   a. Panels shall be constituted from five (5) members of the Honor Board - three graduate students and two faculty. At least one student must be from the Respondent's school. Similarly, at least one of the faculty members must be from the Respondent's school. One Faculty Chairperson shall preside during each hearing. The Honor Board Hearing Panel shall hear cases and determine if the Respondent is responsible or not responsible, and shall recommend appropriate penalties for implementation by the Dean's Designee.
4. Honor Board Hearing Panel Voting Rights
   a. Students and faculty are voting members of the Honor Board Hearing Panel and have one (1) vote each. No abstentions are allowed.

ARTICLE VII: HONOR BOARD PANEL HEARINGS

1. Purpose of Hearings
   a. The purpose of the hearing is to provide the graduate student with an opportunity to be heard and to supply the Honor Board Hearing Panel with the relevant information necessary to reach a decision. It should be noted that a hearing is not a legal procedure and as such, formal rules of process, procedure, and/or technical rules of evidence, such as are applied in criminal or civil court, are not used in Code proceedings. Polygraph tests are not admissible as evidence.
2. Hearing Date
   a. The Honor Board will make every effort to process cases in a timely manner. The Dean's Designee will convene an Honor Board Hearing Panel to allow the Chairperson and panel members to review the charges brought against the student. Every effort will be made to convene that hearing within ten (10) working days after the Respondent has been apprised of the charges in writing.
3. End of the Semester Offenses
   a. If the offense is reported at the end of the semester and a sufficient number of board members with appropriate representation from the student's school are unavailable to hear a case, the Dean's Designee may form an ad hoc panel composed of three faculty members (one from the student's school) and two students. If the case must be heard by an ad hoc panel, it will be heard as soon as possible and generally not later than fourteen (14) working days after the end of final exams when feasible.
4. Failure to Appear
   a. If a Respondent, having been duly notified, does not appear before an Honor Board Hearing Panel, the information in support of the charges shall be presented and the hearing shall proceed.
5. Testimony
   a. If a person is called before an Honor Board Hearing Panel, the person is obligated to be completely honest because the charges against the Respondent can result in suspension or expulsion from the University. It is every member of the University community's duty to ensure that the principles of the Code are upheld and that the procedures are properly followed.
6. Procedures for Honor Board Hearing Panel
   a. Honor Board hearings shall be conducted in private.
   b. Honor Board hearings shall be conducted virtually, using Zoom or a similar virtual tool in the University's suite of technology.
   c. The Dean's Designee and Chairperson shall preside over each Honor Board Hearing Panel. They shall see that a recording is made of all testimony. The Chairperson shall submit a written report of the hearing, accompanied by a recording of all testimony and a copy of all evidence presented, to the Dean's Designee generally within two (2) working days after the hearing.
   d. There shall be a single record of all Honor Board Hearings. Deliberations of an Honor Board Panel shall <u>not</u> be recorded. The record shall be the property of the

School. The record shall be retained by the School only until all appeals have been exhausted or a determination has otherwise become final, or such longer period as may be required by law, rule or regulation.

e. The Respondent has the right to be assisted by an advisor of their choice (to be selected from a list of faculty familiar with the workings of the Honor Code). The Dean's Designee can provide the Respondent with a list of potential advisors. The advisor must be a member of the University community and may not have an attorney-client relationship with the person advised. The Dean's Designee may not act as the Respondent's advisor. The Respondent is responsible for presenting their own information, and therefore, advisors are not permitted to speak or to participate directly in any Honor Board Panel Hearing. A student who selects an advisor should ensure that the advisor's schedule allows attendance at the scheduled date and time of the Honor Board Hearing Panel because delays will not normally be allowed due to the scheduling conflicts of an advisor.

f. Pertinent records, documents, and written statements may be accepted as information for consideration by an Honor Board Hearing Panel at the discretion of the Dean's Designee.

g. All procedural questions are subject to the final decision of the Dean's Designee of the Honor Board Hearing Panel. Formal rules of process, procedure, and/or technical rules of evidence, such as are applied in criminal or civil court, are not used in Code proceedings.

h. At the beginning of the hearing, the Dean's Designee shall read the charges against the Respondent. Normally the Complainant (if any) will give testimony first, followed by supporting witnesses, followed by the Respondent and supporting witnesses, and then by other witnesses, if any. Any of the preceding may be recalled for further testimony if clarification is necessary. The Chairperson shall inform the Respondent and any witnesses of the following before testimony begins:
    i. False testimony given in a hearing is a violation of the Unified Code of Graduate Student Academic Conduct.
    ii. All testimony given in an Honor Board hearing is to be held in the strictest confidence.
    iii. All witnesses must be called to give substantive testimony rather than character testimony.

i. The Respondent may make a statement before the Honor Board, examine or dispute any evidence, make no statement, or decline to respond to any questions.

j. The Reporter, the Respondent, and any witnesses will be brought before the Hearing Panel independently and separately of one another to give testimony. If the Reporter and/or Respondent in the hearing cannot be present, written testimony will be accepted.

k. After hearing all evidence and witnesses in the case, the Honor Board Hearing Panel will vote to determine if the Respondent is responsible or not responsible based on whether it is more likely than not that the Respondent violated the Code; a (simple) majority is necessary for a finding of responsible. No member of the Honor Board Hearing Panel will be allowed to vote unless they have been present to hear all the evidence in the case.

l. If the Respondent is judged not responsible, there will be no report of the case on their college record.

m. If the Respondent is found responsible for violating the Code, the Honor Board Hearing Panel will recommend sanctions.

7. Sanctions
    a. Sanctions for violations of the Code are imposed on the basis of the gravity of the infraction, the number of infractions, the harm or potential harm to the University community, and any history of repeated violations by the student. In all cases of findings of responsibility, the offense is noted permanently in the academic record of the student. The appropriate sanctions to be recommended by the Honor Board Hearing Panel to the Dean's Designee may include but are not limited to:
        i. Honor Board Probation: signifying that a student is not in good academic standing for a specified length of time, often for one or two semesters. The student may remain at Tulane University but may be required to satisfy specified

conditions or requirements, or report regularly to a designated administrator. Honor Board Probation spans a proscribed period of time during which a student is prohibited from 1) serving as an officer in a student organization, 2) transferring credit from another institution, and 3) graduating from the university. As long as a student has no other honor board violations during the period of Honor Board Probation, there is no record of this probation on the student's permanent record, and the student will return to academic good standing.

ii. Educational requirements: which may require the completion of projects, programs, or other such requirements designed for student development purposes. Examples include online workshops for citation, TEDx/ podcast with reflection essay and in-person consultation.

iii. Lowering of a grade to zero, for an assignment or test; the Honor Board may stipulate that if a student chooses to withdraw from a course after receiving a grade sanction for an Honor Code violation, the student's record will reflect a grade of "WF" for the course in which the sanction was assessed. This is the sanction that will be applied if the Respondent waives their right to a hearing in accordance with Article V. Section 5.

iv. A grade of "F" or "WF" in a course.

v. Suspension from the University for a period of time.

vi. Expulsion from the University. g. Admission to or a degree awarded by any School within Tulane University may be revoked for violation of the Code.

vii. More than one of the sanctions listed above may be imposed for any single violation

b. Students should be aware that infractions of the Unified Code of Graduate Student Academic Conduct that go to an Honor Board Hearing Panel usually warrant a grade of "F" or "WF" for the course and Honor Board probation of two semesters for a first offense. Students should also be aware that they may not be allowed to continue in their program after receiving the "F" or "WF" if that puts them in violation of their program's minimum standards for grades or overall GPA. A conviction for a second offense warrants, and typically results in, expulsion from the University. In addition, the University reserves the right to withhold institutional support from a student's application for study at another institution if violations of the Code are noted in the student's academic record.

8. The Dean's Designee shall review all pertinent materials. If the Dean's Designee disagrees with the recommended sanction, they must provide the Hearing Panel with the reasons for disagreement. The Dean's Designee, having reviewed all pertinent information, shall notify in writing the student, the faculty, and the Chair of the Hearing Panel of their decision generally within five (5) working days after receipt of the hearing panel's report.

ARTICLE VIII: DUTIES OF THE SCHOOL

1. Records
    a. The School shall maintain and retain a permanent record of all honor board convictions involving her or his students for as long as may be required by law, rules or regulations. The record shall include a copy of all evidence submitted to the hearing panel, the report of the Chairperson to the Dean's Designee, and the Dean's Designees' final action. Copies of the later two documents shall be maintained in separate, permanent records of the Honor Board. The recording of the hearing should be preserved only until all appeals have been exhausted or such longer period as may be required by law, rule or regulation.
    b. From the permanent record, the Dean's Designee shall note in the school records any conviction and the sanction imposed. This information shall be available only to that student unless the student waives his or her right of exclusive access under the provisions of the Family Educational Rights and Privacy Act. Access to the recording and other information concerning a case during the process of adjudication shall be reserved for members of the Honor Board Panel or, if necessary, the

Appeal Panel. The right to access these materials or copies of them from the school's records shall be restricted to the Honor Board panel Chairperson, the Dean and Dean's Designee, and the Appeal Panel during the hearing and appeal processes.

ARTICLE IX: APPEALS

1. Appeal Process
    a. Dissatisfaction with the results of a hearing is not itself a valid basis for appeal. Appeals are also not an occasion to engage in contempt of the process, administrators, or students who participated in Code process. A respondent may appeal the decision on the grounds of:
        i. Procedural error is defined as material deviation from procedures that substantially impacted determinations of responsibility or sanctions applied.
        ii. New evidence is defined as new and substantial evidence that has appeared that could have not reasonably been discovered before the determination of responsibility was made, and that could have substantially impacted determinations of responsibility.
        iii. Disproportionate Sanctions are where sanctions are grossly disproportionate to the findings of responsibility.
    b. A Respondent who wishes to request an appeal of a decision of the Honor Board Hearing Panel may do so by notifying in writing the Dean's Designee within seven (7) working days after being notified of the Dean's Designees' decision, except when the appeal is on the basis of new evidence, in which case more time may be granted upon request by the Dean's Designee. Students requesting an appeal on the basis of new evidence may, with the permission of the Dean's Designee, listen to a copy of the recording of the original hearing in the presence of an officer of the Honor Board. Access to the recording will not be provided to any other individual.
    c. The appeal document must be in writing and must provide evidence of procedural error, excessive sanction, and/or new evidence.
2. Appellate Panel
    a. The Dean's Designee shall convene a panel of three members of the Honor Board to form an Appellate Panel to review the student's request for appeal, including one member who will serve as the Appellate Panel Chairperson, and one other student and one faculty of the board where the student and faculty can be from any School.
    b. No member who heard the original case may serve on the Appellate Panel. If this Panel of three decides that an appeal should be granted, this panel will conduct the appeal hearing as soon as possible.
    c. The review panel may uphold the original decision, alter the sanction, or set the decision aside and refer the case back to the Honor Board for a new hearing
3. Appellate Board Hearing Procedures
    a. An appellate hearing is not a retrial, but rather a careful examination of points raised in a letter of appeal and is conducted in private.
    b. Persons other than the three-member Appellate Panel who may be present during an appellate hearing include:
        i. the Respondent, who may state his or her reasons for appeal;
        ii. material witnesses, who may appear if the accused is presenting new evidence;
        iii. the Chairperson of the hearing panel that originally heard the case who shall summarize the case as heard by the panel and address the grounds for the appeal, and;
        iv. additional appointees consistent with Article V, Section 8.
    c. The Reporter in the original case should generally not be present, unless the accused presents new evidence, either through witness testimony and/or documentation.
    d. All information presented or discussed at an Appellate Panel hearing shall be confidential.
    e. All members of the Appellate Panel present for the appellate hearing shall receive a copy of all pertinent information and a copy of the student's document of appeal.
    f. The Appellate Panel Chairperson shall ensure that an audio recording is made of all testimony and placed in the school's files. The record shall be the property of the School. The record shall be retained

by the School only until either all appeals have been exhausted, or a determination has otherwise become final, or such longer period as may be required by law, rule or regulation.

g. A Respondent shall present his or her document of appeal and may call material witnesses if new evidence is submitted.

h. The Appellate Panel Chairperson shall inform the Respondent and any witnesses of the following before testimony begins.

i. False testimony given in a hearing is a violation of the Code.

ii. All testimony given in a hearing is to be held in the strictest confidence.

iii. All witnesses must be called to give substantive testimony rather than as character witness testimony.

i. Pertinent records, documents, and written statements may be accepted as information for consideration by an Appellate Panel at the discretion of the Chairperson.

j. All procedural questions are subject to the final decision of the Chairperson of the Appellate Panel. Formal rules of process, procedure, and/or technical rules of evidence, such as are applied in criminal or civil court, are not used in Code proceedings.

k. The Appellate Panel shall deliberate in private and decisions of the Appellate Panel shall be by majority vote.

4. Appellate Decision
   a. The Appellate Panel may uphold the hearing panel's decision, alter the sanction, or set the decision aside and return the case to the honor board for a new hearing. This decision shall be communicated in writing to the Dean's Designee and the presiding officer of the Honor Board Hearing Panel that originally heard the case within one (1) working day. The Dean's Designee shall inform the student of the decision generally within (3) working days of receipt of notification by the Chair. If the decision is made to uphold the original decision and sanction, the matter shall be considered final and binding upon all involved.
5. Records
   a. All printed material distributed during the appellate hearing shall be collected by the Appellate Panel Chairperson who shall deposit one copy of the printed materials and recording in the school's files. A copy of the report of the Appellate Panel and the action of the Dean's Designee shall be included in the records of the Honor Board.
6. Attending Classes During the Appellate Process
   a. Students may continue to attend classes during the appeal process. In the most serious cases, involving expulsion from the University, if the original verdict is upheld under appeal, then no academic credit can be earned for the semester in which the student was notified by the Dean's Designee of the expulsion, nor for any further semester into which the appeal process might continue. If the decision to expel the student is upheld, they will be eligible for a tuition refund only for the semester(s) during which the appeal was ongoing.
7. Students Exonerated
   a. Students exonerated as the result of the appeal process will have the original honor code verdict removed from their college record and any institutional financial aid that had been withdrawn as a result of the conviction will be retroactively reinstated.

AMENDMENTS AND REVISIONS

These regulations may be amended or revised with the written approval of the Tulane University's Graduate and Professional Student Association and the Graduate Council.

Conduct

Responsible adult behavior is expected of students in SoPA in both scholastic and non-scholastic affairs. Violations of the rules and regulations, including those on academic honesty, lead to disciplinary action by a dean of SoPA, the office of the Vice President for Student Affairs, or other appropriate university authority. For a thorough description of expectations and procedures, please refer to the Code of Student Conduct .

Discipline

Departures from acceptable conduct may lead to fines, disciplinary probation, suspension or expulsion. Disciplinary probation (which refers to conduct and not to academic standing) and suspension usually are imposed for a stated period. Suspension and expulsion involve exclusion from classes and from all University activities. Students suspended or expelled will receive Ws or WFs in all courses at the discretion of the dean. Expulsion is the most serious academic penalty and is permanent. It is noted on the student's record and included on transcripts issued thereafter. Suspension is noted on the student's record and on transcripts issued while the penalty is in effect, but the notice is removed from the transcript at the end of the suspension. Transfer credits cannot be accepted for students who attend other colleges or universities while ineligible for any reason to continue in SoPA.

Reporting to the Dean
All students must report to a dean of SoPA, to the Vice President for Student Affairs, to their advisor, or to their instructors, without delay, when notified to do so.

Grievance Committee
The SoPA Grievance Committee is composed of three faculty and two student members and the assistant dean for student support and success as a non-voting member. One of the committee's duties is to hear students' grievances and complaints against Tulane University and SoPA or Tulane personnel, including the faculty. The Grievance Committee deals with issues such as the grading system and unfair treatment. Students desiring a hearing before the committee must submit their requests in writing to the associate or assistant dean.

Students may appeal the decision of the Grievance Committee in writing to the SoPA Dean under the following circumstances: new evidence or significant evidence or material that would have likely changed the outcome of the Grievance Committee's decision. This appeal must be submitted within five business days of transmission of the decision of the Grievance Committee to the student. The decision of the Dean is final.

Right to Privacy
Privacy of students' records and affairs is protected under the Federal Family Educational Rights and Privacy Act (FERPA) of 1974 as amended (P.L. 93-380) and by policies issued by the Tulane University Board of Administrators: a university must allow a student the opportunity to review and inspect his or her educational records; a university must give a student the opportunity to challenge the content of his or her records under certain circumstances; a university must not grant access to or allow disclosure of a student's records to outside parties, unless such disclosure is specifically permitted under the law or is made with the student's written consent; a university must notify students of their rights under the law. For further details, contact the Office of Student Affairs at 504-314-2188.

Degree Requirements
Degree Requirements

Undergraduate
School of Professional Advancement Requirements
Undergraduate degrees offered at SoPA fulfill the mission of the school by providing students with high quality, distinctive education across a range of disciplines, along with applied skills, as relevant to their area(s) of study. As part of their undergraduate education at SoPA, students must demonstrate proficiency in writing, quantitative reasoning, and a foreign language or global perspectives. Students must also show distribution of knowledge by completing coursework in humanities, social sciences, and science. Additional core requirements of the bachelor's degree at SoPA include coursework in American government, oral communication, and race and inclusion. The proficiency, distribution, and supplemental undergraduate degree requirements are known as the SoPA Core Curriculum.

Bachelor's Degree

To receive a first baccalaureate degree from SoPA, students must have a minimum of 120 credits of passing work, as follows:

Proficiency Requirements

Course ID	Title	Credits
English/Writing		7
Quantitative Reasoning		3-6*
Foreign Language or Global Perspectives		6

* For BA students, the Quantitative Reasoning requirements = 3 credits; for BS and BSN students, the Quantitative Reasoning requirements = 6.

Supporting Requirement

Course ID	Title	Credits
Oral Communications		3
Race & Inclusion		3
American Government		3

(Oral Communication and American Government are not required for students majoring in disciplines in the School of Liberal Arts and the School of Science and Engineering)

Distribution Requirements
(BA or BS with a SoPA major, BSN)

A course can only satisfy one of the distribution areas.

Course ID	Title	Credits
Humanities		12
Science		12
Social Science		12

Students majoring in Liberal Arts and Sciences disciplines that are outside of SoPA should refer to the Newcomb-Tulane College graduation requirements. (p.)

Major Requirements
Undergraduate students have the opportunity to select a single area of study in which to gain deeper knowledge and mastery of a subject. SoPA undergraduate students must declare a major prior to earning 90 credit hours. This requires completion of the SoPA Major Declaration Form, which must have documented approval (i.e. a signature) from a SoPA academic advisor. Degree-seeking students who have completed 90 credit hours and have not declared a major will have a hold placed on future course registrations.

Courses taken to satisfy Proficiency, Supporting, and Distribution Requirements may be used to fulfill major and minor requirements. However, no more than six credits in the major may overlap with the minor. Students must have a grade point average of 2.0 in the major to receive the degree.

At any point, students may change their majors. However, students who change their majors should understand that previously completed coursework may not apply to the newly selected major,

and that additional coursework may be necessary to meet the major requirements.

SoPA undergraduate majors require between 30 and 45 credits. The nursing major is 60 hours and housed in the School of Medicine.

Minor Option
SoPA students may elect to complete one or more minors, which is indicated on the SoPA Major Declaration Form. SoPA minors are typically 15-18 credits. Students who elect to complete the requirements for a minor must earn a grade-point average of at least 2.000 in courses counting toward that minor.

Electives
Students will complete electives as needed to reach a total of 120 credits.

Minimum Requirements to Graduate
Undergraduate students must have a cumulative 2.0 grade point average to graduate. They must also have a minimum 2.0 grade point average in their major(s) and, if applicable, their minor(s). For SoPA majors, at least 60 credits must be earned in courses at the 2000 level or higher.

No more than half the credits used toward satisfying graduation requirements may be in the major. Students may take no more than 70 credits each of humanities, science, and social science. This includes credits in the major.

Up to 6 credits of electives earned in courses with designations such as Independent Study, Special Projects, Directed Study, and Practicum will count toward graduation requirements. Students who must exceed this limit are required to petition the dean's office.

English Writing Requirements
ENGL 1010 Writing (4 c.h.), a 4-credit intensive writing course, is Tulane's writing proficiency requirement. Students must demonstrate writing proficiency by the end of their first year at SoPA. Writing proficiency may be demonstrated by: successful completion of ENGL 1010 Writing (4 c.h.) or ENGL 1011 Writing for Academic Purposes (4 c.h.), or a grade of C or better in a course equivalent to ENGL 1010 Writing (4 c.h.) from a regionally accredited institution, or an Advanced Placement score of 4 or better in either "English Literature and Composition" or "English Language and Composition" (or a similar A.P. exam). Students who do not demonstrate writing proficiency after their first year at SoPA will have a hold placed on future course registrations.

Students who need to review basic English skills before enrolling in ENGL 1010 Writing (4 c.h.) may wish to take PAEN 1000 Academic Writing and Reading (3 c.h.) for elective credit. PAEN 1000 Academic Writing and Reading (3 c.h.) does not count toward the completion of the writing requirement.

Upon completing the mandatory first-year writing course ENGL 1010, SoPA students must also complete at least one 3-credit upper-level writing course. These include intensive writing courses such as PAEN 2630 Expository Writing (4 c.h.)/ENLS 3630 Expository Writing (4 c.h.) and ENLS 3650 Persuasive Writing (4 c.h.) , and designated writing courses offered within a specific SoPA discipline. These designated writing courses offer students additional opportunities for sharpening writing skills in disciplines where instructors have incorporated additional writing activities and instruction into the curriculum. Designated writing courses that satisfy this requirement are indicated in the Tulane Class Schedule. A designated writing course may be a "Writing across the Curriculum" course, which can also be used to fulfill a major, minor, or distribution requirement.

Quantitative Reasoning Requirement
Students working toward a Bachelor of Arts Degree in a SoPA discipline are required to demonstrate competency in at least 3 credits of quantitative reasoning, while students working towards a Bachelor of Science Degree in a SoPA discipline or the Bachelor of Science in Nursing are required to demonstrate competency in at least 6 credits by passing any mathematics course, CPST 1070 Discrete Math for Information Technology (3 c.h.), BSLS 3250 Business Statistics (3 c.h.), DATA 1010 Introduction to Data (3 c.h.), or PAMT 1100 Quantitative Analysis (3 c.h.). A course that meets the quantitative reasoning may also fulfill a major or minor requirement. Students should check the curriculum in the major or minor to determine if specific quantitative reasoning courses are required.

Students majoring in Liberal Arts and Sciences disciplines that are outside of SoPA may not use CPST 1070 Discrete Math for Information Technology (3 c.h.), BSLS 3250 Business Statistics (3 c.h.) , or PAMT 1100 Quantitative Analysis (3 c.h.) to satisfy this requirement. Please refer to the Newcomb-Tulane College graduation requirements. (p.)

Foreign Language/ Global Perspectives Requirement
Students pursuing any bachelor's degree offered by SoPA must demonstrate foreign language proficiency through successful completion of the second level in any foreign language, or complete two courses designated as Global Perspectives. Students may also blend one language and one Global Perspectives course. Please consult the SoPA website for a list of possible Global Perspectives courses.

Supporting Requirements
Oral Communication

Students majoring in SoPA disciplines are required to complete one course in oral communications (Any SPEC course, BSLS 2250 Business Communications (3 c.h.), NRSG 4800 Management and Leadership in Nursing (3 c.h.) or THEA 2100 Fundamentals of Acting (3 c.h.)). A course that meets the oral communication degree requirement may also fulfill a major or minor requirement. Students should check the curriculum in the major or minor to determine if specific oral communication courses are required.

Race & Inclusion

SoPA students will complete one course that focuses on race and inclusion in the United States. Courses that fulfill this requirement will focus at least 60% of their content on race and inclusion in the United States. A course that meets the Race & Inclusion degree requirement may also fulfill a major or minor requirement. Students should check the curriculum in the major or minor to determine if specific Race & Inclusion courses are required.

American Government

SoPA students must also complete one course in American government. This requirement may be fulfilled by GLSP 4350 Law and Government in American Society (3 c.h.) or POLA 2100 American Government (3 c.h.). A course that meets the American Government

requirement may also fulfill a major or minor requirement. Students should check the curriculum in the major or minor to determine if specific American Government courses are required. Other courses may also satisfy the American Government requirement, with the approval of the SoPA associate dean for academic affairs.

Courses that fulfill the Proficiency and Supporting Requirements including the race & inclusion, global perspectives, oral communication, and American government requirements may also be used to satisfy SoPA baccalaureate general education distribution requirements (humanities, science, and social science).

Students majoring in Liberal Arts and Sciences disciplines that are outside of SoPA should refer to the Newcomb-Tulane College graduation requirements. (p.)

Distribution Requirement
Students majoring in SoPA disciplines are required to complete 12 credits each of humanities/fine arts, sciences, and social sciences. In each distribution area, courses must be chosen from at least two different disciplines.

Students majoring in Liberal Arts and Sciences disciplines that are outside of SoPA should refer to the Newcomb-Tulane College graduation requirements. (p.)

Residency
At least 60 credits of a student's degree program must be completed at Tulane University, with the final 30 taken while enrolled in SoPA.

Graduate

The School of Professional Advancement awards a Master of Arts in Teaching (MAT), Master of Education (MEd), Master of Liberal Arts (MLA), Master of Professional Studies (MPS), Master of Public Administration (MPA), or Master of Science (MS), upon successful completion of the major course requirements for one of these programs. Please refer to the individual program for specific coursework requirements. No thesis is required. Students may not apply more than two independent study courses toward graduation requirements. In order to earn a master's degree, a student must have a cumulative grade point average of at least 3.00. Students must also submit an application for degree (https://gradapp.tulane.edu/)at the beginning of the semester in which the student plans to complete all required coursework and graduate. This application must be completed with the student's academic advisor.

General Graduate School Requirements

A full description of Master's (p. 89) degree requirements for all students can be found in the Office of Graduate and Postdoctoral Studies section of this catalog. Students should review these policies thoroughly. Graduate degrees offered at SoPA provide students with in-depth knowledge and mastery in professional disciplines and liberal arts.

Academic Progress Requirements

Students admitted to study at the master's level at SoPA must maintain an overall grade point average of 3.00 or better to be considered in good academic standing. Students whose cumulative grade point average falls below 3.00 will be placed on academic probation, which will require a written academic development plan. Students will be removed from academic probation when they earn an overall grade point average of at least 3.00.

Graduate students who receive a grade lower than a B- in any coursework attempted will be placed on academic probation. Students who earn two grades below a B- will be dismissed. Courses in which a student earns a grade of C+ or lower cannot be counted towards a master's degree.

Human Resources, B.A.

Overview

With its curriculum aligned with
the Society for Human Resource Management (SHRM) curricular templates and Competency Model, the fully online Bachelor of Arts in Human Resources provides students with the knowledge and skills to forecast, plan, recruit, compensate, appraise, and otherwise develop human resources within business organizations in compliance with applicable laws and ethical guidelines. In addition, graduates of the BA in Human Resources program who meet the SHRM experience requirements may be eligible to take the examination to attain the SHRM-CP Certification.

The School of Professional Advancement awards the Bachelor of Arts in Human Resources following the successful completion of 120 credits, including 36 credits in the major, culminating in capstone project.

Requirements

Course ID	Title	Credits
BSLS 2450	Career Success Strategies	3
BSLS 3330	Intro To Human Resources	3
BSLS 3320	Compensation & Benefits	3

BSLS 3340	Managing Org Behavior	3

Organizational Behavior and Management Studies, B.S.

Bachelor of Science in
Organizational Behavior & Management Studies

The fully online Bachelor of Science in Organizational Behavior & Management Studies provides students with the foundational knowledge necessary to manage business entities successfully. Students will build their communication and analytical skills, along with their knowledge of organizational behavior and management, while learning to identify and apply the economic, financial, legal, and ethical concepts that are fundamental to all business operations.

Organizational Behavior & Management Studies Mission Statement

The Bachelor of Science degree in Organizational Behavior & Management Studies (OBMS) provides adult learners with foundational knowledge about the different aspects of business organizations and how the systems within organizations work. Students will learn about the impacts of organizations on the attitudes and behaviors of individuals and develop the skills to manage the relationships and transactions of organizations successfully, based on practical knowledge of applicable psychological, human resources, economic, financial, legal, and ethical concepts.

OBMS Learning Objectives

On completion of the Bachelor of Science degree in Organizational Behavior & Management Studies, graduates will have the knowledge and skills to:

1. Identify and apply the laws, moral and ethical principles, and social responsibilities that govern business entities, transactions, and managerial decisions.
2. Analyze attitudes and behaviors within the organization at various levels (individual, team, organizational) and draw conclusions from the research.
3. Demonstrate knowledge about the fundamental business areas of the business organization, such as: accounting, finance, marketing, and human resources.
4. Communicate clearly and persuasively, verbally and in writing.
5. Compare and contrast various organizational structures and analyze how organizational culture can impact organizational attitudes and behavior.
6. Describe how managers establish organizational goals, motivate employees, and lead through change.

Early Childhood Education, MAT

Overview

The Master of Arts in Teaching with a specialization in Early Childhood Education offers courses and a path to Louisiana teacher certification that will equip teacher candidates with necessary credentials, research skills, and instructional practices to successfully support all learners. To earn this degree, students are required to complete 36 hours of course work in Early Childhood Education. Applied learning is also an integral part of the graduate degree. By the time the final residency experience begins, students will have spent many hours in diverse public and private school classrooms. Upon successful completion of the coursework and field experiences, teacher candidates are eligible for certification through the Louisiana Department of Education.

Requirements

The Master of Arts in Teaching in Early Childhood Education consists of twelve three credit courses, including the required year-long residency course.

Course ID	Title	Credits

Total Credit Hours		**36**

Additional Requirements for Certification

Students in the MAT in Early Childhood Education must maintain a 3.0 GPA in education courses. To enroll in and progress through the Residency program for certification, students must:

- Successfully complete and meet program requirements and competencies
- Successfully pass the Gateway to Residency
- Complete the Praxis II (Content Area) prior to residency
- Complete the Praxis II (Principles of Learning and Teaching) prior to or during residency
- Successfully pass the Gateway to Teaching

Education Coordinate Majors

What is a coordinate major?

The *coordinate major* is an additional major designed to complement the primary one. To earn a coordinate major in education, students must also complete a major in another discipline. Upon successful completion of the coordinate major, the student's transcript will reflect the fact that the student has completed the coordinate major in Elementary Education (grades 1-5) or Secondary Education (grades 6-12) with a focus on the area of application. Tulane SoPA does not currently offer a standalone Bachelor of Arts in Education.

To earn a coordinate major in education, students must be enrolled in a B.A., B.S., or B.F.A. degree at Tulane University. Students should align the field of their primary major with a complementary area of study for the coordinate major. Depending on the area of concentration, students are required to complete 33 hours for Elementary Education or 30 hours for Secondary Education. All education coursework, including the final residency or applied research project, is completed concurrently with students' undergraduate studies.

Applied learning is an integral part of the coordinate major. Students engage in several clinical experiences in diverse public and private school classrooms. Additionally, the coordinate major program requires students to engage in a year-long applied learning component, whether through a residency or a research project, as their culminating experience of the program. For those seeking certification approved by

the Louisiana Department of Education, the final, year-long residency in a school is required.

Elementary Education Coordinate Major (p. 443)

The Elementary Education (grades 1-5) Coordinate Major is a 33-credit major that offers students coursework and a path to become an elementary (grades 1-5) teacher in the State of Louisiana. Successful completion of all coursework and a two-semester residency is a requirement of any individual seeking teaching certification in the State of Louisiana. Students who choose not to pursue teacher certification may complete an applied research project in lieu of the residency.

Secondary Education Coordinate Major (p. 445)

The Secondary Education Coordinate Major can be completed concurrent with an undergraduate degree major at Tulane. Successful completion of all coursework and a two-semester residency is a requirement of any individual seeking teaching certification in the State of Louisiana. Students who choose not to pursue teacher certification may complete an applied research project in lieu of the residency. Students must meet the requirements for the primary major while completing the required Secondary Education requirements, including a subject concentration:

- English
- Mathematics
- Social Studies
- Science (Physics, Chemistry, or Biology)
- Foreign Language (Spanish, French, German, Italian, or Latin)

Elementary Education (Grades 1-5) Coordinate Major

Overview

The Elementary Education (grades 1-5) Coordinate Major is a 33-credit major that offers students coursework and a path to become an elementary (grades 1-5) teacher in the State of Louisiana. Successful completion of all coursework and a two-semester residency is a requirement of any individual seeking teaching certification in the State of Louisiana. Students who choose not to pursue teacher certification may complete an applied research project in lieu of the residency.

Students must meet the requirements for the primary major while completing the required Elementary Education requirements. Students work with an advisor in the department of their primary major and an advisor in the Education program to ensure all requirements in both programs are met.

Requirements

The elementary education (grades 1-5) coordinate major requires 33 credit hours. Students who successfully complete all requirements below, including the clinical residency, become eligible for the elementary education (grades 1-5) teaching license in the State of Louisiana.

Please see the primary major's department page for major requirements.

* Students choose the certification or non-certification pathway by taking 6 credits of either Residency or the Applied Research Project.

Additional Requirements for Certification

Students in the Elementary Education Coordinate Major must maintain a 3.0 GPA in education courses. To enroll in and progress through the Residency program for certification, students must:

- Successfully complete and meet program requirements and competencies
- Successfully pass the Gateway to Residency
- Complete the Praxis II (Content Area) prior to residency
- Complete the Praxis II (Principles of Learning and Teaching) prior to or during residency
- Successfully pass the Gateway to Teaching

The student teaching/ practitioner residency is an intensive teaching experiential-learning pathway taken over the course of two consecutive semesters. During this time, the student completes a carefully designed and fully supported yearlong teacher residency at a school. The student is supervised over the course of their clinical experience by a team comprised of the school-based mentor teacher, the residency school site principal or their designee, as well as a Tulane faculty supervisor. Note that successful completion of a two-semester residency is a requirement of any individual seeking licensure in the State of Louisiana.

Elementary Education, MAT

Overview

The Master of Arts in Teaching with a specialization in Elementary Education offers courses and a path to Louisiana teacher certification that will equip teacher candidates with the necessary credentials,

research skills, and instructional practices to successfully support all learners in the elementary grades. To earn this degree, students are required to complete 36 hours of coursework in Elementary Education. Applied learning is also an integral part of the coordinate major. By the time the final residency experience begins, students will have varied clinical experiences in diverse public and private school classrooms.

Master of Education, M.Ed.

Overview

The Master of Education (M.Ed.) is 30 credits hours and will require students to complete five foundational courses, including a capstone course, along with five courses that may be earned either through elective courses or through graduate certificates stacked into the degree. All courses are three credits.

Requirements

The five 3-credit required courses are as follows:

Course ID	Title	Credits
EDUC 6000	Historical and Philosophical Foundations of Education	3
EDUC 6020	Learning Processes Across the Lifespan	3
EDUC 6040	Curriculum, Instruction, & Assessment for All Learners	3
EDUC 6060	Methods of Educational Research	3
EDUC 6080	Culminating Capstone Project	3

The remaining credits can be earned through elective courses or through graduate certificates. One of the following graduate certificates may be earned as part of the M.Ed. or completed prior to admission to the M.Ed. and then stacked into the degree:

Graduate Certificate in Equity-Centered Education Leadership
Graduate Certificate in Learning Experience Design
Graduate Certificate in Special Education
Graduate Certificate in Teaching English Learners (TEL)

Secondary Education (Grades 6-12) Coordinate Major

Overview

The Secondary Education (grades 6-12) Coordinate major is 30 credits and offers students coursework and a path to become a secondary (grades 6-12) teacher in the State of Louisiana. Successful completion of all coursework and a two-semester residency is a requirement of any individual seeking teaching certification in the State of Louisiana. Students who choose not to pursue teacher certification may complete an applied research project in lieu of the residency.

The Secondary Education (grades 6-12) Coordinate Major can be completed concurrent with an undergraduate degree major at Tulane. Students must meet the requirements for the primary major while completing the required Secondary Education requirements, including a subject concentration:

- English
- Mathematics
- Social Studies
- Science (Physics, Chemistry, or Biology)
- Foreign Language (Spanish, French, German, Italian, or Latin)

Students work with an advisor in the department of their primary major and an advisor in the Education program to ensure all requirements in both programs are met. Students receive a B.A., B.S., or B.F.A. degree and must complete the core requirements of their respective Colleges.

Requirements

The secondary education (grades 6-12) coordinate major is 30 credits and open to all Tulane undergraduates. Please see the primary major's department page for major requirements.

Students who complete all requirements below earn a coordinate major in Secondary Education (grades 6-12) and, for those who participate in the clinical residency, become eligible to apply for the Secondary Education (grades 6-12) teaching license in Louisiana.

[1] Students choose the certification pathway by taking 6 credits of Residency. Those not seeking certification take 6 credits of Applied Research Capstone.

Additional Requirements for Certification

Students in the Secondary Education coordinate major must maintain a 3.0 GPA in education courses, as well as maintain a 2.75 GPA overall. To enroll in and progress through the Residency program for certification, students must:

- Successfully complete and meet program requirements and competencies
- Successfully pass the Gateway to Residency
- Successfully pass the Gateway to Teaching

Secondary Education, MAT

Overview

The MAT degree offers courses and a path to Louisiana teacher certification that will equip teacher candidates with necessary credentials, research skills, and instructional practices to successfully support all learners. To earn this degree, students must be enrolled in the MAT degree at Tulane University SoPA Education program and are required to complete 33 hours of course work in Secondary Education. Applied learning is also an integral part of the coordinate major. By the time the final residency experience begins, students will have varied clinical experiences in diverse public and private school classrooms. Each pathway ensures that our teacher candidates are eligible for certification through the Louisiana Department of Education in one of the following areas of specialization:

- English
- Mathematics
- Social Studies
- Science (Physics, Chemistry, or Biology)
- Foreign Language (Spanish, French, German, Italian, or Latin)

Requirements

The Master of Arts in Teaching in Secondary consists of eleven three-credit courses, including the required year-long residency courses.

Teaching English Learners, Minor

Overview

The Teaching English Learners (TEL) minor is designed for current Tulane students who have an interest in teaching English learners and/or wish to take relevant courses in order to prepare them for future professional goals. With this minor, Tulane students entering the United States K-12 education system are equipped to provide better support for multilingual learners of English in their classrooms and schools. The TEL minor also prepares Tulane students for a variety of other professional pathways, including but not limited to graduate school, Teach for America, teaching/ training abroad, and the Peace Corps.

The courses included in the TEL minor provide Tulane students with a strong foundation in the pedagogical principles and practices that form the basis of an equitable, inclusive learner-centered approach to supporting multilingual learners of English and their families in both academic and non-academic contexts. Students develop the mindsets, knowledge, and skills to act as advocate-allies that are ready and able to support not only the educational outcomes of multilingual learners of English but also contribute to the overall thriving of these learners in their local communities and beyond.

Teaching, Learning, and Training Minor

Overview

The Teaching, Learning, and Training minor examines the critical role of the education system in our society and the importance of education in the life of every individual. The program equips students to identify the purpose for learning in each instance, to develop their own teaching skills, and to facilitate the learning of others across a variety of environments. These learning contexts range from informal experiences to more traditional programs, including teaching in the home, community settings, PK12 schools, institutions of higher education, service organizations such as City Year, Teach for America, and Peace Corps, corporate training divisions, and teaching and training in international contexts.

Emergency Management, Master of Professional Studies

The MPS in Emergency Management degree from the Tulane School of Professional Advancement teaches students the skills and knowledge needed to play a leading role in protecting communities from both natural and human-created hazards and disasters, including those stemming from climate change, as well as responding to ongoing terrorist threats. Students gain the knowledge and the practical skills that are required in the ever-changing threat environment, both domestically and abroad.

The School of Professional Advancement awards the MPS in Emergency Management degree following the successful completion of 11 graduate courses comprised of five core courses, five electives, and one capstone course. No thesis is required.

Requirements

The MPS in Emergency Management is designed to be tailored to the student's interests and needs. The degree is designed with five core courses, a capstone, and five electives. With the five electives, students may opt to pursue a concentration or graduate certificate.

Homeland Security Studies, Master of Professional Studies

The MPS in Homeland Security Studies prepares students to work in the fields of emergency management, intelligence analysis, counterterrorism analysis, cyber security, border protection and security, and infrastructure protection at all levels of government and in the private sector. From courses on domestic and international terrorism and intelligence research methods to examinations of emergency management and border security, the curriculum dives deep into the policies and strategies used in today's advanced homeland security sector. Upon completion of the core courses, students may develop an individual plan of study for the remainder of their coursework with the Program Director based on their specific interests. The School of Professional Advancement awards the MPS in Homeland Security degree following the successful completion of 11 graduate courses comprised of six core courses, four electives, and one capstone course. No thesis is required.

Requirements

The MPS in Homeland Security is designed to be tailored to the student's interests and needs. The degree is designed with six core courses, a capstone, and four electives. A student may use the four electives to pursue a concentration or graduate certification.

Intelligence Studies Certificate (Graduate)

Overview

Intelligence Studies is an academic field devoted to developing analytical, communication, written, computer, critical thinking, and interpersonal skills. Students will gain both theoretical and practical knowledge from intelligence community experts to become highly skilled and sought after in the intelligence fields, both with government agencies and private industry.

This certificate focuses on the missions, methods, and organizational arrangements of intelligence in general, and US intelligence in particular. It focuses on the three significant elements of intelligence – collection, analysis, and counterintelligence – and their applications in the real world. Additionally, courses will explore the relationship between intelligence and national security, the use of intelligence in policymaking and implementation, and privacy rights.

All courses may be applied toward the Master of Professional Studies in Homeland Security or the Master of Professional Studies in Security Management.

Requirements

Curriculum

Course ID	Title	Credits
ESSC 6006	Intel Analysis and Critical Thinking	3
ESSC 7002	Intelligence Research, Methods & Analysis	3
ESSC 7003	Human Intelligence & Counter Intelligence	3
ESSC 7013	Information Operations and Open Source Intelligence	3

Open Source Intelligence Certificate (Graduate)

Overview

Open Source Intelligence is a rapidly changing and growing field focused on collection of information and structured analytical techniques to evaluate diverse types of publicly available information, from historical and geographical data to imagery and social media sources. In this 12-credit certificate, students will learn and evaluate collection strategies and techniques as well as analyze gathered data. The skills developed throughout this four course certificate can be applied in both the private and public sector, as well on an individual level.

All courses in the certificate program may be applied toward the Master of Professional Studies in Homeland Security or the Master of Professional Studies in Security Management.

Requirements

ESSC 6013	Business Continuity	3
ESSC 6017	Sport/Event Security and Response	3
Total Credit Hours		**12**

Sport Security Certificate (Graduate)

The four-course Sport Security certificate program is designed for individuals either employed or seeking employment in sport security (teams, stadiums, tournaments) or events (parades, festivals). This graduate level certificate is comprised of four three-credit hour courses that cover the following: the basics of emergency management (preparing, responding, recovering from either a human-created or natural disaster); physical security (cameras, fences, locks, and so forth, in and around a stadium or event facility); the major threats faced by sporting and other types of events (domestic and international terrorism); and sport and event security management procedures.

All courses from the certificate may be applied toward the Master of Science in Sport Studies, the Master of Professional Studies in Security Management, and the Master of Professional Studies in Security Management.

General Legal Studies Program

Programs

Undergradute

Major

- General Legal Studies, B.A. (p. 451)

Minor

- General Legal Studies Minor (p. 452)

Certificates

- Paralegal Studies Post-Baccalaureate Certificate (p. 453)

General Legal Studies, B.A.

The School of Professional Advancement's General Legal Studies Program was first approved by the American Bar Association's (ABA) Standing Committee on Paralegals in 1981 and earned its most recent reapproval in 2023. Throughout this time, the program has maintained compliance with the rigorous ABA guidelines that govern all aspects of our operations, instilling in our graduates the superior education that ABA requires and legal employers demand.

The General Legal Studies Bachelor of Arts (BA) degree and accompanying Paralegal Certificate, awarded simultaneously, require 120 credits for completion, including 36 credits in the GLSP major. Carefully sequenced coursework begins with core skills classes that emphasize legal research, writing, and analysis, along with law office technology, legal ethics, and other practical aspects of the legal profession. In ensuing semesters, upper-level electives allow students to explore major areas of substantive law.

In or near the final semester, students not already employed as paralegals take GLSP 5900 Gen Legal Studies Practicum (3 c.h.) , a course that includes both a 100-hour internship in a legal services office and an instructional component focusing upon legal ethics, professionalism, and career success skills. Students already employed as paralegals may apply to waive GLSP 5900 and replace the course with an additional GLSP 4000-level elective.

GLSP courses are offered in person or online, in either synchronous **remote** (meeting one evening per week on Zoom) or fully **online** formats (with at least two Zoom sessions that are recorded for those who cannot attend)**. Subject to the ABA requirement that each student must complete at least 3 classes (9 credits) in person or in synchronous remote format, you may take your GLSP classes from wherever you may be, in the format that suits your needs and preferences.**

Many of our graduates pursue careers as paralegals or in other positions in law firms, courts, corporations, government agencies, non-profit legal service providers, and other legal services offices, while others choose to enter law school and become attorneys.

General Legal Studies Program Mission Statement: *The General Legal Studies Program provides our students with the skills, wisdom, and integrity to identify, communicate, and conserve knowledge and to pursue careers as efficient, ethical legal professionals who are prepared to assist attorneys in courts, governmental agencies, law firms, and other legal services offices, or to apply to law school after graduation, if they choose.*

General Legal Studies Program Learning Outcomes

On completion of the General Legal Studies Program curriculum, graduates will have the knowledge and skills to:

1. Describe and analyze the jurisdictions and functions of the state and federal civil, criminal, and administrative court systems.
2. Perform legal research and factual investigations using both print and electronic methods and summarize findings in legal memoranda and briefs.
3. Cite authorities consistent with the adopted legal citation manual (The Bluebook: A Uniform System of Citation.)
4. Draft memoranda of law and legal correspondence.
5. Identify, draft, and file standard pretrial and litigation documents in Federal and State Courts.
6. Use industry-standard law office technology to organize and manage documents, files, billing data, and dockets for trial and other law practice management purposes.
7. Identify and apply the ABA Model Rules of Professional Conduct and the NALA and NFPA ethics guidelines.

Note: Paralegals are trained professionals who work under the supervision of licensed attorneys. Paralegals are not lawyers and are not permitted to practice law or to provide legal services directly to the public, except as permitted by law.

Credit Transfers toward the BA in General Legal Studies

Tulane SoPA's General Legal Studies Program does not accept the transfer of credits for paralegal or legal studies courses completed at

paralegal or legal studies programs that were not approved by ABA's Standing Committee on Paralegals at the time the courses were taken.

Consistent with Tulane SoPA's undergraduate credit transfer policy, which is found here: https://sopa.tulane.edu/admissions/student-transfers/undergraduate (https://sopa.tulane.edu/admissions/student-transfers/undergraduate/), students pursing the General Legal Studies BA and Paralegal Certificate may be permitted to transfer in up to 18 credits (50%) of the 36 legal studies/paralegal course credits required for the GLSP major, provided each course (1) meets all SoPA undergraduate course transfer requirements; (2) was completed at a paralegal or legal studies program that was approved by ABA's Standing Committee on Paralegals at the time the class was completed; and (3) has been reviewed and approved by the General Legal Studies Program Director.

Requirements

To ensure compliance with ABA requirements, all students must complete at least 9 credits of GLSP coursework (three GLSP classes) via in-person or synchronous remote format. The General Legal Studies BA degree requires completion of 120 credits, including these courses in the GLSP major:

Course ID	Title	Credits

Total Credit Hours in Major:		**36**

[1] Preceding course is a prerequisite

Optional 4+1 Program

Undergraduate students in the General Legal Studies (GLS) Program who have earned at least 75 credits, including all 36 credits in the GLS major, and a cumulative GPA of at least 3.0, may apply for admission to SoPA's John Lewis Master of Public Administration (MPA) 4+1 Program. If accepted, students attending full-time may earn the MPA in a single year after completing the GLS BA degree. Up to six graduate-level public administration credits (at the 6000 level or higher) may count toward both the non-major requirements of the GLS B.A. degree and the MPA degree, and up to six additional graduate credit hours taken as overload during undergraduate study (exceeding the required 120 credit hours of the bachelor's) may be applied toward the MPA degree.

General Legal Studies Minor

The General Legal Studies Minor may be completed entirely online and is designed for students who are majoring in other disciplines and wish to develop a general knowledge of U.S. law. The minor is not approved by the American Bar Association, does not award a Paralegal Certificate, and is not intended to prepare graduates to work as paralegals.

Paralegal Studies Post-Baccalaureate Certificate

The School of Professional Advancement's General Legal Studies Program was first approved by the American Bar Association's (ABA) Standing Committee on Paralegals in 1981 and earned its most recent reapproval in 2023. Throughout this time, the program has maintained compliance with the rigorous ABA guidelines that govern all aspects of our operations, instilling in our graduates the superior education that ABA requires and legal employers demand.

The Paralegal Studies Post-Baccalaureate Certificate (PBC) is available for students who have completed a bachelor's degree from a regionally accredited institution, earning an overall GPA of at least 2.0.

The 9-course, 27-credit curriculum for the Paralegal Studies PBC focuses upon legal office skills, ethics, and substantive law courses. Most students finish the PBC and embark upon their new careers within one year. Carefully sequenced coursework includes eight core skills classes that emphasize legal research, writing, ethics, and analysis, along with law office technology and other practical aspects of the legal profession.

In or near the final semester, students not already employed in law offices take GLSP 5900 Gen Legal Studies Practicum (3 c.h.) , a course that includes a 100-hour internship in a legal services office and an instructional component focusing upon legal ethics, professionalism, and career success skills.

GLSP courses are offered in person or online, in either **synchronous remote** (meeting one evening per week on Zoom) or fully **online** formats (with at least two Zoom sessions that are recorded for those who cannot attend). **Subject to the ABA requirement that each student complete at least 3 classes (9 credits) in person or in synchronous remote format, you may take your GLSP classes from wherever you may be, in the format that suits your needs and preferences**.

Many of our PBC graduates pursue careers as paralegals or in other positions in law firms, courts, corporations, government agencies, non-profit legal service providers, and other legal offices, while others choose to enter law school and become attorneys.

General Legal Studies Program mission statement: *The General Legal Studies Program provides our students with the skills, wisdom, and integrity to* identify, *communicate, and conserve knowledge and to pursue careers as efficient, ethical legal professionals who are prepared to assist attorneys in courts, governmental agencies, law firms, and other legal services offices, or to apply to law school after graduation, if they choose.*

General Legal Studies Program Learning Outcomes

On completion of the General Legal Studies Program curriculum, graduates will have the knowledge and skills to:

1. Describe and analyze the jurisdictions and functions of the state and federal civil, criminal, and administrative court systems.
2. Perform legal research and factual investigations using both print and electronic methods and summarize findings in legal memoranda and briefs.
3. Cite authorities consistent with the adopted legal citation manual (The Bluebook: A Uniform System of Citation.)
4. Draft memoranda of law and legal correspondence.
5. Identify, draft, and file standard pretrial and litigation documents in Federal and State Courts.
6. Use industry-standard law office technology to organize and manage documents, files, billing data, and dockets for trial and other law practice management purposes.
7. Identify and apply the ABA Model Rules of Professional Conduct and the NALA and NFPA ethics guidelines.

Credit Transfers for the PBC in Paralegal Studies

SoPA's General Legal Studies Program does not accept the transfer of credits for paralegal courses completed at paralegal programs that were not approved by ABA's Standing Committee on Paralegals at the time the courses were taken.

Consistent with Tulane SoPA's credit transfer policy (https://sopa.tulane.edu/admissions/student-transfers/), students pursing the Post-Baccalaureate Certificate in Paralegal Studies may be permitted to transfer in up to 6 credits (2 classes) of the 27 required legal studies/paralegal course credits, provided each course (1) meets all SoPA course transfer requirements; (2) was completed at a paralegal or legal studies program that was approved by ABA's Standing Committee on Paralegals at the time the class was completed; and (3) has been reviewed and approved by the General Legal Studies Program Director.

Note: Paralegals are trained professionals who work under the supervision of licensed attorneys. Paralegals are not lawyers and are not permitted to practice law or to provide legal services directly to the public, except as permitted by law.

Requirements

To ensure compliance with ABA requirements, all students must complete at least 9 credits of GLSP coursework (three GLSP classes) via in-person or synchronous transmission format. The Paralegal Studies Post-Baccalaureate Certificate requires completion of 27 credits:

Course ID	Title	Credits
Major Core Courses (Offered every semester, in online or remote format)		**24**
GLSP 2010	Intro to the Legal System	
GLSP 3020	Legal Research I	
GLSP 3030	Legal Writing I *	
GLSP 3050	Litigation I	
GLSP 3060	Litigation II *	
GLSP 3070	Legal Technology I	
GLSP 4190	Legal Ethics (Online)	
Select one:		
GLSP 4100	Legal Technology II	
or GLSP 4200	Legal Research & Writing II	
Internship		

GLSP 5900	Gen Legal Studies Practicum (remote, all semesters. 100-hour internship and classroom component) **	3
Total credit hours		**27**

* Preceding course is a prerequisite.

***Students already employed as paralegals may apply to waive GLSP 5900 – Gen. Legal Studies Practicum and replace the course with a GLSP 4000-level elective from the list below:*

Course ID	Title	Credits
Major Electives		
GLSP 4030	Louisiana Succession Practice (remote, fall semester)	3
GLSP 4040	Real Property Practice (remote, summer semester)	3
GLSP 4050	Family Law (online, spring semester)	3
GLSP 4060	Advanced Discovery and Evidence (online)	3
GLSP 4070	Immigration Law Practice (online, all semesters)	3
GLSP 4080	Criminal Law (remote, spring semester)	3
GLSP 4100	Legal Technology II (online, spring semester)	3
GLSP 4160	Interviewing & Investigation (in person, spring semester)	3
GLSP 4180	Bankruptcy Practice (online, fall semester)	3
GLSP 4200	Legal Research & Writing II (online, fall semester)	3
GLSP 4240	Intellectual Prop & Entertain (remote, fall semester)	3
GLSP 4250	Civil Rights Law (remote, spring semester)	3
GLSP 4280	Personal Injury - Malpractice (online, spring semester)	3
GLSP 4300	Louisiana Notary Law (remote, spring and/or summer, per LA state exam schedule)	3
GLSP 4310	Employment Law (remote, spring semester (cross-listed with BSLS 3390 - Employment & Labor Law (online))	3
GLSP 4330	White Collar Crime (remote, fall semester)	3
GLSP 4350	Law and Government in American Society (online, all semesters)	3
GLSP 4380	Evidence Law (remote, summer semester)	3

Humanities & Social Sciences

Programs

Undergraduate

Majors

- Humanities, B.A. (p. 454)
- Social Sciences, B.A. (p. 454)

Graduate

- Liberal Arts, Master of Liberal Arts (p. 455)

Humanities, B.A.

The Humanities major will develop critical oral communication, analysis, and writing skills and prepare students for a wide range of contemporary work environments and professions. Humanities students engage in the interdisciplinary study of complementary fields such as English literature, history, religious studies, linguistics, music, visual and performing arts, and philosophy.

The School of Professional Advancement awards the Bachelor of Arts in Humanities degree following the successful completion of 120 credits, including 30 credits in the major. To fulfill the major core course requirements, students must earn 12 credits in 1000/2000 level and 18 credits in 3000+ level humanities courses. Students must complete HUMA 1010 and three foundational courses (1000 or 2000 level) in three different humanities subject areas. Students will then take five upper-level humanities courses. As their final requirement, students will complete an interdisciplinary Capstone seminar course. Students may have the option to complete their Capstone as an independent study, depending on the semester.

Requirements

Major Core Courses

Course ID	Title	Credits
HUMA 1010	Humanities Foundations	3
One 1000/2000 level course in three different humanities areas [1]		9
Five 3000+ level courses in any of the humanities areas [1]		15
Capstone Seminar [2]		3
Total Credit Hours		**30**

[1] Humanities Areas: English, history, philosophy, religious studies, art history, art studio, digital design, communication, linguistics, language studies, Africana studies, music, theater, or another humanities area chosen with an advisor

[2] Students will have the option to complete their Capstone as an independent study in cases where there is low enrollment for the Capstone seminar.

Social Sciences, B.A.

The Social Sciences major provides students with a versatile skill set and comprehensive interdisciplinary study of human behavior. Social sciences students explore the cultural, economic, political, and historical contexts of societies, with courses available in anthropology, geography, Latin American studies, sociology, political science, and related fields.

The School of Professional Advancement awards the Bachelor of Arts in Social Sciences degree following the successful completion of 120 credits, including 30 credits in the major. To fulfill the major core course requirements, students must earn 12 credits in 1000/2000 level and 18 credits in 3000+ level social science courses. Students must complete PASS 1010 and three foundational courses (1000 or 2000 level) in

three different social science areas. Students will then take five upper-level social science courses. As their final requirement, students will complete an interdisciplinary Capstone seminar course.

Requirements

Major Core Courses

Course ID	Title	Credits
PASS 1010	Social Science Foundations	3
One 1000/2000 level course in three different social science areas [1]		9
Five 3000+ level courses in any of the social science areas [1]		15
Capstone Seminar [2]		3
Total Credit Hours		**30**

[1] Social Science Areas: anthropology, sociology, economics, political science, and gender and sexuality studies, or another social science area chosen with an advisor.

[2] Students will have the option to complete their Capstone as an independent study in cases where there is low enrollment for the Capstone seminar.

Liberal Arts, Master of Liberal Arts

The Master of Liberal Arts (MLA) program at The School of Professional Advancement promotes the development of skills in critical thinking, reading, writing, and oral communication. The MLA degree is awarded following the successful completion of ten graduate-level liberal arts courses. These must include at least two courses designated MLAR and the MLA Capstone course.

The MLA Capstone allows students to critically and systematically integrate the knowledge gained in the program. Students may complete the Capstone Project or the Capstone Portfolio. Students work with the MLA Program Director to determine the best option for their learning goals. Both feature a seminar that serves as the 10th course in the MLA program. Students wishing to complete a master's thesis are exempt from the Capstone requirement.

MLA students may be eligible to enroll in other graduate-level liberal arts courses at Tulane, though tuition for graduate-level courses taken at Tulane schools outside of the School of Professional Advancement may be billed at a higher rate.

Requirements

Students are required to complete ten courses. These must include at least two courses designated MLAR, while students may be eligible to enroll in other graduate-level liberal arts courses at Tulane. As their tenth course, students will enroll in a Capstone seminar to complete either a Capstone Project or a Capstone Portfolio. MLA students who wish to write a thesis in lieu of the tenth course may petition the Director to do so. Students may not apply more than two independent study courses toward graduation requirements for the MLA. Students must also submit an application for degree, available from the School of Professional Advancement Dean's office, at the beginning of the semester in which the student plans to complete all required coursework.

Information Technology

Undergraduate

Major

- Information Technology, B.S. (p. 455)

Minor

- Information Technology Minor (p. 457)

Graduate

- Cybersecurity Management, Master of Science (p. 458)
- Information Technology Management, Master of Science (p. 458)

Certificates

- Cyber Defense Certificate (Graduate) (p. 457)
- Cyber Leadership Certificate (Graduate) (p. 457)
- Cyber Technology Certificate (Graduate) (p. 457)
- Data Science & Cloud Certificate (Graduate) (p. 458)
- IT Strategic Planning Certificate (Graduate) (p. 459)
- Technology Architecture Certificate (Graduate) (p. 459)

Information Technology, B.S.

Overview

The B.S. in Information Technology provides a base of knowledge, skills and exposure to industry practices in areas including cybersecurity, product and program support, integrated application development, and enterprise systems & cloud.

The School of Professional Advancement awards the Bachelor of Science in Information Technology degree following the successful completion of 120 credits, including 21 credits in the major and 24 credits in the chosen concentration of study.

Information Technology Program Educational Objectives

After completing the program, graduates should be able to:

1. Contribute to the success of organizations and communities through adopting a lifelong process of research, adaptation, and implementation of technology.
2. Serve as thought leaders and catalysts for change in the IT industry for the betterment of communities and organizations while acting ethically and with integrity.
3. Apply cybersecurity concepts to technology pursuits in order to help secure people's privacy, liberty and better their way of life.

