. Requires department approval. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LATN 5390 Junior Year Abroad (1-20)
Study abroad course in Latin language. Requires department approval. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LATN 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

LATN 6010 Roman Comedy (3)
Selected plays in Latin of Plautus and Terence to suit the needs and desires of the students enrolled.

LATN 6020 Catullus & Elegiac Poets (3)
Readings in Latin from Catullus, the elegies of Propertius, Tibullus, and Ovid.

LATN 6030 Virgil (3)
Selected readings in Latin from the Aeneid, Eclogues, and/or Georgics.

LATN 6040 Roman Philosophy (3)
Readings in Latin from Lucretius, Seneca, and other authors.

LATN 6080 Literature of the Age of Nero (3)
This course examines the reign of the emperor Nero through readings in the literature of that period. Particular focus will be placed upon the changing status of the emperor, the role of the emperor as patron of the arts, and the development of intellectual and political resistance to Nero and the principate.

LATN 6110 Special Authors (3)
Readings in Latin from a Roman author. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LATN 6130 Rom Historians of the Republic (3)
Readings in Livy's History or Sallust's Catiline and Jugurtha.

LATN 6140 Roman Satire (3)
Readings in the satires of Horace, Persius, or Juvenal. Course may be repeated unlimited times for credit.

Course Limit: 99

LATN 6150 Roman Historians of the Empire (3)
Readings in the historical works of Tacitus and other historians of the Roman empire.

LATN 6170 Cicero (3)
A study of the man and the period based on portions of his work. Course may be repeated unlimited times for credit.

Course Limit: 99

LATN 6180 Horace (3)
Close study of the Latin work of Rome's most important poet.

LATN 6910 Independent Study (1-3)
Prerequisite: Graduate student status and approval of department. Students wishing to maintain and improve their skill in reading Latin may enroll in a reading course for one, two, or three credits. The reading will normally be part or all, depending on the amount of credit sought, of the assigned reading in an existing 6000-level course.

LATN 6920 Independent Study (1-3)
Prerequisite: Graduate student status and approval of department. Students wishing to maintain and improve their skill in reading Latin may enroll in a reading course for one, two, or three credits. The reading will normally be part or all, depending on the amount of credit sought, of the assigned reading in an existing 6000-level course.

LATN 7040 Selected Readings (1-9)
Prerequisite: Graduate student status and approval of department. Students wishing to maintain and improve their skill in reading Latin may enroll in a reading course for up to 9 credits.

LATN 7920 Independent Study (1-3)
Graduate students wishing to maintain and improve their skill in reading Latin may enroll in a reading course for one, two, or three credits. Requires departmental approval and an appropriate faculty supervisor. Course may be repeated unlimited times for credit.

Course Limit: 99

LATN 9980 Masters Research (0)
Course reserved for students writing a thesis for the Master's degree in Latin. Requires approval of the department and an appropriate faculty director. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LAST 1010 Introduction to Latin American Studies (3)
This course provides a basic historical, cultural, and socio-political introduction to the study of Latin America, including the Latinx influence on US culture and society. The class seeks to find cultural and historic continuity within this vastly diverse region relative to a complex history of exchange and interchange with the US and Europe. Students discuss the influence of foreign perceptions on our understanding of Latin America and Latinx America and survey how Latin American and Latinx artists, writers and intellectuals represent their nations and cultures to themselves and to the world. The class equips students for more advanced coursework on the region in a wide array of disciplines at Tulane. Focusing on the development of cultural understanding and intercultural communication and creating the foundations for area expertise, the class provides critical skills for numerous professions an increasingly globalized society and economy including business, social policy, public health, law and advocacy, among others.

LAST 1290 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Maximum Hours: 99

LAST 3000 Approaches to Latin American Studies (3)
This course introduces students to the interdisciplinary field of Latin American Studies through the study of contemporary social, political, and cultural issues in the region. Addressing some of the most critical scholarly questions through a variety of disciplinary and theoretical lenses, the class examines the theoretical and practical meanings of interdisciplinarity while introducing students to canonical literature in the field of Latin American Studies. Through readings and discussion of texts from the humanities and social sciences, students develop an understanding of how various disciplinary perspectives contribute to an holistic understanding of the complexities of a world region. Critical to the class is to challenge external constructions of an issue or problem and to approach it on its own terms, from within its cultural context.

Course Limit: 2

LAST 3010 Approaches to Latinx Studies (3)
This course introduces students to the study of the Latinx diaspora and Latinx experience in the United States as a step toward a more holistic understanding of the region we call Latin America. Latin America and the US have long shared porous borders that blur easy division between histories and identities. This class looks at the United States' historical relationship with Latin America to explore push and pull factors of Latinx immigration, regimes of migration and citizenship, borders and border cultures and emergent forms of political and social action.
It introduces students to key theories on Latinx politics, culture and identity, introducing canonical texts in the field. Students will become familiar with interdisciplinary approaches and discipline-based theories of identity, assimilation, transnationalism, and citizenship, and other issues that contribute to the field of Latinx studies.

LAST 3130 Tps Cont Lat Am Cul Soc (3)
Interdisciplinary exploration of the cultures, history, social structures, and institutions of Latin American and Caribbean societies. Emphasis is placed on tracing the relationships among institutions such as the government, religion, economy, family, and tourism and cultural forms such as literature, performance, visual arts, music, film, and others. The focus of the course may be a single Latin American / Caribbean nation (Cuba, Mexico, Trinidad and Tobago, for example) or comparative. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LAST 7060 Church & Politics Lat Am (3)

LAST 7720 Pedagogy and Professionalization in Latin American Studies (3)
This doctoral-level, discussion-based seminar provides doctoral students with the knowledge to think critically about their teaching practices and to enhance their pedagogical skills. By reading scholarship on teaching and learning, discussing challenges and controversies within the profession and field, creating and presenting a class lecture, and composing a syllabus and preparing a canvas site, students will engage both the theoretical and practical vectors of teaching Latin American Studies, while beginning to build a teaching portfolio and develop expertise to take into the job market. The course will help novice instructors to gain teaching-self-efficacy and utilize pedagogical best practices while providing a supportive environment to develop and discuss diverse instructional approaches and materials.

Law Clinical Courses (CLIN)

CLIN 5100 Federal Pretrial Practice Seminar (3)
This seminar is the co-requisite course for the Civil Rights and Federal Practice Clinic and examines the practice, procedure, and ethics of pre-trial advocacy in the area of civil litigation. Topics include client interviewing, case planning, drafting pleadings and discovery requests, taking and defending depositions, motion practice, expert witnesses, and jury selection.

CLIN 5110 Civil Rights & Fed Prac Clinic (3)
This course is the civil advocacy component in which students, under supervision, represent clients primarily in the areas of fair housing, equal employment opportunity, and civil rights/liberties. Students may draft motions, pleadings, discovery requests, and briefs; conduct depositions; argue motions; negotiate settlements and/or try cases in state and federal court. Student attorneys have professional responsibility for clients and handle all aspects of the case from the initial client interview through fact investigation and discovery, then to trial, adjudication, or settlement. To be taken in conjunction with Federal Pretrial Practice. Students are selected on the basis of an application and personal interview. Full year only, 3 credits in the fall and 3 credits in the spring. Course may be repeated 2 times for credit.

Prerequisite(s): minimum score of PASS in 'Law Graduate Student' or 2LAW 2400 and 2LAW 2800, CLIN 5100* and 5550*.
* May be taken concurrently.
Course Limit: 2

CLIN 5120 Immigration Law Clinic (3)
Students in the Immigrants' Rights Law Clinic represent detainees, migrant workers, children and other immigrants with critical legal needs working through the U.S. Immigration system. Working alongside licensed attorneys, students work on behalf of clients and community groups in a variety of settings--immigration agencies and courts, state and federal courts, as well as work-shops in detention centers and/or community centers.

Corequisite(s): CLIN 5130.
Course Limit: 2

CLIN 5130 Immigration Clinic Seminar (3)
The course is an experiential, yearlong law clinic integrating lawyering theory, skills and doctrine in the context of representing noncitizens, including detainees, migrant workers, and children. Students will be assigned to work in pairs and groups, under Professor Yanik (yearlong) and Prof. Hlass (Fall semester), completing work on behalf of clients and community groups in a variety of settings—immigration agencies and courts, state and federal courts, as well as workshops in detention centers and/or community centers. Students will learn the substantive immigration and federal practice law, as well as ethics and professionalism, as they develop lawyering skills including: critical interviewing, investigating facts, researching and analyzing relevant law, case planning, developing a theory of the case, creative problem-solving, strategic decision-making, collaborating, legal storytelling, critical lawyering and consequences of bias in legal systems, legal writing, oral advocacy, and motion practice.

Corequisite(s): CLIN 5120.
Course Limit: 2

CLIN 5150 Litigation Skills in DV Clinic (3)
The course will examine domestic violence in the criminal justice system and in family law, with a special focus on practical legal skills. Topics include domestic violence as a violation of law, civil rights, international human rights and as a tort, and the role of domestic violence in divorce law and custody. While examining the issue systematically, students will also learn important practice skills through simulated role plays and demonstrations. Students will take a mock deposition, perform cross-examinations, and oral arguments.

Prerequisite(s): minimum score of PASS in 'Law Graduate Student' or CLIN 5160*.
* May be taken concurrently.

CLIN 5160 Domestic Violence Clinic (3)
The Domestic Violence Clinic provides legal services to victims of domestic abuse, relationship violence, stalking, or sexual assault. Legal services will address the variety of legal problems which may arise as a consequence of domestic violence, including emergency assistance in obtaining protective orders, and extending to representation in family law cases; including child custody and support; problems with housing, unemployment, or denial of access to financial resources such as bank accounts or other community property. The Domestic Violence Clinic is offered in the fall for three credits and in the spring for three credits. Enrollment is limited to twelve students. Students are selected on the basis of an application and personal interview. Students must meet all eligibility requirements of the Louisiana student practice rule. Prerequisites: Legal Profession and Evidence. Co-requisite: Litigation Skills for DV Clinic Students. Course may be repeated 2 times for credit.

Prerequisite(s): minimum score of PASS in 'Law Graduate Student' or 2LAW 2800 and 2LAW 2400, CLIN 5150* and 5550*.
* May be taken concurrently.
Course Limit: 2

CLIN 5200 Criminal Practice Seminar (3)
This seminar is an in-depth study of selected aspects of criminal practice, both skills and substantive. Topics covered include: client counseling, investigation and discovery, drafting and arguing motions, competency to stand trial, the insanity defense, expert witnesses, case strategy, state and federal post-conviction proceedings. This course is geared towards those considering careers in criminal law, whether as prosecutors or defense attorneys. Enrollment is limited to students participating in the Criminal Justice Clinic. A rule penalizing students for lack of preparation and/or excessive absenteeism will be invoked. Fall semester only.

Corequisite(s): CLIN 5210.

CLIN 5210 Criminal Justice Clinic (3)
This course is the criminal litigation and advocacy component in which students, under supervision, represent indigent criminal defendants in all phases of a criminal case: pretrial motions and trials; parole hearings; state post-conviction relief; appeals to the LA Fourth Circuit Court of Appeal and the LA Supreme Court; and federal habeas corpus petitions in the federal district court, Fifth Circuit Court of Appeal, and United States Supreme Court. Additionally, students engage in non-litigation advocacy on behalf of clinic clients such as testifying before the state legislature, meeting with community organizations, and partaking in community legal education. This course is geared towards those considering careers in criminal law, either as prosecutors or defense attorneys. To be taken in conjunction with Criminal Practice Seminar. Students are selected on the basis of an application and personal interview. Full year only, 3 credits in the fall and 3 credits in the spring. A rule penalizing students for lack of preparation and/or excessive absenteeism will be invoked. Course may be repeated 2 times for credit.

Prerequisite(s): minimum score of PASS in 'Law Graduate Student' or 2LAW 2400 and 2LAW 2800, CLIN 5550* and 2LAW 2300* or 4LAW 4160*.
* May be taken concurrently.
Corequisite(s): CLIN 5200.
Course Limit: 2

CLIN 5240 Environmntl Advocacy Sem (3)

CLIN 5250 Environmental Law Clinic (3)
The Tulane Environmental Law Clinic (TELC) provides legal services to local, regional, and national groups, as well as individuals, on a wide range of environmental and public participation issues. Under the supervision of the Clinic's staff attorneys, students in the Clinic take the lead in representing clients in pleadings and oral arguments before local governmental bodies, state and federal agencies, and state and federal courts. Among the issues TELC student attorneys address are issues faced by fence line environmental justice communities impacted by facilities which pollute their land, air and water and pose risks from accidental releases; Atchafalaya Basin residents and fishermen who seek to preserve their way of life and the wetlands they rely on; clients concerned with preserving fish and wildlife, including threatened and endangered species; and regional and national groups addressing local environmental issues which reverberate nationwide. TELC is open to 3Ls, 2Ls (during the spring semester only), and LLMs with JD degrees from U.S. law schools. 2L and 3L students are required to enroll for two semesters; LLMs are limited to one semester in TELC. Under student-practice rules, 3Ls and LLMs may sign pleadings and appear in court under the guidance of TELC's supervising attorneys. Professor Jordan plans to invoke a rule penalizing students for excessive absenteeism. 3 credits each semester. Course may be repeated 2 times for credit.

Course Limit: 2

CLIN 5300 Juvenile Advocacy Sem (3)
This seminar studies the special problems involved in the representation of children and their parents. Topics reviewed include discovery practices in criminal and civil cases, evidence, constitutional criminal procedure, expert witnesses, child custody and child support, and pre-trial motions appropriate for litigation in juvenile court. Enrollment is limited to students participating in the Juvenile Litigation Clinic. Professor Katner plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism.

Prerequisite(s): minimum score of PASS in 'Law Graduate Student' or CLIN 5310*.
* May be taken concurrently.

CLIN 5310 Juvenile Litigation Clinic (3)
In the Juvenile Clinic 10 students represent indigent clients in juvenile delinquency cases, and children in need of care cases. Students work under the direction of the supervising attorney, but the students are primarily responsible for all client and witness interviews, pre-trial hearings, trials and appeals. The course must be taken in conjunction with the Juvenile Advocacy Seminar. The course lasts the entire year and carries 3 credits in the fall and 3 credits in the spring. Students are selected during the spring of their second year based upon written applications and personal interviews with the supervising attorney. Professor Katner plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism. Course may be repeated 2 times for credit.

Prerequisite(s): minimum score of PASS in 'Law Graduate Student' or 2LAW 2400.
Course Limit: 2

CLIN 5350 First Amendment Clinic (3)
This clinical course is dedicated to protecting freedom of expression, increasing government transparency, and supporting the essential work of news gatherers. The work includes impact litigation and direct legal services. Student attorneys have professional responsibility for clients and handle all aspects of their cases. To be taken in conjunction with the First Amendment Advocacy Seminar. Students are select on the basis of an application and personal interview. Full year only, 3 credits in the fall and 3 credits in the spring.

Corequisite(s): CLIN 5360.
Course Limit: 2

CLIN 5360 First Amendment Clinic Seminar (3)
This seminar is the co-requisite course for the First Amendment Clinic and examines the practice, procedure and ethics of pre-trial advocacy in the area of First Amendment. 3 credits.

Corequisite(s): CLIN 5350.

CLIN 5410 Legislative & Admin Advocacy (3)
Legislative and Administrative Advocacy examines how bills become law and how agency rules are promulgated. Each student will research and draft a proposed bill or agency regulation on behalf of a client group, present it in a mock hearing, and write a research paper. Grades are based in equal proportions on the draft of an instrument, mock hearing, and research paper; there is no examination. Class meetings will cover legislative and administrative enactment and promulgation procedures, research methodologies, drafting techniques, constitutional restrictions, and public access to information. This clinical course is open for enrollment by second and third year students. Professors plane to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism.

CLIN 5420 Adv Leg & Admin Clinic (2)
Students will work on multiple legislative and administrative instruments at various stages of development, including bills appropriate for introduction into the spring legislative session, rules intended for promulgation by agencies, city ordinances, research memoranda, one-page informational sheets, proposed amendments, fiscal notes, and fiscal and economic impact statements. Classroom meetings will include presentations by faculty and by personnel from collateral agencies with expertise in legislative and administrative advocacy. Direct faculty instruction will also be provided through meetings and tutorials, individually and in small groups, where drafts of instruments will be reviewed and critiqued, feedback will be provided on written memoranda, strategic considerations will be discussed, and students will engage in critical reflection on their field experiences. Students will devise implementation strategies based on economic analysis and feasibility of proposed instruments. They will attend meetings of selected public bodies and prepare a written reflection on what they observed. Grades will be based on written memoranda and drafts, timeliness of the work, supervisory and client feedback, and diligence. In order to apply for entry into the clinic, students must have taken the fall semester course in Legislative & Administrative Advocacy; enrollment is subject to professor approval.

CLIN 5550 Trial Advocacy (3)
This course is intended to prepare and train students in advocacy skills for litigation. It is graded on a pass/D/fail basis, with top 10% of class receiving “honors” designation. The principal method of instruction is “Learning By Doing.” The students participate in intensive role playing of simulated trial problems and receive feedback from faculty members. Subjects covered during the course are: opening statements; direct and cross examination; exhibits and demonstrative evidence; impeachment and rehabilitation; examination of expert witnesses; closing arguments; and trial notebook. Asynchronous lectures on the skill of the week are provided, and members of the faculty give demonstration performances. Each student performance is recorded at least once as part of the weekly faculty feedback and self-evaluation component. The faculty includes experienced trial lawyers and judges, who rotate through each section so that students will be exposed to a variety of views and ideas. Each student tries a trial at the conclusion of the course. The course has a limited enrollment. It is strongly recommended that you take Evidence prior to enrolling in Trial Advocacy, but co-enrollment is permitted.

Prerequisite(s): 2LAW 2400*.
* May be taken concurrently.

Law First Year Courses (1LAW)

1LAW 1080 Constitutional Law 1 (4)
This course is an introduction to problems arising under the Constitution of the United States, including the nature of the judicial function, the operation of the federal system, the separation of powers, and the protection of individual rights. Both the development of constitutional doctrines and current problems are considered.

1LAW 1110 Contracts I (3)
This course is an introduction to the law of contracts, dealing with consideration, offer and acceptance, techniques for policing the bargaining process, and an introduction to remedies. Although the course is essentially an introduction to the common law of contracts, there will be some attention to statutory materials, including the Uniform Commercial Code.

1LAW 1160 Contracts II (3)
The major focus is on the law of contracts for the sale of goods, as embodied in Article 2 of the Uniform Commercial Code. Particular emphasis is placed on remedies for breach of contract and warranties as to quality. Throughout, comparison is made to the similar concepts developed at common law.

1LAW 1210 Criminal Law (3)
This course focuses on typical statutes proscribing criminal behavior as a means of studying legal concepts of responsibility and punishment. Selected topics include mens rea, mistake, attempt, conspiracy, accomplice liability, homicide, rape, insanity, and related constitutional doctrines.

1LAW 1310 Civil Procedure (4)
This course offers the first-year law student an introduction to civil procedure. Emphasis is placed on the interrelationship between theories of jurisdiction and notions of federalism. The course also focuses on approaches to such matters as service of process, joinder, preliminary motions, multiple claims and parties, amendments, discovery, directed verdicts, summary judgment, res judicata, and collateral estoppel.

1LAW 1340 Civil Law Property (4)
This course presents fundamental principles of the civil law as they relate to property; Louisiana Civil Code, Preliminary Title, Articles 1-15; Book II, Articles 448-532, 784-791; Book III, Articles 3412-3555. Topics include: introduction to the civil law system, things, ownership, possession, liberative and acquisitive prescription. The course emphasizes analysis of institutions in the light of civilian methodology, jurisprudence, and doctrine.

1LAW 1360 Common Law Property (4)
The course surveys the common law system of property rights. The focus is on voluntary and involuntary transfers of land including estates in land, landlord and tenant rights, eminent domain and servitudes and other rights in the land of another.

1LAW 1410 Legal Research & Writing (0-4)
This course is designed to teach the fundamentals of legal writing and to acquaint the student with various research techniques utilizing the resources of the law library and computerized legal databases. Students are assigned to an instructor, and each instructor will be assisted by several third-year senior fellows. Students will be placed into small sections, which will meet on a regular basis. Over the course of two semesters, students will learn the techniques of legal problem-solving, and learn to research and draft legal memoranda and briefs through a series of progressively more complex writing assignments. The course is graded and ordinarily culminates with the drafting of an appellate brief and an oral argument before an appellate moot court. The course lasts the entire year and carries 2 credits in the fall and 2 credits in the spring. This course may be repeated 2 times for credit.

Course Limit: 2

1LAW 1420 Becoming Lawyers (0)
This series is designed to help first-year students identify professional goals and build critical academic and professional skills.

1LAW 1440 Obligations I (3)
This is a basic course in Louisiana contract law with primary emphasis upon the Louisiana Civil Code as revised in 1985, and comparisons to the common law. It explores, comparatively, the general concept of a legal obligation, and more particularly the principles of civil law contracts. Matters dealt with include capacity, consent and cause, formation of contracts, effects of contracts, and remedies for nonperformance.

1LAW 1510 Torts (4)
This course deals with problems of non-contractual wrongs for which private compensation is sought under the common law. Topics include intentional wrongdoing, negligent wrongdoing, instances in which society imposes strict liability, accidents, and the ways in which the legal system shifts their social costs or attempts deterrence.

Law Mini Courses (MINI)

MINI 3530 Becoming Lawyers: Applied Legal Analysis (1)
This course aims to promote the academic and professional success of 3L students transitioning into their post-graduation bar exam preparation. The course will focus on exam strategies and study skills; it will not explicitly teach content tested on the bar exam and is not designed or intended to be a substitute for a commercial bar review course. The course will be held jointly, with two class sessions split by jurisdiction to provide exam-specific instruction and targeted skills practice. Both sections will begin with an overview of the structure of the Uniform Bar Exam and Louisiana Bar Exam and the processes for admission to state bar associations. Following this initial lecture-based session, students are expected to be active participants in the course, which will require out of class assignments, in-class assignments, skills practice, mock exams, and other formative graded exercises. Students will receive hands-on studying and writing practice, peer evaluation, and individual feedback. Students will take at least one civil law bar course or one upper-class bar course in the same semester (unless the student has successfully completed three civil law or upper-class bar courses). The proposed course is in line with the overwhelming majority of our peer and aspirational schools. Of the twenty-four schools ranked between 60 and 80 by the U.S. News and World Report in 2023, nineteen have a bar preparation program. Of the ninety-one schools ranked between 1 and 80, only twenty-nine have no bar course or commercial partnership.

MINI 3540 Introduction to International Taxation (1)
The course will introduce key concepts including international tax policy and the taxation of inbound and outbound business operations, cross-border financing, foreign currency transactions, cash repatriation and acquisitions and divestitures. The course will leverage real-life examples to illustrate the taxation of common cross-border business transactions and provide students with an appreciation of the critical role tax plays in structuring multinational business operations. Course grades will be based on individual written assignments designed to assess students' ability to identify and effectively communicate basic international tax concepts.

Prerequisite(s): (2LAW 2070 and 2530) or minimum score of PASS in 'Law Graduate Student'.

MINI 4000 Wind Law (1)
Wind is a major source of renewable electricity in use around the world. This course will focus on legal and policy factors that arise with this technology, using case studies, legal materials, scientific data, and other sources from the U.S. The course provides an in-depth study of most aspects of wind law in the US, with a focus on selected states, including the history of wind energy, the major elements of the wind energy lease, permitting, land law issues, the contractual framework for the sale of wind energy, offshore wind projects, government tax incentives, transmission issues and litigation.

MINI 4010 Competition Law in the Digital Economy (1)
The course explores the impact of digitalization on the application of competition law. On the one hand, competition has been tremendously intensified by the reduction of transaction costs, greater transparency and geographic market expansion. On the other hand, unprecedented economies of scale, network effects and control over big data create considerable barriers to entry and increase market power. Moreover, algorithms and artificial intelligence allow for new methods of coordinating market conduct with other players. Therefore, it does not come as a surprise that new competition law cases have emerged, including but not limited to the GAFAM platforms (Google-Alphabet, Apple, Facebook-Meta, Amazon and Microsoft). While the focus of the course is on European Union (EU) competition law, developments in US antitrust law will be considered comparatively. It will be shown that competition law – when adequately applied – does not stand in the way of innovation but has become indispensable for keeping markets dynamic, fair and open.

MINI 4020 International and Comparative Climate Law (1)
Emissions of greenhouse gases are known to cause widespread ecological, economic, and social consequences at a global scale. For over three decades, states have engaged in intense international negotiations and national efforts to address this issue, in particular by limiting and reducing greenhouse gas emissions. This course will consider what has been done, what is being done, and what could be done to address climate change through law and policy at the international, national, and local scales.

MINI 4030 International Sports And Human Rights Law (1)
The intersection of sports with human rights law is a complex and multifaceted realm, encompassing individual physical exercise, competitive games, global competitions, and mega sporting events such as the Olympic Games and the FIFA World Cup. Despite sports' historical autonomy and the court's traditional deference to sport's governing bodies, national and international human rights regimes are increasingly paying attention to abuses taking place in the sports field. Sport relies on a rules-based system in all its facets, including athletes, fans, workers, volunteers, and local communities, as well as governments, businesses large and small, the media, and sports bodies. This seminar examines and unpacks human rights standards and legal commitments to show the diverse actors involved in sports business and/or governance and their human rights responsibilities and obligations. Understanding the diverse actors involved in sport business and/or governance and their human rights responsibilities and obligations. how human rights are impacted by sporting events or sports activities. Sports operate within a meticulously structured system, involving athletes, fans, workers, volunteers, communities, governments, businesses, media, and sports bodies, all bound by rules. The seminar will address issues such as the human rights of athletes, the basic right to participate in sports and physical activity, remedies for victims of human rights abuses tied to major global sporting events; discrimination against women, LGBTQI+ people, and persons with disabilities in sport; campaigns against racism and apartheid in sports; the existence of disciplinary systems in the sports movement and the growing number of situations and cases of potential or actual clashes between the running of competitions and human rights standards (e.g. individuals rights in the context of anti-doping, corruption, and match-fixing). In particular, the seminar will discuss cases decided by human rights courts, such as the European and Inter-American Courts of Human Rights (ECHR and IACtHR), and specialized sports arbitration mechanisms, notably the Court of Arbitration for Sport (CAS).

MINI 4040 Climate Change and the Law (1)
This one-credit course aims to provide an overview of the legal implications and consequences of one of humankind's most pressing existential challenges – climate change – and thereby to expose Tulane Law students to a fundamental theme of modern life that will increasingly influence, if not shape their future professional activities. The course consists of ten substantive sessions, eight of which address distinct topical issues and will be taught by different members of the Tulane law faculty as well as by two or three guest lecturers, specialists on the topics concerned – either on-site, in person or by Zoom. Both introductory and concluding classes will be taught collectively by Tulane's in-house faculty.

MINI 4810 Socio-Economic Rights (1)
Socio-economic rights play an important role in many societies. Demands for jobs, food, water, housing/shelter, education, health care or – more generally – dignified living conditions are as important as classical liberal ('first generation') rights to equality, free speech, assembly, political participation or religion in countries like South Africa or India and continue to influence the human rights debate across large parts of South America. The Arab Spring is the most recent battleground over constitutionally entrenched socio-economic demands and greatly expanded the scope of such entitlements in systems like Iraq or Egypt. Other societies, including the United States and many countries in Europe, provide assistance for citizens in need but take a much more cautious stance on the constitutional protection of the socio-economic sphere. This course identifies different approaches to the protection of socio-economic entitlements. Drawing on the origins of social welfare states, including the German and French models, students will be alerted to the tensions that exist between the desire to provide a constitutional basis for the most fundamental needs of citizens and the limited resources available to most societies when it comes to the creation of job opportunities or the provision of social welfare benefits. Options range from ordinary social welfare legislation without a constitutional safety net, constitutional principles that direct public policy and resources towards the development of socio-economic safeguards, constitutional provisions that guarantee a minimum standard of life, to the constitutional entrenchment of ambitious individual rights to socio-economic benefits. Students will explore these options on the basis of selected academic writings, socio-economic data from national sources and international organizations, court decisions, and constitutional texts from a variety of systems including Ecuador, South Africa, India, Egypt, Germany and the United States. Particular emphasis will be placed on the role that constitutional law can play in socio-economic development and the distribution of limited resources between competing societal needs. This will include the difficult question of judicial enforcement and the implications of constitutionally entrenched rights for the separation of powers in democratic systems of government.

MINI 5040 Legal Scholarship Workshop (1)
This "workshop" will feature presentations by four or five visiting authors of their works-in-progress on regulation of economic activity, broadly construed. Students formally enrolled in the workshop will meet with one or more of the faculty conveners the week before each author's presentation to discuss the paper. Students will prepare brief (one-page) response papers for each paper for discussion in the prior meeting; those response papers will be shared with the authors. In addition, students will be expected to attend two additional approved lectures at the law school or elsewhere on campus and submit a brief (one-page) response paper. The workshop is designed for students who are interested in legal scholarship in general and for those with particular interest in issues related to regulation, economic regulation, and international coordination of economic policies. The author presentations will be open to students who are not formally enrolled in the workshop. The faculty conveners are: Adam Feibelman (Tulane, Law) Blair Druhan Bullock (Tulane, Law), and Steve Sheffrin (Tulane, Murphy Institute). 1 credit, pass/fail.

MINI 5041 Legal Scholars Wkshp, Advanced (1)
Continuation of Legal Scholarship Workshop.

MINI 5110 Freight Forwarders & NVOCCs (1)
This course will examine the role of intermediaries with respect to the negotiation and conclusion, or "fixing" of contracts for the carriage of goods by sea. The course will specifically examine the procedure for negotiating contracts including charter parties, the applicable chartering terms, the relationship between the intermediaries and the merchants, charterers, carriers and owners, and the relevancy of agency law. The course will explore multimodal transportation and liability regimes in EU and US. The course will be taught by Andrei Kharchanka, Manager of Risk, Claims and Litigation for BBC Chartering GmbH of Leer, Germany. BBC specializes in project cargo and is the world's largest operator of heavy lift multipurpose vessels.

MINI 5120 Adm: Charter Parties (1)
In this course, the student will become familiar with the different types of charter parties utilized by the shipping industry for chartering both cargoes and vessels. The main focus of the course will be on the duties of the owners and charterers under time and voyage charter parties, and the legal basis for disputes under both U.S. and English law. The course will be taught by Jason P. Waguespack (L'91) of the firm Galloway, Johnson, Tompkins, Burr & Smith.

MINI 5300 Corporate Governance: Hot Topics in Corporate & Personal Governance (1)
This mini-course carries one semester hour of credit and meets for six two-hour sessions. It is graded on the "P, D, F" basis. It considers selected topics in corporate governance and cases in which governance failures contribute to business failures. Because a significant portion of the course is current events, which are not predictable, newspapers are part of the assigned reading. Please choose either The New York Times or The Wall Street Journal. Editorial content will not be assigned. The course outline may change with little or no notice. Adjunct Professor Fishman is of counsel to Fishman Haygood, LLP, a New Orleans boutique law firm. Adjunct Professor Gershanik is a partner of Fishman Haygood, LLP. A student's background in corporation and securities law will be useful, but not prerequisite. The course is most appropriate for 3Ls, but 2Ls are also welcomed.

Prerequisite(s): 2LAW 2070.

MINI 5490 EU Competition (Antitrust) Law (1)
The course will consider a critical area of European Union business law: competition/antitrust law. It begins with a sketch of European Union law with specific reference to how the Union regulates trade, corporate establishment and the institutions that enforce these policies. It then turns to the two relevant European Union treaty articles: Article 101, which governs multi-firm conduct (agreements between business entities), and Article 102, which observes single firm conduct (abuse of dominant position). It is not necessary to have taken either Antitrust or European Business Law to enroll in the course.

MINI 5620 Human Rights Discourse (1)
This course will explore key themes of human rights protection through the lens of U.S. and foreign court decisions.

MINI 6040 Anti-Racist Lawyering (1)
Amidst the twin pandemics of corona virus and longstanding structural racism, this mini course will immerse students in readings, analysis and conversation about how law is frequently used to perpetuate anti-black racial harms and hierarchies and how students might use their legal education to disrupt those hierarchies. In a series of workshops, leading scholars, practitioners, organizers, and community members will address both historical civil rights barriers as well as current proposals for eliminating structural racism across the criminal justice, voting, education, housing, health/environmental and other sectors. Students will be assigned a series of prompts for preparation of reflection papers and essays.

MINI 6080 Roman Law (1)
Peace, liberty guaranteed by clear-cut rules, social interaction guided by value-laden principles-it is by these ethical and rational contents, deeply grounded and diligently elaborated in its religious, philosophical, and political history, that Roman Law has become part of the common heritage of the world's jurisprudence. As the course will illustrate in telling detail and general overview, Roman Law is in fact inspired from its beginning by the humanly valid idea that human life has to realize and to reconcile two seemingly contradictory ends, individual freedom an the reliable cooperativeness. Notably, slavery, omnipresent in its day, was branded by Roman lawyers an institution against human nature, thus paving the way for its abolition in modern times.

MINI 6150 Int'l Anti-Corruption (1)
This course will cover the basics of international anti-corruption laws such as the U.S. Foreign Corrupt Practices Act, the U.K. Bribery Act, international conventions against corruption, and similar anti-bribery laws of other countries. These anti-corruption laws generally prohibit direct and indirect corrupt payments to foreign officials. Enforcement has increased significantly in the last few years and will continue to be a major factor to any organization operating globally. The course will use recent SEC and DOJ investigations (such as the case against former U.S. congressman from New Orleans, William Jefferson) to illustrate the basics of these anti-corruption laws. The course will also cover other areas in the international trade regulatory regime such as export controls, anti-boycott, anti-money laundering, and fraud prevention. Other areas addressed by the course include the scope of international anti-corruption laws, identifying a government official, identifying red flags in business partners, conducting due diligence, exceptions to the laws, assessing third party risk, and other areas that play an integral role in counseling clients doing business abroad. We will review the elements of a comprehensive corporate compliance program and mechanisms used to implement compliance procedures and internal controls in an organization. The course will also address the cultural challenges presented by certain countries and industries. Students will be expected to participate in case studies and exercises designed to apply legal principals to situations that arise in the practice of law.

MINI 6180 Real Estate Contracts (1)
This course will examine the negotiation of a number of real estate contracts and the skills and methods of lawyers who handle transactions. The contracts include a purchase agreement, a construction loan commitment, purchase and remediation agreements for a brownfield site, a workout (loan modification) agreement and a management agreement for a senior living facility. The course materials will include a case study for each transaction and a form of the agreement, with an indication of the matters that most concern the party that receives the initial draft. The course will take up the rules of law that motivate and constrain the contents of particular agreements.

MINI 6181 Real Estate Contracts II (1)
This course will examine the negotiation of a number of real estate contracts and the skills and methods of lawyers who handle transactions. The contracts include an office lease, a shopping center lease for a small tenant, a reciprocal easement agreement for a shopping center, an LLC agreement between a developer-manager and high net worth investors, an owner-architect contract and an owner-contractor agreement. The properties will include an office building, a shopping center, a warehouse and one to be determined. The course materials will include a case study for each transaction, a form of the agreement, and the response of the party that receives the first draft. The course will take up the rules of law that motivate and constrain the contents of particular agreements.

MINI 6190 Representing Physicians (1)
This course will be begin with an overview of general issues in healthcare law but will focus primarily on practical legal issues physicians face in the current healthcare world and how lawyers can be prepared to counsel the physicians facing those issues. This mini-course will address issues as diverse as anti-trust and ERISA to medical staff and peer review, from the viewpoint of a practitioner who specializes in representing physicians. Tulane medical students will also attend several of the classes, and there will also be several attorney and physician guest instructors.

MINI 6250 Corp Law & Hostile Acquisition (1)
This is an advanced corporate law course focusing on state corporate law, corporate governance, the fiduciary duties of directors and the rights of stockholders in the context of hostile acquisitions. This course will emphasize the practical aspects of corporate law and will cover hostile acquisitions from a bidder's perspective (which will include takeover approaches, takeover negotiations, takeover techniques, and the structuring and pricing of offers), hostile acquisitions from a target's perspective (which will include advanced preparation, structural changes to reduce vulnerability, and responding to acquisition offers), proxy con-tests and stockholder activism. Business Enterprises is a prerequisite for 2L students and a pre-requisite or co-requisite for 3L students. The course will be taught by Michael Maimone who is an experienced corporate attorney and litigator who practices primarily in Delaware and New York.

MINI 6370 Political Investgns & Impeachm (1)
This course looks at issues at the intersection of politics and law that arise in investigations of public officials, including in impeachment proceedings. Topics will include criminal investigations, congressional inquiries, the role of defense counsel, and standards and processes for impeachment and removal of a U.S. president and other high-level government officers. Both the legal framework and practical political considerations will be considered. This course will be taught by Ross Garber, chair of the Government Investigations and White Collar Crime Group of Shipman & Goodwin LLP (Washington, D.C.), whose practice concentrates on representing government officials in investigations and who has served as lead defense counsel to three U.S. governors facing impeachment.

MINI 6450 Intro to Chinese Maritime Law (1)
This introductory course aims to convey to the student the primary knowledge of the shipping law and practice of the Mainland of China. The key sectors which are to be covered include Chinese legal system, setting up in China, contracting with Chinese entities, carriage of goods by sea, shipping contracts, ship and ship-related rights, marine casualties, marine insurance, agency, dispute resolution and maritime procedural law. This course intends to present the unique features of Chinese shipping law and tries to prepare the students for recognizing and dealing with uncomplicated legal issues in relation to Chinese shipping industry.

MINI 6480 Climate Change: Underlying Drivers & Potential Solutions (1)
In Climate Change: Underlying Drivers and Potential Solutions, students will explore major sources of greenhouse gas (GHG) emissions, understand drivers to reduce GHG emissions (including voluntary and mandatory mechanisms), assess the effectiveness of various GHG reduction efforts, evaluate available GHG reduction technologies, and review various U.S. government initiatives to accelerate GHG reduction efforts.

Prerequisite(s): 4LAW 6040, 4990, 6080 or minimum score of PASS in 'Law Graduate Student'.

MINI 6490 Transnational Litigation (1)
The rapidly growing number of disputes involving foreign parties and transactions present distinct problems that do not arise in purely domestic litigation or arbitration. The course will address these problems and the emerging solutions as developed by American courts, and it will compare these developments with approaches that prevail in other legal systems. Areas that will be covered include the extraterritorial application of U.S. laws, taking evidence abroad, personal jurisdiction over foreign defendants, and the enforcement of foreign judgments.

MINI 6620 Space Law: Jurisd Int Treat (1)
This course focuses on the question of what rules apply in outer space and examines the five current international treaties that govern outer space: the Outer Space Treaty, the Rescue Agreement, the Liability Convention, the Registration Convention, and the Moon Agreement. Comparisons to issues of jurisdiction in admiralty law will be made throughout the course, though no prior knowledge of admiralty law is required. This course is taught by Jeanne Amy from the Department of Justice's Aviation, Space, and Admiralty Division.

MINI 6630 Space Law: Property, Tort, and the Environment (1)
This minicourse examines three interrelated areas to consider in space: delict (tort), property, and the environment. In terms of tort law and space, undertaking outer space activities is inherently a risky business. Things blow up, fall down, smash into one another – bottom line, things can go very wrong. And when they do, someone will be liable. How tort law principles apply in outer space will be the first area of focus for the mini course. Property rights, the second area of focus, also are important in space. While existing treaties provide that States cannot take ownership of celestial bodies, there is room for interpretation as to whether a private person (or institution) might acquire such ownership. Moreover, there are property rights already in outer space given the existence of man-made objects, such as satellites, spacecraft, etc. How property law impacts space law is the second topic for our discussion. Finally, we will examine space and the environment. There are environmental impacts of outer space activity not only in space, but also on Earth, including pollution created during launch operations, importing new microbes onto Earth during space activity, and objects falling into Earth's atmosphere from space. Issues of the environment within outer space will also be discussed in the context of space debris, satellites, space stations, the future of possible space hotels, and more. The course will be taught by Professor Wian Erlank of North-West University in South Africa and will be graded in a Pass/C/Fail basis

MINI 6650 Public Co Reporting Practicum (1)
This course is designed to provide a hands-on and practical introduction to disclosure issues and practices of publicly traded companies. The course will address disclosure issues and topics under the federal securities laws and the various rules and regulations thereunder. The course will also cover select corporate governance issues, such as director independence, committee composition and duties, shareholder approval of certain matters, and other exchange listing requirements (NYSE and/or NASDAQ rules). This is an advanced course that is designed to teach students how to approach and solve problems relating to public company disclosure issues, focusing on the structure and content of disclosure and available resources. The course will be designed to simulate the issues and tasks that an attorney would perform in representing a public company in practice. It is primarily designed for students who intend to practice corporate or securities law and represent companies in connection with public filings with the Securities and Exchange Commission and the sale of securities.

MINI 6660 Plea Bargaining (1)
Only about 2% of all federal criminal defendants go to trial, and only about 6% of state criminal defendants do so. Yet the vast majority of the training received by prosecutors and defense attorneys, both in law school and after, focuses on trials. This mini-course will instead address the mechanism(s) by which most criminal cases are actually resolved, (with a particular emphasis on the federal courts) and will attempt to provide future criminal lawyers with some of the tools needed to achieve just and fair resolutions in those cases. For the last class, students will be put into pairs (prosecutor-defense attorney), and required to conduct plea negotiations in a hypothetical case, and ultimately reach a resolution that does not involve a trial. The roles of the participants will then be reversed, and the exercise will be conducted again.

Law Non-Classroom Courses (NCLS)

NCLS 9010 Law Review (0-2)
Founded in 1916 as the Southern Law Quarterly, the Tulane Law Review is published five times annually and is managed and edited by students of the Tulane University Law School. The Review is recognized as a preeminent forum for scholarly publication in the areas of Civil Law, Comparative Law, and Admiralty Law. The Review has a significant international circulation and is on a select list of minimum holdings for courts and law libraries in the United Kingdom. The Review maintains a wide European readership. Course may be repeated up to unlimited credit hours.

Maximum Hours: 4

NCLS 9020 Moot Court (0-2)
Tulane Moot Court is one of the largest student-run organizations at Tulane University Law School and among the oldest programs of its kind in the nation. The Tulane Moot Court program was founded in 1929 by a small group of Tulane Law students, including the legendary U.S. Fifth Circuit Judge John Minor Wisdom. Alumni include state and federal judges, members of Congress, U.S. Ambassadors, and state governors. Tulane Moot Court is comprised of four Interschool teams: Mock Trial, Appellate, Alternative Dispute Resolution, and Willem C. Vis International Arbitration. The Appellate team consists of four sub-teams: International Criminal Court, John R. Brown Appellate Admiralty, Pace Environmental Appellate, and Black Law Students Association (BLSA) Appellate. Throughout the year, all of these teams earn academic credit by competing in a number of national and international moot court competitions. Course may be repeated up to unlimited credit hours.

Maximum Hours: 4

NCLS 9030 Maritime Law Journal (0-2)
The Tulane Maritime Law Journal is a biannual, student-edited law journal that includes scholarly works written by academics, practitioners, and students concerning current topics in Admiralty and Maritime Law. In addition, the Journal publishes annual sections in Recent Developments and International Law for the United States and the international community, as well as periodic symposia on relevant topical areas in the field and quantum and collision surveys every other year. Course may be repeated up to unlimited credit hours.

Maximum Hours: 4

NCLS 9040 Environmental Law Journl (0-2)
The Tulane Environmental Law Journal is a biannual legal periodical produced and edited by students of Tulane Law School with the support of the faculty and administration of Tulane Law School. The Journal contains timely articles written by professors and practitioners, as well as commentary on recent cases written by journal members. Featured scholarly articles rigorously analyze a broad range of environmental issues affecting individuals, communities, and the nation at large. Course may be repeated 4 times for credit.

Course Limit: 4

NCLS 9050 Law & Sexuality Journal (0-2)
First published in 1991, the Tulane Journal of Law & Sexuality is the first student-edited law review in the country devoted solely to covering legal issues of interest to the lesbian, gay, bisexual, and transgender community on a wide variety of subjects, including constitutional, employment, family, health, insurance, and military law. The Journal also publishes the winning article of the annual National LGBT Bar Association Michael Greenberg Student Writing Competition. Course may be repeated 4 times for credit.

Course Limit: 4

NCLS 9060 Jrnl Int'l & Comparative Law (0-2)
The Tulane Journal of International and Comparative Law was founded at Tulane University Law School in New Orleans, Louisiana as an outgrowth of that institution's historical tradition as a signpost in the academic world for international and comparative law. Published biannually, the Journal is dedicated to discussing and debating all facets of international law, from human rights to transnational commerce to the historical evolution of current global law. Course may be repeated 4 times for credit.

Course Limit: 4

NCLS 9070 Tech & Intell Property Journal (0-2)
The Tulane Journal of Technology & Intellectual Property (JTIP) is a student-edited, subscription-based, scholarly publication of Tulane University Law School. JTIP examines legal issues relating to technology, including topics such as patents, copyrights, trademarks, trade secrets, antitrust, information privacy, computer law, constitutional law, contracts, torts, and all other policy implications of law and technology in our society. Course may be repeated 4 times for credit.

Course Limit: 4

NCLS 9080 Sports Law Journal (0-2)
The Sports Lawyers Journal is a national legal journal edited by Tulane law students and published by the Sports Lawyers Association (SLA). Every member of the SLA, currently nearly 1,500 practicing lawyers, professors, law students, and other professionals, receives the publication annually. Since the Journal is composed of articles authored by American, Canadian, and European law students, it provides a unique view of sports issues and an unparalleled opportunity for students to have their works published and read. Course may be repeated up to unlimited credit hours.

Maximum Hours: 4

NCLS 9100 Directed Research (1-3)
Directed Research is a way for students to receive one, two, or three hours of credit for research papers completed under the supervision of a member of the full-time faculty. The faculty member must approve the topic and scope of the paper and determine the number of pages required for the credit granted. Students may receive a maximum of three credits during their entire degree program. Course may be repeated 3 times for credit.

Course Limit: 3

NCLS 9110 Seminar Work (1)
Out of class work component for 3 credit law seminar courses Course may be repeated up to unlimited credit hours.

Enrollment limited to students in the Uptown campus.

Enrollment limited to students in the Law department.

Maximum Hours: 99

NCLS 9300 Senior Fellow (2-4)
Legal Research and Writing Senior Fellowship.

Maximum Hours: 4

NCLS 9400 Law Externships (0-6)
The Externship courses provide legal education and skills development in real-life settings. Students work and learn in a variety of workplaces: public interest or nonprofit organizations; courts or government offices at the federal, state or local level; and corporate counsel offices. The Externship courses allow students to gain expertise in professional skills and problem-solving; study professionalism and the lawyers' ethical requirements; examine lawyers' roles in the delivery of justice and ensuring justice for all; develop specific lawyering skills or learn a specific area of law; explore career interests in a variety of legal fields and build a professional network; and provide service to the community and to the public at large. Course may be repeated up to unlimited credit hours.

Maximum Hours: 18

NCLS 9410 Advanced Summer Externship (3)
Upper-class summer externship.

Maximum Hours: 6

Law Special Courses (LAWS)

LAWS 6000 Mindfulness for Lawyers (0)
The 30-minute sessions are designed to help you reduce stress, increase concentration, and thrive during exam period.

LAWS 6010 Pretrial Civil Lit Bootcamp (1)
This course is designed to teach students the fundamental skills necessary to represent clients in civil discovery and motion practice before trial. The course concentrates on developing skills in client communication, drafting pleadings, preparing and responding to written discovery, arguing pretrial motions, and preparing for and taking the depositions of both fact and expert witnesses. Throughout the individual lessons, the faculty spends time discussing case development, the burden of proof at trial, and the witnesses and exhibits that an attorney will need to obtain in preparation for representing their client before a jury. The faculty also discusses related issues including insurance coverage and its effect on the attorney-client relationship and execution of a potential judgment. The course's explicit focus on pretrial practice reflects the availability of further education in trial skills through Tulane's Trial Advocacy program and Tulane's clinical programs.

LAWS 6020 Pretrial Criminal Lit Bootcamp (1)
This course hopes to teach students three critical skills required for pretrial advocacy in criminal litigation: information gathering; drafting motions; and arguing motions. The course will focus on the five matters (and related motions) most commonly encountered in the interval between arrest and trial: (1) bail; (2) discovery; (3) "similar acts"/FRE 404B evidence; (4) motions to dismiss; and (5) motions to suppress evidence. Students in the course will be divided into two groups – a prosecution track, and a defense track – and will be expected to learn what information is necessary for each motion; to research and write each motion; and then to argue their motion (or opposition) each day. In addition, students will be expected to learn to formulate a theory of the case, either prosecution, or defense, and then to make strategic decisions consistent with that theory as they move through the pretrial process. The course is designed to occupy the territory between classroom theory and trial practice. Training in the latter area is readily available through Tulane's Trial Advocacy program, Tulane's Criminal Law Clinic, and Tulane's supervised externships at public defenders' and prosecutors' offices.

LAWS 6030 Transactional Bootcamp (1)
This course will consist of a series of counseling, negotiation, due diligence, and drafting exercises structured around a basic corporate transaction (e.g., an asset purchase). The course will introduce students to fundamental deal skills, such as structuring the timetable for a transaction, eliciting and drafting the operative business terms, identifying legal and business risks and negotiating corresponding risk-shifting and risk-reduction provisions, and reviewing and drafting the ancillary documents necessary to consummate the transaction.

Prerequisite(s): minimum score of PASS in 'Law Graduate Student' or 2LAW 2070.

LAWS 6040 Business Literacy (1)
This one-credit course is designed to introduce students to a range of basic business concepts that lawyers will encounter in commercial or transactional practice. Students will be grouped into 6 teams, each of which will act as a consultant in connection with a proposed sale of a publicly traded company (the "Company"). With the assistance of one or more Senior Advisor, each team will participate in a series of exercises designed to analyze different aspects of the proposed sale, including an understanding of the industry, the value chain in the Company's market, the value of a business combination with the Company in advancing the long-term objectives of different bidders, the fair value of the Company under different valuation methodologies, the options available to a finance a business combination with the Company, and the risks posed to individual bidders by a business combination with the Company. As a final project, each team will make an oral presentation to the CEO and board of a specific bidder regarding the Company's strengths and weaknesses and the opportunities and challenges posed by a business combination with the Company.

LAWS 6060 Trademark Prosecution (1)
TRADEMARK Prosecution Boot Camp This 1-credit graded course will provide students the opportunity to engage in educational simulated hands-on trademark prosecution tasks, including researching trademark availability, preparing freedom-to-use and registrability opinions, preparing trademark applications, preparing use affidavits, evaluating and responding to USPTO office actions, and responding to oppositions. The course, taught by Prof. Joel Feldman, will simulate the lifecycle of a trademark application, from clearance through publication for opposition

Maximum Hours: 99

Law Summer Program in Germany (LGER)

LGER 1000 Law - Summer In Germany (0)
Law summer abroad in Berlin, Germany.

LGER 4500 Intercultural Mediation (1)
The Berlin Summer Program in Intercultural Negotiation and Mediation is a joint venture between Tulane Law School and Humboldt University in Berlin/Germany. 2024 marks the 26th consecutive year that the Program is being offered. The curriculum consists of lectures, Q+A sessions and role-play exercises. An experienced team of academic experts and practitioners from the United States, Germany and Israel provides a thorough introduction to the theory and practice of successful mediation including the challenges that arise in intercultural settings. A special unit will focus on the negotiation and mediation of political disputes. Successful participants receive one credit of experiential learning (at Tulane) and a certificate that documents successful participation in the Program. Participants will move between general lectures and exercises in small groups. The language of instruction is English. The main reading is Stulberg/Love, The Middle Voice (Carolina Academic Press). Additional readings, presentation slides and fact patterns will be provided via Canvas (for TLS students) or email (non-TLS students).

LGER 4510 Intercultural Negotiation (1)
The Berlin Summer Program in Intercultural Negotiation and Mediation is a joint venture between Tulane Law School and Humboldt University in Berlin/Germany. 2024 marks the 26th consecutive year that the Program is being offered. Segment 1 (Negotiation) consists of lectures, Q+A sessions and role-play exercises. An experienced team of academic experts and practitioners from the United States, Germany and Israel provides a thorough introduction to the theory and practice of successful negotiation including the challenges that arise in intercultural settings. A special unit will focus on the negotiation of political disputes. Successful participants receive one credit of experiential learning (at Tulane) and a certificate that documents their successful participation in this segment of the Program. Participants will move between general lectures and exercises in small groups. The language of instruction is English. The main reading for this course is Fisher/Ury, Getting to Yes (Penguin). Additional readings, presentation slides and fact patterns will be provided via Canvas (for TLS students) or email (non-TLS students).

LGER 4610 Int'l Negotiation & Mediation (3)
The Berlin Summer Program in Intercultural Negotiation and Mediation is a joint venture between Tulane Law School in New Orleans and Humboldt University in Berlin. 2020 marks the 22nd consecutive year that the program is being offered. The four-week curriculum consists of lectures, Q+A sessions and role-play exercises that cover both theory and practice of negotiation and mediation. An experienced team of academic experts and practitioners from the United States, Germany and Israel provides a sound introduction to the principles and techniques of ADR and highlights the special challenges of conflict resolution in an intercultural setting. A special unit will focus on online negotiation. Optional components feature the mediation of political conflicts (post-conflict/peace negotiations and conflicts over employment and pension rights) as well as virtual excursions to Germany and the European Union. Successful participants receive three credits of experiential learning as well as certificates in negotiation and mediation. The entire Program is conducted online via Zoom (Mondays, Wednesdays and Fridays). Participants will move from common events (general lectures) to small groups (exercises). The language of instruction is English.

Law Upperclass Electives (2) (2LAW)

2LAW 2070 Business Enterprises (4)
This four-credit course will cover the legal architecture of certain business enterprises (including partnerships, corporations, and limited liability companies), how business enterprises are financed, how control and managerial authority are allocated within a business enterprise, and the scope of the fiduciary duties owed to a business enterprise and its owners in routine and fundamental transactions. This course will also cover aspects of federal securities law affecting the governance of business enterprises, including antifraud rules and insider trading.

2LAW 2110 Civil Law Property II (3)
This course covers institutions of property law not covered in the first-year Civil Law Property course. It includes analysis of the notion, function, and structure of real rights in civil law jurisdictions; actions for the protection of the ownership and possession of movables and immovables; boundary actions; dismemberments of ownership, such as personal servitudes (usufruct, habitation, rights of use), predial servitudes, and building restrictions in subdivision developments.

2LAW 2300 Con Crim Pro:Investigatn (3)
This is a constitutional law course focusing on those aspects of the Bill of Rights that apply to the rights of suspects and defendants in the investigative phases of the criminal justice system. Specifically, we will be studying United States Supreme Court case law interpreting the Fourth, Fifth and Sixth Amendments. The course is recommended for the Juvenile Law Clinic and is one of the recommended courses for the Criminal Litigation Clinic.

2LAW 2400 Evidence (3)
The focus of this course is on the law and policy considerations surrounding the proof of facts (and law) in judicial proceedings. We will be studying the Federal Rules of Evidence, as most states have adopted these rules wholesale or in large part. We will cover issues of relevance and of reliability, the two main concerns of the Rules.

2LAW 2530 Income Taxation (3)
Practicing lawyers, regardless of their area of expertise, need a basic understanding of federal income tax because this tax affects so much of modern American life. This course covers the fundamentals of federal income taxation of individuals. It provides a basic understanding of the structure and vocabulary of the tax statute and of the relationship of the statute to regulations, other administrative pronouncements, and case law. The course introduces students to key concepts and issues in individual federal taxation such as the taxable unit, rate structure, the definition of income, capital recovery, the difference between a deduction and a credit, and the treatment of capital gains. Through the use of the problem method, the course develops the critical skills necessary to read and analyze any statutory language.

2LAW 2750 Obligations II (3)
This is a continuation course building upon the general principles developed in Obligations I. Its focus is a detailed study of sale and (to a lesser extent) lease, the most important nominate contracts in the Civil Code. Where appropriate, comparisons are made between the UCC and the French and Louisiana Civil Codes.

2LAW 2800 Legal Profession (3)
This course introduces students to the roles of lawyers in society, the nature and structure of the legal profession, the rules of ethics, fundamental concerns and dilemmas of lawyers engaged in the practice of law. The course seeks to make students aware of their ethical responsibilities, both as members of society and members of the legal profession. This course must be taken prior to both as members of society and members of the legal graduation

2LAW 2870 Real Estate Transactions & Finance, Common, and Civil Law (2)
This course covers issues of substantive and procedural law in their relationship to real estate transactions, and drafting, financing, and other problems encountered in sophisticated transactions.

Law Upperclass Electives (3) (3LAW)

3LAW 3110 Civil Lit:Strategy&Pract (2)
This course will provide the student with a realistic understanding and appreciation of handling litigation matters in private or corporate practice and the type of work and situations they can expect to deal with on a daily basis. The course will provide a practical application of how to take a lawsuit from the initial client contact through trial and appeal. Students will discuss and prepare pleadings, including Complaints/Petitions, Discovery Requests and Responses, Motions, and Judgments, and will be provided with a practical understanding of what is expected of them by judges and how the rules of civil procedure are applied in the real world. The course will be taught by Robert L. Redfearn, Jr. a partner with Simon, Peragine, Smith & Redfearn, L.L.P. Because of the substantial overlap in content, students enrolled in Civil Litigation: Strategy & Practical Skills may not enroll in the Pre-trial Civil Litigation Winter Intersession.

3LAW 3130 Coml Law-Civil Sec Rghts (3)
This is a course in credit transactions under the civil law of Louisiana. Topics include suretyship and secured transactions as to movables and immovables. Article 9 of the Louisiana version of the Uniform Commercial Code is considered, together with mortgages on immovables, and codal and statutory privileges. Problems of ranking or priorities are studied.

3LAW 3150 Mergers & Acquisitions: Intro to Deal Process, Corporate Associate Roles & Essential Drafting Skills (2)
This course will provide students with an immersive learning experience by teaching them the essential skills need when performing the role of a corporate associate on a merger transaction. Students will be provided with an in depth look at how transactions are initiated, effectuated and completed. Practical skills that will be taught include how to draft and edit key transaction documents such as non-disclosure agreements, letters of intent, purchase and sale agreements and related disclosure schedules, due diligence memos and closing documentation. Students will be assigned to work in groups for certain exercises. They will receive instruction how to draft contract clauses and feedback on their work throughout the course. Students will also participate in negotiating exercises (representing hypothetical buyers and sellers) where they will learn to advocate for their client's positions in a persuasive but non-confrontational fashion. In class lectures will primarily provide the students with practical information from the real world of M&A transactions.

Prerequisite(s): 2LAW 2070 or minimum score of PASS in 'Law Graduate Student'.

3LAW 3200 Contract Drafting (2,3)
This course introduces students to the principles, processes and techniques for drafting business contracts. Students will learn how transactional lawyers translate a business deal into contract provisions. Students will draft commercial agreements with a focus on managing risk, minimizing ambiguity, drafting with clarity, using contemporary commercial drafting techniques, and solving problems through effective drafting. Students will also learn to read, review and analyze contracts with an eye toward both legal and business risk issues. The course is presented through a combination of lecture, drafting and editing assignments, and in-class exercises. Students draft sample contract provisions, draft contracts from scratch, analyze term sheets, and review and revise contracts. Grades will be based upon drafting and editing assignments, participation in in-class exercises, and good faith completion of ungraded assignments.

3LAW 3210 Coml Law-Secured Trans (3)
This course deals in depth with the creation and perfection of security interests in personal property, priority of claims, and remedies upon debtors' default under Article 9 of the Uniform Commercial Code. In addition to full coverage of Article 9, the potential risks of the secured creditor under the Federal Bankruptcy Code are considered. Substantial consideration is given to the policies and commercial equities which underlie doctrine in this area of law.

3LAW 3280 Com'L Law-Bankruptcy I (3)
After a brief study of individual debt collection under state law, this course will focus on federal bankruptcy law. It will provide an overview of fundamental aspects of consumer and business bankruptcy law and practice. It will also explore a number of current and ongoing policy debates related to bankruptcy law. Thus, the course should be of interest to students who expect to be involved in the practice of bankruptcy law as well as any students who wish to explore broader themes related to economics, financial markets, politics, legislative process, and public policy.

3LAW 3350 Common Law Trusts & Ests (3)
This course examines the law governing the transmission of property at the owner's death. Topics emphasized are intestate succession; the substantive and formal requirements for the validity of will; interpretation of wills; the creation of private trusts; the nature of the beneficiary's interest in a trust.

3LAW 3370 Comparative Law in Action (1,2)
This course highlights the fact that large areas of national law are influenced (and sometimes even driven) by developments outside our country's borders, and that 'local' legal practice will often require lawyers to engage with foreign and/or international law – or to apply comparative legal techniques – in their daily work. The focus is very much on the practical application of foreign/comparative/international law in areas such as contract law, torts, constitutional law, human rights protection, public international law, environmental law, development, employment law, criminal law, or economic regulation. The course is based on a background hypothetical involving a U.S. company which seeks to expand its operations – both in terms of production, distribution and administration – to various foreign markets across the globe and/or import to and sell foreign goods in the U.S. Week by week, different legal questions and difficulties arise. These will touch on, e.g., contractual issues, products liability, employment law, environmental regulation, taxation, health and safety (consumer protection), or conflicts of law. International treaties such as TRIPS might also come into play. In one of the two weekly classes the instructor will set out the (new) facts and discuss the core aspects of the relevant area of law. Students will then be asked to research the issues raised in the hypothetical (individually or in groups) and to present in the second weekly meeting their substantive findings as well as any practical difficulties they encountered in the course of their work (language barriers, access to foreign legal materials, or possible non-legal trade-offs between the advantages and problems that foreign jurisdictions might offer or pose in a particular field). The assignment will always require the production of a concise legal memorandum that sets out the issues and possible solutions, and suggests a way forward for the client company. Students should expect a few surprises (such as sudden changes of the situation 24 hours prior to the deadline for completion of the memorandum) and be prepared to present their work in a professional format (both orally and in writing). Successful completion of the course will require submission of the entire portfolio of assignments. Assessment is based on a three-hour final exam. The course will start off with an introduction to comparative methodology, research methods, and an explanation of the background hypothetical, cover 5 distinct problems in selected areas of the law, and close with a final debriefing/review. Students will receive a course package with selected texts about comparative methodology and, in preparation for each problem, substantive background reading that covers the relevant legal topic. The weekly handouts that set out the (developing) narrative of the hypothetical and research assignments may contain additional specific materials such as model contracts, newspaper clippings, or traditional references to cases, statutes, international treaties and legal articles or book chapters.

3LAW 3380 Community Property (2)
This course is a comparative study of marital property regimes that involve the distinction between the separate and community property of spouses. The course examines the law of the eight community property states and Wisconsin, which has a version of community property based on the Uniform Marital Property Act. Special attention will be given to Louisiana law.

3LAW 3400 Conflict of Laws (3)
This course explores how courts in the United States determine the governing rules and doctrines in cases that implicate the laws of more than one jurisdiction. Students will learn the various approaches courts take to resolving conflicts of law when they arise, including the historical and theoretical foundations for those approaches.

3LAW 3450 Family Law: Civil & Common (3)
This course is a study of the formation, rights and obligations in formal and informal family relationships, and the breakdown of marriage and its incidents such as nullity of marriage, divorce, division of property, support, and custody. The course will treat the family law of both the civil law and common law jurisdictions of the United States.

3LAW 3460 Employment Law (3)
The employment relationship serves an important role in structuring the lives of most adults in the United States. Employment provides wages, and often, a slew of benefits including health care and retirement pensions. It also provides a sense of stability and routine, and can even serve as the foundation of our identities. Legal disputes about the employment relationship occupy a significant segment of the legal market and consume a significant proportion of legal resources. This course offers students an overview of the important legal issues that are raised in the context of the employment relationship. It examines the law governing the employment relationship, including the establishment and termination of that relationship. The course will discuss employment issues, such as contractual employment agreements, wrongful discharge, regulation of wage and hour laws (FLSA), leave (e.g., FMLA), safety (OSHA and workers comp), unemployment insurance, privacy and freedom of speech, intellectual property issues (such as R&D ownership, trade secrets and noncompetition clauses), the developing concept of unjust discharge, and regulations providing protection of retirement benefits. Throughout the course, students will be able to deepen their study of contract law, torts, and statutory and regulatory processes through the context of the law of the work. The course does not cover either Employment Discrimination or Labor Law, both of which are offered as separate courses.

3LAW 3490 E-Discovery (2)
Modern discovery increasingly concerns the production and retrieval of information that is electronically stored in computer systems, email, text messages, social media, cloud applications, and varying other methods. This course will focus on the new issues, rules, and practices involving the application of e-discovery, digital evidence, and computer forensics. It will explore not only the application of the federal rules of civil procedure and evidence to electronic discovery but also the appropriate handling and treatment of electronically stored information in the litigation process. The course is taught by the Hon. Karen Wells Roby, Chief Magistrate Judge, U.S. District Court for the Eastern District of Louisiana, and Lynn M. Luker, Of Counsel at Stanley, Reuter, Ross, Thornton & Alford.

3LAW 3495 Info Technology for Lawyers (2)
The trial lawyer's craft lies in marshaling the evidence that enables the parties to weigh the risks and benefits of litigation and the court and jury to determine the facts and resolve disputes. Evidence is information; and, apart from testimony, nearly all information is created, collected, communicated and stored electronically. Thus, the ability to identify, preserve, interpret, asses, authenticate and challenge electronically stored information (ESI) is crucial advocacy skill. Students will explore information technology (IT) and digital evidence through the lens of trial practice. You will learn the language of IT and acquire hands-on-trading in the tools of ESI and computer forensics. We will explore information management and storage and the Maria forms ESI occupies as it bears on emerging standards of lawyer competency. You will cover challenges of acquisition, authenticity and admissibility unique to modern digital evidence. This course will be taught by Craig Ball, a trial attorney and consultant in computer forensics and e-discovery.

3LAW 3500 Federal Courts (3)
Federal courts occupy a strategic place at the crossroads of the foundational constitutional principles of separation of powers, federalism, and individual rights. This course examines the constitutional and statutory power of federal courts from that vantage point. Topics planned for the course include case-or- controversy and justiciability limitations on the federal judicial power (with an emphasis on standing doctrine), congressional power to control the jurisdiction of the Supreme Court and lower federal courts, the role of state courts in the enforcement of federal rights, state sovereign immunity under the Eleventh Amendment, and abstention doctrine.

3LAW 3530 Dignity and Belonging (3)
There are about 12 million people around the world who are de jure stateless or who are at risk of being stateless. A stateless person is defined as one "who is not considered as a national by any State under the operation of its laws." One of the consequences of statelessness is the lack of a place to belong and the loss of protection that comes with belonging. In a world of states where everyone is supposed to belong to one or another nation-state, the stateless becomes the "extra," the surplus product of the international order of states. This seminar focuses on the condition of the statelessness to explore the general issue of what it means to belong and the consequences of being denied the opportunity (or the right) to so belong. Using interdisciplinary material (law, political theory, geography and sociology) the seminar will provide the opportunity: to examine the conditions that lead to statelessness, to assess the existing national and international responses that are meant to deal with statelessness, and to explore alternative ways in which belonging could be conceived so that incidences of statelessness are minimized. The seminar will explore the dignity that membership provides through a close study of its opposite, the indignity of displacement and statelessness.

3LAW 3560 Gift & Estate Tax Planning (3)
The course focuses on techniques for the transmission of wealth to a person's successors with emphasis on methods of minimizing federal estate, gift, and generation-skipping taxes under the Internal Revenue Code. Appropriate consideration is also given to the federal income tax consequences of wealth transfer transactions. Both inter vivos and testamentary planning techniques are covered, as is the use of trusts to meet estate-planning objectives. Other topics include the valuation of property included in the transfer tax base, transfers to minors, life insurance planning, planning for jointly-held property and community property, charitable gifts and bequests, retirement benefits planning, and deductions (particularly the marital deduction) from transfer taxes. The basic course in income tax is not required, but is a desirable preparation. The course is taught by Kenneth Weiss, a board certified specialist in both taxation and estate planning.

3LAW 3640 Louisiana Civil Procedure (2)
The objective of this course is to provide a basic and practical knowledge of the Louisiana Code of Civil Procedure necessary to successfully pass the Louisiana Civil Procedure section of the Louisiana State Bar Exam, as well as to draft pleadings and litigate in Louisiana state trial and appellate courts. This course will emphasize practical skills training, in conjunction with theory, and when possible use examples of pleadings, memoranda, briefs and jurisprudential authorities that focus on Louisiana Civil Procedure Law. When practical, students will be exposed to the application of certain provisions of the Code through experiential learning, by viewing one or two rule days at Civil District Court for the Parish of Orleans. Upon completion of this course, students will have a thorough working knowledge of Louisiana Civil Procedure, as well as be trained to handle all aspects of civil litigation. This course will be taught by the Hon. Regina Bartholomew Woods, Louisiana Fourth Circuit Court of Appeal. (2 Credits)

3LAW 3650 Legl Aspect Int'l Monetary Sys (2)
This seminar will explore current issues in international monetary law and related legal topics. It will focus primarily on the International Monetary Fund and its evolving role in international monetary law, global governance domestic law reform and economic development. Among other things, the seminar will cover the history of the Fund, it internal governance, its surveillance of member states' obligations under the Fund's articles, its lending facilities and practices, and the technical assistance it provides sovereign states. Particular attention will be given to legal and practical issues related to the Fund's role in addressing the ongoing economic and financial fallout from the Covid pandemic and from Russia's attach on Ukraine.

3LAW 3680 Solo & Small Firm Practice (2)
Solo and small firm practice is the most common organizational form in the legal profession today. This course will focus on the essential elements of forming and operating a small firm or solo law practice. Although many of the topics covered in this course could be translated into law practice skills in general, the course will give particular emphasis to those issues that are frequently encountered by solo and small firm practitioners, including setting up a law practice; developing business; hiring, managing, and effectively using support staff; financial planning, billing, and fee management; issues of ethics and professionalism; leveling the playing field through practice skills and management; and many others. Students will be graded on a P/C/F basis and will be assessed on quality of their involvement and participation in both individual and group exercises. Students will also be evaluated on the quality of their critiques of fellow students' performance. There will not be a final exam in this course. Attendance and participation are required. The course is primarily geared toward 3L students who will be given preference. 2L students may be accepted, with permission of the professor, provided they have taken or are enrolled in legal ethics.

Prerequisite(s): 2LAW 2800.

3LAW 3690 Successions Donations Trusts (4)
A course in the Louisiana civil law governing the transfer of property by inheritance, testament or gift during life. Topics include rules of inheritance, rights of surviving spouses, acceptance and administration of successions; collation and partition; the making of wills, kinds of legacies, and forced heirship limitations on gratuitous dispositions. The course also considers the Louisiana Trust Code's provisions concerning the creation, modification, and termination of trusts; limitations on dispositive provisions; and the powers and responsibilities of trustees.

3LAW 3770 Oil and Gas (2)
This course covers the law relating to oil and gas exploration, development, and production. The class will largely focus on issues related to oil and gas leases but will also cover the nature and classification of other mineral rights and related issues. The course will include common law doctrines as well as certain Louisiana law concepts. The course will be taught by Aimee Hebert, a partner in the law firm Kelly, Hart & Pitre.

3LAW 3830 Protect of Cultural Property (3)
Notwithstanding the critical role cultural heritage plays in forming our national and ethnic identities, and in inspiring us as civilizations, protecting it has never been a legal priority. Through an examination of the legal history of cultural property, this seminar will attempt to explain why that has been the case, and what is now being done to change that historical trajectory. The seminar will focus on the relevant international conventions, and on significant actions by the European Union and Arab League, along with those federal laws of the United States that seek to preserve and protect different forms of cultural property. In addition, selected state and local laws and cases will be addressed, as part of a discussion of the efforts (and accompanying litigation) that have been made in New Orleans to protect the city's unique art, architecture, and traditions. Each student will be required to select a paper topic, one that directly relates to a cultural property issue arising from his or her location - e.g., a student located in New York City will be required to write about a "New York" cultural property issue. In addition to writing the paper required for 3 credits, students will be required to give a 15 minute in-class presentation regarding their paper. The course will be co-taught by Prof. Herbert Larson and Ms. Terressa Davis, who is the executive director of the Antiquities Coalition.

3LAW 3900 Empirical Legal Methodologies (2)
Statistics are playing an increasing role in court decisions, public policy regulations, and legal scholarship. This course provides and understanding of the most common statistical methods and examples of the use of those methods by courts, administrative agencies, and scholars. Students are not expected to come to class with any knowledge of these methods or mathematic expertise, but will leave with the understanding of them and their role in legal analysis.

3LAW 3920 Tax - Adv Corporate Tax (2,3)
The course will use a transactional approach to examine the corporate tax law issues associated with business operations and acquisitions. Major topics include spin-offs, taxable acquisitions, reorganizations, consolidated returns, tax attributes, contributions, distributions, redemptions, and liquidations. Some partnership, international, and tax procedure issues will also be discussed. There will be assigned readings for each class (generally cases, rulings, articles, and brief passages from the treatises). Class will consist of a short lecture followed by a discussion of problems. Students will be evaluated on the basis of class participation (in the form of a half-page to full-page memorandum on an assigned issue with a brief oral explanation to the class), two short writing assignments, and a final writing assignment. This course will be taught by Joseph Henderson, Senior Vice President and General Tax Counsel, Entergy Corporation.

3LAW 3960 Taxation of Business Entities (3)
The course covers federal income taxation of C corporations, S corporations, partnerships, and limited liability companies (“LLCs”) and the holders of ownership interests in such entities, including the federal income tax consequences of operations; contributions of capital to the entity; distributions by the entity; and acquisitions, dispositions, and rearrangements of the entity. The course also will address choice of entity considerations under the new tax law. Prerequisite or Co-requisite: Federal Income Taxation.

Law Upperclass Electives (4) (4LAW)

4LAW 4010 Deposition Practice & Procedure (2)
This is a skills course focused on depositions. While the course centers on basic and advanced skills in preparing for, taking, and defending depositions, its focus is broader. It begins by placing depositions in the context of formal pretrial discovery and ends with the use of depositions in pre-trial motions, negotiation and at trial. Skills exercises will include both oral and written advocacy skills relevant to this important portion of civil litigation. While most civil cases filed in federal or state court are resolved before final adjudication, all practicing attorneys will have to take depositions in order to learn what evidence they must meet at trial, or alternatively use case evaluation for settlement negotiations or mediation. The information obtained in a deposition will allow an attorney to intelligently evaluate the case and competently advise their clients. The course begins with the role of depositions in the larger discovery process, preparation, developing a theme, and the mechanics of the deposition process and procedure, including questioning techniques. More advanced topics will include the expert deposition, use of expert depositions to make effective Daubert challenges, taking and defending corporate depositions, and the use of depositions in pretrial practice including Daubert challenges and summary judgment motions.

4LAW 4040 Advanced Persuasive Writing (2)
This course combines theory and practicality to cover advanced strategies in persuasive writing and build upon the instruction provided in Legal Research and Writing. The theoretical aspect of the course will focus on principles of persuasion drawn from several disciplines, such as classical rhetoric, cognitive psychology, linguistics, and literary theory. Topics studied may include the rhetorical foundations of legal persuasion and credibility; the role of stock structures, visual imagery, and literary or cultural allusions in legal analysis and argument; leveraging storytelling and narrative coherence; and using document design and other visual techniques persuasively. The practical aspect of the course will involve the application of the covered principles to litigation-oriented documents. Students will analyze the persuasiveness of various examples of attorney communications, such as briefs, letters, and judicial opinions, and create their own versions of these documents that incorporate the principles we discuss. Thus, students will learn a number of strategies and techniques, and practice implementing them, to become more persuasive writers. The course will involve a combination of lecture, discussion, in-class exercises and workshops, and individual student-teacher conferences outside of class. Grades will be based on several writing and editing assignments of various length, as well as students’ participation in class discussions and fulfillment of course requirements. There will be no final exam.

4LAW 4060 Administrative Law (3)
The course explores the history, present status and nature of administrative agencies. The main emphasis is placed on administrative procedure, contrasting it with the judicial process, as well as constitutional limits on administrative action and the due process rights of persons who are adversely affected by agency action. Topics covered include: delegation of powers, the law of judicial review of agency actions, and procedural requirements of administrative rulemaking and adjudication. (3 credits)

4LAW 4070 Art/Culture Law (2-3)
This course will look at all of the main issues surrounding art, cultural heritage, and current contemporary user-generated culture. We will look at Holocaust-era related art crimes; the life of the artist and legal issues; museums, dealers, and collectors; First Amendment issues related to art; moral rights; indigenous cultures and cultural preservation; who owns the past within an international context; and the creation of user-generated culture in our current Internet world. This class focuses on visual arts, but in many cases applies to all cultural works, particularly in our multi-media world. The seminar will produce a collection of essays that will be published as a book, (Il)Legal Art: A Handbook. Students will each write a chapter for the book. Because of the nature of the course, students must be good a deadlines and working with others. We will potentially be working with local artists as part of the experience. Students will be graded on their paper, but also should make a commitment to make revisions to their post-graded paper as part of the book as we get further in the process of publication, even if this occurs after graduation. This may be up to a year or more in the future. While this latter time commitment is not great, it still is an integral part of the experience. IP Survey is a required pre-requisite. If you have not taken IP Survey, but feel that you have other qualifications that might benefit the class, please indicate this on your seminar application. This seminar may be taken to satisfy the upper-class writing requirement.

4LAW 4080 Advanced Appellate Advocacy (2)
The course is designed to further develop the skills learned in Legal Research and Writing and to provide 2Ls and 3Ls with the opportunity to draft an appellate brief and present an oral argument. The course focuses on appellate theory, standard of review, advanced appellate brief writing, and the art of appellate oral argument. Students will be assigned to act as either Appellants or Appellees and will write a brief from a shortened record. While focusing on the Federal Rules of Appellate Procedure, the course will also survey certain differences in Louisiana state appellate practice. Students will also prepare, practice and deliver a full oral argument. This course will be co-taught by James Garner, a co-managing member of Sher Garner Cahill Richter Klein & Hilber, L.L.C.; the Hon. Scott Cichton, Associate Justice of the Supreme Court of Louisiana; and Stuart Kottle, an associate with Sher Garner Cahill Richter Klein & Hilbert, L.L.C.

4LAW 4090 Arbitration Law (3)
Arbitration is an increasingly popular method of resolving civil disputes, including employment, securities regulation, construction, and insurance disputes. Although arbitration is the result of an agreement between the parties, a developing legal regime governs the use of arbitration and the enforcement of arbitration awards. Federal and state laws such as the Federal Arbitration Act govern what disputes are covered by an arbitration agreement, when arbitration is prohibited, and whether a court can review the award. This course provides an overview of those laws and the court decisions interpreting them so that the students understand an area of law that they are likely to encounter early on in their varied careers.

4LAW 4100 Written Discovery (2)
This experiential course will focus on the knowledge and skills required to manage and execute written discovery. Effective discovery requires identifying and understanding the legal principles and detailed facts of a client's case; crafting a theme and trial plan; and using this information to conduct discovery in a manner that maximizes a case's strengths and accommodates its weaknesses. Students will participate in exercises designed to simulate the experience of an attorney charged with responsibility for written discovery. Topics will include preliminary cases assessment; articulation of a case's themes; initial disclosures; discovery conferences and scheduling orders; drafting and responding to requests for production, interrogatories, and requests for admission; privilege and work production protects; protective orders and common interest agreement; written expert discovery; meet-and-confer letter; and motions to compel. The course will be taught by Eva Dossier a member of the firm Stanley, Reuter, Ross, Thornton & Alford, L.L.C.

4LAW 4120 Complex Litigation (2)
This is an advanced civil procedure course focusing on a number of important aspects of civil procedure which are only superficially considered in the first year. It is useful for anyone interested in litigation or practice involving multi-party transactions such as antitrust, securities, product liability, mass torts, consumer litigation and employment rights. The procedures considered include: joinder of parties and structure of law suits in complicated multi-party suits; duplicative litigation and use of stay orders, injunctions, consolidation, and transfer to the Multi District Panel; res judicata; class actions; discovery and trial in complex cases; settlement, and attorneys' fees.

4LAW 4140 Law and Time (2)
What is the relationship of how disciplines think about time and how understands time? Why are copyrights for the life of the author plus seventy years? Why are stature of limitations 2, 3, 4 years? time rewards. Time punishes. Time acts as a barrier for redress. Time signals an equitable solution. Lawyers are paid by their time. Think of industrial time, biological time, and legal time. What does law's relationship to time tell us about the laws themselves? how do we understand time and the law? This seminar will investigate the concept of time across disciplines, and then students will choose a part of the law to investigate and apply concepts of time, whether the area of law is overtly about time or an example of law that is missing a time component.

4LAW 4160 Con Crim Pro:Adjudication (3)
The course will examine constitutional procedural and litigation issues from the commencement of a criminal case through conviction (or acquittal), appeal, and post-conviction relief options. Students will be asked to think critically about the goals of criminal procedure and about whether our legal system effectively serves those goals. The course primarily addresses Sixth Amendment issues.

4LAW 4200 Animal Law (2)
This survey course will provide an overview of the evolution of animal law and the breadth of issues encompassed by this rapidly developing field of law. At the same time, the course will afford the opportunity for in-depth deliberation of the salient issues in current animal law litigation, including in Louisiana. Because animal law necessarily implicates virtually every field of law, including constitutional law, property law, criminal law, and torts, students must develop and apply their knowledge of these other fields in class discussions. Students will also be expected to understand and apply basic principles of administrative law introduced in the course.

4LAW 4270 Business Planning (2,3)
What do transactional lawyers do and how do they do it? The course focuses on the lawyer's role as an advisor to a privately-owned start-up company and its owners. We will explore how legal issues and business objectives overlap, the role played by the transactional lawyer in the transaction and soft skills such as client relations/communications and co-worker relationships. This course will examine the life cycle of a hypothetical company, focusing on sample transactions from three major stages of the company's life cycle: choice of entity, formation and obtaining capital; ongoing operations; and exiting or sale of the company. Much of the class work will involve working in teams simulating an actual transactional practice. Using hypothetical business scenarios and actual deal documents, students will represent the company, its owners, or third parties and will analyze, structure and negotiate selected deal components, and, on a limited basis, draft portions of the relevant deal documents. This capstone course is designed to broaden the student's knowledge in a number of substantive areas, help students learn to focus on a client's business objectives rather than just addressing legal issues, and to begin the process of bridging the gap between law school and practice. The course will be taught by John Herbert, outside general counsel of a Houston-based energy company and formerly a division general counsel of a Fortune 30 energy corporation. Business Enterprises is a prerequisite. Grades will be based on periodic written team and individual exercises, a personal journal, and a final written project. There will be no final exam.

Prerequisite(s): minimum score of PASS in 'Law Graduate Student' or 2LAW 2070.

4LAW 4280 Antitrust (3)
This course will examine the basic antitrust statutes, Sections 1 and 2 of the Sherman Act, Sections 3 and 7 of the Clayton Act, Section 5 of the Federal Trade Commission Act, and the Robinson Patman Act. The course will focus on the objectives of antitrust law, the concepts of market power and market definition, monopolization, horizontal and vertical restraints, mergers, the use of the per se rule and the rule of reason, price discrimination, and commercial bribery. Professor Feldman plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism. Note: Antitrust may not be offered during the 2019-2020 academic year.

4LAW 4285 Antitrust in College Sports (2)
This course examines a number of the key legal issues facing college athletics today, including the battle over athlete compensation and the rapid development of name, image, and likeness rights for college athletes. This course focuses on the ways antitrust and labor laws have shaped many aspects of college sports and continue to play a significant role in the development and future of the National Collegiate Athletic Association (NCAA) and college athletics. The course will examine the impact of antitrust and labor law on television contracts, college athlete compensation, coaching salaries, eligibility restrictions, and a number of other facets of the collegiate model. The course will also feature a number of guest lectures from lawyers, executives, and administrators in the college sports industry. There are no prerequisites for this course. Students who have taken or plan to take Sports Law: Antitrust & Labor may enroll in this course. This course does not count toward the Sports Law certificate. The course will be graded on the basis of a take-home examination.

4LAW 4360 Civil Law Seminar (2-3)
This Seminar covers selected civil law institutions with emphasis on the laws of property, obligations, community property, and successions. It also covers the subjects of civilian methodology, techniques of codification, and the modern history of the civil law. The Seminar is designed to sum up student experience in the civilian tradition. Louisiana law is studied in comparison with the common law of sister states and the laws of European countries. Doctrinal study is applied to the resolution of legal issues in contemporary practice. There is no final examination. Students are graded in light of class participation and their ability to produce an original research paper on a civil law topic. Students are required to have taken at least one civil law course (e.g., Property, Obligations I or II).

4LAW 4380 Civil Law Torts:Selected Issue (2)
This course will focus primarily on Louisiana's unique tort law, utilizing the Louisiana Civil Code, current Louisiana cases and statutes. Some of these concepts will be compared to common law torts. Subjects likely to be covered during the semester are duty-risk, intentional torts, damages, defenses, wrongful death, contribution and indemnification, vicarious liability, absolute liability, strict liability, products liability, liability of owners/lessors and occupiers of land, and professional malpractice (medical and legal) and prescription. (2 Credits)

4LAW 4450 Commercial Law: Business Reorganizations and Bankruptcy Procedure (3)
Through a lens examining the philosophy, principles, and policies underlying business reorganizations, this course will provide a practical look at the path a financially distressed enterprise can take, from filing to confirmation of a plan of reorganization under chapter 11, conversion to chapter 7, or dismissal. The following topics, among others, will be covered: good-faith filing and venue; retention and compensation of professionals; the extent of the court's equitable powers; use, sale, and lease of the debtor's property; successor liability; post-petition financing; the absolute priority rule; involuntary imposition of a reorganization upon creditors and shareholders; claims allowance; and the role of debtors, professionals, creditors, officers, directors, and trustees in the context of corporate restructuring. Grades will be basis on draft pleadings and mock arguments for hypothetical clients at each stage. This course will be taught by the Hon. Meredith Grabill (U.S. Bankruptcy Judge, U.S. Bankruptcy Court for the Eastern District of Louisiana) and Mark Mintz (Jones Walker LLP).

Corequisite(s): 3LAW 3280.

4LAW 4460 Env'L Law:Comparative (3)
'This course treats the rising phenomenon of environmental law around the world, not through international accords (the subject of other courses) but through national approaches to common issues including: impact assessment, judicial review, land use, toxins and wildlife species. The class will be graded on the basis of student participation (including TWEN), and on selected research projects leading to discussions and papers at the end of the course. Introductory in nature, prior or concurrent classes in the field are useful but not required. (3 Credits)

4LAW 4540 Compar Constitutionl Law (2)
This course provides a comparative survey of influential contemporary constitutions including those of the United Kingdom, France, Germany, and South Africa. Following an introduction to comparative methodology and the functions of comparative law, especially in the legislative and judicial spheres, the class focuses on a shortlist of specific topics. These include the legislative process, bicameralism, the separation of powers, electoral systems, federalism, judicial review, and the protection of human rights. The concept of transnational constitutionalism, the potential and pitfalls of constitutional legal transplants, and the drafting of new constitutions in post-conflict societies such as Iraq, Tunisia or Kenya will also be considered. Students are invited to engage with foreign approaches to these issues through the lens of US case law and constitutional doctrine. The course will be based on a study pack of selected legal materials from the systems under review. Knowledge of foreign languages is not required.

4LAW 4550 Con Law:14th Amendment (3)
This course is designed to cover issues of individual rights under the Fourteenth Amendment that are given only brief treatment in the introductory first-year course. Subjects include equal protection, substantive due process, state action, and Congress's power to enforce the Fourteenth Amendment's guarantees.

4LAW 4560 Comparative Law Seminar: Citizen Access and Judicial Review Environmental Decisions Around the World (1)
This one-credit Seminar provides a unique view of two phenomena that have arisen at the same time around the globe: environmental protection and judicial review. We do this through a single book, Taking Back Eden, that describes cases from eight countries as different as the Philippines, Chile and Japan. The second part of the course consists of cases that you will identify, research and present orally to the class. There is no paper required. Grading will be pass-C-fail. The seminar counts as the graduate seminar required for students seeking the LLM in Energy & Environmental Law. Accordingly preference will be granted for students in the LLM program.

4LAW 4590 Constitutional Law Seminar (2-3)
Decisions of the Supreme Court such as Brown v. Board of Education and Roe v. Wade have inspired extensive debate among academic scholars as to the role of the Supreme Court in our system of government and the proper way to interpret the Constitution. This seminar will provide an in-depth examination of the most important issues in constitutional theory. The main topics to be addressed will be the idea of constitutionalism in the U.S., the justification of judicial review in a representative democracy, and the various theories of constitutional interpretation proposed by scholars. The readings for the course will be extensive, and will represent the wide diversity of opinion present in contemporary theoretical debates.

4LAW 4700 Copyright Law (3)
This course will take an in-depth look at copyright law. Building upon the IP Survey, which is a prerequisite, the course will focus on the advanced and contemporary topics in copyright law, both in a domestic and international context.

4LAW 4701 Copyright & Social Media (3)
The Copyright and Social Media course will cover the key advanced topics in copyright and social media. The course will be hands-on looking at questions that arise in the current climate, working with real-world problems. Students will be writing short papers on assigned topics. This course does not fulfill the writing requirement. Prerequisite: IP Survey.

4LAW 4740 Corporate Finance (3)
This course provides both an introduction to financial economics – e.g., how companies are valued, how investment decisions are made – and advanced coverage of corporation and contract law related to the financing of modern business enterprises. The course will survey the rights and protections that exist for financial stakeholders in the corporate enterprise, including debtholders, preferred shareholders, holders of warrants and rights. Business Enterprises is a pre-requisite or permission of instructor required. Mergers & Acquisitions is also highly recommended.

Prerequisite(s): minimum score of PASS in 'Law Graduate Student' or 2LAW 2070.

4LAW 4770 Corporate Dealmaking (2)
This course will emphasize the practical aspects of advising the public corporation's board of directors in the deal making context of takeovers, proxy contests, shareholder activism, and mergers and acquisitions. The course will introduce students to the laws, theories, and corporate governance systems that underpin the board's decision-making process, as well as the roles and perspectives of other players, including corporate officers, investors, investment bankers, and regulators. Each topic will be addressed in a policy class taught by faculty and a practice class led by distinguished legal practitioners. Grades will be based on attendance, biweekly written analyses of a hypothetical transaction, and a final reflection paper. Business Enterprises is a prerequisite for 2L students and a prerequisite or co-requisite for 3L students. Some course content may overlap with that taught in Mergers & Acquisitions and the Corporate Governance mini-course.

4LAW 4810 Criminal Law, Federal (3)
This course explores major jurisdictional, procedural and substantive issues involved in the enforcement of federal criminal law. Included among the crimes on which the course focuses are mail and wire fraud, drug offenses, banking offenses and money laundering, perjury and obstruction of justice, and RICO. Professor Larson plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism.

4LAW 4840 Criminal Practice, Adv (2)
This course explores the various stages of the criminal justice process, e.g. arrest, first appearance, bail hearing, charging process (district attorney, grand jury), arraignment, pre-trial discovery, plea negotiations, and post-trial motions.

Prerequisite(s): minimum score of PASS in 'Law Graduate Student' or 2LAW 2300*.
* May be taken concurrently.

4LAW 4860 Criminal Law, International (3)
The course attempts to examine the political and jurisprudential theories which underlie the rapidly-developing system of international criminal law, together with the actual structure of the system which now exists. The course will address both the "core crimes" of international criminal law, i.e., war crimes, crimes against humanity, genocide, and aggression, as well as those crimes that have become truly international in nature, such as drug trafficking, money laundering, and terrorism. During the semester, the course will cover both threshold issues, e.g., what is "international" criminal law, and general concepts, such as sovereignty and jurisdiction in international criminal matters. In addition, international enforcement and penal mechanisms will be studied, all within the context of those entities that create, implement or enforce international criminal laws, such as the United Nations, the European Union, and the federal courts of the United States. With regard to each such entity, consideration will be given to the political and economic implications of the international aspect of the system, and to the procedural problems created by its trans-national nature. Public International Law is recommended. Professor Larson plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism.

4LAW 4870 Cybercrimes (3)
It is a given that law will lag behind the technology of the society in which both are situated. In no field is that more true than cyber crime. As computers moved out of research laboratories and into the houses and pockets of billions of people, that also moved into the hands of persons willing to exploit their unique features for criminal purposes. The speed, anonymity, and networking capabilities of computers, when coupled with the borderless nature of the Internet, make computers the most potent tool for crime ever invented. This course will examine, on a very basic level, the technological structure and operation of computers, the Internet, and the "dark web." It will show how these can be used to commit a wide variety of crimes. Among the offenses that will be studied in depth are: cyber hacking and cyber extortion/blackmail; sex trafficking, pornography, and child pornography; money laundering, and money laundering via cryptocurrencies; and cyber fraud and cyber theft, including theft of data. The substantive law that attempts to combat these offenses, both federal and state, will be reviewed, with particular emphases on the need to further develop that law in light of its manifest inadequacies. Procedural issues unique to cyber crimes, including 4th Amendment issues, will also be considered. The course will conclude by looking at computers as weapons of war, which has been described as the "ultimate crime." The principles of jus in bello will be reviewed in light of the crime of aggression, as adopted by the International Criminal Court (and defined by the Kampala Review Conference). These classes will focus on cyber aggression by states - which occurs on a daily basis in numerous forms - and its status as a crime under international law.

4LAW 4890 Election Law (2)
Election law is a fascinating topic not only in politically charged times; the rules surrounding elections determine the way constitutional principles play out in practice at any point in time and thus lie at the very heart of democracy. In combination with a few other key variables, such as the structure of the executive (presidential or parliamentary) and the vertical distribution of power (unitary or federal), election systems can shape the exercise and coherence of party influence over government, the stability of the executive, the breadth and legitimacy of representation, the capacity of a system to manage internal conflict, the extent of public participation, and the overall responsiveness of government. Several factors – in particular overall system design, state funding and private campaign financing, districting, or general party influence – impact on elections. The course covers these and many other core issues in the context of different voting systems and their respective political and constitutional dynamics. Most of the course deals with the United States; the increasing influence of proportional representation and variants of majoritarian election systems both in the U.S. and around the world, however, also invites some comparison with approaches found in the United Kingdom, France, Germany and South Africa. Due to overlap in content students may not enroll in both the Election Law and the Law of Democracy course.

4LAW 4910 Employment Discrimination (3)
This course concentrates on analyzing the statutory, constitutional, administrative, and judicial responses to discrimination on the basis of race, age, sex, religion, national origin, alienage and sexual orientation by private and public employers.

4LAW 4930 Env Law: Historic Preservation (2)
This seminar will present a national, state and local perspective on historic preservation in a broad sense, including protection of the urban environment and of archaeological, cultural and other historic resources. It will examine laws dealing directly and indirectly with preservation, and the institutions that implement them. The city of New Orleans provides rich material for this examination. Students will be required to research selected topics and to present their findings orally to the class and in a substantial final paper. Grade will be based on research paper, oral presentation of paper topic, class participation and attendance. (3 Credits)

4LAW 4940 Internet Law (3)
This is a survey course in Internet law. It provides an introduction to how privacy, contracts, intellectual property, intermediary liability, jurisdiction, trespass, free speech, taxation, antitrust, and other legal doctrines may apply to activity on the Internet. Topics covered may vary based on recent events, with a focus on e-commerce, social media, and platforms.

4LAW 4950 Entertainment Law (2)
This course will cover legal issues in representing clients within the entertainment industry, highlighting business and economic considerations. The focus will be on the nature of relationships and transactions, including implications on intellectual property rights arising from contractual and other legal matters, which arise among various players from the music, film, visual and performing arts sectors. These players will include recording artists, songwriters, producers, managers/agents, record labels, publishers, filmmakers, screenwriters, graphics artists, studios, etc. Emphasis will be placed on analyzing the initial development and evolution of these dynamic relationships as they are intertwined within a pragmatic fact-pattern involving common issues arising from entertainment legal matters. Throughout the course, consideration will be given to various revenue streams flowing from intellectual property through channels of commerce, such as tangible record sales, digital sales, performance rights, and licensing, including synchronization licensing for music placements against film. This course is taught by Ashlye M. Keaton, Esq.

4LAW 4960 Energy Regulation (3)
This course will begin with an overview of the global energy situation in terms of supply and demand as well as balanced projections for the coming decades both here and abroad. It then will proceed to examine the primary sources of energy along with the multi-faceted role of electricity as the central source of secondary energy in our economy. This portion of the course will cover in some detail how these energy sources are used and regulated from economic, reliability, and environmental perspectives. There will therefore be a review of legal and regulatory principles governing fossil fuel extraction and use, the coal industry, nuclear power, a range of renewable energy sources, and finally the regulation of electricity generation, transmission, and distribution. The course will conclude with a brief review of the growing role of conservation and climate change in energy markets here and to some extent abroad. There will be an essay-based final examination and class participation will certainly be encouraged.

4LAW 4990 Env Law: Pollution Control (3)
This course introduces the basic pollution control statutes, the Clean Water Act, the Clean Air Act and hazardous waste laws. It examines and contrasts their objectives, their regulatory schemes and their relative successes. Special emphasis is given to comparing and critiquing the major regulatory approaches to pollution control: command and control regulation according to health-based or technology-based standards and economic incentive schemes, as well as statutory interpretation. Professor will invoke the rule penalizing students for lack of preparation and/or excessive absenteeism.

4LAW 5030 Env Law-International (3)
This course examines the basic international legal setting for the protection and management of the environment. It discusses how international law is made and applied, the role of international environmental regimes or institutions, transboundary liability and compensation, enforcement strategies and compliance control mechanisms. Major themes of the course include human rights and the environment, free trade and environmental protection, the financing of global environmental protection measures, the protection of biodiversity, North-South issues generally, as well as various regulatory regimes for the protection of the global commons and internationally sensitive natural resources, including the Climate Change Convention. Public International Law is highly recommended. Professor Handl plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism.

4LAW 5040 Env Law-Coastal Law (2,3)
This seminar provides an examination of the factual, legal, and policy framework that has developed regarding issues of coastal land-loss, with a focus primarily on the quickly disappearing wetlands in Louisiana, but also with an examination of similar land-loss issues in other communities. The seminar will examine the background of the importance of wetlands, the crisis of coastal land loss, the causes of that loss, and the legal and policy responses in the search for remedies for wetland and coastal harm. The seminar will be co-taught by Christopher Dalbom (Senior Research Fellow and Assistant Director of the Institute on Water Resources Law and Policy at Tulane Law School) and Bessie Antin Daschbach and Tad Bartlett (both members of Jones, Swanson, Huddell & Garrison LLC).

4LAW 5090 Env Law: Water Law (2)
This course will cover the role and influence of the legal system on the use, allocation, and stewardship of water resources in the United States and Louisiana. Since the field of water resources management is rapidly evolving to accommodate storm protection, ecosystem restoration and sea level rise an understanding of the policies that underlay our current laws and the factors that are influencing current policy and law-making will be an important part of the course's focus. Course materials will include law cases and related materials which must be read before class. The course will be lecture oriented with occasional guest lecturers with specific experience in development of water resources law and policy. Students will be asked to participate in one group project in which they will be asked to develop, present and defend a position paper on some aspect of the water resources management challenges arising in coastal Louisiana.

4LAW 5110 EU: Constitutional Law (1,3)
This course covers the legal and political development of the European Union. It highlights the gradual functional and organizational changes that have taken place in this system over the past six decades and deals with its present-day constitutional structures including: Parliament, the Commission, the Council, the European Court of Justice, and the European Central Bank. Emphasis will also be placed on human rights protection and judicial review in the European context, the concept of a European constitution, the ongoing expansion process, Brexit, and challenges connected to the concept of a common European currency. The course also focuses on the tensions between an increasingly influential supranational Union and its 27 sovereign Member States, and will introduce the most important principles of business-related EU law such as the free movement of goods, workers, services and capital. Students are invited to draw comparisons between the European Union and the United States throughout the course.

4LAW 5120 Feminist Legal Theory (2)
Feminist legal theory can pose a significant epistemological challenge to traditional schools of jurisprudence, questioning some of the very premises of what constitutes justice and equality in a liberal democracy. At the same time, it seeks to explore how gender shapes the law and how the law shapes gender. This course will examine the principle tenets, methodologies, and controversies in feminist legal theory including the meaning of equality, the intersection of race and law, the public/private divide, concepts of objectivity and neutrality, and how law reproduces hierarchies while also having the ability to participate in significant social change. We will look at how feminist theory has used, incorporated, modified and critiqued other schools of jurisprudence and theoretical paradigms including Marxism, critical legal studies, critical race theory, and postmodernism. We will also analyze debates between feminist theorists regarding essentialism, women's sexual agency, and how feminist theory itself is a product of a particular society. The goal of the course is to think broadly and critically regarding the interaction of law, society, and gender while exploring the potential and limitations of our legal system.

4LAW 5140 Financial Institutions (3)
The financial system is the infrastructure on which all economic activity takes place with enormous political and distributive stakes. The law of financial institutions is thus of central concern to students of diverse interests: aspiring private practitioners, regulators, and public interest lawyers concerned with social justice. A decade now since the Global Financial Crisis, the legal reforms put into place are profoundly trans-forming all three areas and their interrelationships. We will study these transformations, focusing on the law of commercial banks and the Federal Reserve (Part 1); broker-dealers, hedge funds, and registered investment companies (Part 2); and central clearing counterparties (Part 3).

4LAW 5160 Fair Housing & Litigation (3)
With U.S. HUD suspending and reissuing a number of regulations governing proof standards and its affirmative duty to promote housing choice and opportunity, a study of fair housing law and litigation is particularly timely. This course will examine Title VIII of the Civil Rights Act of 1968, as amended in 1988; classes protected; transactions covered (rental, sales, lending, insurance); and the fair housing obligations of states, municipalities, and public and affordable housing programs. Stu-dents will be challenged to consider the strengths and weaknesses of litigation as a tool for creating an equal housing market and eradicating residential segregation. This course will incorporate doctrine, theory, and practice and will be assessed using a mid-term exam and several writing assignments.

4LAW 5170 Energy & Env'l LLM Seminar (1)
This seminar explores current issues in Environmental and Energy law through faculty and LLM candidate presentations and discussion. This seminar is open to graduate Energy & Environment students only.

4LAW 5180 Con Law:Freedom Speech/Press (3)
This course focuses on the Supreme Court's opinions on freedoms of speech and press issues in First Amendment jurisprudence. The topics of study may include: advocacy of illegal action, defamation, commercial speech, obscenity, offensive speech, hate speech, symbolic speech, regulation of the public forum, prior restraint, and other topics. The First Amendment topic of freedom of religion is the subject of a separate course, entitled The Constitution & Religion.

4LAW 5200 Foreign Affairs & National Sec (3)
The focus of the course will be on the U.S. constitutional structure and how that affects the role the United States plays in the international domain. We will inquire into how the Constitution enables and constrains the manner in which the United States government participates in lawmaking internationally and how that in turn affects private rights within the United States. An international lawyer working in this country will surely need to be familiar with constitutional and other legal constraints that govern our relationship with the outside world. And a domestic lawyer to be effective in this day of global interdependence will need to be familiar with the international process that continuously shapes the nature of the constitutional order in this country and our very understanding of the Constitution itself. Some of the areas that will be covered in the course are: foreign relations and the separation of powers doctrine; the scope of and limitation on the treaty power; presidential power to conclude international agreements outside Article II treaty power; constitutional and domestic status of customary international law; foreign sovereign immunity and the act of state doctrine; congressional and presidential war-making powers; constitutional rights and the war on terrorism; extraterritorial application of the U.S. Constitution and U.S. laws; and the power of states in relation to foreign affairs.

4LAW 5280 Health Care Law & Regul (2)
The course begins with an overview of the U.S. health care industry and then addresses the law that affects major portions of that industry and those it serves. Relationships among individual health care providers (e.g., physicians), institutional providers (e.g., hospitals, nursing homes, clinics), and patients of those providers are explored, as are various statutory entitlements (e.g., Medicare, Medicaid, EMTALA), medical malpractice concepts, preemption effects of ERISA, patient privacy/consent issues including HIPAA mandates, and the policing of fraud and abuse. The class will examine the health law that resulted from the health reform legislation signed in 2010 and modern changes to health law resulting from the COVID-19 pandemic. Finally, the course will review how the antitrust laws impact the structure and conduct of health care providers.

4LAW 5320 Laws of War (2-3)
This course provides students with an overview of the laws of war which, for the purposes of this course, will include the various areas of international law applicable to situations of armed conflict. It will largely cover: a) the jus ad bellum, or the law on the use of force; and b) the jus in bello, or international humanitarian law (IHL), also referred to as the law of armed conflict (LOAC). For the jus in bello, this includes: the classification of armed conflicts; duties and responsibilities of parties to an armed conflict; the principles of humanity/necessity, distinction, proportionality, and precautions; and other IHL rules. It will also look at contemporary issues in IHL such as cyber warfare and autonomous weapons, as well as gaps and challenges in IHL including compliance and enforcement. In addition to the jus ad bellum and the jus in bello, the course will cover the interrelationships between IHL and international human rights law (IHRL), international criminal law (ICL), and the rules on state responsibility in war.

4LAW 5340 Immigration Law (3)
The course examines the immigration and naturalization processes of the United States with a focus on practical application, procedures, and statutory construction. Topics will include citizenship and naturalization, the admission and removal of immigrants and nonimmigrants, and the issues of undocumented immigration and national security. We will also address the intersection of immigration with other practice areas including employment, criminal, and family law.

4LAW 5370 Privacy in the Digital Age (2)
Information Privacy is a course that explores privacy law with a special focus on its history, technological advancements, and the tort aspects of privacy in the United States, including misappropriation, intrusion, publication of private facts, and false light. Students will be expected to come to class having done the readings and ready for discussion. Professor Gajda plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism.

Prerequisite(s): 1LAW 1510 or minimum score of PASS in 'Law Graduate Student'.

4LAW 5380 Insurance Law (2)
Insurance plays a critical role in all areas of law practice. This course will introduce you to the basic concepts and terminology; survey numerous types of insurance such as general liability, property, life, automobile, construction, professional liability, employment, environmental, homeowners, product liability, including litigation issues such as the duty to defend, the duty to indemnify, subrogation, fraud, bad faith, defenses, damages, procedure; and address governmental regulation.

4LAW 5410 Intellectual Property (3)
This survey course introduces students to the basic state and federal laws relating to inventions and cultural works. The class will cover topics that include patents, trademarks, copyright, right of publicity, and trade secrets. The course will look at the moral, cultural, economic and theoretical underpinnings to our current controversies in intellectual property law. This course is a prerequisite for nearly every advanced course in Intellectual Property.

4LAW 5450 Int'l Business Transactions (3)
The objective of this course is to provide students with an introduction to a number of areas of international business law and to provide an opportunity to study some of those areas in more detail. The course looks at the supranational and U.S.-domestic law that serves as backdrop to any international business transaction connected to this country. It focuses particularly on how to finance both sales and direct investment and how to structure direct investment of various tangible and intangible assets. The course is focused on the law as it affects individual business entities rather than on the relationships between States. However, this course does deal with the way that certain treaties have an impact on domestic law in relevant areas, such as international dispute settlement. This course also covers the World Trade Organization treaties to a limited extent as relevant to international business transactions.

4LAW 5470 Int'l Human Rights Law (3)
In this course we will explore the place of human rights in United States and international law. More broadly, we will closely examine and evaluate the entire human rights "regime," that is to say the norms, principles, rules, and decision-making institutions that occupy and organize this issue area within the broad sphere of international relations. The course is designed to provide students with a confident grasp of: the substantive norms of human rights; the philosophic basis for the concept of rights and the leading points of controversy about the existence or character of certain rights that appear in conventional enumerations; the diverse procedures available at the global, regional, and national level for defense and promotion of human rights; the subtle and not-so-subtle ways in which ideological and material interests influence the definition and enforcement of rights; the ways in which policy makers attempt to reconcile the demand for human rights enforcement with more traditional foreign policy objectives.

4LAW 5490 International Law-Public (3,4)
This is the basic introductory course in international law and as such focuses initially on how international law is made and applied as well the various theoretical justifications for and explanation of international law and international institutions. The course then explores other issues such as the proper subjects of international law—states, international organizations, individuals, etc; allocation of legal authority among states; the forums for and the methods of international dispute resolutions, etc. Special attention is paid to the use of force in international relations and the UN-based collective security system. Using the United States as an example, the course will also explore the interrelationship of domestic law and international law—the domestic effect of treaties and customary international law, the role of federalism in the adoption and enforcement of international obligations, and the role of municipal courts in the enforcement of international obligations.

4LAW 5540 Int'l Commercial Arbitration (3)
This offering is intended to introduce students to the problems of dispute resolution in the international transactional context. Most international commercial disputes and contract claims are resolved through arbitration. The course will address the primary substantive law issues in the field, consider in detail comparative and transborder aspects of the subject area, and provide students with a simulation exercise in a contemporary practice problem.

4LAW 5550 Int'l Sale of Goods (3)
This course will address the United Nations Convention on Contracts for the International Sale of Goods (the "Vienna Convention"). The rules of the Convention, to which more than eighty States adhere (including the U.S.), govern a great number of export/import transactions involving American parties. The course is designed to familiarize students with these rules and their application to specific aspects of international sales contracts, such as contract formation, remedies and allocation of risk. The discussion also will address the broader ramifications of the Vienna Convention. Topics of this nature include an assessment of fundamental problems, such as uniform interpretation, that are inherent in every effort to unify or harmonize legal rules. The course will also familiarize students with INCOTERMS 2010 that govern the transportation and insurance aspects of sales transactions and UCP 600 that provides the standard mechanisms for international payments, including letters of credit and documentary collections. Professor Davies plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism.

4LAW 5570 Int'l Institutions (3)
This seminar examines international institutions – both formal organizations and informal arrangements – as increasingly important elements of a rapidly changing international governance system. These institutions range from traditional treaty-based organizations, such as the United Nations and its subsidiary organs, to understandings among states lacking formal structural organization which govern some aspects of international economic relations, human rights and arms control. Apart from the topics of formation, membership and participation, as well as of (applicable) privileges and immunities, the seminar will pay special attention to international institutions' role in developing international law. It will also canvass the extent to which international institutions are accountable pursuant to international law. The seminar will thus highlight political-legal phenomena of the transition to an international legal order in which international institutions have taken on indispensable governance functions that both compliment and threaten states' traditional, dominant position in the international legal system. Professor Handl plans to invoke a rule penalizing students for failure to be prepared and/or excessive absenteeism.

4LAW 5580 Int'l Trade Finance & Banking (3)
Analyzes competing trade and industrial policies, GATT-WTO, NAFTA, unfair trade practices, dumping and subsidy controversies, trade imbalance problems, foreign investment, safeguards, expropriation and remedies, international banking and lending, debt overloads, IMF policies, global financial crisis, remedies, and adjustment mechanisms.

4LAW 5600 Intro to Law of the US (1,2)
This course is designed to help international law students pursuing an LL.M. in the United States prepare for the demands of graduate education in an American law school. Because of its location in a state with a civil law heritage (which is unique in the United States), Tulane has long been known for its expertise in comparative and international law. This expertise allows the school and its faculty to better understand and meet the needs of students who come from a wide variety of legal systems. By utilizing tenured faculty, and by focusing on the basic principles of the American Legal system, with particular emphasis on constitutional law, the orientation program ensures that international students are given the best possible grounding for their subsequent studies. Classes meet four days a week, for 220 class minutes per day, in the three weeks before regular fall classes begin. The specific courses taught are as follows: Constitutional Law, Criminal Law, the U.S. Legal system, Constitutional Criminal Procedure, and Civil Procedure. Students who pass the written examination at the end of the course will earn two credits for their work, based upon American Bar Association guidelines. In addition to regular classes, students are offered free tutoring in English, with particular emphasis on legal terms and phrases, a speaker series, and an introduction to legal education in the U.S. Students will also be invited to attend a variety of social events and dinners, and will be given the opportunity to visit local courts and observe judicial proceedings.

4LAW 5700 Law of Democracy (3)
This constitutional law course concerns voting rights and elections, topics not covered in upper-level classes on the Fourteenth Amendment and First Amendment. We will address a variety of topics related to the proper legal functioning of our democratic system, including the law of voter participation, reapportionment and redistricting, election administration, racial discrimination and the Voting Rights Act, racial gerrymandering, and direct democracy. Campaign finance will be covered if there is time.

Prerequisite(s): 1LAW 1080 or minimum score of PASS in 'Law Graduate Student'.

4LAW 5710 Labor Law (3)
After a brief introduction to the history and evolution of the labor movement and labor legislation, the course covers in depth the legal framework dealing with union organization and collective bargaining. The material is considered from the beginning of the relationship between the employer and union, the organizational phase, through collective bargaining and enforcement of the contract once it is in place. Professor Friedman plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism.

4LAW 5730 Law of The Sea (3)
This course reviews the public order of the oceans, i.e., the basic principles of international law, both customary and treaty-based, that apply to maritime spaces, such as the territorial sea, the high seas, continental shelf, seabed, and ocean floor. The course analyzes the allocation of jurisdictional powers among individual states and the international community at large over the various maritime zones involved; the use and management of ocean resources, such as regional and global fisheries regimes and seabed mining; marine environmental protection and pollution control; military uses of the ocean; and freedom of navigation. Special consideration will be given to enforcement issues related to drug trafficking and violations of marine environmental protection or fisheries regulations.

4LAW 5770 Law and Literature Sem (2,3)
This interdisciplinary seminar will use various works from the canon of Western literature-Homer, Shakespeare, Kafka, and others-as well as American film to explore jurisprudential concerns such as the distinction between justice and revenge, law and illegality, and the limits and purposes of punishment. We will explore the differences and similarities between legal and literary narrative, the origin and nature of law, how law reflects (and whether it should reflect) community norms and moral views. Students will be required to prepare a research paper which they may use to satisfy the upper-class writing requirement, make one or more class presentations, and participate in class discussion. Reading assignments will consist of literary works and commentaries of these works.

4LAW 5831 Law, Finance & Technology (2-3)
This seminar explores the legal issues raised by the integration of emerging technologies in finance and the regulatory regimes applied to fintech platforms. The class will explore several major themes and current trends governing the complex interrelationship between law and technology. Grades will be based on the following: (a) Class Participation, Proposal, First Draft and Presentation: 40%; (b) Final Seminar Paper: 60%. This course will satisfy the upper-class writing requirement. Corequisite(s): NCLS 9110.

4LAW 5840 Cause Lawyering (2)
This course examines the use of law to advance social, economic, or political goals. After a brief exploration of the theoretical framework and historical background of "cause lawyering," students will consider the role of law and lawyering in various change-seeking applications, such as social movements and impact litigation, and in various practice settings. Throughout the semester, students will meet with practitioners involved in prominent cases or organizations to discuss their objectives, strategies, and challenges—and whether they achieved their goals. Students will prepare for those meetings by reading relevant material and generating specific questions for the speakers. Grades will be based on several short papers, a final paper, and class participation. This course is not subject to a curve and includes an option for students to satisfy the upper-level writing requirement.

4LAW 5880 Modern European Legal History (3)
This course traces the history of private law in Europe from approximately 1750 to 1950. It will begin with the pre-codified law and custom found in the European ius commune, the legal situation during the Ancien Régime of France, revolutionary age leading out to the first great codifications, and proceed to the rise of the historical school and Romanist legal science in Germany, the national debates over codification in Germany, the nature and background of the German Civil Code, the Austrian, Swiss, Spanish and Italian codification experience, and the diffusion of European codifications in countries of Latin America and Asia. Readings will be assigned for discussion and participation in class. Professor Palmer plans to invoke a rule penalizing students for failure to be prepared and/or excessive absenteeism.

4LAW 5910 Legal Reasoning, Research & Writing for LLM Students (2-3)
This course is an introduction to the legal methodologies of practicing attorneys in the United States. Because the course is limited to foreign students seeking their LLM, it emphasizes the development of legal reasoning and writing skills in an adversarial legal system, while simultaneously acquainting students with the legal resources readily available to attorneys in the United States, such as Westlaw, and Lexis. The first half of the course is devoted to short writing projects, e.g., motions, and memoranda, as might be created and used by a U.S. law firm. The second portion of the course, which immediately follows the first, is devoted to the creation of a brief on a current issue. In addition, the students are required to orally argue at least three times. Professor Larson plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism.

4LAW 5950 Legal Research, Adv (3)
Building on the research techniques presented in Legal Research and Writing, Advanced Legal Research focuses on the effective use of electronic and print legal research tools and examines existing electronic sources for both legal and non-legal information of interest to lawyers. After reviewing research concepts taught during Tulane's first year Research and Writing course, this advanced course will provide coverage of selected additional research subjects, including statutory research, legislative history, administrative and regulatory research, practice aids, research strategies, and various specialized areas, including an introduction to treaty research and international/ foreign research sources. The course also offers advanced training on comprehensive proprietary online research systems such as Westlaw and LexisNexis and introduces specialized proprietary online systems such as Bloomberg Law and BNA. It will focus on using the Internet to locate legal and non-legal resources, covering such topics as search engines, legal portal sites, websites for federal and state law, government information, and no/low cost information sources (commercial and noncommercial). This course will not be subject to the curve. The professor plans to invoke a rule penalizing students for lack of preparation and/or excessive absenteeism.

Prerequisite(s): minimum score of PASS in 'Law Graduate Student' or 1LAW 1410.

4LAW 5960 Litigating Com'l Fraud Sem (2)
The subject of this seminar is commercial fraud. The goal is to provide students with a comprehensive understanding of what parties should consider, what they should anticipate, and how they might respond in litigating and arbitrating commercial fraud cases. The topics to be covered include (1) the Racketeer Influenced and Corrupt Organizations (RICO) Act, (2) the federal securities laws, and (3) various state law claims. Class will focus on the problems confronted daily by the practicing attorney.

4LAW 5970 Mixed Jurisdictions Seminar (2,3)
This seminar will focus principally upon the so-called 'classical' Mixed Jurisdictions of which there are about 15 or so in the world. Prominent among these are South Africa, Scotland, Quebec, Puerto Rico, Israel, The Philippines and Louisiana. There is debate about the countries belonging to this group and our research interest may extend beyond this circle in order to deal with classification issues. Each student in the seminar will select a topic dealing with some aspect of the Mixed Jurisdictions and write a research paper that will be presented and discussed in class. A paper topic may relate to any micro or macro aspect of such systems and should make use of the comparative method. Before topics are chosen, the opening classes will discuss the defining characteristics and traits of the mixed jurisdictions and students will be introduced to the literature on the subject. The principal text in the course will be V.V. Palmer (ed), Mixed Jurisdictions Worldwide: The Third Legal Family (2001).

4LAW 6000 Marine Pollution (2)
This course will cover U.S. legislation, administrative regulations, state legislation, and case law in the area of marine pollution. This course counts as credit for both the Environmental and Maritime certificates.

4LAW 6020 Media Law (3)
In modern times, media is more ubiquitous than ever and the law is developing quickly in response. This class will examine the law that impacts media in its broadest sense—everything from a student's social media posts to a Pulitzer Prize-winning journalist's news story in The New York Times—and explore how those laws have developed over time. Topics will include access and who gets what from government when government is determined to keep things out of public hands; defamation protections that appear to be changing rapidly from New York Times v. Sullivan days; invasion of privacy and what deeply personal information journalists or Twitter posters are allowed to reveal; special rules for the internet; media liability for emotional harm and fakery; FCC regulations; and more.

4LAW 6040 Mergers & Acquisitions (3)
This is an advanced corporate law course covering federal law aspects of tender offers, mergers (including forward and reverse triangular), leveraged buyouts, asset purchases, and other acquisition techniques, as well as selected defensive tactics (poison pills, recapitalization, white knights, etc.), due diligence, and drafting merger and acquisition deal documents. Business Enterprises is a pre-requisite or permission of instructor required.

4LAW 6050 Native American Law (2)

4LAW 6080 Env Law: Natural Resources (3)
This course is one of the two foundation courses in environmental law and presents a survey of programs that govern the use and protection of natural resource systems, including energy, mining, timber, grazing, transportation and water resource development. Special attention is given to the National Environmental Policy Act, and to management statutes for public lands, forests, parks, refuges, wilderness areas, and endangered species.

4LAW 6100 Negotiation and Mediation (3)
The purpose of this course is to expose students to the process of negotiation as a pervasive lawyering activity; to increase awareness of the technical, interdisciplinary, and ethical dimensions of that process; to introduce the concept of the lawyer's role as problem-solver; to enable students to experiment with and consider thoughtfully the various theories, forms, and techniques of negotiation and mediation advocacy; and to provide students an opportunity to assess their own capabilities within those contexts. 75% of the course will focus on negotiation and 25% on mediation advocacy. (Please note that the mediation advocacy portion of the course is not training students to be mediators but rather to enhance their understanding of the lawyer's role in a mediation.) A number of negotiation exercises are completed outside of class at times that are mutually agreed upon by the negotiators. Flexibility by students in this regard is expected. Students will be graded on a "Pass/C/Fail" basis. There is no curve in this course. The professors plan to invoke a rule penalizing students for lack of preparedness and/or excessive absenteeism. Students who have taken Intercultural Negotiation & Mediation in Berlin may not take Negotiation & Mediation Advocacy due to course overlap.

Prerequisite(s): 2LAW 2070.

4LAW 6110 EU: Energy & Environmental Law (3)
This course presents an introduction to the basic history and legal framework of the European Union (EU) and then concentrates on several key areas of practice. While the course will touch on the role of key EU institutions in the integration process, a central area of emphasis will be EU law in the fields of energy -- principally electricity, gas, and nuclear -- and the environment. Throughout the course, recurring overall themes will be sovereignty, federalism, subsidiarity and power sharing.

4LAW 6160 Patent Prosecution (3)
This course concentrates on U.S. patent laws, U.S. patent regulations, and procedures involved in obtaining patents from the U.S. Patent and Trademark Office. Students will learn how to write patent claims, patent applications, and responses to office actions from the USPTO. Some aspects of foreign and international law will be discussed. The grade will be based on several written assignments and a final exam.

Prerequisite(s): minimum score of PASS in 'Law Graduate Student' or 4LAW 5410*.
* May be taken concurrently.

4LAW 6180 Patent Law (3)
This is a 3-credit course that covers patent law in greater depth than the intellectual property survey course. Topics to be covered include: patentability requirements, infringement, defenses, remedies, litigation, appellate issues, administrative revocation, and special topics. A technical background is NOT required for this course.

Corequisite(s): 4LAW 5410.

4LAW 6210 Law & Entrepreneurship (2)
This course focuses on questions that arise in new social ventures, start-ups, non-profits and other early-stage projects. This will be a hands-on course where students will be introduced to the practice of IP and entrepreneurship through a variety of means, including a standard casebook, guest attorneys and entrepreneurs, and individualized research assignments. This course is recommended for students interested in the following areas: business, IP, non-profits, and solo practice. The grade is based project based work (individual research assignments each week) that will be graded. Students turn in a portfolio of their work at the end of the course which will be graded on completeness and thoroughness. This is a rigorous class that takes dedication. Students are expected to dedicate 3 hours preparation per class (6 hours a week) to the individual research assignments. Attendance is also key.

4LAW 6220 Client Interview & Counseling (2)
The course will focus on the legal principles and skills involved in interviewing clients and witnesses and counseling clients in the course of litigation, dispute resolution, and decision making. Establishing an effective lawyer-client relationship requires gathering information relevant to client decisions and assisting clients in analyzing the legal and non-legal consequences of various options in order to make the decision most likely to achieve client objectives. Additional topics include addressing political polarization and cultural differences; interviewing and counseling clients experiencing trauma or disability; and representing children, criminal defendants, and organizational clients. Students will be assessed based on in-class role plays, recorded interviewing and counseling simulations, written plans, and self-evaluations.

4LAW 6230 Property Theory Seminar (2-3)
This seminar provides a forum in which students can deepen their understanding of what property is, debate the merits of property law, and contemplate future issues that property law will face. In doing so, this seminar strives to enhance students' analytical, research, writing, and presenting skills. The seminar is divided into three main parts. The first part focuses on developing a greater understanding of how the law views property. We will read fundamental property scholarship that has helped developed the modern concepts of what property is and how ownership is established and protected. The second part applies the traditional theories of property rights in more modern context. Through a variety of readings, the class will contemplate whether property rights should extend to things like the body, outer space, and virtual worlds. The third part allows students to develop their own thoughts on property rights through the writing and presenting of a seminar paper.

4LAW 6270 Compar Private Law (3)
This course will compare common and civil law approaches to the law of property, contracts, and torts. The common law originated in England and is judge made. The civil law developed from Roman law and, in most jurisdictions today, it is codified. We will look at how England, the United States, France, and Germany deal with some concrete legal problems, and ask whether the differences are due to history, codification, culture or to the problems themselves. The topics chosen will be familiar to the students from their first year. NOTE: Students who previously completed Professor Palmer's European Legal Systems course may not enroll in this course.

4LAW 6280 Criminal Justice Seminar (2,3)
This seminar provides students to learn and engage with the rules of professional conduct and the law as it relates to the differing roles of the prosecutor and the criminal defense lawyer. Students will gain knowledge of constitutional rights and principles that affect the conduct of counsel and the intersection of the law with the rules that govern lawyers. On a fundamental level, students will gain an understanding of the historical and public policy considerations underlying the law and rules governing the conduct of prosecutors and defense lawyers.

4LAW 6290 Products Liability (3)
The course focuses upon the founding and evolution of American products liability law, including the latest formulation in the third Restatement of Torts as well as state "reform" statutes. Emphasis is placed upon the inter-relationship between con-tract and tor remedies; the rise of the doctrine of strict liability; and the theory of enterprise liability. Professor Palmer will invoke a rule penalizing students for lack of preparation and/or excessive absenteeism.

4LAW 6320 Prof Responsibility Sem (2)
This course will explore the role of lawyers' ethics in the American legal system and the conceptual models that currently frame the ethical rules and regulate lawyer behavior. It also will explore those areas in which ethical regulation deviates from practice, and further examine through the use of practical in-class exercises how ethical rules can be developed to improve advocacy and truth-finding in the legal process. The grade will be based on a non-anonymous paper. Professor Stanley plans to invoke a rule penalizing students for lack of preparation or excessive absences. Note: This course does not satisfy the requirement to take Legal Profession. The grade will be based on a non-anonymous paper. Professor plans to invoke a rule penalizing students for lack of preparation or excessive absences. This course does not satisfy the requirement to take Legal Profession. This seminar may be taken to satisfy the upper-class writing requirement with permission of the Professor and meeting all of the requirements; the course does not automatically satisfy the upper-level writing requirement.

Prerequisite(s): minimum score of PASS in 'Law Graduate Student' or 2LAW 2800.

4LAW 6330 Military Law (2,3)
This course will be an overview of military and military-related law as practiced in the United States. The course will be divided into three thematic blocks: 1) the military justice system as it applies to service members, 2) the military legal system as it interacts with veterans, civilians, and civilian institutions, and 3) the military legal system as it acts internationally.

4LAW 6350 Race Relations Seminar (2,3)

4LAW 6360 Critical Race Theory Seminar (2)
This seminar will explore the relationship between critical understandings of the significance of race and legal interpretation. Of particular importance will be the examination of how societal values and customs, expressed in legal rules purporting to address racial issues, inhibit critical approaches to the concerns of justice for the disadvantaged groups. Students must take any one of the following courses as a co-requisite for this seminar: Constitutional Law: 14th Amendment, Gender Law & Public Policy, Law & Sexuality Seminar, or Constitutional Law, Legal History, and Race Relations Seminar. This seminar may be taken to satisfy the upper-class writing requirement.

Prerequisite(s): 4LAW 4550*, 5920*, MINI 5510*, 4LAW 6450*, 6450*, 1LAW 1080* or 4LAW 6350*.
* May be taken concurrently.

4LAW 6400 Intro Int'l & Comp Energy Law (3)
International energy law is an important part of the required knowledge base of an "energy lawyer". There is no single body of law or a treaty on "energy law" or "international energy law". Instead, it is a combination of various rules of international, regional and national laws. After providing insights into what "energy law" is and who are the main players in the field, this course will cover the entire energy value chain and introduce students to legal and contractual issues relating to each segment. The course covers all forms of energy from oil and gas to reviewable energy. It also provides an overview of typical national policies and policy drivers for various energy activities.

4LAW 6420 Roman Law (3)

4LAW 6430 Scientif Evid+Expert Sem (2-3)

4LAW 6450 Sexuality and The Law Seminar (2-3)
This course examines the impact of legal regulation in the United States on such areas as sexuality and sexual preference as intimate association, marriage, family structure, workplace discrimination, and civil rights. It also covers law relevant to transgender persons, intersex persons, and queer sexualities. No attendance policy; however participation aspect of the grade may suffer due to poor attendance. This seminar may be taken to satisfy the upper-class writing requirement.

4LAW 6460 Securities Regulation (3)
This course provides a broad overview of U.S. Federal securities law, including statutes and regulations governing the underwriting and offering process, exemptions from registration, the operation of securities markets, and the activities of securities intermediaries, such as stock exchanges and broker-dealers. The course focuses on theoretical issues, such as the philosophy of regulating disclosure; the classification of professional and retail investors; the allocation of authority among the SEC, self-regulatory organizations and other federal and state regulators with respect to financial instruments; and the scope of and limitations on private securities litigation and the SEC's enforcement authority. Business Enterprises is required.

4LAW 6500 Negotiating M&A Transactions (2)
This course is designed to give students an introduction to the real world experience of the deal making process, from the first contact between the parties to drafting and negotiating the documents that govern transformational corporate transactions. Over the course of the semester, we will break down the main agreements involved in a hypothetical deal with a view to developing a fundamental understanding of how those components interact with the overall business arrangement and deal dynamics. You will analyze and learn to understand how the key provisions of these transaction agreements are negotiated with the goal of maximizing value for the client and appropriately allocating risk among the parties to a deal. We will also discuss the less tangible aspects of deal making that take place outside of the four corners of the transaction agreements but are no less important. Specifically, we plan to discuss the economic and personal motivations of the various parties involved and the psychology and group dynamics of a deal process. As the deal world is an ever changing environment, we'll look to bring current real world examples into the classroom. Students will participate out-of-class group and individual practice assignments, including drafting (or "marking up") transaction documents and negotiating key issues in the context of a prepared fact pattern. Students will also participate in an off-campus mock negotiation of a deal term sheet at Jones Walker, LLP's office downtown. The course is taught by Britton Seal and Daniella Silberstein, who are both partners in the Corporate Practice Group at Jones Walker LLP in New Orleans. Because of the substantial overlap in content, students enrolled in Negotiating M&A Agreements may not enroll in the Transactional Winter Intersession.

4LAW 6520 Sports Law: Antitrust & Labor (3)
This course examines how the antitrust and labor laws apply to the unique relationships in the sports industry. The course focuses on the ways the antitrust and labor laws have shaped virtually every aspect of professional and amateur sports – ranging from salary caps and age restrictions to television deals and team relocations.

4LAW 6540 Sports Law: Int'l & IP (3)
This course examines the application of a variety of different areas of law—including intellectual property, contracts, torts, and constitutional law— to the sports industry. The course emphasizes intellectual property law and issues relating to the ownership of "data" produced by sports leagues, teams, and athletes. In particular, the course focuses on right of publicity and trademark law. This course will also examine a variety of legal issues that arise in collegiate, amateur, and international sports.

4LAW 6620 Sust Energy Law & Policy (2)
This course focuses on environmental sustainability in the energy sector from a legal perspective. Given that we all share the common problem, and try to come up with the best possible solution to answer the challenge of combatting climate change, understanding different tools adopted in different jurisdictions is central in developing — and improving — the policies and implementing measures given the diversity of experiences across the globe. Therefore, the course adopts a comparative approach to examine different regulatory alternatives that can be introduced to reduce the harmful greenhouse gas emissions in particular in the energy supply side in order to enable a more sustainable energy future. While the emphasis will be placed on the power sector given its overall contribution to the greenhouse gas emissions, building, transport and end-use sectors are also examined to a lesser extent.

4LAW 6660 Tax: Partnerships (3)
The course explores the federal income tax concepts of "pass through" or conduit taxation. Partnership tax topics include choice of entity decisions, partnership formations, asset contributions, liability assumption, distributions, operations, transfer of partners' interests, special allocations of tax attributes, partnership interests received for services, special basis adjustments, and analysis of the entity and aggregate approaches found in the law. Also included is an introduction to the study of the law of S-Corporations and how it compares to the taxation of partnerships. (3 Credits)

4LAW 6680 Tax Policy Seminar (2)
The Tax Policy Seminar takes a multidisciplinary approach to tax policy. It explores the political economy of tax policy from different perspectives: efficiency vs. equity; tradeoffs in taxation, key elements and weaknesses of U.S. tax law; the philosophical and psychological foundations of taxation; historical and comparative perspectives on taxation; taxation of income from owning capital; recent proposals to tax the very wealthy.

Prerequisite(s): minimum score of PASS in 'Law Graduate Student' or 2LAW 2530.

4LAW 6690 Tax: Corporate Tax (3)
The course provides a basic overview of regular "C" corporations. Using a transactional approach, the course traces the life of a corporation from formation through distributions to liquidation. Income Tax is a prerequisite for this class.

4LAW 6710 Tax:Research In Taxation (2-3)
Tax research consists of the examination of tax questions through the following process: (1) identification of pertinent issues; (2) determination of proper authorities; (3) evaluation of the strength of the authorities; and (4) application of these authorities to the specific fact situation. Through the use of a series of assigned research projects, students will be given an opportunity to survey significant areas of the Internal Revenue Code, gain an awareness of developing tax issues, and develop a capability in tax research. Based on the cases presented, the student will be asked to analyze the facts, identify the tax issues, locate appropriate authorities, evaluate those authorities, develop conclusions and recommendations, and communicate the findings in the form of an opinion letter, a protest, or a memorandum. A final research paper on a tax topic chosen by each student will be combined with the assigned research projects and credit for class attendance to determine the final grade. Each weekly class session is dedicated to tax research techniques and a survey lecture of the general area of tax law covered by the specific case then under consideration. The course is a Business School course, cross-listed with the Law School. Income Tax is a prerequisite.

4LAW 6730 Tax: State & Local Tax (2)
This course explores the state and local taxation of entities and individuals, focusing on multi-state taxation and overall tax planning strategies to minimize or eliminate multi-state tax liability. In this course, we will examine the concept of "nexus" (when a taxpayer or transaction is subject to the taxing jurisdiction of a state or locality), both as it has been understood historically, and in light of technological advances that have made remote business operations increasingly practical. We will also address the unique state and local tax issues created by the growth of "e-commerce" and the financial impact on state and local tax jurisdictions administering tax laws developed in the context of local business operations. Finally, we will discuss and analyze business activity taxes and sales and use taxation in detail, and will also cover very generally franchise, capital stock and gross receipts taxes, and property taxation, as time permits. Students will have an opportunity to practice handling or deciding a current significant SALT issue in a "moot court" exercise. The course will be taught by Jaye A. Calhoun, a member of the Business Tax Section of Kean Miller, L.L.P.

4LAW 6790 Intl Energy Investment Protect (3)
International investment protection is particularly important for energy activities. This is true for all segments of the energy value chain from upstream to downstream energy. It is a national and an international issue. Looking at various treaties and agreements as well as real disputes from around the world, this course covers all the main elements of energy investment protection. The objective of the course is to introduce the students to various investment protection methods. The classes examine both treaty and contract based investment protection. It will also cover both investment treaties and Host Government Contracts and Inter-Governmental Agreements used for upstream, pipeline and downstream investments. In addition to the theoretical and more abstract parts, the course will also use several case studies as learning material. The students will be exposed to real contracts and real treaties. This course could meet the upper-class writing requirement.

4LAW 6820 Trademark Law (2-3)
This course picks up where IP Survey left off. Advanced topics in trademark are covered, along with key concepts related to the use of those trademarks in advertising law. Topics include foreign trademarks, false advertising, deception, omissions and disclosures in advertising, brand protection, and many others. IP survey is required for all participants (no waiver). Students who previously took copyright/ trademark may enroll in trademark and advertising law.

4LAW 6840 Transnational Litigation (3)
The rapidly growing number of disputes involving foreign parties and transactions present distinct problems that do not arise in purely domestic litigation or arbitration. The course will address these problems and the emerging solutions as developed by American courts, and it will compare these developments with approaches that prevail in other legal systems. Areas that will be covered include the extraterritorial application of U.S. laws, taking evidence abroad, personal jurisdiction over foreign defendants, and the enforcement of foreign judgments.

4LAW 6860 Environmental Litigation (2)
This is a theory and practice course covering the major components of an environmental case up to trial including: substantive and procedural law, investigations, claims/defenses, discovery and depositions, experts and science, and motions . Grading will be based on written and oral exercises; no examination. It is taught by William Goodell a sole practitioner specializing in environmental and toxic damage litigation. Mr. Goodell is principal of the Goodell Law Firm, was formerly Louisiana Assistant Attorney General for Environmental Enforcement, and also taught the Environmental Trial Advocacy and Deepwater Horizon Seminar courses at Tulane. This course is the former Toxic Tort Litigation Practice.

4LAW 6930 WTO Seminar (2)
This seminar explores the fundamentals of international trade practice in the World Trade Organization (WTO). After reviewing the economic foundations for international trade and the historical underpinnings of the WTO system, our primary focus will be on the texts of the WTO agreements and the international legal practice surrounding the WTO dispute settlement system. This course is taught by Edward T. Hayes, a partner at Leake & Andersson, LLP. This seminar may be taken to satisfy the upper-class writing requirement with permission of the Professor and meeting all of the requirements; the course does not automatically satisfy the upper-level writing requirement.

Prerequisite(s): minimum score of PASS in 'Law Graduate Student' or 4LAW 5490*.
* May be taken concurrently.

4LAW 6940 Law and Gender (3)
Using gender as a paradigm for thinking about law, this course examines sex-based discrimination from a variety of perspectives in substantive areas of law that influence the lives of women and men. It covers issues of formal equality in employment, equal opportunity in education, substantive equality through affirmative action and pay equity, pregnancy, parenting, sexual orientation, sexual harassment, family law, domestic violence, pornography, prostitution, rape, and reproductive choice among others.

4LAW 7000 Race and International Law Seminar (2-3)
The Race and International Law Seminar provides a forum for studying race and racial hierarchies in international law, and the use of international law to produce, reproduce, and justify those hierarchies. Throughout the semester, the seminar will discuss the theoretical underpinnings of early postcolonial critiques and what connections they have to critical race theory approaches to international law.

4LAW 7020 Race Internl Law Seminar (2,3)

4LAW 7030 Criminal Ethics Advocacy Sem (2)
This seminar allows students to learn and engage with the rules of professional conduct and the law as it relates to the differing roles of the prosecutor and the criminal defense lawyer. Students will gain knowledge of constitutional rights and principles that affect the conduct of counsel and the intersection of that law with the rules that govern lawyers. On a fundamental level, students will gain an understanding of the historical and public policy considerations underlying the law and rules governing the conduct of prosecutors and defense lawyers.

4LAW 7040 Energy Law (2,3)
This course will begin with an overview of global energy systems and introduce global energy value chains for the dominant energy paradigms and their reach into the real economy. It will then introduce the legal regime governing the extraction of raw materials needed for energy value chains. It will do so by focusing on the exploration, development and production of oil and gas resources in the U.S. covering core aspects of the oil and gas lease (property), joint operating agreements (contracts), and conservation (environmental regulation) and will place the U.S. experience in an international context. The next portion of the course will introduce the regulation of electricity generation, transmission, and distribution. It will focus in particular on the challenges for energy regulation by an increased focus on renewables in the U.S. energy mix. It will again place these developments in a global perspective. The course will use simulations as a means to introduce the many complexities of energy law in a realistic fashion.

4LAW 7050 International Trade Law (2,3)
The course is a survey course covering the law relating to international trade in goods, covering both private commercial transactions relating to trade in goods and the international legal instruments and organizations regulating international trade. The course will deal with international sales and payments and also longer-term “framework” agreements relating to marketing and licensing and the issues that they raise, such as antitrust regulation and parallel importing. It will also deal with trade regulation by GATT, the WTO, and regional trade agreements between countries, and will show how the private commercial relationships between parties are related to the public law relationships between countries in relation to trade. The course will consider only trade in goods. It will not consider trade in services or foreign direct investment or taxation as it relates to the planning of import/export transactions.

4LAW 7060 Corporate Governance, Accountability & Control Seminar (2)
This course will consider the mechanisms of control over the modern business corporation in American society. What are the roles played by directors, shareholders, regulators, and other groups? Who should owe fiduciary duties to the corporation, what are the content of those duties, and how should they be enforced? How should boards of directors manage the claims of various constituencies affected by corporations?

Prerequisite(s): 2LAW 2070.

4LAW 7070 Introduction to Medical Malpractice (2)
The seminar will provide students with an in-depth examination into the legal arena of medical malpractice with a concentration on the policies behind the various State statutes governing these claims. We will pay special attention to the caps on damages in each State, if the cap changed in each State, and which States have abolished a cap; the burden of proof; pertinent cases; large jury verdicts; States where a pre-litigation panel is required; collateral source; and other interesting aspects of medical malpractice claims which may be governed by various States. While there will be some focus on medical malpractice laws in Louisiana specifically, the seminar will mostly be a survey of medical malpractice in other States, with a small section dedicated to medical malpractice internationally, for comparison. We will also have a brief introduction of the history of medical malpractice lawsuits.

4LAW 7100 Legal History of Reproductive Justice Seminar (2)
This course examines the legal history of reproductive justice in the United States from the colonial era to the present. It traces ideas about gender, family, sexuality, bodily autonomy, and consent as they have developed over time, using the theory of "preservation through transformation" to analyze change and continuity. The class will situate the development of various reproductive justice doctrines in political, social, and economic context and examine the impact of shifting ideologies about sex, gender, and race on these doctrines. The course will take an interdisciplinary approach, examining the intersections of reproductive justice with, inter alia, race, class, labor, immigration, environmental justice, and international law. This is a reading-heavy course that requires significant preparation and class participation. Assignments will include weekly discussion questions, a paper draft, and a 35-page final paper.

4LAW 8090 Asylum Law (2)
The course will examine U.S. asylum law in three parts. First, students will understand how the legal framework for today's asylum law has been built on treaty law, domestic implementing legislation, agency regulation, judicial interpretation, and subregulatory activity. Second, the course will examine the judicial interpretation phase that was for decades the principal way that U.S. asylum law developed, sometimes as a means of immigration control and sometimes as a means of innovation in refugee protection. Third, the course will examine the shift to procedural limitations and access to asylum that have become more decisive of the extent to which the United States fulfills both its protection and control imperatives. The course will focus on the dramatic policy shifts that have come with changes of Administrations, especially in an era of more pronounced exercises of executive authority than legislative. It will also focus on the allocation of authority among the executive, legislative, and judicial branches of government, with the aim of providing students with lessons that will have value in areas of practice or thought beyond immigration and asylum.

4LAW 8100 Elder Law (3)
The course is specifically designed to provide students with a uniquely focused perspective from which to gain a deep understanding of the varied legal issues that arise at the intersection of law and aging. More specifically, "Elder Law" is the legal practice of counseling and representing older persons and their representatives about the legal aspects of health and long-term care planning, public benefits, surrogate decision-making, older persons' legal capacity, the conservation, disposition and administration of older persons' estates, and the implementation of their decisions concerning such matters. Additional issues covered include retirement planning, discrimination in employment, elder abuse, and assisted suicide. This course will inform the growing number of students who may work with or represent the elderly, family members of the elderly, legal service agencies or legislative advocacy groups.

4LAW 8110 Advanced Corporate Tax Practice I (1)
This course examines the tax law relevant to capital formation, dividends, redemptions, and liquidations. The exercises are designed to 1) improve students' ability to interpret a statute and apply it to the facts, 2) gain confidence in the application of major corporate tax doctrines, 3) improve writing skills, and 4) learn the tax law applicable to common corporate transactions. Several problems and a short writing assignment are designed to allow students to practice boiling down complex issues into a concise summary suitable for their deal team colleagues, clients, the IRS, or a judge. Grades are based on the daily problem assignments, a short (three to five page) writing assignment, and a short take-home exam.

Prerequisite(s): 2LAW 2530.
Corequisite(s): 3LAW 3960.

4LAW 8130 Plea Bargaining (1)
Only about 2% of all federal criminal defendants go to trial, and only about 6% of state criminal defendants do so. Yet the vast majority of the training received by prosecutors and defense attorneys, both in law school and after, focuses on trials. This mini-course will instead address the mechanism(s) by which most criminal cases are actually resolved, (with a particular emphasis on the federal courts) and will attempt to provide future criminal lawyers with some of the tools needed to achieve just and fair resolutions in those cases. For the last class, students will be put into pairs (prosecutor-defense attorney), and required to conduct plea negotiations in a hypothetical case, and ultimately reach a resolution that does not involve a trial. The roles of the participants will then be reversed, and the exercise will be conducted again.

4LAW 8145 Advanced Corporate Tax I (1)
This course will prepare students to be productive members of a deal team. Combined, they cover the commonly encountered major corporate transactions, such as stock issuances, distributions, redemptions, and liquidations. The exercises are designed to improve a student's confidence in interpreting a statute and applying it to the facts. Several writing assignments and problems are designed to allow the students to practice boiling down complex issues into a concise summary for their deal team colleagues, clients, the IRS, or a judge.

Prerequisite(s): 2LAW 2530 and 3LAW 3960*.
* May be taken concurrently.

4LAW 8150 Advanced Corporate Tax II (1)
This course examines the tax law relevant to taxable acquisitions, spin-offs, reorganizations, the carryover of corporate attributes in connection with acquisitions, and anti-abuse provisions. The exercises are designed to 1) improve students' ability to interpret a statute and apply it to the facts, 2) gain confidence in the application of major corporate tax doctrines, 3) improve writing skills, and 4) learn the tax law applicable to common corporate transactions. Several problems and a short writing assignment are designed to allow the students to practice boiling down complex issues into a concise summary suitable for their deal team colleagues, clients, the IRS, or a judge. Grades are based on the daily problem assignments, a short (three to five page) writing assignment, and a short take-home exam.

Prerequisite(s): 2LAW 2530 or 3LAW 3960.

4LAW 9510 Representing Physicians (2)
This course will begin with an overview of general issues in healthcare law but will focus primarily on practical legal issues physicians face in the current healthcare world and how lawyers can be prepared to counsel the physicians facing those issues. This course will address issues as diverse as anti-trust and ERISA to medical staff and peer review, from the viewpoint of a practitioner who specializes in representing physicians. Tulane medical students will also attend several of the classes. The course is taught by Richard Levenstein, a Shareholder at Nason Yeager. There will also be several attorney and physician guest instructors.

Legal Studies in Business (LGST)

LGST 3010 Legal, Ethical and Regulatory Environment of Business (3)
LGST 3010 examines the legal, ethical and regulatory issues that affect business decision-making. The course covers ethical decision-making, including the concepts of professionalism, integrity-based management, compliance-based management and corporate social responsibility. LGST 3010 then focuses on the legal, ethical and regulatory issues associated with the legal system; the litigation process; alternative dispute resolution techniques; business torts based on negligence; intent and strict liability, including fraud, product liability, misrepresentations, and misleading advertising; contracts; consumer protection issues; business crimes; labor and employment law; laws surrounding equal opportunity; and property law, including patents, copyrights, trade secrets, trade names, and trademarks. Sophomore Standing or Above.

Prerequisite(s): ECON 1010 and (ENGL 1010 or 1011).

LGST 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. One of the following courses must be taken concurrently: LGST 4040, 4100, 4110, 4120, 4140, 4150, 4160, 4170, 4175, 4180, 4210, 4220, MGMT 4170, 4910, 4990, 5000, MGMT 4170, MKTG 4275, TAXN 4100. Course may be repeated. Junior Standing or Above.

Prerequisite(s): (LGST 3010) and (LGST 4040*, 4100*, 4110*, 4120*, 4140*, 4150*, 4160*, 4170*, 4175*, 4180*, 4185*, 4210*, 4220*, MGMT 4170*, MKTG 4275* or TAXN 4100*).
* May be taken concurrently.

Maximum Hours: 99

LGST 4040 Preventing Discrimination in Business (3)
The course examines the effect of legal and regulatory requirements on business decisions regarding issues of race and inclusion. The course will focus on the legal requirements as well as ethical implications of business decisions regarding racial and discriminatory issues in a variety of business endeavors including profit and non-profit businesses, higher education, insurance, real estate, banking and finance, advertising and marketing, entertainment, sports and healthcare. This course satisfies the University's race and inclusion requirements.

Prerequisite(s): LGST 3010.

LGST 4100 Business Law (3)
LGST 4100 examines the fundamental legal element of almost every business transaction – a contract. The course focuses on how businesspeople form and perform contracts under the Uniform Commercial Code. In addition, the course examines negotiable instruments and how they function in the banking system. LGST 4100 then focuses on the general rights of creditors and how bankruptcy affects creditor rights. The course also includes material on the structure of business organizations, including mergers and consolidations, and the use of agents in a business setting. The course concludes with a variety of specialized topics including property law, landlord-tenant law, insurance law, estate law and professional liability law. This course is required for Legal Studies in Business majors.

Prerequisite(s): LGST 3010.

LGST 4110 Legal Writing & Research (3)
LGST 4110develops fundamental legal writing skills and acquaints the student with the essential resources of computerized legal databases. Students learn the techniques of legal problem-solving and practice how to research and draft legal memoranda and briefs through a series of progressively more complex written assignments. This course is required for Legal Studies in Business majors.

Prerequisite(s): LGST 3010*.
* May be taken concurrently.

LGST 4120 International Business Law (3)
LGST 4120 introduces students to relevant features of the various legal systems currently governing the conduct of international business – national, regional and worldwide. The course covers the legal issues associated with international trade, licensing and investment. Subjects include the legal risks of international business, international public law, international organizations and private dispute settlement procedures. Also discussed are the risks associated with importing and exporting, foreign licensing and franchising, and foreign investment, as well as environmental regulations. This course also presents policy problems and operational concerns that arise as a result of conflicting laws, gaps in laws, and developing international standards.
Prerequisite(s): LGST 3010.

LGST 4140 Insurance & Risk Management (3)
LGST 4140 helps students navigate the ever-changing landscape of identifying and analyzing risk. Students learn how to manage risk through insurance and finance techniques that are integral to a firm's overall risk management plan. Insurance topics include property insurance, commercial liability insurance, health insurance, life insurance and automobile insurance. This class also shows students how risk management impacts critical financial decisions through methods such as loss control, risk retention and risk transfer. An added focus on speculative risk management, in addition to current insurance coverage, makes this class essential for managers who need to understand risk.

Prerequisite(s): LGST 3010 and FINE 3010.

LGST 4150 Real Estate Law (3)
LGST 4150 examines the fundamentals of real estate financing and development from a legal and managerial perspective. The course develops the student's skills in using legal concepts in a real estate transactional setting. The main topics covered include the following: land acquisition, subdivision, construction, permanent loans, joint ventures, management (leasing, environmental), limited partnerships, disposition of real property (sale of a mortgaged property, foreclosures, wraparound mortgages, sale-leasebacks) and recent legal developments.

Prerequisite(s): LGST 3010.

LGST 4160 Law of E-Commerce (3)
This course looks at how courts, legislatures and regulators confront the significant issues of the internet world. Billions of people are now active on social media, and firms such as Google, Facebook, Amazon and Alibaba are among the world's most valuable and influential. The legal interfaces between the physical world and the digital world are therefore increasingly important. In particular, exploitation of personal information online by governments, digital platforms and bad actors is becoming a constant source of significant controversies. The course topics include dispute resolution, cyber torts, crimes, intellectual property issues, risk management, information security and privacy issues.

Prerequisite(s): LGST 3010.

LGST 4170 Employment Law (1-3)
LGST 4170 examines legal issues associated with the hiring process, such as recruitment; background checks; eligibility; hiring and promoting; and managing a diverse workforce, including affirmative action, harassment and accommodations. The course also covers conditions of employment such as pay, benefits, terms of employment, and so forth; managing performance; and terminating an employee, including terminating union, non-union and public sector employees.