Information Technology Program Learning Objectives

Upon successful completion of the program, students should be able to:

1. Analyze a complex computing problem and to apply principles of computing and other relevant disciplines to identify solutions.

2. Design, implement, and evaluate a computing-based solution to meet a given set of computing requirements in the context of the program's discipline.
3. Communicate effectively in a variety of professional contexts.
4. Recognize professional responsibilities and make informed judgments in computing practice based on legal and ethical principles.
5. Function effectively as a member or leader of a team engaged in activities appropriate to the program's discipline.
6. Identify and analyze user needs and to take them into account in the selection, creation, integration, evaluation, and administration of computing- based systems.
7. Apply security principles and practices to maintain operations in the presence of risks and threats.

Requirements

All students entering the Information Technology major will take seven (7) foundational technology courses
together and then declare a concentration. Each concentration will require seven (7) courses and a
program concentration capstone course.

Note: Students may also choose to earn a BS in Information Technology without a concentration by taking the seven (7) core courses, plus any seven (7) CPST courses (level 3000 or above) AND a Capstone course.

Cyber Defense Certificate (Graduate)

Overview

This Graduate Certificate is a twelve-credit course of study in which students will be exposed to cybersecurity technical concepts related to the design, monitoring, auditing, and maintaining a cybersecurity posture to protect assets. All credits in this certificate are stackable and may be applied toward the Master of Science Graduate Degree in Cybersecurity Management.

Requirements

Course ID	Title	Credits
CSMT 7700	Cyber Network & Tele Security	3
CSMT 7300	Data & Database Security	3
CSMT 7870	Cyber Incident Res & Forensics	3
CSMT 7750	Wireless, Mobile & Cloud Secur	3
Total Credit Hours		**12**

Cyber Leadership Certificate (Graduate)

Overview

This Graduate Certificate is a twelve-credit course of study in which students will be exposed to cybersecurity leadership concepts related to the governance, policy, and management of securing and protecting digital assets. All credits in this certificate may be applied to the Master of Science Graduate Degree in Cybersecurity Management.

Requirements

Course ID	Title	Credits
CSMT 7050	Leadership for CS Profnls	3

Total Credit Hours		**12**

Cyber Technology Certificate (Graduate)

Overview

The Cyber Technology Graduate Certificate is an 18-credit, six course program that provides students with a broad overview of information technology in areas including networking, application development, data management, cyber and information security. It is suited both for those looking to take on technical and management roles in IT, and also serves as an entry point to SoPA's MS degrees in Information Technology Management and Cybersecurity Management.

Requirements

Cybersecurity Management, Master of Science

Overview

The MS in Cybersecurity Management was designed to provide individuals with the deep theoretical and functional knowledge of the technical, business, and management aspects of cybersecurity.

This graduate program consists of eleven three-credit courses in the cybersecurity management curriculum: 3 foundation courses, 5 required courses, 1 capstone course, and two electives. Students will be prepared to effectively envision, plan, develop, document, review, communicate and lead cybersecurity efforts for an organization. This will include in-depth study of existing and emerging cybersecurity domain technologies, and the industry's best practices and standards for organizations in need of an effective approach to managing cybersecurity.

Requirements

Please note: Any IT Management MS course is available as an elective to Cybersecurity Management students.

Course ID	Title	Credits
CSMT 7050	Leadership for CS Profnls	3
CSMT 7900	Sec & Cyber Threats for Mgrs	3
CSMT 7700	Cyber Network & Tele Security	3

Data Science & Cloud Certificate (Graduate)

Overview

As the Information Technology Industry continues to pivot to cloud computing, especially as it relates to data-driven decision making and data analytics, IT leaders are expected to be able to envision, implement, secure and leverage cloud-based data systems to drive organizational success. This 12-credit certificate will enable students to learn how to conduct Big Data analysis with practical, real-world examples using cloud-based labs (through our partner, Amazon Web Services) and learning resources that are designed to provide students with hands-on experience working with data at scale. It will also prepare students to sit for up to three AWS certification exams.

Information Technology Management, Master of Science

The MS in Information Technology Management is designed for information technology and business professionals who want to combine their managerial skills and technical acumen to advance into a leadership role in the application of computing technologies. Students will acquire: a core set of technology and management knowledge; broad business and real world perspective; communication, interpersonal, and team skills; analytical and critical thinking skills; and the ability to integrate technology, business processes and people to

leverage the use of computing technologies to solve critical needs of a business or organization.

The School of Professional Advancement awards the MS in Information Technology Management degree following the successful completion of 10 graduate courses comprised of seven core courses and 3 electives.

Requirements

Please note: any Cybersecurity Management MS course is available as an elective to Information Technology Management students.

John Lewis Public Administration Program

Overview

Mission Statement

The Tulane SoPA John Lewis Public Administration program prepares forward-thinking, responsive, and ethical public service professionals to effectively lead within a diverse and ever-changing civic sector.

Tulane University

Our Visions & Identity

Known as the "Conscience of Congress," Congressman John Lewis dedicated his life and career to advancing social justice. His transformative work as an activist, civil rights, and political leader embodied the values that guide our mission and work.

We are Community-Responsive, Results-Driven, and Impact-Foused. The Tulane SoPA John Lewis Public Administration program offers applied, dynamic, interdisciplinary coursework that continuously integrates up-to-date practice strategies to meet the demands of the diverse sectors which work for the public interest, including government, nonprofits, philanthropy, and corporate settings.

Graduate

- Joint Degree in Public Administration / Sustainable Real Estate Development, MPA/MSRED (p. 460)
- Master of Public Administration with Concentration in Emergency Management, MPA (p. 461)
- Master of Public Administration with Concentration in Public Health, MPA (p. 461)
- Master of Public Administration, MPA (p. 462)

Certificates

- Economic Development Certificate (Graduate) (p. 460)
- Environmental Management & Resilience Certificate (Graduate) (p. 460)
- Nonprofit and Strategic Philanthropy Management Certificate (Graduate) (p. 463)

Economic Development Certificate (Graduate)

Overview

This four course, 12-credit graduate certificate in Economic Development develops students' specialized expertise in supporting economic development strategies, as well as understanding the ways in which economic development strategies directly intersect with the health and well-being of cities and communities. Students will be prepared for diverse roles that span throughout government, nonprofits, and the private sector that serve to foster business development, retention and growth, and to cultivate healthy business environments and a skilled workforce.

All courses from certificate may be applied toward the Master of Public Administration degree.

Requirements

Course ID	Title	Credits
MPAD 7300	Elements of Economic Development	3
MPAD 7310	Economic Development Challenges and Civic Resilience	3
MPAD 7320	Economic Development and Urban Transformation	3
MPAD 7330	Social Equity and Economic Development	3
Total Credit Hours		**12**

Environmental Management & Resilience Certificate (Graduate)

Overview

This graduate certificate in Environmental Management and Resilience consists of four courses that help students develop specialized expertise in environmental management, focusing on contemporary issues related to the natural environment, civic resilience and the impact of environmental remediation and degradation on communities and individuals. Students are prepared for diverse roles that span throughout government, nonprofits and the private sector that address environmental risks and impact on areas such as transportation, energy, housing, economic development and education.

All courses from this graduate-level "stackable" certificate program may be applied toward a Master of Public Administration degree.

Requirements

Course ID	Title	Credits
MPAD 7400	Environmental Policy	3
MPAD 7410	Environmental Challenges and Civic Resilience	3
MPAD 7420	The Role of Data in Environmental Decisions	3
MPAD 7430	Social Equity and Environmental Management	3
Total Credit Hours		**12**

Joint Degree in Public Administration / Sustainable Real Estate Development, MPA/MSRED

Overview

Tulane Master of Public Administration students may pursue a joint degree programs established with the School of Architecture. MPA Students interested in pursuing this possibility should confer with the MPA Program Director.

MPA / MSRED

The School of Professional Advancement (SoPA) and the School of School of Architecture (TuSA) offer a 64 credit MPA / MSRED dual degree. Joint MPA / MSRED degree candidates complete a minimum of 30 credit hours from the MPA and 34 credit hours from the MSRED.

Through this joint program, a student would be able to pursue both the MPA and MSRED simultaneously and earn both degrees with a lower overall credit requirement than if enrolled in each program separately. Upon completion of joint degree requirements, students will be awarded two separate degrees: an MPA degree awarded by SoPA and an MSRED degree awarded by the TuSA. The dual degree option eliminates up to 12 credit hours / 5 classes required to complete each degree separately.

Requirements

Course ID	Title	Credits
Required Six MPA Foundational Courses:		
MPAD 6000	Public Policy Foundations	3
MPAD 6100	Technology and Civic Sector Leadership	3
MPAD 6110	Data-Informed Leadership, Management, and Decision-Making	3
MPAD 6120	Public Organizational Leadership, Cross-Sector Partnerships, and Stakeholder Engagement	3
MPAD 6130	Budgeting and Financial Management	3
MPAD 6140	Equity, Diversity, Inclusion, and Public Service	3
Required four MPA Environmental Management Concentration Courses:		
MPAD 7400	Environmental Policy	3
MPAD 7410	Environmental Challenges and Civic Resilience	3
MPAD 7420	The Role of Data in Environmental Decisions	3
MPAD 7430	Social Equity and Environmental Management	3
Required nine MSRED Courses:		
SRED 6100	Intro-Real Est Finance & Econ	3
SRED 6110	Introduction to Sustainable Architecture & Design	3
SRED 6130	Intro to Sustainable Urbanism	3
SRED 6140	Intro to Finance Products	3
SRED 6210	Legal Issues in Real Est Deve	3
SRED 6220	Sustainable Design & Planning	4
SRED 6230	Real Estate Finance	4
SRED 6240	Applied Urban Economics	3
SRED 6720	Case Study Sust Real Est Deve	4
Required Practice and Culminating Assessments:		
SRED 6740	Directed Research	4
Total Credit Hours		**64**

Questions about the MSRED program should be directed to the Tulane School of Architecture (https://architecture.tulane.edu/academics/real-estate/msred/).

Master of Public Administration with Concentration in Emergency Management, MPA

Overview

The MPA degree with a concentration in Emergency Management helps students develop specialized expertise that will prepare them with the skills and knowledge to play a leading role in protecting communities from both natural and human-made hazards and disasters. It is comprised of coursework from SoPA's Emergency and Security Studies MPS program.

Requirements

Courses are available entirely online. Completion of the MPA with a concentration in Emergency Management requires 12 courses (36 credit hours), and includes four Emergency Management concentration courses:

Master of Public Administration, MPA

Overview

Mission

The Tulane SoPA John Lewis Public Administration program prepares forward-thinking, responsive, and ethical public service professionals to effectively lead within a diverse and ever-changing civic sector.

Our Vision & Identity

Known as the "Conscience of Congress," Congressman John Lewis dedicated his life and career to advancing social justice. His transformative work as an activist, civil rights, and political leader embodied the values that guide our mission and work.

We are Community-Responsive, Results-Driven, and Impact-Foused. The Tulane SoPA John Lewis Public Administration program offers applied, dynamic, interdisciplinary coursework that continuously integrates up-to-date practice strategies to meet the demands of the diverse sectors which work for the public interest, including government, nonprofits, philanthropy, and corporate settings. Our MPA program actively supports service learning, civic sector workforce development and the career advancement of professionals working in fields connected to public service.

The MPA includes a 3-day residency where students will be exposed to experiential learning, collaboration, and networking with peers, program faculty and other individuals working in civic sector careers.

Requirements

All courses in the MPA program are delivered online. The MPA degree is awarded following the successful completion of 12 graduate courses (36 credit hours), including six core courses, five electives (which may be earned through a graduate certificate or in an area of concentration), and one capstone course. MPAD 6000 serves as the first course in sequence for MPA students. However MPAD 6000 is not required for the program certificate students. MPA students must also complete a residency in New Orleans.

The MPA consists of seven core courses—including a required capstone—plus five elective courses. Students in the MPA program must begin their course sequence with MPAD 6000.

Core Requirements:

Course ID	Title	Credits
MPAD 6000	Public Policy Foundations	3
MPAD 6100	Technology and Civic Sector Leadership	3
MPAD 6110	Data-Informed Leadership, Management, and Decision-Making	3
MPAD 6120	Public Organizational Leadership, Cross-Sector Partnerships, and Stakeholder Engagement	3
MPAD 6130	Budgeting and Financial Management	3
MPAD 6140	Equity, Diversity, Inclusion, and Public Service	3
MPAD 7900	MPA Capstone	3

Electives:

As part of their electives, students may choose to take at least four courses from one of four graduate certificates or from the areas of concentration. Students who complete all of the requirements for the graduate certificates may apply those credits toward the master's degree.

General Elective

Course ID	Title	Credits
MPAD 7800	Law & Public Administration	3

Option One—Equity-Centered Education Leadership Graduate Certificate

Course ID	Title	Credits
EDUC 6100	Reimagining and Leading Equitable Education Systems for the Future (Currently cross-listed with MPAD 7120)	3
EDUC 6120	Leading Learning (Currently cross-listed with MPAD 7130)	3
EDUC 6150	An Introduction to Education Finance and Budgeting: Implications for Strategy, Equity, and Change (Currently cross-listed with MPAD 7110)	3
Choose one course from the following:		
EDUC 6110	Educational Leadership & Policy for Changemakers (Currently cross-listed with MPAD 7100)	3

Sport Studies, Master of Science

The Master of Science (MS) in Sport Studies is offered in collaboration with Tulane's Center for Sport to prepare early career professionals, people experienced in the field, and adults working with local and recreational sports leagues for roles in a range of sport-related occupations, including athletic administration, coaching, working with professional or intercollegiate sports teams, fitness clubs, wellness organization, sports security, and sports marketing.

The program has three required core courses. Students also take eight courses across the program's certificates; either picking and choosing from any of the areas or completing two four-course certificates. Currently offered certificate programs include Sport Administration, Sport Coaching, Sport Security, and Sports Medicine.

Requirements

The MS in Sport Studies consists of ten courses (Eight are selected from two certificate programs and two core requirements).

Digital Design, B.A.

Overview

The mission of the Tulane School of Professional Advancement Digital Design program is to bridge the gap between art and technology by providing students with superior creative problem-solving, acute visual thinking, and cultural and socially significant design challenges while using industry-relevant and forward-thinking technology. In addition to building their professional design portfolios, students will gain experiences beyond the classroom through conferences and community networking events.

The Tulane School of Professional Advancement Awards the B.A. in Digital Design following the completion of 120 credits, which includes 42 credits in the major. All students in the digital design major take core courses in design foundations and then declare a career track (https://digitaldesign.tulane.edu/degreeinfo/) to specialize in either Graphic Design or Interactive UX/UI Design.

Requirements

Blocks

Each Digital Design track consists of "blocks" showing the required order of all coursework. All courses within each block must be completed before you may move on to the next block. For example, all courses in Block 1 must be completed before any courses may be taken in Block 2, and so on. Courses within a block may be take at the same time.

Reviews

Due to the highly demanding nature of this program, students are assessed for knowledge and preparedness for further courses after both Block 2 and Block 5. The reviews include a portfolio review and a questionnaire, both of them evaluated and scored by faculty. A score of 80 or higher constitutes passing the review, which means that the student is ready to proceed in the program. Students who do not pass may resubmit their portfolios the following semester; a letter will be provided to each student with specific recommendations for how to improve their work, which may include taking additional leveling classes. Students who fail the review twice may be asked to take a semester of leave to work on a portfolio, or to change majors.

Digital Design, Post-Baccalaureate Certificate

Overview

The Digital Design Post-Baccalaureate Certificate (PBC) is designed for individuals who have already earned a Bachelor's degree. Both PBCs align with the two tracks within the Digital Design program; Graphic Design and Interactive UX/UI Design. These certificates are comprised of all of the coursework required for an undergraduate major, without required courses in other subjects.

Requirements

Matriculation Blocks

The blocks show the order in which coursework must be taken. All courses within each block must be completed before you may move on to the next block. For example, all courses in Block 1 must be completed before any courses may be taken in Block 2, and so on. **Courses within a block may be taken at the same time.**

Lower-Level and Upper-Level Reviews

Due to the highly demanding nature of this program, students are assessed for knowledge and preparedness for further courses after both Block 2 and Block 4. The reviews include a portfolio review and a questionnaire, both of them evaluated and scored by faculty. A score of 80 or higher constitutes passing the review, which means that the student is ready to proceed in the program. Students who do not pass may resubmit their portfolios the following semester; a letter will be provided to each student with specific recommendations for how to improve their work, which may include taking additional leveling classes. Students who fail the review twice may be asked to take a semester of leave to work on a portfolio, or to change majors.

Digital Media & Marketing Communications, B.A.

Overview

The mission of the Media + Design program is to provide students with the research and problem-solving skills necessary to create strategic, innovative, cultural and socially significant communication solutions. Students will understand how communication can create change through design, advertising, public relations and digital media

marketing. Upon graduation, students of SoPA's Media + Design program will be prepared to enter a highly competitive workforce in the industries of graphic design, interactive design, public relations, digital media marketing and advertising.

The Media + Design Program's Digital Media Marketing and Communications major will equip students with content-rich and highly competitive skills that are necessary in the digital marketing and communication industries. In the program, students will demonstrate mastery in the following: fundamentals of digital marketing that will address common marketing challenges including research, planning, implementation and evaluation; articulating the value that digital marketing campaigns across SEO, paid search, social media, mobile, email and display marketing; conducting audience research to recognize key performance indicators and comprehend marketing analytics which will ultimately shape campaign success; understanding the legal, ethical and cross-cultural implications that digital marketing campaigns are grounded in; and, measuring and analyzing the impact of digital marketing campaigns through the use of various platforms and tools.

Tulane's School of Professional Advancement awards the Bachelor of Arts in Digital Media Marketing and Communications following the successful completion of 120 credits, including 36 credits in the major.

Requirements

Digital Media & Marketing Communications, Certificate

Overview

The mission of the Media + Design program is to provide students with the research and problem-solving skills necessary to create strategic, innovative, cultural and socially significant communication solutions. Students will understand how communication can create change through design, advertising, public relations and digital media marketing. Upon graduation, students of SoPA's Media + Design program will be prepared to enter a highly competitive workforce in the industries of graphic design, interactive design, public relations, digital media marketing and advertising.

The Professional Certificate in Digital Media and Marketing Communications enables students to advance their skill set and understanding of digital media strategies, tactics, and best practices used in the digital marketing and communications industries. This 18 credit-hour undergraduate certificate focuses on the strategies used in digital marketing campaigns including digital content such as infographics, e-books, and blogs; and, SEO & SEM tactics to improve an organizations effectiveness in communicating to their audience on digital, social media, and mobile platforms.

Public Relations, B.A.

Overview

The Media + Design Program's Public Relations major will equip students with content-rich and highly competitive skills that are necessary in the public relations and strategic communication industries. In the program, students will demonstrate mastery in the following: the fundamentals of the public relations process including research, planning, implementation and evaluation - the steps necessary for campaign development; writing for strategic communications adhering to the standards set forth by the industry; conducting primary and secondary research to aid in campaign development; understanding the legal, ethical and cross-cultural issues that pertain to public relations campaigns; and, measuring and analyzing the impact of strategic communication campaigns that include stakeholder-specific strategies and tactics (e.g. social media, earned media) through the use of various platforms and tools.

Tulane's School of Professional Advancement awards the Bachelor of Arts in Public Relations following the successful completion of 120 credits, including 36 credits in the major.

SCHOOL OF PUBLIC HEALTH AND TROPICAL MEDICINE

Dean: Thomas A. LaVeist, PhD
Weatherhead Presidential Chair in Health Equity

Mission and Values

Our Mission

As stewards of the first school of public health in the United States, the Tulane University School of Public Health and Tropical Medicine cultivates independent thinkers, innovative leaders, fierce advocates, and accomplished scholars.

From the neighborhoods of New Orleans to communities worldwide, we conduct research and collaborate with our partners to ensure that all of humanity has an equitable opportunity to be healthy and pursue optimal well-being.

We train the problem solvers.

Our Values

Legacy: We were the first; we lead

Diversity: Leverage our collective genius

Collaboration: Cultivate a culture of shared success

Excellence: Whatever we do, do it well

Discovery: Solve problems that matter

Engagement: Be of value to New Orleans and the world

Balance: Have fun!

Our Vision

Optimal health and well-being for all.

About Us

In 1912, the Tulane University School of Public Health and Tropical Medicine (SPHTM) became the very first school of public health in the country. In fact, Tulane's commitment to public health goes back to 1834 when the university was founded to address concerns of cholera, yellow fever, smallpox, and malaria. Today Tulane SPHTM continues to live out that mission with research and education that spans the gamut of specialty areas in public health, from biostatistics to maternal and child health, epidemiology to nutrition, health policy to clinical research, environmental health sciences to violence prevention, and much, much more.

Students learn from faculty who are actively engaged in the health needs of communities around the corner and around the globe. We've long been known for our hands-on approach to public health education, and employers routinely report that our graduates are prepared and ready to work on day one. This approach is true whether students learn in person or through one of our growing list of high-caliber online programs.

The school is located in the culturally rich city of New Orleans, Louisiana, and we are the leading school of public health in the Gulf Coast. We're dedicated to improving the health and wellbeing of residents throughout the region and serving as a collaborative partner on initiatives to address the inequities plaguing our communities. At the same time, we have long held a wide and diverse global footprint. Faculty conduct research and operate programs that prioritize capacity building and sustainability in numerous countries around the world, such as the Democratic Republic of the Congo, Mali, Zambia, Peru, Bolivia, Taiwan, and Cambodia, just to name a few.

The school's strengths are diverse and many. As the first school of tropical medicine in the country, we have studied vector-borne diseases extensively, with ongoing research in malaria, dengue, Ebola, and several neglected tropical diseases. We also have a strong focus on cardiovascular disease, health equity and disparities, reproductive health, and disaster response and displacement, along with growing strengths in genomics, epigenetics, and other aspects of personalized health and medicine. Topics like climate change and health, data science and artificial intelligence, and cancer prevention and control will offer interdisciplinary options to faculty and students alike in the coming years.

Our diverse faculty are committed public health professionals regularly recognized among their peers with awards, prestigious memberships, and important roles and responsibilities on editorial boards and within associations. They take their job preparing the next generation of public health professionals very seriously. Our students gain a very skills-based education here, and we are fortunate to count ministers and commissioners of health, deans of schools of public health, and presidents and CEOs of health organizations among our alumni. No matter what their role, all of our graduates go on to do important, life-changing work.

Join more than a century's worth of Tulane graduates who have arrived with passion and left with purpose as leaders in public health.

Academic Policies

Academic Policies

School of Public Health and Tropical Medicine Undergraduate Student Policies

A full description of academic policies for all students in Newcomb-Tulane College (https://catalog.tulane.edu/newcomb-tulane/#academicpoliciestext) can be found in the college's section of this catalog. Students should review these policies thoroughly.

Office of Graduate and Postdoctoral Studies Policies

A full description of academic policies for all students in Graduate Programs (p. 80) can be found in the Office of Graduate and Postdoctoral Studies section of this catalog. Students should review these policies thoroughly.

School of Public Health and Tropical Medicine Graduate Student Policies

Academic Advising

At matriculation, each student is assigned a faculty advisor who provides information on the degree and program requirements, advises students on course selection, assists students with practice and integrative learning experiences and/or research experiences, mentors students on academic and professional issues, and assess students' progress toward their degrees. Students and faculty advisors are expected to meet at least once each semester. Students may change faculty advisors with the agreement of another faculty to serve as their advisor. Students must inform the departmental administrator of the change in faculty advisor in writing.

Upon paying the admission deposit and confirming intent to enroll, master's and DrPH students are assigned a student success advisor who collaborates with the student's faculty advisor and department. The student success advisor provides information on degree requirements, assists students with addressing academic and transition related issues, monitors fulfillment of degree requirements, aids students in interpreting university policies and procedures, coordinates the completion of relevant university forms and requests, and acts as a liaison to various university departments. Students are expected to meet with their student success advisor at least once each semester.

Class Attendance

Graduate Courses - Residential

Class attendance is a critical component of learning and students are expected to attend and participate fully in all scheduled class meetings and activities. Attendance policy is established by the instructor for a given course and is stated in the syllabus. It is up to the instructor to determine whether the student can make up missed quizzes, examinations or other exercises, and grades may be adjusted accordingly. Students are responsible for notifying instructors and the

Office of Student Experience about significant absences that result from serious illnesses, injuries, or critical personal problems. Course instructors must clearly state expectations for class participation in the syllabus. Students experiencing barriers to meeting attendance requirements due to disabilities are encouraged to register with the Goldman Center for Student Accessibility to discuss accommodations and to make the necessary arrangements with their Instructor.

Graduate Courses - Online

Success in online courses is dependent on active participation and engagement throughout the course. Students are required to complete all assignments by the due date. Live sessions in online learning create an interactive and effective learning environment. There may be some live, synchronous sessions that students are expected to attend during which class assignments are competed for a grade. The dates for these sessions will be stated in the course syllabus. It is the responsibility of the student to notify the instructor in advance if unable to attend to discuss alternative assignment options. For all other live sessions, attendance will not be graded, however you are responsible for all the content covered. All live sessions are recorded.

Course Add/Drop

Students can Add/Drop courses according to the dates set each semester by the Registrar's Office. Please refer to the academic calendar for Add/Drop dates. Tuition refund is determined by drop date and refunds are automatically computed in Gibson. During the Add/Drop period the student can add and drop courses through Gibson without any signatures or other approval. Courses dropped during Add/Drop will not appear on the student transcript. Students dropping all courses in a semester must complete a resignation form. Students completing the resignation form are only resigned from the current semester and are still considered enrolled in their degree program. Students adding and/or dropping courses must be aware of potential financial aid and visa implications and should check with the Office of Financial Aid or the Office of International Students and Scholars. After the Add period, no courses can be added and after the Drop period, no courses can be dropped without record, please refer to the withdrawal policy.

Readmitting Students to Degree Programs

Students that have not registered for courses for more than 12 consecutive months must seek readmission. Students seeking readmission must contact the SPHTM Advising and Student Success Office at sphtmadvising@tulane.edu. The readmission packet will be reviewed and approved by the Department Chair and Program Director. If readmitted, the student must satisfy the current degree requirements as shown in the current course catalog and not the degree requirements under which they originally enrolled. Students who are readmitted can apply applicable earned credit hours to their degree, provided that those credit hours have not expired. This policy does not apply to students on medical leave or leave of absence.

Medical Withdrawal, Leave, and Return

Students may experience medical and/or psychological conditions as well as problems around substance misuse that significantly impact their ability to complete their academic pursuits. During such circumstances, a medical leave of absence from the University provides the student an opportunity to remain a matriculated student while also allowing time away for appropriate treatment and recovery.

Any student who wishes to request a complete medical withdrawal from classes or leave of absence from the University should review the information here (https://cmvss.tulane.edu/content/medical-withdrawal-leave-return/).

Incomplete (I) Grades

Students must work with instructors on a plan and timeframe to complete remaining work. A grade of "I" automatically becomes an "F" one year after the final examination date. An extension may be obtained with the permission of the instructor by requesting an extension with the Office of Academic Affairs.

Transfer Credits

Please note this policy exclusively pertains to transfer credits from courses that were not completed at Tulane University. Students that completed previous graduate coursework at Tulane University must contact their faculty advisor and the Office of Academic Affairs to determine shared credit hours.

Courses for transfer credit are reviewed on a course-by-course basis and SPHTM reserves the right not to accept the transfer of credit toward a SPHTM degree. Only academic credits from didactic courses can be considered for transfer credit.

Maximum number of credits potentially accepted for transfer is determined by degree:

- MPH, MSPH, MPHTM, and MS degrees – 12 credit hours
- DrPH degree - 15 credit hours (Foundational Coursework - Prerequisites only)
- MHA and PhD degrees – 18 credit hours

For a course to be eligible for transfer to SPHTM, a course must be:

- taken at a regionally US Department of Education accredited 4-year college or university. Courses taken at universities outside of the United States must be evaluated by a transcript evaluation service (such as the World Education Service, "WES"). For universities with formal partnerships with Tulane, credit transfers will be guided by policies outlined in the Memorandum of Understanding.
- a grade of B or higher
- a graduate level courses taken after completion of an undergraduate degree
- completed within the last 7 years at time of enrollment

Transfer Credits and GPA

Grades of courses accepted for transfer credits are not included in the GPA calculation.

Transfer Credits from Quarter-based Systems

Credits completed at an institution that uses a quarter credit system rather than a semester credit system will be accepted at 2/3 the number of hours on the transcript. For instance, a three-credit hour course from an institution that uses quarter credits will transfer to Tulane University as two hours of credit.

Transfer Credits – At the time of matriculation
In order to process transfer credit for coursework completed prior to matriculation, the student must complete a Transfer Credit Approval Form and provide the course syllabus and an official transcript. Transfer requests for courses required by the degree program must be reviewed and approved by the Course Director. Transfer requests for elective courses will be considered on a case-by-case basis. A similar course must be taught at Tulane University and the syllabus reviewed and approved by the Program Director and Course Director. New students should submit the request for transfer credits the semester before starting the program and no later than 2 semesters into the program.

Graduate Credit Earned before the Bachelor's Degree is Conferred
Generally, no credit is given for graduate courses taken before a student has completed a bachelor's degree from an accredited institution. The exception to this policy are students in an accelerated bachelor's to master's degree program.

Transfer Credits – After matriculation
Current students may need to take and transfer courses outside of Tulane University as part of their degree program if the course is not offered by Tulane University. These requests will be evaluated on a case-by-case basis and must be pre-approved by the Faculty Advisor and Graduate Program Director. Transfer of credit is not automatic and not all courses may be accepted toward their program. Once matriculated, students cannot enroll in a course at a different university and apply for transfer credits when an equivalent course is offered at Tulane University.

Transfer Credit Expiration
No credit earned at another college or university more than seven (7) years previously at the time of matriculation may be applied to a SPHTM degree.

Course Waivers

Course Waiver: For SPHL 6020 Foundations in Public Health

Tulane School of Public Health and Tropical Medicine must ensure that all degree seeking students are grounded in foundational public health knowledge. These foundational learning objectives are taught in SPHL 6020 Foundations in Public Health. All SPHTM students (all degree programs) that meet the criteria for option 1 or 2 below are eligible to apply for a course waiver.

OPTION #1 – PREVIOUS PUBLIC HEALTH DEGREE:

Students with a previous Bachelor's, Master's or Doctoral degree from a CEPH-accredited public health program or school can request a waiver from SPHL 6020 Foundations in Public Health. A list of CEPH-accredited schools and programs can be found here: https://ceph.org/about/org-info/who-we-accredit/accredited/ (https://nam11.safelinks.protection.outlook.com/?url=https%3A%2F%2Fceph.org%2Fabout%2Forg-info%2Fwho-we-accredit%2Faccredited%2F&data=05%7C01%7Ctal%40tulane.edu%7C78ded40909d64f61cc0c08db439590b4%7C9de9818325d94b139fc34de5489c113b%7C0%7C0%7C638178081872209969%7CUnknown%7CTWFpbGZsb3d8eyJWIjoiMC4wLjAwMDAiLCJQIjoiV2luMzIiLCJBTiI6Ik1haWwiLCJXVCI6Mn0%3D%7C3000%7C%7C%7C&sdata=9rznaQvYEr40ZI4zxT75oK9oSYx%2B7otqWnKucDVAPyg%3D&reserved=0). Students who receive the waiver are required to take an additional elective to fulfill the 3 credit hours.

OPTION #2 – CHALLENGE EXAM:

The challenge exam assesses student mastery of foundational public health knowledge. Students that successfully pass the exam receive a course waiver from SPHL 6020 Foundations in Public health. All students are eligible to sit for the SPHL 6020 Foundations in Public Health Challenge Exam. Students must score at least 70% to pass the Challenge Exam. Students who receive the waiver are required to take an additional elective to fulfill the 3 credit hours. Students who score below 70% must register for SPHL 6020 Foundations in Public Health.

The Challenge Exam can only be taken one time. If a student has taken SPHL 6020 Foundations in Public Health and failed, they are not eligible to take the Challenge Exam and must repeat the course.

For students that receive a course waiver for SPHL 6020, transfer credit may also be available.

Course Waiver: All Courses (except SPHL 6020 Foundations in Public Health)

Course waivers will be considered on a case-by-case basis. To request a waiver of a course students must consult with their Faculty Advisor and complete a Course Waiver Request Form. Depending on the course, students may be required to take a challenge exam. A course waiver must be approved by the Course Director, Program Director, and Department Chair. If the request for course waiver is approved, students must still fulfill the required number of credit hours. The credit hours of a waived course do not count toward total credit hours for the degree.

Cross Registration

Students are identified as either online or residential students based on degree program enrollment. Students registered for ≥9 credit hours in a single semester can take up to 3 credit hours in the other modality, either online or residential, during that semester. Students interested in cross registration should consult with their Faculty and/or Student Success Advisor. This policy applies to Fall, Spring, and Summer semesters.

Change in Degree Requirements for Academic Programs

If degree program requirements change while a student is enrolled, the student completes the degree under the requirements in which they matriculated. Students enrolled in a degree program that has been revised will be notified. A student may voluntarily opt to complete the degree under the new requirements; however, all new program requirements must be fulfilled. Students should consult with their faculty advisor when considering their options and will be provided guidance on how to opt into the revised plan of study. If students choose the revised plan of study, they will receive a letter of the updated requirements to complete the degree.

Academic Standards

MPH, MSPH, MPH&TM, and MHA Degree Programs

Academic Requirements

- GPA - Cumulative grade point average (GPA) of at least a 3.0 on a 4.0-point scale. GPAs below 3.0 cannot be rounded up.
- Course Grade Minimum - Grades below C will not count towards the total credit hours required to complete the degree. A course can be repeated only one time. The original grade remains on the transcript but is not included in calculating the overall GPA.

Transfer Between Programs/Concentrations

- Students in the MPH, MSPH, MPH&TM or MHA programs may transfer to other SPHTM master's programs/concentrations and apply credits earned. The student must fulfill all of the degree requirements for the program they transfer into, even if it requires more total credits for the degree. Departmental and Graduate Program Director approval is necessary to transfer.

Academic Probation

- A student with a GPA <3.0 or a grade below C in any course will be placed on academic probation. A student placed on probation has 12 months to return to good academic standing. Probation status may lead to withdrawal of financial support.
- A student placed on probation must work with their faculty and student success advisors to propose in writing a plan and timeline to return to good academic standing. This plan must be approved by the Senior Associate Dean of Academic Affairs. A copy of the plan must be sent to SPHTM student records no later than two weeks after delivery of the probation letter.

Dismissal

A student will be dismissed from a master's program if any one of the following occurs:

- Not meeting the terms of probation.
- GPA, based on the number of credit hours remaining, cannot be brought above 3.0.
- Receiving a grade lower than C in a required course that has been repeated.
- Failure to meet departmental milestones, such as finishing coursework and passing applied practice experiences, residencies, integrative learning experiences, and/or thesis within the time frames established by the school.

MS, PhD and DrPH Degree Programs

Academic requirements

- GPA - Cumulative grade point average (GPA) of at least a 3.0 on a 4.0-point scale. GPAs below 3.0 cannot be rounded up.
- Course Grade Minimum - Grades below B- will not count towards the total credit hours required to complete the degree. Only two grades of B- will count toward the degree. Courses can be repeated one time only. The original grade remains on the transcript but is not included in calculating the overall GPA.

PhD Program Continuous Registration

- A doctoral student must be continuously registered in a degree-granting division of the university during the academic year (exclusive of the summer session) in either full-time or part-time status from the date of the first registration until the awarding of the degree. Failure to be continuously registered is *de facto* withdrawal and the school reserves the right not to readmit. Students who are readmitted may be subject to any changes in degree criteria in place at the time of readmission.

Transfer Between Programs/Concentrations

- MS students may transfer to other SPHTM master's programs/concentrations and apply credits earned but must fulfill all of the degree requirements for the program they transfer into, even if it requires more total credits for the degree. Departmental and Graduate Program Director approval is necessary to transfer.
- PhD students may transfer to a master's program or other PhD concentration but must fulfill all of the degree requirements for the program they transfer into, even if it requires more total credits for the degree. Departmental and Graduate Program Director approval is necessary to transfer.
- DrPH students may transfer to a master's program but must fulfill all of the degree requirements for the program they transfer into, even if it requires more total credits for the degree. DrPH students need to reapply to move to a PhD program. Departmental and Graduate Program Director approval is necessary to transfer.

Academic Probation

- A student with a GPA <3.0. or three B-grades, or one grade of C or lower in any course will be placed on academic probation. A student placed on probation has 12 months to return to academic good standing. Probation status may lead to withdrawal of financial support.
- A student placed on probation must work with their faculty advisors to propose in writing a plan and timeline to return to good academic standing. This plan must be approved by the Senior Associate Dean of Academic Affairs. A copy of the plan must be sent to SPHTM student records no later than two weeks after delivery of the probation letter.

Dismissal

A student will be dismissed from a doctoral program if any one of the following occurs:

- Not meeting the terms of probation.
- GPA, based on the number of credit hours remaining, cannot be brought above 3.0.

- Three or more grades of B- with no more repeats. One grade of C or lower in a required course with no more repeats.
- Failure to meet departmental milestones, such as finishing coursework, passing qualifying or cumulative exams, defending a prospectus, and/or defending a thesis or dissertation within the time frames established by the school.

Student Appeal of Dismissal

The steps to appeal a dismissal are:

1. Submit a written explanation to your faculty advisor and department chair explaining extenuating circumstances or other matters pertinent to the appeal.
2. The department determines if the appeal has merit and submits their decision in writing and the student appeal to the Senior Associate Dean for Academic Affairs. If the department does not feel that the appeal deserves further consideration, the dismissal stands. If the department supports the appeal, it is forwarded to the Academic Standards Committee for review.
3. The decision of the Academic Standards Committee shall be considered final.

Grading Scale - Graduate Courses

Grades are reported as follows:

Grade	Description
A	4.00
A minus (A-)	3.67
B plus (B+)	3.33
B	3.00
B minus (B-)	2.67
C	2.00
F	0.00
WF	0.00

I (Incomplete)

Time for Completion of Degrees

Students enrolled in any SPHTM degree program are required to complete the degree requirements within seven (7) years.

Undergraduate Public Health Degrees

School of Public Health and Tropical Medicine

Bachelor of Public Health (BSPH)

The Tulane Bachelor of Science in Public Health (BSPH) degree is an academic degree addressing the health of populations and communities through instruction, service, and community based research. Grounded in a background of humanities, social science, and the liberal arts, the degree fulfills Tulane University's campus-wide undergraduate core proficiency while stressing an additional commitment to quantitative and scientific skills. This degree program is nationally accredited and has specific competencies, or educational targets. Competencies for the BSPH cover core concepts and structures of public health, along with university-required proficiencies, writing and math skills, and a foreign language.

Newcomb-Tulane College Requirements

Newcomb-Tulane College General Education Curriculum

The Newcomb-Tulane College Core Curriculum allows students to explore a wide-range of disciplines and embodies the mission and values of the College by allowing students to have flexibility in their core curriculum courses while exploring a full-range of courses.

The core curriculum—which is composed of a minimum of 30 credits—is divided into three parts: proficiency requirements, distribution of knowledge requirements, and additional requirements. To ensure

that students experience the breadth of knowledge at the collegiate level, AP, IB, and Cambridge A-Level courses can be used to satisfy proficiency requirements only in Formal Reasoning and Foreign Language.

Courses will be designated as satisfying the distribution requirements according to the content and methodology rather than the departmental affiliation of the course.

The new core curriculum general education requirements went into effect with the entering class of 2018.

Courses proposed to satisfy core requirements will be ratified by the Newcomb-Tulane Curriculum Committee.

Proficiency Requirements

Writing Skills (2 courses and 6 credits)

- Tier 1: Freshman writing (ENGL 1010 Writing or ENGL 1011 Writing for Academic Purposes) unless the student is exempt because of their score on the A.P/I.B./Cambridge-A level exams.
- Students receiving exemption from ENGL 1010 Writing/ENGL 1011 Writing for Academic Purposes are required to take an approved writing class during their freshman year. Approved courses will have at least 1/3rd of the grade based upon writing (excluding in class exams), but no revision is required.
- Tier 2: One additional writing course at the 2000 level or above taken from an approved list. Approved courses will have at least 1/3rd of the grade based upon writing (excluding in class exams), to include revision and re-evaluation by the instructor.
- Students are encouraged to take the Tier-1 writing course prior to taking the Tier-2 writing course; however, students are not prohibited from taking the Tier-1 and Tier-2 courses simultaneously.

Note: creative writing courses cannot be used to satisfy the writing proficiency requirement.

Formal Reasoning (1 course and 3 credits)

- One course in mathematics or symbolic logic from an approved list.

Foreign Language (0-3 courses)

The foreign language proficiency requirement is achieved in any of the following ways:

- A passing grade in a course at the 2030 level (3rd semester of Tulane 4-credit hour Foreign Language or ASLS coursework) or higher in accordance with assigned placement level.
- A passing grade on a Tulane-administered proficiency exam for students with assigned placements above the 2030 level. Students who do not successfully pass the proficiency exam will be automatically placed and must successfully complete a course at the 2030 level.
- A passing grade in a course at the level of placement above 2030.
- Advanced Placement score of 4 or 5 **in a foreign language test as noted in the AP/IB chart**
- Higher-Level IB score of 5 or higher **in a foreign language test as noted in the AP/IB chart**
- Cambridge A-Level score decided by the appropriate language department.
- SAT II achievement test of 640 or higher **in a foreign language.**

Note: This requirement is waived for students in B.S.E. programs.

Distribution Requirements

(A course can satisfy only one of the distribution areas.)

Mathematics and the Natural Sciences (2 courses including 1 lab science course and 7 credits)

(Those completing the B.F.A. degree need only complete 1 course with lab)

Social and Behavioral Sciences (2 courses and 6 credits)

Textual and Historical Perspectives (2 courses and 6 credits)

Aesthetics and the Creative Arts (3 credits), which can be fulfilled in 1-3 courses.

Additional Core Requirements

The First Year Seminar (p. 77) (1 course, 1-3 credits)

> This requirement can be satisfied by a Tulane Interdisciplinary Seminar (TIDES) course or Colloquium course (COLQ 1010 Freshmen Colloquium Seminar (1-3 c.h.) or COLQ 1020 Freshman Colloquium (1-3 c.h.))

Public Service (2 courses)

Students develop their commitment to civic engagement through the completion of service learning courses experiences. All students will complete their public service through service-learning courses, an approved public service internship, or an approved public service research experience. These courses can also be used to satisfy other areas of general education.

- To meet this requirement for graduation, all students must complete two semesters of service. One of these semesters must be at the 2000 level or above. The first experience should be completed by the 2nd semester of the sophomore year.
- Service Learning courses require a minimum of 20 hours of service per semester. Those service-learning courses designated as requiring a minimum of 40 hours of service carry one additional credit hour. No course may carry more than 4 credits.

Race and Inclusion (1 course, 3 credits)

One course and 3 credits. Courses that fulfill this requirement will focus on the intersections of race with power, privilege, equity, justice, and/or inclusion and will focus at least 60% their content on these issues in the United States. These courses may also be used to satisfy proficiency or distribution core curriculum requirements.

Global Perspectives (1 course, 3 credits)

One course and 3 credits. Courses that fulfill this requirement will focus at least 60% content with stated objectives to develop historical, cultural, and societal knowledge of an area beyond the United States. These courses may also be used to satisfy proficiency or distribution core curriculum requirements.

For more information please visit the Core Curriculum website (https://college.tulane.edu/core-curriculum/).

Graduate Academic Degrees

Graduate School Requirements

A full description of Master's (p. 89) and PhD Degree (p. 92) requirements for all students can be found in the Office of Graduate and Postdoctoral Studies section of this catalog. Students should review these policies thoroughly. The MS and PhD programs follow the University academic requirements as well as the SPHTM degree requirements.

Master of Science (MS)

The Master of Science degree is an academic research degree with study in biostatistics, epidemiology, clinical research, or tropical medicine. Students are prepared to work on research projects as study managers, data analysts, and biomedical sciences. The MS degree requirements range from 36-45 credits.

The MS is offered in the following areas:

- MS in Biostatistics
- MS in Epidemiology
- MS in Clinical Investigation
- MS in Tropical Medicine

Doctor of Philosophy (PhD)

The Doctor of Philosophy in Public Health is an academic research degree that prepares students for research roles in a variety of public health settings. The PhD provides an understanding of theory and mechanisms of a topic area, research methods for conducting original research, and problem-solving approaches in public health settings. Students obtain in-depth knowledge of a public health field plus skills in research applications and methods. Graduates are prepared for careers in academic research, research institutes, and agencies.

The PhD in Public Health is offered with concentrations in:

- PhD in Biostatistics
- PhD in Epidemiology
- PhD in Environmental Health Sciences
- PhD in Health Policy and Management
- PhD in International Health and Sustainable Development
- PhD in Social, Behavioral, and Population Sciences
- PhD in Tropical Medicine

Public Health Professional Degrees

Master of Public Health (MPH)

The Master of Public Health is the recognized professional degree for careers in public health. The MPH degree is based on a multidisciplinary field of study that addresses the health of populations throughout the world and covers evidence-based approaches to public health; public health and health care systems; planning and management to promote health; policy in public health; leadership; and communication. The MPH degree requires 45 credits.

The MPH is offered in the following concentrations:

- MPH in Community Health Sciences (online)
- MPH in Disaster Management (in-person and online)
- MPH in Epidemiology (in-person)
- MPH in Health Education and Communication (in-person)
- MPH in Health Policy (in-person)
- MPH in Health Systems Management (in-person)
- MPH in International Health and Sustainable Development (in-person)
- MPH in Maternal and Child Health (in-person)
- MPH in Nutrition (in-person)
- MPH in Social, Behavioral and Population Sciences (in-person)

Master of Public Health and Tropical Medicine (MPH&TM)

The Master of Public Health and Tropical Medicine is a practice-oriented program that prepares students to recognize and control infectious diseases found in tropical and subtropical regions and developing countries. This degree is unique to Tulane and reflects a century of work with tropical diseases. The MPH&TM requires 45 credits.

Master of Health Administration (MHA)

The Master of Health Administration, offered in-person and online, trains future managers and leaders who strive to improve the delivery of health services in diverse settings. The MHA degree requires a total of 54 credits plus an administrative residency. The in-person program has been accredited by the Commission on Accreditation of Healthcare Management Education (CAHME) since 1971.

Master of Science in Public Health (MSPH)

The Master of Science in Public Health is a public health professional degree with a science orientation. Students obtain a public health foundation with additional study in a scientific topic. Students are prepared for public health practice as well as in research The MSPH degree requires 42-47 credits.

The MSPH is offered in the following areas:

- MSPH in Biostatistics (in-person)
- MSPH in Environmental Health Sciences (in-person)
- MSPH in Industrial Hygiene (in-person and online)

Master of Medical Management (MMM)

The Master of Medical Management degree prepares current and aspiring clinical leaders with the quantitative and evidence-based management. leadership, and personal mastery skills, which are requisite to assuming leadership toles in the evolving consumer-driven healthcare market. The MMM degree requires 36 credits.

Doctor of Public Health (DrPH)

The Doctor of Public Health is a part-time, applied professional doctoral degree that prepares students for leadership roles in public health practice. It is intended for early to mid-level career

professionals to prepare them for positions of leadership in public health practice settings. The program is comprised of foundational and advanced training in leadership, advocacy, equity, and evaluation, and grounded in a solid understanding of the impact of the social determinants of health on community and individual level outcomes. The DrPH degree requires 57 credits (15 credit hours pre-requisites and 42 credit hours doctoral coursework).

The DrPH is offered with a concentration in:

- DrPH in Leadership, Advocacy, and Equity (online)

Academic Departments

- Department of Biostatistics and Data Science (p. 479)
- Department of Environmental Health Sciences (p. 483)
- Department of Epidemiology (p. 489)
- Department of Health Policy and Management (p. 496)
- Department of International Health & Sustainable Development (p. 500)
- Department of Social, Behavioral, and Population Sciences (p. 503)
- Department of Tropical Medicine and Infectious Disease (p. 514)

Programs

- Public Health and Tropical Medicine, MPHTM (p. 519)
- Social, Behavioral, and Population Sciences, MPH (p. 511)
- Social, Behavioral, and Population Sciences, PhD (p. 512)
- Tropical Medicine, MS (p. 522)
- Tropical Medicine, PhD (p. 523)

Graduate Certificates

- Biostatistics Certificate (Graduate) (p. 483)
- Clinical and Translational Research Certificate (Graduate) (p. 491)
- Clinical Tropical Medicine Certificate (Graduate) (p. 518)
- Disaster Management Certificate (Graduate) (p. 485)
- Epidemiologic Methods Certificate (Graduate) (p. 491)
- Genetic Epidemiology Certificate (Graduate) (p. 495)
- Industrial Hygiene Certificate (Graduate) (p. 488)
- Maternal and Child Health Certificate (Graduate) (p. 508)
- Methods in Monitoring and Evaluation Certificate (Graduate) (p. 518)
- Public Health Certificate (Graduate) (p. 529)
- Social Epidemiology, Certificate (Graduate) (p. 495)
- Violence Prevention Certificate (Graduate) (p. 513)

Graduate Internships

- Dietetic Internship (p. 505)

Dual and Accelerated Degrees

- Dual and Accelerated Degrees (p. 525)

Department of Biostatistics and Data Science

Programs

Chair: John Lefante, PhD

Mission

The Department of Biostatistics and Data Science advances biostatistics, bioinformatics and data sciences by conducting original methodological research, collaborating on interdisciplinary research teams, training students in the application of biostatistics and bioinformatics methods and public health data analytics, and providing high quality services to the academic, research and professional communities.

About Biostatistics

The Department of Biostatistics and Data Science has expertise in biostatistics, bioinformatics, genomics, biomedical informatics, big data and data analytics, including data capture and data management.

The BIOS faculty take great pride in providing a strong nurturing learning environment and are very accessible to students. Faculty are highly engaged in collaborative and independent research and encourage student participation in research projects both within and outside the department. Faculty serve on interdisciplinary research teams and provide expertise in statistical methodology, sample size estimations, data analysis, techniques for handling missing data, design of experiments, robust estimation, survival analysis, analysis of microarray data, genomics and proteomics.

Faculty research areas include biostatistics methods and applications, bioinformatics related to cancer, osteoporosis, respiratory and cardiovascular disease, health informatics and data analytics, big data, data capture, management analysis for large clinical trial studies.

Graduate Degrees

- Biostatistics, MS (p. 480)
- Biostatistics, MSPH (p. 481)
- Biostatistics, PhD (p. 482)

Graduate Certificates

- Biostatistics Certificate (Graduate) (p. 483)

Biostatistics, MS

The Master of Science in Biostatistics educates students in the basic methods of mathematical and applied statistics for health data analysis. Through courses in epidemiology and related subjects, students become familiar with the general areas of public health to which statistical methodologies may be applied. Coursework includes mathematical statistics and probability theory, applied and theoretical multivariate methods, stochastic processes, basic epidemiology, and demography, enabling the student to assist in the application of statistical theory to applied statistical problems. Graduates from the MS in Biostatistics program typically pursue careers in academic research or as statisticians on projects.

Program Competencies

- Define and use the principles of probability and mathematical statistics to guide the selection and application of data analysis methods.
- Apply descriptive and inferential methodology based on study design in solving research questions.
- Design experimental and observational studies for research projects, addressing specific questions in statistics or in an applied field.
- Interpret and effectively communicate research results orally and in writing.

Requirements

The MS Degree in Biostatistics requires a total of 42 credits that includes:

Course ID	Title	Credits
Biostatistics Course Requirements		
SPHL 6020	Foundations in Public Health	3
BIOS 6040	Intermediate Biostatistics	3
BIOS 7040	Statistical Inference I	3
BIOS 7050	Statistical Inference II	3
BIOS 7060	Regression Analysis	3
BIOS 7080	Design of Experiments	3
BIOS 7150	Categorical Data Analysis	3

BIOS 7300	Survival Data Analysis	3
SPHL 6060	Epidemiology for Public Health	3
BIOS 9980	Master's Thesis Research	0
Elective Courses		
Select 12 credits of Biostatistics and other relevant elective courses at the 6000 or higher level [1]		12
Total Credit Hours		**42**

[1] Students should choose these courses in consultation with their faculty advisor

Thesis

Students must successfully complete a thesis. Students register in BIOS 9980 Master's Thesis Research (0 c.h.). The thesis is based on a supervised research project demonstrating scholarship in the area of statistical methodology. The results will be presented orally and in writing. The project will be supervised by a thesis director who is a faculty member of the Department of Biostatistics and Data Science, and approved by at least one other member of the Biostatistics faculty. The master's thesis must be completed within a year of completion of the required courses.

MS in Biostatistics Model Schedule

Biostatistics, MSPH

The MSPH program in Biostatistics emphasizes applied data analysis in the areas of public health and medicine, by preparing students to analyze data in a wide range of settings, including public health surveillance and research programs; local, state, and federal government agencies; pharmaceutical research divisions; university research programs; and consulting firms. Students learn to assist in selecting research design appropriate for the goals of the research, estimate sample size requirements, establish and maintain databases, select and conduct the appropriate statistical analysis, and communicate the results of the analysis orally and in writing fields of public health. Coursework concentrates on developing these statistical skills through the use of actual data sets and computerized statistical software packages.

Program Competencies

- Incorporate knowledge of the core areas of biostatistics, epidemiology, environmental health, health systems management, and the behavioral, social, and cultural aspects of health in addressing and solving problems.
- Select and conduct appropriate statistical procedures for evaluation of public health intervention and surveillance programs.
- Contribute to the design of public health programs by estimating the required sample size and power for program monitoring.
- Incorporate knowledge of databases and information systems in data collection and study management of public health intervention and surveillance programs.
- Interpret and effectively communicate statistical analysis results orally and in writing to public health investigators, collaborators, and members of general community.

Requirements

The MSPH Degree in Biostatistics requires a total of 42 credits that includes:

Biostatistics, PhD

PhD in Biostatistics

The PhD program in Biostatistics educates advanced students in the theory and application of biostatistics and data science methods and prepares them to be on the forefront of leadership in these areas. Education in the advanced theory of probability and statistical inference is combined with applied methods in complex study design and analysis.

Graduates from the PhD program typically pursue careers as academic researchers and teachers; in industry, such as the pharmaceutical and biomedical fields; and in other research pursuits, both public and private. Typical roles include teaching, collaborative research and independent research in statistics, biostatistics, bioinformatics methods, design, and data analysis.

Program Competencies

- Develop new biostatistical and data science methods for application to biomedical and public health research problems.
- Assess the performance of advanced statistical methods applied to biomedical and public health research.
- Design a statistical analysis plan to analyze complex data.
- Design teaching and learning experiences grounded in pedagogical best practices in a chosen area of expertise.
- Develop a grant proposal for a public health research study with a compelling scientific narrative, description of investigator capacity, timeline, and budget.

Requirements

Students must complete 48 credit hours of coursework and doctoral studies beyond the baccalaureate, with a minimum of 30 didactic hours at Tulane in the doctoral program. Up to 18 Credits can be transferred from Master's degree.

The PhD must be completed within seven years of matriculation into the doctoral program.

BIOS 8350	Clustered and Longitudinal Data Analysis	3
BIOS 8820	Multivariate Methods	3
Elective Courses		
Select a minimum of 9 credits from relevant advanced level courses in consultation with an academic advisor.		9
Total Credit Hours		**48**

Research Ethics

Students are required to take online research ethics training via CITI or another equivalent training program in research ethics. This certification must remain current throughout the program duration.

Teaching Assistant Experience

All PhD students at SPHTM are required to serve as a teaching assistant (TA) for two SPHTM courses while enrolled in the PhD program. Students should register for Teaching Assistantship Educational Experience (0 credits) during the terms they complete each TA requirement.

Comprehensive Exam

Students are required to pass a written comprehensive examination that demonstrates general knowledge of biostatistical methods and research applications. The department administers a written comprehensive examination upon completion of the required coursework. The exam is administered twice a year (October and March) and must be taken within a year after the completion of the coursework. The exam has two parts: an applied biostatistics component; and a probability and mathematical statistics component. Candidates must pass both parts to successfully complete the comprehensive exam requirement. Students have two attempts to pass each component of the examination; the second attempt must take place within a year of the first.

Doctoral Committee

After successful completion of the comprehensive examination, the student forms a dissertation committee and develops a prospectus. The committee must include a minimum of three members with at least two faculty from the Department of Biostatistics and Data Sciences and one external to the school.

Prospectus

Students work with their advisor and doctoral committee to determine a research hypothesis and prepare a prospectus of proposed dissertation research. The research prospectus is presented and defended at least one semester before the dissertation defense. Following the successful defense of the prospectus, students are admitted to PhD candidacy and proceed with dissertation research.

Dissertation

Students must conduct original research and defend a dissertation based on that research. The dissertation research demonstrates scholarly work and is the basis for the dissertation. The student defends the dissertation to their committee; the dissertation committee and SPHTM Executive Faculty approve the dissertation.

Biostatistics Certificate (Graduate)

The Certificate in Biostatistics provides students with skills in applied data analysis in the areas of public health and medicine. The coursework concentrates on developing statistical skills through the use of actual data sets and computerized statistical software packages. The certificate program will benefit students who want to strengthen their public health study with strong applied data analysis skills.

Offered by: Department of Biostatistics and Data Science

Faculty Lead: A (https://sph.tulane.edu/gbds/john-lefante-phd/)rti Shankar, PhD

Purpose

This certificate program provides students with skills in applied data analysis in the areas of public health and medicine.

Eligible Students

This certificate is designed for students not enrolled in a degree-seeking program in the School of Public Health and Tropical Medicine. Tulane students enrolled in degree programs in other schools and persons not enrolled in a degree program but have a prior bachelor's degree are eligible to apply. Current SPHTM students can apply for the certificate, however, only 3 credit hours of the certificate can be shared with their degree.

Certificate Competencies

Students who earn then the Certificate in Biostatistics will be able to:

- Formulate appropriate linear regression models and conduct simple and multiple linear regression analysis.
- Differentiate between various analysis of variance procedures and analyze data using these procedures.
- Distinguish between procedures for analyzing discrete data and conduct logistic regression and other categorical procedures.

Department of Environmental Health Sciences

Programs

Chair: Melissa Gonzales, PhD, MS

Environmental Health Sciences

Environmental Health Sciences prepares students to improve the health of populations through strengthening environmental health protection and management systems, building stronger communities, providing technical assistance, and facilitating health risk reduction strategies in an increasingly complex and changing world.

Environmental Health Sciences Programs train students to identify health impacts and develop strategies to reduce health risks across work, home, and ambient environments posed by natural and man-made sources and disasters, which are modified by climate change and unequally distributed among communities.

Our mission is to equip the next generation of environmental public health leaders with the knowledge and skills to protect the health from the impacts of environmental exposure.

Our vision is a world in which one's health status and life chances are supported by the environments in which they live, work, and play.

Graduate Degrees

- Disaster Management, MPH (p. 483)
- Environmental Health Sciences, MSPH (p. 485)
- Environmental Health Sciences, PhD (p. 486)
- Industrial Hygiene, MSPH (p. 487)

Graduate degrees in Occupational and Environmental Health, MPH and Occupational Health and Safety Management, MPH will not be admitting students for academic year 2024-2025.

Graduate Certificates

- Disaster Management Certificate (Graduate) (p. 485)
- Industrial Hygiene Certificate (Graduate) (p. 488)

Graduate certificates in Occupational and Environmental Health, Occupational Health and Safety Management, Disaster Management and Resilience, and Environmental Health will not be admitting students for the academic year 2024-2025.

Disaster Management, MPH

The MPH in Disaster Management program prepares professionals to apply scientific principles to prevent, detect, and mitigate environmental public health problems and threats associated with natural and technological disasters- locally to globally. Students gain skills to implement population-based interventions to protect communities, particularly vulnerable populations, from natural, accidental, and intentional disasters. This MPH offering is intended for both pre-professionals and mid-career individuals. Students typically

have a background in a life or physical science or engineering. This course is offered by Distance Learning and on campus.