Prerequisite(s): LGST 3010.

LGST 4175 White Collar Crime (3)
LGST 4175 examines white-collar crime, which is a significant problem in the business world. Major corporations and financial institutions fail because of unlawful activities, resulting in substantial financial losses to Federal, state and local governments, as well as to private organizations and individuals. Whether students plan to pursue careers in business or law, they will need to be familiar with at least the basics of white-collar criminal law. This course covers a variety of subjects, including substantive criminal law, inchoate offenses, the attorney-client privilege, business ethics and corporate criminal liability, as well as many specific offenses such as fraud, obstruction of justice, bribery, environmental crime, computer crimes, currency crimes, insider trading and RICO.

Prerequisite(s): LGST 3010.

LGST 4180 Sports & Entertnmt Law (3)
LGST 4180 introduces students to the legal principles applicable to the sports and entertainment industries. The first part of the course focuses on entertainment law, and the second half explores sports law. The primary areas of the law that students examine are those relating to contracts, torts, intellectual property, agency, antitrust, labor and employment, as well as the business forms used in the sports and entertainment industries. The course also delves into policy problems and operational concerns that arise as the result of conflicting laws, as well as gaps in the laws applicable to these two industries.

Prerequisite(s): LGST 3010.

LGST 4185 White Collar Crime II (3)
This course builds on concepts introduced in White Collar Crime I (LGST 4175-01), although that course is not a prerequisite. As discussed in White Collar Crime I, white collar crime is a significant problem in the business world. Whether you plan to pursue a career in business or in law, you should be familiar with concepts such as corporate criminal liability and the reasons why otherwise successful business people commit crimes. This course analyzes these important concepts by focusing on high-profile and noteworthy white collar crime cases. Many of these cases went to trial. Others ended in guilty pleas or dismissals but nevertheless involved extensive litigation. After analyzing these cases, you will have a better understanding of the issues prevalent in white collar prosecutions.

Prerequisite(s): LGST 3010.

LGST 4200 LSAT Review (1)
The Law School Admissions Test Review (LSAT) course prepares students for the LSAT, including familiarizing students with the LSAT's format and structure and developing test-taking strategies. The course is one credit hour taken on an S/U basis, and the course does not count toward the student's degree requirements. Junior Standing or Above.

LGST 4210 Mock Trial (1.5)
LGST 4210 and LGST 4220 comprise a year-long course that examines procedural and evidentiary issues involved in case analysis and trial preparation. The course covers ethical decision making, including the concepts of professionalism, negotiations, public speaking, and legal research and writing. The course then focuses on the ethical and legal issues associated with the legal system, specifically the litigation process and alternative dispute resolutions. The course will include simulation exercises involving trial preparation and trial procedures, including motion filing and oral arguments. Trial materials will include subject matter related to business torts based on negligence; intent and strict liability; fraud; products liability; misrepresentations and misleading advertising; contracts; consumer protection issues; business crimes; bankruptcy; labor and employment law; laws surrounding equal opportunity; and property law, including patents, copyrights, trade secrets, trade names, and trademarks. The course will culminate in student participation in the American Mock Trial Association competition where students will compete with other undergraduate institutions. Junior Standing or Above.

Prerequisite(s): LGST 3010.

LGST 4220 Mock Trial II (1.5)
LGST 4210 and LGST 4220 comprise a year-long course that examines procedural and evidentiary issues involved in case analysis and trial preparation. The course covers ethical decision making, including the concepts of professionalism, negotiations, public speaking, and legal research and writing. The course then focuses on the ethical and legal issues associated with the legal system, specifically the litigation process and alternative dispute resolutions. The course will include simulation exercises involving trial preparation and trial procedures, including motion filing and oral arguments. Trial materials will include subject matter related to business torts based on negligence; intent and strict liability; fraud; products liability; misrepresentations and misleading advertising; contracts; consumer protection issues; business crimes; bankruptcy; labor and employment law; laws surrounding equal opportunity; and property law, including patents, copyrights, trade secrets, trade names and trademarks. The course will culminate in student participation in the American Mock Trial Association competition where students will compete with other undergraduate institutions. Junior Standing or Above.

Prerequisite(s): LGST 3010 and 4210.

LGST 4410 Special Topics (1-3)

LGST 4550 Legal Studies Internship (1)
Freeman School majors may elect to do a business internship that will appear as a one-credit, 4000-level course on their transcripts; however, the credit does not apply towards the 122 minimum hours required for a BSM degree. The internship must be related to one of the majors offered through the BSM program, and the internship must apply (within an ongoing business organization) the intellectual capital obtained from first- through third-year Freeman School courses. To obtain approval for the internship, the student must visit the Career Management Center for instructions. The final grade for the internship is given on an S/U basis upon submission of a paper/evaluation to a supervising faculty member in the Career Management Center. This course is normally offered during the summer and fulfills the “curricular practical training” option for students with F-1 visa status.

LGST 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LGST 4891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LGST 4892 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LGST 4893 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LGST 4894 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LGST 4910 Independent Study (1-4)
Freeman School seniors demonstrating academic excellence are allowed to pursue an Independent Study. The work may take the form of directed readings, laboratory or library research, or original composition. Instead of traditional class attendance, the student substitutes conferences, as needed, with the supervising faculty. An Independent Study requires the approval of the supervising instructor and the Associate Dean for Undergraduate Education. The credit does not apply towards the legal studies in business major requirements for a BSM degree; the independent study counts as business elective credit only. Interested students should contact the Office of Undergraduate Education at the Freeman School. Course may be repeated up to unlimited credit hours.

Prerequisite(s): LGST 3010.

Maximum Hours: 99

LGST 4990 Legal Studies Honors Thesis (3)
This course is the traditional thesis option for the Legal Studies in Business area. Students enrolled in this course will begin their theses in the fall semester. They will conclude their theses in LGST 5000 in the spring semester. Senior Standing.

LGST 5000 Legal Studies Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): LGST 4990.

LGST 5380 Business Study Abroad - LGST (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LGST 5390 Business Study Abroad - LGST (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LGST 6000 Essentials of Business Law (2)
This course introduces the basic concepts of contracts, labor laws, discrimination, torts, partnerships, corporations, securities, and bankruptcy and gives students an understanding of the relationships between parties in a typical business setting. Tax consequences relative to various entities used in business transactions are also examined.

LGST 7210 Business Law (3)
This course provides an overview of the laws that affect private business relationships, including contracts, torts, sales, negotiable instruments, secured transactions, principle-agency relationships, types of business organizations, antitrust, securities regulation, labor laws, administrative laws, and bankruptcy.

LGST 7920 Independent Study (1-3)
Independent study: Business Law.

Less Commonly Taught Languages (LCTL)

LCTL 1010 Arabic I (3)

LCTL 1020 Arabic II (2)

LCTL 1210 Hungarian (2)
Introduction to essential skills in Hungarian

LCTL 1290 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LCTL 1510 Swahili (2)

LCTL 1610 Spec Language offerings (2)
To be offered as demand arises and resources permit. Currently includes elementary Hindi and intermediate Swahili.

LCTL 2390 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LCTL 5190 Semester Abroad (0)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LCTL 5380 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LCTL 5390 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Linguistics (LING)

LING 1000 Linguistics: An Introduction (3)
Linguistics is the study of language; this includes human language (spoken, written, and signed) as well as machine languages and animal communication. This course provides a broad overview of language as a symbolic system of communication as well as the basic methods of linguistic analysis.

LING 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

LING 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

LING 2940 Transfer Coursework (0-20)

Maximum Hours: 99

LING 3000 Tunica La's Sleeping Language (3)
Tulane has been collaborating with the Tunica tribe of Louisiana to bring back their language, the last speaker, Sesostrie Youchigant having died over fifty years ago. This course addresses the processes of language death, as well as methods and initiatives for language revitalization. Students will learn effective second language teaching methods and elementary Tunica. They will then apply what they have learned, serving as teaching assistants during the tribe's Language Summer Camp. The Tunica tribe will host the course in Marksville for the week of the Summer Camp. This course counts as a second tier service learning course.

Corequisite(s): LING 3890.
Course Limit: 3

LING 3010 Semantics (3)
What does the word cat mean? This course looks at three answers. One says that cat is just the set of all cats. Another says that cat refers to a prototypical cat, one described by the characteristics common to all the cats that you have ever seen. The third answer says that cat is the word that the brain associates with the cats that you saw when you were younger. Each of these answers assumes that the mind works in a certain way, so the right one tells us something about how the mind works in situations that have nothing to do with the meaning of cat

LING 3441 Lexicography (3)
Lexicography is the making of dictionaries. Dictionaries take many forms and fulfill many functions. Dictionaries have evolved new formats; professional lexicographers share word gleaning with internet users. Dictionaries may be monolingual, di-, tri-, or multi-lingual, etymological or encyclopedic, synchronic or diachronic, prescriptive or descriptive, terminological or generic. Dictionary construction requires a number of skills which co-vary with the type of dictionary to be produced. This course provides an overview of dictionaries, their forms, formats and histories, while fostering a basic skill set for harvesting words and compiling lexicons. Dictionaries provide a cognitive map to communities of speakers, both past and present. Notes: Writing Practica Option

LING 3700 Second Language Acquisition (3)
This course is intended to familiarize students with the field of Second Language Acquisition, including a history of the field's origins. Discussion of recent theories of second language acquisition and an overview of approaches to research methodology in this field.

LING 3810 Special Topics In Ling (3)
Special topics in linguistics. For description consult the director. Other departments offer courses with linguistic import as well. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LING 3811 Special Topics in Ling (3)
Special topics in linguistics. For description consult the director. Prerequisite(s): LING 1010.

Prerequisite(s): LING 1010.

LING 3820 Special Topics (3)
Special topics in linguistics. For description consult the director. Other departments offer courses with linguistic import as well. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LING 3821 Special Topics (3)
Special Topics in Linguistics Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LING 3822 Special Topics (3)
Special Topics in Linguistics Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LING 3823 Special Topics (3)
Special Topics in Linguistics

LING 3824 Special Topics (3)
Special Topics in Linguistics.

Prerequisite(s): LING 3822.

LING 3825 Special Topics (3)
Special Topics in Linguistics.

Prerequisite(s): LING 3823.

LING 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LING 3940 Transfer Coursework (3)

Maximum Hours: 99

LING 4110 Brain and Language (3)
The goal of this course is to learn how the brain is organized to produce and comprehend language and to understand linguistic disorders attendant on brain damage. There is an optional service learning component in which students can work with a speech therapist at a local health-care provider.

LING 4560 Internship (1-3)
Internships with Community Partners to develop language and linguistic resources. Experiences may include language teaching, materials development, web-design and curricular innovation. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LING 4570 LX CPS Internship (3)
Internships with Community Partners to develop language and linguistic resources. Experiences may include language teaching, materials development, web-design and curricular innovation. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LING 4700 Applied Second Language Acquisition (3)
This course reviews the fundamentals of Second Language Acquisition and focuses on applying theories and research to teaching second and foreign languages. Students will acquire concrete experience through the mandatory 20-hour Service Learning component that requires student to teach, tutor an/or be conversation partners with learners of English as a second language.

Corequisite(s): LING 4890.

LING 4720 Translation Studies Theory (3)
This course is an exploration of the development of the field of Translation, from Ancient Civilization through the twenty-first century, with a heavy emphasis on primary source commentaries on translation produced by translators over time. Students should expect to study the writings and historical context of such translators as Cicero (100-43 BCE), St. Jerome (4th century AD), Erasmus (1500s), Martin Luther (1520s-1530s), Etienne Dolet (1540s), Friedrich Schleiermacher (1813), Walter Benjamin (1923), Roman Jakobson (1959), Eugene Nida (1960s), Miguel Leon Portilla (20th century Mexico), Jacques Derrida (responding to Jakobson), Lawrence Venuti (1990s), and Dennis Tedlock (1990s) and complete a comparative analysis of multiple versions of a translation of a text of their choosing.

LING 4810 Special Topics In Linguistics (3)
Special topics in linguistics. For description consult the director.

LING 4850 Proseminar In Linguistics (3)
This course will examine a topic within linguistics, integrating the various levels of linguistic analysis: phonetics, phonology, morphology, syntax, semantics, and pragmatics. Students will be asked to apply linguistic theory to data within their field of concentration, synthesizing materials from primary and secondary sources.

LING 4880 Writing Practicum: LING 4910 (1)
Writing practicum.

LING 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): LING 4700.

Maximum Hours: 99

LING 4891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LING 4910 Independent Study (1-3)
Independent study in Linguistics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LING 4990 Honors Thesis (3)
Honors Thesis.

LING 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): LING 4990.

LING 5380 Junior Year Abroad (1-20)

Maximum Hours: 99

LING 5390 Junior Year Abroad (1-20)

Maximum Hours: 99

LING 6700 Applied Second Language Acquisition (3)
This course reviews the fundamentals of Second Language Acquisition and focuses on applying theories and research to teaching second and foreign languages. Students will be introduced to research methods in the field and will acquire concrete experience with an associated practicum.

LING 6720 Translation Studies Theory (3)
This course is an exploration of the development of the field of Translation, from Ancient Civilization through the twenty-first century, with a heavy emphasis on primary source commentaries on translation produced by translators over time. The course intends to prepare the advanced graduate student for undertaking independent research in the field of translation studies by familiarizing him/her with the issues in the field of translation from Ancient to Modern times.

LING 6810 Special Topics (3)
Special topics in linguistics. For description consult the director. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LING 6820 Special Topics (3)
Special topics in linguistics. For description consult the director. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

LING 6823 Special Topics (3)
Special topics in linguistics. For description consult the director.

LING 6910 Independent Study (1-3)
Independent study in Linguistics.

Independent study in Linguistics.

LING 9980 Master's Research (0)
Master's Research. Course may be repeated up to unlimited credit hours.

Enrollment limited to students in the Linguistics department.

Maximum Hours: 99

LING 9990 Dissertation Research (0)
Dissertation Research. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Management (MGMT)

MGMT 3010 Organizational Behavior (3)
MGMT 3010 applies concepts from a variety of disciplines including, but not limited to, psychology and sociology to organizational problems that managers face. Topics such as organizational climate, leadership, communication, job design, attitudes, motivation, group dynamics and decision-making are covered in a lecture, discussion and problem-solving framework. This course includes a writing intensive component. Sophomore standing or above.

Prerequisite(s): ECON 1010 and 1020 and (ENGL 1010 or 1011).

MGMT 3200 Fundamentals in Entrepreneurship (3)
This course provides students interested in a career in entrepreneurship – from conducting analysis for a VC firm, to working for a startup accelerator or incubator, to launching your own venture – with the skills needed to pursue an attractive path for business school graduates, especially here in New Orleans given the vibrant local ecosystem. This class will give you insights into the benefits and drawbacks of a career in entrepreneurship, and it will equip you with many of the tools and practices needed to pursue opportunities in this field. Important topics include: 1) How to evaluate business models from the perspective of a variety of key stakeholders; 2) How to best approach valuation and conduct due diligence on new ventures, based on the latest guidance from leading venture capital funds; and 3) How to seek equity funding and the mechanics of new venture finance. Throughout the course, you will read about, discuss and meet entrepreneurs; read the latest writings by leading investors and learn from local angel investors firsthand; and analyze a variety of perspectives on how startups factor into national and international economic and policy discussions, as you explore the role of entrepreneurship in society. Sophomore Standing or Above.

MGMT 3380 Business Ethics (3)
This course considers the ethical responsibilities of managers and corporations. Specific objectives of the course include fostering an understanding of the ethical responsibilities in becoming a manager; improving individual and group skills in identifying and analyzing ethical issues in the contexts they arise; developing action plans based upon those analyses; and providing a safe setting in which to critically examine the assumptions and values people bring to complex business decisions that raise ethical issues. Class sessions will entail case discussions, exercises and presentations of theoretical frameworks for interpreting business ethics.

Prerequisite(s): MGMT 3010.

MGMT 4001 Entrepreneurial Hospitality (3)
Entrepreneurial Hospitality exists at the intersection of the analytical and the creative. This course combines the two by challenging students to identify a market deficiency within the service industry and create a new hypothetical business to fulfill or enhance the guest experience. Students will combine traditional business strategy, along with the methods and mindsets of design thinking, to prototype three parts of a service business – value proposition and offer, revenue model, and sales channel. This course is not for the passive student. Lectures are purposefully kept short, giving students ample time for in-class activities including, primary and secondary market research, trend identification, brainstorming sessions, business model construction, prototyping, customer journey mapping, brand identity creation, forecasting sales, and crafting a final pitch deck. Entrepreneurial Hospitality encourages students to get out of the classroom and co-create the curriculum under the guidance of their instructor, a resident in-class mentor, and a host of industry professionals to take a deep dive into those areas of the service industry which interest them most.

Prerequisite(s): MGMT 3010.

MGMT 4010 Strategic Management (3)
In this course, students will integrate the knowledge and skills acquired from the BSM core curriculum to identify and diagnose the strategic issues that companies face in complex and competitive environments. Strategic Management encompasses a series of interrelated steps by which managers conduct analyses at the industry, business and corporate levels; decide on strategies to enhance firm competitiveness; put those strategies into action; and constantly evaluate and modify those strategies, as needed. This case-based course helps students develop skills in conducting industry analyses, identifying the firm's resources and capabilities and addressing problems in strategy implementation. In MGMT 4010, students assume the role of the practicing general manager and develop a capacity to propose and implement sound, realistic and specific solutions for the firm's strategic problems. Junior standing or above, with priority given to Graduating Seniors.

Prerequisite(s): ACCN 3010, FINE 3010 and LGST 3010 and (MCOM 3010 or 3200) and MGMT 3010, MGSC 3010 and MKTG 3010.

MGMT 4050 Entrepreneurial Hospitality (3)
Entrepreneurial Hospitality exists at the intersection of the analytical and the creative. This course combines the two by challenging students to identify a market deficiency within the service industry and create a new hypothetical business to fulfill or enhance the guest experience. Students will combine traditional business strategy, along with the methods and mindsets of design thinking, to prototype three parts of a service business – value proposition and offer, revenue model, and sales channel. This course is not for the passive student. Lectures are purposefully kept short, giving students ample time for in-class activities including, primary and secondary market research, trend identification, brainstorming sessions, business model construction, prototyping, customer journey mapping, brand identity creation, forecasting sales, and crafting a final pitch deck. Entrepreneurial Hospitality encourages students to get out of the classroom and co-create the curriculum under the guidance of their instructor, a resident in-class mentor, and a host of industry professionals to take a deep dive into those areas of the service industry which interest them most.

Prerequisite(s): MGMT 3010.

MGMT 4100 Entrepreneurial Mgmt (3)
This course considers the ethical responsibilities of managers and corporations. Specific objectives of the course include fostering an understanding of the ethical responsibilities in becoming a manager; improving individual and group skills in identifying and analyzing ethical issues in the contexts in which they arise; developing action plans based upon those analyses, and providing a safe setting in which to critically examine the assumptions and values people bring to complex business decisions that raise ethical issues. Class sessions will entail case discussions, exercises and presentations of theoretical frameworks for interpreting business ethics. Sophomore Standing or above.

Prerequisite(s): MGMT 3010.

MGMT 4110 Cases In Entrepreneurshp (3)
MGMT 4110 reviews thirteen actual business cases. A visiting CEO (or other top executive) and the professor teach each case jointly. The class explores problems and opportunities encountered in the search, evaluation and acquisition of new, as well as ongoing, ventures. Students will further develop analytical skills in finance, accounting, business analysis, management and marketing that they have acquired in other courses. Brainstorming sessions will challenge and improve innovative thinking while assignments and presentations hone business communication skills. Discussion of entrepreneurship, family business and small business management gives the student an overview of the alternatives to traditional corporate employment. Most importantly, students interact with top-level executives who are role models from whom they can learn how to be successful entrepreneurs. Sophomore standing or above.

MGMT 4120 Corporate and Cooperative Strategy (3)
MGMT 4120 teaches students to analyze firms that manage multiple businesses. The primary goal is to understand how different businesses create value at the corporate level and for customers over and above the market. This case-based approach followed in the course emphasizes the analysis of the drivers of value creation and value destruction in a multi-business firm. Using the frameworks learned in the class, students will examine the scope of diversified firms and analyze different ways firms leverage to expand their corporate scope, including mergers and acquisitions, alliances and informal inter-organizational networks. By analyzing the past decisions of diversified firms through extensive group discussions and individual assignments, students will learn to make corporate-level decisions related to 1) what business a firm should own, 2) how it should enter those businesses, and 3) how these businesses together create value for the firm and its customers. The course also includes a group project. Junior standing or above.

Prerequisite(s): ACCN 3010, FINE 3010 and LGST 3010 and (MCOM 3010 or 3200) and MGMT 3010, MGSC 3010 and MKTG 3010.

MGMT 4130 Dimensions in Human Resources Management (3)
MGMT 4130 introduces the major strategies and procedures for effectively managing human resources. Through readings, cases and a series of experiential exercises, students learn about the legal environment of human resource management, analyzing jobs and work, staffing, performance management, training, compensation and workplace safety. Junior Standing or above.

Prerequisite(s): (MATH 1140 or 1230) and MGMT 3010 and PSYC 1000.

MGMT 4150 Environment, Society, and Capitalism (3)
This course takes a strategic planning perspective to investigate environmental management issues in the context of assessing and responding to competitive and social forces. This course examines a serious challenge to corporations competing in the global economy: How to maximize profitability and production in such a way that will allow the planet to support operations indefinitely. Emphasis will be on the company's ability to use both traditional management concepts and new sustainability practices to build and sustain a competitive advantage. Students will learn how an enterprise can meet sustainability goals while still fulfilling its financial and market objectives. Junior Standing or Above.

MGMT 4160 Leadership (3)
The purpose of this course is three-fold. First, students will develop a general understanding of leadership theories and an understanding of their own leadership traits. Second, students will use theories to help analyze real-world cases involving both successful and unsuccessful examples of leadership. Finally, students will practice their own leadership skills as they lead their teams in a variety of exercises and projects. Junior Standing or Above.

Prerequisite(s): MGMT 3010.

MGMT 4170 Negotiations (3)
This course addresses the theoretical foundations and practical skills used in resolving differences and negotiating mutually satisfying outcomes. Students develop skills through simulated negotiations in a variety of contexts. Class topics include the nature of negotiations, different negotiating styles, distributive versus integrative bargaining, conflict and intercultural bargaining. Self-reflection and giving and receiving feedback are key aspects in developing negotiation skills. Junior Standing or Above.

Prerequisite(s): MGMT 3010.

MGMT 4180 Management of Technology and Innovation (3)
Technology, innovation and entrepreneurship are among the most frequently used terms in today's business environment. We are bombarded by products and technologies that are changing the ways we live and work, but how do we analyze the processes that bring them to market? What exactly is technology? What forces shape its evolution? What roles do strategic alliances, standards and intellectual property play in forecasting? How should we create product development teams? How should we create organizations that foster innovation? What is the role of creativity in the development of new technologies? These are some of the topics that are covered in this course. Junior Standing or Above.

Prerequisite(s): ACCN 3010, FINE 3010 and LGST 3010 and (MCOM 3010 or 3200) and MGMT 3010, MGSC 3010 and MKTG 3010.

MGMT 4190 Managing Hospitality Organizations (3)
Managing Hospitality Organizations provides students with a comprehensive understanding of the principles, theories, and practices involved in managing operations within the hospitality and service industry. Students will explore the diverse facets of hospitality management, including hotel operations, restaurant management, event planning, customer service, and strategic decision-making. Through a combination of theoretical knowledge, real-world case studies, and hands-on exercises, students will develop the skills and competencies necessary to excel in the dynamic and ever-evolving field of hospitality management. The course will employ various assessment methods to evaluate students' understanding and application of hospitality management concepts. These may include individual and group projects, case studies, presentations, guest speaker sessions, practical exercises, and examinations that assess students' ability to analyze, strategize, and solve real-world challenges in hospitality management. By the end of this course, students will possess a strong foundation in hospitality management, enabling them to pursue careers in a wide range of hospitality-related roles. They will be equipped with the knowledge and skills necessary to lead teams, provide exceptional customer service, manage operations effectively, and contribute to the success of hospitality organizations in a globalized and competitive marketplace.

Prerequisite(s): MGMT 3010.

MGMT 4200 Student Venture Accelerator 1 (3)
In this course, students will develop an understanding of the resources, strategies and management skills required to launch a new business -- and some students will have the opportunity to create viable ventures that they can pursue through Student Venture Accelerator 2 in a subsequent semester. Working out of the Lepage Center's Student Venture Incubator, students will have the opportunity to take an idea from its earliest inception to analyze potential product-market fit. Throughout this course, student teams will work on their new ventures by developing a business model and business strategy; creating financial, marketing, sales and hiring analyses; developing founding documents and policies; setting up charts of accounts; and developing a new venture pitch.

MGMT 4210 Student Venture Accelerator 2 (3)
In this course, students will deepen their understanding of the resources, strategies and management skills required to launch a new business — with a goal of creating a profitable venture that they can pursue well beyond the end of the course. Working out of the Lepage Center's Student Venture Incubator, students will have the opportunity to take an idea to fruition by undertaking customer interviews to test their ideas, determine product-market fit and obtain their first paying customers. Throughout this course, student teams will work on their new ventures by improving the business model and business strategy; developing financial, marketing, sales and hiring plans; finalizing founding documents and policies; refining charts of accounts; and preparing for a board meeting simulation. To support the launch of each new venture, the professor, a team of mentors that includes entrepreneurs/executives-in-residence, and the Lepage Center's expert network will provide coaching, referrals and guidance that will be customized to the unique challenges facing each startup.

Prerequisite(s): MGMT 4200.

MGMT 4300 Social Venturing for a Sustainable Future (3)
This course introduces undergraduate students to the topic of social entrepreneurship, broadly defined as developing innovative, sustainable solutions to address persistent social problems. Drawing from a wide range of academic fields (business management, public administration, economics, psychology, political science, sociology, etc.) and through a team-based, experiential learning approach, students will learn many of the concepts and tools associated with social venturing (e.g., the impact business model canvas, theories of change, logic models, social impact measurement techniques) and actively apply them in one of the social problem domains identified by the United Nations Sustainable Development Goals (UNSDGs), such as Extreme Poverty, Affordable and Clean Energy, Responsible Consumption and Production, etc. Furthermore, by actively developing a potential solution to that social problem, students will explore, discuss, and live the unique challenges and opportunities associated with social venturing.

Prerequisite(s): MGMT 3200 or 4140.

MGMT 4310 Cases in Hospitality (3)
The hospitality sector has rapidly evolved in recent years, opening new space for discussions about the future of the industry. This "high touch" course combines case study pedagogical methodology with experiential learning to take students out of the classroom and into lobbies, kitchens, and C-suites of the hospitality profession. Cases in Hospitality offers students the unique opportunity to engage in real-time conversations with peers and experts from the Tulane community and beyond. Students will support their coursework by applying their knowledge and experiences to various areas of the industry, examining the innovations and accommodations which occurred throughout periods of disruption and strategizing future directions. By participating in relevant and engaging discussions, students will discover a variety of perspectives and build connections with their fellow participants from across the industry. Throughout the duration of the course, student teams will engage in a real-time consulting project with an industry participant. With an underlying mandate for value creation, students will gain inside access to what companies are facing on the ground, providing invaluable experience for future industry leaders.

Prerequisite(s): MGMT 3010.

MGMT 4550 Management Internship (1)
Freeman School majors may elect to do a business internship that will appear as a one-credit, 4000-level course on their transcripts; however, the credit does not apply towards the 122 minimum hours required for a BSM degree. The internship must be related to one of the majors offered through the BSM program, and it must apply (within an ongoing business organization) the intellectual capital obtained from first- through third-year Freeman School courses. To obtain approval of the internship, the student must visit the Career Management Center for instructions. The final grade for the Internship is given on a Satisfactory/Unsatisfactory (S/U) basis when the student submits a paper/evaluation to the supervising faculty member in the Career Management Center. This course is normally offered during the summer and fulfills the "curricular practical training" option for students with F-1 visa status.

Prerequisite(s): ACCN 2010, 3010, FINE 3010, LGST 3010, MCOM 3010, MGMT 3010, MGSC 3010 and MKTG 3010.

MGMT 4600 Strategic Consulting (3)
A strategic management consultant provides strategic guidance, tactical advice and implementation support to senior managers in industry and government. Students in this course will learn to make value propositions that reflect their clients' goals and maximize their clients' competitive potential. Topics include industry analysis, consulting skills development, consultant-client relationships, stages of consulting (contracting, data collection and diagnosis, feedback and the decision to act, developing client commitment, implementation, results and accountability), ethics in consulting, and differences between internal and external consulting. Students will learn to understand resistance and manage meetings; they will study project management and the management of consulting firms. Senior Standing.

Prerequisite(s): ACCN 3010, FINE 3010 and LGST 3010 and (MCOM 3010 or 3200) and MGMT 3010, 4010*, MGSC 3010 and MKTG 3010.
* May be taken concurrently.

MGMT 4610 Management of New Ventures (3)
MGMT 4610 focuses on entrepreneurs concerned with the relentless pursuit of opportunities in the marketplace. This highly experiential and team-based course provides students with the opportunity to practice the basic tools of business discovery and validation, both as an instrument for new venture formation and as a core capability for addressing challenges in competitive landscapes. It also reviews the key conceptual and theoretical antecedents that underpin opportunity recognition. By the conclusion of this class, students should have a clear idea of how to take an entrepreneurial idea and engage in a series of iterative tests to determine its potential and viability in the market. Senior Standing.

MGMT 4620 Special Consideration in Nonprofit Organization Management (3)
The nonprofit sector employs one in ten working Americans. Approximately 1.56 million nonprofit organizations (NPOs) contributed nearly $1 trillion to the U.S. economy – 5.4% of GDP – in 2015. Because NPOs differ from for-profit companies, leading and managing their change-oriented (vs. profit-oriented) mission requires special operational and managerial considerations. This course provides theoretical and practical perspectives to expose students to key issues and challenges shaping the sector. Junior Standing or Above.

Prerequisite(s): LGST 3010, MGMT 3010 and MKTG 3010.

MGMT 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours. Junior Standing or Above.

Maximum Hours: 99

MGMT 4891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours. Junior Standing or Above.

Maximum Hours: 99

MGMT 4895 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

MGMT 4896 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours. Junior Standing or Above.

Maximum Hours: 99

MGMT 4900 Strategy Integration Capstone (1)
MGMT 4900 students will integrate the knowledge, skills and concepts acquired from the core classes and majors in the Bachelor of Science of Management degree. Students will examine the problem of making strategic business decisions from functional area perspectives and a total organizational perspective. The professor will organize the class into teams, and the highlight of the course will be a final BSM Case Competition involving all students who are taking the Capstone course. The course requirements include an individual written case analysis and a team case analysis and presentation. The professor will also grade students on class attendance and participation, and on their abilities to work effectively and contribute as team members. In this course, students will be required to take a comprehensive exam known as the ETS® Major Field Test for the Bachelor's Degree in Business, and this exam is part of the course grade. The exam contains 120 multiple-choice questions designed to measure a student's subject knowledge and ability to apply facts, concepts, theories and analytical methods. Some questions are grouped in sets and based on diagrams, charts and data tables. The questions represent a wide range of difficulty and cover depth and breadth in assessing students' achievement levels. The test covers the following areas (coverage): Accounting (~15%), Economics (~13 %), Management (~15%), Quantitative Business Analysis (~11%), Information Systems (~10%), Finance (~13%), Marketing (~13%), Legal and Social Environment (~10%) and International Issues (overlapping and drawn from other content areas previously listed). Prerequisites: All 3000-level BSM core courses, enrollment limited to students with senior standing, with priority given to graduating seniors.

Prerequisite(s): ACCN 3010, FINE 3010, LGST 3010, MCOM 3010, MGMT 3010, 4010*, MGSC 3010 and MKTG 3010.
* May be taken concurrently.

MGMT 4910 Independent Studies (1-3)
Freeman School seniors who demonstrate academic excellence are allowed to pursue an Independent Study. The work may take the form of directed readings, laboratory or library research, or original composition. Instead of traditional class attendance, the student substitutes conferences with the supervising faculty, as needed. An Independent Study requires the approval of the supervising instructor and the Associate Dean for Undergraduate Education. The credit does not apply towards the management major requirements for a BSM degree; the independent study counts as business elective credit only. Interested students should contact the Office of Undergraduate Education at the Freeman School. Prerequisites: Minimum cumulative GPA of 3.333 or higher; Senior Standing or Above.

Maximum Hours: 99

MGMT 4920 BSM Capstone (3)
In MGMT 4920, students will integrate the knowledge, skills, and concepts acquired from all core business classes in the Bachelor of Science of Management degree. Students will examine business problems and decision making from functional area perspectives and total organizational perspective. The course will use a team approach and culminate in a final BSM Case Competition involving all students who are taking the Capstone course. The course requirements include individual written case analyses and team case analyses and presentations. In this course, students will be required to take a comprehensive exam known as the ETS® Major Field Test for the Bachelor's Degree in Business, and this exam is part of the course grade. The exam is designed to measure a student's subject knowledge and ability to apply facts, concepts, theories, and analytical methods. Some questions are grouped in sets and based on diagrams, charts, and data tables. The questions represent a wide range of difficulty and cover depth and breadth in assessing students' achievement levels. The test covers the following areas (coverage): Accounting (~15%), Economics (~13 %), Management (~15%), Quantitative Business Analysis (~11%), Information Systems (~10%), Finance (~13%), Marketing (~13%), Legal and Social Environment (~10%) and International Issues (overlapping and drawn from other content areas previously listed).

Prerequisite(s): ACCN 3010, FINE 3010 and LGST 3010 and (MCOM 3010 or 3200) and MGMT 3010, 4010*, MGSC 3010 and MKTG 3010.
* May be taken concurrently.

MGMT 4990 Management Honors Thesis (3)
This course is for BSM students in the Tulane Honors Program. Students enrolled in this section will begin their Business Senior Honors Thesis. They will conclude their Business Senior Honors Thesis in MGMT 5000 in the spring semester. Senior Standing.

Prerequisite(s): MGMT 4010* and 4900*.
* May be taken concurrently.

MGMT 5000 Honors Thesis (3)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): MGMT 4010 and 4990.

MGMT 5380 Business Study Abroad - MGMT (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MGMT 5390 Business Study Abroad - MGMT (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MGMT 6000 Strategy (2)
This course introduces a toolkit of analytical approaches and theoretical concepts that can help managers better understand the nature of the competition that their company faces as well as inform their choice and execution of strategy. We will explore how firms achieve competitive advantage in a dynamic and complex environment. The course is organized around frameworks that will assist you in analyzing a wide range of strategic issues facing companies, including: 1) theories for in-depth industry and competitor analysis as well as for anticipating and predicting future industry developments, 2) an examination of the economic underpinnings of competitive advantage, and the conditions that allow firms to conceive, develop, and sustain advantageous strategic positions, and 3) an examination of both business strategy and corporate strategy issues and how to implement strategies. Strategies to achieve greater climate and social sustainability are also covered in this course.

MGMT 6010 Managing People (2)
This course is designed to teach students the vocabulary, framework, and critical thinking skills to help them understand and manage individuals' behavior in organizations. The content and process aspects of this course should be helpful to students as they plan their careers, manage relationships with others, and work to achieve goals in dynamic organizational settings. As the result of this course, students should 1) gain an understanding of key concepts and frameworks for understanding individuals and teams in organizations, 2) apply these frameworks to diagnose work situations, evaluate options, and propose solutions to organizational problems, and 3) effectively communicate observations about organizational behavior in both oral and written form. Topics such as workforce diversity and employee engagement are covered.

MGMT 6020 Business Negotiations (2)
Much managerial activity involves negotiating, and settling of disputes, and effective negotiation can improve outcomes for everyone involved. Ineffective negotiation, in contrast, usually leads to poor outcomes for everyone involved, and can lead to failures to agree even when agreement is possible. The course is designed to provide students with basic negotiating skills, as well as to provide specific tactics and the theoretical underpinnings for those tactics. The importance of planning is also emphasized, as well as how to avoid common mistakes in negotiations. Specifically, this course explores the behavioral processes inherent in virtually all types of negotiations, as well as the problems involved in cross-cultural negotiations. The course involves lectures concerning types of negotiations, and relevant tactics, while in-class negotiation exercises allow students to practice tactics, as well as receive feedback concerning how to improve.

MGMT 6030 Strategic Management (3)
This course is designed to present strategic management from the point of view of the practicing general manager. It focuses on specific knowledge and skills that are required to understand strategy and the process by which it is developed in business organizations. It also provides information on the situation and context in which strategy is formed and implemented.

MGMT 6040 Business Ethics & Leadership (3)
This course concerns the ethical foundations of leadership in business and society. Students will gain an understanding of various academic perspectives on leadership, real-world examples of effective and ineffective leadership, and insights into their own leadership capabilities. The emphasis on ethics will include some moral philosophy, but will also involve the application of common sense morality to business leadership. This means that active student participation is essential in this course. The classroom experience will include much conversation, debate, disagreement, and dissent in response to provocative case studies, class exercises, and group projects.

MGMT 6050 Consulting Practicum (3)
The Consulting Practicum course is a project-based action-learning semester-long course. In this course, you will put your problem-solving skills from different business disciplines covered in your MBA core coursework into action and synthesize knowledge from different business disciplines to develop strategies and solution approaches to a client company's business problem. Core course faculty from different business disciplines will oversee and advise small student teams as you put your knowledge and skills to work. The course will begin with an overview of the best practices in consulting and hands-on consulting skills as your team familiarizes themselves with the client company and its problem. Don't expect those to be problems with a clear solution or answer, but rather real and messy problems across a range of business disciplines. Your team will develop a report to your client and present project recommendations. This course is designed to provide you with client project experience you can readily leverage to succeed in your summer internship.

MGMT 6070 Strategic Consult Organization (3)
Strategic consulting aims to prepare students for internal and external management consulting positions. Topics include industry analysis, consulting skills development, consultant-client relationships, stages of consulting (contracting, data collection and diagnosis, feedback and the decision to act, developing client commitment, implementation, results, and accountability), ethics of consulting, differences between internal and external consulting, understanding resistance, managing meetings, project management, and management of consulting firms.

MGMT 6080 Managing People in Orgs (3)
This course provides students with knowledge of the elements of individual, group, and organizational influences on behavior in organizations and the impact that behavior has on individual, group, and firm outcomes. It covers a range of issues and challenges including creating an environment for success, managing diversity, managing performance, motivating workers, understanding group processes, and making decisions. In doing so, this course exposes students to current thinking, strategies, and evidence-based best practices by incorporating perspectives of leading practitioners, consultants, and researchers in the field.

MGMT 6090 Data-Driven Strategic Management (2)
Data literacy has become an essential skill for non-technical managers, and data-driven strategic decisions are becoming a key success factor for companies and organizations. Understanding how to apply the appropriate data sets and analytical methods can help you better formulate strategic decisions and communicate more effectively with other organizational members. In this course, you will explore various strategic management issues with the data-driven approach. You will gain hands-on experience in applying analytical methods such as prescriptive modeling, predictive modeling, machine learning, and artificial intelligence to address managerial problems such as innovation strategy, non-market strategy, and corporate social responsibility.

Prerequisite(s): MGMT 6000, MGSC 6010 and 6030.

MGMT 6160 New Venture Planning (3)
This course focuses on entrepreneurship, strategic management, and innovation. Working in teams, students work with actual start-up companies, learning to assess, plan, finance, launch, manage, and exit a scalable high-growth new venture.

MGMT 6250 Business Model Development (2)
This course is designed to expose students to the concepts integral to entrepreneurship, and the identification of entrepreneurial opportunities. Students will develop their knowledge about the role of entrepreneurship in both dynamic market economies and areas of social impact (i.e., social entrepreneurship), and the particular challenges that come with new venture creation in these different contexts. This course provides students with the opportunity to practice the basic tools of business discovery and validation, both as an instrument for new venture formation and as a core capability for addressing pressing social issues. It also reviews the key conceptual and theoretical antecedents that underpin opportunity recognition. By the conclusion of this class, students should have a clear idea of how to take an entrepreneurial idea and engage in a series of iterative tests to determine its potential and viability in the market through the formation of a tractable business model.

MGMT 6270 Internship Studies (1-3)
In this course, students will apply the intellectual capital obtained from coursework to a real business organization. The objectives of the course are to help the student integrate the concepts presented in separate functional area courses, to allow the student to experience how academic concepts are adapted to fit the realities of a particular business context, and to help the student understand how his or her academic training can help the organization. Note: MGMT 6270 does not count toward degree completion.

MGMT 7000 Leading for Success (2)
Leading for Success is an intensive, experiential-oriented course that is aimed at developing four fundamental leadership skills. No matter their general mental ability, experience, or drive, leaders at any level need the same four core skills to be effective. These skills are: -Self Awareness: Understanding your behavior's impact on organizational outcomes - Communication: Effectively communicating goals and inspiring trust - Influence: Being comfortable at persuading, promoting, and delegating - Learning agility: Knowing when to change course, and helping others to do so In this course, students will immerse themselves in development, adapt these skills to their own leadership contexts, participate with peers in learning, and share ideas on how to apply their leadership lessons to the workplace.

MGMT 7002 Mgmt Advanced Standing (1-45)

MGMT 7020 Impact Capstone (3)
The Impact Capstone is a project-based action-learning semester-long course. In this course, you will put your problem-solving skills from different business disciplines across your MBA core courses and MBA leadership module to work to make a difference in the realm of social and/or environmental issues that plague society today. Core course faculty will oversee and advise small student teams as they put their knowledge and skills to work with a local or regional partner. Projects can be of the following types: 1) Help a local or regional business become more sustainable; 2) Help a local or regional business to alleviate social inequities in the community; or 3) Work with a local non-profit or government organization on bigger questions of sustainability and resiliency in the face of climate change and how climate change impacts the local and regional business environment.

Prerequisite(s): MGMT 6050.

MGMT 7030 Environmental, Social, and Governance (ESG) in a Dynamic Global World (3)
This course explores the pressing issues in today's world pertaining to the environment, society and governance (ESG), and the associated challenges that managers and organizations face related to these issues internationally. Students will better understand how business impacts their stakeholders and communities in which they operate. Specifically, students will learn how to formulate strategic analyses, utilize data-driven approaches to business analytics, and assess the financial impact that our changing environment and climate has on firms in different international settings. In doing so, students will gain a better understanding of how managers foster organizational resilience in the face of dynamic shifts in governance and policy, technology, migration, the environment, and the broader social fabric in which an organization is embedded. The course involves interactions with international business leaders, entrepreneurs, consultants, and policy makers as part of an international trip.

MGMT 7050 Managing for Success (3)
Managing for Success is an intensive, experiential course, where students develop fundamental and advanced leadership skills. Regardless of position or formal authority, leadership should be diffused across teams and organizations; this course focuses on the core skills needed to be effective. Students will practice strategies and tactics through the use of role plays, exercises, and simulations designed by the Center for Creative Leadership (CCL) and supplemented by Tulane CCL-certified faculty. Students will receive CCL certificates upon completion of the Lead 4 Success, Delegating Effectively, and Leading People Through Change workshops.

MGMT 7100 Strategic Mergers and Acquisitions (3)
In this course, students integrate knowledge from the different functional areas and evaluate strategic decisions in a corporate context. This case-based course emphasizes the analysis of the drivers of value creation and value destruction in such corporate tools as mergers and acquisitions, alliances, and informal inter-organizationa] networks. Students will learn to apply a set of tools that help them to make better corporate-level decisions addressing diversification, integration, and internal development issues facing modem multi-business firms. The coursework includes a team project.

Prerequisite(s): MGMT 6000 or 6030.

MGMT 7110 Negotiations (3)
This course explores the behavioral processes and phenomena which are inherent in virtually all types of negotiations. Emphasis is on systematic preparation of a negotiating strategy. In-class negotiation exercises and extensive debriefings are used by participants to test and evaluate their strategies and tactics.

Prerequisite(s): MGMT 6030 or 6000.

MGMT 7120 Competition & Strategy (3)
This is an advanced course in strategy and competition analysis. Analytical tools are presented for formulating competitive strategies. In-depth analysis of several industries and competitors is undertaken to help predict competitors' behavior and future industry evolution. Additional considerations include how government, technology, and other environmental factors affect competition.

Prerequisite(s): MGMT 6030 or 6000.

MGMT 7170 Healthcare Policy & Reform (3)
This course provides a foundation of knowledge in four key areas of focus within the United States healthcare system: access to care, cost of care, quality of care, and consumer perception of care. Students will gain an understanding of the history and evolution of the insurance industry, Medicare, and Medicaid, their purpose, and their role in the four key areas of the healthcare system. Students will also learn about the government's role in healthcare, the history of healthcare reform, and the Affordable Care Act. Finally, students will see how these lessons apply in the real world during a series of guest lectures from hospital administrators, insurance company executives, experienced physician leaders, and experts on the Affordable Care Act legislation and current healthcare policy.

MGMT 7180 Innovation and Technology Commercialization (3)
This course is designed to teach students to develop models of innovation and apply innovation theory and practices from across a range of commercial size-scales—from small startup companies to intrapreneurial units within large, established companies. The twin poles of theory and practice are balanced through classroom lectures and experiential training. Weekly lectures furnish students with effective and portable theoretical frameworks for identifying, selecting, and executing opportunities for technological innovations in healthcare, energy, water, and the environment. In the experiential training component, students will apply their classroom learning to develop targeted, formal innovation and entrepreneurship business models. Completion of this course will supply students with intellectual groundwork and practical experience in advancing inventive technological ideas toward commercialization and ultimately public benefit. This course builds on the frameworks and case method teaching utilized in MGMT 7210 Management of Technology and Innovation, which is a recommended prerequisite.

Prerequisite(s): MGMT 6030 or 6000.

MGMT 7210 Management of Technology and Innovation (3)
Maintaining or creating a competitive advantage requires innovation in process and product technologies. In many industries, top companies in one decade are struggling or absent in the next due to an inability to deal effectively with innovation development. In many cases, top companies fade from prominence due to an inability to anticipate or adjust to the introduction of disruptive technologies by other firms. In this course, frameworks and tools for managing technology advancement are introduced.

Prerequisite(s): MGMT 6000 or 6030.

MGMT 7250 Strategic Human Resources Management (3)
This course develops an understanding of how human resource management influences organizational success, how human resource strategy should align with the strategic goals of an organization, and how general managers acquire the skills needed in order to successfully manage human resources. This course will draw on economics, psychology, sociology, and legal issues to inform students about recruiting, selecting, training, placing, compensating, and managing employees in order to develop and maintain a highly committed and high performing workforce. Students will engage in a variety of exercises and projects which require the application of course material.

Prerequisite(s): MGMT 6000, 6010, 6030 or 6080.

MGMT 7320 Executive Leadership (3)
This course provides an opportunity to explore leadership from the point of view of a senior business executive. The starting point will be a set of leadership challenges that are currently faced by business executives. Examples include responding to a business crisis, leading an integration following a merger or acquisition, making a highly consequential strategic decision, implementing a workforce reduction, finding value from diversity and inclusiveness, creating a change in operating culture, accessing a new foreign market, and negotiating the sale of a company. Students will work in teams to develop a response to their assigned challenge. Students will present their response to the class and receive feedback from the professor, their peers, and executive leaders who have actually faced that specific situation. In addition, throughout the course, perspectives on leadership from research and academic frameworks are analyzed. This approach puts students “in the trenches” and develops a practical understanding of the functions of executive leaders.

Prerequisite(s): MGMT 6000, 6010, 6030 or 6080.

MGMT 7910 Independent Study (1-3)
Independent study: General Management.

MGMT 7920 Medical School Transfer Credit (4)

Management Communications (MCOM)

MCOM 3010 Management Communication (3)
Emphasizing a problem-solution approach, MCOM 3010 teaches students to produce professional written documents and oral presentations; to analyze various communication purposes, strategies and audiences; and to work effectively in teams. If the course is taken at Tulane, MCOM 3010 satisfies the University’s second-tier writing requirement. Sophomore Standing or Above.

Prerequisite(s): ENGL 1010 or 1011.

MCOM 3100 Social Media (3)
Using case studies and real-world examples from large corporations and small business, students explore current and future ways professionals communicate through online social networks, user-generated content and content sharing. This course looks at these new channels of communication that make up social media and the web, and it explores how these tools fit into a company’s traditional integrated communication strategy. Junior Standing or above.

Prerequisite(s): MCOM 3010.

MCOM 3200 Management Communication (3)
Business success depends on impact. In this advanced communication course, you will learn to position value through your ideas and relationships. You will practice presenting and writing persuasively in order to fuel change and advance into management roles. You will also work in teams to engage real clients outside the classroom. These skills are directly applicable to roles in management, marketing, etc., and are based on cutting-edge research in communication. Prerequisite: Tier I Writing NTC requirement met prior to taking this course. MCOM 3200 is mutually exclusive with MCOM 3010. Students may receive credit for only one of MCOM 3200 or MCOM 3010 in the undergraduate degree.

Prerequisite(s): ENGL 1010 or 1011.

MCOM 3300 Organizational Communication (3)
This course emphasizes the development of critical-thinking, communication and team-building skills among students and focuses on enhancing team dynamics, leadership and communication. For six weeks, students will engage in a global virtual team experience with students from other universities and other countries. As a result, students will know how to work in a virtual work environment using virtual collaboration tools (IBM Connections), manage virtual team processes and collaboration and develop leadership skills. Using case studies, we will explore crisis communications and corporate social responsibility as it relates to team coordination, leadership and ethics. The course complements individual communication skills students have developed in other courses. Junior standing or above, Business students only.

Prerequisite(s): MCOM 3010.

MCOM 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MCOM 4000 Leadership Communication (3)
For business leaders to be effective, they must build a workplace culture of respect and inclusivity. Students in this course will study the principles of effective communication to support an inclusive work environment. The coursework will be based on theories and principles of race and inclusion and emphasize the best practices of inclusive business communication. Students will begin the course by examining their own differences and their experiences with inclusion and progress to an understanding of the experience of others to inform their workplace communication practices. This course satisfies the University's race and inclusion requirements.

Prerequisite(s): MCOM 3010 and MGMT 3010.

MCOM 5380 Business Study Abroad - MCOM (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MCOM 5390 Business Study Abroad - MCOM (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MCOM 6000 Corporate Communications (2)
A successful manager must analyze communication situations, develop communication strategies, and demonstrate appropriate behavior leading to intelligent, flexible decisions. Specifically, students evaluate communication issues in both internal and external environments and communicate orally and in writing. In addition, the course examines corporate communication issues such as communication management, corporate image, identity, reputation, media relations, and crisis communication. Topics such as data protection and privacy, employee engagement, and community relations are also covered.

MCOM 6020 Business Communications (3)
This course is a blend of principles and practice, subject and skill. Students apply communication theories to relevant business situations to develop specific behaviors and skills. The successful manager must analyze communication situations, develop communication strategies, and demonstrate appropriate behavior leading to intelligent, flexible decisions. Specifically, students evaluate communication issues in both internal and external environments, and communicate orally and in writing both as an individual employee and as a member of a work group. In addition, the course examines corporate communication issues such as communication management, image, identity, reputation, and media relations.

MCOM 6130 Financial Communications (3)
Finance and accounting are disciplines that are pre-eminently quantitative, yet fundamentally rely on human interaction. This course arms finance and accounting students with the tools and knowledge of advanced communication principles, enabling them to deliver complicated financial information to various audiences in a way that fosters sound investment decisions. Through training in financial reporting in both written documents and in oral presentations, students will become an effective interface between the financial system and its stakeholders.

MCOM 7910 Independent Study (1-3)

Management Science (MGSC)

MGSC 3010 Introduction to Business Analytics (3)
This course introduces students to using the computer as a business-modeling tool. The overarching goal is to teach students to use computers to analyze models and interpret data for integrated decision-making across multiple domains, including finance, marketing, accounting, strategy and operations. The course material consists of four modules. The first module concerns data modeling and builds on INFO 1010 by reviewing data modeling in Excel. The second module focuses on deterministic modeling, including decision-making under certainty, and the use of optimization models such as linear programming. This module also covers topics such as portfolio optimization, transportation and assignment, and introduces students to the concepts of problem formulation and sensitivity analysis. The third module focuses on spreadsheet automation, including concepts for programming in Excel. The fourth module covers probabilistic modeling. This module uses simulation and decision analysis principles in uncertain environments. In addition, students will learn to choose the appropriate probability distribution for a given problem.

Prerequisite(s): INFO 1010 and (MATH 1140 or 1230).

MGSC 4320 Advanced Business Analytics (3)
This course introduces the concepts, methods and software used in the emerging field of business analytics. Students use computer languages, software packages and statistical methods to collect and to analyze large data sets and to apply the results in business performance improvement and planning. The course employs examples, exercises and cases that demonstrate how business analytics has been transforming decision-making processes in many companies and industries. Students improve their knowledge of and skills in computing and data analysis and enhance their analytical capabilities and problem-solving abilities.

Prerequisite(s): MGSC 3010.

MGSC 4790 Advanced Business Analytics with Python (3)
This course introduces students to Python as a business analytics tool. The overarching goal is to teach students to use programming techniques to establish business models across multiple domains, especially including finance and operations. The course will review 1) Descriptive Analytics; data essentials, imports, etc., 2) Prescriptive Analytics; optimization, probability distributions, and Monte Carlo simulations, 3) Predictive Analytics: forecasting, time series analysis with seasonality, and 4) Visualization throughout all subject matters. An experiential learning team project will be completed by the students, who will be asked to optimize and simulate portfolios of their choices. This is an applied analytics course with real-life data on various business problems. Foundational knowledge in any programming language is recommended in addition to the required pre-requisite for the course.

Prerequisite(s): MGSC 3010.

MGSC 5380 Business Study Abroad - MGSC (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MGSC 5390 Business Study Abroad - MGSC (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MGSC 6010 Introduction to Business Statistics (2)
This course is designed to equip students with a basic understanding of business problems, data analysis tools, and mathematical techniques. Students master essential statistics concepts, spreadsheet functions, build descriptive business data measures, and develop their aptitude for data modeling. They'll also explore basic probability concepts, including measuring and modeling uncertainty, using various data distributions and the Linear/Multiple Regression Model to analyze and inform business decisions. The overarching goal is to teach students to use statistics and spreadsheets to analyze models and data for integrated decision-making across multiple domains, including finance, marketing, accounting, strategy, and operations

MGSC 6020 Business Stats and Models (3)
Methods for summarizing, analyzing, and making inferences from statistical data germane to management are learned. Topics include descriptive statistics, probability concepts, discrete and continuous probability distributions, sampling distributions, confidence intervals, hypothesis testing, simple and multiple regressions, and chi-squared tests. The methods are applied to management problems drawn from finance, marketing, accounting, operations management, human resources management, economics, and strategic planning.

MGSC 6030 Analytics for Managers (2)
Business analytics refers to the skills, technologies, and practices for continuous iterative exploration and investigation of past business performance to gain insight and drive business planning. Business analytics focuses on developing new insights and understanding of business performance based on data and statistical methods. Business analytics has been widely adopted in different functional areas (i.e., accounting, finance, operations, marketing, and human resources) as well as a wide range of different industries (energy, healthcare, sports, government, etc.). For example, banks, such as Capital One, use analytics to segment customers based on credit risk, usage behavior and other characteristics and then to match customer characteristics with appropriate product offerings. Harrah's, the gaming firm, uses analytics based on tracking consumer behavior to improve its customer loyalty programs. This course provides students with the fundamental concepts, techniques, and applications needed to understand the emerging role of business analytics in organizations, and the ability to communicate with analytics professionals to effectively use and interpret analytics models and results for making better business decisions. This course will also familiarize students with R (analyses software) and Tableau (visualization software) which are widely used in the industry.

Prerequisite(s): MGSC 6010.

MGSC 6040 Supply Chain and Operations Management (2)
To achieve a competitive advantage, firms must thoroughly understand the complex processes underlying the manufacturing of products as well as the delivery of services. This course provides students with concepts, tools, and techniques to design, analyze, and improve the operational capabilities of organizations and supply chains. We will look at the operations function in both manufacturing and service industries and investigate how it can provide a competitive advantage along the dimensions of cost, quality, delivery, and flexibility. We will then look more broadly at the importance of coordination and risk mitigation for supply chains. The course will introduce several key topics in operations and supply chain management that are essential to any organization. Operations management is largely based on statistics. Consequently, we will devote a substantial amount of time to mastering analytical methods. The deeper issues surrounding operations and supply chain strategy and ESG implications, however, must be addressed through a broad and conceptual approach. Hence, this course will provide a mix of quantitative and qualitative treatments of the subject using lectures, case discussions, articles, instructional games, and exercises.

Prerequisite(s): MGSC 6010.

MGSC 6090 Operations and Supply Chain Management (3)
The management of technology, people, and business processes presents one of the most critical challenges to business leaders. To achieve competitive advantage, managers must thoroughly understand the complex processes underlying the development, manufacture, and distribution of products as well as the creation and delivery of services. This course will expose students to topics and techniques related to operations, design, and management of supply chains by means of qualitative and quantitative techniques. The course material is applicable to a broad range of industries such as electronics, online services, insurance, healthcare, retail, fashion, automotive, manufacturing, and more. The topics covered include: process, capacity, inventory, revenue, supply chain, quality, and project management.

Prerequisite(s): MGSC 6020 or 7330.

MGSC 7000 Bus Analytics Practicum (3)
This course introduces business analytics. It involves three components: (1) an overview of business analytics, (2) introduction to tools for business analytics and (3) field trips to companies and follow-up sessions on how business analytics creates value in the real-world.

MGSC 7100 SQL Database Fundamentals and Business Intelligence (3)
The effective use of data across firms to deliver fast and intelligent services presents one of the most critical challenges to today's business leaders. This course is designed to introduce students to basic concepts and techniques in the theory, design, implementation and administration of relational databases. Topics to be covered include, the database design process, the entity-relationship (ER) model, normalization, queries in Structured Query Language (SQL), distributed and client-server databases, database administration, and big data analysis. We will build a database application as a completion project. This course focuses on the skills and concepts needed to design and query databases and therefore contribute to companies' competitive positions.

MGSC 7310 Modeling and Analytics (3)
The widespread proliferation of IT-mediated economic activity generates a large amount of micro-level data about consumer, supplier, and competitor preferences. This has led to the emergence of a new form of competition based on the extensive use of analytics, experimentation, and fact-based decision-making. In nearly every industry, the competitive strategies that organizations are employing today rely extensively on data analysis to predict the consequences of alternative course of action, and to guide executive decision-making. This course provides a hands-on introduction to the concepts, methods, and processes of business analytics. Students will learn how to obtain and draw business inferences from data by asking the right questions and using the appropriate tools. Topics include data preparation, statistical tools, data mining, and the overall process of using analytics to solve business problems. Students will work with real-world business data and analytics software such as R. Students should also have a basic familiarity with elementary probability and be comfortable with basic data manipulation.

Prerequisite(s): MGSC 6010, 6020, 7330* or ENRG 7110*.
* May be taken concurrently.

MGSC 7320 Advanced Spreadsheet Modeling (3)
This course covers the use of Microsoft Excel and the programming language Visual Basic for Applications (VBA) within Excel for obtaining, managing, and processing information. Example areas covered include (1) automatically producing customized mass emails and summary reports, (2) updating Excel databases with 100 or more sheets, (3) copying from a user's workbook to a separate master workbook for analysis and returning solutions, and (4) solving a series of optimization models for various exchange rates. Most of the managerial problems used for illustration involve financial and operations applications. Illustrations from actual company projects demonstrate the power and versatility of course concepts. No prior exposure to VBA or any other programming language is required.

Prerequisite(s): ENRG 7110, MGSC 6010, 6020 or 7310.

MGSC 7330 Business Statistics and Modeling with R (3)
This course introduces students to the foundations of business analytics. The course is designed to teach business managers how to use data to make good decisions in complex decision-making situations. In fact, a good decision is not the same as a good outcome. A good outcome can sometimes result as a matter of luck, and, conversely, a bad outcome does not necessarily suggest that a manager has made a bad decision. Students will develop sound reasoning skills and learn how to utilize information to arrive at good decisions.

Prerequisite(s): MGSC 7000*.
* May be taken concurrently.

MGSC 7340 Web Analytics (3)
This course will provide students an overview of web analytics so that they can measure business goals and find areas of improvement. Students will learn how to apply value measurements to the website, analyze user behavior and optimize the content for the best possible search engine ranking and conversion. In this course students will be given a comprehensive overview of key concepts, tools and techniques related to analysis of quantitative internet data to optimize websites and web marketing initiatives.

MGSC 7520 Advanced Modeling and Analytics (3)
This course intends (1) to expose students to advanced theories and techniques in business analytics and (2) to familiarize students with advanced tools and packages. The advanced theories and techniques will cover the following broad areas: data preparation and exploration, advanced models, deep learning, and other frontier topics. Python packages for analytics – NumPy, Pandas, scikit-learn, TensorFlow/ Keras – are the main tools used. Other advanced techniques and tools ay be covered depending on interest and time availability.

Prerequisite(s): MGSC 7310.

MGSC 7530 Advanced Data Management (3)
This course is designed to satisfy the job-market demand for advanced data/database management topics. Topics to be covered include database design with entity-relationship (ER) model and relational data model, advanced Structured Query Language (SQL) with a focus to answer complex business questions, SQL interface with Data Visualization (with R), Normalization, Data Warehouse, SQL interface with Cloud and Big Data, and Textual Data Analytics (with Python). This course focuses on the skills and advanced concepts needed to manage data in both traditional and big data environments which contribute to companies' data analytics strategy.

Prerequisite(s): MGSC 7100.

MGSC 7650 Applied Machine Learning (3)
Machine learning is a fast-growing field - more businesses are employing machine learning techniques to solve big data analytics problems. This course focuses on teaching learners a blend of machine learning techniques and application development. Students will learn how to identify an appropriate machine learning technique and how to apply the technique to a real-world business dataset. The emphasis will be on application of machine leaning technique rather than statistical theory behind the technique. By the end of the course, students will be able to develop an end-to-end interactive machine learning application using an enterprise technology platform.

Prerequisite(s): MGSC 7310 and 7330.

MGSC 7870 Business Analytics Projects (3)
In this semester-long experiential learning course, students work in teams on various analytics projects sponsored by faculty and industry partners. Each team needs to apply analytics techniques and tools on real-world problems. In addition to gaining real-world experience, students develop communication, presentation and leadership skills pertinent to business analytics.

Prerequisite(s): (MGSC 7310 and 7330) or MGSC 7520*.
* May be taken concurrently.

MGSC 7960 Independent Study (1-3)
Independent study: Management Science.

Managerial Perspectives (PERS)

PERS 4570 Business Service Learning Internship (1-3)
The Academic Internship Program is designed for students who are participating in an intensive business public service internship experience. The goal of this course is to offer students an opportunity to discuss issues related to their public service internship experience, to encourage them to actively explore issues related to both their internship setting and their major, and to facilitate individual growth and career development. The course requires a minimum of 60 hours of public service and requires participation in a weekly Internship Seminar course. The course provides three credits towards the BSM degree. Students are restricted to one internship for credit. Course may be repeated up to unlimited credit hours.

Corequisite(s): SRVC 4890.

Maximum Hours: 99

PERS 5380 Business Study Abroad - PERS (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PERS 5390 Business Study Abroad - PERS (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Marketing (MKTG)

MKTG 3010 Marketing Fundamentals (3)
This course is designed to teach students the basic elements of marketing. The course presents frameworks to analyze marketing problems faced by both for-profit and non-profit organizations. Students will study the influence of consumers, the marketplace and the marketing environment on marketing decision making. The course will also provide a conceptual and theoretical toolkit for developing marketing strategies – segmentation, targeting and positioning – and marketing tactics including price, promotion, product and distribution.

Prerequisite(s): MATH 1210 or (MATH 1150 and 1160) and MATH 1230, ECON 1010, 1020 and PSYC 1000.

MKTG 4100 Consumer Behavior (3)
The course covers major concepts and findings in consumer behavior and how these ideas relate to consumer decision-making and consumption choices. The course is focused on understanding the cognitive, emotional, social and contextual factors that govern consumer decision-making. Students debate the efficacy and ethics of marketing actions by brand managers, advertising agencies, public service organizations and policy makers and consumers' reactions to these actions. The course draws substantially on real-world marketing stimuli to illustrate how the success (or failure) of marketing strategies depend on the close correspondence to (or violation of) principles of consumer behavior.

Prerequisite(s): MKTG 3010.

MKTG 4105 Customer Relationship Marketing (3)
Customer relationship marketing (CRM) is the overall business process in which companies use marketing strategies and activities to build and maintain client relationships, reinforce customer loyalty and increase brand value. The objective of the course is to examine the strategic, analytical and technological aspects of CRM to provide students with a fundamental knowledge of CRM and an understanding of the implementation of CRM systems and analysis of customer data. Topics covered in the course include relationship marketing; customer lifetime value; customer equity; customer databases; customer retention; customer loyalty; operational, analytical and collaborative CRM; reasons for CRM implementation failure; and the role of CRM in marketing management.

Prerequisite(s): MKTG 3010.

MKTG 4110 Research and Analytics (3)
This course provides a hands-on introduction to marketing research, an organized approach to developing and providing information for marketing decision-making. Through a combination of lectures, exercises and projects, the course familiarizes students with data collection techniques such as focus groups, surveys and experiments, as well as data analyses techniques such as hypothesis testing and regression. Specific applications include preference measurement, market segmentation and targeting, customer economics, product and brand policies, pricing, advertising and digital marketing.

Prerequisite(s): MGSC 3010 and MKTG 3010.

MKTG 4117 Business to Business Marketing (3)
The course focuses on strategic aspects of marketing decisions of the organizations that market products to other organizations. The course teaches students the unique needs of business customers, how to analyze business organizations' core competencies and their competitive environment, positioning and segmentation of businesses, and personal selling. Students will learn how to set organizations' business objectives and strategies, build business-to-business marketing plans and measure customer satisfaction.

Prerequisite(s): MKTG 3010.

MKTG 4120 Advanced Marketing Strategy (3)
This course teaches students how to analyze markets, make better marketing decisions, and evaluate and monitor marketing performance. The impact of each marketing decision made by the firm is influenced by a wide variety of factors, including culture, consumer psychology, the business environment/context, competitor actions, and the other marketing tactics utilized by the firm. The course combines quantitative and qualitative analysis within a theoretical framework to analyze these complex relationships and better understand the relationships between market knowledge and the many decisions needed to effectively design and monitor an effective marketing strategy.

Prerequisite(s): MKTG 3010.

MKTG 4137 Pricing (3)
The course will introduce the student to the basic considerations a firm faces in devising a pricing policy. The broad aims of the course are the following: Expose students to the concepts, theories and latest thinking on pricing, from the viewpoint of a marketing manager; enable the student to understand the pricing strategies of a firm in a variety of situations; and work towards the above objectives, while drawing on microeconomic models and marketing theories.

Prerequisite(s): MKTG 3010.

MKTG 4145 New Product Development (3)
While new products offer unique opportunities for growth, most new products fail in the marketplace. This course will introduce students to the new product development process to maximize the likelihood of their success. Students will learn how to identify potential ideas and markets for new product development; how to position, price and advertise new products; and how to measure potential sales and success prior to launch.

Prerequisite(s): MKTG 3010.

MKTG 4155 Brand Management (3)
The brand names associated with products and services are among a firm's most valuable assets. This course addresses the fundamental branding decisions faced by a firm when determining how to build, measure and manage brand equity. The course objectives include planning brand strategies, evaluating brand strategies and examining the actions needed to improve a brand's long term sustainability. The course combines lectures, case discussions, guest speakers and a team brand evaluation project.

Prerequisite(s): MKTG 3010.

MKTG 4165 Retailing (3)
This course in an introduction to the retail environment and its role in the marketing process. It includes discussions on operations, location strategy, store organization, personnel, buying, merchandising, inventory control, pricing, vendor relations, sales promotions and consumer demand. It provides frameworks for understanding different types of retail outlets and the relationship between bricks-and mortar retailing and e-tailing.

Prerequisite(s): MKTG 3010.

MKTG 4170 Marketing Planning & Implementation (3)
This course focuses on the development of dynamic marketing plans for a broad array of companies who may be facing accelerated growth opportunities and/or operating difficulties. Focus will be on choosing the right marketing vehicles, determining how the vehicles need to work together, developing the implementation work plan, mapping out sequencing, and defining metrics and measurement process. Student teams will draw on this information, as well as knowledge acquired from earlier marketing courses, to implement a field study. For classroom discussions, we will be using a mix of text, articles and case studies focusing on companies across diverse industries. Fieldwork will also be discussed in class, culminating in team marketing plan presentations.

Prerequisite(s): MKTG 3010.

MKTG 4220 Sales Management (3)
This course is about persuasion, personal branding and managing people in a workplace. Principles of persuasion when applied to the sales domain are referred to as personal selling or professional selling. While salespeople do try and build a reputation for their company and the products they are selling, their personal reputation tends to be primary. Personal branding by salespeople is often seen as establishing trust. Sales management, although it has some unique elements to it, is very much like the management of every workplace organization. Good management requires, principally, good leadership, which in turn enables good selection, training and motivation, and, though often not emphasized, a good moral code. Since there are a large number of sales employees in this country – about one in every ten employees is identified as a salesperson – their personal happiness, not just their effectiveness, becomes an important issue to study. Since happiness correlates with turnover, and high turnover can compromise good sales management, all three criteria–effectiveness, happiness, and retention–are important sales management concerns.

Prerequisite(s): MKTG 3010.

MKTG 4230 Global Marketing (3)
This course takes a multidisciplinary approach, including concepts from marketing, sociology, political science and economics, to examine the issues associated with marketing across borders. Students will study key characteristics of major markets in different regions of the world: how to collect and interpret the information about the markets; how to analyze global customers, competitors and collaborators; and how to develop international and global marketing strategies. This course also considers contemporary issues, including globalization and the impact of the internet.

Prerequisite(s): MKTG 3010.

MKTG 4240 Relationship Marketing (3)
In marketing, nothing is as critical as building and maintaining relationships with key constituencies. Business corporations and non-profit institutions alike realize the importance of long-lasting relationships and their impact on these organizations' success. The major objectives of this course are twofold. First, it will focus on the marketing tools and techniques that organizations use to identify key constituencies, build relationships and assess their impact on the organizations' performance. Second, the course will provide students with a forum for presenting and defending their recommendations, and for critically examining and discussing the recommendations of others.

Prerequisite(s): MKTG 3010.

MKTG 4250 Social and Online Marketing (3)
In this course, students will learn tools and frameworks to understand how companies can implement effective online and social media marketing campaigns. Using a mix of theoretical and practical exercises, students will learn to think about online tools from a marketing perspective. Following completion of this course, students should be able to 1) understand the different tools available for social media and online marketing, 2) help a company listen to and engage customers through online and social media, 3) use tools to measure and evaluate the effectiveness of online and social media campaigns, and 4) develop a comprehensive online and social media strategy.

Prerequisite(s): MKTG 3010.

MKTG 4255 Digital Communication Strategy (3)
How do you connect with your audience and write for digital channels? This course focuses on effective writing practices for a social media environment. You will learn how to strategically structure and write content that delivers your messaging while engaging your audiences by thinking about what a reader needs and wants. Businesses leverage digital channels such as search engines, social media, and websites to connect with current and prospective customers. In this course, we will look at ways companies communicate across channels and gage the messaging strategy effectiveness for its brands. Ultimately, we will explore how these tools fit into a company's traditional integrated communication strategy.

Prerequisite(s): MKTG 3010.

MKTG 4260 Advertising and Promotions (3)
This course is designed to provide the conceptual underpinnings of marketing communication, and reflect the role of media strategies in providing information, persuading, selling and creating popular culture. This course emphasizes the development of integrated marketing communication programs. Students will learn the fundamentals of different media options, how to evaluate marketing communication programs/outcomes, and how to develop an integrated marketing communication campaign. A substantial portion of in-class and out-of-class time will be devoted to applying the concepts and developing a real-world marketing communication program.

Prerequisite(s): MKTG 3010.

MKTG 4275 Law in Marketing (3)
Law in Marketing will help the student develop an appreciation and an understanding of the legal and ethical challenges present in marketing decisions. The course takes an in-depth look at the relationship between intellectual property, product development, and marketing. Explorations of these topics range from how to identify potential intellectual property rights to how protect those rights by using a variety of intellectual property protections such as patents, copyrights, trademarks, trade dress, and trade secrets to give a firm a comparative advantage. Further, the course will examine strategies for addressing competitors that infringe on a firm's intellectual property rights through techniques such as litigation and licensing. Intellectual property issues are examined from both a U. S. and global perspective.

Prerequisite(s): MKTG 3010 and LGST 3010.

MKTG 4280 Sports Marketing (3)
The Sports Marketing course provides students with a practical application of marketing concepts in this unique industry, with an emphasis on strategy development. The course is designed to explore how businesses and organizations market their products and services, including product decisions, distribution, pricing and development of promotional programs. Topics include the marketing environment, segmenting audiences, building a relevant brand, communications strategies and channels, customer relationship management and delivering sports experiences. The course will incorporate a guest speaker series and project work to provide students with professional perspectives within the sports industry.

Prerequisite(s): MKTG 3010.

MKTG 4290 Service Marketing (3)
This course introduces students to the challenges professionals and organizations face in creating, marketing and delivering high-quality services. Class sessions center around lecture presentations and case-based learning on topics such as measuring and managing customer satisfaction, coordinating marketing and operations in designing and implementing service delivery, developing the human and technical skills of employees who deliver services, and utilizing emerging technology. Assignments provide students with a hands-on understanding of concepts and methods practitioners use in today's competitive markets to analyze customer/client requirements; measure service quality; and design, promote and deliver outstanding services in financial, healthcare, educational, high-tech, manufacturing, nonprofit and retail organizations.

Prerequisite(s): MKTG 3010.

MKTG 4550 Marketing Internship (1-3)
Freeman School majors may elect to do a business internship that will appear as a one-credit, 4000-level course on their transcripts; however, the credit does not apply towards the 122 minimum hours required for a BSM degree. The internship must be related to one of the majors offered through the BSM program, and the internship must apply (within an ongoing business organization) the intellectual capital obtained from first- through third-year Freeman School courses. To obtain approval of the internship, the student must visit the Career Management Center for instructions. The final grade for the internship is given on a Satisfactory/Unsatisfactory (S/U) basis when the student submits a paper/evaluation to a supervising faculty member in the Career Management Center. This course is normally offered during the summer and fulfills the "curricular practical training" option for students with F-1 visa status.

MKTG 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MKTG 4891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

MKTG 4910 Independent Study (1-3)
Prerequisites: Minimum cumulative GPA of 3.333 or higher, senior standing Freeman School seniors who demonstrate academic excellence are allowed to pursue an independent study. The work may take the form of directed readings, laboratory or library research, or original composition. Instead of traditional class attendance, the student substitutes conferences with the supervising faculty, as needed. An independent study requires the approval of the supervising instructor and area head. The credit does not apply towards the marketing major requirements for a BSM degree; it may be used as business elective credit. Interested students should contact the Office of Undergraduate Education at the Freeman School. Prerequisites: Minimum cumulative GPA of 3.333 or higher, senior standing Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MKTG 4990 Marketing Honors Thesis (3)
Traditional thesis option for marketing area. Students enrolled in this course will begin their thesis in the fall semester. They will conclude their thesis in MKTG 5000 in the spring semester.

MKTG 5000 Marketing Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): MKTG 4990.

MKTG 5380 Business Study Abroad - MKTG (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MKTG 5390 Business Study Abroad - MKTG (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MKTG 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

MKTG 6000 When Data Lie (2)
This course examines the many decisions that go into collecting, analyzing, interpreting, and presenting data. Through a mix of theoretical and practical exercises, students will learn to recognize some of the most common pitfalls that can lead to the misunderstanding and misrepresentation of data analysis. Examples will be drawn from both business and non-business settings to develop a deep understanding of the practical challenges of real-world data analysis as well as of the broader implications of this process for business, policy, and society.

Prerequisite(s): MGSC 6010 and 6030.

MKTG 6010 Marketing Management (2)
This course is designed as a graduate-level introduction to the basic principles and concepts in marketing. The goal is to expose you to these concepts as they are used in a wide variety of business settings. The course will provide you with a framework that can help you make effective marketing decisions. This framework includes elements of a market situation analysis (company, customer, competition, collaborators, context), marketing strategy formulation (segmentation, targeting, positioning), and the marketing mix (product, price, placement/distribution, promotion) as the tactical implementation of a marketing strategy. Students will combine quantitative and qualitative analyses in applying the principles you learn in class to a variety of real-world marketing issues. The course covers what societal marketing is and how marketers can contribute more than just product or service value.

MKTG 6020 Marketing (3)
This course provides students with frameworks for making effective marketing decisions. Students will learn to conduct market situation analyses (company, customer, competition, collaborators, context), design marketing strategy formulations (segmentation, targeting, positioning), and implement marketing mix plans (product, price, placement/distribution, promotion). The course combines quantitative and qualitative analyses in applying the principles learned to a variety of real world marketing issues.

MKTG 7140 New Product Development (3)
This course teaches students the fundamentals of new product development. Students learn to identify unmet consumer needs, develop rich consumer insights, ideate meaningful consumer solutions, build and test product concepts and create and commercialize new products and services. The class is a mixture of lectures, activities and projects that give students the opportunity to work directly with brands to solve real consumer unmet needs. Students will also take a novel new product or service idea through the entire new product development process, ending with presenting their ideas to local professionals. The course will also provide an understanding of how new product design can improve environmental implications in a given product segment, how to boost customer satisfaction and improved health and wellness outcomes through innovation and how to increase equity through access to new customer solutions.

Prerequisite(s): MKTG 6010 or 6020.

MKTG 7250 Social Media and Online Marketing (3)
In this course, students will learn how to design and implement an effective online and social media marketing campaign. Using a mix of theoretical frameworks, case studies, and practical exercises, students will learn how to strategically leverage online and social media platforms to achieve marketing goals. This course will cover various topics, including search engine optimization, social media listening, organic marketing, user-generated content, and online analytics. This course will also touch upon the unique ethical and societal considerations that arise from these online platforms.

Prerequisite(s): MKTG 6010, 6020 or MGSC 7330.

MKTG 7280 Data and Analysis for Marketing Decisions (3)
This course provides students with statistical and computational skills that are critical for business research and analytics, using real world data from marketing applications. Through lectures, hands-on exercises, and cases, the course equips students with data analysis tools so they can take advantage of firm and consumer data by extracting meaningful information from them for decision making. The course covers statistical skills including regression, cluster analysis, and choice models, as well as computational skills using statistical programming software. Specific applications include topics such as pricing, conjoint analysis, market segmentation, targeting, experiments, and mobile marketing.

Prerequisite(s): (MGSC 6020 and MKTG 6020) or (MGSC 6010 and MKTG 6010).

MKTG 7290 Strategic Brand Management (3)
This course teaches students how to create a strategic marketing plan. Students will learn to develop a thorough understanding of customers, analyze markets, develop brands, position new products and services, and create integrated marketing plans with metrics to monitor performance. The course will combine quantitative and qualitative analyses to support marketing decisions. Students will work on projects and make tactical decisions about designing and implementing an effective marketing strategy. The course provides the opportunity to apply marketing knowledge and strategy in a tangible and meaningful way by participating with a corporate partner. In addition, it exposes students to processes that facilitate the building of strategic marketing plans.

Prerequisite(s): MKTG 6010 or 6020.

MKTG 7980 Independent Study (1-3)
Independent study: Marketing

Master of Liberal Arts Courses (MLAR)

MLAR 7010 Ancient Political Thought (3)
This course will study classical works of ancient political philosophy in the Western tradition, with a concentration on Plato and Aristotle. We will examine their understanding of political life and the place of the individual in society, exploring the questions they raise that remain of central importance in our world today: What is justice? What is a citizen? Why is the rule of law desirable? What is the relation between freedom and equality in democracy?

MLAR 7020 Modern Political Thought (3)
This course will be devoted to a study of classical works of modern political philosophy in the Western tradition. How did the early modern political philosophers try to make a new beginning by turning to a realism they thought missing in the ancients? How did they go about defending individual rights in society on that basis? We will examine Machiavelli's introduction of this approach, and its development in the political theories of thinkers such as Hobbes, Locke and Rousseau.

MLAR 7030 Masterwrks West Lit Foundation (3)
This course will examine literary texts, ancient and medieval, that have played an important role in shaping Western thought and imagination. We will explore the understanding of the human condition that comes to light in works such as the Bible, the Homeric poems, Greek tragedy, the dialogues of Plato, the writings of Augustine or Dante, among others.

MLAR 7040 Masterworks of Western Literature in the Modern Era (3)
This course will examine literary texts central to the Western tradition from the Renaissance to the present. We will explore the understanding of the human condition that comes to light in works such as those of Cervantes, Shakespeare, Dostoevsky, Kafka, Toni Morrison, and others.

MLAR 7050 Understanding Amer Foundations (3)
This course is an intense analytical investigation of social, political, economic, religious, and philosophical issues in the early years of the American republic. The course examines the people and events of the founding of the American republic from the revolution, through the creation of the American Constitution, and culminating in the election of 1800. This course is primarily an intellectual history course and the main scholarly work that we will read is the work of historians, but the course also delves deeply into issues in political theory, political economy, and political and social philosophy. The course charts the development of American political ideas about constitutionalism, governance, political freedom, economic freedom, representative democracy, republicanism, and federalism primarily from the vantage point of the careers of two of the main figures from this period, John Adams and Thomas Jefferson. The views of other figures will also be central to our investigation, particularly the views of James Madison and Alexander Hamilton. The student will be challenged to examine fundamental assumptions about these topics in order to rethink the intellectual origins of the American political tradition in its founding years.

MLAR 7060 Understanding Amer Modern Era (3)
This course is an intense encounter with the work of perhaps the most significant, original, and influential philosopher in American history, Richard Rorty (1931-2007). The material that we read will cover all the main aspects of Rorty's philosophical and political work. The main focus of the course will be an attempt to come to terms with Rorty's critique of the cult and culture of professional philosophy. We will also be concerned with an attempt to understand Rorty as a major figure in the American intellectual tradition and locate him within the history that includes such figures as Emerson, Whitman, William James, John Dewey, and other figures considered to be exemplars of naturalism, pragmatism, or neo-pragmatism in one form or another.

MLAR 7070 Political World (3)
This course examines the political economy of food by exploring the processes of production, regulation, and consumption that determine the relationships between humans and the food we eat in the world today. We will explore the moral, political, social, and economic dimensions of this topic with the goal of providing a platform for personal exploration and transformation. The presentation of material in the course is designed to be engaging, provocative, and stimulating and to provide the student with an opportunity to make informed decisions about the moral and political dimensions of their own relationship to food.

MLAR 7080 The Economic World (3)
This course examines the causes and consequences of the Great Recession, the economic crisis of 2008 and beyond. Over the past thirty years, the economic and political landscape of the world has been transformed by sweeping economic changes that reflect the influence of the once marginalized but now dominant ideology of neo-liberalism and free market fundamentalism. These changes have created the greatest accumulation of individual wealth in human history, but also have arguably created greater suffering, poverty, inequality, anti-democratic developments, and the growing potential for the catastrophic failure of the global economy, as evidenced by recent events. We will consider a variety of political and economic views of the Great Recession, from a broad spectrum of economic and political thinkers.

MLAR 7100 Special Topics (3)
Special topics in liberal arts.

MLAR 7101 Special Topics (3)
Special topics in liberal arts.

Maximum Hours: 99

MLAR 7102 Special Topics (3)
Special topics in liberal arts.

MLAR 7103 Special Topics (3)
Special topics in liberal arts.

MLAR 7113 Philosophy of Religion (3)
This course will analyze various ways of understanding the nature and importance of religious experience and religious beliefs. We will consider some of the most influential arguments for the existence of God and examine central issues such as the problem of evil or the relation between revelation and reason.

MLAR 7122 King Arthur: History & Legend (3)
In this course, we will investigate the evidence, both textual and archaeological, for the existence of an historical Arthur, King of the Britons, and will then consider how that evidence was transformed into an imaginative cycle of stories concerning kingship and chivalry that were highly influential within and beyond the Middle Ages. We will pay particular attention to three themes: the ideals of monarchy and knightly behavior that inform the Arthurian stories (e.g. the medieval theory of the divine right of kings); the development within the Arthurian materials of ideas about medieval romantic love or fin amor, especially in representations of the passionate but doomed relationship between Lancelot and Guinevere; and the mystical dimensions of Arthurian romance, as these emerged from writings about the Round Table fellowship's pursuit of the Holy Grail. We will read Sir Thomas Malory's late medieval revision of the Arthurian story cycle, but with reference to other non-Malory materials to be introduced and explained by the instructor (e.g. a long alliterative poem concerning Arthur's battle with the giant of St. Michael's Mount). We will also deal briefly at the end of the course with Victorian adaptations of the Arthurian materials, especially those by Tennyson in his Idylls of the King and William Morris in his Defence of Guenevere. Three written assignments: a midterm and final examination (essay format) and a short critical paper (5 pp. typed, double-spaced). Required Text: Sir Thomas Malory, Le Morte Darthur: The Winchester Manuscript, ed. by Helen Cooper (Oxford: Oxford University Press, 2008).

MLAR 7123 Robin Hood (3)
This course will explore the legendary history of the medieval outlaw figure, Robin Hood, as it developed through the Medieval and Early Modern periods and into our own century. We will begin by examining historical and archaeological evidence for the person "Robin Hood" (including pre-Christian influences on his character) and then will consider Robin Hood's complex literary and cultural identity. We will also be concerned with various political uses to which the figure of Robin Hood was put in the Medieval and Early Modern periods and with Robin Hood's persistent role in modern British and American popular culture, especially the movies. Three written assignments: a midterm and final examination (essay format) and a short critical paper (5 pp. typed, double-spaced). Required Texts: Stephen Knight and Thomas Ohlgren, eds., Robin Hood and Other Outlaw Tales, 2d ed. (Kalamazoo: Medieval Institute Publications, 2000) and Stephen Knight, Robin Hood, A Mythic Biography (Ithaca: Cornell University Press, 2009).

MLAR 7124 Great Irish Famine (3)
The Great Irish Famine, 1846-1852, is the central event in the history of modern Ireland. The Famine or the Great Hunger killed approximately one million Irish, forcing the emigration of another two million, and altering not only the history of Ireland, but also the history of Britain, Australia, Canada, and the United States. This course will concentrate on the seminal issues concerning the Famine: Ireland's political and social relationship with British society, the tortured relationship between landlord and tenant, the desperate poverty which afflicted the Irish underclass and threatened much of the population with ruin, the bitter sectarian conflicts which convulsed the island and tainted its political and economic arrangements, and Ireland's struggle for self-determination. We will discuss the causes of the Famine (which were different from the blight which attacked the potato), the domestic and international responses to it, and its consequences for Ireland, Britain, and the United States. This course is a seminar and will emphasize reading, discussion, and writing.

MLAR 7126 Tudors in TV and Film (3)
This course will look at popular depictions of Henry VIII, Thomas Cromwell, Catherine of Aragon, and Anne Boleyn. We will explore questions about creators of historical fiction: Do they have obligations to their audience and to the memory of the dead? Are there some cases in which it is particular important to achieve historical accuracy and others not?

MLAR 7129 Canterbury Tales (3)
This course will investigate the medieval phenomenon of pilgrimage —or religious vacationing—by way of a reading of one of the classics of English literature, Geoffrey Chaucer's 14th c. masterpiece, The Canterbury Tales. In addition to the motif of devotional journeying, we will study the different medieval social classes (knights, clerics, and peasants) and story types (chivalric romances, fabliaux or bawdy tales, saints lives) that Chaucer explores in his literary masterwork.

MLAR 7130 Love/Romance in Lit & Film (3)
In this course we will look at the portrayal of love, romance, and marriage in modern society in short stories, plays and films.

MLAR 7132 Masculinities (3)
What does it mean to be "masculine"? What effects does the concept of "masculinity" have on men, on women, and on society? Until recently, masculinity was considered "natural" for "real men." Recently, however, traditional notions have been challenged by economic crises, social conditions, feminists, and men who do not "fit" the characteristics of "traditional" masculinity. This class takes a critical look at the concept of "masculinity," particularly "hegemonic masculinity," its domination of various "sub" masculinities, and its constructions in popular culture. Through readings, lectures, class discussions, and analyses of films and other cultural elements, we examine what it means to conform to and challenge "hegemonic masculinity" in the United States over the last half century or so.

MLAR 7133 Culture & Politics of Marriage (3)
Although today there are numerous ways to construct a family in America, marriage continues to be the preferred option. Nearly 100% of Americans routinely report a desire to marry at some point in their lives. Roughly 90% of them do marry at least once, and over half do it more than once. Yet soaring divorce rates point to a disconnect between what we expect marriage to be and what it actually is. As young children, we're told that marrying our prince/princess will ensure us a happily ever after, as it did for Cinderella, and this cultural message only gets stronger as we grow up. We're so bombarded by these assurances that we take it for granted that we must marry our prince or princess just to be happy. For this reason, we rarely stop to consider that marriage is a social institution that creates, reinforces, and reflects power and hierarchy. This is a master's level seminar on the social institution of marriage. This course engages questions such as: What is marriage? Where does our notion of marriage come from? How does popular culture act to construct and reinforce that notion and make it part of our taken-for-granted stock of knowledge? How do our idealized notions of marriage differ from our practice of marriage? What politics are implicated in our idealized notions about marriage, and how do those politics play out in the practice of marriage? Drawing on class readings, discussions, and exercises, we engage these issues (and more) as part of the ongoing family values debate that questions whether marriage is in crisis or simply in transition. The intent of this course is to make students aware of some of the hidden forces that shape our contemporary attitudes and ongoing cultural debates about marriage and family.

MLAR 7134 History, Power and the State (3)
This course will explore the theme of power and the state through a study of films, such as "The Man for All Seasons," "Amistad," "Schindler's List" or "Book Thief." We will discuss the historical accuracy of the films, asking what they can teach us, both about the period depicted and the period in which they were made, considering in particular the way people have thought about power and the state.

MLAR 7135 Huey Long in Literature & Film (3)
This course will consider the life of Huey Pierce Long as depicted in biography and film. It will discuss and analyze three major biographical and literary works about Long: Alan Brinkley's comparative biography Voices of Protest: Huey Long, Father Coughlin, and the Great Depression, Richard D. White, Jr.'s Kingfish The Reign of Huey P. Long, and Robert Penn Warren's classic political novel, All the King's Men. The course will also view and analyze two films about Huey Long: Ken Burns's documentary Huey Long and an Academy Award film based on Robert Penn Warren's All the King's Men. The course will also discuss and assess Long's life in light of other writings on the history of Louisiana, the South, and nation from the 1890s through the 1930s.

MLAR 7136 Philosophy of Art (3)
This course is an examination of central philosophical questions about the nature of art. We will examine philosophers' responses to questions such as: what is art? Does art differ from craft? Must art be beautiful? Is art universal or the same across cultures? Are there objective standards for determining the value of a piece of art? What is the relationship of aesthetic value to moral value, and what role (if any) does art play in social justice? We will also examine issues that arise in relation to particular art forms, including poetry, music, painting, dance, and theater.

MLAR 7137 Love and Death in Lit and Film (3)
In this course we analyze the representation of love and death in works of literature and cinema. We will discuss questions about the way these works reveal presumptions of gender, economic class, public and private life.

MLAR 7140 Represnt of War in Lit/Film (3)
In this course we will look at the ways war has been portrayed by writers or film directors and address a number of important questions: Why do countries go to war? When, if ever, is resorting to war legitimate or necessary? What are the psychological effects of war?

MLAR 7153 The Twentieth Century (3)
Was it the most violent century or the most humane? Technologically advanced or spiritually sick? What is often called "the American Century" seems to be characterized by contradictions. What is its legacy? This course will address that question by considering important events and processes, including World War II, the Cold War, Existentialism, Colonialism, Imperialism, and Post-Colonialism.

MLAR 7155 Utopia and Dystopia (3)
This course is devoted to the depiction of utopia and dystopia in Western culture from Plato to the present. We will consider the relation between the two: Why does utopia so often turn into dystopia? What are the elements of a perfect society? Why have all attempts to create a utopian society failed, at least so far?

MLAR 7157 Witchcraft Early Modern Europe (3)
In this course students analyze the causes of the rise of witchcraft prosecution in late medieval and early modern Europe (roughly 1300-1700), while also examining recent historiographical trends in early modern witchcraft research. Topics include the relationship between gender and witchcraft, as well as the effects of social, political, and religious change on witchcraft accusations and trials.

MLAR 7160 Contempry Culture in Lit/Film (3)
In this course we will look at problems in our contemporary culture as they have been represented in short stories, plays, and films.

MLAR 7161 Civil War New Orleans (3)
This course is a seminar which emphasizes reading, discussion, research, and writing. Despite the contentions of some historians, the Civil War had a profound impact on the people and history of New Orleans. During the late antebellum period (1840s-1850s), the city was the principal slave market in the nation. This domestic trade fueled the lower south and New Orleans' economic development. Slavery shaped the economic and social character of the south, over the years creating not only a society with slaves, but also a slave society. Despite its dominance and apparent unanimity, slavery was also a contentious and divisive institution. Slavery in New Orleans was no exception to these twin dynamics. The historical records, newspapers, acts of sales, successions, census records, and private correspondence demonstrate the centrality of slavery to New Orleans' antebellum society. On the other hand, the city's complex racial, ethnic, and sectional composition heightened political and social tensions, raising suspicions and fears about racial identity, naturalization and citizenship, and loyalty. Slavery and ethnicity shaped issues of civil liberties, criminal justice, and politics. The presidential and secession elections of 1860 and 1861 sharply divided New Orleans, as they did throughout much of the urban south. These divisions did not disappear with mobilization and civil war, but were only intensified in the hothouse of occupation, reunion, reconstruction, and, above all, loss. New Orleans suffered greatly during and after the Civil War. Thousands of men were killed or died from wounds and disease and even more were maimed physically and scared emotionally. The fighting ended, but the war continued beyond Appomattox Court House. To this day, the privileges and immunities of American citizens are intensely debated, bringing not only hope but also rancor and division, as much as they did in antebellum New Orleans and America.

MLAR 7166 Genocide as a Political Weapon (3)
This course examines the character of genocide in the modern world, from the killing of the Armenians during World War I to events in Rwanda and Bosnia. What is a genocide? Is it something different than mass murder? What lessons can we learn from the Holocaust and subsequent examples of genocide?

MLAR 7169 Special Topics (3)
Special topics in liberal arts. Course can be repeated up to unlimited times under separate title.

Maximum Hours: 99

MLAR 7171 Introduction to the Bible (3)
This course examines the structure and content of the Bible from historical, literary, philosophic, and religious or theological perspectives.

MLAR 7193 Special Topics (3)
Special topics in liberal arts. Course may be repeated unlimited times for credit.

Course Limit: 99

MLAR 7194 Special Topics (3)
Special topics in liberal arts.

MLAR 7195 Special Topics (3)
Special topics in liberal arts.

Maximum Hours: 99

MLAR 7196 Special Topics (3)
Special topics in liberal arts.

MLAR 7200 Racial Formation Around the World (3)
This course is a comparative sociohistorical inquiry into the bases and mechanisms of racial domination as a "denegated form of ethnicity" anchored in culturally salient (putative) physical differences. Readings include a wide range of sociological, historical, and anthropological studies of ethno-racial vision and division, accommodation, and conflict in Latin America, Asia, Western Europe, the United States, and Africa. They are geared toward helping us uncover the social mechanisms that lead to the rise, reproduction, and transformation of ethno-racial inequality, wherever and whenever it is found. This course is problem-oriented, not group-oriented; its purpose is neither to celebrate nor to denigrate the experiences of this or that particular category but to explain and understand them in sociological terms.

MLAR 7210 Language, Power, & Identity (3)
Language is a powerful mode through which identities and social norms are created, negotiated, and transformed. This course will examine how people use language to enact different cultural, social, or linguistic identities, and how language ideologies impact the understanding and reception of those enactments. We will also explore how people's language beliefs and practices support or challenge dominant power structures and mainstream discourses. Readings will include critical theoretical perspectives on language and discourse, focusing on topics that include multilingualism, code-switching, language loss, microaggressions, and domestic and global language policies.

MLAR 7215 Asian Philosophy (3)
This course studies the major intellectual traditions of India and China, including Hindu and early Buddhist thought in India, as well as Confucian, Taoist, and later Buddhist thought in China.

MLAR 7220 Digital Cultures (3)
This course will critically explore participation in digital communities, including social networks, blogs, intellectual, political and civic collaborations, and emerging digital cultures and art forms. Through sociocultural perspectives on multimodal discourses, we will examine the relationship between technology and culture, community, identity/representation, language and power, and social activism in global digital communities.

MLAR 7235 Women in Global Societies (3)
This course engages with transnational, postcolonial, Black, and Chicana feminist theories to examine how different sociopolitical contexts intersect with women's experiences around the world. In particular, we consider how place, nationality, sexuality, religion, culture, and class impact women's everyday lives while analyzing how women navigate and challenge dominant social structures. Course topics will focus on the experiences of women in relation to identity, migration, representation, and economic development.

MLAR 7240 Justice, Law & Public Policy (3)
This course will examine considerations of justice and morality that help shape law and public policy. Issues to be discussed may include: crime and punishment, drugs, gun control, treatment of enemy combatants, torture, surveillance and privacy, free speech and national security.

MLAR 7245 Medieval New Orleans (3)
By way of numerous Power Point tours of on and off campus sites and materials, as well as our reading of a popular American novel, Mark Twain's A Connecticut Yankee in King Arthur's Court, this course will consider the influence of medieval culture and ideas on New Orleans and, to some extent, Southern culture in general, especially during the post-Civil War period and Reconstruction. For instance, we will discuss medieval architectural styles preserved in Tulane and other local buildings (Richardsonian Romanesque and Gothic Revival), experience medieval music by New Orleans' Musica da Camera (a special guest performance), and explore real medieval manuscript materials from the Tulane Rare Books Room in Jones Hall. We will also talk about medieval influences on such pre-Lenten festivals as Mardi Gras and on such regional foods as gumbo and turducken. Class will conclude with our viewing of a musical film version of Connecticut Yankee, which suggests how Hollywood adapted medieval experience to bring it in line with certain nineteenth-century attitudes toward the Middle Ages. Three written assignments: a midterm (essay format), short critical paper (5 typed pp.), and a final examination (on course terminology). Required Text: Mark Twain, A Connecticut Yankee in King Arthur?s Court, ed. byMLAR Justin Kaplan (New York: Penguin, 1972).

MLAR 7247 Shakespeare (3)
What makes Shakespeare a great writer and why are some of his plays and poems judged to be greater than others in terms of their literary merits? We will take up this twofold question by way of a discussion of some of Shakespeare's "greatest hits," examples derived from each of his major literary genres.

MLAR 7250 Verbal and Visual Rhetoric (3)
This course will focus on theories and practices of verbal discourse in comparison with visual imagery and technology. While concentrating on rhetorics of western cultures, some comparison will be made with rhetorical discourse and imagery in other cultures. The course will examine topics such as the interfaces of religion and politics, mass media and persuasive campaign, or the role of values in institutional leadership and issue campaigns.

MLAR 7280 Philosophy of Religion (3)
This course examines various attempts to understand the nature and importance of religious experience and religious beliefs from a naturalistic perspective. We will discuss the ontological, epistemic, and axiological significance of claims about the nature of religious experience and religious beliefs in an attempt to situate these phenomena in a broader naturalistic understanding of the self and the world. After a consideration of the varieties of religious experience as exemplified in the work of William James, we will review arguments by Pascal Boyer and Daniel Dennett to the effect that the origin, development, and diversity of religious belief and religious experience are all phenomena that are scientifically explainable within the naturalistic frameworks of evolutionary biology and cognitive psychology.

MLAR 7290 Under Arrest: Art, Identity and the Culture Wars (3)
This course uses the controversial art at the center of the Culture Wars as an anchor for questions surrounding the social and political stakes of cultural representation. What does American art look like? What should it look like? Who does American culture represent and who should it represent?

MLAR 7400 Gender, Culture and Families (3)
Research suggests that gender and family are inseparable concepts. Family carries particular gender role expectations at both the "ideal" and the "practice" level. However, we rarely think about what family is or how gender plays into family—we simply take gendered family roles for granted. Yet where do our ideas about family and gender come from? This class will explore our perceptions of the gender-family nexus, and the changes that have occurred over the last half century or so, from the perspective of popular culture.

MLAR 7451 Religions of the World (3)
This course will examine the teachings of several major religious traditions—including Hinduism and Buddhism as well as Judaism, Christianity, and Islam—through selected readings from their sacred scriptures.

MLAR 7500 Independent Study (3)
For specific topics, see Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MLAR 7550 Holocaust in Film & Literature (3)
This course will consider the Holocaust, the attempted genocide of European Jewry by the Nazis during World War II, and the diverse ways that the events related to it are portrayed and understood by diverse audiences. The course is divided into thematic sections that highlight the different issues motivating the authors and creators of relevant texts and films.

MLAR 7940 MLA Transfer Credit (3)
MLA Transfer Credit. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MLAR 7950 Capstone Portfolio (3)
The Capstone Portfolio will enable students to integrate the knowledge gained from three courses in the MLA program, while participating in a reflective writing seminar. Building on a portfolio of three previously completed papers/projects, the seminar will culminate in a paper or a creative project (e .g., artwork, website, podcast, etc.) accompanied by a shorter academic narrative. Students will explore topics such as metaphor in narrative writing ; reflective and reflexive inquiry; and credibility and knowledge in reflective writing practice.

MLAR 7980 Capstone Project Seminar (3)
The Capstone Project seminar will be structured as a workshop that will support students in improving their research, writing, and critical thinking skills. A variety of writing concerns will be covered, including warranting claims, conducting library searches, writing from sources,creating a dialogue among different disciplines and scholars, interpreting and attributing sources, writing for an audience, analyzing data and methods, exploring structures of presentation, and improving clarity and style. The course will also explore the challenges and opportunities in designing interdisciplinary research projects. Students will work collaboratively to articulate their project's scope, goals, and significance ; develop a comprehensive literature review; frame the research and methods; and complete a full version of the project.

MLAR 7990 Masters Research (3)
Research in Liberal Arts

MLAR 9980 Masters Research (3)
Research in Liberal Arts Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Materials Physics & Engineering (MPEN)

MPEN 6290 Computation Material Sci & Eng (3)
Computational Materials Science and Engineering: This course will cover theories, implementations, and applications of common quantum mechanical software for computational study of materials. State-of-the-art computational methods will be introduced for materials research with emphasis on the atomic and nano scales and hands-on modeling on PCs and supercomputers. The class is aimed at beginning graduate students and upper level undergraduate students, and will introduce a variety of computational methods used in different fields of materials science. The main focus is quantum mechanical methods with a short overview of atomistic methods for modeling materials. These methods will be applied to the properties of real materials, such as electronic structure, mechanical behavior, diffusion and phase transformations. Computational design of materials using materials database via high-throughput and machine learning methods will also be covered.

MPEN 6350 Kinetics of Material Systems (3)
This course covers all aspects of kinetics in material systems. Topics include thermodynamics, steady state and time dependent diffusion, phase transformations, statistical mechanics, structure evolution, boundaries and interfaces, solidification, and precipitation effects.

MPEN 6360 Structure of Materials (3)
The properties of matter depend on which of the about 100 different kinds of atoms they are made of and how they are bonded together in different crystal structures; specifically, the atomic structure primarily affects the chemical, physical, thermal, electrical, magnetic, and optical properties of materials. Metals behave differently than ceramics, and ceramics behave differently than polymers. Students will learn the different states of condensed matter and develop a set of tools for describing the crystalline structure of all of them. They will gain a better understanding of the principles of structure common to all materials. Key concepts, such as symmetry theory will be introduced introduced and applied to provide a common viewpoint for describing structures of ceramic, metallic, and polymeric materials and the latter includes optical microscopy, electron optics, x-ray diffraction and some surface analytical techniques. Structure-sensitive properties of real materials will also be introduced.

MPEN 6370 Processing of Biomaterials (3)
Processing of biomaterials gives an overview of the most advanced techniques to process biomaterials into structures that satisfy next generation applications. All materials classes will be covered including polymers, ceramics, metals, composites and cells and tissues. In each case, the material-specific processing and the properties and potential applications will be covered.

MPEN 6380 Materials for Energy (3)
The course begins with a history of our understanding and utilization of different sources of energy and a review of thermodynamics. In all cases, the most effective materials used are discussed as well as the relevant fundamental equations used and approaches for improving the figure-of-merit. The 5 different forms of energy are introduced - mechanical, electromagnetic, thermal, chemical, and nuclear - and discussed. Materials and techniquesused for energy applications are discussed including thermoelectrics, fossil fuels, nanoparticles, different approaches for energy storage, fuel cells, nuclear energy (fission and fusion), energy biological systems - from cellular scale and ATP and catabolism/anabolism to biomass conversion, and magnetohydrodyanmics. Techniques for energy conversion, biomimetics, energy and the environment and material issues for energy transformation are discussed. The sun is also discussed as a source of energy for photosynthesis, photovoltaics, and photothermal power generation.

MPEN 6390 Synthesis of Nanomaterials (3)
This course focuses on the fundamentals of nanomaterials synthesis mechanisms and characterization. The course gives an introduction for nanomaterials classes and their importance for today's world, followed by basics of physical chemistry of solid surfaces. Then, top-down and bottom-up synthesis approaches for nanomaterials systems including gas, liquid and solid phase processes are covered. Characterization techniques of special importance for nanomaterials are taught. During the semester students will study and review scientific articles focused on nanomaterials synthesis and characterization.

Prerequisite(s): ENGP 3120.

MPEN 6560 Photonic Materials & Devices (3)
This course will cover the theory, design, fabrication, characterization, and application of photonic materials and devices. The course will start with a review of the fundamentals of photonics, including ray optics, wave optics, and nanophotonics/quantum optics. The course will then focus on light-matter interactions and photonic materials, including dielectrics, semiconductors, metals, metamaterials, and photonic crystals. Using these principles and materials, we will explore a number of device architectures, including LEDs, lasers, photodetectors, photovoltaics, etc. We will then discuss fabrication methods for making these materials and devices and common optoelectronic characterization techniques. The course will conclude with exploration of cutting edge topics in photonics research. Prerequisites: PHYS 2350 and PHYS 2360 (or equivalent) or instructor approval.

MPEN 6570 Semiconductor Devices (3)
An introduction to the physics and technology underlying semiconductor electronic and optoelectronic devices, including electrons and holes in semiconductors, energy-band diagrams, carrier transport, metal-semiconductor contacts, p-n junctions, and heterostructures. Device examples include bipolar transistors, MOSFETs, LEDs, and solar cells.

MPEN 6620 MicroFab and Nanotech (3)
Nano/micro-electromechanical devices (N/MEMS) require knowledge of a broad range of disciplines, from the fundamental physics of mechanics and electromagnetism to practical nano/microfabrication processes and techniques.

MPEN 6660 Special Topics (1-3)
Special Topics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MPEN 6720 Mechanic Behavior of Materials (3)
The course covers the general foundations of elasticity and plasticity theory, dislocation theory, and strengthening mechanisms. Basics of materials forming processes are studied. An overview for non-destructive testing of materials is taught. The course emphasis is on destructive mechanical testing of materials including; tension, torsion, hardness, fatigue and creep tests, in addition to fracture mechanics and failure analysis.

MPEN 6760 Thermodynamics of Materials (3)
The course covers the general foundation of both statistical thermodynamics and classical thermodynamics, including thermodynamics laws, auxiliary functions, and behavior of gases and solutions. In addition, special attention is dedicated to equilibria of reactions and phase diagrams of materials. Computer-based programs will be used to solve thermodynamics problems for complicated materials.

MPEN 6950 Engineers for Int'l Deve (1)
Engineers for International Development at Tulane University exists for students to participate in community-driven development programs worldwide through the design and implementation of sustainable engineering projects, while fostering responsible leadership. We work both internationally and locally to build and educate communities about their basic infrastructure systems such as drinking water, sanitation, and safe homes.

MPEN 7910 Research I (3)

MPEN 7920 Research II (3)

MPEN 7930 Research III (3)

MPEN 7940 Research IV (3)

MPEN 7951 Advanced Research I (3)

MPEN 7952 Advanced Research II (3)

MPEN 9000 Independent Study (0-3)
Course Limit: 99

MPEN 9980 Masters Research (3)
Research toward completion of a masters degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Math offered through SoPA (PAMT)

PAMT 1100 Quantitative Analysis (3)
This course delves into the processes used by mathematically-literate citizens and professionals in multiple industries to make optimal decisions in their lives and careers. Students will use technology (such as calculators, Microsoft Excel, Wolfram-Alpha, visual programming languages, and calculators) to create models, providing a rigorous way of simulating and analyzing our complex world. Topics may include probability, introductory statistics, expected value, linear and exponential regression, analysis of functions and their derivatives, and infinite series. Students will explore this content through participant-centered activities and performance-based analysis of real-world contexts based on their interests and careers. Knowledge of high-school algebra is suggested, though not required.

PAMT 1940 Math Transfer Credit (3)

PAMT 2910 Special Topics (0-3)
Special topics course as designed by visiting or permanent department faculty. For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

PAMT 2940 Math Transfer Credit (3)

Mathematics (MATH)

MATH 1001 College Mathematics Prep (1)
A five week review of algebra, trigonometry and other pre-calculus concepts relevant to success in calculus and statistics using an artificially intelligent assessment and learning system. This course is open only to students participating in the Newcomb-Tulane College Summer Experience program.

MATH 1005 Explore Experiment Math (3)
An introduction to selected topics in mathematics through inquiry-based discovery. Students will make novel calculations, search for patterns, formulate conjectures, and ultimately prove theorems based on their exploration. The emphasis of the course is on the search for structures in mathematics through guided discovery. This course is open only to high school students participating in the Tulane Science Scholars program.

MATH 1110 Probability & Statistics I (3)
Elementary probability theory with applications; random variables; distributions including a thorough discussion of the binomial, and normal distributions; central limit theorem; histograms; sampling distributions; confidence intervals; tests of hypotheses; linear models; regression and correlation; chi-square test; non-parametric statistics. 1110 is a prerequisite for 1120. These courses do not count toward the Mathematics B.S. requirement in SSE. MATH 1110 is mutually exclusive with MATH 1230. Students may receive credit for only one of MATH 1110 or 1230 in the undergraduate degree.

Corequisite(s): MATH 1111.

MATH 1111 Recitation for Prob & Stats (0)
This is a co-requisite recitation course for MATH 1110.

MATH 1150 Long Calculus I (3)
The material of Calculus 1210 is covered in two semesters, with diversions for topics in algebra, trigonometry, complex numbers as the need for these topics arises. Mathematics 1150 is a prerequisite for 1160. Students finishing the course sequence 1150-1160 may continue with 1220 or any other course having Calculus 1201 as a prerequisite. The combination of 1150 and 1160 may count as one course toward the B.S. degree requirement.

MATH 1160 Long Calculus II (3)
The material of Calculus 1210 is covered in two semesters, with diversions for topics in algebra, trigonometry, complex numbers as the need for these topics arises. Mathematics 1150 is a prerequisite for 1160. Students finishing the course sequence 1150-1160 may continue with 1220 or any other course having Calculus 1201 as a prerequisite. The combination of 1150 and 1160 may count as one course toward the B.S. degree requirement.

Prerequisite(s): MATH 1150.

MATH 1210 Calculus I (4)
Functions and their graphs, limits and continuity, derivatives and applications of derivatives, and introduction to the integral.

Corequisite(s): MATH 1211.

MATH 1211 Calculus I Recitation (0)
This is a co-requisite recitation course for MATH 1210.

MATH 1220 Calculus II (4)
Integration; exponential, logarithmic, and trigonometric functions; techniques of integration; mean value theorem; Taylor's Theorem and Taylor series; and infinite series. MATH 1220 is mutually exclusive with MATH 1310. Students may receive credit for only one of MATH 1220 or MATH 1310 in the undergraduate degree.

Prerequisite(s): MATH 1160 or 1210.
Corequisite(s): MATH 1221.

MATH 1221 Recitation for Calculus II (0)
This is a co-requisite recitation course for MATH 1220.

MATH 1230 Statistics For Scientists (4)
The objective of this course is to provide a thorough introduction to the statistical methods most likely to be encountered by scientists in practical research applications. Specific topics that will be covered in this course include probability axioms and counting techniques, discrete and continuous distributions, sampling methods and descriptive statistics, the Central Limit Theorem and its applications, confidence intervals, hypothesis testing, and linear regression. MATH 1230 is mutually exclusive with MATH 1110. Students may receive credit for only one of MATH 1110 or 1230 in the undergraduate degree. Only MATH 1230 counts towards the B.S. degree.

Prerequisite(s): (MATH 1210) or (MATH 1150 and 1160) or (MATH 1310).
Corequisite(s): MATH 1231.

MATH 1231 Stats for Scientists Recitation (0)
This is a co-requisite recitation course for MATH 1230.

MATH 1310 Consolidated Calculus (4)
A combined course in Calculus I and II for students with a background in Calculus I. Students receive credit for both this course and 1210 if they receive a B- or higher. MATH 1310 is mutually exclusive with MATH 1220. Students may receive credit for only one of MATH 1220 or MATH 1310 in the undergraduate degree.

Corequisite(s): MATH 1311.

MATH 1311 Consolidated Calculus 1 Rec. (0)
This is a co-requisite recitation course for MATH 1310.

MATH 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

MATH 2010 Math Modeling of World (3)
This course exposes students to the process of mathematical modeling as a way to describe, explain, understand, or predict situations arising in everyday life. Examples of such situations might include: the design of handicap ramps, estimating the number of sand bags needed to raise a levee a few feet, understanding and predicting the number of daylight hours at different places in the world, analyzing the consequences of child support payment adjustment formulas used by the states, etc. The modeling process emphasizes making assumptions, translating the empirical situation into mathematical language, drawing conclusions from the mathematical solution, interpreting and validating those conclusions in the context of the original situation and revising assumptions if necessary.

Prerequisite(s): MATH 1150, 1210, 1220, 1310 or 2210.

MATH 2170 Intro To Discrete Math (3)
This course is an introduction to several areas of mathematics that are particularly useful in computer science. The topics include an introduction to predicate and propositional logic, mathematical induction, combinatorics and counting, and discrete probability theory. In lieu of prerequisites please contact instructor for consideration.

Prerequisite(s): MATH 1210, 1310, 1150 or 1110.
Corequisite(s): CMPS 2171.

MATH 2171 Intro To Discrete Math Lab (0)
Co-requisite lab for MATH 2170.

Corequisite(s): MATH 2170.

MATH 2210 Calculus III (4)
A basic course in differential and integral calculus of several variables. Vectors in the plane and space. Vector functions, derivatives, arc length, curvature. Functions of several variables: continuity, partial derivatives, chain rule, gradient, optimization, Lagrange multipliers. Double and triple integrals: change of variables, polar coordinates, cylindrical and spherical coordinates, surface area. Vector fields: gradient, curl, divergence, line and surface integrals, Green's, Stokes', and Divergence theorems.

Prerequisite(s): MATH 1220 or 1310.
Corequisite(s): MATH 2211.

MATH 2211 Recitation for Calculus III (0)
This is a co-requisite recitation course for MATH 2210.

MATH 2240 Intro To Applied Math (4)
An introduction to the techniques of applied mathematics. The course combines an introduction to ordinary differential equations with linear algebra. Numerical and graphical techniques for finding both quantitative and qualitative information about solutions will be discussed and implemented on the computer. No programming experience is assumed. Note: MATH 2240 is mutually exclusive with MATH 4240. Students may receive credit for only one of MATH 2240 or MATH 4240 in the undergraduate degree.

Prerequisite(s): MATH 1220 or 1310.
Corequisite(s): MATH 2241.

MATH 2241 Recitation for Intro App Math (0)
This is a co-requisite recitation course for MATH 2240.

Corequisite(s): MATH 2240.

MATH 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

MATH 3050 Real Analysis I (3)
Introduction to analysis. Real numbers, limits, continuity, uniform continuity, sequences and series, compactness, convergence, Riemann integration. An in-depth treatment of the concepts underlying calculus.

Prerequisite(s): MATH 2210.
Corequisite(s): MATH 3051.

MATH 3051 Recitations for Real Analysis (0)
This is a co-requisite recitation course for MATH 3050.

MATH 3070 Intro To Probability (3)
An introduction to probability theory. Counting methods, conditional probability and independence. Discrete and continuous distributions, expected value, joint distributions and limit theorems. Prepares student for future work in probability and statistics.

Corequisite(s): MATH 3071.

MATH 3071 Intro to Probability Rec. (0)
Corequisite(s): MATH 3070.

MATH 3080 Intro to Statistical Inference (3)
Basics of statistical inference. Sampling distributions, parameter estimation, hypothesis testing, optimal estimates and tests. Maximum likelihood estimates and likelihood ratio tests. Data summary methods and categorical data analysis. Analysis of variance and introduction to linear regression.

Prerequisite(s): MATH 2210 and 3070.
Corequisite(s): MATH 3081.

MATH 3081 Recitations for Intro to Stat (0)
This is a co-requisite recitation course for MATH 3080.

MATH 3090 Linear Algebra (4)
An introduction to linear algebra emphasizing matrices and their applications. Gaussian elimination, determinants, vector spaces and linear transformations, orthogonality and projections, eigenvector problems, diagonalizability, Spectral Theorem, quadratic forms, applications. MATLAB is used as a computational tool.

Prerequisite(s): MATH 2210.
Corequisite(s): MATH 3091.

MATH 3091 Recitations for Linear Algebra (0)
This is a co-requisite recitation course for MATH 3090.

MATH 3110 Abstract Algebra I (3)
An introduction to abstract algebra. Elementary number theory and congruences. Basic group theory: groups, subgroups, normality, quotient groups, permutation groups. Ring theory: polynomial rings, unique factorization domains, elementary ideal theory. Introduction to field theory. Prerequisite(s): MATH 2210.

Prerequisite(s): MATH 2210.

MATH 3140 Experimental Mathematics (3)
The exploration of Mathematical tools in Symbolic Languages. Examples are taken from calculus, differential equations, and linear algebra. Prerequisite(s): MATH 1210, 1220 and 2210.

Prerequisite(s): MATH 1210, 1220 and 2210.

MATH 3200 Combinatorics (3)
Basics of combinatorics with emphasis on problem solving. Provability, pigeonhole principle, mathematical induction. Counting techniques, generating functions, recurrence relations, Polya's counting formula, a theorem of Ramsey. Prerequisite(s): (MATH 1210) and (MATH 1220) and (MATH 2210) or (MATH 3090) or (MATH 1310).

Prerequisite(s): (MATH 1210) and (MATH 1220) and (MATH 2210) or (MATH 3090) or (MATH 1310).

MATH 3280 Information Theory (3)
This introduction to information theory will address fundamental concepts, such as information, entropy, relative entropy, and mutual information. In addition to giving precise definitions of these concepts, the course will include a probabilistic approach based on equipartitions. Many of the applications of information will be discussed, including Shannon's basic theorems on channel capacity and related coding theorems. In addition to channels and channel capacity, the course will discuss applications of information theory to mathematics, statistics, and computer science. Prerequisite(s): MATH 3050, 3090 or 6090.

Prerequisite(s): MATH 3050, 3090 or 6090.

MATH 3310 Scientific Computing I (3)
Errors. Curve fitting and function approximation, least squares approximation, orthogonal polynomials, trigonometric polynomial approximation. Direct methods for linear equations. Iterative methods for nonlinear equations and systems of nonlinear equations. Interpolation by polynomials and piecewise polynomials. Numerical integration. Single-step and multi-step methods for initial-value problems for ordinary differential equations, variable step size. Current algorithms and software.

Prerequisite(s): (MATH 2210) and (MATH 2240) or (MATH 4240).

MATH 3650 Number Theory (3)
The subject of number theory is one of the oldest in mathematics. The course will cover some basic material and describe interesting applications. One of the recurrent themes is the realization that mathematics that was developed usually for its own sake, has found applications in many unexpected problems. Some of the topics covered in the class are Pythagorean triples, prime numbers, divisibility and the highest common divisor, linear diophantine equations, congruences, round-robin tournaments and perpetual calendars, multiple functions, perfect numbers, primitive roots, pseudo-random numbers, decimal fractions and continued fractions, quadratic reciprocity.

MATH 3660 Special Topics (1-3)
Special Topics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

MATH 3980 Senior Seminar (1)
Under faculty guidance, students will select a topic in current mathematical research, write an expository article on that topic, and give an oral presentation. This seminar is required of all mathematics majors who are not doing an Honors Project within the department.

MATH 3990 Senior Seminar (3)
Under faculty guidance, students will select a topic in current mathematical research, write an expository article on that topic, and give an oral presentation. This seminar is required of all mathematics majors who are not doing an Honors Project within the department.

MATH 4060 Real Analysis II (3)
An in-depth treatment of multivariable calculus. Extends the material covered in Mathematics 2210. Chain rule, inverse and implicit function theorems, Riemann integration in Euclidean n-space, Gauss-Green-Stokes theorems, applications.

Prerequisite(s): MATH 3050.

MATH 4120 Abstract Algebra II (3)
Abstract vector spaces, quotient spaces, linear transformations, dual spaces, determinants. Solvable groups. Field extensions, Galois theory, solvability of equations by radicals. Prerequisite(s): MATH 3090 and 3110.

Prerequisite(s): MATH 3090 and 3110.

MATH 4210 Differential Geometry (3)
Theory of plane and space curves including arc length, curvature, torsion, Frenet equations, surfaces in three-dimensional space. First and second fundamental forms, Gaussian and mean curvature, differentiable mappings of surfaces, curves on a surface, special surfaces. Prerequisite(s): MATH 3050 and 3090.

Prerequisite(s): MATH 3050 and 3090.

MATH 4240 Ordinary Differentl Equa (3)
Review of linear algebra, first-order equations (models, existence, uniqueness, Euler method, phase line, stability of equilibria), higher-order linear equations, Laplace transforms and applications, power series of solutions, linear first-order, systems (autonomous systems, phase plane), application of matrix normal forms, linearization and stability of nonlinear systems, bifurcation, Hopf bifurcation, limit cycles, Poincare-Bendixson theorem, partial differential equations (symmetric boundary-value problems on an interval, eigenvalue problems, eigenfunction expansion, initial-value problems in 1D). Note: MATH 4240 is mutually exclusive with MATH 2240. Students may receive credit for only one of MATH 2240 or MATH 4240 in the undergraduate degree.

Prerequisite(s): MATH 2210 and 3090.

MATH 4300 Complex Analysis (3)
The complex number system, complex integration and differentiation, conformal mapping, Cauchy's theorem, calculus of residues.

MATH 4410 Topology (3)
An introduction to topology. Elementary point set topology: topological spaces, compactness, connectedness, continuity, homeomorphisms, product and quotient spaces. Classification of surfaces and other geometric applications. Prerequisite(s): MATH 3050.

Prerequisite(s): MATH 3050.

MATH 4470 Analyt Method Appl Math (3)
Derivations of transport, heat/reaction-diffusion, wave, Poisson's equations; well-posedness; characteristics methods for first order PDE's; D'Alembert formula and conservation of energy for wave equations; propagation of waves; Fourier transforms; heat kernel, smoothing effect; maximum principles; Fourier series and Sturm-Liouville eigen-expansions; method of separation of variables, frequencies of wave equations, stable and unstable modes, long time behavior of heat equations; delta-function, fundamental solution of Laplace equation, Newton potential; Green's function and Poisson formula; Dirichlet Principle.

MATH 4560 Internship (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 4660 Special Topics (1-3)
Special Topics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 4900 Advanced Topics In Math (3)
This course covers a variety of advanced topics in mathematics and exposes students to recent developments not available in other parts of the mathematics curriculum. Topics covered will vary from semester to semester. Recent topics offered include Knot Theory and 3-Manifolds, Algebraic Combinatorics, Cardiac Modeling, Number Theory.

MATH 4910 Independent Study (1-3)
No more than four hours of 4910-4920 may be counted toward satisfying the major requirements. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 4920 Independent Study (1-3)
No more than four hours of 4910-4920 may be counted toward satisfying the major requirements. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

MATH 4990 Honors Thesis (3)
Honors thesis research, first semester. Register in department.

MATH 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): MATH 4990.

MATH 5380 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 5390 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 6020 Mathematical Statistics (3)
Thorough review of key distributions for probability and statistics, including the multivariate calculus needed to develop them. Full derivation of sampling distribution. Classical principles of inference including best tests and estimations. Methods of finding tests and estimators. Introduction to Bayesian estimators. Prerequisite(s): MATH 6070, 6080 and 7150.

Prerequisite(s): (MATH 6070 or 6070) and (MATH 6080 or 6080) and (MATH 7150 or 7150).

MATH 6030 Stochastic Processes (3)
Markov processes, Poisson processes, queueing models, introduction to Brownian Motion.

Prerequisite(s): MATH 3070.

MATH 6040 Linear Models (3)
Overview of multivariate analysis, theory of least squares linear regression, regression diagnostics, analysis of variance. Includes data modeling using statistical software.

Prerequisite(s): MATH 6090 and (MATH 6080 or 6020).

MATH 6050 Real Analysis I (3)
Introduction to analysis. Real numbers, limits, continuity, uniform continuity, sequences and series, compactness, convergence, Riemann integration. An in-depth treatment of the concepts underlying calculus.

Prerequisite(s): MATH 2210.
Corequisite(s): MATH 6051.

MATH 6051 Recitations for Real Analysis (0)
This is a co-requisite recitation course for MATH 6050.

Corequisite(s): MATH 6050.

MATH 6060 Real Analysis II (3)
An in-depth treatment of multivariable calculus. Extends the material covered in Mathematics 2210. Chain rule, inverse and implicit function theorems, Riemann integration in Euclidean n-space, Gauss-Green-Stokes theorems, applications.

MATH 6070 Intro To Probability (3)
An introduction to probability theory. Counting methods, conditional probability and independence. Discrete and continuous distributions, expected value, joint distributions and limit theorems. Prepares student for future work in probability and statistic

Corequisite(s): MATH 6071.

MATH 6071 Intro to Probability Rec (0)
Corequisite(s): MATH 6070.

MATH 6080 Intro to Statistical Inference (3)
Basics of Statistical inference. Sampling distributions, parameter estimation, hypothesis testing, optimal estimates and tests. Maximum likelihood estimates and likelihood ratio tests. Data summary methods, categorical data analysis. Analysis of variance and introduction to linear regression.

Corequisite(s): MATH 6081.

MATH 6081 Recitations for Intro to Stat (0)
This is a co-requisite recitation course for MATH 6080.

MATH 6090 Linear Algebra (3)
An introduction to linear algebra emphasizing matrices and their applications. Gaussian elimination, determinants, vector spaces and linear transformations, orthogonality and projections, eigenvector problems, diagonalizability, Spectral Theorem, quadrati

Corequisite(s): MATH 6091.

MATH 6091 Recitations for Linear Algebra (0)
This is a co-requisite recitation course for MATH 6090.

Corequisite(s): MATH 6090.

MATH 6110 Abstract Algebra I (3)
An introduction to abstract algebra. Elementary number theory and congruences. Basic group theory: groups, subgroups, normality, quotient groups, permutation groups. Ring theory: polynomial rings, unique factorization domains, elementary ideal theory. Int

MATH 6120 Abstract Algebra II (3)
Abstract vector spaces, quotient spaces, linear transformations, dual spaces, determinants. Solvable groups. Field extensions, Galois theory, solvability of equations by radicals.

MATH 6200 Combinatorics (3)
Basics of combinatorics with emphasis on problem solving. Provability, pigeonhole principle, mathematical induction. Counting techniques, generating functions, recurrence relations, Polya's counting formula, a theorem of Ramsey.

MATH 6210 Differential Geometry (3)
Theory of plane and space curves including arc length, curvature, torsion, Frenet equations, surfaces in three-dimensional space. First and second fundamental forms, Gaussian and mean curvature, differentiable mappings of surfaces, curves on a surface, sp

MATH 6240 Ordinary Differentl Equa (3)
Review of linear algebra, first-order equations (models, existence, uniqueness, Euler method, phase line, stability of equilibria), higher-order linear equations, Laplace transforms and applications, power series of solutions, linear first-order, systems (autonomous systems, phase plane), application of matrix normal forms, linearization and stability of nonlinearsystems, bifurcation, Hopf bifurcation, limit cycles, Poincare-Bendixson theorem, partial differential equations (symmetric boundary-value problems on an interval, eigenvalue problems, eigenfunction expansion, initial-value problems in 1D). Students may not receive credit for both 2240 and 4240.

MATH 6280 Information Theory (3)
This introduction to information theory will address fundamental concepts, such as information, entropy, relative entropy, and mutual information. In addition to giving precise definitions of these concepts, the course will include a probabilistic approac

MATH 6300 Complex Analysis I (3)
The complex number system, complex integration and differentiation, conformal mapping, Cauchy's theorem, calculus of residues.

MATH 6310 Scientific Computing I (3)
Errors. Curve fitting and function approximation, least squares approximation, orthogonal polynomials, trigonometric polynomial approximation. Direct methods for linear equations. Iterative methods for nonlinear equations and systems of nonlinear equation

MATH 6350 Optimization (3)
Constrained and unconstrained non-linear optimization; Linear programming, combinatorial optimization as time allows. Emphasis is on realistic problems whose solution requires computers, using Maple or Mathematica.

MATH 6370 Time Series Analysis (3)
This course provides an introduction to time series analysis at the graduate level. The course is about modeling based on three main families of techniques: (i) the classical decomposition into trend, seasonal and noise components; (ii) ARIMA processes and the Box and Jenkins methodology; (iii) Fourier analysis. If time permits, other possible topics include state space modeling and fractional processes. The course is focused on the theory, but some key examples and applications are also covered and implemented in the software package R.

Prerequisite(s): MATH 6070 and 6080 and (MATH 6040 or 7260).

MATH 6470 Analy Methods Appl Math (3)

MATH 6510 Topology I (3)
Point set topology. Connectedness, product and quotient spaces, separation properties, metric spaces. Classification of compact connected surfaces. Homotopy. Fundamental group and covering spaces. Singular and simplicial homology. Eilenberg-Steenrod axioms. Computational techniques, including long exact sequences. Mayer-Vietoris sequences, excision, and cellular chain complexes. Introduction to singular cohomology.

MATH 6520 Topology II (3)
Point set topology. Connectedness, product and quotient spaces, separation properties, metric spaces. Classification of compact connected surfaces. Homotopy. Fundamental group and covering spaces. Singular and simplicial homology. Eilenberg-Steenrod axioms. Computational techniques, including long exact sequences. Mayer-Vietoris sequences, excision, and cellular chain complexes. Introduction to singular cohomology.

Prerequisite(s): MATH 3050 and 4060.

MATH 6550 Differential Geometry I (3)
Differentiable manifolds. Vector fields and flows. Tangent bundles. Frobenius theorem. Tensor fields. Differential forms, Lie derivatives. Integration and deRham's theorem. Riemannian metrics, connections, curvature, parallel translation, geodesics, and submanifolds, including surfaces. First and second variation formulas, Jacobi fields, Lie groups. The Maurer-Cartan equation. Isometries, principal bundles, symmetric spaces, K&aumlhler geometry.

MATH 6560 Differential Geometry II (3)
Differentiable manifolds. Vector fields and flows. Tangent bundles. Frobenius theorem. Tensor fields. Differential forms, Lie derivatives. Integration and deRham's theorem. Riemannian metrics, connections, curvature, parallel translation, geodesics, and submanifolds, including surfaces. First and second variation formulas, Jacobi fields, Lie groups. The Maurer-Cartan equation. Isometries, principal bundles, symmetric spaces, Kähler geometry.

MATH 6610 Algebra I (3)
Vector spaces: matrices, eigenvalues, Jordan canonical form. Elementary number theory: primes, congruences, function, linear Diophantine equations, Pythagorean triples. Group theory: cosets, normal subgroups, homomorphisms, permutation groups, theorems of Lagrange, Cayley, Jordan-Hölder, Sylow. Finite abelian groups, free groups, presentations. Ring theory: prime and maximal ideals, fields of quotients, matrix and Noetherian rings. Fields: algebraic and transcendental extensions, survey of Galois theory. Modules and algebras: exact sequences, projective and injective and free modules, hom and tensor products, group algebras, finite dimensional algebras. Categories: axioms, subobjects, kernels, limits and colimits, functors and adjoint functors.

MATH 6620 Algebra II (3)
Vector spaces: matrices, eigenvalues, Jordan canonical form. Elementary number theory: primes, congruences, function, linear Diophantine equations, Pythagorean triples. Group theory: cosets, normal subgroups, homomorphisms, permutation groups, theorems of Lagrange, Cayley, Jordan-Hölder Sylow. Finite abelian groups, free groups, presentations. Ring theory: prime and maximal ideals, fields of quotients, matrix and Noetherian rings. Fields: algebraic and transcendental extensions, survey of Galois theory. Modules and algebras: exact sequences, projective and injective and free modules, hom and tensor products, group algebras, finite dimensional algebras. Categories: axioms, subobjects, kernels, limits and colimits, functors and adjoint functors.

Prerequisite(s): MATH 3090 and 3110.

MATH 6660 Special Topics (1-3)
Special Topics. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 6710 Analysis I (3)
Lebesgue measure on R. Measurable functions (including Lusin's and Egoroff's theorems). The Lebesgue integral. Monotone and dominated convergence theorems. Radon-Nikodym Theorem. Differentiation: bounded variation, absolute continuity, and the fundamental theorem of calculus. Measure spaces and the general Lebesgue integral (including summation and topics in Rn such as the Lebesgue differentiation theorem). Lp spaces and Banach spaces. Hahn-Banach, open mapping, and uniform boundedness theorems. Hilbert space. Representation of linear functionals. Completeness and compactness. Compact operators, integral equations, applications to differential equations, self-adjoint operators, unbounded operators.

MATH 6720 Analysis II (3)
Lebesgue measure on R. Measurable functions (including Lusin's and Egoroff's theorems). The Lebesgue integral. Monotone and dominated convergence theorems. Radon-Nikodym Theorem. Differentiation: bounded variation, absolute continuity, and the fundamental theorem of calculus. Measure spaces and the general Lebesgue integral (including summation and topics in Rn such as the Lebesgue differentiation theorem). Lp spaces and Banach spaces. Hahn-Banach, open mapping, and uniform boundedness theorems. Hilbert space. Representation of linear functionals. Completeness and compactness. Compact operators, integral equations, applications to differential equations, self-adjoint operators, unbounded operators.

Prerequisite(s): MATH 3050, 3090 and 4060.

MATH 6810 Applied Math I (3)
Formulating mathematical models. Introduction to differential equations and integral equations. Fourier series and transforms, Laplace transforms. Generating functions. Dimensional analysis and scaling. Regular and singular perturbations. Asymptotic expansions. Boundary layers. The calculus of variations and optimization theory. Similarity solutions. Difference equations. Stability and bifurcation. Introduction to probability and statistics, and applications.

MATH 6820 Applied Math II (3)
Formulating mathematical models. Introduction to differential equations and integral equations. Fourier series and transforms, Laplace transforms. Generating functions. Dimensional analysis and scaling. Regular and singular perturbations. Asymptotic expansions. Boundary layers. The calculus of variations and optimization theory. Similarity solutions. Difference equations. Stability and bifurcation. Introduction to probability and statistics, and applications.

MATH 6940 Transfer Coursework (0-20)
Transfer coursework at the 6000 level. Departmental approval required.

Maximum Hours: 99

MATH 7001 Math Teaching Training (1)
An interactive seminar to prepare students to teach mathematics at the college level. Topics covered will include discussion of practical issues such as how to keep a class engaged, how to prepare and grade assessments, how to prepare for class meetings, as well as discussion of theoretical issues such as what a teacher should be trying to achieve in the classroom, current understanding of how students learn best, and evaluating the effectiveness of assessments of student performance.

MATH 7010 Topology I (3)
Point set topology. Connectedness, product and quotient spaces, separation properties, metric spaces. Classification of compact connected surfaces. Homotopy. Fundamental group and covering spaces. Singular and simplicial homology. Eilenberg-Steenrod axioms. Computational techniques, including long exact sequences. Mayer-Vietoris sequences, excision, and cellular chain complexes. Introduction to singular cohomology.

MATH 7020 Topology II (3)
Point set topology. Connectedness, product and quotient spaces, separation properties, metric spaces. Classification of compact connected surfaces. Homotopy. Fundamental group and covering spaces. Singular and simplicial homology. Eilenberg-Steenrod axioms. Computational techniques, including long exact sequences. Mayer-Vietoris sequences, excision, and cellular chain complexes. Introduction to singular cohomology.

MATH 7030 Stochastic Processes (3)
Markov processes, Poisson processes, queueing models, introduction to Brownian Motion.

MATH 7110 Algebra I (3)
Vector spaces: matrices, eigenvalues, Jordan canonical form. Elementary number theory: primes, congruences, function, linear Diophantine equations, Pythagorean triples. Group theory: cosets, normal subgroups, homomorphisms, permutation groups, theorems of Lagrange, Cayley, Jordan-Hölder , Sylow. Finite abelian groups, free groups, presentations. Ring theory: prime and maximal ideals, fields of quotients, matrix and Noetherian rings. Fields: algebraic and transcendental extensions, survey of Galois theory. Modules and algebras: exact sequences, projective and injective and free modules, hom and tensor products, group algebras, finite dimensional algebras. Categories: axioms, subobjects, kernels, limits and colimits, functors and adjoint functors.

MATH 7120 Algebra II (3)
Vector spaces: matrices, eigenvalues, Jordan canonical form. Elementary number theory: primes, congruences, function, linear Diophantine equations, Pythagorean triples. Group theory: cosets, normal subgroups, homomorphisms, permutation groups, theorems of Lagrange, Cayley, Jordan-Hölder , Sylow. Finite abelian groups, free groups, presentations. Ring theory: prime and maximal ideals, fields of quotients, matrix and Noetherian rings. Fields: algebraic and transcendental extensions, survey of Galois theory. Modules and algebras: exact sequences, projective and injective and free modules, hom and tensor products, group algebras, finite dimensional algebras. Categories: axioms, subobjects, kernels, limits and colimits, functors and adjoint functors.

MATH 7150 Probability Theory I (3)

MATH 7210 Analysis I (3)
Lebesgue measure on R. Measurable functions (including Lusin's and Egoroff's theorems). The Lebesgue integral. Monotone and dominated convergence theorems. Radon-Nikodym Theorem. Differentiation: bounded variation, absolute continuity, and the fundamental

MATH 7220 Analysis II (3)
Lebesgue measure on R. Measurable functions (including Lusin's and Egoroff's theorems). The Lebesgue integral. Monotone and dominated convergence theorems. Radon-Nikodym Theorem. Differentiation: bounded variation, absolute continuity, and the fundamental

MATH 7240 Mathematical Statistics (3)
Consists of Math 6020 and additional meetings and readings to cover advanced limit theorems and foundations of mathematical statistics. Prerequisite(s): MATH 6070, 6080 and 7150.

Prerequisite(s): (MATH 6070 or 6070) and (MATH 6080 or 6080) and (MATH 7150 or 7150).

MATH 7260 Linear Models (3)
Overview of multivariate analysis, theory of least squares linear regression, regression diagnostics, analysis of variance. Includes data modeling using statistical software.

MATH 7291 Algebraic Geometry I (3)
This is the first semester of a second year course for graduate students with research interest in Algebraic Geometry and related areas. The course will give students a necessary background preparation for research in Algebraic Geometry or to read and understand papers in this area. Topics in this course include: affine and projective varieties, morphisms of varieties, nonsingular varieties, and category theory.

MATH 7292 Algebraic Geometry II (3)
This is the second semester of a second year course for graduate students with research interest in Algebraic Geometry and related areas. The course will give students a necessary background preparation for research in Algebraic Geometry or to read and understand papers in this area. Topics in this course include: sheaves and schemes, line bundles and divisors, projective morphisms, and applications in toric geometry, homogeneous spaces, and algebraic group embeddings.

MATH 7310 Applied Mathematics I (3)
This is a first year graduate course in Applied Mathematics. A solid working knowledge of linear algebra and advanced calculus is the necessary background for this class. The topics covered include a mix of analytical and numerical methods that are used to understand models described by differential equations. We will emphasize applications from science and engineering, as they are the driving force behind each of the topics addressed.

MATH 7320 Applied Math II (3)
This is a first year graduate course in Applied Mathematics. A solid working knowledge of linear algebra and advanced calculus is the necessary background for this class. The topics covered include a mix of analytical and numerical methods that are used to understand models described by differential equations. We will emphasize applications from science and engineering, as they are the driving force behind each of the topics addressed.

MATH 7350 Scientific Computing I (3)
Introduction to numerical analysis: well-posedness and condition number, stability and convergence of numerical methods, a priori and a-posteriori analysis, source of error in computational models, machine representation of numbers. Linear operators on normed spaces. Root finding for nonlinear equations. Polynomial interpolation. Numerical integration. Orthogonal polynomials in approximation theory. Numerical solution of ordinary differential equations.

MATH 7360 Data Analysis (3)
This course covers the statistical analysis of datasets using R software package. The R environment, which is an Open Source system based on the S Language, is one of the most versatile and powerful tools available for statistical data analysis, and is widely used in both academic and industrial research. Key topics include graphical methods, generalized linear models, clustering, classification, time series analysis and spatial statistics. No prior knowledge of R is required.

Prerequisite(s): MATH 6020 and 6080.

MATH 7370 Time Series Analysis (3)
This course provides an introduction to time series analysis at the graduate level. The course is about modeling based on three main families of techniques: (i) the classical decomposition into trend, seasonal and noise components; (ii) ARIMA processes and the Box and Jenkins methodology; (iii) Fourier analysis. If time permits, other possible topics include state space modeling and fractional processes. The course is focused on the theory, but some key examples and applications are also covered and implemented in the software package R.

MATH 7510 Differential Geometry I (3)
Differential manifolds. Vector fields and flows. Tangent bundles. Frobenius theorem. Tensor fields. Differential forms, Lie derivatives. Integration and deRham's theorem. Riemannian metrics, connections, curvature, parallel translation, geodesics, and submanifolds, including surfaces. First and second variation formulas, Jacobi fields, Lie groups. The Maurer-Cartan equation. Isometries, principal bundles, symmetric spaces, Kähler geometry.

MATH 7520 Differential Geometry II (3)
Differential manifolds. Vector fields and flows. Tangent bundles. Frobenius theorem. Tensor fields. Differential forms, Lie derivatives. Integration and deRham's theorem. Riemannian metrics, connections, curvature, parallel translation, geodesics, and submanifolds, including surfaces. First and second variation formulas, Jacobi fields, Lie groups. The Maurer-Cartan equation. Isometries, principal bundles, symmetric spaces, Kähler geometry.

MATH 7530 Partial Diff Equations I (3)
Classical weak and strong maximum principles for 2nd order elliptic and parabolic equations, Hopf boundary point lemma, and their applications. Sobolev spaces, weak derivatives, approximation, density theorem, Sobolev inequalities, Kondrachov compact imbedding. L2 theory for second order elliptic equations, existence via Lax-Milgram Theorem, Fredholm alternative, a brief introduction to L2 estimates, Harnack inequality, eigenexpansion. L2 theory for second order parabolic and hyperbolic equations, existence via Galerkin method, uniqueness and regularity via energy method. Semigroup theory applied to second order parabolic and hyperbolic equations. A brief introduction to elliptic and parabolic regularity theory, the Lp and Schauder estimates. Nonlinear elliptic equations, variational methods, method of upper and lower solutions, fixed point method, bifurcation method. Nonlinear parabolic equations, global existence, stability of steady states, traveling wave solutions. Conservation laws, Rankine-Hugoniot jump condition, uniqueness issue, entropy condition, Riemann problem for Burger's equation, p-systems.

MATH 7540 Partial Diff Equitns II (3)
A brief introduction to elliptic and parabolic regularity theory, the L^p and Schauder estimates. Nonlinear elliptic equations, variational methods, methods of upper and lower solutions, fixed point method, bifurcation method. Nonlinear parabolic equations, global existence, stability of steady states, traveling wave solutions. Conservation laws, Rankine-Hugonoit jump condition, uniqueness issue,, entropy condition, Reimann problem for Burger's equation and p-systems.

MATH 7550 Probability Theory II (3)
Various types of convergence, independent increments, stable laws, central limit problem. Central limit theorems, x^2 distribution, contingency tables. Sampling distributions for normal populations (t, x^2, F). Estimation of parameters: minimum variance, maximum likelihood, sufficiency, nonparametric estimation. Hypothesis testing: Neyman-Pearson lemmas, general linear models, analysis of variances and covariance, regression. Introduction to time series, sampling design, and Bayesian theory.

MATH 7570 Scientific Computatn II (3)
Floating point arithmetic (limitations and pitfalls). Numerical linear algebra, solving linear system by direct and iterative methods, eigenvalue problems, singular value decompositions, numerical integrations, interpolations. Unconstrained optimization.

MATH 7580 Scientific Computing III (3)
Numerical ODE, both initial and boundary value problems. Numerical PDE. Introduction to fluid dynamics and other areas of application.

Prerequisite(s): MATH 7570.

MATH 7710 Topics In Algebra (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 7711 Topics in Algebra (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 7712 Topics in Algebra (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 7713 Topics in Algebra (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 7714 Topics in Algebra (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 7715 Topics in Algebra (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 7720 Topics In Analysis (3)

MATH 7730 Topics In Applied Math (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 7731 Topics in Applied Math (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 7732 Topics in Applied Math (3)

MATH 7740 Topics In Computation (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 7750 Topics/Differential Equa (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 7760 Topics In Geometry (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 7770 Topics/Probability&Stats (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 7780 Topics/Theoret. Comp Sci (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 7790 Topics In Topology (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 7940 Transfer Credit-Grad (1-12)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 7980 Reading and Research (1-9)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 7990 Advanced Math (1-9)

MATH 9980 Masters Research (3)
Research toward completion of a masters degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MATH 9990 Dissertation Research (3)
Research toward completion of a doctoral degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MD - Anesthesiology (ANES)

ANES 4000 Anesthesiology (4)

Maximum Hours: 99

ANES 4020 Basics of Anesthesiology (2)
This course is an introductory course to the practice of Anesthesiology. Students participating in this rotation will be introduced to the most common anesthesia subspecialties including General Anesthesia, Obstetric Anesthesia, Regional Anesthesia, and the Preoperative evaluation process. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANES 4021 Advanced Anesthesiology (2)
This course is an advanced course to the practice of Anesthesiology. Students participating in this rotation will be introduced to the advanced anesthesia subspecialties including Cardiac Anesthesia, Neuro Anesthesia, and Transplant Anesthesia. Students will also take part in basic anesthesia cases and the preoperative evaluation process.

ANES 4034 Point of Care Ultrasound (2)

ANES 4040 Anesthesiology Research (4)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANES 5000 Introduction To Anesthesiology (1)
This elective introduces medical students to the Anesthesiology specialty. The course includes differing combinations of classroom problem-based case discussions, group lectures with other students or residents, and visits to the simulation center and operating rooms. Operating rooms and the simulation center are where students are provided with hands-on experience with endotracheal intubation and the placement of intravenous lines. Supervision is by residents and/or attendings. Discussion topics might include airway management, general vs. regional anesthetic techniques, preoperative & postoperative assessment, intraoperative monitoring, pharmacology, cardiovascular and pulmonary physiology, and co-existing disease, as well as anesthetic complications such as awareness during general anesthesia, malignant hyperthermia, regional anesthetic mishaps, and failed intubation. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANES 5500 Clinical Preceptorship - Anes (1)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANES 5540 Anesthesiology Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANES 9020 ANES Visiting Student (2)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MD - Biochemistry (BIOC)

BIOC 1003 Metabolic Biochemistry (5)

BIOC 1004 Cellular Biochemistry (2)

BIOC 1010 Biochemistry (7)
Biochemical understanding of proteins and nucleic acids is fueling a revolution in medicine, demonstrating how the basic principles of biochemical structure govern molecular regulation in normal human health or malfunction in disease. Medical Biochemistry at Tulane University School of Medicine divides its focus into two sets of broad topics. Cellular Biochemistry focuses upon the molecular and cellular level of biochemistry, providing information about how cell organelles and structures function. Metabolic Biochemistry focuses upon biochemical pathways involved in intermediary metabolism. Both stress normal function and why disease states occur if these functions are abrogated. In this manner students can appreciate the relevance of biochemical structure and function. Numerous clinical cases are provided, relating disease states to biochemistry, to help students integrate complex disease states viewed from a cellular stand point.

BIOC 1111 Biochemistry Summer Course (5)

MD - Brain & Behavior (BRBH)

BRBH 2006 Brain, Mind and Behavior (6)
The Brain, Mind, and Behavior course is an integration of neuroscience and its application in pre-clerkship neurology and psychiatry.

MD - Clinical Diagnosis (CLDG)

CLDG 2004 Clinical Diagnosis (3)
Clinical Diagnosis is a required, year-long course for sophomore medical students. It is designed to enhance history-taking skills while introducing the student to both normal and abnormal exam findings. The course is inter-digitated with the mechanisms of disease course and is, therefore, organ systems-based. This allows the student to approach the patient's exam with an understanding of the underlying pathophysiology, thus reinforcing the principles of basic science at the bedside. In addition to the history and physical exam sessions with the preceptor, the student will be introduced to statistics and evidence-based medicine, clinical reasoning sessions, SP FEX sessions, and SIM Center activities. There are also ward preparation sessions which present and allow for group discussion of ethical issues which the students may face as clinical clerks.

MD - Dermatology (DERM)

DERM 4000 Dermatology (4)
The goal of the dermatology elective is to provide fundamental dermatology skills in medical dermatology, surgical dermatology, pediatric dermatology and dermatopathology. The student will participate in clinics, didactic lectures, Kodachrome sessions, and journal clubs. Students are expected to complete the American Academy of Dermatology's Basic Derm Curriculum. Students on the 4-week rotation will be expected to give a 15-minute oral presentation at the conclusion of their rotation. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

DERM 4020 Dermatology (2)
The goal of the dermatology elective is to provide fundamental dermatology skills in medical dermatology, surgical dermatology, pediatric dermatology and dermatopathology. The student will participate in clinics, didactic lectures, Kodachrome sessions, and journal clubs. Students are expected to complete the American Academy of Dermatology's Basic Derm Curriculum. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

DERM 4040 Dermatology Research (4)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

DERM 5000 Introduction to Dermatology (1)

DERM 5500 Clinical Preceptorship - Derm (1)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

DERM 5540 Dermatology Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

DERM 9000 Dermatology Visiting Student (4)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

DERM 9020 Dermatology Visiting Student (2)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MD - Emergency Medicine (EMER)

EMER 4000 Emergency Medicine (4)
Emergency Medicine in New Orleans is a fascinating and challenging blend of fast-paced patient care, hands-on learning, multidisciplinary team interactions, and a strong focus on the social determinants of health. In Advanced Emergency Medicine, students will obtain insight into and experience with the principles and practice of emergency medicine and trauma care; gain knowledge and skills in the evaluation and treatment of the acutely ill undifferentiated patient; be exposed to a variety of procedural experiences; and explore the variety of subspecialties and career options in Emergency Medicine. The 4-wk EMER4000 elective is open ONLY to students who intend to match in EMER. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EMER 4020 Emergency Medicine (2)
Emergency Medicine (EM) is a broad, complex discipline with a wealth of patient encounters unmatched by most other specialties. Evaluation of the undifferentiated patient – that is, figuring out who is truly “sick” or “not sick” – is one of the most elusive yet important skills for any physician. Through this rotation, we aim to teach you basic skills in acute medical care, including simple and common procedures, and provide you with an evidence-based foundation for approaching patient care. Furthermore, by one-on-one interactions with faculty and residents, we hope to illustrate to you that every patient encounter can result in both formal and informal teaching and education. Evidence-based learning should occur as often as possible during the course of your shift. Finally, we intend to provide you with a healthy understanding of how a modern ED and trauma unit operates. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MD - Family Medicine (FAMY)

FAMY 3000 Family Medicine (6)
The family medicine clerkship is a six-week required course for third-year medical students. Clerkship students are paired with a community family medicine physician "preceptor." Preceptors are board-eligible family medicine physicians who volunteer their time to mentor Tulane medical students during the clerkship. Students work one-on-one with their preceptor to learn the essentials of family medicine through direct patient care. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 3006 Family Medicine (6)

FAMY 3040 Family Medicine Research (4)
An opportunity for students interested in Family Medicine and/or primary care research to learn about research topics and methods appropriate to primary care research. The student may develop a research proposal and protocol, conduct a systematic review of the literature, conduct a research project under faculty supervision, or participate in research underway in the Dept of Family & Community Medicine. Research related to prevention, physical activity, healthy eating, weight loss, or domestic violence is encouraged. Other topics may be considered.

Maximum Hours: 99

FAMY 3500 FAMY Acting Internship (4)
Hands-on, ward-based inpatient experience on a Family MEDICINE hospital service in an approved academic program under the supervision of Tulane Clinical faculty. The experience is equivalent to that of a FAMILY MEDICINE intern, but with fewer patients. Patients are of all ages and both genders. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 4020 Family Medicine (2)
This is a clinical, ambulatory rotation during which students adopt their preceptor’s schedule and community engagements and meant to further our students’ family medicine experiences within the community. This rotation is predominantly outpatient with attention to chronic and acute conditions and longitudinal care across a wide range of patients, utilizing the patient-centered interview, and can include aspects of the business of medicine within a changing healthcare system and community projects, where possible. Students are evaluated via observation, leading to a final evaluation, and will strengthen their history and physical-taking, differential diagnoses, and pharmaceutical knowledge, all connected to evidence-based medicine. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 4021 Hospice (2)
This is a home healthcare elective, wherein the student rotates with a hospice professional in making home visits, exposing him/her to end of life care and the empathy, costs, and family dynamics that go with it. The student regularly consults with RN’s and the director of the course. This is a daily elective that runs for two weeks and can serve as a complement to the FM clerkship or serve as a T4 experience that showcases a unique and necessary part of primary care. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 4022 Spanish Clinical Elective (2)
This is a clinical, ambulatory rotation during which students adopt their preceptor’s schedule and community engagements and utilize their medical Spanish. It is predominantly outpatient with attention to chronic and acute conditions and longitudinal care across a wide range of patients, utilizing the patient-centered interview, and can include aspects of the business of medicine within a changing healthcare system. Students are evaluated via observation, leading to a final evaluation. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 4024 Healthcare Law for Physicians (2)

FAMY 4040 Family Medicine (4)
This is a clinical, ambulatory rotation during which students adopt their preceptor’s schedule and community engagements and meant to further our students’ family medicine experiences within the community. This rotation is predominantly outpatient with attention to chronic and acute conditions and longitudinal care across a wide range of patients, utilizing the patient-centered interview, and can include aspects of the business of medicine within a changing healthcare system and community projects, where possible. Students are evaluated via observation, leading to a final evaluation, and will strengthen their history and physical-taking, differential diagnoses, and pharmaceutical knowledge, all connected to evidence-based medicine. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 4041 Hospice (4)
This is a home healthcare elective, wherein the student rotates with a hospice professional in making home visits, exposing him/her to end of life care and the empathy, costs, and family dynamics that go with it. The student regularly consults with RN's and the director of the course. This is a daily elective that runs for two weeks and can serve as a complement to the FM clerkship or serve as a T4 experience that showcases a unique and necessary part of primary care. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 4042 Spanish Clinical Elective (4)
This is a clinical, ambulatory rotation during which students adopt their preceptor's schedule and community engagements and utilize their medical Spanish. It is predominantly outpatient with attention to chronic and acute conditions and longitudinal care across a wide range of patients, utilizing the patient-centered interview, and can include aspects of the business of medicine within a changing healthcare system. Students are evaluated via observation, leading to a final evaluation. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 4043 Medical Ethics in Geriatrics (4)

FAMY 4121 Community Medicine (2)
A basic understanding of the public health, community medicine and social determinants of health are essential for any medical student. Medicine is moving more and more in the direction of population management. Population health and public health is an issue that needs to be addressed in medicine from the national policy level, healthcare system level, community level, clinic level, and even the individual patient level. This rotation will provide a basic introduction to the concepts of public health and community medicine as they apply to physicians today. Students will leave this rotation with an understanding of the importance of population medicine and public health. They will also understand how to begin to incorporate the basic concepts of public health and population management into their future practice. These concepts include but are not limited to epidemiology, biostatistics, health systems management, emergency preparedness, outbreak investigations, community health, injury prevention, mental health, and environmental health. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 4140 Community Medicine (4)
A basic understanding of the public health, community medicine and social determinants of health are essential for any medical student. Medicine is moving more and more in the direction of population management. Population health and public health is an issue that needs to be addressed in medicine from the national policy level, healthcare system level, community level, clinic level, and even the individual patient level. This rotation will provide a basic introduction to the concepts of public health and community medicine as they apply to physicians today. Students will leave this rotation with an understanding of the importance of population medicine and public health. They will also understand how to begin to incorporate the basic concepts of public health and population management into their future practice. These concepts include but are not limited to epidemiology, biostatistics, health systems management, emergency preparedness, outbreak investigations, community health, injury prevention, mental health, and environmental health. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 4520 Rural Montana Medicine (2)
This is a clinical, ambulatory rotation during which students adopt their preceptor's schedule and community engagements in rural Ennis, MT. It is predominantly outpatient with attention to chronic and acute conditions and longitudinal care across a wide range of patients, utilizing the patient-centered interview, and can include aspects of the business of medicine within a changing healthcare system. Students are evaluated via observation, leading to a final evaluation. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 4540 Rural Montana Medicine (4)
This is a clinical, ambulatory rotation during which students adopt their preceptor's schedule and community engagements in rural Ennis, MT. It is predominantly outpatient with attention to chronic and acute conditions and longitudinal care across a wide range of patients, utilizing the patient-centered interview, and can include aspects of the business of medicine within a changing healthcare system. Students are evaluated via observation, leading to a final evaluation. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 4800 International (8)
The global health elective is an opportunity to experience first-hand the practice of medicine in a unique, underserved, international setting. Students will gain a meaningful appreciation of the challenges faced by providing healthcare in a resource limited setting as well as experience the rewards of doing so. This rotation is particularly well-suited to the student–physician interested in rural health care, community health and primary care or in the socioeconomics of medical care around the world. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 4840 International (4)
The global health elective is an opportunity to experience first-hand the practice of medicine in a unique, underserved, international setting. Students will gain a meaningful appreciation of the challenges faced by providing healthcare in a resource limited setting as well as experience the rewards of doing so. This rotation is particularly well-suited to the student–physician interested in rural health care, community health and primary care or in the socioeconomics of medical care around the world. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 5001 Autonomy in the Clinical Rel. (1)
Autonomy is a cornerstone value of medical ethics. Even so, there is widespread disagreement regarding the nature of autonomy, what it means to respect the autonomy of others, and autonomy's proper role – as well as its limits – in medicine. This course provides students an opportunity to explore these issues and how they affect the students' professional lives. It begins with a treatment of the various theories of autonomy. It then moves on to such questions as: Does respecting patient autonomy require providing patients with whatever treatment they wish? How do we respect the autonomy of patients who can no longer make autonomous decisions of their own? Does physician autonomy justify withholding medically indicated interventions to which the physician has moral objections? Students will have the opportunity to wrestle with these and other questions in an open, supportive, discussion-based setting. Doing so will provide students with an understanding of important issues in professionalism and patient care which will be valuable for their Step 2 exams.

FAMY 5002 Bioethics and Film (1)

FAMY 5003 Clinical Research Ethics (1)

FAMY 5004 Stories in Order to Live (1)

FAMY 5005 Illness as Metaphor (1)

FAMY 5006 Healthcare Law for Physicians (1)

FAMY 5007 Current Controversies in Bioethics 1 (1)
This course examines a wide variety of controversial issues that arise within bioethics. Part I of the course focuses on conceptual controversies relating to disease, illness, and death, and the practical issues of end of life care involved in euthanasia/assisted suicide. Part II examines problems that challenge principles of human dignity. Part III examines genetics. Finally, Part IV concerns problems relating to social justice.

FAMY 5008 Current Controversies in Bioethics 2 (1)
This course examines a wide variety of controversial issues that arise within bioethics. Part I of the course focuses on conceptual controversies relating to disease, illness, and death, and the practical issues of end of life care involved in euthanasia/assisted suicide. Part II examines problems that challenge principles of human dignity. Part III examines genetics. Finally, Part IV concerns problems relating to social justice.

FAMY 5051 Health Care Policy and Reform (1)
The vision of the health policy elective is to educate and facilitate action about local and national health policy issues among Tulane medical students and the larger New Orleans community. We hope to spur thought, dialogue, and involvement that will improve access to and quality of health care, leading to better health outcomes. By exposing students to health policy issues now, we hope they will see the importance of getting involved in policy-making and advocacy and will continue to stay informed and engaged as practicing physicians who advocate on their patients' behalf. We hope that this elective will serve to spur positive change in health care policy both presently and long-term. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 5052 Tibetan Refugee Health (1)
This elective is a 2 week international rotation in Dharmsala, India, where students will gain experience working in an underserved global health setting, while providing health services to Tibetan refugees. Daily activities will include medical assessments of refugees, team meetings with attending physician, lectures by various local medical experts, tours of local medical facilities, and opportunities to learn from local practitioners. Students will be supervised by a board certified physician during the rotation. The 2 week elective will be followed by an optional 1 week of organized travel to experience further cultural immersion. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 5200 Art of Observation (1)

FAMY 5500 Clinical Preceptorship - Fam M (1)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 5551 Health and Human Rights (1)
This course is designed to provide a forum for discussion of pertinent issues in global health and human rights and to motivate students to become active advocates for their resolution. Students will participate in weekly discussions with local and national experts in public health, clinical medicine, and health sciences research who are also strong advocates for human rights. The speakers will stress the importance of addressing the underlying social, political, and economic factors influencing health. Speakers will give examples from their background and the motivations for their career choices and discuss the skills and strategies necessary to become effective advocates for health and human rights. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 5555 Family Medicine Elective (1)
his is a clinical, ambulatory rotation during which students meet six times with their preceptor(s) for a minimum of four hours per session in a shadowing capacity. It is predominantly outpatient with attention to chronic and acute conditions and longitudinal care across a wide range of patients, utilizing the patient-centered interview, and can include aspects of the business of medicine within a changing healthcare system. Students receive P/F pre-clinical elective credit based on attendance/participation, history taking (T1's) and history and physical taking (T2's), and a final clinical evaluation. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 5559 Pre-Clinical Primary Care (1)
Pre-clinical students may apply to participate in a 4 week primary care preceptorship program during the summer following their T1 year. Preceptorships are arranged with practitioners, group practices, or clinics in the disciplines of Family Practice, General Internal Medicine, General Pediatrics, or OB/GYN that provide primary care in rural or medical disadvantaged areas through out Louisiana. As this is an early clinical experience during the basic science years of medical education, the approach to this preceptorship has been characterized by some as an 'observer-ship' reflecting the limited ability of the early trainee to participate in independent patient care. However, the preceptorship provides a rich opportunity for early development of clinical skills and application of basic science knowledge. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 9000 Family Med. Visiting Student (4)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

FAMY 9020 Family Med. Visiting Student (2)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MD - Foundations Medicine I (FIM1)

FIM1 1005 Foundations Med I (5)
Foundations in Medicine I serves as the clinical counterpart to the basic science courses. While the medical knowledge you'll acquire via your basic science coursework is the traditional cornerstone of medical education, it's the tip of the iceberg when it comes to what it takes to be a competent physician. In recent years, the organization that accredits medical schools has developed a list of competencies in which medical schools should ensure students are proficient prior to graduation. Tulane has adapted these competencies into our own set of objectives encompassing, in addition to knowledge, the domains of patient care, practice-based learning and improvement, interpersonal communication, professionalism, systems-based practice, interprofessional collaboration, personal and professional development, and community health and engagement. Foundations in Medicine is tasked with ensuring you are introduced to each of these domains, whose mastery is critical in your journey toward competency as a practicing physician.

FIM1 5003 Service Learning Leadership (1)
Students who serve in major leadership roles in service learning organizations will participate in program development and administration, technology innovation and product development, and resource procurement activities under the guidance of the course director. Students participating in this elective will gain experience in leadership and community involvement.

FIM1 5004 Summer Preceptorship (1)

FIM1 5005 Social Contexts in Medicine (1)
Social Contexts in Medicine is a longitudinal in which students perform interdisciplinary care coordination for vulnerable patients. Students will attend lectures, trainings, and perform home visits with vulnerable patients throughout the year.

FIM1 5007 Intro to Medical Education (1)
Students in this elective will learn the principles of designing medical education curriculum including needs assessments, writing learning objectives using Bloom's taxonomy, developing content, and evaluation strategies. This is a hands-on elective in which participants will actually work on a small portion of the curriculum. If designed well projects may be selected for inclusion as a pilot in the larger curriculum, the students may have the opportunity to create a scholarly product (ie., poster) for submission to a conference.

MD - Foundations Medicine II (FIM2)

FIM2 2005 Foundations Med II (2)
Foundations in Medicine II serves as the clinical counterpart to the basic science courses. This course is tasked with ensuring you are introduced to each of Tulane's institutional competency domains, whose mastery is critical in your journey toward competency as a practicing physician.

FIM2 5005 Social Contexts in Medicine (1)
Social Contexts in Medicine is a longitudinal in which students perform interdisciplinary care coordination for vulnerable patients. Students will attend lectures, trainings, and perform home visits with vulnerable patients throughout the year.

FIM2 5007 Intro to Medical Education (1)
Students in this elective will learn the principles of designing medical education curriculum including needs assessments, writing learning objectives using Bloom's taxonomy, developing content, and evaluation strategies. This is a hands-on elective in which participants will actually work on a small portion of the curriculum. If designed well projects may be selected for inclusion as a pilot in the larger curriculum, the students may have the opportunity to create a scholarly product (ie., poster) for submission to a conference.

FIM2 5205 Service Learning Leadership (1)
Students who serve in major leadership roles in service learning organizations will participate in program development and administration, technology innovation and product development, and resource procurement activities under the guidance of the course director. Students participating in this elective will gain experience in leadership and community involvement.

MD - General Medicine (GENM)

GENM 8000 Full Time Medical Stud (12)
This course has no specific content: it serves as a place-holder for T1 & T2 curriculum

MD - Genetics (GENE)

GENE 1007 Genetics (1)
The Genetics course is designed to provide an overview of human genetic concepts and clinical disorders that have a genetic component. The course seeks to teach students to apply knowledge of the principles of human genetics to a variety of clinical problems. It surveys many clinical areas including cytogenetics, molecular genetics, biochemical genetics, population genetics and clinical genetics.

GENE 5500 Clinical Preceptorship (1)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

GENE 5540 Genetics Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

MD - Gross Anatomy (GANT)

GANT 1008 Gross Anatomy (8)

GANT 1111 Gross Anatomy Summer Course (8)

GANT 4000 Advanced Anatomy Elective (2)

GANT 5005 Teaching Medical Gross Anatomy (1)
Students will serve as a teaching assistants in gross anatomy. Each student will assist a faculty member in the laboratory.

GANT 5006 Teaching Medical Histology (1)
Students will serve as teaching assistants in the Medical Histology course and will gain hands-on teaching experience in small group facilitation and presentation.

GANT 5007 MS Elective (1)

GANT 5008 Medical Mandarin I (1)
6 week-long course dedicated to learning and improving medical Mandarin speaking skills. Class will involve students learning medical vocabulary, going over clinical cases, applying vocabulary in mock patient interview situations, and improving cultural competence in medical encounters.

GANT 5009 Medical Mandarin II (1)
7 week-long course dedicated to learning and improving medical Mandarin speaking skills. Class will involve students learning medical vocabulary, going over clinical cases, applying vocabulary in mock patient interview situations, and improving cultural competence in medical encounters.

GANT 5010 China Summer Mission Trip (1)
4 week-long mission trip dedicated to learning about an alternative healthcare systems in both rural and urbanized China. Students will be engaged in clinical encounters, improving cultural competency, navigating language barriers. When not on rotation, students will be able to experience the local culture and partake in excursions.

GANT 5011 Spirituality in Medicine (1)
Interested in learning more about the different religions and cultures of New Orleans and their views on medicine, death and disease? Want to know how this can help you provide better health services to your patients? This elective will develop your understanding of a wide variety of religions and cultural views on health care, including such faith practices as Islam, Voodoo, Buddhism, and local Vietnamese culture. Through this elective, you will become a more sensitive and compassionate physician to those of differing faith practices and cultural traditions.

GANT 5012 Leadership in Healthcare I (1)
To confront the challenges facing modern health care, experts and organizations are calling for an increase in physician leadership capabilities. The Institute of Medicine describes a need to "develop leaders at all levels who can manage the organizational and systems changes necessary to improve health... ." The mission statement of the Tulane University School of Medicine states "...to deliver the highest quality patient care and prepare the next generation of distinguished clinical and scientific leaders." To meet this need, two consecutive preclinical electives, Leadership in Health Care I and II, will engage with leadership topics starting early in the preclinical stages of training. This course will be guided by the Five Practices of Exemplary Leadership revealed by studying the times when leaders performed at their personal best. The five practices of exemplary leadership align with three major leadership theories: transformational, situational, and servant leadership. Each has features that align with expressed beliefs about physician leadership. Students will engage in seminars with leaders to learn to utilize these 5 practices in their own leadership opportunities. This is an experiential course based on participation and student interaction.

GANT 5013 Leadership in Healthcare II (1)
To confront the challenges facing modern health care, experts and organizations are calling for an increase in physician leadership capabilities. The Institute of Medicine describes a need to “develop leaders at all levels who can manage the organizational and systems changes necessary to improve health... .” The mission statement of the Tulane University School of Medicine states "...to deliver the highest quality patient care and prepare the next generation of distinguished clinical and scientific leaders." To meet this need, two consecutive preclinical electives, Leadership in Health Care I and II, will engage with leadership topics starting early in the preclinical stages of training. This course will be guided by the Five Practices of Exemplary Leadership revealed by studying the times when leaders performed at their personal best. The five practices of exemplary leadership align with three major leadership theories: transformational, situational, and servant leadership. Each has features that align with expressed beliefs about physician leadership. Students will engage in seminars with leaders to learn to utilize these 5 practices in their own leadership opportunities. This is an experiential course based on participation and student interaction.

GANT 5014 Theory and Basic Concepts (1)

GANT 5500 Advanced Anatomy (1)
Individual projects of dissection by advanced medical and graduate students. Enrollment may be limited by the availability of cadavers. No final examination.

GANT 5540 Anatomy and Med Ed Research (1)
Students participate with a member of the faculty in an ongoing research program as a means of learning research principles and techniques. In addition, reading assignments from original literature will be made and if results warrant, a publication should develop from the work. No final exam.

GANT 5541 Anatomy Research (1)

MD - Histology (HSTO)

HSTO 1001 Histology (5)
The Histology course is designed to provide students with a thorough understanding of the microscopic appearance and function of normal structures in the human body. This allows students to integrate this information with other disciplines such as Gross Anatomy, Pathology, and Physiology.

HSTO 1111 Histology Summer Course (5)
T1 & T2 summer courses may be required for students who need to remediate pre-clinical coursework. Contact your course director for more information.

MD - Mechanism of Disease (PATH)

PATH 1111 Pathology Summer Course (14)
T1 & T2 summer courses may be required for students who need to remediate pre-clinical coursework. Contact your course director for more information. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PATH 2002 Mechnms of Disease (14)
The Mechanisms of Disease course is designed to help students develop an understanding of the causes and mechanisms of disease and the associated structure and function. Students are expected to develop the skills of observation, interpretation, and integration needed to analyze human disease. Specifically, when provided with the clinical history, the anatomic lesions, and the laboratory data of a patient, students are expected to determine the most likely diagnosis and explain the pathogenesis of the disease. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PATH 2003 Advances in Pathology Research (1)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PATH 2004 Mechanisms of Disease - MS (5)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PATH 4000 Pathology (4)
The Pathology elective introduces the medical student to the field of pathology. The elective runs for four weeks with a choice of 2 weeks each in Surgical pathology, Cytopathology, Dermatopathology or Hematopathology. The student will participate in the pathology rotation at TMC and will experience the spectrum of responsibilities of a pathologist including interactions with clinicians. This includes but is not limited to gross prosections, microscopic evaluation, frozen section evaluations, ancillary techniques, and histologic diagnosis with differential diagnostic considerations. The student will work closely with the pathology residents and faculty on service. The student will attend tumor boards. This elective runs Monday through Friday and begins at approximately 8:00 am and ends at approximately 5:00 pm each weekday. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PATH 4040 Pathology Research (4)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PATH 4210 Cytopathology (2)
In this elective, students will learn the value of the clinical application of cytopathology to include: diagnosis, differential diagnosis, ancillary tests and therapy. Students will learn to understand the clinical significance of morphologic changes in healthy and diseased cells from cytologic examination of gynecologic and non-gynecologic specimens, including superficial and deep fine needle aspirations. Students will participate in the fine needle aspiration service as well as daily cytology sign-out. Student will work closely with the cytology fellow, resident and staff cytopathologist. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PATH 4220 Dermpathology (2)
The dermatopathology elective introduces the medical student to the field of dermatopathology, a subspecialty of anatomic pathology and dermatology. During this elective, the student will participate in the dermatopathology service and will experience the spectrum of responsibilities including interactions with clinicians. This includes microscopic evaluation, ancillary techniques, and histologic diagnosis with differential diagnostic considerations. The student will work closely with the Dermatopathology fellows, pathology residents and faculty on service. The clerkship runs for two weeks, Monday through Friday and begins at approximately 8:00 a.m. and ends at approximately 5:00 p.m. each weekday. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PATH 4230 Hematopathology (2)
Students will encounter about 20 new cases, involving CBC's, blood smears, bone marrow biopsies, flow cytometry, molecular diagnostics, coagulation studies, hemoglobin electrophoresis and protein electrophoresis. The student will gather pertinent clinical history on assigned cases, and preview slides with the hematopathology fellow. At each afternoon's sign-out with the faculty and fellow, the student will have the opportunity to present their brief case histories and to summarize the laboratory data at hand. Morphologic evaluation and case interpretation will take place during sign-out. The student will also have an opportunity to observe specimen work-up in the flow cytometry lab. Every evening, the student will be given sample cases to solve that reflect the kinds of cases seen at sign-out. These exercises will be reviewed with the course director every morning. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PATH 4240 Surgical Pathology (2)
The Surgical Pathology elective introduces the medical student to the field of surgical pathology, a subspecialty of anatomic pathology. During this rotation, the student will participate in the surgical pathology rotation at either Tulane Medical Center or UMCNO and will experience the spectrum of responsibilities of a surgical pathologist including interactions with clinicians. This includes but is not limited to gross prosections, microscopic evaluation, frozen section evaluations, ancillary techniques, and histologic diagnosis with differential diagnostic considerations. The student will work closely with the pathology residents and faculty on service. The student will attend the tumor boards. The clerkship runs Monday through Friday and begins at approximately 8:00 am and ends at approximately 5:00 pm each weekday. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PATH 4440 Surgical Pathology (4)
The Surgical Pathology elective introduces the medical student to the field of surgical pathology, a subspecialty of anatomic pathology. During this rotation, the student will participate in the surgical pathology rotation at either Tulane Medical Center and UMCNO and will experience the spectrum of responsibilities of a surgical pathologist including interactions with clinicians. This includes but is not limited to gross prosections, microscopic evaluation, frozen section evaluations, ancillary techniques, and histologic diagnosis with differential diagnostic considerations. The student will work closely with the pathology residents and faculty on service. The student will attend the tumor boards. The clerkship runs Monday through Friday and begins at approximately 8:00 am and ends at approximately 5:00 pm each weekday. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PATH 5500 Clinical Preceptorship - Path (1)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PATH 5540 Pathology Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PATH 6100 Pathology Research Elective (2,4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PATH 6200 Autopsy Pathology (3)
This course provides a foundation in autopsy pathology and includes instruction in medical and forensic autopsy pathology, as well as perinatal and pediatric autopsy pathology. This course is designed to prepare pathologists' assistant students for their autopsy practicum.

PATH 6210 Surgical Pathology Techniques (4)
This is the first of three sequential courses designed for Pathologists' Assistant students. This course provides a connection between the didactic coursework of the first-year curriculum and its application to the practice of surgical pathology by Pathologists' Assistants in the clinical setting. This class is taken in conjunction with the corresponding Surgical Pathology Techniques Laboratory course.

PATH 6211 Surgical Pathology Lab (2)
This is the first of three sequential courses designed for Pathologists' Assistant students. This course provides a connection between the didactic coursework of the first-year curriculum and its application to the practice of surgical pathology by Pathologists' Assistants in the clinical setting. This class is taken in conjunction with the corresponding Surgical Pathology Techniques lecture course.

Corequisite(s): PATH 6210.

PATH 6220 Advanced Surgical Path Tech I (4)
This is the second of three sequential courses designed for Pathologists' Assistant students. This course provides a connection between the didactic coursework of the first-year curriculum and its application to the practice of surgical pathology by Pathologists' Assistants in the clinical setting. This class is taken in conjunction with the corresponding Advanced Surgical Pathology Techniques Laboratory course.

Corequisite(s): PATH 6221.

PATH 6221 Adv Surgical Path Lab I (2)
This is the second of three sequential laboratory courses designed for Pathologists' Assistant students. This course provides a connection between the didactic coursework of the first-year curriculum and its application to the practice of surgical pathology by Pathologists' Assistants in the clinical setting. This class is taken in conjunction with the corresponding Advanced Surgical Pathology Techniques lecture course.

Corequisite(s): PATH 6220.

PATH 6230 Advanced Surgical Path Tech II (4)
This is the third of three sequential courses designed for Pathologists' Assistant students. This course provides a connection between the didactic coursework of the first-year curriculum and its application to the practice of surgical pathology by Pathologists' Assistants in the clinical setting. This class is taken in conjunction with the corresponding Advanced Surgical Pathology Techniques Laboratory course.

Corequisite(s): PATH 6231.

PATH 6231 Adv Surgical Path Lab II (2)
This is the third of three sequential courses designed for Pathologists' Assistant students. This course provides a connection between the didactic coursework of the first-year curriculum and its application to the practice of surgical pathology by Pathologists' Assistants in the clinical setting. This class is taken in conjunction with the corresponding Advanced Surgical Pathology Techniques lecture course.

Corequisite(s): PATH 6230.

PATH 6240 Pathologist's Assistant Seminar (1)
This course is designed to provide pathologists' assistant students with a foundation in working within an interprofessional healthcare team. This course focuses on medical ethics, interdisciplinary communication, and practices of professional conduct through team activities and group discussions.

Course Limit: 2

PATH 6270 Surgical Pathology Practicum (1)
This is a practical course in surgical pathology that prepares students for their clinical rotations in surgical pathology during the second-year curriculum. Students will rotate at Tulane Medical Center pathology lab under the guidance of Tulane pathologists' assistants, pathology residents, and pathologists. Students will watch and perform (under guidance) the duties of a Pathologists' Assistant. Emphasis will be placed on developing the student's skills of gross tissue description, dissection, and frozen section preparation.

Course Limit: 2

PATH 6280 Autopsy Pathology Practicum (1)
This is a practical course in autopsy pathology that prepares students for their clinical rotations in autopsy pathology during the second-year curriculum. Students will rotate at Tulane Medical Center pathology lab under the guidance of Tulane pathologists' assistants, pathology residents, and pathologists. Students will watch and perform (under guidance) the duties of a Pathologists' Assistant. Emphasis will be placed on developing the student's skills of autopsy technique including evisceration and block dissection.

Course Limit: 2

PATH 6300 Mechanisms of Disease 1 (5)
The course integrates the study of the nature of disease with the structural and functional changes that accompany those disease processes. This course is for graduate students and not intended for medical students.

PATH 6310 Mechanisms of Disease 2 (5)
This course follows Mechanisms of Disease 1. It is intended for graduate students and not intended for medical students.

PATH 6400 Molec & Cellular PATH (4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PATH 7200 Anatomic Pathology Clerkship (12)
This is a twelve-month practical course sequence that forms the curriculum of the second year of the Pathologists' Assistant program. Students rotate through various clinical sites and perform the duties of a Pathologists' Assistant under the guidance of a preceptor. Emphasis is placed on developing the student's skills of gross tissue description, dissection, and frozen section preparation in surgical pathology. Emphasis is placed on autopsy techniques including evisceration and block dissection in autopsy pathology.

Course Limit: 3

PATH 7600 Cancer Biology and Pathology (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PATH 9000 Pathology Visiting Student (4)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PATH 9020 Pathology Visiting Student (2)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PATH 9980 Pathology Master's Research (6)
Master's Research is mandatory for students in the 2-year M.S. in Molecular and Cellular Pathobiology program to conduct research to fulfill the thesis requirement. It is the student's responsibility to choose a Pathology faculty member as the thesis advisor by the end of the second semester. It is expected that the student spend a minimum of 20 hours a week working on the thesis project. The thesis is expected to be completed in two semesters and must be approved by a thesis committee, consisting of three faculty members.

MD - Medicine (MED)

MED 3000 Medicine (8)
The entire rotation is an inpatient rotation. In other words, all patients seen will be hospitalized patients or patients being evaluated for hospitalization. Students will spend their time at either Tulane University Hospital or the University Medical Center-NO or both. The Veterans Hospital service is contained within the Tulane University Hospital until the new VA hospital is built (estimated Spring 2017). Students will spend 6 weeks on a general internal medicine hospitalist service and 2 weeks on a subspecialty consulting service, either cardiology, hematology/oncology,

MED 3006 Medicine (6)

MED 3020 Medicine (2)
gastroenterology, infectious disease, or nephrology.

MED 3040 Medicine Research (4)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty.

MED 3041 DeBakey Scholar Research (4)
The DeBakey Scholars program provides Tulane medical students with an opportunity to pursue a four-year structured research project with a faculty mentor. Research training forms an important part of medical education because it instills critical thinking and reasoning skills. Since its founding in 2009, the program continues to attract the best and brightest students at Tulane University School of Medicine. DeBakey Scholars are exposed to the creative culture of research throughout their four years in medical school. They evaluate and interpret new clinical and scientific information. The development of these skills foster students' professional growth through continuing education and lifelong learning. DeBakey Scholars are highly-motivated students who are focused on success and looking to make a difference. These students pursue a program that develops skills and talents in the field of research. The tools they develop, publishing papers and presenting to peers, make them even more desirable in highly competitive residency placement.

MED 3400 Medicine (4)
This course is a general medicine elective that is reserved for special circumstances: students are encouraged to request specialty-specific electives, but may be encouraged to enroll in this elective by the Medicine Department.

MED 3401 Eli Lilly (4)
This 4-week elective involves enrollment in the Medical Student Rotation Program at Eli Lilly in Indianapolis. It's an experiential learning program that features a student-centric curriculum and structured mentorship in various aspects of pharmaceutical development. It includes independent projects, industry-led workshops, exposure to many facets of drug discovery and development, and networking opportunities with Lilly medical leaders.

MED 3500 Medicine Acting Internship (4)
The Sub-internship is an opportunity for medical students to assume more responsibility for their patients and tryout being an intern on a limited number of patients. Students should assume the role of intern for 2-4 patients and complete all the necessary tasks for patient care. These may include, but are not limited to, calling consults, writing orders, performing procedures, preparing discharge paperwork, and writing discharge summaries under the supervision of the resident or attending. Students are expected to use this opportunity to refine their physical exam, diagnostic skills, and medical knowledge. Sub-interns are expected to set an example for the clerkship students and help teach them how to maneuver the hospital stetting and meet the clerkship expectations. Students should complete the four-week sub-internship with a firm understanding of the responsibilities of an intern and ways he or she can improve prior to beginning intern year. We hope that this will be a meaningful and enjoyable rotation that helps you mature into the physician you hope to become. NOTE: Preference in May-August will be given to students applying to IM for residency at the discretion of the director of student programs.

MED 3520 Medicine Acting Internship (2)

MED 4000 MD/MBA Elective (4)

MED 4001 Interdisciplinary Patient Care (2)

MED 4002 Military Officer Training (4)

MED 4003 Military Officer Training (2)

MED 4004 Step 2 Study Elective (2)

MED 4015 Palliative Medicine (2)

MED 4016 ALL/IMM/RHEU (4)

MED 4017 COVID-19:Medical/Social Impact (4)

MED 4018 Homeless Health Care (2)

MED 4019 Learning in Venture Capital (2)
The New Orleans BioFund (NOBF) has created an educational program that brings highly driven Tulane medical students interested in VC directly into the fund's day to day operations. The program will provide students with firsthand experience with the southern VC region. Students will leave with the fundamental skills and knowledge in VC, specifically in fields related to healthcare. Tulane medical students have previously interned at NOBF and reported high satisfaction. Students will work a minimum of 60 hours over the T4 year at the NOBF office, located in the New Orleans BioInnovation Center (NOBIC). Students, the NOBF Managing Director and Analyst will work together on a flexible schedule. Students will be assigned to work on projects most of which will be current investment deals the fund is working on. Students will track their deals from due diligence to deal closing. NOBF associates will assign tasks, answer questions, and provide guidance to each student. Students will research, draft memos, and give presentations periodically to demonstrate their work. NOBF associates will provide targeted feedback to ensure by the end of the term students are comfortable with the basics of VC.

MED 4020 Stories: Narrative Medicine (2)

MED 4021 Technology Commercialization (4)
This is an elective primarily for fourth-year students in the 4-yr combined MD/MBA program. The elective is an experiential learning opportunity in Tulane's Office of Technology Transfer. Students participating in the elective will be able to combine their interests and training in business and medicine to contribute to commercialization of biomedical intellectual property developed at Tulane. Students will be given projects that include patent research, marketing research, and feasibility studies for products at various stages of development in the Office of Technology Transfer. Students will apply concepts of strategy, marketing, new venture planning, and valuation in real time. Students will be assigned projects that are actively being commercialized through the Office of Technology Transfer. Students will gain experience with intellectual property law, the role of venture capital, and the role of universities in developing an idea into a commercializable product. The one-month rotation will be experiential in nature. Students participating in the elective will work full time for the entire month. Students will participate in the mechanics of bring an idea to market through activities in the Office of Technology Transfer and the New Orleans Bioinnovation Center (NOBIC). Occasional lectures will take place in NOBIC. Final grades will be based on a final project as well as overall participation in the technology commercialization process.

MED 4022 Online Medical Spanish Level 1 (2)
This 2-week elective is for students interested in learning Spanish in a clinical context. For credit, students are expected to complete one level of medical Spanish language training using the Canopy program over a two-week period. Students must also attend an online orientation and record a 3-5 minute final presentation using the grammar, vocabulary, and cultural training in their respective Canopy level. All course activities can be done as correspondence, and students do not need to physically be present in New Orleans for this elective. Credit will be given upon completion of the required number of modules, orientation attendance, and completion of the final presentation. Students may take this elective more than once at different level 1-3, up to three times.

MED 4023 Online Medical Spanish Level 2 (2)
This 2-week elective is for students interested in learning Spanish in a clinical context. For credit, students are expected to complete one level of medical Spanish language training using the Canopy program over a two-week period. Students must also attend an online orientation and record a 3-5 minute final presentation using the grammar, vocabulary, and cultural training in their respective Canopy level. All course activities can be done as correspondence, and students do not need to physically be present in New Orleans for this elective. Credit will be given upon completion of the required number of modules, orientation attendance, and completion of the final presentation. Students may take this elective more than once at different level 1-3, up to three times.

MED 4024 Online Medical Spanish Level 3 (2)
This 2-week elective is for students interested in learning Spanish in a clinical context. For credit, students are expected to complete one level of medical Spanish language training using the Canopy program over a two-week period. Students must also attend an online orientation and record a 3-5 minute final presentation using the grammar, vocabulary, and cultural training in their respective Canopy level. All course activities can be done as correspondence, and students do not need to physically be present in New Orleans for this elective. Credit will be given upon completion of the required number of modules, orientation attendance, and completion of the final presentation. Students may take this elective more than once at different level 1-3, up to three times.

MED 4026 Making Medicines: Drug Dev (2)
This 2-week elective is an eLearning course in which students will explore how a new drug is developed from the initial concept to the patient. The goal of the course is to provide an opportunity for individuals with an interest in a health-related field and medical research to learn the processes required to discover and develop drugs that will ultimately provide a benefit to meet unmet medical needs, with minimal risk.

MED 4028 Intro to Clinical Teaching (2)
This is a longitudinal elective that will take place over the course of the academic year. Upon successful completion of course criteria, students will receive credit for a two-week elective. Students will attend hour-long workshops, held in evenings throughout the fall, each focusing on one discrete teaching skill. Students will then be given multiple opportunities to practice teaching skills within the context of the Foundations in Medicine course and other possible settings. This course is meant to complement, not to replace, the Advanced Clinical Teaching elective held in spring. While both offer opportunities to practice, this course contains more focused skill-building, while the Advanced Clinical Teaching course offers theory, approaches, and applications to lifelong development as a clinical educator.

MED 4029 Upperclassman Tutoring (4)
This T4 tutoring elective increases academic support for underclassmen and enables upperclassmen tutors to develop a tutoring skill set. Our elective meets the needs of tutors by providing elective credit, opportunity for development of a tutoring skill set, increased confidence in tutoring ability, and improved communication skills. It meets the needs of tutees by increasing the number of available upperclassman tutoring sessions and improving the quality of such tutoring sessions by adequately training tutors. This tutoring elective improves the quality of learning and student academic performance by providing an additional academic resource for failing and struggling students. Our elective tutoring sessions serve as a supplement to the PAL program's current resources by providing group tutoring reviews, rather than replacing the PAL program's traditional one-on-one sessions. We utilize TutorLingo software, faculty-led training sessions, and standardized tutee experiences to train upperclassmen in how to be effective tutors for underclassman students. This training process includes a Pre-Tutoring Assessment. Following completion of the training process, upperclassman tutors develop lesson plans and provide group tutoring sessions for both underclassmen who have failed a block exam and students who are passing their courses but are seeking further aid. Tutors complete a Reflection on their growth as a tutor in order to receive academic credit.

MED 4030 Upperclassman Tutoring (2)
This T4 tutoring elective increases academic support for underclassmen and enables upperclassmen tutors to develop a tutoring skill set. Our elective meets the needs of tutors by providing elective credit, opportunity for development of a tutoring skill set, increased confidence in tutoring ability, and improved communication skills. It meets the needs of tutees by increasing the number of available upperclassman tutoring sessions and improving the quality of such tutoring sessions by adequately training tutors. This tutoring elective improves the quality of learning and student academic performance by providing an additional academic resource for failing and struggling students. Our elective tutoring sessions serve as a supplement to the PAL program's current resources by providing group tutoring reviews, rather than replacing the PAL program's traditional one-on-one sessions. We utilize TutorLingo software, faculty-led training sessions, and standardized tutee experiences to train upperclassmen in how to be effective tutors for underclassman students. This training process includes a Pre-Tutoring Assessment. Following completion of the training process, upperclassman tutors develop lesson plans and provide group tutoring sessions for both underclassmen who have failed a block exam and students who are passing their courses but are seeking further aid. Tutors complete a Reflection on their growth as a tutor in order to receive academic credit.

MED 4031 Healthcare Policy & Reform (2)
This elective for graduate students is designed to provide a foundation of knowledge of the United States healthcare system in four critical areas of focus: access to care, cost of care, quality of care, and consumer perception of care. Students will learn about U.S. healthcare policy, the government's role in healthcare, the history of healthcare reform, and the Affordable Care Act (ACA). Students will gain an understanding of how healthcare in the U.S. compares to that in the developed world. The course will introduce students to the history and evolution of the U.S. insurance industry, Medicare and Medicaid. The course will also explore the rise of consumerism in healthcare, both in the U.S. and globally. Further, students will gain additional insights about the intersections between business and healthcare through a series of guest lectures from hospital administrators, insurance company executives, experienced physicians, and experts on ACA legislation. This course will also offer an opportunity for students to engage in self-directed learning by designing and leading custom modules tailored to specific interests of class members.

MED 4032 Student-Run Clinic Elective (2)
This is a longitudinal elective that will take place over the course of the academic year. Upon successful completion of course criteria, students will receive credit for a two-week elective. Students enrolling in this elective will be given credit for their participation in Tulane's student-run clinics. T3s/T4s are a valuable part of the clinics: they help guide the T1s/T2s through what is often their very first experience with patients; they provide instruction and assistance with obtaining a medical history, formulating an assessment and plan, documentation and presentation; and they help provide quality care to persons with limited access to healthcare. Tulane's student-run clinics appeal to incoming students, and help develop our students into effective and open-minded physicians. This elective is intended to improve junior and senior students' clinical teaching skills, and to increase student involvement in the student-run clinics.

MED 4033 Healthcare in Central America (2)

MED 4034 Point of Care Ultrasound (2)

MED 4035 Teaching Medical Spanish (2)
The goal of this elective is to create a sustainable and equitable system for teaching the pre-clinical T2 medical Spanish elective. This elective will take the burden off T1 students/LMSA leaders who have historically taught the medical Spanish elective as volunteers – this has been an undue burden on T1 students for too long and is not equitable, as most of the students who have served as instructors in the past have been Latinx/Hispanic. It should not be the responsibility of these students to teach medical Spanish without receiving credit. By creating this T4 medical Spanish teaching elective, students will receive credit for their efforts, and it is much more appropriate for T4 students to serve as instructors than T1s. This is a longitudinal elective available to T4s who are bilingual Spanish speakers. Students will receive credit for teaching medical Spanish lessons to second-year medical students. Students in this elective will utilize the medical Spanish curriculum developed for TUSOM students and teach medical Spanish lessons throughout the academic year. Furthermore, as a "teaching elective," this elective will include a mandatory session for the T4 elective participants on how to be an effective instructor.

MED 4036 Medical Justice Elective (4)
The goal of this rotation is to provide fourth year medical students the opportunity to explore and participate in the medical care of vulnerable patient groups including: unhoused, incarcerated, and formerly incarcerated patients. Students will spend approximately 30 hours per week at two sites that are focused on providing medical care to vulnerable patient groups: (1) the city's public health clinic at Healthcare for the Homeless, and (2) the Orleans Parish Public Defender's office. In addition, there will be opportunities to attend peer support groups for formerly incarcerated persons and work with a prison advocacy group. Students will be responsible for participating in two discussion sections and completing two reflection papers. They will meet twice per block with a facilitator and guest speakers to learn from individuals with lived experience of homelessness or incarceration. This experience is designed to expose senior medical students to a physician's role in public health and community medicine and give them an opportunity to witness the barriers that vulnerable patients face in seeking medical care. There will be optional activities in the evenings that students can opt to participate in. These experiences include: • Wellness Nights at VOTE (Voices Of The Experienced, a group providing support to formerly incarcerated persons) – Third Tuesday of every month from 6-8 pm • Peer support group (formerly incarcerated persons sharing experiences) There are optional experiences that will occur without regular frequency that a student may participate in, including: • Opportunities for observation of legislation discussion at the State House in Baton Rouge

MED 4201 Palliative Care (2)
This 2-week online elective will help "fill-in" the gap in End-of-life care education at Tulane School of Medicine. It also offers medical students the opportunity to learn about this topic when it's most relevant - when they are being exposed to clinical opportunities.

MED 4210 Cardiology (2)
This elective is for students with an interest in learning more about how to diagnose and treat cardiac disease. Students will learn more about the management of severe congestive heart failure, arrhythmias, and coronary artery disease. Students will also get to observe cardiac catheterization, echocardiography, and nuclear medicine. The students will be members of an inpatient consult team comprised of a fellow and faculty from the section of Cardiology. An intern or resident may also be a part of the team. Students are expected to participate in daily rounds with the fellow and attendings and attend all Cardiology conferences. Students will be assigned a panel of patients from which they are expected to write daily progress notes and present on rounds. A student panel should not exceed four patients.

MED 4212 Community Health (2)
This required clerkship allows fourth year students an experience working in a community organization focused on a social determinant of health that acts as a barrier to care. There are assigned didactic activities that focus on analyzing social determinants of health and a discussion section to evaluate these determinants. The course will include one short writing assignment.

MED 4220 Endocrinology (2)
This elective is for students with an interest in learning more about how to diagnose and treat endocrine diseases. Students are to become familiar with the principles of clinical endocrinology in an outpatient setting. Teaching will be largely focused on clinical activities; seeing patients in the clinic setting at three locations. Students will also be encouraged to attend and participate in our weekly endocrine conference on Monday afternoons, from 4 – 6 pm, monthly multidisciplinary tumor board meetings (4th Wednesday of the month, 2-3 pm), and other weekly didactic sessions.

MED 4221 Technology Commercialization (2)

MED 4230 Gastroenterology (2)
This 2-week elective is for students with an interest in general gastroenterology. This is the inpatient consult service which works with the general medicine inpatient teams and other services to address GI patient issues. Clinic time may also be involved at the discretion of the supervision attending or fellow.

MED 4233 Cases in Healthcare Org (2)

MED 4250 Hematology/Oncology (2)
This 2-week elective is for students with an interest in learning more about how to diagnose and treat patients with hematological and oncological disease. Students will be members of an inpatient consult team. The consult team usually evaluates between 1-2 consults per day. The team consists of a medical resident, a fellow, and a staff physician. Rounds are held once a day. Both new consults and prior consults are discussed. The medical student is expected to take an active role in this rotation. Under the supervision of the fellow and the attending, the student is expected to interview patients, perform the physical exam, review pertinent radiological and laboratory data, as well as pathology slides with the attending or pathologist. The student will have a great opportunity to participate and be exposed to the multidisciplinary aspect of Hematology/Oncology as a subspecialty.

MED 4260 Allergy/Imm/Rheum (2)
This elective is for students with an interest in learning more about how to diagnose and treat allergic and immunologic diseases. Students will travel to various outpatient clinics at Tulane and Ochsner (will need to provide own transportation). Students will work directly with fellows and attendings in the Section of Allergy and Immunology. Students are expected to participate in seeing clinic patients and attend all Allergy and Immunology conferences.

MED 4270 Infectious Disease (2)
This elective is for students with an interest in learning more about how to diagnose and treat patients with infectious disease. Students will also learn how to use antibiotics appropriately, prevent future infections, and manage the complications of HIV and other chronic infections. The students will be members of an inpatient consult team comprised of a fellow and faculty from the section of Infectious Disease. An intern or resident may also be a part of the team. Students are expected to participate in daily rounds with the fellow and attendings and attend all ID conferences. Students will be assigned a panel of patients from which they are expected to write daily progress notes and present on rounds. A student panel should not exceed four patients.

MED 4275 Medicine-Pediatrics (4)
This 4-week elective provides students exposure to both adult and pediatrics patients, through both inpatient and outpatient duties.

MED 4276 Medicine-Pediatrics (2)
This 2-week elective provides students exposure to both adult and pediatrics patients, through both inpatient and outpatient duties.

MED 4280 Nephrology (2)
This 2-week elective is for students with an interest in learning more about how to diagnose and treat patients with renal disease. Students will also learn how to assess fluid balance and manage patients on hemodialysis. The students will be members of an inpatient consult team comprised of a fellow and faculty from the section of nephrology. An intern or resident may also be a part of the team. Students are expected to participate in daily rounds with the fellow and attendings and attend all renal conferences. Students will be assigned a panel of patients from which they are expected to write daily progress notes and present on rounds.

MED 4290 Pulmonary (2)
This elective is for students with an interest in learning more about how to diagnose and treat patients with pulmonary disease. Students will also learn about ventilator management, indications for bronchoscopy, and in-depth evaluation of chest x-rays and CT of the chest. The students will be members of an inpatient consult team comprised of a fellow and faculty from the section of Pulmonology and Critical Care. An intern or resident may also be a part of the team. Students are expected to participate in daily rounds with the fellow and attendings and attend all pulmonology conferences (i.e. Chest conference). Students will be assigned a panel of patients from which they are expected to write daily progress notes and present on rounds. A student panel should not exceed four patients.

MED 4400 Advanced Clinical Teaching (4)
This course is designed for fourth-year students who seek advanced instruction in clinical education. Students will work with the best of Tulane's medical educators to learn the principles of clinical education. The course is highly interactive and requires 100% attendance on the part of all participants. All elements of the course are required. Students will begin the course by having one of their teaching attempts videotaped. The first two weeks of the course will combine didactic lectures with teaching drills that will sharpen the principles discussed in the didactic lectures. During all weeks of the course, students will observe some of Tulane's most accomplished educators, including Dr. Jeff Wiese (author of Teaching in the Hospital) and have the opportunity to sit with them to discuss their teaching strategies. Students will participate in discussion conferences in which these principles will be analyzed. Students will have the opportunity to use their newly acquired teaching skills to teach Foundations in Medicine students, Clinical Diagnosis students and Internal Medicine Clerkship students.

MED 4409 Community Health (4)
The Tulane Community Health Clerkship is a 4-week non-clinical rotation focusing on social determinants of health. These are the non-medical aspects of patients' lives such as education, housing, employment, language, environment, nutrition, and safety that affect their health. The skills students gain in this course are vital to contextualizing care to individual patient needs and addressing broader population health issues. Students meet with the instructor once weekly (twice in the first week) for didactic instruction and group discussions based on readings. Core topics include health disparities, cultural humility, contextualization of patient care, and workforce and programmatic interventions to address social determinants of health. Students also spend approximately 20 hours per week working at a community partner organization where they design, implement, enhance or evaluate an intervention that addresses social determinants of health. Students connect classroom and community experiences through weekly reflective writing assignments and a final presentation.

MED 4410 Cardiology (4)
The Medicine Department most commonly offers 2-week electives rather than 4-week electives. Students interested in cardiology should see the description for the 2-week cardiology elective.

MED 4411 Culinary Medicine (4)

MED 4412 Teaching Kitchen (4)
The fourth-year elective (4-weeks) in the Goldring Center for Culinary Medicine involve building content and helping guide hands-on cooking classes for 1st year medical students, allied health workers and community members. These classes cover culinary medicine and culinary nutrition concepts, meal planning principals and culinary technique. You will learn by leading, and rotations include an introduction to the kitchen and knife-skills. This rotation will have you working alongside medical students, chefs, physicians, nutritionists, dietitians and other public health professionals, so you'll be introduced to many culinary medicine concepts as you go along. Hours will likely include evenings and weekends, and will require a flexible schedule. This rotation includes work on your feet in the kitchen preparing for classes, curriculum development and leading class discussions teaching culinary medicine concepts. Rotation may include up to 40 hours/week with some evenings and weekends. Please note that we require a minimum of a 4-week commitment in order to complete this rotation. No exceptions will be made. Rotations are offered year-round.

MED 4420 Endocrinology (4)
The Medicine Department most commonly offers 2-week electives rather than 4-week electives. Students interested in endocrinology should see the description for the 2-week endocrinology elective.

MED 4430 Gastroenterology (4)
The Medicine Department most commonly offers 2-week electives rather than 4-week electives. Students interested in gastroenterology should see the description for the 2-week gastroenterology elective.

MED 4450 Hematology/Oncology (4)
The Medicine Department most commonly offers 2-week electives rather than 4-week electives. Students interested in hematology/oncology should see the description for the 2-week hematology/oncology elective.

MED 4460 Allergy/Imm/Rheum (4)
The Medicine Department most commonly offers 2-week electives rather than 4-week electives. Students interested in allergy/immuology/rheumatology should see the description for the 2-week allergy/immuology/rheumatology elective.

MED 4470 Infectious Disease (4)
The Medicine Department most commonly offers 2-week electives rather than 4-week electives. Students interested in infectious disease should see the description for the 2-week infectious disease elective.

MED 4480 Nephrology (4)
The Medicine Department most commonly offers 2-week electives rather than 4-week electives. Students interested in nephrology should see the description for the 2-week nephrology elective.

MED 4490 Pulmonary (4)
The Medicine Department most commonly offers 2-week electives rather than 4-week electives. Students interested in the pulmonary elective should see the description for the 2-week pulmonary elective.

MED 4500 MED/PEDS Acting Internship (4)

MED 4520 ICU (2)
This 2-week elective is for students with an interest in critical care medicine. The students will see 2-3 VA ICU level patients each day and present on rounds. Students will work with Tulane/VA faculty as well as Tulane Pulmonary/Critical Care Fellows.

MED 4540 ICU (4)
The Medicine Department most commonly offers 2-week electives rather than 4-week electives. Students interested in the ICU elective should see the description for the 2-week ICU elective.

MED 5000 Affordable Care Act (1)
This elective provides students opportunities to learn about nuances of the Affordable Care Act (ACA). Emphasis will be on the three pillars of ACA, including individual mandate, employer mandate and insurance companies.

MED 5001 Bioethics Seminar (1)
This elective provides students opportunities to explore issues of organ donation, genetic screening and controversial medical procedures. Research ethics, and reproductive autonomy will be part of the discussion.

MED 5003 Disparities in Heath Care (1)
The United States is the most diverse country in the world. The US is made up of citizens from all types of backgrounds, races, ethnicities, and beliefs. Cultural competence in health care is a course that gives students the opportunity to learn about cultural biases, social determinants of health, and adapt clinical and communication skills to adequately treat a diverse patient population. Furthermore, this course will help prepare students for USMLE Step II CS, a mandatory nationwide exam in which students must interact with patients of different races and ethnicities. This is an opportunity for students to gain worthy clinical and communication skills in order to deliver effective care to all patients, regardless of their background.

MED 5004 MBA Elective (1)

MED 5007 Narrative Medicine (1)
What does it mean to experience illness? What emotions are felt when a student meets their first patient in anatomy lab, silently waiting and seemingly voiceless? Narrative medicine is an interdisciplinary field that explores these questions and challenges disparities in health care by allowing participants (students, patients, providers) to give voice to their experiences, be heard, and valued. The field is steadily growing, featuring the works of such doctor-authors as Atul Gawande, MD, Danielle Ofri, MD, and Paul Kalanithi, MD. This course serves as a primer, giving foundational tools and a space for students to engage with narrative medicine and more fully own their academic and clinical experiences.

MED 5009 Health Care Law & Regulation (1)
This elective provides a broad survey of the most fundamental legal issues surrounding the delivery of health care in America. No prior knowledge of health law is required. By the end of this elective students should be able to explain both the current state of American health law and the social forces that have shaped its historical development. Major topics include state and federal regulation of health care providers and institutions; tort liability in the context of medical care; patient and provider rights and obligations; public and private insurance systems; and basic issues in bioethics and public health. This elective is intended to provide only an introductory overview of the major issues in health law.

MED 5010 Integrative Medicine Elective (1)
Have you ever wanted to know how Acupuncture actually worked? Have you, a family member or friend suffered from a condition that doctors haven't been able to resolve? The Integrative Medicine elective is designed to expose students to various approaches that are used to achieve wellness, and uses evidence-based data when available. It also reviews indications, contraindications and best use of each modality. A few of the lectures have the students practice the techniques on themselves, so that they can better explain it to their future patients (i.e. mind-body/guided imagery). Students will also benefit from shadowing a community provider of their choice to see how their approach is used in day-to-day practice and hear from the patients what benefits they experience. Students will also enjoy a journal club discussion on an article pertaining to Integrative Medicine. Topics covered include acupuncture, integrative medicine, mind-body medicine, chiropractic, nutrition among others.

MED 5011 Foundations: Ethics & Justice (1)
This elective provides an opportunity to gain a better understanding of the principles and practice of medical ethics presented in a case-based format. Site visits and surveys of current Social Justice issues will be introduced in light of Ethical Decision making.

MED 5012 Business in Healthcare 1 (1)

MED 5013 Planning for a Profession (1)

MED 5052 History of Medicine Seminars (1)
Weekly speakers will discuss various topics of interest to medical historians. Discussion of the medical aspects and their impact on current medical thought and practice will be emphasized.

MED 5100 DeBakey Program (1)

MED 5101 Sexual Health (1)
This elective is designed to develop medical students' knowledge and skills toward encouraging healthy sexualities and managing sexual concerns among their patients. Medical students will be able to apply a lot of this information during their rotations. Sessions vary in topics and teaching methods and are purposefully designed to provide cross-disciplinary perspectives.

MED 5149 Recruiting the Next Generation (1)
Participants in this course will learn how to serve as standardized patients. They will run role-play scenarios with applicants to the School of Medicine. They will rate applicants' performance for the admissions committee as well provide formal feedback to applicants to exemplify how focused Tulane is on formally developing students' interpersonal skills.

MED 5152 Culinary Medicine in Practice (1)
The T1/T2 course will teach fundamental dietary and nutrition knowledge with basic culinary skills through hands-on cooking classes. Lessons will be keyed to the basic science curriculum (biochemistry, physiology, etc.) while linking concepts learned to the practical clinical skills needed for the patient-physician discussion about the importance of dietary and lifestyle change. Students will be expected to watch a 15-20 minute presentation and take a short quiz prior to scheduled class time. Step preparation is tied into the course, and students get to eat what is cooked! Most time in the classroom is spent in a fun, interactive environment in the kitchen.

MED 5153 Medicine in Martial Arts (1)
This course will provide students a brief overview of some of the anatomical, physiological, and pathological concepts encountered in the first 2 years of medical school and Step 1 through the context of martial arts. Lecture topics will include such things as boxing, the mystical "touch of death," and rear-naked choke. There will be both a lecture component and optional practical component where students will learn select techniques and be able to practice them in a controlled and supervised environment. Please note that this is not a self-defense class.

MED 5500 Clinical Preceptorship - Med (1)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

MED 5501 Out In The Field With Geriatri (1)
This elective will introduce students to the special needs of the older patient. Students may get involved in seeing patients in the home setting, Community Living Center (CLC), Geriatrics outpatient clinic, Palliative Care clinic, as well as other aspects of care of the older veteran. Most of the efforts will occur at sites associated with Southeast Louisiana Veterans Health Care System (SLVHCS). Preceptors for the course will include the faculty physicians of Geriatrics and Extended Care at SLVHCS and Tulane University Section of General Internal Medicine/Geriatrics. Students will be encouraged to follow patients as they transition from various settings, e.g. the inpatient to the home setting and/or nursing home setting as they recover from an acute illness. Student performance will be evaluated by rating of preceptors.

MED 5505 Mind Body Medicine (1)
This elective will teach the biological underpinnings of Mind-Body Medicine while you experience the mind-body skills in a small group setting. This course has been taught in over 13 medical schools, including Georgetown and University of Minnesota. The eight sessions are based on the Center for Mind Body Medicine in Washington DC model (www.cmbm.org). This experiential elective will help medical students understand the concept of Self-Care and how to incorporate relaxation, mindful nutrition and exercise into their lives. It will teach many skills (meditation, autogenic training and biofeedback, movement, nutrition, and virtual imagery) that will help develop the resiliency needed for a demanding and fulfilling career in medicine. Most importantly, the skills are simple and help with many stress-induced and preventable chronic conditions that will be encountered in patient care.

MED 5506 Medical Humanities (1)
This elective focuses on the application of literature and film to medical education and practice.

MED 5507 Palliative & End of Life Care (1)
The art and science of palliative and end of life care remain under-discussed and under-taught during the preclinical years of medical education. This can lead to both patient and provider frustration in addition to less than optimal patient centered care. This elective will foster a better understanding of core concepts palliative and end of life care while empowering students to begin the journey of feeling comfortable with having difficult conversations.

MED 5540 Medicine Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

MED 5567 Emergency Medicine Volunteerin (1)
Students will become familiar with the specialty of Emergency Medicine through observation and limited hands-on Emergency Department experience. Students are encouraged to participate in patient care in three ways: learning the basic approach to the emergency patient, contributing to resident and staff discussions of basic anatomy and physiology with knowledge obtained from studies of the first or second year level of medical school, and assisting in such procedures as starting IVs, drawing blood, etc. when appropriate. They will interact with emergency medicine faculty and residents in the ED and discuss patient management and emergency medicine principles.

MED 5568 Entrepreneurship In Bioscience (1)
This course is looking for the dreamers, the students who ask why, and the ones who may be interested one day of becoming an entrepreneur. This course focuses on taking an idea or taking graduate and senior capstone engineering and bioscience research projects to a commercial stage. Not only does one need to take the research projects to an advanced engineering/bioscience stage in order to be commercialized, one needs to develop a competitive business plan, an intellectual property position, and a sustainable competitive advantage.

MED 5570 Medical Spanish (1)
Medical Spanish is a half-semester long course dedicated to learning and improving medically-related Spanish speaking skills. The class will involve students in learning medical vocabulary, going through clinical cases, applying vocabulary in mock interview situations, and learning about various aspects of Latino culture. This elective is facilitated by members of the Tulane Latin American Medical Student Association (LAMSA).

MED 9000 Medicine Visiting Student (4)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

MED 9020 Medicine Visiting Student (2)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

MD - Microbiology (MICR)

MICR 1111 Microbiology Summer Course (4)
T1 & T2 summer courses may be required for students who need to remediate pre-clinical coursework. Contact your course director for more information. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MICR 2000 Intro to Infectious Diseases (4)
The IID course is designed to provide medical students with a broad-based foundation in the basic concepts of medical microbiology. Course material is presented in two distinct sections: 1) a 3-week introductory module touching upon basic principles in immunology, bacteriology, mycology, virology, and parasitology; 2) more in-depth sessions on specific pathogens within the context of their respective diseases taught throughout systems modules. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MICR 5541 Immunology Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MICR 5542 Microbiology Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MD - Neurology (NEUR)

NEUR 3000 Neurology (4)
It is expected that the student will accomplish the following educational informational goals during the clerkship. This can be achieved by evaluating patients on the in-patient, consult, and clinic services as well as participating in clinical problem solving during the lectures and conferences. The student is expected to know the clinical history, examination findings and appropriate decision analysis for patients with the following disorders: headache and face pain; dizziness-vertigo and episodic loss of consciousness; weakness and gait impairment; stupor and coma; cerebrovascular disease; seizures and epilepsy; traumatic injury - brain and spine; neurobehavioral disorders, including dementia, amnesia and aphasia; central nervous system infection; abnormal involuntary movements, including Parkinsonism; demyelinating disorders (multiple sclerosis and its mimics); neurological complication of medical illness; stroke; delirium & dementia; neuromuscular disorders; acute spinal cord disorders. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NEUR 3006 Neurology (3)

NEUR 3020 Neurology (2)
This is a 2-week elective for students who want to learn more about neurocritical care. Students will be exposed to a variety of cases at Tulane Medical Center including neurosurgical patients in the ICU, neurology consults from other ICU services and critical care management of patients on the stroke service. Attendance is required daily for the 2-week block. Topics covered include but are not limited to evaluation of coma, ventilator management, subarachnoid hemorrhage management, intracranial pressure monitoring and management, sodium management in the ICU and post-operative care of spinal surgery. There is no call associated with this elective and there is no final examination. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NEUR 3500 Neurology Acting Internship (4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NEUR 4000 Neurology (4)
Three site placements are available: 1) Clinical Neurology Stroke Service 2) Pediatric Neurology 3) Outpatient Neurology. Students can view eMedley for more information about each site. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NEUR 4001 Interdisciplinary Patient Care (2)

NEUR 4040 Neurology Research (4)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NEUR 5500 Clinical Preceptorship - Neuro (1)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NEUR 5540 Neurology Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NEUR 9000 Neurology Visiting Student (4)

NEUR 9020 Neurology Visiting Student (2)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MD - Neuroscience (NESC)

NESC 5500 Neuroscience Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

MD - Neurosurgery (NRSR)

NRSR 3500 Neurosurgery Acting Internship (4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NRSR 4000 Neurosurgery (4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NRSR 4020 Neurosurgery (2)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NRSR 4040 Neurosurgery Research (4)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NRSR 5500 Clinical Preceptorship - Nsur (1)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NRSR 5502 Introduction To Neurosurgery (1)
Students will be given an introduction to career opportunities in neurosurgery. The course will be conducted through weekly conferences, daily rounds, clinic, and observation in the operating room. Students will be provided exposure to the neurological examination, as well as the diagnosis and treatment of common neurosurgical pathologies. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NRSR 5540 Neurosurgery Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NRSR 9000 Neurosurgery Visiting Student (4)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MD - Obstetrics & Gynecology (OBGY)

OBGY 3000 Obstetrics & Gynecology (8)
This course is an introductory experience in the provision of comprehensive medical care and counseling services to adult and adolescent female patients. The obstetrical conditions and gynecological problems commonly encountered by the physician provide the primary focus for this clerkship experience, but knowledge of serious, less common conditions, is also required. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OBGY 3006 Obstetrics & Gynecology (6)

OBGY 3500 OB/GYN Acting Internship (4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OBGY 3520 OB/GYN Acting Internship (2)

OBGY 4000 Obstetrics & Gynecology (4)
Fourth year electives are designed to permit medical students to gain a greater depth of understanding of principles of women's health care in Obstetrics and Gynecology. The foundation is expected to have been acquired in the core third year clinical clerkship experience. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OBGY 4001 Justice, Equity, Diversity, Inclusion Facilitator (2)
As a facilitator of the Justice, Equity, Diversity, and Inclusion(J.E.D.I.) course, the student will be an active participant in continuously developing a curriculum and environment that fosters anti-racist physicians. As a member of the J.E.D.I. team, the student will take part in regular check-ins with course coordinators, review content material, and collaborate with curriculum content developers to create new content as needed.

OBGY 4020 Obstetrics & Gynecology (2)
Fourth year electives are designed to permit medical students to gain a greater depth of understanding of principles of women's health care in Obstetrics and Gynecology. The foundation is expected to have been acquired in the core third year clinical clerkship experience. At the conclusion of the course the student will achieve a more advanced level of knowledge, clinical skills, and independence of judgment under faculty and resident supervision in a focused aspect of Obstetrics and Gynecology. Such students are expected to demonstrate increased initiative in the care of their patients and increased knowledge gained through more advanced reading and discussion of principles related to the care their patients. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OBGY 4021 Family Planning Elective (2)

OBGY 4040 OB/GYN Research (4)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OBGY 4220 Advance OB/GYN (2)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OBGY 4999 Transition to Residency (2)

OBGY 5000 Introduction to OB/GYN (1)
This elective is an introduction to the field of Obstetrics and Gynecology for interested first and second year medical students. Besides shadowing attendings and residents providing obstetric and gynecologic care to patients in the outpatient setting, students have the opportunity to observe continuity of care by following a patient throughout their care. Students will also observe surgeries at Tulane Medical Center and Lakeside. Students will participate in a lecture series which will introduce the different sub-specialties as well as practice settings in OB/GYN. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OBGY 5002 Medical Student for Choice: Reproductive Justice Elective (1)
This elective provides a comprehensive introduction to family planning and reproductive justice with an additional focus on public health and medical ethics. It will provide a baseline knowledge of health concerns that impact reproductive-aged people with uteruses, a population that every future physician will encounter. Topics covered in this elective include: the history of reproductive justice through a human rights framework, medical jargon of abortion, the epidemiology of unintended pregnancy, reproductive health disparities in the US, the policy and ethics surrounding abortion, contraception counseling, pregnancy option counseling, the pharmacology of medical abortions, and advocacy training.

OBGY 5500 Clinical Preceptorship - Obgyn (1)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OBGY 5540 Ob/Gyn Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OBGY 9000 OB/GYN Visiting Student (4)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OBGY 9020 OB/GYN Visiting Student (2)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MD - Ophtalmology (OPTH)

OPTH 4000 Ophthalmology (4)
A four-week elective designed to give students an introduction to Ophthalmology in both outpatient clinics and surgical settings. Students will rotate among different subspecialties to gain exposure to a wide breadth of ophthalmologic pathologies. Subspecialties may include: Cornea & Anterior Segment, Glaucoma, Retina-Vitreous, Pediatric, Strabismus, Orbital & Lacrimal Diseases/Surgery, Oculoplastics & Periocular Eyelid Reconstructive Surgery, Orbital & Ocular Adnexal Oncology, and Ophthalmic Plastic & Reconstructive Surgery. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OPTH 4020 Ophthalmology (2)
A two-week elective designed to give students an introduction to Ophthalmology in both outpatient clinics and surgical settings. Students will rotate among different subspecialties to gain exposure to a wide breadth of ophthalmologic pathologies. Subspecialties may include: Cornea & Anterior Segment, Glaucoma, Retina-Vitreous, Pediatric, Strabismus, Orbital & Lacrimal Diseases/Surgery, Oculoplastics & Periocular Eyelid Reconstructive Surgery, Orbital & Ocular Adnexal Oncology, and Ophthalmic Plastic & Reconstructive Surgery. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OPTH 4040 Ophthalmology Research (4)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OPTH 4046 Ophthalmology Research (6)

OPTH 5500 Clinical Preceptorship - Ophth (1)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OPTH 5501 Introduction To Ophthalmology (1)
This course is designed to provide the student with an introduction to clinical ophthalmology and with knowledge of the relationships of ocular problems which physicians will encounter during their practice of medicine. The lectures will be conducted between 1:00 and 3:00 p.m. on Fridays. Students are to attend at least one day of the 68th Annual Symposium: Updates in Glaucoma, Retina and Neuro-Ophthalmology, February 15-17, 2019, at the Sheraton New Orleans Hotel, 500 Canal Street, New Orleans, LA 70130. Students are also invited to attend any of the following Lectures and Grand Rounds as time allows: Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OPTH 5540 Ophthalmology Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OPTH 9000 Ophthalmology Visiting Student (4)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OPTH 9020 Ophthalmology Visiting Student (2)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MD - Orthopaedic Surgery (ORTH)

ORTH 3500 Orthopaedic Acting Internship (4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ORTH 4000 Orthopaedic Surgery (4)
This is a four-week elective designed for the student interested in Orthopedics or a similar surgical specialty. Each week, students will join a resident-faculty team at our affiliated hospitals. Students will participate in all inpatient and outpatient clinical activities within the different orthopedic specialties, including Trauma, Sports Medicine, Reconstruction, Pediatric Orthopedics, and/or Foot/Ankle. Attendance is expected at all orthopedic training functions, including grand rounds and fracture conference. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ORTH 4020 Orthopaedic Surgery (2)
This is a two-week elective designed for the student interested in Orthopedics or a similar surgical specialty. Students will participate in all inpatient and outpatient clinical activities within the different orthopedic specialties including Trauma, Sports Medicine, Reconstruction, Pediatric Orthopedics, and/or Foot/Ankle. Attendance is expected at all orthopedic training functions, including grand rounds and fracture conference. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ORTH 4021 Orthopaedic Trauma Surgery (2)

ORTH 4040 Orthopaedic Research (4)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ORTH 4041 Orthopaedic Pediatric (4)
This is a four-week elective designed for the student interested in pediatric orthopaedics. The student will join a resident-faculty team for four weeks at our affiliated hospitals. They will take call, attend grand rounds and conferences, and participate in all inpatient and outpatient clinical activities including surgical cases. Student evaluation is by faculty. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ORTH 4042 Physical Medicine and Rehab (4)
Students may be eligible to complete a PM&R elective at an away site. See eMedley information about approval for away rotations. Students should see ORTH4121 and ORTH4140 for a Tulane-based PM&R elective. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ORTH 4121 PM&R/Sports Medicine (2)
The Physical Medicine and Rehabilitation/Sports Medicine elective provides basic training in PM&R evaluations with a strong focus on sports medicine and neurological rehabilitation. The elective exposes the medical student to the broad field of PM&R including sports injuries, ultrasound, electromyography, complications of disability, and the restoration and maintenance of function. Time will be spent on the inpatient rehabilitation service, and in the Tulane Institute of Sports Medicine. The student will be exposed to therapies, medications and procedures typically used in PM&R practice. There will be opportunities for sideline game coverage if desired.

ORTH 4141 PM&R/Sports Medicine (4)
The Physical Medicine and Rehabilitation/Sports Medicine elective provides basic training in PM&R evaluations with a strong focus on sports medicine and neurological rehabilitation. The elective exposes the medical student to the broad field of PM&R including sports injuries, ultrasound, electromyography, complications of disability, and the restoration and maintenance of function. Time will be spent on the inpatient rehabilitation service, and in the Tulane Institute of Sports Medicine. The student will be exposed to therapies, medications and procedures typically used in PM&R practice. There will be opportunities for sideline game coverage if desired.

ORTH 4220 Physical Medicine & Rehab (2)

ORTH 4221 Mgmt. of Acute Sports Injuries (2)

ORTH 4240 Physical Medicine & Rehab (4)

ORTH 4241 Mgmt. of Acute Sports Injuries (4)

ORTH 4500 PM&R Acting Internship (4)
Students may be eligible to complete a PM&R Subinternship at an away site. See eMedley information about approval for away rotations. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ORTH 5053 Orthopaedic Pathways (1)
The pre-clinical student is given an introduction to the basics of Orthopaedic Surgical Science including basic surgical skills, principles and opportunities for career development. The course is a preceptorship with role-model orthopaedic surgeons to provide personalized instruction, teaching, and mentoring through experience in the clinic office, conferences, rounds, operating room (if applicable), and professional association. This elective is split into four subspecialties. Subspecialties include Foot and Ankle Surgery, Total Joint Surgery, Sports Medicine, and Shoulder/Elbow. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ORTH 5056 Orthopaedic Spring Elective (1)
Participants will be given hands-on learning on how to reduce fractures and dislocations, make splints and casts, and incise, debride, and suture wounds. They will receive biweekly lectures on the following topics: musculoskeletal chief complaints and their workup, a primer to fractures and dislocations, being a team physician, and musculoskeletal imaging. Students may be given the opportunity to observe operative cases. Students will be required to participate in a scheduled Sim Center activity on Sterile Scrubbing Technique and Proper OR Procedure. Students will take a musculoskeletal competency test at the end of their elective in order to solidify their knowledge. This test will be compiled by the residents. No book will be required for purchase—all material tested will be included in information provided to students in electronic form. The students completing the elective will be given a certificate stating their participation in the musculoskeletal elective. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ORTH 5500 Clinical Preceptorship - Ortho (1)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ORTH 5501 Introduction To Orthopaedic Su (1)
This elective is designed to give students an introduction to orthopaedic surgery and the diagnosis and treatment of the musculoskeletal system. It is taught by senior faculty in the Department of Orthopaedic Surgery. The sessions will consist of problem-based case presentations via a Socratic interactive dialogue between faculty and students. Students will be exposed to various aspects of orthopaedic surgery including general orthopaedics, total joints, sports medicine, pediatrics, trauma, oncology, hand, spine and foot/ankle. There will be no written or oral examinations. Pass/fail grades will be based upon class attendance, class participation, and oral student presentations. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ORTH 5540 Orthopaedic Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ORTH 9000 Orthopaedic Visiting Student (4)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ORTH 9020 Orthopaedic Visiting Student (2)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MD - Otolaryngology (OTLN)

OTLN 3500 OTLN Acting Internship (4)
Students may be eligible to complete an OTLN Subinternship at an away site. See eMedley information about approval for away rotations. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OTLN 4000 Otolaryngology (4)
The student will function as a sub-intern during this four-week rotation. The rotation is divided into two two-week rotations at Tulane University Hospital and Clinics and Ochsner. The elective is designed to be an outstanding learning environment for students interested in pursuing Otolaryngology as a career or students who would benefit from exposure to Otolaryngology for their career. Students will be expected to track patients assigned to the Otolaryngology-Head & Neck Surgery service throughout the patient's hospital stay including planned and emergent surgery. Attendance at weekly didactic conference (Tuesday 4 to 6 PM) is required. The student will be required to present patients on clinical rounds as well as discuss relevant Otolaryngology topics in the operating room and clinics. This is an intense clerkship experience. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OTLN 4020 Otolaryngology (2)
The student is introduced to Clinical Otolaryngology during this two-week rotation at Tulane University Hospital and Clinics. The elective is designed to be an outstanding learning environment for students interested in learning more about Otolaryngology as either a possible career, or students who would benefit from exposure to Otolaryngology for their career. Students are expected to attend both the Otolaryngology clinic as well as track patients assigned to the Otolaryngology-Head & Neck Surgery service throughout the patient's hospital stay including planned and emergent surgery. Attendance at weekly didactic conference (Tuesday 4 to 6 PM) is required. The student will be required to present patients on clinical rounds as well as discuss relevant Otolaryngology topics in the operating room and clinics. This is a focused clerkship experience. The student is expected to read the Primary Care Otolaryngology online textbook from the American Academy of Otolaryngology Head and Neck Surgery. During the rotation, the faculty will review relevant topics and the students are expected to demonstrate competency in the subject matter. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OTLN 4040 Otolaryngology Research (4)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OTLN 5000 Introduction to Otolaryngology (1)

OTLN 9000 Otolaryngology Visiting Studen (4)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

OTLN 9020 Otolaryngology Visiting Studen (2)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MD - Pediatrics (PEDS)

PEDS 3000 Pediatrics (8)
The Pediatric Clerkship is an 8-week clinical rotation designed to provide an introductory experience in the care of children for junior or senior medical students. The curriculum is based on a national curriculum formulated by the Council on Medical Student Education in Pediatrics and is designed to assist students in acquiring basic knowledge of common and uncommon but significant pediatric disorders through both clinical and didactic learning experiences. All students spend time in general and specialty ambulatory clinics, general or specialty oriented inpatient ward services, and the well-baby and neonatal intensive care nurseries. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 3004 Pediatrics (4)
This four-week elective provides students with an introduction to outpatient primary care and acute care in pediatrics. Students will rotate in various outpatient clinics to gain a better understanding of primary preventative care. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 3006 Pediatrics (6)

PEDS 3020 Pediatrics (2)
This two-week elective provides students with an introduction to outpatient primary care and acute care in pediatrics. Students will rotate in various outpatient clinics to gain a better understanding of primary preventative care. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 3040 Pediatric Research (4)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 3520 PEDS NICU Acting Internship (2)

PEDS 3521 PEDS PICU Acting Internship (2)

PEDS 4119 Advanced Pediatric Experience (4)
The Department of Pediatrics will be offering the Advanced Pediatric Elective (APE) in the T-4 February block each year. The APE is a course designed for senior medical students who are interested in residency careers which involve the care of infants, children, and adolescent patients. The APE is an additional elective for senior students (the other being their sub-internship) designed to give students extra training to prepare them for pediatrics, internal medicine/pediatrics (med/peds), triple board (pediatrics/adult psychiatry/child psychiatry), or family practice residencies. The APE will be held in February each academic year as a 1 month elective in order for students to acquire the knowledge and skills necessary to be competent and successful at the start of their intern year. This senior elective will be limited to 10 seniors to ensure a more concentrated and robust learning experience for each student. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4120 PEDS Emergency Medicine (2)
This is a 2-week elective in the Pediatric Emergency Department. Students will actively participate in the management of patients in the ED. Students will learn how to assess each patient and how to approach each complaint by considering most common causes and acutely emergent cases. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4121 Pediatric Forensic Medicine (2)

PEDS 4122 Pediatric PM&R (4)

PEDS 4123 PSEL & Team Training Elective (2)

PEDS 4124 Pediatric Rheumatology (2)
The Pediatric Rheumatology Elective will provide fourth year medical students who are considering Pediatric Rheumatology or Pediatrics as a future career with a broad exposure to the field of Pediatric Rheumatology. Over the course of two or four weeks, students will attend clinics and participate in inpatient consults with the Tulane Pediatric Rheumatology team at Children's Hospital of New Orleans. Students will work in an interdisciplinary team, seeing patients, presenting patients, writing notes, and formulating differential diagnoses and plans alongside experts in the field.

PEDS 4125 Pediatric Rheumatology (4)
The Pediatric Rheumatology Elective will provide fourth year medical students who are considering Pediatric Rheumatology or Pediatrics as a future career with a broad exposure to the field of Pediatric Rheumatology. Over the course of two or four weeks, students will attend clinics and participate in inpatient consults with the Tulane Pediatric Rheumatology team at Children's Hospital of New Orleans. Students will work in an interdisciplinary team, seeing patients, presenting patients, writing notes, and formulating differential diagnoses and plans alongside experts in the field.

PEDS 4140 PEDS Emergency Medicine (4)
This is a 4-week elective in the Pediatric Emergency Department. Students will actively participate in the management of patients in the ED. Students will learn how to assess each patient and how to approach each complaint by considering most common causes and acutely emergent cases. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4141 Pediatric Forensic Medicine (4)

PEDS 4210 PEDS Cardiology (2)
This is a two-week elective designed to provide exposure to Pediatric Cardiology. Students will rotate in an outpatient Cardiology Clinic to learn the diagnostic workup and management of common cardiologic cases. Students will learn about Congenial Heart Diseases and how they are managed in infants, children and adults. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4230 PEDS Gastroenterology (2)
This is a 2-week elective with inpatient and outpatient clinical experiences involving patients with GI and Nutritional issues. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4240 PEDS Genetics (2)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4250 PEDS Hematology/Oncology (2)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4270 PEDS Infectious Disease (2)
During this 2-week elective, the student will be part of the clinical team, including the attending, fellow (some months) and resident (some months). The team will do inpatient consults, attend Pediatric ID clinics (including pediatric TB and HIV clinics), visit the microbiology lab to review cultures and smears, and attend teaching conferences and journal club. The student is expected to make 1-2 case presentations which include a review of the literature. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4275 PEDS Medicine-Pediatrics (4)
Students may be eligible to complete a PEDS Med-Peds elective at an away site. See eMedley information about approval for away rotations. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4276 PEDS Medicine-Pediatrics (2)
Students may be eligible to complete a PEDS Med-Peds elective at an away site. See eMedley information about approval for away rotations. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4280 PEDS Nephrology (2)
This is a two-week elective on the Nephrology service. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4290 PEDS Pulmonary (2)
This is a two-week elective that provides an introduction to pediatric pulmonology in both inpatient and outpatient clinic services. Students will be exposed to a wide range of topics including cystic fibrosis, asthma, chronic lung disease, recurrent lung infections in infancy, and pulmonary function testing. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4410 PEDS Cardiology (4)
This is a four-week elective designed to provide exposure to Pediatric Cardiology. Students will rotate in an outpatient Cardiology Clinic to learn the diagnostic workup and management of common cardiologic cases. Students will learn about Congenial Heart Diseases and how they are managed in infants, children and adults. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4430 PEDS Gastroenterology (4)
This elective is a four-week rotation with inpatient and outpatient clinical experiences involving patients with GI and Nutritional issues. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4440 PEDS Genetics (4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4450 PEDS Hematology/Oncology (4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4461 PEDS Allergy/Immunology (4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4462 PEDS Allergy/Immunology (2)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4475 PEDS Infectious Disease (4)
The student will be part of the clinical team, including the attending, fellow (some months) and resident (some months. The team will do inpatient consults, attend Pediatric ID clinics (including pediatric TB and HIV clinics), visit the microbiology lab to review cultures and smears, and attend teaching conferences and journal club. The student is expected to make 1-2 case presentations which include a review of the literature. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4480 PEDS Nephrology (4)
This is a four-week elective on the Nephrology service. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4490 PEDS Pulmonary (4)
A four week introduction to pediatric pulmonology in both inpatient and outpatient clinic services. Students will cover a wide range of topics including cystic fibrosis, asthma, chronic lung disease, recurrent lung infections in infancy, and pulmonary function testing. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4500 PEDS Wards Acting Internship (4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4501 PEDS NICU Acting Internship (4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4502 PEDS PICU Acting Internship (4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4503 Pediatric Acting Internship (4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4520 PEDS Adolescent Medicine (2)
This is a 2-week elective in which students will care for adolescent and young adult patients in a variety of outpatient clinics including non-traditional, community-based settings (homeless shelter, voc/tech school). Autonomy is encouraged. Learning will be supplemented with live lectures and online modules. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4540 PEDS Adolescent Medicine (4)
Care for adolescent and young adult patients in a variety of outpatient clinics including non-traditional, community-based settings (homeless shelter, voc/tech school). Autonomy is encouraged. Learning will be supplemented with live lectures and online modules. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 4640 PEDS Neurology (4)
PEDS Neurology

Maximum Hours: 99

PEDS 5500 Clinical Preceptorship - Peds (1)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 5501 Pediatric Hematology/Oncology (1)
The student is expected to participate for a semester in the elective, which will involve about 1/2 day per week following patients in the Pediatric Hematology/Oncology clinic. The students will be mentored by the Pediatric Hematology/Oncology attending physician. Initially, students will see and examine patients in the presence of the attending. As the student becomes more experienced and comfortable, he/she will take histories, do examinations, formulate the assessments and plans and make presentations to the attending physician before the physician sees the patient. Because the majority of patients have chronic illnesses, the student will be able to follow many patients over most of the year. A variety of illnesses are seen such as leukemia, solid tumors, and sickle cell disease, anemia's and coagulation disorders. Emphasis will be placed on understanding the pathophysiology of these disorders. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 5540 Pediatric Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 9000 Pediatrics Visiting Student (4)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PEDS 9020 Pediatrics Visiting Student (2)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible.

MD - Pharmacology (PHAR)

PHAR 2003 Pharmacology (5)
The Pharmacology course covers primary concepts such as mechanisms of drug action, drug indications, contraindications, drug interactions & side effects.

PHAR 5001 Health and the Environment (1)
This course will introduce students to topics about the intersection between the environment and human health. Lectures will explore topics ranging from molecular biology to ecosystem-level determinants of health. The courses will be a mixture of lectures and interactive discussion sessions mediated by various faculty and visiting lecturers.

PHAR 5500 Clinical Preceptorship - Phar (1)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

PHAR 5530 Cardiovasular Pharmacology Res (1)
The goals and objectives of this course are to study the mechanisms that regulate tone in the pulmonary vascular bed, examine how pharmacologic agents alter this regulation, and to separate the cardiac and pulmonary vascular effects of these agents. The course consists of supervised laboratory research, collection of data, writing of abstracts for professional meetings and papers for journals. No formal examinations. Evaluation will be on performance and acquired knowledge during the course of experiments. Students will be assessed via quality of final written research report and performance in research lab.

PHAR 5540 Pharmacology Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

MD - Physiology (PYSI)

PYSI 1002 Physiology (5)
This course involves the study of the body's function from molecules to the whole organism. Students are expected to apply fundamental principles of physics and chemistry to the understanding of the body's function and regulatory mechanisms. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

PYSI 1111 Physiology Summer Course (5)
T1 & T2 summer courses may be required for students who need to remediate pre-clinical coursework. Contact your course director for more information.

PYSI 5110 Capstone component: PYSI 1002 (0)

PYSI 5500 Clinical Preceptorship - Pysi (1)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs.

PYSI 5540 Physiology Research (1)
Several faculty members, led by our Chairman, Dr. L.G. Navar, are investigating the role of the kidney and blood vessels in the pathophysiology of hypertension. Students will be exposed to various experimental approaches used in the study of renal function, hemodynamics, tubular transport processes, and fluid and electrolyte regulation. Student can learn techniques for the evaluation of renal function, renal tubule reabsorption, and vascular responses to different antihypertensive drugs, as well as the expression and regulation of genes involved in hypertension. Basic methodological approaches also will be covered in a systematic manner. The remainder of the student's time will be spent in one or more laboratories of participating faculty.

MD - Psychiatry (PYCH)

PYCH 3000 Psychiatry (4)
Psychiatry is a 4-week rotation intended to expose students to the basics of mental health, as well psychopathology and its treatment. It is intended to illustrate to students that psychological and psychiatric issues and patients will be part of their career, no matter what specialty they choose. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

PYCH 3006 Psychiatry (3)

PYCH 3050 Psychiatry Research (4)
Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

PYCH 3500 Psychiatry Acting Internship (4)
During the psychiatry sub-internship, students will gain increased supervised responsibility for patients with severe psychopathology in an inpatient setting. The goals are to deepen understanding of psychopathology and psychotherapeutics, learn evaluation and management skills for patients with a broad range of psychiatric disturbances, and begin to gain skills necessary for first-year residency as a psychiatry intern. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

PYCH 4000 Psychiatry (4)
Psychiatry is a 4-week rotation intended to expose students to the basics of mental health, as well psychopathology and its treatment. It is intended to illustrate to students that psychological and psychiatric issues and patients will be part of their career, no matter what specialty they choose. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

PYCH 4001 Specialty Psychiatry (4)

PYCH 4002 Addiction Medicine (4)

PYCH 4020 Assertive Community Treatment (2)
This is a 2-week elective in Psychiatry. The following experiences are available: Assertive Community Treatment and Forensic Psychiatry. See eMedley for more information about sites. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

PYCH 4021 Med-Psych (2)

PYCH 4022 Pain Management & Addiction (2)

PYCH 4040 Child Psychiatry (4)
During this elective, students will have the opportunity to participate in some or all of the following clinical activities: 1) school-based mental health treatment for complex behavioral and emotional disorders; 2) Tulane Parent Education Program – outpatient treatment of children and adolescents and their biological or foster families; 3) Psychiatric Consult/Liaison - consultation in the Tulane ER, Tulane pediatrics and school-based clinics in various Louisiana parishes; 4) Community mental health clinics providing outpatient treatment. Students will also attend Child Psychiatry didactics one day each week, along with clinical case conferences and seminars. Students are able to select a curriculum of varied clinical sites for a broad exposure to child psychiatry or may choose a more intense focused experience. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

PYCH 4041 Med-Psych (4)
This elective is offered for 4th year medical students interested in combined training and want a closer look at the environments and practice styles of dual-boarded physicians. The elective involves experiences in our two Med/Psych continuity clinics and the consult/liaison service run by a combined physician. Students may also participate in a traumatic brain injury clinic run in conjunction with the NFL and observe forensic evaluations of medically-complicated psychiatric cases. Rotating students will be expected to attend didactics in both the Internal Medicine and Psychiatry departments as well as our weekly Med/Psych conference. By the end of the rotation, the student will lead the weekly conference on a topic chosen in collaboration with the course director. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

PYCH 5500 Clinical Preceptorship - Pych (1)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

PYCH 5534 Psychiatry Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

PYCH 9000 Psychiatry Visiting Student (4)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

MD - Public Health (PHEA)

PHEA 4000 Public Health (4)
Required for students in the MD/MPH combined degree program. See MD/MPH Program Office for more information. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHEA 4001 Tropical Medicine (4)
Available only to TRMD students in the MD/MPH combined degree program. See MD/MPH Program Office for more information. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHEA 4002 MD/MPH (4)
Only available in T3 May to students in the MD/MPH combined degree program. See MD/MPH Program Office for more information. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHEA 5001 Public Health (1)
T1/T2 elective available only to students in the MD/MPH combined degree program. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MD - Radiology (RADS)

RADS 3020 Radiology (2)
The radiology clerkship is a concentrated two-week experience in diagnostic imaging and its role in patient care. Students attend regular faculty lectures and spend time in each of the imaging areas within the radiology department. The imaging reading areas include: general radiology, CT, ultrasound, nuclear medicine, angiography, neuroradiology, pediatric radiology, musculoskeletal imaging, and mammography. While in the reading areas students can observe the imaging exams and interact with the radiologist as the results are interpreted and dictated. This experience offers opportunity to correlate patient clinical presentation and findings with the results from the appropriate diagnostic imaging exam(s). In addition to faculty lectures and time in the reading areas, students have access to the radiology teaching area where their knowledge can be augmented by participation in teaching files covering the full spectrum of diagnostic imaging. During the two weeks, students are required to complete an assigned programmed text on the principles of chest Roentgenology. Students are evaluated by input from attending radiologists in each of the reading areas (25%), student participation in class lectures (25%), and power point presentation of an interesting case encountered while on service. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RADS 3040 Radiology (4)
See description for RADS3020. The 4-wk RADS3040 rotation will count as 2 weeks of the required RADS3020 and 2 weeks of elective credit. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RADS 3044 Radiology Research (4)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RADS 4000 Interventional Radiology (2)
This course is designed to be a foundational, 2-week experience in interventional radiology. Students interested in or considering pursuing a residency in diagnostic and interventional radiology are encouraged to take the course as T3s, although it is offered for T3s and T4s. Students should expect to participate as a member of the IR team, which will include seeing consults, presenting patients, discussing imaging, and participating in cases in the angiography suites. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RADS 4001 Interventional Radiology (4)

RADS 4021 Radiation Oncology (2)
Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RADS 4040 Radiology Oncology Research (4)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RADS 4041 Radiation Oncology (4)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RADS 5500 Clinical Preceptorship - Rads (1)
Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RADS 5540 Radiology Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RADS 9000 Radiology Visiting Student (4)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

MD - Surgery (SURG)

SURG 3000 Surgery (8)
The Surgery clerkship is designed to teach students the role of surgical care in the overall management of patients. Specifically, the students are expected to learn the work-up and evaluation of surgical patients, as well as the indications and contraindications for expected results, risks and complications of specific operations. Students are expected to scrub on a number of operations and will follow patients from presentation, work-up, and treatment, including operations and post-treatment/postoperative care. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SURG 3006 Surgery (6)

SURG 3040 Surgery Research (4)
The Surgery Research Elective is designed to encourage students to participate in active research with a faculty member or community faculty member and to understand all aspects involved with current research protocols and steps taken to achieve research goals. The student should be able to feel confident at the completion of the elective with the research process. The student will have research experience and will be able to include this in their CV in order to support their future career opportunities. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SURG 3120 Outpatient Surgery (2)
During this rotation, students will broaden their experience in evaluating surgical patients and increase their understanding of the different environments in which surgery is performed. The SURG Dept assigns students to a specific site/specialty. The SURG Dept will query registered students shortly before the block begins and notify students which specialties are available. SURG assigns specialties on a first-come, first-served basis. SOM Student Affairs does not have the ability to assign students to specific sites/specialties or to determine which sites/specialties might be available. Students must be enrolled for SURG3120 to fulfill the outpatient surgery requirement. Students may not request retroactively that an elective fulfill the outpatient surgery requirement. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SURG 3121 The IMPRESS Teaching Program (2)

SURG 3240 Honors Surgery (4)
This is a four-week course creating an intense and comprehensive surgical experience. This course will be limited to 4th year medical students. Such students will be chosen/accepted to this course based on high evaluations during their core surgery rotations and have demonstrated an aptitude and interest in a surgical career. The course will consist of the following: Dedicated lectures by selected faculty, which will encompass topics including surgical diseases, innovative surgical procedures, introduction to academic research, career planning and litigation issues; student presentations on specific surgical issues and procedures; dedicated simulation training including "Intern BootCamp" that Tulane surgical interns currently undergo; an introductory course and simulation training on the DaVinci Surgical Robotic system by residents and faculty; an animal lab over two/three days where the students will perform surgical procedures themselves with supervision and feedback; individual time to meet and discuss career goals, resume/personal statement review and interview preparation with faculty members. The overall goal is to help prepare these students to become outstanding interns at the start of their surgical residency. The course will be Pass/Fail, and students may use this to help strengthen their residency applications by stating they were chosen for, and passed the Tulane Honors Surgery Course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SURG 3500 Surgery Acting Internship (4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SURG 3520 Surgery Acting Internship (2)

SURG 4000 Surgery (4)
Students on senior electives in surgery will advance their clinical skills and knowledge by focusing on a specific area of surgical practice with a particular surgery service. The students will strengthen their clinical skills in perioperative patient assessment and management, in the use of diagnostic studies pertinent to the surgeon's practice, and assisting or performing procedures under direct supervision. Students are expected to participate in the operating room, clinic, wards fully including taking night or weekend call. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SURG 4001 The IMPRESS Program (Introduction to the Medical Profession: a Rotation to Empower Students (4)
The goal of this elective course is to give fourth year medical students the opportunity to assist with the recruitment and teaching of underrepresented minorities in medicine who participate in the "Introduction to the Medical Profession: a Rotation to Empower StudentS (IMPRESS)" program, a 4-week program for students from backgrounds underrepresented in the medical professions. They will do so by teaching college student recruits how to perform basic suturing methods, tying techniques, and laparoscopic moves.

SURG 4002 Surgery (2)
Students on senior electives in surgery will advance their clinical skills and knowledge by focusing on a specific area of surgical practice with a particular surgery service. The students will strengthen their clinical skills in perioperative patient assessment and management, in the use of diagnostic studies pertinent to the surgeon's practice, and assisting or performing procedures under direct supervision. Students are expected to participate in the operating room, clinic, wards fully including taking night or weekend call. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SURG 4020 Plastic Surgery (4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SURG 4021 Plastic Surgery (2)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SURG 4022 Surgery Research (2)

SURG 4520 SICU (2)
The student will receive in-depth exposure to critical care patients in either the surgical or trauma critical care units that will strengthen their clinical skills in perioperative assessment and management of critically ill patients. This will be accomplished by working as a member of a surgical resident team, including approximately weekly night/weekend call. Students will be expected to participate in all rounds, seminars, and resident teaching lectures. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SURG 4540 SICU (4)
The student will receive in-depth exposure to critical care patients in either the surgical or trauma critical care units that will strengthen their clinical skills in perioperative assessment and management of critically ill patients. This will be accomplished by working as a member of a surgical resident team, including approximately weekly night/weekend call. Students will be expected to participate in all rounds, seminars, and resident teaching lectures. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SURG 5000 Clinical Research (1)

SURG 5500 Clinical Preceptorship - Surg (1)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SURG 5540 Surgery Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SURG 5550 Surgical Pathways (1)
This elective is designed to give you an up close look into the life of a surgeon and that of an academic center's clinical surgical program. We have redesigned the elective in hopes that all of you are able to gain new knowledge while still maintaining your duties and obligations of being a T1/T2 pre-clinical student. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SURG 5640 Plastic Surgery Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SURG 9000 Surgery Visiting Student (4)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SURG 9020 Surgery Visiting Student (2)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MD - Urology (UROL)

UROL 3500 Urology Acting Internship (4)
The student will function as much in the capacity of an intern as can be permitted under present medico-legal limitations. Ward rounds will be made daily with the residents; attendance and participation in outpatient clinics will be expected; and the student will assist in both diagnostic and operative procedures. Weekly staff pyelogram conferences, IVP conferences, faculty and resident lectures, daily sign out rounds with staff on call, and monthly D & C Conferences are held and the student is expected to attend. All outpatient clinics meet with an attending physician. Seminars and Visiting Professor Programs are open to the student. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

UROL 4000 Urology (4)
Students enrolled in this elective will make ward rounds daily with the residents; attendance and participation in outpatient clinics will be expected; and the student will assist in both diagnostic and operative procedures. Weekly staff pyelogram conferences, IVP conferences, faculty and resident lectures, daily sign out rounds with staff on call, and monthly D & C Conferences are held and the student is expected to attend. All outpatient clinics meet with an attending physician. Seminars and Visiting Professor Programs are open to the student. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

UROL 4020 Urology (2)
During this 2-week rotation, students will make ward rounds daily with the residents; attendance and participation in outpatient clinics will be expected; and the student will assist in both diagnostic and operative procedures. Weekly staff pyelogram conferences, IVP conferences, faculty and resident lectures, daily sign out rounds with staff on call, and monthly D & C Conferences are held and the student is expected to attend. All outpatient clinics meet with an attending physician. Seminars and Visiting Professor Programs are open to the student. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

UROL 4040 Urology Research (4)
This course is an independent research elective for students in their clinical years: students must identify a faculty PI and negotiate content and deliverables with the faculty. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

UROL 5500 Clinical Preceptorship - Uro (1)
Preceptorships are available to T1 & T2 students who are interested in the specialty. Students must identify a physician to shadow. Students must have their preceptorship approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

UROL 5540 Urology Research (1)
5000-level research opportunities are available to T1 & T2 students who are interested in the specialty. Students must identify a faculty member with whom to conduct research. Students must have their research prospectus form approved in advance by the Senior Associate Dean of Admissions and Student Affairs. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

UROL 9000 Urology Visiting Student (4)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

UROL 9020 Urology Visiting Student (2)
This rotation is available only to visiting MD students, from US schools of medicine, in the clinical phase of their training: Tulane SOM does not accept visiting students from international schools of medicine. Visiting MD students must apply through AAMC's VSAS system to be eligible to enroll; pre-clinical visiting MD students are not eligible. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Media & Design (MDES)

MDES 1100 Introduction to Mass Media (3)
This course is designed to offer a broad appreciation of all types of media, and an understanding of how media shapes and reflects our culture. The course will examine the impact of books, newspapers, magazines, movies, radio, TV and the Internet. The course will also cover advertising and public relations and how these industries are used in mass media to shape consumer perceptions and behaviors.

MDES 1120 Media Writing (3)
The media writing course is designed to develop students' communication writing skills and styles in an effort to communicate with and reach diverse audiences. The course includes an overview of basic rules for becoming a better writer, journalistic writing with an emphasis on Associated Press style, and a comprehensive look at the types of writing assignments that communications professionals use to communicate with diverse audiences.

MDES 1940 Transfer Coursework (0-4)

Maximum Hours: 99

MDES 2000 Media & Design Assessment I (3)
This course provides students the opportunity to master skills within lower-level coursework as determined by faculty advisors. Students may take this course with permission by the Department Chair.

MDES 2110 Media Ethics & Equity (3)
Studying media ethics is central to understanding the pervasive nature that media play in our lives and the impact that the decisions of media practitioners have on society. Ethics play an integral role in every decision we make – from content creation to audience selection. This course begins with a discussion of traditional moral theory and ethical philosophies and applies them to modern-day issues in 21st century media. Topics include truth in media, privacy, social justice, framing the news and current events, media ownership, stereotyping and representation in film, television and advertising, as well as communications law, the Internet and digital media. Media literacy will be a central theme throughout the course and students will be presented with case studies about events and issues and will examine the decisions and implications on society. Ultimately, students are encouraged to become active users of media and, ultimately, content creators whose diverse, equitable and inclusive lens can create actionable change in society.

Prerequisite(s): (MDES 2200 and 3220).

MDES 2120 Media Law (3)
This course provides a historical survey and analysis of the current and future trends in the development of the media-related law in America. Students explore media-related ethical theories and the law in current issues, case studies, and problem-solving scenarios. Students explore the moral philosophies that govern such concerns as royalties, copyright infringement, libel, and intellectual property.

MDES 2200 Principles of Public Relations (3)
This course focuses on the communication between an individual or organization and the public to promote public acceptance and approval. Students explore traditional and emerging components of the public relations process through mass media, as well as the needs of different types of businesses, such as corporations, nonprofit organizations, and government offices.

MDES 2210 Media Research (3)
This course is designed to introduce students to mass media research including equipping students with the tools needed to develop a strategic communications plan including execution and evaluation. The primary focus of the class is on using research for advertising and public relations campaigns. Students will learn about the various types of research, research methods – content analysis, focus groups, in-depth interviews, surveys and experiments – and gain experience with the statistical methods most often used to analyze data.

MDES 2300 Digital Media Principles & Strategy (3)
This course will provide students with an understanding of how goals, audience, and metrics define a strategic approach to online communication and how specific channels, platforms, and tactics are used to achieve that strategy. The course will also focus on the key components of planning and creating an effective inbound strategy to reach an organization's audience.

MDES 2310 Influencer Strategy (3)
This course is designed to introduce students to the basic concepts, strategies, tactics and procedures of influencer marketing - a type of social media marketing that uses endorsements and product mentions from influencers. Course topics will include how to evaluate and decide when and how to work with influencers and how to leverage their social proof to reach your brand's following.

MDES 2400 Principles of Advertising (3)
This course covers the fundamentals of advertising, beginning with the history and evolution of advertising as an element in the economy, a specialized form of communication, a craft, and an area of ethical sensitivity. At the practical level, students will be introduced to media planning and the emergence of new media, market research, agency organization and creativity as well as the legal and ethical concerns that advertising professionals must bear in mind.

MDES 2401 Business of Media and Design (3)
Advertising is all about spends: media spends, agency fees, and production expenses. In this course, students will be exposed to the wide array of costs associated with advertising. We'll take a look at what comprises freelance and agency rate structures; how media is planned, placed, and compensated for; and how production costs and billing structures can be approached. This course will further expose the business side of advertising through developing an understanding of building viable scopes, budgets and timelines that are economically sound for both the agency and the client.

Prerequisite(s): MDES 2400.

MDES 2910 Special Topics in Strat Comm (1-3)
Special topics in strategic communication.

Maximum Hours: 99

MDES 3210 Digital Public Relations (3)
This course explores the opportunities and special demands of digital media in the business and promotion of public relations and PR campaigns. Students are taught the techniques of using blogging, social networking and advanced web technology in the promotion and publicizing of public relations clients.

Prerequisite(s): MDES 1100, 1120, 2110, 2200 and 2210.

MDES 3220 PR Writing (3)
This course emphasizes the factors of information content, creativity, and persuasion in a way that relates specifically to the practice of Public Relations. Students will receive guidance in the preparation of written materials that adhere to high standards of truth and information value, engage and interest the public(s), and take an advocacy stance in support of the originating organization's goals and objectives. These qualities of writing will be fostered for use both in the new media of websites and social media as well as in the traditional media of printed materials, news releases, speeches, letters, multi-media presentations, fact sheets, etc. Public Relations writing's association with marketing and advertising will also be explored.

Prerequisite(s): MDES 1100, 1120, 2110, 2210, 2120, 2200, 3210 and 3240.

MDES 3230 Media Relations (3)
This course is designed to help you better understand the role and practice of media relations and messaging in the private and public sector. Whether working in corporate, non-profit or governmental organizations, students will learn to research media and reporters, develop messages, build strategic media plans, generate media coverage, serve as spokespersons, handle crisis situations, and use digital media strategies to achieve the desired goals.

Prerequisite(s): (MDES 1120, 2200, 3210 and 3220).

MDES 3240 PR Case Studies (3)
This course studies real-life public relations cases and campaigns with discussions on why some campaigns succeed and others fail. Special attention is given to contemporary cases and to development of the tools necessary for effective campaigns including the importance of research, objectives, programming and planning.

Prerequisite(s): MDES 1100, 1120, 2110, 2200 and 2210.

MDES 3250 Non-Profit Communication (3)
Non-Profit Marketers wear many hats. In this day and age, non-profit marketers need to have a variety of skills to fulfill their role, and the outcomes that are needed. They are one of the main ways that an organization reaches its audiences. It includes: public relations, advertising, special event planning, social media, and consumer relationship building. This course will examine how organizations use their marketers to publicize who they are, their mission, and reach donors.

Prerequisite(s): MDES 1100, 1120, 2110, 2200, 2120, 2210, 3210 and 3240.

MDES 3260 Health Communication (3)
This course is designed to address the concepts and functions of health communication. Upon completion, students will have created a strategic health communication plan that can be used by a local organization to address the organization's stakeholders to increase behaviors that lead to positive health outcomes and decrease those that are adverse to their well-being.

Prerequisite(s): MDES 1100, 1120, 2110, 2120, 2200, 2210, 3210 and 3240.

MDES 3270 PR Event Planning (3)
Events are a very important strategy utilized by PR practitioners. This class will examine every aspect of event planning – from research and planning to contracts and budgets. Whether a practitioner is working with members of an internal or external audience, event planning will always be a useful tactic to build community, awareness and influence behavior. Students will also learn to promote events through both traditional and social media.

Prerequisite(s): MDES 2200.

MDES 3280 Crisis Communication (3)
This course will focus on the communication professional's role and responsibilities during a crisis. This class will in equal parts address what constitutes a crisis, which stakeholders are impacted during a crisis, how to manage the crisis and what happens when the crisis is "over." During a crisis, time is of the essence. Thus, students will be presented with several crisis scenarios throughout the class and will be asked to address them preparing them to aid in providing strategic counsel in crisis situations.

Prerequisite(s): MDES 1100, 1120, 2110, 2200, 2210, 2110, 2120, 3210, 3240 and 3220.

MDES 3300 Creating Digital Content (3)
This course will teach students how to think critically when developing digital content for different online channels and platforms, including long-form writing, short-form copy and headlines, images, infographics, and long-form videos and short clips.

Prerequisite(s): DDSN 2103 and MDES 2300.

MDES 3310 Digital Media Analytics & Reporting (3)
This course will take a deeper look at developing metrics, reporting tactics, and evaluating results of digital media and marketing communication campaigns. Students will have hands-on access to multiple platforms that track performance on different channels (social, paid media, email, etc.) and will analyze and report results.

Prerequisite(s): MDES 2300, 2210, 3300, 3450 and 2110.

MDES 3320 CRM and Digital Media (3)
This course is designed to present how customer relationship management (CRM) software is used to manage customer and audience relationships with digital media and marketing communication strategies, campaigns, and tactics. Students will learn and evaluate different CRM and engagement database platforms and develop strategies, tactics, and processes to help manage relationships with an organization's customers, constituents, and audience.

Prerequisite(s): DDSN 2103, MDES 2300 and 3300.

MDES 3330 SEO & SEM Strategies (3)
This course will present the basic principles of Search Engine Optimization, Search Engine Marketing, and Paid Media. It will focus on both creative and technical applications and strategies guided by industry research and best practices. Students will have hands-on access to the platforms available to research, build, and measure digital media effectiveness across platforms.

Prerequisite(s): DDSN 1100, 2103, MDES 2300, 2110, 2210, 3300, 3450, 3310 and 3320.

MDES 3333 Advancement Review (0)
This course will prepare students for the advancement review through advising and portfolio preparation. Students are expected to take this course as a pre-requisite or concurrently with MDES 3240 PR Case Studies or MDES 2210 Media Research.

MDES 3440 Project Management for Advertising (3)
This course is designed to expose students to the ways in which an advertising agency functions, specifically how work flows through it and how various roles impact agency output. Working and collaborating with others is part and parcel of the strategic communications industry and understanding the process will help students understand the value that each member of the team brings to the campaign's success. Exploring the role that both the traffic and production departments play in an agency or campaign setting will further students' grasp of the dynamic between the various departments.

Prerequisite(s): MDES 2400 and DDSN 2103.

MDES 3450 Brand & Campaign Strategy (3)
This course is designed to introduce students to the foundations of building memorable brands and effective campaigns. We'll address the core values of brand development, from brand creation to rebrands; as well as building and maintaining relationships with the consumer, while managing client expectations. Students will examine the elements involved in campaign development from planning and budgeting, to executing and managing campaigns. This course sits on the line where creativity and feasibility meet: how to tell a story in its most effective and authentic way, while accounting for not only budgets and timelines, but where and how that message could be best received – thus maximizing reach, repetition and relevancy of dollars spent.

Prerequisite(s): MDES 2400, DDSN 2103 and MDES 2401.

MDES 3460 Media Planning & Buying (3)
This course is designed to introduce students to the basic concepts, strategies, tactics and procedures of media planning and buying. Course topics will include how to evaluate and decide where and when to buy and place advertisements to achieve an organization or clients' marketing, advertising and media objectives.

Prerequisite(s): MDES 2400, 3450 and DDSN 2103.

MDES 3900 Special Topics (3)

Maximum Hours: 99

MDES 3901 Special Topics (3)

Maximum Hours: 99

MDES 3902 Special Topics (3)

Maximum Hours: 99

MDES 4000 Media & Design Assessment II (3)
This course provides students the opportunity to master skills within upper-level coursework as determined by faculty advisors. Students may take this course with permission by the Department Chair.

MDES 4150 Capstone: Media & Design (3)
This course is designed to emulate an agency in which students in the Media + Design program will come together to produce a campaign that includes conducting research, developing a plan, implementing strategies and tactics and measuring campaign success for real-world clients. This capstone course will provide students with the ability to put into practice the skills they learned throughout their coursework and create compelling portfolio works.

Prerequisite(s): MDES 1120, 2200, 2110, 2210, 2120, 3210, 3240, 3220 and 3230.

MDES 4190 Internship: Media & Design (3)
An internship is a hands-on experience in a professionally supervised environment to further students knowledge and skills within real-world context. B.A. candidates will spend at least 100 hours working and documenting their output in the Media and Design industries directly related to their academic major. Prerequisite(s): Successful completion of Review.

Maximum Hours: 99

MDES 4200 Strategic Corporate Communication (3)
This course will focus on the role and responsibilities of the corporate communications function and the integral nature of the corporate stakeholders. Understanding the role that stakeholders – individuals or groups who have a shared interest in the success or failure of a business such as employees, customers, shareholders, local community, society, media, etc. – is critical in the entire process. In this course, students will come to understand the role that corporate communicators play.

Prerequisite(s): MDES 1100, 1120, 2200, 2110, 2210, 2120, 3210, 3240 and 3220.

MDES 4210 Portfolio: Media & Design (3)
This class is designed to assist students in the development of their professional portfolios. This course and the creation of portfolios will position students for their career opportunities after graduation. Students will curate work from their courses and/or internships to produce professional-level portfolios that reflect mastery of strategy and tactical execution. The course will also include a focus on resume development and professional networking. Professionals in the respective industries will evaluate student portfolios against the highest industry standards and students will be expected to present their portfolios at the end of the semester. Prerequisite(s): By permission of Department Chair.

MDES 4300 DMMC Studio (3)
This course will provide a hands-on, applied learning experience using digital media and marketing communications automation software suites. Students will work in groups with real-life companies and organizations to create, implement and analyze the effectiveness of their digital media and marketing communication campaign. Peers, faculty, and other industry experts will evaluate and judge the performance of the group's plan and results.

Prerequisite(s): DDSN 1100, 2103, MDES 2300, 2110, 2210, 3300, 3450, 3310 and 3320.

MDES 4400 Advertising Studio I (3)
Building on the Principles of Advertising, this course requires students to develop and present advertising campaigns that involve organizing research, establishing goals and objectives, developing creative and messaging strategies, and preparing budgets similar to what advertising agencies do on a daily basis. The projects will provide a greater mastery of advertising principles and provide students with completed projects for their portfolio.

Prerequisite(s): MDES 2400, DDSN 2103 and MDES 3450.

MDES 4401 Advertising Studio 2 (3)
Building on the Advertising Studio 1, this course requires students to continue to develop and execute strategic advertising campaigns for real-world clients that includes research, planning, implementation and evaluation. The establishing goals and objectives, developing creative and messaging strategies, and preparing budgets similar to what advertising agencies do on a day-to-day basis. The projects will provide a greater mastery of advertising principles and provide completed projects for their portfolio.

Prerequisite(s): MDES 2400, DDSN 2103, MDES 4400 and 3450.

MDES 4404 NSAC Student Competition (3)
This studio course explores the interdisciplinary opportunities of the media and design industry by creating a real-world multi-media campaign for the American Advertising Federation National Student Advertising Competition (NSAC) client. This course is by application only.

MDES 4900 Special Topics (3)

Maximum Hours: 99

MDES 4901 Special Topics (3)

Maximum Hours: 99

MDES 4902 Special Topics (3)

Maximum Hours: 99

MDES 4910 Independent Study (1-3)
This course explores special topics with the Media & Design field. The student will work one-on-one with the faculty member to create portfolio ready works in a concept-driven environment. The independent study may be taken twice for credit if the topics vary.

Maximum Hours: 99

MDES 4990 Honors Thesis (3)

MDES 5380 Junior Year Abroad (1-20)

Medieval & Early Modern Studies (MEMS)

MEMS 1290 Semester Aboard (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MEMS 1890 Service Learning (0-1)

Maximum Hours: 99

MEMS 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

MEMS 1999 Medieval and Early Modern Events Management (1-3)
This course will introduce students to the theory and practice of supporting, promoting, and managing arts and humanities events in general and specifically those focused on the medieval (500-1400) and early modern (1400-1800) periods. Course emphasizes event planning, multimedia communications (creating, editing, producing, and distributing), community outreach, and coordination. Planning events related to the medieval and early modern periods can also involve archival research, image reproduction, preservation, and curatorship. In addition to gaining practical experience in outreach and events management, the course also has a classroom component that will introduce students to contemporary theories of events planning and management, with particular attention on community relationships and inclusivity. Course may be repeated 2 times for credit.

Course Limit: 2

MEMS 2000 Intro to Medieval Studies (3)
An introduction to the interdisciplinary nature of medieval studies focusing on the relationships between history, language, and the production of literary texts.

MEMS 2200 Topics in the Early Modern Period (1-3)
Topics in the Early Modern Period focuses on specific topics in Early Modernity (1400-1800), inclusive of art, literature, history, philosophy, science, music, language, and religion. Topics, format, and requirements will vary. Course may be repeated 4 times for credit.

Course Limit: 4

MEMS 2201 Topics in the Early Modern Period (1-3)
Topics in the Early Modern Period focuses on specific topics in Early Modernity (1400-1800), inclusive of art, literature, history, philosophy, science, music, language, and religion. Topics, format, and requirements will vary. Course may be repeated 4 times for credit.

Course Limit: 4

MEMS 2202 Topics in the Early Modern Period (1-3)
Topics in the Early Modern Period focuses on specific topics in Early Modernity (1400-1800), inclusive of art, literature, history, philosophy, science, music, language, and religion. Topics, format, and requirements will vary. Course may be repeated 4 times for credit.

Course Limit: 4

MEMS 2390 Semester Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MEMS 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

MEMS 3600 Writing the Past (4)
Writing the Past is a writing intensive course that focuses on critical, analytical, instructive, and creative writing about the world before 1800. Specific topics will vary, but the course will ask students to critically examine writings about the past (which may include but are not limited to old manuscripts or printed books, modern scholarship or journalism about the past, creative adaptations of the past, exhibitions or events focusing on the past) and learn to write about the past with a critical eye. This is not a history class or a class in archival research. Writing about the past can and very often does mean learning to look critically at how the past is represented in our world and to think critically about how we ourselves represent it. This class fulfills the second tier writing requirement and will require each student to write 5000 words (about 20 pages) of academic prose and to revise their writing after peer and instructor feedback. Course may be repeated two times for credit.

Course Limit: 2

MEMS 4000 Topics in Medieval Studies (3)
Each course will treat a particular area of medieval and early modern studies, within an interdisciplinary framework. Course may be repeated up to 2 times for credit.

Course Limit: 2

MEMS 4910 Independent Study (1-3)
Independent Study

Course Limit: 99

MEMS 4990 Honors Thesis (3)
Honors Thesis.

MEMS 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): MEMS 4990.

MEMS 5190 Semester Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MEMS 5370 Washington Semester (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MEMS 5380 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MEMS 5390 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MEMS 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

Microbiology - Graduate (MIIM)

MIIM 7010 Seminar Microbiol,Immun (1,2)

MIIM 7020 Graduate Journal Club (1,2)

MIIM 7030 Topics in Microbiology (1-3)

MIIM 7050 Thesis Research Design (2)

MIIM 7065 Scientific Writing (2)
This course is for students in the Master of Science Program in Microbiology and Immunology who have chosen the thesis track for completion of their degree. This course will guide students through the scientific writing process, with a focus in the field of biomedical science. In doing so, students will be expected to critically analyze scientific literature in the fields of microbiology and immunology. Weekly sessions will focus on the scientific writing process, critical analysis of published literature, slide presentation preparation, and providing constructive feedback as a reviewer.

Prerequisite(s): MIIM 7050.

MIIM 7100 Clincl Cases & Underlying Mech (2)
Prerequisite(s): MIIM 7600 and 7500.

Prerequisite(s): MIIM 7600 and 7500.

MIIM 7120 Advanced Virology (4)
Prerequisite(s): MIIM 7500.

Prerequisite(s): MIIM 7500.

MIIM 7150 Dynamics Immuno & Microb Inter (3)

MIIM 7210 Special Problems (1-5)

MIIM 7220 Advanced Research Methods (1-4)

MIIM 7250 Vaccine Biology (3)

MIIM 7310 Research (1-10)

MIIM 7320 Research (1-10)

MIIM 7400 Responsible Conduct-Biomed Rsh (2)

MIIM 7500 Graduate Microbiology (4)

MIIM 7550 Microbiology Laboratory (3)

MIIM 7600 Medical Immunology (3)

MIIM 7620 Advanced Immunology (3)
Advanced Immunology

MIIM 7720 Medical Mycology (3)

MIIM 7750 Medical Parasitology (3)

MIIM 7790 Advanced Methods in Molecular Biology (2)
This course is designed to introduce graduate students to the advanced and most recently developed methods and techniques in Molecular Biology. We will focus on recent new methods and technologies, including Gibson Cloning, DNA- and RNA guided CRISPR, Proximity Ligation, and Single Cell Sequencing etc., as well as the software tools and public databases for gene analysis and project design. Students need to have learned basic molecular biology or taken courses like Advanced Cell Biology (BMSP 6070), Genetics (EPID 6070 or GBCH 7170), or Methods in Biochemistry (GBCH 7580).

MIIM 7810 Special Topics (1-2)

Maximum Hours: 99

MIIM 8100 Viral Pathogenesis Jrnl Club (2)

MIIM 9970 Master's Thesis (1-2)
Master's Thesis

Course Limit: 2

MIIM 9980 Master's Research (2)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MIIM 9990 Dissertation Research (0)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Music (MUSC)

MUSC 1000 Fundamentals of Theory (3)
Basic course in the elements of music. Both semesters.

MUSC 1010 Adv Fund Theory Songwrt (3)
The focus of this course involves writing songs and acquiring basic skills in arranging.

MUSC 1030 Music at Midday (3)
A music appreciation class focused on examining, evaluating, and understanding the musical compositions and performances of classical, jazz, electronic and world music presented at the Music Department's Music at Midday concert series, interspersed with readings and discussions of writings on music performance philosophy.

MUSC 1050 The Art of Listening (3)
A course designed to increase the listener's perception and enjoyment of music employing masterworks of the European classical tradition.

MUSC 1060 Survey of Euro Art Music (3)
A chronological survey of masterworks of the European classical tradition.

MUSC 1080 Music of the Mexico-US Border (3)
The Mexico-U.S. border has historically been a site of contention. Walls and policing try to keep the two sides separate and to make the U.S. impenetrable. But sound has different boundaries and is hard to contain. Moreover, for large groups of people, the border is a way of life where the categories "Mexican" and "American" have fluid meaning. This course examines musical recordings and performances from a transnational perspective, pointing at the limits of the nation-state and of the category of "Hispanic" to understand and embrace border populations and their musics.

MUSC 1090 Intro To Popular Music (3)

MUSC 1190 Freshmen Writing Seminar (4)

MUSC 1290 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MUSC 1410 Hist Euro Music To 1800 (3)
Primarily for music majors and minors.

MUSC 1420 Hist European Music Since 1800 (3)
Primarily for music majors and minors.

MUSC 1510 Music Theory I (3)
Note: A basic understanding of the rules of tonal melody and chord construction is required. If remedial work is required, sign up for MUSC 1000 (Fundamentals). Harmony is the study of "simultaneous sounds (chords) and of how they may be joined with respect to their architectonic, melodic, and rhythmic values and their significance, their weight relative to one another." Music Theory I is essentially the study of diatonic and secondary chord structures and progressions with written exercises and analysis of music from the common practice period. First, an emphasis will be placed on chord construction, four-part writing, and voice leading, building on the relationship between counterpoint and harmony and the fundamental harmonic rules of the common practice period. Furthermore, throughout the semester, basic elements of the form of tonal music will be addressed so that the students will be able to see how these fundamental principles function within the context of a piece of music. During the semester there will be in-class and homework harmonization and analysis assignments, quizzes, a midterm exam, and to end the semester a final take-home exam project. At the end of the semester you will hand in a 3-ring binder containing a portfolio of all of your work for the semester.

Corequisite(s): APMS 1090.

MUSC 1520 Music Theory II (3)
Theory II picks up where Theory I (MUSC-1510) left off, delving into the use of chromaticism in the common practice period. As a continuation of MUSC-1510, this class begins with the exploration of secondary harmonic functions. The course continues from that point into a detailed study of the different modulatory techniques, mode mixture, and the use of other chromatic chords. After a look at tonal harmony in the late Nineteenth Century, this class shifts focus to the study of form and analysis in preparation for the following course in the sequence, MUSC-2010, Analysis I.

Prerequisite(s): MUSC 1510.
Corequisite(s): APMS 1100.

MUSC 1531 Composition & Arranging (3)
In this course, we will explore approaches to musical composition and the fundamentals of arranging, including the range, transposition, idiomatic techniques of instruments, and styles of ensemble arranging. Our primary text is Richard Sussman and Michael Abene's Jazz Composition and Arranging in the Digital Age, and a recommended text is Samuel Adler's The Study of Orchestration, 3rd Edition or any comparable orchestration book. Additional score excerpts and recordings will be supplied. Through written arrangement exercises and class discussion, we will practice the basic skills of composition and arranging that can be applied to your own music projects. Completion of MUSC 1530 is suggested.

MUSC 1650 History West Art Music (3)

MUSC 1810 Special Topics (3)
Special Topics in Music; title and topic varies by semester.

MUSC 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MUSC 1900 Music in New Orleans (3)
This course is intended as an introductory survey of New Orleans music, including jazz, brass band, Mardi Gras Indian, rhythm and blues, funk, and hip-hop, through an intensive exposure to existing research, field trips, and occasional visits from local researchers and musicians. Musical socialization--the role of young people in extending the city's musical traditions--will be a running theme throughout the course and will connect the course materials to the optional service learning project.

MUSC 1901 Sound Studies (3)
Sound is one of the five senses and a primary way we relate to one another and to the world. Speech distinguishes humans from other animals; we locate ourselves in spaces through echo; we feel sound in our bodies and vibrate sympathetically; we capture sound waves on vinyl or as binary codes. In this introduction to the field of sound studies, we will take up familiar topics like voice and listening, music and technology, and unpack them through readings from leading scholars. We will listen intently to speech and song, silence and noise. And we will dive into case studies that focus on people and places in the Unites States.

MUSC 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

MUSC 2010 Music Analysis I (3)
Analysis, or Form, is the study of the "disposition [of the material] for the construction and development of musical ideas."1 This course is essentially an in-depth study of harmonic, melodic, contrapuntal, rhythmic, and formal procedures in works selected from a vast array of time periods and musical styles. the Baroque through the Romantic periods that are representative of the common-practice tonal system. This course will incorporate review of harmony & voice-leading principles, the fundamental elements of phrase design, further aspects of phrase design, and important formal constructs of tonal music.

Prerequisite(s): MUSC 1520.
Corequisite(s): APMS 2090.

MUSC 2016 Music, Sound and Climate Change (3)
This course explores the relation between music, sound and climate change. We do an overview of the field of acoustic ecology and explore key terms such as ambient music, soundscape, keytones and soundwalks, environmental sound art, among others. We look at issues of sound pollution and the sonic relations between humans and non-humans across different cultures, especially environmental racisms and the relation between climate change, music and the colonial. We explore these issues through specific audiovisual and sonic materials.

MUSC 2020 Music Analysis II (3)
MUSC-2020, Music Analysis II, covers music from the end of the 19th & beginning of the 20th century, including Debussy, Stravinksy, Schoenberg, and Boulez. to the composers of today, including composers like Saariaho, Furrer, Czernowin, and Fure. In this class, selected compositions that represent significant developments in composition in the 20th and 21st Centuries will be studied to give you a clear representation of the many styles of composition that have grown out of these centuries. As we move through the 20th and 21st Centuries, we will also look at other musics that arose and influenced or were influenced by the composers of the classical world, as well as some music that may not have any connection but is valuable to understanding music of the 20th and 21st centuries.

Prerequisite(s): MUSC 1520.
Corequisite(s): APMS 2100.

MUSC 2030 Comparative Music History: Listening and Music in Cross Cultural Perspective (3)
This course is meant to introduce students to thinking about music history globally. It does so in two ways: first, by approaching comparative sets of practices of musicking and listening across cultures. This means we explore practices such as singing the sacred, court music, the rise of recorded music, large ensembles, the use of the voice, what is a musical instrument, etc. across cultures. Thus what is compared is not a chronological period but a musical practice, even if it comes from different historical moments. Second, this course proposes a global comparative perspective that explores the interconnected aspects of changing music histories, exploring the colonial, the rise of a global recording music industry, and other global changes and how they affect specific music genres and practices of listening. Grading is based as much on writing as on being able to develop listening skills.

MUSC 2040 Music, Culture, and Society (3)
This course begins with the premise that the study of music and the study of musicians are intertwined. Using methods from musicology and ethnomusicology, we will focus as much on the lives of musicians, and how their cultures and societies shape their practices, as we do on the analysis of musical sounds. Rather than separating out genre labels like traditional folk, commercial popular music, and erudite concert music, we will explore how these practices all inhabit the same cultural fields. During the semester, we will use particular case studies, such as K-pop, Claude Debussy, Brazilian bossa nova and Tuvan throat singing, as entry points to discussions regarding broader questions of culture and society. How is music intertwined with questions of economics, geography, cultural identity, religion, politics and history? This course seeks to attune your ears to novel sounds through listening assignments, and contextualize what they hear through weekly readings. It also serves to introduce you to methods and approaches within cultural study of music.

MUSC 2050 Orchestral Music (3)
The development of music for orchestra from Bach to Mahler. Listening, reading, and written reports.

MUSC 2170 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

MUSC 2290 Hist Amer Popular Music (3)
This is a survey history of American popular music from pre-Civil War Minstrelsy to MTV. The course is intended for the general student body, with no musical prerequisites required. Lectures integrate an in-depth discussion of the music itself, generously illustrated by recordings, with a solid presentation of the music's historical and cultural context. Major topics include the multicultural roots of American popular musics, the parallel development of four separate streams of popular music (an urban mainstream and three rural sub streams), the increasing tendency of these separate streams to interact to create new popular styles, and the function of the music industry in the dissemination of popular musical styles.

MUSC 2300 Computer Apps In Music (3)
An introduction to the critical role of computers in the music field today. As a survey of computer tools and techniques, this course will include applied work with notation, MIDI, digital sound-editing and multi-media software.

MUSC 2310 Electronic Music History (3)
This course will involve an examination of the electronic music repertoire with a focus on both the music and technology. We will learn about the history of electronic music through philosophies, aesthetics, and technologies that have been and are being used today.

MUSC 2390 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MUSC 2410 American Music (3)
A chronological survey of music in the United States from the Pilgrims to jazz and rock. The course traces the widely varied paths taken by music in America and shows how the three spheres of folk, popular, and classical music have continually interacted to form a variegated whole. Lectures move from genre to genre, placing each in its historical and sociological order.

MUSC 2420 World Musics (3)
An overview of the field of ethnomusicology and the types of issues and concerns that have guided the research of world music within that field. A number of selected musical case studies from Asia, the Middle East, Africa and the Americas that illuminate the differences and similarities between Western musics and their counterparts in other parts of the world. Particular interest will be given to the way in which cultural, social, and religious beliefs have informed stylistic, performance practice, and aesthetic development in other parts of the world as a means of reflecting about the same types of connections in Western music.

MUSC 2450 Intro To Opera (3)
Course includes lectures concerning the nature of opera and also a historical outline of the development of opera in Europe. Emphasis is then placed on viewing a number of complete operas, which will be screened on laser discs.

MUSC 2530 Black American Music Theory (3)
This course will be an intense study of Black American Music theory. There will be emphasis on the application of rhythm, melody, and harmony. The course is designed for music majors and minors as well as for non-majors who have a firm grasp of music fundamentals.

Prerequisite(s): MUSC 1000.
Corequisite(s): APMS 2200.

MUSC 2800 Intro To Music Business (3)
This course prepares students for operational and administrative as well as creative and technical positions within the music and entertainment industry.

MUSC 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MUSC 2910 Special Topics (3)
Course Limit: 99

MUSC 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

MUSC 3200 Listening to Art Music (3)
Students will study selected topics of concert music in the Western tradition, from the Middle Ages to present day. Emphasis is on listening in two senses: informed listening and analysis of repertory and reception history. Lectures move chronologically, situating each composer, genre, and style in historical and sociocultural context. This course requires students to be able to read scores and know music theory terms related to tonal music.

Prerequisite(s): MUSC 1510.

MUSC 3300 Music Cultures of World (3)
A survey of music in different societies throughout the world with assignments and readings in music other than Western art music. The lectures explain how to listen to this music and consider systematically the function of music in societies ranging from Australian Aborigines, to Indian classical musicians, to urban popular music in Latin America.

MUSC 3310 Topics: Musics Latin Amr (3)
This course will provide a survey of Latin American music and culture. The content of the course will change on a rotating basis each fall term. Topics include: Caribbean; Andean Countries; Mexico and Central America. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MUSC 3320 Musical Theatre In Amer (3)
A survey of vernacular theatre music in America from its European roots in opera buffa, ballad opera, and operetta through the jazz and rock developments of the sixties.

MUSC 3330 Jewish Music (3)
Survey of Jewish liturgical music from Biblical times to the present, and of Jewish popular, theatre, and folk music. Emphasis on European, Israeli, Sephardic, and American traditions.

MUSC 3340 History of Jazz (3,4)
Development of jazz as a cultural, sociological phenomenon, and survey of jazz styles.

MUSC 3350 Music In Contem Society (3)
An introduction to the music of the contemporary world as it interacts with social, political, and cultural processes that distinguish the 20th century. Examines the full spectrum of modern musical styles (classical, jazz, popular, folk, rock) as they have adapted to the mass communications technology of the present day.

MUSC 3360 The Latin Tinge: Jazz and Latin American Music in New Orleans and Beyond (3,4)
This course explores the relationship of African-American popular music and Latin American popular music, with a special focus on how New Orleans is a key site mediating these musical mixtures. It compares U.S. popular styles with styles from other countries in the hemisphere.

MUSC 3370 Studies in Great Composers (3)
The music of three influential composers is studied in depth against the background of their careers and times. The composers selected will change each term; contact the instructor or department for more information. Student must have ability to read, analyze, and discuss musical notation in order to be successful in the course.

Prerequisite(s): MUSC 1410*, 1420* and 2010*.
* May be taken concurrently.

MUSC 3390 World Vocal Traditions (3)
This course is an ethnomusicological exploration of selected vocal traditions from around the world. Anchored around three sets of guest lectures and live performances by Tuvan throat singers, a Persian Jewish singer, and a singer of Afro-Cuban religious music, the course will examine both the musical sounds that voices can produce, and the ways in which these voices are woven into the cultures from which they emerge.

MUSC 3410 Russian Music (3)
The history of 19th- and 20th-century Russian music with special emphasis on Tchaikovsky, Prokofiev, and Shostakovich.

MUSC 3421 Women Die in Opera (3-4)
Opera has been an elite form of musical entertainment in Western culture since the seventeenth century. Even though most famous lead roles in opera are for women, operas until the twentieth century have been predominantly written by men librettists and composers. They capture and prescribe the predominant values of modern Western patriarchy. In this course, we watch and listen to operas from 1600 to the present time. We pair the viewings with readings to answer the question: why do women so frequently die (and lie) in opera?

MUSC 3430 Blues In American Life (3)
The blues, as both a musical form and a state of being, is the primary layer of African American culture. This course considers how the blues permeates American life, through the music of work songs, rural blues, classic blues, jazz, rhythm and blues, cowboy and rock n roll.

MUSC 3440 Black Music, Black Lives (3,4)
Black music is celebrated as the signature artistic contribution America has given to the world. Music has been a source of power for people subject to enslavement, legal segregation, and an ongoing struggle for political citizenship and economic equity. This course highlights the agency of black musicians and the political significance of the music they have created, from slave songs to hip-hop. This is a social and cultural history, and no musical training is required for understanding course materials.

MUSC 3441 Black Music Lab (1)
This lab is for music majors, minors, or any other performing musicians who are enrolled in MUSC-3440 “Black Music, Black Lives.” Students will discuss and perform the musical aspects of the material covered in that course. The two courses should be taken concurrently.

Corequisite(s): MUSC 3440.
Course Limit: 1

MUSC 3450 Music & Politics (3)
Though often considered apart from social and political trends, music is central to thought and action in the public sphere. Whether in protest marches or in dance clubs, music challenges the belief that public opinion is expressed solely through language. We will concentrate on conflicts across lines of social identity: race, ethnicity, gender/sex, religion, and nationality. We will focus especially on racism against Black Americans in the U.S., anti-Semitism against Jews in Nazi Germany, and the Israeli-Palestinian conflict.The course is open to all undergraduate students.

MUSC 3460 Music, Religion, Spirit (3,4)
Music forms vital part of ritual for most religions around the world. In performing and listening to music, religious affiliates seek connection with the supernatural, foster community ties, and create tradition bridging past, present, and future. Furthermore, music gives religious groups visibility in the broader society, whether in live or recorded performance. This course explores the traditional musical practices of the three major monotheistic religions -Judaism, Christianity, Islam - followed by one unit on Indian religions, and one unit about of selected spiritual practices inherited from Africa currently practiced in the Americas, including voodoo, candomble, and Santeria. We will also critically look at historical and current social perceptions reacting to these musical practices and to their practitioners. This is a cultural history class; no musical training is required.

MUSC 3480 Music and Gender (3,4)
In this course, we'll explore the relationship between gender and music in the West over the past 450 years. How have shifting rules and boundaries of gender identity interacted with similarly shifting rules and boundaries about beauty, function, and construction of music? In what ways has music helped to represent and/or define gender in culture? Further, how do gender identities intersect with other categories if social and cultural identity such as race, ethnicity, and class? This course will use a variety of case studies from popular and art music to explore the relationships between musical practice and gender identification, including: the courtesans and castrati of Baroque opera; Glam Rock; Clara Schumann, jazz singers; and Elvis Presley. Course open to both music majors and non-majors.

MUSC 3535 Listening to Black American Music (3)
Survey of Black American Music styles with an emphasis on listening to recordings such as gospel, blues, jazz, R&B, funk, and hip hop to discern the stylistic evolution of the music and the musicians themselves.

MUSC 3700 Contemporary Music Industry (3)

MUSC 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MUSC 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

MUSC 4110 Chamber Music (3)

MUSC 4270 Indigenous media and sound in Latin America (3)
This course explores how indigenous musics and sounds have been inscribed into ethnographic media. We explore how the notion of indigenous musics arose in the late nineteenth century based on how it was collected and inscribed on specific sound and audiovisual formats, creating a racialized and colonial notion of indigenous musics. Then we explore how indigenous peoples themselves, often in collaborative processes, are decolonizing and appropriating such histories by rethinking the early archives or documenting their own musics and sounds in new ways. In so doing, they challenge Western notions of musicality, of media inscription, of racialized histories of music, and how human and non-human sounds are understood. Graduate students: some readings in Spanish.

MUSC 4330 Music of the Latin American Outlaws (3,4)
Music sounds loud and clear at the edge of law. From bandits to illegal immigrants, from underdogs to drug dealers, people who subscribe to their own rules reach out to our ears through song and dance. Their stories and sounds both fascinate and scare audiences well beyond their immediate surroundings, making their way to mass media and live events big and small. In this class, we will focus on Spanish-and Portuguese-speaking regions in the Americas, and our point of entry will be the music produced by and for groups or individuals who live(d) at the margin of law in the nineteenth and twentieth centuries. Your study time will be equally divided between learning and practicing aural skills and musical terminology, and critically reading texts of historical significance. In the long term, I hope that this course helps you look at any outlaw groups in new, more informed ways. I invite you to let the musics we will study challenge our preconceptions about Latin American cultures.

MUSC 4400 Music & Dsp (3)
This course introduces the student to the breadth and depth of signal processing used in musical applications. The course will cover fundamentals of signal processing and familiarize the student with classic computer music theories as well as state-of-the art topics for sound synthesis, analysis, and computer music composition. Students work mostly in a graphical coding language for audiovisual applications called Pure Data. No prior coding experience is required although experience with Matlab, Python or other languages translates well. Pure Data is an excellent coding language for students interested in both creative applications and science and engineering projects.

MUSC 4410 Music Performance System (3)
This Human Computer Interaction (HCI) course focuses on creative and innovative applications of engineering and design in the context of musical performance and composition. Students learn about the history of technology as it relates to musical instrument design and music composition as they design their own custom instruments, synthesizers, and controllers.

MUSC 4420 Algorithmic & Comp Music (3)
This course will be an exploration of computer music composition using various available techniques and state-of-the-art tools. This will be a hands-on course with compositional exercises and projects, working in our digital studio, and producing a concert at the end of the term.

MUSC 4440 Music Performance Systms (3)

MUSC 4560 Internship (1,3)
Qualified junior and senior majors may receive credit for work in musical institutions in the community, such as recording studios, the New Orleans Opera Association, the Louisiana Philharmonic Orchestra, and the like; this is to be accompanied by an academic component. Registration is administered by the Office Manager in the Department of Music, Brandt v. B. Dixon Performing Arts Center, Room 10. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MUSC 4570 Internship (1,3)
Qualified junior and senior majors may receive credit for work in musical institutions in the community, such as recording studios, the New Orleans Opera Association, the Louisiana Philharmonic Orchestra, and the like; this is to be accompanied by an academic component. Registration is administered by the Office Manager in the Department of Music, Brandt v. B. Dixon Performing Arts Center, Room 10. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MUSC 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MUSC 4900 Intro New Orleans Jazz (3)
This course is designed to provide an historical introduction to the origins, idiomatic coalescence, and early development of New Orleans jazz.

MUSC 4910 Independent Study (1-4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MUSC 4920 Independent Study (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MUSC 4930 Seminar (3)

MUSC 4940 Seminar (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MUSC 4950 Spec Topic In Musicology (1-4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MUSC 4951 Special Topics in Musicology (1-4)

MUSC 4952 Special Topics (1-4)
Course Limit: 99

MUSC 4953 Special Topics (1,4)
This class provides an overview of the benefits of music education in the lives of young people. We will consider the influence of teachers in the development of professional musicians as well as the value of teamwork, leadership, and discipline imparted to all students. Focusing on marching bands in New Orleans, we will visit school bandrooms, attend a high school football game, and host visits from music educators. Students will get a birds-eye view of the fate of music education while researching the effects of increasing cutbacks in arts education.

MUSC 4954 Special Topics in Musicology (1-4)

MUSC 4955 Spec Topic In Musicology (1-4)

MUSC 4956 Spec Topic In Musicology (1-4)

MUSC 4990 Honors Thesis (3)

MUSC 4991 Senior Honors Project in Fine Arts (3)
Senior Honors Project in Fine Arts

MUSC 5000 Honors Thesis (3-4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): MUSC 4990.

MUSC 5001 Senior Honors Project in Fine Arts (3)
Senior Honors Project in Fine Arts

Prerequisite(s): MUSC 4991.

MUSC 5190 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MUSC 5370 Washington Semester (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MUSC 5380 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MUSC 5390 Junior Year Abroad (0-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MUSC 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

MUSC 6010 Advanced Theory (3)

MUSC 6020 Advanced Theory (3)

MUSC 6030 Band Instrum & Arranging (3)

MUSC 6050 Analytical Methodology (3)

MUSC 6060 Culture & Power in New Orleans (3)
New Orleans is renowned for culture and it has been Black New Orleanians, above all, whose creativity has shaped the city's musical, culinary, architectural, and religious identity. This course places culture at the center of struggles for full citizenship by African Americans and Creoles of Color as well as Italians, Jews, Latinos, and Vietnamese. Under colonial, antebellum, and Jim Crow rule, culture was a source of power in terms of fomenting an ethics of care and a politics of rebellion against white supremacy. Since the Civil Rights era, culture has increasingly been incorporated into the tourist economy. This added value has trickled down unevenly, with Black culture workers most exploited and subject to surveillance, enclosure, and extraction. This course will investigate the deep history of local culture as a contested source of value, drawing upon historical, anthropological, and cultural studies of Blackness and whiteness in New Orleans.

MUSC 6090 Music Before 1600 (3)

MUSC 6100 17th & 18th Centry Music (3)

See MUSC 4420 for course description.

MUSC 6430 The Creative Soundscape (3)
This course introduces students to approaches of art and research that consider environmental sound. Students will learn technical skills, develop compositional processes, and engage with theoretical perspectives to inform the generation of original creative works, ranging from composed and improvised musical pieces to podcast episodes and radio dramas. Topics covered will include frameworks for environmental acoustics including ontologies of sound; listening practices; field recording; microphone technique; compositional strategies; audio editing and creative audio processing; spectral analysis; sonification; and more.

MUSC 6440 Music Performance Systms (3)

MUSC 6480 Music and Gender (3)

MUSC 6600 Theory of American Music (3)

MUSC 6610 Analysis of American Mus (3)

MUSC 6700 Creative Process (3)
In this course, we will together explore different topics as they relate to the creative process, with a focus on improvisation, collaboration, and communication. Our primary text will come from The Oxford Handbook of Critical Improvisation Studies, Volumes 1 & 2, edited by George E. Lewis & Benjamin Piekut, with additional text from Keywords in Sound, edited by David Novak & Matt Sakakeeny, and other texts, recordings, and videos that will be supplied on Canvas. The goals of this class are to explore a range of perspectives on the creative process through class material and from the range of perspectives offered by visiting guest speakers, and to form ideas for creative projects of your own.

Special Topics Music course taught by visiting or permanent SoPA Faculty. May be repeated up to unlimited times under separate topics.

Maximum Hours: 99

PAMU 3330 Creole &Cajun Music Hist (3)
French Louisiana music (Cajun and Creole) was largely ignored in mainstream music culture, except by a handful of collectors, scholars, and commercial promoters who sought to popularize it. From the first recordings in the 1920s to the transformation of the genre by the 1970s, the spread of this regional sound was driven by local, national, and international elites who saw the music's traditions and performers in the context of larger social, political, and cultural developments, including the folk revival and the civil rights and ethnic revival movements.

Music - Applied (APMS)

APMS 1090 Musicianship Lab I (1)
Basic musicianship laboratory.

Corequisite(s): MUSC 1510.

APMS 1100 Musicianship Lab II (1)
Intermediate musicianship laboratory.

Corequisite(s): MUSC 1520.

APMS 1290 Semester Abroad (1-20)
Can be repeated up to unlimited credit hours.

Maximum Hours: 99

Advanced musicianship laboratory.

Prerequisite(s): APMS 1100.
Corequisite(s): MUSC 2010.

APMS 2100 Musicianship Lab IV (1)
Writing and aural skills based on 20th century melodic, rhythmic, and harmonic principles.

Prerequisite(s): APMS 1100.
Corequisite(s): MUSC 2020.

APMS 2171 Vocal Ensemble (1)
Ensemble courses are open, for credit, to all students of the University. Some are by instructor approval (audition), as indicated. Students are permitted to earn 8 credits total toward their undergraduate degree in ensemble credit in APMS 2171-2187.

Course Limit: 8

APMS 2172 Men's Chorus (1)
Ensemble courses are open, for credit, to all students of the University. Some are by instructor approval (audition), as indicated. Students are permitted to earn 8 credits total toward their undergraduate degree in ensemble credit in APMS 2171-2187.

Course Limit: 8

APMS 2173 Instrumental Ensemble (1)
Ensemble courses are open, for credit, to all students of the University. Some are by instructor approval (audition), as indicated. Students are permitted to earn 8 credits total toward their undergraduate degree in ensemble credit in APMS 2171-2187.

Course Limit: 8

APMS 2174 Tulane-Newcomb Choir (1)
Ensemble courses are open, for credit, to all students of the University. Some are by instructor approval (audition), as indicated. Students are permitted to earn 8 credits total toward their undergraduate degree in ensemble credit in APMS 2171-2187.

Course Limit: 8

APMS 2175 TU Opera Workshop Prod & Desig (1)
The purpose of this Opera Workshop Production and Design is to provide opportunities for growth in the area of operatic repertoire, role preparation, operatic scenic/costume design, and compelling performance, direction, or design for the stage. The course will focus on the study and performance of operatic literature from traditional, contemporary, and diverse cultural sources. Admission is BY AUDITION in the semester prior to the opera. The course is open to music majors and non-music majors from across the University. Students are permitted to earn 8 credits total toward their undergraduate degree in ensemble credit in APMS 2171-2187.

Course Limit: 8

APMS 2181 Percussion Ensemble (1)
Ensemble courses are open, for credit, to all students of the University. Some are by instructor approval (audition), as indicated. Students are permitted to earn 8 credits total toward their undergraduate degree in ensemble credit in APMS 2171-2187.

Course Limit: 8

APMS 2182 Concert Band (1)
Ensemble courses are open, for credit, to all students of the University. Some are by instructor approval (audition), as indicated. Students are permitted to earn 8 credits total toward their undergraduate degree in ensemble credit in APMS 2171-2187.

Course Limit: 8

APMS 2183 Marching Band (1)
Ensemble courses are open, for credit, to all students of the University. Some are by instructor approval (audition), as indicated. Students are permitted to earn 8 credits total toward their undergraduate degree in ensemble credit in APMS 2171-2187.

Course Limit: 8

APMS 2184 Big Jazz Band (1)
Ensemble courses are open, for credit, to all students of the University. Some are by instructor approval (audition), as indicated. Students are permitted to earn 8 credits total toward their undergraduate degree in ensemble credit in APMS 2171-2187.

Course Limit: 8

APMS 2185 Jazz Combo (1)
Ensemble courses are open, for credit, to all students of the University. Some are by instructor approval (audition), as indicated. Students are permitted to earn 8 credits total toward their undergraduate degree in ensemble credit in APMS 2171-2187.

Course may be repeated 4 times for credit.

Course Limit: 4

APMS 2230 Composition for Electronic Media I (2)
Students in Composition for Electronic Media work closely with the instructor to develop facility with compositional tools available in commercial Digital Audio Workstations. Students first pursue short composition assignments focused on the use of samples, virtual instruments, digital audio effects, and basic recording techniques. After a level of proficiency has been achieved students undertake a larger scale project to be presented on an end of semester concert.

Course Limit: 4

APMS 2320 Music Recording Techniques I (3)
This is an applied music course. It includes an in-depth study of the techniques and methods used to produce small-scale, home studio, and mobile studio recordings. Special emphasis is placed on recording methods and microphone techniques for music recording that translate between modern recording studio environments and home studios and live music recording situations.

Maximum Hours: 6

APMS 2390 Semester Abroad (1-20)
Can be repeated up to unlimited credit hours.

Maximum Hours: 99

APMS 2810 Special Topics (0-4)

Maximum Hours: 99

APMS 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

APMS 2891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

APMS 2893 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

APMS 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

APMS 3020 Counterpoint (18th Cen) (3)
Eighteenth-century counterpoint. Principles of canonic and fugal composition in the style of J.S. Bach. Analysis of pertinent compositions. Sight singing and dictation.

Prerequisite(s): APMS 1520.

APMS 3130 Tech of Instru Conduct (1)
Prerequisite(s): MUSC 1520 and 2020.

Prerequisite(s): MUSC 1520 and 2020.

APMS 3140 Tech of Instru Conduct (1)

APMS 3210 Voice/Vocal Jazz (2)
One 50-minute lesson per week at the intermediate level culminating in half recital. Course may be repeated 4 times for credit.

Course Limit: 4

APMS 3211 Instrument (2)
Course may be repeated 4 times for credit.

Course Limit: 4

APMS 3212 Piano.Jazz Piano (2)
Course may be repeated 4 times for credit.

Course Limit: 4

APMS 3213 Composition (2)
One 50-minute lesson per week at the intermediate level culminating in half recital. Course may be repeated 4 times for credit.

Course Limit: 4

APMS 3214 Voice/Vocal Jazz (2)
Course may be repeated 4 times for credit.

Course Limit: 4

APMS 3230 Composition for Electronic Media II (2)
Students in Composition for Electronic Media II work closely with the instructor first on advanced audio composition assignments utilizing Digital Audio Workstations and Computer Programming languages to place and manipulate audio samples, midi note information, and effects parameter automation. Topics are chosen based on student and faculty interests and can include Algorithmic Composition, Surround Sound, Interactive Composition, Electro-acoustic Composition, Musique Concrete, and Advanced Sound Synthesis.

Course Limit: 4

APMS 3330 Music For Film (3)
This course provides both critical analysis of music and sound for film as well as practical approaches to the medium. Students will complete several music for film projects, such as scoring original music for a scene from a silent film.

APMS 3340 The Creative Soundscape (3)
This course introduces students to approaches of art and research that consider environmental sound. Students will learn technical skills, develop compositional processes, and engage with theoretical perspectives to inform the generation of original creative works, ranging from composed and improvised musical pieces to podcast episodes and radio dramas. Topics covered will include frameworks for environmental acoustics including ontologies of sound; listening practices; field recording; microphone technique; compositional strategies; audio editing and creative audio processing; spectral analysis; sonification; and more.

APMS 3400 The Story Road Project (3,4)
In this course, students will prepare, perform and tour a work of music theatre to area schools and civic organizations. The participants will not only perform, but also create educational materials to accompany the production, take on marketing responsibilities, and act as moderators with the audience members following the performances. This course fulfills the first or second tier service learning requirement. There is no prerequisite for the course, but instructor permission is needed for registration.

Corequisite(s): APMS 3891.

APMS 3450 Music & Musicians in Community (1)
Music service learning students will gain firsthand knowledge of how emerging musicians can serve and create music in the New Orleans community - creating musical programs, cultural events, or major service projects for the Bishop Perry Center, and by learning how to prepare and work in the Chapel of the Holy Spirit's church music setting. (This a 1 credit course, with an additional 1 credit service learning component).