Faculty Lead: Stephen Murphy, PhD

Program Competency

Upon completion of the MPH degree in Disaster Management, graduates will have the following competencies:

- Apply scientific principles to prevent, detect, respond to, and mitigate local and global threats to environmental health that are associated with natural and technological disasters.
- Integrate public health strategies in each core component of disaster management: prevention, preparedness, response, mitigation, and recovery.
- Implement population-based interventions to protect communities and particularly vulnerable populations from natural, accidental, and intentional disasters that affect personal and community health.
- Evaluate the capacity of public health systems to effectively respond to natural and intentional disasters.
- Apply international, federal, and state regulatory policies, guidelines, and authorities to address public health needs during disasters.

Requirements

The MPH Degree in Disaster management requires 45 credits that includes:

SPHTM Foundational Requirements (15 credits)

Course ID	Title	Credits
SPHL 6020	Foundations in Public Health	3
SPHL 6050	Biostatistics for Public Health	3

Selected from courses offered within the department, school, or university in consultation with an academic advisor.

Applied Practice Experience (SPHL 9980)

The Applied Practice Experience (APE) (formerly practicum) is a supervised practice experience conducted in an agency or organization external to the university to gain practical experience. The APE allows students to demonstrate attainment of at least five competencies, including at least 3 from the foundational competencies (CEPH Criterion D2). The APE is conducted after completion of the foundational courses. After identifying the APE setting and defining the competencies, students enter the information into Terra Dotta. An APE report is required that summarizes the field experiences.

Integrated Learning Experience (SPHL 7950)

All students must complete an Integrated Learning Experience (ILE) (formerly culminating experience) that demonstrates the synthesis of foundational and concentration competencies. Students in the MPH in Disaster Management conduct a public health analysis.

Model Course Schedule

Year 1, Fall Semester

Course ID	Title	Credits
SPHL 6020	Foundations in Public Health	3
SPHL 6050	Biostatistics for Public Health	3
ENHS 6910	Environmental Aspects of Disaster Management	3
ENHS 6030	Survey of Environmental Health	3
Total Credit Hours		**12**

Year 1, Spring Semester

Course ID	Title	Credits
SPHL 6070	Health Systems Policy and Management	3
SPHL 6060	Epidemiology for Public Health	3
SPHL 6080	Design Strategies in Public Health Programs	3
ENHS 6930	Planning and Implementation in Disaster Management	3
Total Credit Hours		**12**

Year 1, Summer

Total degree credits: 45

Disaster Management Certificate (Graduate)

The Graduate Certificate Disaster Management prepares professionals in disaster preparedness, response and management. This is non-degree standalone graduate certificate for students in the distance learning programs. The graduate certificate provides skills for responding to public health aspects of disasters, including crises communication, population issues and psychosocial aspects of disasters. It also addresses the management structure and operational models unique to disasters.

Courses carry graduate degree credit and may be applied toward the MPH degree in disaster management.

Professionals who select the graduate certificate may already have a master's degree and seek a specialization in disaster management. Others seek a credential to work in the disaster management fields.

Backgrounds of professionals in the disaster management certificate have experience in public health, on disaster management teams, occupational or environmental health professionals with disaster management responsibilities and a wide range of other professional experiences.

Faculty Lead: Stephen Murphy, PhD
Program Competencies
At the completion of the Graduate Certificate in Disaster Management, the student will be able to:

- Apply public health, policy, practice and scientific principles to address the health threats resulting from natural and intentional disasters.
- Integrate environmental public health strategies in disaster preparedness, response, containment, and recovery.
- Integrate public health skills in emergency planning and response, crisis communications, protecting vulnerable populations, and managing the psychosocial impact of disasters.

Requirements

The Graduate Certificate in Disaster management requires 15 credits includes:

Course ID	Title	Credits
ENHS 6430	Disaster & Emergency Communication	3
ENHS 6600	Principles of Toxicology	3
ENHS 6910	Environmental Aspects of Disaster Management	3
ENHS 6930	Planning and Implementation in Disaster Management	3
ENHS 6950	Psychosocial Aspects of Disaster	3
Total Credit Hours		**15**

Apply Graduate Certificate credits toward the MPH in Disaster Management

This graduate certificate may be taken as a standalone graduate certificate for students in the distance learning programs. For those wishing to pursue a MPH in Disaster Management, the course credits obtained in the graduate certificate may be applied to the MPH degree. Students proceeding into the MPH degree complete a total of 42 credits that include the remainder of the required Disaster Management courses and the SPHTM foundational courses. Only the MPH degree in Disaster Management is awarded. Student must have a GPA of 3.0 in coursework and meet the MPH degree admission requirements to transfer to the degree program.

Combined Graduate Certificate in Disaster Management with a MPH degree in another area.

Student in another MPH degree program seeking to add a graduate certificate in Disaster Management may use the elective credits available in the degree program, but not required courses, for the graduate certificate. Required courses cannot be double counted toward both the MPH and a graduate certificate. If there is an overlap in required courses, the student, in consultation with their advisor, selects another disaster management courses to meet the 15 credits. The combined MPH and graduate certificate may take 5 to 6 additional credits beyond the total for the degree alone. If the graduate certificate in disaster management is combined with the MSPH in industrial hygiene, the student will take an additional 14 credits since the industrial hygiene degree does not have electives.

Environmental Health Sciences, MSPH

The MSPH degree in Global Environmental Health Sciences prepares students to recognize, evaluate and control global environmental health problems, use quantitative and qualitative methods to evaluate environmental data, and to manage delivery of global environmental health services. Beyond the school core requirements, students select elective coursework in consultation with their academic advisor to strengthen their knowledge, skill and competence in specific areas of environmental health.The MSPH degree is designed for both pre- and mid-career professionals.

Program Competencies

Upon completion of the MSPH degree in Global Environmental Health Sciences graduates will have the following competencies:

- Recognize, evaluate, and control global environmental health problems.

- Apply environmental health principles to solve global public health problems.
- Use quantitative and qualitative methods to evaluate environmental and health data.
- Translate research in global environmental health into practice.
- Communicate environmental health information to peer groups, environmental health practitioners, affected communities, and the public.

Requirements

The MSPH Degree in Global Environmental Health Sciences requires 45 credits that include:

Course ID	Title	Credits
SPHTM Foundational Requirements (15 credits)		
SPHL 6020	Foundations in Public Health	3
SPHL 6050	Biostatistics for Public Health	3
SPHL 6060	Epidemiology for Public Health	3
SPHL 6070	Health Systems Policy and Management	3
SPHL 6080	Design Strategies in Public Health Programs	3
Program Course Requirements (21 credits total)		
ENHS 6030	Survey of Environmental Health	3
ENHS 6420	Global Food Safety and Public Health	3
ENHS 6510	Water Quality Management	3
ENHS 6560	Environmental Health Microbiology	3
ENHS 6600	Principles of Toxicology	3
ENHS 7500	Air Sampling & Analysis	3
ENHS 7620	Health Risk Assessment	3
Elective Courses [1]		**9**
SPHL 9980	Applied Practice Experience	0
SPHL 7950	Integrative Learning Experience	0
Total Credit Hours		**45**

Integrated Learning Experience (SPHL 7950)

All students must complete an Integrated Learning Experience (ILE) (formerly culminating experience) that demonstrates the synthesis of foundational and concentration competencies. Students in the MSPH in Environmental Health Sciences conduct a public health analysis.

Applied Practice Experience (SPHL 9980)

The Applied Practice Experience (APE) (formerly practicum) is a supervised practice experience conducted in an agency or organization external to the university to gain practical experience. The APE allows students to demonstrate attainment of at least five competencies, including at least 3 from the foundational competencies (CEPH Criterion D2). The APE is conducted after completion of the foundational courses. After identifying the APE setting and defining the competencies, students enter the information into Terra Dotta. An APE report is required that summarizes the field experiences.

[1] Selected from courses offered within the department, school, or university in consultation with an academic advisor.

Environmental Health Sciences, PhD

The PhD degree in the Environmental Health Sciences Department is an advanced research degree that prepares students to employ laboratory and community approaches to address adverse environmental health impacts. Students use basic and applied research methodologies to examine consequences of chemical and non-chemical stressors and disasters. Graduates of the PhD programs advance to careers at academic institutions, governmental agencies, industry and nonprofit organizations.

Program Competencies:

- Evaluate current challenges to environmental health through an exploration of the current literature and scientific evidence.
- Construct approaches and solutions to environmental health problems.
- Investigate contemporary challenges in environmental health sciences.
- Design teaching and learning experiences grounded in pedagogical best practices in a chosen area of expertise.
- Develop a grant proposal for a public health research study with a compelling scientific narrative, description of investigator capacity, timeline, and budget.

Requirements

Students must complete 48 credit hours of coursework and doctoral studies beyond the baccalaureate, with a minimum of 30 didactic hours at Tulane in the doctoral program. Up to 18 Credits can be transferred from a prior graduate degree.

The PhD must be completed within seven years of matriculation into the doctoral program.

Course ID	Title	Credits
PhD Foundational Courses		
SPHL 6020	Foundations in Public Health	3
SPHL 6050	Biostatistics for Public Health	3
SPHL 6060	Epidemiology for Public Health	3
ENHS 6030	Survey of Environmental Health	3
ENHS 6600	Principles of Toxicology	3
ENHS 7620	Health Risk Assessment	3
PhD Core Courses		
ENHS 8100	Advanced Environmental Health	3
ENHS 8200	Environmental Health Methods	3
BIOS 6040	Intermediate Biostatistics	3
EPID 7120	Epidemiologic Methods II	3
SPHL 8080	Public Health Pedagogy	3
SPHL 7500	Public Health Grant Writing	3
Electives [1]		**12**
Total Credit Hours		**48**

[1] Select 12 credits of Environmental Health Sciences and other relevant elective courses at the 6000 or higher level. Students should choose these courses in consultation with their faculty advisor.

Research Ethics

Students are required to take online research ethics training via CITI or another equivalent training program in research ethics. This certification must remain current throughout the program duration.

Teaching Assistant Requirement

All PhD students at SPHTM are required to serve as a teaching assistant (TA) for two SPHTM courses while enrolled in the PhD program. Students should register for Teaching Assistantship Educational Experience (0 credits) during the terms they complete each TA requirement.

Comprehensive Exam

The departmental faculty administer the comprehensive examination. The exam should be taken no later than a year after completing all required coursework. The comprehensive exam is offered in January, August, or by special arrangement. The exam consists of written questions from the faculty that gauge the student's ability to identify, assess, and propose approaches to study environmental health problems.

Students have two attempts to pass the examination; the second attempt must take place within a year of the first.

Doctoral Committee

After successful completion of the comprehensive examination, the student forms a dissertation committee and develops a prospectus. The committee must include a minimum of three members with at least two faculty from the Department of Global Environmental Health Sciences and one external to the school.

Prospectus

Students work with their advisor and doctoral committee to determine a research hypothesis and prepare a prospectus of proposed dissertation research. The research prospectus is presented and defended at least one semester before the dissertation defense. Following the successful defense of the prospectus, students are admitted to PhD candidacy and proceed with dissertation research.

Dissertation

Students must conduct original research and defend a dissertation based on that research. The dissertation research demonstrates scholarly work and is the basis for the dissertation. The student defends the dissertation to their committee; the dissertation committee and SPHTM Executive Faculty approve the dissertation.

Industrial Hygiene, MSPH

Vision Statement: To improve worker and community health by developing the most competent industrial hygienists in the world.

Millions of workers across the globe make our modern lifestyle a reality. Industrial hygiene (IH) is the critical profession that protects the health and wellbeing of these workers and their communities. The Tulane MSPH-IH program prepares students to take on challenging professional careers in exposure science and worker protection in occupational and community settings. Our program is ABET accredited, which allows our graduates to take the Certified Industrial Hygienist (CIH) exam with one less year of professional work experience. Graduates of our program receive the designation of Graduate Safety Professionals (GSP). The program is also a recipient of a National Institute of Occupational Safety and Health (NIOSH) training grant to support students financially. Finally, our extensive alumni network and expert faculty make our program one of the premier graduate industrial hygiene programs nationally and globally.

Our graduate certificate program is designed to prepare CIH candidates for the exam, by providing the 15 industrial hygiene-specific credits required to apply, and by equipping students with knowledge and skills important for the comprehensive practice of industrial hygiene.

Accreditation

The Industrial Health program is accredited through the **Applied Science Accreditation Commission of ABET**, an accrediting agency for programs in applied science, computing, engineering, and engineering technology. Tulane's Industrial Hygiene program has been ABET - accredited since 1996.

Student Enrollment and Graduation Statistics

Academic Year	New Student Enrolled	Total Students Enrolled	Total Students Graduated
2017-18	7	15	6
2018-19	4	13	5
2019-20	5	13	7
2020-21	6	12	4
2021-22	18	23	2
2022-2023	16	29	1
2023-24	9	30	4(anticipated)

Graduates of the MSPH in Industrial Hygiene receive one year of credit towards the experience requirement to sit for the exam to become a board-certified industrial hygienist (CIH, American Board of Industrial Hygiene).

NIOSH Training and Education Grant

The Tulane MSPH program in Industrial Hygiene is supported by a Training and Education grant awarded by the National Institute for Occupational Safety and Health (NIOSH). Students in the MSPH–IH program are eligible to apply for a NIOSH traineeship which may provide partial tuition support and stipend. For further details on the NIOSH training program, contact Program Director Dr. Mark Wilson.

Program Competencies

At the completion of the MSPH degree, the student will be able to:

- Anticipate and identify hazards in the workplace using basic and applied scientific and engineering principles.
- Quantify and evaluate the hazard or risks of occupational health stressors utilizing the methods and techniques of analytical chemistry, other measurement sciences, and statistics.
- Analyze and interpret toxicology and epidemiology data and information on occupational health hazards.
- Design and evaluate engineering and administrative controls for workplace hazards, with emphasis on general and local exhaust ventilation.
- Select and specify appropriate types of personal protective equipment for control of occupational exposures.
- Demonstrate knowledge of the development, management, and evaluation of industrial hygiene programs.
- Communicate verbally and in writing, the nature, risks, and remediation of workplace and environmental hazards.
- Interpret and apply environmental and occupational safety and health regulations and standards.

Industrial hygiene comprehensive examination

Semester subtotal: 6

Total degree credits: 47

Industrial Hygiene Certificate (Graduate)

The online Graduate Certificate in Industrial Hygiene prepares professionals with the basic knowledge of industrial hygiene and toxicology to recognize and control workplace hazards. The Certificate provides 15 industrial hygiene specific credits that prepare students for the Certified Industrial Hygiene (CIH) exam

The Graduate Certificate in Industrial Hygiene is a non-degree program. Courses carry degree credit that may be applied toward the MSPH or MPH degrees. This graduate certificate is offered online, suiting the needs of most mid-career professionals.

Program Competencies

At the completion of the Graduate Certificate in Industrial Hygiene, the student will be able to:

- Recognize hazardous agents and the adverse effects of exposure
- Anticipate and evaluate work place hazards using basic and applied scientific and engineering principles.
- Specify types of personal protective equipment and other controls for work place hazards and exposures.

Requirements

The Graduate Certificate in Industrial Hygiene requires a total of **15 credits** that includes:

Course ID	Title	Credits
Required Courses		
ENHS 6030	Survey of Environmental Health	3
ENHS 6600	Principles of Toxicology	3
ENHS 6720	Principles of Industrial Hygiene	3
Select six credits from the following:		6
ENHS 6300	Radiological Health	
ENHS 6540	Principles of Occupational Health	
ENHS 6620	Physical Agents & Ergonomic Hazards in the Workplace	
ENHS 7110	Industrial Ventilation & Chemical Hazard Control	
ENHS 7500	Air Sampling & Analysis [1]	
Total Credit Hours		**15**

[1] This course requires a one week on campus laboratory section. Dates for on campus lab posted in calendar.

Apply Graduate Certificate Credits toward the MSPH in Industrial Hygiene
IH course credits taken in the graduate certificate may be applied to the MSPH in industrial hygiene. Students proceeding onto the MSPH degree in IH complete a total of 45 credits that include the remainder of the required IH courses and the SPHTM core. Only the MSPH degree is awarded. Student must have a GPA of 3.0 in coursework and meet the IH admission requirements to transfer to the degree program. Contact the DL manager prior to completion of the certificate for information.

Combined Graduate Certificate with a MPH Degree in Another Area
Student in another MPH degree program seeking to add a graduate certificate in IH may use the elective credits available in a degree program, but not required courses, for the graduate certificate. Required courses cannot be double counted toward both the MPH and the IH graduate certificate. If there is an overlap in required courses, the student, in consultation with their advisor, selects other industrial hygiene courses to meet the 15 credits for the certificate. The combined MPH and the IH graduate certificate may take 2 to 6 additional credits beyond the total for the MPH degree alone.

Department of Epidemiology

Programs

Interim Chair: Lu Qi, MD, PhD
HCA Regents Distinguished Chair and Professor

Mission
The Department of Epidemiology plays a leading role in the improvement of global public health through epidemiological research, education and professional service at the local, national, and international levels.

About Epidemiology
The faculty investigates the burden and cause of disease in populations and use this knowledge for disease prevention and treatment. Faculty and students work together to discover the role of genomic, behavioral, social, and environmental influences on health.

Our students enjoy a supportive and collaborative environment with accessible faculty, research opportunities, and organized social events. Additionally, experienced faculty play an active role in mentoring students as they explore the wide range of opportunities available for their future careers.

Faculty have substantial research expertise in cardiometabolic diseases, cancer, infectious diseases, reproductive health, environmental health, trans-omics, clinical trials, implementation science, and epidemiologic methodology.

Graduate Degrees

- Clinical Investigation, MS (p. 489)
- Clinical Investigation, PhD (p. 490)
- Epidemiology, MPH (p. 492)
- Epidemiology, MS (p. 493)
- Epidemiology, PhD (p. 494)

Graduate Certificates

- Clinical and Translational Research Certificate (Graduate) (p. 491)
- Epidemiologic Methods Certificate (Graduate) (p. 491)
- Genetic Epidemiology Certificate (Graduate) (p. 495)
- Social Epidemiology, Certificate (Graduate) (p. 495)

Clinical Investigation, MS

The Master of Science in Clinical Investigation provides training in the methods and conduct of clinical investigation for future leaders in patient-oriented research. In addition to traditional instruction in biostatistics, epidemiology and study design, this program will provide students with a strong foundation in ethics and professionalism, while developing skills in critical thinking, communication of scientific findings, leadership, and management of research studies.

Program Competencies

- Problem formulation: Define focused research questions and testable hypotheses
- Methodology: Compare and select study designs for addressing clinical or translational research questions; identify a target population with consideration of socioeconomic, ethnic and cultural diversity; identify measures to be utilized while addressing reliability and validity, data quality, and cultural diversity
- Data management and security: Manage data using computer technology; define strategies to ensure data security and protection of privacy are maintained
- Data analysis and interpretation: Generate statistics that fit the study design chosen and answer research questions; identify risk/preventive factors that may contribute to outcomes and incorporate them into a research study; interpret computer output containing results of statistical procedures and graphics
- Scientific communication: Compile statistical output into tables and figures suitable for publication; prepare and communicate research findings to different groups of individuals through oral

presentations and research papers; critically appraise the existing literature

- Ethics and professionalism: Describe the fundamental principles of the protection of human subjects and voluntary informed consent; describe the authority for and professional standards for the responsible conduct of research; explain the concept of good clinical practice; explain conflict of interest management in research
- Teamwork and leadership: Demonstrate group decision-making techniques; manage conflict; lead and manage team-based and individual projects; foster innovation and creativity

Requirements

The MS in Clinical Investigation Degree in Epidemiology requires 36 credits that includes:

Course ID	Title	Credits
Epidemiology Course Requirements		
SPHL 6020	Foundations in Public Health	3
SPHL 6060	Epidemiology for Public Health	3
EPID 6230	Computer Packages for Epidemiology	3
EPID 6340	Clinical and Translational Research Methods	3
EPID 6420	Clinical Epidemiology	3
EPID 7120	Epidemiologic Methods II	3
EPID 7130	Observational Epidemiology	3
EPID 7170	Clinical Trials: Design, Conduct & Interpretation	3
EPID 7310	Meta-Analysis	3
INTD 6010	Responsible Conduct of Research	0
or EPID 7990	Master's Independent Studies	
Biostatistics Course Requirements		
SPHL 6050	Biostatistics for Public Health	3
BIOS 6040	Intermediate Biostatistics	3
Elective		**3**
Thesis		
EPID 9980	MS Thesis Research	0
Total Credit Hours		**36**

Academic Standards

In addition to the SPHTM academic standards, students in the MS in Clinical Investigation and those taking advanced epidemiology courses must demonstrate the following standards:

- All students must complete and earn a "B" or better in the prerequisite foundational course, SPHL 6060 Epidemiology for Public Health (3 c.h.), before advancing to EPID 7120 Epidemiologic Methods II (3 c.h.) or other advanced epidemiology courses.

Thesis

Students must successfully complete a thesis (https://tulane.app.box.com/v/thesis-guidelines/). The thesis is based on a supervised research project demonstrating scholarship in the area of clinical research. The results will be presented orally and in writing and reviewed by two faculty members. The master's thesis must be completed within a year of completion of the required courses. It should be an academic investigation suitable for publishing.

Model Course Schedule

Total Credit Hours		**36**

Clinical Investigation, PhD

Overview

The PhD in Clinical Investigation program is to train clinicians for careers as leaders in academic medical research in a way that advances our understanding of the diagnosis, screening, treatment and prognosis of clinical conditions and promotes evidence-based changes to clinical practice. Through this program, graduates will learn to effectively and efficiently design, implement, analyze, and interpret clinical research to improve human health and improve clinical practice.

Program Competencies

Upon completion of the program, the graduate should be able to:

1. Appraise the rigor and reproducibility of clinical research in public health and clinical medicine.
2. Compose impactful and innovative clinical research questions that are informed by existing literature and a comprehensive conceptual framework.
3. Design high-quality epidemiologic and/or translational studies.
4. Manage a clinical research study in line with ethical and regulatory standards.
5. Perform statistical analysis of data from clinical research studies.
6. Effectively communicate scientific findings from clinical research studies to professionals and the lay public.
7. Develop a grant proposal for the conduct of a clinical research study.

Requirements

The PhD in Clinical Investigation requires 48-49 credits that include:

Course ID	Title	Credits
PhD Foundational Courses		
SPHL 6020	Foundations in Public Health	3
SPHL 6060	Epidemiology for Public Health	3
SPHL 6050	Biostatistics for Public Health	3

MSCR 7090	Grant Writing	3
EPID 8990	Doctoral Independent Study	3
Elective		3
Thesis		
Total Credit Hours		**48-49**

Clinical and Translational Research Certificate (Graduate)

Overview

This certificate program will provide students with an in-depth exploration of epidemiologic methods within the context of clinical research. Students will learn clinical research methods, clinical trials, and meta-analysis. The program will be useful both to those with a clinical background and to those without prior clinical training. Students will learn to refine their critical thinking skills and apply epidemiologic methods to clinical research.

Offered by: Department of Epidemiology

Faculty Lead: Lydia Bazzano, MD, PhD (https://sph.tulane.edu/epid/lydia-bazzano/)

Purpose

This certificate is designed to prepare master's level students (including MD/MPH students) for research readiness in conducting clinical and translational research. This certificate will also prepare students to be collaborators on clinical research projects and apply research skills in clinical practice.

Eligible Students

This certificate program is designed for advanced students currently in an MPH/MSPH/MPH&TM/MHA program. Students must have a background in epidemiology and biostatistics. Pre-requisites: SPHL 6050 Biostatistics for Public Health, SPHL 6060 Epidemiology for Public Health and EPID 7120 Epidemiologic Methods II.

Certificate Competencies

Students who earn the Certificate in Clinical & Translational Research will be able to:

- Critically assess medical literature;
- Describe issues related to clinical research design, including statistical power calculations; and
- Evaluate methodological issues in clinical research, clinical trials, and meta-analysis

Number of Credits Required for Completion: 14

Requirements

Certificate in Clinical and Translational Research

Course ID	Title	Credits
EPID 6340	Clinical and Translational Research Methods	3
EPID 6420	Clinical Epidemiology	3
EPID 7170	Clinical Trials: Design, Conduct & Interpretation	3
EPID 7310	Meta-Analysis	3
EPID 7410	Pharmacoepidemiology	2

Pre-requisite coursework is: SPHL 6050 Biostatistics for Public Health, SPHL 6060 Epidemiology for Public Health and EPID 7120 Epidemiologic Methods II.

Epidemiologic Methods Certificate (Graduate)

The Certificate in Epidemiologic Methods provides in-depth training in epidemiologic methods for non-majors, grounding them in the basic approaches that can benefit their future endeavors in addressing public health issues. The program exposes students to the core epidemiologic methods courses. It is ideal for students who want to strengthen their ability to conduct research, which will benefit them in their future careers, whether that's in a research setting, in academia, or in the community.

This graduate certificate serves as a second area of study for SPHTM student in the MPH, MSPH or MPHTM degrees and not majoring in Epidemiology.

Offered by: Department of Epidemiology (https://sph.tulane.edu/epid/home/)

Faculty Lead: Jeanette Gustat, PhD (https://sph.tulane.edu/epid/jeanette-gustat/)

Epidemiologic Methods Certificate Enrollment Form (https://tulane.box.com/v/epid-methods-certificate-enrol/)

Purpose

Students will acquire training in observational epidemiology and clinical trials. At the conclusion of the program, students will be able to design and implement studies, conduct basic data analysis, and interpret study findings.

Eligible Students

SPHTM students enrolled in a MPH, MSPH, or MPH&TM degree program at Tulane SPHTM and not majoring in Epidemiology.

Certificate Competencies

Students who earn the Certificate in Epidemiologic Methods will be able to:

- Develop the appropriate research questions for biomedical and public health issues;
- Apply the best study design to answer important study questions; and
- Analyze and interpret study findings and critically review epidemiological literature

Number of Credits Required for Completion: 15

Requirements

Prerequisite Courses

EPID 7130	Observational Epidemiology	3
EPID 7160	Survey Methodology	3
EPID 7170	Clinical Trials: Design, Conduct & Interpretation	3

*For programs requiring BIOS 6040, the student may substitute: BIOS 7060 Regression Analysis (3) or BIOS 7150 Categorical Data Analysis (3). For students pursuing the master's degree in biostatistics, substitute with BIOS 7220 Nonparametric Statistics (3) or BIOS 7250 Principles of Sampling.

Students should consult with their academic advisor to determine which certificate best fits their professional and academic goals and how best to plan their graduate course schedule.

Epidemiology, MPH

The MPH in Epidemiology is a professional degree that prepares students to serve as epidemiologists in mid-level positions in public health research or practice settings. The program appeals to professionals currently employed in the health field and as well as those without previous training or experience in public health.

The MPH in epidemiology is highly analytical and methods-based. Students learn to apply conceptual methodology to the study of public health problems and health disparities as a means of understanding how to prevent or address them. As an MPH student in epidemiology, the knowledge base and research skills are applied within a chosen content area of current importance in the field, such as chronic or infectious disease; environmental, reproductive, molecular/cancer, or genetic epidemiology. Through coursework and other learning experiences, students gain a thorough knowledge of the sources of health data, how to collect data from original sources, how to process, analyze and effectively report findings from epidemiologic studies.

Graduates can design and carry out studies in which epidemiologic information is needed for making sound health policy decisions or for the management of research projects in both public and private agencies and institutions.

Program Competencies

1. Communicate characteristics and threats to validity of major study designs used in epidemiologic research.
2. Summarize the strengths and weaknesses of an epidemiologic study
3. Write a study protocol for a specific research question.
4. Differentiate the major measures of disease frequency and association used in epidemiologic research
5. Analyze public health data using appropriate statistical techniques and software

Requirements

The MPH Degree in Epidemiology requires 45 credits.

Course ID	Title	Credits

Epidemiology, MS

The MS in Epidemiology is an academic degree that prepares students for careers in research. It serves students new to public health as well as those currently working in the field who wish to gain the quantitative skills necessary to conduct population based research. The curriculum focuses on understanding theoretical issues and applying disciplinary methods to the study of public health problems. Coursework includes learning experiences in epidemiologic methods, biostatistics, data management, analysis and interpretation of findings in content areas such as chronic or infectious disease, reproductive, molecular, or genetic epidemiology. Students learn the design, conduct, analysis and interpretation of epidemiological studies, and implementation, from developing protocols and instruments, to the selection and recruitment of subjects, data collection and quality control. These skills prepare graduates for engaging roles in research activities that impact public health planning, control and global disparities.

Program Competencies

- Define the concepts and contents of epidemiology.
- Formulate a research hypothesis.
- Determine study aim, objectives and appropriate study design to address the hypothesis.
- Identify risk and/or preventive factors that may contribute to outcomes and incorporate them into a research study.
- Use computers to collect, manage and analyze data for evaluation of hypotheses.
- Evaluate the use of questionnaires and measurement instruments in collection of data to maintain internal validity.
- Use existing databases to provide background or supportive data to address research questions.
- Analyze data, interpret the findings and prepare a report of study result.
- Perform ethical research.

Requirements

The MS Degree in Epidemiology requires 43 credits that includes:

- All students must complete and earn a "B" or better in the prerequisite foundational course, SPHL 6060 Epidemiology for Public Health, before advancing to EPID 7120 Epidemiologic Methods II or other advanced epidemiology courses.

Thesis

Students must successfully complete a thesis. The thesis is based on a supervised research project demonstrating scholarship in the area of epidemiology. The results will be presented orally and in writing and reviewed by two faculty members. The master's thesis must be completed within a year of completion of the required courses. It should be an academic investigation suitable for publishing.

Epidemiology, PhD

The PhD degree program prepares students for careers in epidemiologic research and teaching, usually in an academic setting. The PhD graduate is expected to have knowledge across a wide range of epidemiologic theory and methods as well as sustained experience in the conduct of research in one or more content areas. The PhD program has a strong theoretical base and is focused on research. The PhD is the terminal degree in Epidemiology.

Program Competencies

1. Critique the scientific literature to assess the current state of knowledge and identify research questions for future investigation.
2. Construct an epidemiologic study to advance the field of epidemiology and public health.
3. Formulate an epidemiologic analysis plan using advanced methods to answer research questions.
4. Design teaching and learning experiences grounded in pedagogical best practices in a chosen area of expertise.
5. Develop a grant proposal for a public health research study with a compelling scientific narrative, description of investigator capacity, timeline, and budget.

Requirements

Course ID	Title	Credits
PhD Foundational Courses		
SPHL 6020	Foundations in Public Health (or equivalent)	3

BIOS 8350	Clustered and Longitudinal Data Analysis	3
Electives		6
Total Credit Hours		**48**

Elective Courses

Selected from courses offered within the department, school, or university in consultation with a faculty advisor.

Research Ethics

Students are required to take online research ethics training via CITI or another equivalent training program in research ethics. This certification must remain current throughout the program duration.

Teaching Assistantship Requirement

All PhD students at SPHTM are required to serve as a teaching assistant (TA) for two SPHTM courses while enrolled in the PhD program. Students should register for SPHL 8070 Teaching Assistantship Educational Experience (0 credits) during the terms they complete each TA requirement.

Comprehensive Exam

Students are required to pass a written comprehensive examination demonstrating general knowledge of epidemiologic and biostatistical methods and knowledge of the epidemiology in at least one content area. The exam will include sections on higher level epidemiologic methods, a content area and study design.

Prospectus

Students must prepare and defend a prospectus of proposed research.

Dissertation

Students must conduct original research and defend a dissertation based on that research.

Genetic Epidemiology Certificate (Graduate)

Overview

The Certificate in Genetic Epidemiology is for students with previous training in molecular biology and/or genetics. The program will provide in-depth training in genetic epidemiology. Students will learn human genetics, genetic epidemiology, genetic statistics, and bioinformatics.

Offered by: Department of Epidemiology

Faculty Lead: Changwei Li, PhD

Purpose

This certificate program provides students with skills in genetic epidemiology research.

Eligible Students

This certificate program is designed for advanced students currently in an MPH/MSPH/MPH&TM/MHA program. Students must have a background in molecular biology or molecular genetics.

Certificate Competencies

Students who earn the Certificate in Genetic Epidemiology will be able to:

- Describe the genetic and molecular basis for human diseases;
- Select the best genetic and molecular epidemiology study design to answer important clinical and public health questions;
- Analyze and interpret genetic study data and critically review genetic literature

Number of Credits Required for Completion: 15

Requirements

Course ID	Title	Credits
EPID 6290	Genetic Epidemiology	3
EPID 6320	Molecular Epidemiology	3
EPID 7810	Human Molecular Genetics	3
Two additional genetic epidemiology related courses		6

The Certificate in Genetic Epidemiology requires 15 credits.

Pre-requisite courses are SPHL 6060, SPHL 6050, BIOS 6040 and BIOS 7060 or BIOS 7080.

Social Epidemiology, Certificate (Graduate)

Overview

This concentrated training in social and spatial epidemiology is aimed at improving our capacity to monitor, research, and address social determinants of health and health inequities. Courses in this certificate program combine theory from the social sciences with rigorous epidemiological and social science methods utilized to understand and to address the connections between social factors and health.

Purpose

Our purpose is to train scholars and practitioners in the conduct of rigorous research and evaluation methods aimed at understanding and addressing social determinants of health, to improve population health and reduce health inequalities locally, nationally, and internationally. The certificate is aimed at master's students who want training in social epidemiologic methods, specifically, preparing them for an ever-increasing workforce aimed at tackling these fundamental causes of health and reducing health disparities. Students will be prepared to work in a variety of settings, both research and practice, and at multiple levels, but also in other non-public health and interdisciplinary settings.

Competencies

1. Apply epidemiological methods to social and population health problems.

2. Describe the different study designs and data collection tools utilized in social epidemiology
3. Demonstrate proficiency in data management, collection, and analysis of social epidemiologic and spatial data.
4. Succinctly describe and interpret data from a social epidemiologic inquiry.

Requirements

Course ID	Title	Credits
Prerequisite		
SPHL 6060	Epidemiology for Public Health	3

Course ID	Title	Credits
Required Courses		
EPID 6600	Social Epidemiology: Mechanisms of Disparities	3
SBPS 7280	Qualitative Methods I: Basic Foundations	3

Department of Health Policy and Management

Programs

Chair: Arthur Mora, PhD, MHA (https://sph.tulane.edu/hpam/arthur-mora/)
Professor

Mission
The mission of the Department of Health Policy and Management is to conduct health management and policy research and to prepare a diverse group of future managers and leaders to improve health care delivery services, increase access to health care, reduce health disparities, and advance health care policy worldwide.

About HPM
Faculty in the Department of Health Policy and Management investigate the impact of financing models, organizational structures, processes, and social determinants on quality, cost, and access to healthcare to improve population health in both domestic and international settings.

This department prepares students to meet the ever-changing demands of the health care, public health, and health policy environments using financial models, organizational structures, and social determinants to improve quality, contain costs, improve access to health care, and address health disparities for all populations. We envision a future where our graduates enhance quality of life by improving public health and healthcare delivery systems worldwide.

Areas of faculty expertise include health policy, organizational theory and behavior, management, economics, medicine, law, sociology, political science, and statistics. Faculty have experience in leadership and policy in healthcare organizations, national nonprofits, and international agencies and health care systems.

Graduate Degrees

- Health Administration, MHA (p. 496)
- Health Policy and Management, PhD (p. 497)
- Health Policy, MPH (p. 499)
- Health Systems Management, MPH (p. 499)

Health Administration, MHA

The Master of Health Administration (MHA) program prepares students with a foundation in health care leadership and applied analytical skills to promote data-driven decision making. Graduates can address the unique challenges presented in this complex industry, including ensuring equitable opportunity to health and optimal well-being.

The 54-credit program provides study in leadership of health care organizations, applied analytics, health care economics, financial management, population health, communications, and strategy in 22 months. Students complete a residency in health care organizations to gain practical experience, develop professionalism, and apply management skills.

Anticipated growth in health care positions continues to outpace all other occupations. The MHA opens a path to leadership positions and opportunities for advancement in diverse settings across the industry.

The MHA program at Tulane is accredited by the Commission for Accreditation of Healthcare Management Education (CAHME).

Program Competencies
At the completion of the MHA degree, the student will be able to:

- Speak and write in a clear, concise and logical manner in formal and informal situations within healthcare settings to convey cogent business presentations and to facilitate a group. (Effective Communication)
- Demonstrate attributes necessary to influence others to achieve high performance in a healthcare setting. (Leadership)
- Continuously strive to improve oneself and to act with respect and sensitivity for others. (Professionalism)

- Consider the business, demographic, ethno-cultural, political, and regulatory factors in developing strategies that continually improve the long-term success and viability of healthcare organizations. (Strategic Management)
- Utilize data to effectively organize and coordinate the performance and activities of a healthcare organization in order to achieve defined objectives. (Management)
- Deconstruct complex problems into smaller elements and synthesizing that with other data to derive recommendations. (Critical Thinking and Analysis)
- Use financial and accounting information to assess the financial health of an organization, to inform short-term operational decisions and to assess long-term resource allocation opportunities. (Financial Skills)

Requirements

The MHA requires a total of 54 credits total that includes:

Course ID	Title	Credits
Program Course Requirements		
SPHL 6020	Foundations in Public Health	3
HPAM 6050	Health Systems Concepts	3
HPAM 6170	Quality Management in Health Care	3
HPAM 6200	Intro to Healthcare Analytics	3
HPAM 6210	Health Law and Regulation	3
HPAM 6300	Data Visualization and Communication	3

Health Policy and Management, PhD

The program trains students for a Doctor of Philosophy (PhD) in Health Policy and Management (HPAM). It aims to develop researchers, educators and policymakers who can contribute to improving health of populations around the world. The program will prepare the student to conduct original scholarly research, publish in peer-reviewed journals, write competitive research grant proposals, and teach in university settings. Students' area specializations reflect the major strengths of the HPAM faculty which include public health insurance design (e.g., Medicare and Medicaid benefits), vaccine policy, health equity, big data analytics, diabetes care, hospital financing, and information technology.

PhD Program Competencies

- Create conceptual models based on existing theoretical frameworks that can be applied to public health policy and management research questions.
- Design a testable health policy and management research question with a suitable theoretical framework and study design.
- Estimate impacts of health policies or management practices using appropriate research methods and statistical analyses.
- Design teaching and learning experiences grounded in pedagogical best practices in a chosen area of expertise.
- Develop a grant proposal for a public health research study with a compelling scientific narrative, description of investigator capacity, timeline, and budget.

Requirements

Students must complete 48 credit hours of coursework and doctoral studies beyond the baccalaureate, with a minimum of 30 didactic hours at Tulane in the doctoral program. Up to 18 Credits can be transferred from previous graduate coursework.

Course ID	Title	Credits
PhD Foundational Courses		
SPHL 6020	Foundations in Public Health	3
SPHL 6050	Biostatistics for Public Health	3
SPHL 6060	Epidemiology for Public Health	3

HPAM 8410	Cost Benefit and Cost Effective Analysis	3
HPAM 8770	Health Services Research Methods	3
HPAM 8350	Policy Analysis with Natural Experiments and Panel Data	3
Electives		6
Total Credit Hours		**48**

Research Ethics

All doctoral students are required to complete CITI trainings as they join research studies.

Teaching Assistant Requirement

All PhD students at SPHTM are required to serve as a teaching assistant (TA) for two SPHTM courses while enrolled in the PhD program. The courses for which the student will serve as a TA must be approved by the PhD program director.

Comprehensive Exam

On completion of doctoral coursework, students will be required to pass a comprehensive exam to demonstrate global health management and policy PhD program competencies. Comprehensive exams are administered in the spring of the fourth semester. They consist of take-home exams that cover three core areas (theory, design, and methods) as well as a subject matter exam that is individualized to each particular student's interest. Each portion of the exam is graded by two graders. If students fail any particular question from either grader they must retake the entire area.

Doctoral Committee

After successful completion of the comprehensive examination, the student forms a dissertation committee and develops a prospectus. The committee must include a minimum of three members with at least two faculty from the Department of Global Health Management and Policy and one external to the school.

Prospectus

Students work with their advisor and doctoral committee to determine a research hypothesis and prepare a prospectus of proposed dissertation research. The research prospectus is presented and defended at least one semester before the dissertation defense. Following the successful defense of the prospectus, students are admitted to PhD candidacy and proceed with dissertation research.

Dissertation

Students must conduct original scholarly research and defend a dissertation based on that research. The dissertation research demonstrates scholarly work and is the basis for the dissertation. Many graduates of HPAM follow the three-paper model as this delivers publishable units closer to what is demanded by the types of jobs graduates of this program pursue. The student must defend the dissertation in an oral exam. This process must be completed within seven years of matriculation into the PhD program.

Model Schedule (not including PhD Foundational Courses)

The model schedule represents an overall plan for completing degree requirements. Students should consult an advisor to plan their actual schedule in terms of total credits per semester and course sequencing.

Elective	3

Year 2, Spring Semester

Health Policy, MPH

The MPH in Health Policy provides students with a foundation in health policy processes, concepts, and issues as well as strong analytical skills to help develop and evaluate health policies. The Health Policy MPH degree offers students' opportunities to tailor their studies in domestic and international health policy, with courses focused on foundations, methods, and a topical area of expertise.

Graduates of the program work in leadership and research in the public or private sector, domestically or internationally. Employment settings include institutions involved in developing policy, evaluating of health programs and projects, or providing goods and services in support of health sector program implementation or development. The MPH in Health Policy can also serve as a strong academic foundation for students who may wish to pursue a doctoral degree in health policy or management.

Program Competencies

At the completion of the MPH degree, the student will be able to:

- Apply economic and legal concepts and theories to the analysis of healthcare policy and management issues.
- Evaluate health policies for impacts and unintended consequences using fundamental research and analytic methods.
- Critique the health policy literature on how robustly the evidence base supports a particular policy.
- Communicate health policy issues written and orally.

SPHL 7950	Integrative Learning Experience	0
SPHL 9980	Applied Practice Experience	0
Total Credit Hours		**45**

Applied Practice Experience

The Applied Practice Experience (APE) (formerly practicum) is a supervised practice experience conducted in an agency or organization external to the university to gain practical experience.

The APE allows students to demonstrate attainment of at least five competencies, including at least 3 from the foundational competencies (CEPH Criterion D2). The APE is conducted after completion of the foundational courses. After identifying the APE setting and defining the competencies, students enter the information into Terra Dotta. An APE report is required that summarizes the field experiences.

All students in the MPH in Health Policy complete a 250-hour applied practice experience under the supervision of a qualified professional in public health.

Integrated Learned Experience

The MPH in Health Policy MPH degree requires a capstone course that includes the ILE requirement including the ILE written report. Rubrics for the ILE final paper are included in the capstone course syllabus. Student in capstone course synthesize the three competencies from the program by evaluating the policies, critiquing the literature, and communicating the issues.

Health Systems Management, MPH

The Health Systems Management program prepares future managers and leaders who will improve the healthcare delivery services in diverse organizational settings worldwide. Students learn the fundamental areas of management of health services through coursework and practicum experience, preparing them for entry-level managerial roles in healthcare settings. Taking a systems approach, courses emphasize active management in planning, financing, implementing, evaluating, and maintaining complex systems.

Program Competencies

At the completion of the MPH degree, the student will be able to:

- Apply population-based and public health findings and principles in assessing individuals and groups at risk of disease and injury and making recommendations for improved health in clinical practice settings.
- Identify the theoretical and applied bases of economics in health care, including delivery of care to populations, access to care for populations, and organization of medical service delivery organizations.
- Explain and analyze the issues of quality, access, and efficiency of healthcare service delivery.
- Identify and describe the main components of the organization, financing, and delivery of health services and public health systems in the U.S. and other contexts.
- Describe frameworks for understanding and assessing health systems performance.
- Apply "systems thinking" approaches to viewing complex situations, defining problems, and formulating solutions.
- Apply basic managerial concepts and tools to program planning, budgeting, monitoring, and evaluation of organizational and community-based initiatives.
- Incorporate knowledge of the public health core areas of epidemiology, biostatistics, environmental health, health systems management, and the biological, behavioral, social, and cultural aspects of health and disease in addressing and solving problems.

Requirements

The MPH Degree in Health Systems Management requires 45 credits that includes:

Course ID	Title	Credits
SPHTM Foundational Requirements		
SPHL 6020	Foundations in Public Health	3
SPHL 6050	Biostatistics for Public Health	3
SPHL 6060	Epidemiology for Public Health	3
SPHL 6070	Health Systems Policy and Management	3
SPHL 6080	Design Strategies in Public Health Programs	3
Program Course Requirements		
HPAM 6140	Leadership for Clinical Improvement	3
HPAM 6170	Quality Management in Health Care	3
HPAM 6380	Organizational Behavior	3
HPAM 6450	Health Economics	3
HPAM 6540	Managerial Accounting for Health Care Managers	3
Additional Coursework		
SPHL 9980	Applied Practice Experience [1]	0
SPHL 7950	Integrative Learning Experience [2]	0
Elective Courses [3]		**15**
Total Credit Hours		**45**

[1] The Practicum or Applied Practice Experience (APE) is a supervised practice experience conducted in an agency or organization external to the university to gain practical experience. The Practicum allows students to demonstrate attainment of at least five competencies, including at least 3 from the foundational competencies (CEPH Criterion D2). The Practicum is conducted after completion of the foundational courses. After identifying the Practicum setting and defining the competencies, students enter the information into Terra Dotta. A Practicum report is required that summarizes the field experiences.

[2] All students must complete an Integrated Learning Experience (ILE) (formerly culminating experience) that demonstrates the synthesis of foundational and concentration competencies. Students in the MPH in Epidemiology conduct a public health analysis.

[3] Students take 15 credits of electives selected from courses offered within the department, school, or university in consultation with their Faculty Advisor.

Model Course Schedule

Year 1		
Fall		**Credit Hours**

Department of International Health & Sustainable Development

Programs

Chair: David Hotchkiss, PhD (https://sph.tulane.edu/ihsd/david-hotchkiss/)

Vice Chair: Mai Do, MD, DrPH (https://sph.tulane.edu/ihsd/mai-do/)

Mission

The mission of the Department of International Health & Sustainable Development is to improve the health and wellbeing of vulnerable populations around the world by eliminating health inequities and promoting human rights and social justice for all persons.

The department aims to achieve this mission by being a global leader and partner in:

- **Capacity Strengthening**: educate and train the next generation of public health professionals, and strengthen the capacity of institutions, at home and abroad, through innovative education and technical assistance programs, in order to improve the effectiveness and sustainability of health programs and policies.
- **Research**: expand knowledge and understanding of the complex causes of health inequities, vulnerability, and resilience and provide evidence that can be used to improve the design, implementation, and evaluation of effective and sustainable programs and policies.
- **Service**: mobilize our expertise and engage with communities and institutions at home and abroad to advance the goals of our professions and institutions towards health equity and social justice.
- **Advocacy**: advocate for evidence-based policies to accelerate progress towards health equity, promote social justice, and support the sustainable development of communities around the world.

About International Health and Sustainable Development (IHSD)

Since the 1970s the Department of International Health and Sustainable Development, along with its predecessor departments, has been integral in establishing Tulane University as a leader in global health. The department's degree programs draw on its extensive experience in research, technical assistance, and capacity building in low- and middle-income countries. The curriculum emphasizes the importance of cultural, social, and behavioral factors that influence health, with a focus on developing skills in program design and implementation, assessment, and analytical methods. Graduates are well-prepared for careers in global health, including roles in international non-governmental organizations, public-private partnerships, government agencies, consultancy firms, and academia.

The faculty members of the department have expertise in program monitoring and evaluation, health systems strengthening, social and behavior change, food security and resilience, sexual and reproductive health, adolescent health, and infectious diseases. They bring a wealth of knowledge and expertise to the classroom, ensuring that students receive a well-rounded education that prepares them for the challenges of working in the field of global health.

Graduate Degrees

- International Health & Sustainable Development, MPH (p. 501)
- International Health & Sustainable Development, PhD (p. 502)

International Health & Sustainable Development, MPH

The International Health and Sustainable Development (IHSD) Program at Tulane provides professional public health training in 1) the major health problems facing vulnerable populations globally and their underlying causes; 2) how to assess the prevalence and consequences of these problems; 3) how to mitigate these problems through programs, policy, and research; and 4) how to evaluate the effectiveness of program and policy efforts. The curriculum and applied learning opportunities draw upon Tulane's extensive overseas research, technical assistance work, and nearly four decades of experience in providing leadership training in international health to students from around the world. Coursework and learning opportunities are designed to emphasize the importance of cultural, social, and behavioral factors influencing health.

Program Competencies

- Analyze key global public health problems linked to development.
- Examine the roles and relationships of organizations influencing global health, and key sources of funding for global health programs.
- Develop a theory-based public health intervention or program.
- Apply public health assessment and analytical methods to address global health problems, policies, and programs in low-and-middle income countries.
- Analyze health disparities across population sub-groups and potential interventions at the intersection of health and social structures, culture, gender, poverty, place, and power.

Requirements

The MPH Degree in International Health and Sustainable Development requires a total of 45 credits that include:

Course ID	Title	Credits
SPHTM Foundational Requirements		
SPHL 6020	Foundations in Public Health	3
SPHL 6050	Biostatistics for Public Health	3

International Health & Sustainable Development, PhD

Overview

The PhD program in International Health and Sustainable Development (IHSD) prepares the next generation of global public health researchers to conduct state-of-the-art research on global health and development issues, to reduce inequities, and to shape a sustainable future for the planet. The PhD program provides students with the skills to identify, assess, and apply scientific theories and research methodologies; to conduct original scientific research studies in resource-constrained settings; to leverage research findings towards best practice and strategic planning for global health programs; and to teach, mentor and advise students, programs, development officials, and governments. Students will develop understanding of relevant theories, the capacity to employ interdisciplinary and mixed-method research approaches, cultural competency, and the skills for ethical conduct of research.

Program Competencies

- Critique empirical and theoretical knowledge relevant to health and development issues and factors associated with inequities in resource poor settings.
- Formulate evocative, relevant, and clear research questions addressing global health and development issues.
- Generate applied qualitative and quantitative field research, including working with local partners, maintaining appropriate cultural sensitivities, addressing ethical issues, and managing and analyzing primary and secondary data.
- Explain research methodologies, scientific findings, and programmatic and policy implications of research findings to the scientific community and program implementers.
- Teach in an area of specialization, whether substantive, regional/geographic, and/or methodological.

Requirements

Electives (Choose Three)		9
Total Credit Hours		**49**

Research ethics
IHSD doctoral candidates will complete the CITI ethics training course (or equivalent) no later than the end of the second year of their program and will remain certified for the duration of the academic program.

Teaching Assistant Requirement
All PhD students at SPHTM are required to serve as a teaching assistant (TA) for two SPHTM graduate courses while enrolled in the PhD program. Students should register for Teaching Assistantship Educational Experience (0 credits) during the terms they complete each TA requirement. The courses for which the student will serve as a TA must be approved by the faculty advisor.

Comprehensive Examination
Upon completion of required coursework listed above students will be required to pass a comprehensive examination to demonstrate knowledge of, and competency with, the PhD core coursework, and concentration-specific coursework, as well as their specialty area. The exam will be administered by the concentration PhD program director and two additional faculty members in the department.

Prospectus

After passing the comprehensive exam a student must defend their prospectus. Upon agreement of all committee members, a student will defend the prospectus in an oral exam which is open to the school. Students need to follow all deadlines and submit all forms as specified in the school PhD handbook.

Dissertation

Students must complete a dissertation representing applied public health research that meets the school requirements for a PhD dissertation. Upon agreement of all committee members, a student will defend the dissertation in an oral exam which is open to the school. Students need to follow all deadlines and submit all forms as specified in the school PhD handbook.

Model Schedule (not including Foundational Courses)
The model schedule represents an overall plan for completing degree requirements. Students should consult their academic advisor to plan their actual schedule in terms of total credits per semester and course sequencing.

Year 1

Department of Social, Behavioral, and Population Sciences

Programs

Chair: Akilah Dulin, PhD

Mission
The mission of the Department of Social, Behavioral, and Population Sciences (SBPS) is to prepare future generations of highly skilled, socially conscious, and culturally sensitive public health professionals for careers in research, program development, evaluation, and community-based health with the goal of advancing health equity. The department is comprised of a broad mix of public health social scientists working in New Orleans and around the word to provide our diverse students rigorous grounding in social, behavioral, and population science methods ass applied to health interventions at

the individual, community, and societal levels. Our work elucidates and addresses the behavioral, social, and structural bases of health inequities related to decision-making; economic, social, and cultural stratification; and power, place, and history.

About SBPS
The Department of Social, Behavioral, and Population Sciences addresses the fundamental sources of disease burden for rich and poor countries alike. Many of the leading causes of early death either have direct links with behavior and related fundamental social causes. Social science always has been, and always will be, central to public health. From understanding and addressing behaviors substance use to more systemic issues like racism or income inequality, social and behavioral sciences are key to public health.

Social, Behavioral, and Population Sciences works to define and address the behavioral, social, and structural bases of health inequities related to decision-making; economic, social, and cultural stratification; and power, place, and history to reduce health disparities and inequities.

Students obtain strong skills for the planning, design, implementation, communication, and evaluation of preventive strategies and interventions at the community and societal levels. Students also obtain skills aimed at understanding the impact of social and behavioral factors, including structural and systemic factors, on health and the distribution of health across populations and in communities globally.

Graduate Degree Programs

- Community Health Sciences, MPH (p. 504)
- Health Communication and Education, MPH (p. 505)
- Leadership, Advocacy, and Equity, DrPH (p. 528)
- Maternal and Child Health, MPH (p. 507)
- Nutrition, MPH (p. 508)
- Nutrition, MSPH (p. 510)
- Social, Behavioral, and Population Sciences, MPH (p. 511)
- Social, Behavioral, and Population Sciences, PhD (p. 512)

The MPH in Community Health Sciences is only offered online.

Graduate Certificates

- Health Education and Communication Certificate (Graduate) (p. 506)
- Maternal and Child Health Certificate (Graduate) (p. 508)
- Violence Prevention Certificate (Graduate) (p. 513)

Graduate Internships

- Dietetic Internship (p. 505)

Community Health Sciences, MPH

The Master's of Public Health Degree in Community Health Sciences focuses on developing knowledge and skills to work with communities in order to address health disparities and improve quality of life for its members. Using a social and behavioral lens, this unique program teaches students how to plan, design,implement, and evaluate community-based interventions to promote health and well-being. Effective translation of scientific evidence and active engagement within the community will inform this community health approach.

Program Competencies

Students who graduate from this degree program can expect to develop the following competencies as they successfully meet and complete the program degree requirements.

- Analyze public health issues within the context of a specific community and environment, generate solutions, and apply solutions with communities.
- Design theoretically informed and culturally appropriate interventions by applying public health theory and principles to a diverse set of problems at the community level.
- Develop an effective plan to monitor and evaluate a community-based public health intervention or program based on translation of scientific evidence.
- Collaborate effectively with members of a community through engagement in the process of public health programming.
- Effectively communicate in both oral and written forms to a variety of audiences and purposes related to community health.

This program only accepts online students.

Requirements

The MPH degree in Community Health Sciences requires a total of 45 credits that include:

Dietetic Internship

Overview

The Tulane Dietetic Internship Program is a graduate-level supervised practice program for students who would like to become Registered Dietitians. It is a full-time non-degree program with a community emphasis. The dietetic internship at Tulane University School of Public Health is currently granted accreditation by the Accreditation Council for Education in Nutrition and Dietetics (ACEND) of the Academy of Nutrition and Dietetics, 120 South Riverside Drive, Suite 2190, Chicago, IL 60606. 800/877-1600, ext 5400.

The mission of the Tulane Dietetic Internship is to prepare entry-level Registered Dietitians for leadership in community health practices through education, research and practice directed at health promotion and disease prevention among individuals and their communities. The Dietetic Internship program will give the students the opportunity to apply clinically the nutrition and food management knowledge that they have learned in their Didactic Program in Dietetics (DPD).

The purpose of the Tulane Dietetic Internship is to provide a comprehensive and intensive supervised practice experience, with the opportunities to acquire the competencies necessary to function as an entry-level practitioner and to make the student registration eligible (to be qualified to register for the Registered Dietitian [RD] Exam).

Requirements

The Tulane Dietetic Internship lasts 10 months and provides practical training and field experience in various community, clinical, and food service and management settings in the greater New Orleans area. The program accepts 20 interns per year. All Interns must have a master's degree in any subject to be eligible for a DI verification statement. 12 hours from the Tulane DI may be substituted for 12 hours of the Tulane Nutrition master's program. The internship begins in the Fall semester and is completed in June. Interns must successfully complete all rotations and exams to receive a verification statement and be eligible to take the CDR Registration Examination in Dietetics. Interns must follow the policies/procedures required by the rotation facilities. Interns must remove facial jewelry and tattoos must be covered with clothing while at internship rotation sites.

For more information, contact the Tulane Dietetic Internship Director Marsha Piacun at di@tulane.edu.

Health Communication and Education, MPH

The MPH in Health Education and Communication prepares graduates to work in the areas of health promotion and disease prevention in order to decrease health disparities and advance health equity. Students' training will focus on effective methods to support behavior change at the individual and community levels. Students will gain a comprehensive skillset in intervention design, evaluation, community engagement and organization, health communication, and qualitative and quantitative community-based participatory research methodologies that can be applied to any public health issue and setting. This MPH program also prepares students to successfully take the Certified Health Education Specialist (CHES) exam.

Program Competencies

Students who graduate from this degree program can expect to develop the following competencies as they successfully meet and complete the program degree requirements.

- Assess individual and community needs for health education/ communication.
- Design a theory-based public health intervention or program.
- Apply health education and communication strategies to interventions and programs.
- Develop a plan to evaluate a public health intervention or program, based on a theory of change.
- Identify health education and communication resources.
- Explain how to promote health education through advocacy campaigns and policies.

The MPH in Health Communication and Education is no longer accepting applications.

Requirements

The MPH Degree in Health Education and Communication requires a total of 45 credits that includes:

Course ID	Title	Credits

Health Education and Communication Certificate (Graduate)

Overview

The Health Education and Communication (HEDC) certificate prepares students to work in the areas of health promotion and disease prevention in order to decrease health disparities and advance health equity. Students' training will focus on effective methods to support behavior change at the individual and community levels. Students will gain a comprehensive skillset in intervention design and evaluation, community engagement and organization, health communication, and social marketing that can be applied to any public health issue and setting. The HEDC certificate includes 12 semester credits for process courses in partial fulfillment of the required 25 hours of coursework to qualify to sit for the CHES exam.

Requirements

Year 1

Fall		Credit Hours
SBPS 6340	Monitoring and Evaluation of Health Programs	3
SBPS 7010	Health Communication Theory and Practice	3
SBPS 7220	Community Organization: Community Work for Social Justice	3
SBPS 7260	Social Marketing	3
	Credit Hours	**12**
	Total Credit Hours	**12**

* Additionally, the two required foundational MPH courses (SPHL 6020 Foundations in Public Health (3 c.h.) and SPHL 6080 Design Strategies in Public Health Programs (3 c.h.)) will also contribute to

the student's preparation to take the CHES exam. However, they are not part of the required HEDC certificate courses.

This graduate certificate is not eligible for federal financial aid.

Maternal and Child Health, MPH

The Maternal and Child Health (MCH) Program provides public health education in:

- The biologic, sociocultural, behavioral, and policy issues that impact the health of the MCH population.
- A well-grounded historical context for and current federal, state and local governmental policies and services in the MCH arena.
- Underlying causes of major health problems and disparities facing the MCH population.
- Approaches to properly address these problems and the professional skills required for an MCH career whether nationally or internationally.

Students will gain the skills needed to develop, implement, and evaluate interventions with a special emphasis on women, children, and families over the lifespan. The MCH concentration is conceptualized with sensitivity to cultural diversity within a global context.

Program Competencies

Students who graduate from this degree program can expect to develop the following competencies as they successfully meet and complete the program degree requirements.

- Describe the historical development, scientific basis, financing and structural organization of MCH public policies and practices in the United States for federal, state, and local agencies and programs serving MCH populations.
- Determine how different strengths, needs, values and practices of diverse cultural, racial, ethnic and socioeconomic groups affect health status, health behaviors and program design.
- Evaluate theories and principles of individual and family growth and development from an intergenerational and lifespan perspective.
- Apply appropriate research methods to the evaluation of MCH program and practices.
- Evaluate evidence-based methods that contribute to the translation of research into programming and practice.
- Recognize principles of ethical conduct in program management, research and data collection and storage.
- Identify, assess and prioritize health problems at the level of the community
- Develop a plan to monitor and evaluate a public health intervention or program, based on a theory of change.

Requirements

The MPH degree in Maternal and Child Health requires a total of **45 credits** that includes:

Maternal and Child Health Certificate (Graduate)

The Certificate in Maternal and Child Health (MCH) provides the knowledge and skills that will prepare students to contribute to community programs, research, and other interventions aimed at improving the health and well-being of vulnerable and underserved women, children, and families. Students will gain knowledge about emerging issues in MCH, MCH policy and governmental services, evidence-based programming and the MCH population from a life course perspective. All of the relevant courses are in SBPS. The MCH certificate courses pair well with other public health degree courses.

This graduate certificate serves as a secondary area of study for SPHTM students enrolled in the MPH, MSPH or MPHTM degrees.

Offered by: Department of Social, Behavioral, and Populations Sciences

Faculty Lead: Shokufeh Ramirez, PhD

Certificate Purpose

The courses required for the certificate provide students with a background in the biologic, sociocultural, behavioral, and policy issues that impact the health of the MCH population. The certificate is conceptualized with a sensitivity to cultural diversity within a global context. Students will be able to undertake the process of planning and evaluating community programs with a special emphasis on women and children.

Eligible Students

This certificate program is designed for current MPH, MSPH, MPH&TM, and MHA students who are not pursuing the Master of Public Health in Maternal and Child Health (MCH). Only 3 credit hours can be counted toward both the degree and certificate. The certificate is a complement to degrees in other areas.

Certificate Competencies

Students who earn the Certificate in Maternal and Child Health will be able to:

- Recognize the different strengths, needs, values and practices of diverse cultural, racial, ethnic, and socioeconomic groups and determine how these factors affect health status, health behaviors, and program design;
- Describe the historical development, scientific basis, financing and structural organization of MCH public policies and practices in the United States for federal, state, and local agencies and programs serving MCH populations;
- Evaluate and use theories and principles of individual and family growth and development from an intergenerational and lifespan perspective;
- Evaluate evidence-based methods that contribute to the translation of research into programming and practice.

Number of Credits Required for Completion: 15

Requirements

Course ID	Title	Credits
SBPS 6460	Child Health and Development in Public Health	3
SBPS 6490	Key Policies and Programs in Maternal and Child Health	3
SBPS 6510	Essential Issues in Maternal and Child Health	3
SBPS 7510	Maternal Child Health: The Life Course Perspective	3
SBPS 7250	Evidence-Based Research Methods in Social and Behavioral Sciences	3
Total Credit Hours		**15**

Students should consult with their academic advisor to determine if the MCH certificate fits their professional and academic goals and how best to plan their graduate course schedule.

Nutrition, MPH

The MPH in Nutrition program emphasizes the social and environmental determinants of nutrition and food security and how to solve them through nutritional assessment of populations, community nutrition actions, health promotion programs, and food and nutrition policies. The program trains future public health nutritionists to manage programs and shape policies that improve the nutritional health and food security of populations. A full spectrum of contexts is addressed, including: humanitarian crises in low-income countries; sustainable development in low- and middle-income countries; and the dual burden problems of under- and over-nutrition common to middle and high-income countries.

The mission of the MPH Nutrition Program is to train future public health leaders to shape policies, administer programs, and to communicate to the public to improve nutritional health and food security of population groups across a full spectrum of economic context.

This program is a member of the Association of Graduate Programs in Public Health Nutrition (AGPPHN). (https://www.aspph.org/)

Tulane University

Program Competencies

Students who graduate from this degree program can expect to develop the following competencies as they successfully meet and complete the program degree requirements.

- Identify the major types of food and nutrition related health problems in domestic and international settings and the factors that cause them.
- Apply various methods in order to assess the food security and nutritional status of populations, including anthropometric, biochemical, clinical, dietary, and ecological methods.
- Describe and design a theory-based public health intervention or program.
- Develop a plan to monitor and evaluate a public health intervention or program, based on a theory of change.
- Conduct analysis of nutrition and food security data using statistical software, including the interpretation and communication of results.
- Describe major policies and programs that affect food, nutrition, and health and explain the logic of their impacts.
- Demonstrate proficiency in applying the concepts of public health programming and evaluation to food, nutrition, and health problems.

Prerequisites for admission into the MPH in Nutrition program include a basic nutrition course and a basic biological basis of health and disease course.

This program is no longer accepting new students. Check out the MSPH in Nutrition.

Requirements

The MPH Degree in Nutrition requires a total of **45 credits** that includes:

Course ID	Title	Credits
SPHTM Foundational Requirements		
SPHL 6020	Foundations in Public Health	3
SPHL 6050	Biostatistics for Public Health	3
SPHL 6060	Epidemiology for Public Health	3
SPHL 6070	Health Systems Policy and Management	3
SPHL 6080	Design Strategies in Public Health Programs	3
Program Course Requirements		
SBPS 6030	Social and Behavioral Aspects of Health	3
SBPS 6340	Monitoring and Evaluation of Health Programs	3
SBPS 6750	Population Nutrition Assessment	3
SBPS 6770	Food and Nutrition Policy	3
SBPS 6780	Nutrition in Low- and Middle-Income Countries	3
Elective Courses [1]		**15**
SPHL 9980	Applied Practice Experience [2]	0
SBPS 7980	Professional Practice Seminar [3]	1
or SPHL 7950	Integrative Learning Experience	

[1] For Public Health Nutrition students, the nutrition faculty suggest the following electives:

- SBPS 6610 - Local Food Systems and Nutrition;
- IHSD 6331 – Public Health and Nutrition in Complex Emergencies
- IHSD 6790 - Food Security and Resilience

For students accepted into the HRSA funded MCH Nutrition Leadership Training Program, students, the nutrition faculty suggests selecting two of the following electives:

- SBPS 6140 – Developing Leadership and Communication Skills
- SBPS 6490 - Key Policy and Programs in Maternal and Child Health;
- SBPS 6510 - Essential Issues in Maternal and Child Health;
- SBPS 7510 - Maternal and Child Health: Lifecourse Perspective

Those who are eligible for the Tulane Dietetic Internship can fulfill these elective credits through the 12 internship course credits during year 2.

[2] The Applied Practice Experience (APE) is a supervised practice experience conducted in an agency or organization external to the university to gain practical experience.

[3] All students must complete an Integrative Learning Experience (ILE) that demonstrates the synthesis of foundational and concentration competencies. The ILE for students in the MPH in Nutrition may be either the Public Health Analysis or the Capstone Course - SBPS 7980 Practice Seminar in Nutrition.

Model Course Schedule

Year 1		
Fall		**Credit Hours**
SPHL 6020	Foundations in Public Health	3
SPHL 6060	Epidemiology for Public Health	3

Nutrition, MSPH

Overview

The MSPH Nutrition Program emphasizes the social and environmental determinants of nutrition problems and how to solve them through nutritional assessment of populations, community nutrition actions, health promotion programs, and food and nutrition policies. The program trains future public health nutritionists to manage programs and shape policies that improve the nutritional health and food security of populations. A full spectrum of contexts is addressed, including problems of sustainable development in low- and middle-income countries, and dual burden problems (under- and over-nutrition) common to middle- and high-income countries. Students who have previously completed an accredited didactic program in dietetics have the option to complete a Dietetic Internship jointly with the MSPH program.

Program Competencies

1. Identify the major types of food and nutrition-related health problems in domestic and international settings and the factors that cause them.
2. Apply various methods to assess the food security and nutritional status of populations, including anthropometric, biochemical, clinical, dietary, and ecological methods.
3. Develop a theory-based public health intervention or program
4. Develop a plan to monitor and evaluate a public health intervention or program, based on a theory of change.
5. Conduct analysis of nutrition and food security data using statistical software, including the interpretation and communication of results.
6. Examine the rationale of major policies and programs that affect food, nutrition, and health.
7. Apply the concept of public health programming and evaluation to food, nutrition, and health problems.

Requirements

The MSPH in Nutrition requires 45-46 credits that include:

Course ID	Title	Credits
SPHTM Foundational Requirements (15 credits)		
SPHL 6020	Foundations in Public Health	3
SPHL 6050	Biostatistics for Public Health	3
SPHL 6060	Epidemiology for Public Health	3
SPHL 6070	Health Systems Policy and Management	3
SPHL 6080	Design Strategies in Public Health Programs	3
Program Course Requirements (15-22 credits)		
SBPS 6030	Social and Behavioral Aspects of Health	3
SBPS 6340	Monitoring and Evaluation of Health Programs	3
SBPS 6750	Population Nutrition Assessment	3
SBPS 6770	Food and Nutrition Policy	3
SBPS 6610	Local Food Systems & Nutrition	3
SBPS 6690	Essentials of Public Health Nutrition *	3
SBPS 6780	Nutrition in Low- and Middle-Income Countries *	3
SPHL 7950	Integrative Learning Experience (or SBPS 7980 **)	0-1
SPHL 9980	Applied Practice Experience	0
Electives (9-15 credits)		
Total Credit Hours		45-46

* Students with an undergraduate degree in nutrition or dietetics or equivalent coursework can waive these courses and take extra electives.

**This course meets the requirement for an Integrated Learning Experience.

Applied Practice Experience (SPHL 9980)

All students in the MSPH in Nutrition will complete an applied practice experience under the supervision of a qualified professional in public health. This part of the curriculum usually occurs after foundational courses are complete.

Integrated Learning Experience (SPHL 7950 or SBPS 7980)

To complete their Integrated Learning Experience, students in the MSPH Nutrition Program will enroll in a 1-credit capstone course (SBPS 7980 Professional Practice Seminar in Nutrition). As an alternative, students can enroll in a 0-credit (SPHL 7950) option to complete a thesis-like Public Health Analysis with a professor in the program.

Model Course Schedule

Year 1		
Fall		**Credit Hours**
SPHL 6020	Foundations in Public Health	3
SPHL 6080	Design Strategies in Public Health Programs	3
SBPS 6030	Social and Behavioral Aspects of Health	3

SPHL 7950	Integrative Learning Experience (or SBPS 7980 **)	0-1
Elective		3
	Credit Hours	**6-7**
	Total Credit Hours	**45-46**

Students completing the MSPH in Nutrition with a Dietetic Internship begin courses in the summer semester and complete the Dietetic Internship in year 2.

Social, Behavioral, and Population Sciences, MPH

Overview

The MPH program in the Department of Social, Behavioral, and Population Sciences provides advanced training and field applications in basic and applied public health program development, evaluation, and research to promote health equity. Our mission is to define and address the societal and structural bases of health inequities. The program has a strong emphasis on social determinants of health and theoretically based multi-level models of health promotion. The program prepares individuals for further graduate training or professional practice where graduates progress to careers in national and international government agencies (i.e., the Centers for Disease Control and state health departments), global nonprofit organizations, public health institutes, and academia. Graduates are expected to have responsibilities that include program leadership, planning and evaluation, and applied research.

MPH in Social, Behavioral and Population Health Competencies:

- Construct multilevel models of health behaviors for health promotion interventions and research based on individual, community, and population level theories.
- Plan research and evaluation strategies to answer key social behavioral science research questions and evaluate programming, with a community-informed lens.
- Apply appropriate data management and analysis methods for social behavioral science research in the social determinants of health, health systems, and health policy to promote health equities and reduce health disparities.
- Formulate implications for research, policy, and practice from an interpretation of the results of social behavioral science research at the individual, community, and societal levels.
- Assess health inequities in the U.S. and globally through applying a social justice framework.
- Appraise one's own implicit biases and make a plan for minimizing their potential impact on personal and professional interactions.

Requirements

The MPH in Social, Behavioral and Population Sciences requires 45 credits that include:

MPH in Social, Behavioral and Population Sciences Requirements

Social, Behavioral, and Population Sciences, PhD

The purpose of the PhD program in Social, Behavioral, and Population Sciences is to train experts who will advance the field of social, behavioral, and population sciences through research, development and application of theory, and teaching. The PhD is a highly specialized training program, integrating theory and research in a focused substantive area of global importance. Graduates will have in-depth expertise necessary for a research career, and are expected to develop careers in universities, medical schools, and other higher institutions of learning as faculty members or in research organizations globally.

Program Competencies

Upon completion of the program, the graduate should be able to:

1. Evaluate social and behavioral sciences theoretical approaches for guiding population health research.
2. Evaluate significant research questions in social, behavioral, and population sciences using qualitative and quantitative research methods.
3. Design independent research to investigate social or structural causes of population health inequities.
4. Create compelling written and oral presentations of social, behavioral and population science research results.
5. Design teaching and learning experiences grounded in pedagogical best practices in a chosen area of expertise.
6. Develop a grant proposal for a public health research study with a compelling scientific narrative, description of investigator capacity, timeline, and budget

The PhD in Social, Behavioral, and Population Sciences follows the SPHTM guidelines for all PhD degrees. For further details on the PhD please see the Tulane University School of Public Health and Tropical Medicine "Policies and Procedures for Doctoral Programs (https://nam11.safelinks.protection.outlook.com/?url=https%3A%2F%2Ftulane.app.box.com%2Fv%2Fdoc-handbook-102015&data=04%7C01%7Cnicole%40tulane.edu%7C3ddfd5c5e5604acd18e108da1651a8f2%7C9de9818325d94b139fc34de5489c%7C0%7C0%7C637846837230678917%7CUnknown%7CTWFpbGZsb3d8eyJWIjoiMC4wLjAwMDAiLCJQIjoiV2luMzIiLCJBTiI6Ik1haWwiI%7C3000&sdata=Z0WYmTgLBknZ0mmrO%2B1G3Qn18o4XkLJoVf2yTvZXE%2Bo%3D&reserved=0)" guide.

Requirements

The PhD degree in Social, Behavioral, and Population Sciences requires a total of 49 post-baccalaureate degree credits with at least 30 credits of doctoral study at Tulane SPHTM. Up to 18 credits may be applied from the MPH or equivalent master's degree.

Research Ethics

Students are required to take online research ethics training via CITI or another equivalent training program in research ethics. This certification must remain current throughout the program duration.

TA Requirement

All PhD students at SPHTM are required to serve as a teaching assistant (TA) for two SPHTM courses while enrolled in the PhD program. The courses for which the student will serve as a TA must be approved by the PhD advisor.

Comprehensive Exams

On completion of the coursework listed above, students will be required to pass a comprehensive examination (https://nam11.safelinks.protection.outlook.com/?url=https%3A%2F%2Ftulane.app.box.com%2Fv%2Fgchb-comprehensive-july2018&data=04%7C01%7Cnicole%40tulane.edu%7C3ddfd5c5e5604acd18e108da1651a8f2%7C9de9818325d94b139fc34de5489c1f3b%7C0%7C0%7C637846837230678917%7CUnknown%7CTWFpbGZsb3d8eyJWIjoiMC4wLjAwMDAiLCJQIjoiV2luMzIiLCJBTiI6Ik1haWwiLCJXVCI6Mn0%3D%7C3000&sdata=KwTHlbAELH88sI8qMXmOCahoLgQiqXr9y%2F7ov66hwl8%3D&reserved=0) to demonstrate doctoral program competencies as well as knowledge related to their content area of expertise.

Prospectus

After passing the comprehensive exam a student must defend their prospectus members, a student will defend the prospectus in an oral exam which is open to all deadlines and submit all forms as specified in the school PhD handbook.

Dissertation

PhD students must complete a dissertation that has a strong basic social science or natural science research focus, and make a unique and original contribution to the scientific literature. The dissertation should help the student prepare for a career in research through demonstrated excellence in the research methods that are used. Consistent with the purpose of the PhD program, dissertations should go beyond basic descriptive analyses of existing data sets (through novel theoretical or methodological applications are acceptable); and have greater innovation and significance than just monitoring and evaluation of an existing project.

Violence Prevention Certificate (Graduate)

Overview

Violence is a leading health burden in the U.S. and globally and plays a significant role in shaping population health and health disparities. This concentrated training in violence prevention is aimed at improving our capacity to monitor, research, and address violence as a root cause of negative health outcomes and disparities in health. Courses in this certificate program combine theory and methods to understand and address violence from multiple levels and throughout the lifespan.

Purpose

Our purpose is to train scholars and practitioners in the conduct of research and evaluation methods aimed at violence prevention, one of the most important social determinants of health and health disparities. The certificate is aimed at master's students who want training in violence prevention, specifically, preparing them for a career in violence and injury prevention. Students will be prepared to work in a variety of settings, both research and practice, and at multiple levels, but also in other non-public health and interdisciplinary settings.

Competencies

1. Articulate the causes and consequences of multiple forms of violence, and mechanisms for violence prevention.
2. Analyze the intersection of scientific evidence and practice in violence prevention.
3. Plan research and evaluation strategies to answer key violence prevention questions and evaluate programming, with a community-informed lens.
4. Develop applied skills to competently engage in violence prevention efforts from a public health perspective.

Offered by: Department of Social, Behavioral, & Population Sciences
Faculty lead: Dr. Julia Fleckman

Department of Tropical Medicine and Infectious Disease

Chair: Ronald Blanton, MD, MS

William G Vincent Professor of Tropical Medicine

Mission

The Department of Tropical Medicine and Infectious Disease conducts basic and applied research in the fields of tropical medicine, parasitology and applied population-based malaria evaluation research and educates students to address the clinical, laboratory and evidence-based approaches to prevent and control tropical diseases.

About TRMD

The Department of Tropical Medicine and Infectious Disease (TRMD) has long and prestigious history as one of the oldest institutions studying, preventing and managing topical diseases. A leader in the field, TRMD has a strong international reputation for research and education in vector-borne and other tropical infectious diseases. TRMD addresses tropical diseases from the clinical, laboratory and epidemiological approaches.

The degree programs educate students in field work, epidemiology and evidence-based prevention and control along with state-of-the-art laboratory studies of tropical diseases. Graduates are prepared to work in disease control programs, diagnostic parasitology labs, academic and research institutions, governmental and non-governmental organizations, health care organizations, or biotechnology / pharmaceutical companies.

Department faculty have extensive expertise in areas such as mosquito biology and biochemistry, medical and biochemical entomology, tropical virology, and population-based prevention and evaluation. They conduct basic and applied research on vector-borne infectious diseases like Chagas, Dengue fever, West Nile virus, Lassa fever, and Ebola virus.

Graduate Degrees

- Public Health and Tropical Medicine, MPHTM (p. 519)
- Tropical Medicine, MS (p. 522)
- Tropical Medicine, PhD (p. 523)

Graduate Certificates

- Clinical Tropical Medicine Certificate (Graduate) (p. 518)
- Methods in Monitoring and Evaluation Certificate (Graduate) (p. 518)

Courses

Tropical Medicine (TRMD)

TRMD 6010 Biological Basis of Disease (3)
This course provides a foundation of knowledge about the human body in health and disease. It gives an overview of important concepts of the biological mechanisms of disease at the cellular, individual, and societal levels. At the cellular level, the course summarized DNA and cellular function, genomics, immunology, and vaccination. At the individual and societal levels, the course addresses the most important infectious and non-infectious causes of death worldwide, providing background on their pathophysiology, clinical aspects, and patterns of disease occurrence, risk factors, and methods of prevention.

TRMD 6040 Early Introduction to Laboratory Research in Tropical Medicine (0)
This introductory course serves to introduce new students to foundational concepts and methods in laboratory research, including the regulatory and applied aspects of laboratory based research. Assigned to a faculty supervisor and shadowing laboratory personnel during day-to-day laboratory activities, students will gain a firsthand practical experience. Additionally, students will gain the theoretical aspects from various activities, including presentations, article readings, and in-class discussions.

TRMD 6050 Medical Helminthology (3)
Medical Helminthology is the study of worm (helminth) parasites of medical significance to humans. In this course, we will discuss the helminths which cause human disease in terms of geographic distribution, transmission, clinical presentation and pathology, diagnosis, treatment, and control strategies. Emphasis will be placed on the helminths which affect large populations of humans and on those which are emerging pathogens. Clinicians will receive a strong grounding in diagnosis and treatment of diseases due to helminths, and public health professionals will appreciate how to apply and evaluate different methods of prevention and control on a population basis.

TRMD 6060 Medical Entomology (3)
This course is designed to provide the fundamental information necessary for understanding and evaluating both the role of arthropods in transmission of pathogens causing human disease, and the role of arthropods in directly causing human disease. Following a brief overview of the general anatomy, physiology, and classification of arthropods, individual groups of medical importance are considered in detail with regard to the recognition of important species, the epidemiology and pathogenesis of associated diseases, and the principles and methods of vector control.

TRMD 6070 Medical Protozoology and Malaria (3)
The identification of medically important parasites relies heavily upon macroscopic and microscopic examination of clinical specimens. In this course students will learn the basic principles of identifying parasitic helminthes and protozoa in blood, feces, and tissue specimens. Prepared specimens of the major helminth and protozoan pathogens of humans will be provided for macroscopic and microscopic examination. Students will learn the basic operations of the microscope and how to identify and distinguish the various helminthes and protozoa. Samples demonstrating the pathological features of the disease will also be provided. The techniques for preparing diagnostic specimens of parasites in blood and feces will be reviewed. In the laboratory students will learn the basic principles of identifying parasitic protozoa in blood, feces, and tissue specimens. Students will learn the basic operations of the microscope and how to identify and distinguish the various protozoa. The techniques for preparing diagnostic specimens of parasites in blood and feces will be reviewed.

TRMD 6080 Medical Protozoology Lab (1)
This course provides students with training in the use of a microscope and the identification of medically important protozoa in fecal, blood, tissue and other specimens. Laboratory exercises will focus upon the detection and recognition of parasitic protozoa in prepared samples. Students will learn how to distinguish the various protozoa which infect humans and be able to identify protozoa in clinical and histological preparations.

Prerequisite(s): TRMD 6070.

TRMD 6090 Parasitology Laboratory (1)
The identification of medically important parasites relies heavily upon macroscopic and microscopic examination of clinical specimens. In this course students will learn the basic principles of identifying parasitic helminthes and protozoa in blood, feces, and tissue specimens. Prepared specimens of the major helminth and protozoan pathogens of humans will be provided for macroscopic and microscopic examination. Students will learn the basic operations of the microscope and how to identify and distinguish the various helminthes and protozoa. Samples demonstrating the pathological features of the disease will also be provided. The techniques for preparing diagnostic specimens of parasites in blood and feces will be reviewed.

TRMD 6100 Health and Human Rights (1)
This course is designed to provide a forum for discussion of pertinent issues in global health and human rights and to motivate students to become active advocates for their resolution. Students will participate in weekly discussions with local and national experts in public health, clinical medicine, and health sciences research who are also strong advocates for human rights. The speakers will stress the importance of addressing the underlying social, political, and economic factors influencing health. Speakers will give examples from their background and the motivations for their career choices and discuss the skills and strategies necessary to become effective advocates for health and human rights.

TRMD 6170 Immunology (3)
This course is designed for students of public health and the basic biomedical sciences who are interested in a current overview of immunology. This course is a comprehensive introduction to immunity and immunopathogenesis as it relates to health and disease. Following a thorough consideration of cells and tissues of the immune system, attention is given to immune recognition and regulation of immune responses, with special emphasis on the role of cytokines in immunity. Finally, clinical concepts are presented with current knowledge of basic immune mechanisms for each: autoimmunity and autoimmune disease, transplant rejection, immunity to tumors, primary immunodeficiency diseases, and immunity to infectious agents including viruses and parasites, and immunopathogenesis of HIV/AIDS.

TRMD 6200 Impact Evaluation in Global Health (3)
This course introduces students to the basic concepts, principles, and practices for public health programs and interventions. It focuses on impact evaluation at the national and sub-national levels, in addition to community and intervention-based evaluations. Lectures, discussions, and assignments will highlight evaluation strategies for health programs and disease-specific prevention and control interventions in international settings with a focus on diseases and programs in the tropics. The course is intended to 1) introduce students to impact evaluation, 2) provide a solid grounding in study designs relevant in field settings; 3) develop students' skills in designing evaluation plans, and 4) serve as a foundation for more specialized program evaluation classes as well as for courses on data analysis, sampling, epidemiology, and operations research. This course is not intended for those students who already have taken GCHB 6200 or GCHB 6340.

TRMD 6250 Biomedical Research Methods (3)
Students will be able to apply the basic biomedical methods used in public health and tropical medicine research or practice, and summarize the principle and the theoretical basis. They will be able to analyze the strengths and weaknesses of the different methods, and design hypothesis-driven studies to address public health and tropical medicine problems, applying the appropriate methods. Students will also assess scientific papers and critically appraise their relative merit in the field of public health research and practice.

TRMD 6330 Microbial Disease of the Tropics (3)
This required course builds foundational knowledge regarding the important bacterial and mycotic (fungal) pathogens in the tropics. This course forms a part of the foundations of tropical medicine knowledge. Students will learn the etiology, epidemiology, transmission characteristics, pathogenesis, clinical features, diagnosis and management of diseases caused by these pathogens. This course draws on faculty expertise both within Tulane and outside. The course focuses on disease topics not usually covered in depth in the US medical or public health curriculum. Additionally, the content of this course is a required component of the syllabus for the American Society of Tropical Medicine & Hygiene's CTropMed certification examination.

TRMD 6340 Diagnostic Methods in Microbiology (2)
This laboratory course parallels topics presented in TRMD 6330. The course is designed to teach students how to perform basic laboratory tests using simple techniques applicable to developing countries. Most of these will be diagnostic tests for infectious diseases, although some clinically relevant non-diagnostic techniques will also be taught (e.g., complete blood counts). The bulk of the course consists of hands-on laboratory experience conducting laboratory tests with clinical specimens and analyzing prepared teaching specimens. Procedures for organism isolation and identification and rapid diagnostic kits will be covered.

TRMD 6350 Disease Prevention & Control in Developing Countries (2)
This course is designed to prepare students to recognize and contribute effectively to the public health needs of communities in developing countries. It includes four broad content areas: (1)concepts of disease prevention and control with special reference to developing countries, including types of surveillance, monitoring and control strategies, (2) analysis of community needs, and provision of basic preventive services; (3) prevention and control of important endemic diseases such as malaria, tuberculosis, vaccine-preventable diseases; and (4)other topics such as special needs populations, disaster/refugee health programs, sources of information, and local and international organizations and programs. The course will emphasize practical rather than theoretical considerations based on the needs of the practitioner working under relatively resource-poor conditions.

Enrollment limited to students in the Medicine or Pub Hlth Trop Med (GR) departments.

TRMD 6420 Tropical Virology (3)
This course covers the broad area of virology with an emphasis on viruses of public health concern in developing and tropical countries. Both historically problematic and emerging viruses are covered. Topics include the molecular biology, epidemiology, and pathology of selected viruses. Focus is placed on developing an understanding of the molecular aspects of the viral life cycle that give rise to transmission and pathogenic characteristics, especially in the context of the co-evolution of the virus and host. Additional topics include the interactions between the virus and host immune response, as well as viral control and the development of vaccines and anti-viral pharmaceuticals. Students enrolled in the course should come with a basic understanding of communicable disease concepts.

TRMD 6450 Tuberculosis: Global Trends and Interactions with the HIV Epidemic (2)
This course is designed as an overview of tuberculosis and the challenges posed by the dual epidemics of TB and HIV. The course comprises a series of lectures and case studies. Guest faculty are recognized experts in this area and bring extensive experience and case study material to the course. A field activity to supplement in-class learning is offered. This is a visit to the Wetmore Tuberculosis Clinic. The course includes three broad content areas – basic concepts of tuberculosis disease and epidemiology, clinical manifestations and management; challenges posed by the interactions of Tuberculosis and HIV infection and global initiatives to integrate TB and HIV control programs; and issues in tuberculosis control with special reference to multidrug resistance, social aspects, and program strategies. The biological, clinical and programmatic perspectives gained from this course will assist students in interpretation and critique of programs and policies related to tuberculosis control.

TRMD 7000 Tropical Medicine Seminar (1)
Tropical Medicine Seminar is designed as a journal club, with the specific goal of training students to develop skills in critically evaluating and effectively presenting relevant scientific literature. Each student is expected to present at least one article to the class from recent tropical medicine literature, and to attend and actively participate during presentation delivered by other students. Course may be repeated up to unlimited credit hours.

Maximum Hours: 2

TRMD 7020 Infectious Disease Seminar (0-1)
The seminar experience is intended to stimulate a critical reading of the current literature and to ensure that each student learns to present important and potentially controversial data in a rigorous and careful fashion.

Maximum Hours: 99

TRMD 7180 Immunoparasitology (2)
This advanced level course is designed to provide students of public health and the basic biomedical sciences with an update on the role of immunity to parasitic infections and the immunopathogenesis of clinical parasitic diseases. Special emphasis will be placed on current knowledge of mechanisms of immunity to protozoan and helminth infections that cause malaria, trypanosomiasis, leishmaniasis, toxoplasmosis, schistosomiasis and filariasis, some of the most widespread and debilitating diseases in endemic countries of the world. Additional topics include parasitic opportunistic infections of AIDS patients, and updates on protozoan and helminth vaccine development.

TRMD 7300 Mechanisms of Pathogen Intervention (2)
This course provides an advanced foundation of knowledge about the selection and mechanisms of action of different interventions against important viruses, bacteria and unicellular parasites of public health significance. The course describes how drugs, vaccines and other intervention agents reach their cellular targets and how they act in harmony with the host immune system to control or eradicate the pathogen, inside the human or the arthropod hosts.

Prerequisite(s): TRMD 6170.

TRMD 7330 Advanced Topics in Host Pathogens (2)
This course will provide both an overview and an update on the recent advances in the study of host-pathogen interaction at the cellular and molecular levels. The focus will be on pathogen molecules that mediate interactions with host (and vector, if applicable), and the role these interactions play in host recognition and modulation, pathogen survival, virulence, and disease progression. The course will cover topics such as host specificity, immune evasion, pathogenicity and host-pathogen coevolution. Examples from the current literature will illustrate the link between basic science research in infectious diseases and our understanding of broader biological phenomena, as well as mechanisms of pathogenesis.

Prerequisite(s): TRMD 6170, 6070 and 6330.

TRMD 7420 Population-Based Malaria Prevention and Control (3)
This course introduces the principles of prevention and control of malaria infection and disease, as well as population based methods for evaluating the success of control programs or new interventions. This course investigates how culture, society, and the environment influence disease transmission, risk factors, and health status. Students will analyze data and integrate information using a monitoring and evaluation framework to inform prevention and control policy. Topics covered will include vector ecology, malaria epidemiology, malaria control strategies, malaria monitoring and evaluation, issues around cost-effectiveness, and prospects for elimination.

Prerequisite(s): (EPID 6030, SPHL 6860 or 6060).

TRMD 7500 Advanced Tropical Virology (2)
This course covers advanced topics in tropical virology. The focus is on viruses of recent public health concern in developing and tropical countries. Both historically problematic and emerging viruses are covered. Topics from published literature include molecular biology, epidemiology and pathology. Emphasis is placed on extending and deepening the understanding of the molecular aspects of the viral replication that gives rise to transmission and pathogenic characteristics. Additional topics include the interactions between the virus and host immune response, as well as viral control and the development of vaccines and anti-viral pharmaceuticals.

Prerequisite(s): TRMD 6420.

TRMD 7650 One Health Approaches to Disease (3)
One Health is a framework to expand interdisciplinary collaborations and communications for optimal health of people, domestic animals, wildlife, plants and our environment. This course will explore the theory behind One Health, describe methods and tools used in One Health, and develop skills to work with interdisciplinary teams and communication across professions. Using a One Health framework, we will discuss case studies of emergent health issues including emerging diseases, antibiotic resistance, food safety and security, climate change, and disease surveillance. Students will work in teams to produce an analysis of a health issue using a One Health framework.

Prerequisite(s): (SPHL 6020, 6820 or minimum score of PASS in 'SPHL 6020 Exemption') and (SPHL 6060 or 6860) and (SPHL 6070 or 6870) and (SPHL 6080 or 6880).

TRMD 7800 Advanced Medical Entomology (3)
This advanced course applies the most current knowledge in vector biology to the study of arthropods and diseases they transmit. It meets twice a week: a 2hr30´ classroom session (a lecture and in-class activities) followed by a 2h30´ lab session, in which students reinforce classroom learnings with practical experience in performing bioassays; bioinformatic, ecological, behavioral and surveillance experiments; computer and video simulations, and metabolomics. Drawing from current, primary literature and discipline-specific guidelines, students also write and present a research proposal on a topic of interest. Primary and guest instructors, which include vector biologists and biochemists from local, regional and national institutions, reflect diverse identities. This unique structure makes the course well-suited for anyone interested in vector-borne research and disease control.

Prerequisite(s): TRMD 6060*.
* May be taken concurrently.

TRMD 7820 Malaria (2)
This is an advanced course which provides a rigorous approach to both the basic and applied issues related to malaria and malaria control. Areas covered in detail include cell biology and biochemistry of the parasite-red cell integration, antimalarial drug action and resistance mechanisms, parasite genetics and cell biology and the immunologic aspects of malaria, including asexual and sexual stage candidate vaccine antigens. At the conclusion of the semester, students are expected to critically review current malaria control and research strategies and to suggest and defend appropriate alternatives.

TRMD 7960 Clinical Tropical Medicine (3)
Clinical Tropical Medicine is designed to offer an overview of topics of clinical importance in tropical medicine, with an emphasis on a syndromic approach to patient presentation. Through a combination of lectures and clinical case presentations with group discussions the course both introduces key subject matter and will help students apply their knowledge to the clinical sphere. It is expected to complement other course offerings from the Tropical Medicine Department for the MPHTM and Diploma in Tropical Medicine curricula. Participants should have some experience in clinical medicine (usually a terminal degree in medicine, nursing, or veterinary sciences) and should either have experience or be in the process of learning about diseases of the tropics.

TRMD 7990 Special Studies (1-3)
Masters students and advisor select a topic for independent study and develop learning objectives and the expected written final product.

TRMD 8080 Large Dataset Management and Sequencing: Part 1 (3)
TRMD 8080 and 8090 are interdependent courses designed to develop skills in generating hypotheses specific to DNA sequence data, applying protocols for sample collection, analysis of large data sets, use of the MinION instrument and presentation of research findings that demonstrate rigor and reproducibility. TRMD 8080 (fall semester) introduces students to the principles and theoretical bases of novel molecular methods, design studies and hypotheses to be addressed. Students learn to collect sequence data using an accessible sequencing instrument. TRMD 8090 (spring semester), equips students with techniques for evaluating and analyzing large data sets, with attention to rigor and reproducibility. The experience of these courses will be broadly applicable, regardless of the area of public health pursued.

TRMD 8090 Large Dataset Management and Sequencing: Part 2 (3)
TRMD 8080 and 8090 are interdependent courses designed to develop skills in generating hypotheses specific to DNA sequence data, applying protocols for sample collection, analysis of large data sets, use of the MinION instrument and presentation of research findings that demonstrate rigor and reproducibility. TRMD 8080 (fall semester) introduces students to the principles and theoretical bases of novel molecular methods, design studies and hypotheses to be addressed. Students learn to collect sequence data using an accessible sequencing instrument. TRMD 8090 (spring semester), equips students with techniques for evaluating and analyzing large data sets, with attention to rigor and reproducibility. The experience of these courses will be broadly applicable, regardless of the area of public health pursued.

TRMD 8100 Laboratory Rotation (2)
Doctoral students are required to take TRMD 8100 Laboratory Training three times in different DTM faculty laboratories for a total of six credits (2 each). The faculty member will be identified on the student's transcript as the person teaching the course. At the completion of each lab rotation, the advisor will fill out a lab rotation form and assign a pass/fail grade. In addition to a record of grade on the student's transcript, this report will be maintained in the student's file by the department. Before enrolling in the TRMD 8100 course, students are encouraged to meet with various faculty members and discuss the prospect of doing a rotation with them. The rotations will acquaint the student with the different research programs available in the department and assist the student in choosing a permanent dissertation advisor. In addition, by rotating through several laboratories the student will obtain laboratory experience and training in specialized areas. Ideally the laboratory rotations should begin during the first semester and continue through the summer until a permanent advisor is chosen in the second year.

Course Limit: 3

TRMD 8990 Doctoral Independent Study (1-3)
Doctoral students and advisor select a topic for independent study and develop learning objectives and the expected final written product.

Maximum Hours: 99

TRMD 9980 Master's Thesis Research (0)
MS students engaging in thesis research.

Course Limit: 3

Clinical Tropical Medicine Certificate (Graduate)

Overview

The Department of Tropical Medicine offers the Diploma Course in Clinical Tropical Medicine accredited by the American Society of Tropical Medicine and Hygiene (ASTMH). The Diploma Course is designed for physicians and eligible healthcare professionals who intend to work in the tropics, physicians experienced with tropical medicine, or practitioners who need experience in clinical parasitology, tropical diseases and travel medicine.

This intensive, four-month program combines lectures, seminars, and practical laboratory work to provide physicians and other healthcare professionals with the epidemiologic, biologic and social aspects of tropical diseases and to evaluate and plan disease prevention and control programs. Students completing the Diploma Course are eligible to take the **Certificate of Knowledge in Clinical Tropical Medicine and Travelers' Health (CTropMed®) Examination** administered by ASTMH.

Eligible Students

Tropical Medicine offers the Diploma Course as a non-degree graduate certificate to doctors who hold a MD, DO, DVM or equivalent degrees. Other qualified health professionals, such as RN, will be considered on a case-by-case basis.

Medical students concurrently enrolled in the Tulane University School of Medicine and earning the joint MD/MPHTM degree also complete the requirements for the Diploma Course and are eligible to sit for the **CTropMed® Examination** upon graduation.

Physicians and qualified healthcare professionals enrolled in the MPHTM degree program can take TRMD 7960 (Clinical Tropical Medicine) and TRMD 6340 (Diagnostic Lab Methods in Microbiology) as elective courses to satisfy the Diploma Course requirements for the **CTropMed® Examination** upon graduation.

Requirements

The Diploma in Tropical Medicine requires 17 credits:

Course ID	Title	Credits
TRMD 6050	Medical Helminthology	3
TRMD 6070	Medical Protozoology and Malaria	3
TRMD 6330	Microbial Disease of the Tropics	3
TRMD 6340	Diagnostic Methods in Microbiology	2
TRMD 6350	Disease Prevention & Control in Developing Countries	2
TRMD 7000	Tropical Medicine Seminar	1
TRMD 7960	Clinical Tropical Medicine	3

Methods in Monitoring and Evaluation Certificate (Graduate)

Overview

Monitoring and evaluation (M&E) is critical as donors, governments, and other relevant stakeholders attempt to validate their investments and improve public health program performance. Students with a Certificate in Methods in M&E can expect to acquire the necessary skills to assess the performance, effectiveness, and impact of global public health programs. The courses offered will enable students to work effectively with global public health organizations involved with M&E and program implementation. The Tulane School of Public Health and Tropical Medicine is recognized for its expertise in M&E, and for producing students with strong marketable skills in this area. Students with this certificate will be prepared for jobs within the public and private sector that focus on M&E across a broad range of public health areas. Jobs in this area include M&E specialists and advisors, technical advisors, data analysts and program managers.

Certificate Purpose

Students will meet the following learning objectives to earn a certificate in M&E:

1. Utilize and apply the basic terminology and definitions of M&E including basic epidemiological measurements, impact evaluation, indicators, precision, bias, internal and external validity, logical frameworks and public health program goals, measurable objectives, inputs, outputs, outcomes and impacts;
2. Calculate basic measures commonly used in M&E;
3. Draw appropriate inferences from M&E data;
4. Work with stakeholders to conduct evaluations and improve programs; and
5. Communicate M&E information and findings to other lay and professional audiences.

Eligible Students

Students enrolled in a MPH, MSPH, MPH&TM degree program at Tulane SPHTM.

Certificate Competencies

Students obtaining a certificate in M&E can expect to acquire the following competencies:

- Understand the theory and role of M&E of global public health programs, and explain the importance of M&E data for informing public health programs and decision making;
- Ability to monitor and assess the implementation, effectiveness, and impact of public health programs; and
- Ability to work effectively with donors, governments, implementing organizations and other relevant stakeholders to validate investments and improve global public health program performance.

Number of Credits Required for Completion: 15

Requirements

Prerequisite courses are SPHL 6050 Biostatistics for Public Health and SPHL 6060 Epidemiology for Public Health and proficiency in the use of statistical packages (e.g. EPID 6230 or SPHU 4160).

Course ID	Title	Credits
TRMD 6200	Impact Evaluation in Global Health	3
or IHSD 6200	Evaluation of Program Interventions in Global Health	
IHSD 6300	Monitoring of Global Health Programs	3
EPID 7120	Epidemiologic Methods II	3
BIOS 6040	Intermediate Biostatistics	3
Elective [1]		3
Total Credit Hours		**15**

[1]Three Additional Credits in a Topical Area Relevant to M&E

In addition to the main requirements of the certificate as stated above, students are expected to take three additional credits in a topical area relevant to M&E and are intended to provide deeper and/ or topic specific training in an area relevant to M&E. These three credits will enrich this largely methods focused certificate by providing additional training in the M&E of a topical area of interest to the student and/or by expanding their knowledge of relevant M&E methods. This training might come in the form of measurement in a topical area, additional methodological training appropriate for M&E experts, or in applications of M&E approaches to specific public health problems or areas.

Credits may be made up of one or several courses determined, documented in advance, in collaboration with the certificate leader. Examples of classes include:

- IHSD 8250 Advanced Research Methods in Global Health
- IHSD 7440 Household Sampling Applications in Developing Countries, and
- IHSD 7140 Monitoring and Evaluation of HIV/AIDS Programs

Public Health and Tropical Medicine, MPHTM

Overview

The Master of Public Health and Tropical Medicine (MPHTM) is a public health degree with a specialty in infectious diseases, and especially those diseases found in tropical regions. The program prepares public health practitioners to plan and evaluate disease control and prevention programs, physicians to better treat and evaluate tropical diseases, or students to pursue medical school and other medical professions. The curriculum consists of foundational public health courses and specialty courses in the biological, medical, social, and epidemiological aspects of diseases that are more prevalent in tropical regions. Physicians, medical students, and healthcare professionals can also complete the requirements for the Diploma Course in Clinical Tropical Medicine to be eligible for the Certification Examination in Clinical Tropical Medicine and Traveler's Health (CTropMed®) offered by the American Society of Tropical Medicine and Hygiene (ASTMH).

Program Competencies (https://sph.tulane.edu/trmd/mphtm/)

- Assess key elements affecting the pathogenesis and transmission of infectious diseases commonly found in the tropics.
- Assess the factors influencing tropical disease prevention, control and diagnosis.
- Identify appropriate techniques, as they relate to specific tropical disease pathogen and vector for diagnosis, prevention, and control.
- Critique relevant methods for planning and evaluating tropical disease control and prevention programs.

Requirements

The MPH&TM degree requires a total of 45 credits that include:

Course ID	Title	Credits
MPH Foundational Courses		
SPHL 6020	Foundations in Public Health	3
SPHL 6050	Biostatistics for Public Health	3
SPHL 6060	Epidemiology for Public Health	3
SPHL 6070	Health Systems Policy and Management	3
SPHL 6080	Design Strategies in Public Health Programs	3
MPHTM Course Requirements		

TRMD 6050	Medical Helminthology	3
TRMD 6060	Medical Entomology	3
TRMD 6070	Medical Protozoology and Malaria	3
TRMD 6330	Microbial Disease of the Tropics	3
TRMD 6350	Disease Prevention & Control in Developing Countries	2
TRMD 6420	Tropical Virology	3
TRMD 7000 or TRMD 7020	Tropical Medicine Seminar Infectious Disease Seminar	1
Electives		**12**
Additional Coursework		
SPHL 7950	Integrative Learning Experience	0
SPHL 9980	Applied Practice Experience	0
Total Credit Hours		**45**

Electives

Students select from courses offered within the department, school, or university in consultation with their faculty advisor that complement their career goals and objectives.

Option for students in the joint MD/MPHTM only

Students concurrently enrolled in the Tulane University School of Medicine and earning the joint MD/MPHTM degree have the option of substituting TRMD 7960 (Clinical Tropical Medicine) and TRMD 6340 (Diagnostic Methods in Microbiology) in place of TRMD 6420 (Tropical Virology) and TRMD 6060 (Medical Entomology). These substitutions permit joint MD/MPHTM students to also complete the requirements for the Diploma Course in Clinical Tropical Medicine from the American Society of Tropical Medicine and Hygiene (ASTMH) upon graduation.

Recommended coursework for Clinicians, Medical Students and Healthcare Professionals (Diploma Course in Clinical Tropical Medicine)

Physicians and other eligible health care professionals interested in deepening their knowledge of diagnoses and treatment of tropical diseases can take two elective courses focusing on the clinical aspects of tropical diseases: TRMD 6340 - Diagnostic Methods in Microbiology and TRMD 7960 Clinical Tropical Medicine. Students who successfully complete these courses are eligible to take the **Certificate of Knowledge in Clinical Tropical Medicine and Travelers' Health (CTropMed®) Examination** administered by American Society of Tropical Medicine and Hygiene (ASTMH). Students with a clinical focus are also encouraged to take Tropical Medicine Seminar (TRMD-7000) at least once.

MPHTM Model Course Schedule

Course ID	Title	Credits
Year 1, Fall Semester

Semester subtotal : 12-14

Year 2, Spring Semester

Electives 1-3
Public Health Analysis

Total Degree Credits: 42

Tropical Medicine, MS

Overview

The MS in Tropical Medicine is an academic degree designed to build a strong knowledge of infectious diseases of global public health importance. Coursework provides a solid foundation in parasitology, vector biology and other infectious diseases. Specialty courses in biological, cellular and epidemiological aspects of pathogens and infectious disease comprise the curriculum. Students are required to carry out original research and write a thesis based on the findings of the research project.

Graduates of the MS degree in Tropical Medicine are expected to find careers in public health, biomedical sciences, or related fields at academic institutions, governmental and non-governmental organizations, health care organizations, or biotechnology/ pharmaceutical companies. Many individuals enter the program with the intention of subsequently pursuing doctoral or medical degrees.

Program Competencies

The following competencies are necessary for success in the particular branch of public health to which this degree relates. They were developed through rigorous analysis of employers, community and global needs, and the quality standards set forth by accrediting bodies.

1.Explain infectious disease including types of organisms, mechanisms or transmission, and natural history.

2.Demonstrate knowledge of the biology and immunology of host - pathogen interactions and their outcomes.

3. Effectively communicate research-based peer-reviewed literature.

4.Analyze how research projects address specific questions as applied to tropical medicine.

5.Identify appropriate statistical analyses and research methodology for performing hypothesis-driven research that address public health problems.

6. Appraise the strengths and weaknesses of biomedical methods used in public health.

Requirements

The MS degree requires a total of 42 credits that includes:

Required Courses

Course ID	Title	Credits
SPHL 6020	Foundations in Public Health	3
SPHL 6050	Biostatistics for Public Health	3
SPHL 6060	Epidemiology for Public Health	3
TRMD 6050	Medical Helminthology	3
TRMD 6060	Medical Entomology	3
TRMD 6070	Medical Protozoology and Malaria	3
TRMD 6170	Immunology	3
TRMD 6250	Biomedical Research Methods	3
TRMD 6420	Tropical Virology	3
TRMD 6330	Microbial Disease of the Tropics	3
TRMD 7020	Infectious Disease Seminar (taken two semesters)	1
TRMD 9980	Master's Thesis Research	0
Electives		**11**
Total Credit Hours		**42**

Thesis

Students pursuing the MS degree in Tropical Medicine must successfully complete a thesis based on a rigorous and independent research project demonstrating scholarship in Tropical Medicine research. The project will be supervised by a thesis director who is a faculty member of the Department of Tropical Medicine.

Students who have completed required coursework may register in TRMD 9980 (Thesis Research) each semester while conducting the research and writing the thesis. The master's thesis should be completed within a year of completion of the required courses.

Model Course Schedule

Year 1		
Fall		**Credit Hours**
SPHL 6020	Foundations in Public Health	3
SPHL 6050	Biostatistics for Public Health	3
TRMD 6170	Immunology	3
TRMD 6050	Medical Helminthology	3
TRMD 6330	Microbial Disease of the Tropics	3
	Credit Hours	**15**
Spring		
TRMD 6060	Medical Entomology	3
TRMD 6070	Medical Protozoology and Malaria	3
TRMD 6250	Biomedical Research Methods	3
TRMD 7020	Infectious Disease Seminar	1
SPHL 6060	Epidemiology for Public Health	3
	Credit Hours	**13**

Summer Session		
TRMD 9980	Master's Thesis Research	0
	Credit Hours	**0**
Year 2		
Fall		
TRMD 7020	Infectious Disease Seminar	1
Electives		5
TRMD 9980	Master's Thesis Research	0
TRMD 6420	Tropical Virology	3

Spring		
TRMD 9980	Master's Thesis Research	0
Electives		5
	Credit Hours	**5**
	Total Credit Hours	**42**

Tropical Medicine, PhD

Overview

The PhD program in Tropical Medicine is an advanced degree that prepares students to pursue careers in tropical medicine. The PhD graduate is expected to have knowledge across a wide range tropical diseases as well as sustained experience in the conduct of research in one or more content areas. Graduates of the PhD program pursue careers in basic and applied research in academic institutions, governmental agencies, industry, and nonprofit organizations.

Program Competencies

- Critique scientific literature for validity and relevance to tropical pathogens and vectors.
- Design relevant research approaches that address problems of management, diagnosis, or biology of tropical diseases.
- Evaluate the factors that affect pathogen transmission of infectious diseases commonly found in the tropics.
- Produce communication of original research methods and results for peer groups, students, practitioners/industry, and the general public.
- Design research using the relevant methods for planning and evaluating tropical disease control and prevention.
- Design teaching and learning experiences grounded in pedagogical best practices in a chosen area of expertise.
- Develop a grant proposal for a public health research study with a compelling scientific narrative, description of investigator capacity, timeline, and budget.

Requirements

Students must complete at least 48 credit hours of coursework and doctoral studies beyond the baccalaureate, with a minimum of 30 didactic hours at Tulane in the doctoral program. Up to 18 credits may be applied from a prior master's degree. The advisor works with the students in identifying which courses may be applied toward the 48 credits for the PhD.

As part of the PhD training, students in Tropical Medicine are required to take advanced courses required of all doctoral students in SPHTM as well as specialty courses focusing on infectious diseases of the tropics. Students should work with their advisor to choose the courses that would be relevant to the knowledge required for successful completion of the dissertation research project.

Requirements

Course ID	Title	Credits
PhD Foundational Requirements		
SPHL 6020	Foundations in Public Health	3
SPHL 6050	Biostatistics for Public Health	3
SPHL 6060	Epidemiology for Public Health	3
TRMD 6050	Medical Helminthology	3
TRMD 6060	Medical Entomology	3
TRMD 6070	Medical Protozoology and Malaria	3
PhD Core Course Requirements		
EPID 7120	Epidemiologic Methods II	3
BIOS 6040	Intermediate Biostatistics	3
SPHL 8080	Public Health Pedagogy	3
SPHL 7500	Public Health Grant Writing	3
Tropical Medicine PhD Required Courses		
TRMD 7020	Infectious Disease Seminar	1
TRMD 7020	Infectious Disease Seminar	1
TRMD 7180	Immunoparasitology	2
or TRMD 7800	Advanced Medical Entomology	
TRMD 6200	Impact Evaluation in Global Health	3
or TRMD 7420	Population-Based Malaria Prevention and Control	
TRMD 8080	Large Dataset Management and Sequencing: Part 1	3
TRMD 8100	Laboratory Rotation	2
Electives		6
Total Credit Hours		**48**

PhD Elective Courses – 6 credits

Students are encouraged to take courses covering a broad array of the disciplines involved in the field of Tropical Medicine, including coursework offered by other academic departments (e.g., Epidemiology, Biochemistry, Microbiology, Pharmacology, etc.) relevant to their area of concentration. Students should take advanced elective courses that complement their research area and are consistent with the PhD program objectives. Courses taken outside of the SPHTM need approval from the advisor to confirm such an elective course would be relevant to knowledge required for successful completion of the dissertation research project.

Infectious Disease Seminar

Students must enroll twice in TRMD 7020 Infectious Disease Seminar for 1-credit each time (for a total of 2 credits). After fulfilling the 2 credits of seminar, students must enroll in 0-credit versions of either TRMD 7020 Infectious Disease Seminar or TRMD 7000 Tropical Medicine Seminar each semester until the comprehensive examination is completed.

Research Rotations

Doctoral students are required to enroll in TRMD 8100 Laboratory Rotation as part of their research training at least once. They may enroll up to two more times with different faculty as an elective course. The rotations will acquaint the student with different research programs available in the department and assist the student in choosing a permanent dissertation advisor. In addition, by rotating with other faculty members the student will obtain research experience and training in different specialized areas.

Research Ethics

Students are required to take online research ethics training via CITI or another equivalent training program in research ethics. PhD students in Tropical Medicine fulfill this requirement with INTD 6010 – Responsible Conduct of Research (RCR). This seminar series satisfies the responsible conduct of research training requirements of the National Institutes of Health (NIH) and the National Science Foundation (NSF). This certification must remain current throughout the program duration and at a frequency of no less than once every four years.

Teaching Assistant Experience

All PhD students at SPHTM are required to serve as a teaching assistant (TA) for two SPHTM graduate courses while enrolled in the PhD program. Students should register for Teaching Assistantship Educational Experience (0 credits) during the terms they complete each TA requirement. The courses for which the student will serve as a TA must be approved by the faculty advisor.

SPHL 9970 – Dissertation Research

Doctoral students who have completed required doctoral course work but have not defended their prospectus are required to register for (SPHL 9970) Dissertation Research each semester to maintain continuous registration in the PhD program.

SPHL 9990 – Dissertation

Doctoral candidates who have defended their prospectus and are engaged in research are required to register for (SPHL 9990) Dissertation each semester until the degree is awarded.

Comprehensive Exam

Upon completion of required coursework, students are expected to develop a research question outside of the focus of their dissertation work and write and defend their work orally before a faculty committee chosen in consultation with the PhD Program Director. The purpose of the comprehensive examination is to ensure that candidates for the PhD degree can organize a clear plan of research around a problem different from their proposed thesis.

Prospectus

After passing the comprehensive exam the student along with their advisor will choose a prospectus dissertation committee and prepare and defend a prospectus of proposed research, ideally within 6 months after successful completion of the comprehensive examination. The committee must include a minimum of three members with at least two faculty from the Department of Tropical Medicine and one external to SPHTM. The research prospectus must be presented and defended at least one semester before the dissertation defense. Following the successful defense of the prospectus, students are admitted to PhD candidacy and proceed with dissertation research.

Dissertation

Students must conduct original public health research and defend a dissertation based on that research. The dissertation research demonstrates scholarly work and is the basis for the dissertation. The dissertation committee and SPHTM Executive Faculty approve the dissertation. In addition to SPHTM dissertation requirements for the PhD, the dissertation must meet the requirements for a PhD dissertation in Tropical Medicine.

Model Schedule for Fall Entry

The model schedule represents an overall plan for completing degree requirements. Students should consult an advisor to plan their actual schedule in terms of total credits per semester and course sequencing.

Year 1		
Fall		**Credit Hours**
SPHL 6020	Foundations in Public Health	3
SPHL 6050	Biostatistics for Public Health	3
TRMD 6050	Medical Helminthology	3
TRMD 6200 or TRMD 7420	Impact Evaluation in Global Health or Population-Based Malaria Prevention and Control	3
TRMD 7020	Infectious Disease Seminar	1
	Credit Hours	**13**
Spring		
SPHL 6060	Epidemiology for Public Health	3
TRMD 6060	Medical Entomology	3
TRMD 6070	Medical Protozoology and Malaria	3
TRMD 7180 or TRMD 7800	Immunoparasitology or Advanced Medical Entomology	2
TRMD 7020	Infectious Disease Seminar	1
	Credit Hours	**12**
Summer Session		
TRMD 8100	Laboratory Rotation	2
	Credit Hours	**2**
Year 2		
Fall		
BIOS 6040	Intermediate Biostatistics	3
TRMD 8080	Large Dataset Management and Sequencing: Part 1	3

	Credit Hours	**0**
Spring		
SPHL 9990	Dissertation	0
	Credit Hours	**0**
	Total Credit Hours	**48**

Dual and Accelerated Degrees

Graduate Dual Degrees

Graduate/Professional Dual Degrees:

- School of Medicine: MPH, MSPH, MPHTM or PhD
- School of Social Work: MSW/MPH in Community Health Sciences or Social, Behavioral, and Population Sciences
- School of Business: MBA/MHA
- School of Law: JD/MHA; JD/MPH in Health Systems Management

Medical students may enroll in a dual degree in SPHTM with study in any of the concentrations in the MPH, MSPH or MPHTM degrees. Up to 10 credits from the medical school may be applied toward the MPH, MSPH or MPHTM degrees. Students complete the same concentration requirements for the public health degrees.

Students enrolled in the JD degree may enroll in a dual degree in SPHTM with study in the MHA degree or the MPH in Health Systems Management. Up to 10 credits from the law school may be applied toward the MHA or MPH degree. Students complete the same public health degree requirements for the public health degrees.

School of Social Work students in the MSW degree program may obtain a dual degree in SPHTM pursuing the MPH in Community Health Sciences (online) or Social, Behavioral, and Population Sciences (residential, although some courses are available online). Up to 10 credits from the social work school may be applied toward the MHA or MPH degree. Students complete the same public health degree requirements for the public health degrees.

Business School students in the MBA may obtain a dual degree with the MHA degree at SPHTM. Up to 10 specific credits from the business school may be applied toward the MHA degree. Students complete the same MHA degree requirements.

Undergraduate Accelerated Degree

Undergraduate Accelerated Degrees:

- Public Health majors: BSPH/MPH, MSPH, MPHTM or MHA
- School of Science and Engineering: BS/ MPH, MSPH, MPHTM or MHA
- School of Business: BSM/MPH, MSPH, MPHTM or MHA

Undergraduate students in the BSPH degree in the School of Public Health, the BS degree in the School of Science and Engineering or the BSM degree in the School of Business may combine the degree with the MPH, MSPH, MPHTM or MHA degrees. Students apply to the program in the second semester of their junior year and, in consultation with their advisor, may begin taking graduate course in their senior year.

The accelerated degree program allows student to apply 12 credits of graduate foundational courses to the bachelors degree and the MPH, MSPH, MPHTM, or MHA degrees. In addition, students in the BSPH program also receive a course waiver for SPHL 6020 Foundations in Public Health. This results in the saving of approximately 1 semester of course work toward the MPH, MSPH, MPHTM or MHA degree.

Programs

BS/MHA Accelerated Degree

Overview

BS/MHA and BSM/MHA Accelerated Degrees

The BS and BSM Accelerated Degree Programs are a path for continuous study from the bachelor's degree through the Master of Health Administration (MHA) professional degree at the School of Public Health and Tropical Medicine (SPHTM). The accelerated degree is an opportunity for Bachelor of Science majors in the School of Science and Engineering or Bachelors of Science in Management majors in the School of Business to begin graduate study for the MHA during their senior year; students may take up to 12 graduate credits from the designated public health graduate courses that are applied to the MHA degree.

Students must graduate from the BS or BSM program to continue in the MHA program.

Requirements

Accelerated BS/MHA or BSM/MHA

The MHA program is a 54 credit masters in health administration plus an administrative residency. (See the MHA degree requirements) BS/MHA or BSM/MHA Accelerated Degree students may take up to 12

credits of graduate courses during their senior year. Students may select up to 12 graduate credits from the following courses:

Course ID	Title	Credits
HPAM 6050	Health Systems Concepts	3
HPAM 6200	Intro to Healthcare Analytics	3
HPAM 6300	Data Visualization and Communication	3
HPAM 6710	Quantitative Decision Models	3

BS/MPH, MSPH or MPH&TM Accelerated Degree

Overview

Public Health Accelerated Degree Programs

BS or BSM/MPH or MSPH or MPH&TM

These accelerated degrees are an opportunity for Bachelor of Science majors in the School of Science and Engineering or Bachelors of Science in Management majors in the School of Business to begin graduate study in one of the public health professional degrees during their senior year. The BS/MPH, MSPH, MPHTM or BSM/MPH, MSPH, MPH&TM Accelerated Degree Programs are a path for continuous study from the bachelor's degree through a master's level professional degree at the School of Public Health and Tropical Medicine (SPHTM). The accelerated degree program leads to a Master in Public Health (MPH), a Master of Public Health and Tropical Medicine (MPH&TM), or a Master of Science in Public Health (MSPH).