APMS 3500 Improvisation (2)
Students will work with instructors individually and in small groups to develop the ability to logically respond to the harmonic, melodic, rhythmic, and formal implications inherent in specific types of musical material. Students will also examine compositional techniques characteristic of Black American Music. This course may be repeated 3 times for credit.

Course Limit: 3

APMS 3510 Jazz Arrangements (3)
Students will work with the instructors individually and in small groups to develop the ability to understand the challenges involved in the process of creating jazz arrangements. Student will focus on the concepts of music notation characteristic of the jazz idiom and on the idiomatic writing for instruments. They will also examine the sound characteristics of individual instruments, the mixtures, and the crucial issues of balance within the ensembles.

Course Limit: 2

APMS 3810 Special Topics (0-4)

Maximum Hours: 99

APMS 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

APMS 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

APMS 4030 Advanced Analysis (3)

APMS 4040 Orchestration (3)
The instruments of the orchestra; their construction, ranges, and playing techniques; methods of effective instrumental writing; the mechanics of reading and writing a score. Written exercises, analysis of scores, study of recorded performances and live demonstrations.

APMS 4230 Adv Voice/Recital Prep (3)
One 50-minute lesson per week at the advanced level. This course may be repeated 2 times for credit.

Course Limit: 2

APMS 4231 Adv Instrument/ Recital Prep (3)
One 50-minute lesson per week at the advanced level. This course may be repeated 2 times for credit.

Course Limit: 2

APMS 4232 Adv Piano/Recital Prep (3)
One 50-minute lesson per week at the advanced level. This course may be repeated 1 time for credit.

Course Limit: 2

APMS 4233 Adv Composition/Recital Prep (3,4)
One 50-minute lesson per week at the advanced level. This course may be repeated 2 times for credit.

Course Limit: 2

APMS 4234 Adv Voice/Recital Prep (3)
One 50-minute lesson per week at the advanced level. This course may be repeated 2 times for credit.

Course Limit: 2

APMS 4300 Adv Comp/ Sr. Recital (3,4)
One 50-minute lesson per week at the advanced level culminating in a senior recital.

APMS 4500 Materials Pedagogy Piano (3)

APMS 4810 Special Topics (0-4)

Maximum Hours: 99

APMS 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

APMS 4910 Lect Rec Prep/Lect Rec (2)
This course is offered to transfer students or students going abroad, who will have missed one of their required 8 courses in private lessons necessary for the BFA in the track of Performance. It takes the place of ONE of the pre-senior year lessons courses.

APMS 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

APMS 4950 Spec Top In Music Theory (3)
Ensemble courses are open, for credit, to all students of the University. Some are by instructor approval (audition)

APMS 5190 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

APMS 5370 Washington Semester (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

APMS 5380 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

APMS 5390 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

APMS 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

APMS 6810 Special Topics (0-4)

Maximum Hours: 99

APMS 6900 Summer Lyric Theatre (1)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

APMS 6920 Summer Lyric Theatre (2)

APMS 6940 Summer Lyric Theatre (3)

APMS 7250 TU Opera Workshop Prod & Desig (3)
The purpose of this Opera Workshop Production and Design is to provide opportunities for growth in the area of operatic repertoire, role preparation, operatic scenic/costume design, and compelling performance, direction, or design for the stage. The course will focus on the study and performance of operatic literature from traditional, contemporary, and diverse cultural sources. Admission is BY AUDITION in the semester prior to the opera. The course is open to music majors and non-music majors from across the University. Course may be repeated 6 times for credit.

Course Limit: 6

APMS 7510 Applied Music (3)

APMS 7520 Applied Music (3)

APMS 7530 Applied Music (3)

APMS 7540 Applied Music (3)

APMS 7810 Applied Music Special Topics (1-3)
Applied Music Special Topics for Graduate Students

Maximum Hours: 99

Native American and Indigenous Studies (NAIS)

NAIS 1810 Special Topics (3)
For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

NAIS 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level.

Maximum Hours: 99

NAIS 2810 Special Topics (3)
For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

NAIS 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level.

Maximum Hours: 99

NAIS 3810 Special Topics (3)
For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

NAIS 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level.

Maximum Hours: 99

NAIS 4560 Internship Studies (3)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NAIS 4570 Internship Studies (3)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NAIS 4810 Special Topics (3)
For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

NAIS 4910 Independent Study (1-3)
Independent Study.

NAIS 4920 Independent Study (1-3)
Independent Study.

NAIS 4940 Transfer Coursework (0-20)
Transfer Coursework at the 4000 level.

Maximum Hours: 99

Neuroscience (NSCI)

NSCI 1015 Introductory Neuroscience with Laboratory (3)
Introduction for high school students enrolled in the TSSP summer program.

NSCI 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

NSCI 2660 Special Topics (3)
Special topics in Neuroscience. Topic varies by semester.

Maximum Hours: 99

NSCI 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NSCI 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

NSCI 3300 Brain and Behavior (3)
Lectures cover the function and structure of the nervous system and the role of brain activity in the regulation of behavior. This course provides Neuroscience majors with a first exposure to the biological bases of behavior and should be taken prior to other Neuroscience courses at the 3000-level and above.

Prerequisite(s): PSYC 1000 or 1100.

NSCI 3310 Cellular Neuroscience (3)
In-depth coverage of the basic principles of cellular neuroscience, including the biophysical basis of the membrane potential, action potential generation and propagation, and synaptic signaling. Students also will be introduced to the synaptic organization of higher neural systems, such as the visual, auditory and somatic sensory systems.

Prerequisite(s): CELL 1010 and (NSCI 3300 or PSYC 3300).

NSCI 3315 Cellular Neuroscience Lab (1)
This is an interactive lab class giving students hands-on experience working with techniques used in the study of cellular neuroscience. Techniques include: behavioral testing using invertebrates, tissue staining, immunocytochemistry, and intracellular electrophysiological recordings.

Prerequisite(s): CELL 3310 or NSCI 3310.

NSCI 3320 Systems Neuroscience (3)
The subject of this course is the human nervous system, its anatomy, connectivity and function. Discusses the normal structure of the nervous system and the relationship of that structure to physiological function. The course is taught from a practical, clinical point of view and is intended to prepare students for further study in the neurosciences.

Prerequisite(s): CELL 1010 and (CELL 3310 or NSCI 3310).

NSCI 3325 Neuroanatomy Lab (1)
The subject of this course is the anatomy of the human nervous system. Students will learn to identify and map the structure and position of nuclei, pathways, and anatomical divisions of the brain and spinal cord. The course is a practical correlate to Systems Neuroscience (NSCI 3320), and is intended to prepare students for further study in the neurosciences.

Prerequisite(s): CELL 3320* or NSCI 3320*.
* May be taken concurrently.

NSCI 3330 Experiential Learning in Neuroscience (0)
Zero-credit add-on to 3 credits of NSCI/SCEN 4910 (Research/Lab); or 3 credits of SCEN 4570 (Internship); or another appropriate experience formally approved by the Neuroscience Curriculum Committee. S/U graded.

Prerequisite(s): NSCI 3300 or PSYC 3300.

NSCI 3360 Neuroanatomy & CNS Dissection (3)
The course emphasis is extracting intact Central Nervous System (CNS) structures with connecting peripheral nerves. The course will look at specific pathways (afferent, efferent, dermatomes) and discuss related clinical manifestations associated with lesions to the individual CNS and peripheral nerve structures. Team dissection will attempt to save substantial segments of cranial nerves and will explore the structures with which they communicate. As student progress through the dissection they will: 1) identify structures that surround and or cover the CNS; 2) log them in a course notebook and then dissect appropriate structures. Grading will be based upon participation, complete notebooks and final dissection results. (e.g., did you remove the brain, spinal cord, and peripheral nerves as a single unit in reasonable condition?)

NSCI 3660 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department.

NSCI 3665 Special Topics Lab (1-3)
Special Topics Lab.

NSCI 3770 Sensation & Perception (3)
Course provides the student with an appreciation for the different senses and the psychological phenomena associated with each sense. Topics include the major theories and experimental methods and findings associated with each of the sensory systems. Emphasis is placed on understanding sensory functions from an evolutionary perspective. The objective is for the student to obtain a firm understanding of the sensory functions and psychological phenomena associated with each sense.

Prerequisite(s): NSCI 3300 or PSYC 3300.

NSCI 3775 Sensation & Percptn Lab (1)
Course provides the student with hands on activities in order to gain a deeper understanding for the different senses and the methods used to study psychological phenomena associated with each sense. Satisfies neuroscience laboratory requirement.

Prerequisite(s): NSCI 3770* or PSYC 3770*.
* May be taken concurrently.

NSCI 3780 Sex, Gender, and the Brain (3)
How do we define sex? How do we define gender? How do we communicate research on sex differences with the public? Using an inclusive framework, we will learn the basics of sexual development and differentiation, including prenatal, adolescent, and beyond. Then, with a critical lens, we will explore current neuroscience research regarding gender/sex differences in humans and animal models.

Prerequisite(s): (NSCI 3300 or PSYC 3300).

NSCI 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NSCI 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

NSCI 3942 Neuroscience Lecture Elective Transfer Credit Behav Cog (0-20)
Credit for Neuroscience lecture course taken at another institution of higher learning that counts to fulfill the Behavioral/Cognitive neuroscience lecture elective requirement for the neuroscience major.

Maximum Hours: 99

NSCI 3943 Neuroscience Lecture Elective Transfer Credit Cell Molec (0-20)
Credit for Neuroscience lecture course taken at another institution of higher learning that counts to fulfill the Cellular/Molecular neuroscience lecture elective requirement for the neuroscience major.

Maximum Hours: 99

NSCI 3944 Neuroscience Lecture Elective Transfer Credit other (0-20)
Credit for Neuroscience lecture course taken at another institution of higher learning that counts to fulfill the "other" neuroscience lecture elective requirement for the neuroscience major.

Maximum Hours: 99

NSCI 3945 Transfer Course Work Lab (1-3)

NSCI 4060 Behavioral Endocrinology (3)
An introduction to the roles of steroid and peptide hormones in physiology and behavior. Lectures focus on the hormonal mechanisms that control reproductive and regulatory functions in human and infrahuman species.

Prerequisite(s): NSCI 3300 or PSYC 3300.

NSCI 4065 Behavioral Endocrinology Lab (1)
Laboratories provide demonstration and hands-on experience in research methods used in contemporary neuroendocrinology including hormonal manipulation, behavioral measurement, data analysis, and manuscript preparation.

Prerequisite(s): (NSCI 3300 or PSYC 3300) and (NSCI 4060* or PSYC 4060*).
* May be taken concurrently.

NSCI 4080 Computational Neurochemistry (3)
Introduction to 3D computational modeling of electrochemical signaling, including laws of diffusion, electrochemistry, resting and action potentials, synaptic communication between neurons, and synaptic plasticity.

Prerequisite(s): CHEM 1080 and (CELL 3310 or NSCI 3310).

NSCI 4110 Brain and Language (3)
The goal of this course is to learn how the brain is organized to produce and comprehend language and to understand linguistic disorders attendant on brain damage. There is an optional service learning component in which students can work with a speech therapist at a local health-care provider.

Prerequisite(s): NSCI 3300 or PSYC 3300.

NSCI 4130 Sport Rel Brain Injury (3)
This course will provide students with a conceptual and practical appreciation of contemporary neuroscience techniques that are utilized for the assessment and rehabilitation of athletes that suffer sport related concussion(s), including both strengths and limitations. The course will provide an innovative and engaging environment within the community for supervised exploration of specific components of sport concussion management including education/prevention and baseline testing. The students will also communicate research findings in oral and written formats. Course grades will be determined by the students' performance on test(s), scientific article critiques, student lead class discussions, and a group project. In lieu of a final exam, students will submit a group project that will simulate the process to complete a clinical research project.

Prerequisite(s): NSCI 3300 or PSYC 3300.

NSCI 4200 General Endocrinology (3)
This course explains the basics of hormone action and hormone interactions with their receptors, with an emphasis on the molecular mechanisms by which homeostasis is maintained in multicellular organisms. Physiological outcomes of hormone actions on different organs, as well as aberrant hormone action will be covered.

Prerequisite(s): CELL 1010 and 2050.

NSCI 4260 Methods for Functional MRI (3)
This course will cover methods for noninvasive functional imaging of the human brain using magnetic resonance imaging (fMRI). The course will include both lectures and computer lab sessions involving hands-on analysis of fMRI data. Topics include physical basis of the MRI signal, image encoding, data preprocessing, statistical analysis, multivoxel pattern analysis, and functional connectivity.

Prerequisite(s): PSYC 3300 or NSCI 3300.

NSCI 4330 Neurobiol Learn & Memory (3)
An introduction to the study of the neural mechanisms involved in learning and memory. The course involves detailed study of the memory systems of the brain as well as historical trends, theoretical perspectives and empirical findings that are associated with the neurobiology of learning and memory.

Prerequisite(s): NSCI 3300 or PSYC 3300.

NSCI 4340 Neurobiology of Disease (3)
Advanced course on the higher neural functions of the nervous system and neurological diseases resulting from disruption of these functions. An emphasis is placed on the physiology of the nervous system and neural dysfunction caused by inherited and acquired diseases. Topics range from motor control and neuromuscular diseases to high cognitive function and dementia. Clinical interventions as well as current research are discussed.

Prerequisite(s): CELL 3310 or NSCI 3310.

NSCI 4350 Developmental Neurobiology (3)
A broad overview of the different stages of neural development. Examination of the molecular aspects of developmental neurobiology, with reference to some important signaling pathways involved in neural growth and specification. Particular attention will be given to those active research fields, such as growth cone guidance and collapse and activity-dependent development, and applications of these to injury and disease.

Prerequisite(s): CELL 2050, 3310 or NSCI 3310.

NSCI 4370 Molecular Neurobiology (3)
Introduction to the molecular biology of neurons and neuronal function. Topics of study will include: the molecular composition of nerve cells, and how this provides a basis for their functional properties; their synaptic connectivity; how they receive, transmit and retain information at a molecular level. Studies will focus on current research in the field of molecular neurobiology.

Prerequisite(s): CELL 3310 or NSCI 3310.

NSCI 4380 Cognitive Neuroscience (3)
An introduction to the study of human behavior and cognition using neuroscience methods. The course will examine the neural basis of perception, attention, memory, language, motor control, and emotions.

Prerequisite(s): NSCI 3300 or PSYC 3300.

NSCI 4385 Cognitive Neuroscience Lab (1)
A laboratory course that provides training in experimental design and ethical issues, data collection, analysis, and manuscript preparation for cognitive neuroscience experiments. Methods used in cognitive neuroscience research, such as event-related potentials, structural and functional MRI, also will be discussed. Students will conduct their own studies using behavioral and brain electrical activity measures. Note: Satisfies psychology and neuroscience laboratory requirement. Fulfills college laboratory requirement. Prerequisite(s): (NSCI 3300, 3670, PSYC 3300 or 3670) and NSCI 380*. * May be taken concurrently.

Prerequisite(s): (NSCI 3300, 3670, PSYC 3300 or 3670) and NSCI 4380*.

* May be taken concurrently.

NSCI 4450 Genome Biology (3)
Genome-level science is changing the pace of biomedical research and medicine. This course will examine how whole genomes, transcriptomes, and proteomes are studied, and what we are learning about the biology of multiple organisms using these novel techniques. Epigenetics, genomics. and proteomics will be covered in the context of disease and the development of novel therapeutics. NOTE: Cross-listed as CELL/NSCI 4450/ 6450/ 7450.

Prerequisite(s): NSCI 4370, CELL 4370 or 3030.

NSCI 4500 Advanced Molecular Neurobiology (3)
This course provides detailed description and in-depth discussion of current techniques and experimental topics in the field of molecular neurobiology.

Prerequisite(s): NSCI 4370 or CELL 4370.

NSCI 4510 Biological Psychology (3)
A survey of biological psychology with an emphasis on neuroanatomy and research methods used to study mechanisms of learning and memory, mental disorders, emotion, stress, and other psychological phenomena.

Prerequisite(s): NSCI 3300 or PSYC 3300.

NSCI 4513 Music and Brain (3)
An introduction to current research linking music education to brain development and function. Fulfills writing intensive and service-learning requirements. NOTE: Cross-listed with PSYC 4513.

Prerequisite(s): NSCI 3300 or PSYC 3300.
Corequisite(s): NSCI 4890.

NSCI 4515 Biological Psychology Lab (1)
A laboratory course providing training in behavioral and neurobiological methods, experimental design, data collection and analysis and preparation of research reports. Fulfills the writing intensive requirement.

Prerequisite(s): PSYC 4510* or NSCI 4510*.
* May be taken concurrently.

NSCI 4530 Psychopharmacology (3)
An introduction to the effects of psychoactive agents on the nervous system. Lectures emphasize the mechanisms by which drugs regulate neurotransmitter systems to alter psychological and physical states.

Prerequisite(s): NSCI 3300 or PSYC 3300.
Enrollment limited to students in the Neuroscience or Psychology departments.

NSCI 4535 Psychopharmacology Lab (1)
Optional laboratory that fulfills laboratory requirement for Neuroscience and Psychology majors.

Prerequisite(s): NSCI 4530* or PSYC 4530*.
* May be taken concurrently.

NSCI 4570 Service Learning Internship (3)
An experiential learning process coupled with pertinent academic course work. Apply and register through the Center for Public Service for the three credit internship that fulfills the Second Tier service requirement.

Maximum Hours: 99

NSCI 4580 Internship (1-3)
An experiential learning process coupled with pertinent academic course work. Registration is completed in the department. S/U graded. Does not count towards any major requirements, but does count as required credits for graduation.

Maximum Hours: 3

NSCI 4590 Internship (1-3)
An experiential learning process coupled with pertinent academic course work. Registration is completed in the department. S/U graded. Does not count as credits required for graduation.

NSCI 4622 Neuroscience Special Topics Behavior Cognition (3)
Credit for Neuroscience special topics course that counts to fulfill the "behavior/cognitive" neuroscience lecture elective requirement for the neuroscience major.

Maximum Hours: 99

NSCI 4660 Special Topics in Neuroscience (1-4)
Various topics in Neuroscience based on faculty and student interest.

Maximum Hours: 99

NSCI 4661 Special Topics in Neuroscience (1-4)
Various topics in Neuroscience based on faculty and student interest.

NSCI 4662 Neuroscience Special Topics Behavior Cognition (3)
Credit for Neuroscience special topics course that counts to fulfill the "behavior/cognitive" neuroscience lecture elective requirement for the neuroscience major.

Maximum Hours: 99

NSCI 4663 Neuroscience Special Topics Cell Molec (3)
Credit for Neuroscience Special Topics course that counts to fulfill the "cell/molecular" neuroscience lecture elective requirement for the neuroscience major.

Maximum Hours: 99

NSCI 4664 Neuroscience Special Topics Other (3)
Credit for Neuroscience special topics course that counts to fulfill the "other" neuroscience lecture elective requirement for the neuroscience major.

Maximum Hours: 99

NSCI 4665 Special Topics Lab (1-3)
Special Topics Lab.

NSCI 4730 Neurodevelopment and Disease (3)
The assembly of a functional nervous system is one of the most complex developmental processes in nature. This course provides advance knowledge on the mechanisms controlling nervous system development, at the cellular, circuit, and functional levels, and how failure on these mechanisms underlie neurodevelopmental disorders. Also, this course will introduce the student to most current techniques and research topics on neurodevelopment.

Prerequisite(s): CELL 3310 or NSCI 3310.

NSCI 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): NSCI 4513.

Maximum Hours: 99

NSCI 4891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NSCI 4892 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NSCI 4910 Independent Study (1-3)
Laboratory research under direction of a faculty member. Registration is completed with the Neuroscience Program. A three-credit independent study may be used to fulfill a neuroscience laboratory requirement. Course may be repeated for up to 6 credits.

Maximum Hours: 6

NSCI 4920 Independent Study (1-3)
Laboratory research under direction of a faculty member. Registration is completed with the Neuroscience Program. Graded S/U.

Course Limit: 99

NSCI 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

NSCI 4945 Transfer Course Work Lab (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NSCI 4950 Special Projects In NSCI (1-3)
Individual projects supervised by program faculty members. Open to qualified students with approval of instructor and advisor. Registration is completed with the Neuroscience Program.

NSCI 4990 Honors Thesis (3)
Honors thesis research, first semester. Register in department.

NSCI 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): NSCI 4990.

NSCI 5380 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NSCI 6030 Brain Institute Seminar (1)
Students attend weekly departmental seminars as an introduction to research hypotheses, techniques and presentations. For Graduate Students Only. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NSCI 6040 Trends In Neuroscience (1)
Students select, analyze, present, and discuss recent empirical articles in the field of Neuroscience. During most weeks, an article authored by a neuroscientist who is presenting a departmental colloquium will be selected to facilitate understanding of the presentation. For Graduate Students Only. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NSCI 6060 Behavioral Endocrinology (3)
An introduction to the roles of steroid and peptide hormones in physiology and behavior. Lectures focus on the hormonal mechanisms that control reproductive and regulatory functions in human and infrahuman species.

NSCI 6070 Neurobiology of Aging (3)
This course will survey the current literature in clinical and research journals regarding the Neurobiology of the aging process. Emphasis is placed on the state of research in aging, looking at experimental design issues as well as published results. Connections will be drawn between the research literature and current clinical practice, as well as what the research literature says regarding aging and lifestyle.

NSCI 6080 Computational Neurochemistry (3)
Introduction to 3D computational modeling of electrochemical signaling, including laws of diffusion, electrochemistry, resting and action potentials, synaptic communication between neurons, and synaptic plasticity.

Prerequisite(s): CELL 6310 or NSCI 6310.

NSCI 6105 Philosophy of Neuroscience (3)
This course will introduce students to interdisciplinary research at the intersection of philosophy and neuroscience. The course will cover both historical and current material. Topics will include the relationship between neuroscience and psychology, neuroscience and the "self," the neural correlates of consciousness, and the localization of function in the brain.

NSCI 6110 Brain and Language (3)
The goal of this course is to learn how the brain is organized to produce and comprehend language and to understand linguistic disorders attendant on brain damage. There is an optional service learning component in which students can work with a speech therapist at a local healthcare provider.

NSCI 6130 Sport Rel Brain Injury (3)
This course will provide students with a conceptual and practical appreciation of contemporary neuroscience techniques that are utilized for the assessment and rehabilitation of athletes that suffer sport related concussion(s), including both strengths and limitations. The course will provide an innovative and engaging environment within the community for supervised exploration of specific components of sport concussion management including education/prevention and baseline testing. The students will also communicate research findings in oral and written formats. Course grades will be determined by the students performance on test(s), scientific article critiques, student lead class discussions, and a group project. In lieu of a final exam, students will submit a group project that will simulate the process to complete a clinical research project.

NSCI 6170 Psychedelics (3)
This course will examine the pharmacology, neuroscience, and sociological impacts of psychedelic drugs. Emphasis will be on the actions of these agents at the cellular and neuronal network level. Potential therapeutic applications and existing published data will be examined. Cross-listed with CELL 6170. Open to Graduate Students only.

NSCI 6200 General Endocrinology (3)
This course explains the basics of hormone action and hormone interactions with their receptors, with an emphasis on the molecular mechanisms by which homeostasis is maintained in multicellular organisms. Physiological outcomes of hormone actions on different organs, as well as aberrant hormone action will be covered. Open to undergraduates by petition who plan to transfer credit to the 4+1 Program in Neuroscience.

NSCI 6220 Neural Microengineering (3)
In recent years, a number of technologies have been developed and utilized for probing the nervous system. This course will focus on microscale tools, technologies, and techniques employed for the control, manipulation, and study of the nervous system in vitro. Course material will be presented primarily by students who prepare presentations from extensive background literature review. A number of projects will be assigned as design challenges in which multiple interdisciplinary groups will research and present proposed solutions to the same challenge. No background in engineering or math is required. Generally offered every other Spring.

NSCI 6260 Methods for Functional MRI (3)
This course will cover methods for noninvasive functional imaging of the human brain using magnetic resonance imaging (fMRI). The course will include both lectures and computer lab sessions involving hands-on analysis of fMRI data. Topics include physical basis of the MRI signal, image encoding, data preprocessing, statistical analysis, multivoxel pattern analysis, and functional connectivity.

NSCI 6310 Cellular Neuroscience (3)
In-depth coverage of the basic principles of cellular neuroscience, including the biophysical basis of the membrane potential, action potential generation and propagation, and synaptic signaling. Students also will be introduced to the synaptic organization of higher neural systems, such as the visual, auditory and somatic sensory systems. In addition, a term paper is required. Open to graduate students only.

NSCI 6320 Systems Neuroscience (3)
The subject of this course is the human nervous system, its anatomy, connectivity and function. Discusses the normal structure of the nervous system and the relationship of that structure to physiological function. The course is taught from a practical, clinical point of view and is intended to prepare students for further study in the neurosciences. In addition, a term paper is required.

Prerequisite(s): CELL 6310 or NSCI 6310.

NSCI 6325 Neuroanatomy Lab (1)
The subject of this course is the anatomy of the human nervous system. Students will learn to identify and map the structure and position of nuclei, pathways, and anatomical divisions of the brain and spinal cord. The course is a practical correlate to Systems Neuroscience, and is intended to prepare students for further study in the neurosciences.

Prerequisite(s): NSCI 3320*, 3320, 3320, 3320, CELL 3320*, 3320, 3320 or 3320.
* May be taken concurrently.

NSCI 6330 Neurobiol Learn & Memory (3)
An introduction to the study of the neural mechanisms involved in learning and memory. The course involves detailed study of the memory systems of the brain as well as historical trends, theoretical perspectives and empirical findings that are associated with the neurobiology of learning and memory. Open to undergraduates by petition who plan to transfer credit in Neurobiology of Learning and Memory to the 4+1 Program in Neuroscience.

NSCI 6340 Neurobiology of Disease (3)
Advanced course on the higher neural functions of the nervous system and neurological diseases resulting from disruption of these functions. An emphasis is placed on the physiology of the nervous system and neural dysfunction caused by inherited and acquired diseases. Topics range from motor control and neuromuscular diseases to high cognitive function and dementia. Clinical interventions as well as current research are discussed. In addition, a term paper is required. Open to undergraduates by petition who plan to transfer credit in Neurobiology of Disease to the 4+1 Program in Neuroscience.

NSCI 6350 Developmental Neurobiol (3)
A broad overview of the different stages of neural development. Examination of the molecular aspects of developmental neurobiology, with reference to some important signaling pathways involved in neural growth and specification. Particular attention will be given to those active research fields, such as growth cone guidance and collapse and activity-dependent development, and applications of these to injury and disease. In addition, a term paper is required. Open to undergraduates by petition who plan to transfer credit to the 4+1 Program in Neuroscience.

NSCI 6362 Neuroscience & CNS Dissection (3)
The course emphasis is extracting intact Central Nervous System (CNS) structures with connecting peripheral nerves. The course will look at specific pathways (afferent, efferent, dermatomes) and discuss related clinical manifestations associated with lesions to the individual CNS and peripheral nerve structures. Team dissection will attempt to save substantial segments of cranial nerves and will explore the structures with which they communicate. As student progress through the dissection they will: 1) identify structures that surround and or cover the CNS; 2) log them in a course notebook and then dissect appropriate structures. Grading will be based upon participation, complete notebooks and final dissection results. (e.g., did you remove the brain, spinal cord, and peripheral nerves as a single unit in reasonable condition?) Notes: Satisfies neuroscience laboratory requirement. Cross-listed with NSCI 3360.

NSCI 6365 Comparative Neuroanatomy Lab (1)
This course focuses on the relevant similarities and differences of model systems in the neurosciences. Students in the laboratory will engage in an intensive comparative study of the structural and functional anatomy of commonly used living model systems. Hands-on dissections of the nervous system from various species is utilized to reinforce learning, demonstrate how the nervous system is modified to match body type and lifestyle, and to give students experience in practical skills for neuroscience research. In addition, students will pursue an independent project on a protein of their choice. Students will use a literature search to try to map the relative expression of this protein across the nervous system.

NSCI 6370 Molecular Neurobiology (3)
Introduction to the molecular biology of neurons and neuronal function. Topics of study will include: the molecular composition of nerve cells, and how this provides a basis for their functional properties; their synaptic connectivity; how they receive, transmit and retain information at a molecular level. Studies will focus on current research in the field of molecular neurobiology. In addition, a term paper is required. Open to undergraduates by petition who plan to transfer credit to the 4+1 Program in Neuroscience.

NSCI 6380 Cognitive Neuroscience (3)
An introduction to the study of human behavior and cognition using neuroscience methods. The course will examine the neural basis of perception, attention, memory, language, motor control, and emotions. Open to undergraduates by petition who plan to transfer credit to the 4+1 Program in Neuroscience.

NSCI 6400 Neuroscience Applied (3)
This course is designed for neuroscience graduate students to help them utilize and apply their skills and knowledge of neuroscience and to help prepare them for their future professions. The course consists of individual and group presentations, discussion of selected readings, career preparation activities, invited speakers, evaluation/feedback, and a final project as students develop their critical thinking, analytical, and communication skills. For Graduate Students only.

NSCI 6450 Genome Biology (3)
Genome-level science is changing the pace of biomedical research and medicine. This course will examine how whole genomes, transcriptomes, and proteomes are studied, and what we are learning about the biology of multiple organisms using these novel techniques. Epigenetics, genomics. and proteomics will be covered in the context of disease and the development of novel therapeutics. NOTE: Cross-listed as CELL/NSCI 4450/ 6450/ 7450.

Prerequisite(s): NSCI 4370 or CELL 3030.

NSCI 6530 Psychopharmacology (3)
An introduction to the effects of psychoactive agents on the nervous system. Lectures emphasize the mechanisms by which drugs regulate neurotransmitter systems to alter psychological and physical states. Open to graduate students. Open to undergraduates by petition who plan to transfer credit in Psychopharmacology to the 4+1 Program in Neuroscience.

NSCI 6550 Synaptic Organization of the Brain (3)
The goal of this course is to discuss and understand functional connections within and between areas of the brain to lead to a greater understanding of brain function and behavior. We will focus on limbic and memory systems. A strong emphasis will be placed on in- class discussions and student presentations to enhance critical thinking and oral presentation skills.

Prerequisite(s): CELL 3310 or NSCI 3310.

NSCI 6660 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty primarily for graduates. For description, consult department.

Maximum Hours: 99

NSCI 6661 Special Topics in NSCI (0-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NSCI 6665 Special Topics Lab (1-3)
Special Topics Lab.

NSCI 6730 Neurodevelopment and Disease (3)
The assembly of a functional nervous system is one of the most complex developmental processes in nature. This course provides advance knowledge on the mechanisms controlling nervous system development, at the cellular, circuit, and functional levels, and how failure on these mechanisms underlie neurodevelopmental disorders. Also, this course will introduce the student to most current techniques and research topics on neurodevelopment.

NSCI 6900 Graduate NSCI Internship (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NSCI 6940 Transfer Coursework (0-20)
Transfer coursework at the 6000 level. Departmental approval required.

Maximum Hours: 99

NSCI 7030 Cognitive Neuroscience (3)
This course provides an introduction to the study of human behavior and cognition using neuroscience methods. The course will describe methods used to study human systems neuroscience and examine the neural basis of perception, attention, memory, language, motor control, and emotions.

Prerequisite(s): PSYC 7090.

NSCI 7100 Special Projects In NSCI (1-3)
Individual studies in a selected field with approval of instructor and advisor. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NSCI 7110 Graduate Neuroscience I (3)
An advanced survey of cellular neuroscience team-taught by members of the Tulane Neuroscience Program faculty. Topics covered include, among others: neuronal electrogenic properties, synaptic transmission and neuromodulation, signal transduction, neurotransmitter systems, synaptic plasticity, blood-brain barrier, glia, and neuropsychiatric disorders. The objective of the course is to achieve a fluency in neuroscience that will provide a foundation for pursuing further graduate-level neuroscience study and research. Restrictions: Open only to graduate students in Neuroscience

NSCI 7120 Graduate Neuroscience II (3)
This course is concerned with the structure and function of the human nervous system. In addition to lectures, this course provides hands-on examination of neuroanatomical structures. Most neuroscience research requires a working knowledge of the structural components of the nervous system as the basis of understanding conceptual aspects of nervous system function. This course is designed to provide a clear and concise account of the anatomy of the human nervous system in sufficient detail to understand the main functions and common disorders which impact the nervous system. This method will demonstrate how knowledge of neuroanatomy can aid in understanding clinical symptoms and emphasizes those areas of neuroanatomy which are particularly relevant to human neurological disorders. In addition, this course will focus on some broad aspects of human neuroscience and how they are rooted in the structure of the nervous system. Restrictions: Open only to graduate students in Neuroscience.

Prerequisite(s): NSCI 7110, CELL 6310 or NSCI 6310.

NSCI 7130 Research Rotations (3)
First-year doctoral students in Neuroscience complete research rotations in three different laboratories lead by faculty members of the Tulane Brain Institute before placement in a permanent laboratory to pursue doctoral training. The research objectives of each rotation are outlined by the supervising faculty member at the beginning of the rotation, typically 6-8 weeks in length. Three credits are earned for the first research rotation completed during the fall semester in the doctoral program and three additional credits are earned for the two research rotations completed during the spring semester. Course may be repeated 2 times for credit. Restrictions: Open only to first-year doctoral students in Neuroscience

Course Limit: 2

NSCI 7140 Scientific Communications (3)
This course will cover fundamental principles of scientific communication. The course will be workshop-based, with students creating communication products and receiving peer and instructor feedback. Topics include fellowship grant writing, oral presentations, poster presentations, figure making, and public engagement.

NSCI 7240 College Teaching Pedagogy (3)
The objective of Teaching Pedagogy is to provide a structured learning experience for doctoral students in Psychology and Neuroscience to facilitate their preparation to teach at the collegiate level and to increase their competitiveness on the job market. The course focuses on strategies and techniques to teach undergraduate and graduate courses in Psychology and Neuroscience.

NSCI 7241 College Teaching Practicum (1-4)
College Teaching Practicum allows doctoral students in Psychology and Neuroscience to design, prepare, and team-teach a section of an undergraduate course in their areas of expertise. Students receive supervision and mentoring based on classroom observations by Dr. Dohanich and other faculty members. Each student enrolled in the course teaches approximately 25% of an undergraduate course. Final grades are based on the effectiveness of teaching as evaluated by Dr. Dohanich using the attached rubric provided the CELT Peer Observation Program. The College Teaching Pedagogy course (PSYC/NSCI 7240) is the mandatory pre-requisite course for College Teaching Practicum.

NSCI 7260 Graduate Communications (3)
In today's competitive science market place, effective communication can be THE deciding factor in obtaining postdoctoral fellowships, faculty positions or alternative career options, as well as in getting grants funded and manuscripts published. Deliberate practice of these skills is therefore critical for graduate level science trainees. This course will involve extensive discussion and practice of oral and written communication. By the end of the semester, students will have prepared a draft of a NIH F-31 proposal, similar to that required for qualifying exams and will receive input on the clarity, rigor, format, grammar, and writing style of this document. This course is open to Ph.D. students only, and is recommended to students in their 4th semester of graduate study.

NSCI 7450 Genome Biology (3)
Genome-level science is changing the pace of biomedical research and medicine. This course will examine how whole genomes, transcriptomes, and proteomes are studied, and what we are learning about the biology of multiple organisms using these novel techniques. Epigenetics, genomics. and proteomics will be covered in the context of disease and the development of novel therapeutics. NOTE: Cross-listed as CELL/NSCI 4450/ 6450/ 7450.

NSCI 7660 Special Topics (1-3)

Maximum Hours: 99

NSCI 7940 Transfer Credit-Grad (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NSCI 7980 Research In Neuroscience-PhD (1-9)
Individual research supervised by faculty.

Maximum Hours: 99

NSCI 7981 Research in Neuroscience -MA (1-9)
Individual research supervised by faculty. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NSCI 9980 Master's Thesis Research (0-3)
Research toward completion of a masters degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NSCI 9990 Dissertation Research (0-3)
Research toward completion of a doctoral degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Nursing (NRSG)

NRSG 3000 Integrated Pathophysiology and Pharmacology for Nursing Practice: Part 1 (3)
This course [Part 1] focuses on the fundamental knowledge and content of pathophysiology and pharmacology for nurses. The course focuses on the disruption of physiological processes that produce disease states and examines the underlying mechanisms and alterations in normal bodily functions that contribute to the development, progression, and manifestations of diseases. The course integrates pharmacokinetics (how drugs are absorbed, distributed, metabolized, and excreted in the body) to conceptualize how drugs can prevent or ameliorate these disruptions, and provides the foundation for implementing drug therapy.

NRSG 3010 Integrated Pathophysiology and Pharmacology for Nursing Practice: Part 2 (3)
This course [Part 2] focuses on application to nursing practice and expands upon the fundamentals learned in Part 1. The course considers the influence of genetics, social and environmental factors, and lifespan on the development, progression, and manifestations of diseases. Pharmacodynamics (how drugs produce their effects), nursing considerations related to medication administration, patient education, and relevant non-pharmacologic interventions will be covered. Clinical judgment, patient safety, and evidence for best practice are integrated throughout the course.

Prerequisite(s): NRSG 3000.

NRSG 3100 Wellness and Professional Success (3)
This course provides the student with the opportunity to explore the basic concepts of Wellness from both a self-care and a professional development perspective. Theories and models of holism, wellness, stress, health promotion, health belief, and change are introduced as frameworks by which the student learns to reflect upon the lifestyle and behavior choices that influence health and well-being and are key factors in achieving and sustaining professional success. The course focuses on developing professionalism in nursing and includes topics in interprofessional collaboration, effective communication, and cultivating cultural humility. The course also provides a broad overview of topics relevant to professional nursing practice. Past and present influences that shape the role of nurses in the interdisciplinary healthcare system are discussed.

NRSG 3200 Foundations of Nursing Practice (3)
This course provides students with the knowledge and skills necessary to provide basic nursing care to adult individuals. Evidence-based principles and concepts of nursing will be covered including the nursing process, communication skills, physical assessment and the performance of nursing skills, and infection control. Students will apply principles and concepts of nursing interventions to patient care scenarios. Students will also learn about legal and ethical considerations in nursing practice and cultural competence in delivering patient care across the continuum of care.

Corequisite(s): NRSG 3205.

NRSG 3205 Foundations of Nursing Practice Practicum/Lab (1)
This practicum is a hands-on laboratory course designed to provide essential practical experience and basic skills necessary for entry-level nursing practice. This course serves as a complement to the theoretical knowledge gained in the Foundations of Nursing course. Students will apply foundational nursing concepts and techniques within the safety of the laboratory and simulated healthcare settings. The course aims to develop students' clinical reasoning and technical skills while promoting professionalism and safe person-centered care.

Corequisite(s): NRSG 3200.

NRSG 3210 Adult Health Assessment (3)
This course provides the skills and knowledge required for a comprehensive and systematic assessment of the physical, mental, emotional, and social well-being of adult individuals. The course teaches effective techniques for gathering comprehensive health histories including past medical history, family history, social history, and review of systems. The course focuses on developing methodical systems assessment skills and is a foundational course that prepares students to conduct health assessments as part of their nursing practice.

Corequisite(s): NRSG 3215.

NRSG 3215 Advanced Skills and Health Assessment Practicum/ Lab (1)
This practicum is a hands-on laboratory course designed to provide direct practice in the comprehensive assessment and advanced skills necessary for entry-level nursing practice. This course serves as a complement to the theoretical knowledge gained in the Health Assessment course. Throughout the practicum, students will apply assessment techniques and utilize advanced nursing skills in laboratory and simulated healthcare settings. The course aims to develop students' clinical judgment, communication, and technical skills while promoting professionalism, ethical conduct, and person-centered care.

Corequisite(s): NRSG 3210.

NRSG 3350 Community Immersion Preparation (1)
The course emphasizes the importance of cultural competence, empathy, and ethical decision-making when engaging with diverse communities. This initial immersion experience prepares students with basic competencies related to community health such as Basic Life Support certification, basic first aid, and beginning knowledge in Disaster Preparedness. The experience provides students with an opportunity to observe, learn from, and actively contribute to the community they serve. Students will be introduced to social issues, community dynamics, and the complexities of social change. Throughout the immersion experience, students will be guided to reflect on their personal biases, assumptions, and privilege. Students will examine their own values and perspectives in relation to social justice and community engagement. The course provides opportunities for students to utilize communication and interpersonal skills with empathy and compassion and experience a sense of social responsibility.

NRSG 3400 Adult Health Nursing (4)
This comprehensive course explores the concepts, theories, and evidence-based practices necessary for understanding and addressing the unique healthcare needs of adults, and specifics related to older adults, in various healthcare settings. The course will also examine the diverse physiological, psychological, social, and cultural aspects of adult health and wellness. The course emphasizes the promotion of health, the prevention of illness, and the management of acute, chronic, and surgical conditions. Additionally, students will utilize clinical judgment and ethical decision-making to evaluate safe, person-centered care within the interdisciplinary healthcare team.

Prerequisite(s): NRSG 3000, 3200, 3205, 3210 and 3215.
Corequisite(s): NRSG 3450.

NRSG 3450 Adult Health Practicum (3)
This Practicum is a clinical course designed to provide students with practical experience and skills in the care of adult patients across various healthcare settings. The course focuses on the application of learned assessment skills and evidence-based nursing interventions, and the development of clinical reasoning and clinical judgment skills specific to adult health. Students will have the opportunity to apply theoretical knowledge gained in previous coursework to real-world clinical and simulated healthcare settings. The practicum aims to enhance students' competence in assessing, planning, implementing, and evaluating nursing care for adult patients while promoting patient safety, interdisciplinary collaboration, and professionalism and advocates for a holistic and person-centered approach. Emphasis is also placed on the knowledge and skills necessary to provide comprehensive and compassionate care to older adults in various healthcare settings.

Corequisite(s): NRSG 3400.

NRSG 3500 Psychiatric Mental Health Nursing (3)
This course is designed to provide a comprehensive understanding of the principles and practices of psychiatric mental health nursing. The course explores the promotion, maintenance, and restoration of mental health across the lifespan, as well as the prevention and management of mental health disorders and psychiatric conditions. Students will examine the biological, psychological, and environmental factors that influence mental health and well-being. The course emphasizes the importance of a holistic and person-centered approach to care, fostering therapeutic relationships, and utilizing evidence-based interventions to support individuals with mental health challenges.

Prerequisite(s): NRSG 3000, 3200, 3205, 3210 and 3215.
Corequisite(s): NRSG 3550.

NRSG 3550 Psychiatric Mental Health Practicum (2)
This Practicum is a clinical course designed to provide students with real-world experience and skills in the care of individuals with mental health challenges. The course focuses on the application of theoretical concepts and nursing interventions in a variety of mental health care settings and through simulated experiences. Students will have the opportunity to engage in direct patient care, therapeutic interventions, and interdisciplinary collaboration within mental health care teams. The practicum aims to develop students' clinical competence, clinical judgment, therapeutic communication, and empathy while promoting recovery-oriented and person-centered care.

Corequisite(s): NRSG 3500.

NRSG 4000 Nursing Research and Evidence-Based Practice (3)
This course introduces students to the different types of research methodologies used by healthcare disciplines to apply evidence-based findings to clinical practice. Topics include the introduction of clinical questions, ethical conduct of research, research methodologies, concepts of measurement, qualitative and quantitative research design, the influence of government on research, and the analysis and dissemination of research findings. Students will also learn how to integrate their clinical expertise, patient preferences and values, along with the best available evidence, to make informed clinical decisions.

NRSG 4400 Complex Adult Health Nursing (4)
This is an advanced course that builds upon the foundational knowledge and skills gained in prior courses. It concentrates on providing advanced nursing care to patients with complex or life-threatening health conditions. The course will provide content on the etiology, diagnostic tests and procedures, and management of complex health conditions, including recognizing and managing polypharmacy and providing emotional support to patients and their families. It also provides content related to the unique physiological, psychological, and social aspects of older adults. The course emphasizes the integration of theory and practice to enhance clinical reasoning, decision-making, advanced assessment techniques, and evidence-based nursing interventions.

Prerequisite(s): NRSG 3010, 3400 and 3450.
Corequisite(s): NRSG 4450.

NRSG 4450 Complex Adult Health Practicum (2)
This Practicum is designed to provide students with advanced practical experience and skills in the nursing care of adult and older adult patients who have multiple health issues and complex needs or who are experiencing life-threatening conditions. Building upon the foundational knowledge and skills acquired in previous courses, this clinical course focuses on the application of advanced assessment, evidence-based nursing interventions and the development of clinical competence in managing complex healthcare needs. Students will be provided the opportunity to improve their organizational skills by experiencing the expanding complexity of patient acuity levels and workloads in demanding real-life and simulated healthcare settings. The practicum emphasizes clinical judgment, technical skills, and interdisciplinary collaboration while promoting patient safety, holistic care, and professionalism.

Corequisite(s): NRSG 4400.

NRSG 4500 Population and Community Health Nursing (3)
This course provides students with a broad introduction to the principles, theories, and practices related to nursing care in the community. The course explores the role of the community health nurse in promoting, maintaining, and improving the health of individuals, families, and populations across the healthcare continuum and in various community settings. Students will examine the determinants of health, health promotion strategies, and the impact of social, cultural, and environmental factors on community health. The course emphasizes the application of evidence-based practices, health education, and collaboration with community stakeholders to address the unique health needs and challenges of underserved and diverse populations.

Prerequisite(s): NRSG 3350, 3500 and 3550.
Corequisite(s): NRSG 4550.

NRSG 4550 Community Immersion Practicum (3)
This a clinical course designed to immerse students in delivering nursing care in community settings. This practicum complements the theoretical knowledge gained in the Community Health Nursing course and focuses on the application of evidence-based practices to promote health, prevent disease, and address the unique health needs of underserved and diverse populations. Students will have the opportunity to work directly with individuals, families, and communities to provide comprehensive and holistic nursing care. The practicum aims to develop students' clinical competence, clinical judgment, cultural sensitivity, and collaborative skills while promoting community engagement and addressing health disparities.

Corequisite(s): NRSG 4500.

NRSG 4600 Pediatric Nursing (3)
This is a specialized course that builds on developmental theory and focuses on the principles of nursing care for children and their families who are experiencing acute, complex, and/or chronic health problems. This course focuses on the provision of holistic care to pediatric patients across various healthcare settings. The course covers various aspects of pediatric nursing including growth and development, common health conditions, nursing assessments, interventions, and health promotion specific to pediatric patients. The course emphasizes family-centered care, cultural considerations, and ethical principles in pediatric nursing practice.

Prerequisite(s): NRSG 3450 and 3550.
Corequisite(s): NRSG 4650.

NRSG 4650 Pediatric Nursing Practicum (1)
This practicum is a clinical experience that provides students with the opportunity to apply theoretical knowledge and develop practical skills in the field of pediatric nursing. The course provides students with the opportunity to provide direct care to infants, children, and adolescents in various real-time and simulated healthcare settings. The course emphasizes clinical competence, decision-making, and professional development in pediatric nursing practice.

Corequisite(s): NRSG 4600.

NRSG 4700 Maternal Newborn Nursing (3)
This is a specialized course designed to provide students with an introduction to the process of childbirth and the practical concepts related to nursing care during the child-bearing period. The course explores health promotion, physiologic changes associated with pregnancy, high-risk conditions, and fetal development. Racial disparities in maternal and child health outcomes will be addressed. The course emphasizes the provision of holistic care to women, infants, and families throughout the pregnancy, childbirth, and postpartum periods with a focus on the cultural needs of a diverse population.

Prerequisite(s): NRSG 3450 and 3550.
Corequisite(s): NRSG 4750.

NRSG 4750 Maternal Newborn Nursing Practicum (1)
This practicum is a clinical experience that provides students with the opportunity to apply theoretical knowledge and develop practical skills in maternal newborn nursing. This course provides students with the opportunity to provide direct care to women, infants, and families in real-time and simulated prenatal, intrapartum, or postpartum settings. Emphasis is placed on clinical judgment, stress adaptation, and problem-solving.

Corequisite(s): NRSG 4700.

NRSG 4800 Management and Leadership in Nursing (3)
The course is an introduction to a variety of theoretical frameworks that support principles of leadership and management in nursing. Emphasis is placed on developing, enhancing, and demonstrating leadership skills, competencies, and aptitudes. Students are exposed to practical situations in the management of current and practical patient care in diverse healthcare settings. Topics include organizational structure, comparison of management and nursing processes, decision-making, change, oral and written communication skills, effective interpersonal skills, interprofessional collaboration, team building, quality improvement, and the nurse-sensitive indicators of structure, process, and outcomes.

Prerequisite(s): (NRSG 3400 and 3450) and (NRSG 3500 and 3550) and (NRSG 4400 or 4450) and (NRSG 4500 or 4550).

NRSG 4950 Nursing Generalist Preceptorship & Seminar (4)
This course is a culminating course that provides students with an opportunity to synthesize their knowledge, increase their responsibility and accountability, and prepare to successfully transition to professional nursing practice. The course provides students with the opportunity to demonstrate competence and readiness for practice in real-world settings under the guidance of a registered nurse preceptor. The course emphasizes advanced nursing concepts, clinical judgment, delegation, leadership, and NCLEX-RN preparation in concert with self-reflection, feedback, and committing to professional growth.

Prerequisite(s): NRSG 4400, 4450, 4500 and 4550.

Pharmacology - Graduate (GPHR)

GPHR 7040 Neuropharmacology (2)
Enrollment limited to students in the Pharmacology department.

Course Limit: 2

GPHR 7050 Cellular Control Mechanm (2)
Course Limit: 2

GPHR 7055 Practicing Professionalism (1)
The goal of this course is to teach and assess the practice of professional behavior for students in our graduate program.

Enrollment limited to students in the Pharmacology department.

Course Limit: 2

GPHR 7060 Endocrine Pharmacology (2)
Course Limit: 2

GPHR 7120 Adv Topics In Cardiobiol (2)

GPHR 7180 Selected Topics (0-9)

GPHR 7190 Pharmacology Seminar (1)
Enrollment limited to students in the Pharmacology department.

GPHR 7200 Seminar Pharmacology (1)
Course Limit: 2

GPHR 7210 Pharm Advances (1)
Enrollment limited to students in the Pharmacology department.

GPHR 7220 Adv In Pharmacology (1)
Course Limit: 2

GPHR 7230 Principles of Pharmacol (3)
Enrollment limited to students in the Pharmacology department.

GPHR 7240 Principles of Pharmacol (2)
Enrollment limited to students in the Pharmacology department.

Course Limit: 2

GPHR 7250 Medical Pharmacology (3-6)
Medical Pharmacology

Enrollment limited to students in the Pharmacology department.

GPHR 7260 Medical Pharmacology (4)
Course Limit: 2

GPHR 7505 Master's Research (2)
Enrollment limited to students in the Pharmacology department.

GPHR 7510 Pharmacological Lab Research (2)

GPHR 7520 Pharmacology ePortfolio (1-2)
Course Limit: 2

GPHR 7530 Molecular & Cellular Pharmacol (2)
Enrollment limited to students in the Pharmacology department.

GPHR 9980 Master's Research (2)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GPHR 9990 Dissertation Research (0)
Course may be repeated up to unlimited credit hours.

Enrollment limited to students in the Pharmacology department.

Maximum Hours: 99

Philosophy (PHIL)

PHIL 1010 Introduction to Philosophy (3)
A general introduction to the most persisting questions of philosophy: Is there a God? Do I exist? Can I live forever? Do I have free will? How should I live?

PHIL 1020 Philosophies of The Self (3)
An examination of several theories of the nature of self and its relation to society and to the world.

PHIL 1030 Ethics (3)
A critical study of alternative theories of the good life, virtue and vice, right and wrong, and their application to perennial and contemporary moral problems.

PHIL 1040 Beginning With Minds (3)
A topical introduction to philosophy which surveys historical and current work in philosophy of mind and the study of cognition. The material revolves around the reasons we have to attribute minds to people. We explore several reasons for having a mind: the capacity for knowledge, innate representations, language, consciousness, agency, control over the body, freedom from natural causality. This course is particularly useful for those students interested in the cognitive studies program, a coordinate major.

PHIL 1050 Introduction to Medical Ethics (3)
This is an introductory course to Medical Ethics and focuses on the major ethical principles and values related to several aspects of life and death. In the first part of the course, we will examine case studies, the second part of the course will be focused on ethical and conceptual questions regarding the nature and significance of autonomy, decisional capacity, and informed consent, and the third part will be focused on issues relating to social justice, equality, and equity in the practice of medicine.

PHIL 1060 Critical Thinking (3)
This course is intended to enhance the student's analytical reasoning skills. Emphasis is placed on the study of arguments and the development of techniques of informal logic for assessing their cogency.

PHIL 1210 Elementary Symbolic Logic (3)
The course concerns techniques of analyzing sentences and arguments by uncovering the formal structures and relations which underlie them. This involves translating ordinary language into the symbolic formulas of elementary logical systems and proving formalized arguments.

PHIL 1290 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 1330 Meaning of Life (3)
The question, What is the meaning of life?, has been regarded as one of the most important and profound of human inquiries. This course will examine a number of different philosophical attempts to address this question.

PHIL 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 1891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

PHIL 2010 History of Ancient Phil (3)
A study of ancient Greek philosophy, focusing on the thought of the Pre-Socratics, Plato, and Aristotle.

PHIL 2020 History of Modern Phil (3)
A study of early modern philosophy, focusing on the period from Descartes through Kant.

PHIL 2030 Minds, Machines & Experiences (3)
Introduction to philosophical issues in the study of mind and consciousness. Topics include: the place of mind in the natural world; mechanism and thought; computer intelligence; consciousness and the mind-body problem; mental causation and explanation.

PHIL 2040 East Meets West (3)
This course places into dialogue major thinkers of the Eastern and Western traditions, exploring fundamental issues of metaphysics, knowledge and language, ethics, politics and human nature.

PHIL 2110 Classics Ancnt Poli Phil (3)
A study of classical works of political philosophy in the Western tradition, primarily Plato's Republic and Aristotle's Politics.

PHIL 2120 Classics Modrn Poli Phil (3)
A study of classical works of modern political philosophy in the Western tradition, including those of Machiavelli, Hobbes, Locke, Rousseau, Marx, or Mill.

PHIL 2190 Phil & Hist Nat Science (3)
Scientific method will be analyzed as a process of stages and illustrated by historical examples. The philosophical presuppositions of science are examined in light of the historical shift from Aristotelian to modern science. Whether change in scientific theories is revolutionary or evolutionary is studied with reference to actual case histories.

PHIL 2200 Matter and Consciousness (3)
A systematic survey of philosophical and foundational theories of mind and cognition of this century. The course begins with the philosophical legacy of earlier centuries (mind/body dualism, consciousness and privileged access, introspection, sense data, and phenomenology), considers the first scientific response to this legacy (behaviorism and the rise of scientific psychology), and then follows the major theoretical positions and debates of this century such as physicalism and reductionism, functionalism and the computer model of the mind, eliminative materialism and neurophilosophy, instrumentalism, and common sense psychology.

PHIL 2600 Ethics In Business (3)
This course is about how to deal with moral problems in business management with integrity. The scope and resources for making principled responses to ethical challenges will be examined and a variety of cases will be analyzed.

PHIL 2930 Special Topics: Phil (3)
Examination of philosophical issues not typically covered in existing courses. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 2931 Special Topics: Phil (3)

PHIL 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

PHIL 3010 Philosophy of Religion (3)
A study of major philosophical ideas and figures in the philosophy of religion.

PHIL 3020 Topics in Bible & Philosophy (3,4)
The Western tradition has two roots: Jerusalem and Athens, or the Bible and Greek philosophy. This course will be devoted to a reading of the Bible with a view to the fundamental philosophic questions it raises. Courses in different semesters will focus on various biblical texts (Genesis; Exodus and Deuteronomy; Samuel and Kings; Job), with relevant philosophic reflections drawn from Plato, Aristotle, Maimonides, Machiavelli, Kant, Kierkegaard, and others. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 3030 Philosophy of Art (3)
A philosophical inquiry into the nature of art in its various forms, including poetry and literature, painting and sculpture, dance and music. Based on readings of classical and contemporary texts, we will address questions such as: What makes an object a work of art? How do different forms of art influence each other? How is art related to scientific inquiry and philosophy? What is the role of art in social and political life?

PHIL 3040 Mathematical Logic (3)
An introduction to and survey of the mathematical study of formalized logical systems.

PHIL 3050 Moral Philosophy (3)
A critical inquiry into the major issues of normative and critical ethics. Problems and positions concerning moral conduct and responsibility and the meaning and justification of ethical discourse are discussed in connection with readings from classical and contemporary sources.

PHIL 3090 Existentialism (3)
A study of characteristic existentialistic themes as exemplified in the writings of thinkers like Kierkegaard, Nietzsche, Heidegger, or Sartre.

PHIL 3100 19th Cent European Phil (3)
A study of major philosophical ideas and figures from Hegel through Nietzsche.

PHIL 3110 Contemporay European Philosophy (3)
A study of major philosophical issues and figures in 20th-century continental philosophy, including Husserl, Heidegger, and Sartre, among others.

PHIL 3120 Analytic Philosophy (3)
An introduction both to major figures in the analytic tradition such as Frege, Russell, and Quine, and to major problems such as meaning, reference, and truth.

PHIL 3130 Classic American Thought (3)
Readings in American philosophy from early 17th century to late 19th century, covering representative thinkers from the Puritans to the pragmatists.

PHIL 3140 Recent American Philosophy (3)
Readings in American philosophy from the pragmatists to the present.

PHIL 3150 Logical Empiricism (3)
Survey of main figures and movements in logical empiricism. Topics may include meaning and verification, the nature of philosophical inquiry, the unity of scientific discourse.

PHIL 3190 Philosophy of Social Science (3)
Exploration into the logic, methods, and foundations of social sciences such as psychology, economics, and political science.

PHIL 3200 Plato (3)
An in-depth reading of one or more of the Platonic dialogues.

PHIL 3240 Medieval Philosophy (3)
A study of major thinkers in the Christian, Islamic, and Jewish traditions, such as Augustine, Aquinas, Alfarabi, Averroes, or Maimonides.

PHIL 3250 Descartes & 17th Century (3)
Exploration of Descartes' writings that focuses on his place in and influence on the scientific and religious revolutions of the 17th century.

PHIL 3340 Humanity's Place in Nature (3)
This course will compare the predominant Western conception of humanity's place in nature with alternative conceptions, including those held by non-Western thinkers.

PHIL 3410 Theory of Knowledge (3)
An introduction to epistemology. Topics may include the problem of skepticism, theories of epistemic justification, the nature of empirical knowledge, a priori or mathematical knowledge, and our introspective knowledge of our mental states.

PHIL 3420 Metaphysics (3)
An introduction to one or more topics in metaphysics, including causality, identity, modality, existence, persons and minds, universals and particulars, space and time, and the nature and possibility of metaphysics itself.

Prerequisite(s): PHIL 2020.

PHIL 3430 Semantics of Nat. Langu. (3)
An introduction to the study of meaning in natural languages. The central techniques involve extending the methods of logical semantics for formal languages. No prerequisites, but prior exposure either to generative grammar (e.g., ANTH 3590) or symbolic logic (e.g., PHIL 1210) would not be wasted.

PHIL 3490 Buddhist Ethics (3)
This course provides an overview of Buddhist ethics, including a comparison of Buddhist and Western ethical theories, the Buddhist presentation of intention and action theory, and an examination of some key topics from Buddhist moral psychology, such as care, the afflictions, and equanimity.

PHIL 3500 Buddhism (3)
This course examines the metaphysical, epistemological, religious, and psychological dimensions of Buddhism, while also tracing its development from India into Southeast Asia, China, Japan, and the West.

PHIL 3510 History of Ethics (3)
The historical development of philosophies concerning the good life, moral duty and right, choice and consequences, freedom and necessity in their personal and social nature.

PHIL 3540 Gender and Justice (3-4)
Many contemporary moral and political controversies concern sex- and gender-related issues, and there are also difficult conceptual and theoretical questions about the nature of sex and gender. This course introduces students to some of those practical and theoretical questions by examining work in philosophy, both historical and contemporary, that theorizes about sex, gender, and justice. It examines some foundational theoretical questions (e.g., what sex and gender are, what sex- and gender-related injustice is, and what individuals and the state ought to do about it) and some contemporary moral and political questions (e.g., questions about the gendered division of labor, the gender pay gap, abortion, the #MeToo movement, and trans rights). Students will learn to use the tools of philosophical analysis to achieve a better understanding of the difficult issues implicated in these important theoretical and practical questions.

PHIL 3550 Medical Ethics (3)
A systematic and critical study of ethical problems in medicine concerning the physician-patient relationship, life and death, and social responsibility.

PHIL 3560 Social & Polit Ethics (3,4)
A study of the arguments and positions advanced by philosophers with regard to the need for and justification of social and political institutions and with regard to the character of human rights, justice, and the good society.

PHIL 3570 Ethics of Abortion (3)
Investigates the philosophical arguments surrounding the most controversial moral issue of our time, including arguments about moral status, the rights of women, personhood and its potential, and the development of pain and consciousness.

PHIL 3580 Ethical Theory (3)
This course surveys the prominent ethical theories of the late nineteenth and twentieth centuries. It considers both theories of meta ethics and normative ethics. Theories to be examined include: relativism, subjectivism, egoism, moral realism, utilitarianism, Kantianism, contractualism, virtue theory, and Existentialism.

PHIL 3590 Greek Philo & Jewish Thought (3,4)
Western culture has a double source, the Bible and Greek philosophy, or Jerusalem and Athens. Are the two traditions harmonious or do they stand in some essential tension with each other? This course will approach that question by examining the response of some important Jewish thinkers, Maimonides in particular, in their encounter with the teachings of Plato and Aristotle.

PHIL 3640 Philosophy of Law (3)
A study of the character and justification of law and legal systems. Legal realism, legal positivism, and natural law theories are explored as are such law-related issues as punishment, the enforcement of morals, and the grounds of legal responsibility.

PHIL 3650 Crime and Punishment (3)
This course offers a critical examination of philosophical issues involving crime and punishment. In the first half, we will ask what forms of behavior, if any, the state is entitled to declare to be criminal, focusing on such issues as drug abuse, prostitution, blackmail, gambling, hate speech, suicide, pornography, ticket scalping, insider trading, and gun control. In the second half, we will ask what forms of punishment, if any, the state is entitled to impose on those who violate those laws, if any, which are permissible, focusing on such issues as capital punishment, corporal punishment, and competing justifications of punishment in general.

PHIL 3660 Anarchy (3)
This course examines diverse philosophic treatments of anarchy. Specific topics may include: various anarchist views, such as those embracing private or communal property; defenses of anarchism based in natural rights, autonomy, efficiency, or avoidance of pernicious tendencies of states; theories according to which the state is justified as a means for addressing conflicts or deficiencies endemic in an anarchic state of nature; arguments regarding the authority of states and our obligations to obey laws; philosophical fiction concerning anarchistic utopias or related themes.

PHIL 3710 Altered Experience (3,4)
This course will serve as a philosophical overview to a variety of unique experiences, including delusions, drug experiences, and religious experiences, and will analyze these from the perspective of philosophy of psychology.

PHIL 3720 Philosophy of Science (3)
Science, according to most, is our best way of gathering objective knowledge about the world. But what, if anything, guarantees the "objectivity" of science? While we tend to think of our current scientific theories as providing us with knowledge, how do we know those theories will not be displaced by better ones, as theories in the past have been? Moreover, how should we reconcile the fact that science is geared towards knowledge with the fact that it is pursued by individuals with their own political aims, biases, and values? In this course, we will consider what characteristics of science allow for objective knowledge.

PHIL 3740 Consciousness (3)
This course addresses questions such as the following: What is consciousness and why is it puzzling, if not mysterious? Is consciousness one phenomenon or many? What mechanisms and competencies underpin consciousness? Where (brain location)? Who are the possessors of consciousness, phylogenetically and ontogenetically? Why consciousness: its rationale and functions? How does consciousness emerge from matter (if at all)?

PHIL 3750 Philosophy of Cognitive Science (3,4)
This course will serve as an overview to theoretical approaches and debates in cognitive science, viewed through a philosophical lens.

PHIL 3760 Interpreting Minds (3)
A systematic introduction to the recent and dynamic interdisciplinary research area in naive psychology or theory of mind. The course begins with the philosophical debates about naive or folk psychology, then surveys the main empirical data, key experiments and hypotheses about ape and child interpretation of minds, and concludes with a comparative analysis of several much debated proposals about how the interpretation of minds is accomplished through innate mechanisms (modules), by simulation or in terms of a naive theory.

PHIL 3765 Imagination (3,4)
This class is an advanced undergraduate overview of imagination, construed as cognitive competence. In an interdisciplinary spirit, covering data and theories from philosophy, cognitive and developmental psychology as well as neuroscience, the class surveys such topics as the evolutionary reasons for imagination; the cognitive and cerebral mechanisms of imagination; the format of imaginative representations-pictorial versus symbolic; the ontogeny of imagination; and connections between imagination and reasoning, deliberation and foresight.

PHIL 3800 Language and Thought (3,4)
An introduction to the philosophy of language and mental representation. Major topics: the relations between language and thought, models of mind, representation as computation, the language of thought, mental imagery, propositional attitudes, meaning and intentionality.

PHIL 3850 Terrorism (3)
An examination of terrorism and counter terrorism with emphasis on moral issues.

PHIL 3870 Mind In Evolution (3)
As any biological capacity, the mind must have evolved. Can evolution explain its design? The mind has many components, from perception to language and thinking. Are they all products of natural selection, of other evolutionary forces, or of no such forces at all? Can evolution explain the uniqueness of the human mind? What could be the factors that explain this uniqueness: tool making, language, social life? In attempting to answer these questions, the class brings an evolutionary perspective to some important topics in philosophy of mind and philosophical psychology and offers a multidisciplinary introduction to the emerging but rapidly developing field of evolutionary cognitive science.

PHIL 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 3892 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 3894 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 3895 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 3930 Special Topics In Phil (3,4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 3931 Special Topics in Philosophy (3,4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 3932 Special Topics in Phil (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 3933 Special Topics in Philisophy (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 3940 Special Topics In Phil (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 4560 Internship (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 4570 Internship (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 4910 Independent Study (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 4920 Independent Study (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 4990 Honors Reading (3)

PHIL 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): PHIL 4990.

PHIL 5190 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 5380 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 5390 Junior Year Abroad (1-20)

Maximum Hours: 99

PHIL 6010 Metaphysics of Mind (3,4)
Discussion of topics related to the place of mind in the natural world. Topics may include mental causation, materialism and dualism about mind, fundamental and derivative reality. Prerequisites: PHIL 2010, PHIL 2020, or PHIL 2030; or permission of instructor.

PHIL 6040 Philosophy of Law (3,4)
Explores important questions about the law and legal systems, including: What is law? What are the criteria for legal validity? What is the relation between law and morality? What are the conditions for criminal responsibility?

PHIL 6050 Moral Philosophy (3,4)
An advanced critical inquiry into the major issues of normative and critical ethics. Problems and positions concerning moral conduct and responsibility and the meaning and justification of ethical discourse are discussed in connection with readings from classical and contemporary sources.

PHIL 6060 Advanced Symbolic Logic (3)
Translation of propositions into quantified formulas with single-place and relational predicates. Deduction by quantification rules. Also, theorematic development of an axiomatic logistic system.

PHIL 6070 Mathematical Logic (3)
This course treats soundness and completeness of first-order systems of deduction, arithmetical coding of syntax, unprovability of consistency, and undefinability of truth. The course develops these topics and reflects on their philosophical significance. Instructor approval strongly recommended.

PHIL 6100 Skepticism (3)
A study of historical and contemporary skepticism about knowledge.

PHIL 6105 Philosophy of Neuroscience (3,4)
This course will introduce students to interdisciplinary research at the intersection of philosophy and neuroscience. The course will cover both historical and current material. Topics will include the relationship between neuroscience and psychology, neuroscience and the "self," the neural correlates of consciousness, and the localization of function in the brain.

PHIL 6120 Metaphysics (3,4)
An examination of basic problems of metaphysics (e.g. being, substance, universals, identity, freedom) as treated by the main traditions in classical and contemporary thought.

PHIL 6130 Moral Psychology & Meta-Ethics (3,4)
This seminar offers students the opportunity to develop more deeply their understanding of the origins and nature of moral attitudes and beliefs, and thus to probe more fully issues to which they had been introduced in previous courses in ethics. Optional Capstone for senior majors and second semester juniors with 5110 add-on. Writing Practicum option.

PHIL 6150 Freedom & The Self (3,4)
Free will is one of the main puzzles in philosophy. While human beings ordinarily think that their choices are free, it is difficult to see how this conception can go together with modern scientific conceptions of nature. The problem is not only to establish whether human beings have free will, but whether it is an intelligible conception at all. This course will examine major approaches put forward to solve this puzzle, drawn from contemporary as well as classical sources.

PHIL 6160 Philosophy of Action (3)
Investigates the causes of human behavior, the nature of action and human agency, the relations between intentions, motives, desires, and beliefs, how to individuate and describe actions, and the nature of free action.

PHIL 6162 Philosophy of Language (3)
Discussion of topics in philosophy of language (reference, meaning, descriptions, truth) with an emphasis on how these topics bear on issues in metaphysics, philosophy of mind, and logic.

Prerequisite(s): PHIL 2010 or 2020.

PHIL 6170 Philosophy of Perception (3,4)
A systematic philosophical and interdisciplinary examination of major theories of perception.

PHIL 6180 Mental Representation (3,4)
A survey and evaluation of major theories of mental representation drawing on recent work in philosophy of mind, cognitive psychology, linguistics, semantics, and artificial intelligence. Major topics: linguistic representation, the language of thought, propositional attitudes, mental imagery, and innate representations.

Prerequisite(s): PHIL 1040, 3740, 3750 or 3760.

PHIL 6190 Philosophy of Mind (3)
The mind-body problem, knowledge of other minds, and problems about thought, action, and feelings are discussed in the light of readings from classical and contemporary sources.

Prerequisite(s): PHIL 1210 and 2020.

PHIL 6200 Topics in Plato (3,4)
An in-depth study of one or more of the Platonic dialogues, Republic, Theaetetus, Sophist, Statesman, Parmenides, Philebus or Timaeus, with reading and discussion of related dialogues as background. Course may be repeated 6 times for credit.

Prerequisite(s): PHIL 2010 or 2110.
Course Limit: 6

PHIL 6210 Topics in Aristotle (3,4)
An in-depth study of one or more of the Aristotelian treatises, Metaphysics, Physics and De anima, Ethics, Politics, or the logical writings. Course may be repeated 6 times for credit.

Course Limit: 6

PHIL 6250 Locke's Moral & Political Phil (3)
A detailed critical examination of the political philosophy of John Locke. Locke is arguably the pivotal figure in the development of modern individualist liberalism. Both historically and philosophically, the course examines Locke's doctrines of natural law, freedom, property rights, contractually grounded government, rights of resistance and rebellion, and the rights of toleration

PHIL 6260 Rationalism (3)
Descartes, Spinoza, and/or Leibniz examined individually and as contributors to one of modern philosophy's historical developments.

PHIL 6270 Empiricism (3)
Locke, Berkeley and/or Hume examined both individually and as contributors to one of modern philosophy's historical developments.

PHIL 6280 Kants Critique of Pure Reason (3,4)
An examination of Kant's Critique of Pure Reason. Topics include Kant's epistemology (e.g. his Copernican Revolution), as well as his metaphysics (e.g. freedom and the self).

PHIL 6290 Kant's Ethics (3,4)
An examination of Kant's Groundwork and Critique of Practical Reason. Topics include Kant's view of the nature of morality, the role of the Categorical Imperative, as well as his views on worth, respect, dignity and autonomy.

PHIL 6300 Philosophies of India (3)

PHIL 6310 Hegel (3-4)
A close reading and critical examination of selected major works of Hegel.

PHIL 6330 Nietzsche (3,4)
A close reading and critical examination of selected major works of Nietzsche.

PHIL 6340 Heidegger (3)
A close reading and critical examination of selected major works of Heidegger.

PHIL 6420 Heidegger (3)

PHIL 6490 17th Century Political Philoso (3)
This course will focus on the most important political philosophers of the 17th century , e.g., Hugo Grotius, Thomas Hobbes, and John Locke--authors who founded and set the agenda for much of modern western political philosophy. A central theme of the course will be the attempts by these authors to reconcile the autonomous pursuit by individuals of their own self-preservation and happiness with moral order and social cooperation. What sort of state (if any) with what sort of authority (if any) facilitates individual freedom, justice, and social order? (Optional Capstone)

PHIL 6510 Theories of Economic Justice (3,4)
A study of alternative conceptions of economic justice including the conceptions offered by utilitarians, contractarians, natural rights theorists, and Marxists. Other topics include the just distribution of natural resources and the choice between command and market economies.

PHIL 6520 Environmental Ethics (3)
Examination of ethical issues regarding treatment of nonhuman beings. Major topics include moral extentionism, as well as critiques of attempts to extend human-centered moral doctrines to nonhuman beings.

PHIL 6530 Philosophy and Gender (3-4)
An examination of conceptions of gender in the history of philosophy and in contemporary philosophic discussions. Topics may include relations between gender and identity, ethics, law, and science.

PHIL 6540 Global Justice (3)
A study of the justice of relations among nations and among individuals across national boundaries. Topics include international distributive justice, the ownership of global resources, the morality of secession, just war, and terrorism.

PHIL 6620 Philosophical Logic (3)
Central topics in philosophical logic are covered, including reference, predication, vagueness, logical form, counterfactuals, propositional attitudes, logical truth, and paradoxes.

PHIL 6730 Con Empirical Pol Theory (3)

PHIL 6740 Contemporary Polit Phil (3-4)
An analysis of contemporary approaches to normative concepts in politics, concentrating on political philosophers such as Arendt, Marcuse, Oakeshott, Rawls, and Strauss.

PHIL 6750 Utilitarianism (3,4)
An examination of the utilitarian tradition and the modern debate over whether some version of utilitarianism is likely to serve as the most adequate moral and political philosophy.

PHIL 6760 Mill's Util Liberalism (3)
A study of the liberal moral and political philosophy of John Stuart Mill, including his utilitarian ethics, doctrine of individual liberty, theory of constitutional democracy, and analysis of capitalism versus socialism.

PHIL 6890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 6920 Independent Study (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 6930 Special offerings (1-4)
For specific offering, see the Schedule of Classes. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 6931 Special Topics (3,4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 6935 Special Topics (3,4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 6940 Special offerings (3,4)
For specific offering, see the Schedule of Classes. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHIL 6941 Special Offerings (3,4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Physics (PHYS)

PHYS 1010 Great Ideas in Science & Technology (4)
For non-scientists. Basic principles of science, applications and their relevance to our world. Typically includes astronomy, universe, Newtonian mechanics, energy and applications, symmetry in nature, order and disorder, electricity and applications, quantum mechanics, atoms and molecules, DNA, computer technology, and ethical issues. Laboratory. Course may be repeated up to unlimited credit hours.

Corequisite(s): PHYS 1011.
Course Limit: 2

PHYS 1011 Great Ideas in Science & Technology Lab (0)
Lab section for PHYS 1010.

Corequisite(s): PHYS 1010.

PHYS 1015 Materials Science & Eng & Lab (3)
This summer session will focus on the field of Materials, which is an interdisciplinary field applying the properties of matter to various areas of science and engineering. This two-week (ten-day) course is intended for high school students who wish to explore and stimulate their interest in the materials sciences and engineering. The course consists of rotations between six materials science research laboratories in the Department of Physics and Engineering Physics. Each rotation combines lectures with hands-on laboratory activities to excite and introduce students to contemporary methods and issues in superconductivity, optics and lasers, biomaterials, nanomaterials, nanotechnology, and energy harvesting materials and technologies. Emphasis is placed on demonstrating basic principles and hands-on student involvement. Laboratory activities will be supervised by Tulane faculty members and graduate students.

PHYS 1025 Optical Images and Illusions (3)
Physics-by-inquiry learning about optics, including how light behaves when it reflects off mirrors or refracts through transparent media. We will learn to explain various phenomena like image creation and optical illusions. For high school students only.

PHYS 1050 Physics for Architects (3)
A non-calculus course in classical physics stressing the fundamental physical laws and their application to architecture. Main topics include Newtonian mechanics with an emphasis on equilibrium applications, elasticity, fluids, and thermal processes. Credit not given for PHYS 1050 and PHYS 1210 or 1310. Does not count towards the B.S. Physics or B.S.E. Engineering Physics degrees.

PHYS 1210 Introductory Physics I (4)
A non-calculus course in classical physics stressing the fundamental physical laws. Newtonian mechanics, oscillations, and classical waves normally are treated in 1210. A weekly laboratory is included; the laboratory includes a review of techniques of problem solving, as well as experiments in classical physics. PHYS 1210 is mutually exclusive with PHYS 1310. Students may receive credit for only one of PHYS 1210 or PHYS 1310 in the undergraduate degree. Does not count towards the B.S. Physics or B.S.E. Engineering Physics degrees.

Corequisite(s): PHYS 1211.

PHYS 1211 Introductory Physics I Lab (0)
Lab section for PHYS 1210.

Corequisite(s): PHYS 1210.

PHYS 1220 Introductory Physics II (4)
A continuation of PHYS 1210. Electricity and magnetism, optics, and thermal phenomena. A weekly laboratory is included. Not open for credit to students who have completed 1320. PHYS 1220 is mutually exclusive with PHYS 1320. Students may receive credit for only one of PHYS 1220 or PHYS 1320 in the undergraduate degree. Does not count towards the B.S. Physics or B.S.E. Engineering Physics degrees.

Prerequisite(s): PHYS 1210 or 1310.
Corequisite(s): PHYS 1221.

PHYS 1221 Introductory Physics II Lab (0)
Lab section for PHYS 1220.

Corequisite(s): PHYS 1220.

PHYS 1310 General Physics I (4)
Prior or concurrent study in calculus is required. A calculus-based course in classical physics designed primarily for physical science and engineering majors. Newtonian mechanics, oscillations, and classical wave motion are studied. Emphasis is on understanding basic principles and solving problems. A weekly laboratory is included. The laboratory includes a review of techniques for problem solving, as well as experiments in classical physics. PHYS 1310 is mutually exclusive with PHYS 1210. Students may receive credit for only one of PHYS 1210 or PHYS 1310 in the undergraduate degree.

Prerequisite(s): MATH 1150*, 1210* or 1310*.
* May be taken concurrently.
Corequisite(s): PHYS 1311.

PHYS 1311 General Physics I Lab (0)
Lab section for PHYS 1310.

Corequisite(s): PHYS 1310.

PHYS 1320 General Physics II (4)
A continuation of PHYS 1310. Emphasis on electricity and magnetism, with selected topics in optics and modern physics. The laboratory includes a review of techniques for problem solving, as well as experiments in classical physics. PHYS 1320 is mutually exclusive with PHYS 1220. Students may receive credit for only one of PHYS 1220 or PHYS 1320 in the undergraduate degree

Prerequisite(s): PHYS 1310.
Corequisite(s): PHYS 1321.

PHYS 1321 General Physics II Lab (0)
Lab section for PHYS 1320.

Corequisite(s): PHYS 1320.

PHYS 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHYS 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

PHYS 2350 Modern Physics I (3)
Quantitative treatment of important topics of 20th-century physics, focused on special relativity and introductory quantum physics. Planck's and de Broglie's hypotheses, photons, the Bohr model, introduction to wave mechanics, the hydrogen atom, spatial quantization, spin, exclusion principle, multi-electron atoms.

Prerequisite(s): PHYS 1320 or 1310.

PHYS 2360 Modern Physics II (3)
An overview of the major fields in modern physics. Quantum statistics. Diatomic molecules, electrons in metals, band theory of solids, superconductivity, properties of nuclei, radioactivity, nuclear reactions, interaction of particles with matter, elementary particles, the standard model and cosmology.

Prerequisite(s): PHYS 2350.

PHYS 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHYS 2910 Intro to Physics Pedagogy (1)
Introduction to the theory and practice of teaching physics courses through workshops, observations and assisting teachers at local schools with lectures and/or classroom demonstrations.

Prerequisite(s): (PHYS 1210 or 1310) and (PHYS 1220 or 1320).

PHYS 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

PHYS 3010 Theoretical Physics (3)
An introduction to the methods of theoretical physics emphasizing modern mathematical techniques, numerical methods using computers, and computer algebra. Prerequisites: 11 credits of mathematics, or approval of instructor.

Prerequisite(s): PHYS 2350.

PHYS 3150 Intro To Neutron Science (3)
An introduction to the theory and applications of neutron scattering, neutron optics, neutron interferometry and neutron beta decay. This course explores the many uses of thermal and cold neutron beams to study condensed matter, nuclear, molecular and biological systems; test fundamental principles of quantum mechanics and advance the frontier of particle physics.

Prerequisite(s): MATH 2210, 2240, PHYS 2350 and 2360.

PHYS 3170 Computnl Physics & Engr (3)
An introduction to the use of computational methods in physics and engineering. Writing computer code and using data visualization techniques to help solve experimental and theoretical problems. Data analysis and modeling, Monte Carlo simulations, numerical differentiation and integration, ordinary and partial differential equations, electrostatics nonlinear dynamics and chaos, fast Fourier transform, noisy signal processing, quantum spectra, thermodynamics.

Prerequisite(s): PHYS 2350 and (MATH 2210 or 2240).

PHYS 3180 Introduction to Feedback Control and Control Theory (3)
This course introduces tools for controlling systems via a feedback loop, which power the world around us – from consumer products to ecological and economic systems. The presented mathematical principles are illustrated using MATLAB and a variety of examples. No prior experience with MATLAB and programming is required. The topics covered include the control of nonlinear systems via Lyapunov theory, linearization of nonlinear dynamics, controllability and observability, the Kalman filter, transfer functions, stability, and robustness, as well as the proportional-integral-derivative controller.

Prerequisite(s): MATH 2210.

PHYS 3210 Molecular Biophysics & Polymer Physics (3)
An introduction to the physics of polymers and the physical bases underlying the biofunctionality of macromolecules in living systems. Themes of molecular self-organization, conformation, complementarity, and information content are emphasized and related to protein, lipid, and nucleic acid structure and processes. Introduction to scattering and other spectroscopic techniques.

Prerequisite(s): MATH 1220 or 1310.

PHYS 3230 Quantum Information Science & Engineering (3)
This survey course introduces students to the new world of quantum information, quantum communication, and quantum computing. The course is intended for advanced undergraduates and beginning graduate students in physics, engineering, and mathematics. Topics include: Quantum states, operators, and linear algebra; Bits and qubits; Ensembles and density operators; Unitary transformations; Gates and circuits; Information and entropy; POVM measurement; Multipartite systems; Bell inequality, Bell states, and non-locality; Measures of entanglement; Quantum communication and cryptography; Teleportation; Superdense coding; Quantum noise and error correction; Classical and quantum computational complexity; Quantum algorithms; Deutsch-Jozsa, Grover, Shor; DiVincenzo criteria; Physical realizations of quantum computers: trapped ions, solid state qubits; Quantum optics and quantum internet; Topological quantum computation; Quantum biology.

Prerequisite(s): PHYS 2350 and (MATH 2210 or 2240).

PHYS 3290 Computation Material Science & Engineering (3)
Computational Materials Science and Engineering: This course will cover theories, implementations, and applications of common quantum mechanical software for computational study of materials. State-of-the-art computational methods will be introduced for materials research with emphasis on the atomic and nano scales and hands-on modeling on PCs and supercomputers. The class is aimed at beginning graduate students and upper level undergraduate students, and will introduce a variety of computational methods used in different fields of materials science. The main focus is quantum mechanical methods with a short overview of atomistic methods for modeling materials. These methods will be applied to the properties of real materials, such as electronic structure, mechanical behavior, diffusion and phase transformations. Computational design of materials using materials database via high-throughput and machine learning methods will also be covered.

Prerequisite(s): PHYS 2350 and 2360.

PHYS 3310 Quantum Optics (3)
Quantum optics is an emerging field of physics that involves the study of semi-classical and quantum-mechanical models of the electromagnetic field, as well as its interaction with atoms and molecules. These nonclassical and quantum features of light have been shown to break the barriers imposed by classical physics in a variety of fields, such as communication, interferometry, computation, and imaging. The main emphasis of this course will be to introduce these nonclassical features, quantize the electromagnetic field, introduce fundamental tests of quantum mechanics by use of optics, and explore the applications of nonclassical concepts such as entanglement.

Prerequisite(s): PHYS 1320*.
* May be taken concurrently.

PHYS 3350 Kinetics of Material Systems (3)
This course covers all aspects of kinetics in material systems. Topics include thermodynamics, steady state and time dependent diffusion, phase transformations, statistical mechanics, structure evolution, boundaries and interfaces, solidification, and precipitation effects.

Prerequisite(s): ENGP 3120.

PHYS 3360 Structure of Materials (3)
The properties of matter depend on which of the about 100 different kinds of atoms they are made of and how they are bonded together in different crystal structures; specifically, the atomic structure primarily affects the chemical, physical, thermal, electrical, magnetic, and optical properties of materials. Metals behave differently than ceramics, and ceramics behave differently than polymers. Students will learn the different states of condensed matter and develop a set of tools for describing the crystalline structure of all of them. They will gain a better understanding of the principles of structure common to all materials. Key concepts, such as symmetry theory will be introduced and applied to provide a common viewpoint for describing structures of ceramic, metallic, and polymeric materials and the latter includes optical microscopy, electron optics, x-ray diffraction and some surface analytical techniques. Structure-sensitive properties of real materials will also be introduced.

PHYS 3370 Processing of Biomaterials (3)
Processing of biomaterials gives an overview of the most advanced techniques to process biomaterials into structures that satisfy next generation applications. All materials classes will be covered including polymers, ceramics, metals, composites and cells and tissues. In each case, the material-specific processing and the properties and potential applications will be covered.

PHYS 3380 Materials for Energy (3)
The course begins with a history of our understanding and utilization of different sources of energy and a review of thermodynamics. In all cases, the most effective materials used are discussed as well as the relevant fundamental equations used and approaches for improving the figure-of-merit. The 5 different forms of energy are introduced - mechanical, electromagnetic, thermal, chemical, and nuclear - and discussed. Materials and techniques used for energy applications are discussed including thermoelectrics, fossil fuels, nanoparticles, different approaches for energy storage, fuel cells, nuclear energy (fission and fusion), energy biological systems - from cellular scale and ATP and catabolism/anabolism to biomass conversion, and magnetohydrodynamics. Techniques for energy conversion, biomimetics, energy and the environment and material issues for energy transformation are discussed. The sun is also discussed as a source of energy for photosynthesis, photovoltaics, and photothermal power generation.

Prerequisite(s): ENGP 3120.

PHYS 3390 Synthesis of Nanomaterials (3)
This course focuses on the fundamentals of nanomaterials synthesis mechanisms and characterization. The course gives an introduction for nanomaterials classes and their importance for today's world, followed by basics of physical chemistry of solid surfaces. Then, top-down and bottom-up synthesis approaches for nanomaterials systems including gas, liquid and solid phase processes are covered. Characterization techniques of special importance for nanomaterials are taught. During the semester students will study and review scientific articles focused on nanomaterials synthesis and characterization.

Prerequisite(s): ENGP 3120.

PHYS 3450 Elementary Particle Physics (3)
An introduction to modern elementary particle physics, with an emphasis on the Standard Model, its phenomenology, and dynamics. The Standard Model explains, in principle and with remarkable success, virtually all phenomena that are observed in nature except gravity. The course begins with a qualitative examination of the electromagnetic, strong, and weak interactions and an introduction to the elementary particles through the use of Feynman diagrams. This is followed by relativistic kinematics, the quantum theory of angular momentum and spin, discrete symmetries, and bound states of leptons and quarks, with a focus on the hadrons. Finally the Dirac equation, the Feynman calculus, and the mathematical tools needed to calculate basic decay lifetimes and cross sections involving the electromagnetic and weak interactions are developed and applied.

Prerequisite(s): PHYS 2360 and MATH 2210.

PHYS 3530 Advanced Laboratory (3)
Advanced experiments in modern physics, particularly nuclear physics, emphasizing research techniques and analysis of data using computers.

Prerequisite(s): PHYS 2350.

PHYS 3560 Photonic Materials & Devices (3)
This course will cover the theory, design, fabrication, characterization, and application of photonic materials and devices. The course will start with a review of the fundamentals of photonics, including ray optics, wave optics, and nanophotonics/quantum optics. The course will then focus on light-matter interactions and photonic materials, including dielectrics, semiconductors, metals, metamaterials, and photonic crystals. Using these principles and materials, we will explore a number of device architectures, including LEDs, lasers, photodetectors, photovoltaics, etc. We will then discuss fabrication methods for making these materials and devices and common optoelectronic characterization techniques. The course will conclude with exploration of cutting edge topics in photonics research.

Prerequisite(s): PHYS 2350 and 2360.

PHYS 3570 Semiconductor Devices (3)
An introduction to the physics and technology underlying semiconductor electronic and optoelectronic devices, including electrons and holes in semiconductors, energy-band diagrams, carrier transport, metal-semiconductor contacts, p-n junctions, and heterostructures. Device examples include bipolar transistors, MOSFETs, LEDs, and solar cells.

Prerequisite(s): MATH 1220, PHYS 1320 and 2350.

PHYS 3600 Nanoscience & Technology (3)
Nanoscience and technology is often branded the science of the 21st century. It has been promised that nanotechnology will have similar stimulating effects on the world's economy and society as the industrial-and microelectronics- revolution. Nanoscience is an interdisciplinary effort with the aim to manipulate and control matter at length scales down to single molecules and atoms and thus to create materials and devices with novel properties. With diminishing dimensions material properties are being governed by quantum mechanics. The description and exploitation of quantum phenomena in novel devices is the quintessence of nanophysics. Consequently, the main emphasis of this course is to give an overview of the physics of low dimensional solid state systems. This course is supplementary to courses in solid state physics and surface science but can be taken independently.

Prerequisite(s): PHYS 2350.

PHYS 3620 MicroFab and Nanotech (3)
Nano/micro-electromechanical devices (N/MEMS) require knowledge of a broad range of disciplines, from the fundamental physics of mechanics and electromagnetism to practical nano/microfabrication processes and techniques. This course is opened for the introduction of this interdisciplinary engineering field, using examples and design projects drawn from real-word N/MEMS applications. Lectures will cover nano/micro-fabrication technologies, material properties at different scaling, physical principle and behaviors of nano/microstructural behavior, piezoresistive and capacitive sensing, electrostatic actuation, fluid damping, noise, and feedback systems.

Prerequisite(s): PHYS 2360.

PHYS 3630 Electromagnetic Theory (3)
Electrostatic fields in a vacuum, dielectric materials, solutions to Laplace's and Poisson's equations, currents, magnetic fields, vector potentials, electromagnetic induction, relation to Special Relativity, Maxwell's equations, and the properties of classical electromagnetic waves.

Prerequisite(s): PHYS 1310, 1320 and MATH 2210.

PHYS 3650 Optics (3)
Geometrical, physical and quantum optics, with an emphasis on the classical electromagnetic aspects of optics pertaining to scattering, reflection, refraction, dispersion, polarization and interference. Applications to optical instruments, spectroscopy, interferometry, and Fourier optics. Course was previously listed as PHYS 4650. Students may not earn degree-applicable credit for both PHYS 3650 and PHYS 4650.

Prerequisite(s): PHYS 1320 and MATH 2210.

PHYS 3660 Special Topics (1-3)
Special Topics.

PHYS 3700 Electronic Properties of Materials (3)
Quantum physics, electronics and energy bands in crystals, electronic transport in materials, photoconductivity, Hall effect, quantum Hall effect, superconductors and their applications, magnetic properties of material and their applications, thermal properties of materials and dielectric properties of materials.

Prerequisite(s): PHYS 2350 and 2360.

PHYS 3720 Mechanic Behavior of Materials (3)
he course covers the general foundations of elasticity and plasticity theory, dislocation theory, and strengthening mechanisms. Basics of materials forming processes are studied. An overview for non-destructive testing of materials is taught. The course emphasis is on destructive mechanical testing of materials including; tension, torsion, hardness, fatigue and creep tests, in addition to fracture mechanics and failure analysis.

Prerequisite(s): ENGP 3120, 2430 and MATH 2210.

PHYS 3740 Classical Mechanics (3)
Newtonian mechanics, oscillations, central force motion, special theory of relativity, dynamics of rigid bodies, and the Lagrangian formulation of classical mechanics.

Prerequisite(s): PHYS 1320 and MATH 2210.

PHYS 3760 Thermodynamics of Materials (3)
The course covers the general foundation of both statistical thermodynamics and classical thermodynamics, including thermodynamics laws, auxiliary functions, and behavior of gases and solutions. In addition, special attention is dedicated to equilibria of reactions and phase diagrams of materials. Computer-based programs will be used to solve thermodynamics problems for complicated materials.

PHYS 3800 Physics Colloquium (1)
A series of undergraduate and faculty seminars emphasizing topics and points of view not covered in the standard curriculum, but which are nonetheless important to the education of a physicist. Notes: Required of all majors. Prerequisites: Junior standing or departmental approval.

PHYS 3880 Writing Practicum (1)
Writing Practicum. Notes: Does not count toward Physics courses or electives for the Physics major. Prerequisites: Successful completion of the First-Year Writing Requirement. Corequisites: Three-credit departmental course.

PHYS 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHYS 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

PHYS 4230 Thermal Physics (3)
A study of the physical properties of matter where temperature is an important variable. The laws of thermodynamics, equations of state, thermodynamic potentials. Kinetic theory of gases. Elementary statistical postulates. Ensembles, the partition function. Entropy, phase transitions.

Prerequisite(s): (PHYS 1210) and (PHYS 1220) or (PHYS 1310) and (PHYS 1320).

PHYS 4470 Intro Quantum Mechanics (3)
The postulates of quantum mechanics, Schroedinger equation, operator methods, angular momentum, fermion and boson systems, and Heisenberg formulations, applications to simple physical systems.

Prerequisite(s): PHYS 2350 and MATH 2210.

PHYS 4660 Special Topics (1-3)
Special Topics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHYS 4910 Independent Studies (1-3)
Independent Studies. Prerequisites: Approval of instructor and chair of department. Course may be repeated up to 6 credit hours.

Maximum Hours: 6

PHYS 4920 Independent Studies (1-3)
Independent Studies. Prerequisites: Approval of instructor and chair of department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHYS 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

PHYS 4990 Honors Thesis (3)
Honors thesis research, first semester. Register in department.

PHYS 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): PHYS 4990.

PHYS 5380 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHYS 5390 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHYS 6010 Techniques Theor Phys I (3)
Mathematical techniques used in theoretical physics. Topics include partial differential equations, orthogonal coordinate systems, separation of variables, introduction to ordinary differential equations, series solutions and convergence; Sturm Liouville theory, eigensystems and orthogonal functions; complex variables, Taylor and Laurent series, contour integration, integration by steepest descents, and conformal mappings.

PHYS 6020 Techniques Theor Phys II (3)
A continuation of PHYS 6010. Calculus of variations, Rayleigh Ritz technique, Bessel and Legendre functions, Fourier series, Fourier and Laplace transforms, Green functions. An introduction to group theory and symmetry.

Prerequisite(s): PHYS 6010.

PHYS 6070 Astrophysics (3)
Fundamentals of stellar atmospheres and interiors: nuclear astrophysics, energy generation in stars, stellar evolution, nucleo-synthesis, and theories of supernovae. Gravitational collapse and properties of superdense stars. Galactic structure and evolution, elements of cosmology.

PHYS 6150 Intro To Neutron Science (3)
An introduction to the theory and applications of neutron scattering, neutron optics, neutron interferometry and neutron beta decay. This course explores the many uses of thermal and cold neutron beams to study condensed matter, nuclear, molecular and biological systems; test fundamental principles of quantum mechanics and advance the frontier of particle physics.

PHYS 6170 Computnl Physics & Engr (3)
An introduction to the use of computational methods in physics and engineering. Writing computer code and using data visualization techniques to help solve experimental and theoretical problems. Data analysis and modeling, Monte Carlo simulations, numerical differentiation and integration, ordinary and partial differential equations, electrostatic nonlinear dynamics and chaos, fast Fourier transform, noisy signal processing, quantum spectra, thermodynamics.

PHYS 6180 Introduction to Feedback Control and Control Theory (3)
This course introduces tools for controlling systems via a feedback loop, which power the world around us – from consumer products to ecological and economic systems. The presented mathematical principles are illustrated using MATLAB and a variety of examples. No prior experience with MATLAB and programming is required. The topics covered include the control of nonlinear systems via Lyapunov theory, linearization of nonlinear dynamics, controllability and observability, the Kalman filter, transfer functions, stability, and robustness, as well as the proportional-integral-derivative controller.

PHYS 6210 Molec Biophysics & Polymer Phy (3)
An introduction to the physics of polymers and the physical bases underlying the biofunctionality of macromolecules in living systems. Themes of molecular self-organization, conformation, complementarity, and information content are emphasized and related to protein, lipid, and nucleic acid structure and processes. Introduction to scattering and other spectroscopic techniques.

PHYS 6230 Quantum Information Sci & Eng (3)
This survey course introduces students to the new world of quantum information, quantum communication, and quantum computing. The course is intended for advanced undergraduates and beginning graduate students in physics, engineering, and mathematics. Topics include: Quantum states, operators, and linear algebra; Bits and qubits; Ensembles and density operators; Unitary transformations, Gates and circuits; Information and entropy; POVM measurement; Multipartite systems; Bell inequality; Bell states and non-locality; Measures of entanglement: Quantum communication and cryptography; Teleportation, Superdense coding; Quantum noise and error correction; Classical and quantum computational complexity; Quantum algorithms; Deutsch-Jozsa, Grover, Shor; DiVincenzo criteria; Physical realizations of quantum computers; trapped ions, solid state qubits; Quantum optics and quantum internet; Topological quantum computation; Quantum biology.

PHYS 6300 General Relativity (3)
Review of special relativity. Tensor analysis. Differential forms and manifolds. Geodesics and curvature two-forms. The metric tensor. The stress-energy tensor and the Einstein equations. The initial data problem. The Schwarzschild and Kerr solutions: classical black holes. Elementary relativistic cosmology. Generation and detection of gravitational waves. Experimental tests of general relativity: the PPN formalism. Global techniques and the Hawking-Penrose singularity theorems. Hawking radiation and the Bekenstein bound.

PHYS 6310 Quantum Optics (3)
Quantum optics is an emerging field of physics that involves the study of semi-classical and quantum-mechanical models of the electromagnetic field, as well as its interaction with atoms and molecules. These nonclassical and quantum features of light have been shown to break the barriers imposed by classical physics in a variety of fields, such as communication, interferometry, computation, and imaging. The main emphasis of this course will be to introduce these nonclassical features, quantize the electromagnetic field, introduce fundamental tests of quantum mechanics by use of optics, and explore the applications of nonclassical concepts such as entanglement.

PHYS 6450 Elem Particle Physics (3)
An introduction to modern elementary particle physics, with an emphasis on the Standard Model, its phenomenology, and dynamics. The Standard Model explains, in principle and with remarkable success, virtually all phenomena that are observed in nature except gravity. The course begins with a qualitative examination of the electromagnetic, strong, and weak interactions and an introduction to the elementary particles through the use of Feynman diagrams. This is followed by relativistic kinematics, the quantum theory of angular momentum and spin, discrete symmetries, and bound states of leptons and quarks, with a focus on the hadrons. Finally the Dirac equation, the Feynman calculus, and the mathematical tools needed to calculate basic decay lifetimes and cross sections involving the electromagnetic and weak interactions are developed and applied.

PHYS 6600 Nanoscience & Technology (3)
Nanoscience and technology is often branded the science of the 21st century. It has been promised that nanotechnology will have similar stimulating effects on the world's economy and society as the industrial-and microelectronics- revolution. Nanoscience is an interdisciplinary effort with the aim to manipulate and control matter at length scales down to single molecules and atoms and thus to create materials and devices with novel properties. With diminishing dimensions material properties are being governed by quantum mechanics. The description and exploitation of quantum phenomena in novel devices is the quintessence of nanophysics. Consequently, the main emphasis of this course is to give an overview of the physics of low dimensional solid state systems. This course is supplementary to courses in solid state physics and surface science but can be taken independently.

PHYS 6660 Special Topics (1-3)
Special Topics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHYS 6700 Electrnc Prop of Materls (3)
Quantum physics, electronics and energy bands in crystals, electronic transport in materials, photoconductivity, Hall effect, quantum Hall effect, superconductors and their applications, magnetic properties of material and their applications, thermal properties of materials and dielectric properties of materials.

PHYS 6750 Modern Cosmology (3)
The Friedmann cosmological models: open, flat, and closed; matter and radiation dominated. The cosmological constant. Three degree blackbody radiation and its theoretical implications. Experimental tests in cosmology. Nucleosynthesis and galaxy formation. Anisotropic and inhomogeneous cosmologies: the Bianchi models, primarily Kasner and Type IX. GUTs in the very early universe: baryogenesis and phase transitions. Dark matter. Cosmic strings and magnetic monopoles. Inflationary models. Chaotic inflation. Future history and final state of the universe.

PHYS 6940 Transfer Coursework (0-20)
Transfer coursework at the 6000 level. Departmental approval required.

Maximum Hours: 99

PHYS 7060 Theoretical Mechanics (3)
Advanced studies of theoretical mechanics. Lagrangian and Hamiltonian methods. Integrable and non-integrable problems.

PHYS 7100 Statistical Mechanics (3)
Advanced studies of statistical mechanics. Probability theory, random walks, statistical ensembles, entropy, quantum statistical mechanics and applications.

PHYS 7130 Solid State Physics (3)
Advanced studies of solid state physics. Properties of the solid state, semiconductors, novel systems, applications.

PHYS 7160 Atomic/Molecular Physics (3)
Advanced studies of atomic and molecular physics. The hydrogen, helium and many electron atoms. Diatomic and polyatomic molecules.

Enrollment limited to students in the Physics department.

PHYS 7170 Quantum Mechanics I (3)
Advanced studies of quantum mechanics. Quantization, probability, quantum wave functions, quantum entanglement. Two, three and multi-level quantum systems and applications.

Enrollment limited to students in the Physics department.

PHYS 7180 Quantum Mechanics II (3)
Continuation of PHYS 7170.

Prerequisite(s): PHYS 7170.
Enrollment limited to students in the Physics department.

PHYS 7230 Electromagnetic Theory I (3)
Advanced studies of electromagnetic theory. Maxwell's equations and applications. Electric and magnetic fields and their properties. Applications.

PHYS 7240 Electro-Magnetic Thry II (3)
Continuation of PHYS 7230.

Enrollment limited to students in the Physics department.

PHYS 7310 Advanced Spec Problems (3)
Course may be repeated up to unlimited credit hours.

Enrollment limited to students in the Physics department.

Maximum Hours: 99

PHYS 7311 Advanced Special Problems (3)
Enrollment limited to students in the Physics department.

PHYS 7312 Advanced Special Problems (3)

PHYS 7320 Adv Special Problems II (1-9)

_

Enrollment limited to students in the Physics department.

PHYS 7810 Seminar (3)
Enrollment limited to students in the Physics department.

PHYS 7820 Seminar (1)
Enrollment limited to students in the Physics department.

PHYS 7910 Research I (3)
Individual research supervised by faculty.

PHYS 7920 Research II (3)
Individual research supervised by faculty.

PHYS 7930 Research III (3)
Individual research supervised by faculty.

Enrollment limited to students in the Physics department.

PHYS 7940 Research IV (3)
Individual research supervised by faculty. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHYS 7951 Advanced Research I (3)

PHYS 7952 Advanced Research II (3)

PHYS 7990 Research (1-9)
Individual research supervised by faculty.

Enrollment limited to students in the Physics department.

PHYS 9980 Masters Research (3)
Research toward completion of a masters degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PHYS 9990 Dissertation Research (0-3)
Research toward completion of a doctoral degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Physiology - Graduate (GPSO)

GPSO 6010 Medical Physiology (6)
A major physiology course taught by various faculty in the Physiology Department. This course covers most important concepts in medical physiology, along with updated information and in-depth discussion in all fields of interest related to physiological function.

GPSO 6060 Experimental Physiol Lab (2)
This course provides students' hands-on experiences to perform the physiological experiments with human body, animals and computer simulation modeling systems.

GPSO 6250 Membrane Physiology (2)
The course covers the major structure and function of ion channels, the basic physiological mechanisms of voltage gated ion channels, and transmitter gated ion channels. Also a brief consideration will also be given to certain pathophysiological mechanisms leading to disease.

GPSO 7175 Med Terminology (3)
This on-line course provides definition and appropriate use of common medical terminology and abbreviations. It is especially beneficial for students who are newly committed in medical sciences and who have foreign culture background.

GPSO 7180 Selected Topics (1-5)
Self-study under the direction of a faculty mentor in a selected topic in physiology. A final report is required.

GPSO 7320 Renal Physiology (3)
This course provides updated information regarding renal function and renal/hormonal control of blood pressure. The roles of kidney function in hypertension, diabetes mellitus and other human diseases are also covered.

GPSO 7350 Translational Physiology (2)
Seminars in physiology present cutting edge research scientists of national prominence and Tulane Faculty. A one-page report is required at the end of each seminar.

Course Limit: 2

GPSO 7560 Signal Transduction/Hormone Ac (2)
This course provided current molecular mechanisms for cellular signal transduction pathways and hormone action including membrane receptors and downstream pathways, second messenger systems, receptor-ion channels, kinase/phosphatases, extracellular matrix signaling, signaling and cell death, Wnt signaling pathways and nuclear receptor signaling.

GPSO 7600 Integrative Cardiovascular Physiology (3)
This advanced course covers in-depth topics in cardiovascular physiology and its association with other systems to regulate body function. The objective of the course is to provide the students with comprehensive knowledge of cardiac and vascular function and its regulation by neural, hormonal and other systems.

GPSO 7910 Seminar Physiology (1)
Seminars in physiology present cutting edge research scientists of national prominence and Tulane Faculty. A one-page report is required at the end of each seminar.

Course Limit: 2

GPSO 7980 Research (3)
Research thesis under the direction of faculty. Students are required to independently choose topic, conduct experiments, analyze and report data. A concise thesis based on experimental data is also required.

GPSO 7990 Research (1-9)
Research thesis under the direction of faculty. Students are required to independently choose topic, conduct experiments, analyze and report data. A concise thesis based on experimental data is also required.

Prerequisite(s): GPSO 7980.

GPSO 9990 Dissertation Research (0)
Research thesis under the direction of faculty. Students are required to independently choose topic, conduct experiments, analyze and report data. A concise thesis based on experimental data is also required. Course may be repeated up to unlimited credit hours.

Enrollment limited to students in the Physiology department.

Maximum Hours: 99

Political Economy (PECN)

PECN 1290 Semester Abroad (1-20)
Credit placeholder for study abroad courses in Political Economy. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PECN 1940 Transfer Credit (3)
Transfer Credit. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PECN 2390 Semester Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PECN 3010 Positive Political Economy (3)
This course is designed to provide students with an introduction to the field of positive political economy. Positive political economy seeks to understand and predict policy outcomes and political behavior. The course will take an interdisciplinary approach that uses tools and concepts from economics to study politics and political behavior. The course will presume that political actors are rational and goal oriented. Using this approach, the course will examine how institutional constraints in the political environment affect the choices of these actors and the resulting political outcomes.

Prerequisite(s): ECON 1010 or 1030.

PECN 3020 Pol Ecn:Historical Ovrvw (3)
This course introduces students to the question of how different modern Western societies and thinkers have defined the relationships between political and economic activities. Beginning with the experience of Europe in the 15th century, it examines what the unprecedented wealth of modern Western societies has meant for the understanding and practice of politics. It also explains what caused the economic abundance of Western nations to come into being in the first place, and how that abundance has been sustained over time.

PECN 3030 The Individual,Soc&State (3)
This course presents an integrated study of the main alternatives in political ideology (liberalism, socialism, fascism, Marxism) advocated in the modern world and the exemplifications of these ideologies in practice in the modern world (post-war West Germany, 20th-century Britain, Mussolini's Italy, the former Soviet Union).

PECN 3040 Comp & Intl Pol Econ (3)
Virtually all contemporary economies are characterized by extensive relations between the economic and political systems. Furthermore, these relations seem to involve often complex relations between the global, national, and sub-national political economies. This fact is currently referred to as globalization. However, it is clear that globalization, whatever it is, has different effect on national (and sub-national) political economies. In this course, we will: 1) attempt to develop an understanding of globalization; 2) develop a comparative analysis of the links between globalization and national outcomes; and 3) examine the international institutions that attempt to manage globalization. Because time is finite, and there are other courses, we will focus primarily on advanced democracies.

PECN 3940 Transfer Coursework (3)
Transfer Coursework in Political Economy

Maximum Hours: 99

PECN 4010 Constitutionalism (3)
This course discusses the historical development of constitutionalism, with a view to understanding what is common to the various forms of constitutional government which have appeared in different societies from classical Athens to modern America.

PECN 4040 Democ/Capitlsm/Free Spch (3)
This course discusses freedom of expression in the context of advanced capitalist democracies such as the U.S. Topics include justifications for free speech, its proper scope, tensions between democratic self-government and capitalist mass media, and Supreme Court decisions relating to freedom of expression.

PECN 4300 Behavioral Economics &Public Policy (3)
This course provides an overview of research in “behavioral economics” which integrates insights from psychology into economic models of behavior. We’ll survey a range of topics which comprise the standard behavioral economic canon — focusing on ways in which individuals may systematically depart from assumptions such as perfect rationality, self interest, and time consistency of decisions. It will examine models of non-standard preferences and decision rules, and discuss empirical strategies for distinguishing between such behavioral decision-making and the predictions of the standard model. Behavioral economics incorporates insights from social psychology, experimental economics, and sociology. Important areas of emphasis will be behavior towards risky outcomes, financial decision making, and applications to social institutions such as taxation and public finance, An important emphasis will be on how insights into behavioral economics can and should influence the design of public policy programs.

Prerequisite(s): ECON 3010.

PECN 4400 Law & Economics of the Regulatory State (3)
This course is designed to introduce students to the law and economics of the regulatory state and the challenges to governance posed by the regulatory state. Students will be expected to develop an understanding of key legal principles as well as to apply economic analysis to legal rules. For each of the topics, a discussion of legal principles will be paired with the relevant economic analysis. The first part of the course treats classic topics of law and economics. The aim here is to provide the key foundational material in contracts, torts, property, and administrative procedures. The questions to be addressed are the specifics of the legal rules and their impact on economic efficiency and welfare, broadly defined. These tools are necessary in order to understand why there may need to be further government regulation. The second part focuses on administrative law and the regulatory state. It will focus on why laws are written so as to permit action for regulatory agencies; the procedures that agencies and courts follow for regulations; and the limits of regulatory authority. There will be a careful look at case studies illustrating these principles.

Prerequisite(s): ECON 1010 and 3010.

PECN 4560 Internship (1-3)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Only one internship may be completed per semester. Certain internships may satisfy the public service graduation requirement with prior approval of the department and the Center for Public Service. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PECN 4570 Internship (1-3)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Only one internship may be completed per semester. Certain internships may satisfy the public service graduation requirement with prior approval of the department and the Center for Public Service. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PECN 4910 Independent Study (3)
Independent study in Political Economy. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PECN 4920 Independent Study (1-3)
Independent study in Political Economy. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PECN 4970 Special Topics Political Econ (3)
Special topics in Political Economy. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PECN 4980 Special Topics Political Econ (3)
Special topics in Political Economy. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PECN 4981 Special Topics Political Econ (3)
Special topics in Political Economy.

PECN 4990 Honors Thesis (3)
Honors thesis in Political Economy.

PECN 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): PECN 4990.

PECN 5190 Semester Abroad (3-6)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PECN 5380 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PECN 5390 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PECN 6000 Major Seminar In Pol Econ (3,4)
The political economy majors' seminar focuses on a large theme or question that no single discipline in the program uniquely claims for its own and no one approach exhausts. Example of such issues: the rise of the nation state, capitalism and democracy, the foundations of economic behavior, the organization and meaning of work, and industrialization, economic growth, and social change. In designing a majors seminar, faculty define the issues that most engage them as teachers and scholars and that sustain a coherent cross-disciplinary course offering.

PECN 6100 Empirical Approaches to Political Economy (3)
An introduction to empirical approaches of Political Economy.

PECN 6200 Advanced MA Seminar for Political Economy (3)
An application of empirical approaches of Political Economy.

PECN 6810 Special Topics (1-4)
Special Topics in Political Economy. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

PECN 6890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Political Science - American (POLA)

POLA 2100 American Government (3)
An introductory survey of government at the national level with emphasis on constitutional principles and significant contemporary trends and problems.

POLA 3010 Special Projects (3,4)
Special Topics course in Political Science - American. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLA 3011 Special Projects (3)
Special Topics course in Political Science - American. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLA 3012 Special Topics (3)
Special Topics course in Political Science - American. Course may be repeated up to unlimited credit hours.

POLA 3013 Special Topics (3)
Special Topics course in Political Science - American. Course may be repeated up to unlimited credit hours.

POLA 3020 Special Projects (3)
Special Projects course in Political Science - American. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLA 3030 Special Topics (3)
Special Topics course in Political Science - American. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLA 3031 Special Topics (3)
Special Topics course in Political Science - American. Course may be repeated up to unlimited credit hours.

POLA 3032 Special Topics (3)
Special Topics course in Political Science - American. Course may be repeated up to unlimited credit hours.

POLA 3110 State and Local Politics (3)
This course examines the roles and responsibilities of state governments and the complex dynamics of state politics in the U.S. federal system. It uses a comparative state perspective to examine state government institutions. political behavior in the states, and the major areas of policy frequently addressed in the states.

POLA 3240 Public Policy (3)
This course covers the policy making process for domestic policy in the United States. We will study the following questions: Why do some problems reach the political agenda and others do not? Who are the important actors in the policy process and what roles do they play? What are the values at stake with policy debates? What explains why certain solutions are offered and others are rejected? How do we know if a policy has been successful?

POLA 3270 Courts and Politics (3,4)
Analysis of the political factors that influence courts, their staffing, their decisions, and their policymaking role. The interaction between legal policies and structures and political institutions and their development will be addressed.

POLA 3272 Big Easy Politics (3)
The objective of this course is for students to examine the level of government with the greatest impact on the daily lives of Americans--local government. Specifically, we will focus on the politics, functions, and governmental structure of the City of New Orleans.

POLA 3280 Southern Politics (3)
This class is designed to provide a comprehensive overview of Politics in the American South. The course focuses on both the distinctiveness of the region and the South's influence on the nation. The course selectively examines historical as well as contemporary issues related to the eleven states of the Old Confederacy.

POLA 3300 Race and American Politics (3)

POLA 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLA 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLA 3910 Independent Study (1-3)
Independent study on a suitable topic, with consent of instructor. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLA 4010 Special Projects (3,4)
For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor. Course may be repeated up to unlimited credit hours.

Prerequisite(s): POLA 2100 and POLS 2010.

Maximum Hours: 99

POLA 4011 Special Projects (3-4)
Special Topics course.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4012 Special Projects (3,4)
For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor. Course may be repeated up to unlimited credit hours.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4020 Special Projects (3)
For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor. Course may be repeated up to unlimited credit hours.

Prerequisite(s): POLA 2100 and POLS 2010.

Maximum Hours: 99

POLA 4110 Policy Research Shop (3)
The Policy Research class creates a partnership between city government and Tulane students in order to address issues of concern to the city and increase students' civic engagement. In this course, the professor solicits policy topics from elected and appointed officials and bureaucrats and the students write policy briefs on these issue areas. In exchange for the policy brief , policy sponsors agree to allow the students to present their findings at an official forum, such as a city council meeting.

Corequisite(s): POLA 4890.

POLA 4120 Louisiana Politics (3)
A review of topics in Louisiana politics, including right- and left-wing populism, campaign techniques, diversion of campaign funds and rewards for supporters, the culture of sociability, and the history of racial, regional, and religious cleavage. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4140 Urban Politics (3)
This course is an introduction to urban politics in the United States. It will focus on problems of cities and discuss solutions to these problems, including the lack of formal authority and high rates of class, race, and ethnic heterogeneity and segregation. We will focus on the heritage of municipal government in the U.S., the development of their responsibilities, and the role of federal and state governments in municipal affairs. The course will also spend time discussing some of the solutions for residents of urban areas to try to advocate for change.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4150 Elections in America (3)
The focus is on candidates. political parties. the Dress, consultants, and public opinion in elections and political campaigns. Covers presidential and congressional elections, Each semester, special attention is paid to a topic such as the economy, fundraising. activists, or campaign techniques.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4160 Political Parties (3-4)
A study of theories of political parties in the United States and other democracies. The stress is on the electoral and governmental role of party organizations.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4170 The American Presidency (3)
A study of the office of the President of the United States that includes both historical review and analysis of the Presidential role in our national government. A main focus of the course is on the relative importance of particular presidents and their leadership capacities and the limitations on the office itself.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4200 Congress (3)
A study of the United States Congress with emphasis on its development, its internal structure, the relationship of the elected representatives to their constituents, and the legislative process itself.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4210 Women and Politics (3,4)
This course is an exploration of the role gender and sex have in politics, including voting. party activism, leadership, candidacy, holding office, and law-making. Special attention will be paid to the relationship between gender and political behavior, including political socialization, political attitudes. and public policy creation. Time will be spent on understanding what gender and sex mean in American politics, as well as the effect that disparate power has on political behavior.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4230 Environ Politics & Policy (3)
This course is an examination of the process of environmental policymaking in the United States. We will evaluate how environmental politics and policymaking has progressed in the US and the current state of environmental policymaking. Using a case-study approach, we will examine current environmental problems for local and state governments and suggest policy solutions.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4250 Politics of Poverty Policy (3)
This course covers the politics of poverty policy within the United States, including relevant approaches to the debates over poverty's causes consequences and solutions: the ways in which poverty is defined and measured and how this affects the policy alternatives: the state of economic inequality in the United States: American attitudes toward the poor and policies seeking to address poverty: and, an examination of case studies to redress poverty.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4260 Race, Sex, & Power (3,4)
This course examines the role of race and sex based classification in the law of equal protection and focuses on the political actions and events that lead to legal remedies for discrimination. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4270 Constitutional Law (4)
A study of the general powers and limits of the branches of the national government and the relationship among the levels of government, as this has affected civil rights and individual liberties under the Constitution. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4300 Interest Group Politics (3)
Prerequisite(s): POLA 2100 and POLS 2010.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4310 Interest Groups & Supreme Court (3)
This course will examine the role of interest groups in various aspects of the Supreme Court process, including the selection of justices, case selection, and judicial decision making. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4320 Women's Legislative Leadership (3-4)
This course is an examination of gender in American legislatures. We will analyze both the processes and personnel of legislatures at the federal and state level of the United States in order to better evaluate the policy outcomes of these institutions. Students will be placed in a service role with one of the above sites for the length of the semester. Having students placed at several sites in the legislative process enables a more thorough analysis of how gender is interwoven into policymaking. Students will have a range of perspectives on the process as a consequence of their own placement and the experiences of their peers. Mandatory 20-hour service learning component POLA 4891. In lieu of prerequisites please contact the instructor for approval to enroll.

Prerequisite(s): POLA 2100 and POLS 2010.
Corequisite(s): POLA 4891.

POLA 4350 Politics of Education Policy (3,4)
This course examines education policy through the lens of U.S. Politics. In particular, we will consider what public schools should do for students: the changing nature of school governance: the major policy problems within primary and secondary education and how they have been defined: the groups that have had power in education policy debates: and where New Orleans fits into the larger national picture with regard to its education system?"

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4450 Politics and Literature: US (3)
Study of political theme as presented in American literature. For majors only. Non-major junior and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): POLA 4110.

Maximum Hours: 99

POLA 4891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): POLA 4320.

Maximum Hours: 99

POLA 4892 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLA 5190 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLA 5380 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLA 5390 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLA 6120 Advanced Campaigns & Elections (4)
This course explores advanced topics related to election campaigns in the United States. Particular attention will be paid to how campaigns are run and their impact on election outcomes. The course will introduce students to the paradigms and techniques that political scientists use to study campaigns and elections.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 6180 Pub Opinion Voting Behvr (4)
An analysis of opinion formation in political situations and a survey of voting behavior in the United States.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 6200 Interpretations American Politics (4)
This class examines alternative accounts of American politics, using research to explore competing views, different methodologies, and varying emphases. Each participant will be responsible for conducting a serious piece of research on his or her own.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 6230 Politics Policy Making (4)
Prerequisite(s): POLA 2100 and POLS 2010.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 6290 Judicial Process (4)
This seminar course examines theories of judicial behavior and decision making, asking how various factors both internal and external to judges and courts in the U.S. explain their legal and policy outputs.

Prerequisite(s): POLA 2100 and POLS 2010.

POLA 6960 Special Topics (3,4)
Special Topics course in Political Science - American. Course may be repeated up to unlimited credit hours.

Prerequisite(s): POLA 2100 and POLS 2010.

Maximum Hours: 99

POLA 7110 American Politics Sem (3)

Political Science - Comparative (POLC)

POLC 1290 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLC 2300 Comparative Politics (3)
This course introduces students to the fundamental theories and concepts of the subfield of comparative politics. Comparative politics is a method of analysis that evaluates similarities and differences among political systems in order to develop general conclusions about political phenomena. The study of politics beyond U.S. borders helps place our own political system into perspective by highlighting alternatives to our own system and challenging the assumption that there is only one right way to organize political life.

POLC 3003 Women Leading Change (4)
This course engages students in considering the real world dilemmas of women working in organizations and bringing about social change in those and other organizations. The course analyzes different theories and explanations of why so few leaders are women and how women can become leaders and lead as well. Case studies are used to examine the intricacies of organizations, the roles of women in various organizations, as Well as the impact of organizations on policy (public, social, scientific, educational), government, and leadership in a global world. The course outcomes are an enhanced critical understanding of the dilemmas that are encountered by women leading change; the ability to evaluate and compose case studies at the intersection of leadership and gender; and the demonstration of critical thinking and problem-solving skills.

Prerequisite(s): INTU 1000.

POLC 3010 Special Projects (1-6)
Special Projects course in Political Science - Comparative. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLC 3011 Special Projects (1-6)
Special Projects course in Political Science - Comparative. Course may be repeated up to unlimited credit hours.

Course Limit: 99
Maximum Hours: 99

POLC 3012 Special Projects (1-6)
Special Projects course in Political Science - Comparative. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLC 3013 Special Projects (1-6)
Special Projects course in Political Science - Comparative. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLC 3030 Special Topics (3)
Special Topics course in Political Science - Comparative. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLC 3040 Special Topics (3)
Special Topics course in Political Science - Comparative. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLC 3200 African Politics (3)
This course offers an introduction to Sub-Saharan African politics from the precolonial period to the contemporary era. We will examine colonialism and independence movements, new state creation, democratic breakdown and dictatorship, protest movements, civil wars and genocide, economic collapse and ethnicity politics. This course offers students an understanding of political theories and these theories' applicability to African politics.

POLC 3300 European Governments (3)
This course is an introduction to the Post-World War II evolution of Western Europe. It examines four main dimensions: (i) the position of countries in the international political economy, (ii) the role of the state in the management of the economy as well as of the welfare system, (iii) the formal structure of the system of governance and policymaking, and (iv) the form of political participation and representation.

POLC 3310 Politics of Central America (3)
This course will focus on the current state of Central American politics and society by analyzing the social and political forces at play in the region, the challenges of its economic development, and its external interaction with the United States and other world regions. Although regional in its scope the course will rely on individual countries to exemplify particular issues confronting the region.

POLC 3330 Political Polarization: Social Origins (3)
This course examines how neoliberalism generates resistance and pressure for change. However, the direction of change, such as trends towards inclusionary politics vs. exclusionary politics, is not foreordained. Latin America was a frontrunner in these trends. As the USA grapples with similar tensions, its politics eerily resemble those of Latin America, a region renowned for inequality and democratic backsliding. What lessons might the Latin American experience hold for the United States?

POLC 3340 Middle East Comp Politics (3)
Overview of domestic politics in the countries of the Middle East, focusing on different types of regime and recent political developments.

POLC 3350 Politics of Latin America (3)
This course will focus on the current state of Latin American politics and society by analyzing the social and political forces at play in the region, the challenges of its economic development, and its external interaction with the United States and other world regions. Although regional in its scope the course will rely on individual countries from South America as well as Mexico to exemplify particular issues confronting the region.

POLC 3380 Asian Governments (3)
This course focuses on the origins and dynamics of change in the newer nations of Asia, with a special emphasis on South Asia.

POLC 3410 Politics & Nationalism (3)
A study of nationalism and ethnic conflict in the contemporary world. Both approaches to the study of nationalist conflict and case studies of conflict are included.

POLC 3440 Politics & Islam (3)
This course will focus on the motivations of political parties, movements, and leaders in the Middle East and North Africa (MENA) region who drew inspiration from Islam. It considers the interactions of "the West" and "the Islamic world" in generating a wide range of MENA social and political forces, from the decline of the Ottoman Empire and the rise of post-colonial regimes to the Iranian Revolution, the jihad in Afghanistan, the activism of the Muslim Brotherhood and the political violence of the Islamic State of Iraq and Al-Sham.

POLC 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLC 4010 Special Projects (3-4)
For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor. Course may be repeated up to unlimited credit hours.

Prerequisite(s): POLC 2300 and POLS 2010.

Maximum Hours: 99

POLC 4011 Special Projects (3,4)
For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor. Course may be repeated up to unlimited credit hours.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 4012 Special Projects (3,4)
For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor. Course may be repeated up to unlimited credit hours.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 4030 Comp Poli Econ Welfare State (3-4)
This course analyzes the historical development of, and contemporary change in, the welfare states of the advanced industrial countries. It focuses in particular on the political, economic, and institutional sources of outcomes in the post-war era and the post-1970 period. It investigates how and why welfare states have developed historically, how they vary cross-nationally, and how pressures on inherited arrangements are generating reforms in a variety of institutional and political contexts. Course may be repeated up to unlimited credit hours.

Prerequisite(s): POLC 2300 and POLS 2010.

Maximum Hours: 99

POLC 4200 The Politics of Rape (3,4)
This course will ground students in the academic literature of rape and the anti-rape movement, with a focus on public policy, critical race theory, feminist theory, law, and social movements.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 4300 Political/Economic Develop of Western Europe (3-4)
This course focuses on the historical antecedents of contemporary West Europe politics, with an emphasis on the social and economics bases of 20th-Century regime outcomes. It explores the political development of four major European countries - Great Britain, France, Germany, and Italy-with particular attention to contrasting responses to economic, social, and political challenges since the middle ages, including the commercialization of agriculture, the consolidation and dissolution of political regimes, democratization, and industrialization.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 4310 Mexican Politics Govt (3)
An exploration of the Mexican political process and the historical developments leading up to its present structure. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 4340 Chinese Politics Revolution to Reform (3,4)
In this course we will analyze Chinese politics, paying particular attention to how the Chinese Communist Party came to power in 1949; how it ruled during the Mao era; and why it initiated economic reforms in 1978. We will also analyze enduring features of the Chinese polity that were instituted shortly after 1949 and persist to the current day, like the single-party system, campaigns, and ideology.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 4350 Chinese Politics (3)
This course will examine the political and economic reforms that China has undertaken since 1978.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 4360 Russian Politics (3-4)
An examination of both formal and informal factors affecting the nature of the Russian political system. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 4390 Poverty & Development (3,4)
For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 4420 State Society Developing Countries (3)
The course examines the global context of political development in Africa, Asia, and Latin America, the pursuit of economic development and democracy in these regions, and efforts at grass-roots reform.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 4470 Politics & Literature (3,4)
Study of the literature of political dissent, with particular focus on writers in communist and other authoritarian states.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 4480 Populism, Politics, and Change (3)
A populist tide clamoring for change in the political status quo is sweeping the world. Populists – those abandoned, forgotten, ignored by the establishment – believe that anti-establishment politics offer the best hope for inclusion of their dreams, aspirations, and beliefs in politics. The establishment fears them believing that their polarized, confrontational politics herald the "end of the world" as we know it. The battle lines are drawn, the stakes seem clear. But reality is much more complex. This course seeks to make sense of the populist tide. Populist movements are hugely varied. Some are more authoritarian and conservative while others are more left oriented emphasizing greater social inclusion and welfare. All claim to be perfecting, saving, or protecting good government and democracy. To sort out the cacophony around really existing populisms we will explore the following questions. What is populism? Who are populists? Why are they gaining so much traction? Are they anti-democratic? What is at stake in the rising populist tide? We will examine these questions in the context of Latin American, US, and European cases.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 4510 Politics of the European Union (3,4)
The nation-states of the old Europe are becoming the member-states of a European Union. While founded to avoid a repetition of the horrors of the past, the New Europe is increasingly being viewed as a model for the future. This course provides an overview of the political institutions and the political economy of the European Union. Four main areas are examined: (i) formal institutions and institutional relations of the European Union (ii) critical junctures in the evolution of the European Union, (iii) issues of democratic deficits, and (iv) external relations and eastward enlargement.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 4520 Comparative State Building (3)
This course will explore the nature of state authority and the processes by which different types of states emerged at different moments in world history and in different regions of the world, as well as how the nature of states has evolved over time.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 4550 People's Politics of Latin Am (3)
Prerequisite(s): POLC 2300 and POLS 2010.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLC 5190 Study Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLC 5380 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLC 5390 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLC 6010 Approaches to Global Dilemmas (3,4)
This course employs an interdisciplinary approach to explore the tensions and debates surrounding global capitalism in various world regions. Open to senior Altman Scholars only.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 6100 Politics & Health (4)
This course approaches health care as a policy area, one in which a variety of actors attempt to influence the design and delivery of health services. We begin with an overview of the U.S. system, compare it to peer nations, and then analyze health policy issues in other world regions.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 6110 Comparatv Political Econ (4)
Prerequisite(s): POLC 2300 and POLS 2010.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 6120 Comparative Social Policy (4)
This course focuses on welfare states and social policy across world regions including advanced industrialized countries, post-communist states, and developing nations. It examines explanations for variation in social policy provision across countries and regions and asks why welfare state reforms are more successful in some places than others. The course includes detailed study of key policy areas (pensions, healthcare, and education).

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 6350 Social Movements, Protest, and Policy/Political Change (3-4)
We think of social movements as forces for change, which frequently involves policy and institutional reform. Yet just how they affect such change is frequently not explicitly addressed. This course introduces students to major theories and analytical frameworks that help to explain the policy/political consequences of contentious action by social movements, ranging from nil to substantial and points in between. In the process, the course covers themes such as race and ethnicity, policy consequences of resistance to mega development projects, environmental justice, nuclear power and peace movements, among others. Effects are traced at various levels of governance, from national to local (sorry no international). Regions of the world include Latin America, the United States, and Europe.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 6410 Approaches L A Politics (4)
Major approaches to the study of Latin American politics such as developmentalism, institutionalism, corporativism, bureaucratism, authoritarianism, and dependency theory.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 6910 Authoritarianism (4)
Despite the impressive gains that democracy has made over the past four decades, more than half of the countries in the world remain autocratic. What are the roots of this authoritarian resilience? We will first approach this question theoretically and by cases studies of countries in Europe and Eurasia (the Soviet Union; pre-1989 Eastern Europe; post Soviet Russia and Central Asia), Asia (China, North Korea, Taiwan), Latin America (Mexico, Cuba), and the Middle East (Iraq, Syria, Iran).

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 6930 Regime Change in Asia (4)
In this course we will analyze the reasons for democratization in some Asian countries and will evaluate the prospects for regime change in countries that remain authoritarian. The first module of the course will focus on theories of authoritarian rule and of democratization. The second will examine several successful cases of democratization. The third module will focus on China, which represents a crucial case of regime durability. The fourth module of the course will assess the prospects for regime change in North Korea and several Southeast Asian autocracies.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 6950 Special Topics (3,4)
Special Topics course in Political Science - Comparative. Course may be repeated up to unlimited credit hours.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 6951 Special Topics (4)
Special Topics course in Political Science - Comparative. Course may be repeated up to unlimited credit hours.

Prerequisite(s): POLC 2300 and POLS 2010.

POLC 7315 Sem in Comparative Politics (3)

Political Science - General (POLS)

POLS 1010 Introduction To Politics (3)
An introduction to the principles and practice of political life in a variety of domestic and international contexts. Open to freshmen only. Each 1010 section has a limited enrollment of no more than 20 students. A paper is required and is assigned on a tutorial basis with individual student-instructor conferences.

POLS 2010 Scope/Methods Poli Sci (3)
This course is intended to introduce advanced students to the concepts and methods of political science research. Substantive fields of interest--such as American politics, IR, Comparative, etc.--are all bound by similar skills and techniques inherent to the discipline of political science. Students will be introduced to these techniques in an effort to train them to become producers, not merely consumers of knowledge. This course is fundamentally about how to conduct research in political science, and what makes political science a science. The course covers both introductory quantitative methods (univariate, bivariate, and some multivariate analyses), as well as some of the most often used qualitative methods in the discipline. The course is not meant to be exhaustive of all political science methods.

POLS 3010 Special Projects (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLS 3011 Special Projects (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLS 3030 Special Projects (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLS 3910 Independent Study (1-3)
Independent study on a suitable topic, with consent of instructor. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLS 3920 Independent Study (1-4)
Independent study on a suitable topic, with consent of instructor. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLS 4010 Special Projects (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLS 4560 Internship (1,3)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLS 4920 Independent Study (1-3)

Maximum Hours: 99

POLS 4990 Honors Thesis (3)

POLS 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): POLS 4990.

POLS 5190 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLS 5380 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLS 5390 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLS 6010 Conduct of Research (4)
This course is intended to introduce advanced students to the concepts and methods of political science research, and to show how those methods can be applied to concrete problems.

POLS 6910 Independent Study (1-3)

POLS 6960 Spec offerings Pol Sci (4)
For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLS 7040 Independent Study (1-3)

POLS 7111 Scope & Methods for Poli Sci (3)

POLS 7112 Quantitative Methods I (3)
In recent decades, political scientists have used quantitative methods more and more frequently in their research. While econometric analysis is not the only analytic tool available for researchers assessing causal claims, it is imperative that any student of the discipline be able to digest and interpret the language of statistics. It is rare to pick up a journal in the discipline these days that is completely devoid of statistical analysis. Students must be able to understand this language at a minimum, and successful publication strategies (which in turn are important for successful careers) will involve the production of independent results. The trend towards econometric analysis (alongside formal theory) is unmistakable, and occurs in all subfields with the possible exception of political theory. Statistical literacy is simply indispensable for political scientists. Theoretic development is important as well, and can work hand in hand with empirical testing in important political science research. Some of you may not have had learning statistics in mind when you decided to attend graduate school. Some of you may have little mathematics or statistics background, perhaps dating back to high school. However, you should not be intimidated or afraid of integrating this language into your research interests. Moreover, if you don't learn this material and takes steps to produce your own results, you will miss out on what is going on in your field. Even if you do not end up producing copious amounts of data and analysis, you will at a minimum need to become a competent consumer of quantitative political science research. This course, along with its partner course next semester, will allow you to recognize the foundations of econometric analysis in political science and give you the tools to accurately discern its meaning. You will also begin to produce your own conclusions based on careful analysis and interpretation. The emphasis in this course is on understanding the building blocks of quantitative research in political science.

POLS 7113 Qualitative Methods II (3)
Qualitative Methods II

Prerequisite(s): POLS 7112.

POLS 7114 Qualitative Methods (3)

POLS 7116 Dissertation Prospectus Seminar (3)
This is a workshop-style PhD seminar that has one central aim: namely, to help you develop a draft of your dissertation prospectus. The dissertation prospectus represents a piece of original research on an important question in the field of political science that is approximately 35-40 pages in length, inclusive of references. The prospectus should clearly state the puzzle of the dissertation; its theoretical importance; and the research hypotheses that will be evaluated. In addition, students should explicitly articulate the specific empirical evidence and methodological techniques that they will use to assess the validity of the research hypotheses. A strong proposal does more than just summarize existing research on the question that the dissertation plans to investigate – it constitutes a promise to produce a PhD dissertation that will advance the state of the field.

POLS 7210 Political Development I (3)

POLS 7211 Political Development II (3)

POLS 7225 Sustainable Human Development: Theory and Practice (3)
The purpose of this course is to gain an in-depth understanding of the origins, evolution, and characteristics of Sustainable Human Development (SHD) both in terms of formulation and implementation.

POLS 7311 Sem Political Economy (3)

POLS 7312 Pol Inst of Rights (3)

POLS 7750 Special Topics (3)
Special Topics in Political Development.

POLS 7751 Special Topics (3)
Special topics in Comparative Politics.

Maximum Hours: 99

POLS 7752 Special Topics (3)
Special topics in International Relations.

POLS 7910 Research (3)

POLS 7920 Research (3)

POLS 7950 Special Projects (3)

POLS 7951 Special Projects (3)

POLS 7952 Special Projects (3)

POLS 7960 Special Projects (3)

POLS 9980 Masters Research (0)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLS 9990 Dissertation Research (0)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Political Science - International (POLI)

POLI 1290 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLI 2500 International Relations (3)
An introductory analysis of basic factors influencing international politics, organization and law.

POLI 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLI 3010 Special Projects (1-4)
Special Projects course in Political Science - International. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLI 3011 Special Projects (1-4)
Special Projects course in Political Science - International. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLI 3012 Special Projects (3)
Special Projects course in Political Science - International. Course may be repeated up to unlimited credit hours.

POLI 3013 Special Projects (1-4)
Special Projects course in Political Science - International. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLI 3020 Special Projects (3-4)
Special Projects course in Political Science - International. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLI 3040 Politics of Immigration (3)
This course will explore the history of immigration to the U.S., the major push and pull factors fueling immigration, the impacts of immigration on sending and receiving communities, and the outcomes of various policy responses.

POLI 3360 Politics of Civil Wars (3)
From Syria to South Sudan, India to Colombia armed conflict within nation-states keeps challenging domestic and international institutions. The aim of this course is to understand the different causes and paths of civil wars. We will survey contemporary theories related to the causes, duration, and consequences of civil wars. Further, we will consider what these theories and findings mean for the prospects of successful conflict management and prevention. Case studies of ongoing and recent wars will elucidate the theories and underline the urgency to advance our knowledge in this area.The study of civil wars is a growing research field of international relations, as civil wars have become more common than wars between states. By examining theories of civil war causation and testing these on case studies from the 20th and 21st centuries, the course covers important subject matter in the International Relations concentration of Tulane's BA in Political Science.

POLI 3410 Globalization and Politics (3)
The Globalization and Politics course examines diverse aspects of globalization and their effects on politics. The course begins with the analyses of the debate between globalists and anti-globalists, followed by the study of the economic effects of globalization and increase in capital and labor mobility. The issues of global inequality, global civil society, North-South gap and global governance are also addressed. The course provides answers to the questions about the impact of global culture and growing influence of high-tech global flows in special social networking.

POLI 3450 Global War on Terrorism (3)
The course will ask student to examine broad questions about the nature of the contemporary world in order to understand the roots of modem terrorism, including its historical, philosophical and political background. It will also discuss and evaluate the various counter; terrorism policies developed by the United States and elsewhere to address terrorist violence.

POLI 3520 International Organizations (3)
A systematic study of attempts to modify the international system through multilateral organization.

POLI 3530 Engaging the United Nations (3)
The purpose of this class is to increase students' knowledge about history, organization, issues, policy-making and the activities of the United Nations. During this class we will explore the purpose and functions of the United Nations. We will trace the institution's development since its inception, consider current international problems the UN is tasked to solve (like migration and Ebola), and grapple with debates surrounding the organization, from the structure of the Security Council to the Responsibility to Protect. Through readings, course assignments and simulation exercises, and service learning students will gain valuable skills in public speaking, policy brief research and writing, negotiation, organization, and interpersonal communication.

POLI 3540 Internationl Political Economy (3,4)
Survey of traditional and recent theories and approaches to the study of international political economy. Emphasis will be given to the microfoundations for macromodels such as liberalism, Marxism, and realism. Topical areas will include monetary management, trade, and multinational corporations.

POLI 3550 Conflict Mgmt in Arab-Israeli (3)
This course is part of the Mandel-Palagye Program for Middle East Peace. It will introduce students to a range of theories and experiences exploring ways to resolve violent conflict, and conditions to build sustainable peace, with a focus on the Arab-Israeli conflict.

Corequisite(s): HISM 3910 and JWST 3100.

POLI 3630 Causes & Prevent Intl War (3)
This course surveys the causes of war among nations. The course examines theories of war causation, and tests these out on historical case studies from the 20th century. The lessons of the past will be applied to important contemporary questions: Is the postwar peace among the great powers permanent? What policies can help reduce the likelihood of future war? Can 20th century theories explain 21st century conflicts? Upon completion of this course, students will be familiar with many of the factors that seem to cause, exacerbate, or lessen military conflict between nation-states. Students will be able to apply these factors in examining real-world scenarios.

POLI 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLI 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLI 4010 Special Projects (3,4)
For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor. Course may be repeated up to unlimited credit hours.

Prerequisite(s): POLI 2500 and POLS 2010.

Maximum Hours: 99

POLI 4011 Special Projects (3-4)
For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor. Course may be repeated up to unlimited credit hours.

Prerequisite(s): POLI 2500 and POLS 2010.

Maximum Hours: 99

POLI 4012 Special Projects (3-4)
Special Projects course; topic varies. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor. Course may be repeated up to unlimited credit hours.

Prerequisite(s): POLI 2500 and POLS 2010.

Maximum Hours: 99

POLI 4310 Peace Studies & Conflict Mgmt (3,4)
Peace Studies is often defined as the study of conflict resolution through nonviolent means. This course will introduce students to a range of theories and experiences exploring ways to resolve violent conflicts, with a focus on intrastate war, and conditions to build sustainable peace in nations that have seen armed conflict. Taking an interdisciplinary approach by including readings from psychology, anthropology, international relations and more, we will consider theoretical debates regarding the roots of conflicts and how these interpretations affect the choice of conflict management tools. Then we will study various attempts of peacemaking, ranging from mediation to nonviolent resistance, nation-building to human rights regimes. Reflecting on both evidence and theory the course will give students an understanding of the strengths and weaknesses of current approaches to conflict management and peace building.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4410 International Law (3)
This course provides an introduction to basic principles of international law and how it is created, implemented, and enforced. Students will learn what forms of law make up international law; how international law is made and by whom; to whom international law applies; and the specific rules of international law in various subject areas. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4510 Women and War (3,4)
The course explores the many different roles women play in international affairs, with a particular focus on violent conflict. Beyond their vulnerabilities as potential victims, women are soldiers, diplomats, terrorists and peace activists. We will consider if and how gender influences individuals' perceptions of war and peace, leaders' policy choices, and whether increased participation of women in conflict resolution and mediation affects the outcome of conflict management processes.

Prerequisite(s): POLS 2010 and (POLI 2500 or PSDV 2400).

POLI 4520 Intell. & Covert Ops. (3)
The class examines the uses of intelligence and clandestine operations as strategies affecting international relations from the end of World War II to the present. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4530 American Foreign Policy (3)
Theory and practice of American foreign policy. Emphasis is on major issues in United States diplomacy and on basic ideas governing American foreign policy.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4600 Latin Am Intl Relations (3,4)
This course deals with relations among Latin American nations as well as those with the United States, Europe, Japan, and multinational institutions. This class will cover the international aspects of issues such as trade, security, human rights, immigration, and environmental politics as they relate to Latin America.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4620 Global Envirnmnt Politcs (3-4)
An examination of the political dimensions of international environmental problems. The course will include investigation and analysis of the causes, consequences, and potential solutions to a range of environmental problems.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4630 Strategy & Politics (3,4)
The focus of this course is grand strategy - the economic, diplomatic, and military policies adopted by states to improve their security. Theory and historical evidence will be used to address these questions: What are the different types of grand strategy, and which are appropriate to different international conditions? What forces determine a state's choice of grand strategy? What political, psychological, and cultural factors lead states to choose badly?

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4650 Russian Foreign Policy (3)
This course will explore the sources and substance of Russian foreign policy with a focus on security issues, and on relations with the U. S., Europe, and the new independent states of Eurasia.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4660 Middle East Security (3)
Overview of contemporary security conditions in the Middle East, including conventional arms balances, weapons of mass destruction, guerrilla wars, terrorism, and economic conditions affecting security.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4670 Politics of Arab Israeli Confl (3,4)
Examines the origins and development of the Arab-Israeli conflict from the beginning of renewed Jewish settlement in Palestine in the 1880s until the present day.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 4883 Writing Practicum: POLI 4010 (1)

POLI 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLI 5190 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLI 5380 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLI 5390 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLI 6530 International Human Rights (4)
This course is an exploration of the history, theory and practice of human rights law. It pays particular attention the interactions between international law and repressive campaigns, transnational social movements, and the operation of domestic courts. Students will be challenge to assess claims about progress and decline in human rights over time.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 6630 International Security (4)
A review of critical issues threatening the security of the major powers including nuclear strategy, arms control, weapons procurement, international economics, and military interventions in regional disputes. In addition to the substance of selected issues, the course deals with the literature on decision-making, crisis management, and the organization of governments for effective foreign policy-making. Emphasis is on American security problems and policy-making.

Prerequisite(s): POLI 2500 and POLS 2010.

POLI 6890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLI 6950 Special Topics (3,4)
Special Topics course in Political Science - International. Course may be repeated up to unlimited credit hours.

Prerequisite(s): POLI 2500 and POLS 2010.

Maximum Hours: 99

POLI 7510 Sem:Internation.Relation (3)

Political Science - International Development (PSDV)

PSDV 2010 Research Design and Methods for International Development (3)
This course is intended to introduce students to the concepts and methods of research in the international development subfield. Students will be introduced to research design techniques in an effort to train them to become producers, not merely consumers of knowledge. This course is fundamentally about how to conduct research in international development. The course covers both introductory quantitative methods (univariate, bivariate, and some multivariate analyses), as well as some of the most often used qualitative methods in the discipline. The course is not meant to be exhaustive of all methods utilized In the subfield.

PSDV 2400 Intro to Internatl Development (3)
This course introduces students to the notion and history of "international development" and examines the different theories and strategies of development that have evolved in the last seventy years. We address the many challenges that the global community is facing in its efforts to reduce poverty in an equitable and sustainable manner. We then tackle varied thematic issues and goals of development such as understanding multifaceted poverty, improving health and education outcomes, and building sustainable cities, which provide students with opportunities to apply the theories under study along with exploring possible solutions. Altman students in the PSDV major or minor may substitute ISIB 3010 for PSDV 2400.

PSDV 3010 Special Projects (3)
Special Topics. Course may be repeated unlimited times for credit.

Course Limit: 99

PSDV 3011 Special Projects (3)
Special Topics. Course may be repeated unlimited times for credit.

Course Limit: 99

PSDV 3012 Special Projects (3)
Special Topics. Course may be repeated unlimited times for credit.

Course Limit: 99

PSDV 3013 Special Projects (3)
Special Topics. Course may be repeated unlimited times for credit.

Course Limit: 99

PSDV 3014 Special Projects (3)
Special Topics. Course may be repeated unlimited times for credit.

Course Limit: 99

PSDV 3015 Special Projects (3)
Special Topics. Course may be repeated unlimited times for credit.

Course Limit: 99

PSDV 3016 Special Projects (3)
Special Topics. Course may be repeated unlimited times for credit.

Course Limit: 99

PSDV 3017 Special Projects (3)
Special Topics. Course may be repeated unlimited times for credit.

Course Limit: 99

PSDV 3018 Special Projects (3)
Special Topics. Course may be repeated unlimited times for credit.

Course Limit: 99

PSDV 3019 Special Projects (3)
Special Topics. Course may be repeated unlimited times for credit.

Course Limit: 99

PSDV 3020 Special Projects (3)
Special Topics. Course may be repeated unlimited times for credit.

Course Limit: 99

PSDV 3200 Develpment Issues & Strategies (3)
This course gives insight into how to make development more sustainable, durable, compatible with nature, the needs of current and future generations, and, in particular, the essential needs of the world's poor. Keeping in mind that the definition of sustainability is heavily dependent on local contexts and concerns, the course provides several approaches to understanding sustainable development. These include: governance at global, national, and local levels, the resource curse hypothesis, sustainable and durable peace, international aid and debt structures, and a gender lens. The assignments take the students through a process of developing a policy for a current problem in a developing country of their choice.

PSDV 3500 Global Food Politics & Policy (3)
This course explores what is meant by food policy and the major challenges in the food sector as well as policy responses at home and abroad. We start with the political economy of agriculture in the United States, including the history of government intervention in this sector, the role of trade, and migrant worker policy. Then we examine famine, hunger, and food insecurity, including programs aimed at mitigating these problems. The final section concerns diet, the food industry, and health (of ourselves as well as our planet). We will study food safety, climate change, and new philosophies of farming and eating. In each section, we consider the role of interests, institutions, and ideas in policymaking.

PSDV 3561 Environment & Development (3)
In this course, we will study the ways that environmental stewardship and economic development are often at odds and how they might be more complementary. In particular, we will explore the concept of sustainable development and how development projects can balance economic demands and environmental stewardship. How can development projects be designed such that they use limited resources prudently and don't generate pollution that threatens public health and contributes to climate catastrophe? What sort of regulatory policies should be put in place? We will use basic readings, case studies, and student research projects to analyze wrong turns and best practices in sustainable development.

PSDV 4200 Women & Development in Africa (3-4)
Development studies increasingly focus on questions of gender and family as drivers and receivers of development. Improving the quality of life of African women and families hinges on first understanding who they are and why and how they live as they do. In this course we explore a key question: How are women, gender and sexuality central to development in Sub-Saharan Africa? The course answers this question by providing a comprehensive overview of the social, political, economic, regional and global realities that shape daily lives of women in Sub-Saharan Africa. We examine diverse topics ranging from family planning and social entrepreneurship to beauty politics and women's role in conflict. A variety of case studies and authors from across the continent are consulted, including examples from Kenya, Tanzania, the Democratic Republic of Congo, Rwanda, Somalia, and Nigeria. The course is interdisciplinary in approach, with course materials drawn from public health, history, education, psychology, political science, environmental studies, and literature. The sources we use are diverse, including academic articles, monographs, novels, short stories, poetry, art, and film. This course is required for students who wish to apply for the Newcomb College Institute's summer program in Kenya.

Prerequisite(s): PSDV 2400 and POLS 2010.

PSDV 4300 Identity and Development (3,4)
A principal concern of many development theorists and practitioners today is the need to recognize differences. That means, fundamentally, respecting differences in identity and how one's identity or identities, such as gender, ethnicity, family structure, national origin, political affiliation, race, and religion, play out in daily practice. The first section of the course provides historical and theoretical context for current discussions of identity as they relate to, affect and shape current international development theory and practice. The second section of the course examines cross-cutting issues where identity concerns intersect, with an emphasis on current trends and challenges, such as migration, violence, and urban change.

Prerequisite(s): PSDV 2400 and POLS 2010.

PSDV 4320 Migrants Refugees & Development (3,4)
This course provides students with the opportunity to consider the implications of global population movements – 258 million in 2017, exclusive of internal migrants – and the events they reflect. We examine internal and external migration flows, their political, economic, social, cultural, and environmental causes and consequences. Moreover, we consider whether migrants may be an engine of development, a hindrance, or both. Success stories of migrant integration, upward mobility and thriving businesses go alongside with tales of discrimination, crowded slums and refugee camps where disease is rampant, education is scarce, and youth widen the ranks of the unemployed and revert to crime as a way of living and violence as a means of surviving. Based on migration theories and case studies, this course aims at understanding these patterns and exploring how the pace of migration may be slowed and conditions improved in order for migrant populations to better integrate their new societies and become positive agents of change.

Prerequisite(s): (PSDV 2400 or IDEV 1010) and POLS 2010.

PSDV 4330 Post-Conflict Development (3-4)
Determining the appropriate response to atrocities of gruesome scale, such as genocide and crimes against humanity, is one of the most difficult tasks scholars and policymakers have had to grapple with in post-conflict societies. This course examines key concepts and explores theoretical and practical problems in confronting political and structural violence, including deprivation of basic material needs, human rights violations, and ethnic cleansing and genocide. We explore recent attempts to establish just outcomes in transitional settings and assess different transitional justice mechanisms, such as truth and reconciliation commissions, war crimes tribunals, and the International Criminal Court. Students have the opportunity to analyze a variety of topics in their assignments, such as retributive, restorative, reparative, and distributive justice, and the relationship between transitional justice and development, displacement, gender, and media.

Prerequisite(s): PSDV 2400 and POLS 2010.

PSDV 4392 The Politics of Global Public Health (3-4)
This class explores how politics affect global health governance and the ways in which global health issues fit into the discipline of political science. Topics studied include core global health institutions, types of power and authority, infectious threats and securitization, development assistance for health, medical diplomacy, global mental health, and efforts to contain chronic diseases through governance of the tobacco, alcohol, and food industries.

Prerequisite(s): PSDV 2400 and POLS 2010.

PSDV 4400 Sustainable Development in the Francophone World (3)
Development in the Francophone World, taught in the French language, focuses on political, economic, and social aspects of development in francophone developing areas, especially in Africa. We also discuss disaster relief issues with a focus on Haiti. Topics of discussion include: historical and political heritage; French and European development practices in terms of trade, investment, and foreign aid; entrepreneurship as a tool of development; and the impact of globalization and migration on the regions in question. We examine development programs in areas such as poverty, food security, education, human rights and gender equity, health, and the environment, and assess the performance and prospects of the United Nations Millennium Development Goals (2000-2015) and Sustainable Development Goals (2016-2030).

Prerequisite(s): PSDV 2400 and (FREN 3060, 3110, 3140, 3150, 3160, 3210, 3350 or 3710).

PSDV 4560 Internship (1-3)
With the approval from the International Development Studies Program and the Center for Public Service, students can gain unique practical experiences and earn credit by engaging in a service-learning internship course. The internship program provides students the opportunity to bridge academic learning with service in the community. Internships foster professional development, promote practical application of knowledge acquired in the classroom, and encourage civic engagement. This course requires motivation, passion, and enthusiasm. Course may be repeated up to unlimited credit hours.

Prerequisite(s): PSDV 2400 and POLS 2010.

Maximum Hours: 99

PSDV 4561 Special Topics (1-4)
Special Topics Course. Topics will vary. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSDV 4900 Leadership & Management for Development (3)
This undergraduate course examines the complex challenges inherent to managing non-governmental organizations in developing countries. The focus is on the role of leadership in managing social, political, and financial influences and constraints on policy decision-making. Students learn to apply a conceptual framework including mission, goals, objectives, and allocation of human, financial and technical resources to real-life development projects conducted in Africa, Asia, Latin America, and the United States.

Prerequisite(s): POLS 2010 and PSDV 2400.

PSDV 4901 Independent Study (1-3)
Prerequisite(s): PSDV 2400 and POLS 2010.

Prerequisite(s): PSDV 2400 and POLS 2010.

PSDV 4950 Special Topics (1-3)
Special Topics Course. Topics will vary. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSDV 4951 Special Topics (1-3)
Special Topics Course. Topics will vary. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSDV 5380 Junior Year Abroad (1-20)

PSDV 6950 Special Topics (4)
Special Topics in Political Science - International Development

Course Limit: 99

Political Science - Political Theory (POLT)

POLT 1290 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLT 2700 Pol Thought In The West (3)
A history of the development of Western political thought from the ancient Greeks to recent times.

POLT 3010 Special Projects (3)
Special Projects in Political Science - Political Theory. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLT 3011 Special Projects (3)
Special Projects in Political Science - Political Theory. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLT 3020 Special Projects (3)
Special Projects in Political Science - Political Theory. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLT 3610 Jewish Political Thought (3)
This course examines Jewish political thought in its many manifestations from its beginnings in the books of the Hewbrew Bible (Tanakh) through the twentieth century.

POLT 3710 Social Contract Theory (3,4)

POLT 3730 Politics and Morality (3)
An examination of the morally questionable means that are most commonly used in the political process. No prerequisites.

POLT 3750 Democratic Theory (3)

POLT 3780 Feminist Political Thry (3)
This course will focus, first on the role of women in the tradition of western political thought. Second, the course will examine the attempts of contemporary feminist thinkers to deal with concepts central to the tradition of political theory, such as justice, equality, and liberty.

POLT 3810 Rhetoric & Politics (3)
A survey of theories of political discourse from the ancient Greeks to late 20th-century democratic theory. Special attention will be paid to the relationship between classical rhetoric and political theory.

POLT 3820 Contemp Political Ideas (3)
An analysis of variants of revisionist Marxism, socialism, anarchism, fascism, 20th-century liberalism and conservatism, and the relation of these to contemporary American ideologies.

POLT 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLT 4010 Special Projects (3)
For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLT 4610 Bible As Politicl Theory (3)
A study of the Bible from the prospective of political theory, which analyzes the similarities and differences between the political perspectives of classical (Greek and Roman) thinkers those of the Bible. The course will focus on the Hebrew Bible (Old Testament), although the New Testament, especially those sections dealing with social ethics, will be examined and discussed. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

POLT 4720 Ancient&Medvl Pol Theory (3,4)
For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

POLT 4770 Transition To Modernity (3)
For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

POLT 4780 Modern Political Theory (3)
An analysis of the development of political theory since the 16th century with emphasis on modern ideologies especially conservatism, liberalism, communism, and fascism. Hobbes, Locke, Rousseau, Burke, Bentham, and Marx are given particular attention. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

POLT 4790 Contemp Pol Theory (3)
Analyzing contemporary political philosophy, within the context of Kantianism vs. Hegelianism. Attention will be concentrated on political philosophers such as Arendt, Oakeshott, Rawls, Foucault, Lyotard and Derrida. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

POLT 4860 American Pol Thought (3,4)
This course discusses the historical development of the Constitution and associated political ideas, from the founding period up to the present. Thinkers discussed include Paine, Madison, Calhoun, Dewey, and Rawls, among others. For majors only. Non-major juniors and seniors may enroll in courses at the 4000-level or above only with the consent of the instructor.

POLT 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLT 5190 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLT 5380 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLT 5390 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

POLT 6750 Top Soc & Pol Philosophy (4)

POLT 7710 Political Theory Sem (3)

Portuguese (PORT)

PORT 1120 Intensive Portuguese (4)
An intensive one-semester introduction to Portuguese with an emphasis on listening and speaking skills designed to quickly prepare students for more advanced study of language, literature, and culture. Co-requisite: PORT 1121.

PORT 1121 Intensive Portuguese Lab (0)
A 75-minute weekly meeting dedicated to improving proficiency via telecollaboration. Co-requisite: PORT 1120.

PORT 1290 Semester Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PORT 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

PORT 2000 Portuguese For Spanish Speakers (4)
Language course that uses students' previous knowledge of Spanish to achieve quick command of Portuguese.

PORT 2030 Intermediate Portuguese (4)
Review of fundamental skills taught in previous courses. Introduction to Brazilian literature and culture through plays, short stories, articles, and Plm. Practice in composition. Co-requisite: PORT 2031. Optional: PORT 2890.

Prerequisite(s): minimum score of PASS in 'PORT 2030 Placement' or PORT 1120.

PORT 2031 Intermediate Portuguese Lab (0)
Intensive Portuguese Lab. A 75-minute weekly meeting dedicated to improving proficiency via telecollaboration. Co-requisite: PORT 2030.

PORT 2050 Immersive Intermedia Portugues (4)
Summer Program.

Prerequisite(s): PORT 1120.

PORT 2390 Semester Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PORT 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): PORT 2030.

Maximum Hours: 99

PORT 3040 Grammar & Writing - Portuguese (3)
Analysis and practice in the written language.

Prerequisite(s): PORT 2030.

PORT 3050 Immersive Grammar & Writing (3)
Summer program.

Prerequisite(s): PORT 2030.

PORT 3130 Intro to Brazilian Culture (3)
Introduction to Brazilian literature, with a focus on questions of cultural identities, relations between high and low culture, representations of race, gender, class, and sexuality.

Prerequisite(s): minimum score of PASS in 'PORT 3130 Placement' or PORT 2030.

PORT 3190 Brazilian Short Stories (3)
This course provides an introduction to the Brazilian short story from 1870 to the present, while providing intermediate to advanced training in Portuguese conversation and composition.

PORT 3250 Composition & Convers (3)
Reinforcement of spoken Portuguese and review of grammatical structures. Short stories and plays serve as the basis for further development of speaking and writing. Emphasis in dealing with the texts is on their utility for skill practice rather than literary analysis.

Prerequisite(s): minimum score of PASS in 'PORT 3250 Placement' or PORT 2030.

PORT 3280 Advanced Portuguese through Brazilian Film (3)
Through a series of film viewings, readings, and access to other visual media from Brazil, students receive instruction in how to discuss and analyze visual culture in Portuguese. Vocabulary building and strategies for enhanced viewing and reading comprehension are stressed. Significant emphasis on the continued development of linguistic skills.

Prerequisite(s): PORT 2030.

PORT 3290 Special Topics (3)
Course will expand upon grammar and vocabulary learned in 1120-2030 sequence. Emphasis on written and oral production in specific registers. Possible themes include Portuguese across the Lusophone world, regional studies in the Lusophone world, professional skills, historical development of Portuguese, Portuguese pronunciation. The precise topic varies from year to year. Course may be repeated 3 times for credit.

Prerequisite(s): PORT 2030 or minimum score of PASS in 'PORT 3290 Placement'.
Course Limit: 3

PORT 3330 Brazilian Lit Translatn (3)
A survey of Brazilian literature in translation, focusing primarily on the novel and short story. Students engage a wide variety of texts, including representative works of romanticism, realism, modernism and postmodernism. This course may be taken for major or minor credit if written work is completed in Portuguese.

PORT 3340 Brazilian Women Writers (3)
An introductory survey of influential Brazilian women writers of prose fiction, with a focus on literary treatment of questions of gender, sexuality, race, and class.

PORT 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PORT 4100 Gender & Sexuality Brazillian (3)
This course proposes a historicized and interdisciplinary consideration of gender and sexuality in modern Brazil through short fiction, films, documentaries, popular music, and critical texts. It will address a wide range of topics, including patriarchal power and the construction of masculinity, the quest for female subjectivity, gender in relation to race and class, the constitution and crisis of the bourgeois family, marital strife and infidelity, homosexuality, and transgender performance.

Prerequisite(s): PORT 3040, 3130 or 3280.

PORT 4110 Race and Ethnicity in Brazilian Literature and Culture (3)
This course will focus on the construction of “race” as a social category and ethnicity as a process of cultural distinction in relation to Brazilian nationality. While making use of historical and, to a limit extent, social scientific materials, our focus will be on literary texts and other cultural artifacts dating from the mid-nineteenth century to the present. We will engage canonical texts of Brazilian literature, as well as recent works.

PORT 4120 Social Problems in Brazilian Literature & Culture (3)
The chief problems of Brazilian society as reflected in fiction, testimony, poetry, theatre, music, and other forms of cultural expression. Representative works may concern persistent race, class, and gender inequalities; tyranny and political repression; violence; and/or environmental issues.

Prerequisite(s): PORT 3130, 3280 or 3250.

PORT 4130 Topics in Brazilian Literature (3)
Readings in Brazilian stories, essays, and poems, focusing on a topic of historical and cultural importance. Some themes: women in Brazilian literature, regionalism, Afro-Brazilian culture, soccer. The precise topic varies from year to year. Course may be repeated up to unlimited credit hours.

Prerequisite(s): PORT 3130, 3250, 3280 or minimum score of PASS in 'PORT 4000 Level Placement'.

Maximum Hours: 99

PORT 4160 Afro-Brazilians (3)
This course provides an introduction to the history of Brazilian race relations, the fiction and poetry of black writers from Brazil, and the study of recent Afro-Brazilian cultural and social movements.

PORT 4290 Brazilian Cultural Study (3)
A survey of Brazilian cultural practices and discourses of the twentieth century that engages historic and contemporary debates in Brazil surrounding nationality, modernity, democracy, and citizenship.

PORT 4440 Brazilian Popular Music (3)
This course examines Brazilian cultural history through the prism of popular music, often regarded as Brazil's most accomplished field of artistic production. The study of music will provide the basis for the exploration of issues such as nationalism, regionalism, developmentalism, authoritarianism, and globalization.

PORT 4510 Luzo-Brazilian Cities (3)
An advanced undergraduate course with a focus on the literary and cultural production of a major city of the Portuguese-speaking world including Lisbon, Rio de Janeiro, São Paulo, Salvador da Bahia, Luanda, and Maputo. Course may be repeated 2 times for credit.

Prerequisite(s): PORT 3130, 3250 or 3280.
Course Limit: 2

PORT 4610 Brazilian Cinema (3)
This survey of Brazilian cinema and film criticism covers key phases in national film production including early experiments, the failed Vera Cruz enterprise, Cinema Novo, Cinema Marginal, Embrafilme productions, and recent film directors include Mário Peixoto, Humberto Mauro, Anselmo Duarte, Nelson Pereira dos Santos, Ruy Guerra, Glauber Rocha, Carlos Diegues, Walter Lima Junior, Luiz Carlos Barreto, Paulo César Saraceni, Joaquim Pedro de Andrade, Rogério Sganzerla, Júlio Bressane, Suzana Amaral, and Carla Camurati.

PORT 4910 Independent Study (3)
PORT 3000-level sequence and departmental approval. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PORT 4990 Honors Thesis (3)
Honors Thesis.

PORT 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): PORT 4990.

PORT 5380 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PORT 5390 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PORT 6000 Independent Study (1-3)
Independent Study.

Prerequisite(s): PORT 4120, 4130, 4510, 4610 or 4910.

PORT 6130 Brazilian Cultural Imaginaries (3)
This course is a textual and experiential exploration of Brazil and specifically the city of São Paulo as part of the Tulane Summer in Brazil program.

PORT 6160 Afro-Brazilians (3)
This course provides an introduction to the history of Brazilian race relations, the fiction and poetry of black writers from Brazil, and the study of recent Afro-Brazilian cultural and social movements.

PORT 6190 Avant-Garde Move Lat Am (3)
This course surveys the avant-garde movements in Spanish America and Brazil, focusing on the period from 1916 to 1935. Some of the movements to be examined include Huidobro's creacionismo, ultraísmo, Brazilian modernismo and verdeamarelismo, Mexican estridentismo and the “Contemporáneos” group, and the impact in Latin America of surrealism and other European avant- garde movements. Readings in both Spanish and Portuguese, and the class is taught in both languages, but fluency in both languages is not expected.

PORT 6220 The Literature of Brazil (3)
In-depth study of Brazilian literature from its beginning to the present. Authors: Manuel Antônio de Almeida, José de Alencar, Gonçalves Dias, Castro Alves, Machado de Assis, Aluisio Azevedo, Graciliano Ramos, José Lins do Rêgo, Mário de Andrade, Oswald de Andrade, Manuel Bandeira, João Cabral de Melo Neto, Jorge Amado, Carlos Drummond de Andrade, Guimarães Rosa, Clarice Lispector, Antônio Callado, Lygia Fagundes Telles, Rubem Fonseca, Sérgio Sant'anna, Roberto Drummond, and others.

Prerequisite(s): (PORT 4120, 4130, 4510, 4610, 4910 or 4920).

PORT 6230 Brazilian Lit & The City (3)
Brazilian literature and its production within an urban environment focusing of issues such as slavery and race relations, class divisions and spatial marginality, industrialization and labor movements, gender and sexuality, media and popular culture, rural to urban migration, and violence and criminality. Authors may include Manuel Antônio de Almeida, Aluísio Azevedo, Machado de Assis, Lima Barreto, Mário de Andrade, Patricia Galvão, Marques Rebelo, Nelson Rodrigues, Rubem Fonseca, Caio Fernando Abreu, Patricia Melo, Paulo Lins, and Regina Rheda.

PORT 6290 Brazilian Cultural Studies (3)
An advanced survey of Brazilian social and cultural critics of the twentieth century including Silvio Romero, Euclides da Cunha, Gilberto Freyre, Sérgio Buarque de Hollanda, Guerrero Ramos, Roland Corbisier, Florestan Fernandes, Antônio Cândido, Roberto Schwarz, Ferreira Gullar, Silviano Santiago, Luiz Costa Lima, Flora Süssekind, Renato Ortiz, Muniz Sodré, and Marilena Chaui. The course foregrounds historic and contemporary debates in Brazil surrounding nationality, modernity, democracy, and citizenship.

PORT 6440 Brazilian Popular Music (3)
Prerequisite(s): (PORT 4120, 4130, 4510, 4610, 4910 or 4920).

Prerequisite(s): (PORT 4120, 4130, 4510, 4610, 4910 or 4920).

PORT 6710 Contemp Fict Sp Am &Braz (3)
A comparison of the contemporary fiction of Spanish America and Brazil. Topics vary but may include: the short story; race, gender, and nationalism; the regionalist novel; experimental fiction; fiction and popular culture. Among the selected authors are Julio Cortázar, Guimarães Rosa, Fonseca, Borges, Clarice Lispector, Rulfo, Donoso, Icaza, Ramos, Rivera. Reading competence in Spanish and Portuguese to be established by previous course work or judgment of instructor.

PORT 6910 Special Topics (3-4)
Open to graduate students only.

Prerequisite(s): (PORT 4120, 4130, 4510, 4610, 4910 or 4920).

Professional Advancement Prior Learning (PAPL)

PAPL 1000 Portfolio Dev for Prior Learni (3)
This course helps students develop a portfolio to document learning from experience. Students describe learning from experience, such as training, work, community volunteering, and self-study, and reflect on the learning to synthesize ideas and prepare learning narratives that demonstrate learning comparable to college level courses. Course may be repeated 8 times for credit.

Prerequisite(s): ENGL 1010, 1010, 1010 or 1010.
Course Limit: 8

PAPL 2000 Portfolio Development (0)
Student will develop a prior learning assessment portfolio to demonstrate learning gained through previous work experience. Departmental approval required.

Prerequisite(s): PAPL 1000.
Course Limit: 99

PAPL 2010 Portfolio Development (0)
Student will develop a prior learning assessment portfolio to demonstrate learning gained through previous work experience. Departmental approval required.

Prerequisite(s): PAPL 1000.
Course Limit: 99

PAPL 2020 Portfolio Development (0)
Student will develop a prior learning assessment portfolio to demonstrate learning gained through previous work experience. Departmental approval required.

Prerequisite(s): PAPL 1000.
Course Limit: 99

PAPL 2030 Portfolio Development (0)
Student will develop a prior learning assessment portfolio to demonstrate learning gained through previous work experience. Departmental approval required.

Prerequisite(s): PAPL 1000.
Course Limit: 99

PAPL 2040 Portfolio Development (0)
Student will develop a prior learning assessment portfolio to demonstrate learning gained through previous work experience. Departmental approval required.

Prerequisite(s): PAPL 1000.
Course Limit: 99

PAPL 2050 Portfolio Development (0)
Student will develop a prior learning assessment portfolio to demonstrate learning gained through previous work experience. Departmental approval required.

Prerequisite(s): PAPL 1000.
Course Limit: 99

PAPL 2060 Portfolio Development (0)
Student will develop a prior learning assessment portfolio to demonstrate learning gained through previous work experience. Departmental approval required.

Prerequisite(s): PAPL 1000.
Course Limit: 99

PAPL 2070 Portfolio Development (0)
Student will develop a prior learning assessment portfolio to demonstrate learning gained through previous work experience. Departmental approval required.

Prerequisite(s): PAPL 1000.
Course Limit: 99

PAPL 2080 Portfolio Development (0)
Student will develop a prior learning assessment portfolio to demonstrate learning gained through previous work experience. Departmental approval required.

Prerequisite(s): PAPL 1000.
Course Limit: 99

PAPL 6000 Portfolio Development (0)
Student will develop a prior learning assessment portfolio to demonstrate learning gained through previous work experience. Departmental approval required.

Course Limit: 99

PAPL 6010 Portfolio Development (0)
Student will develop a prior learning assessment portfolio to demonstrate learning gained through previous work experience. Departmental approval required.

Course Limit: 99

Psychology (PSYC)

PSYC 1000 Introductory Psych (3)
Fundamentals of contemporary psychology, including topics such as scientific methodology, heredity and behavior, principles of learning, physiological substrates of behavior, perception, social interaction, and mental health.

PSYC 1001 Psychology Beyond Classroom (0)
The goal of this S/U course is to encourage students to learn more about how the scientific field of psychology operates in the real world by experiencing various aspects of the psychological research process.

Corequisite(s): PSYC 1000.

PSYC 1100 Exploring Psychology & Lab (3)
Introduction to Psychology for high school students enrolled in the TSSP summer program.

PSYC 1660 Special Topics (1-3)
Special topics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSYC 1665 Special Topics Lab (1-3)
Special Topics Lab. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSYC 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

PSYC 1945 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

PSYC 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSYC 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

PSYC 3010 Intro To Personality (3)
An introductory survey of theories and measurement in personality.

Prerequisite(s): PSYC 1000 or 1100.

PSYC 3090 Univariate I & Lab (4)
Lectures and laboratory in design of experiments, psychological measurement, and deriving conclusions from experimental data.

Prerequisite(s): PSYC 1000 or 1100.

PSYC 3091 Univariate I Lab (0)
Lab section for PSYC 3090

PSYC 3130 Experimental Psychology & Lab (4)
Lectures and laboratory in design of experiments, quasi-experimental designs, control of variables, scientific communication, and application of statistical procedures.

Prerequisite(s): (PSYC 3090 or 6090).

PSYC 3131 Experimental Psychology Lab (0)
Lab section for PSYC 3130.

PSYC 3180 Psychological Testing (3)
PSYC 3180 provides an overview of the process of psychological test development and analysis. After completing this course, students will be able to identify and describe the various types of psychological tests available for commercial use (e.g., intelligence tests, objective personality tests, projective personality techniques, neuropsychological tests, career interest inventories) and the criteria used to evaluate them.

Prerequisite(s): PSYC 3090.

PSYC 3200 Educational Psychology (3)
Examines psychological principles applied to educational practices with special emphasis on development, learning theories, and contexts of learning. Its purpose is to help adults working with children to understand better the relationship between applied educational practices and psychological principles and research. PSYC 3200 is mutually exclusive with PSYC 3202. Students may receive credit for only one of PSYC 3200 or PSYC 3202 in the undergraduate degree.

Prerequisite(s): PSYC 1000 or 1100.

PSYC 3202 Educational Psychology in a Diverse Society (3)
The purpose of the course is to examine links between applied educational practices, psychological principles, and research findings with diverse populations in school contexts. PSYC 3200 is mutually exclusive with PSYC 3202. Students may receive credit for only one of PSYC 3200 or PSYC 3202 in the undergraduate degree.

Prerequisite(s): PSYC 1000.

PSYC 3210 Child Psychology (3)
A survey of the concepts, principles, and major findings of research on human development. PSYC 3210 Child Psychology is mutually exclusive with PSYC 3270 Lifespan Development. Students may receive credit for only one of PSYC 3210 or PSYC 3270 in the undergraduate degree.

Prerequisite(s): PSYC 1000 or 1100.

PSYC 3220 Research Methods in Child Psychology (4)
The course will include the basic elements of research design, the methodologies particular to child psychology, and writing research reports in the style of the American Psychological Association. This course will fulfill the laboratory requirement for PSYC or PYEC majors.

Prerequisite(s): PSYC 3090 and (PSYC 3210 or 3250).

PSYC 3230 Nursery School Observation (3)
For students in the coordinate psychology and early childhood education major.

Prerequisite(s): PSYC 3210.

PSYC 3250 Psychology of Early Childhood (3)
An investigation of educational programs for young children and/or parents of young children based on cognitive developmental theory, learning theory, and others. Curriculum development and the evaluation of program effectiveness are discussed.

Prerequisite(s): PSYC 3210.

PSYC 3260 Infancy (3)
The cognitive, perceptual, and social development of the human infant are reviewed. Research findings and methods are emphasized.

Prerequisite(s): PSYC 3210.

PSYC 3270 Lifespan Development (3)
This course covers the development of behavior and psychological activity through the prenatal period, infancy, childhood, adolescence, maturity, and old age, with emphasis on typical development. PSYC 3270 Lifespan Development is mutually exclusive with PSYC 3210 Child Psychology. Students may receive credit for only one of PSYC 3210 or PSYC 3270 in the undergraduate degree.

Prerequisite(s): PSYC 1000.

PSYC 3300 Brain and Behavior (3)
Lectures cover the function and structure of the nervous system and the role of brain activity in the regulation of behavior. This course provides psychology majors with a first exposure to the biological bases of behavior and is not recommended for students who have taken other courses in this area of study.

Prerequisite(s): PSYC 1000 or 1100.

PSYC 3310 Intro to African American Psychology (3)
A study of a wide range of topics relating to psychology generally, and African Americans specifically. Topics include personality, education, psychological assessment, racism, psychology in communities, and research.

Prerequisite(s): PSYC 1000 or 1100.

PSYC 3330 Clinical Science and Psychological Disorders (3)
Students will become familiar with diagnostic criteria of major psychological disorders that affect people throughout the lifespan, with focus on adulthood, according to the Diagnostic and Statistical Manual of Mental Disorders-5th edition (DSM-5). Students will read and discuss controversies and hot topics in DSM and established diagnostic categories; be able to "choose a side" within presented areas and discuss rationale. Students will examine the basic etiology, course, and maintaining factors of major psychological disorders from different viewpoints, including biological, cognitive-behavioral, multicultural, and social perspectives. Students will read about DSM-5 disorder symptoms and how they manifest cognitively, behaviorally, and socially in descriptive text, lecture, and case examples. By the end of the course, students should be able to name main criteria for each disorder and at least 2+ symptoms.

Prerequisite(s): PSYC 1000.

PSYC 3340 Developmental Psychopathology (3)
This course is intended to provide a basic familiarity with the major forms of psychopathology and behavioral disorders. This familiarity includes knowledge of the etiology, developmental course, and prognosis of major psychological disorders affecting children and adolescents. Students will increase their knowledge on the application of information gained from the study of psychological disorders to the diagnosis, treatment and study of disorders and psychological problems found in children and adolescents.

Prerequisite(s): PSYC 1000 or 1100.

PSYC 3390 Adolescent Psychology (3)
A study of development through the adolescent years. Emphasis is on cognitive, social, physical, moral, sexual, and political development.

Prerequisite(s): PSYC 1000 or 1100.

PSYC 3430 Intro To Social Psychology (3)
The individual in a social context: the nature and measurement of attitudes, social perception, interpersonal and intergroup relations.

Prerequisite(s): PSYC 1000 or 1100.

PSYC 3450 Positive Psychology (3)
This upper-level seminar in which the content and application of positive psychology will be discussed, including the topics of well-being, happiness, health, and strengths.

Prerequisite(s): PSYC 3430.

PSYC 3460 The Self in Social Psychology (3)
This is an upper level honors seminar in which we will explore the large body of theory and research focused on understanding the nature and function of the self from a social psychological perspective, including topics such as self-awareness, self-esteem, and neural correlates of self-related processes.

PSYC 3470 Psychology of Diversity (3)
Navigating diversity has become increasingly important as our social world becomes more integrated with people from many varied backgrounds. Psychologists have become increasingly interested in studying diversity from a scientific perspective in order to gain a fuller understanding of these complex phenomena as well as to identify ways to increase social justice. This course will provide students with an increased understanding of theory and research related to the psychology of diversity. The course will emphasize an empirical approach to diversity. The heart of this course will cover basic psychological processes related to prejudice, stereotyping, discrimination, and stigma. We will examine diversity that results from differences in race, ethnicity, gender, gender identity/expression, disability, age, social class, sexual orientation, weight, religion, political ideology, and more. The course will make use of different learning formats and emphasize both more formal and experiential learning.

Prerequisite(s): PSYC 3430.

PSYC 3478 Psychology and Diversity (3)
Navigating diversity is increasingly important as our social world becomes more integrated with people from many varied backgrounds. Psychologists have become increasingly interested in studying diversity from a scientific perspective in order to gain a fuller understanding of these complex phenomena as well as to identify ways to increase social justice. This course will provide students with an increased understanding of theory and research related to the psychology of diversity, and emphasize an empirical approach to diversity. The heart of this course will cover basic psychological processes related to prejudice, stereotyping, stigma, and discrimination. We will examine diversity that results from differences in race, ethnicity, gender, gender identity/expression, disability, age, social class, sexual orientation, weight, religion, & political ideology. The course will make use of different learning formats and emphasize both more formal and experiential learning. Cannot also receive credit for PSYC 3470.

Prerequisite(s): PSYC 1000 or 1100.

PSYC 3480 Intergroup Relations (3)
The primary purpose of this course is to offer students an overview of intergroup relations theory, research, and applications. Students in this course will become acquainted with the various theoretical perspectives that have been developed in order to understand the development, maintenance, and reduction of conflict between social groups. We will focus on: (1) the major psychological approaches intergroup relations (e.g., individual differences approaches, new ism approaches, social identity theory, group-conflict models); (2) how group identities and group attitudes become linked to one's self concept; (3) the link between human cognition and stereotyping; (4) psychological factors underlying discrimination and group hierarchy; (5) the structural/systemic factors underlying discrimination and disparities; and (6) the practical problem of improving intergroup relations.

Prerequisite(s): PSYC 1000.

PSYC 3530 Introduction to Health Psychology (3)
The primary purpose of this course is to provide an introduction to the study of health psychology. The course will examine how biological, psychological, and social factors interact with and affect: (1) the efforts people make in promoting good health and preventing illness; (2) the treatment people receive for medical problems; (3) how effectively people cope with and reduce stress and pain; and (4) the recovery, rehabilitation, and psychosocial adjustment of patients with serious health problems. The two course goals are to: (a) develop an understanding and appreciation of the complex interplay between one's physical well-being and a variety of biological, psychological, and social factors; and (b) learn how psychological research methods, theories, and principles can be applied to enhance biomedical approaches for promoting health and treating illness.

Prerequisite(s): PSYC 1000.

PSYC 3660 Special Topics (1-3)
Special Topics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSYC 3665 Special Topics Lab (1-3)
Special Topics lab. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSYC 3680 Comp Animal Behavior (3)
A lecture course to introduce the types of questions asked by animal behaviorists, theoretical disciplines posing those questions, and recent research in behavior as related to the environment, social behavior, and reproduction.

Prerequisite(s): PSYC 1000 or 1100.

PSYC 3700 Evolution & Psychology (3)
Lecture course exploring human behavior and cognition from an evolutionary perspective. Topics include evolutionary mechanisms, history of evolution in psychology, and the adaptive nature of sensory processes, language, social behaviors, reproduction and psychopathology.

Prerequisite(s): PSYC 1000 or 1100.

PSYC 3710 Psychology Applied to Work (3)
This course will introduce students to psychology as it is applied in the workplace. Specifically, a wide range of Industrial/Organizational (1-0) Psychology topics will be covered, including: employee selection, training, performance appraisal, work motivation, leadership, team dynamics, stress and well-being at work, and organizational theories. How the workplace has changed over time and the implications technology has had on organizations and our workforce will be reviewed. What is learned in this course can be applied to working in any industry across a variety of organizations. Students will gain an understanding of how psychological principles are applied in the workplace at the individual, group, and organizational level.

PSYC 3770 Sensation & Perception (3)
Sensation and Perception provides an appreciation for the different senses and the psychological phenomena associated with each sense. Discussions include the major theories, experimental methods, and findings associated with each of the sensory systems. Emphasis is placed on understanding sensory functions from an evolutionary perspective.

Prerequisite(s): PSYC 3300 or NSCI 3300.

PSYC 3775 Sensation & Percept Lab (1)
Sensation and Perception lab is a course that provides the student with hands on activities in order to gain a deeper understanding for the different senses and the methods used to study psychological phenomena associated with each sense.

Prerequisite(s): PSYC 3770* or NSCI 3770*.
* May be taken concurrently.

PSYC 3800 Special Topics (3)
Various topics in psychology based on faculty and student interest. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSYC 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSYC 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

PSYC 3946 Transfer Biological PSYC (3-4)
Transfer or study abroad course that meets the PSYC major/minor biological psychology subgroup

PSYC 3947 Transfer Developmental PSYC (3-4)
Transfer or study abroad course that meets the PSYC major/minor developmental psychology subgroup

PSYC 3948 Transfer CulPerSoc PYSC (3-4)
Transfer or study abroad course that meets the PSYC major/minor cultural, personality, and social psychology subgroup

PSYC 3949 Transfer Clinical Apps & Asses (3-4)
Transfer or study abroad course that meets the PSYC major/minor clinical applications and assessment subgroup

PSYC 4060 Behavioral Endocrinology (3)
An introduction to the roles of steroid and peptide hormones in physiology and behavior. Lectures focus on the hormonal mechanisms that control reproductive and regulatory functions in human and infrahuman species.

Prerequisite(s): NSCI 3300 or PSYC 3300.

PSYC 4065 Behavioral Endocrinology Lab (1)
Laboratories provide demonstration and hands-on experience in research methods used in contemporary behavioral endocrinology including hormonal manipulation, behavioral measurement, data analysis, and manuscript preparation. Fulfills Tier 2 writing requirement.

Prerequisite(s): PSYC 4060* or NSCI 4060*.
* May be taken concurrently.

PSYC 4090 Univariate II (3)
Whereas the emphasis of the prerequisite course, Univariate I, was the pairing of statistical concepts with by-hand computations, Univariate II covers more practical approaches. Specifically the course includes detailed instruction on the use of statistical software packages (IBM SPSS and R). The course covers generation of descriptive statistics as well as running a variety of analyses, including those previously done by hand in Univariate I. The course also includes instruction in additional analysis methods, including assessment of normality, multiple regression, interaction between continuous predictors in regression, and the use of coded predictors to represent categorical variables in regression. For all analyses, the course covers interpretation of software output and students are guided in preparing written communication of results. The PSYC6090 requirement for the 4+1 MS in PSYC or PSBH is waived for· students who successfully complete the 3090-4090 sequence.

Prerequisite(s): PSYC 3090.

PSYC 4180 History & Systems (3)
A survey of the roots of contemporary psychology. Students then identify an interest area, trace its historical roots, and present their work in class.

Prerequisite(s): PSYC 1000 or 1100.

PSYC 4260 Methods for Functional MRI (3)
This course will cover methods for noninvasive functional imaging of the human brain using magnetic resonance imaging (fMRI). The course will include both lectures and computer lab sessions involving hands-on analysis of fMRI data. Topics include physical basis of the MRI signal, image encoding, data preprocessing, statistical analysis, multivoxel pattern analysis, and functional connectivity.

Prerequisite(s): PSYC 3300 or NSCI 3300.

PSYC 4330 Neurobiology Learn & Memory (3)
An introduction to the study of the neural mechanisms involved in learning and memory. The course will involve detailed study of the memory systems of the brain as well as historical trends, theoretical perspectives and empirical findings that are associated with the neurobiology of learning and memory.

Prerequisite(s): PSYC 3300 or NSCI 3300.

PSYC 4380 Cognitive Neuroscience (3)
An introduction to the study of human behavior and cognition using neuroscience methods. This course will examine the neural basis of perception, attention, memory, language, motor control, and emotions.

Prerequisite(s): PSYC 3300 or NSCI 3300.

PSYC 4385 Cognitive Neuroscience Lab (1)
A laboratory course in which students will be introduced to the methods of cognitive neuroscience, including neural networks, event-related potentials, and functional magnetic resonance imaging. Students will design and carry out simple cognitive experiments to examine issues of hemispheric laterality.

Prerequisite(s): PSYC 3130 and 4380*.
* May be taken concurrently.

PSYC 4510 Biological Psychology (3)
Survey of biological psychology with an emphasis on neuroanatomy and research methods used to study mechanisms of learning and memory, mental disorders, emotion, stress, and other psychological phenomena.

Prerequisite(s): PSYC 3300 or NSCI 3300.

PSYC 4513 Music and Brain (3)
An introduction to current research linking music education to brain development and function. Fulfills Tier 2 writing intensive and service-learning requirements.

Prerequisite(s): PSYC 3300 or NSCI 3300.

PSYC 4515 Biological Psyc Lab (1)
A laboratory course providing training in behavioral and neurobiological methods, experimental design, data collection and analysis and preparation of research reports. Fulfills the Tier 2 writing intensive requirement.

Prerequisite(s): PSYC 4510* or NSCI 4510*.
* May be taken concurrently.

PSYC 4530 Psychopharmacology (3)
An introduction to the effects of psychoactive agents on the nervous system. Lectures emphasize the mechanisms by which drugs regulate neurotransmitter systems to alter psychological and physical states.

Prerequisite(s): (PSYC 3300 or NSCI 3300).

PSYC 4535 Psychopharmacology Lab (1)
Lab section for PSYC 4530.

Prerequisite(s): PSYC 4530* or NSCI 4530*.
* May be taken concurrently.

PSYC 4560 Internship Psychology (3)
Students will complete 70 hours of service in a community setting in which they will use the knowledge of psychology to complete a project or paper of benefit to the community site. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSYC 4570 Internship Psychology (3)
Students will complete 70 hours of service in a community setting in which they will use the knowledge of psychology to complete a project or paper of benefit to the community site. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSYC 4580 Field Experience (1-3)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Registration is completed in the academic department sponsoring the internship. Course may be repeated up to 3 credit hours. This course is graded S/U.

Maximum Hours: 3

PSYC 4590 Field Experience (1-3)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Registration is completed in the academic department sponsoring the internship. Course may be repeated up to 3 credit hours. This course is graded S/U.

Maximum Hours: 3

PSYC 4610 Black Youth Development Psychology (4)
A study of major research findings with African-American children and adolescents. The course includes a participant-observer experience in the applied setting (e.g., school, group home). Fulfills Tier 2 Writing Intensive requirement.

Prerequisite(s): PSYC 3200, 3210 or 3390.

PSYC 4650 Cognitive Development (3)
In addition to describing developmental and individual differences in cognition, scientists who study children's thinking are concerned with the mechanisms that underlie cognition and its development. How do biological factor interact with experiences in the physical and social world to yield a particular pattern of development? Do children develop all their intellectual skills uniformly, or do some skills develop at a faster rate than others? Is development relatively continuous and gradual over a childhood, or are there major disruptions on its course? We will examine classic and contemporary accounts of cognitive development, and consider them from both a theoretical and an empirical standpoint.

PSYC 4660 Special Topics (1-3)
Special Topics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSYC 4670 Clinical Neuropsych Assessment (3)
The primary purpose of this course is to provide an introduction to the study of clinical neuropsychology. The course will begin by presenting an overview of brain structures and functions. It then will cover conditions that are due to some malfunction in the central or peripheral nervous system. Specifically, this course will (1) survey current neuropsychological knowledge as it pertains to normal function and to both neuropathological and psychopathological conditions (2) present a developmental perspective about neuropsychological factors in pathological conditions and (3) familiarize students with primary research literature in an area of personal interest.

Prerequisite(s): (PSYC 3300 or NSCI 3300) and PSYC 3330.

PSYC 4850 Writing in Psychology (2)
Writing in Psychology is a practicum course geared toward students planning on masters or graduate study. Written products will include statement of intent, conference abstracts, research summaries, and proposal introduction. Students will obtain experience and feedback on writing for empirically-supported arguments for a scholarly audience, manuscript organization and idea transition, and technical writing. The course is graded S/U.

Prerequisite(s): PSYC 3130 or 3130.

PSYC 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSYC 4900 Psychology Research (1-3)
Course may be repeated up to 6 credit hours.

Maximum Hours: 6

PSYC 4930 Advanced Psychology Research (1-3)
Laboratory or library research under direction of a faculty member. Course may be repeated up to unlimited credit hours. The course is graded S/U.

Maximum Hours: 99

PSYC 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

PSYC 4950 Race& Inclusion Research in US (3)

PSYC 4960 Special Projects (1-3)
Individual studies in a selected field. Open to qualified juniors and seniors with approval of instructor and advisor.

PSYC 4990 Honors Thesis (3)
Honors thesis research, first semester. Register in department.

PSYC 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): PSYC 4990.

PSYC 5380 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSYC 5390 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSYC 6060 Behavioral Endocrinology (3)
An introduction to the roles of steroid and peptide hormones in physiology and behavior. Lectures focus on the hormonal mechanisms that control reproductive and regulatory functions in human and infrahuman species.

Prerequisite(s): PSYC 3300, 3300, NSCI 3300 or 3300.

PSYC 6065 Behavioral Endocrinology Lab (1)
Laboratories provide demonstration and hands-on experience in research methods used in contemporary behavioral endocrinology including hormonal manipulation, behavioral measurement, data analysis, and manuscript preparation.

Corequisite(s): PSYC 6060.

PSYC 6090 Univariate I (3)
An introductory course covering a variety of statistical procedures commonly used in Psychology research. Course topics include descriptive statistics and significance testing as well as detailed instruction on various statistical tests. Students learn to conduct each type of analysis both by hand and using statistical analysis software (SPSS).

PSYC 6100 Rsch Methods Behav Hlth (3)
This course covers a wide array of issues related to the conduct of clinical research. Topics include Ethical Issues, choosing a research question, defining a study population, study design, randomization methods, and other relevant topics. In addition, the course includes instruction on statistical analyses that are relevant in clinical research, such as analysis of covariance (ANCOVA) and survival analysis.

PSYC 6110 Psyc Appl Univar Stat II (3)
An intermediate-level course in statistics designed to meet the needs of beginning graduate students and those undergraduate students who plan to undertake graduate work in psychology. Emphasis is placed upon design of experiments and interpretation of research results.

PSYC 6130 Psyc Appl Multivar Stats (3)
Design and analysis of experiments in the behavioral sciences involving multiple predictor and criterion variables. Extensive use is made of Tulane computer facilities but no programming knowledge is required.

PSYC 6150 Research Methods in Psychology (3)
Individual research supervised by faculty.

PSYC 6180 History & Systems (3)
A survey of the roots of contemporary psychology. Students then identify an interest area, trace its historical roots, and present their work in class.

PSYC 6260 Methods for Functional MRI (3)
This course covers methods for noninvasive functional imaging of the human brain using magnetic resonance imaging (fMRI). The course includes both lectures and computer lab sessions involving hands-on analysis of fMRI data. Topics include physical basis of the MRI signal, image encoding, data preprocessing, statistical analysis, multivoxel pattern analysis, and functional connectivity.

PSYC 6330 Neurobiol Learn & Memory (3)
An introduction to the study of the neural mechanisms involved in learning and memory. The course will involve detailed study of the memory systems of the brain as well as historical trends, theoretical perspectives and empirical findings that are associated with the neurobiology of learning and memory.

PSYC 6380 Cognitive Neuroscience (3)
An introduction to the study of human behavior and cognition using neuroscience methods. This course will examine the neural basis of perception, attention, memory, language, motor control, and emotions.

PSYC 6530 Psychopharmacology (3)
An introduction to the effects of psychoactive agents on the nervous system. Lectures emphasize the mechanisms by which drugs regulate neurotransmitter systems to alter psychological and physical states. (Same as NSCI 6530)

PSYC 6590 Stress & Trauma (3)
This course provides an overview of the psychobiological bases of stress and trauma reactions and related psychological disorders.

PSYC 6610 Adv Studies In Psych (1-3)
By arrangement with department. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSYC 6611 Adv Studies In Psych (1-3)
By arrangement with department.

PSYC 6620 Advanced Studies (1-3)
By arrangement with department. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSYC 6700 Health Psychology I (3)
This is the first course of the two semester Health Psychology series for the Behavioral Health 4+1 terminal Master of Science Program in Psychology. The primary purpose of this course is to provide an introduction to the study of health psychology. The course will examine how biological, psychological, and social factors interact with and affect: (1) the efforts people make in promoting good health and preventing illness; (2) the treatment people receive for medical problems; (3) how effectively people cope with and reduce stress and pain; and (4) the recovery, rehabilitation, and psychosocial adjustment of patients with serious health problems. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

PSYC 6710 Health Psychology II (3)
This seminar is the second course of the two semester Health Psychology series for the Behavioral Health 4+1 terminal Master of Science Program in Psychology. The primary purpose of this course is to delve more deeply into contemporary topics in health psychology with direct relevance to the priorities outlined in recent healthcare reforms under the Affordable Care Act (ACA). By the end of the course, students are expected to develop knowledge and skills relevant to a broad range of topics in health psychology directly relevant to future careers in research, clinical practice, or policy.

Prerequisite(s): PSYC 6700 or 6700.
Enrollment limited to students in the Psychology department.

PSYC 6810 Special Topics (1-3)

Maximum Hours: 99

PSYC 6940 Transfer Coursework (0-20)
Transfer coursework at the 6000 level. Departmental approval required.

Maximum Hours: 99

Public Administration (MPAD)

MPAD 6000 Public Policy Foundations (3)
This course provides an introduction to policymaking, implementation, and analysis with a focus on practices that reflect the values and priorities of diversity, equity, and inclusivity. Emphasis will be on policy within local and urban contexts. Topics will include the impact of public, nonprofit, and private sectors on policy decisions; advocacy; contemporary critical issues; foundations of policy analysis; and the politics of the policy process. Students will be introduced to the fundamental theoretical frameworks used to describe public policy development processes, as well as to contemporary critiques of those frameworks.

Enrollment limited to students in the Public Administration department.

MPAD 6100 Technology and Civic Sector Leadership (3)
This course examines the relationship between society, technology, and public administration professions, and how leaders effectively utilize contemporary and evolving technologies. Emphasis will be on local and urban contexts. It will explore the challenges and opportunities presented by technological emergence and advancements along with the impact of technology on public administration considerations and practice. Topics will include: public infrastructure; use and analysis of data collection; privacy issues; artificial intelligence and other innovations; implications of contemporary technologies for policy and regulation; technology ethics; data breaches and crisis management; and other emergent contemporary issues and contexts.

Enrollment limited to students in the Public Administration department.

MPAD 6110 Data-Informed Leadership, Management, and Decision-Making (3)
This course examines the use of data in strengthening the effectiveness in public service organization leadership, management, programming, and decision-making. Emphasis will be on local and urban contexts. It will explore tools and approaches to collecting, analyzing, and communicating data. Topics will include data collection, use and analysis, policy implications, contemporary issues, innovations, contexts, ethics, and leadership/management skills and capabilities. The course will examine approaches to incorporating participation and perspectives of communities and individuals directly affected by data-informed leadership and decision-making.

MPAD 6120 Public Organizational Leadership, Cross-Sector Partnerships, and Stakeholder Engagement (3)
This course will examine both theories and practice approaches of public service organizational leadership, management frameworks for cross-sector partnerships, and stakeholder engagement at global, national, state and local levels. Emphasis will be on local and urban contexts, with students analyzing specific cases from New Orleans. It will explore organizational management; leadership, culture, and structure in complex internal and external contexts, cultivation of internal and external stakeholders, best practices and pitfalls in translating from one sector to another, systems thinking, public interest communication, new models of cross-sector collaboration, and approaches to foster community and partner buy-in and cooperation; the strategic planning for and management of competing and cooperative interests, approaches to identify common and conflicting goals, objectives and priorities; and strategies for clarifying, communicating, and managing goals and expectations. Topics will include foundations of leadership and management, organizational environmental awareness, organizational behavior, performance management, decision-making, individual and group management, and collaborative partnerships development and growth. Attention will be given to the interdisciplinary and cross-sector development and implementation of public service initiatives and programming.

MPAD 6130 Budgeting and Financial Management (3)
This course will examine theoretical and practical approaches in budgeting and financial management within public service organizations. It will explore strategies for ensuring alignment of resource development and management with organizational goals, objectives, and priorities; fund development strategies; evaluation of budget and financial management systems effectiveness; strategies for addressing financial management and budgeting challenges; as well as the alignment of budget analysis with organizational decision-making.

MPAD 6140 Equity, Diversity, Inclusion, and Public Service (3)
This course examines topics central to operationalizing equity frameworks and priorities within civic sector leadership and practice. It will explore strategies for the development of competencies for fostering equitable approaches to work within public service. Emphasis will be on local and urban contexts. Topics explored will include historical/social contexts related to issues of equity and impact on public sector work; cost-benefits of equity in the civic sector; equity competency rooted approaches to public service; collective and cultural narratives; intersections of equity, diversity, inclusion, and public service systems and structures. The course will examine approaches to incorporating participation and perspectives of communities and individuals directly affected by civic sector leadership and practice.

MPAD 7100 Educational Leadership and Policy for Changemakers (3)
This course provides an overview of leadership and policy topics especially relevant to leadership in the education sector through four modules. For the policy module, topics include federal, state, and local education policy development; the influence of law and policy on schooling over time; and the role of education leaders in policy advocacy and enactment. The course includes a module on the politics and contextual factors involved in leading in collaboration with a school board. A third module on school law provides an overview of the most significant legal issues in public elementary and secondary schools and implications for leading and decision-making. The final module centers on the effective and sustainable education leader with an emphasis on growing the ability to understand, engage, and effectively support and challenge others and creating conditions for equitable school and system transformation and governance. The course will use case studies and live cases with current education leaders to engage students authentically in the field.

MPAD 7110 An Introduction to Education Finance and Budgeting: Implications for Strategy, Equity, and Change (3)
This course is an introduction to public school finance and budgeting systems in the United States. Budgeting and finance impact all aspects of schooling and education and are therefore critical to education leadership at all levels. Focus areas include the budgeting process; the politics of budgeting; district and school cost drivers; revenue generation including federal, state, and local funding sources; norm-based budgeting; weighted-student funding; cost-benefit analysis; benchmarking; and “key performance indicators” (KPIs) and “objectives and key results” (OKRs). Questions include: How can budgeting reflect the values and priorities of schools and systems? What are the equity implications of education budgeting and finance? What are the economic and financial drivers that maintain or disrupt the status quo? The course will use case studies and simulations from both traditional public and charter settings with special emphasis on the New Orleans context.

MPAD 7120 Reimagining and Leading Education Systems for the Future (3)
This course supports education leaders in developing and communicating a vision and strategy for student success centered on excellence and equity for all. The early part of the course includes a historical overview of schooling in the U.S. and the influence of this history on the features and limitations of the current system, including the educational implications of race and poverty. The course also includes an investigation of shifts in learning, management, and equity, as well as a survey of promising systemic reforms and strategies such as integrated student supports, collective impact, and cross-sector collaboration. Key skills of effective education leaders include communicating and building support for vision and change. Students will also develop a public narrative and strategic communication plan around their vision and strategy. Questions include: What are the vision, qualities, and characteristics of future-focused, future-ready learning organizations? How can a leader move from vision to transformational change for students? The course will include a variety of texts, including interviews with leaders in the field, as well as specific instruction in design thinking and strategic communication. Prerequisite(s): MPAD 6000*, 6100*, 6110*, 6120*, 6130* and 6140*. (* May be taken concurrently.)

MPAD 7130 Leading Learning (3)
The course examines leading learning as a system-level task. Focus areas include the instructional core and the centrality of the instructional task as predictive of student learning; current models of learning; challenges of improving instruction, effective management of learning systems; developing, enacting, and scaling vision for learning; and the role of evidence in decisions about practice and policy impacting learning. In addition, the course addresses the roles of the leader's identity and previous learning experiences, as well as their implications for equity and leadership. Throughout the course, students will examine current systems of learning through classroom observations, interviews with leaders in the field and case studies. What does great learning look like, and how do we create equitable systems that support and demand high-quality learning experiences and outcomes for all?

MPAD 7200 Nonprofits, Philanthropy, and the Civic Sector (3)
This course examines the role of nonprofits and philanthropy in advancing practice and innovation within the civic sector. The course explores multi-sector exchanges and intersections, focusing on the impact and capacity of nonprofits and philanthropic organizations to advance civic sector. Topics include historical contexts of the nonprofit sector and philanthropy; connections to social change and public policy; values, ethics, and equity; and contemporary and future-focused issues, venture philanthropy, mission-related and program-related investments, and other innovations.

MPAD 7210 Evaluation and Outcomes Management (3)
This course supports the development, implementation, and management of nonprofit and philanthropic organizational programs by examining theories and approaches related to evaluation and outcomes management. The course explores considerations and implications of evaluation not only from a programmatic perspective, but also the impact of dimensions of organizational performance on overall effectiveness. Focus areas include program delivery, tools, and approaches to monitoring and evaluating organizational activities and programs, systems thinking evaluation, facilitating strategic learning, developmental evaluation, determinates of effectiveness, outcome evaluations, program analysis, process evaluation, equitable evaluation, and organizational and program adaptability. The course will examine approaches to incorporating participation and perspectives of communities and individuals directly affected by nonprofit and philanthropic decisions and initiatives.

MPAD 7220 Organizational Sustainability, Leadership, and Governance (3)
This course examines both theories and practice approaches to nonprofit and philanthropic organization leadership and governance with a focus on the cultivation of organizational sustainability within dynamic civic sector contexts. Emphasis will be on local and urban contexts. The course will explore foundational nonprofit and philanthropic organization governance designs and functions along with strategies for the development and management of organizational leadership and governance that is equipped to successfully support adaptability, effectiveness, and long-term sustainability. Topics will include foundations of leadership and governance approaches; board functions, development, and management; stakeholder relationship management, leadership, and governance values and ethics; leadership planning and succession; and organizational culture, change, adaptability, and sustainability.

MPAD 7230 Financial Management, Resource Development, and Capacity Building (3)
This course examines theoretical and practical approaches in the financial management of nonprofit and philanthropic organizations focusing on supporting the strengthening of organizational capacity and fiscal sustainability. It will explore strategies for resource development and evaluation of budget and financial management effectiveness. Topics will include financial management and budgeting issues, resource cultivation and management, grant seeking and contract management, capacity building and sustainability issues, and fund development strategies.

MPAD 7240 Foundations of Strategic Philanthropy (3)
This course examines the role of strategic philanthropic investment as a catalyst for change and innovation within the civic sector. The course explores cross-sector intersections and collaborations, focusing on the impact and capacity of strategic philanthropy and frameworks of program-related, mission-related investing. Focus areas include models of civic sector-focused strategic philanthropy, systems thinking and philanthropy, philanthropic program design for sustainable outcomes, and cross-sector philanthropic program engagement. The course will examine approaches to incorporating participation and perspectives of communities and individuals directly affected by philanthropic decisions and initiatives.

MPAD 7300 Elements of Economic Development (3)
This course will provide an introduction to economic development focusing on impact and intersections within the civic sector. The course will explore theory and practice strategies of economic development along with the implications for society and public sector professionals. Emphasis will be on local and urban contexts, with students analyzing specific cases from New Orleans. The course will examine approaches to incorporating participation and perspectives of communities and individuals directly affected by economic development policy and initiatives. Focus areas include strategies for the development of healthy local and regional economies, cross-sector collaborations, equity and ethics, tax incentives and regulations, workforce development, civic sector engagement in business attraction, entrepreneurship and small business development, public policy considerations and intersections, and contemporary issues in economic development.

MPAD 7310 Economic Development Challenges and Civic Resilience (3)
This course examines the intersections of civic resilience and economic development. The course will explore theory, systems, practices, and innovations related to civic resilience and business development. Emphasis will be on related local, regional, and national contemporary issues affecting civic sector practice. The course will examine approaches to incorporating participation and perspectives of communities and individuals directly affected by economic development policy and initiatives. Focus areas include dimensions of business development and related civic resilience dimensions: economy and society, infrastructure and environment, leadership and strategy, equity and ethics; and cross-sector engagement in the management of economic development challenges and resilience.

MPAD 7320 Economic Development and Urban Transformation (3)
This course examines economic development as a driver of sustainable civic advancement and positive urban growth. It will explore contemporary strategies with the aim of conceptualizing actionable cross-sector frameworks for transformational economic development. Emphasis will be on local contexts and the experience of New Orleans and other civic notables in urban innovation. The course will examine approaches to incorporating participation and perspectives of communities and individuals directly affected by economic development policy and initiatives. Focus areas include a comparative analysis of urban transformation, drivers of sustainable business development transformation in urban cities, public sector collaborations, issues of equity and ethics, intersections of data and technology, and contemporary issues.

MPAD 7330 Social Equity and Economic Development (3)
This course examines topics central to operationalizing social equity frameworks and priorities within economic development leadership and practice. It will explore strategies for the development of competencies for fostering equitable approaches to work within economic development. The course will examine approaches to incorporating participation and perspectives of communities and individuals directly affected by economic development policy and initiatives. Emphasis will be on local and urban contexts, with students analyzing specific cases from New Orleans. Topics explored will include historical/social contexts related to issues of equity and impact on economic development, equity competency rooted approaches to economic development, systemic barriers to minority-owned small business development and financing, and intersections of equity/diversity and cross-sector cooperation.

MPAD 7400 Environmental Policy (3)
This course provides an introduction to contemporary issues related to the natural environment and related policymaking and civic practice. Emphasis will be on environmental policy within local and urban contexts, with students analyzing specific cases from New Orleans. The course will examine approaches to incorporating participation and perspectives of communities and individuals directly affected by environmental challenges. Topics will include cross-sector engagement and interactions surrounding and environmental policy decisions, environmental risk solutions, funding, and advocacy.

MPAD 7410 Environmental Challenges and Civic Resilience (3)
This course examines the intersections of civic resilience and concerns surrounding the natural environment. The course will explore theories, practices, and innovations related to civic resilience and contemporary issues connected to environmental risks and challenges. The course will examine approaches to incorporating participation and perspectives of communities and individuals directly affected by environmental challenges. Emphasis will be on related local, regional, and national contemporary issues affecting civic sector practice. Focus areas include dimensions of environmental management and related civic resilience dimensions: health and well-being, economy and society, infrastructure and environment, and leadership and strategy. The course will also examine questions of environmental sustainability, equity and ethics, risk mitigation, and cross-sector engagement in the management of environmental challenges and resilience.

MPAD 7420 The Role of Data in Environmental Decisions (3)
This course examines the use of data in strengthening the effectiveness of decision-making related to civic sector concerns surrounding the natural environment. Emphasis will be on local and urban contexts, with students analyzing specific cases from New Orleans. The course will examine approaches to incorporating participation and perspectives of communities and individuals directly affected by environmental challenges. It will explore tools and approaches to collecting, analyzing, and communicating data. Topics will include intersections of data, equity, and decisions; management of data certainties and uncertainties in environmental decision-making; and incorporation of data into decision-making processes.

MPAD 7430 Social Equity and Environmental Management (3)
This course examines topics central to operationalizing social equity frameworks and priorities within environmental management practice. It will explore strategies for the development of competencies for fostering equitable approaches to civic work related to the management of environmental risks and challenges and prioritizing the inclusion of stakeholders, communities, and individuals impacted by environmental challenges. Emphasis will be on local and urban contexts, with students analyzing specific cases from New Orleans. Topics explored will include historical/social contexts related to issues of equity and impact on environmental management, equity competency rooted approaches to environmental management, intersections of equity/diversity, and cross-sector cooperation.

MPAD 7800 Law & Public Administration (3)
This course analyzes the relationship between law and public administration. Students examine how courts and agencies create and interpret law that shapes civic sector leadership decisions. Practical exercises allow students to influence real-world rulemaking projects and draft advisory opinions for common ethics and standards of conduct scenarios. Students research and present on appellate court opinions affecting modern public administration practice, with an emphasis on the practical policy implementation of the case law and related legal issues.

MPAD 7900 MPA Capstone (3)
In this course, students apply concepts, theories, best practices, knowledge, and principles as learned throughout the program. Additionally, students will grapple with the complexities of public sector work by testing concepts, strategies, and approaches in real-world contexts. Through a site-based immersion project completed through options such as fieldwork, internships, civic practice labs, or simulations, students will demonstrate mastery of program objectives and course competencies. Mastery will be shown through the creation of a final written report that provides findings and focusing on civic practice implications. Report findings will be presented; presentations may incorporate design approaches and elements appropriate to audiences found in real-world public sector practice environments. MPA program students with less than three years of relevant work experience will participate in a capstone with an experiential site-based component where a project is shaped on-site and applied. Elements include issue/problem identification and related factors, strategic recommendations, key considerations, implementation approaches, analysis and evaluation, applied research methodologies, research design, data collection, and analysis and presentation.

MPAD 7905 Masters in Public Administration Residency (0)
Tulane MPA Residency provides an on-site opportunity for in-person networking, skill development and professional development opportunities while still offering the flexibility and accessibility of online education. During the Tulane MPA residency, students visit New Orleans for experiential learning, collaboration, and networking with peers, program faculty and other individuals working in civic sector careers. Programming includes lectures, workshops and events that further support the development of skills and competencies offered in the Tulane MPA curriculum. Residencies take place annually and participation is required for completion of the MPA degree. Students may complete the residency at any time in their matriculation.

Maximum Hours: 99

Public Health Special Courses (SPHL)

SPHL 6000 Fundamentals of Interprofessional Collaboration & Practice (1)
Students will be introduced to Interprofessional Education to prepare students to work collaboratively with other sectors to promote and advance population health. Six modules will cover the four core competency domains identified by the Interprofessional Education Collaborative (IPEC): 1) Values and Ethics; 2) Roles and Responsibilities; 3) Communication; and 4) Teams and Teamwork. This course will prepare students to utilize team science, collaboration, and effective communication to be effective public health professionals. This course is required for all MPH, MSPH, and MPHTM students. They will enroll in this course in their first semester of enrollment to meet accreditation requirements.

SPHL 6020 Foundations in Public Health (3)
Foundations of Public Health is one of five interdisciplinary courses that contribute to the foundational competencies required of graduates with degrees in public health. The course introduces students to the unique history, purpose of TU SPHTM and the critical focus of health equity in the curriculum. Students will discuss the principles and concepts of public health, prevention, and evidence-based approaches to addressing population health. Students will explore the determinants that influence health, including biological and genetic factors, social and behavioral determinants of health, environmental influences, economic and political factors impacting health, and culture and health inequities. The course provides a context for graduate public health degrees and is required for all SPHTM graduate public health degree programs. Course waiver: Students who have completed a CEPH-accredited public health degree can request a course waiver. Students with previous public health coursework can take the Challenge Exam to qualify for a waiver.

SPHL 6050 Biostatistics for Public Health (3)
One of five interdisciplinary courses that contribute to the foundational competencies required of graduates with professional degrees in public health. Strong analytical skills in evidence-based practices are essential across all public health disciplines. In SPHL 6050, students learn how to collect, manage, and visualize a wide variety of data and appropriate biostatistical methods, including probability distributions, estimations, power and sample size, and regression. Interdisciplinary exercises, homework assignments, and data sets are drawn from real-world scenarios. The course also prepares those students who move on to advanced biostatistics courses. Biostatistics for Public Health is a requirement for all students in the MPH, MSPH, and MPH&TM professional degree programs.

SPHL 6060 Epidemiology for Public Health (3)
One of five interdisciplinary courses that contribute to the foundational competencies required of graduates with professional degrees in public health. SPHL 6060 introduces students to epidemiological methods and approaches for use across all public health domains. This includes measuring the occurrence of disease, outbreak investigations, incidence and prevalence, natural history of disease, study designs, and estimating risk. The course also addresses the interpretation of data analyses for research, policy, and practice. Epidemiology for Public Health is a requirement for all students in the MPH, MSPH, and MPH&TM professional degree programs.

SPHL 6070 Health Systems Policy and Management (3)
One of five interdisciplinary courses that contribute to the foundational competencies required of graduates with professional degrees in public health. SPHL 6070 exposes students to the complexities, scope, and impact of decisions affecting public health. It provides a survey of public health and health care systems, policy and management principles used in public health settings. Class discussion and exercises provide opportunities for students to apply principles and skills to their own areas and career interests. This course is a requirement for all students in the MPH, MSPH, and MPH&TM degree programs.

SPHL 6080 Design Strategies in Public Health Programs (3)
One of five interdisciplinary courses that contribute to the foundational competencies required of graduates with professional degrees in public health. SPHL 6080 equips students with the knowledge and skills to design, implement, and evaluate public health programs for diverse public health issues, populations, and settings. This course features active and collaborative learning and real-world application of course concepts. Ultimately, the course will illustrate that the effective design of public health programs is critical to improving community health. This course is a requirement for all students in the MPH, MSPH, and MPH&TM degree programs.

SPHL 6100 Health Equity (3)
This introductory-level course in health equity is designed for students in an MPH degree. Both synchronous and asynchronous activities will be used. Students will be introduced to the status of health equity in the U.S. according to race and ethnicity, sex and gender, and socioeconomic status. They also will explore causes of health inequities guided by a socioecological framework. Lastly, they will gain skills in cultural competency, including tools for addressing implicit biases individually and in organizations, as well as approaches for allyship with marginalized populations. Students will engage in peer discussions pertaining to topical areas, complete brief writing assignments to apply learning from the course, and conduct a literature review to synthesize knowledge in a chosen health equity topic.

SPHL 6110 Introduction to GIS for Public Health (3)
This course will introduce students to commercial and open-source GIS and digital data collection tools (ArcGIS, QGIS, Google Earth and OpenDataKit), and applications to global health program management. It is designed to build incremental skills in order to use these software and tools for spatial analysis related to programmatic issues including healthcare coverage, epidemic monitoring, and health services' accessibility. Case studies will invite students to think critically about appropriate use of technology in resource-constrained environments. In addition, the students develop an independent data collection and mapping project on a public health issue relevant to New Orleans.

SPHL 6820 Advanced Standing (3)
Advanced Standing course: SPHL 6020

SPHL 6850 Advanced Standing (3)
Advanced Standing course: SPHL 6050

SPHL 6860 Advanced Standing (3)
Advanced Standing course: SPHL 6060

SPHL 6870 Advanced Standing (3)
Advanced Standing course: SPHL 6070

SPHL 6880 Advanced Standing (3)
Advanced Standing course: SPHL 6080

SPHL 6900 Student Success & Academic Skills (0)
The Graduate Student Success and Academic Skills synchronous hybrid course is designed to help international graduate students take advantage of available on-campus resources, adjust to new expectations, gain awareness of cultural assumptions, and develop practical techniques for resolving both personal and academic issues. Students explore U.S. expectations for classroom behavior, academic integrity and communication with professors and classmates. They also practice graduate writing, presentation, and listening and notetaking skills. These unique workshops will ensure that students understand what is expected of them and how to build the skills they need to thrive academically during their graduate experience. This is a non-credit course. An appropriate score on an accepted English proficiency test is required for entry.

SPHL 7000 Special Topics (1-3)
Any TSPHTM course offered for credit in which the subject matter or content may vary within specific sections as indicated by that course's title and description in course inventory.

Maximum Hours: 99

SPHL 7020 Leadership Theory & Practice (3)
Leadership Theory and Practice is an advanced graduate level course that examines organizational leadership skills necessary for leadership positions within the public health system. Drawing from a variety of disciplines, this course provides students with a set of strategies, theoretical models and frameworks that are adaptable to the broad scope of experience in the field of public health, particularly as it relates to collaborative consensus building for purposes of influencing behavior and policies. Case studies will challenge students to analyze problems collaboratively and apply strategies to address real--world dilemmas faced by decision-makers. This course also emphasizes development of a personal leadership model and philosophy for lifelong learning.

Prerequisite(s): (SPHL 6020, 6820 or minimum score of PASS in 'SPHL 6020 Exemption') and (SPHL 6070 or 6870) and (SPHL 6080 or 6880).

SPHL 7030 MI Program Internship (0)
Practicum during Peach Corps service for Master's Internationalsis students

SPHL 7800 Public Health Study Abroad (9-12)

Maximum Hours: 99

SPHL 7940 Transfer Coursework (0-20)
Transfer coursework at the 7000 level. Departmental approval required.

Maximum Hours: 99

SPHL 7950 Integrative Learning Experience (0-1)
All MPH, MSPH, and MPHTM students must complete an Integrative Learning Experience (ILE) that demonstrates the synthesis of foundational and concentration competencies and that contains a substantive writing component.

Course Limit: 2

SPHL 7990 Independent Study (1-3)
SPHL 7990 is the designation for a special (independent) study in a master’s program. Course may be repeated up to 6 credit hours.

Maximum Hours: 6

SPHL 8000 Principles of Public Health Leadership (3)
Principles of Public Health Leadership is an advanced graduate-level course that examines organizational leadership skills necessary for leadership positions within the public health system. Drawing from a variety of disciplines, this course provides students with a set of strategies, theoretical models, and frameworks that are adaptable to the broad scope of experience in the field of public health, particularly as it relates to collaborative consensus building for purposes of influencing behavior and policies. Case studies will challenge students to analyze problems collaboratively and apply strategies to address real--world dilemmas faced by decision-makers. This course also emphasizes development of a personal leadership model and philosophy for lifelong learning.

SPHL 8010 Budget and Financial Management (3)
This course provides foundational theory and practice in developing and managing budgets and financial operational plans. Topics to be covered include budgeting, financial statements, resource allocation, and financial management. Didactic content and case studies will be used as well as applications to different practice settings and situations.

SPHL 8020 Leadership and Strategic Management (3)
This is an application course that builds upon SPHL 7020 Leadership Theory and Practice, and will focus on advanced leadership and advocacy skills essential for successful deployment of public health initiatives. Students will conduct an environmental scan and mixed methods stakeholder assessment, evaluating the strengths, weaknesses, opportunities, and threats (SWOT) for an organization or entity. Results of the assessment will produce the analysis from which students will develop a responsive strategic plan to address identified needs in the community. Data-driven plans will include strategies to improve health equity and identify advocacy opportunities for under-represented populations.

Prerequisite(s): SPHL 7020.

SPHL 8070 Teaching Assistantship Educational Experience (0)
This course will provide students with an applied learning experience to strengthen their skills in teaching. The course will include an orientation, mid-course reflection, and faculty evaluation. The specific skill set of focus will depend on the needs of the student and the course instructor. Illustrative skills include effective communication, public speaking, assessing student learning, utilizing learning management systems, and teaching and learning strategies among others.

Course Limit: 2

SPHL 8080 Public Health Pedagogy (3)
This doctoral-level discussion-based course will equip doctoral students with the knowledge to think critically about their teaching practices and to enhance their pedagogical skills. Rooted in the scholarship of teaching and learning, the course will help novice instructors to gain teaching-self-efficacy and utilize pedagogical best practices while providing a supportive environment to develop and discuss diverse instructional approaches and materials. The course will also prepare students to assist with or teach future public health academic classes and other instructional activities. Course assessments include the development of a teaching philosophy, classroom observations, a research paper on a pedagogical strategy, a mock teaching session, and a series of journal reflections.

SPHL 8100 Health Equity and Advocacy (3)
This is designed to equip doctoral-level students with advanced knowledge and skills to tackle health disparities by addressing social determinants of health and advocating for systemic health policies that promote equity. Through in-depth exploration of models, frameworks, contextual models, and empirical data, students will develop and implement a community health needs assessment. By integrating readings, lectures, and the course assignments and project, students gain expertise in collecting and synthesizing primary and secondary data (qualitative and quantitative), identifying affected populations, and proposing evidence-based recommendations. The course aims to cultivate individuals who can contribute to transformative changes in public health through advocacy and policy development for improved health equity.

SPHL 8200 Public Health & Social Policy (3)
The course will advance your abilities to utilize public health principles, practice, and policy to improve population health using liberatory public health frameworks. We will look at policy and practice from a diversity of spaces, including federal, state, and local government (policy with a big P); international laws and bodies (policy with a big P); as well as institutional, organizational, and regulatory policy (policy with a small p). Students in this course will advance their skills in conducting policy analyses, evidence synthesis, communicating and advocating for public health policy; and framing policy problems and solutions all in support of advancing equitable population health.

SPHL 8250 Study and Evaluation Methods in Public Health (3)
The course will focus on designing a study or evaluation project to address a public health issue using ethnically-sound, rigorous sampling, recruitment, data collection and data management methods. Building on prior coursework, methods covered in this course will support the design of quantitative, qualitative, mixed, and program evaluation projects. For the final project, students will design a qualitative, quantitative, mixed methods, or evaluation project to address a public health issue of their choosing. This course is intended for DrPH students.

Prerequisite(s): (SPHL 6050 or 6850) and (SPHL 6060 or 6860) and (SPHL 6080 or 6880).

SPHL 8400 Public Health Grant Writing (3)
This course is designed to provide doctoral students the knowledge and skills to prepare clear, effective, and persuasive grant applications to biomedical and public health funding agencies. All important aspects in the academic funding process will be covered. They include identifying the right funding opportunities, asking significant and innovative research questions, communicating the application effectively to tell your scientific story, and understanding the merit review process to make reviewers your research advocates. Students will develop a NIH grant application for a research project including specific aims, research strategy, human subject protection, budget, and biographic sketch. In addition, students will learn how to critically review and revise a grant application.

SPHL 8500 Interdisciplinary Doctoral Seminar (1)
Interdisciplinary seminar for doctoral students.

SPHL 8990 Independent Study (1-3)
SPHL 8990 is the designation for a special (independent) study in a doctoral program. Course may be repeated up to 12 credit hours.

Maximum Hours: 12

SPHL 9450 Practice Based Portfolio: Background (3)
The course will focus on establishing the background and rationale for the focus of the Practice Based Portfolio for rising second year doctoral students in the DrPH program in Leadership, Advocacy, and Equity. Students will conduct a background and literature review, and develop a prospectus for their portfolio that includes priority population, topic of interest, fieldwork site and preceptor descriptions, timeline, objectives, scope of work and proposed products. Completion of this course provides the foundation to advance successfully into the advanced course series of the doctoral program and the development of the portfolio.

Prerequisite(s): (SPHL 7020, 8080, 8200 and SBPS 8220) and (SPHL 8010* and 8250*).
* May be taken concurrently.

SPHL 9460 Practice Based Portfolio: Experiential Learning (0)
DrPH students who are engaged in an applied practice experience. The course may be repeated up to 5 times.

Course Limit: 5

SPHL 9470 Practice Based Portfolio: Culminating Experience (0)
DrPH students who have completed their prospectus and are engaged in their culminating learning experience. The course may be repeated up to 5 times.

Course Limit: 5

SPHL 9970 Dissertation Research (0)
Doctoral students who have completed course work but not defended their prospectus. Course may be repeated up to 3 times.

Course Limit: 3

SPHL 9980 Applied Practice Experience (0-1)
The Applied Practice Experience (APE) (formerly practicum) is a supervised practice experience conducted in an agency or organization external to the university to gain practical experience. The APE allows students to demonstrate attainment of at least five competencies, including at least 3 from the foundational competencies (CEPH Criterion D2). The APE is conducted after completion of the foundational courses. After identifying the APE setting and defining the competencies, students enter the information into Terra Dotta. An APE written report is required that summarizes the field experiences. Students who need to repeat the course need to complete an APE Extension Request form.

Course Limit: 2

SPHL 9990 Dissertation (0)
Doctoral candidates who have defended their prospectus and are engaged in research. Course may be repeated up to 9 times.

Course Limit: 9

Public Health Undergraduate (SPHU)

SPHU 1010 Intro To Public Health (3)
Students are introduced to the concepts and practice of public health in the U.S. and internationally by tracing its historical evolution. Classic public health problems and their resolution will be discussed in the context of the broader contemporary social environment. The latter part of the course is focused on public health practice in both the U.S. and developing countries, with a consideration of the structure, function, and financing of public health organizations. The many different roles for public health professionals in these organizations also are described.

SPHU 1020 Cell, Individual & Community (3)
This course provides a foundation of knowledge about the human body in health and disease. It gives an overview of important concepts on the biological mechanisms of disease at the cellular, individual, and population/ community levels. The course will focus on a natural progression in the development of health and disease, moving from a discussion of the cellular mechanisms, to manifestations in the individual, and finally, to disease effect and interventions at the community level. This course is designed to provide a firm foundation in the mechanisms of health and disease. Furthermore, each session will offer insights into current public health topics and research trends.

SPHU 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPHU 1891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPHU 1940 Transfer Coursework (0-20)

Maximum Hours: 99

SPHU 2016 Infectious Disease Outbreaks (3)
This course will introduce students to the operational pillars of infectious disease outbreaks such as clinical management, logistics, infection prevention and control, policy and regulations. Students will begin with the basic concepts of infectious diseases, dynamics of disease transmission, and emerging and reemerging infectious diseases. The course encourages a wider conversation on the implications of infectious diseases in the broader context of public health, and challenges students to think creatively about solutions for prevention and control.

SPHU 2050 Arthropods and Public Health (3)
This course provides a broad introduction to insects and other arthropods that transmit infectious pathogens, or cause problems to humans through infestation or other contact. The impact of arthropods on the history of human civilization and development will be explored, as will their use as food and in art. Arthropod utilization in forensic science and for medicinal purposes will be discussed. Throughout the course the myriad adaptions utilized by arthropods, allowing them to become the most specious group of animals in existence, will be highlighted.

SPHU 2150 Foundations of Environmental Health (3)
This course is designed to provide students with an introduction to and overview of key areas in environmental health. Using the perspectives of the population and community, the course will cover factors associated with the development of environmental health problems. Students will gain an understanding of the interaction of individuals and communities with the environment, the potential impact on health of environmental agents, and specific application of concepts of environmental health. The course consists of lectures that cover principles derived from core environmental health disciplines. The sequence begins with background material and "tools of the trade"; agents of environmental diseases; and applications and domains of environmental health.

SPHU 2160 Biostatistics in Public Health (3)
This course provides an overview of various statistical methods used in public health practice and research. Emphasis is on application of appropriate methods and interpretation of results. Examples and problems from public health settings will be included. Various statistical software will be used to analyze data (excel, SPSS and others), but prior computing experience is not required. Topics covered include methods of summarizing data and estimation and hypothesis testing techniques, including the t-test, the chi-square test, the analysis of variance, correlation analysis, and linear regression.

SPHU 2300 Introduction to Nutrition (3)
This course is designed to provide students with an introduction to the basic principles of nutrition science and research. It is recommended for undergraduate students who have not had a prior course in nutritional science. It is designed to help students gain basic knowledge about the roles of specific nutrients, with emphasis on their sources, functions, and metabolism in the human body, basic principles of digestion and absorption. Other topics include food selection for optimal health, energy balance and weight control, dietary practices in health promotion and chronic disease prevention, nutrition throughout the lifespan, and in introduction to public health nutrition including but not limited to food safety, food supply, food insecurity, and food policy.

SPHU 2333 Introduction to Global Maternal and Child Health (3)
The course introduces undergraduate students to the complex public health problems that affect women and children in the USA and in developing countries. The course will introduce and use the socio-ecological framework and the life-course models to examine factors that determine women and children's health and disease. The foundation of the course is a comprehensive review of common health issues that affect pregnancy, children and teenagers worldwide. Programs and policy to address these issues will also be reviewed and discussed in the context of socio-ecological frameworks.

SPHU 2400 Global Health in Action (3)
This course is targeted towards students considering global health work. Using a "Best Practices" lens, students will explore how to have a meaningful, field-based global health experience, and how to incorporate their global health experience into a future career. Students will examine policy issues and other health determinants in order to understand effective strategies to respond to health challenges in a global setting. As an outcome, students will approach global health in its wider social, economic and political context. Lectures, readings from primary literature, and field-based case studies will provide the framework for discussion, analysis, and interpretation of global health in action.

SPHU 2410 Health & Women's Rights (3)
This course addresses health and women's rights around the world from health equity, gender, and ethnicity perspectives. The main topics are: women's human rights and gender equality, discrimination against women and girls; rights of LGBTI people; gender-based violence; early marriage and pregnancy; right to contraception and abortion; forced sterilizations and abortions, and virginity examinations; female genital mutilation; maternal mortality; sexual transmission of HIV; trafficking of women and girls; women's rights during complex humanitarian emergencies; migration and reproductive health; and postcolonial feminism and health. The course contextualizes and analyzes: 1) health and women's rights within their economic and political context, 2) the social inequality roots of health and women's rights issues, and 3) the main health and rights challenges faced by women and girls. It uses country case studies from around the world. It is open to all undergraduate students.

SPHU 2420 Health Challenges and Climate Change (3)
Climate change affects the very basic foundations of health - adequate and nutritious food, safe water, fresh air, and secure shelter. This course introduces the direct and indirect links between climate change and human health. Examples of health impacts related to climate change will include those arising from drought induced water and food insecurity, vector-borne and water-borne diseases, temperature extremes, wildfires, and extreme hydrological events. Underlying socio-ecological determinants that influence exposure and vulnerability will be described. The course will also explore opportunities for mitigation and adaptation to reduce the threats of climate change. Case studies of how countries are responding to the health challenges posed by climate change will be presented.

SPHU 2430 Pandemics and Public Health (3)
Pandemics have shifted social norms, devastated economies, and transformed society throughout history. This lecture and discussion-based course investigates how culture, society, politics, and the environment influence the development and control of pandemics; and describes how scientists and public health officials integrate data and information to inform public health pandemic policy. In this transdisciplinary course students will 1) learn how science, economics, communication, government response, and social tensions influence control practices and policy, using examples from the Spanish Flu, cholera, HIV, SARS-CoV-2, and the plague; and 2) provide a foundation for more specialized classes that can be applied to prevent and control future pandemics.

SPHU 2810 Special Topics in Public Health (1-3)
Special Topics in Public Health. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPHU 2940 Transfer Coursework (0-20)

Maximum Hours: 99

SPHU 3010 Foundations of Health Care Systems (3,4)
SPHU 3010 introduces and examines the framework of a health care system, taking a particular look at the United States' system. The course examines the relationship between health and health care; public and private financing models; and the delivery of health care, both through public health and traditional medical care. Students will analyze issues related to the "iron triangle" of health care (i.e., cost, quality, and access) and will discuss the future of health care in the United States from a management and policy perspective.

Prerequisite(s): SPHU 1010.

SPHU 3011 Introduction to Occupational Health and Safety (3)
The working population continues to grow, and so is the expansion of workplaces where people spend long hours every day. Injuries, diseases, and deaths in the workplace are major public health issues. The workplace environment must be safe and healthful to support the working population. This course introduces students to the fundamentals of occupational safety and health. It examines the physical, chemical, and biological hazards and risks in the workplace environment, as well as the scientific and policy measures for improving workplace safety and health in the United States. Students are given case study exercises to enhance their understanding and application of best practices for promoting the public health in the workplace environment.

SPHU 3015 Public Health Program Implementation and Management (3)
This course develops practical skills for the design, implementation, and management of public health programs. A solid grounding in personal, financial, and organizational determinants of health and organizational effectiveness will complement the use of practical management tools and techniques such logic model development for program design and implementation. Students will apply these concepts and tools within the context of service delivery and policy-making in the field of public health.

Prerequisite(s): SPHU 3110*.
* May be taken concurrently.

SPHU 3100 Environmental Pollution & Biomarkers of Health (3)
This course introduces the concept and practical issue of environmental exposure to polluted water, soil, and food that cause adverse health effects on humans. Students will learn how to apply biomarkers to determine the magnitude of exposure and health associated with toxic chemicals (metals and trace elements). The use of biomarkers in other health issues related to climate change and occupational environment (such as in mining and farm workers) will be also discussed. Students work collaboratively on exposure, biomarkers, and health data assessment to draw relevant information and communicate to public health policy and practice. The course consists of lectures, article reading, discussion, quizzes, and problem sets.

SPHU 3110 Social and Behavioral Perspectives in Public Health (3)
Students integrate their understanding of public health science in this applied problem-solving course that brings together the social science-based theories and models with techniques of seeking community input. Students go beyond the initial results of data to seek explanations for public health problems using a social ecological framework and public health behavioral theories. This course demonstrates the value of anchoring program planning in the social and behavioral sciences, which lays the groundwork for strong program implementation and evaluations.

Prerequisite(s): SPHU 1010.

SPHU 3120 Issues & Strategies in Public Health (3)
This seminar-style course is designed to provide students with basic biological and social concepts, control practices, and policies underlying the epidemiology of diseases of global importance. This course investigates how culture, society and the environment influence disease transmission, risk factors, disease prevention and health status. The course will be transdisciplinary, emphasizing the connections between the biological nature of disease and the social, economic and political context that influences prevention and control practices. Examples of health topics that may be addressed are malaria, neglected tropical diseases, diabetes, and vaccine preventable diseases.

SPHU 3170 Foundations of Epidemiology (3)
This course is designed to give students a general introduction to epidemiological concepts and basic tools of the field. The historic and current contributions made through the use of epidemiology in shaping our understanding of disease in populations will be described and investigated. The course will assist the student in establishing a foundation for the definition of and response to public health challenges in the community as well as the global society. The course will introduce a number of areas of specialization within the field of epidemiology including infectious and non-infectious diseases and other health issues.

SPHU 3200 Nutrition & Chronic Disease (3)
This course will provide students the opportunity to explore the complex relationships between diet, obesity and chronic disease outcomes particularly cardiovascular disease and cancer. The emphasis of the course will be using evidence-based approaches to investigate relationships between diet and disease. We will review research from experts in areas related to nutrition. The course will focus on the causal pathway from diet and inactivity to obesity to negative chronic outcomes with overnutrition being the pivotal mechanism to disease. Students will explore current diet trends and learn practical skills around making food choices in addition to examining the current research on diet factors associated with chronic disease.

Prerequisite(s): SPHU 3170.

SPHU 3330 Disasters & Environmental Health (3)
This course focuses on the complex intersection of population health and disasters through the lens of environmental health. Students will examine the impacts that disasters (natural and technological) have on environmental and human health, along with influences attributed to climate change. Case studies will be incorporated as a didactic and learning element of the course to highlight critical environmental health challenges, overall population health concerns, and associated impacts imposed by disasters.

SPHU 3350 Lifecycle Nutrition (3)
This course is designed to build on the basic principles of nutrition and explores nutrition through each major life stage including, but not limited to, pre-pregnancy, pregnancy, infancy, early childhood, childhood, adolescence/teenage years, adulthood, and older adulthood. During this course, students will apply basic nutrition knowledge to evaluate the rationale for nutritional needs of normal growth and development, eating habits, and dietary cautions for each life stage. Consequences of under-or over-nutrition at critical life stages and policies, programs, and interventions that have been implemented to address these consequences will also be examined. The role of the social determinants of health and other lifestyle factors in meeting suggested nutritional requirements and guidelines at various life stages will also be discussed.

Prerequisite(s): SPHU 2300.

SPHU 3360 Public Health Nutrition: Principles to Practice (3)
This course comprehensively explores the intersection between nutrition and public health. It introduces students to the science of nutrition and dietetic practice within community and public health settings, including skill sets and scope of practice found within public health nutrition. Through a structural, social-determinants lens, this course emphasizes the role of nutrition in disease prevention, health promotion, and overall well-being, considering existing and potential health inequities. Students will delve into multidisciplinary aspects of public health nutrition, such as program development and intervention, epidemiology, policy, assessment, and behavior change. Public health nutrition concepts and practices will be discussed in the context of individuals, communities, and populations, and public health nutrition programs and services in the US and globally will be highlighted.

Prerequisite(s): SPHU 2300.

SPHU 3500 Public Health Approach to Sexual Violence (3)
This course provides an in-depth examination of sexual violence from a public health perspective. Theories of sexual violence, the epidemiology of sexual violence (scope, causes, risk factors, and consequences), and public health approaches to reducing sexual violence will be covered.

SPHU 3560 Biological Basis of Disease (3)
Biological basis of disease provides a foundation of knowledge about the human body in health and disease. The focus of the course is on the biological mechanisms of disease with an emphasis on molecular, cellular, genetic, and immunological aspects. The etiology and pathophysiology of the most important infectious and non-infectious diseases in terms of prevalence and mortality are thoroughly discussed. Applications of genomics and other biotechnologies to health and disease, as well as its treatment and prevention, are also covered. Intermediate and advanced students in public health, pre-medicine, or other biomedical fields may find this course particularly useful.

Prerequisite(s): CELL 1010 or SPHU 1020.

SPHU 3570 Introductory Microbiology (3)
This course is an introduction to the biology of bacteria, protists, fungi, and viruses, their structure, life cycles, geochemical activities, diversity, and nutrition. We will also cover fundamentals of metabolism, genetics and genomics, microbial biotechnology, roles in health, disease and human immunological responses. This course is meant for students with fundamental understanding of general biology, molecular biology, and organic chemistry.

SPHU 3600 Women's Reproduction & Obstetric Health (3)
This course is geared toward public health undergraduate students with a strong interest in women and maternal health. The course has two distinct objectives. The first objective is to provide an overview of the pathophysiology of the female reproductive system and a survey of the complications of pregnancy, labor and delivery. The second objective is to explore medical and lay practices related to women gynecological and obstetric health, in USA and worldwide. Existing scientific evidences associated with these practices will be examined, along with ways to reconcile medical authoritative knowledge and women's autonomy.

SPHU 3810 Special Topics in Public Health (0-3)
Special Topics in Public Health. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPHU 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPHU 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): SPHU 3011.

Maximum Hours: 99

SPHU 3910 Special Topics (3)
Special Topics course

Maximum Hours: 99

SPHU 3920 Special Topics (3)
Special Topics course

Maximum Hours: 99

SPHU 3940 Transfer Coursework (0-20)

Maximum Hours: 99

SPHU 4010 Formulation of Public Health Policy (3)
An overview of the roles and responsibilities of public health government, nongovernment agencies, private organizations, health services, and health systems in promoting health. An overview of the influence of policies, laws, regulations, and legislation on both individual and population health. The course will include both historic and modern case studies of existing and emerging public health issues at the local, national, and global level.

Prerequisite(s): SPHU 1010.

SPHU 4160 Introduction to Statistical Packages (3)
This course covers the elementary concepts and applications for managing and analyzing data using the Statistical Analysis System (SAS) and Stata statistical packages. The concepts covered are applicable to virtually all academic and professional settings. Each lecture begins with a presentation to introduce fundamental mapping concepts and is complemented with hands-on exercises to reinforce technical application. The first part of the course covers SAS applications, and the analog concepts for Stata are covered in the second part of the course.

Prerequisite(s): SPHU 2160.

SPHU 4180 Introduction to Qualitative Methods (3)
Qualitative data can be a valuable source of information for public health programs. This course is an applied learning experience to equip public health students with skills in qualitative research. Course lectures, readings, and activities are linked to a project with a public health organization in New Orleans. Students learn principles of qualitative research, how to collect, organize, and store textual data using NVIVIO software, and approaches to textual data analysis and presentation.

SPHU 4200 Evidence Based Public Health (3)
This course introduces the student to the scientific, epidemiological, organizational and management skills needed in designing and obtaining funding for an evidence-based public health intervention within an organizational or community setting. Students become familiar with the role and operation of not-for-profit organizations, foundations, national and international government agencies, and the local community in this process. Students learn to access publicly available and electronic information provided by these agencies and organizations. The course illustrates how evidence-based public health is used by funding agencies in developing and awarding grants and by public health providers and community contractors in applying for and receiving them. Emphasis is placed on how evidence-based public health is used in writing grant proposals and students have an opportunity to write a grant proposal as part of the course.

Prerequisite(s): SPHU 1010.

SPHU 4210 Health & Environmental Risk (3)
This course covers the basic concepts of environmental health risk assessment. The National Academy of Sciences model framework for chemical risk assessment (hazard identification, dose response assessment, exposure analysis, and risk characterization) is used throughout the course. An introduction to toxicology and the rationale for risk assessment used by federal agencies will be discussed. Case studies on contemporary environmental pollutants, personal care products, etc., will be covered in the course.

Prerequisite(s): SPHU 2150.

SPHU 4220 Latino Health in the US (3)
Addressing the health needs of Latinos in socially and culturally appropriate ways is critically important for creating an inclusive, cost-effective health care system and a more equitable society. Effective public health policies, interventions and population-based preventive programs are important tools for promoting healthy behaviors and reducing risk factors for adverse health outcomes in this vulnerable population. The goal of this course is to strengthen student's knowledge and understanding of Latinos in the United States and the health problems affecting them at the individual, community, and population level. Students will explore successful policies and public health interventions targeting those populations.

Prerequisite(s): SPHU 3110*.
* May be taken concurrently.

SPHU 4240 Epidemiology of Sexually Transmitted Infections (3)
This course is designed to provide students with the skills to conduct epidemiologic research in HIV and other sexually acquired infections. The first part of the course, we discuss the etiology, treatment, epidemiology and common prevention methods for the most common and/or most serious STIs. In the second part of the course, we will cover the methodological issues of surveillance, study design in the context of clinical and behavioral research. Ethical aspects of conducting research in HIV/STI are also discussed. Students will have hands on practice examining methodological issues by completing four exercises. Finally, we put STIs into context by discussing social, economic and political ramifications of these infections in the world by reviewing two books and one movie that illustrate these concepts.

Prerequisite(s): SPHU 3170.

SPHU 4260 Organizational Leadership and Management in Public Health (3)
Organizational Leadership and Management in Public Health is a interdisciplinary course that examines the complex challenges inherent in leading and managing organizations in the public health sphere, including public and private settings. Students will explore leadership and management principles in the current environment through the analysis of case studies and current events. In-class activities will expose students to diverse perspectives and challenges of leadership and decision-making.

SPHU 4300 Public Health Communication (3)
This course examines the intended and unintended effects of health communication, with specific focus on how the mass media and the Internet stimulate change in knowledge, attitudes, behavior, and subsequent health outcomes. Three health communication foci will be explored: 1) planned communication campaigns designed specifically to elicit health behavioral change, 2) traditional mass media's role in influencing health outcomes, and 3) the evolving influence of the Internet on health outcomes. This course examines the linkages between communication effects and various health topics, including smoking/alcohol, sex, diet, and physical activity. By the end of the course, students will understand the theoretical and practical aspects of the linkage between communication and public health and be able to apply such to public health initiatives.

Prerequisite(s): SPHU 1010.

SPHU 4310 Nutrition Education and Communication (3)
This course prepares the future public health nutrition professional with the necessary skills and strategies to provide nutrition education to and communicate with individuals, communities, and populations. While considering cultural differences, root causes of health inequities, and differences in health literacy levels, this course will explore evidence-based principles, strategies, and methods used in nutrition education and communication. During this course, students will analyze different communication techniques and the utilization of various platforms to disseminate accurate nutritional information. A strong focus of this course is on developing skills in designing educational programs, creating materials, and employing communication strategies to promote healthy eating behaviors and improve nutritional outcomes. Students will practice individual counseling approaches, participate in social media, and engage with and critique nutrition information delivered through mass media.

Prerequisite(s): SPHU 2300 and 3360*.
* May be taken concurrently.

SPHU 4330 Resilience in International Disasters (3)
This course addresses the field of disaster and international humanitarian studies, trends and recent developments in the field, and strategies to reduce disaster risk. It builds basic concepts and tools that will prepare students to understand humanitarian issues for disaster management. Students will learn to articulate concepts about disasters and the changing patterns of disasters, disaster resilience and international humanitarian response. They will develop a broad view of the key organizations involved in and components of the international humanitarian response system. The course methodology includes case studies of major disasters including the Haiti earthquake of 2010, Hurricane Katrina, the current crisis in Syria, famines in the Horn of Africa, Sahel, Southern Africa and the 2004 Asian Tsunami. Students will gain hands-on experience in computing indicators used to determine the effects of disasters on public health. Guest lecturers from the Centers for Disease Control will participate through tele video-conferencing.

Prerequisite(s): SPHU 1010.

SPHU 4340 Public Health Genomics (3)
This course is designed to prepare public health students for the study of human health in a post-genome era. Students will learn the molecular basics and the complex issues involved in applying and integrating genomic technology and information into public health. The students will be able to discuss the ethical, legal, and social implications of genomics on public health.

SPHU 4350 Zoonotic Infections (3)
This course provides a foundation of knowledge on the public health consequences of infections originating in vertebrate animals that cross over to humans with or without disease. Topics include: the consequences of animal-transmitted infections on the emergence of new human diseases; adaptation process of animal infections transitioning from animal microbes to become human microbes; human activities, occupational exposures, and medical practices that enable microbial transitions. Students will present reports and follow zoonotic disease outbreaks in real time.

Prerequisite(s): SPHU 1020.

SPHU 4410 Data and Information Management in Public Health (3)
This course provides students with a full introduction to data and information management. The topics include tools for collecting data, database concepts, data-entry techniques, queries of databases, data sharing, data reporting, and database design. Hands-on exercises are mainly practiced on MS Access. Having taken the course, students will be able to perform basic database functions to clean, collect, sort, share, retrieve, report, and alter data.

SPHU 4540 Capstone Senior Seminar (3)
This seminar is designed for public health students in their senior year. The course fulfills the Public Health capstone requirement. The class sessions will facilitate individual growth and career development through a series of guest lecture presentations, reflection essays, and the development of a professional public health portfolio.

SPHU 4550 Capstone Independent Study (3)
Working one-on-one with a faculty member, the student will complete a high-level research paper. Students should seek out a sponsoring faculty mentor and speak to the program manager to register for credit.

SPHU 4560 Capstone Internship (3)
This seminar is designed for students doing a public service internship during the spring. The seminar offers students an opportunity to discuss and explore issues related to their internship experience including the topics of service, service-learning in higher education, and civic engagement. Finally, the seminar is meant to compliment the public service internship experience in facilitating individual growth and career development.

Maximum Hours: 99

SPHU 4570 Internship (3)
Public Health Internship. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPHU 4580 Capstone International Program (3)
Tulane's Office of Study Abroad works with international programs that provide academic research or internship projects, which can count as a public health Capstone. To complete this type of Capstone, the experience needs to be approved by the department program staff.

SPHU 4810 Special Topics in Public Health (1-3)
Special Topics in Public Health. Course may be repeated up to unlimited credit hours.

Prerequisite(s): SPHU 1010 and 1020.

Maximum Hours: 99

SPHU 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPHU 4892 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPHU 4910 Independent Study (1-3)
The student will work closely with a faculty member from the department of Environmental Health Sciences. The student and faculty member will craft a research topic together. Students should consult their advisor for assistance. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPHU 4920 Independent Study (1-3)
The student will work closely with a faculty member from the department of Environmental Health Sciences. The student and faculty member will craft a research topic together. Students should consult their advisor for assistance.

SPHU 4990 Honors Thesis (3)
During the senior year students may write an Honors Thesis that may be used to fulfill the BSPH Capstone. To be eligible to write an Honors Thesis, a student must have an overall cumulative GPA of 3.4 or higher, and a GPA of 3.5 or higher in the major or majors for which the thesis is to be written. The Honors Thesis requires two semesters (SPHU 4990 Fall and SPHU 5000 Spring) of work with a three-member faculty thesis committee. This option can be very rewarding for students planning to go on to graduate school. Interested students should speak to a faculty member during their third year at Tulane about this option, as well as to administrators of the Office of Academic Enrichment. Students receive 7 total credit hours as well as writing intensive credit for completing an Honors Thesis.

SPHU 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): SPHU 4990.

SPHU 5380 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPHU 5390 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Public Service (SRVC)

SRVC 4890 Public Service Internship (0)
This course carries the second tier public service graduation requirement when associated with xxxx 4560/4570 Internship Seminar courses offered through various departments. Internship Seminars are designed for students completing public service internships for elective and public service credit. They offer students an opportunity to discuss and explore issues related to their internship experience. Internship Seminars are academic courses based on discussion sessions, professional development workshops, guest speakers from local organizations, and student presentations. They meet weekly during the academic year and run online during summer. CPS Internship Coordinators facilitate student placements in one of the following seminars, depending on their department for credit and their internship: Communication Internship (limited to Communication major/minors only), Careers in Health Sciences, Leadership and Ethics in Public Health, Psychology Internship, STEM Education Internship, Public History Internship Seminar, or Topics in Community Engagement. Students receive a letter grade for their participation in the Public Service Internship Program. The letter grade is posted to the xxxx 4560/4570 departmental courses, which carry elective credits. The final grade reflects work in the Internship Seminar and an evaluation of the internship by the Internship Supervisor. SRVC 4890 courses are graded S/U (based on completion of minimum number of hours required by department).

Maximum Hours: 99

SRVC 4900 Public Service Independent Study (0)
This course carries the second tier public service graduation requirement when associated with Independent Study and Honors Theses courses offered through various departments. Students must submit a petition via the Center for Public Service, which must be approved in order for the Independent Study/Honors Thesis course to fulfill the second tier. All public service independent studies and public service honors theses must meet the following requirements: Apply academic knowledge and critical thinking skills to meet genuine community needs; Include community-based research under the supervision of a Tulane faculty member; Require direct engagement with a community partner/organization; Community engagement must connect with the academic field for which credit is being earned; Research findings must benefit and be shared with the community partner. Students are expected to provide their community partner with tangible products of work that benefits the partner organization; Semester-long volunteer assignments will not be approved for public service credit. For more information on the petitioning process, please contact the Center for Public Service.

Religious Studies (PARL)

PARL 2931 Middle Eastern Religion (3)
This course examines some of the religious traditions of the Middle East in terms of their history, worldview, devotional practices, cultural expressions, goals and ideas. We will survey the main themes of each religion in a functional way, to examine how religion has worked to influence the region and sub sequential worldview through means such as ritual, myth, symbolism, individual and institutional meaning. Course topics include: Zoroastrianism, Baha'i, Judaism, Christianity and Islam among others.

PARL 3330 World Religions (3)
This course presents the student with a survey of the principal living religions in the modern world, and provides the necessary intellectual tools to understand their history and relation to world events and contemporary issues. The student will also learn to identify underlying religious patterns throughout a large variety of cultures, ancient and modern, incorporating the study of myth, symbol, ritual, scripture, music, and community.

PARL 3911 Special Topics (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Religious Studies (RLST)

RLST 1020 Religions of the World (3)
An introduction to historical origins, teachings, scriptures, and devotional practices of major religious traditions, including Hinduism, Buddhism, Confucianism and Taoism, Judaism, Christianity, and Islam.

RLST 1100 Intro To Religious Stud (3)
This course gives an overview of the development of the western approach to the study of religion. It will be comparative and cover many aspects of world civilization, provide a window on the cultural dimensions of global politics, and supply a way of perceiving approaches to the study of religion under the rubrics of anthropology of religion, sociology of religion, history and phenomenology of religion, and philosophy of religion. Important theorists and schools of thought will also be examined.

RLST 1290 Semester Abroad (1-20)
Semester Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RLST 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

RLST 2390 Semester Abroad (1-20)
Semester Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RLST 2910 Spec Topics Rel Studies (3)
This course will cover special topics in Religious Studies offered by one of the cooperating departments in the RLST program. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RLST 2920 Spec Topics Rel Studies (3)
This course will cover special topics in Religious Studies offered by one of the cooperating departments in the RLST program. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RLST 3020 Religious Tolerance & Coexiste (3)
How have Christians, Muslims, and Jews or members of other religions lived together in political communities of particular places and times? This course uses historical reports, memoirs, religious texts, fiction and film to explore tolerance and co-existence of different religious groups in societies drawn from different epochs in America, Europe, the Middle East and elsewhere.

RLST 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

RLST 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

RLST 3950 Spec Topics Rel Studies (3)
This course will cover special topics in Religious Studies offered by one of the cooperating departments in the RLST program. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RLST 3960 Spec Topics Rel Studies (3)
This course will cover special topics in Religious Studies offered by one of the cooperating departments in the RLST program. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RLST 4910 Independent Study (3)
Open to students provided that the appropriate faculty director is available. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RLST 4920 Independent Study (3)
Open to students provided that the appropriate faculty director is available. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RLST 4950 Spec Topics Rel Studies (3)
This course will cover special topics in Religious Studies offered by one of the cooperating departments in the RLST program. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RLST 4960 Spec Topics Rel Studies (3)
This course will cover special topics in Religious Studies offered by one of the cooperating departments in the RLST program. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RLST 4990 Honors Thesis (3)
Honors Thesis.

RLST 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): RLST 4990.

RLST 5190 Semester Abroad (1-20)
Semester Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RLST 5380 Junior Year Abroad (1-20)
Junior Year Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RLST 5390 Junior Year Abroad (1-20)
Junior Year Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

River-Coastal Science & Engineering (RCSE)

RCSE 1030 Climate Change and Global Rivers (3)
This course covers the basic principles of global climate change, global change and the management of water resources above and below ground. The course will begin with a review of the IPCC Climate Change 2022: Impacts, Adaptation and Vulnerability Summary for Policy Makers and selected readings covering concepts in the UN Sustainable Targets Network draft methodology for corporate water sustainability. From here we will survey large river systems in a compare/contrast modality using the IPCC, UNSDG and SBTN-W frameworks as a lens through which to see future pathways. We will spend the first several weeks in the US on the Colorado and Mississippi River basins. From here we will explore global basins (one per week) including: the Mekong, Amazon, Ganges-Indus, Yellow-Yangtze and the Congo. The course will deliver introductory skills in collaboration, science communication, systems thinking and synthesis, and science diplomacy.

RCSE 1040 The Gulf Coast in 2100: Sustaining Healthy Ecosystems and Vibrant Community (3)
In the 21st century, Gulf Coast ecosystems, communities and economies are under unprecedented threat from the effects of a rapidly changing climate, compounded by pre-existing human and natural factors. This seminar-based course will use a diverse team of instructors and guest discussion leaders to outline the issues and challenges that are underway in the Gulf, and to explore solutions. A second goal will be to explore possible career and advocacy pathways for students to contribute to “Saving the Gulf Coast”.

RCSE 1660 Special Topics in River Coastal Science and Engineering (3)
Special Topics course for Undergraduates at the 1000 level.

Maximum Hours: 99

RCSE 2660 Special Topics in River Coastal Science and Engineering (3)
Special Topics course for Undergraduates at the 2000 level.

Maximum Hours: 99

RCSE 3010 Water Resources Engineering - I (3)
This course covers the static and dynamic behavior of incompressible fluids; development of the continuity, energy and momentum equations using the control volume approach; dimensional analysis, similitude and model testing laws; steady, incompressible fluid flow in series, parallel, and branching pressure conduits; and turbulent and laminar boundary concepts.

Prerequisite(s): ENGP 1410.

RCSE 3660 Special Topics in River Coastal Science and Engineering (3)
Special Topics course for Undergraduates at the 3000 level.

Maximum Hours: 99

RCSE 4010 Water Resources Engineering II (3)
This course covers the basic principles of flow in open channels, open channel transitions, pumping system (water and wastewater), flow through hydraulic structures, and drainage analysis. It also includes hydraulics of flow in closed conduits, municipal water distribution systems. The laboratory section of this course focuses on flow measurements and non-uniform flow analysis: e.g., flow over a weir, hydraulic jump, losses through a pipe system, and flow visualization techniques.

Prerequisite(s): (RCSE 3010, BMEN 3440 or CENG 2320).

RCSE 4030 Water Resources Engineering III (3)
This course covers the basic principles of hydrologic science and their application to the solution of hydraulic, hydrologic, environmental, and water resources engineering problems; environmental restoration and protection techniques. Specifically, the course covers rainfall and catchment properties, hydrologic abstractions, hydrologic measurements, small and midsize catchments hydrology, reservoir routing, hydrologic and hydraulic routing.

Prerequisite(s): RCSE 3010 or CENG 2320.

RCSE 4660 Special Topics in River Coastal Science and Engineering (3)
Special Topics course for Undergraduates at the 4000 level.

Maximum Hours: 99

RCSE 6010 Water Resources Engineering II (3)
This course covers the basic principles of flow in open channels, open channel transitions, pumping system (water and wastewater), flow through hydraulic structures, and drainage analysis. It also includes hydraulics of flow in closed conduits, municipal water distribution systems. The laboratory section of this course focuses on flow measurements and non-uniform flow analysis: e.g., flow over a weir, hydraulic jump, losses through a pipe system, and flow visualization techniques.

RCSE 6030 Water Resources Engineering III (3)
This course covers the basic principles of hydrologic science and their application to the solution of hydraulic, hydrologic, environmental, and water resources engineering problems; environmental restoration and protection techniques. Specifically, the course covers rainfall and catchment properties, hydrologic abstractions, hydrologic measurements, small and midsize catchments hydrology, reservoir routing, hydrologic and hydraulic routing. Graduate students will be given additional writing and presentation assignments.

RCSE 6040 Coastal Marine Geology (3)
Geomorphic features of estuarine, coastal, and continental shelf environments: erosional, depositional, and geochemical processes; field and laboratory methods; emphasis on dynamic coastal environments of the northern Gulf of Mexico.

RCSE 6660 Special Topics (1-3)
Special Topics. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RCSE 6661 Special Topics (1-3)
Special Topics. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RCSE 6710 Open Channel Flow (3)
This course covers the principles of open channel hydraulics, and their applications for analysis and design of river channels. Specifically, the course covers open channels classifications and properties, computation of uniform flow, steady gradually varied flow, flow over hydraulic structures (spillways, weirs, gates, culverts, syphons, and pumps), hydraulic jump, flow characteristics in meandering rivers and nonprismatic channels, and unsteady flow. Pre-requisite: Permission of instructor.

RCSE 6800 Intro to River Science & Eng (3)
Rivers drain the majority of non-ice-covered land surfaces on Earth and are the primary conduit for freshwater, minerals, carbon, and dissolved ions to the global ocean. In the 21st century, rivers large and small are being increasingly managed for flood control, as a source of water (agricultural, industrial, potable), recreation and navigation, all of which can have system-wide environmental consequences. Future basin and global-scale climate changes must also be considered in management decisions. This course is designed to be a graduate and advanced undergraduate, interdisciplinary examination of river science and engineering practices that can serve as a springboard to more advanced coursework on the disciplinary aspects covered. It will also be useful to practitioners who require an interdisciplinary overview of river systems to more effectively perform their professional duties.

RCSE 6802 Introduction to Coastal Science and Engineering (3)
With approximately 3 billion people living within 200 kilometers of the world's coastlines, coastal regions are home to a large and ever-growing population. A broad engineering knowledge is fundamental for the construction, protection, and maintenance of these coastal communities, and a good scientific understanding of the main underlying physical, chemical and ecological processes is particularly necessary considering the climatic changes we are facing in the 21st century. This course is designed to be a graduate and advanced undergraduate, interdisciplinary examination of coastal science and engineering practices that can serve as a springboard to more advanced coursework on the disciplinary aspects covered. It will also be useful to practitioners who require an interdisciplinary overview of coastal systems to more effectively perform their professional duties.

RCSE 6810 River and Stream Restoration (3)
Rivers and streams are complex ecosystems which have interconnected geologic, geomorphologic, chemical and biological underpinnings. As the demands of human populations have increased over the past several centuries, rivers and streams have often been pushed beyond their ability to maintain the dynamic equilibrium inherent to the system. In recent decades, in an attempt to restore some of the values and functions to these systems, river and stream restoration has emerged as a multi-billion-dollar industry. This course will cover the definitions of river and stream restoration, discuss the planning process associated with solid restoration efforts, present restoration techniques, discuss environmental flows as restoration measures, present commonly applied design concepts and consider how uncertainty, monitoring, and adaptive management may be applied to river and stream restoration efforts.

Prerequisite(s): RCSE 6800 or SCEN 6800.

RCSE 6820 Introduction to River-Coastal Hydrologic and Hydraulic Modeling (3)
Numerical models are effective and informative research, design, and planning tools. The substantial advancement in computational power has allowed numerical models to be a viable and efficient tool to solve complex problems and improve our understanding of the fundamentals in the water resources field. Therefore, it is critical to provide an in-depth understanding of the basics of numerical modeling techniques and recognize the strengths and limitations of these techniques. This 3 credit hour graduate level introductory modeling course will provide general overview of the basics of numerical modeling, model development, and applications. This course will also include opportunities for the students to participate in hands-on applications to examine a research, design or a planning problem and explore ways where numerical models can provide usable information to answer or provide insights into these questions. Permission from instructor required to register.

RCSE 6830 River Mechanics & Management (3)
This course will provide a thorough understanding of the practical application of river mechanics. This science is a critical, but often overlooked component, of any river management project. The River Mechanics and Management course introduces the student to a wide range of river topics related to the engineering and management of river systems. This includes an advanced examination of fluvial processes, channel stability concepts, sediment transport, and design considerations for commonly used engineering features. The course will also provide instruction on designing structural elements to aid in the management of river channels and floodplain. The course will emphasize the interdisciplinary nature of river science and engineering.

Prerequisite(s): RCSE 6800.

RCSE 6840 Methods in River Sampling (3)
Tools and procedures developed for sampling and monitoring riverine systems over the last century are distinct from those developed for other aqueous environments. In addition to the need for tools tailored for systems of a wide range of size, energy, and setting, effective river monitoring also needs to capture highly episodic hydrographs that encompass large overbank areas during floods. River monitoring has profound implications in managing rivers for human use and for channel and riparian ecosystem health. Rivers are also highly sensitive to climate, and historical records of their behavior are a key indicator of changing climate on a basin and global scale. This course is designed to examine river sampling as conducted by agencies and academic researchers, including the use of remote sensing, and the collection of ecological, water chemistry, hydrological, sediment dynamics, and morphological evolution data sets. Historical data will be examined to define statistical data analytical procedures.

Prerequisite(s): RCSE 6800.

RCSE 6850 Estuarine Processes (3)
Estuaries, where rivers meet the ocean, are among the most productive and dynamic systems on earth, and they are valued for recreation, habitat, and navigation. They are often located in areas with large populations, frequently resulting in intense competition for resources. This class will be taught to convey basic concepts that are important in estuary dynamics. It will include an introduction to estuarine ecology, descriptions of the generation of tides, tie wave propagation within the estuary, the role of salinity and density currents, estuarine sedimentation and an overview of navigation concerns. An emphasis will be placed on understanding the relationships between ecological and physical systems. The class will provide an understanding of ecosystem impacts as a result of physical changes in the estuary. Numerical models are the standard approach for investigating estuary behavior and will be used as a construct to understand estuaries, but prior knowledge of modeling is not required.

Prerequisite(s): RCSE 6800.

RCSE 6860 Environmental Data Analysis in the Anthropocene (3)
Scientists, engineers, and planners are increasingly faced with the challenges of a changing environment. These changes can be climate change related – and associated with factors such as sea-level rise, droughts, or heavy precipitation – or result from more local human overprints of the natural landscape (e.g., changes in land use, dredging of rivers, flood protection measures). But they all require, more than ever, tailored data analysis tools to capture transient behaviors, non-stationarity, and new equilibria. This class equips students with the probability, data, and time series analysis tools that they need to interpret a wide range of environmental data - from lab measurements to field observations.

Prerequisite(s): RCSE 6800 or 6802.

RCSE 6870 Hydroclimatology (3)
The course will cover four major themes and their specific methods. First, we will review the physical processes behind precipitation, cloud formation, and hydrological partitioning at small hydrological scales (small catchments and sub-basins) to understand how climate influences and is influenced by energy and water exchange at the planet's surface. Then, we will discuss how land use and coverage changes affect hydro-climatological processes at the regional scale (the size of the Mississippi River basin and a bit below) and how to measure the magnitudes of these changes via micro-meteorological techniques. At the larger synoptic scales, we will learn how climatic modes of variability – like ENSO – influence the hydroclimate. Finally, we will review probabilistic and stochastic methods to estimate hydrologic change from data and project the future with a resilient hydraulic infrastructure in mind.

Prerequisite(s): RCSE 6800 or 6802.

RCSE 6900 Independent Study (1-3)
Independent study on a research topic of choice under the direction of a faculty member.

Maximum Hours: 99

RCSE 7100 Seminar in River Coastal Science and Engineering (1)
Research seminars led by a speaker with external readings and discussions with the seminar speaker.

Course Limit: 3

RCSE 7940 Transfer Credit- Graduate (1-12)
Graduate Transfer Credit in River Coastal Science and Engineering.

Maximum Hours: 99

RCSE 9980 Masters Research (0-3)
Research toward completion of a master degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

RCSE 9990 Dissertation Research (0-3)
Research toward completion of a doctoral degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ROTC - Aerospace Studies (AERO)

AERO 1010 Heritage and Values of the USAF I (1)
"Heritage and Values," is a survey course designed to introduce students to the United States Air and Space Forces and provides an overview of the basic characteristics, missions, and organization of the Air and Space Forces. Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with Leadership experiences.

AERO 1011 Heritage and Values of the USAF I LAB (0)
This lab is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Department of the Air Force second lieutenants and complement the AFROTC academic program. It is a student planned, organized, and executed practicum conducted under the supervision of the Detachment Commander and Operations Flight Commander.

AERO 1020 Heritage and Values of the USAF II (1)
This is a survey course designed to introduce students to the United States Air and Space Forces and provides an overview of the basic characteristics, missions, and organization of the Air and Space Forces. Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with Leadership experiences.

Corequisite(s): AERO 1021.

AERO 1021 Heritage and Values of the USAF II LAB (0)
This lab is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Department of the Air Force second lieutenants and complement the AFROTC academic program. It is a student planned, organized, and executed practicum conducted under the supervision of the Detachment Commander and Operations Flight Commander.

Corequisite(s): AERO 1020.

AERO 1210 Evol Usaf Air&Space Pow (1)

AERO 1220 Air Power History II (1)

AERO 1290 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

AERO 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

AERO 2010 Team and Leadership Fundamentals I (1)
"Team and Leadership Fundamentals" provides a fundamental understanding of both leadership and team building. The lessons and course flow are designed to prepare students for field training and leadership positions in the detachment. Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with Leadership experiences.

AERO 2011 Team and Leadership Fundamentals I LAB (0)
This lab is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Department of the Air Force second lieutenants and complement the AFROTC academic program. It is a student planned, organized, and executed practicum conducted under the supervision of the Detachment Commander and Operations Flight Commander.

AERO 2020 Team and Leadership Fundamentals II (1)
This course provides a fundamental understanding of both leadership and team building. The lessons and course flow are designed to prepare students for field training and leadership positions in the detachment. Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with Leadership experiences.

Corequisite(s): AERO 2021.

AERO 2021 Team and Leadership Fundamentals II LAB (0)
This lab is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Department of the Air Force second lieutenants and complement the AFROTC academic program. It is a student planned, organized, and executed practicum conducted under the supervision of the Detachment Commander and Operations Flight Commander.

Corequisite(s): AERO 2020.

AERO 2390 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

AERO 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

AERO 3010 Leading People and Effective Communication I (3)
This course utilizes student's field training experience to take a more in-depth look at leadership. Special emphasis is placed on enhancing communication skills, and why that is important as a leader. Students have an opportunity to try out these leadership and management techniques in a supervised environment as juniors and seniors. Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with Leadership experiences.

AERO 3011 Leading People and Effective Communication I LAB (0)
This lab is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Department of the Air Force second lieutenants and complement the AFROTC academic program. It is a student planned, organized, and executed practicum conducted under the supervision of the Detachment Commander and Operations Flight Commander.

utilizes student's field training experience to take a more in-depth look at leadership. Special emphasis is placed on enhancing communication skills, and why that is important as a leader. Students have an opportunity to try out these leadership and management techniques in a supervised environment as juniors and seniors. Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with Leadership experiences.

Corequisite(s): AERO 3021.

AERO 3021 Leading People and Effective Communication II (0)
This lab is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Department of the Air Force second lieutenants and complement the AFROTC academic program. It is a student planned, organized, and executed practicum conducted under the supervision of the Detachment Commander and Operations Flight Commander.

Corequisite(s): AERO 3020.

AERO 4010 National Security/Commissioning Preparation I (3)
This course is designed for college seniors and gives them the foundation to understand their role as military officers and how they are directly tied to our National Security Strategy. It is an overview of the complex social and political issues facing the military profession and requires a measure of sophistication commensurate with the senior college level. Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with Leadership experiences.

AERO 4011 National Security/Commissioning Preparation I LAB (0)
This lab is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Department of the Air Force second lieutenants and complement the AFROTC academic program. It is a student planned, organized, and executed practicum conducted under the supervision of the Detachment Commander and Operations Flight Commander.

AERO 4020 National Security/Commissioning Preparation II (3)

AERO 4021 National Security/Commissioning Preparation II LAB (0)
This lab is a dynamic and integrated grouping of leadership developmental activities designed to meet the needs and expectations of prospective Department of the Air Force second lieutenants and complement the AFROTC academic program. It is a student planned, organized, and executed practicum conducted under the supervision of the Detachment Commander and Operations Flight Commander.

Corequisite(s): AERO 4020.

AERO 5190 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

AERO 5380 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

AERO 5390 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

AERO 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

ROTC - Military Science (MILS)

MILS 1010 Intro Army & Critical Thinking (1)
MILS 1010 introduces you to the personal challenges and competencies that are critical for effective leadership and communication. You will learn how the personal development of life skills such as cultural understanding, goal setting, time management, mental/physical resiliency, and stress management relate to leadership, Officership, and the Army profession. As you become further acquainted with MILS 1010, you will learn the structure of the ROTC Basic Course program consisting of MILS 1010, 1020, 2010, 2020, Fall and Spring Leadership Labs, and Base Camp. The focus is on developing basic knowledge and comprehension of Army leadership dimensions, attributes and core leader competencies while gaining an understanding of the ROTC program, its purpose in the Army, and its advantages for the student.

Corequisite(s): MILS 1011.

MILS 1011 Intro Army & Critical Thinking (0)
Corequisite(s): MILS 1010.

MILS 1020 Intro Profession of Arms (2)
MILS 1020 overviews leadership fundamentals such as setting direction, problem-solving, listening, presenting briefs, providing feedback, and using effective writing skills. You will explore dimensions of leadership attributes and core leader competencies in the context of practical, hands-on, and interactive exercises. As you become further acquainted with MILS 1020, you will learn the structure of the ROTC Basic Course program consisting of MILS 1010, 1020, 2010, 2020, Fall and Spring Leadership Labs, and Basic Camp. The key objective this semester is to explore (in more detail) the Army's leadership philosophy and learn fundamental military concepts. Emphasis on Army leadership will provide the learner a better understanding of the ROTC program, its purpose in the Army, and its advantages for the student.

Corequisite(s): MILS 1021.

MILS 1021 Intro Profession of Arms (0)
Lab. Corequisite(s): MILS 1020.

Corequisite(s): MILS 1020.

MILS 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

MILS 2010 Leadership & Decision Making (2)
MILS 2010 explores the dimensions of creative and innovative tactical leadership strategies and styles by examining team dynamics and two historical leadership theories that form the basis of the Army leadership framework. Aspects of personal motivation and team building are practiced planning, executing and assessing team exercises. While participation in the leadership labs is not mandatory during the MILS II year, significant experience can be gained in a multitude of areas and participation in the labs is highly encouraged. The focus continues to build on developing knowledge of the leadership attributes and core leader competencies through the understanding of Army rank, structure, and duties as well as broadening knowledge of land navigation and squad tactics. Case studies will provide a tangible context for learning the Soldier's Creed and Warrior Ethos.

Corequisite(s): MILS 2011.

MILS 2011 Leadership & Decision Making (0)
Corequisite(s): MILS 2010.

MILS 2020 Army Doctrine & Team Deve (2)
MILS 2020 examines the challenges of leading teams in the complex operational environment. The course highlights dimensions of terrain analysis, patrolling, and operation orders. Further study of the theoretical basis of the Army Leadership Requirements Model explores the dynamics of adaptive leadership in the context of military operations. MILS 2020 prepares Cadets for MILS 3010. Cadets develop greater self-awareness as they assess their own leadership styles and practice communication and team building skills. Case studies give insight into the importance and practice of teamwork and tactics in real-world scenarios.

Corequisite(s): MILS 2021.

MILS 2021 Army Doctrine & Team Deve (0)
Corequisite(s): MILS 2020.

Corequisite(s): MILS 2020.

MILS 2530 Military History (3)

MILS 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

MILS 3010 Tring Mgmt & Warfighting Func (3)
This course is designed to provide opportunities, apply learned skills, and evaluate progress in preparation for successful completion of LDAC. This course is physically and intellectually demanding. Ultimately, each MILS III Cadet is trained in skills such as map reading, land navigation, combat water survival training, basic rifle marksmanship, troop leading procedures, operations order process, briefing skills, problem solving and small-unit tactics/techniques. Active leadership and leadership application techniques is stressed and evaluated during the course.

Prerequisite(s): MILS 1010, 1020, 2010 and 2020.
Corequisite(s): MILS 3011.

MILS 3011 Tring Mgmt & Warfig Func Lab (0)
Corequisite(s): MILS 3010.

MILS 3020 Applied Leadership-Small Unit Ops (2)
This is an academically challenging course where you will study, practice, and apply the fundamentals of Army Leadership, Officership, Army Values and ethics, personal development, and small unit tactics at the team and squad level. At the conclusion of this course, you will be capable of planning, coordinating, navigating, motivating and leading a team or squad in the execution of a tactical mission during a classroom PE, a Leadership Lab, or during a Situational Training Exercise (STX) in a field environment. Successful completion of this course will help prepare you for success at the ROTC Advanced Camp in which you will attend next summer at Ft. Knox, KY. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies, and practical exercises, a mid-term exam, and a final exam. You will receive systematic and specific feedback on your leader attributes values and core leader competencies from your instructor and other ROTC cadre and MILS IV Cadets who will evaluate you using the ROTC Leader Development Program (LDP) model.

Corequisite(s): MILS 3021.

MILS 3021 Appld Ldership-Sm Unit Ops Lab (0)
Corequisite(s): MILS 3020.

Corequisite(s): MILS 3020.

MILS 4010 The Army Officer (3)
MILS 4010 transitions the focus of student learning from being trained, mentored and evaluated as an MILS III Cadet to learning how to train, mentor and evaluate underclass Cadets. MILS IV Cadets learn the duties and responsibilities of an Army staff officer and apply the Military Decision Making Process, Army Writing Style, and the Army's Training Management and METL Development processes during weekly Training Meetings to plan, execute and assess battalion training events. Cadets learn to safely conduct training by understanding and employing the Composite Risk Management Process. Cadets learn how to use the Comprehensive Soldier Fitness (CSF) program to reduce and manage stress.

Prerequisite(s): MILS 3010.
Corequisite(s): MILS 4011.

MILS 4011 The Army Officer Lab (0)
Corequisite(s): MILS 4010.

MILS 4020 Company Grade Leadership (2)
MILS 4020 explores the dynamics of leading in the complex situations of current military operations in the full spectrum operations (FSO). You will examine differences in customs and courtesies, military law, principles of war, and rules of engagement in the face of international terrorism. You also explore aspects of interacting with non-government organizations, civilians on the battlefield, and host nation support. The course places significant emphasis on preparing you for BOLC B, and your first unit of assignment. It uses case studies, scenarios, and What Now, Lieutenant? exercises to prepare you to face the complex ethical and practical demands of leading as a commissioned officer in the United States Army. This semester, you will explore Military Professional Ethics and ethical decision making facing an Officer, gain practical experience in Cadet battalion leadership roles, demonstrate personal skills in operations and communications, evaluate and develop MILS III small unit leaders, and examine issues of force protection in Full Spectrum Operations & prepare for the transition to a career as an Army Officer.

Prerequisite(s): MILS 4010.
Corequisite(s): MILS 4021.

MILS 4021 Company Grade Leadership Lab (0)
Corequisite(s): MILS 4020.

Corequisite(s): MILS 4020.

MILS 4910 Independent Study (1-3)

MILS 4920 Independent Study (1-3)

MILS 5190 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

MILS 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

ROTC - Naval Science (NAVS)

NAVS 1010 Intro To Naval Science (3)
Freshman/Fall. A general introduction to the naval profession and to concepts of sea power. The mission, organization, and warfare components of the U.S. Navy and Marine Corps. Overview of officer and enlisted ranks and rates, training and education, and career patterns. Naval courtesy and customs, military justice, leadership, and nomenclature. Professional competencies required to become a naval officer.

Corequisite(s): NAVS 1011.

NAVS 1011 Naval Science Lab (0)
The laboratory time is used to conduct close-order drill and professional education/training. Topics cover general Navy/Marine Corps mission and policies, force protection, operational security, watch standing, physical fitness, nutrition, stress management, and other professional development subjects not normally included in the curriculum of the Naval Science courses. Laboratory periods may also be used on an occasional basis to supplement the Naval Science courses and provide additional time for projects, such as navigation chart work. The Naval Science Laboratory

Course Limit: 99

NAVS 1020 Sea Power & Maritime Affairs (3)
This course is a study of the U.S. Navy and the influence of sea power on history that incorporates both a historical and political science process to explore the major events, attitudes, personalities, and circumstances that have imbued the U.S. Navy with its proud history and rich tradition. It deals with issues of national imperatives in peacetime, as well as war, varying maritime philosophies that were interpreted into Naval strategies/doctrines, budgetary concerns which shaped force realities, and the pursuit of American diplomatic objectives. It concludes with a discussion of the Navy's strategic and structural changes at the end of the Cold War and its new focus, mission, and strategy in the post-September 11, 2001 world.

NAVS 1021 Sea Power & Maritime Affrs Lab (0)
The laboratory time is used to conduct close-order drill and professional education/training. Topics cover general Navy/Marine Corps mission and policies, force protection, operational security, watch standing, physical fitness, nutrition, stress management, and other professional development subjects not normally included in the curriculum of the Naval Science courses. Laboratory periods may also be used on an occasional basis to supplement the Naval Science courses and provide additional time for projects, such as navigation chart work. The Naval Science Laboratory curriculum guide lists the topics for the laboratory periods.

Corequisite(s): NAVS 1020.

NAVS 1060 Leadership Lab (0)
The laboratory time is used to conduct close-order drill and professional education/training. Topics cover general Navy/Marine Corps mission and policies, force protection, operational security, watch standing, physical fitness, nutrition, stress management, and other professional development subjects not normally included in the curriculum of the Naval Science courses. Laboratory periods may also be used on an occasional basis to supplement the Naval Science courses and provide additional time for projects, such as navigation chart work. The Naval Science Laboratory curriculum guide lists the topics for the laboratory periods.

NAVS 1290 Semester Abroad (1-20)
Freshman study abroad credit. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NAVS 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

NAVS 2000 Leadership & Management I (3)
The course introduces the student to many of the fundamental concepts of leading Sailors and Marines, which shall be expanded upon during the continuum of leadership development throughout NROTC. It develops the elements of leadership vital to the effectiveness of Navy/Marine Corps officers by reviewing the theories and parameters of leadership and management within and outside of the Naval Service and progressing through values development, interpersonal skills, management skills, and application theory. Practical applications are explored through the use of experiential exercises, readings, case studies, and laboratory discussions. Course may be repeated up to unlimited credit hours.

Corequisite(s): NAVS 1011.

Maximum Hours: 99

NAVS 2001 Leadership & Management I Lab (0)
The laboratory time is used to conduct close-order drill and professional education/training. Topics cover general Navy/Marine Corps mission and policies, force protection, operational security, watch standing, physical fitness, nutrition, stress management, and other professional development subjects not normally included in the curriculum of the Naval Science courses. Laboratory periods may also be used on an occasional basis to supplement the Naval Science courses and provide additional time for projects, such as navigation chart work. The Naval Science Laboratory curriculum guide lists the topics for the laboratory periods.

NAVS 2010 Naval Ship Systems I (3)
In this course, students learn detailed ship design, hydrodynamic forces, stability, propulsion, electrical theory and distribution, hydraulic theory and ship control, and damage control. The course includes basic concepts of theory/design of steam, gas turbine, diesel, and nuclear propulsion. Case studies on leadership/ethical issues in the engineering arena are also covered.

Corequisite(s): NAVS 1011.

NAVS 2011 Naval Ship Systems I Lab (0)
The laboratory time is used to conduct close-order drill and professional education/training. Topics cover general Navy/Marine Corps mission and policies, force protection, operational security, watch standing, physical fitness, nutrition, stress management, and other professional development subjects not normally included in the curriculum of the Naval Science courses. Laboratory periods may also be used on an occasional basis to supplement the Naval Science courses and provide additional time for projects, such as navigation chart work. The Naval Science Laboratory curriculum guide lists the topics for the laboratory periods.

NAVS 2390 Semester Abroad (1-20)
Sophomore study abroad credit. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NAVS 2940 Transfer Coursework (0)

Maximum Hours: 99

NAVS 3010 Navigation I (3)
This course is an in-depth study of the theory, principles, procedures, and application of plotting, piloting, and electronic navigation, as well as an introduction to maneuvering boards. Students learn piloting techniques, the use of charts, the use of visual and electronic aids, and the theory of operation of both magnetic and gyrocompasses. Students develop practical skills in plotting and electronic navigation. Other topics include tides, currents, effects of wind/weather, voyage planning, and an application and introduction to the international/inland rules of navigation. The course is supplemented with a review/analysis of case studies involving moral/ethical/leadership issues pertaining to the concepts listed above.

NAVS 3011 Navigation I Lab (0)
The laboratory time is used to conduct close-order drill and professional education/training. Topics cover general Navy/Marine Corps mission and policies, force protection, operational security, watch standing, physical fitness, nutrition, stress management, and other professional development subjects not normally included in the curriculum of the Naval Science courses. Laboratory periods may also be used on an occasional basis to supplement the Naval Science courses and provide additional time for projects, such as navigation chart work. The Naval Science Laboratory curriculum guide lists the topics for the laboratory periods.

Corequisite(s): NAVS 3010.

NAVS 3020 Naval Ops Analysis (3)
This course is a continued study of relative motion, formation tactics, and ship employment. It includes introductions to Naval operations and operations analysis, ship behavior and characteristics in maneuvering, applied aspects of ship handling, afloat communications, Naval command and control, Naval warfare areas, and joint warfare. The course is supplemented with a review/analysis of case studies involving moral/ethical/leadership issues pertaining to the concepts listed above.

Corequisite(s): NAVS 1011.

NAVS 3021 Naval Ops Analysis Lab (0)
The laboratory time is used to conduct close-order drill and professional education/training. Topics cover general Navy/Marine Corps mission and policies, force protection, operational security, watch standing, physical fitness, nutrition, stress management, and other professional development subjects not normally included in the curriculum of the Naval Science courses. Laboratory periods may also be used on an occasional basis to supplement the Naval Science courses and provide additional time for projects, such as navigation chart work. The Naval Science Laboratory curriculum guide lists the topics for the laboratory periods.

NAVS 3030 Evolution of Warfare (3)
In this course, students trace the development of warfare to the present day. It is designed to cover the causes of continuity and change in the means and methods of warfare. It addresses the influence of political, economic, and societal factors on the conduct of war, with significant attention focused on the role of technological innovation in changing the battlefield. Students will explore the contribution of preeminent military theorists and battlefield commanders to our modern understanding of the art and science of war.

Corequisite(s): NAVS 1011.

NAVS 3031 Evolution of Warfare Lab (0)
The laboratory time is used to conduct close-order drill and professional education/training. Topics cover general Navy/Marine Corps mission and policies, force protection, operational security, watch standing, physical fitness, nutrition, stress management, and other professional development subjects not normally included in the curriculum of the Naval Science courses. Laboratory periods may also be used on an occasional basis to supplement the Naval Science courses and provide additional time for projects, such as navigation chart work. The Naval Science Laboratory curriculum guide lists the topics for the laboratory periods.

NAVS 3050 Fund of Maneuver Warfare (3)
Corequisite(s): NAVS 3051.

NAVS 3051 Fund of Maneuver Warfare (0)
Corequisite(s): NAVS 3050.

NAVS 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

NAVS 4010 Naval Ship Systems II (3)
Junior/Spring. Theory and employment of weapons systems, including the processes of detection, evaluation, threat analysis, weapon selection, delivery, guidance, and explosives. Fire control systems and major weapons types, including capabilities and limitations. Physical aspects of radar and underwater sound. Facets of command, control, and communications as means of weapons system integration.

NAVS 4011 Naval Ship Systems II Lab (0)
Corequisite(s): NAVS 4010.

Corequisite(s): NAVS 4010.

NAVS 4020 Leadership and Ethics (3)
Senior/Spring. The interaction of leadership, organizational behavior, and human resource management. Subordinate interviewing and counseling, performance appraisal, military and civilian law, and managerial ethics and values. This capstone course integrates professional competencies to develop understanding of the issues faced by leaders, managers, and naval officers.

NAVS 4021 Leadership & Ethics Lab (0)
Corequisite(s): NAVS 4020.

Corequisite(s): NAVS 4020.

NAVS 4030 Fundamentals Maneuver Warfare (3)
A historical survey of the development of amphibious doctrine and the conduct of amphibious operations. The evolution of amphibious warfare in the 20th century, especially during World War II. Present-day potential and limitations on amphibious operations, including the concept of rapid deployment force.

Corequisite(s): NAVS 4031.

NAVS 4031 Fundamentals Maneuver Warfare (0)
Corequisite(s): NAVS 4030.

Corequisite(s): NAVS 4030.

NAVS 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NAVS 4910 Independent Study (3)
Independent study.

NAVS 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

NAVS 5190 Semester Abroad (1-20)
Semester abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NAVS 5380 Junior Year Abroad (1-20)
Junior year abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NAVS 5390 Junior Year Abroad (1-20)
Junior year abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

NAVS 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

Russian (RUSS)

RUSS 1010 Elementary Russian I (4)
Introduction to Russian grammar. Development of basic language skills, with particular emphasis on the active use of present-day Russian. For students with little or no knowledge of Russian. Meets four times a week.

RUSS 1020 Elementary Russian II (4)
Continuation of the development of introductory language skills. Practice in reading, speaking, writing and understanding.

Prerequisite(s): minimum score of PASS in 'RUSS 1020 Placement' or RUSS 1010.

RUSS 1190 Freshman Writing Sem (4)
Freshman Writing Seminar on varying topics. Consult department for details.

RUSS 1290 Semester Abroad (1-20)
Semester Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RUSS 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

RUSS 2030 Intermediate Russian (4)
Advancement of all language skills, including aural-oral, writing, and communicative fluency. Reading of literary texts.

Prerequisite(s): minimum score of PASS in 'RUSS 2030 Placement' or RUSS 1020.

RUSS 2040 Intermediate Russian II (4)
This course is a continuation of second-year Russian. Discussion of and essays on subjects related to Russian history, culture, and contemporary life. Advancement of all language skills.

Prerequisite(s): minimum score of PASS in 'RUSS 2040 Placement' or RUSS 2030.

RUSS 2390 Semester Abroad (1-20)
Semester Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RUSS 2910 Topics In Slavic Studies (3)
Topics in Slavic Studies, including literature, culture, and film, that change from year to year. See current semester's course schedule for details.

RUSS 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

RUSS 3030 Masterpieces Russ Lit I (3)
Selected readings from among the most outstanding works of Russian literature from its beginnings through the 19th century. Advancement of all language skills through study and analysis of literary texts.

RUSS 3040 Masterpieces Russ Lit II (3)
Selected readings from the most outstanding works of 20th-century Russian literature. Advancement of all language skills through study and analysis of literary texts.

RUSS 3250 Advanced Russian Grammar (3)
Phonemic, grammatical, and syntactical patterns of standard literary Russian. Practice in composition and vocabulary building.

RUSS 3330 Oral Discussion (3)
Discussion of topics from contemporary Russian politics and history. Students learn syntax and vocabulary aimed at building discourse competence. Hypothesization, narration, questioning, contradicting, speaking in paragraphs. Reading, listening, speaking.

RUSS 3450 Tolstoy/Dostoevsky-Trans (3)
Readings and discussions of the major novels. Comparative study of literary method, theme and structure, modern critical approaches. No knowledge of Russian required. May be counted toward major.

RUSS 3530 Survey of Russian Art (3)
An introduction to the art and architecture of Russia, from the 12th century to the present. The first part of the course deals with the medieval period (church architecture, icons, frescoes). The second part begins with the assimilation of western Europe.

RUSS 3700 Russian Poetry (3)
Readings in Russian poetry, including Pushkin, Lermontov, Tyutchev, and the symbolists. Lectures, discussions, and compositions in Russian.

Prerequisite(s): RUSS 2040 or minimum score of PASS in 'RUSS 3000 Level Placement'.

RUSS 3780 Soviet Jewish Experience (3,4)
The course examines major trends in Russian Jewish history, culture and identity as developed during the Soviet period. Taught in English.

RUSS 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

RUSS 4810 Special Topics (3)
See Schedule of Classes for specific topic. May be repeated for credit under different topic up to 3 times. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RUSS 4811 Special Topics (3)
See Schedule of Classes for specific topic. May be repeated for credit under different topic up to 3 times. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RUSS 4812 Special Topics (3)
See Schedule of Classes for specific topic. May be repeated for credit under different topic up to 3 times.

RUSS 4813 Special Topics (3)
Special Topics in Russian.

RUSS 4820 Special Topics (3)
See Schedule of Classes for specific topic. May be repeated for credit under different topic up to 3 times. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RUSS 4880 Writning Intensive: RUSS 4810 (1)
Writing Intensive Component in conjunction with RUSS 4810.

RUSS 4910 Independent Study (3)
An independent research project in any advanced area of Russian language, literature or culture. Open to superior students with the approval of the department. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RUSS 4920 Independent Study (1-3)
An independent research project in any advanced area of Russian language, literature or culture. Open to superior students with the approval of the department. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RUSS 4990 Honors Thesis (3)
Research and writing in conjunction with Honors Thesis (first semester).

RUSS 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): RUSS 4990.

RUSS 5110 Capstone Component: RUSS 4810 (0)
Capstone Component in conjunction with RUSS 4810.

RUSS 5190 Semester Abroad (1-20)
Semester Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RUSS 5380 Junior Year Abroad (1-20)
Junior Year Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RUSS 5390 Junior Year Abroad (1-20)
Junior Year Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RUSS 5940 Tulane Non-Equvalent (1-3)
Tulane Non-Equvalent. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

School of Professional Advancement (SOPA)

SOPA 1100 Foundations of Academic Success (3)
This course is an interdisciplinary study of a student's academic success while at the Tulane School of Professional Advancement (SoPA). Students will develop the skills needed to promote academic and personal success. Topics include strengths assessment, motivation, goals, self-advocacy, self-managment, and well-being. Students will also identify the campus resources and support services available to them. At the end of the course, students will create their own academic success toolkit that they can use throughout their time at SoPA. Upon successful completion of this course, students also be able to access a student success portal, in order to receive updates and reminders that build upon their created academic success toolkit.

SOPA 1500 Advanced Placement (0-12)
Course designated for transfer credit.

Science & Engineering (SCEN)

SCEN 1010 Communicating Science: Teaching (1)
In New Orleans schools, one of the many challenges is the uneven level of preparation among students, particularly in STEM (science, technology, engineering, and math). Students are often motivated but hampered by disparities in their educational backgrounds and resources available. In this course, we try to understand the origins of their difficulty and the educational landscape of New Orleans. Then we apply that knowledge by working with the students and also fulfilling Tier 1 of the Newcomb Tulane College Public Service requirement. The service, a minimum of 20 hours over the course of a semester done through partnerships with community organizations, can take the form of teaching, tutoring, and assisting with in-class exercises related to STEM, while always acting as a mentor and role model to local students.

Corequisite(s): SCEN 1890.

SCEN 1015 Creative Music Technology (3)
This course is for high school students enrolled in the TSSP summer program. Students in this course survey the history and techniques employed by creative music technologists. Students engage in daily creative music projects using Digital Audio Workstations, Recording Technology, and Music Programming Techniques. (High School Students Only)

SCEN 1030 Introduction to Creative Coding for the Web (3)
The internet is all around us and coding for it has never been easier and more accessible thanks to open source and free software. In this introductory course (no prior coding experience necessary), students will learn how to code for the web using p5.js (a Javascript library) to create interactive and fun applications. Along with the students' own designs, we will be looking at artists, designers and online communities who have been making experimental works with code over the last 50 years. Students will leave this course with a basic to intermediate understanding of coding structure, logic and syntax in addition to a final project. Open to high school students only.

SCEN 1400 Engineering at Tulane and Beyond (1)
This course will introduce students to engineering at Tulane through a semester-long design challenge, and engagement with faculty from the departments of Biomedical Engineering, Chemical & Biomolecular Engineering, Engineering Physics, and River Coastal Science & Engineering. Students can also participate in an optional 20-hour service-learning component by enrolling in SCEN 1890. This course is restricted to first-year students only and is recommended for students interested in majors in the School of Science and Engineering.

SCEN 1500 Interdisciplinary Science (3)

SCEN 1660 Special Topics (1-4)
Special Topics. Courses may be repeated up to unlimited credit hours under separate topic.

Corequisite(s): SCEN 1665.

Maximum Hours: 99

SCEN 1665 Special Topics Lab (0-1)
Special Topics Lab Course. Courses may be repeated up to unlimited credit hours under separate topic.

Corequisite(s): SCEN 1660.

Maximum Hours: 99

SCEN 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): SCEN 1010.

Maximum Hours: 99

SCEN 1891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): SCEN 1400.

Maximum Hours: 99

SCEN 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

SCEN 1945 Transfer Coursework Lab (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

SCEN 2030 Anatomy (3)
The purpose of this course is to aid students in acquiring an understanding of, and new appreciation for, the structures of the human body and their relationships using a regional approach. Early in the course, students are introduced to structural, directional, and regional terminology. Students are introduced to structures at the tissue level, differentiating between cell structure and function. Using this foundation, the curriculum guides students through segments of the body, primarily focusing on the skeletal, muscular, nervous, and cardiovascular systems while introducing basic anatomy of visceral organs.

Prerequisite(s): CELL 1010 or EBIO 1010.

SCEN 2035 Anatomy - Lab (1)
This Anatomy Lab course is designed to concurrently apply anatomical concepts to the field of Exercise Science. Students are taught to perform detailed analyses of human motion, with consideration of lever systems, muscle architecture, recruitment patterns, and motor pathways. Students view common surgeries and rehabilitation techniques. Students are responsible for identifying structures on a variety of imaging mediums, including cross sectional scans, x-rays, and cadaveric images.

Prerequisite(s): (CELL 1010 or EBIO 1010) and SCEN 2030*.
* May be taken concurrently.

SCEN 2040 Physiology (3)
The Physiology course is designed to examine body processes using an integrative view of body systems. Throughout the curriculum students are introduced to processes of muscle contraction, conduction of nervous tissue, and metabolism. Special attending is paid to the endocrine system and autonomic nervous system and their influences.

Prerequisite(s): CELL 1010 or EBIO 1010.
Corequisite(s): SCEN 2045.

SCEN 2045 Physiology - Lab (1)
The Physiology I Lab course focuses on pathway-based instruction and assessment and incorporates activities for students to perform via a virtual lab. Lab activities will focus on systemic and sub cellular pathways, including ion transport, reflexes, homeostatic feedback loops, and function of the special senses.

Prerequisite(s): CELL 1010 or EBIO 1010.
Corequisite(s): SCEN 2040.

SCEN 2070 Comm Sci.: STEM Enrichment (1)
The Tulane Center for K-12 STEM Education has partnered with local middle schools to bring hands-on STEM activities into their school. Students will work with various graduate students who are leading these workshops at the Center's local partner schools and/or assisting with the planning and execution of the Center's events. Tulane students will learn middle school pedagogy (teaching techniques) as well as how to make learning science fun and exciting for our local students. SCEN 2070 satisfies the lower tier Service Learning graduation requirement. The service is a minimum of 40 hours over the course of the semester. Class time is not counted toward hours, and weekly attendance is required.

SCEN 2660 Special Topics (1-3)
Special Topics. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SCEN 2665 Special Topics Lab (0-1)
Special Topics Lab Course. Courses may be repeated up to unlimited credit hours under separate topic.

Maximum Hours: 99

SCEN 2700 Indigenous Cultures & Communities of the Gulf South (3)
This course is intended for undergraduate and graduate students interested in the indigenous cultures and communities who continue to occupy the Gulf South region including parts of what is now called eastern Texas, Louisiana, Mississippi, Alabama, western Florida, and southern Georgia, as well as groups living in eastern Oklahoma as a result of removal. These groups include the Biloxi, Chitimacha, Choctaw, Natchez, Atakapa-Ishak, Tunica, Houma, Mvskoke, among other current and former tribal nations. This course seeks to center pre-historical, historical, and contemporary cultures, peoples, and voices of the region for students of both indigenous and non-indigenous backgrounds. Topics include mound-building, plant knowledge, musical traditions, languages, basket-weaving (and other material cultures), dance, tribal governance, state & federal recognition, loss of land, games & entertainment, history & oral tradition, foodways, and tattooing.

SCEN 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a one to three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SCEN 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

SCEN 2945 Transfer Coursework Lab (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

SCEN 3030 Anatomy & Physiology I (3)
The course objectives are to learn the principal structure and physiology of the musculoskeletal, peripheral nervous, and central nervous systems and to be able to relate the structures to their functions.

Prerequisite(s): EBIO 1010 or CELL 1010.

SCEN 3035 Anatomy & Physiology Cadaver Lab I (1)
The first of two sequenced laboratory courses that complements SCEN 3030. Discussion of anatomical nomenclature, skeletal, muscular, peripheral and central nervous systems dissections. Dissection and exploration of human cadavers are an integral component of the laboratory experience.

Prerequisite(s): SCEN 3030*.
* May be taken concurrently.

SCEN 3040 Anatomy & Physiology II (3)
The second of two sequenced courses in human anatomy and physiology. The second sequenced course explores special senses, the respiratory, cardiovascular, lymphatic and reproductive systems.

Prerequisite(s): SCEN 3030.
Corequisite(s): SCEN 3045.

SCEN 3045 Anatomy & Physiology Cadaver Lab II (1)
The second of two sequenced laboratory courses that complements SCEN 3040. Systems covered included: autonomic nervous system, special senses, endocrine, cardiovascular, respiratory, digestive, urinary and reproductive systems. Dissection and exploration of human cadavers are an integral component of the laboratory experience.

Prerequisite(s): SCEN 3035.
Corequisite(s): SCEN 3040.

SCEN 3050 Biotech Entrepreneurship (3)
SCEN 3050 provides a multi-disciplinary exploration of "real world" topics that science and engineering researchers must consider when translating their innovations from the laboratory to the medical arena. The focus is on such processes as identifying and validating a need, brainstorming and selecting a concept, developing an intellectual property strategy, determining funding sources, and evaluating the reimbursement and regulatory pathway. The goal is to provide students with critical information pertinent to the translation of their idea or invention from original conception in the university laboratory all the way to the healthcare marketplace where it may impact patients.

SCEN 3660 Special Topics (1-3)
Special Topics. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SCEN 3665 Special Topics Lab (0-1)
Special Topics Lab Course. Courses may be repeated up to unlimited credit hours under separate topic.

Maximum Hours: 99

SCEN 3880 Writing Intensive (0)
Course to be attached to regular courses that incorporate a writing component within the regular course. Register within department.

SCEN 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SCEN 3940 Transfer Coursework (3)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

SCEN 3945 Transfer Coursework Lab (0-20)
Transfer Coursework Lab. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SCEN 4110 Basic Medical Biochemistry (3)
Basic Medical Biochemistry aims to establish the student's biochemical competency for admission to medical school and success in the first-year medical curriculum. The course focuses on topics, mechanisms, and analyses that are most relevant to human health and disease, including biomolecule structure and function, gene regulation, and metabolism in cancer, diabetes, and heart disease. The instructors are faculty in the Tulane Medical School, and classes are held on the medical campus. Course topics are drawn from those addressed by Tulane medical students. Instructional methods include those currently employed in the Tulane Medical School, such as the flipped classroom and team-based learning. Students will be provided an array of learning aids, including instructional videos. Junior standing or instructor approval. Course does not count towards major requirements in CMB, BIOC, CHEM, or CHE. Credit not given for this course and CELL 4010/6010, CHEM 3830, CENG 4450 or CENG 4460.

Prerequisite(s): (CHEM 2410 or 2430) and (CELL 2050 or EBIO 2070).

SCEN 4570 Internship (1-3)
An experiential learning course in which students will work with community partners in a variety of settings (health, environmental, education, etc.). In-class sessions and assignments will consist of discussions, readings, and written and oral reflections to place the volunteer service into the greater academic context. Fulfills the second tier service requirement. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SCEN 4580 Internship (1-3)
An experiential learning process coupled with pertinent academic course work. Registration is completed in the SSE Dean's office. S/U graded. Does not count towards any major requirements but does count as required credits for graduation.

SCEN 4590 Internship (1-3)
An experiential learning process coupled with pertinent academic course work. Registration is completed in the SSE Dean's office. S/U graded. Does not count as credits required for graduation.

SCEN 4660 Special Topics (1-3)
Special Topics. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SCEN 4665 Special Topics Lab (0-1)
Special Topics Lab Course. Courses may be repeated up to unlimited credit hours under separate topic.

Maximum Hours: 99

SCEN 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SCEN 4910 Independent Study (1-3)
Laboratory or library research under direction of a faculty member.

Maximum Hours: 6

SCEN 4920 Independent Study (1-3)
Laboratory research under direction of a faculty member. Graded with S/U (Satisfactory/Unsatisfactory) grading.

Course Limit: 99

SCEN 4940 Transfer Coursework (3)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

SCEN 4945 Transfer Coursework Lab (0-20)
Transfer Coursework Lab. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SCEN 4950 Special Projects in SCEN (1-3)
Students will work on their own project in consultation with a faculty member.

SCEN 4960 Special Projects (1-3)
Students will work on their own project in consultation with a faculty member.