Students may take up to 12 graduate credits of public health foundational courses as an undergraduate that may be applied to both the undergraduate degree and the MPH, MPH&TM or MSPH degrees.

Students must graduate from the BS or BSM program to continue in the MPH, MPH&TM, MSPH degree program. Once students have been accepted into the accelerated degree program, they should meet with a public health advisor to incorporate graduate classes into their senior year schedule.

The BS or BSM/MPH or MSPH or MPH&TM accelerated degree may be completed in approximately 1½ - 2 years following graduation. Actual time depends on the number of credits students complete per semester and the time to complete the applied practice experience and integrated learning experience.

Requirements

BS or BSM/MPH or MSPH or MPH&TM

BS or BSM students may select any of the MPH, MSPH or MPH&TM degree concentrations. These degrees require a total of 42 - 45 credits plus an applied practice experience (APE) and an integrative learning experience (ILE).

Accelerated degree students may take up to 12 credits from the following courses during their senior year (no substitutions):

Course ID	Title	Credits
SPHL 6020	Foundations in Public Health	3
SPHL 6050	Biostatistics for Public Health	3
SPHL 6060	Epidemiology for Public Health	3
SPHL 6070	Health Systems Policy and Management	3
SPHL 6080	Design Strategies in Public Health Programs	3

BSPH/MPH or MSPH or MPHTM or MHA Accelerated Degree

BSPH/MPH or MSPH or MPH&TM or MHA Accelerated Degrees

The accelerated degree program is a path for continuous study from the BSPH degree through a professional master's degree at the School of Public Health and Tropical Medicine (SPHTM). BSPH majors may combine their undergraduate study with a Master in Public Health (MPH), a Master of Science in Public Health (MSPH), a Master of Public Health and Tropical Medicine (MPH&TM), or a Master of Health Administration (MHA). The accelerated degree is an opportunity for undergraduate public health majors to begin graduate study during their senior year; students may take up to 12 graduate credits of public health courses that may be applied to the MPH, MSPH, MPH&TM, or MHA degrees.

Students must graduate from the BSPH program to continue in the MPH, MSPH, MPH&TM, or MHA. Once students have been accepted into the accelerated degree program, they should meet with their public health advisor early in their senior year to plan graduate courses into their senior year schedule.

The MPH, MSPH, MPHTM, or MHA may be completed in approximately 1½ - 2 years following graduation from the BSPH. Actual time depends on the number of credits students complete per semester and the time to complete the applied practice experience and integrated learning experience or the administrative residency.

Students in this accelerated degree program are waived from the SPHL 6020 Foundations in Public Health requirement as the foundational knowledge learning objectives in this course are obtained in the BSPH core courses. Students must instead complete an additional elective.

Requirements

BSPH/MPH or MSPH or MPH&TM Accelerated Degrees

BSPH students may select any of the professional public health degrees (MPH, MSPH, MPH&TM, MHA). These degrees require a total of 45 credits plus an applied practical experience and integrative learning experience.

Combined degree students complete up to 12 credits of graduate courses during their senior year. Students select from the following courses.

Course ID	Title	Credits
SPHL 6050	Biostatistics for Public Health	3
SPHL 6060	Epidemiology for Public Health	3
SPHL 6070	Health Systems Policy and Management	3
SPHL 6080	Design Strategies in Public Health Programs	3

BSPH/MHA Accelerated Degree

The MHA program is a 54 credit masters in health administration plus an administrative residency. (See the MHA degree requirements). BSPH/MHA Accelerated Degree students may take up to 12 credits of graduate courses during their senior year in the BSPH program. Students choose from the following courses:

Course ID	Title	Credits
HPAM 6050	Health Systems Concepts	3
HPAM 6200	Intro to Healthcare Analytics	3
HPAM 6300	Data Visualization and Communication	3
HPAM 6710	Quantitative Decision Models	3

JD/MPH or MHA Dual Degrees

Students enrolled in Tulane School of Law may apply for the dual JD/MHA degree. The dual degree requires students to complete all requirements in both schools. Students may share up to 12 credits that count toward both degrees and should work closely with advisors in both schools for course selection and advising. The MHA program includes an approximately 400-hour administrative residency. Contact Dr. David Washburn dwashburn@tulane.edu for more information. For the MPH program, contact Dr. Kevin Callison at kcallison@tulane.edu.

Requirements

Tulane Law students (see the requirements here: https://law.tulane.edu/academics/jd (https://law.tulane.edu/academics/jd/)) can combine their studies with the MHA degree for health administration (see the requirements here: https://sph.tulane.edu/hpam/mha (https://sph.tulane.edu/hpam/mha/)). The MHA degree requires a total of 54 credits and an approximately 400-hour administrative residency. Students accepted as joint degree students may apply up to 12 credits of designated law school courses related to health care toward the MHA degree. Please check with Dr. David Washburn dwashburn@tulane.edu for which courses are allowed. Joint degree students complete all of the requirements for the MHA degree.

Tulane Law students may also complete a joint degree with the MPH in Health Policy (see the requirements here: https://sph.tulane.edu/hpam/mph-health-policy (https://sph.tulane.edu/hpam/mph-health-policy/)). The MPH is 45 credits, and joint degree students may apply up to 12 credits of designated law school credits to the MPH. Please check with Dr. Kevin Callison, kcallison@tulane.edu, for which courses are allowed. Joint degree students complete the same MPH in Health Systems Management requirements.

Master of Social Work/Master of Public Health Dual Degree

The MSW/MPH dual degree is an opportunity for students to pursue both a MSW from the School of Social Work and a MPH from the School of Public health and Tropical Medicine. The dual degree requires students to complete all requirements in both schools; student may share up to 12 credit hours between degrees.

Requirements

Tulane students in the MSW in Social Work may combine their studies with the MPH. The MPH degrees requires a total of 45 credits plus a practicum and integrated learning experience.

Contact Maya Begalieva, PhD for information on designated shared courses, MPH degree requirements and scheduling.

MBA/MHA Dual Degree

Students enrolled in Tulane School of Business may apply for the dual MBA/MHA degree. The dual degree requires students to complete all requirements in both schools. Students may share up to 12 credits that count toward both degrees. Students should then work closely with advisors in both schools for course selection and advising. The MHA program includes an approximately 400-hour administrative residency. Contact Dr. David Washburn dwashburn@tulane.edu for more information.

Requirements

Tulane MBA (https://freeman.tulane.edu/graduate/full-time-mba/) students may combine their studies with the MHA degree for health administration (see the MBA requirements here (p. 154)). The MHA degree requires a total of 54 credits plus an approximately 400-hour administrative residency. Students accepted as joint degree students may apply up to 12 credits of specific MBA courses related to health care toward the MHA degree. Contact Dr. David Washburn dwashburn@tulane.edu for more information.

MD/MPH or MSPH or MPHTM Dual Degree

MD/MPH, MSPH or MPHTM

Medical student in the joint degree program may select any of the professional degree programs as the master's level of specialization. The MPH in Health Systems Management, the MPH in Community Health Sciences and MPH in Epidemiology are the most common areas selected, but all professional degree areas are available.

In the selected area of study, combined degree students complete the MPH, MSPH, MPHTM or MHA requirements as listed for these degrees.

Requirements

MD/MPH, MSPH or MPHTM

Medical student in the joint degree program may select any of the professional degree programs as the master's level of specialization. The MPH in Health Systems Management, the MPH in Community Health Sciences and MPH in Epidemiology are the most common areas selected, but all professional degree areas are available.

In the selected area of study, combined degree students complete the MPH, MSPH, MPHTM or MHA requirements as listed for these degrees.

Leadership, Advocacy, and Equity, DrPH

Overview

The DrPH program in Leadership, Advocacy, and Equity is a part-time, applied professional degree that prepares leaders in public health and other practice settings to create and manage programs and organizations. The DrPH program has a strong focus on field applications of needs assessment, coalition building, and program planning, grounded in an advanced understanding of the social determinants of health on health equity. Advanced study focuses on leadership and strategic management, systemic barriers to health equity, community advocacy, and program development and grant writing. Graduates of the program are expected to lead in the areas of health equity and advocacy to improve organizations and communities.

Program Competencies:

- Analyze the impact of historical and contemporary multilevel bias, trauma, and resilience on health inequities between marginalized groups.
- Develop priority settings to address complex health topics that pose the greatest public health threats by utilizing equity focused health impact assessment tools and methodologies.
- Design an advocacy strategy that promotes health equity in a specified community by identifying and mapping stakeholders, appropriate platforms, key processes, and engaged organizations.
- Translate evidence-based research and practice-based findings into culturally responsive, sustainable public health programs and initiatives.
- Propose a program or initiative that addresses an idenitified health equity need and advocates and empowers individuals and communities to achieve optimal well-being.

Requirements

The DrPH Degree in Leadership, Advocacy, and Equity requires a total of 57 credits (15 credits of pre-requisites and 42 credit hours of doctoral coursework) that includes:

Course ID	Title	Credits
Foundational Coursework - Prerequisites		
SPHL 6020	Foundations in Public Health	3
SPHL 6050	Biostatistics for Public Health	3
SPHL 6060	Epidemiology for Public Health	3
SPHL 6070	Health Systems Policy and Management	3
SPHL 6080	Design Strategies in Public Health Programs	3
Program Required Courses		
SPHL 8000	Principles of Public Health Leadership	3
SPHL 8010	Budget and Financial Management	3
SPHL 8020	Leadership and Strategic Management	3
SPHL 8080	Public Health Pedagogy	3
SPHL 8100	Health Equity and Advocacy	3
SPHL 8200	Public Health & Social Policy	3
SBPS 8220	Community Organizing for Social Change	3
SPHL 8250	Study and Evaluation Methods in Public Health	3
SBPS 8750	Social Determinants of Health I: Theory	3
SBPS 8770	Social Determinants of Health in Public Health Practice	3
SPHL 8820	Advance Program Planning and Grant Writing	3
Electives		6
SPHL 9450	Practice Based Portfolio: Background	3
SPHL 9460	Practice Based Portfolio: Experiential Learning	0
SPHL 9470	Practice Based Portfolio: Culminating Experience	0
Total Credit Hours		**57**

The DrPH in Leadership, Advocacy, and Equity is a part-time program which follows a cohort model. Students complete two 8-week courses during the Fall and Spring terms, and 0-2 courses during the Summer term.

Model Schedule*

*Based on a Fall start

For students needing to complete the foundational pre-requisite courses:

Year 1

Fall		**Credit Hours**
SPHL 6020	Foundations in Public Health	3
SPHL 6050	Biostatistics for Public Health	3
	Credit Hours	**6**
Spring		
SPHL 6060	Epidemiology for Public Health	3
SPHL 6070	Health Systems Policy and Management	3
	Credit Hours	**6**
Summer Session		
SPHL 6080	Design Strategies in Public Health Programs	3
	Credit Hours	**3**
	Total Credit Hours	**15**

After completion of the foundational pre-requisite courses students continue with the plan of study listed below.

For students that have completed the foundational pre-requisite courses prior to matriculation:

Year 1

Fall		**Credit Hours**
SPHL 8200	Public Health & Social Policy	3
SPHL 8000	Principles of Public Health Leadership	3
	Credit Hours	**6**
Spring		
SPHL 8250	Study and Evaluation Methods in Public Health	3

SBPS 8220	Community Organizing for Social Change	3
	Credit Hours	**6**
Summer Session		
Electives		6
	Credit Hours	**6**
Year 2		
Fall		
SPHL 8010	Budget and Financial Management	3
SPHL 8080	Public Health Pedagogy	3
	Credit Hours	**6**

Public Health Certificate (Graduate)

Overview

The Certificate in Public Health provides students with foundational knowledge of public health. It is designed for public health and working professionals from a variety of backgrounds, including physicians, nurses, public health administrators, health educators, clinical researchers, and policy experts looking to enhance their public health knowledge as well as students interested in exploring the field of public health. The Certificate in Public Health coursework can be applied toward a Master of Public Health (MPH) degree. The Certificate is comprised of five 3-credit hour courses: Foundations in Public Health, Biostatistics for Public Health, Epidemiology for Public Health, Health Systems Policy and Management, and Design Strategies in Public Health Programs. Courses can be completed on a full- or part-time basis, online or in-person.

Requirements

Course ID	Title	Credits
SPHL 6020	Foundations in Public Health	3
SPHL 6050	Biostatistics for Public Health	3
SPHL 6060	Epidemiology for Public Health	3
SPHL 6070	Health Systems Policy and Management	3
SPHL 6080	Design Strategies in Public Health Programs	3
Total Credit Hours		**15**

Undergraduate Public Health Programs

Associate Dean of Undergraduate Education: Joseph Keating, PhD MA

Mission

The Tulane Bachelor of Science in Public Health (BSPH) degree is an academic degree that addresses the health of populations and communities through instruction, service, and community-based research. The degree is firmly grounded in a background of humanities, social science and the liberal arts. The degree fulfills Tulane University's campus-wide undergraduate core proficiency through this background while stressing an additional commitment to quantitative and scientific skills.

About Public Health

Public health addresses health at a broad level, and the impact of professional public health is felt by individuals, families, and communities. The field of public health promotes healthy lifestyles, helps to develop policies, conducts education campaigns, confronts the spread of infectious disease, conducts research to improve methods, and uses data to track and measure health status and the effectiveness of health programs.

At Tulane, Undergraduate Public Health Studies has been one of the fastest-growing programs for several years. The program educates students in the key concepts of the field, providing a firm grounding in the foundational aspects of public health. Students can tailor their electives to meet personal academic and professional goals, which may cover areas such as global health, maternal and child health, nutrition, environmental health, data science, or another public health niche. An undergraduate public health degree is also a good fit for students planning to pursue graduate work for careers in medicine, allied health professions, and some pre-law areas.

Undergraduate

Major

- Public Health, BSPH (p. 529)

Minor

- Public Health Minor (p. 532)
- Public Health Nutrition Minor (p. 532)

Public Health, BSPH

The Tulane Bachelor of Science in Public Health (BSPH) degree is an academic degree which addresses the health of populations

and communities through instruction, service, and community based research. The degree is firmly grounded in a background of humanities, social science and the liberal arts. The degree fulfills Tulane University's campus-wide undergraduate core proficiency through this background while stressing an additional commitment to quantitative and scientific skills.

Newcomb-Tulane Core Proficiencies Newcomb-Tulane College General Education Curriculum

The Newcomb-Tulane College Core Curriculum allows students to explore a wide-range of disciplines and embodies the mission and values of the College by allowing students to have flexibility in their core curriculum courses while exploring a full-range of courses.

The core curriculum—which is composed of a minimum of 30 credits—is divided into three parts: proficiency requirements, distribution of knowledge requirements, and additional requirements. To ensure that students experience the breadth of knowledge at the collegiate level, AP, IB, and Cambridge A-Level courses can be used to satisfy proficiency requirements only in Formal Reasoning and Foreign Language.

Courses will be designated as satisfying the distribution requirements according to the content and methodology rather than the departmental affiliation of the course.

The new core curriculum general education requirements went into effect with the entering class of 2018.

Courses proposed to satisfy core requirements will be ratified by the Newcomb-Tulane Curriculum Committee.

Proficiency Requirements

Writing Skills (2 courses and 6 credits)

- Tier 1: Freshman writing (ENGL 1010 Writing or ENGL 1011 Writing for Academic Purposes) unless the student is exempt because of their score on the A.P/I.B./Cambridge-A level exams.
- Students receiving exemption from ENGL 1010 Writing/ENGL 1011 Writing for Academic Purposes are required to take an approved writing class during their freshman year. Approved courses will have at least 1/3rd of the grade based upon writing (excluding in class exams), but no revision is required.
- Tier 2: One additional writing course at the 2000 level or above taken from an approved list. Approved courses will have at least 1/3rd of the grade based upon writing (excluding in class exams), to include revision and re-evaluation by the instructor.
- Students are encouraged to take the Tier-1 writing course prior to taking the Tier-2 writing course; however, students are not prohibited from taking the Tier-1 and Tier-2 courses simultaneously.

Note: creative writing courses cannot be used to satisfy the writing proficiency requirement.

Formal Reasoning (1 course and 3 credits)

- One course in mathematics or symbolic logic from an approved list.

Foreign Language (0-3 courses)

The foreign language proficiency requirement is achieved in any of the following ways:

- A passing grade in a course at the 2030 level (3rd semester of Tulane 4-credit hour Foreign Language or ASLS coursework) or higher in accordance with assigned placement level.
- A passing grade on a Tulane-administered proficiency exam for students with assigned placements above the 2030 level. Students who do not successfully pass the proficiency exam will be automatically placed and must successfully complete a course at the 2030 level.
- A passing grade in a course at the level of placement above 2030.
- Advanced Placement score of 4 or 5 **in a foreign language test as noted in the AP/IB chart**
- Higher-Level IB score of 5 or higher **in a foreign language test as noted in the AP/IB chart**
- Cambridge A-Level score decided by the appropriate language department.
- SAT II achievement test of 640 or higher **in a foreign language.**

Note: This requirement is waived for students in B.S.E. programs.

Distribution Requirements

(A course can satisfy only one of the distribution areas.)

Mathematics and the Natural Sciences (2 courses including 1 lab science course and 7 credits)

(Those completing the B.F.A. degree need only complete 1 course with lab)

Social and Behavioral Sciences (2 courses and 6 credits)

Textual and Historical Perspectives (2 courses and 6 credits)

Aesthetics and the Creative Arts (3 credits), which can be fulfilled in 1-3 courses.

Additional Core Requirements

The First Year Seminar (p. 77) (1 course, 1-3 credits)

This requirement can be satisfied by a Tulane Interdisciplinary Seminar (TIDES) course or Colloquium course (COLQ 1010 Freshmen Colloquium Seminar (1-3 c.h.) or COLQ 1020 Freshman Colloquium (1-3 c.h.))

Public Service (2 courses)

Students develop their commitment to civic engagement through the completion of service learning courses experiences. All students will complete their public service through service-learning courses, an approved public service internship, or an approved public service research experience. These courses can also be used to satisfy other areas of general education.

- To meet this requirement for graduation, all students must complete two semesters of service. One of these semesters must be at the 2000 level or above. The first experience should be completed by the 2nd semester of the sophomore year.
- Service Learning courses require a minimum of 20 hours of service per semester. Those service-learning courses designated as requiring a minimum of 40 hours of service carry one additional credit hour. No course may carry more than 4 credits.

Race and Inclusion (1 course, 3 credits)

One course and 3 credits. Courses that fulfill this requirement will focus on the intersections of race with power, privilege, equity, justice, and/or inclusion and will focus at least 60% their content on these issues in the United States. These courses may also be used to satisfy proficiency or distribution core curriculum requirements.

Global Perspectives (1 course, 3 credits)

One course and 3 credits. Courses that fulfill this requirement will focus at least 60% content with stated objectives to develop historical, cultural, and societal knowledge of an area beyond the United States. These courses may also be used to satisfy proficiency or distribution core curriculum requirements.

For more information please visit the Core Curriculum website (https://college.tulane.edu/core-curriculum/).

Requirements

Program Competencies

- Describe the history, philosophy, core values, concepts, functions, and population-based approaches of public health.
- Explain the behavioral, environmental, biological, and socio-economic determinants that impact human health and contribute to health disparities.
- Apply data collection and analysis to develop evidence-based population approaches to public health problems.
- Discuss and apply cultural competencies and concepts of public health planning, implementation, assessment, and evaluation.
- Describe the fundamental characteristics and organizational structures of the U.S. health system as well as the systems in other countries.
- Describe the legal, ethical, economic, and regulatory aspects of public health practice and health policy.
- Demonstrate public health communication skills using oral, written, mass media, and electronic technology formats.

Course ID	Title	Credits
Public Health Basic Core		
SPHU 1010	Intro To Public Health	3
SPHU 1020	Cell, Individual & Community	3
SPHU 2150	Foundations of Environmental Health	3
SPHU 2160	Biostatistics in Public Health	3
SPHU 3010	Foundations of Health Care Systems	3
SPHU 3110	Social and Behavioral Perspectives in Public Health	3
SPHU 3170	Foundations of Epidemiology	3
SPHU 4010	Formulation of Public Health Policy	3

SPHU 4560	Capstone Internship	3
or SPHU 4540	Capstone Senior Seminar	
or SPHU 4550	Capstone Independent Study	
or SPHU 4560	Capstone Internship	
or SPHU 4580	Capstone International Program	
or SPHU 4990	Honors Thesis	
or SPHU 5000	Honors Thesis	
BSPH Electives		
Select a minimum of six courses		18
Total Credit Hours		**45**

[1] Students are eligible to complete their capstone after five semesters as an undergraduate, and with a majority of their other program requirements completed. See capstone options at https://sph.tulane.edu/bsph/capstone (https://sph.tulane.edu/bsph/capstone/).

BSPH Electives

BSPH Electives provide the opportunity to focus on specialized public health knowledge or to gain a breadth of knowledge across public health fields. Because of the multi-disciplinary nature of public health, students are encouraged to consult with their program advisors to explore electives that will further their career goals or expand their public health interests and integrate other relevant disciplines into their study of public health.

A minimum of 3 courses for a minimum of 9 credit hours must be completed in courses offered by Public Health faculty (SPHU classes).

Public Health Electives

Course ID	Title	Credits
SPHU 2016	Infectious Disease Outbreaks	3
SPHU 2050	Arthropods and Public Health	3
SPHU 2300	Introduction to Nutrition	3
SPHU 2333	Introduction to Global Maternal and Child Health	3
SPHU 2400	Global Health in Action	3
SPHU 2410	Health & Women's Rights	3
SPHU 2420	Health Challenges and Climate Change	3
SPHU 3015	Public Health Program Implementation and Management	3
SPHU 3120	Issues & Strategies in Public Health	3
SPHU 3200	Nutrition & Chronic Disease	3
SPHU 3330	Disasters & Environmental Health	3
SPHU 3500	Public Health Approach to Sexual Violence	3
SPHU 3560	Biological Basis of Disease	3
SPHU 3600	Women's Reproduction & Obstetric Health	3
SPHU 4160	Introduction to Statistical Packages	3
SPHU 4180	Introduction to Qualitative Methods	3
SPHU 4200	Evidence Based Public Health	3
SPHU 4210	Health & Environmental Risk	3

SPHU 4220	Latino Health in the US	3
SPHU 4240	Epidemiology of Sexually Transmitted Infections	3
SPHU 4260	Organizational Leadership and Management in Public Health	3
SPHU 4300	Public Health Communication	3
SPHU 4330	Resilience in International Disasters	3
SPHU 4340	Public Health Genomics	3
SPHU 4350	Zoonotic Infections	3
SPHU 4410	Data and Information Management in Public Health	3
SPHU 4570	Internship (non-capstone)	3
SPHU 4910	Independent Study	1-3
SPHU 4920	Independent Study	1-3
Combined degrees: BSPH + MPH/MSPH/MPHTM degrees - Foundational Courses - SPHL 6050, SPHL 6060, SPHL 6070, SPHL 6080		
Combined BSPH + MHA degree - HPAM 6050, HPAM 6200, HPAM 6300, HPAM 6710		

Additional Electives

Certain courses above the 2000-level from other schools and departments with public health content or relevance may be approved by the program director as electives for public health majors. See the SPHU website https://sph.tulane/bsph/degree (https://sph.tulane.edu/bsph/degree/)for a list of approved electives outside of Public Health courses.

Study Abroad electives: SPHU 5390 or SPHU 5390 Study Abroad credits approved by the program.

Public Health Minor

The Public Health Minor is designed for students who are looking for an introduction to the field and its disciplines. This minor offers a complementary curriculum for students who are on a pre-medical track or those majoring in fields, such as environmental sciences or policy, which may incorporate a health focus. The coursework for the minor offers exposure to the concepts and applications of public health in a variety of the specific disciplines that make up the School of Public Health and Tropical Medicine.

To declare the Public Health minor:

- Student must be in good academic standing with an overall GPA of 2.0 or better.
- All minor courses must be taken for a letter grade.
- Completion of the minor requires a GPA of 2.0 or better in all classes taken for credit towards the minor.

Requirements

The Public Health Minor requires a minimum of 18 hours in undergraduate public health credits.

Students are required to take the following courses for a total of 18 credits:

Course ID	Title	Credits
Required Courses		
SPHU 1010	Intro To Public Health	3
SPHU 1020	Cell, Individual & Community	3
SPHU 3170	Foundations of Epidemiology	3
Select three additional Public Health courses [1]		9
Total Credit Hours		**18**

[1] Students choose three (3) additional public health courses for nine (9) credits. Courses with the SPHU prefix (e.g., SPHU 3010, SPHU 4210) will count as an elective. One study abroad course may count toward this requirement with approval of a program advisor.

Please note the following before applying to the Public Health Minor:

- Applicants must be in good academic standing with an overall GPA of 2.0 or better.
- All minor courses must be taken for a letter grade.
- Completion of the minor requires a GPA of 2.0 or better in all classes taken for credit towards the minor.

Public Health Nutrition Minor

Overview

The Public Health Nutrition Minor is designed to equip students with the knowledge and skills necessary to understand and address the interplay between nutrition and public health. This minor offers a complementary curriculum for students who are majoring in a health-focused field, science-focused field, and liberal arts. The coursework for the minor offers students exposure to interdisciplinary aspects of public health nutrition, such as education and communication, epidemiology, systems, and policy.

Requirements

Course ID	Title	Credits
Core Courses (12 credit hours)		
SPHU 1010	Intro To Public Health	3
or SPHU 1020	Cell, Individual & Community	
SPHU 2300	Introduction to Nutrition	3
SPHU 3360	Public Health Nutrition: Principles to Practice	3
SPHU 4310	Nutrition Education and Communication	3
PH Skill-Based Nutrition Selectives (Choose 2)		**6**
SPHU 3015	Public Health Program Implementation and Management	
SPHU 3200	Nutrition & Chronic Disease	
SPHU 3350	Lifecycle Nutrition	
SPHU 3570	Introductory Microbiology	
SPHU 4330	Resilience in International Disasters	
SPHU 4550	Capstone Independent Study	
SPHU 4570	Internship	
PSDV 3500	Global Food Politics & Policy	
ECON 3530	Global Food Economy	

EVST 3010	Food System Leadership in the Gulf South
Total Credit Hours	**18**

Per university policy, students are not permitted to share credits between minors. Only three credit hours can be shared with a Public Health Major.

Associate Dean for EDI, Strategic Innovation and Masters Programs

Mission Statement

The mission of the Tulane University School of Science and Engineering is to provide outstanding opportunities for learning and discovery in science and engineering and to foster an environment that is student focused, research intensive, trans-disciplinary, entrepreneurial, and responsive to the needs of society and the community.

Programs of Study

The School of Science and Engineering offers two degrees at the undergraduate level, the Bachelor of Science in Engineering (B.S.E.) and the Bachelor of Science (B.S.); and two graduate degrees, the Master of Science (M.S.) and the Doctor of Philosophy (Ph.D.). Students seeking an undergraduate degree from the School of Science and Engineering must have a primary major offered by the school. Students may have an additional major or minor in a second program. To qualify for graduation, an undergraduate student must satisfy the requirements of the Newcomb Tulane College core curriculum, the school specific core, and the major program and meet the residency and quality of work requirements of Newcomb-Tulane College. To qualify for graduation, a graduate student must meet the graduate program requirements.

Degrees

The School of Science and Engineering offers the Bachelor of Science in Engineering (B.S.E.) and the Bachelor of Science (B.S.) degrees at the undergraduate level. The School offers the major in Computer Science as a Coordinate Major with any other stand-alone major offered by Newcomb-Tulane College. Students also may earn certificates or minors which complement the undergraduate degree. The School offers graduate-level certificates, Master of Science (M.S.) degrees, and the Doctor of Philosophy (Ph.D.).

Undergraduate Programs

As a student in the School of Science and Engineering, you will be offered outstanding opportunities for learning and discovery in science and engineering in an environment that is student-focused, research-intensive, interdisciplinary, entrepreneurial, and responsive to the needs of the community. The School offers a broad range of undergraduate programs in the sciences, engineering, and mathematics. The undergraduate experience is further enriched by opportunities to engage in research, internships, study abroad, and public service. The School offers the Bachelor of Science and Bachelor of Science in Engineering degrees.

To declare a major or minor in the School of Science and Engineering you must contact the appropriate departmental office. The Major/Minor Declaration Form (https://advising.tulane.edu/sites/default/files/MajorMinorForm_20220207_0.pdf)requires the approval of the Department Chair. When declaring your major you will receive a Major Advisor to help schedule your Major and/or Minor required courses. The signed major/minor declaration form must be turned in to the student's Newcomb-Tulane advisor.

Second Majors, Minors, and Certificates

Students in the School of Science and Engineering may elect to complete a second major. They must complete all courses for each major and a total of at least 18 different courses in the two majors. At least half of the coursework required for majors must be completed at Tulane University, and students must have a grade point average of at least 2.000 in all coursework applied to the major. Students who satisfy the requirements for two majors in the School of Science and Engineering will receive one bachelor's degree, and their transcript will reflect that a double major has been completed. Second majors from an outside division are subject to the conditions set by requirements for that major as designated by the home division or department. Science and engineering students also may pursue one or two minors or a certificate. The minor or certificate is intended to give structure to the study of a secondary field of interest chosen by the student. Students should check the requirements of the intended minor or certificate, as they vary among departments. Students must complete at least 24 credits in their major that do not overlap with the minor or certificate. Students who elect to complete the requirements for a minor or certificate must earn a grade-point average of at least 2.000 in courses counting toward that minor. No courses counting toward the student's first minor will count toward the student's second minor or towards a certificate. Individual departments may have additional restrictions on major-minor/certificate overlap. Students should consult the department listings for additional information.

Graduate Degree Programs

Students at Tulane University may pursue a Master of Science (M.S.) or Doctor of Philosophy (Ph.D.) program in the School of Science and Engineering of Tulane University. Thirty credits are required for the M. S. degree. With approval, a student in some disciplines may elect to pursue a non-thesis M.S. that requires 30 credit hours of coursework. Thesis students take 24 course credit hours and six graded thesis research hours and complete a research thesis. The Ph.D. degree is awarded with a minimum of 48 credit hours plus a dissertation. Summer research work is typically required for the timely completion of the program. The 4+1 Master's program allows students in the School

of Science and Engineering to complete the requirements for both the bachelor's and master's degree in five years.

Graduate Admissions

Applicants holding the equivalent of a bachelor's degree in mathematics, science, or engineering or a related field from recognized institutions may be admitted to the graduate program of the School of Science and Engineering if their academic records and personal attributes indicate their ability to pursue advanced study successfully. Students must present to the appropriate department satisfactory evidence of adequate preparation for the subjects in which they seek to specialize. Ordinarily, only students whose undergraduate average is B or above are admitted. Students required to make up undergraduate course deficiencies before being admitted to the graduate program of the School of Science and Engineering may be asked to enroll in an undergraduate program as special students. In most cases, graduate credit is not awarded for undergraduate courses. A master's degree is not a prerequisite for study for the doctorate, but a student may be required to qualify for the master's degree while working toward the doctorate.

Financial Aid and Scholarships for Doctoral Students

The School of Science and Engineering awards financial support for doctoral students primarily on the basis of academic merit. For full-time students, financial assistance is available in the form of teaching assistantships, research assistantships, and fellowships, as well as partial and full tuition scholarships.

Selected Undergraduate and Graduate Awards

Aaron Hartman Award
The award recognizes exceptional performance in academic and research activities in Psychology by a Newcomb-Tulane College senior.

AICHE Awards
Several awards are offered. Two are scholastic awards, one offered by the New Orleans Section to the senior in chemical -engineering with the highest scholastic average, and one by the National Society to the junior in chemical engineering who made the highest average in the freshman and sophomore years. The annual chapter award is for outstanding participation in chapter activities, particularly participation in the student paper presentation. The student chapter award is for outstanding services to the profession. American Chemical Society Prizes were established in 1930 by the Louisiana section of the American Chemical Society and are awarded for excellence in chemistry.

Alpha Eta Mu Beta Award
This award, given by the biomedical engineering honor society, is presented to a junior for outstanding performance as a student in the biomedical engineering curriculum.

The American Chemical Society Award
For excellence in chemistry, a senior will be honored at a dinner given by the local chapter of the American Chemical Society, and also receive a check from the department. American Institute of Chemists Award Established to honor seniors in chemistry, chemical engineering, or biochemistry. Given in recognition of potential advancement of the chemical professions on the basis of a student's demonstrated record of leadership, ability, character, and scholastic achievement.

Ann Hero Northrup Prize in Chemistry (Junior or Senior)
The prize, established by the late Clare M. de Milt, consists of a valuable book or collection presented on behalf of the winner to the Howard-Tilton Library.

Anne M. McPherson Award in Psychology
The award recognizes junior or senior students who have demonstrated a capacity for cutting-edge research in the field of Psychology. Awardees should possess a strong overall grade point average and conduct research with a faculty member of the Department.

Arnold Gerall Award in Neuroscience
The award recognizes exceptional performance in academic and research activities in the area of Neuroscience by a Psychology major or a Neuroscience major advised by a member of the Psychology faculty.

The Barbara E. Moely Award for Application of Psychology
The award recognizes exceptional public service to the community.

Biomedical Engineering Graduate Student Outstanding Achievement Award
For outstanding accomplishments as a graduate student in the Department of Biomedical Engineering, Tulane University.

Biomedical Engineering Society Scholarship Award
This award is presented to the outstanding senior in biomedical engineering with the highest scholastic grade point average.

The Cell and Molecular Biology Prize
Special recognition for interest, enthusiasm and proficiency in Biology.

Chairman's Award
Given to a graduating senior who is outstanding in geology or earth science.

Chevron Undergraduate Award
Awarded to two students who have completed the second semester of the junior year and have the highest scholastic average.

C. W. Ricker Award
Awarded annually to an outstanding undergraduate Engineering Physics student.

Daniel H. Vliet Award
Established in 1989 to honor Dr. Daniel H. Vliet who served on the faculty of Electrical Engineering for 37 years, including four years as head of the department, before his retirement in 1986. The award goes to a sophomore in an engineering program who has demonstrated superior performance in freshman physics.

The Department of Chemistry Award for Excellence in Undergraduate Research
This award is given to Juniors/Seniors who demonstrate leadership ability, character and scholastic achievement.

Elsie Field Dupré Memorial Prize in Physics
This award honors a female physics student for her interest, enthusiasm, and proficiency in physics.

Faculty Award for Research in Psychological Science honors students for contributions to research in the basic science of psychology.

Faculty Award for Applied Psychological Research honors students for applied psychological research that addresses a critical problem in society at large.

The Faculty Memorial Award in Psychology honors the memory of our departed Psychology faculty colleagues.

Francis M. Taylor Award
Established in 1971 by chemical engineering alumni to honor Professor Emeritus Taylor. Awarded to a senior in chemical engineering for outstanding citizenship, professional attitudes, and accomplishments.

Fred R. Cagle Memorial Prize was established in 1981 in memory of Professor Cagle, a former chair of the Department of Zoology. The prize is awarded for outstanding achievement in ecology and evolutionary biology, taking into consideration the student's academic record, difficulty of academic program completed, and the likelihood of a substantial contribution to scholarship in integrative biology.

Gerald E. Gunning Memorial Award
Awarded annually to an exceptional undergraduate major in ecology and evolutionary biology.

Gerald S. Gussack Award
This award goes to the most outstanding graduating senior in Newcomb-Tulane College in Cell and Molecular Biology. The recipient is chosen based on excellence in Grade Point Average, creativity in honors thesis research, and a demonstration of well balanced academic achievement. The award is named in honor of the late Gerald Gussack, a Professor of Otolaryngology at Emory University School of Medicine, who was a 1975 graduate of Tulane College.

Glendy Burke Medals were established in 1848 (oratory) and 1879 (mathematics) by Glendy Burke. They are awarded for excellence in the fields of speech and mathematics.

Harold E. Vokes Award
Established in 1992 by the faculty of the Department of Geology in honor of Harold E. Vokes, professor emeritus of geology, for an outstanding graduating student in the Department of Earth and Environmental Sciences. Vokes Fellowship Awarded annually to the top Ph.D. candidate in the Department of Earth and Environmental Sciences.

Honors Thesis Award in Cell and Molecular Biology
For the student with the most outstanding thesis in Cell and Molecular Biology.

James Marshall Robert Leadership Award
Established in 1957 by the Society of Tulane Engineers and named in honor of Dean Emeritus Robert. Additional gifts from alumni and friends after Dean Robert's death in 1964 have made possible the award of a medal and cash to a senior in engineering in recognition of scholarship, collegiate activities, and leadership.

The Joseph J. Kyame Physics Award
This award was established in 1990 by the physics faculty, and is given to a senior for excellence in physics.

Joyous and William Van Buskirk Scholarship Award
The student was selected by the biomedical engineering faculty for his outstanding achievement in biomedical engineering studies.

Kappa Kappa Gamma Prize in Mathematics
Awarded to an outstanding undergraduate female math student.

Kenneth H. Kuhn, Sr. Memorial Award Senior
Team Design Project 1st Place Winners The students are selected by a panel of judges as the 1st place winners of the Senior Team Design Project for their ability to integrate the scholarship of discovery, learning, and service, by applying biomedical engineering to improve the quality of life for people with disabilities in the New Orleans Metro Area.

Leon H. Scherck Memorial Award
The oldest award presented by the School of Engineering was established in 1922 by the late Mrs. Albert H. Scherck of New Orleans in memory of her brother, Leon H. Scherck, class of 1894, for excellence in engineering. Awarded to a member of the senior class in an engineering program.

Liz Earley Prize in Cell and Molecular Biology
Awarded for excellence and proficiency in laboratory science.

Merck Index Awards
This award is presented each year to an outstanding student in Chemistry.

National Society of Black Engineers
There are two awards. One is awarded to the Outstanding Executive Board member and the other is to the graduating senior with the highest grade point average.

The Neuroscience Faculty Award
The award recognizes exceptional performance in academic and research activities in Neuroscience by a Newcomb-Tulane College senior.

New Orleans Geological Society Memorial Foundation Scholarships
Awarded annually to the outstanding freshman, sophomore, junior, and senior geology or earth science majors, upon recommendation of the faculty of the Department of Earth and Environmental Sciences.

Nissim Nathan Cohen Memorial Award
This award is presented to a graduating senior in Biomedical Engineering who has contributed most to his or her class, school, and the profession of Biomedical Engineering, as voted on by the senior class.

Omega Chi Epsilon Award
This award, presented by the chemical engineering honor society, is given to the member of the student chapter who best exemplifies the ideals of Omega Chi Epsilon.

Phi Beta Phi Award
Given occasionally to a junior or senior for best research paper in the sciences; the recipient is chosen among the departments of cell and molecular biology, chemistry, ecology and evolutionary biology, and physics.

Professor Erik G. Ellgaard Award for Excellence in Cell and Molecular Biology
For the best graduating senior in Cell and Molecular Biology.

Randall K. Nichols Award

Awarded to a chemical engineering junior who has special talents worthy of recognition and encouragement.

R. A. Steinmayer Award
Established in 1957 by the Tulane geological alumni in honor of R. A. Steinmayer, emeritus professor of geology, for the outstanding graduating student in the Department of Earth and Environmental Sciences.

Rosa Cahn Hartman Medal
The award recognizes exceptional performance in academic and research activities in Psychology by a Newcomb-Tulane College senior.

ROTC Awards
Encompass many prizes and honors, including the President's Cup, for ROTC work.

Sigma Gamma Epsilon Prize
Established in memory of W. A. Tarr by the national geology honor society, is awarded for scholarship and service in the Department of Earth and Environmental Science.

Stuart S. Bamforth Prize
Awarded for excellence in environmental studies to the graduating senior in earth and environmental sciences or ecology and evolutionary biology.

Terry Lawson Prize in Mathematics
Awarded to a graduating senior for excellence in undergraduate mathematical research.

William L. Alworth Prize in Biological Chemistry
This award honors Professor Emeritus William L. Alworth who retired in June of 2004 and will be awarded annually to the outstanding graduating senior majoring in Biological Chemistry. It is based on academic and research performance.

The Zoology Prize
Awarded to a graduating senior majoring in ecology and evolutionary biology for outstanding achievement in zoology.

Academic Policies

Newcomb-Tulane College Policies

A full description of academic policies for all students in Newcomb-Tulane College (https://catalog.tulane.edu/newcomb-tulane/#academicpoliciestext) can be found in the college's section of this catalog. Students should review these policies thoroughly.

Graduate School Policies

A full description of academic policies for all students in Graduate Programs (p. 80) can be found in the Office of Graduate and Postdoctoral Studies section of this catalog. Students should review these policies thoroughly.

School of Science and Engineering Graduate Academic Regulations

Registration Requirement

To maintain full time status all graduate students must enroll for a minimum of 9 credit hours in the Fall Semester and a minimum of 9 credit hours in the Spring Semester (or equivalent). During the Summer, Ph.D. and M.S. with thesis students must enroll for 9990 or 9980, respectively. Some Departments may use equivalent courses that serve the same purpose. These are designated as "Masters Research" and "Dissertation Research" courses. Ph.D. and M.S. with thesis students who have completed all of their required course work must maintain continuous enrollment using these courses, each semester until all degree requirements are complete.

Course Credits

Graduate work is measured in terms of credits. A credit represents a measurement of academic progress in terms of work undertaken and satisfactorily completed and is not specifically related to an hour concept for class lecture or recitation. For purposes of evaluating graduate transfer credit, in most cases a credit is equal to a semester hour.

Grades and Grade Points

The same grading system is used throughout Tulane University. A course in which a grade of C+ or less is earned cannot be counted toward a graduate degree in the School of Science and Engineering.

Conferring of Degrees

A student who has completed all of the requirements for a degree will have that degree conferred at the annual spring commencement, in May. Degrees are also conferred at the close of the fall semester in December and at the close of Summer School, in mid-August.

Transfer Credit

In general, up to 12 transfer credits of graduate courses may be accepted toward a master's degree, and up to 24 transfer credits may be accepted toward the doctorate. Only grades of B or better will be considered for transfer credit. The appropriate department and the Associate Dean must approve credit for graduate work done at other institutions.

Students ordinarily must complete the requirements for the doctorate within seven years from the original date of registration. Only in unusual cases, and with the approval of the department chair and Associate Dean, will credit be approved for courses taken more than six years before the date of the general or preliminary examination.

Credit for 6000-level courses taken by an undergraduate at Tulane University and passed with a grade of B or better may be transferred to a graduate degree program in the School of Science and Engineering on the recommendation of the Department Chair and with the approval of the Associate Dean.

Transfer Between Programs

To transfer from one graduate program to another offered by the School of Science and Engineering, a student must submit an application for admission to the new program. Transferring students must fulfill any obligations they have incurred in the first program prior to receiving their degrees from the second programs. The Department Chair and Associate Dean will determine whether credit from the initial program can be applied toward a degree in the new program.

Required Withdrawal, Probation and Dismissal

A student may be required to withdraw from any course or from the university, temporarily or permanently, for any of the following reasons:

- Work below the standard specified by the School of Science and Engineering
- Violation of the Code of Academic Conduct or other misconduct
- Possibility of danger to the health of the student or to other students if enrollment is continued.

A minimum grade point average of 3.00 (B) must be maintained by all students to remain in good standing in any graduate degree program. Students whose grade point average falls below 3.00 will be considered for a probationary semester in consultation with the chair of the appropriate department. Students who receive a grade below B- or two grades of B- also will be considered for probation in consultation with the chair of the appropriate department. The terms of the probation are determined by the department chair, in consultation with the Dean or designate. Students who fail to meet the terms of their probation in two consecutive semesters will be required to withdraw from the program. Students are subject to dismissal in consultation with the appropriate department if they receive two grades below B- in a given semester. Two grades of B- are considered equivalent to one grade below B-. If a student becomes subject to dismissal during the semester in which other graduation requirements are met, the student will be excluded and will not receive the degree. Courses with grades below B- may not be used to meet degree requirements. It is the department's responsibility to report to the Dean, in a timely manner, any student not making reasonable progress toward the degree. The School of Science and Engineering and the University reserve the right to change any of its rules, courses, regulations, and charges without notice, and, if necessary, to make such changes applicable to students already registered as well as to new students.

Degree Requirements

Graduate (p. 538)

- General Graduate School Requirements (p. 538)

Undergraduate (p. 538)

- Newcomb-Tulane College Requirements (p. 538)
  - Newcomb-Tulane College General Education Curriculum (p. 538)
  - Proficiency Requirements (p. 538)
  - Distribution Requirements (p. 539)
  - Additional Core Requirements (p. 539)
- School of Science and Engineering Requirements (p. 539)

Graduate

The School of Science and Engineering has active research programs in 14 focus areas within the school and a rich variety of interdisciplinary programs linked to Tulane's School of Medicine (https://medicine.tulane.edu/), the Tulane National Primate Research Center (https://tnprc.tulane.edu/), the Bioinnovation Institute (https://bioinnovation.tulane.edu/), and the Bywater Institute (https://bywater.tulane.edu/). The school offers both Ph.D. and M.S. degrees. With approximately 130 research faculty, 350 students in Ph.D. programs, and 100 students in M.S. programs, Tulane's Science and Engineering programs are large enough to have state-of-the art facilities, but small enough to provide an intimate research atmosphere, where faculty and students work side by side.

General Graduate School Requirements

A full description of Master's (p. 89) and PhD Degree (p. 92) requirements for all students can be found in the Office of Graduate and Postdoctoral Studies section of this catalog. Students should review these policies thoroughly.

Undergraduate Requirements

Newcomb-Tulane College Requirements

Newcomb-Tulane College General Education Curriculum

The Newcomb-Tulane College Core Curriculum allows students to explore a wide-range of disciplines and embodies the mission and values of the College by allowing students to have flexibility in their core curriculum courses while exploring a full-range of courses.

The core curriculum—which is composed of a minimum of 30 credits—is divided into three parts: proficiency requirements, distribution of knowledge requirements, and additional requirements. To ensure that students experience the breadth of knowledge at the collegiate level, AP, IB, and Cambridge A-Level courses can be used to satisfy proficiency requirements only in Formal Reasoning and Foreign Language.

Courses will be designated as satisfying the distribution requirements according to the content and methodology rather than the departmental affiliation of the course.

The new core curriculum general education requirements went into effect with the entering class of 2018.

Courses proposed to satisfy core requirements will be ratified by the Newcomb-Tulane Curriculum Committee.

Proficiency Requirements

Writing Skills (2 courses and 6 credits)

- Tier 1: Freshman writing (ENGL 1010 Writing or ENGL 1011 Writing for Academic Purposes) unless the student is exempt because of their score on the A.P/I.B./Cambridge-A level exams.
- Students receiving exemption from ENGL 1010 Writing/ENGL 1011 Writing for Academic Purposes are required to take an approved writing class during their freshman year. Approved courses will have at least 1/3rd of the grade based upon writing (excluding in class exams), but no revision is required.
- Tier 2: One additional writing course at the 2000 level or above taken from an approved list. Approved courses will have at least 1/3rd of the grade based upon writing (excluding in class exams), to include revision and re-evaluation by the instructor.
- Students are encouraged to take the Tier-1 writing course prior to taking the Tier-2 writing course; however, students

are not prohibited from taking the Tier-1 and Tier-2 courses simultaneously.

Note: creative writing courses cannot be used to satisfy the writing proficiency requirement.

Formal Reasoning (1 course and 3 credits)

- One course in mathematics or symbolic logic from an approved list.

Foreign Language (0-3 courses)

The foreign language proficiency requirement is achieved in any of the following ways:

- A passing grade in a course at the 2030 level (3rd semester of Tulane 4-credit hour Foreign Language or ASLS coursework) or higher in accordance with assigned placement level.
- A passing grade on a Tulane-administered proficiency exam for students with assigned placements above the 2030 level. Students who do not successfully pass the proficiency exam will be automatically placed and must successfully complete a course at the 2030 level.
- A passing grade in a course at the level of placement above 2030.
- Advanced Placement score of 4 or 5 **in a foreign language test as noted in the AP/IB chart**
- Higher-Level IB score of 5 or higher **in a foreign language test as noted in the AP/IB chart**
- Cambridge A-Level score decided by the appropriate language department.
- SAT II achievement test of 640 or higher **in a foreign language.**

Note: This requirement is waived for students in B.S.E. programs.

Distribution Requirements

(A course can satisfy only one of the distribution areas.)

Mathematics and the Natural Sciences (2 courses including 1 lab science course and 7 credits)

(Those completing the B.F.A. degree need only complete 1 course with lab)

Social and Behavioral Sciences (2 courses and 6 credits)

Textual and Historical Perspectives (2 courses and 6 credits)

Aesthetics and the Creative Arts (3 credits), which can be fulfilled in 1-3 courses.

Additional Core Requirements

The First Year Seminar (p. 77) (1 course, 1-3 credits)

This requirement can be satisfied by a Tulane Interdisciplinary Seminar (TIDES) course or Colloquium course (COLQ 1010 Freshmen Colloquium Seminar (1-3 c.h.) or COLQ 1020 Freshman Colloquium (1-3 c.h.))

Public Service (2 courses)

Students develop their commitment to civic engagement through the completion of service learning courses experiences. All students will complete their public service through service-learning courses, an approved public service internship, or an approved public service research experience. These courses can also be used to satisfy other areas of general education.

- To meet this requirement for graduation, all students must complete two semesters of service. One of these semesters must be at the 2000 level or above. The first experience should be completed by the 2nd semester of the sophomore year.
- Service Learning courses require a minimum of 20 hours of service per semester. Those service-learning courses designated as requiring a minimum of 40 hours of service carry one additional credit hour. No course may carry more than 4 credits.

Race and Inclusion (1 course, 3 credits)

One course and 3 credits. Courses that fulfill this requirement will focus on the intersections of race with power, privilege, equity, justice, and/or inclusion and will focus at least 60% their content on these issues in the United States. These courses may also be used to satisfy proficiency or distribution core curriculum requirements.

Global Perspectives (1 course, 3 credits)

One course and 3 credits. Courses that fulfill this requirement will focus at least 60% content with stated objectives to develop historical, cultural, and societal knowledge of an area beyond the United States. These courses may also be used to satisfy proficiency or distribution core curriculum requirements.

For more information please visit the Core Curriculum website (https://college.tulane.edu/core-curriculum/).

School of Science and Engineering Undergraduate Requirements

Students seeking a B.S. should satisfy all core requirements as outlined in the Newcomb-Tulane College section and meet the school-specific and major requirements in this section. Students seeking a B.S.E. should satisfy all core requirements except that of Foreign Language as outlined in the Newcomb-Tulane College section and meet the school-specific and major requirements in this section.

Mathematics and Science

Candidates for the B.S. and B.S.E. degrees in the School of Science and Engineering must take a minimum of 32 credits of science and mathematics selected from at least two different disciplines: cell and molecular biology, chemistry, ecology and evolutionary biology, earth and environmental sciences, mathematics, neuroscience, physics and psychology. At least one of these courses must include a laboratory.

A minimum of six credits of mathematics is required. Any two Mathematics courses numbered 1210 and above may be used to satisfy this requirement. However the combination of MATH 1150 Long Calculus I (3 c.h.) and MATH 1160 Long Calculus II (3 c.h.) may count as one course toward this requirement. Students may satisfy all, or part, of the requirement with the appropriate AP score(s). A score of 4 or 5 on the Advanced Placement AB Calculus exam earns credit for MATH 1210 Calculus I (4 c.h.). A score of 3 on the BC Calculus exam together with a score of 4 or 5 on the AB subsection of the BC exam earns credit for MATH 1210 Calculus I (4 c.h.). A score

of 4 or 5 on the BC exam earns credit for MATH 1210 Calculus I (4 c.h.) and MATH 1220 Calculus II (4 c.h.). Students who earn a B- or higher in MATH 1310 Consolidated Calculus (4 c.h.), a course that combines both Calculus I and II, receive credit for both this course and MATH 1210 Calculus I (4 c.h.). Departments may recommend, or require, particular mathematics or science courses for their majors, and students are advised to consult the major department's listing in this catalog.

Writing Intensive/Writing Skills Requirement

Students should satisfy the Writing Skills core requirements as outlined in the Newcomb-Tulane College section. Students may satisfy the Tier 2 requirement within the School of Science and Engineering by taking one course designated "writing-intensive" in the course schedule.

A student enrolled in the School of Science and Engineering must select a major offered by the school no later than the beginning of a student's fourth semester of college study.

Internships for Academic Credit

Some departments offer internships for academic credit as part of the major. An internship combines a relevant academic component with experiential learning. The academic component may, for example, consist of a term paper, a poster presentation, a number of short papers, or discussions of a number of books. Internships ordinarily are open only to those students completing a major in the department that will award the credit. Students should register for Internship Studies (course numbers and names vary) within the department sponsoring the internship after having made initial arrangements with a professor who will sponsor the internship.

A student may not take a salaried position outside the university while earning credit for an internship, except where such an arrangement is required by the cooperating organization for insurance purposes. If a student must take a salaried position for this reason, a letter to this effect from the cooperating organization must be filed with the chair of the sponsoring department prior to the end of the add period. Further, additional work (e.g., written report, reflection paper, journal, etc.) will be required to enhance the academic component of the internship. Only one internship may be completed each semester. Internships are graded satisfactory/unsatisfactory (S/U) unless they are housed in the Center for Public Service (CPS). The sponsoring professor will assign a grade for the internship at the close of the semester after evaluating its academic and experiential aspects.

An alternative internship experience is offered to students through INTR 1990 Liberal Arts Internship (1 c.h.). INTR 1990 Liberal Arts Internship (1 c.h.) was created to accommodate students seeking to participate in internships that require students earn credit for their experience. INTR 1990 Liberal Arts Internship (1 c.h.) carries one credit, which will apply toward the degree but will not apply toward any core curriculum, major, or minor requirement. Only one credit of INTR 1990 Liberal Arts Internship (1 c.h.) may be applied toward the degree. INTR 1990 Liberal Arts Internship (1 c.h.) must be taken on a satisfactory/unsatisfactory (S/U) basis. Students who have completed fewer than 30 credits may not register for this course. Students interested in registering should fill out the online application at https://fs7.formsite.com/tulanecsc/InternshipRegistration/index.html (https://fs7.formsite.com/tulanecsc/InternshipRegistration/).

Independent Study

For Science and Engineering independent study courses, up to 6 credits of independent study can be A-F graded. After 6 credits of independent study, students may take additional independent study only with Satisfactory/Unsatisfactory (S/U) graded credit. Registration is completed in the academic department sponsoring the independent study.

Master of Science

Masters programs in the School of Science and Engineering are designed to enhance your employment opportunities as well as to assist you in pursing admission to doctoral programs and professional schools. A masters degree may take from one year to two years to complete, depending on the program.

Masters degree programs are offered in:

- Applied Mathematics, MS (p. 571)
- Behavioral Health, MS (p. 594)
- Biomedical Engineering, MS (p. 546)
- Cell and Molecular Biology, MS (p. 548)
- Chemical and Biomolecular Engineering, MS (p. 551)
- Computational Science, MS (p. 542)
- Computer Science, MS (p. 557)
- Data Science, MS (p. 572)
- Earth and Environmental Sciences, MS (p. 563)
- Ecology and Evolutionary Biology, MS (p. 567)
- Interdisciplinary, MS (p. 604)
- Materials Science and Engineering, MS (p. 587)
- Mathematics, MS (p. 573)
- Neuroscience, MS (p. 605)
- Physics, MS (p. 592)
- Psychology, MS (p. 596)
- River-Coastal Science and Engineering, MS (Non-Residential) (p. 601)
- River-Coastal Science and Engineering, MS (Residential) (p. 602)
- Statistics, MS (p. 576)

With permission of department and instructor, students also may enroll as non-degree special students.

4+1 Master's Programs

The 4+1 Masters programs at Tulane University provide Tulane undergraduates with the opportunity to earn a masters degree in a single year following the completion of the bachelor's degree.

4+1 Masters Degree Programs are offered in the following disciplines:

- Applied Mathematics (p. 571)
- Biomedical Engineering (p. 546)
- Behavioral Health (p. 594)
- Cell and Molecular Biology (p. 548)
- Chemical and Biomolecular Engineering (p. 551)
- Computational Science (p. 542)
- Computer Science (p. 557)
- Ecology and Evolutionary Biology (p. 567)
- Materials Science and Engineering (p. 587)
- Mathematics (p. 573)
- Neuroscience (p. 605)
- Physics (p. 592)
- Psychology (p. 596)
- Statistics (p. 576)

With permission of the department and instructor, students also may enroll as non-degree special students at 50% graduate tuition.

Doctor of Philosophy

The School of Science and Engineering at Tulane University places significant emphasis on doctoral education. Nearly all of our approximately 350 doctoral students are supported by assistantships or fellowships and conduct research with approximately 130 faculty members. Facilities are excellent and the close knit community of students, faculty and staff serves to stimulate multidisciplinary collaboration. This characteristic is reflected in the descriptions of research programs of individual faculty.

Ph.D. programs are offered in the following areas:

- Bioinnovation, PhD (p. 604)
- Biomedical Engineering, PhD (p. 546)
- Cell and Molecular Biology, PhD (p. 548)
- Chemical and Biomolecular Engineering, PhD (p. 551)
- Chemistry, PhD (p. 553)
- Computational Science, MS (p. 542)
- Computer Science, PhD (p. 559)
- Earth and Environmental Sciences, PhD (p. 564)
- Ecology and Evolutionary Biology, PhD (p. 568)
- Materials Physics and Engineering, PhD (p. 585)
- Mathematics, PhD (p. 574)
- Neuroscience, PhD (p. 605)
- Physics, PhD (p. 592)
- Psychology, PhD (p. 598)
- River-Coastal Science and Engineering, PhD (p. 603)

Computational Science, MS

Overview

Computational Science is a discipline dedicated to the use of computers for the solution of mathematical equations that describe scientific problems over a wide variety of fields. Its aim is to obtain new scientific information and technical practices. The phenomena approached by Computational Science can range from modeling blood flow to geophysical events, biomolecular processes, turbulence in the motion of liquids and gases, the trajectory of spacecraft, statistics, epidemiology, and more.

Investigators with computational science expertise provide ways of approaching important problems that complement and improve experimental and theoretical approaches by performing simulations outside the ranges of what may be viable by other methods. In this way, computational science informs other studies, generating synergy with scientific and engineering disciplines.

Program in Biological Chemistry

Programs

Undergraduate

Major

- Biological Chemistry Major (p. 542)

Minor

- Biological Chemistry Minor (p. 543)

Biological Chemistry Major

A major in Biological Chemistry must include the cell and molecular biology, chemistry, physics and mathematics courses in the lists under Requirements. At least two elective courses, selected from Requirements list, also must be included. In addition, an appropriate six-credit special project integrating the student's biological and chemical studies is required.

Because of the interdisciplinary nature of the Biological Chemistry major, students in this program may not minor in chemistry, cell and molecular biology, or ecology and evolutionary biology.