SCEN 5380 Study Abroad (1-20)
Semester Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SCEN 5390 Study Abroad (1-20)
Semester Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SCEN 6000 Entrepreneurship Eng & Biosci (3)
This course focuses on taking graduate and senior capstone engineering and bioscience research projects to a commercial stage. Not only does one need to take the research projects to an advanced engineering/bioscience stage in order to be commercialized, one needs to develop a competitive business plan, an intellectual property position, and a sustainable competitive advantage. Additionally, this course explores the major economic and technological developments that are shaping the world, how to develop and sustain a competitive bioengineering or biotech start-up firm, how to write a competitive business plan and the proper interaction with venture capitalists, lawyers and investment bankers through the entire business cycle. All through this process, the importance of ethics is continually studied, stressed and examined. Guest speakers are incorporated throughout the semester including a venture capitalist, a business ethicist, startup attorney, investment banker and several bioscience and biomedical engineering entrepreneurs.

SCEN 6030 Anatomy & Physiology I (3)
The course objectives are to learn to identify the principal components of the musculoskeletal, peripheral nervous, and central nervous systems and to be able to relate the structures and their functions. (Graduate section of SCEN 3030.)

SCEN 6035 Anatomy & Physiology Cadaver Lab I (1)
The first of two sequenced laboratory courses that complements SCEN 6030. Discussion of anatomical nomenclature, skeletal, muscular, peripheral and central nervous systems dissections. Dissection and exploration of human cadavers are an integral component of the laboratory experience. (Graduate section of SCEN 3035.)

Prerequisite(s): SCEN 6030*.
* May be taken concurrently.

SCEN 6040 Anatomy & Physiology II (3)
The second of two sequenced courses intended to address human anatomy and physiology. This course explores the respiratory, cardiovascular, lymphatic and reproductive systems. (Graduate section of SCEN 3040.)

Prerequisite(s): SCEN 6030.
Corequisite(s): SCEN 6045.

SCEN 6045 Anatomy & Physiology Cadaver Lab II (1)
The second of two sequenced laboratory courses that complements SCEN 6040. Systems covered included: autonomic nervous system, special senses, endocrine, cardiovascular, respiratory, digestive, urinary and reproductive systems. Dissection and exploration of human cadavers are an integral component of the laboratory experience. (Graduate section of SCEN 3045.)

Prerequisite(s): SCEN 6035.
Corequisite(s): SCEN 6040.

SCEN 6050 Graduate Success and Student Success & Academic Skills Workshop (0)
The Graduate Student Success and Academic Skills course is designed to help graduate students take advantage of available on-campus resources, adjust to new expectations, gain awareness of cultural assumptions, and develop practical techniques for resolving both personal and academic issues. These unique workshops will ensure that students understand what is expected of them and how to build the skills they need to thrive academically during their graduate experience.

SCEN 6052 Career Development and Global Citizenship Workshops (0)
The Career Development & Global Citizenship workshop course is a two-part workshop series designed to help graduate students gain skills they need for their professional career after they complete their studies. The Career Development portion of the workshop will last the first 6 weeks of the semester. The workshop is designed to help graduate students gain awareness of the work culture in the United States, advance professionally, make smart career decisions, and find future career opportunities. The Global Citizenship portion of the workshop will last the remaining 8 weeks of the semester. This course introduces global citizenship as a lens through which students examine various aspects of life in the complex, globalized world of the 21st century, explore the unique challenges of our time and the forces that shape them, and consider how they can take action to improve conditions locally and/or globally. In doing so, it follows the United Nations Educational, Scientific and Cultural Organization (UNESCO), which proposes global citizenship as a way of framing the exploration of global issues and challenges, with the aim of helping students develop the attitudes, knowledge, and skills necessary to secure a more just, peaceful, tolerant, inclusive, secure and sustainable world. Students will learn how cultural and social identity, bias, discrimination, and inequality shape perspectives, including their own, and explore cultural diversity and the challenges of intercultural communication. Students who successfully complete this course receive a Global Citizenship certificate endorsed by the University for Peace, a U.N. Charter institution in Costa Rica.

Prerequisite(s): SCEN 6050.

Maximum Hours: 99

SCEN 6060 Applied Innovation (3)
Given a vetted product that solves a real problem, why do some young projects and companies fail, while others thrive and achieve the commercial or societal impact necessary to make a real difference in the world? This course reviews the foundational aspects of applied scientific and engineering innovation – that is, translation of an idea or concept into a valid application and product – then addresses those rarely taught aspects of development that frequently mean the difference between success or failure in an early stage venture. Topics addressed revolve around opportunity selection and development, leadership of innovative efforts, team development and the daily operational elements necessary to successfully developing and executing a plan. While all students may not become entrepreneurs, most will at some point in their career benefit from a thorough understanding of how to lead and manage teams, and will use the concepts, frameworks and practical tools provided by the course.

SCEN 6080 Tech Invent &Commercialization (3)
Technology Invention; Commercialization; models innovation and entrepreneurial theory; practices from across a range of commercial sizes; from small startup companies to entrepreneurial units within large, established companies. The twin poles of theory and practice are balanced through classroom lectures and experiential training. Weekly lectures furnish students with effective and portable theoretical frameworks for identifying, selecting and executing opportunities for technological innovations in healthcare, energy, water and the environment. In the experiential training, students will apply their classroom learning to targeted, formal innovation and entrepreneurship competitions; including regional and national design contests, technology challenges, and business model competitions. Completion of this course will supply students with intellectual groundwork and practical experience in advancing inventive technological ideas towards commercialization and ultimately public benefit.

SCEN 6660 Special Topics (1-4)
Special Topics. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SCEN 6661 Special Topics Lab (0-1)
Special Topics. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SCEN 6940 Transfer Coursework (0-20)
Transfer coursework at the 6000 level. Departmental approval required.

Maximum Hours: 99

SCEN 6950 Special Projects in SCEN (1-3)

SCEN 7010 Bioinnovation Internship (6)
SCEN 7010 provides 6 credit hours for Bioinnovation PhD Fellows upon completion of their 12-week summer internship with the Food and Drug Administration in Washington, DC.

SCEN 7020 Bioinnovation Research (3)
SCEN 7020 provides 3 credit hours/semester to Bioinnovation fellows. Students in the Bioinnovation PhD Program are eligible to register for this course once they have completed all didactic course requirements.

Maximum Hours: 99

SCEN 7240 College Teaching Pedagogy (3)
The objective of Teaching Pedagogy is to provide a structured learning experience for doctoral students to facilitate their preparation to teach at the collegiate level and to increase their competitiveness on the job market.

SCEN 7500 Intro to Scientific Writing (3)
This course in English Composition is open to all students in PhD programs in the School of Science and Engineering. The course will focus on basic writing skills and skills needed in scientific writing and grant preparation.

SCEN 7650 ESL: Speaking Skills (1-2)

SCEN 7660 ESL Writing Skills (3)

SCEN 7940 Transfer Coursework (0-20)
Transfer coursework at the 7000 level. Departmental approval required.

Maximum Hours: 99

SCEN 9990 Dissertation Research (3)
Research toward completion of a doctoral degree. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

Science (PASC)

PASC 1940 Science Tranfer Credit (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

PASC 2940 Science Tranfer Credit (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

Social Innovation/Entrepreneur (SISE)

SISE 1000 Becoming a Changemaker (3)
This introductory course gives students an appreciation for the field of social innovation, including key concepts such as understanding systems change, assessing organizational mission, and measuring social value. The course considers the historical perspective of the field to inform our current understanding of solving social and environmental problems.

SISE 1940 Transfer Coursework (0-20)
Transfer coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

SISE 2010 Intro Social Innov/Entrepreneu (3)
SISE 2010 is an introductory class that gives students an appreciation for the fields of social innovation and social entrepreneurship (SISE), including key concepts such as understanding systems change, assessing organizational mission, and measuring social value. The course considers the historical perspective of the field to inform our current understanding of solving social and environmental problems. Further, we look at cases of social entrepreneurs, intrapreneurs, innovators, and visionaries who are coming up with novel methods to address a variety of social issues while utilizing different organizational forms and operating in international, domestic, and local contexts.

SISE 2011 Understanding Complex Systems (3)
In the 21st century, our society faces many wicked problems like climate change, health disparities, refugee crises, and more. This course provides students with the tools to gain a deeper understanding of these challenges. This class helps student balance objective and subjective ways of knowing about the dynamics of social problems within complex systems. Students will use systems thinking to understand the key connections among elements of a social problem that form root causes in the systems structure and/or perpetuate an unjust equilibrium in society. By the end of the course, students will be able to use this understanding of how change happens in order to envision new possibilities and their role in systems transformation.

SISE 2020 Intro to Business (3)
This course highlights the importance of understanding business planning and economic concepts for social entrepreneurial organizations. The course will assess different business models for social impact organizations and how these organizations integrate their social mission with their business strategies. Business planning is essential for any organization, whether it is a business, a social entrepreneurial organization, a government agency, etc. Students will consider the necessary business skills required of social entrepreneurs and others working to make systemic, sustainable change in communities around the world.

Prerequisite(s): SISE 2010.

SISE 2021 Design Thinking for Social Impact (3)
This course offers a practical, experience-based introduction to design thinking tools and methods for community-led change and social impact. Through discussion, workshops, and active field work, students will be introduced to the processes, practices, and mindsets that are associated with human-centered design. We use a rights-based approach to our experiments in design thinking, grounding our discussions in the UN Sustainable Development Goals and the UN Declaration of Human Rights. Students will work in close collaboration with Tulane peers and members of the greater New Orleans community to design new products, services, or experiences in response to community needs.

SISE 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SISE 2891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SISE 2930 Special Topics (0-6)
Special Topics

Course Limit: 99

SISE 2940 Transfer Coursework (0-20)
Transfer coursework at the 2000 level. Departmental approval may be required.

Maximum Hours: 99

SISE 3010 Design Thinking for Collective Impact (4)
This course offers a practical, experience-based introduction to design-thinking (DT) tools and techniques with a focus on social innovation for collective impact. We use a rights-based approach to our experiments in design thinking, grounding our activities and discussions in the UN Sustainable Development Goals and the UN Declaration of Human Rights. Through a series of projects, you will learn to find a need by looking for gaps highlighted by the SDGs and the Declaration of Human Rights, and you will respond to this need in individual and group activities. Throughout the semester, you will be introduced to the principles and mindsets that are associated with design thinking through discussion, studio and field work, and close collaboration with colleagues and members of the New Orleans community.

Prerequisite(s): SISE 2010.

SISE 3011 Social Change Across Sectors (3)
Students in this class will learn about social change strategies that transform systems while completing their Tier-1 or Tier-2 service-learning requirement. We take a historical and contextual perspective of the field to assess changemaking strategies in service of more just and equitable societies. We will explore different change strategies that changemakers can use to tackle wicked problems in society, such as social innovation and social entrepreneurship, social advocacy and activism, and social service provision. Students will have the opportunity to explore social impact organizations in the private, public, and citizen sectors. We will also discuss various facets of environmental, financial, and social sustainability.

Prerequisite(s): SISE 2011*.
* May be taken concurrently.

SISE 3041 Leading Change (3)
For real change to happen, there needs to be effective leadership. This course dives into unpacking and formulating what it takes for effective leadership to ensure positive social and environmental change. Students in this course will study the theory and practice of leadership, why leadership is vital to changemaking, and learn from respected leaders and relevant case studies rooted in social change. Students will also assess their personal leadership strengths and weaknesses, practice the art of leading, and create a vision and design for their own leadership as change makers.

SISE 3042 Social Entrepreneurship (3)
Grounded on theories and practice of social entrepreneurship, or the process of developing new and innovative opportunities that directly address social and environmental issues, this course highlights the importance of understanding business planning and economic concepts for organizations. The course will assess different business models for social impact organizations and how these organizations integrate their social mission with their business strategies. Students will consider the necessary business skills required of social entrepreneurs and others working to make positive, systemic, sustainable change in communities around the world.

SISE 3210 The Arts and Social Impact (3)
Pablo Picasso once said, "Every child is an artist. The problem is how to remain an artist once we grow up." The purpose of this course is to examine the value of the arts in society, and more specifically the linkages between the arts, creative problem solving, and social impact. The capacity for artistic expression is one of the defining characteristics of being human. Yet, the arts are systematically devalued in public schools. And the myth of the "struggling artist" perpetuates the idea of the artist as an outcast. Drawing from multiple perspectives, we will explore the unique ways the arts contribute to social impact. We will discuss theories, read scholarly articles, examine case studies, and hear from guest speakers in the local arts community. We will specifically investigate the relationship between art and social impact in terms of (a) arts education, (b) social movements, and (c) economic and community development. Attention will be given to the ways artistic expression intersects with structures of class, gender, race, and geography.

SISE 3310 Facilitating Social Justice (3)
This practicum is a requirement for ongoing participation in the Community Engagement Advocates program and requires applied work in facilitating social justice dialogues. The student facilitators in this class will participate in weekly experiential sessions: to observe, practice, learn and prepare for their work as peer-to-peer facilitators and student leaders working for collective impact; to strengthen their own understanding of social justice, identity development and multicultural education in the context of community engagement and service learning; to further develop their community and co-facilitation relationships and experience; and to continue their own personal growth and development in the areas of facilitation and social justice.

SISE 3315 Facilitating Social Justice II (3)
This is the second course of two courses offered on a Social Justice Track for the Community Engagement Advocates Program. This course will be focused on understanding oppression at various levels in our society and facilitating around the topics with to disrupt systems that marginalized people in our society. This practicum is a requirement for ongoing participation in the Community Engagement Advocates program and requires applied work in facilitating social justice dialogues. The student facilitators in this class will participate in weekly experiential sessions: to observe, practice, learn and prepare for their work as peer-to-peer facilitators and student leaders working for collective impact; to strengthen their own understanding of social justice, identity development and multicultural education in the context of community engagement and service learning; to further develop their community and co-facilitation relationships and experience; and to continue their own personal growth and development in the areas of facilitation and social justice.

Prerequisite(s): SISE 3310.

SISE 3320 Facilitating Comm Engagement (3)
This practicum is a requirement for ongoing participation in the Community Engagement Advocates program and requires applied work in facilitating social justice dialogues. The student facilitators in this class will participate in weekly experiential sessions: to observe, practice, learn and prepare for their work as peer-to-peer facilitators and student leaders working for collective impact; to strengthen their own understanding of social justice, identity development and multicultural education in the context of community engagement and service learning; to further develop their community and co-facilitation relationships and experience; and to continue their own personal growth and development in the areas of facilitation and social justice.

SISE 3325 Facilitating Community Engagement II (3)
This is the second course of two courses offered on a Community Engagement Track for the Community Engagement Advocates Program. This practicum is a requirement for ongoing participation in the Community Engagement Advocates program and requires applied work in facilitating social justice dialogues. The student facilitators in this class will participate in weekly experiential sessions: to observe, practice, learn and prepare for their work as peer-to-peer facilitators and student leaders working for collective impact; to strengthen their own understanding of social justice, identity development and multicultural education in the context of community engagement and service learning; to further develop their community and co-facilitation relationships and experience; and to continue their own personal growth and development in the areas of facilitation and social justice.

Prerequisite(s): SISE 3320.

SISE 3500 Speculative Fiction and Lessons for Social Change (3)
What do imaginary worlds have to teach us about the future we want? From fantasy and horror to science fiction, Afrofuturism, cultural commentary, alternative histories and dystopian scenarios, the genre(s) of speculative fiction depict worlds that don't exist – yet! Through intergalactic encounters, time travel, magic, advanced technologies and more, speculative fiction offers powerful critiques of our current social and environmental systems as well as alternative visions of many possible, and more inclusive worlds. These alternatives allow us to explore and critically analyze what more just, sustainable, liberating, and equitable realities might look like, and how we might imagine them into being through processes of social innovation. This class will engage with literary, musical, and cinematic works of speculative fiction with a focus on works by artists of color, who are using speculation to challenge the status quo and combat marginalization—such as those by N.K. Jemisin, Janelle Monae, Jordan Peele, Nia DaCosta, Juel Taylor, Octavia Butler, Ursula K. Le Guin, Ted Chiang, and more, to understand the lessons they offer us for social change. Students will also produce their own original world-building works through short stories, reflections, poems, drawings and/or prototypes. Through this project they will have an opportunity to offer perspectives race and/or ethnicity as social constructs in the United States.

SISE 3890 Service Learning (0-1)
The service-learning class is taken in conjunction with SISE 3210. An exemplar community partner will provide a real-time case study of the class concepts, helping students to understand how to apply changemaking approaches to address complex social problems. We will use the tenets of critical service-learning including a social change orientation, redistribution of power, and authentic relationships to maximize the impact of the experience for students and partners.

SISE 3940 Transfer Coursework (0-20)
Transfer coursework at the 3000 level. Departmental approval may be required.

Maximum Hours: 99

SISE 4020 Leadership for Collective Impact (3)
The purpose of this course is to develop the next generation of leaders for our country and the world. The study of leadership begins with a conceptual understanding of the genealogies and evolution of leadership theory. It follows with students gaining practical knowledge about change management and different leadership styles and characteristics through case studies and personal interactions with proven leaders. The course also creates an opportunity for students to assess and demonstrate their leadership capabilities and to develop a personal leadership plan for the future.

Prerequisite(s): SISE 2010, 2020 and 3010.

SISE 4050 Senior Seminar (1)
The senior seminar provides a forum for seniors in the social innovation and social entrepreneurship minor (SISE) to synthesize their undergraduate work in this area of study. Students will critically reflect on and consolidate their knowledge and understanding of the SISE field. Through critical discussion around specific themes relevant to SISE, seminar participants will forge a deeper understanding of SISE as an approach to addressing social problems, its potential, and the nature of its critiques. A primary goal of the SISE minor is to help students embody the design thinking skills of empathy, listening, and humility and collaboration, with a focus on social impact (rather than profit or self-promotion). To that end, the class sessions offer a forum for engaging in meaningful reflection on major topics and themes studied throughout the semester and the opportunity to relate that to student's individual experiences. The class will also help students cement their network of current and future thought partners, including peers, classmates, instructors, and guest lecturers. Students will reflect on long-term goals as active citizens and changemakers and explore next steps beyond graduation.

Prerequisite(s): SISE 2010, 2020, 3010 and 4020.

SISE 4060 SISE Senior Capstone (3)
This course provides seniors in the Social Innovation and Social Entrepreneurship (SISE) Minor program the opportunity to synthesize their undergraduate work in this study by engaging in a semester-long project/capstone of their choosing. Participants will forge a deeper understanding of SISE as an approach to addressing social problems, its potential, and the nature of its critiques, as well as demonstrate their ability to practice design thinking, leadership, and collaboration, with a focus on a specific social impact topic related to student's individual experiences. The class will also help students cement their network of current and future thought partners, including peers, classmates, instructors, and guest lecturers. Finally, students will reflect on long-term goals as active citizens and changemakers and explore the next steps beyond graduation.

Prerequisite(s): SISE 2011, 2021 and 3011.

SISE 4560 SISE Internship (3)
SISE Internship open to especially qualified upper level students with approval of instructor, 3 credit hours. Students must contact the SISE Director to enroll.

Maximum Hours: 99

SISE 4570 SISE CPS Internship (3)
CPS Internship Coordinators place students in the appropriate seminar depending on their department for credit and their internship. Internship Seminars are based on discussion sessions, professional development workshops, guest speakers from local organizations, and student presentations.

Maximum Hours: 99

SISE 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SISE 4910 Independent Study (1-3)
Independent Study Open to especially qualified upper level students with approval of instructor, 1-3 credit hours.

SISE 4930 Special Topics (0-6)
Special Topics

Course Limit: 99

SISE 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval may be required.

Maximum Hours: 99

SISE 4950 Special Topics (1-3)
Special Topics in Social Innovation and Social Entrepreneurship. These are newly developed courses or courses taught by visiting faculty. Title and content may vary by semester. See the Schedule of Classes for specific offerings. Course may be repeated unlimited times for credit.

Course Limit: 99

SISE 4951 Special Topics (3)
Special Topics in Social Innovation and Social Entrepreneurship. These are newly developed courses or courses taught by visiting faculty. Title and content may vary by semester. See the Schedule of Classes for specific offerings. Course may be repeated unlimited times for credit.

Course Limit: 99

SISE 4952 Special Topics (3)
Special Topics in Social Innovation and Social Entrepreneurship. These are newly developed courses or courses taught by visiting faculty. Title and content may vary by semester. See the Schedule of Classes for specific offerings. Course may be repeated unlimited times for credit.

Course Limit: 99

SISE 4953 Special Topics (1-3)
Special Topics in Social Innovation and Social Entrepreneurship. These are newly developed courses or courses taught by visiting faculty. Title and content may vary by semester. See the Schedule of Classes for specific offerings. Course may be repeated unlimited times for credit.

Course Limit: 99

SISE 5380 Junior Year Abroad (1-20)
Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SISE 5390 Junior Year Abroad (1-20)
Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SISE 6010 Social Innovation Theories & Practice (3)
Addressing eco-social crises such as climate change, racial injustice and wealth inequality requires collective efforts and creative solutions from all sectors of society. This course provides students with a deeper understanding of social innovation as a dynamic process of transforming dominant, harmful institutions and pursuing planetary wellbeing. By taking a constructionist and glocal lens, this class examines different schools of thought on what constitutes "social good" and how to achieve it, highlighting related actors and factors driving current movements of social innovation. Throughout the course, we draw on cases of enterprises, organizations, movements, policies, programs and more – in domains as diverse as ethical fashion, youth development, ecological conservation and food justice – to highlight key lessons and approaches in understanding and innovating around wicked problems. Through critical reading, creative and reflexive assignments and interactive classroom activities, students explore pathways to changing systems and reimagine their own roles within collaborative innovation ecosystems. A final project invites students to design their unique change making toolkit that they can use to tackle issues about which they are passionate.

SISE 6930 Special Topics (0-6)
Special Topics

Course Limit: 99

SISE 6950 Special Topics (1-3)
Special Topics in Social Innovation and Social Enterprenuership. These are newly developed courses or courses taught by visiting faculty. Title and content may vary by semester. See the Schedule of Classes for specific offerings. Course may be repeated unlimited times for credit.

Course Limit: 99

SISE 7010 Design Thinking for Social Impact (3)
This course offers a practical, experience-based introduction to design thinking tools and methods for community-led change and social impact. Through discussion, workshops, and active field work, students will be introduced to the processes, practices, and mindsets that are associated with human-centered design. We use a rights-based approach to our experiments in design thinking, grounding our discussions in the UN Sustainable Development Goals and the UN Declaration of Human Rights. Students will work in close collaboration with Tulane peers and members of the greater New Orleans community to design new products, services, or experiences in response to community needs.

Social Sciences (PASS)

PASS 1010 Social Science Foundations (3)
Knowledge and understanding of the social sciences place students in position to understand themselves as citizens within an integrated global society. The purpose of this course is to provide students with information about the principal social science disciplines and the relationships among them. Among the integrated social science disciplines are political science, economics, geography, sociology, and anthropology/archeology. Preparation in the skills of social science inquiry prepares the student to engage in rational decision-making as both an individual and as a citizen. In this course, we will examine each of these subjects, what they mean, and how they are relevant to our lives today In order to understand social structure and the relationship of the individual to society, students will be introduced to the concepts of culture, society, personality, socialization and stratification, as well as the principal subsystems of every society: economy, polity, social organization and ideology. A command of this material is necessary for our examination of the human condition. During the second half of the first semester, we will begin to consider theories of social change.

PASS 1940 Social Sciences Tranfer Credit (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

PASS 2940 Social Sciences Tranfer Credit (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

PASS 2941 Social Science Writing Transfer Coursework (2-4)
Social Science writing transfer coursework.

Maximum Hours: 99

PASS 4980 Capstone Seminar (3)
The Capstone seminar will allow students majoring in the social sciences and/or humanities to integrate the knowledge and skills gained through their interdisciplinary degree and apply them to a range of professional settings through case study examples. The students will explore relationships between the different content areas, while examining how their communication, writing, and critical thinking skills apply to issues and challenges commonly experienced in various professional settings. The seminar will culminate in a substantial written or a creative project (e.g., op-ed, website, podcast, etc.) that will highlight the interdisciplinary connections between the students' prior coursework. Creative projects will be accompanied by a shorter academic narrative.

PASS 4990 Capstone Independent Study (3)
The Capstone Independent Study will allow students majoring in the social sciences to integrate the knowledge and skills gained through their interdisciplinary degree and apply them to a range of professional settings through case study examples. The students will explore the relationships between the different areas of the social sciences, while examining how their communication, writing, and critical thinking skills apply to issues and challenges commonly experienced in various professional settings. The independent study will culminate in a substantial written or a creative project (e.g., artwork, website, podcast, etc.) that will highlight the interdisciplinary connections between the students' prior coursework. Creative projects will be accompanied by a shorter academic narrative.

Social Work (PASW)

PASW 3210 Death and Dying (3)
This course provides a comprehensive overview of the study of death and dying, covering the key issues and questions in the field. The personal and social attitudes regarding death in our society will be explored as well as those of other cultures and times.

Social Work (SOWK)

SOWK 1000 Trauma! A Survey Course (3)
This hybrid survey course introduces students to the universal concept of trauma and the global scope and impact of traumatic experience on individuals and communities. Students have the unique opportunity to be involved in the development of TraumaQuest, an innovative online Course Game that reinforces educational objectives and challenges students to apply knowledge in a gaming environment designed to simulate disaster and promote resiliency. The techniques and methodology pioneered during the development phase of TraumaQuest will provide students with an interdisciplinary examination of trauma and resilience, as well as facilitate engagement through student input on design considerations and stylization of academic content.

SOWK 1500 Do Work that Matters: An Introduction to Social Work Practice (3)
This course will serve as an introduction to the social work profession, its history and development, values and ethics, and the systems where social workers practice with individuals, families, organizations, and communities. This course will examine contemporary issues in the context of social justice and systemic barriers. This course will explore the knowledge and skills that social workers utilize in social service agencies and the educational steps required to become a social worker. This course is open to all undergraduate students.

SOWK 2000 Intro Social Policy/Prac (3)
This course examines the processes that influence the development of social policy and social services. Included are legislative and political processes, models of policy analysis, service delivery and policy implementation. Effects of these on people are considered from global, political, economic and social policy perspectives. This course is developed around the general proposition that social workers utilize knowledge and skills to carry out roles and functions critical for practice. Such knowledge and skills include the application of social policy analysis, the legislative process, the role and impact of politics and political choice on the quality of life of people, and the effect of economic-social policy decision and judicial actions on social services. In addition, the course examines the variability of the common and uncommon attributes of service delivery systems.

SOWK 2100 Family Trauma-A Survey Course (3)
Trauma Foundations is an online only graduate course aimed at students being exposed to and critically evaluating the complex factors that affect people and their relationships following a traumatic event across the life cycle and across various traumatic events and circumstances. Students will focus on understanding the causes, consequences, assessment, and treatment trauma at the individual, interpersonal, and community levels. Through examination, discussion group leadership activities, and other assignments student learn about undergraduate students' experiences with trauma, along with an examination of their own experiences and those of others in their life. They are more prepared to engage in personal refection about how their life experiences may affect social work practice. Students will develop an understanding of how differing theoretical frameworks can empower and / or oppress diverse populations exposed to trauma. They will also learn to communicate this understanding in a professional and ethical way with fellow graduate students, the instructor, and those undergraduate students in the discussion group they lead. Collectively and together with other courses, students will be more competent assessment, intervention, and evaluation in social work practice.

SOWK 2220 Drug Use: Univ & Inner City (3)
This course is designed to explore the epidemiology, prevalence, and culture of embeddedness of polydrug use and abuse among college students and inner-city residents. Students will compare and contrast the sociopolitical, sociocognitive, legal, and economic processes that contribute to high risk health behaviors in college and inner-city communities. Participants will develop and understanding of how one's family, friends and current systemic anti-drug initiatives come to shape high-risk health behavior patterns. Panel presentations by former polydrug users from each community will be held with a focus on developing creative solutions for a growing problem.

SOWK 2230 Guns & Gangs (3)
Unlike adult crimes, most juvenile delinquency is committed in groups. The aim of this course is to examine national and local gang dynamics within the context of weapon availability, drug markets, turf issues, and the economy. The rapidly changing social variables of race, social class, migration, and immigration are explored relative to gang membership, chronic gang problems, and solutions.

SOWK 2510 Making Meaning of Trauma (3)
This course is about the suffering that may be caused by traumatic events, and the way that suffering is soothed through spirituality and faith. In this class students will: *explore the early history of religion and health, and through the benefit of a mind-body spirit approach to resilience; *learn about disaster impact - to a community, a family, and an individual - and the ways in which disaster recovery tests the human spirit; *learning the basics of stress and trauma from a clinical perspective, and from the perspective of the major religions traditions (Christianity, Judaism, Islam, Hinduism, Buddhism, non-believers, etc.; *discuss concepts such as pain, suffering, despair, pleasure, joy, forgiveness, grace and transformation; *acquire skills (e.g., relaxation and stress reduction methods) that, when practiced regularly, will be useful when life takes a dark turn for you or someone you know; and *learn about trauma theory and religions traditions, and ways in which an integrated approach to trauma recovery may be transformative.

SOWK 2940 Transfer Coursework (3)
Transfer coursework.

Maximum Hours: 99

SOWK 3200 No One Lives Forever: Death, Dying, and Grief in the Modern Era (3)
This course will help students learn about the ways we interact with illness and death. Students will explore how serious health crises impact individuals and families. The exploration continues through end-of-life decision-making and death. This course examines funeral practices locally in New Orleans and then shifts to global practices demonstrating different perceptions of death and familial/community connections with deceased. The course examines special topics such as suicide, euthanasia, physician-assisted death, and violent death through the lens of individuals and families and then in the broader context of communities and policy. Students will be asked to reflect on their own values and beliefs about end-of-life decisions and life after death beliefs.

SOWK 3500 Protests, Activism, and Social Movements (3)
In this course you students will examine the historical, the sociopolitical, socio-cultural, legal, economic, and pedagogical aspects, and experiential processes related to EDI Activism. Students will be provided training on “how to” engage in effective EDI activism within specific contexts and environments. They will hear from nationally renowned scholars and activists who will share the “nuts and bolts” of contemporary protest and activism. Students will have the opportunity to compare and contrast styles of protest and activism during different eras of our nation’s history beginning with the Revolutionary War through the Black Lives Matter movement. Participants will develop an understanding of the insidious nature of white supremacy and its role in shaping our nation’s history, activism, protest, and issues surrounding equity, diversity, and inclusion. Guest lectures and panel presentations by nationally renowned activism scholars and experts will focus on why protests and activism are necessary and offer creative solutions for achieving social justice, equity, diversity, and inclusion in our nation.

SOWK 4000 SPP: Emerging Programs & Policy (3)
This course is in the social policy curriculum area required for undergraduate SP&P Coordinate Majors. Students will apply both social work and interdisciplinary perspectives to analyze contemporary social welfare policy issues and programs at the federal, state and local levels. This course will explore the historical, economic, political, ideological, and other social conditions that influence policy development in the United States. Specific policy areas discussed include: means-tested social welfare programs, immigration, education, intimate partner violence, community violence, incarceration and health. This course will give particular attention to the impact of social policies and programs on at-risk or marginalized populations (e.g. people of color, people with disabilities, women, children, LGBTQ individuals), highlighting social and economic justice dimensions of social policy and potentials for policy reform.

Prerequisite(s): SOWK 2000.

SOWK 4800 Morphology of Disasters (3)
In this course we will explore the morphology of disaster, by gaining an understanding of what disaster is, how disaster is generated, the associated impacts of disaster and how to mitigate disaster impacts through policy and legislation. Students will compare and contrast the different types of disasters by applying the progression of vulnerability to different disaster scenarios. Participants will develop an understanding of how root causes, dynamic pressures and unsafe conditions come to shape the associated impacts of disaster on the individual, the household/family and the community. Guest lectures by disaster resilience experts will be held with a focus on developing innovative and sustainable solutions for an ever increasing universal problem.

SOWK 6670 Social Work (12-15)

SOWK 6940 Transfer Coursework (0-20)
Transfer coursework at the 6000 level. Departmental approval required.

Maximum Hours: 99

SOWK 7015 Collective Trauma (3)
This is an elective course delving into the multifaceted roles and responses to collective trauma across diverse contexts, with a focus on facilitating effective assistance to survivors. The course is meticulously structured to provide a comprehensive understanding of collective trauma following an initial exploration of the universality of trauma, prevalent definitions, and theories, as well as the causes, consequences, risk factors, and protective elements associated with trauma resilience. An overarching goal of the course is to furnish students with an in-depth overview and best practices for aiding those profoundly affected by collective trauma, exemplified by occurrences such as natural disasters, war, terrorist attacks, genocide, slavery, and catastrophic accidents. The aftermath of collective trauma gives rise to survivors encountering parallel challenges encompassing psychosocial, emotional, and medical dimensions. In addressing these complexities, the course adopts an anti-oppressive, trauma-informed psychosocial lens, inherently promoting human development.

Prerequisite(s): SOWK 7320.

SOWK 7075 Disaster MentalHealth Interven (3)
Disaster Mental Health Interventions is an elective course that explores the nuanced roles and responsibilities of mental health practitioners within disaster contexts through the lens of anti-oppressive social work practice. Designed to follow the disaster management cycle, the course systematically explores the distinctive roles and obligations of mental health practitioners, addressing the diverse needs of individuals, families, and communities impacted by disasters. Structured around six distinct practice methods, the course provides an in-depth examination of the applicable settings for these methods. Moreover, it scrutinizes strategies for cultivating resilience, fostering posttraumatic growth, and mitigating the risk of compassion fatigue among helpers in the aftermath of disasters. The content is meticulously designed to equip students with comprehensive insights into the complex dynamics of disaster mental health interventions.

Prerequisite(s): SOWK 7320.

SOWK 7120 Social Welfare History & Policy (3)
This course focuses on both the historical development of American social welfare policy and the practice of policy analysis in relation to the systematic analysis of contemporary social welfare policies. It delves into critical issues intrinsic to understanding American social welfare policy, including but not limited to poverty, racism, sexism, globalization, privatization, and faith-based policies.

SOWK 7130 Diversity and Social Justice (3)
This course is aimed at enabling students to engage in diversity and difference in practice with people who have multiple, intersecting dimensions of diversity, including (but not limited to): age, class, color, culture, disability and ability, ethnicity, gender, gender identity and expression, immigration status, marital status, political ideology, race, religion/spirituality, sex, sexual orientation, and tribal sovereign status. Using an overarching critical theoretical framework of oppression and liberation/resilience, students will learn to critically evaluate the social and historical sources of contemporary social problems. Awareness of the multiple intersecting dimensions of privilege will be a running theme throughout the course. Students will engage in continuous self-awareness and critical consciousness to understand to manage personal values and their effects on the diverse people with whom social workers work. Students will work to become an ally and work in solidarity with others and advance the human rights of these populations.

SOWK 7211 Human Behavior and the Social Environment I (3)
Human Behavior and the Social Environment I is aimed at exposing students to the complex factors that may affect human development and experiences across the life course. Students will understand theories of human behavior and the social environment (HBSE), and critically evaluate their implications when applied across diverse populations. Students will gain knowledge of human development across differing contexts and understand salient topics across stages of the life course. Through examinations, papers, and presentations, students will demonstrate their knowledge of theories, apply theories to specific contexts, and engage in personal reflection about how their life experiences may affect social work practice. Students will develop an understanding of how differing theoretical frameworks can empower and/or oppress diverse populations and communicate this understanding in a professional and ethical way. This knowledge will provide the foundation to enable social workers to understand multiple factors when engaging with individuals and families to critically analyze theories, which will enable competent assessment, intervention, and evaluation in social work practice.

SOWK 7221 Human Behavior and the Social Environment II (3)
Theories of human behavior is a two-course sequence aimed at exposing students to the complex factors that may affect human development and experiences across the life course and explore biopsychosocial theories across systems. This course explores the impact of social systems on human behavior in terms of socioeconomic, sociopolitical and sociocultural forces, from a variety of theoretical perspectives. This course examines the ways in which systems promote or pose challenges in the achievement and maintenance of optimal health and well-being of clients. The effects of prejudice and discrimination on individuals and groups, based on race, ethnicity, gender, affectional orientation, class, or other stigmatizing characteristics are emphasized are explored. Building upon theoretical approaches to human service organizations/agencies and their distinct attributes, the course addresses key practice knowledge, skills, and values that promote, develop, and maintain organizations that effectively meet community and agency needs. This course also emphasizes models of community and agency intervention as integral to the social work professional's role In community and addresses challenges working with diverse populations in terms of community engagement assessment, intervention and evaluation.

Prerequisite(s): SOWK 7211.

SOWK 7230 Community Organizing and Policy Advocacy (3)
This methods course delves into the domain of community organization—a facet of social work practice focused on addressing structural inequities through collective responses. Community organization harnesses collective human potential by mobilizing individuals to pool resources and strategically act in pursuit of shared interests, aiming for tangible social change. Social workers engaged in community organization utilize policy practice and advocacy to transform community aspirations into laws and regulations, contributing to the realization of social and economic justice goals. This course underscores the integral role of policy practice across various social work settings, spanning local, state, and national levels, as well as micro, mezzo, and macro levels of intervention.

Prerequisite(s): SOWK 7120.

SOWK 7300 Clinical Work with Children and Adolescents (3)
This advanced elective offers comprehensive knowledge into the physical, psychological, and social development of children and adolescents. Emphasizing clinical intervention, the course focuses on knowledge and skills with children, including: 1) acquiring the skills needed to keenly observe and analyze child behavior for its hidden meaning; 2) how to gather a complete and meaningful social history of the child and family within a clinical-community context; 3) interviewing and assessment techniques; and 4) treatment techniques. Students examine a wide range of issues common to adolescents, delving into the social and psychological underpinnings accompanying these challenges. The course prioritizes the development of practical and specific assessment and treatment skills applicable to clinical-community social work practice with children, adolescents, and their families.

SOWK 7310 Introduction to Direct Social Work Practice (3)
This foundation course is the first of three direct practice methods courses (it is followed by Methods II and Advanced Methods). It focuses on teaching students a broad and integrated variety of helping methods that span individuals, families, and groups within a clinical-community perspective. The central vehicle for navigating and managing these many systems is the social worker-client relationship, or Relationship-Centered Practice. Students will learn how to engage, assess, and facilitate change in small systems within the context of larger systems such as neighborhoods and communities. Students will learn to perform major social work practice roles and communication processes as well as procedures necessary for resource development, linkage, and utilization.

Prerequisite(s): SOWK 7130* and 7211*.
* May be taken concurrently.

SOWK 7320 Social Work Practice with Individuals, Groups, and Families (3)
This required methods course is the second of two foundation courses and integrates clinical with community practice. It covers practice with individuals, families, and small groups. The course continues to emphasize relationship-centered practice as a central premise for intervention, addressing traditional direct service approaches.

Prerequisite(s): SOWK 7310.

SOWK 7331 Advanced Integrated Clinical and Community Practice I (3)
This advanced course integrates material from Methods I and Methods II and builds on content delivered in Human Behavior, Research, and Field courses. It is the first part of a two-part Advanced Methods curriculum, followed by SOWK 7341. The focus of the course is on the application of advanced relationship-centered clinical-community methods with complex cases. While students in this course are also taught advanced methods for discrete areas of practice (e.g., advanced case management, intervention and termination, treatment matching), integration of practice skills and professional identity is driven by the challenge to "work across" conventional conceptualizations of "micro," "mezzo," and "macro" practice within local, national, and global milieus.

Prerequisite(s): SOWK 7310 and 7320.

SOWK 7335 Protest, White Supremacy, Social Justice & EDI Movements (3)
In this course, students will examine the historical, sociopolitical, socio-cultural, legal, economic, and pedagogical aspects, as well as experiential processes, pertaining to Equity, Diversity, and Inclusion (EDI) Activism. Students will be provided training on “how to” engage in effective execution of EDI activism within specific contexts and environments. The course features insights from nationally renowned scholars and activists, who will share the “nuts and bolts” of contemporary protest and activism methodologies. Students will have the opportunity to compare and contrast styles of protest and activism across different eras of the nation's history, from the Revolutionary War to the Black Lives Matter movement. Participants will develop an understanding of the of the insidious nature of white supremacy in shaping the nation's history, activism, protest, and issues related to equity, diversity, and inclusion. Notable guest lectures and panel presentations by activism scholars and experts will shed light on the necessity of protests and activism, offering creative solutions for advancing social justice, equity, diversity, and inclusion in the nation.

Prerequisite(s): SOWK 7320.

SOWK 7341 Advanced Integrated Clinical and Community Practice II (3)
This advanced course serves as an integration of content from previous methods courses, extending the foundation established in theory, practice, and field courses. With a focus on advanced relationship-centered clinical-community methods, the course emphasizes their application to intricate cases. Beyond teaching advanced methods in specific practice areas, such as case management, intervention and termination, treatment matching, policy analysis, and direct action organizing, the course prioritizes the integration of practice skills and the development of professional identity. Students engage with complex cases that challenge conventional boundaries of "micro," "mezzo," and "macro" practice, operating within local, national, and global contexts. The overarching goal is to cultivate a nuanced understanding of practice integration across various levels, fostering a holistic and adaptable approach within diverse milieus.

Prerequisite(s): SOWK 7331.

SOWK 7345 Psychopathology and the DSM (3)
This course provides an overview of mental health assessment and diagnostic tools, including the Diagnostic and Statistical Manual of Mental Disorders (DSM) categories, and touches on treatment strategies and techniques. Building on the knowledge base acquired in the foundation courses, SOWK 7310: Introduction to Direct Social Work Practice and SOWK 7320: Social Work Practice with Individuals, Families, and Groups, this course examines the relationship between the biological, psychological, social, environmental, and cultural influences and emotional and mental health from an ecological context. Particular attention is given to variations in the assessment process and access to treatment for populations at social and economic risk. In addition, students examine the political and social implications of mental health and their relations to social work values and ethics.

Prerequisite(s): SOWK 7310, 7320 and 7331*.
* May be taken concurrently.

SOWK 7360 Contemporary Practice with Couples & Families (3)
This advanced elective is meticulously designed to integrate theories, practice principles, and intervention strategies applicable to both traditional and nontraditional couples and families. Building upon the foundational knowledge, the course specifically emphasizes contemporary couples and family treatment, rooted in post-modern theory and philosophy. Exploration of the translation of post-modern theories and methods into effective couples treatment is a pivotal focus of this course. While incorporating mini-lectures, the primary instructional approach centers on case-centered and participatory methodologies. Emphasis is placed on the integration of theories and practice principles, culminating in their translation into specific intervention strategies. A culmination of the course involves a final oral presentation, wherein students engage in case analysis, treatment planning, and the implementation of post-modern intervention strategies.

Prerequisite(s): SOWK 7320.

SOWK 7365 Clinical Practice in Addiction (3)
This elective course is meticulously designed to provide students with clinical practice in the conceptualization, assessment, and treatment of addictions and substance abuse within a relational context. This clinical course places a significant emphasis on the interplay between connection, family, and the recovery process from addiction and substance abuse. The relationship between trauma and addiction are discussed and incorporated in assessment and treatment. The course addresses key aspects, including (1) the brain, the body, interpersonal neurobiology and attachment in healing, (2) Clinical assessment of addictions and substance misuse/abuse, (3) Treatment planning and implementation, (4) The ecosystem of the substance abuse and addiction health care delivery system and healing, and (5) Work with specific populations. Within the course, students will explore the critical role of connection and relationships in the healing process, delve into the ecosystem of addiction and substance abuse care delivery, and master treatment modalities and transitions. Throughout this comprehensive study, students will engage in conceptualizing a client and their family's relational ecosystem. A central component involves completing a thorough assessment and treatment plan, including interventions, for each stage of the recovery process.

Prerequisite(s): SOWK 7320.

SOWK 7370 Intro to Behavior Pharmacology (3)
This elective course offers foundational knowledge pertaining to the nomenclature of pharmaceutical drugs and the intricate process of drug development. It delves into the examination of the biological, social, and behavioral mechanisms underlying substance use. The curriculum addresses contemporary trends and investigates cultural, ethnic, gender, and age-related dimensions of substance use. Additionally, the course examines the impact of diverse forms of substance use on family systems and communities, providing a comprehensive exploration of this complex subject matter.

Prerequisite(s): SOWK 7320.

SOWK 7380 Treatment of Anxiety and Depression (3)
This course comprehensively explores the etiologies, manifestations, nosology, and biopsychosocial interventions associated with depression and anxiety—the predominant concerns presented by clients in primary care and mental health service settings. Guided by the epistemological foundations of the Strengths Perspective and a coordinated holistic biopsychosocial approach, the curriculum incorporates a nuanced consideration of physiological, psychological, social, developmental, familial, cultural, and environmental factors in both the assessment and intervention processes for anxiety and depression. Structured to promote active learning, the course encourages students to engage in practical case applications that span cognitive-behavioral, solution-focused, interdisciplinary case management, and comparative psychotherapy techniques. A focal point of the course involves accessing and evaluating research literature through the lens of Evidence-Based Practice, seamlessly integrating principles to scrutinize the outcomes and effectiveness of various clinical-community treatment approaches.

Prerequisite(s): SOWK 7320.

SOWK 7421 Research for Program Evaluation and Evidence Based Social Work (3)
In this course, students begin to develop mastery of some of the tools or skill sets required for successful completion of the MSW program and for ethical, effective clinical-community social work practice, including the evaluation of social work programs. The course focuses on the methods used to evaluate research and implement research methods into social work practice. The principles of Evidence-Based Practice (EBP) and research methodology will be identified and applied in order to integrate the knowledge gained to diverse practice contexts and the evaluation of practice and program outcomes. Students are familiarized with research knowledge resources vital to social work practice and evaluation and learn strategies for efficiently accessing and applying emerging research knowledge in order to effectively evaluate practice and programs, This course introduces and develops knowledge, values, skills and cognitive and affective processes related primarily to CSWE Competency 4: Engage in practice-informed research and research-informed practice and CSWE Competency 9: Evaluate practice with individuals, families, groups, organizations, and communities.

SOWK 7431 Data Analysis and Interpretation for Program Evaluation Research (3)
In this three-credit course, students continue to develop skills related to the accession, creation, utilization, and dissemination of knowledge for social work practice and program evaluation. The course focuses primarily on the principles, methods, and applications of quantitative and qualitative data analysis used in clinical-community social work research and program evaluation. The course emphasizes the practical application of data analysis knowledge in both assessing the quality of existing research evidence and contributing to knowledge through systematic inquiry on topics of concern to social work practitioners and their clients. Special emphasis is given to issues of norms, validity, and generalizability of measures, statistical methods, and data interpretation for research with diverse populations. The utilization of computer applications for data management and analysis is stressed.

Prerequisite(s): SOWK 7421.

SOWK 7440 Integrative Capstone Seminar (3)
The Capstone Seminar in relationship-centered, integrated clinical and community practice is designed to integrate the cumulative knowledge acquired in prior foundation and advanced courses. The goal is to produce a graduate who is firmly grounded in professional identity and in the values and purpose of social work. This is accomplished through an engaging and dialectical process involving students and the professor. Fundamental inquiries will revisit topics such as structural oppression, local and global issues in social work, critical thinking for social work, systemic oppression, and the application of social work practices.

Prerequisite(s): SOWK 7331.

SOWK 7450 Death, Dying and Grieving (3)
This course critically explores end-of-life issues and their profound impact on clients, families, and social workers. Through a structured curriculum, students will engage in a comprehensive examination of their emotions related to death, dying, grieving, and other losses. The course employs a multifaceted approach, incorporating class readings, targeted exercises, and discussions to provide a nuanced understanding of the complex dynamics surrounding end-of-life considerations.

SOWK 7520 Field Practicum & Seminar I (4)
Field education is the signature pedagogy of social work education. The Field Practicum & Seminar courses are designed to integrate MSW coursework with field practicum learning and experience. Field placements are in community agencies where professional social work supervision is provided to guide the development of a full range of social work practice skills to help the student assume a professional social work role. Field Practicum & Seminar courses require students to complete 300 hours in field placement in conjunction with class attendance and participation. Tulane School of Social Work maintains close ties with agencies in the development of the educational focus of field instruction.

Prerequisite(s): (SOWK 7120, 7130, 7221 and 7310).

SOWK 7530 Field Practicum & Seminar II (4)
Field education is the signature pedagogy of social work education. The Field Practicum & Seminar courses are designed to integrate MSW coursework with field practicum learning and experience. Field placements are in community agencies where professional social work supervision is provided to guide the development of a full range of social work practice skills to help the student assume a professional social work role. Field Practicum & Seminar courses require students to complete 300 hours in field placement in conjunction with class attendance and participation. Tulane School of Social Work maintains close ties with agencies in the development of the educational focus of field instruction.

Prerequisite(s): SOWK 7520.

SOWK 7540 Field Practicum & Seminar III (4)
Field education is the signature pedagogy of social work education. The Field Practicum & Seminar courses are designed to integrate MSW coursework with field practicum learning and experience. Field placements are in community agencies where professional social work supervision is provided to guide the development of a full range of social work practice skills to help the student assume a professional social work role. Field Practicum & Seminar courses require students to complete 300 hours in field placement in conjunction with class attendance and participation. Tulane School of Social Work maintains close ties with agencies in the development of the educational focus of field instruction.

Prerequisite(s): SOWK 7530.

SOWK 7840 Independent Study (1-3)

SOWK 7910 Field Practicum & Seminar PT 1 (2)
Field education is the signature pedagogy of social work education. The Field Practicum & Seminar courses are designed to integrate MSW coursework with field practicum learning and experience. Field placements are in community agencies where professional social work supervision is provided to guide the development of a full range of social work practice skills to help the student assume a professional social work role. Field Practicum & Seminar courses require students to complete 150 hours in field placement in conjunction with class attendance and participation. Tulane School of Social Work maintains close ties with agencies in the development of the educational focus of field instruction.

Prerequisite(s): SOWK 7120, 7130, 7211 and 7310.

SOWK 7920 Field Practicum & Seminar PT 2 (2)
Field education is the signature pedagogy of social work education. The Field Practicum & Seminar courses are designed to integrate MSW coursework with field practicum learning and experience. Field placements are in community agencies where professional social work supervision is provided to guide the development of a full range of social work practice skills to help the student assume a professional social work role. Field Practicum & Seminar courses require students to complete 150 hours in field placement in conjunction with class attendance and participation. Tulane School of Social Work maintains close ties with agencies in the development of the educational focus of field instruction.

Prerequisite(s): SOWK 7910.

SOWK 7930 Field Practicum & Seminar PT 3 (2)
Field education is the signature pedagogy of social work education. The Field Practicum & Seminar courses are designed to integrate MSW coursework with field practicum learning and experience. Field placements are in community agencies where professional social work supervision is provided to guide the development of a full range of social work practice skills to help the student assume a professional social work role. Field Practicum & Seminar courses require students to complete 150 hours in field placement in conjunction with class attendance and participation. Tulane School of Social Work maintains close ties with agencies in the development of the educational focus of field instruction.

Prerequisite(s): SOWK 7920.

SOWK 7940 Field Practicum & Seminar PT 4 (2)
Field education is the signature pedagogy of social work education. The Field Practicum & Seminar courses are designed to integrate MSW coursework with field practicum learning and experience. Field placements are in community agencies where professional social work supervision is provided to guide the development of a full range of social work practice skills to help the student assume a professional social work role. Field Practicum & Seminar courses require students to complete 150 hours in field placement in conjunction with class attendance and participation. Tulane School of Social Work maintains close ties with agencies in the development of the educational focus of field instruction.

Prerequisite(s): SOWK 7930.

SOWK 7950 Field Practicum & Seminar PT 5 (2)
Field education is the signature pedagogy of social work education. The Field Practicum & Seminar courses are designed to integrate MSW coursework with field practicum learning and experience. Field placements are in community agencies where professional social work supervision is provided to guide the development of a full range of social work practice skills to help the student assume a professional social work role. Field Practicum & Seminar courses require students to complete 150 hours in field placement in conjunction with class attendance and participation. Tulane School of Social Work maintains close ties with agencies in the development of the educational focus of field instruction.

Prerequisite(s): SOWK 7940.

SOWK 7960 Field Practicum & Seminar PT 6 (2)
Field education is the signature pedagogy of social work education. The Field Practicum & Seminar courses are designed to integrate MSW coursework with field practicum learning and experience. Field placements are in community agencies where professional social work supervision is provided to guide the development of a full range of social work practice skills to help the student assume a professional social work role. Field Practicum & Seminar courses require students to complete 150 hours in field placement in conjunction with class attendance and participation. Tulane School of Social Work maintains close ties with agencies in the development of the educational focus of field instruction.

Prerequisite(s): SOWK 7950.

SOWK 8880 No Courses This Term (0)

SOWK 9010 Portfolio Planning Seminar I (1)
These 9000 level seminars (Portfolio Planning Seminar Units 1-4) are designed to offer individual academic support to Doctor of Social Work (DSW) students to develop their individual APP and professional portfolios. The Portfolio Planning Seminar provides individualized support for students as they develop their research questions, construct an argument, focus their review of the literature, identify statistical and data analytic methods appropriate to the research question, and demonstrate cohesion between the identified research topic and the application of a theoretical framework. These required courses are designed for students to identify their individual research interests relevant to their respective fields and to develop these interests into an approved APP Proposal.

SOWK 9020 Portfolio Planning Seminar II (1)
These 9000 level seminars (Portfolio Planning Seminar 1-4) are designed to offer individual academic support to Doctor of Social Work (DSW) students to develop their individual APP and professional portfolios. The Portfolio Planning Seminar provides individualized support for students as they develop their research questions, construct an argument, focus their review of the literature, identify statistical and data analytic methods appropriate to the research question, and demonstrate cohesion between the identified research topic and the application of a theoretical framework. These required courses are designed for students to identify their individual research interests relevant to their respective fields and to develop these interests into an approved APP Proposal.

SOWK 9030 Portfolio Planning Seminar III (1)
These 9000 level seminars (Portfolio Planning Seminars 1-4) are designed to offer individual academic support to Doctor of Social Work (DSW) students to develop their individual APP and professional portfolios. The Portfolio Planning Seminar provides individualized support for students as they develop their research questions, construct an argument, focus their review of the literature, identify statistical and data analytic methods appropriate to the research question, and demonstrate cohesion between the identified research topic and the application of a theoretical framework. These required courses are designed for students to identify their individual research interests relevant to their respective fields and to develop these interests into an approved APP Proposal.

SOWK 9040 Portfolio Planning Seminar IV (1)
These 9000 level seminars (Portfolio Planning Seminars 1-4) are designed to offer individual academic support to Doctor of Social Work (DSW) students to develop their individual APP and professional portfolios. The Portfolio Planning Seminar provides individualized support for students as they develop their research questions, construct an argument, focus their review of the literature, identify statistical and data analytic methods appropriate to the research question, and demonstrate cohesion between the identified research topic and the application of a theoretical framework. These required courses are designed for students to identify their individual research interests relevant to their respective fields and to develop these interests into an approved APP Proposal.

SOWK 9101 Leader Evidence Inform Practice (4)
This course introduces students to scholarly leadership principles in social work practice. The course allows the development of critical thinking skills by gaining an understanding of scientific, analytical, and ethical approaches utilized when conducting program evaluation and service outcomes research. Students' mastery of course content prepares them to develop, use, and effectively communicate evidence informed social work research knowledge.

SOWK 9102 Theory, Models & Methods (4)
This course provides students opportunities to examine the structure of selected theories, models and principals that social workers use to support their practice. Specifically it provides both a framework and a forum for students to: (a) hold conversations about the historical and contemporary factors affecting social work practice theory, including the values of American culture and changing technologies; (b) examine practice effectiveness research; and (c) propose newly configured models for theory supported practice.

SOWK 9200 Program & Clinical Evaluation (4)
The purpose of the summer immersion course is to prepare students with the needed skills to measure the effectiveness and appropriateness of programs and interventions. In this course students will learn how to apply action research with community organizations and have the opportunity to apply service outcomes research methods to a local agency. Students will also be introduced to descriptive statistics and effective report writing. The course will further prepare students to develop a critical frame for designing real world program and clinical evaluations.

SOWK 9203 Hist Policy Social Welfare (4)
This seminar introduces students to the historical, political, and sociological approaches to investigate the formation, evolution, and implementation of social policy. Research studies in policy formation, policy implementation and policy evaluation are stressed. Materials on the legislative processes, societal institutions and societal values as reflected are stressed. The seminar is designed to provide a basic theoretical foundation for students to conduct advanced policy research. Students will review and critique some of the seminal theoretical literature that informs policy research and will examine specific applications of social theory to policy questions.

SOWK 9204 Quant Method Research (4)
This course is an introduction to research methods for doctoral students in social work. This course introduces students to the principles; methods and analytical techniques associated with quantitative social work research and service outcome methods. The course allows the development of critical thinking skills by gaining an understanding of scientific, analytical, and ethical approaches utilized when conducting research for social work practice. Students will become familiar with efforts to achieve and measure variables in the context of human and social development. Students' mastery of course content prepares them to develop, use, and effectively communicate empirically-based social work research with experimental, quasi-experimental, and non-experimental research designs.

SOWK 9205 Pedagogy Development (4)
This course introduces the student to the philosophies of adult education, and strategies to enhance learning in the classroom with special emphasis on incorporating diversity content and conflict resolution in the classroom. Students will increase proficiency in the process of learning and teaching especially linking to CSWE Core Competencies. Content will focus on development of specific teaching skills, including curriculum/syllabus design, lecture preparation, assignments and evaluation. Students will also create a teaching philosophy that will be included as part of their professional portfolio.

SOWK 9206 APP Research Ethics (4)
This course is designed for doctoral students beginning to develop their own program of research. It will provide an emphasis on understanding the basic expectations and requirements of research proposal, as well as the ethical and pragmatic considerations to conduct a research study. The primary goal of this course is to provide an opportunity for students to identify research interests relevant to their respective fields and develop these interests into an IRB proposal effectively.

SOWK 9210 Qualitative Methods & Analysis (4)
This course introduces the student to the purposes, goals, and logic of qualitative/naturalistic research methods as they are applicable to social work problems and questions. The course is orientated toward providing students with (1) an introduction to qualitative inquiry and analysis; (2) a beginning experience with research skills appropriate to the ecological perspective on social work practice. The emphasis in this course is on the discovery function of knowledge building activities. In this, as in all courses in the program, the ultimate aim is to prepare students to effectively meet their responsibility to continually assess and improve their own practice and to add to the general store of social work practice knowledge.

SOWK 9307 Applied Social Statistics (4)
This course introduces students to applied social statistics where students will learn to analyze, interpret, and present real world findings. Content includes descriptive and inferential statistics for univariate, bivariate, and multivariate analyses, and the use of electronic data processing technology to manage and analyze secondary data. At the end of this course, students will be able to apply statistical techniques and communicate results common to program evaluation.

SOWK 9308 Nonprofit Mgmt & Development (4)
The focus of this course is on agency leadership. The purpose is for students to understand different management aspects, roles of boards, strategic planning and fundraising ethics for non-profit management. Students will be able to articulate the theoretical foundations that affect the growth of and external influences on the nonprofit sector. Students will also be able to perform basic analyses of financial information provided by nonprofit entities, including budgetary calculations, cost allocation techniques, capital planning, and operational needs.

SOWK 9309 Community Advocacy and Participatory Research for Applied Practice (4)
The focus of this course is on community leadership. The purpose is on the development of research knowledge and skill needed for effective evidence-based clinical-community research application. This course will specifically prepare student with the needed skills for effective community level (macro) practice. Students will be able to identify and describe theories and relevant models of effective community practice and theoretical models for community organization. Students will also be introduced to community based participatory research (CBPR) approaches and methods if CBPR consisted with program evaluation.

SOWK 9310 APP Grant Writing (4)
This course is designed for doctoral students to further develop their programs of research. It will provide an emphasis on grant writing and funding attainment to conduct a research study. The primary goal of this course is to provide an opportunity for students to identify potential grants, funding justification, budgeting, and program evaluation; culminating in development of an effective grant proposal.

SOWK 9410 Quantitative Methods I (3)

SOWK 9420 Qualitative Methods I (3)

SOWK 9430 Intermediate Statistics (3)

SOWK 9440 Adv Multivar Appro & Inf (3)

SOWK 9450 Portfolio Dev Seminar V (1)
These 9400 level seminars (Portfolio Development Seminars 5-8) are designed to build on the 9000 level planning courses and offer individual academic support to Doctor of Social Work (DSW) students to complete their individual APP. The Portfolio Development Seminar provides individualized support for academic writing, data analytics, manuscript submission, grant proposals, and/or program evaluation. These required courses are designed for students to complete their APP proposal and further develop their professional portfolios.

SOWK 9460 Portfolio Seminar VI (1)
These 9400 level seminars (Portfolio Development Seminars 5-8) are designed to build on the 9000 level planning courses and offer individual academic support to Doctor of Social Work (DSW) students to complete their individual APP. The Portfolio Development Seminar provides individualized support for academic writing, data analytics, manuscript submission, grant proposals, and/or program evaluation. These required courses are designed for students to complete their APP proposal and further develop their professional portfolios.

SOWK 9470 Portfolio Develop Seminar VII (1)
These 9400 level seminars (Portfolio Development Seminars 5-8) are designed to build on the 9000 level planning courses and offer individual academic support to Doctor of Social Work (DSW) students to complete their individual APP. The Portfolio Development Seminar provides individualized support for academic writing, data analytics, manuscript submission, grant proposals, and/or program evaluation. These required courses are designed for students to complete their APP proposal and further develop their professional portfolios.

SOWK 9480 Portfolio Develop Seminar VIII (1)
These 9400 level seminars (Portfolio Development Seminars 5-8) are designed to build on the 9000 level planning courses and offer individual academic support to Doctor of Social Work (DSW) students to complete their individual APP. The Portfolio Development Seminar provides individualized support for academic writing, data analytics, manuscript submission, grant proposals, and/or program evaluation. These required courses are designed for students to complete their APP proposal and further develop their professional portfolios.

Course Limit: 4

SOWK 9510 Res. Meth., Dev. & Impl. (3)

SOWK 9550 Research Design In Sowk (3)

SOWK 9610 Soc Wk Pract & Thry:Comp (3)

SOWK 9620 Sys and Theories of Org (3)

SOWK 9640 Advanced Sem Ego Psych (3)

SOWK 9650 Small Group Theory/Treat (3)

SOWK 9670 Lit Sem:Child/Adolsnt I (3)

SOWK 9680 Measure Social Phenomena (4)
This course will provide students with the opportunity to expand their knowledge and understanding of the complexities related to working in varying contests given evolving priorities, pressures, opportunities and constraints. Students will become familiar with efforts to achieve and measure variables in the context of human development. This approach takes into consideration the multiple processes and inherent challenges that come into play across theoretical, economic, environmental, and political in society.

SOWK 9690 Lit Sem:Child/Adolsnt 3 (3)

SOWK 9710 Hist App To Soc Welfare (3)

SOWK 9720 Scholarshp of Pract In P (3)

SOWK 9730 Read In Hist of Soc Wel (3)

SOWK 9740 Advanced Readings (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOWK 9750 Read In Soc Wel Org Adm (3)

SOWK 9760 Advan Read In Hum Beh Sc (3)

SOWK 9800 Ways of Knowing, Learnin (3)

SOWK 9810 Conflict In Families (3)

SOWK 9820 Sem In Advanced Meth II (3)

SOWK 9840 Integrative Seminar (3)

SOWK 9850 Sp Proj In Soc Wk Meth I (3)

SOWK 9870 Sp Proj Soc Wk Meth II (3)

SOWK 9880 Qualifying Exam (4)
The purpose of this seminar is for the student to demonstrate their ability to develop a command of the literature in particular areas and subareas and synthesize this knowledge into a coherent framework. Students are required to demonstrate considerable knowledge about the evolution and growth of ideas in the area as well as the issues that continue to engage scholars. Students will need to go beyond formal coursework to master independently their identified area of expertise. Students must also demonstrate an ability to situation specific research fields, constructs, and theories within a broader academic framework.

SOWK 9900 Clinical Internship I (3)

SOWK 9920 Clinical Internship III (3)

SOWK 9930 General Internship (3)

SOWK 9940 Dissertation Dev Sem I (1)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOWK 9941 Intro to Quant. Methods Rsh (4)
This course is an introduction to statistical analysis for doctoral students in social work. It covers basic statistical methods for use with experimental, quasi-experimental, and non-experimental research designs. The course provides basic mathematical, conceptual, and design tools for data analysis in social work research. Beginning computer applications for data analysis in social work research are also introduced.

SOWK 9942 Intro Qual & Inter Hum Inquiry (4)
This course introduces the student to the purposes, goals, and logic of qualitative/naturalistic research methods as they are applicable to social work problems and questions. The course is orientated toward providing students with (1) an introduction to the "field" of qualitative inquiry and (2) a beginning experience with research skills appropriate to the ecological/field perspective on social work practice. The emphasis in this course is on the discovery function of knowledge building activities. In this, as in all courses in the program, the ultimate aim is to prepare students to effectively meet their responsibility to continually assess and improve their own practice and to add to the general store of social work practice knowledge.

SOWK 9943 Applied Social Statistics (4)
This course introduces students to applied social statistics where students will learn to analyze, interpret, and present real world findings. Content includes descriptive and inferential statistics for univariate, bivariate, and multivariate analyses, and the use of electronic data processing technology to manage and analyze secondary data. At the end o0f this course, students will be able to apply statistical techniques and communicate results common to program evaluation.

SOWK 9950 Dissertation Dev Sem II (3)

SOWK 9951 Research Methods, Dev & Implem (4)
This course introduces students to scholarly leadership principles in social work practice. The course allows the development of critical thinking skills by gaining an understanding of scientific, analytical, and ethical approaches utilized when conducting program evaluation and service outcomes research. Students' mastery of course content prepares them to develop, use, and effectively communicate evidence informed social work research knowledge.

SOWK 9955 Designs for Clinical Comm Prac (4)
This course focuses on the development of research knowledge and skill needed for effective evidence-based clinical-community research application. The purpose of this course is to prepare students with the needed skills to measure the effectiveness and appropriateness of program interventions. This course will specifically prepare student with the needed skills for effective community level (macro) practice.

SOWK 9960 Sw Research Practicum I (1)

SOWK 9961 SW Theory, Prac Models & Meth (4)
This course provides students opportunities to examine the structure of selected theories, models and principals that social workers use to support their practice. Specifically it provides both a framework and a forum for students to: (a) hold conversations about the historical and contemporary factors affecting social work practice theory, including the values of American culture and changing technologies; (b) examine practice effectiveness research; and (c) propose newly configured models for theory supported practice.

SOWK 9970 Sw Research Practicm II (1)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOWK 9971 Hist Approaches to Soc Welfare (4)
This seminar explores the historical context for the development of professional social work values, ideologies and methods.

SOWK 9972 Schol Practice Policy Context (4)
This seminar introduces students to the political and sociological approaches to investigate the formation, evolution, and implementation of social policy. Research studies in policy formation, policy implementation and policy evaluation are stressed. Materials on the legislative processes, societal institutions and societal values as reflected are stressed. The seminar is designed to provide a basic theoretical foundation for students to conduct advanced policy research. Students will review and critique some of the seminal theoretical literature that informs policy research and will examine specific applications of social theory to policy questions.

SOWK 9980 Teachers Practicum (0)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOWK 9990 Dissertation Research (0)
This course students register for while working on their dissertation products. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOWK 9991 Adv Clinical Project (1)
These seminars are designed to offer individual academic support to Doctor of Social Work (DSW) students to complete their individual ACP. Students will have the opportunity to apply knowledge and skills from their coursework in research methods, research design, and data analysis techniques. The goal of these courses is to provide additional individualized faculty support for DSW students in their final year of DSW courses and completion of the ACP.

Maximum Hours: 99

SOWK 9992 Portfolio Planning Seminar (1)
These seminars are designed to offer individual academic support to Doctor of Social Work (DSW) students to develop their individual APP and professional portfolios. The Portfolio Planning Seminar provides individualized support for students as they develop their research questions, construct an argument, focus their review of the literature, identify statistical and data analytic methods appropriate to the research question, and demonstrate cohesion between the identified research topic and the application of a theoretical framework. These required courses are designed for students to identify their individual research interests relevant to their respective fields and to develop these interests into an approved APP Proposal.

SOWK 9993 Adv Clinical Proj Dev Sem I (4)
This course is designed for doctoral students beginning to develop their own program of research. It will provide an emphasis on understanding the basic expectations and requirements of research proposal, as well as the ethical and pragmatic considerations to conduct a research study. The primary goal of this course is to provide an opportunity for students to identify research interests relevant to their respective fields and develop these interests into a proposal effectively.

SOWK 9994 Adv Clinical Proj Seminar I (1)
These seminars are designed to offer individual academic support to Doctor of Social Work (DSW) students to develop their individual ACP. These required courses are designed for students to identify their individual research interests relevant to their respective fields and to develop these interests into an approved ACP Proposal. The ACP seminar provides additional support for students as they develop their research questions, construct an argument, focus their review of the literature, identify statistical and data analytic methods appropriate to the research question, and demonstrate cohesion between the identified research topic and the application of a theoretical framework. This ACP course will incorporate the knowledge and skills developed in previous course work in the program. The goal of these courses is to provide additional individualized faculty support for DSW students throughout their enrollment in the program.

SOWK 9995 Adv Clinical Proj Seminar II (4)
This course is designed for doctoral students to further develop their programs of research. It will provide an emphasis on grant writing and funding attainment to conduct a research study. The primary goal of this course is to provide an opportunity for students to identify potential grants, funding justification, budgeting, and program evaluation; culminating in development of an effective grant proposal.

Social, Behavioral and Population Sciences (SBPS)

SBPS 6030 Social and Behavioral Aspects of Health (3)
This course covers the behavioral, social, and cultural aspects of health and disease. Students identify how behavioral and social theories across levels of the social ecological model are relevant to social and behavioral health issues and interventions. Central to the learning experience is a comprehensive course project, where students conduct an evidence-based literature review, and apply theory to inform interventions to improve health.

SBPS 6140 Development of Leadership and Communication Skills in Public Health (3)
This course combines practical, skills-based exercises with strategic thinking approaches to aid the student to master several of the public health cross-cutting competencies objectives related to leadership, communication and professionalism. It has been tailored to focus on personal leadership and communication skill development and is thus of interest to all public health students. Its goals are to clarify each student's intended professional path; enhance his/her ability to utilize a strategic approach for personal and professional leadership development; and to increase each student's self-efficacy in utilizing communication, oral and written, to achieve organizational leadership.

SBPS 6150 Taiwan Strategies to Community Health Practices (3)
This course provides a field study opportunity in Taiwan for the aim of learning global public health practices, cross-culture communication and interaction, and alternative community health strategies. 10 – 12 students from partner Universities in Taiwan (Asia University and China Medical University) are paired with 10-12 students from Tulane University to form cross-cultural teams to research and develop a plan to address community health concerns at the national, provincial, city, provincial and/or community levels. Lectures and discussions will be provided by experienced faculty from university partners, government officials, and field-based practitioners in Taiwan. The cross-cultural student teams are required to make a power point presentation on their identified community health concerns and submit a written field report.

SBPS 6260 Violence Prevention Studio Seminar (1)
This course is designed to create an interactive and unique learning environment for students, community partners, and Violence Prevention Institute faculty through strengthening the partnerships between academic institutions and community organizations focused on preventing violence as well as mitigating the negative effects of various forms of violence. Seminars will include presentations by community partners and faculty from the Violence Prevention Institute. Community partners will speak about the violence prevention programs and strategies utilized by their organizations. Seminars will also include presentations by Violence Prevention Institute faculty focused on empirical approaches and competencies necessary for effective academic and community partnerships seeking to address the complex issues related to violence.

SBPS 6340 Monitoring and Evaluation of Health Programs (3)
This course provides students with an introduction to monitoring and evaluation, a widely valued set of skills in both the domestic and international contexts. The course content includes rationales for evaluation; the political, organizational, theoretical aspects of evaluation; and methods for implementing a sound evaluation Students will gain practical experience in translating concepts into the development of an evaluation plan for actual programs. To avoid course material redundancy, students attending this course should not enroll in IHSD 6300.

SBPS 6360 Sexual Health - A Public Health Perspective (3)
Sexual health is a growing component of public health outreach. The goal of this course is to provide students with a foundational understanding of sexual health from a public health perspective. Students will (1) critically examine and discuss common sexual health issues addressed by public health practitioners, their epidemiology, and their underlying social determinants, (2) learn to recognize and understand key methodological considerations in the measurement of sexual behavior and sexual health outcomes, and (3) gain knowledge about key theoretical foundations of sexual health promotion and their application to sexual health behavior change. Content topics include HIV/STIs; interpersonal violence; pregnancy; pornography, sex work, and erotic behaviors; adolescent reproductive health; and sexual function, pleasure, and satisfaction.

SBPS 6460 Child Health and Development in Public Health (3)
This course covers child health and development addressing important health issues in each stage of childhood including the biologic, genetic, psychosocial, and environmental influences upon those issues, the medical aspects of their management and most importantly, fundamental public health interventions to address them. Population based approaches working to address disparities in the maintenance of health and access to primary and secondary care of children will be presented with a focus on children with special health care needs, children within immigrant families, children with developmental and psycho-social challenges, and other groups of children who carry a disproportionate burden of disease.

SBPS 6490 Key Policies and Programs in Maternal and Child Health (3)
This course examines maternal and child health policy and programs in the U.S. with a focus on the history, organization, delivery, and financing of maternal and child health, and related public health and social services at the national, state, and local levels. The course emphasizes the evolving Maternal and Child Health (MCH) -Title V Block Grant program legislative mandates and federal policies; the national, state, and local structures and roles in delivering MCH services; and how MCH fits into the overall U.S. public and private health systems.

SBPS 6500 Violence as a Public Health Problem (3)
This introductory elective course is designed to give an overview of the problem of violence as viewed from a public health perspective. We will look at the epidemiology of violence (scope, causes, risk factors, and consequences) alongside public health approaches to the problem. The course aims to balance a review of the problem with ideas and evidence for solutions. Local academic and community members in the field will lend their expertise to help students understand and address violence as a public health problem. Students will have opportunities to build skills through violence prevention training, critical analysis of media and film, and final course projects analyzing major violence-related topics.

SBPS 6510 Essential Issues in Maternal and Child Health (3)
This course explores evidence-based issues and trends in maternal and child health offering an introduction to MCH-related issues from a public health perspective with an emphasis on the social determinants of health. The purpose of the course is to identify the individual, social, economic and environmental issues currently affecting women, men and families, as well as infants and children using a life course approach. Students will develop written and oral presentations addressing scientific, clinical, social and political aspects of MCH issues.

SBPS 6610 Local Food Systems & Nutrition (2)
This course examines community influences on food habits, dietary behaviors, and nutritional outcomes. Socioeconomic and racial/ethnic inequities in access to healthy food are described as are cultural influences on food choice. Examples of applied interventions to address nutrition problems are examined throughout the local food system. New Orleans, with its rich culinary history and active engagement in food and nutrition programming serves as the backdrop for the study of these issues. The course includes field visits to local community organizations working on food and nutrition programming.

SBPS 6690 Essentials of Public Health Nutrition (3)
This graduate-level course is designed to provide an overview of the foundational elements of public health nutrition. This will include a focus on three essential components: (1) principles of human nutrition, (2) biological mechanisms influencing nutrition in health and disease, and (3) major public health nutrition programs and emerging issues. Specific topics will include essential nutrients with emphasis on their sources, function, and metabolism in the human body; nutrition needs throughout the life course; nutrition in chronic disease; national and global public health nutrition initiatives; current challenges and innovations. An emphasis will be placed on the major nutrition#related problems in the world today and evidence-based strategies to address them.

SBPS 6700 Social Innovation Tools (3)
This course offers students a toolkit of skills for complex systems thinking, systems-led leadership, and human-centered design (HCD) to prepare graduates to address complex societal problems such as climate change, violence, and poor access to health. Students learn how to map systems, identify entry-points, reframe messy problems into smaller “challenges”, and address them in human-centered, creative, collaborative ways with stakeholders. Training in design thinking is offered via hands-on workshops, complemented by a theoretical framing of design for public good. Examples are drawn from public health, education, and sustainability; they span domestic, international, and global contexts. Students must participate in the Fast 48 workshop at an additional fee.

SBPS 6750 Population Nutrition Assessment (3)
This course offers a thorough review of the tools used for the assessment of nutritional status of populations. Topics include anthropometric, biochemical, and socioeconomic indicators of nutritional status; methods for the collection, analysis, and interpretation of dietary data; measurement of household food security; and the use of data from nutrition monitoring and surveillance sources. Students will get exposure to major nutrition problems and their causes in variety of country contexts. They will also develop their abilities "to tell a story with numbers." Analyzing data, interpreting the results, and communicating about these results verbally is a necessary part of the planning and programming of nutrition and health interventions.

SBPS 6770 Food and Nutrition Policy (3)
This course surveys domestic policies and programs that affect nutrition at the population level. Subjects include: dietary policy, including the politics of the food guide pyramid: food labeling policy; food access policy, including the U.S. food assistance programs; food safety and food supplies policy; the obesity epidemic, including the role of the food industry; environmental determinants of nutrition outcomes and efforts to improve them; actors and agencies involved in making policy; and nutrition advocacy.

SBPS 6780 Nutrition in Low- and Middle-Income Countries (3)
The purpose of the course is to familiarize students with the current public health nutrition-related issues affecting low- and middle-income countries (LMICs), including the co-existence of under and over nutrition (i.e., double burden of malnutrition), issues with infant feeding behaviors, iron-deficiency anemia and other relevant micronutrient deficiencies, food insecurity and the impact of climate change on diets. Students will learn about the biological, social, and environmental factors influencing these issues as well as the nutrition-specific and nutrition-sensitive policies designed to address them.

SBPS 6800 Community Training Methodologies (2)
This course introduces students to concepts and methods which will enable them to effectively train adults to perform health care functions in the community. Knowledge about adult learning is coupled with exercises designed to help develop a positive attitude toward participatory learning. Students to learn how to "train trainers" in the community to help improve community health outcomes. Emphasis will be placed upon developing a positive attitude toward interactive learning and combining this with a variety of training methodologies which will together help to create an atmosphere where communities are empowered to improve their health.

SBPS 7010 Health Communication Theory and Practice (3)
This course is designed to examine research and practice in health communication, with a special focus on how health media campaigns are planned and executed in order to stimulate change in knowledge, attitudes, behavior and subsequent health outcomes. This examination will include the review of the history of health communication campaigns, the theoretical foundation for the design and implementation of campaigns, and selected case studies of campaigns. Practical aspects of designing campaigns and media messages will be covered.

Prerequisite(s): (SBPS 6030* or GCHB 6030*) and (SPHL 6080* or 6880).
* May be taken concurrently.

SBPS 7100 Public Health Policy & Practice (3)
This course is designed to deepen the students’ understanding of public health practice and use of policy to improve population health. There is a strong focus on governmental public health services delivered by federal, state, and local government, along with the services and organization of non-profits that are involved in the delivery of public health services. Students will actively engage in simulations of those roles through real world case studies, team projects, scenarios, and exposure to prominent individuals working and practicing in the field of public health and policy. Students will develop skills related to policy development and advocacy and integration of public health practice, policy development and integration with the clinical sector.

SBPS 7160 HIV Surveillance in Hard to Reach Populations (2)
In the context of health sciences, sex workers, people who inject drugs, men who have sex with men, transgender persons, migrants, homeless persons, youth living on the streets and other stigmatized and vulnerable populations, are at higher risk for HIV, TB, hepatitis, and other infections. Measuring the behavioral and biological risks affecting these populations is essential to creating effective prevention programs, allocating funding and modeling future epidemic scenarios. Respondent driven sampling (RDS) is a highly robust and effective method to recruit samples of ‘hard-to-reach’ populations that are connected through social networks. This course will provide participants with practical and relevant up-to-date information about the methodological and theoretical issues and analytical concerns from one of RDS’s world-leading practitioner. It will draw on a variety of lectures, presentations of actual field research, hands-on analysis and practical experience in designing surveys using RDS.

SBPS 7200 Development Issues, Theory, & Measurement (3)
This seminar reviews major theories and debates about social, human, and economic development in the developing world, especially Africa, Latin America, and South Asia. These concepts are useful to public health researchers and practitioners aiming to advance human well-being. The first 3 weeks cover economic growth, modernization, neoliberalism, sustainable development, human development/the capabilities approach, human rights, and Marxian theory/dependency schools. The second 3 weeks review critical perspectives: post-structuralism, post-colonialism, feminist theories, complexity and dynamic systems, and social innovation. Ethnographic case studies of development and global health projects reveals how assumptions and practices translate into real-life "development" projects that can fail to address key issues and cause unintended outcomes that have effects. The readings invite us to think differently about knowledge, evidence, culture, participation, globalization, and sustainability; we consider the role of foreign aid and relevant development actors.

SBPS 7220 Community Organization: Community Work for Social Justice (3)
This course focuses on community work as a major approach to social change and highlights community participation as a means to address social determinants of health. The course explores concepts relevant to community engagement and examines how gender, race, ethnicity, power, and structural racism inform community work. The roles of community members, institutions, public health practitioners and others in improving or hindering community work is also examined. The course stresses critical thinking and application of community work skills with an emphasis on participatory approaches, empowerment, intersectionality, community assessment, group process for partnership development, and evaluation of community-level programs. Common strategies for community-level change will be discussed in the context of case study reviews.

SBPS 7250 Evidence-Based Research Methods in Social and Behavioral Sciences (3)
Research methods are at the center of our approach to knowledge and understanding in public health. Theories are supported by empirical evidence. This class provides an introduction to this way of thinking, i.e., into methodology or the "science of finding out." The purpose of this course is to train students in how to collect and analyze data on social and behavioral phenomena in a rigorous and scientific manner. This knowledge requires an understanding of three different components: 1) inquiry and research design, 2) data collection, and 3) data analysis.

Prerequisite(s): (SPHL 6050 or 6850) and (SPHL 6060 or 6860).

SBPS 7260 Social Marketing (3)
This skills-based course examines the application of marketing principles to social and public health problems. Basic and advanced social marketing principles and methods are explored, and a framework for carrying out social marketing is provided. The course covers the features, components, process and methodology of social marketing, and has a focus on real word applications. Skills building exercises are incorporated as both in-class and outside homework assignments. Exam(s) assess student knowledge and application of social marketing principles and elements. Students are required to prepare brief presentations throughout the semester that demonstrate understanding and application of course material. A final project is designed to apply and integrate material from the entire class.

Prerequisite(s): SPHL 6080* or 6880.
* May be taken concurrently.

SBPS 7280 Qualitative Methods I: Basic Foundations (3)
Qualitative methods can be highly useful in the conduct of community-based population health research and evaluation. Students will receive foundational training in the design, implementation, analysis, and synthesis of qualitative methods. Emphasis will be given to the appropriate uses of commonly used methods and analytic procedures in community-based health research and evaluation. This course is for graduate students in SPHTM.

SBPS 7290 Qualitative Methods II: Theory and Methods (3)
This course – the second in a two-part sequence – builds on Qualitative Methods I (SBPS 7280) to provide students hands-on experience analyzing, interpreting, and writing up the results of qualitative research. The goal of this course is to provide students with skills in qualitative data analysis, interpretation, and writing. In SBPS 7280, students were trained in NVivo. In SBPS 7290, students will apply these skills to a dataset provided in the course to explore different analytical approaches and develop analyses.

Prerequisite(s): SBPS 7280.

SBPS 7510 Maternal Child Health: The Life Course Perspective (3)
In this course students are taught to use a life course perspective to approach important issues of public health. As Neil Halfon put it, "the life course perspective seeks to address the causes of poor health trajectories [which] require addressing the nested social ecology of health development." Over the semester, basic principles of human development, from preconception to end of life, are explored and examined through the conceptual framework provided by life course theory. Particularly, students will learn about the mechanisms, timing and dynamics of health as a developmental process, which can inform development of early interventions. The course will build upon Ecological and Transactional models of Life Span Development and introduce the rapidly expanding evidence base for life course theory. In addition to providing a conceptual framework for understanding public health issues, the course will illustrate the application of this framework to gain practical insight into maternal and child health.

Prerequisite(s): SBPS 6030 and 6510.

SBPS 7950 Dietetic Internship I (6)
Supervised practice for dietetic intern students with DPD Verification statements. Experiences are provided in food service management, medical nutrition therapy, and community nutrition at various facilities in southeast Louisiana.

SBPS 7960 Dietetic Internship II (6)
Supervised practice for dietetic intern students with DPD Verification statements. Experiences are provided in food service management, medical nutrition therapy, and community nutrition at various facilities in Southeast Louisiana.

Prerequisite(s): SBPS 7950.
Course Limit: 2

SBPS 7980 Professional Practice Seminar (1)
This is a capstone course, all elements of which are designed to integrate and synthesize competencies in nutrition. As such, this course and its final report satisfies the Integrative Learning Experience for students in the MPH Nutrition Program. Specifically, it will enhance Nutrition Program or Foundational competencies, such as those in programming, evaluation, policy advocacy, communication, team building, ethics, cultural-competence, leadership, and professional development that students have developed throughout the program. Students will describe the challenges they face in the workplace either in their Applied Practice Experience or in another professional setting. They will develop solutions to these challenges in a team-building environment. Students will also learn about professional employment, continuing education, professional associations, and employment resources throughout the field of public health nutrition

SBPS 7990 Independent Study (1-3)

SBPS 8200 Evaluation Theory (3)
Evaluation theory provides the conceptual framework for assessing the effectiveness of evaluation practice. This course presents theories of evaluation, and the theoretical assumptions that underlie evaluation organized around the five components that Shadish, Cook, and Leviton consider to be important to evaluation theory: theories of knowledge, value, use, social programming and practice. While the course begins with a review of evaluation methods and data sources, the seminar focuses on the key figures in the field and exemplary evaluation designs and uses. This is an active learning course applying evaluation principles. Students will be required to participate actively through preparing seminar papers and participating in class discussions.

Prerequisite(s): SPHL 6080 and SBPS 6340.

SBPS 8220 Community Organizing for Social Change (3)
This advanced course is intended for DrPH students to develop a scholar-activist approach to public health practice. We will focus on community organizing as a social change strategy, looking to historical and contemporary examples of social movements. Students will read and synthesize literature across disciplines to gain an understanding of community organizing frameworks and strategies. Students will apply the toolkits of leading community organizers such as the Midwest Academy to gain experience in community analysis and planning.

SBPS 8700 Maternal and Child Health Advanced Methods Seminar (1)
The Maternal and Child Health Advanced Methods Seminar will provide a weekly series of presentations that allow students to deepen their understanding of contemporary challenges in empirical, applied and translational maternal and child health research and practice. Broadly, topics will include innovative research areas, emerging methodologies, and effective solutions for advancing maternal and child population health equity. The seminar series is intended to complement and expand knowledge and skill-building in the areas of life course theory, maternal and child population health sciences, and reproductive epidemiology. The goal of the seminar is to assist participants in integration of learning across program curricula.

SBPS 8750 Social Determinants of Health I: Theory (3)
This course delves into the broad area of social determinants of health from a theoretical perspective. It is geared towards doctoral students, with an emphasis on preparing students to conduct theory-driven research in the social determinants of health. The two overarching goals for the course are for students (1) to develop knowledge about the etiology and theoretical underpinnings of social determinants of health, and (2) to develop skills in crafting a compelling, theory-based rationale for a proposed research study on one social determinant of health. These goals are accomplished through readings, class discussion, two presentations, and a culminating paper. Individual mentorship is also provided to students as they develop their ideas.

SBPS 8760 Social Epidemiology/Social Determinants of Health II (3)
The goal of this course is to prepare students for practical applied research on the social determinants of health. The first half of the course will focus on: 1) measurement of key constructs such as inequality and racism and 2) common study designs such as multilevel and natural experiments. The second half of the course will focus on: 1) common biases and limitations to social determinants research and methods used to address limitations, and 2) analytic strategies and interpretation, including linear and non-linear multilevel regression. By the completion of the course, the student will have the skills necessary to design, analyze and present data from a range of studies that consider social determinants of health.

Prerequisite(s): (SPHL 6050 or 6850) and (SPHL 6060 or 6860) and (EPID 7120 or IHSD 8250).

SBPS 8770 Social Determinants of Health in Public Health Practice (3)
This advanced doctoral level course is designed for students to display competence in the application of social epidemiological methods to analyze and address the relations between social factors and health and health disparities. Practical tools and skills will be introduced to conduct health equity research and translate evidence-based strategies into practice. Students will demonstrate an understanding of the strengths and limitations of various study designs and analyses used in social epidemiology. Experience analyzing and interpreting data surrounding various public health issues from a social epidemiological framework will be provided through classroom sessions and homework assignments. Students will also review and critique empirical applications in the public health field.

Prerequisite(s): SPHL 6060 or 6860.

SBPS 8800 Senior Graduate Research Seminar I (0)
This course is required for all doctoral students in the SBPS department for the duration of their tenure as doctoral students. It is intended to increase student's proficiency in 1) analyzing and interpreting current public health research, as represented in peer review journals; 2) determining how to apply research findings to the practice of public health, especially by developing community-based programs for disease prevention; and 3) presenting and discussing research-related topics. These objectives will be attained through a variety of activities, including faculty-and student-led discussions of required readings; faculty and student oral presentations of ongoing research projects (including the prospectus and dissertation research), and small group projects. All doctoral students will be expected to make a research-related oral presentation at least once.

SBPS 8830 Senior Graduate Research Seminar II (1)
The Doctoral Seminar is conceptualized as a series of content modules that provide a breadth of foundational exposure and training to departmental doctoral students over their doctoral tenure. These modules are intended to complement and expand knowledge in areas of public health and professional development that students might not receive in their current course curricula. The doctoral seminar is required of all students during their program tenure. The Doctoral Seminar serves as a forum where students and faculty can meet regularly to exchange ideas, and discuss foundational areas of public health from multiple perspectives, including empirical, programmatic, systemic, and policy. 2-3 foundational content modules are covered each semester and include 3-5 related seminars offering multiple perspectives on the topic. At the end of the module, there is a session devoted to critical reflection on, and discussion of, the various seminars within the module. Students are required to write a 2-3 page reflection about what they learned across the seminars in the module, and thoughts that it triggered for them. These reflections are shared and discussed. The seminar will consist of several types of presentations: 1) faculty presentations on current research, 2) guest presentations on community-based, governmental, policy-driven, and/or systemic initiatives, 3) student presentations on literature supporting their research project, 4) student presentations on current research in progress, and (5) professional development seminars.

SBPS 8990 Independent Study (1-3)

Sociology (PASO)

PASO 2100 Comparative Race & Ethnic Relations (3)
In 1903, American sociologist W. E. B. Du Bois made his prescient statement, on the launch of his seminal book The Souls of Black Folk: "the problem of the Twentieth Century is the problem of the color-line." Can we make this claim in the Twenty-First Century? To answer this question, we will compare race and ethnic relations in the United States, with a focus on understanding how race and racism shape our lives. We will discuss historical accounts of the social constructs of race and ethnic groups and examine current issues of individual, institutional, and systemic racism, media representations of race and ethnicity, racialized forms of migration, racial inequalities, and environmental racism. We will also make connections between race, gender, and social class to understand how they work together in creating inequalities and shaping our identities.

PASO 2200 Environment & Society (3)
There is no relationship more important to society than the one we have with our natural environment. From how we extract natural resources necessary for everyday life to where we put our waste products, from how we produce our food to where we go on vacation, our dependence on and perceptions of the environment are fundamental to every aspect of our lives. This course focuses on society-environment relations across the globe. We begin by reading about and discussing some conceptual issues that are central to our understanding of society-environment relations. These include the concept of sustainability, environmental resources, political economy, social construction of nature, and environmental justice. We then examine several important society-environment relations, including energy use, agriculture and food, and conservation.

PASO 2300 Families: Diversity & Change in Society (3)
In this course, we are going to look at families as a form of social institution, which means how families work as a set of structured social arrangements that help meet certain human needs. This class will be looking at families within the context of the United States. To begin, we will explore the ways in which families are defined and consider the main elements that describe family relationships. Then, we will address families through history, taking note of the ways they have responded and adapted to larger social changes. Several modules will explore the ways in which families absorb and respond to the larger social inequalities of society. We will also explore family experiences as they relate love and romance, marriage and cohabitation, children, the workplace, divorce and remarriage, and family violence. Throughout the course, we will read and discuss scholarly research and data on families, taking note of how social scientists use research methods to scientifically study this social institution.

PASO 2912 Special Topics (3)
Special Topics in Sociology. Course may be repeated unlimited times for credit.

Maximum Hours: 99

PASO 2913 Special Topics (3)
Special Topics in Sociology. Course may be repeated unlimited times for credit.

Maximum Hours: 99

PASO 2914 Special Topics (3)
Special Topics in Sociology. Course may be repeated unlimited times for credit.

Maximum Hours: 99

PASO 2915 Special Topics (3)
Special Topics in Sociology. Course may be repeated unlimited times for credit.

Maximum Hours: 99

PASO 2990 Social Science Research Methods (3)
In the last several years, people have said that they have done "research" to come to conclusions. Often, this lay usage of "research" refers to doing some internet searches and watching YouTube videos; these searches and video viewings often result in the person justifying an existing belief, as the person chooses sources that align with what she or he already thinks. As you will learn in this course, that is not research. Research is a systematic endeavor. The researcher uses established practices to test an idea or hypothesis or generate a new theory. Evidence gathered through research may disconfirm a hypothesis. Because "research" has taken on this lay usage, it is important to become knowledgeable about what research is, what practices constitute research, and how one can assess the quality of research. This course will introduce you to the concept of research, research terminology, research ethics, and various research methods. For each method, you will learn about the strengths and limitations of each approach and what types of research questions a method can (and cannot) address.

PASO 3100 Urban Space Place & Inequality (3)
This course explores the theoretical and methodological formulations of space and place and their relevance for sociological and social analyses. We will study the relationship of space/place to inequality as manifested in different guises around the world: spatial polarization, architecture, urban planning and design, spatial integration, symbolic space, etc. Throughout the course, we will pay close attention to how space and place intersect with inequality and how challenges to inequality are leveled through spatial approaches. How does the urban experience vary for different groups of people (by gender, race, ethnicity, class, sexuality)? Why? What explains the processes of urbanization and suburbanization? Who controls public space? How do different cities respond to the needs of the poorest residents, and what shapes these responses? How did (do) cities around the world come to develop and grow? What is the role of gentrification? These are some of the questions we'll address in this course.

PASO 3200 Sociology of Travel and Tourism (3)
This course examines the relationship between tourism and social life from a sociological perspective, the root idea being that it is natural for human beings to make contact with other human beings and societies to create leisure institutions to engage in cultural exchange and enjoyment. This course will examine tourist practices and how they are shaped and made meaningful within a social context. As we investigate why people travel, how they travel, and what they do while they are "on the road," we will see that tourism is not on the margins of the social world, but rather profoundly interconnected with everyday social life, from the personal to the global. Through readings, discussing, and writing, we will explore the ways tourism is a material, symbolic, and political representation of many of the features of contemporary society's achievements and ills: modernity and postmodernity, consumption and cultural commoditization, the aestheticization of everyday life, democratization and social inequalities, questions of authenticity, embodiment and identity, gender relations, technology, social mobility and power, and globalization.

PASO 3210 Global Inequality (3)
This course introduces students to the relations among globalization and inequality and globalization, with a focus on implications for the developing world. Among topics for study are the world distribution of income, across and within countries; concepts of inequality (income, opportunity, mobility, capabilities, horizontal inequality); the implications of global trade and capital markets for inequality within developing countries; the consequences of inequality for growth and for political institutions in developing countries; the effects of global market failures and differences among countries in economic power on trade, capital, intellectual property, international migration, climate and other global regimes; and the role of global economic institutions (IMF, World Bank, bilateral aid programs) in addressing unequal opportunity and global market failures.

PASO 3220 Brazilian Society (3)
This course is designed as an interdisciplinary and critical introduction to the history, society, literature, and culture of Brazil, the largest nation of Latin America. Students will learn about Brazil's colonial experience as the only Portuguese colony in the Americas, its unique experiment with monarchical institutions in the nineteenth century, and the trajectory of its uneven modernization in the twentieth century. The course will examine diverse topics including contemporary race relations, gender, sexuality, religion and spirituality, class conflict, migration, and various aspects of Brazilian cultural production and performance, as reflected in film, music, literature, and other forms of popular culture.

PASO 3230 Sociology of Gentrification (3)
Why are rents up? Where are all the people who used to live in this neighborhood? Why was your favorite coffee shop replaced by a bank? What exactly is a hipster? These are all questions swirling around the topic of gentrification. Ruth Glass coined the term "gentrification" in 1964 to describe changes she was seeing in London, in particular the fact that "one by one, many of the working class quarters of London have been invaded by the middle classes." A physical and social transformation of urban neighborhoods, gentrification might have gotten its name in the 1960s, but it has its roots in social processes that run from the early twentieth century through today. In this class, we will explore the causes and consequences of gentrification, with a focus on the United States. In addition to thinking about what gentrification is, we will think about how urban theorists have conceived of gentrification, and how these conceptions shape debates on the contentious topic.

PASO 3300 Socio Health & Mental Illness (3)
This course offers an introduction to sociological theories and research related to health and illness, with a focus on mental health and mental illness. Although many people think of mental illness as under the purview of healthcare providers (and psychiatrists and psychologists for mental illness), sociologists have made significant contributions to our understanding and conceptions of health, illness, and mental illness.

PASO 3911 Special Topics (3)
Special Topics in Sociology. Course may be repeated unlimited times for credit.

Maximum Hours: 99

PASO 3912 Special Topics (3)
Special Topics in Sociology. Course may be repeated unlimited times for credit.

Maximum Hours: 99

PASO 3913 Special Topics (3)

Maximum Hours: 99

PASO 3914 Special Topics (3)
Special Topics in Sociology. Course may be repeated unlimited times for credit.

Maximum Hours: 99

PASO 3915 Special Topics (3)
Special Topics in Sociology. Course may be repeated unlimited times for credit.

Maximum Hours: 99

Sociology (SOCI)

SOCI 1010 Sexualities and Society (3)
The course is an introduction to sociological thinking about sexuality. It explores the social construction of sex; cultural discourses about sex; and the role sex plays in nation-building and social control. It examines role of sex in giving meaning and value to intersecting social identities. It introduces a theory of sexual scenes, particularly as it pertains to collegiate hookup culture. And it asks students to imagine alternative ways of organizing our sexual lives, identities, relationships, and societies.

SOCI 1020 Topics in the Sociology of Race and Ethnicity (3)
Sociology of Race and Ethnicity focuses on race and ethnic categorizations and relations. It examines the social stratification and impact of race and ethnicity on the everyday lives of people. This course provides you with the scientific tools necessary for examining power dynamics and deconstructing socially constructed identities globally. It significantly attends to the historical experiences of racial and ethnic minorities in the United States especially.

SOCI 1030 Sociology of The Family (3)
Consideration of the family as a social institution and a special form of small group. Examination of theoretical and empirical research focusing upon mate selection, marital interaction, and child socialization. Topics include contemporary demographic trends and cultural practices.

SOCI 1040 Gender & Society (3)
Examines the social construction of gender and the consequences of gender equality. Topics include socialization, intimate relations, paid and unpaid work, violence, and social change.

SOCI 1050 Intro to Education & Society (3)
This course is an introduction to sociological research, concepts, and theories about education. In the course, the purpose and function of education for the individual and society are critically considered, and a substantial amount of time is spent discussing the links between education and inequality. Topics that are discussed in detail include: the potential and limitations of schools, schools as agents of socialization, cross-national differences in educational systems, social relationships in schooling (the influence of community, social capital, parents, and peers), within and between school inequalities (school effects/ ability grouping), the effects of school characteristics and ascriptive forces on schooling outcomes, and variation in schooling outcomes themselves (achievement, attainment, labor market outcomes). Students will gain an appreciation of the role of schools as powerful determinants of the opportunities that individuals experience in modern societies.

SOCI 1060 Urban Sociology (3)
The social patterns, processes, and institutional structure of urban life.

SOCI 1080 Deviant Behavior (3)
Examines forms of human behavior that have been defined as deviant by the larger society. An emphasis is placed on understanding the social construction of such definitions, especially their cross-cultural variations, as well as motivations and social implications for those whose behavior is judged as deviant.

SOCI 1090 Social Problems (3)
Examination of critical contemporary social problems and social policy options. Emphasis is placed on understanding the multidimensional sources of crisis, unrest, and instability as well as policy options and tradeoffs associated with ameliorative efforts. Topics vary by semester and instructor.

SOCI 1210 Sociology of Religion (3)
Introduces students to sociological study of religious phenomena, including religious beliefs, practices, and behaviors as conditioned by sociological factors. A key emphasis is the relationship between religious systems and other social institutions, e.g., politics, family, economy, and social stratification.

SOCI 1290 Semester Abroad (1-20)
Semester Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 1300 Criminology (3)
Emphasizes the public's perception of the crime problem and various sociological measures of amounts and trends of criminal behavior in society. Causal and noncausal theories of criminality, and the sociological implications of various selected offenses are explored.

SOCI 1400 Sociology of Sport (3)
An analysis of the structure and functions of sports in contemporary American society. Topics include the relationship between sports, socialization, ideology, sports and totemism, the organization of sports, and the economics of sports.

SOCI 1460 Asian-Amer Communities (3)
This course will provide a sociological introduction to America's rapidly growing Asian American populations and to the major issues facing these populations.

SOCI 1470 Global Social Change (3)
Examines global change and its implications for individuals and groups via exploration of issues of globalization of the economy, international development, urbanization, immigration, social movements, changing gender relations, etc. Emphasis will be placed on how such changes have come about and course focus will be international in scope with emphasis on Latin America, Asia, and/or Africa.

SOCI 1510 Work In American Society (3)
Examines the concepts of occupations, professions, and work organizations. It considers issues about employee selection, job involvement, alienation, satisfaction, performance, and compensation; industrial mental health, occupation safety, health and medicine; social conditions of work in bureaucratic organizations, work groups and union membership; supervision and human resource management; and the changing conditions of work resulting from technological change, social change, shifts in the occupational structure and the interface of work with other institutions such as the family.

SOCI 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 1891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 1893 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 1900 Special Topics (3)
Special topic announced each semester.

Course Limit: 99

SOCI 1901 Special Topics (3)
Special topics course as designed by visiting or permanent Sociology faculty. For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Course Limit: 99

SOCI 1902 Special Topics (3)
Special topics course as designed by visiting or permanent Sociology faculty. For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Course Limit: 99

SOCI 1903 Special Topics (3)
Special topics course as designed by visiting or permanent Sociology faculty. For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Course Limit: 99

SOCI 1904 Special Topics (3)
Special topics course as designed by visiting or permanent Sociology faculty. For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Course Limit: 99

SOCI 1905 Special Topics (3)
Special topics course as designed by visiting or permanent Sociology faculty. For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Course Limit: 99

SOCI 1906 Special Topics (3)
Special topics course as designed by visiting or permanent Sociology faculty. For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Course Limit: 99

SOCI 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

SOCI 2010 Foundations of Sociology (3)
To provide substantive exposure to basic sociological concepts, theories, methods, and tools. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 2050 Population and Society (3)
An examination of the dynamic relationship between population and society. The course focuses on the contemporary demography of developed and developing countries, with an emphasis on societal problems linked to population.

SOCI 2100 Special Topics (3)
Special topic announced each semester. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 2101 Special Topics (3)
Special topics in Sociology.

SOCI 2102 Special Topics (3,4)
Special topics in Sociology. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 2103 Special Topics (3)
Special topics in Sociology.

SOCI 2110 Special Topics (3)
Special Topics in Sociology. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 2120 Issues in Law and Society (3)
This course provides an introduction to the main themes and key debates in sociolegal research. Like the field of "law and society," it is interdisciplinary, and our readings will span sociology, political science, philosophical jurisprudence, and legal scholarship. We will read a mix of canonical law and society readings, as well as more recent pieces. Among the themes we will focus on are: legal pluralism, legal consciousness, the meaning and nature of law, the persistent "gap" between "law on the books" and "law in action," and the ambivalent place of law in political resistance and movements for social change.

SOCI 2180 Wealth,Power and Inequality (3)
Survey of theoretical and empirical literature on the distribution of wealth, power, and prestige within and across societies and historical periods. Emphasis is placed on the impact of social change on stratification systems.

SOCI 2210 Sociology of Reproduction (3)
This course is an introduction to the Sociology of Human Reproduction. We frequently think about reproduction as a natural/biological event, but like other aspects of human life, it is socially constructed: shaped by and experienced in and through various social practices. We will cover topics ranging from childbirth to breastfeeding, contraception to childlessness, and even little-known issues such as man" -opause (i.e.,male menopause). Much of the social science work on human reproduction comes from either demographic or feminist traditions so course readings reflect this dual genealogy.

SOCI 2220 Sociology of Medicine (3)
Introduction to the sociological significance of medicine and medical procedures and professions.

SOCI 2230 Sociology of Law (3)
Introduction to the sociological significance of law and legal procedures and professions.

SOCI 2450 Society Through Cinema (3)
Examination of social organization, interaction, issues, and problems via the depiction of these issues and themes in selected commercial and documentary cinematic statements as illustrative material. Weekly class meetings are divided into lecture, screening, and discussion. Specific topical foci differ by semester.

SOCI 2490 Lat Amer Social Structur (3)
An historical examination of the human condition in Latin America emphasizing three primary spheres of social relations: political, economic, and ideological. Within each sphere the following themes are addressed: national-international relations, urbanization, rural social structure, demographic trends, cultural change, and stability.

SOCI 2500 Organizational Behavior (3)
An introduction to the sociological study of organizations in the private and public sectors. Topics include models for studying organizations, organization processes (communication, decision-making, negotiation, leadership), the impact of structural culture, and environmental factors on organizational behavior.

SOCI 2600 Environmental Sociology (3)
This course examines political and economic aspects of global and local environmental problems. Topics include how societies and the environment interact, why some environmental risks have gained most attention, how support for environmental concerns can be measured, responses by environmental social movements, and visions of sustainable societies in the First and Third Worlds.

SOCI 2650 Latin Amer & the Environment (3)
An introduction to the political economy of the environment in Latin America.

SOCI 2700 Soc Psych Everyday Life (3)
An examination of issues involved in everyday social interactions, this course focuses on dimensions of interpersonal behavior against the background of sociological roles and role-playing, Emphasis is placed on the nature and process of interpersonal relationship, encounters, and public behavior against the backdrop of societal assumptions, norms, practices and beliefs. Related issues of affect/emotion, attitudes, cognition and perception will be discussed.

SOCI 2730 City of Paris (3)
Paris, one of the most distinctive and historically rich cities in the world, is used as a living laboratory for an examination of social patterns, processes, and organization of contemporary urban life. Course materials and field investigations serve to contextualize modern Paris in the conditions that spawned its dramatic transformation over the past two millennia and its continuing evolution into the present. Much of this summer class is experiential: learn by doing-planning, exploring, observing, mapping, and interpreting. In-class and field projects focus on how cities and urban systems are organized, the structuring of public space and its uses, modes of interpersonal interaction, how people perceive and attach meaning to the built environment, how we "read" cities, and represent urban spaces and places in our minds via "cognitive maps".

SOCI 2800 Introduction to Women's Imprisonment (3,4)
This class will explore the history, sociology, law, and politics of women's incarceration in the United States and Louisiana in particular exploring how different disciplines approach the subject. The class will investigate and map the work of local, national, and international organizations working on issues related to women in prison. We will use women in prison as a location to explore gender issues such as violence against women, discrimination against women in employment, racism and intersectionality, devaluation of women, and enforcement of gender norms such as compulsory heterosexuality. We will examine how law oppresses women but also how individuals and groups have changed policies to improve women's prison conditions and reduce the collateral consequences of convictions.

SOCI 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

SOCI 3030 Intro To Research Design (3)
Logic and techniques of social research, the relationships between theory and method, and alternative strategies in data collection.

Prerequisite(s): SOCI 2010.

SOCI 3040 Social Statistics (3)
Basic training in descriptive and inferential statistics with social science applications. Topics include measurement, tabular and graphic displays of data, central tendency, dispersion, probability, estimation, hypothesis testing, and linear regression.

Prerequisite(s): SOCI 2010.

SOCI 3100 Special Topics (3)
Special Topics in Sociology.

Corequisite(s): SOCI 3101.

SOCI 3101 Special Topics (3)

SOCI 3220 Social Theory (3,4)
An introduction to classical and contemporary sociological theory.

Prerequisite(s): SOCI 2010.

SOCI 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

SOCI 4210 Urban Ethnography and Social Justice (3)
In this course students will develop a practical working knowledge of the theoretical and conceptual frameworks used in analyzing urban issues of social justice through a combination of classroom instruction, applied ethnographic field instruction, practitioner engagement, and professional development activities.

SOCI 4310 Crime Punishment & Comm NOLA (3)
This course examines the relationship among community changes/characteristics, crime, and punishment focusing on New Orleans. It includes an intense community engagement component that involves residential outreach to assess viewpoints on common crime prevention, policing and punishment practices.

Corequisite(s): SOCI 4210 and SOCI 4890.

SOCI 4560 Internship (1-3)
Open to especially qualified upper level students. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 4570 Internship (1-3)
Open to especially qualified upper level students. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 4610 Ecology and Society (3)
From local disasters to global crises, this course explores the grave consequences to human development springing from ecological catastrophes and the ways in which wellbeing, social equality, and economic advance are intimately linked to the environment.

Corequisite(s): EVST 4510.

SOCI 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 4910 Independent Study (1-3)
Open to especially qualified upper level students with approval of instructor. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 4920 Independent Study (1-4)
Open to especially qualified upper level students with approval of instructor. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

SOCI 4990 Honors Thesis (3)
Honors Thesis.

Course Limit: 99

SOCI 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): SOCI 4990.

SOCI 5110 Capstone Component: SOCI 6320 (0)
Capstone Component: SOCI 6320.

SOCI 5190 Semester Abroad (1-20)
Semester Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 5380 Junior Year Abroad (1-20)
Junior Year Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 5390 Junior Year Abroad (1-20)
Junior Year Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 6010 Adv Special Topics: SOCI (3,4)
Special topic announced each semester. Courses may be repeated up to unlimited credit hours.

Prerequisite(s): SOCI 3040, 3030 and 3220.

Maximum Hours: 99

SOCI 6011 Adv Special Topics: SOCI (3,4)
Adv Special Topics in Sociology. Course may be repeated up to unlimited credit hours.

Course Limit: 99
Maximum Hours: 99

SOCI 6012 Adv Special Topics: SOCI (3,4)
Adv Special Topics in Sociology. Course may be repeated up to unlimited credit hours.

Prerequisite(s): (SOCI 3030, 3040 and 3220).

Maximum Hours: 99

SOCI 6013 Adv Special Topics: SOCI (3-4)
Advanced Special Topics course as designed by visiting or permanent Sociology faculty. For description, consult the department.

SOCI 6014 Adv Special Topics: SOCI (3-4)
Adv Special Topics in Sociology.

SOCI 6020 Political Sociology (3)
Analysis of both the distribution and institutional bases of power in society and the values which legitimate them. Class, bureaucracy, occupations, and political participation as these correlate with power.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6030 Monog, Poly-Sexualities Societ (3,4)
This class is a sociological exploration of the establishment and consequences of different kinship forms including monogamy, polygamy, polyamory, and polyqueer.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6060 Issues In Soc of Gender (3)
This course examines research in several areas of the sociology of gender. Topics include the acquisition of gender identity, face to face interactions, the changing roles of women and men, the intersection of work and family, and social movements. Students will conduct original research in one of these areas.

Prerequisite(s): SOCI 3040, 3030 and 3220.

SOCI 6070 Sociology of Sexuality (3-4)
An advanced sociology course on sexuality. The core theme of the course is to explore how the way we think about and experience the erotic, sex, and sexuality are constructed through and shaped by social processes. Considerable time will be spent on sexuality as a system of stratification that is separate from but intersects with inequalities on the basis of gender, race, ethnicity, and class.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6080 Mental Health and Illness (3)
Mental health has been typically understood as one of the defining characteristics of "normality"; in contrast. mental illness has long been stigmatized and contested. This course aims to show that the boundaries between the two have been far from stable and depend on the social and historical contexts in which they are drawn.

Prerequisite(s): SOCI 3040, 3030 and 3220.

SOCI 6090 Sociology of Medicine (3)
An examination of social and psychological factors affecting the prevalence and incidence of disease in human populations. Topics also considered include the organization of the health professions, comparative medical systems, social change and health care, and social factors affecting the utilization of health services.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6100 Sociology of Health & Illness (3-4)
Advanced seminar in the social causes and effects of health, illness, and healthcare.

Prerequisite(s): SOCI 3030 and 3040.

SOCI 6112 Sociology of Food and Agriculture (3,4)
Study of food and agriculture systems, particularly in the Gulf South and Latin America, from a sociological perspective.

Prerequisite(s): SOCI 3040, 3030 and 3220.

SOCI 6120 Race/Ethnicity In Amer (3)
Sociological examination of the dynamics of race and ethnic relations in the United States. This course provides an opportunity for students to read about, think, and discuss issues of racial and ethnic relations in society. Topics include the social construction of racial classification systems, the historical record of the interaction between the races in America, public policy, and possible mechanisms for dealing with some of the issues that many consider most problematic in our society.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6130 Race, Crime and Control (3-4)
This course examines the US Criminal Justice system as a mechanism of racial control. It covers the socio-historical construction of race, different theories and practices of racism and their manifestation and institutionalization in the contemporary US Criminal Justice system, and ongoing strategies of resistance and antiracism.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6160 Crime and Human Development (3-4)
This course will examine key conceptual and research issues such as the development of criminal behavior and criminal careers; stability and change in criminal behavior across developmental stages of the life course; trajectories, transition, and turning points through life; qualitative and quantitative approaches to studying crime and the life course, and social change and its link to individual lives.

Prerequisite(s): SOCI 3040 and 3220.

SOCI 6180 Wealth, Power, and Inequality (3)
Theories of stratification, status systems in various societies, measurement and research of social classes in the United States.

Prerequisite(s): SOCI 3040, 3030 and 3220.

SOCI 6200 Issues In Soc of Family (3)
This course will consider the sociological, political, and cultural criticisms of the traditional definitions of family. This course focuses on family demography, gay/lesbian family issues, African-American families, and the "family values" wars as organizing topics.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6210 Sociology of Culture (3,4)
The sociology of culture provides a useful lens to examine culture in everyday life, in mass media, and in the fine arts.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6260 Gender, Work & Family (3)
This course focuses on the sociological intersections of gender, work, and family across a variety of countries, with emphasis on (but not limited to) the European Union and the United States. Major themes are (1) how national context influences the work-family nexus for adults (women and men) and children (girls and boys), (2) how people negotiate, share, and create culture as it relates to work-family issues, and (3) how the experiences and ideologies of parents and children vary within and across societies. The course will cover a wide range of sociological vantage points, from macroscopic to microscopic issues.

SOCI 6270 Climate Change and Disasters (3-4)
Climate change is the most daunting ecological calamity facing all of humanity. This is a discussion-based course designed to evaluate the process of globalization and the political and economic forces therein that affect the environment, with particular focus on climate change and disasters. The course motivates students to critically evaluate the claims of various schools of thought on the relationship between globalization, climate, and the environment. In order to accomplish these objectives, we must first fully understand macro-sociological interpretations of development. In turn, we will extensively consider the interconnections among society, political-economic dynamics, the process of globalization, and natural systems (ecology). The successful integration of these themes depends heavily on your involvement in and preparation for class meetings. To that end, each student should dedicate her/him/themselves to devoting adequate time to contemplate the readings prior to each class meeting and structure thoughtful contributions to class discussion. The process of climate change is a complex web of cause, effect, and feedback among human and natural systems. Your experience in this class will be enhanced to the degree that you appreciate and interrogate the complex relationships that are the nexus of societal and environmental interactions.

SOCI 6300 Urban Policy & Planning (3)
This course examines how government policies and programs have shaped and affected cities and metropolitan areas in the United States and around the world over the last hundred years or so. The course investigates policies and planning actions pertaining to community organizing, welfare reform, adaption to climate change, post-disaster recovery and rebuilding, tourism and urban cultural production: real estate, housing, and uneven development, and sustainability. The course will focus on policies that have impacted the built environment and address relationships between cities, communities, and broader socio-political and economic processes. As a capstone course, assignments and course activities are designed for advanced undergraduate or for graduate students interested in connecting the course subject matter with a service learning project within the sociology of urban policy and planning.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6310 Sociology of the Urban Environment (3,4)
The primary objective of this course is to provide students with an understanding of the fundamental sociological and various social science, humanities, and environmental perspectives on the urban environment. We will also engage with related fields such as political ecology, urban political and urban ecology, political economy of the environment, racial ecologies, and the general study of urban and environmental issues from an interdisciplinary perspective. Further, weaved within the entire course will be a emphasis on important issues related to social and environmental in/justices, including inequality, poverty, stratification, racism, and racial, gender, and sexual orientation inequality (among a number of other related issues). To do this, we will examine specific social and societal institutions including (but not limited to) housing, work, criminal in/justice and mass incarceration, pollution and neighborhoods, healthcare, public and environmental health, government and politics, public policies and a number of specific programs associated with all of those institutions. Additionally, we will discuss the history of urban policies and urban development, and environmental policies and related programs, as they all relate to the sociological concepts, issues, and institutions outlined previously. Lastly, we will explore the practices of inquiry and analysis associated with sociological and other social science approaches from a liberal arts perspective.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6320 Global Political-Economy & The Environment (3,4)
This course provides an overview of sociological research pertaining to globalization and the environment. Topics include macro-comparative theories of development. and the interconnections among society, political-economic dynamics, the process of globalization. and natural system (ecology).

Prerequisite(s): SOCI 3040 and 3220.

SOCI 6325 Global & Local Environmental Justice (3)
This service-learning course enriches student understanding of environmental justice at the global and local level. Students will sharpen their knowledge of various environmental movements. activism. and advocacy in the classroom. which will be supplemented with experience in the field. Specifically. students will collaborate with environmentally-focused organizations and nonprofits in the greater New Orleans area to implement environmental justice activities in the local community.

Prerequisite(s): SOCI 3040.

SOCI 6330 Sociology of Education (3,4)
This course will examine the social functions of educational institutions, the role of education in the American social and economic structure, and major controversies and debates concerning educational policy as social policy.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6340 Race & Ethnicity in Latin Amer (3)
This course explores the development of racial categories throughout Latin America and the implications of these social constructs for group identities, community building, and social activism. We will begin with a theoretical overview of the scholarship on race and ethnicity in Latin America and on the process of racialization. We will explore the limitations of using a Western lens to understand race and racism in Latin America and the Caribbean. Students will learn to expand how they conceptualize these terms in order to better understand Latin America's distinct racial landscape. Students will engage the empirical scholarship of indigenous populations as well as on Latin Americans of African descent. Students will learn about the complexities of mestizaje he erasure of blackness and rising inter-ethnic conflict.

SOCI 6560 Social Movements and Collective Behavior (3)
An advanced theoretical and empirical analysis of the determinants of organized non-institutionalized forms of collective action. Topics include the interplay of structural conditions and voluntaristic actions, the logic of collective action, culture, and ideology as they shape social movement outcomes. The specific types or dimensions of collective action examined may vary from semester to semester.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6640 Sociology of Organizations (3)
Exploration and development of organizational structures, processes and consequences. Interdisciplinary focus drawing conceptual, theoretical, and methodological tools from sociology, management, economics, and applied fields such as law and public administration. The seminar will examine classic and current issues in the sociology of organizations and the influence of complex organizations on different contexts and institutions (e.g., economy, family, healthcare, politics).

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6650 Sustainable Development in Latin America (3,4)
This course examines the dimensions of sustainable development in Latin America from the theoretical perspectives of environmental sociology and the sociology of development.

Prerequisite(s): SOCI 3040, 3030 and 3220.

SOCI 6660 Forensic Sociology (3)
This course will introduce students to the ways in which scholars and researchers apply social science knowledge, methods, and theories to legal problems such as criminal trials, civil disputes, and arbitration proceedings. The course will address socio-legal questions and problems related to the following areas of civil litigation: premises liability and inadequate/negligent security, product liability and human-factors related litigation, climate change, toxic torts and crime torts, racial segregation and fair housing, and employment discrimination lawsuits.

Prerequisite(s): SOCI 3040 and 3220.

SOCI 6700 Sociology of Law (3)
An examination of the implications of law in the persistence and change of social systems, the relation of sociological theory and research to legal institutions, and law as an organization and profession.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6873 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 6890 Qual Research Methods (3)
This course provides an introduction to key themes and practices in qualitative research methods, including major theoretical and methodological debates, project design, gaining access, and gathering and analyzing data. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 6891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 6892 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 6893 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SOCI 6910 Gender In Latin America (3)
A sociological examination of how changing political, economics and developmental issues in Latin America shape and are shaped by gender relations.

Prerequisite(s): SOCI 3030 and 3040 or SOCI 3220.

SOCI 6930 Social Movements in Latin America (3)
An examination of the factors shaping the emergence, development, and decline of social movements in Latin America. Issues addressed include why people join movements, what constraints there are on building of social movement organizations, and in what ways are leaders and ideologies crucial to movement development.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6940 Political Sociology of Latin America (3)
This course examines theories of the bases and distribution of power in Latin America. Topics include the role of elites and domestic class coalitions in state formation and regime transitions, the role of civil society/labor, popular associations, political parties in democratization, and the role of culture, including religion, in political life.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6960 Urban Latin America (3)
This course is a study of the causes and social effects of urban growth and decay in rich and poor countries in the Americas. Examines contemporary urban social classes and political coalitions, and how these are changing with shifting regional economies. The course discusses theories of urban societies and regional growth, and examines case studies and theories from Latin America.

Prerequisite(s): SOCI 3030, 3040 and 3220.

SOCI 6970 Latin America Social Mobilization (3,4)
Certain social networks and types of social practice specialize in subverting the state and dominant society. In this class we look diffusely at social mobilization and focus on manifestations beyond social movements. We look at protest, at crime and violence, and at religion. The goal is to understand social history, or the way people who are not in positions of institutional power come together to change their world, sometimes to make the world better and sometimes to make it worse. Our goal is to develop sensibilities and analytic outlooks that allow us to understand these types of social mobilization as a way of understanding social change in Latin America, beyond the institutions that political scientists and economists tend to focus on.

Prerequisite(s): SOCI 3040 and 3220.

SOCI 6990 Special Topics in the Sociology of Latin America (3)
Course topics vary. Courses will include: Latin American Immigration, Race and Ethnicity in the Americas, Caribbean Societies, and Drugs and Alcohol in the Americas.

Prerequisite(s): SOCI 3030, 3040 and 3220.

Maximum Hours: 99

SOCI 7010 Readings (3)
Graduate Level Independent Study.

SOCI 7350 Advanced Top Data Analys (3)
Course topics vary. Topics include: Innovations in data analysis.

Spanish (SPAN)

SPAN 0100 Spain Summer Program, Cadiz (0)
Summer program

SPAN 0990 Spanish For Reading Knwl (0)
Summer program.

SPAN 1010 Introductory Spanish I (4)
Introductory Spanish

SPAN 1020 Elements of Spanish II (4)
Continuation of SPAN 1010. The overall goal of this course is developing proficiency in the four language skills (listening, reading, speaking, and writing) essential to communicative language learning. The course uses a task-based approach which provides the learner with opportunities to use the language interactively.

Prerequisite(s): minimum score of PASS in 'Span 1020 Placement' or SPAN 1010.

SPAN 1120 Intensive Intro Spanish (4)
Intensive introductory Spanish course.

SPAN 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPAN 1891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPAN 1893 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPAN 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

SPAN 2030 Elements of Spanish III (4)
Continuation of SPAN 1020 or SPAN 1120. The overall goal of this course is to develop proficiency in the four language skills (listening, reading, speaking, and writing) essential to communicative language learning. The course uses a task-based approach which provides the learner with opportunities to use the language interactively.

Prerequisite(s): minimum score of PASS in 'SPAN 2030 Placement', SPAN 1020 or 1120.

SPAN 2031 Elements of Spanish III Lab (0)
Taken concurrently with SPAN 2030, the Elements of Spanish III Lab is an integral and required component of the SPAN 2030 Elements of Spanish III course. All students enrolled in SPAN 2030 must also enroll in SPAN 2031.

SPAN 2040 Span Conversations & Composition (3)
This course is designed to develop oral proficiency in Spanish through the study and analysis of recorded, visual, and written texts, as well as a variety of pair and group activities. Special emphasis is placed on pronunciation, vocabulary acquisition, and a review of Spanish grammar and syntax.

Prerequisite(s): minimum score of PASS in 'SPAN 2040 Placement' or SPAN 2030.

SPAN 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): SPAN 2040.

Maximum Hours: 99

SPAN 2891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPAN 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

SPAN 2990 Foreign Language Exempt (0)

SPAN 3040 Spanish Grammar and Writing (3)
Analysis and practice in the written language.

Prerequisite(s): minimum score of PASS in 'SPAN 3000 Placement', minimum score of PASS in 'SPAN 3040 Placement' or SPAN 2040.

SPAN 3050 Spanish Grammar & Writing Business (3)
This course studies the Spanish language as it is used in business and provides contexts for the practice and use of business-related lexicon in the Spanish-speaking world.

Prerequisite(s): SPAN 2040, minimum score of PASS in 'SPAN 3040 Placement', minimum score of PASS in 'SPAN 3050 Placement' or minimum score of PASS in 'SPAN 3060 Placement'.

SPAN 3060 Spanish Grammar & Writing Medical Profession (3)
This course introduces students to Spanish for the health sciences. Spanish major and minors interested in the health professions are encouraged to enroll, along with pre-medical and public health majors and minors.

Prerequisite(s): minimum score of PASS in 'SPAN 3040 Placement', SPAN 2040, minimum score of PASS in 'SPAN 3050 Placement' or minimum score of PASS in 'SPAN 3060 Placement'.

SPAN 3080 Spanish Grammar and Writing for the Legal Professions (3)
This course offers students the opportunity to enhance existing Spanish communication skills in legal practice. Students will also improve writing skills through assignments to be completed outside of class. The course will introduce Spanish legal terminology in areas such as immigration, consumer protection, criminal, employment, housing and family law.

Prerequisite(s): SPAN 2040, minimum score of PASS in 'SPAN 3040 Placement', minimum score of PASS in 'SPAN 3050 Placement' or minimum score of PASS in 'SPAN 3060 Placement'.

SPAN 3130 Introduction to Latin American Cultures (3)
Introduction to the cultural diversity of Latin America through the study of contemporary literary, social, political, and popular culture trends as observed by selected literary figures, intellectuals, and artists.

Prerequisite(s): SPAN 3040, 3050, 3060 or 3080.

SPAN 3240 Intro to Spanish Culture (3)
This course offers the intermediate student a brief introduction and survey of Spanish culture beginning during the earliest moments of the Spanish nation and continuing through the present, primarily though nonliterary means. Discussions are supplemented by cultural readings and visual media to give an overview of Spanish culture.

Prerequisite(s): SPAN 3040, 3050, 3060 or 3080.

SPAN 3270 Span & Lat Amer Lit & Cultures (3)
Through a series of readings from Latin America and Spain, students receive instruction in literary terminology, vocabulary building, and strategies for enhanced reading comprehension. Significant emphasis on the continued development of linguistic skills and critical analysis.

Prerequisite(s): SPAN 3130, 3240 or 3350.

SPAN 3280 Spanish & Lat Amer Lit & Film (3)
Through a series of film viewings, readings, and access to other visual media from Latin America and Spain, students receive instruction in how to discuss and analyze visual culture in Spanish. Vocabulary building and strategies for enhanced viewing and reading comprehension are stressed. Significant emphasis on the continued development of linguistic skills.

Prerequisite(s): SPAN 3130, 3240 or 3350.

SPAN 3350 Intro Topics Hispanic Cultures (3)
An introduction to Hispanic cultures from different thematic perspectives, which may include: US Latino culture, Jewish cultural production in Latin America and/or the Iberian peninsula, theatrical and performative practices in the Hispanic world, etc.

Prerequisite(s): SPAN 3040, 3050, 3060 or 3080.

SPAN 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPAN 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPAN 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

SPAN 4060 Hispanic Literary Foundations (3)
An introduction to the literature and critical issues of early Hispanic cultures until modernismo. Students acquire fundamental skills in literary and critical analysis as well as a basic understanding of key cultural topics such as medieval "convivencia," the social order in early modern Spain indigenous concerns in colonial Latin America, and the formation of national literatures in 19th century Latin America. Prerequisite(s): (SPAN 3040, 3050, 3060, or 3080) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280) or minimum score of PASS in 'SPAN 4000 level Placement'.

Prerequisite(s): (SPAN 3040, 3050, 3060 or 3080) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280) or minimum score of PASS in 'SPAN 4000 level Placement'.

Course Limit: 2

SPAN 4130 Topics Spanish-American Literature (3)
Readings in Spanish American stories, essays, and poems, focusing on a topic of historical and cultural importance. Some themes: women in Spanish American literature, regionalism and indigenismo, Afro-Latin American writing, testimonio. The precise topic varies from year to year. Course may be repeated up to unlimited credit hours.

Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

Maximum Hours: 99

SPAN 4131 Creative Writing in Spanish (3)
This course offers students the tools to articulate their ideas and experiences in a narrative form in Spanish. The course is designed to achieve this in two ways: by learning specific techniques through readings of short stories both in Spanish and English, which will be refined through numerous exercises; and by working through the semester on the crafting of at least one short story or nonfiction piece, about which the professor will make observations and suggestions as each student present drafts of their work. During the semester students will extensively practice writing, critical reading, and peer editing. The course introduces students to literary terminology and places significant emphasis on vocabulary building.

Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050, 3060 or 3080) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

SPAN 4140 Intro Colonial Letters (3)
Introduction to the literary monuments and cultural history of colonial Spanish America (1492-1815), with special focus on the relationship between first-person narration and Spanish legal traditions. Cultural icons of the colonial period to be studied include Hernán Cortés, Álvar Nuñez Cabeza de Vaca, Catalina de Erauso, Sor Juana Inés de la Cruz, Carlos de Sigüenza y Góngora, Fray Servando Teresa de Mier. Visual texts and films to complement Spanish readings.

Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050, 3060 or 3080) and (SPAN 3130, 3240 or 3550) and (SPAN 3270 or 3280).

SPAN 4150 Spanish Literature of the 20th Century (3)
Selections from the writings in all genres from the Generation of 1898 to the present.

Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050, 3060 or 3080) and (SPAN 3130, 3240 or 3550) and (SPAN 3270 or 3280).

SPAN 4160 Afro-Latin American Literature (3)
This course examines history, literature, and culture of Afro-Latin Americans from the colonial period up to the present. Throughout the course, students read articles concerning slavery, race relations, Afro-Atlantic religions, music, and Black political movements in Latin America. These readings provide socio-cultural context from the analysis of selected literary texts.

Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050, 3060 or 3080) and (SPAN 3130, 3240 or 3550) and (SPAN 3270 or 3280).

SPAN 4170 Intro to Spanish Film (3)
The development of the cinema in Spain from its origins to the present. Contextual topics such as the effects of civil war and censorship are discussed. Emphasis on a theoretical approach to the medium, with close analysis of individual films by directors such as Buñuel , Saura, Erice, and Almodóvar, among others.

Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050, 3060 or 3080) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

SPAN 4180 Topics in Latin American Cultural Studies (3)
Introduction to multiple aspects of Latin American culture. Students study a variety of cultural production, ranging from literature, film, music, and art, to its cooking and comics to form as complete as possible a vision of Latin American's complex and multifaceted culture. Students examine mainstream notions of national identity, while at the same time interrogating them by considering questions of gender, race, class, sexuality, and region. Course may be repeated up to unlimited credit hours.

Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050, 3060 or 3080) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

Maximum Hours: 99

SPAN 4190 Intro to Latin American Film (3)
The development of cinema in Latin American from its arrival as an imported technology to the present. Films studied in relation to the sociopolitical environment and emphasis placed on close analysis as well as a contextual understanding of the material. Topics include the struggle to create national film industries, the "art film" and New Cinema movements, and recent trends in countries such as Mexico and Argentina.

Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050, 3060 or 3080) and (SPAN 3130, 3240 or 3550) and (SPAN 3270 or 3280).

SPAN 4200 Historical Novel Lat Am (3)
Study of recent works by Latin America's premier novelists that considers how these writers articulate modern cultural identities by narrative the lives of iconic figures of the colonial past. Contemporary essays and selections from colonial texts are also discussed. Authors include Arenas, Carpentier, Fuentes, García Márquez , Lobo, Posse, Vargas Llosa.

Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050, 3060 or 3080) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

SPAN 4210 Topics in Latin America Cinema (3)
A topics course on the cinemas of Latin America. Possible themes include representations of history, violence and politics, subaltern subjectivities, genres, cinema and cultural imperialism. The course may refer to a particular national tradition or to Latin American film in general.

Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050, 3060 or 3080) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

SPAN 4260 Span Phonetic/Phonolgy (3)
A detailed investigation of the speech sounds of Spanish, their organization, and their proper articulation. Practice both in class and with recorded material.

Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050, 3060 or 3080) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

SPAN 4270 Iberoamer Dialectology (3)
Survey of the varieties of Spanish spoken in Spain, Latin America, and the United States. We look at variation in pronunciation and grammatical usage, such as the tú/usted/vos, as well as variation by age, gender, and social class.

Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050, 3060 or 3080) and (SPAN 3130, 3240 or 3550) and (SPAN 3270 or 3280).

SPAN 4280 Sex, Sentiment, Marriage (3)
In the 18th century. there is a change in the expectations for marriage and gender relations in general. Instead of the assumption that marriage was to secure property and family alliances, there arose the hope that men and women would find attraction and companionship in marriage. We will look at the process of change in ideas about marriage, the education of women, the right to choose a spouse, romantic love and sexual seduction and practical problems of the division of power in a marriage.

SPAN 4300 Literatures and Cultures of Al-Andalus (3)
This course offers students a foundation in the literary and cultural production of al-Andalus, while understanding those works as key components of the common civilization between Africa, Europe, and the Middle East. Readings include moaxaja and zejel poetry, poetry by Andalusi women, selections from Las mil y una noches, and readings in history, science, medicine, and geography to demonstrate the scope of Andalusi intellectual pursuits.

Prerequisite(s): (SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280) or minimum score of PASS in 'SPAN 4000 level Placement'.

SPAN 4350 Topics in Spanish Literature (3)
A topics course on the literature and culture of Spain. Possible themes include science and literature, construction of gender and sexuality, revolution and repression, honor and violence, popular culture, satire, and metanarrative. Course may be repeated up to unlimited credit hours.

Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050, 3060 or 3080) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

Maximum Hours: 99

SPAN 4351 Topics in Spanish Lit (3)
Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050, 3060, or 3080) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050, 3060 or 3080) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

Maximum Hours: 99

SPAN 4420 Intro. Medieval Iberia (3)
Introduction to the cultural issues of medieval Iberia from the eighth century to 1500. Students read a variety of medieval stories, miracles, and historical documents in order to actively discuss Iberia's diverse Jewish, Muslim, and Christian communities, and to engage with such topics as courtly love, health and healing, pilgrimage, the “reconquest”, and medieval work.

Prerequisite(s): (SPAN 3040, 3050, 3060 or 3080) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280) or minimum score of PASS in 'SPAN 4000 level Placement'.

SPAN 4430 Lit of the Golden Age (3)
Readings and discussions of selected dramatic, poetic, and prose works of the Siglo de Oro by Cervantes, Lope de Vega, Tirso de Molina, Calderón, Quevedo and Luis de Góngora.

Prerequisite(s): (SPAN 3040, 3050 or 3060) and (SPAN 3130, 3240 or 3350) and (SPAN 3270, 3280 or minimum score of PASS in 'SPAN 4000 level Placement').

SPAN 4510 Hispanic Cities (3)
This class explores the history, artistic production, literature, and cultural issues related to a Hispanic city, such as Buenos Aires, Madrid, Mexico City, or Seville. In an effort to investigate the city in a broad national and international context, the course connects an urban area to important events and sites in Latin American and Spain. Taught in rotation by different faculty in the department, the focus on a particular city changes with the professor. Course may be repeated up to unlimited credit hours.

Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050, 3060 or 3080) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

Maximum Hours: 99

SPAN 4520 Topics in Spanish Cultural Studies (3)
Spanish cultural studies applies interdisciplinary approaches to the study of popular and mass cultural forms. Depending on the instructors' specialization, the course may encompass various chronological periods or special themes. In addition to the specifics of individual syllabi, all classes explore the role of culture in nation formation, the organization of leisure time through the culture industry, culture as a site of power, concepts of high and low culture, and how various cultural systems cut across boundaries of class, race, religion, and gender.

Prerequisite(s): minimum score of PASS in 'SPAN 4000 level Placement' or (SPAN 3040, 3050, 3060 or 3080) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280).

Maximum Hours: 99

SPAN 4560 Internship (1-3)
Internship. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPAN 4610 National Cinemas Latn Am (3)
A detailed historical, thematic, and stylistic analysis of individual national cinemas in Latin America (Cuban cinema, Brazilian cinema, Mexican cinema, for example). Emphasis will be placed on understanding the development of national cinema industries and movements in the context of other social, economic, political, and aesthetic forces.

SPAN 4710 Environmental Literature (3)
The importance and grandeur of the diverse environments of the Hispanic and Lusophone worlds as well as the problems and challenges posed by foreign and local exploitation of natural resources, environmental racism, climate change and environmental degradation. (3 credits)

Prerequisite(s): (SPAN 3040, 3050, 3060 or 3080) and (SPAN 3130, 3240 or 3350) and (SPAN 3270 or 3280) or minimum score of PASS in 'SPAN 4000 level Placement'.

SPAN 4870 Transfer Credit (3)

Maximum Hours: 99

SPAN 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPAN 4910 Independent Study (1-4)
Independent Study in Spanish. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPAN 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.s.

Maximum Hours: 99

SPAN 4990 Honors Thesis (3)
Honors Thesis

SPAN 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): SPAN 4990.

SPAN 5380 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPAN 5390 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPAN 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

SPAN 5990 Spanish for Reading Knwl (0)
Summer Program

SPAN 6000 Independent Study (1-3)
Independent Study in Spanish.

Maximum Hours: 99

SPAN 6010 Method Tchg Span & Port (3)
A general introduction to applied linguistics, teaching and testing methodology, and use of technology in the Spanish and Portuguese classroom.

Prerequisite(s): SPAN 4060.

SPAN 6060 Hispanic Bilingualism (3)

SPAN 6850 Senior Seminar (4)
This course is a capstone seminar on major authors of the Hispanic literary tradition from both Spain and Latin America. Course may be repeated up to unlimited credit hours.

Prerequisite(s): SPAN 4060.

Maximum Hours: 99

SPAN 6890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPAN 6910 Special Topics (3)
This course covers topics not regularly covered by courses at the 6000-level. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPAN 7001 Spanish for Graduate Students (0)
This course is designed to develop and/or improve reading proficiency in Spanish. It will give students the opportunity to develop intermediate-mid to intermediate-high reading competency in the target language. Students will acquire the ability to understand main ideas and facts in description and narration of news items, personal correspondence, technical material written for general readers and simple short stories, and follow essential points in ideas of special interest or knowledge. Readings will be taken from the humanities, the arts, the social sciences, and the natural sciences. At the end of this course students will demonstrate general comprehension of a text and will be able to answer content questions in English. The course is geared towards helping graduate students pass a reading proficiency exam in Spanish, and understand research material in Spanish in their corresponding field.

SPAN 7910 Topics in Peninsular Lit (3)
This course covers topics taught by faculty on a rotating basis.

SPAN 7920 Topics in Latin American Lit (3)
This course covers topics taught by faculty on a rotating basis.

Maximum Hours: 99

SPAN 7960 Ph.D Prep & Professional Dev (3)
This seminar prepares students for the Ph.D. exam and dissertation prospectus. It is designed both as a workshop in academic research and writing and as a forum for examining the nature of our discipline and issues related to professionalization for academic careers.

SPAN 9980 Masters Research (0)
Masters Research. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPAN 9990 Dissertation Research (0)
Dissertation Research. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Special Projects (RELS)

RELS 5380 Junior Year Abroad (1-20)
Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

RELS 5390 Junior Year Abroad (1-20)
Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

Speech (SPEC)

SPEC 1400 Persuasive Public Speaking (3)
Principles of audience analysis, speech composition, and delivery. Special attention is given to persuasive techniques

SPEC 1940 Transfer Credit (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

SPEC 2910 Special Topics (3)
Special topics in speech.

SPEC 3110 Small Group Communicatn (3)
An analysis of the impact of social, psychological, emotional and environmental factors on the small-group decision-making process. Emphasis is on the study and application of current problem-solving theories and techniques. (Satisfies humanities requirement for SoPA students.)

Sports Medicine (SPMD)

SPMD 6100 Foundations of Sports Medicine (3)
This course will provide the students with an overview in the field of sports medicine. The course focuses on the basic information and skills important to the recognition, care, prevention, and preliminary rehabilitation of athletic injuries. The course will explore medical providers involved in total athlete care, provide terminology associated with sports medicine, and discover the human body systems as they pertain to sports medicine.

SPMD 6110 Non-traumatic Injuries (3)
Discuss common non-traumatic injuries in young athletes. Categorize non-traumatic injuries. Analyze athlete pre-participation assessments in terms of specific non-traumatic injury categories. Differentiate among common non-traumatic injuries found in secondary and post-secondary level athletics. Identify proper protocol for assessing critical illnesses and providing care for an injured athlete. Analyze the implementation of guidelines for continuation within the activity by the injured athlete. Understand of ergonomic theory behind safety equipment. Determine the proper protective equipment for an athlete based on sport, athlete age and size. Describe the preparation needed for athletic coverage. Analyze recent incidents of non-traumatic injuries in secondary and collegiate athletics. Identify the key components of an Emergency Action Plan. Review and critique an existing Emergency Action Plan. Develop an Emergency Action Plan.

SPMD 6120 Sports Performance Enhancement (3)
This course offers a comprehensive study of the physical, nutritional, and therapeutic methods of injury recovery while holding a focus on the needs of athletes who want to improve performance within their sport.

SPMD 6130 Continuum of Care: Developing a Sports Medicine Program (3)
This course will explore the process of developing and maintaining a sports medicine program that fully addresses the continuum of care for athletes within an institution or organization at the collegiate and secondary levels. Students will discover the components of a comprehensive athletic healthcare program including: health and safety policies and procedures, roles and responsibilities of involved healthcare providers, and best practices of sports medicine.

Strategy, Leadership & Analytics Minor (SLAM)

SLAM 1010 Entrep Lead & Prob Solv (3)
This course introduces students to core leadership, analytical, and managerial competencies from a liberal arts perspective. From a programmatic belief that liberal arts students' education is enhanced though a deeper historical and contextual understanding of the contemporary global economy and its practices, this course advances such understanding in the areas of digital innovation and properties; big data and analytics; entrepreneurship and collaboration; and creative/cultural industries. In the study of these areas, students will develop their knowledge in conjunction with personal reflection on their academic program and career goals.

SLAM 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Course Limit: 99
Maximum Hours: 99

SLAM 2010 Financial Literacy (3)
This class will walk students through the fundamentals of financial planning with topics including but not limited to saving for the future, insurance needs, philanthropic giving, major life purchases and taxes all within the framework of creating a life that is meaningful and affordable.

SLAM 2020 Financial Analysis and and Budgets (3)
This course offers an accessible introduction for students who may not have a business background to the fundamentals of financial analysis and budgets within business, philanthropic, and arts organizations. Looks at the role of financial budgets in three key areas of an organization's activities: creating financial assessment information; providing financial decision-making information for strategic organizational planning; and generating market-specific information for the purposes of managing an organization's operations, such as product or service development, marketing, and go-to-market strategies. This course will help students better understand the central operations of an organization for which they work and the important roles played by different parts or individuals within an organization. This course can be taken in lieu of ACCN-2010 for the Liberal Arts Management Minor. No pre- or co-requisites.

SLAM 2030 Introduction to Data Analytics (3)
SLAM 2030 aims to teach students the introductory skills necessary to collect data, hire data scientists, analyze dashboard results, and make decisions based on the information gained. Students will learn how data analytics fits into decision-making by studying companies that use big data or predictive data. Students will run a simulation to examine datasets and draw conclusions about the information contained within the data. Students will utilize a dashboard to make business decisions based on the outputs provided.

SLAM 2600 Introduction to Creative Industries (3)
Creative industries is a relatively new term that encompasses visual and performing arts, graphics, broadcast media (film, TV and radio), digital arts, design, and the new media. This course aims to provide an overview of the creative industries that create and disseminate meaning. It explores the conceptual foundations, histories, and main issues as well as key regulatory and policy issues surrounding creative industries in their social, political, cultural and global contexts.

SLAM 2940 Transfer Coursework (0-20)

Maximum Hours: 99

SLAM 3010 Principles of Leadership (3)
This course aims to develop the next generation of leaders via a conceptual understanding of the genealogies and evolution of leadership theory. Students will also gain practical knowledge about leadership styles and characteristics through discussions and interactions with proven leaders and assess and demonstrate their own leadership capabilities.

SLAM 3020 Strategic Leadership in Practice (3)
This three-credit hour course serves as a practical introduction to concepts of strategic, purposeful leadership and the discipline of management. The practices of leadership and management govern the daily interactions of individuals, as they move through the world working for people, working with people, and supervising people. This course is a practical approach to leadership, incorporating management strategies and organizational behavior as integral parts of the leadership journey. This course also integrates accepted theories with real world applications to provide students with the basic knowledge and skills needed for leading and managing others. The course begins with individual reflection and analysis based on a modern strengths-based approach, moves to an understanding of leadership theories, discusses the principles and current issues in management and then foregrounds how these concepts can help leaders attract investment in their businesses and organizations — all through a lens focused on engendering diverse, equitable and inclusive environments.

SLAM 3030 Marketing Strategies for Business and Creatives (3)
Whether you are an artist figuring out how to best promote your work or a Fortune 500 company trying to reach a younger audience, marketing plays an essential role in any business endeavor. There is a reason almost every organization (business, non-profit, rock and roll band) allocates a significant portion of its budgeting to marketing, because this is the space in which the consumer learns about, connects with, and ultimately purchases whatever that product or service may be. Developing an effective marketing strategy allows a business of any kind to create value by better understanding the needs of its target audience and, as a result, offers its customer innovation and inspiration. This course will examine the fundamentals of developing a marketing strategy—branding, storytelling, communications, research and creativity—which in turn builds a successful, customer-focused organization that sustains its value over the long-term. Working with New Orleans-based organizations that have created effective marketing strategies, and others that need help on the marketing front, we will learn through a hands-on, real-world approach.

SLAM 3050 Public Relations (3)
The course is an introduction to the professional practice of public relations, emphasizing its dynamic functions and processes and its relationship to society. Students will examine fundamental theories that are essential to the professional practice of public relations. Emphasis will be on how public relations practitioners work to build meaningful and sustainable relationships with various publics, including employees, customers, community partners, news media, government officials, regulators, etc.

SLAM 3060 Philanthropy and Social Change (3)
This course is designed to educate students to the process of philanthropy through a social justice lens that takes into account the unequal distribution of wealth and resources in the United States. It looks at the meaning and history of philanthropy in America, while also examining conceptual frameworks for envisioning the relationship between philanthropy and social change.

Corequisite(s): SLAM 3890.

SLAM 3070 Non-Profit Development (3,4)
This course considers the multibillion dollar sports industry. mostly in the United States but also on a global scale in the cases of soccer and the Olympic Games. We examine professional sports -ownership structure of teams. organization of leagues. revenue generation and division, player compensation, race and gender inequities. and the costs and benefits of stadium construction. We also examine the development of intercollegiate sports, their financial aspects. and the impact of Title IX.

SLAM 3080 Fundraising and Sponsorship (3)
This course provides a foundational understanding of fundraising and sponsorship in the changing contexts of the philanthropic sector. Topics include fundraising planning, annual funds, major gifts, capital campaigns, planned giving, individual donors / membership programs, grants, special events, and sponsorship. Students also learn about building meaningful, ethical relationships between brands and non-profit entities.

SLAM 3100 Digital Entrepreneurship (3)
This course surveys developments in the areas of entrepreneurship and new media/communication/digital technologies, explores and examines the cultural transformations occurring as a result, and gives students an opportunity to initiate their own, original entrepreneurial activity in a hands on way, utilizing emergent technological resources.

SLAM 3330 Algorithms, AI, and Race in Digital America (3)
It is challenging to escape from algorithmic automated learning machines within our digital economy. While we interact with these processes daily, we often do not question how they work or impact us as people or societies. Algorithms are now used for everything from reviewing resumes for job openings to determining if an inmate in prison gets parole. While many have accepted algorithms as a necessity in the technological world, as a society, we do not acknowledge biases within machine learning and AI that lead to suboptimal decision-making and deepen inequities along racial divides. With a critical lens focusing on race, SLAM 3330 aims to explore the uses of these technologies and challenge the status quo to explore how we can improve these processes and outcomes as a society.

Course Limit: 2

SLAM 3510 Topics in Advanced Leadership (3)
This course explores the roots of leadership, which stem from various disciplines, including history, philosophy, sociology, communication, psychology, and management. The course aims to extend basic leadership theory to application applying it to a particular topic, including but not limited to community engagement, ethics, diversity, equity, inclusion, digital transformation, employee experience, reskilling, the changing workplace, and non-positional leadership. In this class, students will nurture leadership skills and develop language and tools that facilitate strategic planning and decision-making to enact social change. Students may repeat courses for credit under a different topic title, such as Community Engagement and Leadership or Ethical and Inclusive Leadership. This course is one of the possible electives for the SLAM minor.

Maximum Hours: 99

SLAM 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): SLAM 3060.

Maximum Hours: 99

SLAM 3910 Special Topics (3)
Specialty courses on particular topics relating to management, media and business in arts and culture. Courses may be rooted in a variety of disciplines and instructors may be permanent or visiting faculty. Courses can be repeated for credit on different topics. Courses may be repeated up to unlimited times for credit.

Course Limit: 99

SLAM 3911 Special Topics (3-4)
Specialty courses on particular topics relating to management, media and business in arts and culture. Courses may be rooted in a variety of disciplines and instructors may be permanent or visiting faculty. Courses can be repeated for credit on different topics. Courses may be repeated up to unlimited times for credit.

Course Limit: 99

SLAM 3912 Special Topics (3)
Specialty courses on particular topics relating to management, media and business in arts and culture. Courses may be rooted in a variety of disciplines and instructors may be permanent or visiting faculty. Courses can be repeated for credit on different topics. Courses may be repeated up to unlimited times for credit.

Course Limit: 99

SLAM 3913 Special Topics (3)
Specialty courses on particular topics relating to management, media and business in arts and culture. Courses may be rooted in a variety of disciplines and instructors may be permanent or visiting faculty. Courses can be repeated for credit on different topics. Courses may be repeated up to unlimited times for credit.

Course Limit: 99

SLAM 3914 Special Topics (3)
Specialty courses on particular topics relating to management, media and business in arts and culture. Courses may be rooted in a variety of disciplines and instructors may be permanent or visiting faculty. Courses can be repeated for credit on different topics. Courses may be repeated up to unlimited times for credit.

Course Limit: 99

SLAM 4010 Leadership Strategies for Creative Industries (3)
Designed for students and professionals, this course forges pathways for strategic, purposeful leadership within the creative industries. Based on individual reflection and analysis within a strengths-based model we will learn tools for successfully managing a creative business, inclusive hiring, and building support. Each student will emerge with a portfolio of work that applies in-class learning to the real world experiences as creative entrepreneurs. This course may be combined with an internship for 4 credits.

SLAM 4020 Branding and Storytelling for Creative Industries (3)
Branding and storytelling are strategies for creative entrepreneurs and entrepreneurial creatives. Students will explore and apply creative business strategies that will connect internal and external stakeholders, including audiences, to position creatives for long-term viability and success through marketing, public relations, events, and media relations. 3 credits, 4 credits with an internship. There are no prerequisites for this course. This course can be combined with a 1-credit internship (SLAM 4560 or 4570), either as service learning or professional application of the learning in the course.

SLAM 4030 Data Driven Strategies (3)
If creatives consider their art their most important asset, data is their second. Artists can use data to find footing and a sustainable path forward as entrepreneurs. The information gathered can then be used to trim up costs, boost revenues, and reach a larger audience. By making data collection, storage, and analysis accessible, students will learn the cycle of making art to make money to make art.

SLAM 4040 Legal Strategies for Businesses and Creatives (3)
Artists, individuals, and businesses in the creative industries today have greater means than ever before to develop and grow a successful operation in the marketplace. Key to this success, however, is a strategic combining of artistic and creative talents with knowledge of marketplace elements, particularly those pertaining to business legal matters. This course introduces individuals to foundations of marketplace thinking as a means for assessing the needs of their given operational model and teaches the essential legal topics necessary for maximizing the opportunities that a given industry and operational model offers. Typical topics include business entity choice and formation, intellectual property identification and protection, and contract matters such as agreements made with other businesses, employee and independent contractor agreements, commissioned work, and user licensing. Students in the course will have the opportunity to apply the course topics to their individual areas of interest and creativity, as well as to work together so as to develop a comparative understanding of the course material's application in different creative fields. As a final project, individuals in the class will develop their own individualized "legal studio"—a business legal plan that is strategically designed and integrated into the practices of their creative operation to further drive the operation's success.

SLAM 4560 Internship (1-4)
Internship in Strategy, Leadership & Analytics Minor

Course Limit: 3

SLAM 4570 Public Service Internship (1-3)
This seminar is designed for students completing internships for elective and public service credit. The seminar offers students an opportunity to discuss and explore issues related to their internship experience including the topics of community and civic engagement, social justice, the nonprofit sector, and service-learning in higher education. Finally, the seminar is meant to complement the public service internship experience in facilitating individual growth and career development. This seminar is worth 1 to 3 credits and satisfies the Tier 2 service-learning requirement. You must also register for SRVC 4890 with this class (0 credits) to have it on your audit. Course may be repeated up to 2 times.

Course Limit: 2

SLAM 4810 Special Topics (1-3)
Specialty courses on particular topics relating to management, media and business in arts and culture. Courses may be rooted in a variety of disciplines and instructors may be permanent or visiting faculty. Courses can be repeated for credit on different topics. Courses may be repeated up to unlimited times for credit.

Course Limit: 99

SLAM 4820 Special Topics (1-4)
Specialty courses on particular topics relating to management, media and business in arts and culture. Courses may be rooted in a variety of disciplines and instructors may be permanent or visiting faculty. Courses can be repeated for credit on different topics.

Course Limit: 99

SLAM 4830 Special Topics (1-4)
Specialty courses on particular topics relating to management, media and business in arts and culture. Courses may be rooted in a variety of disciplines and instructors may be permanent or visiting faculty. Courses can be repeated for credit on different topics.

Course Limit: 99

SLAM 4840 Special Topics (1-4)
Specialty courses on particular topics relating to management, media and business in arts and culture. Courses may be rooted in a variety of disciplines and instructors may be permanent or visiting faculty. Courses can be repeated for credit on different topics.

Course Limit: 99

Corequisite(s): SLAM 4560.

Maximum Hours: 99

SLAM 4910 Independent Study (3)

SLAM 4920 Independent Study (3)

SLAM 5380 Junior Year Abroad (1-20)
Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SLAM 5390 Junior Year Abroad (1-20)
Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SLAM 7010 Leadership Strategies for Creative Industries (4)
Designed for students and professionals, this course forges pathways for strategic, purposeful leadership within the creative industries. Based on individual reflection and analysis within a strengths-based model, we will learn tools for successfully managing a creative business, inclusive hiring, and building support. Each student will emerge with a portfolio of work that applies in-class learning to the real world experiences as creative entrepreneurs. This course is combined with an internship for 4 credits

SLAM 7020 Branding and Storytelling for Creative Industries (4)
Branding and storytelling are strategies for creative entrepreneurs and entrepreneurial creatives. Students will explore and apply creative business strategies that will connect internal and external stakeholders, including audiences, to position creatives for long-term viability and success through marketing, public relations, events, and media relations. This course is combined with an internship for 4 credits.

SLAM 7030 Data Driven Strategies (4)
If creatives consider their art their most important asset, data is their second. Creative professionals can use data to find footing and a sustainable path forward as entrepreneurs. The information gathered can then be used to trim up costs, boost revenues, and reach a larger audience. By making data collection, storage, and analysis accessible, students will learn the cycle of creative making to make money to creative making. This course is combined with an internship for 4 credits.

SLAM 7040 Legal Strategies for Creative Industries (4)
This course introduces the essential legal topics necessary for maximizing the opportunities in a given industry and operations. Topics include business entity choice and formation, intellectual property identification and protection, and contract matters such as agreements made with other businesses, employee and independent contractor agreements, commissioned work, and user licensing. Students will have the opportunity to apply the course topics to their individual areas of interest and creativity. This course is combined with an internship for 4 credits.

Sustainable Real Estate Development (SRED)

SRED 1940 Transfer Coursework (0-20)
Transfer coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

SRED 2010 Introduction to Real Estate (3)
This course is designed to provide students with the basic concepts related immovable property, including its economic and legal aspects and the development process. In addition, the course delves deeply into the unique mechanisms through which real estate has been used to perpetuate racism and resulted in serious inequalities that exist in the United States today. The course also includes a major group project called UrbanPlan. The goal of this project is for students to deeply engage in the complex nature of city-making and the decision process that leads to our built environment and learn from each other as they play specific roles in the development team.

SRED 2020 Real Estate Transactions (3)
This lecture course provides a foundational survey of the key actors, instruments, business models and laws shaping the purchasing, selling, leasing, devising, and development of real estate. The course is grounded in understanding the basic principles of contract and property law. Thereafter, these laws are understood within a variety of instruments ranging from deeds and leases to mortgages and UCC-1 financing statements. Beyond the mechanics of these instruments, students are exposed to a variety of closing and financing workflows and documentation associated with transacting residential and commercial properties. These processes will then be explored within the confines of due diligence, risk management and alternative dispute resolution techniques that are utilized to manage risk, uncertainty, and litigation liabilities. Beyond core transactions, students will be exposed to those laws, regulations and contracts that shape the development process within the public and private sectors. This will include a review of zoning and land use laws, fair housing and anti-discrimination laws, construction contracting, project delivery models, and public sector procurement, financing and subsidization. Through an understanding of the transactional and regulatory aspects of real estate, students are prepared for professional practices that must negotiate a variety of public and private interests.

SRED 2030 Real Estate Finance (3)
This course aims to introduce real estate market analysis and finance to students from different backgrounds. The course will start out simply by exploring single-family housing developments before moving on to more complex mixed-use developments. The degree to which the concepts of market analysis and finance are taught will be commensurate with the scale of each form of development. Students will learn how to conduct a fundamental market study and create a financial pro forma for transaction analysis in this course. Learning and performing real estate market analysis, understanding real estate finance fundamentals, and developing pro forma are among the topics that are covered in this course.

Prerequisite(s): SRED 2010* or 2020*.
* May be taken concurrently.

SRED 2040 Fundamentals of Real Estate Development (3)
This is an introductory course that exposes students of all backgrounds to the fundamentals of real estate development. Through a hands-on case study, students will learn how to conduct a thorough due diligence analysis, including market research, financial projections, and building programming. Students will also learn how to prepare a deal package to be used for presenting to banks, investors, and other parties.

Prerequisite(s): (SRED 2010 or 2020) and SRED 2030.

SRED 2050 Design & Real Estate (4)
Design & Real Estate introduces students to the iterative design process with a focus on understanding space as it relates to the built environment. Students will analyze design problems at three scales; human scale, building scale, and urban scale and will synthesize creative solutions through two and three-dimensional medium. Students will also explore concepts in urban planning, building systems, and specific building program opportunities and challenges.

Prerequisite(s): SRED 2010 or 2020.

SRED 2930 Special Topics (1-6)
The Special Topics course is used for new and one¬time introductory level offerings in the Real Estate Program. Course content will vary from semester to semester. Contact the program for information on particular offerings. Course may be repeated unlimited times for credit.

Maximum Hours: 99

SRED 2940 Transfer Coursework (0-20)
Transfer coursework at the 2000 level. Departmental approval may be required.

Maximum Hours: 99

SRED 3070 Urbanism and Real Estate (4)
A core component of Tulane's real estate development program is creating and evaluating design. This course builds capabilities to analyze and represent design and envision development at varying scales and bridges their capacity to communicate envisioned of urban design. diverse typologies, geographies, and theories of design through of real estate developed and developing across parcels—at the scale of blocks, corridors, neighborhoods, cities and regions. analytical, representation and communication capabilities Mainstream, marginalized, and even maligned approaches to real estate design—from land clearance and assembly to building rehabilitation and renovation—are explored as students develop skills to complete professional products integral to urban development, namely an RFP (Request for Proposals) and responses to it.

Prerequisite(s): (ARCH 1011 or SRED 2050) and (SRED 2010 or 2020).

SRED 3080 Real Estate Capstone (4)
Design + Development Studio II is the final course in a series of design visualization courses for real estate students where they will work on a comprehensive studio project that includes both design and development issues.

Prerequisite(s): SRED 2040 and (SRED 3070 or ARCH 2021).

SRED 3940 Transfer Coursework (0-20)
Transfer coursework at the 3000 level. Departmental approval may be required.

Maximum Hours: 99

SRED 4505 Climate Change & the Built Environment (3)
This course explores the basic tenets of climate change as a foundation for further studies in the theories, models, and practices of sustainability, mitigation, resilience, and adaptation in the built environment. Through a critical reading of central bodies of literature, students are provided a conceptual and empirical basis for exploring applied practices and policies that are advanced in the name of climate change. As such, this course examines both decarbonization and responses to and preparations for climate impacts. Students will develop a critical understanding of relevant public policies and institutions, design and engineering techniques, economic strategies, and planning models.

SRED 4510 Climate Change Resilience & Adaptation (3)
This course explores the basic tenets of climate change science as a foundation for further studies in the theories and models of resilience and adaptation in the social, natural and applied sciences. Through a critical reading and analysis of central bodies of literature, students are provided a conceptual and empirical basis for exploring applied practices and policies advanced in the name of climate change adaptation. The practice component of the course focuses on community resilience in urban planning and policy; technical resilience in civil and systems engineering and conservation ecology; multi-hazard risk assessment in disaster risk management; and adaptation mainstreaming in the public and private sectors. Positioned within an emerging field of study, this course identifies many of the key unanswered questions that are critical for future conceptual and empirical development. With a focus on environmental change and the built environment, students will develop a critical understanding of relevant public policies and institutions, design and engineering techniques, economic strategies, and planning models. While there are no prerequisites for this course, some interest and general familiarity with environmental studies is useful.

SRED 4515 Sustainable Urban Development (3)
This course is a practical, multidisciplinary experience in the realities of a large scale urban real estate development project. By working on teams having to address market and non-market forces, each team will have to address the challenges of managing the conflicting needs and wants of multiple stakeholders, just as they would in a real life development project.

SRED 4520 Cities, Disasters & Decisions (3)
This course teaches the multi-dimensional determinants of economic decision-making in cities during times of crisis, and offers students a road map to analyze and evaluate how those decisions relate to recovery outcomes. We will explore how certain cities approached previous catastrophic events and build a "context and factors" database to understand how specific urban, political, social and economic characteristics of cities interact to result in policy and individual decisions that impact recovery.

Prerequisite(s): SRED 2010.

SRED 4525 Comm RE Analysis with ARGUS (3)
This is a deep dive into cash flow modeling and valuation techniques with a special focus on the use of industry leading software Argus Enterprise. Using real life case studies, students will learn how to perform real estate market research, lease reviews, financial projections, and valuations. Students will also gain a working knowledge of Costar and hear from several guest speakers about ongoing real estate developments in the New Orleans market

Prerequisite(s): SRED 2030 or 2040.

SRED 4530 Infrastructure Planning & Financing (3)
This course provides an advanced overview of the processes and institutions shaping the planning, management, financing, and development of infrastructure. The intent of the course is to expose students to the basic parameters of how infrastructure is planned and managed and to open-up students to a broader asset class of infrastructure. The course includes an introduction to the basic operations and metrics of the major infrastructural sectors (water, transportation, energy, public facilities, solid waste, and communications). The course will cover project master planning and demand analysis; environmental and social impact analysis; economic impact methods; and, project delivery models for public, private and P3 projects. Throughout the course, each infrastructure sector is viewed through the lens of various applicable financing models and associated capital structures utilized by municipal and private utilities. These models will be contextualized within an array of federal and state-level funding sources and financing products. The course will conclude with a survey of contemporary issues in urban development relating to the equitable access to infrastructure; brownfield redevelopment; gray and green infrastructure dynamics; green bonds and public procurement; strategic obsolescence; innovations in material lifecycle analysis; and, asset management strategies under conditions of deep uncertainty. This course provides a central exploration for students in real estate, architecture, engineering, and environmental studies who seek to understand the basics of infrastructure. This course is intended to be an advanced elective for undergraduate and graduate real estate students.

Prerequisite(s): SRED 2010 or 2020.

SRED 4540 Building Performance & Benchmarking (3)
This course explores methods used to verify and track building performance in order to reduce operating costs and make financing possible for energy efficiency and other capital improvements. Students will learn the appropriate metrics as well as technologies and methodologies used to measure and analyze energy and water consumption data, verify occupant comfort, and compare buildings against regional and national building databases.Students will learn how to analyze this data in order to make cost-effective investment decisions and also how benchmarking results can be used to help finance operational changes or building improvements. Finally, students will be made aware of public policy changes around the country that increasingly incentivize and in some cases require energy benchmarking and public reporting.

SRED 4550 Community Development Finance (3)
This course will examine current practices and new opportunities in sustainable community development that foster long-term benefits to surrounding neighborhoods. A specific focus of this study is to utilize market-based strategies to generate greater overall public benefit, and to identify key metrics to define and measure success. Students in this course will explore ways to evaluate local policies and requirements to effectively and efficiently meet local objectives. Students will study what types of development successfully promote and facilitate population and economic growth in certain cities and analyze why some urban areas continue to experience decline.

Prerequisite(s): SRED 2030.

SRED 4560 Real Estate Internship (1-3)
Open to upper level students in good standing, the Real Estate Internship course provides students with an opportunity to reinforce and expand their skills and knowledge through professional internship experiences during the course of their studies. Students must consult with the Real Estate Major Advisor to get approval for selected work assignment prior to registration. The course may be repeated for up to 6 credit hours but only 3 credit hours may count towards general Real Estate elective credit.

Course Limit: 2
Maximum Hours: 6

SRED 4570 Real Estate CPS Internship (1-3)
This course is for students pursuing an internship in Real Estate via the Public Service Internship Program managed by the Center for Public Service (CPS). The student must apply directly to CPS by the pre-determined deadline. If the internship is approved, CPS will coordinate registration with the Real Estate Program. Students must contact the Center for Public Service for additonal information.

SRED 4890 Service Learning (0-1)
Service Learning

Maximum Hours: 99

SRED 4910 Independent Study (1-6)
The Independent Study course gives upper-level undergraduate students an opportunity to work with a faculty advisor to pursue a personal academic interest with greater focus. Qualified students must develop a syllabus and schedule with the help of the faculty advisor. The course must be approved by the Real Estate Major Advisor prior to registration. Course may be repeated up to two times.

Course Limit: 2

SRED 4930 Special Topics (3)
Special Topics in Real Estate. These are newly developed courses or courses taught by visiting faculty. Title and content may vary by semester. See the Schedule of Classes for specific offerings. Course may be repeated unlimited times for credit.

Maximum Hours: 99

SRED 4931 Special Topics (3)
Special Topics in Real Estate. These are newly developed courses or courses taught by visiting faculty. Title and content may vary by semester. See the Schedule of Classes for specific offerings. Course may be repeated unlimited times for credit under separate titles.

Maximum Hours: 99

SRED 4932 Special Topics (3)
Special Topics in Real Estate. These are newly developed courses or courses taught by visiting faculty. Title and content may vary by semester. See the Schedule of Classes for specific offerings. Course may be repeated unlimited times for credit under separate titles.

Maximum Hours: 99

SRED 4933 Special Topics (1-4)
Special Topics in Real Estate. These are newly developed courses or courses taught by visiting faculty. Title and content may vary by semester. See the Schedule of Classes for specific offerings. Course may be repeated unlimited times for credit.

Maximum Hours: 99

SRED 4934 Special Topics (1-4)
Special Topics in Real Estate. These are newly developed courses or courses taught by visiting faculty. Title and content may vary by semester. See the Schedule of Classes for specific offerings. Course may be repeated unlimited times for credit.

Maximum Hours: 99

SRED 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval may be required.

Maximum Hours: 99

SRED 4990 Honors Thesis (3)

SRED 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): SRED 4990.

SRED 5980 Junior Year Abroad (0-20)
Semester Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SRED 5990 Junior Year Abroad (0-20)
Semester Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

SRED 6100 Intro-Real Est Finance & Econ (3)
In this course, students will master basic concepts of finance (with a special focus on risk and time) that influence capital markets, the decisions of lenders and investors, and deal feasibility. They will learn about the financial dynamics of a real estate project; how income collected from operations, property operating expenses, funding sources and project costs interact together and influence one another. While introducing students to real estate finance, the course builds an understanding of financial terminology and key calculations that evaluate and determine the financial feasibility of a project and are used to analyze a real estate development opportunity. As part of their preparation for the Fall curriculum, students will learn how to estimate all the costs associated with a real estate project to create a full financial model of a real estate development. They will also develop an understanding of how to organize and represent all financial aspects of a real estate projects' development, operations and financing in Excel – to develop a pro-forma from scratch

Corequisite(s): SRED 6110, SRED 6130 and SRED 6140.

SRED 6110 Introduction to Sustainable Architecture & Design (3)
The intent of this course is to introduce a vocabulary of sustainable principles, design and building. This course will introduce an array of sustainable design concepts and demonstrate their efficacy through lectures, discussions, readings and case studies. Students will learn a variety of green building strategies by analyzing successful projects. Various scales, contexts, cultures, methods and approaches will be explored to encourage a comprehensive and holistic understanding of sustainable design.

Corequisite(s): SRED 6100.

SRED 6130 Intro to Sustainable Urbanism (3)
The aim of this course is to build students' multi-disciplinary understanding of the urban environment and its relationships within the political, economic, ecological and cultural context. In this abbreviated course, the focus will be on introduction to terms, tools and systems, survey of historical and contemporary examples, and finally, broad perspective analysis of urban development theories. Working from the particular to the general, the class will begin with a survey of the components that make up a city — the parts and pieces, structures and systems that combine to make urban space. An introduction of the regulatory and administrative organizational regimes that control development will follow. In this section, New Orleans will be used as the principal object of study. The second part will be a cursory survey of contemporary urban place making theories and other conceptual underpinnings that will introduce other metropolitan centers national and international. The concluding part will require the class to make a close reading of chosen sections of New Orleans, providing analysis, insight and speculation on development scenarios, necessitating a synthesis of all knowledge gained throughout the course of the summer semester in your combined coursework.

Corequisite(s): SRED 6100.

SRED 6140 Intro to Finance Products (3)
This course will teach students the sources of real estate finance with a focus on the policies, programs and mechanics needed to build a foundation for the MSRED program. The course will be structured around both private and public debt and equity sources, including the underwriting that accompanies each, and the application of these sources to finance different project types, including market-rate and income-restricted for-sale housing, small rental, multi-family, mixed use and commercial properties. The instructors will utilize textbook readings and industry publications, as well as case studies from their own practices throughout the course.

Corequisite(s): SRED 6100.

SRED 6210 Legal Issues in Real Est Deve (3)
Real estate development relies extensively on various overlapping systems of laws and regulations, both public and private. This course will introduce to students the various ways in which legal rules can affect real estate projects in the planning stages, when contracting for services, through the entitlement process, at financing, and elsewhere. At the completion of the course, students will have an understanding of the legal framework that surrounds the real estate development process, which will assist them in planning their projects, engaging with counsel, interacting with government authorities, and contracting with other project team members.

SRED 6220 Sustainable Design & Planning (4)
This course provides students with applied skills and experience in synthesizing real estate projects. It builds upon student's introductory coursework in real estate finance, sustainable urbanism, and architecture and design. As prospective developers, students should begin to have firsthand knowledge of the complexities of development including the development process itself; good design; and synthesizing constraints into an implementable physical development project. This course is rooted in the creative process as real estate development is inherently a creative problem-solving profession. As real estate development is a team-based profession requiring the collaboration of multiple disciplines, the approach of this course is based in lectures and site visits leading to innovative team-based student work that results in an implementable development.

Prerequisite(s): SRED 6130.

SRED 6230 Real Estate Finance (4)
One of the most important core skills a young developer must learn is financial analysis. Every phase of the development process must undergo the scrutiny of financial analysis to ensure the short and long-term success of the project. A developer must have the ability to forecast costs, income, and expenses, while always following strict underwriting criteria and equity investment expectations. At the completion of the course, students will be able to implement a proforma analysis for multiple real estate typologies, including residential and hotel projects. Additionally, students will gain an understanding of equity and debt structures, investment returns, tax credits, and tax analysis.

SRED 6240 Applied Urban Economics (3)
This class will focus on applied urban economics; particularly, we explore how private and public investment decisions take place within the opportunities and constraints of real estate markets. Through readings, lectures, site visits, class discussions and professional exercises/assignments, the class will operate at the intersection of the economics of site-specific transactions (real estate development) with the economics of city-regions (economic development). In doing so, this course will situate the study urban economics in a broader 'city-making' context which looks comprehensively at processes that underlie the growth, decline and regeneration of cities such as economic development, real estate development,planning, design, and public policy. The class will use New Orleans and Los Angeles as primary 'urban laboratories' but will also include in-depth investigations of applied urban economic issues in other U.S. cities to provide students with comparative examples and a range of economic conditions.

SRED 6400 Urban Field Study (0)

SRED 6450 Sustainable Real Estate Development Internship (3)
Tulane's MSRED program offers our graduate students paid internships with local organizations involved in real estate development. These GIGs ("Graduate Internship…GO!") are semester-long positions for approximately 15 hours/week. The primary goals of this program are to supplement the MSRED program's academic work with practical experience and to build confidence and professional networks for our students.

SRED 6505 Climate Change & the Built Environment (3)
This course explores the basic tenets of climate change as a foundation for further studies in the theories, models, and practices of sustainability, mitigation, resilience, and adaptation in the built environment. Through a critical reading of central bodies of literature, students are provided a conceptual and empirical basis for exploring applied practices and policies that are advanced in the name of climate change. As such, this course examines both decarbonization and responses to and preparations for climate impacts. Students will develop a critical understanding of relevant public policies and institutions, design and engineering techniques, economic strategies, and planning models.

SRED 6510 Climate Change Resilience & Adaptation (3)
This course explores the basic tenets of climate change science as a foundation for further studies in the theories and models of resilience and adaptation in the social, natural and applied sciences. Through a critical reading and analysis of central bodies of literature, students are provided a conceptual and empirical basis for exploring applied practices and policies advanced in the name of climate change adaptation. The practice component of the course focuses on community resilience in urban planning and policy; engineering resilience in architectural design, civil and systems engineering; ecological resilience in restoration ecology; multi-hazard risk assessment in disaster risk management; and adaptation mainstreaming in the public and private sectors. Positioned within an emerging field of study, concepts and methods are explored through a variety of interdisciplinary practices from coastal planning to asset management. With a focus on environmental change and the built environment, students will develop a critical understanding of relevant public policies and institutions, design and engineering techniques, economic strategies, and planning models. While there are no prerequisites for this course, some interest and general familiarity with environmental studies is useful. This course is intended to serve as an advanced elective for undergraduates and an introductory elective for graduate students in real estate, architecture, public policy, political economy, environmental studies, and urban studies.

SRED 6520 Cities, Disasters & Decisions (3)
This course teaches the multi-dimensional determinants of economic decision-making in cities during times of crisis, and offers students a road map to analyze and evaluate how those decisions relate to recovery outcomes. We will explore how certain cities approached previous catastrophic events and build a "context and factors" database to understand how specific urban, political, social and economic characteristics of cities interact to result in policy and individual decisions that impact recovery.

SRED 6525 Comm RE Analysis with ARGUS (3)
This is a deep dive into cash flow modeling and valuation techniques with a special focus on the use of industry leading software Argus Enterprise. Using real life case studies, students will learn how to perform real estate market research, lease reviews, financial projections, and valuations. Students will also gain a working knowledge of Costar and hear from several guest speakers about ongoing real estate developments in the New Orleans market.

SRED 6530 Infrastructure Planning & Financing (3)
This course provides an advanced overview of the processes and institutions shaping the planning, management, financing, and development of infrastructure. The intent of the course is to expose students to the basic parameters of how infrastructure is planned and managed and to open-up students to a broader asset class of infrastructure. The course includes an introduction to the basic operations and metrics of the major infrastructural sectors (water, transportation, energy, public facilities, solid waste, and communications). The course will cover project master planning and demand analysis; environmental and social impact analysis; economic impact methods; and, project delivery models for public, private and P3 projects. Throughout the course, each infrastructure sector is viewed through the lens of various applicable financing models and associated capital structures utilized by municipal and private utilities. These models will be contextualized within an array of federal and state-level funding sources and financing products. The course will conclude with a survey of contemporary issues in urban development relating to the equitable access to infrastructure; brownfield redevelopment; gray and green infrastructure dynamics; green bonds and public procurement; strategic obsolescence; innovations in material lifecycle analysis; and, asset management strategies under conditions of deep uncertainty. This course provides a central exploration for students in real estate, architecture, engineering, and environmental studies who seek to understand the basics of infrastructure. This course is intended to be an advanced elective for undergraduate and graduate real estate students.

SRED 6540 Building Performance (3)
This course explores methods used to verify and track building performance in order to reduce operating costs and make financing possible for energy efficiency and other capital improvements. Students will learn the appropriate metrics as well as technologies and methodologies used to measure and analyze energy and water consumption data, verify occupant comfort, and compare buildings against regional and national building databases. Students will learn how to analyze this data in order to make cost-effective investment decisions and also how benchmarking results can be used to help finance operational changes or building improvements. Finally, students will be made aware of public policy changes around the country that increasingly incentivize and, in some cases, require energy benchmarking and public reporting. The course will include small group projects to analyze the performance of actual projects in real time, working jointly with students in the M.Arch. and MSRED programs.

SRED 6550 Community Deve Finance (3)
This course will examine current practices and new opportunities in sustainable community development that foster long-term benefits to surrounding neighborhoods. A specific focus of this study is to utilize market-based strategies to generate greater overall public benefit, and to identify key metrics to define and measure success. Students in this course will explore ways to evaluate local policies and requirements to effectively and efficiently meet local objectives. Students will study what types of development successfully promote and facilitate population and economic growth in certain cities and analyze why some urban areas continue to experience decline. Examples from the professor's extensive experience working in New Orleans and Chicago will be a main focus. Class discussions will be augmented with guest speakers and site visits.

SRED 6560 Business of Real Estate Devel (3)
The Business of Real Estate Development course equips students to be real estate project managers. It is taught by adjunct faculty members who are professional project managers and incorporates guest lectures from a range of professionals whom project managers will interact with on the job. The course topics follow the life cycle/sequence of a real estate project's development and the reading assignments are all real-world examples of documents, reports and work products project managers handle on a daily basis. The assignments are typical work products expected from real estate project managers; synthesizing information, informing decisions and pitching a project to others. When the course concludes students have relationships with a network of real estate professionals, an understanding of the timing and sequence of events and decisions in the real estate development process, a familiarity with how to read and utilize third party reports and work products, and samples of work product from the assignment

SRED 6720 Case Study Sust Real Est Deve (4)
This course explores advanced topics and case studies in the applied science and economics of producing, investing in, and managing sustainable real estate. The recurring theme of people, place and profit is redefined within the context of user demand, asset management, building operations, and financial acumen. Students trace a narrative of process that begins with market analysis and conceptual design and ends with de-commissioning and recycling. Throughout the course, the central subjectivities and applications of sustainability will be challenged in order to critically evaluate aspects of social, financial, and environmental sustainability. In particular, the course seeks to understand the extent to which empirical science can inform risk-adjusted investment decisions. The course includes a systematic review of various rating systems, environmental technologies, project alternatives, project delivery models, and commissioning standards, and as well as the supporting risk management systems and contracting provisions defining contemporary industry practice. Students will move from asset-specific evaluations within the boundaries of a site to understand how portfolios of assets are managed across various scales and geographies. The intent of the course is to further the division between the greening and browning of real estate assets in order to impose higher standards in design, construction and management. In this sense, the future will be defined by a world in which all real estate is low-impact, sustainable, and possesses a designed adaptive capacity to accommodate future user demand and environmental performance.

SRED 6740 Directed Research (4)
In this course you will conduct an original investigation in order to acquire new knowledge within a framework set by a client in practice. The primary goal of this research class is to deepen your personal understanding of a particular topic or issue in real estate development. A key secondary goal is to help address a practical aim or objective of your client.

SRED 6930 Special Topics (3)
The Special Topics course is used for new and onetime offerings in the Sustanable Real Estate Development Program. Course content will vary from semester to semester. Contact the program for information on particular offerings. Course may be repeated unlimited times for credit.

Course Limit: 99

SRED 6931 Special Topics (1-4)
The Special Topics course is used for new and onetime offerings in the Sustanable Real Estate Development Program. Course content will vary from semester to semester. Contact the program for information on particular offerings. Course may be repeated unlimited times for credit.

Course Limit: 99

SRED 6932 Special Topics (1-4)
The Special Topics course is used for new and onetime offerings in the Sustanable Real Estate Development Program. Course content will vary from semester to semester. Contact the program for information on particular offerings. Course may be repeated unlimited times for credit.

Course Limit: 99

SRED 6933 Special Topics (1-4)
The Special Topics course is used for new and onetime offerings in the Sustanable Real Estate Development Program. Course content will vary from semester to semester. Contact the program for information on particular offerings. Course may be repeated unlimited times for credit.

Course Limit: 99

SRED 6934 Special Topics (1-4)
The Special Topics course is used for new and onetime offerings in the Sustanable Real Estate Development Program. Course content will vary from semester to semester. Contact the program for information on particular offerings. Course may be repeated unlimited times for credit.

Course Limit: 99

Swahili (SWHL)

SWHL 1010 Swahili I (3)
Introduction to essential skills in Swahili. . Students will receive training and practice in speaking, listening, reading, and writing.

SWHL 1020 Swahili II (3)
Elementary Swahili II is a second level introductory course for beginners of Swahili language. This course is open to students who have taken and passed SHWL I010. In this course students will further develop the four language skills: listening, speaking, reading and writing.

Prerequisite(s): SWHL 1010.

SWHL 2030 Swahili III (3)
Intermediate Swahili is a continuation of Elementary Swahili I and II. It is an intermediate course designed to reinforce communicative skills in reading, conversation and composition.

Prerequisite(s): SWHL 1020.

Taxation (TAXN)

TAXN 1290 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

TAXN 2390 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

TAXN 4100 Principls of Entity Taxation (3)
TAXN 4100 examines the federal system of taxation as it relates to businesses. The course includes an analysis of the taxation of corporations, S corporations, and partnerships. TAXN 4100 uses a business-cycle approach, wherein the tax effects of formation, ongoing operation, and disposition of the entity are discussed. Tax effects of various transactions as they relate to the shareholders/partners are also discussed. The course is Code (Internal Revenue Code) oriented, emphasizing the primary authorities that govern tax matters.

Prerequisite(s): ACCN 3100.

TAXN 4200 Taxation For Non-Acct (3)

TAXN 4250 Business Taxation (3)

TAXN 4260 Taxation of Individuals (3)

TAXN 4920 Ind. Study: Taxation (1-3)

TAXN 5190 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

TAXN 5380 Business Study Abroad - TAXN (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

TAXN 5390 Business Study Abroad - TAXN (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

TAXN 7100 Principles of Entity Taxation (3)
This course covers tax concepts as they affect corporations and partnerships. Starting with an understanding of what each form of doing business entails, the course examines how they determine taxable income and tax liability, and how they work on tax planning strategies. It will be taught in a lecture/discussion format with significant hands-on problem solving.

Prerequisite(s): ACCN 2010, 6000 or 6050.

TAXN 7260 Taxation of Individuals (3)
The federal system of taxation, as it relates to individuals, is examined. The course uses a problem-solving approach, wherein students analyze the facts presented and synthesize rules and concepts in arriving at a solution to individual tax problems. The course is "Code" (Internal Revenue Code) oriented, emphasizing the primary authorities that govern tax matters.

Prerequisite(s): TAXN 7100.

TAXN 7280 Research In Taxation (3)
Specialized methods of tax research and the use of tax materials are covered in this case course. Specific sections of the Internal Revenue Code are examined, including income taxation of individuals, estates, corporations, and partnerships. Note: Cross-listed with 4LAW 6710.

Prerequisite(s): TAXN 7100.

TAXN 7290 Partnership & S Corp. (3)
Partnership tax topics include asset contributions, liability assumption, distributions, operations, transfer of partners' interests, special allocations of tax attributes, partnership interests received for services, special basis adjustments, and analysis of the entity and aggregate approaches found in the law. Also included is a comprehensive study of the law of S-Corporations and how it compares to the law governing partnerships.

Prerequisite(s): TAXN 7100.

TAXN 7920 Ind Study-Taxation (1-3)
Independent study: Taxation

Taylor Your Life (TYLR)

TYLR 1000 Taylor Your Tulane (1)
TAYLOR Your Tulane is a 1-credit life design lab offered by the Taylor Center for Social Innovation and Design Thinking that uses design mindsets to teach how to create a Tulane experience that is uniquely TAYLORed to their interests and curiosities. Students will explore radically different academic pathways at Tulane, prototype and test areas of curiosity, and map the Tulane and New Orleans communities to effectively meet and connect with likeminded people on campus and in New Orleans.

TYLR 3000 Taylor Your Life (2)
Taylor Your Life is a career development lab for students who are interested in careers with social or environmental impact. The course covers all career basics (tailoring a resume, networking, interviewing skills, salary negotiation) while encouraging students to proactively build a life that is in line with their values and interests and guiding students to think more broadly about what they want in life including and beyond the working world. The course uses design thinking tools to help students clarify their interests; brainstorm multiple life pathways; focus and target their job/internship/fellowship search; build real-world experiments to test professional areas of interest; and use networking tools to join the network of movers and shakers in their field.

Theatre (PATR)

PATR 2010 Plays and Playwrights (3)
Plays and Playwrights is a course examining drama, the literature of theatre. You will read the plays of playwrights from the Greeks to the present. The emphasis is on the playwright and the process of playwrighting. Students will read, analyze and evaluate literature written for live performance. You will post, on Canvas, written comments to engender critical thinking and class discussions.

PATR 2020 Theatre in Contemporary Society (3)
This course is a survey of the history of theatre and how theatre happens. By the end of the course, students will be able to provide the answer to questions, such as “Who makes theatre happen?” and “Why is it called show business?

PATR 2030 American Myth and Drama (3)
American Myth and drama is a course examining the "American Myth" portrayed by playwrights of various cultures and time periods. The emphasis is on reading, writing, critical thinking and class discussions. Students will read, analyze and evaluate literature written for live performance.

PATR 2300 History of the American Musical (3)
This course is a survey of the history of the American Musical Theatre, its origins, its development, and its effects on popular culture. Students will learn about various genres of American Musical Theatre including, but not limited to, opera buffa, ballad, opera, and operetta through the jazz developments of the sixties.

PATR 2910 Special Topics (3)
Special topics in theater.

PATR 2911 Special Topics (3)
Special topics in theater.

Theatre (THEA)

THEA 1010 Plays and Playwrights (3)
This course is an analytic and creative introduction to dramatic literature. It surveys plays from the ancient Greek era to the present. With emphasis on the script as the foundation of live performance, students will analyze narrative structure, sample a variety of styles and authors, and compare thematic concerns. They will also apply their knowledge of play structure by creating pitches for feature-length dramatic narratives. They will also attend two university productions and write responses to each, applying ideas discussed in class.

THEA 1020 Theatre in Contemporary Soc (3)
This course surveys the history of theatre and develops an appreciation for and enjoyment of the performing arts. It also develops an appreciation for artists who bring the playwright's pages to life and considers the contribution of the audience.

THEA 1090 Voice I (2)
Development of relaxation habits, physical alignment, breath control and release, tone production, and articulation.

THEA 1910 Special Topics (1-3)
Specialty courses for undergraduates in performance techniques, projects, and theatre related subjects as designed by visiting or permanent theatre faculty. For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

THEA 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

THEA 2010 Performance I (3)
A structured and at times spontaneous exploration of space, time, shape, sound, scenario, motion, and expenditure of energy to the end of attracting and holding the attention of the audience.

THEA 2020 Performance II (3)
A structured and at times spontaneous exploration of space, time, shape, sound, scenario, motion, and expenditure of energy to the end of attracting and holding the attention of the audience.

THEA 2090 Voice II (2)
Development of relaxation habits, physical alignment, breath control and release, tone production, and articulation with emphasis on corrective tutorial work.

Prerequisite(s): THEA 1090.

THEA 2100 Fundamentals of Acting (3)
Class and workshop sessions in developing fundamental skills in the art and craft of acting as a creative process.

THEA 2110 Acting I (3)
Class and workshop sessions in developing fundamental skills in the art and craft of acting as a creative process. This course is intended for students with previous performance experience. Instructor approval is required. Course may be repeated 1 time for credit.

Course Limit: 1

THEA 2210 Theatre As Collaborative Art (3)
This is an introductory course designed to examine to the collaborative nature of theatre. Students will attend live theatre performances and survey the disciplines of playwriting, acting, directing, and design as well as important periods and styles of the medium. This course satisfies the Aesthetics & Creative Arts core distribution requirement.

THEA 2750 Native America on Stage and Screen (3)
How have stereotypes of Native Americans been created, perpetuated, mutated and contested since the arrival of Europeans in the 1500s? How have Native artists engaged with dominant culture and narratives? Why were certain types of stories compelling to their audiences at the time? What plays and films have been instrumental in telling broad audiences – primarily but not exclusively in the United States – who Native Americans are and what they are like? This course is a chance to explore the roots and contemporary ramifications of stories told about Native America alongside stories told by Native Americans.

THEA 2810 Global Theatre & Performance (3,4)
Drawing from performance traditions and dramatic literature in ancient Greece, India, Africa, China, Japan, Europe, Latin America, and The Caribbean, this course surveys the foundations of theatre history from a global perspective. It examines origins, dramatic theories, and historic contexts to foster the appreciation of cultural distinctions, common themes, and legacies the shape drama today. Assignments will engage students in critical and creative thinking through discussion, collaboration, and written analysis. This course satisfies the "foundations course" requirement for theatre majors.

THEA 2910 Special Topics (1-3)
Specialty courses for undergraduates in performance techniques, projects, and theatre related subjects as designed by visiting or permanent theatre faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

THEA 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

THEA 3010 Acting II (2)
Continuing development of acting skills focusing primarily on work approaching character. Instructor approval is required.

Prerequisite(s): THEA 2110 and 2010.
Course Limit: 1

THEA 3030 Suzuki Method of Acting (2)
Internationally renowned theatre director Tadashi Suzuki developed the well-established Suzuki Acting Method. Technically speaking, the method consists of training to learn to speak powerfully and with clear articulation, and is also used to enhance the expressiveness of the whole body. It is thus that actors can learn the best way to exist on the stage. The goal is therefore to make it possible for actors to develop their ability of physical expression and also to nourish a tenacity of concentration. The class activities include a series of exercises involving the physical center of the body in motion off center/on center within a consistent level of energy. This training is a vocabulary necessary to materialize the theatre and requires assimilation of the vocabulary by the actor as a second instinct. These techniques should be studied, mastered, until they serve as an operational hypothesis. Course may be repeated 1 time for credit.

Course Limit: 1

THEA 3090 Stage Speech I (3)
Corrective work on individual regional speech habits, articulation, and phrasing.

THEA 3110 Text Analysis for Actors and Directors (2-3)
Lecture, discussion, and activity which guides students through practical, structural and interpretive analyses of dramatic texts. Students will apply techniques for breaking down plays to make acting and directorial choices.

THEA 3210 Directing I: The Foundation (2)
This course is an applied study of the foundations of theatre directing including script analysis, blocking, composition, and dramatic action. Staged scenes using outside actors make up a major part of the course activities.

Prerequisite(s): THEA 2100 or 2110.

THEA 3220 Directing II: Staging the Imagination (2)
Advanced studies in principles and practice of directing. Course activities will utilize the principles of Non-Realism to focus on radical use of the imagination, storytelling techniques, and integration of basic design principles.

Prerequisite(s): THEA 3210.

THEA 3230 Playwriting I (3)
The majority of exercises and discussions throughout this class will focus on finding your voice of expression. This can only be done by jumpstarting your writing. With that in mind, this class will throw you almost immediately into the act of habitually writing by insisting upon regular journaling, assigning a consistent stream of exercises that involve more radical theatrical approaches, and the creation of a monologue and ten-minute play.

THEA 3240 Playwriting II (3)
By the end of this semester you will have completed a 20 to 30-page one act.

Prerequisite(s): THEA 3230.

THEA 3250 Directing III: Directing Psycho-Physical Theatre (2)
Psychophysical theatre is a unique approach to making and directing theatre. It is rare to encounter an entire cast with a deep understanding of the concepts of Psychophysical theatre. As a director, one should have a broad knowledge of the theories and be able to embody them, as one will find themselves having to not only direct but often demonstrate as well as coach the cast on them. This course offers a broad base of information for directing psychophysical theatre, understanding of various fundamentals and theories, and experiential practice in coaching and demonstrating the work. To quote theatre director Tadashi Suzuki: “A director should be a great one-minute actor”. Instructor approval required.

Prerequisite(s): THEA 3210.

THEA 3311 Scene Shop Practicum (1)
Course is open with credit to all students of the University and is designed to provide the student with practical production experience in the area of set construction and scene painting.

Course Limit: 2

THEA 3312 Costume Shop Practicum (1)
Course is open with credit to all students of the University and is designed to provide the student with practical production experience in the area of costume construction.

Course Limit: 2

THEA 3313 Running Crew Practicum (1)
Course is open with credit to all students of the University and is designed to provide the student with practical production experience in the area of backstage running crew in areas of sets, props, costumes, lighting, or sound.

Course Limit: 2

THEA 3314 Box Office Practicum (1)
Course is open with credit to all students of the University and is designed to provide the student with practical production experience in the area of box office, selling tickets, ushering, etc.

THEA 3315 Acting Practicum (1)
Course is open to majors performing in department productions wishing to receive credit for the performance work. Note this does not count toward the 4 required Practicum credits. This course it repeatable up to 4 times for credit.

Course Limit: 4

THEA 3340 Production & Design I (3)
An integrated introduction to the disciplines of scenic, costume, and lighting design coupled with the practical considerations of construction and execution of the design process. First of two semester course with Theatre 3350.

Prerequisite(s): THEA 3311* or 3312*.
* May be taken concurrently.

THEA 3350 Production & Design II (3)
A continued exploration of the disciplines of scenic, costume, and lighting design coupled with the practical considerations of construction and execution of the design process. A finished final presentation will be required. One year sequence required of all theatre majors.

Prerequisite(s): THEA 3311* or 3312*.
* May be taken concurrently.

THEA 3410 History of Costume (4)
An illustrated history of dress and society from the ancient Greeks to the present. Assignments emphasizing interpretation of costume research for the stage.

THEA 3510 Rehears Tech/Actor & Dir (3)
Exploration of the interaction between actor and director during scene study with emphasis on developing the analytic and rehearsal techniques fundamental to the production process.

THEA 3610 Basic Makeup (1)
The purpose of this class is to develop basic skills in the design and application of stage makeup. The work completed in this class has the objective of providing a background in the subject that is expected of the professional performer.

THEA 3710 Shakespeare on the Road (3-4)
Students in this course will create, rehearse, and perform a piece of theatre that demonstrates Shakespeare's style and modern-day relevance. This piece will tour to middle and high schools in the New Orleans area. This course is also designed to fulfill a 1st or 2nd tier Service Learning requirement. May be repeated once. Course may be repeated 2 times for credit.

Corequisite(s): THEA 3890.
Course Limit: 2

THEA 3810 Fashion Design Fundamentals (3)
This course explores the student's creativity and imaginative thinking by carrying out small fashion design projects and developing a personal style. No special skills are required and all class materials will be provided.

THEA 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): THEA 3710.

Maximum Hours: 99

THEA 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

THEA 3910 Special Topics (1-3)
Specialty courses for undergraduates in performance techniques, projects, and theatre related subjects as designed by visiting or permanent theatre faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

THEA 3911 Special Topics in Theatre (1-3)
Special topics in Theatre.

THEA 3920 Special Topics (1-3)
Specialty courses for undergraduates in performance techniques, projects, and theatre related subjects as designed by visiting or permanent theatre faculty. For description, consult the department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

THEA 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

THEA 3990 Theatre Practicum (1,2)
Required of all theatre majors. Course is open with credit to all students of the University and is designed to provide the student with practical production experience in the areas of set, costume, lighting, sound, and box office management. Course may be repeated#4 times for credit.

Course Limit: 4

THEA 4010 Acting III (2)
Continuing development of acting skills focusing primarily on language-driven work. Instructor approval required.

Prerequisite(s): THEA 3010.

THEA 4090 Stage Speech II (3)
Corrective work on individual regional speech habits, articulation, and phrasing with added emphasis on the speaking of verse material.

THEA 4120 Acting IV (4)
An advanced course in acting techniques.

THEA 4210 Documentary Theatre (3)
The purpose of this course is to examine the nature of documentary or "verbatim" theatre. Students will investigate the following issues: What is the nature of the documentary material? What is the basis for selection? What is the organizing principle?

THEA 4320 Movement Stories (3)
An interdisciplinary studio course that examines creation of and communication of stories through movement and theatre approaches with emphasis on creativity and invention.

THEA 4400 Clowning & Improvisation (3)
A course that will teach students a form of French clowning popularized by Bataclown. The act of clowning as will be practiced in this class is based on corporeal, emotional, and vocal expression. Each student will create her or his own individualized clown character through improvisational exercises. A midterm research paper with presentation and final performance will be required of all.

THEA 4410 Thea & Social Change (3)
Students are introduced to Augusto Boal's Theatre of the Oppressed" techniques. They will be used to explore such issues as identity and representation.

THEA 4420 Theatre as a Preventative Tool to Address Toxicity and Promote Social Change on Campus (3)
This seminar will examine how theatre can be used as a tool to address difficult topics and promote safety, equity, and justice on college campuses. We will analyze plays written to provoke dialogue and change as well as interactive programs that use improvisational theatre techniques as educational and preventative tools. The plays and case studies are all aimed at stimulating dialogue on subjects such as consent, boundaries, racism, power differentials, sexual harassment, and dating violence.

THEA 4475 Shakespeare Performance (3)
Exploration of Shakespeare's work through performance using the summer Shakespeare Festival as a catalyst. May be repeated once with different context.

THEA 4560 Internship (1-3)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Registration is completed in the academic department sponsoring the internship on TUTOR. Only one internship may be completed per semester. Note: A maximum of three credits may be earned in one or two courses. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

THEA 4710 Foundations of Theatre History (3-4)
A survey course in the history and dramatic literature of theatrical production and performance from antiquity through the 19th century.

THEA 4720 Modern and Contemporary Non-US Theatre (3-4)
This is an upper-division theatre history course in modern and contemporary non-US theatre. The structure of the course is split between lecture and discussion of the topics and plays assigned. By the end of the course students should be able to describe and discuss major trends and figures introduced in class, analyze and contextualize significant scripts from the time periods under discussion, and synthesize information from class and readings in original research and analysis.

THEA 4730 U S Theatre History (3,4)
A course in the history and dramatic literature of theatrical production and performance in the United States (mostly) from Colonial drama to the present.

THEA 4750 African American Theatre Histo (3-4)
This course is a chronological examination of African-American theater history from 1821 to the present through the study of African-American plays, critical race theory, as well as political/social conditions in the United States. Upon completion of this course the student should be familiar with a crosssection of the major written works of African-American theater, have a more complete understanding of the intersection of American and African-American theatre histories. They should also know the position of African-American theater within the context of major American theatrical movements.

THEA 4790 Readings in Theatre History (1-2)
This Independent Study is used when a transfer/study abroad course covers some, but not all, of the content in a required theatre history course.

THEA 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): THEA 4210.

Maximum Hours: 99

THEA 4910 Independent Study (1-3)
Independent practical and research study in theatre-related areas. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

THEA 4920 Independent Study (1-3)
Independent practical and research study in theatre-related areas. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

THEA 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

THEA 4990 Honors Thesis (3)
Honors Thesis.

THEA 4991 Senior Honors Project in Fine Arts (3)
Senior Honors Project in Fine Arts

THEA 5000 Honors Thesis (3-4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): THEA 4990.

THEA 5001 Senior Honors Project in Fine Arts (3)
Senior Honors Project in Fine Arts

Prerequisite(s): THEA 4991.

THEA 5190 Semester Abroad (1-20)
Semester abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

THEA 5380 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

THEA 5390 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

THEA 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

THEA 6020 Shakespeare Verses (3)
One or more topics will be covered each semester, e.g., Acting Shakespeare.

THEA 6110 Acting For Other Media (3)
This course is designed to train the acting student in techniques that are required for successful performance in film, television, and radio. Students will explore the differences between acting for the stage and for the "mechanical" media and will be assigned scenes and copy to perform on camera and on microphone.

Corequisite(s): DMPC 2099.

THEA 6130 Ensemble Production (1,3)
Development of the ensemble in relation to specific genres and playwrights culminating in a public performance.

THEA 6140 Ensemble Production (1,3)
Development of the ensemble in relation to specific genres and playwrights culminating in a public performance.

THEA 6220 Advanced Makeup (3)
This studio style course explores the different types of theatrical makeup and it uses in different venues. The students are provided with supervised time in class to develop application skills both on themselves and using live models as well as thinking critically about an application.

THEA 6230 Special Effects (3)
Introductory course designed to expose the student to the various types of special effects available, and their uses in the entertainment industry.

THEA 6310 Adv Technical Problems (3)
A survey of the traditional methods of constructing and mounting scenery for theatre. A practical approach to planning technical production. Includes budgets for time and material, organization of shops and crews, and standards in drafting the production.

THEA 6330 Fundamentals of Lighting (3)
A course in the art and craft of stage lighting. Basic electricity and color theory. Lighting instruments and their control. Practical experience in lighting the production. Laboratory in addition to lecture.

THEA 6340 Comp. Tech For Lighting (3)
Advanced problems in stage lighting. Structured approach to the development of lighting for the stage. Analysis of available lighting control options. Practical experience in preparation of light designs for production. Laboratory in addition to lecture.

THEA 6350 Thea Drafting & Model-Making (3)
A course in basic drafting and model making techniques for first year graduate students. Foundation for Scenic Design CAD, Fundamentals of Lighting, Scene Design I, II, Technical Direction I, II, and Lighting Design , I, II.

THEA 6410 Design Fundamentals I (3,4)
The development of scenic and costume designs from the modern viewpoint. Techniques of drawing, rendering, and perspective in relation to designers' presentation and portfolio. Laboratory.

THEA 6420 Design Fundamentals II (3,4)
A continuation of THEA 6410. Equal emphasis on the designers' process and rendering techniques. Watercolor, pen and ink, scenic models.

Prerequisite(s): THEA 6410.

THEA 6440 Rendering For Designers (3)
The development of the individual's graphic skills in regard to rendering for theatrical purposes. Stress will be placed on accurately representing designs on plates in a professional fashion and on the manipulation of different mediums.

THEA 6460 Adv Costume Rendering (3)
To improve drawing/costume rendering skills. A course to advance the costume design student's understanding of the human body and how it moves and behaves, thus enhancing the student's ability to communicate through costume design rendering; exploration of the anatomy of the body, including the skeletal and muscular systems, how they interact and how they move; and exploration of how different fabrics behave on the body and how the body's movement is affected by clothing.

THEA 6470 Design for Television (3)
This course is designed to give the students the knowledge of preparing the production of television programs with emphasis on the producer's, the director's, and designer's responsibilities to the overall planning and execution of the program - both in the studio and in the field.

THEA 6480 Design for Puppetry (3)
This course is an introduction to puppet design concepts. An exploration of the specifics associated with different puppet show genres.

THEA 6530 Period Style Designers I (3,4)
In-depth study of the styles of architecture, decor, furniture, and costume from antiquity through Elizabethan England, 1625. Research and design adaptation assignments.

THEA 6540 Period Styles Design II (3,4)
Further study in architecture, decor, furniture, and costume from Charles I through modern including Eastern cultures. Research and design adaptation assignments.

THEA 6550 Stage Management (3)
Introduction to the multifaceted job of stage management.

THEA 6552 Performing Arts Management (3)
This course offers an overview of the managerial aspects of performing arts in America. It aims to relate principles of administration and business operations to theatre, dance. and music. and provide a basis for practical contemporary management of performing arts productions and organizations. Students will gain broad knowledge of management positions in theatre. dance, and music, and steps leading to careers in performing arts management. Students will be introduced to the history of performing arts production and management and will acquire knowledge of practical and financial aspects of managing a performing arts organization.

THEA 6555 Costume Shop Management (3)
Students will develop skills and an understanding of the daily responsibilities required of a Costume Shop Manager. These topics will include budgeting, managing labor, managing costume stock, writing rental agreements and sewing machine maintenance.

THEA 6580 Producing (3)
Introduction to the different elements of producing for the theatre, as well as television, new media, and cinema. Students receive an overview of the different elements of producing, from the initial steps of putting together script, talent, and the team (writer(s), director, actors, designers), through financing, and into marketing and the launch of a new production.

THEA 6600 Welding (3)
This class will cover a variety of metalworking techniques that are used in theatrical construction.

THEA 6650 Studies In Theatre Hist (3)
Graduate History of Theatre I is an intensive course in the conventions, physical conditions and techniques of theatrical production in the Western tradition from the Greek classical period through the 18th C. Emphasis will be placed on setting each period of theatre within the aesthetic traditions of Western Culture.

THEA 6660 Theatre History II (3)
Graduate History of Theatre I is an intensive course in the conventions, physical conditions and techniques of theatrical production in the Western tradition of Modern British and European Theatre.

THEA 6700 Sound Technology (3)
Introductory level course designed to expose the student to the theories and technology of the professional audio world.

THEA 6730 Dramaturgy (3,4)
This course explores dramatic structure as a means of achieving successful storytelling and examines the role of the dramaturg in modern theatrical practice.

THEA 6750 Costume Construction (3)
Students will develop skills in the construction of theatrical clothing, specifically hand sewing skills, machine-sewing skills, reading and understanding commercial patterns, and construction of basic garments as assigned by instructor.

THEA 6751 Beginning Patternmaking (3)
The course is designed to develop basic flat pattern making skills. A basic understanding of sewing techniques is preferred.

Prerequisite(s): THEA 6750 or 6750.

THEA 6760 Costume Technology (3)
Concentrated introduction to the methods, tools, and techniques used in the construction of Theatrical Millinery. Focus will be placed on standard shop equipment, fabrics, and specific Millinery construction materials and techniques.

THEA 6761 Advanced Millinery Techniques (3)
Further development of the methods, tools, and techniques used in the construction of Theatrical Millinery. Focus will be on advanced techniques and materials.

Prerequisite(s): THEA 6760.

THEA 6770 Costume Crafts I (3)
This course is designed to develop skills in the construction of theatrical crafts, specifically mask-making,

THEA 6775 Corsets and Crinolines (3)
This course is designed to explore the history and construction of female underpinnings from different eras.

Prerequisite(s): THEA 6750 or 6750.

THEA 6780 Adv Costume Technique Draping (1-4)
Students will build on flat patterning skills and learn draping techniques needed to create theatrical costumes. Prerequisites- Basic Patternmaking. Course may be repeated up to unlimited credit hours.

Prerequisite(s): THEA 6751.

Maximum Hours: 99

THEA 6790 Costume Crafts II (3)
Students will develop skills in the manipulation of textiles through various painting and dyeing techniques to achieve desired theatrical costuming objectives.

THEA 6800 Practical Applications (1-3)
A design lab where the students put theory into practice. The lab assignments will be tailored by the faculty to the individual student's needs. The objective is to provide actualized work experience in conjunction with faculty mentoring on design work productions. Course may be repeated#4 times for credit.

Course Limit: 4

THEA 6810 Theatrical Photography (3)
Basic photography and darkroom techniques designed specifically for theatre design students to document their work. Both black and white and color will be covered.

THEA 6820 Scene Design Cad (3)
We will introduce and explore Computer Aided Design using primarily the Vector Works program with its practical applications to theatrical scene design.

THEA 6825 Advanced CAD (3)
This class will cover advanced functions of the Vectorworks CAD software, such as 3D modeling and photo-realistic rendering techniques with lighting and textures, with emphasis on its practical applications to theatrical scene and lighting design. This is a continuation of the Scene Design CAD course.

Prerequisite(s): THEA 6820 or 6820.

THEA 6830 Scene Painting (3)
This is a collaborative class based upon professional practices of scenic studios. We will examine the working relationship between the scenic designer and the scenic artist, and look at historical changes to the profession over the past 400 years. There will be extensive time spent drawing and painting and learning techniques to realize different faux finishes. This introductory class will culminate with a full sized color drop, with all in the class participating.

THEA 6840 Intermed Costume Construction (3)
Students will further develop skills in the construction of theatrical clothing, specifically hand sewing skills, machine sewing skills, reading and understanding commercial patterns, and construction of more complex garments as well as repurposing commercial patterns, and construction of more complex garments as well as repurposing commercial garments.

Prerequisite(s): THEA 6750 or 6750.

THEA 6850 Design For Dancers (3)
Designed to expose the dancer/choreographer to the theories of lighting and sound design as it applies to dance.

THEA 6860 Advanced Costume Construction (3)
The course is designed to develop advanced skills in the construction of theatrical costumes. Students will create projects resulting in finished pieces worthy of inclusion in their portfolios. It will also develop an understanding of costume technology for both design and performance students as well as build a vocabulary to enhance the collaboration process.

Prerequisite(s): THEA 6840.

THEA 6890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

THEA 6900 Portfolio Techniques (3)
This course will prepare the student's portfolio, as well as the student, for the professional world. Stress placed upon plate layout, organization of materials, selection of pieces for inclusion, etc. Additionally, job search techniques and interview preparation will be explored.

THEA 6910 Special Topics (0-4)
Courses offered by visiting professors or permanent faculty. For specific offering, see the Schedule of Classes. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

THEA 6920 Special offerings (0-4)
Courses offered by visiting professors or permanent faculty. For specific offering, see the Schedule of Classes. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

THEA 6921 Special Offerings (3)
Special offering.

THEA 6922 Special Offering (3)
Special offering.

THEA 6923 Special Offering (3)
Special offerings in Theatre.

THEA 6924 Special Offering (3)
Special offerings in Theatre.

THEA 6925 Special offerings (3)
Special offerings in Theatre.

THEA 6940 Transfer Coursework (0-20)
Transfer coursework at the 6000 level. Departmental approval required.

Maximum Hours: 99

THEA 6980 Professional Development (3)
This Capstone course is designed for graduating seniors with a Performance track emphasis to address the skills necessary for a successful professional career in theatre and the performing arts. Emphasis will be placed on creation of resumes, self-promotion, and audition materials, including how to book auditions, preparing for call-backs and cold readings, making contacts, writing cover letters, finding an agent, and unions, among other topics.

THEA 6990 BFA Thesis Production (3-4)
Required for B.F.A. designers. Student's work in area of emphasis culminating in the design of a mainstage production. A written thesis is required.

THEA 7010 Graduate Text Analysis (3)
This course is designed for graduate level students of theatre and dance. It will explore methods and vocabularies for the discussion of play texts as they relate to the mounting and production of plays, as well as ways of making meaning on stage.

THEA 7210 Advanced Directing I (3)
This course is meant to give graduate theatre designers a theoretical, historical and practical overview of directing.

THEA 7310 Non-Profit Management (3)
The objective of this course is to provide a detailed analysis of the managerial aspects of commercial performing arts in America. The course aims to relate principles of administration and business operations to theatre, dance, and music, and provide a basis for practical contemporary management of performing arts productions and organizations.

THEA 7320 Dev/Fundraising For Npos (3)
This course focuses on not-for-profit performing arts organizations. Topics covered include the evolution of the field, economic impact, the internal culture and structure, external influences, leadership, governance, planning, human resources, marketing, fundraising, financial management, and others. Students will be introduced to a wide range of arts organizations, working arts managers, and institutional models through field trips, guest lectures, readings, and institutional data. In addition to understanding the organizational structures and functions of an arts organization, students will have begun to develop a philosophy of management in the arts, a theoretical model for general management, arts advocacy, and practical tools for its practice.

THEA 7410 Scene Design I (3)
The objective of this course is to give the students the skills needed to design scenery for a contemporary American or European play that will be analyzed within its diverse visual expressions.

THEA 7420 Scene Design II (3)
The purpose of this course is to empower students to present artistic set design solutions of opera in English translation, to discuss in depth and cross- culturally a theme, Music and Theatre.

THEA 7510 Costume Design I (3)
The Development of costume designs from the modern viewpoint. As well as developing techniques of drawing, rendering, and perspective in relation to designers, presentation, and portfolio.

THEA 7520 Costume Design II (3)
Continuation of THEA 7510.

THEA 7560 Production Management (3)
The exploration of the role of the Production Manager and their responsibilities.

THEA 7610 Lighting Design I (3)
The purpose of this course is to hone students' skills as lighting designers. This will be done through a series of projects and light plots over the course of the semester.

THEA 7620 Lighting Design II (3)
Continuation of THEA 7610 with emphasis on multi-set shows, musicals, and operas.

THEA 7710 Technical Directing I (3)
This course will cover a variety of techniques that are used in theatrical construction.

THEA 7720 Technical Directing II (3)
Continuation of THEA 7710 with emphasis on structural engineering of scenery.

THEA 7890 Internship (9)
Internship.

THEA 7910 Independent Study (0-3)
Independent study in Theatre.

THEA 7920 Independent Study (0-3)
Independent study in Theatre.

THEA 7950 Special Projects (3)
Course Limit: 99

THEA 7990 Thesis Production (3)
MFA Thesis Production.

THEA 9980 Master's Research (0)
Master's Research. Course may be repeated up to unlimited credit hours.

Enrollment limited to students in the Theatre department.

Maximum Hours: 99

Tides - Residential Learning Communities (TIDR)

TIDR 1014 Cultivate Residence Self Care (1)
Health in college is so much more than avoiding pizza every night and occasionally going to the gym. Health is multifaceted and is pivotal to your ability to thrive during the next four years. This course will examine the most relevant health topics for college students from a public health perspective, integrating theories and practices relevant to your life. In addition, this course seeks to cultivate leadership skills as an element of being healthy and successful in college.

TIDR 1015 Cultivate Inner Changemaker (1)
Cultivate your Inner Changemaker is devoted to exploring the skills, strategies, and ideas of effective social change advocates in the 21st century. Students will be learning about some of the essential skills of effective changemakers, including leadership, optimism, resilience, risk-taking, luck, relationship building, conflict resolution, creativity, and innovation. Throughout the course, students will practice these skills, both in class and through assignments.

Corequisite(s): TIDR 1890.

TIDR 1016 Crossroads of Culture: New Orleans' Global Identity in Local Context (1)
In this course we will delve into the rich tapestry of New Orleans' cultural geography and its profound multicultural existence. Students will explore the historical roots and global influences that have shaped the city's unique identity. Through engaging lectures, seminar discussions, and experiential learning, students will develop a nuanced understanding of the city's multicultural history and its ongoing impact on contemporary society. Students will gain an appreciation for the global influences in New Orleans' music, cuisine, environment, and traditions while addressing social justice issues rooted in the city's unique history. The course aims to foster cultural competence, inclusivity, global awareness, civic engagement, and leadership skills, providing students with the tools to navigate an increasingly interconnected world.

TIDR 1018 Case Studies in Leadership (1)
This 1-credit course will utilize a variety of cases which highlight a real-life example of a challenge in leadership. Fields covered will include business, politics, non-profit work, and social movements - all highlighting decision making in New Orleans following Hurricane Katrina. In most class periods, you will be asked to "inhabit" the case and take up the dilemma of its protagonist. I may assign class members roles to prepare and play in the class discussion spontaneously or in advance. None of the cases have right answers, although we may have an epilogue that tells what actually happened (the historical outcome). You are asked to wrestle with the problem as if it were your own and bring your experience and classroom learning from Tulane University and elsewhere to bear on the questions. The Harvard Business School originated and developed the phenomenon of the teaching case to simulate business experience in novices, to create a concrete vehicle for applying abstract theories to real-world situations, and to engender engaged classroom discussion while fostering critical thinking skills as students were forced to wrestle with actual business dilemmas that had no easy answer. It is no accident that professional schools were drawn to case teaching—Law, for obvious reasons—but also schools of public affairs and public health whose missions are to utilize the best thinking of the disciplines to prepare students for careers as practitioners. Cases marry learning about real world policy and organizational problems with critical thinking, abstract reasoning, and theorizing valued in all academic disciplines. In particular, this course will offer you a chance to get to know New Orleans as a resilient city with monumental challenges left to tackle.

TIDR 1090 Who Dat, Fan Up & Geaux (1)
Founded in 1718, the city of New Orleans has a long and rich history with sports. From the rise of social class-driven sports such as rowing and billiards to the New Orleans Saints' heroic revival of the city post-Hurricane Katrina, sports has been as integral to the area as food, music, and Mardi Gras. Sports have made an enduring impact on the social world in which we all live. It is a taken for granted aspect of our everyday lives – whether that entails watching "Sportscenter" or noticing that every single major newspaper contains a "Sports" section that is as long if not longer than any other section. Yet there is more to sport than just what we see on a daily basis. In this course, we will explore general sports-related topics and examine actual case studies related to New Orleans' sports scene. More than simply 'talking sports,' students will study issues from political, economic and social viewpoints and also gain an understanding of the rich sports heritage found here in New Orleans. Readings and discussions, field trips, and guest speakers will aid students to understand both historical accounts and modern-day subjects associated with sports such as governmental involvement, public financing, and community development. Students will participate in a mandatory service learning component with TBD. Their after-school programs promote development in boys and girls through activities that build character, cultivate new skills, and create a sense of belonging – in this case a place where kids can express themselves, play together and get fit. By participating in activities with NFL Youth Education Town students will deepen their understanding of the political, economic, and social ramifications of sports on a local level by making correlations to sports and its impacts on the city's youth, infrastructure, civic pride, crime reduction efforts, poverty eradication, and other areas, and gain an awareness of their role as a citizen in the city of New Orleans.

TIDR 1117 N. O. Performance Culture (1)
There will be two primary goals in this course. The first will involve introducing students to New Orleans's history, culture, and literature. The second will entail an interdisciplinary introduction to a wide array of influences with the effort of showing how New Orleans's turbulent history of changing possession, immigration, and migration have contributed to a "performance" of various versions of "New Orleansness." The course will focus specifically on the presence of French, Spanish, African, and a brief overview of the various immigrant communities in the city's history and the various ways in which these groups have performed their own version of New Orleans for the city itself, the United States, and the world. In addition, the students will use the maps found in Unfathomable City: A New Orleans Atlas to look at how maps are constructions of authenticity.

TIDR 1185 Innovation in Chemical Engineering (1)
This course will introduce students to the modern approaches chemical engineers employ to solve real world problems. Topics will emphasize engineering design and innovation. Students will learn through relevant readings, discussions, and guest lectures from leaders in the field. We will also take two field trips to introduce students to the roles of engineering in New Orleans.

TIDR 1225 Women in STEM (1)
This course covers the challenges facing women pursuing degrees and careers in STEM. Many of these challenges are institutionalized barriers that still exist, creating a system in which it is harder for women to thrive in comparison with their male peers. Other minority groups in STEM face many of the same challenges as women, and the additional and different barriers for other underrepresented groups will also be discussed. The course will cover strategies for success in STEM and becoming an ally and advocate for other traditionally marginalized groups in STEM.

TIDR 1265 Indian Tribes on the Bayou (1)
Want to explore the wilds of Louisiana outside of New Orleans? Try some alligator meat, shrimp caught fresh from the sea or, in general, explore another side of Louisiana's rich cultural heritage- then this class is for you! The far-reaching impact of Native American Tribes of the lower Mississippi Valley on shaping Louisiana history is among the least explored subjects among the otherwise well-documented rich history of Louisiana. Recent and ongoing research shows that without the "Petit Nations"", as some of the Tribes were called, the history of this region would have been quite different. This course offers students the rare opportunity to participate in on-going, important research that entails working directly with Tribal members. In addition, students will have the opportunity to take a trip conducted by Tribal members down the bayous as they give a tour of their ancestral lands as well as explore other areas of Louisiana outside of New Orleans while also tasting some of the food native to Louisiana. An experience not to be missed!

TIDR 1317 Sports as a Leadership Model (1)
This course uses a sports lens to introduce Tulane students to what character traits have made sports figures, coaches, teams, and organizations successful as well as aided in turning sports from recreational fun to a multi-billion-dollar global industry juggernaut. This class will introduce students to several different valuable life skills and lessons to aid them in them in their academic endeavors and professional journey. The goal of this class is to see what transferable skills those in the world of sports use in their respective venues to help them become success stories and pass those qualities along to you to aid you in achieving success in life during and after Tulane.

TIDR 1415 FEMtech: Gender and Technology (1)
Since the industrial era, analog, digital, and medical products have been produced with the claim that certain technologies make women's lives easier. This course examines the role that FEMtech plays in women's lives and the role that product design plays in shaping discourse around women's relationship with technology. Students will also explore the recent rise of the FEMtech app technology, a projected $120 billion-dollar industry. Students will have the opportunity to learn about the technology and start-up industries from technology leaders in New Orleans. Students will use feminist technology design strategies to design and pitch a FEMtech product.

TIDR 1500 The Entrepreneurial Landscape of New Orleans and How the City's Diverse Culture Influences It (1)
In this course, students will be given a behind the scenes look at the entrepreneurial ecosystem in New Orleans –the lessons learned from Hurricane Katrina recovery efforts and what needs to happen to have a vibrant startup community that is equitable, accessible, and collaborative.From local entrepreneurs to community partners to support organizations to investors and more, this course will bring together some of the most important stakeholders in the New Orleans entrepreneurial ecosystem. We will also leverage our data from the Greater New Orleans Startup Report, hearing from our very own Lepage Center to present an in-depth overview of the current state of the early stage business economy in New Orleans.

TIDR 1725 Black Culture, Power, Politics, and Leadership (1)
This one-credit course complements the experience of students living in the 1963 Collective Residential Learning Community (RLC) by providing them with an equity oriented interpretative framework grounded in Black thought, experience, and history. The modular survey course was designed for first-year students interested in exploring Black history, culture, and knowledge across the African diaspora. Through this first year seminar, students will develop an appreciation and understanding of the contributions of Black people in a globalized context.

TIDR 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

TIDR 1898 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

TIDR 1925 Natural History of Louisiana (1)
This course examines the origin and evolution of Louisiana's ecosystems. Students will learn about living and prehistoric plants and animals and their physical surroundings while exploring Louisiana's coastal marshes, bottomland hardwood forests, longleaf pine savannahs, and tallgrass prairies. Course includes multiple field trips.

TIDR 1981 Frames Films & Femmes Fatales (1)
This course is a critical survey of cinematic works by and about women, with examples drawn from different modes of cinematic expression (mainstream fiction films as well as alternative film and video [including documentaries, experimental, & narrative]) and from different historical periods (from the 1930s to the present). The course deploys feminist approaches to film criticism and applies these approaches to cinematic representations of women. Films illustrating particular genres, as well as feminist and "women's" films, are discussed and critiqued. We will consider the role of film in our understandings of sex, gender, and sexuality, as well as race, class, and disability. Through discussions and writing, we will work to discern relevant social, political, ideological, and aesthetic concepts in the media we examine. We will look at contemporary Hollywood and independent cinema, US and some international films by both established and emerging filmmakers.

TIDR 1983 Us vs. Them (1)
Black vs. White. Citizen vs. Immigrant. Transgender vs. Cisgender. Christian vs. Muslim. Gay vs. Straight. The list goes on. In recent years, the United States has become increasingly polarized. The most interesting and exciting aspects of human diversity are set against one another, in rigid opposing binaries. Through interactive workshops, cultural trips, discussions of texts and films, writing reflections, and guest speakers, this seminar will serve as an incubator for students from diverse backgrounds to develop their understanding of the complexities of cultures, identities, and power dynamics. We will simultaneously explore everyday practices for world building beyond "Us. Vs. Them."

TIDR 1985 Women Leading New Orleans (1)
From non-profit organizations to government, from social movements to Mardi Gras, from restaurants to boardrooms, women have led New Orleans. Using an intersectional feminist lens, this course will explore how the personal, the organizational, and the institutional intersect to shape how women practice leadership. Students will be introduced to theories and research that address gender and leadership while focusing on historical and contemporary examples of women practicing leadership in New Orleans. The course will begin with a brief introduction to a sociological perspective on gender and intersectionality - foundational concepts of the course - and move into discussions of how and why women lead, as well as barriers they encounter to leadership. Guest speakers, field trips, and writing assignments will ask students to think broadly, but also analytically, about what leadership means, as well as about how identities and institutions shape the experience of leadership.

Tides - TU Interdisciplinary Experience (TIDE)

TIDE 1000 NOLA Cities of The Dead (1)
Students will be introduced to the history and cultural folkways of New Orleans through the study of historic figures, cemetery architecture, monument construction and funerary symbolism reflected in stone and iron. Why are above-ground tombs more prevalent in New Orleans? What are the different tomb types and their architectural styles? Why do families in Louisiana visit cemeteries on All Saints Day? What symbolism does funerary art in stone and iron reveal? This TIDES course will provide several informative field sessions to local cemeteries combined with class lectures.

TIDE 1003 Happiness & Human Flourishing (1)
What can scientific research tell us about practices and perspectives that lead to a happier life? What can psychology do to help ordinary people to thrive and flourish? Which practices lead to greater fulfillment and life satisfaction? Positive psychology engages such questions by utilizing scientific research methods to identify practices which lead to greater happiness and human flourishing -- a life rich in purpose, relationships, and enjoyment. Positive psychologists maintain that (1) flourishing requires more than curing pathology; (2) flourishing requires tapping human strengths and positive capacities; and (3) scientific research methods can help us to identify and refine strategies for flourishing. This course will provide a theoretical and practical introduction to applied positive psychology. Topics will include positive emotions, hedonic misprediction and adaptation, character strengths (and their application in academia), purpose, gratitude, kindness, meditation, nurturing social relationships, and more. Students will learn about the foundational theories and research of positive psychology and will also engage in experiential homework in which they will apply strategies for enhancing their own health and happiness and for positively impacting their relationships and communities. This course will also expose students to local wellness resources at Tulane and New Orleans and will offer opportunities to explore a variety of life enhancing practices through homework assignments and a few group activities such as attending a yoga class (exercise), a meditation class (mindfulness), and a field trip to the French Quarter exploring New Orleans architecture and history on a walking tour (engagement) and enjoying some local cuisine (savoring).

TIDE 1005 Mardi Gras: Greatest Free Show (1)

TIDE 1010 Ldrshp, Pol, Powr,Change (1)
Are leaders born or bred? How do leaders and their leadership styles impact change? How does one develop the courage and wisdom to lead and promote change effectively? This TIDES class provides an opportunity to examine the nature of leadership, its impact on the change process, and the underlying dynamics of power, politics, and conflict. Over the course of the academic year, this course focuses on developing an interdisciplinary understanding of the theories and practices of organizational and community leadership. As a TIDES member, you will actively study the theories that emerge from a variety of fields and reflect on their practical, political, and ethical assumptions as well as on their implications in a variety of settings. Through readings, classroom discussions, interviews with local leaders, and a group initiative, you will gain a greater appreciation for the issues that affect leaders and the components of successful leadership.

TIDE 1011 Exploring Russia (1)
The war with Ukraine has brought Russia's relationship with its former imperial realm (as well as its own internal minorities) into sharp focus, prompting the scholarly community to examine our prior biases and prejudices. Russia's aggression has intensified calls for a decolonization of our thinking, writing, and teaching about the former Soviet space. Scholars of Ukraine, the Baltics, the Caucasus, and Central Asia, among many others, have called to reappraise prior historiography's Russo-centrism and the often-neglected implications of Soviet nationality policies; the lingering Russian/Soviet imperial legacy. This course will introduce students to the multiplicity of perspectives and experiences of the ex-Soviet nationalities and Russia's ethnic minority groups. A variety of readings, film screenings, musical videos, and guest lectures will be part of the class. No knowledge of Russian is needed or required.

TIDE 1013 The Architecture of Place (1)
How can architecture define a place? How do buildings support social constructs and cultural patterns? How do spatial relationships, proportions, and forms shape how we move through and experience places? How do the lines, curves, textures, and colors of walls, roofs, railings and other built elements impact our senses, emotions, and memories? All of these questions will be explored as students learn about the particular built environment that makes New Orleans so unmistakably New Orleans. Students will be encouraged to think critically about built environment and to communicate their ideas effectively through writing, visuals, and speech.

TIDE 1014 Cultivate Resiliency Self Care (1)
Health in college is so much more than avoiding pizza every night and occasionally going to the gym. Health is multifaceted and is pivotal to your ability to thrive during the next four years. This course will examine the most relevant health topics for college students from a public health perspective, integrating theories and practices relevant to your life. In addition, this course seeks to cultivate leadership skills as an element of being healthy and successful in college.

TIDE 1015 Cultivate Inner Changemaker (1)
Cultivate your Inner Changemaker is devoted to exploring the skills, strategies, and ideas of effective social change advocates in the 21st century. Students will be learning about some of the essential skills of effective changemakers, including leadership, optimism, resilience, risk-taking, luck, relationship building, conflict resolution, creativity, and innovation. Throughout the course, students will practice these skills, both in class and through assignments.

TIDE 1016 Tolkien as Translator (1)
While many have enjoyed J.R.R. Tolkien's The Lord of the Rings as an epic novel, few readers are aware of the fundamentally linguistic and anthropological nature of Tolkien's writing. As Oxford Professor of Anglo-Saxon, Tolkien was intimately familiar with the Germanic languages, their history, and their epic literatures. Because of his background, he went far beyond the invention of a few strange-sounding names for the characters and places of his world, instead developing a detailed proto-language (Common Eldarin) and following its development into two distinct but related Elvish tongues, Quenya and Sindarin. He also invented Khuzdul (Dwarvish), the Black Speech, Adûnaic (Númenórean) and Sôval Phârë (The Common Speech). Importantly, he assumed a role of translator of The Lord of the Rings, employing English archaisms and dialects to reflect the varying speech styles of his characters, their relative social status, and their complex interrelationships. Old English, Old Norse, and Gothic were all employed to accurately reflect the degree of kinship characters, places and languages had to the 'Common Speech'. In this course, we study the role of language in The Lord of the Rings, applying concepts and perspectives from linguistic anthropology to shed light on Tolkien's methods and purpose as the 'translator' of Middle-earth. Students are introduced to Tolkien's invented languages (and their real-world inspirations) and two of his invented alphabets. An appreciation of the linguistic foundations of Middle-earth greatly increases one's understanding of Tolkien's achievement, and provides insights into one linguist's view of the intricate and interdependent relationships of language, culture, and society.

TIDE 1017 Changemakers in NOLA Education (1)
This one-credit course is designed for those interested in social innovation and social entrepreneurship. In addition to exploring design thinking, social and emotional learning, and health and wellness, students will explore the innovative initiatives currently shaping the landscape of education in New Orleans.

TIDE 1018 Case Studies in Leadership (1)
This 1-credit course will utilize a variety of cases which highlight a real-life example of a challenge in leadership. Fields covered will include business, politics, non-profit work, and social movements - all highlighting decision making in New Orleans following Hurricane Katrina. In most class periods, you will be asked to "inhabit" the case and take up the dilemma of its protagonist. I may assign class members roles to prepare and play in the class discussion spontaneously or in advance. None of the cases have right answers, although we may have an epilogue that tells what actually happened (the historical outcome). You are asked to wrestle with the problem as if it were your own and bring your experience and classroom learning from Tulane University and elsewhere to bear on the questions. The Harvard Business School originated and developed the phenomenon of the teaching case to simulate business experience in novices, to create a concrete vehicle for applying abstract theories to real-world situations, and to engender engaged classroom discussion while fostering critical thinking skills as students were forced to wrestle with actual business dilemmas that had no easy answer. It is no accident that professional schools were drawn to case teaching—Law, for obvious reasons—but also schools of public affairs and public health whose missions are to utilize the best thinking of the disciplines to prepare students for careers as practitioners. Cases marry learning about real world policy and organizational problems with critical thinking, abstract reasoning, and theorizing valued in all academic disciplines. In particular, this course will offer you a chance to get to know New Orleans as a resilient city with monumental challenges left to tackle.

TIDE 1019 Crime and Criminal Justice of New Orleans (1)
This course is an exploration of crime and the criminal justice system in New Orleans. With New Orleans as its case, this course will examine why people commit and the conditions that foster crime, policing, the courts, jail/prison, and local movements and organizations seeking to create different criminal justice institutions and practices. It will examine the criminal justice system critically, considering questions of race, class and power as these structure how the CJ system operates as a whole. It will examine the New Orleans police department, the District Attorney and Orleans Public Defenders, the Sheriff and city jail, and advocacy groups such as the Orleans Prison Reform Movement. It will involve field trips to some of these locations, or representatives from the New Orleans CJ system visiting class or for online discussion should physical meetings be hindered.

TIDE 1020 Cities & Urban Environmt (1)
Focusing on selections from the seminal work “The Death and Life of Great American Cities” by Jane Jacobs, we will explore and discuss its relevance to the city of New Orleans. We will also look directly at what is currently happening in the city of New Orleans via field studies, guest presentations and movies. Selected neighborhoods of New Orleans will be explored as vehicles for looking at the social, political, and economic life of cities. By focusing on particular and local examples we will, in effect, also address urban issues that are both more general and global. You will be invited to learn ‘how to see’ (observe) the many aspects of the city, be introduced to tools for the analysis of city form and city behavior, and be asked to draw conclusions from what you read for this class as well as your experiences.

TIDE 1023 Reproductive Politics in NOLA (1)
From sex education for middle and high schoolers to nutrition assistance for impoverished new parents, the phrase “reproductive politics” encompasses far more than debates over abortion and contraception. This one-credit first-year course explores American studies scholar Laura Briggs’ claim that “all politics [are] reproductive politics,” with a particular focus on the political and legal realities of reproductive life in the city of New Orleans.

TIDE 1026 Superheroes: Race, Gender, and Orientation (1)
This course examines the construction of race, gender, and orientation in several popular cultural ideological mediums. We will examine the construction and representation of race and gender in the superhero genre. We will discuss the intersection between the ideas of gaze and perspective. We will examine the representation of race and gender in the superhero cinematic genre. We will examine the intersections and relationships between race, gender, and economic class. We will theorize the economic impact of race and gender in the superhero film genre. We will consider the construction of the idea of the exceptional as it relates to the representation of race and gender in the superhero film genre. We will also include consideration of race, gender and orientation in a larger and more broad television audience.

TIDE 1027 Social Media Cuts Both Ways (1)
Over the several years, widespread concern about the effects of social media on democracy has led to an explosion in research from different disciplines and corners of academia. In the class, students will look at issues like information and disinformation, online hate speech and free speech, political advertising and messaging, and personal privacy rights and assess both sides of the topic for good or bad engagement.

TIDE 1028 Masculinities, Femininities & Sexualities on Campus & Beyond (1)
This course will introduce students to social science academic studies and critically engaged scholarship that explore how men's and women's shifting social roles around sex, gender, and sexuality binaries intimately shape young people's sense of self in emerging adulthood. College, particularly a residential college experience, can be very destabilizing as gendered constructions of young adulthood, typically rooted in the media and popular culture, shape how young men and women explore their identities and sexualities within the context of campus cultures. These cultures are not inevitable or natural,but their impacts are very real and reverberate through young people's lives. Some examples include:the pressure to fit into normative binary identities and organizations, strict gendered appearance standards, hooking up, drinking, partying, and having fun, picking a college major and a career path, starting and ending friendships and romantic relationships, and learning what it means to belong the social category "man" or "woman" in our contemporary world. By exposing the often-invisible web of culture, hegemony, and power that shape our feelings, our identities, our opportunities, and our constraints,we can better locate ourselves within their impacts and to forge more conscientious and engaged relationships with ourselves, with our environment,and with others.

TIDE 1030 Music & Culture of Nola (1)
The Music and Culture of New Orleans introduces the newcomer to New Orleans to the diversity of culture in the city and region. The 11-week course explores the music, literature, art, dance, architecture, and food that are unique to Southern Louisiana so that during your student years here you can fully enjoy them. This TIDES course includes general lectures by experts in the various aspects of the culture of New Orleans. Interspersed and alternating are small sections where these experts converse directly with the freshmen, helping each individual explore the city. Students are directed to the most important music venues in the city, as well as to the best Creole and Cajun restaurants. In addition to the class meetings, each student is expected to join in at least two field trips to witness the culture first hand.

TIDE 1031 Ideology&Belief Everday Life (1)
The course looks at the main beliefs and ideologies prevalent in our culture. Ideas like the entrepreneurial self, celebrity, pleasure-seeking, economic man, techno-optimism,God, nation, race, and family. These ideas are constantly hammered into us by the media,our friends, family and institutions, motivational speakers, business gurus, films, but also in the actions we take in our everyday lives and even more deeply in the experience of who we are.We will look at the origin of these ideas, their often-adverse societal effects and why they sometimes make us feel dis-empowered,anxious, and depressed. The course thus attempts to do two things at the same time.First teach students to critically think about their society and culture, and second help them achieve more personal freedom and well-being.

TIDE 1032 Jazz and New Orleans (1)
Jazz is often called "America's Classical Music." It is the only global art form invented by Americans, as created and developed by African-Americans in New Orleans. Jazz began life as "emancipation music," according to clarinetist Sidney Bechet. This class will draw a straight line from the New Orleans jazz of Bechet and Louis Armstrong to the contemporary brass-band funk of Rebirth,Trombone Shorty, and the Soul Rebels.

TIDE 1033 Taylor Your Tulane (1)
Taylor Your Tulane is a 1-credit TIDES course that applies human-centered design (design thinking) mindsets and tools to support first-year students in designing a fulfilling college experience. Students in this course will build an understanding of how they can be designers in their own lives and prototype different "investments" in the college experience by building a diversified college portfolio that includes their education, and relationships and experiences on campus and in New Orleans. Topics include the purpose of college, major selection, educational way finding, and interest exploration outside of the classroom, all applied through an introduction to Design Thinking (the course is offered through the Taylor Center for Social Innovation and Design Thinking). This seminar class incorporates small group discussion, in-class activities, field exercises, personal reflection, and individual coaching.

TIDE 1034 NoLa - The Lay of the Land (1)
This course explores the geography of New Orleans and coastal Louisiana, with a focus on forces that created and threaten the river delta on which the city sits. The course examines the levee system, climate change, sea level rise, industrial impacts to coastal wetlands, along with measures to promote a resilient city in the face of environmental and other threats. The course will also explore these issues in the context of social equity and environmental justice. Students will hear from a coastal specialist, learn about the city's resiliency efforts, visit areas of the city that experienced the most devastation following hurricane Katrina, and tour a levee adjacent to a cypress swamp.

TIDE 1035 Introduction to Yoga (1)
Yoga is a practice that offers many tools for living skillfully. This class will arm first year students with tools to help ground, calm, and focus them. The best part is that these lessons come from sweating, moving, going upside down, chanting, breathing, talking, listening, and having fun. The Sanskrit work Kula means a community, and we will create a Kula in our class, as well as connect with the New Orleans yoga community. This course is for anyone who loves yoga, or is just interested in learning more about it.

TIDE 1036 Sexuality, Knowledge Production, and Education (1)
The goal of this course is to introduce students to the various ways that the pursuit of knowledge is carried out within and across scholarly disciplines. Grounded in an interdisciplinary exploration of sexuality, knowledge production, and education, students will learn about the purpose and processes of academic research; examine various forms of academic research to appreciate the similarities and differences in questions and methods of scholarship; and study the organization of knowledge and the role of the scholarly communities. In so doing, students will analyze research across disciplines relating to human sexuality, as well as the effects and implications of research on policy and practice related sexuality education. This course meets once a week through the entire semester.

TIDE 1038 Beyond Orgo:Becoming a Good Dr (1)
Gen Chem, Bio, Orgo, Physics, the MCAT:every premed student knows the prerequisites for medical school. But becoming a good doctor takes much more than lab time and formulas. It requires critical thinking,teamwork, communication skills, resilience,adaptability, emotional intelligence, cultural competence, a capacity for improvement, a desire to serve others, and a strong moral compass. In this course, you will examine the human-centered skills necessary to become the good doctors our world needs. Through readings, guest lectures, reflections, and collaborative projects, you will evaluate your personal strengths and weaknesses, identify helpful role models and resources, and discover the ways you can develop these essential skills at Tulane and beyond.

TIDE 1039 Design for Pollinators (1)
In this course, students will learn the basic principles of beekeeping and work in groups to design and construct beehives for honeybees and other pollinators. These designs will be released as open access designs for anyone to use. Course discussions will cover the basics of pollination and ecological hive management, hive designs around the world according to community needs and local plenty vs material scarcity, hive designs tailored to specific pollinators, and principles of open access and inclusive design. We will work in Tulane's MakerSpace.

TIDE 1040 Religion Media Politics & Food (1)
From the influence of the religious right to the impact of gay marriage on the social fabric, religion is moving front and center in our culture. But so is food. Religion and food are often thought as distinct, separate. But in fact religion, cuisine, sexual orientation, the media, and way of life issues strongly impact politics. In this class we will discuss the relationships of these factors on present-day consciousness. This will be a student-centered class, so come ready to share your thoughts.

TIDE 1043 LGBTQ+ New Orleans (1)
This seminar explores LGBTQ+ life in New Orleans from an interdisciplinary perspective. It focuses on the LGBTQ+ history of the city, narratives of personal experiences, cultural representations and expressions, and current research on discrimination and on social and health programs.

TIDE 1044 Gender & Sports Through an Intersectional Lens (1)
The US sports industry is a highly gendered social institution with a long history of reproducing gender inequality. This course invites students to reconsider sports and the idea of athleticism through the lens of intersectional feminism. Over twelve weeks, we will look at sports from several different angles: as proof that gender is a social construct, and that men and women are more alike than different; as an important site where cultural understandings of masculinity and femininity are constantly being redefined; as a source of case studies for examining social problems like sexual violence and the wage gap; and as a medium for exploring our campus, our health and well-being, and the city of New Orleans.

TIDE 1046 Think Like Leonardo da Vinci (1)
This course introduces you to college study and research through emulation of the Renaissance genius Leonardo da Vinci (1452-1519). To coincide with the 500th anniversary of his death, you will be invited to keep notebooks just like he did. We will examine Leonardo's artworks as a way to investigate Renaissance ideas of nature, its transformative potential, and the natural and built environment. Each week you will you be tasked with a theme to explore that relates to one of his fields of interest. After viewing his drawings and writings (in English!), you too will investigate subjects that interested Leonardo and his peers—such as botany, anatomy, machine design, and flight—and learn to articulate in your notebooks your own insights and approaches to studying these topics. You'll have ample opportunity to get to know New Orleans through prompts that invite you to study in New Orleans like Leonardo might have done: you'll be invited to visit the New Orleans Museum of Art, the Pharmacy Museum, and Audubon Park. Weekly discussions will discuss the artist's approaches and your own. For your notebooks, you will not be assessed on artistic merit, but rather for the depth of your engagement with the assignment.

TIDE 1047 Exploring Creole New Orleans: Three Centuries of Creole Culture in the Crescent City (1)
New Orleans is a city celebrated for its vibrant and diverse cultural heritage, and inextricably intertwined with its 300-year history is the concept of "Creole." This course offers an interdisciplinary journey into the multilayered world of Creole politics, culture, and artistic expression in the Crescent City, exploring the complexities of Creole identity, its rich culinary traditions, distinctive architecture, aspects of Creole languages, and the importance of Creole music. Readings, discussions, guest speakers, and field trips will encourage students to gain a deeper appreciation of the city's Creole heritage and foster critical thinking about historical events and their impacts on the city's different social and ethnic groups.

TIDE 1048 AI Unleashed: Mastering ChatGPT for Success (1)
This course empowers students to ethically harness ChatGPT, an AI-driven conversational agent, to supercharge their skills in research, creativity, writing, time management, critical thinking, and career exploration. By blending human ingenuity with AI-sourced information and efficiency, students will become early adopters of AI technology and responsible AI citizens.

TIDE 1049 Challenging American Cultural Myths (1)
This seminar is meant to develop students' critical thinking skills by revisiting and challenging commonly accepted American cultural myths, such as the myths of justice, of education and empowerment, of progress on the tech frontier, of individual opportunity, of gender, and of race. Students will acquire the methods to read written texts, analyze visual documents, and write critically through discussions around thought-provoking issues.

TIDE 1051 German Heritage in the Crescent City (1)
This seminar will introduce students to various aspects of German culture in New Orleans. We will explore how German immigrants helped shape the cultural, social, and political structure of the Crescent City.Today, New Orleans is primarily known for its French and Spanish influence, but in the years before the American Civil War, the German population of New Orleans made up the largest German colony south of the Mason-Dixon line.German settlers dominated the local beer industry, supplied New Orleans with food harvested in the outlying parishes, and were an integral part of the local cultural scene. With the advent of World War I, Anti-German sentiment in Louisiana grew, and by the end of the war all expression of German culture was prohibited by law. Gradually, the German language disappeared,and German traditions were forgotten. However, if we dig a little deeper, we will find ample evidence of a once vibrant German culture, remnants of which survive to the present day.Students will have the opportunity to enjoy traditional German food, go on field trips to German sites,and meet with people from the German community.A variety of readings (excerpts from books and short articles), documentaries, as well as guest lectures will be part of the class. Knowledge of German is not required.

TIDE 1052 Climate Changes Solutions (1)
The course is a global examination of human adaptations, resilience, technologies, and indigenous/traditional culture responses to climate change challenges. We will learn about climate science, climate change challenges, and societal and community responses to these challenges.

TIDE 1053 Horrific Monsters (1)
This course will engage in a critical and historical exploration and analysis of the horror genre in film. In due course we will discuss the origins of horror as a film genre; the definitive characteristics of horror, both formally and narratively; horror's intersections with major critical and social themes and issues; the monster as the definitive characteristic of horror films; and the various ways in which the monster is imagined.

TIDE 1054 Navigating American College Culture (1)
This seminar explores American college culture from an intercultural perspective. Students will acquire the tools to cope not only with the specificities of American college culture and expectations, but also with issues related to interpersonal relations and the diversity of identities and cultures in the US.

TIDE 1056 Ancient Magic, Modern Witchcraft (1)
For the inhabitants of the ancient world, magic and witchcraft were part of everyday life. In modern-era New Orleans, magical practitioners have also found a home and a place in the local culture. This course will explore magical literature, rituals, and beliefs in two ways: first as they existed in ancient Near Eastern civilizations (such as Mesopotamia and biblical Israel), and how these beliefs continue into modern America (especially locally in NOLA). Students will learn the skills necessary to succeed at a rigorous university (such as close reading, academic writing, and class participation) while exploring topics such as demonology, illness, prayer, exorcism,and witchcraft.

TIDE 1057 Ancient Greece in New Orleans (1)
This course will take you through a journey that explores how the culture of Ancient Greece has been incorporated and displayed in New Orleans. Working as a group, we will discover how Ancient Greek culture has permeated the fabric of the city, from architectural choices to Mardi Gras krewes. Through this unusual and engaging journey, we will build a new appreciation for the composite world that is New Orleans, where ancient and modern blends, and where different cultures, including ancient ones, become a distinctive identity. All the while learning the skills necessary for a successful college experience.

TIDE 1058 Comedy! (Or 19 Ways to Analyze a Joke Until It Isn't Funny Anymore) (1)
This 1-credit course fulfills the First-Year Seminar requirement as a Tulane Interdisciplinary Experience Seminar (TIDES). In this course we will discuss how to deconstruct standard comic format, read and discuss five different comic theories, look at 19(+) different comic structures to create a final project.

TIDE 1059 Fundamentals of Traditional Martial Arts Training (1)
This dynamic course offers students a comprehensive introduction to the world of Traditional Martial Arts with a focus on Taekwondo, Krav Maga, Boxing, and general fitness. Designed to accommodate all levels of experience, from beginners to seasoned practitioners, the course provides an in-depth exploration of each discipline's historical roots, philosophical underpinnings, and cultural significance. Students will learn the foundational movements of traditional martial arts. Instruction will emphasize the artistry of martial forms, the tactics of sportive engagement, and the practicalities of self-defense, all while improving overall physical fitness. Classes are conducted in a safe, non-contact setting to ensure a learning environment that is both challenging and supportive. Through collaborative assignments, students will engage in group activities that encourage peer learning and teamwork, fostering an environment of mutual respect and camaraderie. The curriculum is designed to challenge students' perceptions and encourage growth in both martial arts proficiency and personal development. Through written and oral assignments, students will reflect on their experiences and articulate their understanding of the material covered. As an added value to this course, students who fulfill the requirements will have the opportunity to be awarded international rank recognition by a global traditional martial arts association. This distinction not only celebrates the skills acquired but also connects students to the larger martial arts community worldwide.

TIDE 1060 NOLA Global at the Local (1)
Open only to Altman Scholars, this TIDES experience plays an important role in the 4-year curriculum of the Altman Program in International Studies and Business. The students that make up each Altman "cohort" will take one class together each semester that they are on campus during their studies. Altman TIDES will kick off these courses during the Fall of their Freshman year. With an eye towards producing exceptional global citizens, Altman TIDES introduces students to the rich cultural fabric of New Orleans by examining past and present contributions made by peoples of different ethnicity and race. The cultures of French, Spanish, Italian, Creole, African, Latino, Jewish and Vietnamese residents, both past and present, have shaped New Orleans into the vibrant city that it is today. Specifically, we will discuss each group's impact on New Orleans' history, culture, economy and business and the challenges each faced in the process of social and cultural integration. Along the way, students will be exposed to some of the finest food representative of each group that makes New Orleans one of the greatest cities in the world – and an interesting place to directly study international influences at a local level. For Altman Scholars Only.

TIDE 1061 Learning Through Discovery (1)
Welcome! As a member of the Tulane community, you are part of a diverse and developed scientific community. In this course we'll work on developing ways of learning and basic scientific skills that will aid you if you are interested in getting research experience and help you in succeeding in your coursework. This course is designed to teach you new thinking and learning skills, and to apply those skills to develop and run an iterative hypothesis-driven experiment. You will experience the collaborative nature of science by working in groups and receiving feedback on your work from your peers.

TIDE 1062 Calm the Wave: Being in NOLA (1)
The transition to university life can present challenges, as you juggle less structure, more demands, new roles, and increased pressures. The purpose of this TIDES course is to help you develop social and emotional skills; benefitting you in academic and work contexts, interpersonal relationships, and overall well-being. Explore the tranquil side of New Orleans and discover your best self through mindfulness and self awareness activities.This course is designed to help students develop strengths and assets that promote their social and emotional well-being as they transition to a higher education setting in New Orleans. Such settings typically present students with less structure, more demands, new roles, and increased pressures which may contribute to struggles with stress and adjustment difficulties. The purpose of this course is to help students develop social and emotional skills; benefiting them in academic and work contexts, interpersonal relationships, and overall well-being. Students will explore tranquil locations throughout the city of New Orleans. Along the way, they will be introduced to social and emotional competencies that can help promote their personal and interpersonal awareness and competence which will help students navigate new and challenging academic, social, and emotional terrain. These competencies include: self-awareness; self-management; social awareness; relationship skills; and responsible decision making.

TIDE 1063 Tell Me More About It: Paths to Improving Mental Health (1)
Using readings, discussions, interactive group interviews and field trips, students will learn about different career pathways to engaging others in improving mental health. Students will meet different professionals in the city, hear about their paths, learn about their theoretical orientation, and reflect on the experiences they will pursue while at Tulane relevant to this career choice.

TIDE 1064 What is a Book? (1)
This 1-credit Tides course introduces you to research through a historical and experiential engagement with the myriad forms and aspects of one of the oldest and most ubiquitous communication and information technologies: the book. Rather than consume books for their content (text), in this course, our concern will be with the whole book (from cover to binding, to page design and marks left on margins) as a material object. From scroll to codex, to e-book, and from manuscript tradition to print, we will learn the books' anatomy and how to read and interpret those physical features as evidence. In the process, students will gain a deeper appreciation for the book as an object as they explore the book form alongside its text. Each week we will explore the history of book making processes including letterpress printing, book binding, papermaking, and various 20th c printing and duplicating technologies. We will learn about appreciating books as objects through lectures, discussions, and hands on experiments with bookmaking. The class will culminate with each student creating their own book object. In addition, we will enjoy visits with local printers and book makers and virtual visits from book artists and book historians. The course is ideal for students considering majors in art history, art, English, history, archeology, media studies, science, or any subject that requires reading or using books.

TIDE 1066 Media and Narrative in Modern U.S. Presidential Campaigns (1)
This course explores the development of the modern United States presidential campaign, with an emphasis on mass media. Considering the development of new communications technologies, how has the presidential campaign changed over the last six decades? How has it remained the same? The class will consider the creation of narrative across radio, television and social media outlets.Various forms of mass communication, including radio, television, and social media networks, will be considered as channels for political campaign development. The development of emerging technologies and media landscapes will be contextualized.

TIDE 1067 Nazism Fascism & the Alt-Right (1)
This course is inspired by current events, including the rise of alt-right, populist, and authoritarian parties and governments across the globe. Its aim is to use the tools of media analysis and social and literary theory in order to deepen our understanding of where and how these movements arose, how neo-fascism appeals to voters in different places and contexts, and, crucially, how leaders have harnessed popular sentiments to their own end. Readings and discussions are based on contemporary media as well as classical historical sources.Important themes in the course will include roots and causes of fascism, fascism as imperialism and racism, fascist attitudes toward gender and class, theories of totalitarianism, the psychology of fascism.

TIDE 1068 The Pluto & Charon System (1)
This TIDES course explores the Pluto-Charon system, the public's perception of Pluto, its history, and its science. Students will learn about the search for 'Planet 9', the discovery of Pluto and objects beyond, as well as the recent exploration of the Pluto-Charon system and Ultima Thule by the NASA New Horizon's mission. In addition, students will explore and discuss the elusive questions: What is a planet? Is Pluto a planet? The course will include one field trip to Gretna Observatory one evening during the semester. This course is 1 credit hour.

TIDE 1070 Nola Musuems & Communiti (1)
Get to know New Orleans through an exploration of its museums, from art museums to contemporary galleries to house museums and beyond. Students will seek to understand how museums in New Orleans serve diverse communities in the city. To understand museum practice more generally, we will also explore past and current methods in museum curation and education, ethical issues museums face, and how museums respond in times of war and natural disasters. Ideal for students considering majors in art history or history.

TIDE 1071 Running and Imagination (1)
This course explores running as an activity of the embodied imagination--through reading, discussion, and running. When we run, our minds work with and against the body's limitations. Those limitations can be viewed as obstacles to be overcome, but also as constructive forms of resistance that give meaning to our activities. To run a certain distance at a certain pace gives shape to the activity just like paragraphs shape prose or form and meter shapes poetry. Running can also be a way of exploring difference and resisting social constraints; it can also be used an expression of those constraints. Class meetings will alternate between discussions of texts—fiction and non-fiction—that explore the relationship between the physical activity of running and human imagination and identity, and clinics and practice sessions on various aspects of running as a physical activity for health and competition. We will occasionally run together, at whatever pace suits the members of the class. Students in this class should be interested in running and willing to run. But being a fast or accomplished runner is not a requirement!

TIDE 1072 Object(ive) Data: Collections, Databases and Museums (1)
Museums and galleries can inspire awe with the objects and materials they put on display. From the histories of their making, through their preservation over time, objects in museum collections tell stories and reflect larger legacies of movements and change. It is the role of museum staff to extrapolate themes and concepts from their collections, collating information and different interpretations which are recorded in museum databases. Databases allows museums to document objects, but what more can their data do? Can data help museums reevaluate the significance of their objects and collections as a whole? Does the data alone tell a story? And does it come with its own limitations and biases? In this TIDES course, students will have the opportunity to investigate the benefits, challenges, and constraints of managing museum's collection data. Following a brief grounding in the history of museum collections from both an art historical and a collections management perspective, students will progress through weekly conversations and site visits that illuminate the practicalities, perks, and pitfalls that can emerge at the intersections of historical materials and data analysis. Alongside these components, students in this course will gain "hands on" access to a selection of objects from the Newcomb Art Museum (NAM) as they work to research and draft thematic object checklists as a capstone to our course that can potentially be published as a resource for others on campus.

TIDE 1073 Artists Respond: NOLA Through Visual Culture (1)
Art is a conversation that takes place over time and space. It is a response to events past and present, and an invitation to discuss how we shape our future. Art creates community, but it also reflects the communities it is created out of. This course will provide an understanding of New Orleans through the lens of Visual and Performing Arts. The course will introduce students to the rich cultural heritage of New Orleans while gaining insight to how history, environment, politics, socioeconomic conditions, and diversity has shaped life in the city, and how the art of the city responds to help define its culture. Through numerous artists, artworks, cultural traditions, and temporary exhibitions, students will learn how art can provide a reflection on where we've been, alternatives to where we are, and opportunities for ways forward as a city or a community.

TIDE 1074 Foodways in Asian American New Orleans (1)
You already know that New Orleans is famous for its food, but how much do you know about its Asian American foodways? The seminar employs food and foodways as an analytical framework to explore issues of identity, migration, imperialism, race, gender, and sexuality. Through a diverse range of texts including short stories, films, documentaries, menus, cookbooks, and blogs, we will consider what food reveals about cultures, relations, and identity in Asian diasporas with a focus on locales and traditions in New Orleans. Along the way, you will have the opportunity to reflect on your own relationship to food as a first-year student at Tulane University.

TIDE 1076 Visualizing Justice: Urban Environments, Climate Challenges, and Just Sustainable Futures (1)
This course combines practical skill building, active learning, and engagement activities to support local communities around issues of environmental and urban justice, climate challenges, and sustainable futures for New Orleans and the surrounding Gulf Coast. While examining the fields of data literacy and interpretation, artificial intelligence (AI) and algorithmic bias, and the ethical considerations about how data is collected, interpreted, and used for policy decision making and community engagement (data justice fields). The substantive emphasis of the course will be on the use of data for advocacy and support of communities involving urban justice (e.g., inequality, policing, carceral rights, poverty, housing, etc.), environmental justice, (e.g., polluted neighborhoods, indoor and outdoor air pollution, water and soil pollution, etc.), all in an effort to move New Orleans and surrounding communities from their climate challenges to just sustainable futures. The course will also explore community empowerment through the instruction of techniques of data advocacy, citizen science, political activism, etc.

TIDE 1077 When Empire Does Not Atone: The Case of Russia (1)
The seminar will introduce students to the imperial legacy context of Russia's aggression against its neighbors that culminated in an all-out invasion of Ukraine attempted in February 2022 and now transformed into the largest-scale war on Europe since WWII. -The mainstream media discourse about the motives for the ongoing atrocities evolves between the (Kremlin's) narrative about NATO's expansion, ethnic rights for self-determination, and the war as a tool to perpetuate the usurpation of power by Putin's "elite" in Russia and its neighbors. This discourse overlooks the role of failure to fully admit and qualify the crimes that the Soviet Union (and the Russian Empire before it) committed against the people that inhabited the lands it captured and controlled during its reign. There were several attempts to rectify the imperial legacy and to atone for them. Yet all of them eventually failed. One manifestation of the latest failure is the obstruction of access to swaths of state archives even at peaks of the brief democratization of Russia during the 1990s. The implications of that failure are profound. They yield fertile grounds for distorted beliefs about "historical justice" across the world and facilitate the effectiveness of a fascist-style propaganda in nowadays Russia.

TIDE 1078 Donald Trump's America (1)
This seminar will introduce students to the state of American politics and society surrounding the presidency of Donald Trump. It is not designed to be solely a look at his election in 2016 and his administration; instead, it is a broad exploration of the factors that lead to his election and the resulting "state of the union." Through readings and discussion of current events, we will explore the history of our current state of public opinion, issues regarding polarization, race relations, and gender dynamics, and the prospects for forming a "united" country in the midst of a divisive era.

TIDE 1079 Haiti and New Orleans (1)
Haiti is inexorably tied to New Orleans through historic and contemporary through lines beginning with the only successful rebellion by enslaved people in the Americans that eventually led to independence of Haiti and to this small island nation becoming the first free Black country in the entire world in 1804. As a result of the defeat of the French army in St. Domingue, Napoleon yielded the French territory to the U.S. government in the form of the Louisiana Purchase. Throughout the late 1700's and early 1800's, the revolution's impact was felt throughout the U.S. South and by 1809, 10,000 Haitians arrived in New Orleans, doubling the population. There are parallels between New Orleans and Haiti in the areas of architecture, cuisine, cultural celebrations, and music that emerge to even the casual observer. Even though a majority of Haitian settlers from the early 20th century in the New Orleans Ninth Ward area were displaced by events surrounding Hurricane Katrina, immigrant communities of Haitians, particularly on the West Bank of New Orleans have grown due to the contemporary political and natural disasters within the island country. This first-year seminar course will examine the fascinating history and contemporary landscape of the connective tissue between Haiti and New Orleans through a range of readings, reflections, class discussions, as well as through experiential elements including field trips.

TIDE 1081 The History and Rituals of Voodoo in New Orleans (1)
This 1-credit course fulfills the First-Year Seminar requirement as a Tulane Interdisciplinary Experience Seminar (TIDES). In this course we will discuss the history, culture, misconceptions, pop allure, rituals and rites of Voodoo (Vodou) in New Orleans.

TIDE 1082 Crescent City Conundrum – How do we build a healthy New Orleans? (1)
Health is influenced by factors beyond one's genetics. The social determinants of health - where we are born, raised, work, and play - contribute to our overall health. Inequities in these determinants lead to inequities in health. In this TIDES course we will look at New Orleans through the lens of social determinants of health and the health care institutions that have served the people in this community. We will explore the history of New Orleans to understand the social, economic, and racial disparities that impact our residents' health and wellbeing today. Finally, we will look to the future and see what's on the agenda for improving the health of New Orleanians.

TIDE 1083 Cultural Heritage, Social Change: The Activist Archivist (1)
Activist Archivst, noun. Meaning 1: An archivist who strives to document the underdocumented aspects of society and to support political and social causes through that work. Meaning 2: An archivist who seeks to move the archives profession, archives workplaces, and society in general toward social justice Howard Zinn coined the term "activist archivist" in his seminal 1970 address to the Society of American Archivists, in which he challenged cultural heritage professionals to disrupt the status quo and confront social injustices through their work. This class introduces students to the fundamentals of archives and cultural heritage information management, with special attention to the role record-keeping plays in both reifying and dismantling systems of power and how activism can take the form of memory work. Students will develop knowledge of major theories and practices of cultural heritage information management by interacting with primary source materials during visits to the various and eclectic archives of Tulane University and New Orleans. They will apply a critical, investigative lens with consideration for how collective and individual memory is produced and preserved, and whose stories get told. Students will also engage with alternative, activist forms of memory-keeping, including zines, oral histories, craftwork, tarot and oracle decks, and other art forms, through class visits with local memory workers and field trips to explore New Orleans memory work that blurs the lines of art/archives/activism. The class will culminate with a group project: the creation of a zine, a scrapbook, or a documentary product of your group's own design, as a tangible record of your semester experience. This class is ideal for students interested in anthropology, history, studio art, or those considering future work in Public History or the GLAM (galleries, libraries, archives, museums) sector.

TIDE 1084 New Orleans in Film and Literature (1)

TIDE 1086 Engineering New Orleans (1)
In this course, students will explore engineering projects local to the New Orleans area. From the St. Louis Cathedral to the Superdome, the Crescent City Connection to the Causeway, the Lapeyre Shrimp Peeler to Mardi Gras Megafloats, Oil & Gas to Wind & Solar Energy, NASA Rockets to Nerves-On-A-Chip, New Orleans has a wide array of engineering interests. These projects, advancements, and industries will be introduced and put into perspective with discussions of their technology, histories, economic impacts, and cultural influence. The topics will be brought to life by local guest speakers and trips to one or more of the following: NASA Michoud, Mardi Gras World, the Superdome, and the French Quarter.

TIDE 1087 Science,Technology, and Society (1)
Those interested in and pursuing STEM fields have often felt like they were exempt from the conversation on society. They have often been excluded from discussions regarding the ethical implications of the progress that they pay a key role in. In this class, we will use various lenses to view the technical advancements in big data, science and engineering, including those that you may be working on in the coming four years. We will examine the global, societal, economic, and environmental implications of subjects such as ethics of big data, AI, social media, digital media, large scale engineering projects, scientific research , medicine and big pharma, and more, focusing on examples found in the NOLA area. The topics will be brought to life by local guest speakers from local organizations such as Glass Half Full or Green Light NOLA as well as trips to one or more of the following: NASA Michoud, Mardi Gras World, the Superdome, and a Flood Abatement Pumping Station.

TIDE 1088 The Artful Leader (1)
The course will focus on exploring questions on leadership from non-theoretical lens by emphasizing manifestations of leadership in different forms of art (poetry, fiction, painting, sculpture, film, etc.). Using the medium of art, the students will be able to access and distill their own observations about leadership throughout time, which we will then compare to contemporary theories from the fields of organizational psychology and leadership studies.

TIDE 1089 New Orleans Through a Paranormal Lens (1)
New Orleans is a city rich in history, culture, and spirits. Some of that history and culture has been responsible for events associated with hauntings and other paranormal/supernatural occurrences (and vice versa). Using the haunted history of the city as a touchstone or lens, we will explore the non-paranormal history and cultural make-up of New Orleans from before its founding to modern times.

TIDE 1090 Who Dat, Fan Up & Geaux (1)
Founded in 1718, the city of New Orleans has a long and rich history with sports. From the rise of social class-driven sports such as rowing and billiards to the New Orleans Saints' heroic revival of the city post-Hurricane Katrina, sports has been as integral to the area as food, music, and Mardi Gras. Sports have made an enduring impact on the social world in which we all live. It is a taken for granted aspect of our everyday lives – whether that entails watching "Sportscenter" or noticing that every single major newspaper contains a "Sports" section that is as long if not longer than any other section. Yet there is more to sport than just what we see on a daily basis. In this course, we will explore general sports-related topics and examine actual case studies related to New Orleans' sports scene. More than simply 'talking sports,' students will study issues from political, economic and social viewpoints and also gain an understanding of the rich sports heritage found here in New Orleans. Readings and discussions, field trips, and guest speakers will aid students to understand both historical accounts and modern-day subjects associated with sports such as governmental involvement, public financing, and community development. Students will participate in a mandatory service learning component with TBD. Their after-school programs promote development in boys and girls through activities that build character, cultivate new skills, and create a sense of belonging – in this case a place where kids can express themselves, play together and get fit. By participating in activities with NFL Youth Education Town students will deepen their understanding of the political, economic, and social ramifications of sports on a local level by making correlations to sports and its impacts on the city's youth, infrastructure, civic pride, crime reduction efforts, poverty eradication, and other areas, and gain an awareness of their role as a citizen in the city of New Orleans.

TIDE 1091 Representing Minorities in Spanish Cinema (1)
"-Borja, where are you from? -I am Spanish -Oh great, which country?" (question that your professor has been asked many a time). What is being Spanish? There is a misconception in the US about what this word means. Spanish refers to a person born and raised in Spain, so, what is Spain? Spain is a predominantly white country situated in the south of Europe who has enjoyed an ethnic, racial, gender, and religious diversity since very early in history. Therefore, the aim of this course is to study the representation of ethnic, racial, gender, and religious minorities through Spanish cinema in the late 20th century and the early 21st century. Despite advances in integration in the last twenty years, the underlying racism, xenophobia, homophobia, and transphobia from certain sectors of society is still palpable in different areas of this society. We will address questions of diversity, inclusion, discrimination and (lack of) opportunity. In the last section of this class, we will also examine the representation of Spanish people in US American cinema, sometimes taking them as exotic or even having white Spanish actors playing roles from people in Latin America. By the end of the course, students will have a space to compare the situation in Spain with their own country and seeing the parallels in diversity and discrimination between the two countries, probably, reaching the conclusion, that the situation is not that different. Similarly, we will also delve into the idea that a Spanish person automatically becomes a minority in the US imaginary due to their Hispanic origins and the fact they speak Spanish.

TIDE 1092 Latinx in Hollywood (1)
For over a hundred years, cinema has played a key role in shaping your social imaginaries and in creating types and stereotypes. Different national cinemas have their own lists of typical characters that speak eloquently of the economic, political, and cultural structures of their societies. Mainstream American cinema, arguably, exceeds the constraints of a national cinema and has become your conscience of the global subject, but it still formulates ideas and builds subjectivities that are deeply ingrained in your American imagination. Among these constructions is the portrayal of 'Latin America' and, more specifically, 'Latin Americans.' In this course, you will explore, analyze, and question the constructions devised by mainstream Hollywood films around Latin America and its characters. From studio recreations of South American cities in classic films (Gilda, Charles Vidor, 1946) or the US-Mexico border (Touch of Evil, Orson Welles, 1958) to solemn reflections on colonial history (The Mission, Roland Joffé, 1986) to enchanted versions of Mexican traditions (Coco, Disney-Pixar, 2017), American cinema has consistently imagined Latin America. In discussing six films and key critical readings, you will identify, describe, and critique this process. You will also reflect on its connections to current debates in the US.

TIDE 1093 Afro-Brazilian Resistance:Contesting Racism and Discrimination through Popular Culture (1)
This course examines the racial history of Brazil and how it compares and contrasts with other regions in the Americas. Students will engage in weekly discussions about topics in Afro-Brazilian popular culture and will analyze the political resistance inherent in so many of these art forms. In addition to readings and films depicting the Afro-Brazilian experience, students will be collaborating with a local organization as part of their tier one service commitment. Our partner - Capoeira New Orleans - creates educational programming for New Orleans residents to practice and learn more about the Afro-Brazilian martial art capoeira.

TIDE 1094 Leading w/ Empathy: Cultivating Relationships, Building Community, and Navigating Conflict at Tulane (1)
This course offers an introduction to the foundations of empathy and the role it plays in relationships and addressing conflict. Topics covered will include the primacy of empathy in addressing conflict, community building, active listening, and techniques to hold conversations among people in conflict or that disagree with each other. Students will gain an understanding of the role that inclusion and equity play in developing empathy and will learn, through personal reflection, guest lecture, and in-person experience, the skills and techniques necessary to manifest empathy in their own lives, relationships, and conflicts as well as various resources within the Tulane and Greater New Orleans community available for support when they run into problems within these areas.

TIDE 1096 Latin American Dance Cultures (1)
This course examines issues of Latin American race, class, gender, nationality and global belonging through dance cultures. Students will learn how chosen dances, songs and rhythms are conveyors of cultural tenets, regional variations, and national trends.Since culture is made visible to us through its representations, students will learn to read and analyze Latin America through ethnographic texts about performance. Over the semester, students will learn through both theory and practice the techniques and philosophies of dance in selected Latin American performance circles. We will analyze Latin American festivals, stage/commercial performance and everyday cultural performance. As part of student training in ethnographic participant observation, students will also learn the basic steps of these studied dances and contextualize their work within the cultures of Latin American dance communities in New Orleans. In doing so, students will learn to think critically about the relation between text, ethnography and the body by paying attention to the demands that performance places on us as participants, spectators, scholars and commentators where we may be/act, see/hear, feel/sense, and think/evaluate within a world different from our own and understand its implications in governance, policy, and practice.No dance experience required!!!

TIDE 1097 Drugs in Music and Literature: Morocco, Spain, and New Orleans (1)
"Drugs in Music and Literature: Morocco, Spain, and New Orleans" explores the historical and contemporary significance of cannabis as a countercultural and political resistance symbol, particularly within the realm of music, across diverse regions. Students analyze the cultural, social, and political contexts surrounding cannabis use, considering race, religious practices, and the influence of Islam and Sufi rituals. The seminar delves into the evolution and transculturation of musical genres such as Flamenco, Rock & Roll, Sufi- Trance Rock, and Jazz, examining how these genres have been shaped by the intersection of cannabis culture, race, hippie values, and religious traditions. Assessment is based on class participation, written assignments, and a final presentation or creative project, fostering critical thinking and interdisciplinary perspectives. This seminar aligns with the TIDES' goals of promoting active learning, intellectual challenges, and social co-curricular activities, providing students with a transformative interdisciplinary learning experience.

TIDE 1098 "We Didn't Start the Fire" - Examining how Memory, History, and our Current Experiences Interact (1)
In a global connected world where what happens on the other side of the planet is live streamed in real time, the experience of being a person living today can feel overwhelming. It can be argued that this is the worst time in human history. Is the world worse today than at any other time? What does our knowledge of memory and perception contribute to the understanding of the contemporary global context? In Billy Joel's song, "We Didn't Start the Fire" over 100 cultural, social, political, and economic events which took place between 1948 and 1989 are highlighted. A recent remake by Fall Out Boy updates Joel's song using events since 1989. The suggestion in these songs is that human history has been plagued with catastrophes and heralded with triumphs. In this course, students will identify the historical references in both songs comparing them to our current context. Students will study the scientific literature on memory and how memories impact people's current view of the state of our world. The course will culminate in students creating a survey to learn more about how people perceive the historical and current world contexts, and how these ideas interact with each other. Survey results will be analyzed to share findings and develop conclusions. Throughout the course, students will have the opportunity to shape their own learning experience and development of critical thinking skills by contributing to each class session content, course materials, questions to discuss, and practicing research skills. This co-creation of the course between the professor and students is uniquely suited to the TIDES program and supports its objectives and outcomes.

TIDE 1101 Environmental & Climate Diplomacy (1)
Diplomacy is defined as "the profession, activity, or skill of managing international relations, typically by a country's representatives abroad." This course will consider our role as members of a global society, and as guardians of a complex solid Earth-oceans-atmospheres system, and introduce concepts of circular economy, nature-based solutions, climate mitigation and adaptation, as well as the alphabet soup of global organizations, and U.S. diplomacy.

TIDE 1102 Talking New Orleans (1)
Do you know how to pronounce New Orleans the right way? Do you make groceries or wrench your dishes in the zink? You'll learn to talk like an insider in this class that looks at the history, development, and current diversity of New Orleans English! We'll start by taking an overview of the New Orleans (and by extension Louisiana's) linguistic history, starting with the indigenous people who occupied the place called Bulbancha at the time of European arrival. We'll then examine the arrival of Europeans and Africans: the languages they brought with them and the new one(s) they created here. You'll get hands-on experience collecting and analyzing linguistic data as you explore modern New Orleans, talking to locals, attending festivals and participating in the exciting culture this city has to offer. By the end of the semester, you'll be able to say what it really means to sound New Orleans!

TIDE 1103 The Art of Management (1)
Management is the coordination and administration of tasks to achieve a goal. The functions of management are planning, organizing, leading, and controlling. In the Art of Management, we will review and discuss these four functions using text, case studies, and simulations. We will explore companies that are run well and those who messed up along the way. Learning from the mess ups has the best growth opportunities.

TIDE 1105 Cultural Nutrition & Wellness (1)
Welcome! As a member of the Tulane community, you are also now a part of the larger New Orleans community. In a city with such rich history, there is a vast divide of health and wellness options among the diverse cultural groups. Whether we are talking about access to nutritionally complete foods or more esoteric resources, such as mindfulness training, there is a long-standing disparity in our community. This course is designed to introduce students to overall health and wellness needs and availability among various communities in and around New Orleans.

TIDE 1113 Mindfulness: Self & Emotion (1)
This class introduces different mindfulness techniques, application of mindfulness practices in understanding destructive emotions and cultivating positive emotions. Mindfulness techniques cover intentional cultivation of non-judgmental, non-reactive, present-moment awareness, bare attention and concentration. Concentration and mindfulness exercises will be practically studied and evaluated. Students will enhance their experience of awareness, clarity, and empathy. Students will also learn coping skills for emotional regulation, distress tolerance, depression, anxiety, stress, and insomnia. Students will be required to participate in daily mindfulness practices: self-awareness, identification of destructive emotions, logical and mindful responses, and compassionate living. The course will critically analyze mindfulness-based research articles and introduce to how to integrate different mindfulness techniques in research applications. Information will be based on recent scientific research and ancient Tibetan contemplative practices.

TIDE 1117 N. O. Performance Culture (1)
There will be two primary goals in this course. The first will involve introducing students to New Orleans's history, culture, and literature. The second will entail an interdisciplinary introduction to a wide array of influences with the effort of showing how New Orleans's turbulent history of changing possession, immigration, and migration have contributed to a "performance" of various versions of "New Orleansness." The course will focus specifically on the presence of French, Spanish, African, and a brief overview of the various immigrant communities in the city's history and the various ways in which these groups have performed their own version of New Orleans for the city itself, the United States, and the world. In addition, the students will use the maps found in Unfathomable City: A New Orleans Atlas to look at how maps are constructions of authenticity.

TIDE 1125 New Orleans as a D&D Campaign (1)
The central conceit of this course is that all participants build characters for, and participate in, a Dungeons and Dragons (styled) adventure that is based around collaborative storytelling, problem solving, the building and development of critical analytic skills, and the discovery of identity. This course will employ the city of New Orleans – and the Tulane Campus – as the "world" in which these new adventures discover themselves. The students will begin this course by building "character sheets" based on who and what they are (Identity location markers) and what they bring to the adventure. This part of the class will encourage students to articulate their own strengths and – areas of themselves upon which they are working. We will partner with The Office of Multicultural Affairs to engage these students in a discussion of identification (self-identification and how we identify others). The students will be sent on an adventure during which they will have to learn to use the resources available to them in the Tulane University Library System. The students will be asked to go through Audubon Park (and Audubon Zoo) to find creatures and treasures. The students will be asked to go to the French Quarter and have specific foods that are specific to New Orleans Culture and listen to music that was created here in New Orleans. The students will be asked to take pictures and sample sounds as "proof" that they have completed their quests. The students will be asked to "scribe" and reflect upon their adventures. The students are going to be asked to consider the relationship between "game" and "real-life" when we talk to local New Orleans Health and wellness programs (CrescentCare). This course will be rooted in the concepts of discovery, and gaming, and responsibility for choosing one's own adventure. We will also read at least on "fantasy" novel and discuss the nature of the narrative itself. We will discuss how the idea of women and female characters function in the book. We'll talk about how the book depicts the idea of the protagonists, as well as, the "traditional" trope of male as default in much of fantasy fiction – and what that means. We will discuss how the novel utilizes and incorporates the concept of "race."

TIDE 1145 Committed to Cultural Diversit (1)
In 2016, Tulane University President Mike Fitts established the Race Commission composed of students, staff, faculty, and board members to address issues related to campus diversity. Join this TIDES course as an early step in becoming a student leader committed to this and other diversity initiatives at Tulane. You will learn about the array of programs offered by the Office of Multicultural Affairs. Activities will include academic and social events that bring together TIDES students and members of various student organizations involved in promoting intercultural exchange and understanding. We invite you to become a part of this group of change-makers.

TIDE 1165 Blurring Lines Tulane & NOLA (1)
Congratulations - you're officially a Tulane student! As part of the Green Wave, you'll be living both on the St. Charles campus and in a city whose future is as exciting and complicated as its past. In, "In" or "Of" New Orleans, students will have multiple opportunities to blur the lines between Tulane University and New Orleans, Louisiana while considering their own social identities as a member of these two communities. Through readings, guest speakers, as well as explorations of current events, festivals, and cuisine, this course will make clear what it means to be "in" AND "of" New Orleans.

TIDE 1185 Innov in Chemical Engineering (1)
This course will introduce students to the modern approaches chemical engineers employ to solve real-world problems. Topics will emphasize engineering design and innovation. Students will learn through relevant readings, discussions, and guest lectures from leaders in the field. Fieldtrips to the NASA Michoud, Assembly Facility, Aquarium of the Americans, a local brewery, and the Tulane Maker Space will expose students to real-world applications.

TIDE 1190 Introduction to Yoga (1)

TIDE 1210 Art Meets Physics (1)
Art (in its broadest sense, including visual arts, literature, and various types of performance) is meeting science all around us. These interactions go well beyond the use of science as raw material by artists. The advancements in science lead to dramatic changes in our perception of the world clearly reflected in artists' creations. Just as religious and mythological sources had influenced art before and during the Renaissance, artists are now being moved by the need to capture the complexities and mysteries of the physical universe. In many ways, science and art are profoundly similar. The best of each rises up from the depths of human creativity, in both the arts and science there's the need for inspiration and hard work, the willingness to experiment and be brave, and the conviction that you are searching for or creating work that says something meaningful about the world or nature. In this course, we will discuss the mutual influence of arts and science (particularly physics) using examples from different art forms and historic periods. The course includes trips to New Orleans Museum of Arts and Laser Interferometer Gravitational Wave Observatory (LIGO-Livingston).

TIDE 1224 The Art of the Modern Archive: From Making Memories to Self-Fashioning (1)
What is an archive, and how do we make them?From the selfies we take or the ticket stubs we treasure to the cultural institutions we visit, we are surrounded by different means of documenting our past and present for the future. This TIDES course investigates the concept of the archive through a wide array of archival networks available from personal, local, and even global perspectives. Following a brief grounding in the history of collecting artifacts/art as a means to fashion the self or formulate an identity, we will focus on how subsequent archival spaces are created –from the intimate to the expansive, from the tangible to the ephemeral/digital –and the issues at stake when developing the narrative that an archive relays. We will question the voices both resonant and silent in archival practice through guided reading and discussion as well as through visiting speakers and corresponding visits to local institutions to make connections across campus and across the city of New Orleans. Students will be encouraged to consider their own voice in this documentary process as they develop their own personal archive in a capstone project woven through the course.

TIDE 1225 Women in STEM (1)
This course covers the challenges facing women pursuing degrees and careers in STEM. Many of these challenges are institutionalized barriers that still exist, creating a system in which it is harder for women to thrive in comparison with their male peers. Other minority groups in STEM face many of the same challenges as women, and the additional and different barriers for other underrepresented groups will also be discussed. The course will cover strategies for success in STEM and becoming an ally and advocate for other traditionally marginalized groups in STEM. One credit hour.

TIDE 1230 Latin American Infusion (1)

TIDE 1235 Memory and Public Space (1)
In this course, we will come to a better understanding of the articulation of public space in its relationship to history and memory. We will first discuss a number of paradigmatic cases in the battle for the public expression of national, regional, or group trauma in the form of monuments, memorials, or sites of commemoration: the Holocaust memorial in Berlin, the Vietnam memorial in DC, the “Parque de la memoria” in Buenos Aires, and the alternative ways of remembering the totalitarian period in Indonesia. Next, we will focus on these negotiations in the recent history of New Orleans: the marks of Katrina in the city today, the ways New Orleans chooses to remember it, and the controversy about the removal of confederate monuments in the city.

TIDE 1240 Sex/Drugs/Rock'nRoll & Disease (1)
Over the course of the next year students will develop an understanding of why young adults engage in high-risk health behaviors. During the first semester attention will focus on the social processes thought to underlie young adults' uptake of behavior patterns which expose them to unnecessary health risks. Among the wide range of high risk behaviors to be covered over the course of the year will be drinking, drugging, smoking, eating, speeding, unsafe sex, and other risky choices. Participants will develop an understanding of how one's family, friends and peers come to shape high-risk health behavior patterns. New Orleans provides an excellent vantage point from which to scientifically explore a culture in which exhibiting high risk health behavior patterns is almost normative. Students will work up epidemiological comparisons between their hometowns and New Orleans based on a wide range of available Internet databases. Students do no direct observations or participation in any high-risk behavior patterns as part of the course.

TIDE 1245 Sports Med: The Team Approach (1)
The TIDES course Sports Medicine, The Team Approach is a one credit course. This course will explore current topics of sports medicine and how the topics influence practice within the field. Through the guidance of a team physician, students will gain perspective on how sports medicine professionals care for athletes of all ages, with an additional emphasis on collegiate athletes. Students will learn through relevant readings, discussions, and guest lectures fromleaders in the field. Fieldtrips to the Professional Athlete Care Team Clinic, Tulane Institute of Sports Medicine, Tulane Athletic Facilities, and an inside look into a sports game will expose students to the interactions of healthcare professionals involved in the continuum of care for athletes.

TIDE 1250 Visual Arts New Orleans (1)
This TIDES class was put together by a team of university art professionals with the intention of introducing students to the breadth of the visual arts scene in contemporary New Orleans. The course includes field trips to and visits from artists, curators, critics, collectors, private gallery owners, and public museum professionals, offering a behind-the-scenes look at the vibrant cultural life of the city. Ideally students will come away from the class with an appreciation of the richness of the visual arts in New Orleans, the ability to discuss and write about the visual arts, and some insights into the nuts-and-bolts activities of the individuals and institutions the define the visual arts in New Orleans.

TIDE 1251 Medieval Women Writers and Subversive Literature: Radical Women Past and Present (1)
This course explores the connections between gender and literary expression with a focus on medieval women writers from late antiquity to the fifteenth century. We will examine the social, cultural, and literary patterns linking the lives of medieval women writers with their works. Medieval women writers tend to express different attitudes and concerns than those associated with medieval European literature and culture, nevertheless, their attitudes and concerns parallel ideologies expressed by modern women writers. The course aims to introduce medieval women writers by juxtaposing their medieval texts with modern texts written by contemporary women that express similar themes in a more contemporary setting. Some of these themes are art and freedom, importance of community building miracles, prophecies, and body politics. We will discuss the ways these themes have changed from medieval times to the present and the ways in which women continue to face similar struggles. The medieval women writers include:Marie de France, Hildegard of Bingen, and Catherine of Siena; the modern women include the visionary girls in Garabandal and Ana Castillo. Ana Castillo, in particular uses the stories of medieval women writers and rewrites them for a contemporary US Latina audience.

TIDE 1255 Creative Writing and New Orleans Literature (1)
Explore New Orleans through sampling its literature while developing your creative writing skills. We will read selections from various genres of New Orleans literature as well as works about the craft of writing, and spend time inside and outside of class on our own creative writing pursuits. We’ll discuss where writers lived and wrote in the French Quarter, attend readings together, and learn about the craft of writing from New Orleans authors. These activities, along with hearing each other’s pieces read aloud, will help us discover how literature can illuminate a city. Discover the literary imagination of New Orleans, and begin to experience your time at Tulane as “a little piece of eternity dropped into your hands” (Tennessee Williams).

TIDE 1265 Indian Tribes on the Bayou (1)
Want to explore the wilds of Louisiana outside of New Orleans? Try some alligator meat, shrimp caught fresh from the sea or, in general, explore another side of Louisiana's rich cultural heritage- then this class is for you! The far-reaching impact of Native American Tribes of the lower Mississippi Valley on shaping Louisiana history is among the least explored subjects among the otherwise well-documented rich history of Louisiana. Recent and ongoing research shows that without the "Petit Nations"", as some of the Tribes were called, the history of this region would have been quite different. This course offers students the rare opportunity to participate in on-going, important research that entails working directly with Tribal members. In addition, students will have the opportunity to take a trip conducted by Tribal members down the bayous as they give a tour of their ancestral lands as well as explore other areas of Louisiana outside of New Orleans while also tasting some of the food native to Louisiana. An experience not to be missed!

TIDE 1275 Hullabaloo Excell at Tulane (1)
"A Helluva Hullabaloo: Learning How to #BeExcellent at Tulane" introduces students to developing life skills that will be useful not only in college, but also will help prepare them for the "real-world." The broad-reaching goal of this TIDES course is to offer students the opportunity to gain valuable skills and lessons that can be used to succeed during their career at Tulane.

TIDE 1285 Crafting & Comm in New Orleans (1)
Ever wondered about the distinction between arts and crafts, why crafting is popular, or how many beads are in a Mardi Gras Indian costume? Whether you do crafts, buy them, use needle and thread, hammer and nails, or scissors and glue, you are involved in crafting. We'll learn about crafting as a hobby and a profession and look at local craft culture in New Orleans. We'll explore assorted craft practices and communities, through creative workshops, guest speakers, and fieldtrips to local craft centers or markets. No experience necessary – but if you've ever wanted to learn a craft, this is your opportunity!

TIDE 1295 Inside the Ivory Tower (1)

TIDE 1305 Different Pictures-New Orleans (1)
This TIDES course we will address the question, "What constitutes the heart and soul of New Orleans?" The most common answers are, great restaurants, Mardi Gras, Jazz Fest, French Quarter Festival, Voodoo, Ghosts, the Blue Dog, and of course, the Saints. Throughout the semester, we will study and discuss the city's cultural fabric from a folkloric, historical, artistic, literary, and cinematographic point of view. Students will assess the different facets and components that build our great city and contribute to its unique culture through the analysis of assigned text and film material, the participation in class discussions, team presentations, and field trips, as well as in the format of a reflective final paper.

TIDE 1315 Making New Orleans (1)

TIDE 1317 Sports as a Leadership Model (1)
This course uses a sports lens to introduce Tulane students to what character traits have made sports figures, coaches, teams, and organizations successful as well as aided in turning sports from recreational fun to a multi-billion-dollar global industry juggernaut. This class will introduce students to several different valuable life skills and lessons to aid them in them in their academic endeavors and professional journey. The goal of this class is to see what transferable skills those in the world of sports use in their respective venues to help them become success stories and pass those qualities along to you to aid you in achieving success in life during and after Tulane.

TIDE 1325 Organizing Society (1)
This course will explore how various societies, past and present, have been organized. From small tribal societies that practice communism to large industrial societies that foment capitalism, the mechanisms by which society is organized are intentional and deliberate. Anthropological, sociological, political, economic, and historical perspectives will be considered throughout the course. Special attention will be given to how inequality manifests itself within societies. This course will require students to select the societies we will study and to actively participate in researching these societies. The course will culminate in student groups designing a society according to goals and outcomes they set by applying the knowledge they have gained over the course of the semester.

TIDE 1335 Art On and From the Margins: Questions of Race, Class, and Gender (1)
This course investigates practices in New Orleans art that interrogate dominant systems of representation. It examines how artists in New Orleans rely on and devise strategies that confront, appropriate, subvert, and queer the meanings, aims, and experiences of conventional art practices. These may include shifts in the content of a work and its audience to methods by which it is produces, its formal properties, and its reception. The focus of the class will include analyses of practices of documentation, re-appropriation, abstraction, mining the archive, and camp (among others). Directly connected to questions of marginalization of certain artistic voice and art practices are—of course—inquiries into whether attempts to dislodge and reconfigure dominant systems results merely in the consumption of those works and their integration into larger system or whether they have the potential to destabilize those systems. The class will include a number of talks by New Orleans artists, visits to New Orleans museums and other art spaces.

TIDE 1345 Politics of the Past: Monuments and Social Conflict from the Ancient World to Modern New Orleans (1)
This course addresses the impact of monuments, historical and archaeological sites, and cultural heritage management on local communities and the ethical and political dimensions of ongoing conservation, museum, and research projects. Recent protests over cultural heritage sites in places like Mexico, Turkey, and Jerusalem, the dramatic destruction of monuments at the hands of ISIS in Syria, and our own domestic debates about the Confederate monuments that dot many American cities have shown the potential for monuments to be at the center of complex political, ethnic, and religious controversies or to even become a sites of conflict and violence. The course will explore the use and abuse of material culture as a means of underpinning modern claims of nation and statehood and cultural superiority. At the same time, debates over monuments and historical sites provide a unique opportunity to give a voice to groups that fall outside of traditional historical sources, and it can provide a powerful means of opening dialogue about the past. Throughout the course, we will discuss the roles and responsibilities of governments, international organizations, museums, auction houses and galleries, private collectors, and tourism in the exploitation, preservation, and presentation of monuments and material culture. Students will put the historical perspectives of the course into practice by a series of field trips to public and private museums and historical sites in and around New Orleans, and they will address how our own contemporary debates might be informed by wider attention to historical and global issues of cultural heritage management.

TIDE 1355 Art, Place, and Community in New Orleans (1)
This 1-credit TIDES course introduces students to college study, discussion, and research through the topic of art, public space, and community in New Orleans. We will look at histories of placemaking, the role of monuments in public space, and art that has emerged out of engagement with local communities. In the course Art, Place, & Community in New Orleans, students will learn about historical and contemporary New Orleans through its art in public spaces, historical monuments and community-based art. We will think about the history of art in public spaces of New Orleans, grapple with debates about the legacy of historical monuments; and ask how art plays a role in the history and future of New Orleans, as a geographical place and as a constellation of communities. This TIDES Course is ideal for students considering majors or minors in art history, history, or urban studies.

TIDE 1365 @InstaNola: Curating Your Digital Self (1)
@InstaNola: Curating Your Digital Self is a one credit TIDES course that looks at our relationship to social media, both real and projected, set to a New Orleans backdrop. The term "curation" has migrated from the physical world of art to the digital domain as we increasingly apply it in the context of our online activities. The images, songs, stories, locations, and people we interact with online shape the way we want the world to view us. But what happens if our digital self and physical self don't align? We will look at our own relationships to social media, hear from local social media influencers, and visit some of New Orleans' most 'grammed spots all towards the question: How do we see the world, and how do we want others to see us?

TIDE 1375 Gateway to the Americas: The Roots & Routes of Latinx New Orleans (1)
For much of the twentieth century an enormous, iron sign spanned Canal Street celebrating New Orleans as the "Gateway to the Americas." In recent years politicians have labored to swing this gate shut, imploring America to build a wall instead. Yet this open gate has made New Orleans the unique culture it is today. This TIDE approaches current immigration debates from a local perspective, examining New Orleans and Tulane University as vibrant sites of intercultural intellectual, economic and social collaboration and exchange with Latin America and more specifically, Central America. Readings and activities will complicate the rhetoric of "invasion"—which reduces immigration to one-way street—by acknowledging the multidirectional movement of people, goods, ideas and cultures to and from New Orleans and Tulane across the twentieth and twenty-first centuries. Toward this, we will examing policy, literature, art, film and food as they are affected by and effect the formation of culture and identity. You, as a student, are part of this and we will engage your American origins as well, toward developing an empathetic understanding of the immigrant experience and the responsibilities of citizenship. Finally, we will explore how students can be more involved in struggles for social justice and human rights at Tulane and beyond: A) Discussing the skills and experience needed for careers in advocacy, activism, social work, education, immigration law, public health and other professions related to the Latinx community that your education here can provide; and B) Examining opportunities for volunteer work, service learning and internships with organizations that serve New Orleans' Latinx and immigrant communities while you are here. Toward these objectives, we will engages many voices across the New Orleans and Tulane communities, inviting activists, artists, and professionals into the classroom and venturing out of the classroom to experience people, places and life in New Orleans beyond our campus.

TIDE 1385 Cultivating Connection (1)
This one-credit course synthesizes theatre acting techniques and yoga to help students cultivate more presence and connection in their daily lives. The focus will be on calming the nervous system, developing adaptability, and learning to accurately read behavior and emotions in oneself and others.

TIDE 1390 Silver Screen Shakespeare (1)

TIDE 1405 New Orleans on Stage and Screen (1)
We will explore how the legend of New Orleans was created and reinforced by popular representation in theatre and film works from the 19th century through today. Students will investigate various signifiers of New Orleans through time, watching their rise (and sometimes fall) through performance pieces. We will explore home-grown myth-making as well as visions provided by outsiders, and also get out into the city itself, seeing what truth might lie within the narrative reductions of New Orleans that occupied audiences for the last two centuries.

TIDE 1415 FEMtech: Gender and Technology Design (1)
Since the industrial era, analog, digital, and medical products have been produced with the claim that certain technologies make women's lives easier. This course examines the role that FEMtech plays in women's lives and the role that product design plays in shaping discourse around women's relationship with technology. Students will also explore the recent rise of the FEMtech app technology, a projected $120 billion-dollar industry. Students will have the opportunity to learn about the technology and start-up industries from technology leaders in New Orleans. Students will use feminist technology design strategies to design and pitch a FEMtech product.

TIDE 1425 The Archaeology of Mardi Gras (1)
From Indiana Jones to Lara Croft to the guy in the "Ancient Aliens" meme, archaeologists are standard in pop-culture. But what do they actually do? In this course, we will explore the practice of archaeology through the lens of the "greatest free show on earth:" Mardi Gras in New Orleans. Archaeology is the study of humans through our material culture, the stuff we leave behind, and Mardi Gras brings plenty of stuff for us to examine. Working together each week, the class will complete readings, field trips, and hands-on projects, learning how to investigate Mardi Gras as an archaeological phenomenon. By the end of the semester, you will know more about New Orleans and its central tradition, and I promise, you will never look at a strand of beads the same way again.

TIDE 1430 Writing In New Orleans (1)
A student adopts and inhabits a new city, becoming native. Keep a journal of New Orleans. Write it down! Take moments, ideas to reflect the experience among peers living in the Crescent City. Write letters, poems, and lyrics, discussed during workshops in class and on excursions in the city. Become thoughtful...listen, read, write, converse through language. A journal may recollect moments in tranquility (Wordsworth) or may take the form of day-to-day experience (Bosworth). During particular classes the student will be asked to write while on a streetcar, in Audubon Park, and on the levee by the Mississippi river. Students will keep a journal, participate in a writer's workshop, give a class presentation, and write a research paper. Participation is a must. There are no examinations.

TIDE 1435 Ecology, Equality and Migration an Interdisciplinary Perspective Contemporary European Politics (1)
The interdisciplinary course will examine three main political problems in Europe today; the environmental crisis, social inequality and migration from the Middle East. Prof. Ofengenden will begin with examining the ways of life and accepted thinking that these three problems undermine and challenge including consumerism, individualism, traditionalism, economic rationality, developmentalism, growth, globalization and nationalism. Prof. Ofengenden will survey the history of early challenges to accepted thinking including the challenges to exploitation and privatization of land argued by the thinkers of the Enlightenment (e.g. Rousseau) as well as early critics of industrialism. Prof. Ofengenden will use both literature and thought to show illuminate these critics. Prof. Ofengenden will then move to 20th and 21th European contributions to environmental thought and economic inequality as well as political movement and artistic expressions of both of these trends. These will include Martin Heidegger, Theodore Adorno, Arne Naess, Serge Moscovici, Bruno Latour, Thomas Piketty, Jacques Rancière, David Harvey. Finally this part of the course will look at two contemporary political protest movements the Yellow Vests in France and Extinction rebellion in the UK. It will look into how these movement were formed and the way they have transformed in the discourse around income inequality and environmental crisis in France and the UK. The second part of the course lead Prof. Nicosia by will look at the issue of immigration to Europe. After a first survey on the immigration phenomenon starting from the year 2010 through, course will pass to analyze social and political tensions caused by anxiety and phobias towards the Other, and the way it reshapes geographical spaces and cultural patterns of the hosting countries, with particular attention to the notions of borders (in the cities and the neighborhoods), citizenry (what and how to define a citizen at the margin), new ethics' parameters (e.g. religion, welfare etc...), and ultimately the ideas of nation, nationality and nationalism. The second part of the course will be dedicated on the voices of the migrants and their representation through the new artistic phenomena related to migration in the Mediterranean countries (Italy, Greece), with particular attention to literature, video, (photography, video installations), cinema, as well as music creations.

TIDE 1445 Arts Around New Orleans (This Ain't Your Momma's Art) (1)
This course is designed for those interested in exploring the immensely diverse arts scene in New Orleans. The purpose of the course is to introduce students to a variety of art forms. The course includes amazing field trips as well as guest artists in the classroom. Through readings, classroom discussions, meetings with local artists, reflective writing, and creating your own art project, you will gain a great appreciation for the arts scene in the great city of New Orleans! How does one give voice to creativity? Join us to find out!

TIDE 1455 Sports and Culture in Spain: A Sociological Approach (1)
The syllabus of this course has been programmed from a sociological approach to sport, so that the students can gain an overall view of Spanish culture, of the Spanish way of life, throughout the analysis of geographical, historical, cultural and literary factors in the make-up of the nation in the present-day, and in its diverse manifestations. Additionally, it will examine various aspects of the relationship between sport and Spanish society. The importance of sports goes beyond its obvious political significance. Indeed, sociologists and anthropologists have recently studied the interaction between sports and social and cultural dimensions. Nowadays, there is no doubt about the integrative and unifying strength which sports exhibit. It is a phenomenon that carries out an enormous social impact, interests the majority of the population and is practiced by a large part of the population. The course begins with a consideration of general theoretical questions on the idiosyncrasy of every culture by comparing U.S. and Spanish cultural trends and stereotypes. After that, it will examine the different cultures within Spain: Castilian, Catalan, Basque and Galician; focusing mainly on language, nationality, and political implications. Following the midterm, we will focus on the analysis of specific sports such as soccer, traditional sports of Spain, basque pelota, the controversial bullfighting and all their different social and political implications.

TIDE 1465 Crafting Your Story (1)
Compelling storytelling lies at the heart of success across fields. From a business person pitching a new product to a research scientist vying for a competitive grant, the ability to tell a captivating story gives you an advantage. Storytelling skills serve you when interviewing for internships or jobs, networking, or even just making new friends in college. Whether your ultimate goal is a TED Talk with a million views or just a kickass toast at your best friend's wedding one day, this class will give you concrete tools to improve your public speaking and storytelling skills. In this experiential class, we will create a supportive environment where you will discover your personal communication style and how to leverage your strengths to gain more confidence in your ability to tell a great story.

TIDE 1475 For the Love of New Orleans: Entering Community Through Service (1)
Many students have been drawn to Tulane for its heavily touted commitment to community, but what does this mean and look like in actuality and from the perspective of the New Orleans community? This course introduces students to concepts around community engagement at an individual level and at Tulane, the components of ethical service, the dynamics of entering a community that may be new to you, and an introduction to a specific community within New Orleans via service with a partner organization that will engage with the course throughout the semester.

TIDE 1485 Surveillance, Data, & Society (1)
This seminar examines the historical and contemporary relationships between race, gender, class, and sexuality and modern surveillance practices. Students will be introduced to the interdisciplinary theories of surveillance and data studies such as discipline, control, capitalism, privacy, and counter-surveillance. Students will examine and discuss materials related to enslavement, policing and prisons, reality television, workplace surveillance, domestic violence, reproductive rights, (social) media, travel, big data, and machine learning. Seminar discussions will include cases where patriarchal power and racialized systems were used to promote perceptions of security, fear, exposure, and control. As praxis, students will design and produce a data project that uses strategies such as data collection, management, analysis, and/or visualization. All data skills will be taught in this course and all technical skill-levels are welcome.

TIDE 1500 Irish In New Orleans (1)
This course introduces students to an unfamiliar part of New Orleans' history that is as defining to the city's character as her more familiar Spanish and French past: Irish New Orleans. For many different reasons, Irish immigrants were drawn to Antebellum New Orleans, and they came to this city by the tens of thousands. Contrary to still prevailing prejudice, the newly arriving Irish immediately set about creating their own communities,several of which we will explore in this course.Strong familial ties denoted these neighborhoods as did their Catholic faith and the extraordinarily beautiful churches these immigrants built to serve their spiritual needs.Life was not easy in New Orleans: frequent epidemics killed people by the tens of thousands. However, the Irish immigrants successfully carved out lives for themselves that gave the city a permanent Irish flavor which, to this day, is still defined by Irish customs and traditions and inseparable from the colorful, multi-faceted spirit of New Orleans.

TIDE 1515 Voices of the future: Student & Youth Activism (1)
This course explores youth activism from the "angry decades" (60s &70s) to "age of rage" (present) and emphasizes South Louisiana as a hub for youth activism. From Ruby Bridges' and the "McDonough Three's" roles in the integration of New Orleans schools in 1960 to Louisiana youth playing critical roles in the current push for climate justice, youth activists illuminate themselves as political actors who seek to create an equitable world. Beyond discussions of Louisiana youth, this course invites students to learn about the ways student activists from colleges all over the United States emerged as change agents and shifted the state of higher education. With the influx of youth activists and social movements comes the development of distinct fields of inquiry through which scholars analyze youth activists' experiences and motivations. As the course centers youth voices, we will analyze speeches and written work (e.g., statements, petitions, credos) of activists and place their ideas in conversation with youth and movement studies scholarship, popular texts, and media about the ways youth insert themselves in social justice efforts. While investigating the ways students participate in and construct movements, we will also examine how they influence policy change. As we learn, we will consider our roles in resistance work on local, national, and global levels and how putting our knowledge into practice can help create the world(s) we imagine.