Requirements

Course ID	Title	Credits
Cell and Molecular Biology Required Courses		
CELL 1010	Intro to Cell & Molec Biology	3
CELL 2050	Genetics	3
CELL 3030	Molecular Biology	3
CELL 3035	Molecular Biology Lab	1
CELL 3750	Cell Biology	3
CELL 4220	Microbiology	3
Chemistry Required Courses		
CHEM 1070 & CHEM 1075	General Chemistry I and General Chemistry Lab I	4
CHEM 1080 & CHEM 1085	General Chemistry II and General Chemistry Lab II	4
CHEM 3120 & CHEM 3125	Physical Chemistry II and Physical Chemistry Lab II	4
CHEM 3830 & CHEM 3835	Intro To Biochemistry and Intro to Biochem Lab	5
CHEM 3840	Intermediate Biochem	3
Select one of the following:		
CHEM 2410 & CHEM 2415	Organic Chemistry I and Organic Chemistry Lab I	4
CHEM 2430 & CHEM 2435	Organic Chemistry I: Deep-learning and Organic Chemistry I Laboratory: Deep-learning	4
Select one of the following:		
CHEM 2420 & CHEM 2425	Organic Chemistry II and Organic Chemistry Lab II	4
CHEM 2440 & CHEM 2445	Organic Chemistry II: Deep-learning and Organic Chemistry Laboratory II: Deep-learning	4
Physics Required Courses		
PHYS 1310	General Physics I	4
PHYS 1320	General Physics II	4
Mathematics Required Courses		
MATH 1210	Calculus I [1]	4
MATH 1220	Calculus II [1]	4
MATH 2210	Calculus III	4
Electives		
Select at least two of the following:		6
CELL 3050	Foundations of Pharmacology	
CELL 3210	Physiology	
CELL 3310	Cellular Neuroscience	
CELL 3320	Systems Neuroscience	
CELL 3755	Cell Biology Laboratory	
CELL 4130	Embryology	
CELL 4160	Developmental Biology	
CELL 4225	Microbiology Laboratory	
CELL 4340	Neurobiology of Disease	
CELL 4370	Molecular Neurobiology	
CELL 4710	Molecular Biology of Cancer	
CELL 4780	Developmental Genetics	
CENG 2500	Intro To Biotechnology	
CENG 4710	Biochemical Engineering	
CHEM 3110	Physical Chemistry I	
CHEM 3310	Instrumental Analysis	
MATH 1230	Statistics For Scientists	
NSCI 6530	Psychopharmacology	
PHYS 3210	Molecular Biophysics & Polymer Physics	
Independent Studies		
Select one year (research and/or honors thesis) of the following:		6
BMEN 4902	SR Research Prof Experience I	
BMEN 4912	SR Research Prof Experience II	
CELL 4910	Independent Study	
CELL 4920	Independent Study	
CELL 4990	Honors Thesis	
CELL 5000	Honors Thesis	
CENG 4820	Independent Study	
CENG 4910	Independent Study	
CENG 4920	Independent Study	
CHEM 4010	Research	
CHEM 4020	Research and Seminar	
CHEM 4990	Honors Thesis	
CHEM 5000	Honors Thesis	
Total Credit Hours		**84**

[1] MATH 1310 Consolidated Calculus (4 c.h.) may be taken in lieu of MATH 1210 Calculus I (4 c.h.) and MATH 1220 Calculus II (4 c.h.).

Biological Chemistry Minor

The minor in Biological Chemistry consists of coursework in the Departments of Chemistry and Cell & Molecular Biology. Courses are required in Genetics, Biochemistry, and either Cell Biology or Molecular Biology.

Requirements

Biomedical Engineering Major

Welcome to the Department of Biomedical Engineering at Tulane University in New Orleans, LA. Since 1977, our department has been a leader in engineering science investigations of health and medicine. As you explore this site, you will see that our curriculum and translational studies are targeted and integrated, spanning areas of biomaterials, biomechanics, device development and tissue engineering. Our team of faculty and staff members brings energy and enthusiasm towards educating future generations of biomedical engineers as we solve today's most complex and interesting basic and applied research problems relevant to healthcare. We welcome the opportunity to develop collaborations at all levels.

Tulane's Biomedical Engineering program is accredited by the Engineering Accreditation Commission of ABET (www.abet.org).

Requirements

Curriculum

Year 1

Fall		**Credit Hours**
MATH 1210	Calculus I [1]	4
CHEM 1070	General Chemistry I	3
CHEM 1075	General Chemistry Lab I	1
PHYS 1310	General Physics I	4
ENGL 1010	Writing	4
TIDES Tulane Inter. Exp. Sem.		1
SCEN 1400	Engineering at Tulane and Beyond (optional) [2]	1
	Credit Hours	**18**
Spring		
MATH 1220	Calculus II	4
CHEM 1080	General Chemistry II	3
CHEM 1085	General Chemistry Lab II	1
PHYS 1320	General Physics II	4
ENGP 1410	Statics	3
NTC Core Elective		3
	Credit Hours	**18**

Year 2

Fall		
MATH 2210	Calculus III	4
CELL 1010	Intro to Cell & Molec Biology	3
CELL 2115	General Biology Lab	1
BMEN 2310	Product & Experimental Design [3]	3
ENGP 2010	Electric Circuits	3
ENGP 2011	Electric Circuits Lab	1
ENGP 2430	Mechanics of Materials	3
	Credit Hours	**18**
Spring		
MATH 2240	Intro To Applied Math	4

BMEN 4890	Service Learning	0
NTC Core Elective		3
NTC Core Elective		3
Professional Elective [5]		3
	Credit Hours	**12**
	Total Credit Hours	**130**

1. Students with a strong preparation in calculus are advised to consider MATH 1310 Consolidated Calc. in lieu of MATH 1210/1220 Calc. I & II. Consult the Math Dept. website for further guidance.
2. This optional course is offered in the fall and spring of the 1st year. Students are required to take a 1-hour "service learning" course before the end of the Sophomore year. There is an optional service learning course (SCEN 1891) associated with this course.
3. This course is associated with an optional 1st-tier service learning course (BMEN 2890).
4. Students are required to take 2 BME "Domain" courses at the 3xxx level. Additional Domain courses may be taken as Professional Electives. See the student handbook on the BME website for more information.
5. One Professional Elective must be a BMEN6xxx advanced class, following up on a BMEN3xxx domain class.

Pre-Med Students

Those students who are declared pre-med are to make the following adjustments to the BME curriculum:

1. Substitute CHEM 2410 Organic Chemistry I (3 c.h.) & CHEM 2415 Organic Chemistry Lab I (1 c.h.) for BMEN 2600 Intro Organic & Biochem (3 c.h.)
2. Count CHEM 2420 Organic Chemistry II (3 c.h.) & CHEM 2425 Organic Chemistry Lab II (1 c.h.) as one Professional Elective
3. Count CELL 4010 Cellular Biochemistry (3 c.h.) as a second Professional Elective
4. Count EBIO 1010 Diversity of Life (3 c.h.) & EBIO 1015 Diversity of Life Lab (1 c.h.) as the third Professional Elective

No additional Professional Electives are required, except the BMEN 6xxx upper level elective. Note that this adjustment will increase the total required credits toward a BME bachelor's degree by 3 credits due to the additional required laboratories

If after you have completed CHEM 2410 Organic Chemistry I (3 c.h.)/ CHEM 2415 Organic Chemistry Lab I (1 c.h.); or if after you have completed CHEM 2410 Organic Chemistry I (3 c.h.)/ CHEM 2415 Organic Chemistry Lab I (1 c.h.) and CHEM 2420 Organic Chemistry II (3 c.h.)/CHEM 2425 Organic Chemistry Lab II (1 c.h.), you decide to not pursue pre-med, you will be required to take either BMEN 2600 Intro Organic & Biochem (3 c.h.) or CELL 4010 Cellular Biochemistry (3 c.h.) as an appropriate substitute. In this case, CHEM 2410 Organic Chemistry I (3 c.h.)/ CHEM 2415 Organic Chemistry Lab I (1 c.h.), and/or CHEM 2420 Organic Chemistry II (3 c.h.)/CHEM 2425 Organic Chemistry Lab II (1 c.h.) will be counted as one and/or two of your required three, non-6xxx level Professional Electives, respectively

Biomedical Engineering Minor

Students in Chemical and Biomolecular Engineering or Engineering Physics may earn a Minor in Biomedical Engineering through completion of the specified courses: See "REQUIREMENTS" tab

For Non-Engineering Majors
Students may earn a Minor in Biomedical Engineering through completion of the specified sequence of courses.

Requirements

Students in Chemical and Biomolecular Engineering or Engineering Physics may earn a Minor in Biomedical Engineering through completion of the following courses:

Course ID	Title	Credits
CELL 1010	Intro to Cell & Molec Biology	3
CELL 2115	General Biology Lab	1
BMEN 2600	Intro Organic & Biochem	3
BMEN 3030	Anatomy & Physio for Engr	3
BMEN 3035	Anatomy & Physiology for Engineers Cadaver Lab	1
BMEN 3070	Quantitative Physiology	3
BMEN 3075	Quant. Physiology Lab	1
Choose at least one 3xxx "Domain Course" from following list:		
BMEN 3932	Elements of BMEN Design	
BMEN 3400	Biomaterials & Tissue Engineering	
BMEN 3650	Biomechanics and Biotransport	
BMEN 3730	Biomedical Signals and Systems	

Biomedical Engineering Minor for Non-Engineering Majors

Students who are NOT majoring in Chemical and Biomolecular Engineering or Engineering Physics may earn a Minor in Biomedical Engineering through completion of the following sequence of courses.

Requirements

Prerequisite Courses

Course ID	Title	Credits
MATH 1210	Calculus I	4
MATH 1220	Calculus II	4
MATH 2210	Calculus III	4
MATH 2240	Intro To Applied Math	4
CELL 1010	Intro to Cell & Molec Biology (or approved substitute)	3
PHYS 1310	General Physics I	4
PHYS 1320	General Physics II	4

Tulane University

Engineering Courses

Required of all Biomedical Engineering minors:

Course ID	Title	Credits
ENGP 1410	Statics	3
BMEN 2310	Product & Experimental Design	3
Select three of the following:		**9**
ENGP 2010	Electric Circuits	
ENGP 2430	Mechanics of Materials	
ENGP 3120	Materials Science and Engineering	
BMEN 2020	Computing Concepts & Applic	
BMEN 2730	Biomedical Electronics	
BMEN 3440	Biofluid Mechanics	
Select one of the following BMEN 3xxx "Domain" Courses:		**3**
BMEN 3932	Elements of BMEN Design	
BMEN 3400	Biomaterials & Tissue Engineering	
BMEN 3650	Biomechanics and Biotransport	
BMEN 3730	Biomedical Signals and Systems	
Total Credit Hours		**18**

Biomedical Engineering, MS

A non-thesis Master of Science degree (MS) is offered by the Graduate Division of the School of Science and Engineering upon the completion of 30 semester hours of approved graduate course work. This coursework must satisfy the distribution requirement (see below). Students receiving aid in the form of a teaching assistantship or a research assistantship are generally not eligible for a Master's degree as their terminal degree. Doctoral students that have completed 30 semester hours of approved graduate credit and who have successfully defended their research prospectus may then petition the Department for a non-thesis MS degree.

Requirements

In order to prepare our students for careers in biomedical engineering, which is a rapidly evolving interdisciplinary field, we require all graduate students to complete a distribution of classes. These are:

1. Anatomy and Physiology

BMEN 6030 Anatomy & Physio for Engr (3 c.h.)/BMEN 6035 Anatomy & Physiology for Engineers Cadaver Lab (1 c.h.)

BMEN 6070 Quant Physio Lec (3 c.h.)/BMEN 6075 Quant. Physiology Lab (1 c.h.)

2. Biomedical Engineering Domains

One BMEN 6xxx level course in three of the following four domains: Biomedical Design, Biomaterials and Tissue Engineering, Biomechanics and Biotransport, Biosignals and Biosystems. One of these three courses may be cross-registered with a BMEN 3xxx course.

3. Mathematics

One course in advanced mathematics (*e.g.*, various 6000-level MATH courses)

Biomedical Engineering, PhD

The Ph.D. is an academic degree that prepares students for careers in teaching and research. A Master's degree is not required for students seeking the Doctoral degree.

Requirements

The specific requirements are as follows:

1.) Distribution Requirements
a. Anatomy and Physiology
BMEN 6030 Anatomy & Physio for Engr (3 c.h.)/BMEN 6035 Anatomy & Physiology for Engineers Cadaver Lab (1 c.h.)and BMEN 6070 Quant Physio Lec (3 c.h.)/BMEN 6075 Quant. Physiology Lab (1 c.h.)

b. Biomedical Engineering Domains
One course in three of the four domains, as described in Table 1.
Only one (1) of the domain requirements may be satisfied through the completion of a BMEN 3xxx/6xxx domain course

c. Mathematics
One course in advanced mathematics (e.g., various 6000-level MATH courses)

2.) Coursework

The student must demonstrate superior performance while completing 48-hours of graduate study with nine in-class “didactic” classes.

Minor

- Cell and Molecular Biology Minor (p. 547)

Graduate

- Cell and Molecular Biology, MS (p. 548)
- Cell and Molecular Biology, PhD (p. 548)

Cell and Molecular Biology Major

The major in Cell and Molecular Biology is focused on the mechanistic study of the life of the cell at the molecular level. The curriculum is interdisciplinary and includes courses in physics, chemistry, and genetics in addition to molecular and cellular biology. Training in these areas is beneficial for careers in biological research, a number of high tech industries, medicine, and allied health professions. This challenging major requires creativity, rigor, and the ability to analyze,

distill, and interpret data. A love of living systems and a level of comfort with complexity are both essential.

Due to the extensive overlap in curricula, Cell and Molecular Biology majors cannot double major in Biological Chemistry. Students can double major in Cell and Molecular Biology and Neuroscience, but there are additional requirements that must be met beyond those requirements for most double major combinations.

Requirements

Students majoring in cell and molecular biology must complete a minimum of eleven courses in the biology components, totaling at least 25 credits; 16 credits in chemistry; and 8 credits of physics with laboratories. Students must also complete Calculus (MATH 1210 Calculus I (4 c.h.) or MATH 1310 Consolidated Calculus (4 c.h.)) and Statistics for Scientists (MATH 1230 Statistics For Scientists (4 c.h.)) to satisfy the major and BS requirements.

Course ID	Title	Credits
Chemistry Component		
CHEM 1070	General Chemistry I	3
CHEM 1080	General Chemistry II	3
CHEM 1075	General Chemistry Lab I	1
CHEM 1085	General Chemistry Lab II	1
CHEM 2410	Organic Chemistry I	3
CHEM 2420	Organic Chemistry II	3
CHEM 2415	Organic Chemistry Lab I	1
CHEM 2425	Organic Chemistry Lab II	1
Math Component		
Select one of the following:		3-6
MATH 1210	Calculus I	
MATH 1310	Consolidated Calculus	
MATH 1150 & MATH 1160	Long Calculus I and Long Calculus II	
MATH 1230	Statistics For Scientists	4
Physics Component		
Select one of the following:		8
PHYS 1210 & PHYS 1220	Introductory Physics I and Introductory Physics II	
PHYS 1310 & PHYS 1320	General Physics I and General Physics II	
Cell and Molecular Biology Core Component		
CELL 1010	Intro to Cell & Molec Biology	3
CELL 2115	General Biology Lab	1
CELL 2050	Genetics	3
CELL 3030	Molecular Biology	3
CELL 3750	Cell Biology	3
CELL 3755	Cell Biology Laboratory	1
or CELL 3035	Molecular Biology Lab	
Select one additional 3 or 4 credit CELL lecture or lecture/lab course		3-4
Biochemistry Component		
Select one of the following:		3-6
CELL 4010	Cellular Biochemistry	
CHEM 3830 & CHEM 3840	Intro To Biochemistry and Intermediate Biochem	
CENG 4450 & CENG 4460	Applied Biochemistry I and Applied Biochemistry II	
Total Credit Hours		**51-58**

Elective Component

An additional **three** elective courses are required, with at least two of the three being laboratory oriented. Only one laboratory elective may be satisfied by independent laboratory research (CELL 4910 Independent Study (1 to 3 c.h.), CELL 4920 Independent Study (1 to 3 c.h.), CELL 4990 Honors Thesis (3 c.h.) or CELL 5000 Honors Thesis (4 c.h.)). Students may use approved courses from other departments to fill the elective component. A list of courses which fulfill this requirement is available on the CMB Department website or from the CMB Department office. Total credit hours: 5-11.

Capstone Component

Finally, students must use one of their electives to complete a capstone requirement (CELL 3230 Virology (3 c.h.), CELL 3400 Regenerative Biology (3 c.h.), CELL 4250 Principles In Immunology (3 c.h.), CELL 4260 Princ of Biomed Write Capstone (3 c.h.), CELL 4440 Advanced Molecular Biology (3 c.h.), CELL 4450 Genome Biology (3 c.h.), CELL 4710 Molecular Biology of Cancer (3 c.h.), CELL 5110 Capstone Component: CELL 4910 (0 c.h.), CELL 5111 Capstone Component: CELL 4920 (0 c.h.), or CELL 5000 Honors Thesis (4 c.h.)).

Cell and Molecular Biology Minor

The minor in Cell and Molecular Biology introduces the mechanistic study of the life of the cell at the molecular level. Due to the extensive overlap in curricula, Biological Chemistry majors cannot minor in Cell and Molecular Biology. Neuroscience majors may minor in Cell and Molecular Biology, but the requirements are more rigorous.

Requirements

Students wishing to minor in cell and molecular biology must complete:

Course ID	Title	Credits
Required Courses		
CELL 1010	Intro to Cell & Molec Biology	3
CELL 2050	Genetics	3
CELL 3030	Molecular Biology	3
CELL 3750	Cell Biology	3
Additional Coursework		
Select two electives in biology		6
Select 16 credits in chemistry [1]		16
Total Credit Hours		**34**

[1] One year of both general and organic chemistry and their respective laboratories

Because of the interdisciplinary nature of the biological chemistry major, students in that program may not minor in cell and molecular biology.

Neuroscience Majors

Neuroscience majors wishing to minor in cell and molecular biology must complete:

Course ID	Title	Credits
Required Courses		
CELL 3030	Molecular Biology	3
CELL 3750	Cell Biology	3
CELL 4010	Cellular Biochemistry	3
Select two of the following:		6-7
CELL 3050	Foundations of Pharmacology	
CELL 3210	Physiology	
CELL 3400	Regenerative Biology	
CELL 4110/4111	Human Histology	
CELL 4130	Embryology	
CELL 4160	Developmental Biology	
CELL 4200	General Endocrinology [1]	
CELL 4220	Microbiology	
CELL 4440	Advanced Molecular Biology	
CELL 4710	Molecular Biology of Cancer	
CELL 4780	Developmental Genetics	
Additional Coursework		
Select 16 credits in chemistry [2]		16
Total Credit Hours		**31-32**

[1] CELL 4200 General Endocrinology (3 c.h.) may not be used for the CELL minor elective if NSCI 4200 General Endocrinology (3 c.h.) is used as a major elective.

[2] One year of both general and organic chemistry and their respective laboratories

Cell and Molecular Biology, MS

The Master's in Cell and Molecular Biology program is designed to enhance the competitiveness of students applying to postgraduate professional schools, especially Medical and Dental School, but also Veterinary School, Optometry School, Business School, Law School, and Ph.D. programs.

Requirements

Students must complete a total of 30 credit hours, with a cumulative GPA of a 3.0 or higher on a 4.0 scale, in order to receive the MS degree. Students may select from the course list below.

Graduate Courses

Course ID	Title	Credits
CELL 6010	Cellular Biochemistry	3
CELL 6030	Molecular Biology	3
CELL 6035	Molecular Biology Lab	1
CELL 6050	Foundations of Pharmacology	3
CELL 6070	Neurobiology of Aging	3
CELL 6080	Adv Dev & Cell Biol II	3
CELL 6110	Human Histology	4

CELL 6755	Cell Biology Lab	1
CELL 6840	Current Topics Dev Biol	2

Students may be permitted to take electives from other departments with the approval of the program's Co-Directors.

Cell and Molecular Biology, PhD

The Department of Cell and Molecular Biology offers a Doctor of Philosophy degree. The active research opportunities in the department are mostly concentrated in two fields, developmental biology and neuroscience.

Over the course of their first two years, students will take classes aligned with their backgrounds and interests, attend seminars, and serve as teaching assistants. In their first year of the doctoral program specifically, students are expected to rotate through labs within the department and join a lab in which they will continue their dissertation research. Typically, students complete a prospectus in the third year and complete a dissertation in the fifth year.

Requirements

Students will complete 48 credit hours of course work with at least a 3.0 GPA (FIRM). Credit hours should be complete by the end of second year (4th semester).

Core required courses include: Cell Biology CELL 6750, CMB Doctoral Seminar CELL 7870, Advanced Molecular Biology (CELL 6440), and a journal club course (NSCI 6040 or CELL 6840).

- Chemical and Biomolecular Engineering, PhD (p. 551)

Chemical Engineering Major

Chemical engineering combines principles of chemistry, physics, biology, and mathematics to design processes that economically and sustainably meet human needs for energy, food, healthcare, and technology. Chemical engineers are not only leaders in traditional chemical, oil and gas, and brewing industries, but they are also at the forefront of advancements in pharmaceutical discovery and production, renewable energy, biotechnology, and environmental protection. The Chemical & Biomolecular Engineering (CBE) curriculum includes basic coursework in math, physics, and chemistry, as well as advanced courses related to the design of industrial processes including fluid dynamics, thermodynamics, heat and mass transfer, computer methods, reactor design, and automatic process control. All students participate in an internship through the core curriculum. Students can readily tailor the major to their specific interests through choice of appropriate electives; synergistic focus areas include pre-medicine, biotechnology, materials science, energy, and environmental studies.

Tulane's Chemical Engineering program is accredited by the Engineering Accreditation Commission of ABET (https://www.abet.org/).

Requirements

Core Chemical Engineering Curriculum

The Chemical Engineering (CENG) program of study requirements include a solid foundation in math and science, major-specific core material in chemical and biomolecular engineering, plus exposure to the humanities and social sciences. In order to graduate with a B.S. degree in Chemical Engineering, students must fulfill the following requirements:

Major Specific: The engineering courses, including the core chemical engineering courses*, engineering and technical electives, and the advanced specialization electives. *A minimum grade of C- must be earned in each CENG required core course in order to receive credit for the Bachelor's degree.

Newcomb-Tulane College (NTC) Core Curriculum: (https://advising.tulane.edu/sites/default/files/Core_Curriculum_Checklist.pdf) Courses that ensure attainment of basic competencies in writing, scientific inquiry, cultural knowledge, and interdisciplinary scholarship.

Public Service: One service learning course at the 1000-3000 level no later than the fifth semester, and a subsequent second-tier public service requirement. More information on the service learning requirements can be found here (https://cps.tulane.edu/about/graduation-requirement/). The CBE department offers courses which satisfy both the lower and upper-level service learning requirements (CENG 1180/1891 and CENG 3240/3890).

Certain modifications to the freshmen program may be made by:

- Achievement of advanced standing through Advanced Placement Tests offered by the CEEB
- Use of advanced placement tests in mathematics and chemistry offered on campus during Orientation Week
- Submission of transcripts from other universities for equivalent courses taken prior to entering Tulane

Major Advising

New majors are assigned an individual faculty advisor based on their expected graduation year, and they should consult with him or her regularly for class and career planning. Faculty members can be reached by email or in person to set up meeting times.

Class of 2025 - Dr. Russell (krussell1@tulane.edu), Dr. Sandoval (nsandova@tulane.edu)

Class of 2026 - Dr. Russell (krussel1@tulane.edu), Dr. Albert (jalbert6@tulane.edu)

Class of 2027 - Dr. Godbey (godbey@tulane.edu), Dr. Russell (krussell1@tulane.edu)

First-year students - Dr. Godbey (godbey@tulane.edu)

Special advising for transfer students, Tulane/Xavier 3-2 program, study abroad – Dr. Godbey (godbey@tulane.edu)

Year 1

Fall		**Credit Hours**
CHEM 1070 & CHEM 1075	General Chemistry I and General Chemistry Lab I	4

**** CENG Elective Requirements**

In general, a Technical Elective is a course offered by the School of Science and Engineering. An Engineering Elective is any non-required CENG course, a course offered by one of the engineering departments (BMEN, ENGP, RCSE), or a course offered by Computer

Science (COSC and CMPS). Advanced Specialization Electives are typically selected from the following list:

- Any 3000-level or above CENG, BMEN, CHEM, CMPS, COSC, ENGP, MATH, MPEN, PHYS, or RCSE
- CELL 3030: Molecular Biology
- CELL 3750: Cell Biology (pre-req: CELL 3030)
- EENS 3150: Intro to Geographic Information Systems
- EENS 4030: Advanced Geographic Information Systems
- EENS 4250: Isotopes in the Environment
- EENS 4360: Environmental Geochemistry (pre-req: EENS 2110)
- ENRG 4100: Energy Markets, Economics, and Policy
- ENRG 4110: Energy Financial Modeling
- ENRG 4200: Energy Fundamentals and Trading
- SPHU 3160: Biostatistics in Public Health (pre-req: SPHU 1010 and 1020)
- SPHU 4160: Intro to Statistical Packages (pre-req: SPHU 3160)
- SPHU 4400: Practical Bioinformatics
- SPHU 4410: Data & Information Management in Public Health (pre-req: SPHU 1010 and 1020)

Any Substitutions must follow the Petition for Degree Plan Modification process.
The Engineering Electives must satisfy a minimum of 6-credit hours with at least 3-credit hours at the 3000-level or above. The Advanced Specialization Electives must satisfy a minimum of 6-credit hours at the 3000-level or above. The Advanced Technical Elective must satisfy a minimum of 3-credit hours at the 3000-level or above. Additionally, courses containing significant overlap with core curriculum are excluded, and courses for non-science majors do not fulfill the elective requirements. Note that a maximum of 3-credit hours can be satisfied from Professional Development Courses; note a maximum of 6-credit hours can be satisfied by Independent Study/ Honor's Thesis work. **Students are encouraged to inquire with their CBE Advisor or the Undergraduate Committee Chair if they are unsure about a potential elective.**

Courses Excluded from satisfying the Engineering Elective, Advanced Specialization Elective, and Technical Elective requirements: Seminar Courses, MATH 3000: Computational Problem Solving (excluded due to lack of rigor), MATH 3310: Scientific Computing (excluded due to overlap with CENG 3230: Numerical Methods), MATH 2240: Introduction to Applied Math or MATH 4240: Ordinary Differential Equations (students may take either to satisfy degree requirements, the parallel course is excluded due to overlap), and any course of lower technical rigor than the benchmark freshman-level course in the providing department.

**Students may take courses from a biochemistry series offered by either Chemical and Biomolecular Engineering (CENG 4450 and 4460) or Chemistry (CHEM 3830 and 3840) to satisfy one or both courses of the Advanced Specialization Elective requirement. Once a biochemistry course has been taken and a grade of D- or better has been granted, the parallel course from the other department cannot be taken to satisfy any elective requirement for the Chemical Engineering degree. As an example, a student who withdraws from CHEM 3830 can take CENG 4450 to satisfy the first Advanced Specialization requirement. If the student then goes on to earn credit for both CENG 4460 and CHEM 3840, one of the courses can be used for elective credit but the other 'biochemistry II' course will not be counted as an elective, technical or otherwise.

Chemical and Biomolecular Engineering, MS

The Chemical and Biomolecular Engineering Department offers both a thesis and non-thesis option for obtaining a master's degree. Graduate students receiving financial support as research or teaching assistants can earn a M.S. degree only with the approval of Department Chair and SSE Associate Dean for Graduate Studies, and in general, a written thesis is required.
Tenure is five years, although completion of all requirements for the degree for full-time students in two years is strongly encouraged.

Requirements

For the thesis option, the student must complete 24 hours of graduate course work plus conduct a research investigation under the guidance of a faculty member. Typically, two years are required to finish the course work and thesis. Upon completion, the student must defend a thesis before a faculty committee, which is chosen as described for PhD. students. For the non-thesis option, a total of 30 hours of course work is required. For both degree options, three core graduate chemical engineering courses are required: CENG 7110 (Modern Thermodynamics); CENG 7320 (Advanced Transport Phenomena); and either CENG 7150 (Advanced Reactor Design) or CENG 6870 (Biomolecular and Cellular Engineering), with up to six independent study credits toward the 24/30 credit requirement. The remainder of the credits must be made with course work.

Chemical and Biomolecular Engineering, PhD

The Chemical and Biomolecular Engineering Department offers a Doctor of Philosophy degree, in which students perform cutting edge research in advanced engineering topics. Graduate students pursuing PhD studies are supported as research or teaching assistants. The PhD degree culminates in an open defense of a written dissertation based on the original research performed by the student.

A master's degree is not a prerequisite to the beginning of study for the Doctor of Philosophy degree. Completing the Ph.D. requirements normally requires five years of full-time study beyond the B.S. degree.

Requirements

The Ph.D. degree requires a student to reach a critical understanding of the basic scientific and engineering principles underlying their field of interest. In addition, the student must demonstrate the ability to conduct independently an intensive research project and document their results in the form of refereed publications, presentations, and a final thesis dissertation. Specifically, candidates for the Ph.D. degree must:

- Complete a minimum of 48 credit hours of approved course work;
- Pass a qualifying examination;
- Present an acceptable dissertation prospectus to a dissertation committee;

- Make an original contribution to the field of chemical engineering in the form of a dissertation suitable for publication; and
- Defend the dissertation during a public presentation.

The Ph.D. degree requires 48 hours of approved graduate course work plus a thesis. These courses must include three core graduate chemical engineering courses:

Course ID	Title	Credits
CENG 7110	Modern Thermodynamics	3
CENG 7320	Advanced Transport Phenomena	3
CENG 7150	Advanced Reactor Design	3
or CENG 6870	Biomolecular & Cellular Engr	
CENG 7010	Graduate Mentoring Seminar I	1
CENG 7020	Graduate Mentoring Seminar II	1

Ph.D. candidates are also allowed 25 independent study credits toward the 48 credit requirement. Ph.D. candidates who have completed an M.S. at another institution will be potentially allowed to transfer a small number of credit hours toward the Ph.D.

Frequently, students without an undergraduate chemical engineering degree will enroll in the graduate program. To ensure that all students are familiar with the fundamental principles required of chemical engineers, students entering the graduate program with a bachelor's degree in an area other than chemical engineering will be required to take four undergraduate courses—Unit Operations I, II and III, and one of either Reactor Design, Process Control or Process Design. On the recommendation of the Graduate Committee, these requirements can be modified based on each student's specific background. These undergraduate courses do not count toward the total graduate-level credit requirement for the advanced degree. Graduate students may take these courses out of sequence and/or concurrently in order to expedite completion of this requirement.

Completing the Ph.D. requirements normally requires four to five years of full-time study beyond the B.S. degree. Students already possessing an M.S. degree in chemical engineering typically require one year less time. Financial aid is given to all full time graduate students working towards the doctoral degree.

Department of Chemistry

Programs

Undergraduate

Major

- Chemistry Major (p. 552)

Minor

- Chemistry Minor (p. 553)

Graduate

- Chemistry, PhD (p. 553)

Chemistry Major

Students majoring in chemistry must satisfy the general requirements of the B.S. curriculum as well as the required courses in Chemistry. Elective courses may be selected from the list of Chemistry courses above the 1000-level. Alternatively, students may petition the Chemistry Department for approval of other (non-Chemistry) courses. If the course is not from Chemistry, it must be a course where the methods or concepts are relevant to chemistry. Students intending to pursue graduate work in chemistry or in an allied interdisciplinary graduate program are advised to select advanced chemistry courses, including 4010 and/or 4020. Close consultation with their department advisors will help to assure development of a program that can be recommended for graduate work.

The Department of Chemistry is fully accredited by the Committee on Professional Training of the American Chemical Society.

As an alternative to a traditional chemistry major, students can consider a major in Biological Chemistry (https://catalog.tulane.edu/science-engineering/biological-chemistry-program/biological-chemistry-major/) (https://catalog.tulane.edu/science-engineering/biological-chemistry-program/biological-chemistry-major/). This program is certified by the American Society of Biochemistry and Molecular Biology (ASBMB).

Requirements

Students majoring in chemistry must satisfy the general requirements of the B.S. curriculum.

Course ID	Title	Credits
Required Courses		
CHEM 1070 & CHEM 1075	General Chemistry I and General Chemistry Lab I	4
CHEM 1080 & CHEM 1085	General Chemistry II and General Chemistry Lab II	4
CHEM 3110 & CHEM 3115	Physical Chemistry I and Physical Chemistry Lab I	4
CHEM 3120 & CHEM 3125	Physical Chemistry II and Physical Chemistry Lab II	4
MATH 1210	Calculus I	4
MATH 1220	Calculus II	4
MATH 2210	Calculus III	4
MATH 2240	Intro To Applied Math	4
PHYS 1310 & PHYS 1320	General Physics I and General Physics II	8
Select one of the following:		
CHEM 2410 & CHEM 2415	Organic Chemistry I and Organic Chemistry Lab I	4
CHEM 2430 & CHEM 2435	Organic Chemistry I: Deep-learning and Organic Chemistry I Laboratory: Deep-learning	4
Select one of the following:		
CHEM 2420 & CHEM 2425	Organic Chemistry II and Organic Chemistry Lab II	4

CHEM 2440 & CHEM 2445	Organic Chemistry II: Deep-learning and Organic Chemistry Laboratory II: Deep-learning	4
Select one of the following:		**4**
CHEM 3210 & CHEM 3215	Inorganic Chemistry and Inorganic Chemistry Lab	
CHEM 3310 & CHEM 3315	Instrumental Analysis and Instrumental Analysis Lab	
Electives *		
Select three or more elective courses from the Chemistry list of courses or with significant chemistry relevance.		9
Total Credit Hours		**69**

* In order to complete the major, three additional, three-credit courses from the list of Chemistry courses above the 1000-level are required. Check with the Chemistry Department for approval of other (non-Chemistry) courses. If the course is not from Chemistry, it must be a course where the methods or concepts are relevant to chemistry. Many courses offered by Math or Physics and Engineering Physics would be appropriate, as well as some in departments such as Cell and Molecular Biology, Computer Science, and others.

Chemistry Major Advisor: Professor Mark Sulkes, cm06acf@tulane.edu

Chemistry Minor

A minor in chemistry consists of CHEM 1070 General Chemistry I (3 c.h.)/CHEM 1075 General Chemistry Lab I (1 c.h.) and CHEM 1080 General Chemistry II (3 c.h.)/CHEM 1085 General Chemistry Lab II (1 c.h.) plus four additional Chemistry Department lecture courses that count toward the chemistry major. Only one semester of research (CHEM 4010, 3 c.h.) may be counted towards the minor. For students whose major requires Chemistry 1070/1075 and Chemistry 1080/1085, at least one of the additional courses must not be required by that major. Because of the interdisciplinary nature of the biological chemistry major, students in that program may not minor in chemistry.

Requirements

Course ID	Title	Credits
Required Courses		
CHEM 1070	General Chemistry I	3
CHEM 1075	General Chemistry Lab I	1
CHEM 1080	General Chemistry II	3
CHEM 1085	General Chemistry Lab II	1
Elective Courses		
Select four additional 3-credit courses in chemistry chosen in consultation with the chemistry department.		12
Total Credit Hours		**20**

Chemistry, PhD

Tulane's graduate program in chemistry offers research opportunities in the areas of bio-organic, biophysical, physical, inorganic, organometallic, synthetic organic, polymer material, surface chemistry, as well as crystallography, spectroscopy, quantum theory and statistical mechanics.

Requirements

The minimum requirement for the PhD degree is six courses (18 course hours in total) at the 7000 level, four of which must be core courses. Out of the four core courses, up to three can be taken within one field of chemistry. The core courses, offered by division, are:

- Physical Chemistry: CHEM 7110 Intro to Quantum Mechanics (3 c.h.), CHEM 7120 Statistical Mechanics (3 c.h.), CHEM 7150 Chemical Physics (3 c.h.);
- Inorganic Chemistry: CHEM 7210 Inorganic Stru & Bond (3 c.h.) or CHEM 7220 Inorganic Reaction Mechanics (3 c.h.), CHEM 7230 Organomet/Trans. Metals (3 c.h.) or CHEM 7240 Organometallic Chemistry (Main Group Metals) (3 c.h.);
- Organic and Biological Chemistry: CHEM 7410 Adv Organic Physical Organic (3 c.h.), CHEM 7420 Adv Organic Spectroscopy (3 c.h.), CHEM 7460 Adv Organic-Synthetic Ap (3 c.h.), CHEM 6830 Intro To Biochemistry (3 c.h.)-CHEM 6840 Intermediate Biochemistry (3 c.h.) (both courses combined count as one).

The remaining two elective courses should be selected from 7000 level chemistry courses (other than 7870 - 7900) or 7000 level courses from other SSE departments that meet the approval of the Graduate Affairs Committee. In addition, students should register for a total of six hours of seminar over the first six semesters of matriculation. In all, a total of 48 course hours are required for the Ph.D. students. Up to 24 course hours of the 48 hours required may be taken in CHEM 7890 Techniques of Research (1-9 c.h.)-CHEM 7900 Techniques of Research (1-9 c.h.) and special interest courses (6000 or above) offered by the Department of Chemistry or related departments. Students should obtain prior approval of the Graduate Affairs Committee to ensure that the courses taken in other departments will count toward the degree.

Core-Course Description

Course ID	Title	Credits
CHEM 7110	Intro to Quantum Mechanics	3
CHEM 7120	Statistical Mechanics	3
CHEM 7150	Chemical Physics	3
CHEM 7210	Inorganic Stru & Bond	3
CHEM 7220	Inorganic Reaction Mechanics	3
CHEM 7230	Organomet/Trans. Metals	3
CHEM 7240	Organometallic Chemistry (Main Group Metals)	3
CHEM 7410	Adv Organic Physical Organic	3
CHEM 7420	Adv Organic Spectroscopy	3
CHEM 7460	Adv Organic-Synthetic Ap	3
CHEM 6830	Intro To Biochemistry	3
CHEM 6840	Intermediate Biochemistry	3

Cumulative Exams

Ph.D. candidates are required to pass 6 total cumulative exams, at least two by the end of their fourth semester of residence and all six by the end of the 6th semester. In addition, at least 3 of the 6 exams must be passed in the candidate's area of concentration. Students failing to pass two cumes by the end of their fourth semester may be expelled from the program. *Students unable to complete 6 cumes*

in 6 semesters will be automatically placed in the M.S. program and be expected to complete the M.S. thesis by the end of the seventh semester.

Seminar

Registration for, and attendance at, Department seminars is required. Students are required to register for Division Seminar every semester until they have been admitted to candidacy. Six (6.0) hours of credit for seminar courses may be applied to the Ph.D. degree requirements. All Ph.D. candidates must present a seminar to the Department based upon a topic from the current chemical literature. The seminar must be presented before the end of the students' 4th semester in residence. The seminar should be scheduled with the Chemistry Department coordinator for seminar programs. Students presenting seminars are required to enlist two faculty to attend their seminar and provide the faculty with a Seminar Review Form (https://tulane.app.box.com/s/0e73gp9l74otxi84eru9f6eg7d5vfr37/) for a written review of the quality of the presentation; the Seminar Review Form can be obtained from the department website. Students should remember that faculty will only agree to attend if given sufficient notice (one month minimum) before the seminar.

Tenure Requirement

The maximum time allowed by the SSE Graduate Program for completion of the Ph.D. degree is seven years. The Department, however, strongly encourages students to attempt to complete requirements in no more than five years.

Dissertation Committee

After choosing a research advisor (https://tulane.app.box.com/s/mc15nvynrnowmwgdpkzgd8sabm0hqv0n/) (no later than the second semester of residence), students must obtain agreements from a minimum of three chemistry faculty members (other than the dissertation advisor) to participate as members of their dissertation committee. Two members must be within the division of the research advisor and one member of the committee must be from a division in the Chemistry Department other than that of the research advisor. Students must submit to the Chemistry Department a signed and completed *Thesis / Dissertation Committee Form*. The form can be obtained on the department's website.

Dissertation Prospectus

By the end of the fifth semester, students must submit a written proposal of their dissertation research project and make an oral presentation of it to their dissertation committee. The prospectus should be approximately two thousand words in length (excluding legends and references). The cover sheet should state the student's name, department/program, the title of the proposed dissertation, and the name of the chair and the other members of the committee. The introduction of the prospectus should contain a summary of earlier work on the problem in question. The body should include an orderly description of the work accomplished to date and a plan for future investigations. The conclusion should clearly state the anticipated nature of the investigation results. Major sources of information should be indicated and a selective bibliography attached. The prospectus should be submitted to the SSE Dean's Office along with a signed copy of the prospectus approval form.

Admission to Candidacy

Prior to the dissertation, an application for admission to candidacy should be filed with the SSE. This should be done approximately one semester before the final dissertation. Deadlines are posted on the SSE website.

Dissertation

The Ph. D dissertation must reflect the ability of the student to conduct an independent investigation which results in an original contribution to knowledge or an original interpretation of existing knowledge. The research is expected to be reported to the scientific community in the form of publications in refereed journals and/or conference presentations. The student should consult the SSE Dean's office to determine the proper format for the Ph.D. dissertation. Upon completion of all other Ph.D. requirements, the student will give a final oral defense of their Ph.D. dissertation. A written draft of the dissertation should be available to the dissertation committee two weeks prior to the oral defense. This final examination will consist principally of the defense of the dissertation, but may be extended at the discretion of the Ph.D. examining committee to include course material. The satisfactory completion of this final requirement completes the student's doctoral program.

Computer Science Certificate

Overview

The **Undergraduate Certificate in Computer Science** offers students from across the university to develop a strong understanding of the fundamentals of computer science and programming that will increase their competitiveness for future jobs and/or post-baccalaureate studies. The certificate must be attached to a degree and cannot be earned as an independent certificate. The certificate also cannot be earned in addition to the traditional Coordinate Major in Computer Science; students can earn one or the other, but not both.

The requirements for the **Undergraduate Certificate in Computer Science** are highly flexible to provide students the opportunity to specialize their study in ways that complement their chosen major. It also offers students the opportunity to take a few courses in computer science before deciding whether or not to go for the full major. The

certificate will require 3-4 semesters to complete as there is a one year sequence of introductory classes that must be taken in order.

There are multiple entry and exit points for students wishing to pursue the certificate. Students who begin by pursuing the Computer Science Coordinate Major will enter with CMPS 1500 Intro to Computer Science I (4 c.h.), which is a more rigorous course that sets students up for success in CMPS 2200 Intro to Algorithms (3 c.h.) and later courses required for the Major. However, students who are more "computer science curious" can enter with CMPS 1100 Foundations of Programming (3 c.h.) followed by CMPS 3160 Introduction to Data Science (3 c.h.) which will provide them with a comparable foundation at a gentler pace.

Students that have a firm desire to take only a small number of advanced CMPS courses, e.g., Machine Learning, Bioinformatics, or Computational Geometry, can take a sequence consisting of CMPS 1500 Intro to Computer Science I (4 c.h.), CMPS 1600 Intro to Computer Science II (4 c.h.), CMPS 2200 Intro to Algorithms (3 c.h.), and then the specific higher level elective.

Requirements

The **Undergraduate Certificate in Computer Science** requires the completion of a minimum of four courses consisting of the following. Note that the certificate must be attached to an undergraduate degree and cannot be earned as an independent certificate. The certificate also cannot be earned in addition to the traditional Coordinate Major in Computer Science; students can earn one or the other, but not both.

Course ID	Title	Credits
Select one of the following		
CMPS 1100 & CMPS 3160	Foundations of Programming and Introduction to Data Science	6 or 4
or CMPS 1500	Intro to Computer Science I	
CMPS 1600	Intro to Computer Science II	4
Select one or two courses at the 2000-level or above [1]		**3 or 6**
Students who complete CMPS 1100 and CMPS 3160 must complete one additional CMPS course at the 2000-level or higher; Students who complete CMPS 1500 will take two courses at the 2000-level or above to complete this certificate.		

[1] CMPS 2170 Intro to Discrete Math (3 c.h.) or MATH 2170 Intro To Discrete Math (3 c.h.) is a required prerequisite for CMPS 2200 Intro to Algorithms (3 c.h.), however CMPS 2170 Intro to Discrete Math (3 c.h.) or MATH 2170 Intro To Discrete Math (3 c.h.) **will not** count towards the requirements for the certificate.

Computer Science Coordinate Major

The Tulane Computer Science Coordinate Major program helps students develop into leaders who are able to solve interdisciplinary problems using the tools of computer science and computing technology.

What is a coordinate major?

A *coordinate major* is an additional major designed to complement the primary one. To earn a coordinate major in computer science, students must also complete a major in another discipline. Any undergraduate major at Tulane can serve as a primary major for the computer science coordinate major.

Upon successful completion of the coordinate major, the student's transcript will reflect the fact that the student has completed the coordinate major in computer science with a focus on the area of application. The Department of Computer Science doesn't currently offer a standalone Bachelor of Science in Computer Science degree or computer science minor. While this might change in the future, students should not count on the possibility of either when deciding on enrolling at Tulane or in computer science courses. The undergraduate degree (Bachelor of Science or Bachelor of Arts) received by the student is determined by their primary major.

Other computing courses

Students interested in computing, but not in pursuing the coordinate major, are invited to consider our foundational course for non-majors, CMPS 1100 Foundations of Programming (3 c.h.).

About the department

More info about the Department of Computer Science and the program is available on the department webpage (https://sse.tulane.edu/cs/).

Requirements

Coursework

The program comprises 10 courses:

- Five introductory core courses, CMPS 1500 Intro to Computer Science I (4 c.h.), CMPS 1600 Intro to Computer Science II (4 c.h.), CMPS 2170 Intro to Discrete Math (3 c.h.), CMPS 2200 Intro to Algorithms (3 c.h.), and CMPS 2300 Intro to Comp Sys & Networking (3 c.h.).
- At least three CMPS elective classes at the 3000-level or above.
- A two-semester interdisciplinary capstone project, CMPS 4010 Capstone Project 1 of 2 (2 c.h.) and CMPS 4020 Capstone Project Part 2 of 2 (2 c.h.).

These courses total 30 credit hours and can be completed over five or more semesters.

Two starting classes for the program are CMPS 1500 Intro to Computer Science I (4 c.h.) and CMPS 2170 Intro to Discrete Math (3 c.h.).

The five core courses should be completed before the student's senior/final year at Tulane.

CMPS 4010 Capstone Project I (2 c.h.) and CMPS 4020 Capstone Project II (2 c.h.) are each offered once a year, in the fall and in the spring, respectively. The capstone is usually completed in the senior year. Students continuing to 4 + 1 Master's programs in other departments are encouraged to complete the capstone in the senior year, but are allowed to complete the capstone in their final year at Tulane. Students graduating early enroll in the capstone in the junior year. A two-semester Honors Thesis in Computer Science

can be used in place of the Capstone Project requirement. Students wishing to complete an Honors Thesis should coordinate with their major advisor in their junior year. The Honors Thesis readers and topic must be decided before the senior year. For more information about the Honors Thesis, see the Honors Thesis webpage (https://enrichment.tulane.edu/honors-thesis-0/).

Academic requirements

In order to enroll in the senior capstone course, the student should achieve a cumulative GPA of 2.8 or above for the five introductory core courses. In order to graduate with the coordinate major in computer science, the student should achieve a cumulative GPA of 2.8 or above in all CMPS courses.

Declaring the coordinate major

To declare the coordinate major in computer science, please complete and sign the major declaration form and email it to Ms. Debbie Ramil (dramil1@tulane.edu), who will assign you a coordinate major advisor, obtain the corresponding advisor's and the departmental chairman's signatures for your form, and return the form to you. The completed form needs to be submitted to the Advising Office. When you declare your pursuit of the coordinate major, you should have already declared your primary major. When the major declaration form is processed, you will be added to the CS students mailing list. In order to enhance your CS education, you may also wish to join computing-focused student organizations, such as Cookies and Code, Women in Technology, and Girls Who Code. Their info is on WaveSync.

1 Same as MATH 2170 Intro To Discrete Math (3 c.h.)

2 Spring of Sophomore Year - In consultation with Faculty Advisor, choose three CMPS courses at or above 3000-level.

3 Students who wish to complete an Honors Thesis must arrange for their readers and a topic in their junior year. See Honors Thesis website (https://enrichment.tulane.edu/honors-thesis-0/) for more information about the Honors Thesis.

Academic prerequisites

The program is open to all students willing to put time and work into becoming computing professionals. It doesn't assume that students have any previous computer science background. Many of our graduates have never programmed a computer before joining their first computer science class. The department holds several help sessions most days of the week to provide help to students when they have questions while working on computer science homework.

Prior computing experience

Advanced Placement (AP) computer science courses taken by a student in high school usually transfer toward overall college credit. (This is decided by the Tulane University Office of Undergraduate Admissions.) These courses do not have much overlap with our introductory courses and hence don't count toward the coordinate major.

If a student can demonstrate solid knowledge of the material covered in one of the required courses, after consultation with their faculty advisor, they can "skip" the required course and replace it with a CMPS elective of their choice instead. The minimum total number of completed CMPS courses should remain 10.

Transfer coursework

Transfer of college-level courses follows the standard Tulane credit transfer procedure. There is no special department-level limit on the number of courses that can transfer; we adhere to the limit established by Newcomb-Tulane College. In order for a course from another university to count for the coordinate major, it should match a corresponding Tulane course in content and/or complexity; mode of delivery (online, in-person, hybrid) doesn't affect this evaluation. Computing courses on subjects not offered by Tulane might be transferrable. Students should confirm with the Department of

Computer Science whether the course would transfer as a coordinate major course before registering.

Study abroad

With advanced planning, it may be possible to study abroad and complete the coordinate major. Students should confirm with the Department of Computer Science whether and how the foreign courses would transfer before registering.

Programming languages

We often get asked what programming languages we teach. In fact, we teach principles, concepts, and problem-solving approaches rather than specific languages. CMPS 1500 is in Python. CMPS 1600 uses Java, C, C++, Haskell, and a surprise language. The elective courses use a language that's necessary to achieve the tasks of the course (e.g. Javascript, Scala, Ruby). Our successful students get used to learning new languages and are able to study the basics of any computer language on their own.

Computer specifications

Another common area of inquiry is about buying a computer. It is helpful and convenient to have a laptop. We don't have a computer lab, and students work on their own laptops to complete most programming assignments. Model and make don't matter; any modern laptop with Wi-Fi and a battery works. If buying or bringing a laptop is problematic, all necessary work can be done on university stationary computers or loaner laptops. It is possible to do well in all computer science courses without owning a computer.

Computer Science, MS

Overview

The Master's Program in Computer Science is offered in coursework and thesis tracks. The coursework option requires both breadth and depth requirements. The breadth requirement ensures students obtain a solid foundation in core computer science areas, while the depth requirement allows students to design a sequence of courses to target a particular area of interest. The thesis track further allows students to conduct research in a chosen area of interest. The Master's degree can also be pursued in a 4+1 format in conjunction with the Coordinate major in Computer Science.

Requirements

The M.S. program requires 30 credit hours of graduate coursework. Coursework requirements vary slightly depending on the chosen track, but consist of 12 credits of breadth coursework and 12-18 credits of depth coursework. Below we outline these degree tracks with their associated course requirements and provide some example curricula. We note that some of these example curricula do not have full-time enrollment in all semesters. Additional electives can be added in these slots as needed for full-time requirements.

Coursework and Degree Tracks

At the high level, the course requirements for the M.S. can be thought of as having a *core requirement* and an *elective requirement*. The core requirement is identical to that of our Ph.D. program, which requires of one core course from each of three breadth areas (Algorithms, Systems and Artificial Intelligence/Machine Learning), for a total of three courses counting for 9 credit hours. Currently the Algorithms area requirement is fulfilled by CMPS 6610 Algorithms (3 c.h.) (Algorithms), the Systems area is fulfilled by CMPS 6750 Computer Networks (3 c.h.) or CMPS 6760 Distributed Systems (3 c.h.) (Distributed Systems), and the AI/ML area requirement is fulfilled by CMPS 6620 Artificial Intelligence (3 c.h.) (Artificial Intelligence) or CMPS 6720 Machine Learning (3 c.h.) (Machine Learning). The available degree tracks are the *coursework*, *project* and *thesis* tracks; each of these can also be completed in the 4+1 format for existing coordinate majors.

Depending on the chosen option, the remaining 21 credit hours can be fulfilled by some combination of CS electives and thesis work. A CS graduate elective is any CS course that is 6000-level or higher (excluding CMPS 6100 Introduction to Computer Science (3 c.h.) and CMPS 7010 Research Seminar (3 c.h.)). Core courses not counted toward the core requirement also can count toward elective requirements. A comprehensive list of current courses can be found here. Finally, thesis work can be conducted by taking CMPS 9980 Masters Research (0 to 3 c.h.) (Master's Thesis) over two semesters for a grade. In both the coursework and thesis options we seek to encourage elective choices that are coherent enough to provide a specialized area of study, but flexible enough that students can explore different areas of computer science. Below we give examples of each track with sample curricula.

Coursework and Project Tracks.
The 21 credit hours remaining after taking core courses for the coursework only track consists of 7 courses. In some instances, it may be possible to submit a petition to the Graduate Studies Committee to count non-CS courses for elective credit (e.g., in an interdisciplinary subject area). No more than 2 such graduate courses may be counted toward M.S. coursework credit.

CMPS 6740	Reinforcement Learning	3

While the M.S. program is split into coursework and thesis, students can also pursue project work via the coursework track using independent study and research courses. Project work can consist of research activities, or an independently chosen course of student supported by a faculty mentor (i.e., the Independent Study instructor). Project requirements do not rise to the level of a thesis but require that the project goals and progress be clearly evaluated in the syllabi of the courses taken. Here is a sample curriculum with a Data Science focus:

Thesis Track.

The thesis option requires the completion of a Master's Thesis supervised by an advisor chosen by the end of the 2nd semester. This option requires 6 credit hours of a thesis course (for a grade) and 15 credit hours of CS electives. Students must also form an M.S. Thesis Committee by the end of their 2nd semester. The M.S. Thesis Committee will consist of an advisor, one CS faculty member and one other SSE faculty member. The final thesis must be presented and approved by the committee prior to the end of their 4th semester.

4+1 Track.

SSE allows at most 6 graduate credit hours to be counted toward both undergraduate and graduate degrees. In our department, advanced undergraduate electives are available as "mezzanine" courses, with undergraduate and graduate sections that can count for undergraduate or graduate credit, respectively. For the 4+1 degree program, undergraduate students can count 6 credit hours of these courses toward both the CS coordinate major as well as an M.S. degree by enrolling in graduate-level sections. Additionally, up to 6 additional credit hours of graduate coursework completed during the undergraduate degree (beyond the 120 credit hour requirement for undergraduate degrees) may also be counted toward the 4+1 degree. We give two sample curricula below.

4+1 Track: Data Science Focus

Here, we assume that 2 undergraduate CS electives have been taken that will count toward the 4+1 degree.

Course ID	Title	Credits

Computer Science, PhD

The PhD Program in Computer Science guides students from beginning graduate study in Computer Science all the way through to completion of their dissertation research.

The objective of the program is to ensure students obtain a solid foundation by requiring them to take graduate courses in a number of core areas of computer science. A depth requirement involving the attendance of a sequence of courses from one or more areas will enable the student to acquire world-class expertise on a research area of concentration. Students also will be expected to engage in research as early as their incoming semester. This will be accomplished by the research courses and research seminars that will prepare students by engaging them in research from the start.

More detailed information about the PhD program can be found on the following program page: https://sse.tulane.edu/cs/academics/graduate/phd-programs (https://sse.tulane.edu/cs/academics/graduate/phd-programs/) .

Requirements

The program requires 48 credit hours of graduate course work, including core computer science courses, research courses starting in the first year, as well as an interdisciplinary research project. After an oral qualifying examination at the end of the fifth semester, the prospectus presentation is scheduled at the beginning of the seventh semester, and the final milestone is to complete and defend a dissertation.

Course requirements are broken down into four areas: core courses, research courses, the interdisciplinary project and electives. Students are required to complete at least 48 credit hours (typically 16 classes) of coursework. This consists of:

- 9 credit hours of core classes
- 9 credit hours of research courses in the first two years
- 9 credit hours for the interdisciplinary project
- 9 credit hours of Computer Science electives
- 12 credit hours of general electives

Each student is required to devise a schedule of courses in consultation with their faculty advisor.

Core Courses

As a breadth requirement that ensures a good foundation in graduate Computer Science coursework, each PhD student is required to take one class (3 credit hours) in each of the three categories below with a grade point average of at least 3.5 for these three courses. Courses in which an inadequate grade is received may be repeated once. These courses are from the following core areas:

- Algorithms: CMPS 6610 Algorithms (3 c.h.)
- Systems: One of CMPS 6750 Computer Networks (3 c.h.) or CMPS 6760 Distributed Systems (3 c.h.) or CMPS 6780 Computer Architecture (3 c.h.)
- AI/ML: One of CMPS 6620 Artificial Intelligence (3 c.h.) or CMPS 6720 Machine Learning (3 c.h.)

The core courses have to be completed before the student's oral qualifying exam.

Research Courses in the First Two Years

Students are expected to engage in research early on, possibly as early as their incoming semester, but no later than the third semester. This is facilitated through research courses, as well as through the interdisciplinary project. Students are required to take at least three research classes (9 credit hours). Typically, these classes consist of CMPS 7010 Research Seminar (3 c.h.) in the first year, and one offering of CMPS 7020 Research in Computer Science (3 c.h.) in the second year. CMPS 7010 Research Seminar (3 c.h.) introduces students to research methods in Computer Science and to the research conducted in the department. In the CMPS 7020 Research in Computer Science (3 c.h.) course PhD students engage in a research project in Computer Science, under the direction of a faculty member, normally the student's faculty advisor.

Interdisciplinary Project

Each student is required to complete an interdisciplinary research project. The project is directed by a faculty member in Computer

Science, and it consists of interdisciplinary research in a related area. During the rst-year research seminar classes, students are exposed to the research areas represented by the department faculty. Students are encouraged to identify a faculty advisor and a research topic for their interdisciplinary project during these seminar classes. If a student is unable to identify a project, the Graduate Studies Committee assigns a faculty mentor to advise the student and help develop an interdisciplinary project. The requirements for the interdisciplinary project are:

- Students must take one graduate class (3 credits or more) in Computer Science that prepares them for the project. Examples include CMPS 6630 Computational Bio & Bioinform (3 c.h.), CMPS 6360 Data Visualization (3 c.h.), CMPS 6640 Advanced Computational Geometry (3 c.h.), CMPS 6150 Multi-agent Systems (3 c.h.).
- Students must take one graduate class (3 credits or more) outside of Computer Science in the area most relevant to the interdisciplinary project.
- Students must enroll in a directed research course (3 credits), such as CMPS 7020 Research in Computer Science (3 c.h.), to conduct the interdisciplinary research.
- The project culminates in a final report, possibly a published research paper, that summarizes the research outcomes. Students also are required to present the outcomes of their project in a public talk in the department.

Typically, students are exposed to interdisciplinary research during their first year in research seminar classes. They start the interdisciplinary project in their third semester, and the expectation is that the project is completed by the end of the second year.

Elective Courses

The following elective courses are part of the PhD requirements:

- Computer Science electives: Students are required to enroll in 9 credit hours of graduate courses in Computer Science, chosen from PhD-level classes except for CMPS 7010 Research Seminar (3 c.h.), CMPS 7020 Research in Computer Science (3 c.h.), CMPS 7980 Independent Study (3 c.h.). PhD-level classes are listed on the graduate program's webpage and course catalog.
- General electives: Students are required to enroll in 12 credit hours of general electives that can be CMPS 7020 Research in Computer Science (3 c.h.) or graduate courses in Computer Science, chosen from PhD-level classes except for CMPS 7010 Research Seminar (3 c.h.). With approval of the Graduate Studies Committee, at most 9 credit hours of general electives may be replaced with graduate electives outside of Computer Science.

Faculty Advisor

Students are typically paired with an advisor upon entry into the program and are encouraged to begin research with a faculty advisor and their dissertation research topic as soon as possible, but no later than the end of their second year. The advisor will be the faculty member supervising the student on the interdisciplinary research project. Students should plan and discuss their progress through coursework and PhD milestones with their advisor regularly, but at least once a year after receiving feedback from the Graduate Studies Committee.

It is also possible for students to be co-advised by more than one faculty member, as long as one of the advisors is a full-time faculty member in the Department of Computer Science. Co-advisors can include faculty members with adjunct appointments in the CS department. Additionally, any new co-advising arrangement must be supported with a mentoring plan approved by the Graduate Studies Committee. This mentoring plan will outline plans for financial support and how students will make progress through their degree milestones.

PhD Committee

During the student's fourth semester, the student and the faculty advisor draft a proposed list of members of the student's PhD committee. The proposed committee must be approved by the Graduate Studies Committee. Initially, the PhD committee consists of at least three faculty members: the Computer Science faculty advisor and two additional faculty members. Two of these committee members must be full-time faculty members from the Department of Computer Science. The third committee member may be a Tulane faculty member from outside the Department of Computer Science, as appropriate. This committee administers the qualifying oral examination, attends the prospectus presentation and approves the written prospectus, and attends the thesis defense.

During the summer before the student's third year, a fourth member of the committee is recruited. This member must be external to Tulane. The external committee member must attend the student's prospectus presentation, approve the written thesis and attend the thesis defense. A requirement for the thesis committee is that at least three of the members, have a terminal (i.e., PhD) degree.

The PhD Committee provides advice and guidance throughout the student's course of study, oversees the qualifying exam, the prospectus, and the dissertation defense.

Oral Qualifying Exam

The oral qualifying exam typically takes place in the fifth semester, administered by the PhD committee. Before taking the oral qualifying exam, the student must have completed the core requirements as well as the interdisciplinary project. The PhD committee compiles a reading list the student is responsible for in the oral qualifying exam. The purpose of this exam is to ensure the student is qualified to do independent research. The student is tested over a set of selected topics related to the student's research area. The student is informed about the material covered on the exam during the semester preceding the exam. The exam may start with a short presentation by the student and is followed by questions from the committee. The oral qualifying exam must be passed before the end of the fifth semester; it can be retaken at most once.

Prospectus

At the beginning of the student's seventh semester, the PhD committee attends an oral prospectus presentation given by the student. In the presentation, the student describes the central problem that will be addressed in the dissertation, including the background needed to place the problem properly in perspective. The purpose of the presentation is to give the student feedback about the proposed problem(s), evaluate progress and the overall plan for the dissertation work, and finally to provide constructive feedback. The written component of the prospectus is a 10-15 page document that summarizes these points and is approved by the advisor and PhD

committee. Upon successful completion of the Prospectus, candidacy forms and the written prospectus are submitted for departmental and SSE approval.

Dissertation Research and the Dissertation

After passing the oral qualifying exam, a student focuses primarily on research in a particular area in which they have chosen to do their dissertation research, participating in research projects overseen by their advisor. In many cases, the student co-authors papers in conferences and journals about the research results obtained during these research activities. Then the dissertation will comprise a compilation of the results, with the expectation that the student utilizes the dissertation to present the material as a coherent theme. A draft of the thesis must be circulated to the PhD committee at least one month before the final version is due in the School of Science and Engineering, and the committee will render a verdict on whether the dissertation meets the standards to be accepted for the PhD degree.

Example Schedule

In this example schedule, 48 credit hours (typically 16 classes of 3 credit hours each) are composed of:

- 9 credit hours of core classes:
  - Shown as CMPS 6610 Algorithms (3 c.h.), CMPS 6750 Computer Networks (3 c.h.), CMPS 6620 Artificial Intelligence (3 c.h.)
- 9 credit hours of research courses:
  - Shown as two offerings of CMPS 7010 Research Seminar (3 c.h.) and one CMPS 7020 Research in Computer Science (3 c.h.)
- 9 credit hours for the interdisciplinary project:
  - Shown as CMPS Elective, Non-CMPS Elective, CMPS 7020 Research in Computer Science (3 c.h.)
- 9 credit hours of Computer Science electives and 12 credit hours of general electives

Earth and Environmental Sciences Major

Overview

Earth and Environmental Sciences is a broad interdisciplinary field dedicated to understanding the origin and evolution of the Earth. This discipline includes the study of climate, water, landscapes, earthquakes, volcanoes, prehistoric life, planets, natural resources, and the impact of humans on the environment. To help solve some of the greatest challenges facing human society, students majoring in Earth and Environmental Sciences will gain knowledge of Earth's materials and the physical, chemical, and biological processes that have operated throughout Earth's history. The curriculum also emphasizes active and collaborative learning and provides ample opportunities for research, field trips, and study abroad coursework around the world. Students graduating with a degree in Earth and Environmental Sciences will be prepared for graduate or professional programs or direct entry into the workforce. Earth and Environmental Sciences majors may go on

to careers in industry, technology, consulting, nonprofits, government, education, and law.

Requirements

Course requirements for the Earth and Environmental Sciences major are outlined below:

Course ID	Title	Credits
One Introductory Course (choose one introductory EENS course with lab of the following)		**4**
EENS 1110 & EENS 1115	Planet Earth and Planet Earth Lab	
EENS 1300 & EENS 1305	Earth as a Living Planet and Earth as a Living Planet Lab	
EENS 2220 & EENS 2225	Earth & Life Through Time and Earth & Life Through Time Lab	
Core Courses		**16**
EENS 2090 & EENS 2091	Shaping the Earth's Surface and Shaping the Earth's Surface Laboratory	
EENS 2100 & EENS 2101	Dynamic Planets and Dynamic Planets Lab	
EENS 2110 & EENS 2111	How to Build a Habitable Planet and How to Build a Habitable Planet Laboratory	
EENS 2120 & EENS 2121	Climate and Extinction and Climate and Extinction lab	
Six Electives in selected track		**18-24**
Select the Earth and Planetary Science Track or the Environmental Science Track [1]		
Three electives must be at the 3000-level or above		
Only two courses outside of the Earth & Environmental Sciences department may count towards the major.		
No more than two GIS certificate course may count as electives towards the major in EENS. See Elective Lists below for more details.		
Required Courses Outside EENS		
Two Mathematics Courses		8
MATH 1210	Calculus I [1]	
MATH 1220	Calculus II [1]	
or MATH 1230	Statistics For Scientists	
Three Sciences Courses		12
CHEM 1070 & CHEM 1075	General Chemistry I and General Chemistry Lab I	
PHYS 1310 & PHYS 1311	General Physics I and General Physics I Lab	
or PHYS 1210 & PHYS 1211	Introductory Physics I and Introductory Physics I Lab	
EBIO 1010 & EBIO 1015	Diversity of Life and Diversity of Life Lab	
One Senior Experiential Learning Course		**3-7**
Field-based course [3]		
EENS 4560 & SRVC 4890	Public Service Internship and Public Service Internship	
EENS 4570	Internship	
EENS 4990 & EENS 5000	Honors Thesis and Honors Thesis	
Total Credit Hours		**61-71**

1. Students should consult with their major advisor to review available electives and to select a track.
2. Math 1150 and 1160 ((Long Calculus sequence) may be taken instead of MATH 1210 to complete the Calculus 1 requirement. MATH 1310 Consolidated Calculus (4 c.h.) may be taken instead of MATH 1210 Calculus I (4 c.h.)/MATH 1220 Calculus II (4 c.h.)
3. Field-based courses include a range of options, typically transferred from another accredited university-level program. These include geoscience field camp courses, applied field-based geophysics courses, and coastal and/or marine science courses. Department approval is required.

Earth and Environmental Sciences Minor

Overview

The Earth and Environmental Sciences minor provides a broad overview of basic geoscience concepts that may be beneficial to students with majors or interests in the following: anthropology, business, chemistry, communications, ecology and evolution, economics, K-12 education, environmental law, environmental studies, history, public health, physics, political science, or other liberal arts or science and engineering fields.

Requirements

Course requirements for the Earth and Environmental Sciences minor are outlined below:

Course ID	Title	Credits
One Introductory Course		
Any introductory EENS course with lab		4
EENS 1110 & EENS 1115	Planet Earth and Planet Earth Lab	
EENS 1300 & EENS 1305	Earth as a Living Planet and Earth as a Living Planet Lab	
EENS 2220 & EENS 2225	Earth & Life Through Time and Earth & Life Through Time Lab	
One Course Course		**3-4**
EENS 2090	Shaping the Earth's Surface	
EENS 2100	Dynamic Planets	
EENS 2110	How to Build a Habitable Planet	
EENS 2120	Climate and Extinction	
Electives		
Four EENS courses at or above the 2000-level. [1]		12-16
A minimum of one EENS elective course at the 3000-level or above		3-4
Total Credit Hours		**22-28**

[1] Choose electives from the either track of the Earth and Environmental Sciences Major.

Earth and Environmental Sciences, MS

The geosciences aim to increase our understanding of the composition and evolution of the Earth, including its fundamental role in creating the natural environment that humans inhabit. As such, this broad field addresses problems that will likely constitute some of the premier challenges for humankind in the 21st century, given the need to feed a rapidly growing world population, the continuously increasing per capita demand for natural resources, and the associated impacts such as climate change and the vast spectrum of more regional environmental impacts.

Requirements

Applicants pursue a thesis program for a Master of Science degree. To be acceptable, the thesis must contain an original contribution to knowledge and be in form and of literary quality worthy of publication. Students must form a thesis committee and present a prospectus that will serve as a guideline for their thesis before the start of their fourth semester. In addition to the thesis, 24 semester hours of course work at the 6000-9000 level are required. Those expecting to continue into a Ph.D. program can either finish their Master degree or pass a Ph.D. qualifying exam before their fifth semester.

Earth and Environmental Sciences, PhD

The geosciences aim to increase our understanding of the composition and evolution of the Earth, including its fundamental role in creating the natural environment that humans inhabit. As such, this broad field addresses problems that will likely constitute some of the premier challenges for humankind in the 21st century, given the need to feed a rapidly growing world population, the continuously increasing per capita demand for natural resources, and the associated impacts such as climate change and the vast spectrum of more regional environmental impacts.

Requirements

All students working for the Ph.D. degree must satisfy the general requirements as listed below. The master's degree is not a requirement for the Ph.D. in Earth and Environmental Sciences.

Candidates must demonstrate a high degree of creative or research ability and fulfill the following requirements:

1. Pass a qualifying examination before their fifth semester
2. Complete at least 48 semester hours of course work at the 6000-9000 level with approval by the graduate advisor
3. Form a dissertation committee and present a dissertation prospectus that will serve as a guideline for dissertation
4. Present an original contribution in the form of a written dissertation suitable for multiple publications in peer-reviewed journals and successfully defend their dissertation it in a public oral defense of the work

Geographic Information Systems Certificate

The Department of Earth and Environmental Sciences at Tulane University offers a certificate program in Geographic Information Systems (GIS). GIS interfaces, like ESRI ArcGIS, are focused on integration, management and interpretation of remote and ground-based datasets and are important tools for a variety of fields, including physical and environmental sciences, life science, urban planning and management, political science, civil engineering, anthropology, economy/business, education administration, real estate, public health and health care.

The primary goal of this certificate program is to ensure that students become grounded in GIS concepts and theory including organization, management, and visualization of geospatial data, as well as in the acquisition and interpretation of remote datasets.

Requirements

A minimum of 13 credits distributed over two required courses and two electives is necessary to complete the GIS certificate. This coursework is typically completed over two years.

Course ID	Title	Credits
Required Courses		
EENS 3150/6150/ EBIO 6150	Intro to GIS (Fall and Summer)	4
EENS 4030/6030	Advanced GIS (Spring and Summer)	3
Elective Courses		
Select two of the following:		6
EENS 4180/6180	Intro Remote Sensing (Fall)	
EENS 4380/6380	Remote Sensing for Environmental Analysis (Spring)	
EENS 4390/6390	Geospatial and Numerical Methods (Fall)	
EENS 4370	Independent Study in GIS and Remote Sensing	
Special Topics [1]		
Total Credit Hours		**13**

[1] Student can use GIS and Remote Sensing in any research topic. (Independent study should be approved by the Director of GIS program), Fall, Spring, Summer. Students cannot exceed 3 credits for special topic courses.

Department of Ecology and Evolutionary Biology

Programs

Mission Statement

The Department of Ecology and Evolutionary Biology is committed to excellence in teaching, research and service to our communities. We strive to integrate our scientific and educational missions in ecology and evolutionary biology by discovering new knowledge through programmatic research and by providing a rich learning environment for undergraduate and graduate students. We prepare our students for a wide range of disciplines, from biology, environmental science, and conservation to law, medicine, and public health; and for both the creation and dissemination of knowledge.

Our teaching and research includes genomes, organisms, populations, communities, ecosystems, and global systems as we focus our efforts on conservation biology, ecosystem ecology, environmental biology, evolutionary biology, systematics, tropical ecology, disease ecology, and global change, including climate change. We emphasize tropical biology, wetlands and coastal ecosystems, and global change biology centered geographically, but not exclusively in the subtropics — especially Louisiana — and the American tropics.

Achieving our scientific mission is predicated on fostering an inclusive environment that welcomes and supports students, faculty, and staff from marginalized and underrepresented communities, including BIPOC, LGBTQ+, low income, first generation college students and people with disabilities. Academia broadly, and the fields of ecology and evolutionary biology specifically, have a long and well-documented history of racism and exclusivity that continues in many forms to this day. To remove the biases that prevent so many from engaging with, and succeeding in our field, we embrace proactive policies including sensitivity training, targeted funding opportunities, and equal-opportunity hiring and recruiting practices. We consider this work integral to the success of our department, The School of Science and Engineering and Tulane University, and to our academic disciplines.

Ecology and Evolutionary Biology Major

The major in Ecology and Evolutionary Biology is an innovative program of study. Our diverse faculty offer engaging, student-centered courses with ample opportunities for hands-on learning in the lab and field in addition to research and study abroad programming in Ecuador, Australia, and Scandinavia, for example. Students are encouraged to join our labs, where they can develop a wide range of skills and expertise in areas including molecular and microbiology, physiology, animal behavior, and disease and field ecology. The EBIO major prepares students for careers in zoology, botany, conservation, science education, consulting, non-governmental organizations, as well as graduate and professional programs. Students interested in pursuing advanced study in public health, medical or veterinary school also benefit from the breadth and depth of the major, and the unique extent of faculty-student engagement.

The Ecology and Evolutionary Biology Department also offers a major in Environmental Biology and minors in Ecology and Evolutionary Biology and in Marine Biology to undergraduate students.

Requirements

The major in ecology and evolutionary biology provides understanding of the structure and function of organisms and their evolution and ecology. Majors must complete six core courses, six elective courses, two chemistry courses, two mathematics courses, and the capstone requirement.

Course ID	Title	Credits
Core Courses		
EBIO 1010 & EBIO 1015	Diversity of Life and Diversity of Life Lab	4
EBIO 1020 or CELL 1010	Mechanisms of Life Intro to Cell & Molec Biology	3
EBIO 2020	Theory and Methods in Ecology and Evolutionary Biology	3
EBIO 2070 & EBIO 2071	Molecular and Evolutionary Genetics and Molecular and Evolutionary Genetics Recitation [1]	4
or CELL 2050 & EBIO 2072	Genetics and Quantitative, Population & Evolutionary Genetics	
EBIO 3040 & EBIO 3045	General Ecology and General Ecology Lab	4
EBIO 3080	Processes of Evolution	3
Ecology and Evolutionary Biology Electives		
Select elective courses from approved lists [2]		
Three 3-credit-hour Ecology and Evolutionary Biology Lectures		9
Three 4-credit-hour Ecology and Evolutionary Biology Labs		12
Ecology and Evolutionary Biology Capstone **EBIO 5970 (3 credit hours) carries the NTC Tier-2 Writing Attribute**		
Select Capstone Courses [3]		
EBIO 5970	Capstone Research Seminars	2-3
or EBIO 5971	Capstone Research Seminars	
General Chemistry Requirement		
CHEM 1070 & CHEM 1075	General Chemistry I and General Chemistry Lab I	4
CHEM 1080 & CHEM 1085	General Chemistry II and General Chemistry Lab II	4
Mathematics Requirement		
Two semesters of Mathematics [4]		6
Total Credit Hours		**58-59**

Note(s): Additional courses in biological statistics and physics are also highly recommended.

1. The option of CELL 2050+EBIO 2072 is available only to double majors and/or pre-health students whose outside program otherwise require CELL 2050.
2. Three 3-credit lecture electives and three 4-credit lab electives (see department courses (p.) listing) are selected according to the interests of the student in consultation with the major advisor. In addition, a student may use a maximum of one lecture course and one lab course from an approved list of courses (see below) from other departments as elective courses. Courses representing internship studies, independent studies, and seminars may not count as elective courses. EBIO 4990 Honors Thesis (3 c.h.) and EBIO 5000 Honors Thesis (4 c.h.) satisfy only one lecture elective in the major. Students who opt to write an Honors Thesis will take EBIO 4992 Honors Thesis Cohort (0 c.h.) in both semesters concurrently with the thesis courses.
3. This capstone requirement may be satisfied by completion of EBIO 5970 Capstone Research Seminars (3 c.h.) or EBIO 5971 Capstone Research Seminars (2 c.h.).
4. A minimum of 6 credits of mathematics is required for the Bachelor's degree. Any two Mathematics courses (MATH) numbered 1210 and above may be used to satisfy this requirement. However, the combination of MATH 1150 and MATH 1160 (Long Calculus) may only count as one course towards this requirement.

Extradepartmental Courses

One lecture course (3-credits) and one lab course (4-credits) from the list below which are not taught by Ecology and Evolutionary Biology

faculty are acceptable as two of the electives in the required programs for the EE Biology major if not already required by that major.

Course ID	Title	Credits
ANTH 3140	Primate Ecology and Behavior	3
ANTH 6500	Human Evolution	3
ANTH 3720	Adaptation and Human Variability	3
ANTH 3760	Primate Evolution and Adaptation	3

CELL 3750 & CELL 3755	Cell Biology and Cell Biology Laboratory	4
CELL 4010	Cellular Biochemistry	3
CELL 4110	Human Histology	4
CELL 4130	Embryology	3
CELL 4160	Developmental Biology	3
CELL 4220	Microbiology	3
CHEM 2410 & CHEM 2415	Organic Chemistry I and Organic Chemistry Lab I	4
CHEM 2420 & CHEM 2425	Organic Chemistry II and Organic Chemistry Lab II	4
CHEM 2480	Chemistry of Energy	3
CHEM 2500	Environmental Chemistry	3
CHEM 3830 & CHEM 3835	Intro To Biochemistry and Intro to Biochem Lab	5
SCEN 4110	Basic Medical Biochemistry	3

Ecology and Evolutionary Biology Minor

Overview

The Ecology and Evolutionary Biology minor provides students with the opportunity to gain knowledge and skills in ecological and evolutionary sciences and organismal biology. Our objective is to prepare Tulane graduates to be environmentally aware citizens with knowledge of global environmental challenges and their connections to cultural, social, and economic factors.

Requirements

Course ID	Title	Credits

EBIO 3590 & EBIO 3591	Plant Biology and Adaptation and Plant Biology and Adaptation Lab	
EBIO 3780	Community Engaged Conservation & Field Research	
EBIO 3690 & EBIO 3691	Experimental Animal Behavior and Experimental Animal Behavior Lab	
EBIO 4080	Biostatistics and Experimental Design	
EBIO 4110	Tropical Ecology & Agriculture	
EBIO 4270	Population Ecology	
EBIO 4370	Aquatic Autotrophs	
EBIO 4460	Biodiversity and Environmental Informatics	
EBIO 4030 & EBIO 4031	Field Botany and Field Botany Lab	
EBIO 4060 & EBIO 4061	Stream Ecology and Stream Ecology Lab	
EBIO 4090 & EBIO 4091	Invertebrate Paleontology and Invertebrate Paleontology Lab	
EBIO 4210 & EBIO 4211	Vertebrate Morphology and Vertebrate Morphology lab	
EBIO 4230 & EBIO 4231	Molecular Evolution and Ecology and Molecular Evolution and Ecology Lab	
EBIO 4280 & EBIO 4281	Ichthyology and Ichthyology Lab	
EBIO 4310 & EBIO 4311	Plant Systematics and Plant Systematics Lab	
EBIO 4430 & EBIO 4431	Entomology and Entomology Lab	

COLQ 4120	The Grand Canyon
Other upper-level elective courses as approved	
Total Credit Hours	**19-24**

Ecology and Evolutionary Biology, MS

The Department of Ecology and Evolutionary Biology offers the Master of Science degree in both a Thesis and Non-Thesis model (see degree requirements for detail.) The curriculum is designed to encourage maximum student choice and independence while maintaining a close student-advisor relationship. Students are encouraged to adopt a broad, integrative view of science and biological research. Course offerings cover such areas as animal and plant physiology, plant ecology, plant-animal interactions, population biology, structural and evolutionary biology, systematic biology, environmental toxicology, marine/estuarine ecology, and the biology of diverse groups of plants and animals. Students participate in an active departmental seminar program and informal research discussion groups.

Achieving our scientific mission is predicated on fostering an inclusive environment that welcomes and supports students, faculty, and staff from marginalized and underrepresented communities, including BIPOC, LGBTQ+, low income, first generation college students and people with disabilities. Academia broadly, and the fields of ecology and evolutionary biology specifically, have a long and well-documented history of racism and exclusivity that continues in many forms to this day. To remove the biases that prevent so many from engaging with, and succeeding in our field, we embrace proactive policies including sensitivity training, targeted funding opportunities, and equal-opportunity hiring and recruiting practices. We consider this work integral to the success of our department, The School of Science and Engineering and Tulane University, and to our academic disciplines.

Requirements

Thesis Model

Faculty Advisor

The student will consult his/her advisor in order to develop a course of study and to gain the advisor's approval for course registration. The faculty advisor must be a regular (full time) member of the department.

The potential applicant should contact the professor who is desired as advisor prior to making application to the Graduate Studies Program in the School of Science and Engineering. Admission to the EEB graduate program depends upon a faculty member committing to supervise the student's graduate program, including the thesis research and composition. Thus, each applicant must have contacted the potential advisor prior to the decision on her/his application for admission.

Entrance Interview

During the first semester of enrollment, each entering student interviews with the faculty advisor (Graduate Studies Committee Chair substitutes if an advisor has not been arranged) and two other regular faculty members. The purpose of the interview is to review prior courses taken by the student, discuss research interests and degree goals, and ensure that the student understands departmental graduate study procedures. Recommendations for coursework to address deficiencies or to enhance the student's program may be made during the interview. Download Entrance Interview Form (https://tulane.app.box.com/s/wb243g5hmhu7hxjckaqt2lpvan0dqbaz/).

Course Requirements

Course ID	Title	Credits
Year 1-2		
EBIO 6810	EEB Journal Review	1
EBIO 6910 & EBIO 6920	Independent Study and Independent Study This sequence could also be met by 2 sections of EBIO 7150 and EBIO 7160 OR Internship EBIO 7660 and EBIO 7670	2-8
EBIO 9980	Masters Research	3
Additional Approved Graduate level Electives		18-24
Total Credit Hours		**30**

Twenty-four semester hours of approved and graded graduate course work are required in addition to the production of an acceptable Masters of Science thesis. In general, up to 6 semester hours of transfer credit will be accepted toward the Masters of Science degree. Guidelines for acceptability of transfer credit can be found in the Graduate Catalog of the School of Science and Engineering. The Chair of the Department must approve all transfer credits. Courses taken at Tulane are usually taken in the EEB Department, but as many as nine graduate credits from other departments or divisions may be counted toward the course requirement.

Thesis

A student's faculty advisor will also be the director of his/her thesis research. A thesis committee must approve the completed thesis. The thesis committee will consist of at least three faculty members including the student's thesis advisor. EEB faculty must comprise a majority of the thesis committee. Each student must request approval for the composition of the thesis committee by letter addressed to the Chair of the Department. The thesis research must be presented to the Department in a public forum and defended at an oral examination conducted by the thesis committee. Specific instructions for thesis preparation are given in the Graduate Catalog of the School of Science and Engineering.

Non-Thesis Model (Terminal)

In order to earn this degree, students must have been admitted to the EEB graduate program through the regular Tulane University admissions process. Students admitted to the program must have completed the requirements for a baccalaureate degree in any discipline that includes course work in Chemistry (General Chemistry, and either Organic Chemistry or Biochemistry) and Biology (Genetics, Ecology, and Evolution). Additional coursework may be required to make up deficiencies. Students will meet with the graduate advisor prior to the beginning of his/her first semester to discuss appropriate course work for this degree.

Year 1		Credit Hours
EBIO 6810	EEB Journal Review	1
EBIO 6910 & EBIO 6920	Independent Study and Independent Study This sequence could also be met by 2 sections of EBIO 7150 and EBIO 7160 OR Internship EBIO 7660 and EBIO 7670	2-8

Additional Approved Graduate level Electives	21-27
Credit Hours	**30**
Total Credit Hours	**30**

All students seeking this degree must complete 30 credit hours of approved, graduate level coursework in EEB or other relevant departments. A maximum of 6 credits at the graduate level may be transferred to this degree program, at the discretion of the Chair of the Department.

4+1 Degree Program

A Five-Year Combined Degree Program - B.S. in Ecology and Evolutionary Biology (EEBI) or Environmental Biology (ENVB) and M.S. in Ecology and Evolutionary Biology

Description

The five-year, combined degree program is open ***only*** to Tulane undergraduate students. It combines the Bachelor of Science degrees offered by the Department of Ecology and Evolutionary Biology (EEB) with the terminal Master of Science degree in Ecology and Evolutionary Biology, condensing what would normally be about six years of study into five years. Students pursuing the interdisciplinary bachelor's degree in Environmental Science may also apply.

Undergraduate students typically graduate after four years of study, having fulfilled all regular requirements for the Bachelor of Science degree. The accelerated master's degree component allows six graduate credits (two 6000- or 7000- level courses) completed during the senior year to be applied to the B.S. degree as well as to the M.S. degree[1]. Each student pursuing the M.S. degree in Ecology and Evolutionary Biology then completes course work toward the master's degree during one additional year of graduate study. During the fifth (graduate) year the student typically completes a minimum of 24 credits of graduate work for a minimum total of 30 semester hours. The master's degree requires two semesters of independent study or internship courses instead of a written master's thesis. Each master's student will have a graduate advisor who has agreed to advise the student regarding the graduate program and to mentor the student during the independent study or internship.

Rationale

This degree program provides a broad background in the theories and methods of Ecology and Evolutionary Biology at the graduate level, and comprises a minimum of 30 graduate credit hours. The purpose of the 4+1 master's degree program is to provide students with training at the graduate level for one additional year beyond the baccalaureate degree. Thus, the master's degree component provides more complete preparation for future career paths than the Bachelor of Science degree alone. Students electing to pursue this degree program typically desire a broad background rather than a degree program involving a specialization in a particular area based on a master's thesis.

Students who are interested in seeking employment with environmental agencies of federal, state, and municipal government; non-governmental organizations; and in private industry, including environmental consulting firms, will want to take advantage of the elective courses (listed below) that can be taken outside the Department in credit toward this degree. This degree program also will be useful to students planning to enter the field of environmental law as the elective courses outside the Department include law courses in that field.

The degree program provides a foundation in Ecology and Organismal Biology. It requires independent study in Ecology and Evolutionary Biology (EBIO 6910, 6920) or Environmental Biology (EBIO 7150, 7160), or an internship with an approved off-campus agency (EBIO 7660, 7670). These components distinguish this terminal degree program from the thesis-based master's degree in EEB. The opportunity to undertake independent study or to accrue on-the-job training with a governmental or private agency through an internship lends a unique character to this program and may give graduates an employment advantage.

Eligibility

Applications and admissions for the 4+1 programs are rolling - applications are encouraged at any time of the year. Tulane undergraduate students are encouraged to talk with faculty about the 4+1 program during their junior year and may begin to take graduate level classes during their senior year, but should only apply formally during their senior year. By the end of the junior year (or at the time of application), candidates should have completed all LAS proficiency and distribution requirements for the B.S. degree and all core requirements for the major. Candidates are required to have a minimum 3.0 cumulative GPA and EEB GPA. To advance to the fifth (graduate) year, candidates must complete all requirements for the B.S. degree in EEB by the end of their senior year, while maintaining the minimum 3.0 cumulative and EEB GPAs. Teaching assistantships are not available to students pursuing this master's degree program.

Footnote

1. During the senior year, two 6000- or 7000-level courses (6 credits), chosen in consultation with the graduate faculty advisor, may be completed toward both the bachelor's degree and the M.S. degree in Ecology and Evolutionary Biology. In some cases, students wishing to advance their work on the graduate component so as to devote more time to independent study or internship courses in the fifth year may petition the EEB Department to count as many as 12 credits of 6000- or 7000-level courses toward the graduate component. The six additional dual credits must be completed **in excess of the 120 required for the bachelor's degree**, giving the student a total of 126 credits or greater upon receiving the bachelor's degree.

Ecology and Evolutionary Biology, PhD

The Department of Ecology and Evolutionary Biology (EEB) offers a Doctor of Philosophy degree. The curriculum is designed to encourage maximum student choice and independence while maintaining a close student-advisor relationship. Students are encouraged to adopt a broad, integrative view of science and biological research. Course offerings cover such areas as animal and plant physiology, plant ecology, plant-animal interactions, population biology, structural and evolutionary biology, systematic biology, environmental toxicology, marine/estuarine ecology, and the biology of diverse groups of plants and animals. Students participate in an active departmental seminar program and informal research discussion groups.

Students accepted into the doctoral program are informally examined in Genetics, General Ecology, and Evolutionary Biology upon entry; based upon the results of that examination, the department makes

recommendations as to the student's future course of study. By the end of the second year all formal course work is usually completed.The doctoral degree normally requires four or five years of study leading to the production of a publishable dissertation.

Requirements

In addition to university-wide requirements for the PhD, the Department of Ecology and Evolutionary Biology has the following requirements for its PhD students.

Year 1		Credit Hours
EBIO 6810	EEB Journal Review Two sections required	2
EBIO 6777	Foundations in Ecology and Evolutionary Biology	3
EBIO 6910	Independent Study	1-4
EBIO 6920	Independent Study	1-4
Additional approval Graduate Electives		41
	Credit Hours	**48-54**
	Total Credit Hours	**48-54**

Annual Report and Progress

All graduate students who have been enrolled in the EEB Department for at least one semester must submit an annual report that briefly describes progress made during the previous calendar year (see Graduate Student Annual Report Form). Copies of this report must be submitted by January 25th to the student's thesis or dissertation advisor and to the departmental secretary for faculty review and placement in the student's departmental file. The Graduate Studies Committee and departmental faculty will review the annual reports to determine whether each student's progress has been satisfactory. Continued unsatisfactory progress is sufficient cause to revoke a teaching assistantship or terminate a student from the graduate program.

Dissertation Research

Following admission to candidacy, dissertation research hours are required (minimum of 3 hours per term, including summers) on a continuous basis until the dissertation committee certifies the student to graduate or until the department residency limit for PhD students is exhausted.

Journal Submission

All Ph.D. candidates must submit at least one chapter of dissertation for publication prior to final committee approval of the students dissertation defense. A public defense of the presentation must be made in either a regular fall or spring term by the candidate prior to the final defense committee meeting.

Teaching Requirement

All Ph.D. students must complete at least one semester of department teaching experience.

Environmental Biology Major

The major in Environmental Biology is a focused course of study intended for students who are interested in conservation biology, environmental preservation, human health, education, and public policy. Our diverse faculty offer engaging, student-centered courses with ample opportunities for hands-on learning in the lab and field in addition to research and study abroad programming in Ecuador, Australia, and Scandinavia, for example. Students are encouraged to join our labs, where they can develop a wide range of skills and expertise in areas including coastal, aquatic, tropical and disease ecology. The major will prepare students who are interested in seeking employment with environmental agencies of federal, state, and municipal governments or non-governmental organizations, and in private industry, including environmental economics and environmental consulting firms. The program also may appeal to individuals planning to enter the field of environmental law. Global Change Biology and Conservation Biology are required electives for the ENVB major.

The major in Environmental Biology is one of two majors offered by the Ecology and Evolutionary Biology Department to undergraduate students. The Department also offers a major in Ecology and Evolutionary Biology.

Requirements

The major in environmental biology provides understanding of biological processes among populations, communities, and ecosystems. Majors must complete eight core courses, three elective courses, three chemistry courses (or alternatives as listed below), two mathematics courses and the capstone requirement.

Course ID	Title	Credits
Core Courses		
EBIO 1010 & EBIO 1015	Diversity of Life and Diversity of Life Lab	4
EBIO 1020	Mechanisms of Life	3
or CELL 1010	Intro to Cell & Molec Biology	
EBIO 2020	Theory and Methods in Ecology and Evolutionary Biology	3

CHEM 2410 & CHEM 2415	Organic Chemistry I and Organic Chemistry Lab I	4
or EENS 2120 & EENS 2121	Climate and Extinction and Climate and Extinction lab	
or EENS 4360	Environmental Geochemistry	
or RCSE 6802	Introduction to Coastal Science and Engineering	
or RCSE 6810	River and Stream Restoration	
Environmental Biology Capstone [2] **EBIO 5970 (3 credit hours) carries the NTC Tier-2 Writing Attribute**		
EBIO 5970	Capstone Research Seminars	2-3
or EBIO 5971	Capstone Research Seminars	
Complete two semesters of Mathematics [3]		**6**
Total Credit Hours		**58-59**

1 Three elective courses(see department courses (p.) list) in the department of ecology and evolutionary biology must include two laboratory-field courses. Internship studies, independent studies and seminars will not fulfill the elective. EBIO 4990 Honors Thesis Edited Course (3 c.h.) and EBIO 5000 Honors Thesis Edited Course (4 c.h.) satisfy only one lecture elective in the major. Students who opt to write an Honors Thesis will take EBIO 4992 Honors Thesis Cohort (0 c.h.) in both semesters concurrently with the thesis courses.

2 This capstone requirement may be satisfied by completion of EBIO 5970 Capstone Research Seminars (3 c.h.) or EBIO 5971 Capstone Research Seminars (2 c.h.).

3 A minimum of 6 credits of mathematics is required for the Bachelor's of Science degree in the Tulane School of Science and Engineering. Any two Mathematics (MATH) courses numbered 1210 and above may be used to satisfy this requirement. However, the combination of MATH 1150 and MATH 1160 (Long Calculus) may count as one course towards this requirement. Courses in statistics and physics are highly recommended but are not required.

Marine Biology Minor for Biology Majors

In addition to the core courses and the elective courses (selected after discussion with the Marine Biology Advisor) required for either the Ecology and Evolutionary Biology (EEBI) major or the Environmental Biology (ENVB) major, students who wish to add a minor in Marine Biology will complete 16 credits (minimum) beyond those required for an EEBI or ENVB major. These courses cannot be counted toward either EEBI major for those students electing to complete an EEBI major and the marine biology minor. Courses to be completed at the marine field station must be approved for transfer credit by the Marine Biology advisor before they are taken at the marine field station.

Requirements

Students majoring in ecology and evolutionary biology or environmental biology who minor in marine biology will complete a minimum of 16 credits beyond the departmental major. Courses from the Marine Biology minor may not count toward both the major and the minor.

Course ID	Title	Credits
EBIO 2100	Marine Biology [1]	3
EBIO 2230	Oceanography [1]	3
EBIO 4250 & EBIO 4251	Biology of Marine Invertebrates and Biology of Marine Invertebrates Lab [1]	4
or EBIO 4280 & EBIO 4281	Ichthyology and Ichthyology Lab	
Select two summer courses for no less than three credits each at an approved marine field station [2]		6
Total Credit Hours		**16**

1 EBIO 2100 Marine Biology (3 c.h.) and EBIO 2230 Oceanography (3 c.h.) are offered only in the spring semester. EBIO 4250 Biology of Marine Invertebrates (4 c.h.) & EBIO 4251 Biology of Marine Invertebrates Lab (0 c.h.) are only offered in the fall semester of odd-numbered years. EBIO 4280 Ichthyology (4 c.h.) & EBIO 4281 Ichthyology Lab (0 c.h.) are only offered in the fall semester of even-numbered years.

2 Courses to be completed at the marine field station must be pre-approved for transfer credit by the Marine Biology Advisor before students register for those courses. Please contact the Marine Biology Advisor for assistance in finding and selecting appropriate stations/courses.

Marine Biology Minor for Non-Biology Majors

Students majoring in departments other than EEBI who wish to complete a minor in Marine Biology will need to complete both marine science coursework as well as supporting coursework totaling 22-24 credits both in and outside the department. Coursework to be completed at the marine field station must be approved for transfer credit by the Marine Biology advisor before they are taken at the marine field station.

Requirements

Students majoring in departments other than Ecology and Evolutionary Biology who minor in Marine Biology will complete:

Course ID	Title	Credits
EBIO 1010 & EBIO 1015	Diversity of Life and Diversity of Life Lab	4
EBIO 1020	Mechanisms of Life	3
or CELL 1010	Intro to Cell & Molec Biology	
EBIO 2100	Marine Biology (offered only in the spring semester)	3
EBIO 3040	General Ecology (offered only in the fall semester)	3

EBIO 4250 & EBIO 4251	Biology of Marine Invertebrates and Biology of Marine Invertebrates Lab *	3-4
or EBIO 2230	Oceanography	
or EBIO 4280 & EBIO 4281	Ichthyology and Ichthyology Lab	
Select one lecture or lab/field elective course [1]		3-4
Select summer course at approved marine station [1, 2]		3
Total Credit Hours		**22-24**

* EBIO 4250 Biology of Marine Invertebrates (4 c.h.) & EBIO 4251 Biology of Marine Invertebrates Lab (0 c.h.) are only offered in the fall semester of odd-numbered years. EBIO 2230 Oceanography (3 c.h.) is offered only in the spring semester. EBIO 4280 Ichthyology (4 c.h.) & EBIO 4281 Ichthyology Lab (0 c.h.) are only offered in the fall semester of even-numbered years.

[1] Select courses outside of EEB are approved for substitution of this requirement. See departmental website or contact the Marine Biology Advisor for a list of these approved courses.

[2] The course to be completed at the marine field station must be pre-approved for transfer credit by the Marine Biology Advisor before students register for the course. Please contact the Marine Biology Advisor for assistance in finding and selecting an appropriate station/course.

Undergraduate

Major

- Mathematics Major (p. 573)

Minor

- Mathematics Minor (p. 573)

Graduate

- Applied Mathematics, MS (p. 571)
- Data Science, MS (p. 572)
- Mathematics, MS (p. 573)
- Mathematics, PhD (p. 574)
- Statistics, MS (p. 576)

Applied Mathematics, MS

This program is designed to provide students with the opportunity to broaden and deepen their knowledge of mathematics with an emphasis on those areas that have been most important in science and engineering. The student will also examine, through seminars and case studies, examples of significant applications of mathematics to other areas. This expanded base of knowledge, together with extensive experience in problem solving should prepare the student for further studies leading to the Ph.D. degree or for immediate employment in many areas of industry and government.

To enter the program the student should have a Bachelor's degree in mathematics, or a related field, and have completed undergraduate courses in Linear Algebra and Differential Equations. Students without these prerequisites may take them without credit toward the M.S. degree. Partial tuition waivers may be available to qualified students.

Requirements
Non-thesis Option

Course ID	Title	Credits
Required Courses		
Select one of the following Analysis Courses:		3
MATH 6050	Real Analysis I	
MATH 6060	Real Analysis II	
MATH 7210	Analysis I	
Select one of the following Statistics Courses:		3
MATH 6020	Mathematical Statistics	
MATH 6030	Stochastic Processes	
MATH 6040	Linear Models	
MATH 7360	Data Analysis	
MATH 6370/7370	Time Series Analysis	
MATH 7310	Applied Mathematics I	3
MATH 7320	Applied Math II	3
MATH 7350	Scientific Computing I	3
MATH 7980	Reading and Research	3
Optional Courses		
Select four additional courses from the optional list [1]		12
Total Credit Hours		**30**

[1] Other courses not listed may be substituted with the approval of the Graduate Studies Committee. Up to six credits may be transferred from other departments or institutions with the approval of the Graduate Studies Committee.

Additional Requirements

A **four-hour written examination** to be taken upon completion of the course work, with topics drawn from differential equations, and scientific computation. The student is given two chances to pass this exam. The Ph.D. Qualifying examination in Applied Mathematics **or** Scientific Computation can be substituted for the Masters exam.

A **programming project** designed to demonstrate proficiency in one of MATLAB, Fortran, C, or C++.

Thesis Option
Required Courses

MATH 7580	Scientific Computing III	3
MATH 7730	Topics In Applied Math	3
MATH 7740	Topics In Computation	3
MATH 7750	Topics/Differential Equa	3

MATH 7980 Reading and Research (1-9 c.h.) consists of a semester-long project in differential equations, scientific computation, optimization, analytical methods, engineering or other topics in applied mathematics. The project must be under the supervision of a faculty member from the Mathematics Department.

Data Science, MS

Overview

The Master of Science in Data Science program is jointly offered by the Mathematics and Computer Science departments. This program benefits from its interdisciplinary nature and provides students with flexibility to balance theory and practice. By combining traditional training in statistics and mathematics with hands-on experience in machine learning and artificial intelligence, students will be well-prepared for careers in data science.

Requirements

Course ID	Title	Credits
Data Science Foundations		
MATH 6070	Intro To Probability	3
MATH 6090	Linear Algebra	3
CMPS 6100	Introduction to Computer Science	3
Data Science Core		
MATH 6080	Intro to Statistical Inference	3
MATH 6040	Linear Models	3
or MATH 7260	Linear Models	
CMPS 6240	Intro to Machine Learning	3
or MATH 6720	Analysis II	
CMPS 6160	Introduction to Data Science	3
Choose Four Electives [1]		**12**
Total Credit Hours		**33**

[1] The elective requirement consists of four full-semester courses chosen from the list below. Additional courses (e.g. independent study) may substitute for elective courses upon approval from the Graduate Studies Committee of the Math and Computer Science Departments.

Course ID	Title	Credits
Data Science, MS Electives		
MATH 7360	Data Analysis	3
MATH 6030	Stochastic Processes	3
or MATH 7030	Stochastic Processes

CMPS 6740	Reinforcement Learning	3
BIOS 7150	Categorical Data Analysis	3
BIOS 7300	Survival Data Analysis	3
EBIO 6440	Introduction to Data Science for Ecologists	3

BMEN 6800	BME Data Science: Medical Imaging/ Machine Learning	3

Mathematics Major

The Mathematics major provides students with the breadth of knowledge required to excel in a variety of careers including medicine, law, finance and technology-related industries. In addition, the mathematics major also provides excellent preparation for those students who want to pursue graduate studies. The flexibility in the curriculum allows students to emphasize core math, applied math, or statistics.

Requirements

A major in mathematics consists of:

Course ID	Title	Credits
Core Courses		
MATH 1210	Calculus I [1]	4
MATH 1220	Calculus II [2]	4
MATH 2210	Calculus III	4
MATH 3050	Real Analysis I	3
MATH 3090	Linear Algebra	4
Select five elective mathematics courses at the 3000-level or above [3]		15
Total Credit Hours		**34**

1. MATH 1150 Long Calculus I (3 c.h.) and MATH 1160 Long Calculus II (3 c.h.) may be substituted for MATH 1210 Calculus I (4 c.h.);
2. MATH 1310 Consolidated Calculus (4 c.h.) may be substituted for MATH 1220 Calculus II (4 c.h.);
3. Four additional mathematics courses at the 3000-level or above with the following provisos:
   - At most one 2000-level course may be substituted for an elective 3000-level course
   - At least two courses must be at the 4000-level or above
   - The Senior Seminar (MATH 3980 and MATH 3990) may count as one 4000-level course.

Suggested Curriculum

Students should enroll in an appropriate calculus course in their first year of study. Students with no prior calculus course should normally take MATH 1210 Calculus I (4 c.h.) and MATH 1220 Calculus II (4 c.h.), while students with one semester of calculus credit (or equivalent knowledge) should take MATH 1310 Consolidated Calculus (4 c.h.). Students with two semesters of calculus credit should start in MATH 2210 Calculus III (4 c.h.) and contact a mathematics major advisor during the first semester for major program planning advice. Students are encouraged to complete the core courses as early as possible in their programs. It is generally recommended to take MATH 3090 Linear Algebra (4 c.h.) before MATH 3050 Real Analysis I (3 c.h.), but they can be taken concurrently. The MATH 3070-MATH 3080 sequence provides the foundation for upper-level courses in probability and statistics. The Senior Seminar MATH 3980-MATH 3990 is strongly recommended for majors who are not completing an honors thesis.

Students considering a math major should arrange an appointment with the department Director of Undergraduate Studies early in their program. They will be assigned a major advisor who will advise them on course selection within the major. The major program is designed to provide the student with a solid foundation during the first two years and provide for a variety of programs of study during the junior and senior years. A major program in mathematics can provide a background for both graduate study and work in a variety of areas of the mathematical sciences as well as provide preparation for professional schools such as law, medicine, and business. The major program should be designed as early as possible with the student's goals in mind and with the help of the major advisor.

Mathematics Minor

The Mathematics minor offers students majoring in other disciplines the opportunity to develop a strong mathematical background and increase their competitiveness for future jobs or post-baccalaureate studies.

Requirements

A minor in mathematics consists of:

Course ID	Title	Credits
MATH 1210	Calculus I [1]	4
MATH 1220	Calculus II [2]	4
MATH 2210	Calculus III	4
MATH 3090	Linear Algebra	4
Select two or more elective courses at the 3000-level or above [3]		6
Total Credit Hours		**22**

1. MATH 1150 Long Calculus I (3 c.h.) and MATH 1160 Long Calculus II (3 c.h.) may be substituted for MATH 1210 Calculus I (4 c.h.)
2. MATH 1310 Consolidated Calculus (4 c.h.) may be substituted for MATH 1220 Calculus II (4 c.h.)
3. At most one 2000-level course may be substituted for an elective 3000-level course

Mathematics, MS

This program is designed to provide students with the opportunity to broaden and deepen their knowledge of core areas of mathematics. The course work is designed to provide both breadth of knowledge and depth in an area of interest to the student. This experience will prepare the student for further studies leading to a Ph.D. degree in mathematics. Partial tuition waivers may be available to qualified students.

Requirements
Non-Thesis Option

Course ID	Title	Credits
Required Courses		
MATH 7210 & MATH 7220	Analysis I and Analysis II	6

Select one of the following:		6
MATH 7010 & MATH 7020	Topology I and Topology II	
MATH 7110 & MATH 7120	Algebra I and Algebra II	
MATH 7980	Reading and Research [1]	3
Optional Courses		
Select five additional courses from the optional list [2]		15
Total Credit Hours		**30**

[1] Consists of a semester-long project under the supervision of a faculty member from the Department

[2] Other courses not listed may be substituted with the approval of the Graduate Studies Committee. Up to six credits may be transferred from other departments or institutions with the approval of the Graduate Studies Committee.

Additional Requirements

A four-hour written examination to be taken upon completion of the course work, with topics drawn from basic material in algebra, topology and analysis taught in the first-year graduate courses. The student is given two chances to pass this exam. One of the Ph.D. Qualifying examinations may be substituted for the Masters exam.

Thesis Option

Course ID	Title	Credits
Required Courses		
MATH 7210 & MATH 7220	Analysis I and Analysis II	6
Select 1 of the following:		6
MATH 7010 & MATH 7020	Topology I and Topology II	
MATH 7110 & MATH 7120	Algebra I and Algebra II	
Optional Courses		
Select four additional courses from the optional list [1]		12
Total Credit Hours		**24**

[1] Other courses not listed may be substituted with the approval of the Graduate Studies Committee. Up to six credits may be transferred from other departments or institutions with the approval of the Graduate Studies Committee.

Additional Requirements

A thesis approved by the thesis committee consisting of a faculty member acting as advisor and two additional faculty. The thesis is typically much more substantial than the MATH 7980 Reading and Research (1-9 c.h.) project.

List of Optional Courses

Course ID	Title	Credits
MATH 6030	Stochastic Processes	3
MATH 6210	Differential Geometry	3
MATH 6300	Complex Analysis I	3
MATH 7240	Mathematical Statistics	3
MATH 7510 & MATH 7520	Differential Geometry I and Differential Geometry II	6
MATH 7530 & MATH 7540	Partial Diff Equations I and Partial Diff Equitns II	6
MATH 7550	Probability Theory II	3
Special Topics Courses [1]		3

[1] MATH 7710 Topics In Algebra (3 c.h.) - MATH 7790 Topics In Topology (3 c.h.)

Mathematics, PhD

Senior Undergraduate students majoring in mathematics or other sciences with a strong interest in mathematics, and people who already hold undergraduate degrees in mathematics or other sciences, are encouraged to apply for admission to PhD program in Mathematics.

Faculty in the Mathematics Department have active research in areas of Algebra, Domain Theory and Theoretical Computer Science, Geometry and Topology, Symbolic Analysis, Applied Mathematics and Partial Differential Equations, Computational Mathematics, Mathematical Biology, Probability and Statistics.

Requirements

Below is a brief outline of the requirements and further explanation of each step.

1. Complete at least 48 hours of coursework-up to two courses may be taken in another department with the approval of the Graduate Studies Committee. For advanced incoming students, limited transfer credit (https://sse.tulane.edu/math/academics/graduate/transfer-credit/) is possible.
2. Pass the Placement Exam in linear algebra and advanced calculus. It will be taken at the beginning of the fall semester (the student's first semester). If a student fails to achieve A- in the linear algebra portion, he or she will be required to enroll in MATH 3090 Linear Algebra (4 c.h.)/MATH 6090 Linear Algebra (3 c.h.). If the student fails to achieve A- in the advanced calculus portion, he or she will be required to enroll in MATH 4060 Real Analysis II (3 c.h.)/MATH 6060 Real Analysis II (3 c.h.). Read the *Placement Exam syllabus* for details and previous exams.
3. Pass qualifying written exams Analysis (https://sse.tulane.edu/math/academics/graduate/qualifying-exams/analysis/) and two others chosen from among: Algebra (https://sse.tulane.edu/math/academics/graduate/qualifying-exams/algebra/), Analysis (https://sse.tulane.edu/math/academics/graduate/qualifying-exams/analysis/), Applied Mathematics (https://sse.tulane.edu/math/academics/graduate/qualifying-exams/applied-mathematics/), Differential Geometry (https://sse.tulane.edu/math/academics/graduate/qualifying-exams/differential-geometry/), Probability and Statistics (https://sse.tulane.edu/math/academics/graduate/qualifying-exams/probability-statistics/), PDE (https://sse.tulane.edu/math/academics/graduate/qualifying-exams/pde/), Scientific Computation (https://sse.tulane.edu/math/academics/graduate/qualifying-exams/scientific-computation/), and Topology (https://sse.tulane.edu/math/academics/graduate/qualifying-exams/topology/). Read the exam syllabi for qualifying exams

(https://sse.tulane.edu/math/academics/graduate/qualifying-exams/)

4. Pass an oral exam on specific topics of research interest to the student.
5. Write a dissertation.

Credit Hours

The Ph.D. program requires students to complete at least 48 credits. This is equivalent to 16 courses (math courses are 3 credits each). All 7000-level courses may count toward the Ph.D. degree. Students in need of remediation, for example whose undergraduate major was not mathematics, may be advised by the Graduate Coordinator to take some undergraduate courses as 6000-level, but these cannot count toward the Ph.D. degree. Exceptions are 6210 (Differential Geometry) and 6300 (Complex Analysis). These two can be taken for Ph.D. credit if the Graduate Coordinator approves.

It is not enough for a student to complete 48 credits to satisfy this requirement. The credits must be approved by the Graduate Coordinator and must be taken in such a way that they represent breadth and depth.

Owing to these concerns, It is important that the student work closely with the Graduate Coordinator in order to formulate a sequence of courses that will satisfy the coursework requirement. This is done on an individual basis. A student who does not consult with the Graduate Coordinator may find that not all classes taken count toward the degree.

Up to two courses may be taken in other departments when approved by the Graduate Studies Committee. At most two reading courses in total can be counted toward the required 48 credit hours.

In addition, the transfer of up to 9 credits from another graduate program is possible with the approval of the Graduate Studies Committee. Read more about transfer credit »

Placement Exam

This is a 4-hour exam on topics from undergraduate courses on Linear Algebra & Vector Calculus.

This exam is generally offered during the first week of each semester. A sign-up sheet is available in the math office near the end of the preceding semester.

Every first-year PhD student has to take the placement exam prior to his/her first semester at Tulane.

The topics covered in the Preliminary Exam are:

Linear Algebra

- vector spaces
- inner products
- linear transformations
- linear equations
- matrix operations
- determinants
- characteristic equation
- eigenvalues and eigenvectors
- symmetric, skew-symmetric matrices
- hermitian, skew-hermitian matrices
- Jordan canonical form
- spectral theorem

Vector Calculus

- limits in Rn
- partial derivatives
- differentiable functions of several variables
- optimization of functions in Rn (with and without constraints)
- the implicit function theorem
- the inverse function theorem
- Taylor's theorem
- integration in several variables
- line integrals
- the theorems of Green, Gauss and Stokes

References you may want to study:

1. *Linear Algebra, Mathematica Labs* by Terry Lawson
2. *Linear Algebra and Its Applications*, 3rd ed., by Gilbert Strang
3. Almost any textbook with Linear Algebra in its title
4. *Calculus* by Boyce and DiPrima
5. Almost any textbook with Advanced Calculus in its title

Qualifying Exams

These are comprehensive written exams. The student must pass three exams one in Analysis and two others chosen from among:

- Algebra (https://sse.tulane.edu/math/academics/graduate/qualifying-exams/algebra/)
- Analysis (https://sse.tulane.edu/math/academics/graduate/qualifying-exams/analysis/)
- Applied Mathematics (https://sse.tulane.edu/math/academics/graduate/qualifying-exams/applied-mathematics/)
- Differential Geometry (https://sse.tulane.edu/math/academics/graduate/qualifying-exams/differential-geometry/)
- Probability and Statistics (https://sse.tulane.edu/math/academics/graduate/qualifying-exams/probability-statistics/)
- PDE (https://sse.tulane.edu/math/academics/graduate/qualifying-exams/pde/)
- Scientific Computation (https://sse.tulane.edu/math/academics/graduate/qualifying-exams/scientific-computation/)
- Topology (https://sse.tulane.edu/math/academics/graduate/qualifying-exams/topology/)

The topics of each exam are based on the corresponding first-year graduate course sequence. For example, the Analysis exam covers roughly the material in MATH 7210 Analysis I (3 c.h.)-MATH 7220 Analysis II (3 c.h.). Read the Qualifying exam syllabi (https://sse.tulane.edu/math/academics/graduate/qualifying-exams/)

Qualifying exams are offered the first week of each semester. A sign-up sheet is available in the math office near the end of the spring semester for the following semester's exams.

Students do not have to take all three exams at the same time; however, they should complete all three exams by the beginning of the third year in the Ph.D. program.

Oral Exam

After a Ph.D. student has passed the Preliminary exam and three Qualifying exams, the student should:

- decide on the area of mathematics in which he/she would like to write a dissertation (and)
- choose an advisor in this area

The advisor and the student will decide on a reading list and topics for the oral exam.

The exam usually lasts one to two hours and consists of a committee of 5 faculty who ask questions from the list of topics.

The student and the advisor must choose the committee and set the date of the exam. This information must be communicated to the Graduate Coordinator prior to the exam for approval by the Graduate Studies Committee.

It is not necessary that the student complete all coursework before taking the oral exam.

Prospectus

SSE requires a written prospectus. The Mathematics Department requires in addition that the student gives an oral presentation of the prospectus to the committee. Students are encouraged to write a 4-8-page double-spaced prospectus and prepare a 40-minute presentation for the dissertation committee followed by discussion and questions.
A suggested format is:
1. Cover sheet: should state the student's name, department/program, the title of the proposed dissertation, and the name of the chair and the other members of the committee.
2. Introduction: a summary of earlier work on the problem, including a substantial number of references.
3. Statement of the dissertation problem: containing the goal of the thesis, possible sub-problems, and their importance in the global view of the field.
4. Investigation plan: containing an orderly description of the major steps of the investigation that will accomplish the goal of the thesis. This is the plan you propose to follow in order to accomplish the goal and the committee should be convinced that the plan is likely to be successful.
5. Expected results: This section should include expected (partial) results of each major step of the investigation plan.
6. References: Major sources of information should be indicated, and a selective bibliography included.

The prospectus should be submitted to the Dean's Graduate Programs office along with a signed copy of the prospectus approval form.

Dissertation

The dissertation must contain original work by the student and demonstrate the student's ability to carry on independent research that results in a genuine contribution to the field. The student must work closely with his/her advisor in order to have a clear vision of what is required of the dissertation.

The student's dissertation committee must sign the dissertation to accept it before it can be submitted to the SSE (https://sse.tulane.edu/).

The student must also give a presentation of the research in the dissertation as an oral defense.

Please contact the Graduate Coordinator if you have additional questions:
Kyle Zhao
Phone: 504-865-5015
Office: Gibson 417-A

Statistics, MS

The Master of Science degree in Statistics combines theory and application. Our program emphasizes rigorous coursework in probability and mathematical statistics in addition to training in data analysis and computational methods. Graduates from the M.S. program may either directly enter the workforce as junior level statisticians or continue their studies in pursuit of a more advanced degree.

Requirements

Course prerequisites include the equivalent of MATH 6070 Intro To Probability (3 c.h.), MATH 6080 Intro to Statistical Inference (3 c.h.) and MATH 6090 Linear Algebra (3 c.h.). Enrollment in prerequisites does not provide credit towards the M.S. degree.

Non-Thesis Option

Course ID	Title	Credits
Required Courses		
MATH 7150	Probability Theory I	3
MATH 6020/7240	Mathematical Statistics	3
MATH 6040/7260	Linear Models	3
Optional Courses		
Select six courses from the Optional List [1]		18
Total Credit Hours		**27**

[1] The student must have an advisor from the Probability and Statistics faculty. Other courses not listed may be substituted with the approval of the student advisor and the Graduate Studies Committee. Credits may be transferred from other departments or institutions with the approval of the student advisor and the Graduate Studies Committee.

Additional Requirements

A **four-hour written examination** to be taken upon completion of the core course work, with topics drawn from probability, linear models, and statistics. The student is given two chances to pass this exam. The Ph.D. Qualifying examination in Statistics can be substituted for the Masters exam.

· If a student receives at most one grade of B- in the courses, the student is eligible to graduate with a MS in

Statistics - without taking the Statistics MS qualifying exam -, assuming the student meets all remaining requirements.

· If a student receives two grades of B-, or one grade less than B- in the courses, the student is placed on probation and considered for dismissal from the program, subject to the Quality of Work Requirements in the SSE Graduate Handbook https://tulane.app.box.com/s/vt0qe6vp53d1wyektfx7qavdgu1w69fx (https://tulane.app.box.com/s/vt0qe6vp53d1wyektfx7qavdgu1w69fx/)

A student who falls into such a situation may apply to take the Statistics MS qualifying exam. The student should communicate with the Director of Graduate Studies to apply to take the exam.

· If a student passes the exam, the student is once again eligible to graduate with a MS in Statistics, assuming all remaining requirements are met.

· Under exonerating circumstances (serious illnesses, injuries, or critical personal problems) that prevent a student from taking the exam on the designated day, the student must notify the Director of Graduate Studies promptly. The student may re-apply to take the exam upon approval of the Graduate Studies Committee.

· Under normal circumstances, if a student fails the exam, the student is no longer eligible to graduate with a MS in Statistics. However, the student may still get the Certificate in Statistics assuming all remaining requirements (for the Certificate) are met.

Optional Courses

Course ID	Title	Credits
MATH 6030/7030	Stochastic Processes	3
MATH 6280	Information Theory	3
MATH 6370/7370	Time Series Analysis	3
MATH 7360	Data Analysis	3
MATH 6350	Optimization	3
MATH 7550	Probability Theory II	3
MATH 7570	Scientific Computatn II	3
MATH 7210	Analysis I	3
MATH 7770	Topics/Probability&Stats	3
Biostatistics/Bioinformatics courses at the 7000 level or above (with approval)		
MATH 7980	Reading and Research [1]	1-9

[1] MATH 7980 Reading and Research (1-9 c.h.) consists of a semester-long project completed under the supervision of a faculty member from the Mathematics Department, generally completed during the final semester of study.

Thesis Option

There is no thesis option for the M.S. in Statistics.

Neuroscience Major

A major in Neuroscience allows a student to pursue an interdepartmental curriculum that focuses on the role of the nervous system in regulating physiological and behavioral functions. Neuroscience combines many traditional fields of study including Psychology, Biology, Chemistry, Physics, Anatomy, Pharmacology, Linguistics and Physiology. The field of Neuroscience encompasses a broad domain that ranges from the cellular and molecular control of brain cells to the regulation of responses in whole organisms. The requirements for the major in Neuroscience complement the standard requirements of a pre-health curriculum, and those requirements for admission to graduate study in Neuroscience or related graduate programs. This curriculum also enables the student to pursue relevant professional experience to enhance their career preparation. A Bachelor of Science in Neuroscience requires nine credits of core courses, nine credits of elective neuroscience lecture courses, three laboratory courses, and additional credits of required courses in biology, psychology, chemistry, physics, and social science. Students also must fulfill the B.S. mathematics requirement. A student majoring in Neuroscience is strongly encouraged to pursue laboratory research as an independent study and/or honors thesis. An independent study or honors thesis may fulfill one of the three required laboratory courses. Students will meet with a neuroscience major advisor when they declare their major to discuss the requirements, possible internship, research, and study abroad plans, and their course schedule.

Computational Engineering Certificate

Engineering Physics majors have the opportunity to focus their elective course work in a specific concentration area and earn a certificate if they are interested in a more focused field of study. Successful completion of an ENGP certificate requires a student to choose any four out of the seven total electives (i.e., out of the four engineering electives, one contemporary physics elective, one classical physics elective, and one broader technical elective) from within a particular concentration area.