TIDE 1525 Kindness in Action: Emotionally Intelligent Leadership (1)
Over the course of the academic semester, this course focuses on developing an interdisciplinary understanding of the theories and practices of emotional intelligence as it applies to your transition and success as a first-year student at Tulane. As a TIDES member, you will actively study the theories that emerge from a variety of fields and reflect on their practical, social, and ethical assumptions as well as on their implications in a variety of settings. Through readings, classroom discussions, and episodes of Apple TV's Ted Lasso, you will gain a greater appreciation for the issues that affect all of us as human beings in relationship with each other. This course is designed around the three central themes of emotionally intelligent leadership: self, others, context. Each theme will be addressed individually but the course will also examine the interdependence between the three. Course sessions will be dynamic and include a variety of experiential learning, group participation, guest speakers, and activities designed to stimulate thinking and build our capacity and efficacy for affecting change in our own lives and within our community.

TIDE 1535 Delta Clay - Environment & Art (1)
New Orleans sits at the edge of the continent on layers of alluvial clays and sand, on a delta barely 5000 years old. The low elevation and shifting nature of the ground has influenced the growth and construction of the city, and provided a resource of clay for building and ceramic art. This class will explore the ground under our feet, examining the makeup of the geology of our city, the river that formed it and some of the ways geography and geology has influenced the growth and character of its neighborhoods. As climate change magnifies the forces that shaped the delta, the natural processes of flooding, erosion and subsidence are accelerating with serious consequences for the New Orleans and South Louisiana. Our environmental exploration will take us out to find and dig local clay, prospecting at the Studio in the Woods and the Carrolton river bank at the "Fly", experiencing the land in a direct way. The clay we dig will be refined in the ceramics studio and used it to make vessels and other botanical forms inspired by the historic enterprise of Newcomb Pottery. Founded within the Newcomb Art Department in 1896, the Newcomb Pottery enterprise utilized local clays and employed talented women graduates from the Art department, developing unique and beautifully crafted forms that emphasized designs drawn from indigenous plants. Special tours of the Newcomb Art Museum's collection of the historic pottery will provide models for our own works, made from the clays we dig and fired in the modern kilns of the Newcomb Art Department.

TIDE 1545 Law & Order (1)
In Henry VI, Shakespeare wrote, "The first thing we do, let's kill all the lawyers;" however, "all the lawyers" have avoided being killed since that line was written. Why? From the largest corporate mergers to simple adoptions, and from public policy to the enactment of criminal laws, the need for lawyers is increasing because the law is a central part of our daily lives and the bedrock of a free society. Although the press might occasionally indicate otherwise, lawyers are members of a profession and they get respect, but is being a lawyer really like the popular portrayals on television shows such as Law and Order or in a John Grisham novel? This class will help you explore how one becomes a lawyer and what it is like to be a lawyer.

TIDE 1615 Positive Psychology and Successful Leadership (1)
This course will introduce students to research, theories, and practices central to the field of applied positive psychology and the emerging subfield of positive leadership for the purposes of (a) increasing personal and interpersonal well-being and (b) developing positive leadership skills which can be applied within university, business, organizational, civic, and government spheres. Positive psychology is a relatively new field which asks questions such as: What can scientific research tell us about practices and perspectives that lead to a happier life? What can psychology do to help ordinary people to thrive and flourish? Which practices lead to greater well-being, fulfillment, and life satisfaction? Positive psychology engages such questions by utilizing scientific research methods to identify practices which lead to greater well-being (including positive emotions, engagement, relationships, meaning, and accomplishment). Positive psychologists maintain that (1) flourishing requires more than curing pathology; (2) flourishing requires tapping human strengths and positive capacities; and (3) scientific research methods can help us to identify and refine strategies for flourishing. Topics in positive psychology include positive emotions, hedonic misprediction and adaptation, character strengths, purpose, gratitude, kindness, meditation, nurturing social relationships, exercise, and more. Positive leadership studies focus on evidence-based approaches to successful leadership and draw on research at the intersection of positive psychology, leadership studies and organizational studies. Topics in positive leadership studies include approaches to well-being, strengths, leadership styles, problem solving (appreciative inquiry vs. pathologizing inquiry), meaning, intrinsic vs. extrinsic value, effective communication, and cultivating and maintaining positive relationships. This course will provide students with a theoretical and practical introduction to applied positive psychology with a focus on positive leadership. Students will engage in experiential homework in which they will apply strategies for enhancing their own well-being -- and for positively impacting their own leadership initiatives. This course will also expose students to local wellness resources at Tulane and will include a walking tour of the French Quarter exploring New Orleans architecture, history, culture, and cuisine.

TIDE 1680 Hot Topics in Sports Law (1)
This course will explore the authority of commissioners as well as the rights and responsibilities of athletes and others in professional sports leagues and college sports. Students will explore disciplinary measures relating to on and off-field misconduct, performance enhancing and recreational drug use, and speech, as well as the impact of sports gambling, discrimination, and other issues with an emphasis on current events. Students will learn about the source and scope of a commissioner's power, player rights when faced with disciplinary action, league collective bargaining agreement rules, and the types of punishments available. Students will be asked to think critically about the scope of a commissioner's power in specific cases, to consider desired outcomes from multiple perspectives, and to discuss the propriety of various rules governing player, coach, owner, and fan conduct. Students will gain a basic understanding of the application of law to professional and college sports industries. Students will also learn the essential tenets of negotiation applied in a sports setting and engage in a mock negotiation.

TIDE 1700 Myth&Real Nola Food/Drnk (1)
As the concept of local foodways becomes entrenched in the growing "foodie" culture of the United States, local food and local dishes become an ever more important marker of place. Whether justified or not, Creole and Cajun food and, of course, the ubiquitous Cocktail, are perceived by many as synonymous with New Orleans. In this course, we will explore the myths and realities of these three key concepts as they apply to food and drink in New Orleans.

TIDE 1713 Storytelling with Data – How Healthy Are We? (1)
Storytelling through data visualization can dramatically enhance our ability to think about the meaning within data. The connection between vision and cognition is powerful. In this course we will explore the fundamentals of discovering and presenting the story that lies within the data that we wish to tell. We will do this in the context of health care and public health in the United States. Along the way we will explore some common data sets about health care and public health, and we will learn to recognize the strengths and shortcomings of current data visualizations we see in academic settings and the mainstream and social media.

TIDE 1742 Shakespeare in New Orleans (1)

TIDE 1810 Non-Profits & Katrina (1)

TIDE 1880 Martial Arts For Perform (1)

TIDE 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

TIDE 1891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

TIDE 1892 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

TIDE 1893 Service learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

TIDE 1894 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

TIDE 1895 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

TIDE 1896 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

TIDE 1897 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

TIDE 1898 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

TIDE 1899 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

TIDE 1911 Ocean Health/Human Health (1)
The United Nations designated this decade (2021-2030) as the Decade of Ocean Science for Sustainable Development to highlight the needs and mechanisms to reverse the decline in ocean health. This course will focus on the most pressing issues that intersect ocean health, human health, and local/global economics. We will explore, discuss, and debate the science and policies behind what led us to our current situation and what can possibly be done as the international community moves forward.

TIDE 1915 Sicilian Jazz:Ital Cult NOLA (1)
The Italian Culture in New Orleans" will focus on different facets and components of the Italians in the Crescent city. Special consideration will be given to the discussion of the following topics: New Orleans and the culture of the Italian emigrants, traditions, cuisine, music, fiction and movie rendering of the Italian emigration.

TIDE 1925 Natural History of Louisiana (1)

TIDE 1950 Salsa! (1)

TIDE 1970 Songwriting For Audience (1)

TIDE 1975 Visual Pleasure & Photography in NOLA (1)
The class is about visual pleasure and aesthetic beauty. What makes a picture or painting beautiful? We will examine this question through several disciplines including philosophy, art history and experiential artistic practice. We will consult short readings of the classics answer to this question (e.g. Plato, Kant, Schiller, Delacroix, Hegel, Marx, Heidegger, Freud, Vygotsky, Foucault, Gombrich, Susanne Langer, John Berger, Elaine Scarry, Boris Groys, Clement Greenberg, Laura Malvie) At the same time we will also look at several distinct periods and ask what was beauty at these specific times. I have chosen four such times. The first period is the Northern Renaissance (e.g. Van Eyck, Bosch, Du#rer, Bruegel) the second the Baroque (e.g. Velázquez, Rembrandt), the third the impressionists (e.g. Manet, Degas, Cassatt, Monet, Renoir, Toulouse-Lautrec) the expressionists (Franz Marc, Ernst Ludwig Kirchner) and fourth 20th century art photography. We will examine various concerns that we have with the beautiful. For example, the concern that the love of beauty is at best an evasion from the problems of social reality, at worst a way of legitimizing the status of the rich and powerful. That it is merely a marker of social class (e.g. Bourdieu). That beauty is frivolous, decadent, distracting, and unserious. That there is nothing to describe or to share or give account to this most subjective experience. We will attempt to answer this question by looking to both the experience as well as production of beauty as a kind of temporary emancipation from a life-world experience, a lifeworld that is limited by material conditions and social factors. We will also look at beauty as a transformative decentering of the self. We will examine deeply Kant's idea that true beauty is the free play of imagination and understanding in the mind of the audience and therefore can include any theme of topic.

TIDE 1981 Frames Films & Femmes Fatales (1)
This course is a critical survey of cinematic works by and about women, with examples drawn from different modes of cinematic expression (mainstream fiction films as well as alternative film and video [including documentaries, experimental, & narrative]) and from different historical periods (from the 1930s to the present). The course deploys feminist approaches to film criticism and applies these approaches to cinematic representations of women. Films illustrating particular genres, as well as feminist and "women's" films, are discussed and critiqued. We will consider the role of film in our understandings of sex, gender, and sexuality, as well as race, class, and disability. Through discussions and writing, we will work to discern relevant social, political, ideological, and aesthetic concepts in the media we examine. We will look at contemporary Hollywood and independent cinema, US and some international films by both established and emerging filmmakers. Corequisite(s): TIDE 1898.

TIDE 1982 Contemporary Women Writers (1)

TIDE 1983 Us vs. Them (1)
Black vs. White. Citizen vs. Immigrant. Transgender vs. Cisgender. Christian vs. Muslim. Gay vs. Straight. The list goes on. In recent years, the United States has become increasingly polarized. The most interesting and exciting aspects of human diversity are set against one another, in rigid opposing binaries. Through interactive workshops, cultural trips, discussions of texts and films, writing reflections, and guest speakers, this seminar will serve as an incubator for students from diverse backgrounds to develop their understanding of the complexities of cultures, identities, and power dynamics. We will simultaneously explore everyday practices for world building beyond "Us. Vs. Them."

TIDE 1984 Identity, Power & Comm Engage (1)

TIDE 1985 Women Leading New Orleans (1)
From non-profit organizations to government, from social movements to Mardi Gras, from restaurants to boardrooms, women have led New Orleans. Using an intersectional feminist lens, this course will explore how the personal, the organizational, and the institutional intersect to shape how women practice leadership. Students will be introduced to theories and research that address gender and leadership while focusing on historical and contemporary examples of women practicing leadership in New Orleans. The course will begin with a brief introduction to a sociological perspective on gender and intersectionality - foundational concepts of the course - and move into discussions of how and why women lead, as well as barriers they encounter to leadership. Guest speakers, field trips, and writing assignments will ask students to think broadly, but also analytically, about what leadership means, as well as about how identities and institutions shape the experience of leadership.

Tropical Medicine (TRMD)

TRMD 6010 Biological Basis of Disease (3)
This course provides a foundation of knowledge about the human body in health and disease. It gives an overview of important concepts of the biological mechanisms of disease at the cellular, individual, and societal levels. At the cellular level, the course summarized DNA and cellular function, genomics, immunology, and vaccination. At the individual and societal levels, the course addresses the most important infectious and non-infectious causes of death worldwide, providing background on their pathophysiology, clinical aspects, and patterns of disease occurrence, risk factors, and methods of prevention.

TRMD 6040 Early Introduction to Laboratory Research in Tropical Medicine (0)
This introductory course serves to introduce new students to foundational concepts and methods in laboratory research, including the regulatory and applied aspects of laboratory based research. Assigned to a faculty supervisor and shadowing laboratory personnel during day-to-day laboratory activities, students will gain a firsthand practical experience. Additionally, students will gain the theoretical aspects from various activities, including presentations, article readings, and in-class discussions.

TRMD 6050 Medical Helminthology (3)
Medical Helminthology is the study of worm (helminth) parasites of medical significance to humans. In this course, we will discuss the helminths which cause human disease in terms of geographic distribution, transmission, clinical presentation and pathology, diagnosis, treatment, and control strategies. Emphasis will be placed on the helminths which affect large populations of humans and on those which are emerging pathogens. Clinicians will receive a strong grounding in diagnosis and treatment of diseases due to helminths, and public health professionals will appreciate how to apply and evaluate different methods of prevention and control on a population basis.

TRMD 6060 Medical Entomology (3)
This course is designed to provide the fundamental information necessary for understanding and evaluating both the role of arthropods in transmission of pathogens causing human disease, and the role of arthropods in directly causing human disease. Following a brief overview of the general anatomy, physiology, and classification of arthropods, individual groups of medical importance are considered in detail with regard to the recognition of important species, the epidemiology and pathogenesis of associated diseases, and the principles and methods of vector control.

TRMD 6070 Medical Protozoology and Malaria (3)
The identification of medically important parasites relies heavily upon macroscopic and microscopic examination of clinical specimens. In this course students will learn the basic principles of identifying parasitic helminthes and protozoa in blood, feces, and tissue specimens. Prepared specimens of the major helminth and protozoan pathogens of humans will be provided for macroscopic and microscopic examination. Students will learn the basic operations of the microscope and how to identify and distinguish the various helminthes and protozoa. Samples demonstrating the pathological features of the disease will also be provided. The techniques for preparing diagnostic specimens of parasites in blood and feces will be reviewed. In the laboratory students will learn the basic principles of identifying parasitic protozoa in blood, feces, and tissue specimens. Students will learn the basic operations of the microscope and how to identify and distinguish the various protozoa. The techniques for preparing diagnostic specimens of parasites in blood and feces will be reviewed.

TRMD 6080 Medical Protozoology Lab (1)
This course provides students with training in the use of a microscope and the identification of medically important protozoa in fecal, blood, tissue and other specimens. Laboratory exercises will focus upon the detection and recognition of parasitic protozoa in prepared samples. Students will learn how to distinguish the various protozoa which infect humans and be able to identify protozoa in clinical and histological preparations.

Prerequisite(s): TRMD 6070.

TRMD 6090 Parasitology Laboratory (1)
The identification of medically important parasites relies heavily upon macroscopic and microscopic examination of clinical specimens. In this course students will learn the basic principles of identifying parasitic helminthes and protozoa in blood, feces, and tissue specimens. Prepared specimens of the major helminth and protozoan pathogens of humans will be provided for macroscopic and microscopic examination. Students will learn the basic operations of the microscope and how to identify and distinguish the various helminthes and protozoa. Samples demonstrating the pathological features of the disease will also be provided. The techniques for preparing diagnostic specimens of parasites in blood and feces will be reviewed.

TRMD 6100 Health and Human Rights (1)
This course is designed to provide a forum for discussion of pertinent issues in global health and human rights and to motivate students to become active advocates for their resolution. Students will participate in weekly discussions with local and national experts in public health, clinical medicine, and health sciences research who are also strong advocates for human rights. The speakers will stress the importance of addressing the underlying social, political, and economic factors influencing health. Speakers will give examples from their background and the motivations for their career choices and discuss the skills and strategies necessary to become effective advocates for health and human rights.

TRMD 6170 Immunology (3)
This course is designed for students of public health and the basic biomedical sciences who are interested in a current overview of immunology. This course is a comprehensive introduction to immunity and immunopathogenesis as it relates to health and disease. Following a thorough consideration of cells and tissues of the immune system, attention is given to immune recognition and regulation of immune responses, with special emphasis on the role of cytokines in immunity. Finally, clinical concepts are presented with current knowledge of basic immune mechanisms for each: autoimmunity and autoimmune disease, transplant rejection, immunity to tumors, primary immunodeficiency diseases, and immunity to infectious agents including viruses and parasites, and immunopathogenesis of HIV/AIDS.

TRMD 6200 Impact Evaluation in Global Health (3)
This course introduces students to the basic concepts, principles, and practices for public health programs and interventions. It focuses on impact evaluation at the national and sub-national levels, in addition to community and intervention-based evaluations. Lectures, discussions, and assignments will highlight evaluation strategies for health programs and disease-specific prevention and control interventions in international settings with a focus on diseases and programs in the tropics. The course is intended to 1) introduce students to impact evaluation, 2) provide a solid grounding in study designs relevant in field settings; 3) develop students' skills in designing evaluation plans, and 4) serve as a foundation for more specialized program evaluation classes as well as for courses on data analysis, sampling, epidemiology, and operations research. This course is not intended for those students who already have taken GCHB 6200 or GCHB 6340.

TRMD 6250 Biomedical Research Methods (3)
Students will be able to apply the basic biomedical methods used in public health and tropical medicine research or practice, and summarize the principle and the theoretical basis. They will be able to analyze the strengths and weaknesses of the different methods, and design hypothesis-driven studies to address public health and tropical medicine problems, applying the appropriate methods. Students will also assess scientific papers and critically appraise their relative merit in the field of public health research and practice.

TRMD 6330 Microbial Disease of the Tropics (3)
This required course builds foundational knowledge regarding the important bacterial and mycotic (fungal) pathogens in the tropics. This course forms a part of the foundations of tropical medicine knowledge. Students will learn the etiology, epidemiology, transmission characteristics, pathogenesis, clinical features, diagnosis and management of diseases caused by these pathogens. This course draws on faculty expertise both within Tulane and outside. The course focuses on disease topics not usually covered in depth in the US medical or public health curriculum. Additionally, the content of this course is a required component of the syllabus for the American Society of Tropical Medicine & Hygiene's CTropMed certification examination.

TRMD 6340 Diagnostic Methods in Microbiology (2)
This laboratory course parallels topics presented in TRMD 6330. The course is designed to teach students how to perform basic laboratory tests using simple techniques applicable to developing countries. Most of these will be diagnostic tests for infectious diseases, although some clinically relevant non-diagnostic techniques will also be taught (e.g., complete blood counts). The bulk of the course consists of hands-on laboratory experience conducting laboratory tests with clinical specimens and analyzing prepared teaching specimens. Procedures for organism isolation and identification and rapid diagnostic kits will be covered.

TRMD 6350 Disease Prevention & Control in Developing Countries (2)
This course is designed to prepare students to recognize and contribute effectively to the public health needs of communities in developing countries. It includes four broad content areas: (1)concepts of disease prevention and control with special reference to developing countries, including types of surveillance, monitoring and control strategies, (2) analysis of community needs, and provision of basic preventive services; (3) prevention and control of important endemic diseases such as malaria, tuberculosis, vaccine-preventable diseases; and (4)other topics such as special needs populations, disaster/refugee health programs, sources of information, and local and international organizations and programs. The course will emphasize practical rather than theoretical considerations based on the needs of the practitioner working under relatively resource-poor conditions.

Enrollment limited to students in the Medicine or Pub Hlth Trop Med (GR) departments.

TRMD 6420 Tropical Virology (3)
This course covers the broad area of virology with an emphasis on viruses of public health concern in developing and tropical countries. Both historically problematic and emerging viruses are covered. Topics include the molecular biology, epidemiology, and pathology of selected viruses. Focus is placed on developing an understanding of the molecular aspects of the viral life cycle that give rise to transmission and pathogenic characteristics, especially in the context of the co-evolution of the virus and host. Additional topics include the interactions between the virus and host immune response, as well as viral control and the development of vaccines and anti-viral pharmaceuticals. Students enrolled in the course should come with a basic understanding of communicable disease concepts.

TRMD 6450 Tuberculosis: Global Trends and Interactions with the HIV Epidemic (2)
This course is designed as an overview of tuberculosis and the challenges posed by the dual epidemics of TB and HIV. The course comprises a series of lectures and case studies. Guest faculty are recognized experts in this area and bring extensive experience and case study material to the course. A field activity to supplement in-class learning is offered. This is a visit to the Wetmore Tuberculosis Clinic. The course includes three broad content areas – basic concepts of tuberculosis disease and epidemiology, clinical manifestations and management; challenges posed by the interactions of Tuberculosis and HIV infection and global initiatives to integrate TB and HIV control programs; and issues in tuberculosis control with special reference to multidrug resistance, social aspects, and program strategies. The biological, clinical and programmatic perspectives gained from this course will assist students in interpretation and critique of programs and policies related to tuberculosis control.

TRMD 7000 Tropical Medicine Seminar (1)
Tropical Medicine Seminar is designed as a journal club, with the specific goal of training students to develop skills in critically evaluating and effectively presenting relevant scientific literature. Each student is expected to present at least one article to the class from recent tropical medicine literature, and to attend and actively participate during presentation delivered by other students. Course may be repeated up to unlimited credit hours.

Maximum Hours: 2

TRMD 7020 Infectious Disease Seminar (0-1)
The seminar experience is intended to stimulate a critical reading of the current literature and to ensure that each student learns to present important and potentially controversial data in a rigorous and careful fashion.

Maximum Hours: 99

TRMD 7180 Immunoparasitology (2)
This advanced level course is designed to provide students of public health and the basic biomedical sciences with an update on the role of immunity to parasitic infections and the immunopathogenesis of clinical parasitic diseases. Special emphasis will be placed on current knowledge of mechanisms of immunity to protozoan and helminth infections that cause malaria, trypanosomiasis, leishmaniasis, toxoplasmosis, schistosomiasis and filariasis, some of the most widespread and debilitating diseases in endemic countries of the world. Additional topics include parasitic opportunistic infections of AIDS patients, and updates on protozoan and helminth vaccine development.

TRMD 7300 Mechanisms of Pathogen Intervention (2)
This course provides an advanced foundation of knowledge about the selection and mechanisms of action of different interventions against important viruses, bacteria and unicellular parasites of public health significance. The course describes how drugs, vaccines and other intervention agents reach their cellular targets and how they act in harmony with the host immune system to control or eradicate the pathogen, inside the human or the arthropod hosts.

Prerequisite(s): TRMD 6170.

TRMD 7330 Advanced Topics in Host Pathogens (2)
This course will provide both an overview and an update on the recent advances in the study of host-pathogen interaction at the cellular and molecular levels. The focus will be on pathogen molecules that mediate interactions with host (and vector, if applicable), and the role these interactions play in host recognition and modulation, pathogen survival, virulence, and disease progression. The course will cover topics such as host specificity, immune evasion, pathogenicity and host-pathogen coevolution. Examples from the current literature will illustrate the link between basic science research in infectious diseases and our understanding of broader biological phenomena, as well as mechanisms of pathogenesis.

Prerequisite(s): TRMD 6170, 6070 and 6330.

TRMD 7420 Population-Based Malaria Prevention and Control (3)
This course introduces the principles of prevention and control of malaria infection and disease, as well as population based methods for evaluating the success of control programs or new interventions. This course investigates how culture, society, and the environment influence disease transmission, risk factors, and health status. Students will analyze data and integrate information using a monitoring and evaluation framework to inform prevention and control policy. Topics covered will include vector ecology, malaria epidemiology, malaria control strategies, malaria monitoring and evaluation, issues around cost-effectiveness, and prospects for elimination.

Prerequisite(s): (EPID 6030, SPHL 6860 or 6060).

TRMD 7500 Advanced Tropical Virology (2)
This course covers advanced topics in tropical virology. The focus is on viruses of recent public health concern in developing and tropical countries. Both historically problematic and emerging viruses are covered. Topics from published literature include molecular biology, epidemiology and pathology. Emphasis is placed on extending and deepening the understanding of the molecular aspects of the viral replication that gives rise to transmission and pathogenic characteristics. Additional topics include the interactions between the virus and host immune response, as well as viral control and the development of vaccines and anti-viral pharmaceuticals.

Prerequisite(s): TRMD 6420.

TRMD 7650 One Health Approaches to Disease (3)
One Health is a framework to expand interdisciplinary collaborations and communications for optimal health of people, domestic animals, wildlife, plants and our environment. This course will explore the theory behind One Health, describe methods and tools used in One Health, and develop skills to work with interdisciplinary teams and communication across professions. Using a One Health framework, we will discuss case studies of emergent health issues including emerging diseases, antibiotic resistance, food safety and security, climate change, and disease surveillance. Students will work in teams to produce an analysis of a health issue using a One Health framework.

Prerequisite(s): (SPHL 6020, 6820 or minimum score of PASS in 'SPHL 6020 Exemption') and (SPHL 6060 or 6860) and (SPHL 6070 or 6870) and (SPHL 6080 or 6880).

TRMD 7800 Advanced Medical Entomology (3)
This advanced course applies the most current knowledge in vector biology to the study of arthropods and diseases they transmit. It meets twice a week: a 2hr30´ classroom session (a lecture and in-class activities) followed by a 2h30´ lab session, in which students reinforce classroom learnings with practical experience in performing bioassays; bioinformatic, ecological, behavioral and surveillance experiments; computer and video simulations, and metabolomics. Drawing from current, primary literature and discipline-specific guidelines, students also write and present a research proposal on a topic of interest. Primary and guest instructors, which include vector biologists and biochemists from local, regional and national institutions, reflect diverse identities. This unique structure makes the course well-suited for anyone interested in vector-borne research and disease control.

Prerequisite(s): TRMD 6060*.
* May be taken concurrently.

TRMD 7820 Malaria (2)
This is an advanced course which provides a rigorous approach to both the basic and applied issues related to malaria and malaria control. Areas covered in detail include cell biology and biochemistry of the parasite-red cell integration, antimalarial drug action and resistance mechanisms, parasite genetics and cell biology and the immunologic aspects of malaria, including asexual and sexual stage candidate vaccine antigens. At the conclusion of the semester, students are expected to critically review current malaria control and research strategies and to suggest and defend appropriate alternatives.

TRMD 7960 Clinical Tropical Medicine (3)
Clinical Tropical Medicine is designed to offer an overview of topics of clinical importance in tropical medicine, with an emphasis on a syndromic approach to patient presentation. Through a combination of lectures and clinical case presentations with group discussions the course both introduces key subject matter and will help students apply their knowledge to the clinical sphere. It is expected to complement other course offerings from the Tropical Medicine Department for the MPHTM and Diploma in Tropical Medicine curricula. Participants should have some experience in clinical medicine (usually a terminal degree in medicine, nursing, or veterinary sciences) and should either have experience or be in the process of learning about diseases of the tropics.

TRMD 7990 Special Studies (1-3)
Masters students and advisor select a topic for independent study and develop learning objectives and the expected written final product.

TRMD 8080 Large Dataset Management and Sequencing: Part 1 (3)
TRMD 8080 and 8090 are interdependent courses designed to develop skills in generating hypotheses specific to DNA sequence data, applying protocols for sample collection, analysis of large data sets, use of the MinION instrument and presentation of research findings that demonstrate rigor and reproducibility. TRMD 8080 (fall semester) introduces students to the principles and theoretical bases of novel molecular methods, design studies and hypotheses to be addressed. Students learn to collect sequence data using an accessible sequencing instrument. TRMD 8090 (spring semester), equips students with techniques for evaluating and analyzing large data sets, with attention to rigor and reproducibility. The experience of these courses will be broadly applicable, regardless of the area of public health pursued.

TRMD 8090 Large Dataset Management and Sequencing: Part 2 (3)
TRMD 8080 and 8090 are interdependent courses designed to develop skills in generating hypotheses specific to DNA sequence data, applying protocols for sample collection, analysis of large data sets, use of the MinION instrument and presentation of research findings that demonstrate rigor and reproducibility. TRMD 8080 (fall semester) introduces students to the principles and theoretical bases of novel molecular methods, design studies and hypotheses to be addressed. Students learn to collect sequence data using an accessible sequencing instrument. TRMD 8090 (spring semester), equips students with techniques for evaluating and analyzing large data sets, with attention to rigor and reproducibility. The experience of these courses will be broadly applicable, regardless of the area of public health pursued.

TRMD 8100 Laboratory Rotation (2)
Doctoral students are required to take TRMD 8100 Laboratory Training three times in different DTM faculty laboratories for a total of six credits (2 each). The faculty member will be identified on the student's transcript as the person teaching the course. At the completion of each lab rotation, the advisor will fill out a lab rotation form and assign a pass/fail grade. In addition to a record of grade on the student's transcript, this report will be maintained in the student's file by the department. Before enrolling in the TRMD 8100 course, students are encouraged to meet with various faculty members and discuss the prospect of doing a rotation with them. The rotations will acquaint the student with the different research programs available in the department and assist the student in choosing a permanent dissertation advisor. In addition, by rotating through several laboratories the student will obtain laboratory experience and training in specialized areas. Ideally the laboratory rotations should begin during the first semester and continue through the summer until a permanent advisor is chosen in the second year.

Course Limit: 3

TRMD 8990 Doctoral Independent Study (1-3)
Doctoral students and advisor select a topic for independent study and develop learning objectives and the expected final written product.

Maximum Hours: 99

TRMD 9980 Master's Thesis Research (0)
MS students engaging in thesis research.

Course Limit: 3

Urban Studies (URST)

URST 1940 Transfer Course Work (0-4)

Maximum Hours: 99

URST 2010 The City I (3)
City I is the first semester of a two-semester-long survey introduction to the multi-disciplinary field of Urban Studies. Three broad substantive themes are explored: (1) History and Morphology of Cities and City Systems; (2) Urban Ecology and Demographics; and (3) Urban Design/ Aesthetics/ Land Use /Planning. Attention is given to historically, geographically, and culturally diverse cases in order to provide a comparative framework and backdrop to contemporary practices.

URST 2020 The City II (3)
City II is the second semester of a two-semester-long survey introduction to the multi-disciplinary field of Urban Studies. Four broad substantive themes are examined: (1) Urban Political Economy; (2) the Social Psychology of Cities; (3) Urban Culture and Expressive Arts; and (4) Urbanism and Urban Issues. Course employs a modular focus and historical-comparative framework, but primary emphasis will be on the contemporary era.

URST 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

URST 2891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

URST 2892 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

URST 2910 Special Topics (0-3)

Maximum Hours: 99

URST 2940 Transfer Coursework (0-20)
Transfer Coursework

Maximum Hours: 99

URST 3010 Special Topics (3)
Special topics course, content varies by semester.

Maximum Hours: 99

URST 3100 Urban Geography (3)
Surveys discipline of geography with focus on how various traditions within the discipline analyze cities and other human communities as spatial environments. Students will learn the tools, techniques, and datasets geographers employ to investigate questions pertaining to the shape, form, origins, transformative processes, and interaction of the natural and built environments; how and why phenomena are distributed spatially and through time; the concept and perception of place and how we distinguish places from one another; and how present-day cityscapes reflect these concerns. Lectures will focus on New Orleans but be comparative and students will be required to apply these approaches to other cities and towns.

URST 3400 GIS - Practical Applications (3)
Geographic Information Systems (GIS) are widely used tools in the social, biological, and environmental sciences and in urban planning and design. This course provides a hands-on approach to solve problems and deepen geospatial awareness with a focus on modern urban space. End results are an ability to analyze and present geospatial data, knowledge of fundamentals of GIS, and basic skill in data acquisition and respresentation. Course provides a framework for functional application of GIS with a focus on local contemporary New Orleans data and issues.

URST 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

URST 3940 Transfer Coursework (0-20)
Transfer Coursework

Maximum Hours: 99

URST 4560 Internship (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

URST 4567 Internship (1-3)

URST 4570 Internship (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

URST 4910 Independent Study (1-3)

URST 5380 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

URST 5390 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

URST 6010 Special Topics (3)
Advanced level special topics course, content varies by semester.

URST 7100 Urban Georgrphy: NO Case Study (3)

URST 7400 GIS-Prac App the Build Environ (3)

Yoruba (YRBA)

YRBA 1010 Elementary Yoruba I (4)
This course provides an introduction to Standard Yoruba, the dialect form which is understood by speakers of Yoruba worldwide. Students will receive training and practice in speaking, listening, reading, and writing.

YRBA 1020 Elementary Yoruba II (4)
Elementary Yoruba II is a second level introductory course for beginners of Yoruba language. This course is open to students who have taken and passed Yoruba I. In this course students will further develop the four language skills: listening, speaking, reading and writing.

Prerequisite(s): YRBA 1010.

YRBA 4910 Independent Study (3)
Independent Study.

Tulane University

FACULTY

This listing includes Tulane University full-time employees with faculty status, visiting faculty, and postdoctoral fellows at the time of publication.

A

Abboud, Elizabeth Rachael
Senior Professor of Practice
PhD, Tulane University

Abdel-Mageed, Asim B
Professor
PhD, Kansas State University

Abdelghani, Abdelghani A
Professor
SCD, Tulane University

Abdelghani, Ramsy
Assistant Professor
MD, Jordan University of Science and Technology

Abdulnour-Nakhoul, Solange
Associate Professor
PhD, American University of Beirut - Lebanon

Abramowitz, Benjamin
Postdoc Fellow

Aburiziq, Ibrahim k
Assistant Professor
MA, Jordan University of Science and Technology

Acquarone, Mariana
Instructor
PhD, Federal University of Rio De Janeiro

Adams, Katherine Ann
Associate Professor
PhD, Florida State University

Adams, Michele Ann
Associate Professor
PhD, University of California-Riverside

Adderley, Laura R
Associate Professor
PhD, University of Pennsylvania

Addis, Adeno
Professor
SJD, Yale University

Adjerid, Khaled
Professor of Practice
PhD, Virginia Polytech Institute & State University

Agnew, Jeffrey
Senior Professor of Practice
PhD, Louisiana State University

Ahmed, Islam
Visiting Lecturer
MA, Universite Saint-Joseph De Beyrouth

Ahmed, Muhammad Iqbal
Assistant Professor
MD, Jinnah Sindh Medical University, Pakistan

Aidi, Yasmina
Assistant Professor
PhD, Princeton University

Aidoo, Fallon S
Assistant Professor
PhD, Harvard University

Al-Huq, Rafed A
Visiting Lecturer
ABD, University of Missouri-Kansas City

Alai, Hamid R
Assistant Professor
MD, Johns Hopkins University

Albert, Julie
Associate Professor
PhD, University of Delaware

Albrecht, Thomas
Professor and Chair
PhD, University of California-Irvine

Alcina, Kristi B
Instructor
MSN, Loyola University - New Orleans

Alday Sanz, Ignacio N
Dean
MARCH, Polytechnic University of Catalonia, Spain

Alencar, Allan Kardec N
Postdoc Fellow

Alexander, Marie V
Instructor
MAST-Other, University of Alabama at Birmingham

Alexander, Samuel
Assistant Professor
MD, Louisiana State University

Alghamdi, Norah
Assistant Professor
PhD, Cleveland State University

Ali, Gholam H
Associate Professor
MD, University in Baghdad, Iraq

Allison, Mead A
Professor
PhD, SUNY at Stony Brook

Alper, Arnold Brent Jr.
Associate Professor

MD, Tulane University

Alsaad, Ali A
Assistant Professor
MD, Nahrain University, College of Medicine, Iraq

Alvarado, Flor E
Assistant Professor
MD, Louisiana State University

Alvarez, Julie Anne
Senior Professor of Practice
PhD, Emory University

Amdeberhan, Tewodros
Senior Professor of Practice
PhD, Temple University

Anadkat, Samir N
Professor of Practice
MD, Baroda Medical College

Anagnost, Adrian
Associate Professor
PhD, University of Chicago

Anbalagan, Muralidharan
Assistant Professor
PhD, University of Madras, India

Anderson, Margot Harris
Assistant Professor
MD, University of Connecticut

Anderson, Ronald C
Associate Professor
PhD, Tulane University

Andersson, Hans C
Professor
MD, Tulane University

Andre-Johnson, Cory-Alice
Postdoc Fellow

Andrews-Smith, Belinda
Visiting Assistant Professor
DMA, The Ohio State University

Andrinopoulos, Katherine M
Associate Professor
PhD, Johns Hopkins University

Antohe, Diana
Visiting Assistant Professor
MFA, Virginia Commonwealth University

Antrup, Tyler J
Visiting Assistant Professor
MAST-Other, Tulane University

Anwar, Asif H
Associate Professor
MD, University of Geneva - Switzerland

Arcari, Christine M
Clinical Professor
PhD, Johns Hopkins University

Arce, Moises
Professor
PhD, The University of New Mexico

Ardeshir, Amir
Associate Professor
PhD, University of California-Davis

Arencibia, Luis R
Assistant Professor
MD, Spartan Health Sciences University

Armelie, Aaron
Assistant Professor
PhD, Kent State University

Arnett, Zachary M
Assistant Professor
DO, Lincoln Memorial University

Arruda, Caroline T
Associate Professor
PhD, State University of New York

Artecona, Jose F
Assistant Professor
MD, University of Puerto Rico

Arthur, Christopher S
Visiting Assistant Professor
MFA, Tulane University

Ashbaugh, Henry Snyder
Professor
PhD, University of Delaware

Ashton, Ruth
Research Associate Professor
PhD, London School of Hygiene & Tropical Medicine, United Kingdom

Askar, Sereen
Instructor
MSN, Southeastern Louisiana University

Aslam, Rizwan
Associate Professor
DO, Lake Erie College

Atencio, Rebecca
Associate Professor
PhD, University of Wisconsin-Madison

Atkinson, Evan M
Assistant Professor
MD, Louisiana State University

Atkinson, Evelyn
Associate Professor
JD, Harvard Law School

Avelar, Idelber Vasconcelos
Professor
PhD, Duke University

Avilala, Janardhan
Postdoc Fellow

Aw, Tiong Gim
Assistant Professor
PhD, Nanyang Technical University, Singapore

Aye, Pyone Pyone
Associate Professor
PhD, The Ohio State University

Aysenne, Aimee
Associate Professor
MD, Tulane University

B

Baab, Anthony Donald
Senior Professor of Practice
MFA, Cornell University

Babich, Adam
Professor
JD, Yale University

Bailes, Melissa Rebecca
Associate Professor
PhD, University of Illinois at Urbana-Champaign

Bailey, Amber V
Instructor
MAST-Other, Louisiana State University

Bailey, Letia O
Assistant Professor
MSW, Tulane University

Baker, Courtney Noette
Associate Professor
PhD, University of Massachusetts-Amherst

Baker, John W
Assistant Professor
MD, Louisiana State University

Baker, Kate C
Professor
PhD, University of Michigan

Baldwin, Kathryn A
Professor
PhD, Yale University

Balee, William L
Professor
PhD, Columbia University

Balides, Constance Joan
Associate Professor
PhD, University of Wisconsin-Milwaukee

Ball, Jane
Assistant Professor
MD, Tulane University

Bankston, Carl L
Professor
PhD, Louisiana State University

Bao, Hongcun
Postdoc Fellow

Barbieri, Stefano
Professor
PhD, University of Pennsylvania

Barbiero, Lisa M
Assistant Professor
MD, University of Connecticut

Bardon de Tena, Andrea
Research Assistant Professor
MARCH, Technical University of Madrid

Barnes, Heather Michelle
Assistant Professor
MD, Louisiana State University

Barnes, Van H
Instructor
PhD, Tulane University

Baron, Hannah
Postdoc Fellow

Barrios, Edgar L Antonio
Clinical Assistant Professor
MD, University of San Carlos - Phillipines

Barrios, Matthew (Matt)
Senior Professor of Practice
PhD, Florida State University

Bart, Henry L Jr.
Professor
PhD, University of Oklahoma

Basha, Sreenivasulu
Postdoc Fellow

Bass, Jennifer
Clinical Assistant Professor
MD, University of Michigan

Basseches, Joshua
Assistant Professor
PhD, Northwestern University

Bateman, Kristin M
Assistant Professor
MD, Thomas Jefferson University

Batey, D. Scott
Associate Professor
PhD, University of Alabama

Batuman, Vecihi
Professor
MD, Hacettepe University, Turkey

Baudy, Adrian Joseph IV
Associate Professor
MD, Wright State University

Baumgarten, Mara
Professor of Practice
MBA, Northwestern University

Bayer, Carolyn
Associate Professor
PhD, University of Texas at Austin

Bazzano, Alessandra
Associate Professor
PhD, London School of Hygiene & Tropical Medicine, United Kingdom

Bazzano, Lydia A
Professor
PhD, Tulane University

Beasley, Candice Carrie
Clinical Assistant Professor
MSW, University of Oklahoma

Beck, Casey
Professor of Practice
MFA, San Francisco State University

Beckwith, Olivia D
Assistant Professor
PhD, Emory University

Becnel, David
Assistant Professor
MD, Louisiana State University

Beddingfield, Brandon Joel
Assistant Professor
PhD, Tulane University

Beech, Scott Legrant
Associate Professor
MD, Louisiana State University

Begalieva, Maya
Clinical Associate Professor
PhD, Kyrgyz State Medical Institute, Krygyzstan

Behrs, Jan Christoph
Visiting Associate Professor
PhD, Humboldt State University

Beit Halahmi, Mery
Professor of Practice
MA, Hebrew University of Jerusalem

Belgodere, Jorge A
Instructor
PhD, Louisiana State University

Bell, Caryn N
Assistant Professor
PhD

Beller, Thomas
Associate Professor
MFA, Columbia University

Belzince, Myrline Rose
Assistant Professor
MD, Ross University - Medical School

Bennett, Benjamin
Assistant Professor

Associate Professor
PhD, University of California, Berkeley

Conard, Craig J
Assistant Professor
MD, Tulane University

Cong, Fei
Postdoc Fellow

Conner, Pierre E III
Professor of Practice
MBA, Tulane University

Contractor, Sunil H
Visiting Assistant Professor
PhD, University of Georgia

Cook, Charles J
Associate Professor
PhD, Louisiana State University

Cook, Emily
Assistant Professor
PhD, University of Virginia

Cooke, Amanda Gayle
Clinical Assistant Professor
MD, University of Texas Health Science Center

Corey, David M
Senior Professor of Practice
PhD, Tulane University

Cormier, Allison
Assistant Professor
MD, Louisiana State University-Shreveport

Cornu, Olivia L
Instructor
MSN, University of Cincinnati

Corsetti, Ralph L
Professor
MD, Boston University

Cortez, Mallory A
Professor of Practice
PhD, Tulane University

Cortez, Ricardo
Professor
PhD, University of California, Berkeley

Cosentino, Olivia C
Postdoc Fellow

Cossich, Sarah J
Assistant Professor
MD, Tulane University

Courseault, Jacques
Assistant Professor
MD, Tulane University

Cox, Katherine Stammen
Assistant Professor
MD, Louisiana State University-Shreveport

Crabtree, Elizabeth
Associate Professor
MD, Tulane University

Craciun, Mariana
Assistant Professor
PhD, University of Michigan

Craft, Lisa Dawn
Instructor
MSN, The University of Southern Mississippi

Craig, Ryan
Assistant Professor
MD, Louisiana State University

Crivelly, Kea Spencer
Instructor
MS, Bastyr University

Crochet, Denise M
Professor of Practice
MLA, Tulane University

Cronin, James Lawrence
Senior Professor of Practice
PhD, Tulane University

Cropley, Lorelei Beleta
Clinical Associate Professor
PhD, Tulane University

Crosslin, David R
Associate Professor
PhD, Duke University

Cruz, Felipe Fernandes
Assistant Professor
PhD, University of Texas at Austin

Culotta, Alexis
Professor of Practice
PhD, University of Washington

Culotta, Aron
Associate Professor
PhD, University of Massachusetts-Amherst

Cummings, Terry L
Clinical Associate Professor
MD, Tulane University

Cunningham, Michael
Professor
PhD, Emory University

Cupsa, Maria
Associate Professor
PhD, Caragiale Academy of Theatrical Arts and Cinematography, Romania

Curran, Laura
Postdoc Fellow

Cyriac, Mathew
Assistant Professor
MD, Albany Medical College

Czarny-Ratajczak, Malwina
Assistant Professor
PhD, University of Medical Sciences, Poland

D

Da Conceicao Dos Santos, Raoni
Postdoc Fellow

Dabon, Anita J
Instructor
MSN, Louisiana State University

Dahleh, Marie D

Senior Professor of Practice
PhD, Princeton University

Dai, Guixiang
Instructor
PhD, Texas A&M University

Dajko, Nathalie Genevieve
Associate Professor
PhD, Tulane University

Dal Corso, Mark
Clinical Associate Professor
MD, Universidad De Monterrey - Mexico

Dalva, Matthew B
Professor
PhD, Duke University

Dancisak, Michael Joseph
Senior Professor of Practice
PhD, University of Minnesota-Twin Cities

Dang, Audrey T
Assistant Professor
MD, Tulane University

Dangendorf, Soenke
Assistant Professor
PhD, University of Siegen, Germany

Dangler, C. Jean
Professor
PhD, Emory University

Daniel, Jill
Professor
PhD, Tulane University

Daniele, Elena
Senior Professor of Practice
PhD, Brown University

Das, Sumita
Postdoc Fellow

Dash, Manoswini
Postdoc Fellow

Dash, Srikanta
Professor
PhD, Utkal University, India

Datta, Prasun K
Associate Professor
PhD, University of Calcutta, India

Dave, Mitesh
Professor
MS, The Maharaja Sayajirao University of Baroda

Davies, Martin J
Professor
LLM, Harvard Law School

Davies, Susan L
Professor
PhD, University of Alabama at Birmingham

Davila, Roxanne
Sr Professor of the Practice
PhD, Yale University

Davis, Brandon R
Assistant Professor
PhD, University of Alabama

Davis, Claudine
Professor of Practice
PhD, Mercer University

Davis, Kathleen E
Associate Professor
PhD, University of California, Berkeley

Davis, Mark S
Research Professor
LLM, Georgetown University

Dawers, Nancye H
Associate Professor
PhD, Columbia University

De Anda-Duran, Ileana
Postdoc Fellow

de Lanzac, Kraig S
Assistant Professor
MD, Louisiana State University

De Lima, Diogo
Senior Professor of Practice
MFA, Conservatory Maestro Juliano, Brazil

DeBord, Jessica M
Assistant Professor
MD, Tulane University

DeCoste, Kyle A (Kyle)
Visiting Lecturer
MA, Tulane University

Deen, Benjamin M
Assistant Professor
PhD, Massachusetts Institute of Technology

DeFraites, Joseph A
Instructor
MSN, Southeastern Louisiana University

Deininger, Prescott L
Professor
PhD, University of California-Davis

Delafontaine, Patrice
Professor
MD

DeLand, Sarah Marie

Assistant Professor
MD, University of Louisville

DeLarge, Alyssa F
Postdoc Fellow

Delashaw, Johnny B
Professor
MD, University of Washington

Delima-Mujica, Bruna
Instructor
MAST-Other, Southeastern Louisiana University

Delk, Molly B
Assistant Professor
MD, University of Tennessee

Demare, Brian James
Professor
PhD, University of California (UCLA)

Demare, Nina Wen
Instructor
MS, SUNY at Albany

Demosthenidy, Mollye M
Dean
JD, Tulane University

Deng, Hong-Wen
Professor
PhD, University of Oregon

Deng, Wu-Min
Professor
PhD, University of Edinburgh - Scotland

Denham, Alison Edwina
Associate Professor
PhD, Oxford Graduate School

Denisi, Angelo S
Professor
PhD, Purdue University

Dennard, Edwin W
Assistant Professor
MD, Louisiana State University

Denson, Joshua L
Assistant Professor
MD, Tulane University

Dent, Jerome P
Assistant Professor
PhD, University of Rochester

Denteh, Augustine
Assistant Professor
PhD, Georgia State University

DePauw, William David
Senior Professor of Practice
MFA, Tulane University

Derbenev, Andrei Viltorovich
Associate Professor
PhD, Pavlov Institute of Physiology, Russian Academy of Sciences, St. Petersburg, Russia

Deskin, Brian J
Assistant Professor
PhD, Tulane University

Desmoulins, Lucie
Instructor
PhD, University of Burgundy

Dhand, Monica
Clinical Assistant Professor
MD, Temple University

Dhanrajani, Anita
Associate Professor
MA, University of Toronto - Canada

Diana, Mark Leonard
Professor
PhD, Virginia Commonwealth University

diBenedetto, Robert N
Assistant Professor
MD, Tulane University

Didier, Gustavo
Associate Professor
PhD, University of North Carolina-Chapel Hill

Didier, Peter J
Professor
PhD, University of Illinois at Urbana-Champaign

Dietrich, Monika Leah
Assistant Professor
MD, Michigan State University

Dilks, Lisa M
Professor of the Practice
PhD, University of South Carolina

Dimitrov, Martin Kostadinov
Professor and Chair
PhD, Stanford University

Dinerstein, Joel Norman
Professor
PhD, University of Texas at Austin

Ding, Zhengming
Assistant Professor
PhD, Northeastern University

Dingess, Kara M
Assistant Professor
PhD, Florida State University

Diniz, Fabiola C

Postdoc Fellow

Dise, Theresa Lynn
Associate Professor
MD, University of Texas at Austin

Do, Mai P
Associate Professor
PhD, Johns Hopkins University

Dobek, Georgina Lynn
Assistant Professor
DVM

Dochi, Hirotomo
Postdoc Fellow

Dodds, William C
Assistant Professor
PhD, Stanford University

Dola, Phuong Chi
Professor
MD, Tulane University

Dombalagian, Onnig H
Professor
JD, Harvard Law School

Domingue, Simone
Research Assistant Professor
PhD

Donahue, James P
Professor
PhD, Harvard University

Donald, Chancellor E
Assistant Professor
MD, University of Miami

Donelon, Erin Ann
Senior Professor of Practice
JD, Loyola University - New Orleans

Dong, Caroline M
Postdoc Fellow

Dong, Yan
Professor
PhD, SUNY at Buffalo

Donnellan, Eoin
Assistant Professor
MD, National University of Ireland

Dorans, Kirsten S
Assistant Professor
SCD, Harvard University

Doria Vilaca, Luiz
Postdoc Fellow

Dornier, Lelaine
Senior Professor of Practice
PhD, Auburn University

Dotson, Robert Steven
Senior Professor of Practice
PhD, Tulane University

Doukas, David J
Professor
MD, Georgetown University

Downey, Margaret Mary B
Assistant Professor
PhD, University of California, Berkeley

Doyle-Meyers, Lara A
Associate Professor
DVM, Louisiana State University

Dragna, Justin M
Visiting Professor
PhD, University of Texas-Arlington

Drouin, Arnaud
Assistant Professor
MD, Faculte De Medecine Pierre

Drury, Stacy
Professor
PhD, Louisiana State University

Duchesne, Juan C
Professor
MD, Ponce School of Medicine and Health Science

Dufour, Jason P
Associate Professor
DVM, Louisiana State University

Duggan, James E
Associate Professor
JD, University of Mississippi

Duitch, Suri
Dean
PhD, CUNY Graduate Center

Dulaney, Edward M
Associate Professor
PhD, Brandeis University

Dumont, Aaron Sean
Professor
MD, University at Calgary - Canada

Dumonteil, Eric Olivier
Associate Professor
PhD, University of North Carolina-Chapel Hill

Dunaway, Lauren E
Clinical Assistant Professor
PhD, Tulane University

Dunn, Christopher J
Professor

PhD, Brown University

Dupre, Maurice J
Associate Professor
PhD, University of Pennsylvania

Duthu, Stacie
Instructor
MSN, Southeastern University

Dwyer, John Lawson Delaveau
Assistant Professor
DO, Philadelphia Clg Osteopathic Medicine

E

Eagleton, Bernard
Assistant Professor
MD, Southern Illinois University of Medicine

Ebinger, Cynthia J
Professor
PhD, Massachusetts Institute of Technology

Ebrahim, Sherif A
Professor of Practice
PhD, Oklahoma State University

Edwards, Brian T
Dean
PhD, Yale University

Edwards, John H
Associate Professor
PhD, University of Maryland, College Park

Edwards, Maura Kathryn Elizabeth (Kathryn)
Associate Professor
PhD, University of Toronto - Canada

Eftekhari, Saeede
Assistant Professor
PhD, SUNY at Buffalo

Egan, Patrick J.W.
Associate Professor
MFA, University of North Carolina-Chapel Hill

Ehrlich, Melanie
Professor
PhD, SUNY at Stony Brook

Eisele, Thomas
Professor
PhD, Tulane University

Ekmen, Nergiz
Postdoc Fellow

El-Dahr, Samir S
Professor
MD, University of Aleppo, Syria

Eldar, Eran
Visiting Assistant Professor
PhD, Tel Aviv University, Israel

Ellis, Blesilda Q
Associate Professor
MD, University of the East, Roman Magsaysay, Quezon City, Phillippines

Ellis, George S Jr
Clinical Professor
MD, Tulane University

Eloueini, Ammar
Professor
MAST-Other, Columbia University

Elzamly, Kareem
Assistant Professor
MD, Ain Shams University, Cairo

Emin, Mustafa
Visiting Assistant Professor
PhD, University of Florida

Emmerson, Allison Lucille
Associate Professor
PhD, University of Cincinnati

Engel, Astrid M
Associate Professor
PhD, Louisiana State University

Engler-Chiurazzi, Elizabeth B
Assistant Professor
PhD, Arizona State University

Epstein, Jacqueline
Professor of Practice
MLS, University of Alabama

Erickson, AnnieLaurie
Associate Professor
MFA, School of Art Institute of Chicago

Ernest dit Alban, Edmond
Assistant Professor
PhD, Concordia University - Sir George W - Canada

Errami, Youssef
Assistant Professor
PhD, Louisiana State University

Escarra, Matthew D
Associate Professor
PhD, Princeton University

Escher, Alice Pascal
Associate Professor
MFA, Temple University

Estrada-Belli, Francisco Guillerno
Research Assistant Professor
PhD, Boston University

Evers, Patrice B
Assistant Professor

MD, University of Wisconsin-Madison

Ezell, Mary B
Assistant Professor
MD, Louisiana State University

F

Fadok, Jonathan
Assistant Professor
PhD, University of Washington

Falaky, Faycal
Associate Professor and Chair
PhD, New York University

Fan, Jia
Assistant Professor
PhD, Jilin University, China

Fang, Jennifer S
Assistant Professor
PhD, University of Arizona

Farajbakhsh Mamaghani, Fariba (Fariba)
Assistant Professor
PhD, University of Texas at Dallas

Farge, Justin
Assistant Professor
MD, Louisiana State University

Farrer, Emily C
Associate Professor
PhD, University of Michigan

Fauci, Lisa J
Professor
PhD, New York University

Faughnan, Maille Elise
Professor of Practice
PhD, Tulane University

Faul, Timothy D
Assistant Professor
MD, Louisiana State University

Favret, Anne
Instructor
MSN, Louisiana State University

Fedtke, Joerg Michael
Professor
PhD, University of Hamburg

Fee, C. Edward IV
Professor
PhD, Florida State University

Feibelman, Adam
Professor
JD, Yale University

Feiler, Jacob
Professor of Practice
PhD, University of Alabama

Feldman, Gabriel A
Professor
JD, Duke University

Felintro de Souza, Viviane
Postdoc Fellow

Feng, Han
Assistant Professor
PhD, University of Texas at Tyler

Feng, Wenke
Professor
PhD, University of Bodenkultur - Austria

Feoli, Ludovico
Research Professor
PhD, Tulane University

Ferdinand, Keith Copelin
Professor
MD, Howard University

Fernandez Alonso, Camilo
Assistant Professor
MD, William C. Gorgas School of Health Sciences

Fernandez Ugidos, Irene
Postdoc Fellow

Ferreira, Regardt J
Associate Professor
PhD, University of Louisville

Ferris, Kathleen G
Assistant Professor
PhD, Duke University

Fertel, Rien T
Visiting Assistant Professor
PhD, Tulane University

Fettweis, Christopher J
Professor
PhD, University of Maryland, College Park

Ficarra, Mercedes
Associate Professor
MD, University of Cantabria (Santander, Spain)

Fields, Lindsey
Clinical Assistant Professor
PhD, Tulane University

Figley, Charles R
Professor
PhD, Penn State University

Finelli, Julianna M
Assistant Professor
MD, Tulane University

Finger, Julie Laurence
Assistant Professor
MD, University of Texas at Austin

Fink, Mark J
Professor
PhD, University of Wisconsin-Madison

Fischer, Tracy
Associate Professor
PhD, Temple University

Fitts, Michael Andrew
President
JD, Yale University

Fitzgerald, Claire Baudouin
Assistant Professor
MD, Tulane University

FitzGibbons, Jennifer
Instructor
MSN, Yale University

Flanagan, Craig
Professor of Practice
PhD, University of Miami

Fleckman, Julia M.
Assistant Professor
PhD, Tulane University

Flemington, Erik K
Professor
PhD, Louisiana State University

Flora, Holly (Holly)
Professor
PhD, New York University

Flowers, George C
Associate Professor
PhD, University of California, Berkeley

Foa, Michelle A
Associate Professor
PhD, Princeton University

Foldes, Peter J
Associate Professor
MD, Drexel University

Fonseca, Vivian A
Professor
MD, University of Bombay (University of Mumbai, India)

Force, Robert
Professor
LLM, New York University

Ford, Elizabeth Fucich
Professor of Practice
PhD, Texas Health and Science University

Foreman, John Sanders III
Lecturer
MBA, Louisiana State University

Forero, Leslie E
Postdoc Fellow

Forman, Robin
Senior Vice President
PhD, Harvard University

Forstall, Jennifer
Instructor
MSN, University of South Alabama

Foster, Kimberly L
Dean
PhD, Cornell University

Fotino, Alina Domnica
Assistant Professor
MD, Albert Einstein Medical Center

Foust, Karen M
Senior Professor of Practice
PhD, Tulane University

Fowler, Brittnie
Assistant Professor
MD, Ibero-American University, Mexico City, Mexico

Fowler, Sean C
Research Assistant Professor
MSRED, Tulane University

Francavilla, Thomas
Assistant Professor
MD, Tufts University

Franco, Anna C
Visiting Assistant Professor
MAST-Other, Columbia University

Frank, Hannah K
Assistant Professor
PhD, Stanford University

Franklin, David Scott
Professor of Practice
PhD, Louisiana State University

Frasch, Elmer Thomas III
Lecturer
BS, Colgate University

Frazel, Thomas Dooley
Associate Professor
PhD, University of California (UCLA)

Freiberg, John
Assistant Professor
MD, Tulane University

Freiberg, Mary K

Instructor
MS, University of Pennsylvania

Freitas, Raul S
Postdoc Fellow

Friedenberg, Netanel
Postdoc Fellow

Friedlander, Paul L
Professor
MD, Louisiana State University

Friess, Daniel A
Professor
PhD, University of Cambridge - Pembroke - England

Fritzsche, Christopher Fraser
Assistant Professor
MD, Tulane University

Fusco, Dahlene
Assistant Professor
MD, Albert Einstein Medical Center

Fuselier, Joseph A
Assistant Professor
MBA, Tulane University

Fuster, Melissa
Associate Professor
PhD, Tufts University

G

Gadir, Bouchaib
Senior Professor of Practice
PhD, University of Louisiana at Lafayette

Gage, Anastasia J
Professor
PhD, University of Pennsylvania

Gaines, Jason
Professor of Practice
PhD, Brandeis University

Galagan, Robert
Assistant Professor
MD, Saint Louis University

Galazo, Maria J
Assistant Professor
PhD, Autonoma University of Madrid, Spain

Galeas Pena, Trilce Michelle (Michelle)
Research Assistant Professor
PhD, University of New Orleans

Gallagher, Amanda
Assistant Professor
PhD, Florida State University

Gama de Cossio, Borja
Professor of Practice
PhD, University of Massachusetts-Amherst

Gambala, Cecilia Tolo
Assistant Professor
MD, Tulane University

Gao, Shuaihua
Assistant Professor
PhD, College of Life Science and Technology, Hust (China)

Gao, Xing
Postdoc Fellow

Garcia, Amanda R
Senior Professor of Practice
PhD, Texas A&M University-Corpus Christi

Garcia, Ruben
Assistant Professor
PhD, Roma Tre University (Italy)

Gard, Wayne Ronald
Professor of Practice
PhD, University of Arizona

Garner, Sarah
Instructor
MS, Tulane University

Garrett, Kayla B
Postdoc Fellow

Garrett-Scott, Shennette
Associate Professor
PhD, University of Texas at Austin

Garry, Robert F
Professor
PhD, University of Texas at Austin

Gasparini, Nicole M
Professor
PhD, Massachusetts Institute of Technology

Gaver, Donald P III
Professor
PhD, Northwestern University

Ge, Dongxia
Assistant Professor
MD, Sichuan University

Ge, Yang
Postdoc Fellow

Geddes, Leslie Ann
Assistant Professor
PhD, Princeton University

Gelfand, Ryan M
Professor of Practice
PhD, Northwestern University

Geng, Xianjun
Professor

PhD, University of Texas at Austin

George, Amy
Senior Professor of Practice
PhD, Tulane University

Ghinea, Vlad
Senior Professor of Practice
MFA, Tulane University

Ghosh, Abhishek
Visiting Assistant Professor
PhD, Northwestern University

Gibb, Bruce
Professor
PhD, Robert Gordon University - Scotland

Gibson, Jennifer W
Associate Professor
PhD, University of New Orleans

Gilbert, William
Assistant Professor
MD, University of Mississippi

Gillis, Heather J
Clinical Assistant Professor
PhD, Tulane University

Gilpin, Robert B
Associate Professor
PhD, Yale University

Gin, Steven
Professor of Practice
PhD, University of Hawaii at Manoa

Gistand, Constance M
Clinical Assistant Professor
MD, University of Iowa

Gkogkou, Aikaterini
Postdoc Fellow

Gladden, Paul B
Associate Professor
MD, Columbia University

Glass, Marcia H
Clinical Professor
MD, Georgetown University

Glasser, Ryan Thomas
Associate Professor
PhD, Louisiana State University

Glatt-Holtz, Nathan Edward
Associate Professor
PhD, University of Southern California

Gleason, Shekinah
Instructor
MSN, Louisiana State University

Gleckler, Elisabeth A
Clinical Associate Professor
PhD, Tulane University

Glover, Sarah C
Professor
DO, Midwestern University - Downers Grove, Il

Godbey, W T
Associate Professor
PhD, Rice University

Godebo, Tewodros R
Assistant Professor
PhD, Ferrara University, Italy

Godshall, Lauren E
Clinical Assistant Professor
JD, New York University

Goes, Paulo B
Dean
PhD, University of Rochester

Goldsmith, Jay P
Professor
MD, Albert Einstein Medical Center

Goldvarg-Abud, Inna
Instructor
MSN, Frontier Nursing Unversity

Gomez Trejos, Felipe Alberto
Assistant Professor
PhD, Arizona State University

Gomez, Antonio Daniel
Associate Professor
PhD, University of Pittsburgh

Gonzales, Melissa
Professor and Chair
PhD, University of California, Berkeley

Gonzalez, Mauricio
Professor of Practice
PhD, Tulane University

Goodenough, Amelia Chisolm
Assistant Professor
MD, Drexel University

Goodwin, Bruce M
Associate Professor
MARCH, University of California (UCLA)

Gordley, James R
Professor
JD, Harvard Law School

Gordon-Garofalo, Valerie L
Clinical Assistant Professor
PhD, University of Texas at Austin

Gotham, Kevin F
Professor
PhD, University of Kansas

Goya Napolitano, Samary W
Instructor
MEd, Escuela Superior Politecnica Del Litoral (Espol University)

Graber, Jessica
Senior Professor of Practice
PhD, Tulane University

Grace, Amy Nicole
Assistant Professor
MD, University of Alabama at Birmingham

Gragert, Loren
Assistant Professor
PhD, University of Minnesota-Twin Cities

Graham, Caroline S
Instructor
MAST-Other, Louisiana State University

Grant, Brooke
Senior Professor of Practice
PhD, SUNY at Buffalo

Grant, Kelly A
Professor of Practice
MA, University of New Orleans

Grant, Stefan C
Professor
MD, University of Witwatersrand

Grasperge, Brooke F
Associate Professor
DVM, Louisiana State University

Gray, Cathy L
Professor of Practice
MAST-Other, University of Mississippi

Grayson, Scott M
Professor
PhD, University of California, Berkeley

Gredil, Oleg
Associate Professor
PhD, University of North Carolina-Chapel Hill

Green, Christopher R
Assistant Professor
MD, Rush University Medical College

Gregorian, Tamar Grace
Professor of Practice
MAST-Other, Louisiana State University

Gremillion, Chad
Assistant Professor
MD, Louisiana State University-Shreveport

Grewal, Himmat
Assistant Professor
MD, Kasturba Medical College, India

Griffin, Matthew
Instructor
MFA, University of Iowa

Griffin, Stephen M
Professor
LLM, New York University

Groome, Sanda Beacit
Senior Professor of Practice
JD, Louisiana State University

Grossman, Allison N
Assistant Professor
PhD, University of California, Berkeley

Grossmann, Francoise
Clinical Assistant Professor
MPH, Tulane University

Gu, Cong
Postdoc Fellow

Gugel, Jonathan M
Assistant Professor
MD, Tulane University

Guider,Jr., Benjamin Alfred
Clinical Assistant Professor
MD, Tulane University

Guidry, Chrissy
Assistant Professor
DO, Des Moines University

Gularte, Louis R
Visiting Assistant Professor
PhD, Brown University

Gunderson, Alexander
Assistant Professor
PhD, Duke University

Gunshol, Jeffrey
Senior Professor of Practice
MFA, University of Utah

Gupta, Neel D
Assistant Professor
MD, Tulane University

Gustat, Jeanette
Clinical Associate Professor
PhD, Tulane University

Guy, Megan H
Professor of Practice
JD, Tulane University

Guzman, Eduardo

Lecturer
PhD, Tulane University

H

Ha, Tai H
Professor
PhD, Queen's University at Kingston - Canada

Hadah, Hussain
Postdoc Fellow

Hai, Hang (Audrey)
Assistant Professor
PhD, University of Texas at Austin

Halat, Shams K
Associate Professor
MD, American University of Beirut - Lebanon

Haley, Chanell
Postdoc Fellow

Halk, Cristina S
Assistant Professor
MD, LSU Health Sciences Center - Shreveport

Halverson, Nathan
Professor of Practice
MFA, Virginia Commonwealth University

Hamm, Jihae Wee (Sophia)
Assistant Professor
PhD, The Ohio State University

Hamm, Jihun
Associate Professor
PhD, University of Pennsylvania

Hamm, Lotuce Lee (Lee)
Senior Vice President
MD, University of Alabama at Birmingham

Hammer, Rachel R
Assistant Professor
MD, Mayo Clinic, College of Medicine

Han, Jeffrey
Associate Professor
MD, Johns Hopkins University

Han, Lifeng
Professor of Practice
PhD, Arizona State University

Han, Manjong
Senior Professor of Practice
PhD, Sogang University, South Korea

Hancock, Catherine P
Professor
SJD, University of Chicago

Handl, Gunther
Professor
JD, Yale University

Handy, Monique J
Postdoc Fellow

Hanemann, Cynthia Webre
Professor
MD, Louisiana State University

Hansel, Tonya C
Associate Professor
PhD, Tulane University

Hanson, Stephen S
Associate Professor
PhD, Georgetown University

Hao, Wenzhuo
Postdoc Fellow

Haque, S M Nazmul
Postdoc Fellow

Hare, Megan M
Postdoc Fellow

Harrell, Kevin N
Assistant Professor
MD, Emory University

Harris, Douglas Norman
Professor
PhD, Michigan State University

Harris, Emily H
Clinical Instructor
MPH, Tulane University

Harrison, Laura M
Research Assistant Professor
PhD, Tulane University

Harville, Emily
Associate Professor
PhD, University of North Carolina-Chapel Hill

Hasan, Abdul
Postdoc Fellow

Hasan, Md Mehedi
Postdoc Fellow

Hassan, Saad
Assistant Professor
PhD, Rochester Institute of Technology

Hastings, Waylon J
Postdoc Fellow

Hauck, Margaret J
Assistant Professor
PhD, University of Connecticut

Haugeberg, Karissa Ann
Associate Professor

PhD, University of Iowa

Hawkins, Jennifer S
Visiting Research Professor
PhD, Princeton University

Hawkins, Marshall
Clinical Instructor
DDS, Louisiana State University

Hayes, Deidre Denise
Professor of Practice
MSW, Tulane University

Hayley, Barbara
Professor
MFA, New York University

Haynes, Gary
Professor and Chair
MD, Case Western Reserve University

He, Fenglei
Associate Professor
PhD, Tulane University

He, Hua
Professor
PhD, University of Rochester

He, Jiang
Professor
MD, Johns Hopkins University

He, Yumei
Assistant Professor
PhD

Heard, Wendell Malcolm Rogan
Associate Professor
MD, Tulane University

Hebert, Thomas Joseph
Senior Professor of Practice
PhD, Tulane University

Hegde, Yatish
Lecturer
MS, Syracuse University

Heianza, Yoriko
Research Assistant Professor
PhD, University of Tsukuba - Japan

Heinrich, Stephen Douglas
Professor
MD, University of Arizona

Heitz, Amanda
Assistant Professor
PhD, University of Minnesota-Twin Cities

Heller, Sherryl S
Associate Professor
PhD, University of New Orleans

Hellstrom, Wayne J
Professor
MD, Mcgill University - Canada

Helmcke, Frederick R
Associate Professor
MD, Universidad Popular Autonoma Del Estado De Puebla, Mexico

Hendel, Robert C
Professor
MD, George Washington University

Henry, Donata
Senior Professor of Practice
PhD, Tulane University

Henry, Marissa A
Visiting Assistant Professor
PhD, University of California, Berkeley

Herhuth, Eric
Associate Professor
PhD, University of Wisconsin-Milwaukee

Hering-Smith, Kathleen S
Associate Professor
PhD, Tulane University

Hernandez, Julie H
Associate Professor
PhD, University of Paris, France

Herrera, Claudia Patricia
Assistant Professor
PhD, Universidad De Los Andes, Colombia

Herrera, Eduardo
Associate Professor
MD, University of Costa Rica

Herrera-Gutierrez, Yuri
Professor
PhD, University of California, Berkeley

Heumann, Allyson J
Professor of Practice
MAST-Other, University of Scranton

Hewes, Jenny L
Postdoc Fellow

Hextrum, Shannon
Assistant Professor
MD, Loyola University - Chicago

Hidarilak, Neda
Assistant Professor
MD, University of Tehran, Iran

Higashi, Yusuke
Associate Professor
PhD, University of Tokyo

Hill, Amanda Kruger
Professor of Practice
EdD, Johns Hopkins University

Hill, Kelly L
Assistant Professor
MD, Tulane University

Hill, Steven M
Professor
PhD, University of Arizona

Hilton, Theodore J
Visiting Assistant Professor
MA, Tulane University

Hindi, Ata
Visiting Assistant Professor
JD, Emory University

Hinkle, Brittany
Postdoc Fellow

Hinkle, David M
Professor
MD, West Virginia State University

Hinshaw-Fuselier, Sarah S
Assistant Professor
PhD, University of Texas at Austin

Hlass, Laila Laurice
Clinical Professor
LLM, Georgetown University

Ho, Lindsey A
Clinical Assistant Professor
PhD, University of North Carolina-Chapel Hill

Ho, Yi Jen
Associate Professor
PhD, University of California-Irvine

Hoeffel, Janet C
Professor
JD, Stanford University

Hoerger, Michael P
Associate Professor
PhD, Central Michigan University

Hoffman, Aaron E
Clinical Assistant Professor
PhD, Yale University

Hoffmann, Andrew R
Postdoc Fellow

Hogg, Michael H
Senior Professor of Practice
JD, Tulane University

Holliday, Trenton Webster
Professor
PhD, The University of New Mexico

Holtcamp, Victor R
Associate Professor and Chair
PhD, University of Washington

Honer Zu Bentrup, Kerstin
Associate Professor
PhD, University of Osnabrck - Germany

Hoover, Gary A
Executive Director
PhD, Washington University

Hoover, Robert S
Professor
MD, University of California (UCLA)

Horowitz, Brian J
Professor and Chair
PhD, University of California, Berkeley

Horwitz, Ilana
Assistant Professor
PhD, Stanford University

Hoshino, Natsumi
Postdoc Fellow

Hossain, Md Istiak
Postdoc Fellow

Hotchkiss, David (David)
Professor and Chair
PhD, University of North Carolina-Chapel Hill

Howard, Harry D
Associate Professor
PhD, Cornell University

Howard, Jacquelyne T
Professor of the Practice
PhD, Fordham University

Howell, Meghan Parrott
Assistant Professor
MD, Tulane University

Howsmon, Daniel P
Assistant Professor
PhD, Rensselaer Polytechnic Institute

Hu, Kelin
Research Assistant Professor
PhD, East China Normal University

Hu, Ye Y
Professor
PhD, University of Texas at Austin

Hua, Fang
Postdoc Fellow

Huang, Chiung-Kuei
Assistant Professor

PhD, University of Rochester

Huang, Hai
Associate Professor
PhD, Chinese Academy of Sciences

Huang, Yuanyu
Postdoc Fellow

Hubbard, Ladee
Assistant Professor
MFA, University of Wisconsin-Madison

Huck, James D Jr.
Administrative Associate Professor
PhD, Tulane University

Huddleston, Joshua Corben
Instructor
MD, Louisiana State University

Hughes, Austin B
Assistant Professor
MD, Franciscan Missionaries of Our Lady University

Humphreys, Laura-Zoe
Associate Professor
PhD, University of Chicago

Huntwork, John
Clinical Assistant Professor
MD, University of Chicago

Huntwork, Margaret Prat
Assistant Professor
MD, Tulane University

Huppi, John Waldron
Professor of Practice
MSRED, Tulane University

Hurford, Matthew T
Associate Professor
MD, Indiana University-Bloomington

Hussein, Kholoud
Instructor
PhD, Cornell University

Hutchinson, Paul L
Professor
PhD, University of North Carolina-Chapel Hill

Hydock, Christopher
Assistant Professor
PhD, George Washington University

I

Iberico, Mariano Matias
Clinical Assistant Professor
MD, Wright State University

Ice, Robyn Elizabeth
Senior Professor of Practice
JD, Georgia State University

Imma, Zetoile
Assistant Professor
PhD, University of Virginia

Induru, Jayachandra
Assistant Professor
MD, Kurnool Medical College, India

Intapad, Suttira
Assistant Professor
PhD, Mahidol University, Thailand

Irimpen, Anand
Professor
MD, Grant Medical College and Sir Jamshedjee Jeejeebhoy Group of Hospitals, India

Isaac, Elliott W
Assistant Professor
PhD, University of Virginia

Isaacson, Walter
University Professor
MA, Oxford Graduate School

Isasi Gutierrez, Blas
Visiting Assistant Professor
MFA, Tulane University

Ismael, Saifudeen
Instructor
PhD, Sree Chitra Tirunal Institute for Medical Sciences & Technology

Ivester, Sukari
Senior Professor of Practice
PhD, University of Chicago

Iwanaga, Jo
Professor
PhD, Kurume University, Japan

Izadpanah, Reza
Assistant Professor
DVM, University of Tehran, Iran

J

Jack, Katharine M
Professor
PhD, The University of Alberta

Jackson, Colin
Assistant Professor
PhD, Brown University

Jackson, James
Associate Professor
PhD, University of Texas at Austin

Jackson, Jennifer
Assistant Professor
PhD, Brown University

Jackson, Lawrence
Assistant Professor
PhD, Florida State University

Jackson, Neal M
Assistant Professor
MD, University of Texas at San Antonio

Jackson-Weaver, Olan
Assistant Professor
PhD, The University of New Mexico

Jacob, Leah
Assistant Professor
MD, Louisiana State University

Jacobsen, Heiko
Senior Professor of Practice
PhD, University at Calgary - Canada

Jaffe, Bernard M
Clinical Professor
MD, New York University

Jameson, Samuel B
Postdoc Fellow

Janbain, Maissaa
Associate Professor
MD, Lebanese American University - Lebanon

Jang, Hongseok
Assistant Professor
PhD, University of Florida

Japa, Shanker
Associate Professor
PhD, Jawaharlal Nehru University, India

Jarand, Curtis
Research Assistant Professor
PhD, University of New Orleans

Jaubert, Lisa M
Assistant Professor
MD, Louisiana State University

Jayawickramarajah, Janarthanan
Professor
PhD, University of Texas at Austin

Jazwinski, Barbara Maria
Professor
PhD, City University - England

Jazwinski, Stanislaw M
Professor
PhD, Stanford University

Jenkins, Lawrence C
Associate Professor
MD, State University of New York

Jensen, Joan F
Senior Professor of Practice
MFA, Tulane University

Jeon, Hoonbae
Professor
MD, Seoul College of Medicine

Jeong, Hyoju
Visiting Assistant Professor
PhD, University of Minnesota-Twin Cities

Jernegan, Jeremy H
Professor
MFA, San Jose State University

Ji, Junyuan
Professor
PhD, University of Washington

Ji, Xiang
Assistant Professor
PhD, North Carolina State University-Raleigh

Jian, Shaokai
Assistant Professor
PhD, Tsinghua University

Jiang, Xin
Assistant Professor
PhD, The Ohio State University

Jiang, Yinghua
Assistant Professor
PhD, Chongqing Medical University

Jin, Xuanyi
Postdoc Fellow

John, Vijay T
Professor
PhD, Columbia University

Johnson, Colleen J
Associate Professor
MD, Johns Hopkins University

Johnson, Janet E
Associate Professor
MD, University of Missouri - Columbia

Johnson, Katherine
Associate Professor
PhD, Penn State University

Johnson, Kendrick D
Assistant Professor
MD, Louisiana State University-Shreveport

Johnson, Thomas R
Professor
PhD, University of Louisville

Jones, Jacey Christina
Clinical Assistant Professor

MD, Baylor College of Medicine

Jones, Kennedi
Instructor
MS, Massachusetts General Hospital Institution of Health Professions

Jones, Kevin Henry
Professor
MFA, Yale University

Jones, Michael
Visiting Assistant Professor
PhD, Tulane University

Jones, Steven D
Assistant Professor
MD, Tulane University

Jones, Tiffanie V
Clinical Assistant Professor
PhD, Howard University

Jordan, Lisa W
Clinical Professor
LLM, Tulane University

Joseph, Rochelle C
Postdoc Fellow

Joslyn, John
Assistant Professor
MD, University of Virginia

Jothimani, Ganesan
Postdoc Fellow

Jover Biboum, Margarita
Professor
MARCH, Polytechnic University of Catalonia, Spain

Joyce, Michael O
Senior Professor of Practice
PhD, Brown University

Juan Lozano, Carlos
Senior Professor of Practice
PhD, University of Valencia - Spain

Juarez Garcia, Mario Ivan
Assistant Professor
PhD, University of Arizona

Jung, Wendy
Visiting Assistant Professor
PhD, Tulane University

K

Kahn, Margie A
Associate Professor
MD, Tulane University

Kamat, Rahul V
Assistant Professor
MD, St George's University, School of Medicine - Grenada

Kandil, Emad
Professor
MD, Cairo University, Egypt

Kaniuka, Andrea
Clinical Assistant Professor
PhD, UNC-Charlotte

Kapadia, Nishad
Associate Professor
PhD, University of North Carolina-Chapel Hill

Kaplan, Lev
Professor
PhD, Harvard University

Kappeler, Erin J
Assistant Professor
PhD, Tufts University

Kareem, Keena M
Professor of Practice
PhD, Louisiana State University

Karubian, Jordan Oliver
Professor
PhD, University of Chicago

Kashef Alghata, Zaid
Visiting Professor
BA, Southern California Insititute of Architecture

Kastl, Peter Robert
Professor
MD, Tulane University

Katakam, Prasad V
Professor
PhD, University of Georgia

Kathera, Chandrasekhar
Postdoc Fellow

Katin, Nicole Marie
Senior Professor of Practice
PhD, Tulane University

Katner, David R
Clinical Professor
JD, Tulane University

Kaur, Amitinder
Professor
PhD, University of Madras, India

Kaur, Ina
Visiting Assistant Professor
MA, Tulane University

Kawasaki, Lumie
Associate Professor
MD, University of Pittsburgh

Kay, Emma S
Research Assistant Professor
PhD, University of Alabama

Kazan, Osman
Professor of Practice
PhD, University of Texas at Dallas

Kearney-Bagneris, Amanda Leonard (Mia)
Associate Professor
PhD, Harvard University

Keating, Joseph A
Professor
PhD, Tulane University

Keenan, Jesse M
Associate Professor
PhD, Delft University of Technology

Kehoe, Dennis P
Professor
PhD, University of Michigan

Keil, Irene
Senior Professor of Practice
MARCH, University of California (UCLA)

Keita, Akilah J
Professor and Chair
PhD, University of Alabama At Birmingham

Kelley, Anna
Assistant Professor
PSYD, University of Denver

Kelly Hopfenblatt, Alejandro
Postdoc Fellow

Kelly, Dennis Clayton Jr.
Associate Professor
MD, University of Arkansas For Medical Sciences

Kelly, Elizabeth
Assistant Professor
MD, Tulane University

Kemsley, Deen
Associate Professor
PhD, University of North Carolina-Chapel Hill

Kendall, Carl
Professor
PhD, University of Rochester

Kennedy, Brittany Powell
Senior Professor of Practice
PhD, University of South Carolina

Kenney, Sally J
Professor
PhD, Princeton University

Kenyon, Hannah L
Visiting Assistant Professor
MARCH, Tulane University

Keshavarzi, Sassan
Associate Professor
MD, University of Rochester

Keyes, Angela W
Associate Professor
PhD, University of New Orleans

Khalifa, Ahmed Mohamed
Postdoc Fellow

Khambu, Bilon
Assistant Professor
PhD, Kyoto University

Khan, Pervez A
Assistant Professor
MD, University of Mississippi

Khan, Yasin
Assistant Professor
MD, Saba University School Of Medicine - Saba

Khanna, Rajat
Associate Professor
PhD, University of North Carolina-Chapel Hill

Khatun, Mst Shamima
Postdoc Fellow

Khirfan, Diala
Assistant Professor
MD, Jordan University of Science and Technology

Khismatullin, Damir B
Associate Professor
PhD, Bashkir State University, Russia

Khunkhun, Vininder Singh
Assistant Professor
MD, Ross Medical Education Center

Kiel, Christina
Senior Professor of Practice
PhD, University of New Orleans

Killackey, Mary
Professor and Chair
MD, Columbia University

Kim, Irang
Assistant Professor
PhD, University of Georgia

Kim, Sangkyu
Assistant Professor
PhD, University of Iowa

Kim, Woong-Ki
Professor
PhD, New Jersey Institute of Technology

King, Benjamin C
Assistant Professor
PhD, University of Maryland, Baltimore

Kinnard, Judith A
Professor
BARCH, Cornell University

Kinzie, Amy S
Instructor
MSN, Louisiana State University

Kissinger, Patricia
Professor
PhD, Tulane University

Kleinpeter, Myra A
Associate Professor
MD, Tulane University

Klingler, Thomas A
Associate Professor
PhD, Indiana University-Bloomington

Klingsberg, Ross C
Associate Professor
MD, Tulane University

Ko, Hyunmin
Postdoc Fellow

Koehl, Kristen
Instructor
MSN, University of South Alabama

Koepp, Bonnie
Instructor
FNP-C, Loyola University - New Orleans

Kohler, Michelle Delila
Associate Professor
PhD, University of Oregon

Kokkiou, Chara
Visiting Assistant Professor
PhD

Kolls, Jay K
Professor
MD, University of Maryland, Baltimore

Kolluru, Devi Dutt Srikanth
Postdoc Fellow

Komendarczyk, Rafal
Associate Professor
PhD, Georgia Institute of Technology

Kondkar, Becki T
Clinical Professor
JD, University of North Carolina-Chapel Hill

Konow, James
Visiting Research Professor
PhD, University of California (UCLA)

Koplitz, Brent Douglas
Professor
PhD, Princeton University

Koss, Eugene H
Professor
MFA, Temple University

Kostner, Pia Ursula
Professor of Practice
MA, University of New Orleans

Kraker, Jessica Brand
Assistant Professor
MD, Temple University

Krane, N Kevin
Professor
MD, Tulane University

Kreher, Ashley M
Assistant Professor
MD, Florida State University

Kreidieh, Omar
Assistant Professor
MD, American University of Beirut - Lebanon

Kreisman, Norman R
Professor
PhD, Drexel University

Kronlund, Mathias J
Assistant Professor
PhD, University of Chicago

Krousel-Wood, Marie A
Professor
MD, Louisiana State University

Krueger, Evan A
Assistant Professor
PhD, University of California (UCLA)

Krupa, Jake J
Assistant Professor
PhD, University of Miami

Ku, Timothy
Assistant Professor
MD, Northwestern University

Kuban, Scott
Assistant Professor
PhD, Texas A&M University

Kuczynski, Michael P
Professor
PhD, University of North Carolina-Chapel Hill

Kumar, Prerna
Assistant Professor

PhD, Jawaharlal Nehru University, India

Kumler, David R
Instructor
PhD, University of Washington

Kunen, Benjamin N
Assistant Professor
MD, Tulane University

Kunze, Peter C
Assistant Professor
PhD, University of Texas at Austin

Kwaske, Ilianna
Professor of Practice
PhD, Illinois Institute of Technology

Kyomuhangi, Irene
Postdoc Fellow

L

Labbe, Andre
Instructor
MS, Ola Grimsby Institute

Lacey, michelle R
Professor
PhD, Yale University

Lackey, Jeffrey
Associate Professor
MD, Uniformed Services University

Lafaye, Kristina Mathews
Assistant Professor
MD, Tulane University

Lalka, Robert T
Professor of Practice
MAST-Other, Duke University

Landry, Michael D
Associate Professor
MD, Tulane University

Landry, Samuel J
Professor
PhD, Louisiana State University

Lane, Kris Eugene
Professor
PhD, University of Minnesota-Twin Cities

Lang, Julia Schneider
Professor of Practice
MS, Oregon State University

Lara Reyes, Mabel
Instructor
BA, University of San Agustin, Peru

Laroche, Carla
Associate Professor
JD, Columbia University

Larrieu, Julie A
Professor
PhD, Purdue University

Larson, Herbert Victor
Senior Professor of Practice
JD, Loyola University - New Orleans

Lasky, Joseph A
Professor
MD, University of Minnesota-Twin Cities

LaVeist, Thomas A
Dean
PhD, University of Michigan

LaViers, Lisa
Assistant Professor
PhD, Emory University

Laviolette, Cynthia
Instructor
MAST-Other, University of Colorado-Denver

Lawson, Adam B
Assistant Professor
PhD, University of Colorado-Denver

Lawson, Louise B
Assistant Professor
PhD, Tulane University

Lay, Jennifer Celeste (Celeste)
Professor
PhD, University of Maryland, College Park

Lazar, Zachary Lane
Professor
MFA, University of Iowa

Le Jemtel, Thierry
Professor
MD, University of Rouen - France

Leak, Halima
Professor of Practice
PhD, New York University

Leavey, Jamie H
Postdoc Fellow

Leber, Andrew M
Assistant Professor
PhD, Harvard University

Ledet, Elisa Marie
Instructor
PhD, Louisiana State University

LeDoux, Elma Ireland
Professor
MD, Tulane University

Lee, Hyemin
Postdoc Fellow

Lee, Katharine
Assistant Professor
PhD, University of Illinois at Urbana-Champaign

Lee, Norman Mau
Instructor
MA, University of Queensland - Australia

Lee, Sean Bong
Associate Professor
PhD, SUNY-Downstate Medical Center

Lee, Seoungwoo
Assistant Professor
PhD, University of Maryland, College Park

Lefante, John J Jr.
Professor
PhD, University of Alabama at Birmingham

Legshe, Ngawang
Clinical Assistant Professor
MSW, Tulane University

Leguizamon, Amalia
Associate Professor
PhD, City University - England

Lei, Ming
Visiting Assistant Professor
PhD, Purdue University

Leissinger, Cindy A
Professor
MD, Tulane University

Lepingwell, Carlotta
Clinical Assistant Professor
JD, University of Ottawa - Canada

Leslie, Camilo A
Assistant Professor
PhD, University of Michigan

Lesmond, David Anthony
Associate Professor
PhD, Buffalo State College (SUNY)

Leung, Wai Lun (Eugina)
Assistant Professor
PhD, Erasmus University, The Netherlands

Levy, Maxwell H
Assistant Professor
MD, Tulane University

Levy, Rachel K
Visiting Assistant Professor
MFA, California Institute of the Arts

Levy, Shauna
Assistant Professor
MD, University of Texas at Austin

Lewis, Brian E
Assistant Professor
MD, Tulane University

Lewis, JeyDah
Instructor
DNP, Loyola University - New Orleans

Lewis, Joshua
Research Associate Professor
PhD, Stockholm University, Stockholm, Sweden

Lewis, Marva Leatrice
Associate Professor
PhD, University of Colorado-Boulder

Lewis, Nghana T
Associate Professor
PhD, University of Illinois at Urbana-Champaign

Ley, Sylvia H
Assistant Professor
PhD, University of Toronto - Canada

Li, Changwei
Assistant Professor
PhD, Tulane University

Li, Jian
Associate Professor
PhD, North Carolina State University-Raleigh

Li, Kun
Postdoc Fellow

Li, Lin
Postdoc Fellow

Li, Ming
Associate Professor
PhD, Shanghai Jiaotong University, China

Li, Shitao
Associate Professor
PhD, Wuhan University

Li, Simin
Assistant Professor
PhD, Northwestern University

Li, Xiang
Postdoc Fellow

Li, Xiao
Associate Professor
MD, Guangxi Medical University

Li, Xiaoyue
Assistant Professor
PhD, University of Michigan

Li, Xingyu

Postdoc Fellow

Li, Yiping
Professor
PhD, Shanghai Institution of Biochemistry

Li, Yuanyuan
Postdoc Fellow

Li, Yuke
Postdoc Fellow

Li, Yuwen
Assistant Professor
PhD, Tulane University

Lightle, Austin
Visiting Assistant Professor
MA, Southern California Insititute of Architecture

Liles, Andrew M
Visiting Assistant Professor
MARCH, Tulane University

Lim, Lauren
Assistant Professor
MD, Tulane University

Limbach, Kristen E
Assistant Professor
MD, Case Western Reserve University

Limbaugh, Michelle J
Clinical Assistant Professor
MD, LSU Health Sciences Center - Shreveport

Limbaugh, Robert Stone
Assistant Professor
MD, University of South Alabama

Lin, Dong
Instructor
PhD, Peking University, China

Lin, Tiffany
Associate Professor
MARCH, Harvard University

Lin, Yilu
Research Assistant Professor
PhD, Tulane University

Lin, Zhen
Associate Professor
MD, University of Iowa

Linden, Callie A
Assistant Professor
MD, University of Louisville

Lindsey, Sarah H
Associate Professor
PhD, Louisiana State University

Lipman, Jana Kate
Professor
PhD, Yale University

Lipp, Christopher J
Professor of Practice
MA, San Francisco State University

Lipton, Ann Meredith
Associate Professor
JD, Harvard Law School

Liu, Gang
Instructor
PhD, Yang Zhou University

Liu, Hong
Associate Professor
PhD, Hong Kong Polytechnic, China

Liu, Hongbing
Assistant Professor
PhD, Hong Kong Polytechnic

Liu, Jiao
Assistant Professor
MD, Jianghan University, China

Liu, Nianli
Postdoc Fellow

Liu, Ning
Assistant Professor
PhD, Hunan Normal University, China

Liu, Xiaowen (Kevin)
Professor
PhD, City University of Hong Kong

Liu, Yaozhong
Associate Professor
PhD, Creighton University

Liu, Zhan
Postdoc Fellow

Locke, Marie C
Instructor
MA, Loyola University - New Orleans

Londono-Renteria, Berlin L
Assistant Professor
PhD, Tulane University

Long, Wei
Associate Professor
PhD, Texas A&M University

Longmire, Natalie H
Assistant Professor
PhD, University of Texas at Austin

Longo, Michele T
Assistant Professor
MD, Tulane University

Loomis, Ilia D
Visiting Assistant Professor
BFA, New York University

Lopreore, Courtney Lynn
Senior Professor of Practice
PhD, University of Texas at Austin

Love, Mary Casey
Senior Professor of Practice
PhD, Tulane University

Lovelace, Bruce
Assistant Professor
MD, Louisiana State University-Shreveport

Loveless, Megwen May
Senior Professor of Practice
PhD, Harvard University

Lovre, Dragana
Associate Professor
MD, St. Matthew's University, Cayman Islands

Lowell, Devin A
Clinical Assistant Professor
JD, Tulane University

Lu, Hua
Professor
PhD, Rutgers, The State University of NJ

Lu, Xin
Assistant Professor
PhD, Nanyang Technological University

Lu, You
Postdoc Fellow

Lu, Yue (Zoe)
Assistant Professor
PhD, University of Wisconsin-Madison

Luk, Alfred
Assistant Professor
MD, Tulane University

Lukacs, Katalin
Professor of Practice
DMA, University of California-San Diego

Luke, Celeste
Assistant Professor
MD, LSU Health Sciences Center - New Orleans

Lukkarila, Lauren P
Senior Professor of Practice
PhD, Georgia State University

Lund, Andrew R
Visiting Assistant Professor
PhD

Luo, Dan
Visiting Assistant Professor
PhD, Temple University

Luongo, Francis Thomas
Associate Professor
PhD, University of Notre Dame

Lushtak, Faina
Professor
MS, Moscow Tchaikowsky Conservatory, Russia

Lusnia, Susann Sowers
Associate Professor
PhD, University of Cincinnati

Lustig, Arthur J
Professor
PhD, University of Chicago

Lustig, Nora
Professor
PhD, University of California, Berkeley

Lyon, Christopher J
Assistant Professor
PhD, University of California

M

Ma, Wenbo
Postdoc Fellow

MacGowan, Taylor Ashley
Instructor
MA, Tulane University

Machado, Heather L
Associate Professor
PhD, Tulane University

Machio Gomez De Tejada, Marta
Instructor
MA, Southeastern Louisiana University

Maclean, Andrew
Associate Professor
PhD, University of Glasgow - Scotland

Mai, Anh V
Assistant Professor
MD, University of Missouri-Kansas City

Maity, Sudipa
Postdoc Fellow

Majid, Dewan
Professor
PhD, University of Leeds - England

Makelarski, Jennifer
Clinical Assistant Professor
PhD, University of Iowa

Malhotra, Sonia
Associate Professor

MD, Ross University - Medical School

Malone, Missy
Professor of Practice
PhD, Louisiana State University

Maness, Nicholas J
Associate Professor
PhD, University of Wisconsin-Madison

Manguno-Mire, Gina M
Associate Professor
PhD, Louisiana State University

Manirujjaman, Md
Postdoc Fellow

Manuzak, Jennifer A
Assistant Professor
PhD, University of Colorado-Denver

Maraganore, Demetrius
Professor
MD, Northwestern University

Marcev, Victoria McAdam
Instructor
MSN, University of South Alabama

Marcus, Adam
Associate Professor
MARCH, Columbia University

Markant, Julie Christina
Associate Professor
PhD, University of Minnesota-Twin Cities

Marks, Laura
Senior Professor of Practice
PhD, Louisiana State University

Maroteaux, Matthieu J
Research Assistant Professor
PhD, Pierre and Marie Curie University, Paris, France

Marrouche, Nassir
Professor
MD, Heidelberg University

Marshall, Allison N
Research Assistant Professor
PhD, University of Massachusetts-Amherst

Marshall, Richard H
Assistant Professor
MD, Tulane University

MARTIN, EDWARD J III
Clinical Assistant Professor
MD, Tulane University

Martin, Elizabeth
Associate Professor
PhD, Tulane University

Martin, Murphy P
Assistant Professor
MD, Louisiana State University

Martinez Lege, Alejandra N
Assistant Professor
PhD, Oswaldo Cruz Foundation

Masquelier, Adeline M
Professor
PhD, University of Chicago

Matambanadzo, Sarudzayi M
Associate Professor
PhD, University of California (UCLA)

Matsunaga, Yasuka
Postdoc Fellow

Mattei, Nicholas
Assistant Professor
PhD, University of Kentucky

Matter, Michelle L
Professor
MD, Louisiana State University

Mattes, Katherine M
Clinical Professor
JD, University of San Diego

Mauldin, Brandon
Assistant Professor
MD, Florida State University

Maulucci, Christopher Michael
Associate Professor
MD, New York College of Health Professions

Maus, Aaron P
Professor of Practice
PhD, University of New Orleans

Mauvais-Jarvis, Franck
Professor
PhD, University of Paris Sud - France

Maveety, Nancy
Professor
PhD, Johns Hopkins University

Maxwell, Judith M
Professor
PhD, University of Chicago

May, Jonathan Horace
Assistant Professor
MD, University of Arkansas For Medical Sciences

Mayer, Vicki A
Professor
PhD, University of California-San Diego

Maylin, Marlowe M

Assistant Professor
MD, Louisiana State University

Mays, Dana C
Clinical Assistant Professor
MD, Louisiana State University

Mayville, Mary
Instructor
PhD, Northeastern University

Mazza, Anthony P
Instructor
MS, Louisiana State University

Mazzuca, Guido
Postdoc Fellow

Mcbride, Jesse B
Senior Professor of Practice
BACH-Other, Tulane University

McBride, Ryan Kenneth
Senior Professor of Practice
PhD, Marquette University

McCall, Grant S
Associate Professor
PhD, University of Iowa

McCammon, Muira N
Assistant Professor
PhD, University of Pennsylvania

McCarden, Khrista
Associate Professor
JD, Harvard Law School

Mccarren, Felicia
Professor
PhD, Stanford University

McCaul, Gerard
Postdoc Fellow

McClure, Brian Patrick
Assistant Professor
MD, Louisiana State University

McClure, Kelly A
Professor of Practice
EdD, Boston University

McCluskey, Leland C
Assistant Professor
MD, Mercer University

McCombs, Janet E
Assistant Professor
PhD, University of Colorado-Boulder

McConnell, Matthew
Postdoc Fellow

McConville, James Brad
Assistant Professor
MD, University of Iowa

McCoy-Torres, Sabia
Assistant Professor
PhD, Cornell University

McDowell, Andrew J
Assistant Professor
PhD, Harvard University

McDuffie, Roberta H
Instructor
MSN, University of South Alabama

McEvoy, Timothy Graham
Clinical Assistant Professor
JD, American University

McFadden, Bernice L
Assistant Professor
MFA, Saint Joseph's College

Mcginness, Clifton L
Associate Professor
MD, Tulane University

McGraw, Kathleen (Kathy Oqueli)
Clinical Assistant Professor
PhD, Tulane University

McGrew, Patrick R
Assistant Professor
MD, Louisiana State University

McKeown, Adam
Professor
PhD, New York University

McKinley, Catherine E
Associate Professor
PhD, University of Iowa

McKinley, Scott Alister
Associate Professor
PhD, The Ohio State University

McKinney, Laura A
Associate Professor
PhD, North Carolina State University-Raleigh

Mclachlan, James B
Associate Professor
PhD, Duke University

Mclachlan, John A
Professor
PhD, George Washington University

McLane, Louis T
Senior Professor of Practice
PhD, Georgia Institute of Technology

McLaughlin, Kenneth D

Professor
PhD, New York University

McLean, Timothy Irvin
Senior Professor of Practice
PhD, University of North Carolina-Chapel Hill

McLennan, Kay L
Senior Professor of Practice
PhD, University of Nebraska-Lincoln

Mcmahon, Elisabeth Mary
Associate Professor
PhD, Indiana University-Bloomington

McNamara, Brian K
Professor of Practice
LLM, Tulane University

McSkimming, Alexander J
Assistant Professor
PhD, University of New South Whales, Australia

Meadows, Stryder
Associate Professor
PhD, University of Arizona

Medvedev, Gleb
Assistant Professor
MD, Tulane University

Meekers, Dominique A
Professor
PhD, University of Pennsylvania

Melnik, Lilia
Assistant Professor
PhD, Tulane University

Melton, Pamela A
Professor of Practice
DSW, Tulane University

Menard, Geraldine Elizabeth
Associate Professor
MD, Northwestern University

Mercein, Jennifer
Associate Professor
MFA, University of Washington

Merington, Larry Lee
Professor of Practice
MAST-Other, St Edwards University

Meselhe, Ehab
Professor
PhD, University of Iowa

Mettu, Ramgopal
Associate Professor
PhD, University of Texas at Austin

Metzinger, Rebecca C.
Associate Professor
MD, University of Michigan

Michaels, Kenneth W
Associate Professor
MARCH, Harvard University

Michaels, Sarah R
Clinical Assistant Professor
PhD, Tulane University

Michalewicz, Leszek
Assistant Professor
MD, Jagiellonian University

Middleton, Melissa A
Assistant Professor
PhD, University of Central Florida

Mignot, Charles
Senior Professor of Practice
PhD, University of Texas at Austin

Mihans II, Richard John
Senior Professor of Practice
PhD, University of North Carolina-Greensboro

Miles, Corey J
Assistant Professor
PhD, Virginia Polytech Institute & State University

Miletello, Sarah E
Assistant Professor
MD, Baylor University

Miller, Charles Albert III
Professor
PhD, New York University

Miller, Marilyn Grace
Professor
PhD, University of Oregon

Miller, Robert A
Assistant Professor
MD, Tulane University

Mills, Katherine Teresa
Associate Professor
PhD, Tulane University

Mincheva, Kalina
Assistant Professor
PhD, Johns Hopkins University

Ming, Jiang
Assistant Professor
PhD, Penn State University

Mirzoy, Silai
Clinical Assistant Professor
MD, Indiana University School Of Medicine

Mishra, Anil

Professor
PhD, Chhatrapati Shahu Ji Maharaj University, India

Mishra, Saikat
Postdoc Fellow

Mitchell, Kenneth D
Professor
PhD, University of Edinburgh - Scotland

Mitchell, Tyra
Professor of Practice
DPT, Emory University

Mochon, Daniel
Associate Professor
PhD, Massachusetts Institute of Technology

Mock, Nancy B
Associate Professor
DPH, Tulane University

Molini, Annalisa
Associate Professor
PhD, University of Genoa, Italy

Molix, Lisa A
Associate Professor
PhD, University of Missouri - Columbia

Moll, Victor H
Professor
PhD, New York University

Monaco Caterine, Mallory A
Senior Professor of Practice
PhD, Princeton University

Mondrinos, Mark
Assistant Professor
PhD, Drexel University

Money, Shanna E
Instructor
MSN, Northwestern State University, Shreveport, Louisiana

Montagnino, Jami
Assistant Professor
MD, Tulane University

Montanari, Christian
Research Assistant Professor
PhD, Sapienza University of Rome

Montemore, Matthew
Assistant Professor
PhD, University of Colorado-Boulder

Moon, Durward T (Troy)
Professor
MD

Moore, Michael James
Professor
PhD, Mayo Clinic, College of Medicine

Mora, Arthur M
Clinical Professor
PhD, Tulane University

Morici, Lisa A
Professor
PhD, University of California, Berkeley

Morici-Embers, Monica E
Associate Professor
PhD, Penn State University

Moroz, Krzysztof
Professor
MD, Academy of Medicine, Poland

Moroz, Stanislav
Clinical Assistant Professor
JD, New York University

Morrell, Kelli C
Instructor
MSN, Loyola University - New Orleans

Morris, Cindy A
Professor
PhD, Emory University

Morris, Gilbert F
Associate Professor
PhD, Florida State University

Morris, Kevin Michael
Associate Professor
PhD, Brown University

Morrison, David G
Assistant Professor
PhD, Baylor College of Medicine

Morrison, Vivianne E
Postdoc Fellow

Morrow, Nathan
Research Associate Professor
MA, Boston University

Morshed, Adnan
Postdoc Fellow

Morton, Jonathan
Associate Professor
PhD, Oxford Graduate School

Moses, Lina M
Clinical Associate Professor
PhD, Tulane University

Moskowitz, Golan
Assistant Professor
PhD, Brandeis University

Moss, Lolita T

Research Assistant Professor
PhD, University of Michigan

Mostany, Ricardo
Professor
PhD, University of Leon, Spain

Moududee, Sayed
Postdoc Fellow

Moustafa, Ahmed
Postdoc Fellow

Mouton, Byron J
Senior Professor of Practice
MARCH, Harvard University

Mudd, Joseph
Assistant Professor
PhD, Case Western Reserve University

Mukerjee, Kimberly A
Assistant Professor
MD, University of Washington

Mullin, David A
Associate Professor
PhD, University of Texas at Austin

Mumtaz, Madiha
Postdoc Fellow

Mund, Joshua R (Josh)
Visiting Assistant Professor
PhD, University of Wisconsin-Madison

Mundy, Barbara E
Professor
PhD, Yale University

Murakami, Tatsuya
Associate Professor
PhD, Arizona State University

Murdock-Hinrichs, Isa
Senior Professor of Practice
PhD, University of California-San Diego

Murina, Andrea T
Professor
MD, Louisiana State University

Murphy, Devi
Associate Professor
PhD, Tulane University

Murphy, Stephen A
Assistant Professor
PhD, Tulane University

Murray, Damian
Associate Professor
PhD, University of British Columbia - Canada

Murray, Ian J
Instructor
JD, New York Law School

Mushatt, David M
Professor
MD, Harvard University

Muthukrishnan, Pradeep
Assistant Professor
PhD, Cornell University

Myers, Adam K
Instructor
DVM, Western University of Health Sciences

Myers, Sheila Carol
Clinical Assistant Professor
JD, Tulane University

Myint, Myo Thwin
Associate Professor
MD, Virginia Commonwealth University

N

Naguib, Michael
Associate Professor
PhD, Drexel University

Nakhle, Asaad
Assistant Professor
MD, Damascus University

Nakhoul, Nazih L
Associate Professor
PhD, American University of Beirut - Lebanon

Narayanamoorthy, Ganapathi S
Professor
PhD, University of Rochester

Narayanan, Jaishree T
Instructor
PhD, University of Illinois at Urbana-Champaign

Naresh, Amber
Associate Professor
MD, Tulane University

Naruse, Cheryl Narumi
Assistant Professor
PhD, University of Hawaii at Manoa

Nash, Nicole
Assistant Professor
MD, University of Arkansas For Medical Sciences

Nastasi, Bonnie Kaul
Professor
PhD, Kent State University

Navar, Luis G
Professor
PhD, University of Mississippi

Navarro, Wendy
Instructor
MSN, Southern University A&M College

Neighbors, Harold W
Research Professor
PhD, University of Michigan

Nelson, Ashley Keller
Senior Professor of Practice
MBA, Tulane University

Nelson, Douglas R
Professor
PhD, University of North Carolina-Chapel Hill

Nesbitt, Jason Sean
Associate Professor
PhD, Yale University

Nessen, Michelle
Instructor
MD, University of Rochester

Newby, Celeste
Clinical Assistant Professor
MD, Tulane University

Nguyen, Dinh Truong
Postdoc Fellow

Nguyen, Jeremy Binh
Professor
MD, University of Texas at Austin

Nguyen, Trung L
Professor of Practice
PhD, Penn State University

Nice, Johanna K
Research Assistant Professor
PhD, Tulane University

Nicholl, Jeffrey S
Associate Professor
MD, Georgetown University

Nicosia, Roberto
Senior Professor of Practice
PhD, Rutgers, The State University of NJ

Ning, Bo
Assistant Professor
PhD, Peking University, China

Ning, Jinliang
Research Assistant Professor
PhD, Yanshan University

Nisar, Muhammad Azhar (Azhar)
Postdoc Fellow

Niu, Tianhua
Assistant Professor
SCD, Harvard University

Niyogi, Anjali
Associate Professor
MD, Tulane University

Noh, Grace Stuhrman
Instructor
MS, Georgia State University

Nolan, Scott
Professor of Practice
MA, University of New Orleans

Norton, Elizabeth B
Associate Professor
PhD, Tulane University

Nuss, Leah S
Assistant Professor
MD, Tulane University

O

O'Brien, Laurie T
Professor and Chair
PhD, University of Kansas

O'Brien, Michael J
Professor
MD, Tulane University

O'Malley, Keelia M
Clinical Assistant Professor
PhD, Tulane University

O'Neill, Patrick
Professor
MD, Creighton University

Oatley, Thomas H
Professor
PhD, Emory University

Oberhelman, Richard A
Professor
MD, University of Texas-Southwestern Medical Center

OBrien, David
Assistant Professor
PhD, University of Wisconsin-Madison

Ocasio, Manuel A
Assistant Professor
PhD, University of Miami

Occhipinti, Kaitlin
Clinical Assistant Professor
MD, Louisiana State University

Ochoa, Ana M
Professor and Chair
PhD, Indiana University-Bloomington

Oconnor, Kim C

Professor
PhD, California Institute of Technology

Oddo, Emilia
Associate Professor
PhD, University of Cincinnati

Ofengenden, Ari
Senior Professor of Practice
PhD, University of Haifa, Israel

Oklobdzija, Stan N
Assistant Professor
PhD, University of California-San Diego

Oldenburg, Scott Keith
Professor
PhD, SUNY at Buffalo

Oliver, Christopher Scott
Senior Professor of Practice
PhD, Michigan State University

Oliveros, Virginia
Associate Professor
PhD, Columbia University

Olondo, Javier Adrian
Instructor
MA, Mozarteum University of Salzburg, Austria

Olson, Mary K
Associate Professor
PhD, Stanford University

Omerbasic, Delila
Senior Professor of Practice
PhD, University of Utah

Orie, Kenneth K
Clinical Assistant Professor
PhD, Mcgill University - Canada

Oruganti, Lokanatha
Postdoc Fellow

Orzel, Charlotte H
Visiting Assistant Professor
PhD, University of California-Santa Barbara

Ostertag, Stephen F
Associate Professor
PhD

Ottaiano, Rebecca J
Instructor
PhD

Otte, Marline Syeta
Associate Professor
PhD, University of Toronto - Canada

Otten, Christopher Gerald
Professor of Practice
JD, Loyola University - New Orleans

Otten, Rebecca M
Professor of Practice
MPH, Tulane University

Oueis, Yanal
Postdoc Fellow

Overstreet, Stacy
Professor
PhD, Tulane University

Owen, Graham Warwick
Associate Professor
MAST-Other, Harvard University

Owens, Jonathan
Assistant Professor
MD, Baylor College of Medicine

Ozcan, Esra
Senior Professor of Practice
PhD, Jacobs University, Germany

P

Palani, Surya
Postdoc Fellow

Palhares Acacio, Igor Daniel
Postdoc Fellow

Palmer, Clovis S
Assistant Professor
PhD, University of Sydney

Palmer, Vernon V
Professor
PhD, University of Oxford - England

Palomino, Jaime
Associate Professor
MD, University of Valle - Colombia

Pan, Yang
Assistant Professor
PhD, University of Maryland, College Park

Pan, Yongchun
Postdoc Fellow

Pandey, Amitabh C
Assistant Professor
MD, Tulane University

Pandey, Kailash N
Professor
PhD, University of Kentucky

Panganiban, Antonito T
Professor
PhD, University of Washington

Panner Selvam, Manesh Kumar

Instructor
PhD, Tamil Nadu Veterinary and Animal Sciences University

Panteri, Sara
Instructor
MA, University of Michigan

Papadopoulos, Dimitri
Visiting Assistant Professor
MA, Tulane University

Papadopoulos, K
Professor
PhD, Columbia University

Parada, Nereida A
Associate Professor
MD, Columbia University

Paramesh, Anil S
Professor
MD, Kasturba Medical College, India

Park, Heewon
Associate Professor
PhD, University of Texas at Austin

Park, Hyun
Visiting Assistant Professor
PhD, University of Kansas

Parker, Ashlin M
Professor of Practice
MAST-Other, University of New Orleans

Parker, Hazel S
Professor of Practice
PhD, University of New Orleans

Clinical Associate Professor
PhD, Tulane University

Parthasarathy, Geetha
Assistant Professor
PhD, Michigan State University

Parvatiyar, Kislay
Assistant Professor
PhD, University of Miami

Pascal, Robert Anthony Jr.
Professor
PhD, Rice University

Patruno, Luigi
Visiting Assistant Professor
PhD, Harvard University

Pavlovic, Tatjana
Professor
PhD, University of Washington

Payne, Monica A
Assistant Professor
MFA, University of California (UCLA)

Paz Soldan, Valerie A
Associate Professor
PhD, University of North Carolina-Chapel Hill

Peacock, Erin Marjorie
Assistant Professor
PhD, Tulane University

Pealer, Casius Henry
Senior Professor of Practice
JD, University of Michigan

Pearson, Benjamin
Visiting Assistant Professor
PhD, University of Michigan

Pearson, Kristen E
Assistant Professor
PhD, Duquesne University

Pearson, Leslie R
Visiting Assistant Professor
MAST-Other, College of Charleston

Pejic, Rade Nicholas
Associate Professor
MD, Tulane University

Peng, Lu
Professor
PhD, University of Florida

Peng, Peisong
Postdoc Fellow

Perdew, Adrienn Ruzsinszky
Professor
PhD, Budapest University of Technology and Economics

Perdew, John P
Professor
PhD

Perdios, Chrysostomos (Chrys)
Postdoc Fellow

Perepelitsa, Victoria P
Associate Professor
PhD, Tulane University

Perez, Sarah R
Assistant Professor
MD, Louisiana State University

Perrin, Nicholas E
Visiting Assistant Professor
MARCH, University of Pennsylvania

Perro, Ebony
Professor of Practice
PhD, Clark Atlanta University

Perry, Laura M
Assistant Professor
PhD, Tulane University

Pesika, Noshir Sheriar
Associate Professor
PhD, Johns Hopkins University

Peters, Ryan H
Assistant Professor
PhD, University of Pennsylvania

Petersdorf, Megan
Postdoc Fellow

Peterson, Tim Gerard
Clinical Assistant Professor
MD, Louisiana State University

Pfister, Blair A
Assistant Professor
MD, LSU Health Sciences Center - Shreveport

Pfrimmer, Amy Elizabeth
Associate Professor
MAST-Other, Loyola University - New Orleans

Pham, Andrew Anh Quan
Assistant Professor
MD, Tulane University

Phillips, Elizabeth M
Assistant Professor
MD, Escuela Latinoamericana De Medicina, Cuba

Pi, Liya
Assistant Professor
PhD, University of Florida

Piacun, Marsha Emerman
Clinical Assistant Professor
MBA, Loyola University - New Orleans

Piedimonte, Giovanni
Vice President
MD, La Sapienza School of Medicine

Pierre, Nakeisha Landry
Associate Professor
MD, Louisiana State University

Pinder, Jolene B
Professor of Practice
MA, University of Florida

Plante, Michael
Associate Professor
PhD, Brown University

Plessy, Kasia
Assistant Professor
PhD, Louisiana State University

Pletsch, Gayle R
Assistant Professor
MD, Tulane University

Poche, Eric James
Professor of Practice
PhD, Louisiana State University

Pociask, Derek
Assistant Professor
PhD, Louisiana State University

Podewell, Jessica
Senior Professor of Practice
MFA, The Ohio State University

Poinson, Brittany L
Assistant Professor
MD, Howard University

Pollard, Kevin James
Research Assistant Professor
PhD, Tulane University

Pollock, Linda A
Professor
PhD, University of Saint Andrews - Scotland

Ponds, Maryl K
Postdoc Fellow

Pope, Helen E
Assistant Professor
MD, University of Iowa

Porras, Stephanie
Professor and Chair
PhD, Courtauld Institute of Art, United Kingdom

Porretta, Constance P
Instructor
BS, James Madison University

Porter, Norma S
Instructor
DNP, University of Alabama at Birmingham

Porto, Mauro P
Professor and Chair
PhD, University of California-San Diego

Potash, Mordecai N
Associate Professor
MD, New York Medical College

Potter, Clara J
Clinical Assistant Professor

JD, New York University

Powers, Mark D
Professor of Practice
JD, Southern Methodist University

Prasad, Ambika
Lecturer
PhD, University of North Texas

Prasad, Smita R
Assistant Professor
MD

Pratt, Coleman S
Assistant Professor
MD, The American University of The Caribbean School of Medicine

Prefume, Duane J
Professor of Practice
BA, Loyola University - New Orleans

Prestenback-Dufrene, Lisa
Instructor
MA, Southern University New Orleans

Price, Karisma
Assistant Professor
MFA, New York University

Pridjian, Gabriella
Professor
MD, Medical College of Wisconsin

Prieto, Minolfa C
Associate Professor
PhD, Tulane University

Prilmeier, Robert
Associate Professor
PhD, The Ohio State University

Priore, Richard J
Clinical Associate Professor
SCD, Tulane University

Pritchett, Jonathan B
Professor
PhD, University of Chicago

Proctor, III, John F. Rayfield
Assistant Professor
PhD, University of Wisconsin-Madison

Prowse, Gwen
Assistant Professor
PhD, Yale University

Puett, Catherine
Instructor
MSW, Tulane University

Punshon-Smith, Samuel
Assistant Professor
PhD, University of Maryland, College Park

Pursell, Zachary F
Associate Professor
PhD, University of California, Berkeley

Q

Qadir, Mirza Muhammad Fahd
Postdoc Fellow

Qi, Lu
Professor and Chair
PhD, Tufts University

Qin, Xuebin
Professor
MD

Qiu, Chuan
Assistant Professor
PhD, Tulane University

Quinn, Kelly H
Instructor
MS, University of Alabama at Birmingham

Quintana, Micaela
Visiting Assistant Professor
MA, University of California-Riverside

R

Rabinowitz, Mark J
Visiting Professor
BA, Rhode Island School of Design

Rabito, Felicia A
Professor
PhD, Tulane University

Rabon, Justin M
Instructor
MD, Georgetown University

Rachal, Laura C
Assistant Professor
MD, Tulane University

Rae, Guenevere
Associate Professor
PhD, Louisiana State University

Rafail, Patrick
Associate Professor
PhD, Penn State University

Raga-Comes, Maria Asuncion
Instructor
MA, Universidad De Valencia, Spain

Rahman, Md Mostafijur
Assistant Professor
PhD, New York University

Rains, Emily
Assistant Professor
PhD, Duke University

Rajan, Latha
Clinical Associate Professor
MD, All India Institute of Medical Sciences, India

Rallabandi, Kalyan C
Visiting Assistant Professor
PhD, University of California (UCLA)

Ramer, Samuel C (Sam)
Associate Professor
PhD, Columbia University

Ramirez, Angela M
Lecturer
LLM, Tulane University

Ramirez, Shokufeh M
Clinical Assistant Professor
PhD, Tulane University

Rando, Roy J
Professor
SCD, Tulane University

Rao, Swati N
Assistant Professor
MD, University of Utah

Rappaport, Jay
Director
PhD, University of Pennsylvania

Ratchford, Mark
Professor of Practice
PhD, University of Colorado-Boulder

Ray, Laurie C
Instructor
MSN, Louisiana State University

Rayapati, Pratibha
Assistant Professor
MD, Georgia Regents University

Raybon, Curtis L Jr.
Associate Professor
DMA, Louisiana State University

Raymond, Katherine Kleinpeter
Senior Professor of Practice
PhD, Tulane University

Redfield, Wendeline Harriet
Associate Professor
MARCH, University of Virginia

Reed, Nicole C
Instructor
RN, University of South Alabama

Reed, Rustin J
Clinical Assistant Professor
PhD, University of Arizona

Reed, Wayne F
Professor
PhD, Clarkson University

Reers, Ashley
Postdoc Fellow

Reese, Carol Mcmichael
Professor
PhD, University of Texas at Austin

Reese, Thomas F
Executive Director
PhD, Yale University

Reese, William Arthur Jr.
Professor of Practice
PhD, University of Arizona

Regenstein, Fredric Gary
Professor
MD, Washington University

Regueiro Suarez, Maria del Pilar
Postdoc Fellow

Remer, Gary
Professor
PhD, University of California (UCLA)

Remer, Karen Weissbecker
Associate Professor
PhD, Virginia Commonwealth University

Reuber, Alexandra Maria
Senior Professor of Practice
PhD, Louisiana State University

Reyes, Aurelio N
Assistant Professor
MD, Universidad Autonoma De Centro America

Reynaud, Peter
Clinical Assistant Professor
MD, Louisiana State University

Reza, Md Selim
Postdoc Fellow

Rials, William Theodore
Senior Professor of Practice
PhD, Jackson State University

Ribeiro, Renata D
Senior Professor of Practice
PhD, University of Missouri-St. Louis

Ricchiuti, Peter Francis
Senior Professor of Practice
MBA, University of New Orleans

Rich, Nathaniel
Visiting Assistant Professor
BA, Yale University

Richardson, Sally
Interim Dean
JD, Louisiana State University

Riedel, Norbert
Associate Professor
PhD, Technische Universitt Mnchen, Germany

Righi, Shannon Esher
Assistant Professor
PhD, Duke University

Rincon, Lourdes Y
Instructor
PhD, New Orleans Baptist Theological Seminary

Rink, John
Instructor
BS, University of Alabama at Birmingham

Rioja, Felix
Professor
PhD, Arizona State University

Rivera Diaz, Fernando Cesar
Associate Professor
PhD, Princeton University

Rivera Montes, Zorimar
Assistant Professor
PhD, Northwestern University

Rivero Bryant, Inga D
Lecturer
MS, Tulane University

Roberts, John E III
Assistant Professor
MD, Tulane University

Roberts, Madhur
Assistant Professor
MD, St George's University, School of Medicine - Grenada

Robinson, David
Professor of Practice
MFA, Tulane University

Robinson, Dean Edward
Associate Professor
MD, Louisiana State University

Robinson, James E
Professor
MD, Tulane University

Robinson, Martha M
Assistant Professor
MD, University of Kentucky

Rodning, Christopher Bernard
Professor
PhD, University of North Carolina-Chapel Hill

Rodriguez, David
Visiting Assistant Professor
MFA, Florida State University

Rodriguez, Raoul P
Professor
MD, Tulane University

Romanelli, Michael R
Assistant Professor
MD, University of Kentucky

Romero, Maybell
Associate Professor
JD, University of California, Berkeley

Rose, Donald (Diego)
Professor
PhD, University of California, Berkeley

Roser, Cordula
Senior Professor of Practice
BARCH, Technical University of Berlin

Rossi, Mary Alice
Assistant Professor
MD, University of Texas-Southwestern Medical Center

Rothwell, William B
Assistant Professor
MD, Tulane University

Rouse, Jeffrey Christopher
Assistant Professor
MD, Georgetown University

Rouse, Rebecca
Professor of Practice
PhD, Colorado Technical University

Rout, Namita
Assistant Professor
PhD, Anna University, Chennai Area, India

Rowalt, William Z
Instructor
MSN, University of Alabama at Birmingham

Rowan, Brian G
Associate Professor
PhD, SUNY at Buffalo

Roy, Alphonse K (Ken)
Associate Professor
MD, Tulane University

Roy, Chad J
Professor
PhD, University of Iowa

Rozenbaum, Zach
Assistant Professor
MD, Semmelweis Medical University, Budapest

Rubin, Rebecca
Instructor
MSN, University of South Alabama

Rubtsov, Igor V
Professor
PhD, Russian Academy, Russia

Rugile, Timothy P
Assistant Professor
MD, Tulane University

Rupley, Daniel
Clinical Assistant Professor
MD, Louisiana State University

Ruscher, Janet Beth
Professor
PhD, University of Massachusetts-Amherst

Russell, Katie
Senior Professor of Practice
PhD, Tulane University

Russell-Lodrigue, Kasi
Associate Professor
DVM, Louisiana State University

Russo, Ralph R.
Senior Professor of Practice
MAST-Other, University of Phoenix

Rutherford, Holly
Assistant Professor
MD, Tulane University

Rutkai, Ibolya
Assistant Professor
PhD, University of Debrecen, Hungary

S

Saas, Meghan J
Professor of Practice
MFA, Louisiana State University

Saas, William
Senior Professor of Practice
PhD, Penn State University

Saba, Nakhle
Associate Professor
MD, Lebanese American University - Lebanon

Sabharwal, Nitin
Assistant Professor
MBBS (equivalent to MD), NKP Salve Institute of Medical Sciences

Sabino-Santos, Gilberto Jr
Postdoc Fellow

Sabo, John L
Professor
PhD, University of California, Berkeley

Sabo, Oana Anca
Associate Professor
PhD, University of Southern California

Sabzehzar, Amin
Assistant Professor
PhD, Arizona State University

Sackey, Michael Andrew
Senior Professor of Practice
JD, Washington & Lee University

Safah, Hana
Professor
MD, American University of Beirut - Lebanon

Saied, Ahmad
Associate Professor
PhD, Louisiana State University

Saito, Shigeki
Associate Professor
MD, University of Tokyo

Sakakeeny, Matt K
Associate Professor
PhD, Columbia University

Salbador, Debra
Professor of Practice
PhD, University of South Carolina

Salerian, Justin A
Assistant Professor
MD, Tulane University

Saltzman, Leia Y
Associate Professor
PhD, Boston College

Salvaggio, Mark (Marko)
Visiting Assistant Professor
PhD, University of Nevada-Las Vegas

Salyers, Jeffrey M
Professor of Practice
MBA, The Ohio State University

Samarov, Maxim
Senior Professor of Practice
DMA, Michigan State University

Sammarco, Mimi C
Assistant Professor
PhD, Louisiana State University

Sanchez Rojo, Ana P
Assistant Professor
PhD, University of Chicago

Sanchez, Fernando L
Professor
MD, Instituto De Ciencias De La Salud

Sanchez, Michelle Hewlett
Senior Professor of Practice
PhD, Stanford University

Sander, Gary Edward
Clinical Professor
PhD, Tulane University

Sanders, Sarah
Assistant Professor
MD, Louisiana State University

Sandoval, Antony F
Professor
MFA, University of Delaware

Sandoval, Nicholas Richard
Associate Professor
PhD, University of Colorado-Boulder

Santos, Tatiane
Assistant Professor
PhD, University of Colorado-Boulder

Sato, Ryosuke
Assistant Professor
PhD, Gifu University, Japan

Saunders, Richard J
Visiting Assistant Professor
MS, Florida State University

Savant, Adrienne P
Professor
MD, Eastern Virginia Medical School

Savkovic, Suzana
Associate Professor
PhD, University of Illinois at Chicago

Savoie, Felix H III
Professor and Chair
MD, Louisiana State University

Scalise, Ronald Joseph Jr.
Professor
LLM, University Cambridge - Trinity College - England

Scaraffia, Patricia Y
Associate Professor
PhD, National University of Cordoba, Argentina

Schieffelin, John S
Associate Professor
MD, Tulane University

Schippers, Mary Angela
Professor
PhD, University of Wisconsin-Madison

Schmehl, Russell
Professor
PhD, University of North Carolina-Chapel Hill

Schmid, Janet Lee
Associate Professor
MD, University of Minnesota-Twin Cities

Schmid, Karl T
Professor of Practice
PhD, Emory University

Schoellmann, Karis
Clinical Assistant Professor
MPH, Tulane University

Schoner, Rachel J
Assistant Professor
PhD, University of California-San Diego

Schrader-Kriek, Laura
Professor and Chair
PhD, Tulane University

Schuler, Timothy Michael
Senior Professor of Practice
PhD, Tulane University

Schwartz, Kenneth A
Executive Director
MARCH, Cornell University

Schwartzmann, Katharine M
Professor of Practice
JD, Tulane University

Schwarz, Lucia
Assistant Professor
PhD, University of Arizona

Sciaudone, Michael
Assistant Professor
MD, Northwestern University

Scott, John W Jr.
Assistant Professor
MD, University of Oregon

Scott, Leslie A
Associate Professor
MFA, California Institute of the Arts

Seal, David W
Professor
PhD, The University of New Mexico

Seely, Bryan P
Instructor
MPA, University of Florida

Seicshnaydre, Stacy Elizabeth
Professor and Vice Dean
JD, Tulane University

Sen, Abhijit
Postdoc Fellow

Senot, Claire
Associate Professor
PhD, The Ohio State University

Sensen, Oliver
Associate Professor
PhD, King's College - University of Cambridge - England

Serou, Michael J
Assistant Professor
MD, Louisiana State University

Settles, Lisa D
Assistant Professor
PSYD, University of Indianapolis

Shaffer, Jeffrey George
Assistant Professor
PhD, Tulane University

Shahi, Chandra
Postdoc Fellow

Shakov, Khazhgery Kh
Senior Professor of Practice
PhD, Tulane University

Shama, Mohamed A
Assistant Professor
MD, Cairo University, Egypt

Shamburger, Christopher
Assistant Professor
MD, University of South Alabama

Shank, Jessica J
Assistant Professor
MD, Tulane University

Shankar, Arti
Clinical Professor
PhD, Indian Institute of Technology, India

Shantz, Daniel
Professor
PhD, University of Delaware

Sharp, Daniel Benson
Associate Professor
PhD, University of Texas at Austin

Sharshir, Mohd A
Assistant Professor
MD, Odessa State Medical University, Ukraine

Sheats, Jylana L
Clinical Associate Professor
PhD, Indiana University-Bloomington

Sheffer, Marguerite L
Professor of Practice
EdD, Mills College

Sheffrin, Steven M
Professor
PhD, Massachusetts Institute of Technology

Shen, Hui
Professor
PhD, Creighton University

Sherman, Kimberly
Senior Professor of Practice
PhD, University of Rhode Island

Sherman, William F
Associate Professor
MD, Louisiana State University

Shi, Lizheng
Professor and Chair
PhD, University of Southern California

Shirvani Jouzdani, Ali Reza
Professor of Practice
PhD, University of Kentucky

Shom, Verse C
Professor of Practice
MS, Tulane University

Shuger, Dale Rachel
Associate Professor
MFA, New York University

Shukla, Ira
Assistant Professor
MD, Grant Government Medical College, India

Shwayri, Sofia T
Visiting Assistant Professor
PhD, University of California, Berkeley

Sibrack, Jeffrey D
Assistant Professor
MD, Tulane University

Sides, Mark D
Assistant Professor
MD, Case Western Reserve University

Sihota, Aanu K
Clinical Assistant Professor
MD, Karnatak University, Darwhad, India

Sikka, Suresh C
Professor
PhD, Postgraduate Institute of Medical Education and Research, India

Silio, Margarita
Associate Professor
MD, Universidad Central Del Este, Dominican Republic

Silva Acuna, Martha
Clinical Assistant Professor

PhD, Tulane University

Silva, Gustavo Eduardo
Professor
PhD, University of California-San Diego

Silvestre, Eva
Clinical Associate Professor
PhD, Tulane University

Simeone, Francesco
Clinical Associate Professor
MD, Universita Degli Studi Di Perugia

Simison, Emilia
Postdoc Fellow

Simmons, Cameron
Assistant Professor
MD, LSU Health Sciences Center - Shreveport

Simon, Eric Edward
Professor
MD, University of Chicago

Simonian, Yuri
Assistant Professor
MD, Institutul De Medicina Si Farmacie, Moldova

Simons, Jocelyn Nina
Postdoc Fellow

Simpson, Tina
Professor
MD, University of Alabama

Singaram, Vinod
Assistant Professor
MD, Case Western Reserve University

Singh, Anneliese A
Associate Provost
PhD, Georgia State University

Singh, Sanjay
Postdoc Fellow

Singletary, George B
Assistant Professor
MD, Creighton University

Singleton, Chelsea R
Assistant Professor
PhD, University of Alabama at Birmingham

Siodmak, Erin
Visiting Assistant Professor
PhD, CUNY Graduate Center

Skalak, Maradith L
Assistant Professor
MD, The Ohio State University

Skalak, Timothy J
Assistant Professor
MD, The Ohio State University

Sleptsov, Alexander
Lecturer
PhD, University of Michigan

Slipman, Ronald A
Assistant Professor
MD, Tulane University

Sloan, Dauphine Montlaur
Senior Professor of Practice
PhD, University of Paris, France

Smilde, David
Professor
PhD, University of Chicago

Smith, Christine P
Senior Professor of Practice
MBA, University of New Orleans

Smith, Eric N
Professor of Practice
MBA, Tulane University

Smith, Erica Lee
Professor of Practice
PhD, SUNY at Buffalo

Smith, Kiernan
Assistant Professor
MD, Royal College of Surgeons, Ireland

Smith, Matthew P
Instructor
PhD, University of Tennessee

Snarski, Patricia
Postdoc Fellow

Snow, Richard Searcy
Senior Professor of Practice
PhD, University of California-San Diego

Sojic, Annette M
Senior Professor of Practice
PhD, Tulane University

Soltwisch, Brandon
Professor of Practice
PhD, Southern Illinois University - Carbondale

Sommers, Tihara Richardson (Tihara)
Professor of Practice
MAST-Other, George Mason University

Sonn, Julia M
Professor of Practice
PhD, Tulane University

Soong, Herman Chuan
Assistant Professor
MD, Tulane University

Soria Penafiel, Rosa Isabel
Postdoc Fellow

Sourgens, Frederic G
Professor
JD, Tulane University

Sparks, Nicholas
Professor of Practice
PhD, Tulane University

Sparks, Randy J
Professor
PhD, Rice University

Spell, Tara D
Assistant Professor
MD, Medical College of Georgia

Spencer, Marissa K
Instructor
MAST-Other, Rosalind Franklin University of Medicine

Spitzer, Nicholas R
Professor
PhD, University of Texas at Austin

Spruill, David
Assistant Professor
MD, Medical College of Georgia

Srivastav, Sudesh K
Professor
PhD, Old Dominion University

Stanton, Erin M
Assistant Professor
MD, Northwestern University

Stark, Jennifer M
Clinical Instructor
DNP, Graceland University

Steele, Claude Henry III (Chad)
Professor
PhD, Louisiana State University

Steinhardt, Michelle C
Assistant Professor
MD, Louisiana State University

Stevens, Monica Leah
Assistant Professor
PhD, University of Florida

Stevenson, Rae
Visiting Assistant Professor
PhD, Tulane University

Stewart, Gregory W
Associate Professor
MD, UT Medical Branch at Galveston

Stieber, Chelsea
Associate Professor
PhD, New York University

Stock, Christian
Senior Professor of Practice
MFA, Tulane University

Stoecker, Charles
Associate Professor
PhD, University of California-Davis

Stojanovski, Kristefer
Research Assistant Professor
PhD, University of Michigan

Stoll, Jill
Professor of Practice
MFA, Cranbrook Academy of Art

Stolow, Jeni A
Clinical Associate Professor
PhD, Tulane University

Stranova, Thomas J Jr.
Clinical Associate Professor
SCD, Tulane University

Straub, Kyle M
Professor and Chair
PhD, Massachusetts Institute of Technology

Straus, Daniel B
Assistant Professor
PhD, University of Pennsylvania

Stumpf, Brittany Oswald
Assistant Professor
MD, American University of the Caribbean

Su, Kuan-Jui
Instructor
MA, Tulane University

Suarez, Cecilia E
Clinical Associate Professor
PhD, University of Illinois

Subramaniam, Venkata R
Associate Professor
PhD, University of Texas at Austin

Sujan, Harish
Professor
PhD, University of California (UCLA)

Sujan, Mita
Professor
PhD, University of California (UCLA)

Sukhanov, Sergiy
Associate Professor
PhD, Zaboolotny Microbiology Institute

Sulkes, Mark

Professor
PhD, Cornell University

Summa, Brian
Associate Professor
PhD, University of Utah

Sumpter, Matthew
Instructor
PhD, Binghamton University (SUNY)

Sun, Jianwei
Associate Professor
PhD, Tulane University

Sun, Jie
Postdoc Fellow

Sun, Qiang
Postdoc Fellow

Sun, Shuhua
Associate Professor
PhD, National University of Singapore, Singapore

Sundholm, Benjamin T
Instructor
JD, Georgetown University

Sure, Venkata Naga Lakshmi Ramarao
Postdoc Fellow

Sus, Rachana N
Assistant Professor
MD, Medical College of Sulapur, India

Sweeney, Aaron
Assistant Professor
MD, Louisiana State University-Shreveport

Sweeten, Brook
Postdoc Fellow

Swetland, David V
Assistant Professor
MD, LSU Health Sciences Center - New Orleans

Swift, Douglas A
Clinical Associate Professor
MD, Louisiana State University

Syrimis, Michael G
Associate Professor
PhD, University of Chicago

T

Taghavi, Sharven
Associate Professor
MD, Tufts University

Tahboub, Mohammad Yahya Rebhi
Assistant Professor
MD, Jordan University of Science and Technology

Talbayev, Diyar
Professor
PhD, SUNY at Stony Brook

Tamalet, Edwige
Associate Professor
PhD, University of California-San Diego

Tang, Hong
Research Assistant Professor
PhD, Northwestern Polytechnical University (China)

Tang, Wan
Clinical Professor
PhD, University of Rochester

Tang, Yang
Postdoc Fellow

Taqaddusi, Mariam
Visiting Lecturer
MSS, Kabul University, Afghanistan

Taras, Raymond
Professor
PhD, University of Warsaw - Poland

Tasker, Jeffrey G (Jeff)
Professor
PhD, University of Bordeaux, France

Tate, Erica V
Assistant Professor
MD, University of California

Tatum, Danielle M
Assistant Professor
PhD, Louisiana State University

Taylor, Caroline M
Professor
PhD, University of California-Davis

Tebbe, James T
Assistant Professor
MD, Louisiana State University

Teichgraeber, Richard F. III
Professor
PhD, Brandeis University

Tellez, Dora M
Visiting Professor
MA, Universidad Centro Americana (Uca), Nicaragua

Teng, Zhen
Postdoc Fellow

Teran, Federico J
Assistant Professor
MD, Tulane University

Terre, Juan A
Assistant Professor

MD, Universidad Nacional De Rosario

Terrefe, Selamawit
Assistant Professor
PhD, University of California-Irvine

Testa, Patrick A
Assistant Professor
PhD, University of California-Irvine

Thakur, Akanksha S
Assistant Professor
MD, Case Western Reserve University

Thakur, Sharad
Postdoc Fellow

Thalagoda, Kalani
Postdoc Fellow

Thannickal, Victor J
Professor
MD, Oral Roberts University

Theall, Katherine P
Professor
PhD, Tulane University

Thomas, Raju
Professor
MD, University of Bombay (University of Mumbai, India)

Thompson, David
Professor of Practice
MBA, New York University

Thompson, John W Jr.
Professor
MD, University of Texas at Austin

Thompson, Martyn
Professor
PhD, London School of Economics, United Kingdom

Thornhill, Joseph M
Assistant Professor
MD, Louisiana State University

Thornton, Ryder W
Senior Professor of Practice
MFA, Temple University

Thurman, Tonya R
Research Associate Professor
PhD, Tulane University

Tian, Aiguo
Assistant Professor
PhD, Chinese Academy of Sciences

Tian, Di
Associate Professor
PhD, Northwestern University

Tice, Sheri Teresa
Professor
PhD, Michigan State University

Tiemann, Dawn D
Assistant Professor
MD, Louisiana State University

Ting, Peng-sheng
Assistant Professor
MD, National Taiwan University

Tipler, Frank J
Professor
PhD, University of Maryland, College Park

Tirumalasetty, Saritha
Clinical Assistant Professor
MD, Florida State University

Tolat, Nicholas Darshan
Instructor
MD, Baylor College of Medicine

Toraih, Eman
Assistant Professor
PhD, Suez Canal University, Egypt

Tornqvist, Torbjorn
Professor
PhD, Utrecht University, Netherlands

Torres Ortiz, Aldo
Assistant Professor
MD, University of Guadalajara

Tortelote, Giovane G
Assistant Professor
PhD, University of Mass Medical Center

Toups, Matthew A
Visiting Assistant Professor
MAST-Other, University of New Orleans

Townsdin, Jessica M
Postdoc Fellow

Townsend Gard, Elizabeth
Professor
PhD, University of California (UCLA)

Traina-Dorge, Vicki
Associate Professor
PhD, Tulane University

Tran, Hai L
Postdoc Fellow

Trask, Beverly Ann
Associate Professor
MFA, The University of Southern Mississippi

Traviesa, Jonathan Daniel
Visiting Assistant Professor
MFA, Tulane University

Treadway-Hahn, Elsa E
Instructor
MAST-Other, Louisiana State University

Tregre, Kiana Andrew (Kiana)
Assistant Professor
MD, University of Illinois at Urbana-Champaign

Triche, Benjamin L
Associate Professor
MD, Louisiana State University

Trigg, Allison Boothe
Associate Professor
PhD, University of Alabama

Tropez-Martin, Janifer S
Assistant Professor
MD, LSU Health Sciences Center - New Orleans

Truitt, Allison Jean
Professor and Chair
PhD, Cornell University

Tsai, Yu-shiou
Research Associate Professor
PhD, Tufts University

Tsubaki, Kentaro
Associate Professor
MARCH, Cranbrook Academy of Art

Tubbs, Richard S
Professor
PhD, University of Alabama at Birmingham

Tueller, Jessica A
Instructor
JD, Yale University

Tulla, Kiara A
Assistant Professor
MD

Turillo, Carmen (Carmelo)
Lecturer
PhD, Tulane University

Turner, Jacquelyn S
Professor
MD, University of Texas at Austin

Turner, Richard A
Assistant Professor
MD, Louisiana State University

Tuttrup, Gabriela
Assistant Professor
MD, The University of Texas Medical Branch at Galveston

Twiner, Emma
Instructor
MS, University of Alabama at Birmingham

Tynes, Lannis Lee
Professor
MD, Louisiana State University

U

Umar, Meenakshi
Postdoc Fellow

Ungerleider, Nathan Akes
Assistant Professor
PhD, Tulane University

Upadia, Jariya
Assistant Professor
MD, Khon Kaen University

Urbanek, Jennifer
Visiting Assistant Professor
PhD, University of Louisiana at Lafayette

V

Vaccari, Monica
Associate Professor
PhD, University of Milan, Italy

Vail, Krystal
Assistant Professor
DVM, Tuskegee University

Valentine, Erick g
Professor of Practice
PhD, University of Memphis

Valliant, Kristen
Clinical Assistant Professor
MD, Tulane University

Van Bael, Sunshine Autumn
Associate Professor
PhD, University of Illinois at Urbana-Champaign

Van Opijnen, Roeland A
Assistant Professor
MD, Tulane University

Van Schoelandt, Chad Michael
Associate Professor
PhD, University of Arizona

Vander Velde, Nancy S
Associate Professor
MD, Wayne State University

Varada, Neilmegh L
Assistant Professor
DO, Pacific Northwest University of Health Science

Vaughan, Amy E
Assistant Professor
MD, Tulane University

Vaughan, Lyndsi
Instructor

DVM, Oklahoma State University

Veazey, Ronald S
Professor
DVM, Oklahoma State University

Veeraraghavan, Lee
Visiting Assistant Professor
PhD, University of Pennsylvania

Veilleux, Jennifer C
Professor of Practice
PhD, Oregon State University

Vela, Sonsoles
Assistant Professor
MS, University of Extremadura, Spain

Velkley, Richard L
Professor
PhD, Penn State University

Vemulapalli, Krishna C
Assistant Professor
MD, University of Texas-Southwestern Medical Center

Veneziano, Heather L
Professor of Practice
MAST-Other, Tulane University

Verano, John W
Professor
PhD, University of California (UCLA)

Verhaal, Jeffrey C
Associate Professor
PhD, University of Utah

Vijay, Adarsh
Assistant Professor
MD, Government Medical College, India

Vijayaraghavan, Meenakshi
Senior Professor of Practice
PhD, University of Madras, India

Vilda, Dovile
Assistant Professor
PhD, University of Dublin Trinity College - Ireland

Villavaso, Chloe D
Instructor
MS, Louisiana State University

Visniauskas, Bruna
Instructor
PhD, Universidade Federal De Sao Paulo

Vyas, Sanket A
Assistant Professor
MD, Louisiana State University

W

Waddy, Jeffery J
Clinical Assistant Professor
DPH, University of Illinois at Chicago

Wade, Lisa D
Associate Professor
PhD, University of Wisconsin-Madison

Wajda-Johnston, Valerie
Assistant Professor
PhD, Saint Louis University

Walker, Brigham C
Assistant Professor
PhD, Tulane University

Wallace, Maeve E
Associate Professor
PhD, Tulane University

Wallace, Michael Mitchell
Professor of Practice
EdD, University of Alabama

Waller, William
Assistant Professor
PhD, University of North Carolina-Chapel Hill

Wang, Alun R
Clinical Associate Professor
MD, China Medical University

Wang, Arthur
Associate Professor
MD, Case Western Reserve University

Wang, Jieqiong
Postdoc Fellow

Wang, Ruixuan
Postdoc Fellow

Wang, Shu
Postdoc Fellow

Wang, Shusheng
Professor
PhD, Tulane University

Wang, Xianfeng
Instructor
PhD, Shandong Agricultural University

Wang, Xiaolei
Associate Professor
PhD, Kunming Institute of Zoology, China

Wang, Xiaoying
Professor
MD, Henan Medical University

Wang, Yanyong
Postdoc Fellow

Wang, Yu-Ping
Professor

PhD, Xi'An Jiaotong University - China

Wanna, Bassam G
Assistant Professor
MD, American University of Beirut - Lebanon

Ward, Amanda S
Instructor
MSN, Loyola University - New Orleans

Ward, Andrew M
Visiting Assistant Professor
PhD, Tulane University

Ward, Jesmyn
Professor
MFA, University of Michigan

Washburn, David J
Clinical Associate Professor
SCD, Harvard University

Watkins, Benjamin K
Associate Professor

Tulane University

GLOSSARY

Academic year: The period consisting of fall and spring semesters.

Advanced placement: Exemption or credit awarded to beginning first-year students based on scores on the College Board Advanced Placement [AP] Tests.

Audit: To enroll in a course for no credit.

Capstone experience: A major requirement in certain programs, the capstone experience is designed by the student' s school or major department; the capstone typically applies information, skills and ideas from the major to one significant project.

Code of Academic Conduct: Statement of norms for conduct in academic work. The Code also contains procedures for dealing with alleged academic dishonesty.

Code of Student Conduct: The regulations of behavior that prohibit unsatisfactory or disruptive conduct. Disciplinary action and sanction resides with the Office of Student Affairs.

Course load: The total number of semester hours for which a student is registered in one semester or summer term.

Credit hour: Program Integrity Rules issued by the U.S. Department of Education require institutions to establish a definition of "credit hour". This applies to all degree programs (including credit for full and part-time undergraduate, graduate, professional, post-baccalaureate, and online programs):

1. The assignment of credit hours to a course occurs through a formal review process conducted at the appropriate levels of faculty governance.
2. For courses in lecture format, one credit hour represents the subject content that can be delivered in one academic hour (50 min) of contact time each week for the full duration of one academic semester, typically fifteen weeks long. For undergraduate courses, one credit hour also includes associated work that can be completed by a typical student in 1-2 hours of effort outside the classroom. For graduate and professional courses taught in lecture format, 2-3 hours of outside work is expected for each academic hour of contact time as well.
3. For courses taught in other than lecture format (e.g., seminars, laboratories, independent study, clinical work, research, online courses, etc.), one credit hour represents an amount of content and/or student effort that in aggregate is no less than that described in (2) above.

While Tulane's standard definition of a credit hour applies across the University, in some cases the definition may vary to meet specific accrediting body requirements.

Cross-registration: Courses designated in other local universities with which Tulane participates in a consortium.

Cumulative or overall grade point average: A student's grade point average based on the total number of quality points earned and total number of semester hours attempted.

Curriculum: A program of courses required for a degree in a particular field of study.

Degree Audit: The degree audit is an unofficial survey of progress toward a degree or certificate that reflects courses completed and currently in progress. It is not an official record or substitute for the transcript and is not an official notification of degree or certificate completion. The online degree audit is a valuable tool to track requirements and plan future coursework. The degree audit is based on published catalog requirements, and both completed and in-progress coursework.

Departments: The academic units of the university within colleges or schools; administered by chairs or directors.

Elective: Course chosen by the student, as opposed to a required course. The term "elective", without a qualifier, will be understood to be a free elective, chosen by the student at their option from all the courses offered by the university for degree credit, with due regard for prerequisites and subject to restrictions of the school or college in which the student is enrolled.

Equivalent: When used in a course prerequisite [e.g., "Prereq: SOCI 101 or equivalent"], this term means either credit in a comparable course, or equivalency to be determined by individual department.

Gibson Online: A gateway to online services such as Registration, Grades, Degree Audit, myTulane, etc. (gibson.tulane.edu (http://gibson.tulane.edu/))

Good standing: The typical status of a student who is not on academic probation and is eligible to continue in or return to the university.

Grade-point average (GPA): A measure of scholastic performance; the ratio of quality points earned to semester hours attempted.

Interdivisional transfer [IDT]: The procedure for transfer from one school or college within the university to another.

Joint-degree programs: A program whereby a student may pursue two degree programs simultaneously.

Leave of absence: An interruption in enrollment, approved by the student's Dean, which permits re-enrollment without an application for readmission.

Major: The primary field of study; students will take the majority of their required courses in this area.

Matriculation: The state of being registered for credit and working toward a specific degree.

Minor: The student's field of secondary academic emphasis.

Mutually Exclusive Course: A mutually exclusive course is defined as a course with content that overlaps another course. Students may receive credit for only one course of the mutually exclusive course pair in the degree.

Over/Under load: Stated minimum and maximum course loads for which approval must be obtained from the student's dean.

Pre-professional program: A program of study in preparation for entry into a professional degree program at another institution or another division of the University.

Prerequisites: The preliminary requirement, usually credit in another course, that must be met before a course may be taken.

Priority registration: A specified period of time during a semester when a student may enroll in courses for the following semester.

Privacy act: The privacy (https://registrar.tulane.edu/sites/g/files/rdw891/f/FERPA_Policy_FINAL.pdf) of students' records and affairs is protected under the Family Educational Rights and Privacy Act of 1974 as amended [P.L. 93-380], preventing the distribution of any information other than 'directory information' on a student.

Probation and dismissal: Failure to meet the minimum semester requirements toward graduation for the fall or spring semester will result in being placed on academic probation. Academic deficiencies not corrected in the subsequent semester or in a summer term may be cause for dismissal from the University.

Quality of work: The progress toward the baccalaureate degree measured by credits and quality points at the close of each semester.

Quality point: Numerical value assigned to each letter grade from A to F, when given as the final grade in a course; provides a basis for quantitative determination a grade point average.

Registration: The process by which a [duly admitted] student, upon payment of required tuition and fees, is enrolled in classes.

Registration Waitlist: A list that students can add themselves to when a class they wish to register for is full with no open seats.

- If a student who was already registered in the class drops, that seat is offered to the first student on the waitlist.
- Waitlisting for a class does not guarantee enrollment in the class.
- Not all classes offer waitlists.
- Students can be on the waitlist for a maximum of three unique course numbers at the same time in a semester (and cannot at the same time be registered in any of those three course numbers).

Residency requirement: The period of time students are required to be enrolled for a designated number of courses or credits at Tulane University.

Schools: The academic units of the university that offer the university's academic programs, and are administered by deans. The degree anticipated determines the student' s choice of school or college.

Student schedule: The courses in which a student is enrolled.

S/U option: Satisfactory or unsatisfactory is elected as an irrevocable option (following the announced deadline) for a course in which a letter grade and quality points are not awarded, thereby not affecting the GPA.

TIDES (Tulane InterDisciplinary Experience Seminar): a one-credit seminar required for all first-year students.

Transfer student: A student who terminates enrollment in another university and subsequently enrolls in Tulane University.

Withdrawal: Extensive nonattendance to class(es) requires formal withdrawal from: course(s), section(s), or the college/school, with appropriate approvals including that of the dean.

COLLEGES AND SCHOOLS

Newcomb-Tulane College (p. 22)

Founded in 2006, the Newcomb-Tulane College (http://college.tulane.edu/) (NTC) has administrative oversight of the residential full-time undergraduate student experience and its core curriculum. Newcomb-Tulane College is comprised of the full-time undergraduate programs at the university in architecture, business, liberal arts, public health and tropical medicine, and science and engineering. When an NTC student designates a major, whether that decision is made upon admission or before the end of spring semester of the sophomore year, the student also will be considered a student in the school that houses that major. Thus, students simultaneously will be in the Newcomb-Tulane College and a school. The School of Professional Advancement (https://sopa.tulane.edu/) (SoPA) has administrative oversight of its own undergraduate students and core curriculum. SoPA offers applied learning programs that incorporate both industry-relevant knowledge and a grounding in the liberal arts.

Schools

As the homes of the academic departments and programs, the schools define the requirements for the school-specific curriculum and are responsible for designing majors, minors, and certificates. For graduating students, the schools also certify completion of academic programs and the school core curriculum for the degree. The schools also deliver graduate and professional education and programs.