Engineering Physics Major (p. 580)

The allowable electives for the Computational Engineering Certificate are listed in the Requirements.

Requirements

Course ID	Title	Credits
Four Electives		
Select four courses from the list as explained in the description above:		12
ENGP 3290	Computational Materials Scienc [4]	
PHYS 3230	Quantum Information Science & Engineering [3]	
CMPS 2300	Intro to Comp Sys & Networking [1]	
CMPS 3140	Intro Artificial Intelligence [4]	3
CMPS 3160	Introduction to Data Science [1]	3
CMPS 3240	Intro to Machine Learning [1]	3

2 Satisfies a Classical Physics elective.
3 Satisfies a Contemporary Physics elective.
4 Satisfies an Engineering elective.

Electrical Engineering Minor

Overview

The Electrical Engineering minor will provide a foundation in the core principles of electrical engineering that can supplement engineering, science, and non-STEM majors at Tulane. Electrical engineering is a discipline that underlies the vast majority of our modern technological world, and students with the EE minor will be able to apply these skills in a broad range of fields, industries, and careers.

Requirements

CMPS 3280	Information Theory	
CMPS 4750	Computer Networks	
CMPS 3510	Computer Organization	
CMPS 3160	Introduction to Data Science	
Total Credit Hours		**19**

At least three courses (9 credits) counting toward the minor must not overlap with a student's major.

Requirements text

Engineering Physics Major

This interdisciplinary program provides students with a broad science and mathematics background similar to that of Tulane's traditional physics major, combined with a strong grounding in engineering design and the application of physics principles to practical engineering problems. The curriculum is characterized by a strong emphasis on modern physics and its application to 21st century technology, including new materials, quantum electronics, nanofabrication, and devices. Focus areas in our department include: materials engineering, computational engineering, and nano devices. Our students will be well equipped to pursue research and development careers in new and emerging technologies that cut across traditional engineering and science disciplines, to pursue graduate studies in science or engineering, or to enter professional fields including law, management, and medicine. Graduates will have substantial experience with laboratory methods, data analysis, and computation. A centerpiece of the curriculum is the design sequence, consisting of a two-semester Introduction to Design sequence, a summer industry internship, and a two-semester capstone Team Design Project. As an intrinsic part of the curriculum, students develop strong oral and written communication skills, multidisciplinary teamwork skills, experience in public service, and knowledge about the high ethical standards of the engineering profession. The program builds on cross-cutting areas of research strength in the School of Science and Engineering, including: novel 21st century materials; materials for energy; biomolecular materials; macromolecules; "quantum mechanics to devices"; surfaces, interfaces, and nanostructures; and computation.

Tulane's Engineering Physics program is accredited by the Engineering Accreditation Commission of ABET.

Mission Statement for Engineering Physics

The mission of our program is to provide the highest quality education for students in the principles and applications of Engineering Physics. The excellence of the program is ensured by our department's high regard for teaching, research activities and industrial ties. The program educates students to take leadership roles in industry, academia and government.

Educational Objectives for Engineering Physics Program

Our Engineering Physics program educates students to become professionals with a blend of in-depth knowledge and skills in mathematics, science, and engineering, enabling them to understand physical systems, research technical questions and pursue opportunities to innovate, design solutions, and solve problems. Our program provides the foundation for graduate study and lifelong learning. Our objective is to prepare graduates who can successfully pursue:

1. Professional careers at all levels in Engineering Physics or other professional pursuits where an engineering or physics background provides a valuable foundation. Examples of the latter are: focused engineering disciplines, medicine, law, and business administration.
2. Advanced studies in Engineering, Physical Sciences, or related fields.

Student Outcomes for Engineering Physics

Graduates of the Engineering Physics program at Tulane University will attain:

1. an ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
3. an ability to communicate effectively with a range of audiences
4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts
5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives
6. an ability to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies

Engineering Physics is a field that provides broad training in physics and mathematics and basic training in engineering and design. The practitioner of engineering physics is involved in the development of new devices and products using sophisticated physical concepts. The engineering physics curriculum educates students to work in areas where technology is changing rapidly and where the boundaries of several traditional engineering disciplines overlap, such as nanomaterials/devices, lasers, plasmas, robotics, materials, medical imaging, superconductors, and semiconductors. The curriculum develops sufficient depth in both engineering and science to produce graduates who are able to relate basic knowledge to practical problems in engineering. The engineering physicist is a person with the training of both an applied physicist and an engineer, the inclination to attack novel as well as routine problems in engineering, and the flexibility to exploit basic knowledge in any branch of science and technology using analytical and experimental skills.

Our engineering physics curriculum places emphasis on:

- basic principles of engineering
- problem solving
- mathematics
- physics
- engineering design
- computer science and engineering
- chemistry
- science and scientific principles
- research
- communications
- multi-disciplinary teamwork
- continuous learning
- leadership
- ethics
- preparation for advanced degrees in engineering and science

The required curriculum for engineering physics is relatively full. Class schedules should be carefully planned. Typical of engineering in the US, some engineering physics majors may take a course overload in some semesters.

Engineering Physics Certificates

The Engineering Physics program offers optional certificates for students who are interested in specific aspects of the broader program. Completing a certificate offers several advantages: structured/guided use of electives for focusing in a particular area, providing some depth within a broad-based ENGP curriculum; additional branding that may help students attract interest in industry after graduation; and preparation for common graduate engineering programs. Certificates are optional, but if a student does complete one, this is reported on the transcript. Students may choose one of four certificates:

- Computational Engineering (p. 579)
- Electrical Engineering (p. 579)
- Materials Engineering (p. 584)
- Mechanical Engineering (p. 588)

with each having a pre-approved set of coursework that meets the requirements of that certificate. For more information and an up-to date-list of pre-approved electives, follow the links above and go to the "Requirements" section.

PEP Website

tulane.edu/sse/pep/academics/undergraduate/engineering-physics-program/ (https://sse.tulane.edu/pep/academics/undergraduate/engineering-physics/)

Requirements

General Course Requirements for Engineering Physics

The major curriculum consists of the following requirements (91 credits total plus Tulane Core Curriculum requirements):

Tulane University's Core Requirements for Graduation

Engineering Physics majors are exempt from the Newcomb-Tulane foreign language requirement. All other Newcomb-Tulane College core requirements must be fulfilled.

Course ID	Title	Credits
Mathematics		
Select four classes to be completed during the first two years of study including the following:		16
MATH 2210	Calculus III	4
MATH 2240	Intro To Applied Math	4
or MATH 4240	Ordinary Differentl Equa	
Basic Science First Year of Study		
PHYS 1310	General Physics I	4
PHYS 1320	General Physics II	4
CHEM 1070 & CHEM 1075	General Chemistry I and General Chemistry Lab I	4
Basic Science Second Year of Study		
PHYS 2350	Modern Physics I	3
PHYS 2360	Modern Physics II	3

ENGP 3380	Materials for Energy	3
ENGP 3390	Synthesis of Nanomaterials	3
ENGP 3560	Photonic Materials & Devices	3
ENGP 3570	Semiconductor Devices	3
ENGP 3600	Nanoscience & Technology	3
ENGP 3620	MicroFab and Nanotech	3
ENGP 3660	Special Topics	1-3
ENGP 3720	Mechanic Behavior of Materials	3
ENGP 3760	Thermodynamics of Materials	3
BMEN 3400	Biomaterials & Tissue Engineering	3
BMEN 3440	Biofluid Mechanics	3
BMEN 3650	Biomechanics and Biotransport	3
BMEN 3730	Biomedical Signals and Systems	3
BMEN 3820	Math Analysis Bio Systms	3

BMEN 3932	Elements of BMEN Design	3
CMPS 3350	Intro to Computer Graphics	3
or other courses as approved by the Faculty Advisor		
Professional Development		
ENGP 3430 & ENGP 3440	Prof Develop Engineers I and Prof Develop Engineers II [2]	3
Summer Internship		
Normally done in the summer following the third year of study		0
Team Design Project and Professional Practice [3]		
ENGP 4310	Team Design Project & Prf Pr I	3
ENGP 4320	Team Design Project & Prf P II	3
Total Credits Required for Major		**91**

1 Typically taken in the second year of study
2 Normally taken in the junior year
3 Taken in the fourth year of study

Note:

Many intermediate and advanced courses in the program have prerequisites listed under the Basic Science and Mathematics categories; several of the allowed electives may have additional prerequisites. Many of the required and elective courses may not be offered every year. Students must work closely with the departmental undergraduate advisor to develop an individualized schedule of courses that fits their needs and interests, while satisfying all of the above requirements along with the university's core requirements for graduation.

ROTC Courses

ROTC courses, if elected, are taken in addition to the normal courses. Please see the Engineering Physics advisor for details.

Sample Schedule of Classes for Engineering Physics

Year 1

Fall		**Credit Hours**
CHEM 1070 & CHEM 1075	General Chemistry I and General Chemistry Lab I	4
PHYS 1310	General Physics I	4

	Credit Hours	**14**
	Total Credit Hours	**120**

1 Choose either BMEN 2730 Biomedical Electronics (4 c.h.) (spring class) or ENGP 2430 Mechanics of Materials (3 c.h.) (fall class).
2 e.g.,PHYS 3630 Electromagnetic Theory (3 c.h.)

[3] e.g., BMEN 3440 Biofluid Mechanics (3 c.h.), ENGP 2420 Engineering Dynamics (3 c.h.)
[4] e.g., ENGP 3620 MicroFab and Nanotech (3 c.h.)
[5] e.g., ENGP 3360 Structure of Materials (3 c.h.)
[6] e.g., PHYS 4470 Intro Quantum Mechanics (3 c.h.)

Engineering Science Minor

Students not majoring in biomedical engineering, chemical engineering, or engineering physics may earn a minor in Engineering Science by completing the Engineering Science minor. Interested students should contact the Associate Dean of the School of Science and Engineering to declare the minor and discuss the requirements.

Requirements

Students **not** majoring in biomedical, chemical engineering or engineering physics may earn a minor in Engineering Science by completing the following courses:

Prerequisite Math and Science Courses

Course ID	Title	Credits
MATH 1210	Calculus I	4
MATH 1220	Calculus II	4
MATH 2210	Calculus III	4
MATH 2240 or MATH 4240	Intro To Applied Math Ordinary Differentl Equa	4
PHYS 1310	General Physics I	4
PHYS 1320	General Physics II	4

Not all of the above math courses are required prior to taking 1000-2000 level engineering courses. See individual course descriptions for details.

Note: The following courses may be required for some engineering course options:

Course ID	Title	Credits
CHEM 1070 & CHEM 1075	General Chemistry I and General Chemistry Lab I	4
CHEM 1080 & CHEM 1085	General Chemistry II and General Chemistry Lab II	4

Engineering Courses Required

Course ID	Title	Credits
Select two of the following:		6
ENGP 1410	Statics	3
ENGP 2010	Electric Circuits	3
CENG 2110	Matl & Energy Balances (Additional Prerequisite: CHEM 1070, 1080)	3
CENG 2120	Thermodynamics I	3
ENGP 2430	Mechanics of Materials (Prerequisite: ENGP 1410)	3
CENG 2500	Intro To Biotechnology (Additional Prerequisite: CHEM 1070, 1080)	3
ENGP 3120	Materials Science and Engineering (Additional Prerequisite: CHEM 1070, 1080)	3
Select one of the following:		3
BMEN/ENGP 2310	Product & Experimental Design	3
BMEN/ENGP 2020	Computing Concepts & Applic	4
Select two 3000-4000 level electives in either biomedical, chemical engineering or engineering physics		6

Engineering Science Minor with an SSE Major

- Twenty-four credits in the major may not overlap with the minor.
- Student must earn a GPA of at least 2.00 in courses counting toward the minor. No courses counting toward a student's first minor will count toward the student's second minor.

Materials Engineering Certificate

Engineering Physics majors have the opportunity to focus their elective course work in a specific concentration area and earn a certificate if they are interested in a more focused field of study. Successful completion of an ENGP certificate requires a student to choose any four out of the seven total electives (i.e., out of the four engineering electives, one contemporary physics elective, one classical physics elective, and one broader technical elective) from within a particular concentration area.

Engineering Physics Major (p. 580)

The allowable electives for the Materials Engineering Certificate are listed in the Requirements.

Requirements

Course ID	Title	Credits
Four Electives		
Select four courses from the list as explained in the description above:		12
ENGP 3290	Computational Materials Scienc [4]	
ENGP 3350	Kinetics of Material Systems [4]	
ENGP 3360	Structure of Materials [4]	
ENGP 3370	Processing of Biomaterials [4]	
ENGP 3380	Materials for Energy [4]	
ENGP 3390	Synthesis of Nanomaterials [4]	3
ENGP 3560	Photonic Materials & Devices [4]	
ENGP 3620	MicroFab and Nanotech [4]	
ENGP 3700	Electrnc Prop of Materls [3]	
ENGP 3720	Mechanic Behavior of Materials	
ENGP 3760	Thermodynamics of Materials	
CENG 2110	Matl & Energy Balances [4]	
BMEN 3400	Biomaterials & Tissue Engineering [4]	
PHYS 3210	Molecular Biophysics & Polymer Physics [3]	
CENG 2780	Special Topics (Biomimetics: An Approach to Problem Solving) [4]	
CENG 3110	Thermodynamics II [4]	

CENG 4890	Polymer Engr & Science [4]	
Total Credit Hours		**15**

[1] satisfies a Broader Technical elective
[2] satisfies a Classical Physics elective
[3] satisfies a Contemporary Physics elective
[4] satisfies an Engineering elective

Materials Engineering Minor

Overview

The Materials Engineering minor complements various STEM and non-STEM majors at Tulane by offering a focused exploration of material systems and characterization. It includes fundamental courses in kinetics and thermodynamics, providing essential knowledge in the field while allowing further exploration via electives. This minor enhances career prospects across industries including electronics, energy, and manufacturing, preparing students for diverse engineering challenges.

Requirements

Course ID	Title	Credits
Prerequisites		
MATH 1210 & MATH 1220	Calculus I and Calculus II	8
PHYS 1310 & PHYS 1320	General Physics I and General Physics II	8
CHEM 1070 & CHEM 1075	General Chemistry I and General Chemistry Lab I	4
Total Credit Hours		**20**

Course ID	Title	Credits
Required Courses		**9**
CENG 3120	Materials Science & Engr	
or ENGP 3120	Materials Science and Engineering	
ENGP 3350	Kinetics of Material Systems	
ENGP 3760	Thermodynamics of Materials	
or CHEM 3120	Physical Chemistry II	
Electives (Choose 3)		**9**
ENGP 3360	Structure of Materials	
ENGP 3720	Mechanic Behavior of Materials	
PHYS 3700	Electronic Properties of Materials	
BMEN 3400	Biomaterials & Tissue Engineering	
CENG 4890	Polymer Engr & Science	
ENGP 3380	Materials for Energy	
ENGP 3620	MicroFab and Nanotech	
PHYS 3210	Molecular Biophysics & Polymer Physics	
ENGP 3370	Processing of Biomaterials	
ENGP 3290	Computational Materials Scienc	
CENG 4130	Surf. & Colloid Phenomen	
ENGP 3560	Photonic Materials & Devices	
CENG 4140	Electrochemistry	
or CENG 6140	Electrochemistry	
ENGP 3390	Synthesis of Nanomaterials	
ENGP 2430	Mechanics of Materials	
PHYS 2350	Modern Physics I	
CHEM 3410	Macromolecular, Supramolecular, and Nanochemistry	
EENS 3190	Earth Materials	
ENGP 3570	Semiconductor Devices	
Total Credit Hours		**18**

At least three courses (9 credits) counting toward the minor must not overlap with a student's major.

Materials Physics and Engineering, PhD

Materials Physics and Engineering PhD Program

The Tulane University graduate program in Materials Physics and Engineering (MPEN) is an interdisciplinary program that focuses on the fundamentals of material structure, material properties, material processing, and material modeling that are required to solve the complex technological problems in the 21st century, especially in the focus areas of nanotechnology, energy, environment healthcare, and homeland security/defense. The Tulane MPEN program is unique and unlike other graduate programs in materials science and engineering in that this program is based on a core foundation of physics enabling a student to appreciate the aforementioned materials interplay found in every new functional material discovered or developed. Modeling will allow students to handle “big data”, find optimized materials for new applications, and design engineering materials where the goal is integration and synthesis within and across these domains.

Requirements

Course ID	Title	Credits
At least 48 credits of graduate courses must be completed.		
Required courses (30 credits, each course is 3 credits):		
MPEN 6350	Kinetics of Material Systems	3
MPEN 6360	Structure of Materials	3
MPEN 6760	Thermodynamics of Materials	3
or CENG 7110	Modern Thermodynamics	
MPEN 7910	Research I	3
MPEN 7920	Research II	3
MPEN 7930	Research III	3
MPEN 7940	Research IV	3
Students must take two of the following three “Core Physics” courses:		
PHYS 7130	Solid State Physics	3
PHYS 7170	Quantum Mechanics I	3
PHYS 7230	Electromagnetic Theory I	3
Students must take one of the following “Properties of Materials” courses:		
MPEN 6370	Processing of Biomaterials	3
MPEN 6560	Photonic Materials & Devices	3
MPEN 6720	Mechanic Behavior of Materials	3

PHYS 6210	Molec Biophysics & Polymer Phy	3
PHYS 6700	Electrnc Prop of Materls	3

Elective courses (18 credits): The remaining 18 credits should be graduate level physics or materials electives, or graduate level courses in a related field with approval of the research supervisor and graduate program advisor. One of the electives must be a computational course (PHYS 6170 Computational Physics and Engineering, MPEN 6290 Computational Materials Science and Engineering, or a computational course in another department approved by the graduate program advisor). Up to 6 credits may be fulfilled by Advanced Research I and II, with approval of the research supervisor and graduate program advisor. Advanced Research I and II may be taken at the same time as Research I-IV, with up to 6 credits of research allowed in one semester.

Grades:

Per the SSE Handbook: "A course in which a grade of C+ or less is earned cannot be counted toward a graduate degree. If a student receives one B- grade, the student is immediately considered for probation by the Associate Dean for Graduate Studies in consultation with the appropriate department/program. If a student receives two grades of B-, or one grade less than B-, during his/her tenure in the School of Science and Engineering, the student is placed on probation and considered for dismissal by the Associate Dean in consultation with the appropriate department/program."

A student who does not maintain the minimum 3.0 GPA in graduate course work will be subject to disenrollment. To continue in the program, MPE students must have a minimum 3.2 GPA from a minimum 8 graduate courses by the end of the 4th semester, not including research courses.

Oral Qualifying Exam:

The Ph.D. oral qualifying exam is presented by the student to a committee of three materials faculty at Tulane, chosen in consultation with the research supervisor and the graduate program advisor. A student must choose three research articles in agreement with committee members, one approved by each committee member, with each representative of a different topic in MPE not including the student's specific research area. The student must present a maximum 10 minute overview of the paper followed by about 20 minutes of questions on that topic. The exam duration is 1.5 to 2 hours total. The student must attempt the oral qualifying exam by the end of the 4th semester. A second attempt is allowed and must be completed by the end of the fifth week of the fifth semester (two total attempts allowed). The committee votes pass/fail on each paper topic, with unanimous agreement required to pass that topic. A student must pass all three topics. If one or more is failed, the student is allowed one additional chance to pass the failed topics, but with a different research article for each (again agreed between the student and committee). Passed topics do not need to be repeated in the 2nd attempt. Any student who has not passed the qualifying exam by the end of the fifth semester of graduate study will be disenrolled from the program.

Students who have met course and GPA requirements and have passed the qualifying exam become degree candidates. Those who have not are required to attend the weekly departmental colloquium.

Faculty Dissertation Committee:

Prior to the prospectus defense, the student and research supervisor form the faculty dissertation committee, which consists of the research supervisor (chair) and at least two other faculty members. One member may be from another Tulane department or other appropriate institution. The faculty dissertation committee (henceforth the committee) examines the student at the prospectus defense and oral dissertation defense, and approves the final written dissertation.

Prospectus Defense:

The prospectus defense demonstrates to the committee that the student has acquired sufficient knowledge in the specific research area and can effectively express that knowledge orally and in writing. A student must pass the oral qualifying exam before undertaking the prospectus defense. The prospectus defense consists of a written proposal and an oral defense:

The written research proposal (10-15 pages) contains an introduction, proposed research and justification, methods, preliminary results, and discussion. It must be reviewed and approved by the committee before the end of the sixth semester of graduate study.

The oral defense is a two-hour oral examination, including a research presentation (about 45 minutes) prepared by the student, given by the committee. The examination includes specific questions about the student's research as well as broadly focused questions on the general area of research. The oral defense must be attempted following approval of the written proposal, no later than the sixth semester of graduate study. If failed, the student is normally given a second attempt in the following semester. After two failures the student will be disenrolled from the program.

Students who are sufficiently prepared are strongly encouraged to take the prospectus defense before the end of the 4th semester of graduate study.

It is expected that, after completion of the oral prospectus defense, the Ph.D. candidate will obtain a Research Assistantship (RA) in the same research group. In order to encourage this, the faculty have adopted a policy for allocating graduate students on TA's to research groups.

Annual Report:

In April of each year, every Ph.D. student will submit a brief annual progress report (1-2 pages) to the research supervisor (and committee, when formed) summarizing research progress and accomplishments over the previous year, and future plans and milestones. This requirement is waived in the years when the prospectus and thesis defenses are completed.

Dissertation:

The final requirement for the Ph.D. degree is a written dissertation based on original research, approved by the committee, and its defense in an oral exam by the committee.

Master's Degree:

The master's degree is not a requirement for the Ph.D. in Materials Physics and Engineering. Admission with financial aid is only for doctoral students. However a graduate student may receive an M.S. in Physics based on 30 hours of approved graduate credit, or (if the research supervisor agrees to offer this option) an M.S. in Physics

based on 24 hours of approved graduate credit plus a thesis deemed acceptable by the research supervisor. Research course credit does not count toward the M.S. in Physics degree.

Program Transfers:

Students in the Materials Physics and Engineering Ph.D. program cannot transfer to the Physics Ph.D. program without going through the regular admissions process.

Exceptions to the requirements, due to extenuating circumstances, may be granted by vote of the PEP faculty.

The Materials Physics and Engineering program requirements were last modified in Fall 2018. The requirements for students matriculating prior to Fall 2018 may be found here (https://tulane.box.com/s/kolhmpfs9oxi9xh6lh5ro9e59hloeycs/).

Prospective Graduate Student Admission Information

REMINDER: The annual application deadline for Graduate Study in Materials Physics and Engineering at Tulane is Feb. 1st.

Materials Science and Engineering, MS

Materials Science and Engineering (MSE) Masters Program

The Tulane University Master of Science Degree in Materials Science and Engineering is an interdisciplinary degree that focuses on developing the deep understanding of materials modeling, processing, structure, properties, and performance required to solve complex technological problems. The program covers both “hard” and “soft” materials along with related devices. The MSE masters program provides preparation for professional practice in modern materials science for those technologists who wish to continue their education. Participating faculty are drawn from multiple materials-oriented departments in the School of Science and Engineering, including Chemistry, Chemical and Biomolecular Engineering, Biomedical Engineering, and Physics and Engineering Physics. This rigorous program trains graduate students to become leaders in industrial, government, and university settings. The program is flexible, allowing both full-time and part-time students, along with thesis (research component) and non-thesis (coursework only) tracks. Graduates are expected to fill the growing global demand for trained materials scientists and engineers in the twenty-first century. Graduates typically find work in a number of fields, including biotechnology and health care, defense, information technologies, manufacturing, aerospace, chemical processing, and energy.

Requirements

Required and Elective Coursework

Applicants may choose one of two paths: 30 credits of coursework OR 24 credits of coursework and a 6-credit written research thesis supervised by MSE faculty at Tulane (https://tulane.app.box.com/s/wny7qqlm75c0ol8pukm1224byk963szq/).

The required coursework for the Tulane MSE Master’s degree consists of four courses.

Course ID	Title	Credits
MPEN 6360	Structure of Materials	3
MPEN 6350	Kinetics of Material Systems	3
MPEN 6760	Thermodynamics of Materials	3
or CENG 7110	Modern Thermodynamics	
One Properties of Materials Course from an approved list.		
PHYS 6700	Electrnc Prop of Materls	3
MPEN 6370	Processing of Biomaterials	3
MPEN 6560	Photonic Materials & Devices	3
PHYS/CENG 6210	Molec Biophysics & Polymer Phy	3
MPEN 6720	Mechanic Behavior of Materials	3
The remaining coursework (six courses for non-thesis students or four courses for students pursuing the thesis option) consists of graduate electives in science and engineering as approved by the program’s Advisory Committee.		

Partial List of Elective Courses in MSE.

Course ID	Title	Credits
MPEN 6290	Computation Material Sci & Eng	3
MPEN 6560	Photonic Materials & Devices	3
MPEN 6370	Processing of Biomaterials	3
MPEN 6380	Materials for Energy	3
MPEN 6620	MicroFab and Nanotech	3
MPEN 6720	Mechanic Behavior of Materials	3
BMEN 6260	Molec Princ Funct Biomatr	3
BMEN 6650	Biomechanics and Biotransport	3
BMEN 6340	Soft Tissue Mechanics	3
BMEN 6400	Biomaterials & Tissue Engineering	3

or PHYS 6210	Molec Biophysics & Polymer Phy	
CENG 6420	Survey Contemp Polymers Rsh	3
CENG 6780	Special Topics (Electrochemistry)	3
CENG 6781	Special Topics (Nanostructured Soft Materials)	3
CENG 6890	Polymer Engr & Science	3
CENG 7870	Special Topics (Advanced Material Design)	3
CHEM 7440	Adv Organic Polymer Chemistry	3
PHYS 6700	Electrnc Prop of Materls	3
PHYS 7130	Solid State Physics	3

Students interested in technology entrepreneurship and commercialization may take one of the following courses to fulfill one of their electives.

Course ID	Title	Credits
MGMT 6160	New Venture Planning	3
MGMT 7210	Management of Technology and Innovation	3
SCEN 6000	Entrepreneurship Eng & Biosci	3
BMEN 6080	Tech Invent &Commercialization	3

Other SSE courses, including ones designated as BMEN, CENG, CHEM, COSC, MATH, and PHYS, may be suitable electives for MSE Master's students, with approval from the Advisory Committee.

Admission

Applicants from all undergraduate science and engineering majors are eligible to apply. For more information, go to our admissions page here: https://sse.tulane.edu/pep/academics/graduate/mse-masters-program (https://sse.tulane.edu/pep/academics/graduate/mse-masters-program/).

Tuition

Non-4+1 students will pay the per-credit rate for Science and Engineering

For Tuition Rates » (https://studentaccounts.tulane.edu/tuition-and-fees/)

GPA Requirement

A GPA of 3.0 is required for the degree to be conferred. Courses receiving less than B- will contribute no credit toward the Master's degree requirements.

Apply

Please use the Online Application System (https://applygrad.tulane.edu/apply/) to apply for the program. The application deadlines are May 15th for Fall admission and November 15th for Spring admission.

Contacts

Please contact Prof. Doug Chrisey, or any member of the MSE Master's Program Advisory Committee, if you have questions about the program.

- Prof. Doug Chrisey (dchrisey@tulane.edu), Physics and Engineering Physics
- Prof. Matthew Escarra (escarra@tulane.edu), Physics and Engineering Physics
- Prof. Vijay John (vj@tulane.edu), Chemical and Biomolecular Engineering
- Prof. Michael Moore (mooremj@tulane.edu), Biomedical Engineering
- Prof. Noshir Pesika (npesika@tulane.edu), Chemical and Biomolecular Engineering
- Prof. Russell Schmehl (russ@tulane.edu), Chemistry

Materials Science and Engineering (MSE) Masters 4+1 Program

In addition to the above requirements:

- Tulane 4+1 students must have a minimum grade of B in CENG/ENGP 3120, and at least one of their letters of recommendation must be from a Tulane SSE faculty member.
- 4+1 students will normally indicate their intention to pursue the program before the end of the third year at Tulane and will complete between 6 and 12 credits of coursework towards the MS degree by the end of the fourth year.
- Six of these credits can count simultaneously towards the 120 credits required for the Bachelor's degree.
- GRE and TOEFL scores are not required for Tulane 4+1 students.

Tuition

Students in the Tulane 4+1 programs pay only 35% of the regular graduate tuition for the 5th year.

For Tuition Rates » (https://studentaccounts.tulane.edu/tuition-and-fees/)

GPA Requirement

A GPA of 3.0 is required at graduation. Courses receiving less than B- will contribute no credit toward the Master's 4+1 degree requirements.

Apply

Please use the Online Application System (https://applygrad.tulane.edu/apply/) to apply for the program. The application deadlines are May 15th for Fall admission and November 15th for Spring admission.

Contacts

Please contact Prof. Doug Chrisey, or any member of the MSE 4+1 Master's Program Advisory Committee, if you have questions about the program.

- Prof. Doug Chrisey (dchrisey@tulane.edu), Physics and Engineering Physics
- Prof. Matthew Escarra (escarra@tulane.edu), Physics and Engineering Physics
- Prof. Vijay John (vj@tulane.edu), Chemical and Biomolecular Engineering
- Prof. Michael Moore (mooremj@tulane.edu), Biomedical Engineering
- Prof. Noshir Pesika (npesika@tulane.edu), Chemical and Biomolecular Engineering
- Prof. Russell Schmehl (russ@tulane.edu), Chemistry

Mechanical Engineering Certificate

Engineering Physics majors have the opportunity to focus their elective course work in a specific concentration area and earn a certificate if they are interested in a more focused field of study. Successful completion of an ENGP certificate requires a student to choose any four out of the seven total electives (i.e., out of the four engineering electives, one contemporary physics elective, one classical physics elective, and one broader technical elective) from within a particular concentration area.

Engineering Physics Major (p. 580)

The allowable electives for the Mechanical Engineering Certificate are listed in the Requirements.

Requirements

[3] Satisfies a Contemporary Physics elective.
[4] Satisfies an Engineering elective.

Mechanical Engineering Minor

Overview

The Mechanical Engineering Minor complements various STEM and non-STEM majors at Tulane by offering a condensed exploration of mechanical systems. It includes the fundamental courses Statics, Dynamics, and Thermodynamics, providing essential knowledge in the field while allowing further exploration via electives. This minor enhances career prospects across industries including aerospace, renewable energy, and manufacturing, preparing students for diverse engineering challenges.

Requirements

Course ID	Title	Credits

At least three courses (9 credits) counting toward the minor must not overlap with a student's major.

Physics Major

Physics is the most fundamental science. It is the foundation for our understanding of the world around us, spanning the ultimate depths within subatomic nuclei to distances beyond the known universe. Physics provides a basis for other sciences, including chemistry, biology, astronomy, and geology. Physics discoveries, which led to technologies ranging from energy sources to quantum information and nano-communication devices to state of the art medical diagnostics, have revolutionized our world, and will continue to do so. The physics curriculum at Tulane provides strong analytical skills and problem-solving abilities for careers ranging from academic research, to industrial development, to large government exploration, to project management, to the financial sector, to creative writing. The curriculum is unusually flexible and has successfully led to degrees with double, and even triple majors in diverse fields. The physics program also promotes and rewards creativity, stimulates intellectual development, and engages our students in life-long learning.

Mission Statement for Physics

The mission of the Physics program is to provide outstanding opportunities for learning and research in physics and teaching of the highest quality and impact, addressing needs and challenges of the 21st century. The program is designed to assist our students in developing deep understanding via powerful problem-solving skills, preparing them for a very broad range of opportunities.

Program Objectives for Physics

The Physics program aims to educate students to become professionals with in-depth knowledge and skills in science and mathematics to understand physical systems; to research, design and solve problems in physics and related disciplines; and to provide the foundation for graduate study and lifelong learning. Our objective is to prepare graduates to be able to successfully pursue:

- Advanced studies leading to research and/or professional careers in physical science;
- Careers in related technical and professional fields in industry or government.

Program Outcomes for Physics

Graduates of the Physics program at Tulane University will attain:

- an ability to apply knowledge of physics, mathematics, other sciences, and engineering;
- an ability to design and conduct experiments, as well as to analyze and interpret data;
- an ability to function on multi-disciplinary teams;
- an ability to identify, formulate, and solve problems;
- an understanding of professional and ethical responsibility;
- an ability to communicate effectively;
- a recognition of the need for, and an ability to engage in life-long learning;
- a knowledge of contemporary issues;
- an ability to apply advanced mathematics through multivariate calculus, differential equations, and/or numerical techniques;
- a knowledge of contemporary analytical and experimental techniques;
- a competence in the use of computational tools and in the use of a high-level programming language;
- a depth of knowledge in calculus-based physics at an advanced level.

Our physics curriculum places emphasis on:

- physics
- mathematics
- computer science and engineering
- problem solving
- computational skills
- science and scientific principles
- research
- communications
- multi-disciplinary teamwork
- continuous learning
- leadership
- ethics
- preparation for advanced degrees in a broad variety of fields

The basic physics requirements are flexible and accommodate degrees with majors in multiple and diverse fields. Students planning to continue on to graduate school should take more than the minimum courses required.

Website

https://sse.tulane.edu/pep/academics/undergraduate/physics (https://sse.tulane.edu/pep/academics/undergraduate/physics/)

Requirements

General Course Requirements for Physics

The intention of Tulane's physics major program is to encourage students to continue on to graduate education in Physics and related disciplines or to pursue cross-disciplinary preparation in physics for medical or other professional schools. Dual majors are encouraged, however students may not major in both Physics and Engineering Physics due to the substantial overlap. Students pursuing a career in physics are advised to follow the "Pre-Graduate Training" sequence. The minimum GPA for degree certification, counting all courses pertaining to Physics, Mathematics, and approved Science and Engineering electives, is 2.50.

The basic requirements for a Physics Major are as follows:

Course ID	Title	Credits
Select at least four courses of mathematics [1]		**13**
Required Physics Courses		**18**
PHYS 1310	General Physics I	4
PHYS 1320	General Physics II	4
PHYS 2350	Modern Physics I	3
PHYS 2360	Modern Physics II	3
PHYS 3530	Advanced Laboratory	3
PHYS 3800	Physics Colloquium	1
Four Physics Electives		**12**
Select two of the following:		6
PHYS 3010	Theoretical Physics	3
PHYS 3630	Electromagnetic Theory	3
PHYS 3650	Optics	3
PHYS 3740	Classical Mechanics	3
PHYS 4230	Thermal Physics	3
PHYS 4470	Intro Quantum Mechanics	3
Select two additional 3-credit PHYS courses at the 2000 level or higher		6
Additional Electives		**15**
Select five 3-credit elective courses in Mathematics, Physics, Chemistry, Computer Science, or Engineering. The courses must be at the 2000 level or higher, with exceptions noted in the footnote. One of these five electives must be a computational course. [2]		15

[1] At least two courses at the 2000-level or above.

[2] The five elective courses must be at or above the 2000 level, with the exception of CHEM 1070+1075, CHEM 1080+1085, CMPS 1500, and

CMPS 1600. Students should always confirm with the Major Advisor that all their electives are acceptable.

Notes:

- Students are encouraged to consider a bachelor of science in physics as preparation for graduate study in disciplinary and interdisciplinary sciences (physics, astrophysics, biophysics, chemistry, neuroscience, materials science, geophysics, meteorology, oceanography, and applied physics), for professional study in medicine, patent law, business, or engineering, and for careers in environmental science, in mathematical or computer modeling, in science writing, or in science and public policy.
- Within the requirements above, programs can be tailored to suit the needs of students who elect these career options. In addition, the department offers a 4+1 program that allows students to obtain a Master's Degree in five years, by enabling them to take graduate level courses as an undergraduate. Tulane University is a member of the Oak Ridge Associated Universities (ORAU) consortium.
- Research opportunities are often available for undergraduate Physics majors in conjunction with faculty, on a case by case basis.
- Students are responsible for fulfilling all TIDES, cultural knowledge, foreign language, writing, service learning, and other requirements, required by Tulane and the School of Science and Engineering.

Sample Schedule of Classes for Physics

(This is only a suggested schedule and students should not feel compelled in any way to model their course of studies on this example. Many other options and alternatives are possible, especially when including a double major. Chemistry, for example, is not a requirement for the B.S. in Physics. The illustration of certain courses in certain semesters below does not guarantee they will be offered in the suggested semester. Many physics courses at the 3000-level and above are given only once every two years. Students should keep abreast of actual course offerings as they are published by the Registrar.)

Year 1		
Fall		**Credit Hours**
PHYS 1310	General Physics I	4
MATH 1210	Calculus I	4
ENGL 1010	Writing	4
CHEM 1070 & CHEM 1075	General Chemistry I and General Chemistry Lab I	4

[1] e.g., Introduction to Physics Pedagogy

Pre-Graduate Training in Physics

The student who intends to continue graduate work in physics should complete at least 32 credits in physics including:

Course ID	Title	Credits
PHYS 1310	General Physics I	4
PHYS 1320	General Physics II	4
PHYS 2350	Modern Physics I	3
PHYS 2360	Modern Physics II	3
PHYS 3630	Electromagnetic Theory	3

PHYS 3650	Optics	3
PHYS 3740	Classical Mechanics	3
PHYS 4230	Thermal Physics	3
PHYS 4470	Intro Quantum Mechanics	3

Students are encouraged to undertake a research project and write a senior honors thesis under the supervision of a physics faculty member.

Recommended mathematics courses include:

Course ID	Title	Credits
MATH 3050	Real Analysis I	3
MATH 3090	Linear Algebra	4
MATH 4060	Real Analysis II	3
MATH 4210	Differential Geometry	3
MATH 4300	Complex Analysis	3
Courses in Scientific Computing [1]		

[1] e.g., PHYS 3170 Computnl Physics & Engr (3 c.h.) or MATH 3310 Scientific Computing I (3 c.h.) are also recommended.

Physics Minor

The object of the Physics Minor is to provide a strong physics component to bolster students typically majoring in other STEM areas, such as Chemistry, Mathematics, Cell and Molecular Biology, and the various Engineering fields. In some cases, students from the Liberal Arts and Social Sciences pursue the Physics Minor to add STEM strength to their degrees.

Requirements

Course ID	Title	Credits
PHYS 1310	General Physics I	4
PHYS 1320	General Physics II	4
Select four physics courses at the 2000-level or above. At least one must be taken from the following group.		12
PHYS 3010	Theoretical Physics	
PHYS 3630	Electromagnetic Theory	
PHYS 3740	Classical Mechanics	
PHYS 4230	Thermal Physics	
PHYS 4470	Intro Quantum Mechanics	
PHYS 4650	Optics	
Total Credit Hours		**20**

It should be noted that some of the upper-level physics courses have certain mathematics prerequisites.

Physics, MS

The Tulane 4+1 Program in Physics: Current Tulane undergraduates may earn an MS degree in physics by adding one year to the four years of study usually required for the BS degree. The MS degree provides a more complete preparation for a PhD program than the BS. The MS is usually preferred by industry and business. Normally an MS degree requires at least two years of postgraduate study. In this program the time is reduced to one year by taking some graduate level courses as an undergraduate.

Requirements

The MS requires 24 hours of physics coursework at the graduate (6000-7000) level plus six additional hours of either graduate courses or research. In the 4+1 program, a student will normally take a total of twelve hours of graduate courses as a junior or senior and nine more hours each semester in the fifth year. This provides a total of thirty hours, including up to six hours of research credit. With permission of the graduate advisor, graduate courses in other departments (*e.g.* Chemistry, Computational Science, Math, Engineering) may count toward the MS.

A 4+1 student should begin the program in their junior year. While it may be possible to complete the requirements for the 4+1 program by starting in the senior year, this is difficult and not recommended. Please note that some graduate courses are co-taught with similar undergraduate courses and have somewhat different requirements.

Application:

Application may be made using the standard form for graduate admission available on the SSE website (https://sse.tulane.edu/academics/graduate/admissions (https://sse.tulane.edu/academics/graduate/admissions/)). Normally an undergraduate GPA of 3.0 or higher, overall and in physics courses, is required for admission. One letter of recommendation is required. The GRE is not required.

Physics, PhD

The PhD degree in physics provides the academic foundation and laboratory training to conduct high quality research at the frontiers of physics. Graduate students from diverse backgrounds become creative physicists with the skills to thrive in educational, industrial or government laboratory settings.

Requirements

Course Work

At least 48 credits of graduate courses must be completed.

Required Courses

Course ID	Title	Credits
PHYS 6010	Techniques Theor Phys I	3
PHYS 7060	Theoretical Mechanics	3
PHYS 7100	Statistical Mechanics	3
PHYS 7170	Quantum Mechanics I	3
PHYS 7180	Quantum Mechanics II	3
PHYS 7230	Electromagnetic Theory I	3
PHYS 7910	Research I	3
PHYS 7920	Research II	3
PHYS 7930	Research III	3
PHYS 7940	Research IV	3

Elective courses (18 credits): The remaining 18 credits should be graduate level physics electives, or graduate level courses in a related field with approval of the research supervisor and graduate

program advisor. One of the electives must be a computational course (PHYS 6170 Computational Physics and Engineering, MPEN 6290 Computational Materials Science and Engineering, or a computational course in another department approved by the graduate program advisor). Up to 6 credits may be fulfilled by Advanced Research I and II, with approval of the research supervisor and graduate program advisor. Advanced Research I and II may be taken at the same time as Research I-IV, with up to 6 credits of research allowed in one semester.

Grades

Per the SSE Handbook: "A course in which a grade of C+ or less is earned cannot be counted toward a graduate degree. If a student receives one B- grade, the student is immediately considered for probation by the Associate Dean for Graduate Studies in consultation with the appropriate department/program. If a student receives two grades of B-, or one grade less than B-, during his/her tenure in the School of Science and Engineering, the student is placed on probation and considered for dismissal by the Associate Dean in consultation with the appropriate department/program."

A student who does not maintain the minimum 3.0 GPA in graduate course work will be subject to disenrollment.

Written Qualifying Exam

The Ph.D. qualifying exam is a 6-hour written examination covering classical and modern physics, given by the department once per semester. It covers the typical U.S. undergraduate physics curriculum with an emphasis on classical electrodynamics and quantum mechanics. The qualifying exam must be attempted no later than the fourth semester of graduate study. Students who are sufficiently prepared may take it during the first year with approval of the research supervisor. The passing score is 60%. Students who fail the qualifying exam must retake it until passed. Students may attempt the qualifying exam up to three times. Any student who has not passed the qualifying exam by the end of the fifth semester of graduate study will be disenrolled from the program.

Students who have met course requirements and passed the qualifying exam may apply to become degree candidates.

Faculty Dissertation Committee

Prior to the prospectus defense, the student and research supervisor form the faculty dissertation committee, which consists of the research supervisor (chair) and at least two other faculty members. One member may be from another Tulane department or other appropriate institution. The faculty dissertation committee (henceforth the committee) examines the student at the prospectus defense and oral dissertation defense, and approves the final written dissertation.

Prospectus Defense

The prospectus defense demonstrates to the committee that the student has acquired sufficient knowledge in the specific research area and can effectively express that knowledge orally and in writing. A student must pass the written qualifying exam before undertaking the prospectus defense. The prospectus defense consists of a written proposal and an oral defense:

The written research proposal (10-15 pages) contains an introduction, proposed research and justification, methods, preliminary results, and discussion. It must be reviewed and approved by the committee before the end of the sixth semester of graduate study.

The oral defense is a two-hour oral examination, including a research presentation (about 45 minutes) prepared by the student, given by the committee. The examination includes specific questions about the student's research as well as broadly focused questions on the general area of research. The oral defense must be attempted following approval of the written proposal, no later than the sixth semester of graduate study. If failed, the student is normally given a second attempt in the following semester. After two failures the student will be disenrolled from the program (exceptions due to extenuating circumstances may be granted by vote of the faculty).

Students who are sufficiently prepared are strongly encouraged to take the prospectus defense before the end of the 4th semester of graduate study.

It is expected that, after completion of the oral prospectus defense, the Ph.D. candidate will obtain a Research Assistantship (RA) in the same research group. In order to encourage this, the faculty have adopted a policy for allocating graduate students on TA's to research groups.

Annual Report

In April of each year, every Ph.D. student will submit a brief annual progress report (1-2 pages) to the research supervisor (and committee, when formed) summarizing research progress and accomplishments over the previous year, and future plans and milestones. This requirement is waived in the years when the prospectus and thesis defenses are completed.

Dissertation

The final requirement for the Ph.D. degree is a written dissertation based on original research, approved by the committee, and its defense in an oral exam by the committee.

Master's Degree

The master's degree is not a requirement for the Ph.D. in physics. Admission with financial aid is only for doctoral students. However a graduate student may receive an M.S. in Physics based on 30 hours of approved graduate credit, or (if the research supervisor agrees to offer this option) an M.S. in Physics based on 24 hours of approved graduate credit plus a thesis deemed acceptable by the research supervisor. Research course credit does not count toward the M.S. in Physics degree.

Program Transfers

Students in the Physics Ph.D. program cannot transfer to the Materials Physics and Engineering Ph.D. program without going through the regular admissions process.

Exceptions to the requirements, due to extenuating circumstances, may be granted by vote of the PEP faculty.

The Physics program requirements were last modified in Fall 2018. The requirements for students matriculating prior to Fall 2018 may be found here (https://tulane.box.com/s/ovwi03w8wmdq7e75m90okkizbqiu86te/).

Department of Psychology

Programs

Undergraduate

Majors

- Psychology Major (p. 595)

Minor

- Psychology Minor (p. 596)

Graduate Programs

- Behavioral Health, MS (p. 594)
- Psychology, MS (p. 596)
- Psychology, PhD (p. 598)

Graduate Certificates

- Health Psychology Certificate (Graduate) (p. 598)
- Trauma Focused School Psychology Certificate (Graduate) (p. 598)

Behavioral Health, MS

Behavioral Health is a broad term encompassing our social, emotional, and psychological well-being, which affects how we handle stress, relate to others, and make healthy choices. The 4+1 terminal Master of Science program in Behavioral Health provides qualified students earning a baccalaureate degree in Psychology from Tulane University and Xavier University of Louisiana with graduate training in this specialty area of psychology. Students who pursue the M.S. in Behavioral Health are interested in future careers in clinical practice, research, or policy. Students either may pursue the M.S. with an empirical thesis, concentrating in depth on a particular area of Behavioral Health, OR students may pursue the M.S. with a broad training base in Behavioral Health without a thesis.

Requirements

Required courses include two health psychology core courses (PSYC 6700 Health Psychology I (3 c.h.) and PSYC 6710 Health Psychology II (3 c.h.)), univariate statistics (PSYC 6090 Univariate I (3 c.h.)), and quantitative methods (either PSYC 6100 Rsch Methods Behav Hlth (3 c.h.) or PSYC 6110 Psyc Appl Univar Stat II (3 c.h.)). Students in the course-based (non-thesis) track complete 30 course credits (10 graduate courses). Students in the thesis track complete 24 course credits (8 graduate courses) and also produce a Master's thesis comprising an empirical study in psychology (3 credits of graded PSYC 6610 Independent Study first semester of +1 year and 3 credits of graded PSYC 9980 Masters Research (0 to 3 c.h.)second semester of +1 year).

4+1 M.S. in Behavioral Health (PSBH) – Non-Thesis Track

General Curriculum:

- Undergraduate pre-requisite course: PSYC 3330 Clinical Science and Psychological Disorders (3 c.h.) (Abnormal Psychology / Clinical Science & Psychological Disorders) or PSYC 3340 Developmental Psychopathology (3 c.h.).
- 30 graduate credits in Psychology (10 graduate courses).
- No more than 3 credits from graduate courses outside of Psychology; these credits must be approved by the Department of Psychology's Graduate Training Committee.
- No more than 3 credits in a Psychology independent study or special topics graduate course.

Requirements

Course ID	Title	Credits
Fall Senior Year		
Psychology Graduate-Level Elective Course		3
Spring Senior Year		
Psychology Graduate-Level Elective Course		3
Fall +1 Year

PSYC 7400	Devel Psychopathology	3
Total Credit Hours		**30**

Other Requirements:

- All courses counting towards the 30 credits must have a B- or higher grade. Grades below a B- do not count towards the degree.
- The minimum grade point average calculated over the 30 credits counted toward the degree must be greater than 3.0.
- No more than 6 credits can count towards both the Bachelor's and the Master's degree.
- No more than 6 credits taken as an overload during undergraduate studies (i.e., above the minimum 120 credit hours required to graduate) can count toward the Master's degree.
- Application for degree and submission of degree fees to the School of Science and Engineering is required.

4+1 M.S. in Behavioral Health (PSBH) – Thesis Track

General Curriculum:

- Undergraduate pre-requisite course: PSYC 3330 Clinical Science and Psychological Disorders (3 c.h.) (Abnormal Psychology / Clinical Science & Psychological Disorders) or PSYC 3340 Developmental Psychopathology (3 c.h.) (Developmental Psychopathology)
- 30 graduate credits consisting of 8 graduate courses (24 credits) + Empirical Master's thesis (3 credits of graded PSYC 6610 Adv Studies In Psych (1-3 c.h.) first semester of +1 year and 3 credits of graded PSYC 9980 Masters Research (0 to 3 c.h.) second semester of +1 year)

- Prospectus meeting (Held before October 1 for students entering in August and February 15 for students entering in January)
- Successful Master's thesis defense (Held before April 15 for May degree, August 5 for August degree, and December 5 for December degree)

Requirements

Psychology Major

Overview

The Bachelor of Science degree in Psychology introduces students to the major theoretical perspectives and primary empirical techniques of hypothesis testing in psychological science, as well as the application of psychological principles.

Requirements

The following are required for the major in psychology:

Course ID	Title	Credits
Required Courses		
PSYC 1000	Introductory Psych	3
PSYC 3090	Univariate I & Lab	4
PSYC 3130	Experimental Psychology & Lab	4
Biological Psychology		
Select one of the following:		3
PSYC 3300	Brain and Behavior	
PSYC 3680	Comp Animal Behavior	
PSYC 3700	Evolution & Psychology	
Developmental Psychology		
Select one of the following:		3
PSYC 3210	Child Psychology	
PSYC 3390	Adolescent Psychology	
Clinical Applications and Assessment		
Select one of the following:		3
PSYC 3180	Psychological Testing	
PSYC 3200	Educational Psychology	
PSYC 3330	Clinical Science and Psychological Disorders	
PSYC 3340	Developmental Psychopathology	
PSYC 3530	Introduction to Health Psychology	
Cultural, Personality, and Social Psychology		
Select one of the following:		3
PSYC 3310	Intro to African American Psychology	
PSYC 3430	Intro To Social Psychology	
PSYC 3010	Intro To Personality	

Select a total of 9 additional psychology elective credits must be completed at the 3000 level or above (for a total of 29 hours at/above the 3000 level). [1]	9
Total Credit Hours	**32**

[1] Please note that ALL 3000 level courses count towards the 29 credits, including PSYC 3090 Univariate I & Lab (4 c.h.) and PSYC 3130 Experimental Psychology & Lab (4 c.h.), and the departmental distribution requirements

In addition:

Students majoring in psychology must complete the math courses necessary for the B.S. degree, one SSE laboratory course (and its co requisite) outside of (and NOT cross-listed with) PSYC, and one 3 credit non-laboratory SSE courses that is outside (and NOT cross-listed with) PSYC.

No more than 16 credits may be transferred to count towards the Psychology Major.

Psychology majors are limited to taking a maximum of three courses for credit towards the major while studying abroad.

Students must earn at least a 2.0 major GPA.

At least 29 credits must be taken at or above the 3000 level.

S/U graded courses do not count towards the major requirements.

Psychology Minor

A minor in Psychology (PSYC) provides students with exposure to the breadth of the field beyond Introductory Psychology, and includes at least one course in three of the four distribution areas (below) plus one psychology elective.

- Biological Psychology
- Developmental Psychology
- Cultural, Personality, and Social Psychology
- Clinical Applications and Assessment

Students that major in neuroscience complete the psychology minor under PSYN. The PSYN minor requires the completion of PSYC 1000 Introductory Psych (3 c.h.) and four additional elective courses in Psychology which do not overlap with course requirements in Neuroscience and are not cross-listed as PSYC/NSCI.

Because of the large number of psychology courses required for the cognitive studies major, the requirements for cognitive studies majors who minor in psychology are different from other psychology minors. A minor in psychology when completed with a major in cognitive studies requires the completion of PSYC 1000. In addition, students must complete four additional 3 or 4 credit elective courses in psychology which are not applied to the cognitive studies major.

Requirements

A minor in psychology requires:

No more than 8 credits may be transferred to count towards the Psychology Minor.

Students must earn at least a 2.0 minor GPA.

At least 12 credits must be taken at or above the 3000 level.

Psychology minors are limited to taking a maximum of two courses for credit towards the minor while studying abroad.

S/U graded courses do not count towards the minor requirements.

Specifics for each "version" of the psychology minor are the following:

PSYC:

5 Psychology courses and a minimum of 15 hours. These courses must include PSYC 1000 Introductory Psych (3 c.h.), at least 1 course in three of the four distribution areas (see below), and one elective psychology course.

- Biological Psychology
- Developmental Psychology
- Cultural, Personality, and Social Psychology
- Clinical Applications and Assessment

PSYN: (for students majoring in Neuroscience)

5 courses and a minimum of 15 hours. The PSYN minor requires the completion PSYC 1000 Introductory Psych (3 c.h.) and four additional elective courses in Psychology which do not overlap with course requirements in Neuroscience and are not cross-listed as PSYC/NSCI.

Cognitive Studies Majors Seeking a PSYC Minor

Cognitive Studies majors who wish to receive a psychology minor must take PSYC 1000 Introductory Psych (3 c.h.) plus four additional courses at or above the 3000 level in psychology that do not overlap with their Cognitive Studies major.

Psychology, MS

The Master of Science Program in Psychological Science provides graduate level training in psychological theories and research methods. The Psychology Department offers a 4+1 terminal Master of Science degree, with both non-thesis (course-based) and thesis tracks. In addition, all students who enter the Psychology PhD program without a Master's degree are required to complete a Master of Science degree en route to the PhD.

Requirements

Required graduate courses include courses in core areas of psychology (e.g., social psychology), quantitative methods, and other approved courses to provide depth and breadth. All students completing a Master's degree must earn 30 credit hours. The specific requirements depend on whether students are completing (1) the Non-Thesis (Course-Based) Track as part of the 4+1 MS program, (2) the Thesis Track as part of the 4+1 MS program, or (3) a MS Thesis en route to the PhD.

Non-Thesis (Course Based) Track for 4+1 Students

General Curriculum:

- 30 graduate credits (10 graduate courses)
- PSYC 6090 Univariate I (3 c.h.))

- At least 3 credits in a statistics course beyond PSYC 6090 (eligible courses: PSYC 6110 Psyc Appl Univar Stat II (3 c.h.), PSYC 6130 Psyc Appl Multivar Stats (3 c.h.))
- At least 3 credits in social, cultural, or developmental psychology (see Appendix)
- At least 3 credits in biological underpinnings of behavior (see Appendix)
- At least 6 credits in core courses (eligible courses include: PSYC 7000-7090)
- No more than 3 credits from courses outside of Psychology
- No more than 3 credits in a Psychology independent study or special topics graduate course

Notes:

- Students are strongly encouraged to take one to two 6000+-level PSYC graduate courses during their senior year.
- Some courses fulfill multiple requirements (e.g., PSYC 7020 Developmental Psychology meets the requirement of one core course, but it also satisfies the social, cultural, or developmental psychology requirement).

Other requirements:

- All courses counting towards the 30 credits must have a B- or higher grade. Grades below a B- do not count towards the degree.
- The minimum grade point average calculated over the 30 credits counted toward the degree must be greater than 3.0.
- No more than 6 credits can count towards both the Bachelor's and the Master's degree.
- No more than 6 credits taken as an overload during undergraduate studies can count toward the Master's degree.
- Application for degree and submission of degree fees to the School of Science and Engineering is required.

Appendix

Eligible classes for social/developmental psychology and cognitive/behavioral neuroscience general curriculum requirement:

Social, cultural, or developmental psychology

- PSYC 7000 Social Psychology (3 c.h.)
- PSYC 7010 Personality (3 c.h.)
- PSYC 7020 Developmental Psychology (3 c.h.)
- PSYC 7070 Culture and Cognition (3 c.h.)
- PSYC 7150 Advanced Adolescent Psyc (3 c.h.)
- PSYC 7160 Children of Color (3 c.h.)
- PSYC 7170 Intergroup Relations (3 c.h.)
- Special topics by approval

Cognitive/behavioral neuroscience

- PSYC 6060 Behavioral Endocrinology (3 c.h.)
- PSYC 6330 Neurobiol Learn & Memory (3 c.h.)
- PSYC 6530 Psychopharmacology (3 c.h.)
- PSYC 7030 Cog. Neurosc. Grad. Sem. (3 c.h.)
- PSYC 7040 Evol Models In Psych (3 c.h.)
- PSYC 7090 Physiological Psychology (3 c.h.)
- Special topics by approval

Thesis Track for 4+1 Students

General Curriculum:

- 30 graduate credits in Psychology (10 graduate courses)
- PSYC 6090 Univariate I (3 c.h.)
- At least 3 credits in core courses (eligible courses: PSYC 7000-7090)
- No more than 3 credits from courses outside of Psychology
- No more than 3 credits in a Psychology independent study or special topics graduate course
- Empirical Master's thesis (6 credits of PSYC 9980 Masters Research (0 to 3 c.h.))
- Prospectus meeting (Held before October 1 for students entering in August and February 15 for students entering in January)
- Successful Master's thesis defense (Held before April 15 for May degree, August 5 for August degree, and December 5 for December degree)

Other Requirements:

- All courses counting towards the 24 credits must have a B- or higher grade. Grades below a B- do not count towards the degree.
- The minimum grade point average calculated over the 24 credits counted toward the degree must be greater than 3.0.
- No more than 6 credits can count towards both the Bachelor's and the Master's degree.
- No more than 6 credits taken as an overload during undergraduate studies can count toward the Master's degree.
- Application for degree and submission of degree fees to the School of Science and Engineering is required.
- Submission of thesis to the School of Science & Engineering is required.

Thesis en route to the PhD General Curriculum:

- 30 graduate credits in Psychology, inclusive of:
  - PSYC 6090 Univariate I (3 c.h.)
  - PSYC 6110 Psyc Appl Univar Stat II (3 c.h.)
  - At least 3 credits in core courses (eligible courses: PSYC 7000-7090)
  - PSYC 7230 Professional Issues (1 c.h.)
  - Up to 21 credits from elective courses (can include PSYC 9990)
- Empirical Master's thesis, inclusive of:
  - Prospectus meeting
  - Successful Master's thesis defense

Other Requirements:

- All courses counting towards the 30 credits must have a B- or higher grade. Grades below a B- do not count towards the degree.
- The minimum grade point average calculated over the 30 credits counted toward the degree must be greater than 3.0.
- Application for degree and submission of degree fees to the School of Science & Engineering.
- Submission of thesis to the School of Science & Engineering.

Psychology, PhD

Graduate studies leading to the Ph.D. degree in psychology are designed to offer the student training in a major research area within psychology, expertise in quantitative and design methodology, and varied research opportunities. Students study either an area of **Psychological Science (Brain, Cognition, and Developmental Science or Social Psychology)** or **School Psychology** (which is accredited by the American Psychological Association).

Requirements

The minimum requirements for the Ph.D. degree include:

- A total of 48 hours of graduate course credits. These credits include 3 courses in core areas of psychology (e.g., developmental psychology), 3 courses in quantitative methods (e.g., multivariate statistics), and other approved courses and research projects.
- Completion of a Master's thesis in psychology including the production of at least one empirical study.
- Satisfactory performance on a comprehensive preliminary examination.
- Proposal and completion of an original dissertation research project.
- Successful defense of the written doctoral dissertation through an oral examination. The requirements for the degree of *Doctor of Philosophy in Psychology* with a specialization in **School Psychology** are similar to those noted above except that students complete a minimum of 62 didactic hours, 24 practicum hours, and a one-year pre-doctoral clinical internship.

Health Psychology Certificate (Graduate)

Overview

Students enrolled in the Psychological Science Ph.D. program may elect to focus on health psychology. Students complete all the usual requirements of the Psychological Science Ph.D. (p. 598) , with 15 of the usual 29 elective credits being in health psychology (as below). Psychology Ph.D. students completing this sequence will earn a graduate certificate in Health Psychology when their Ph.D. is awarded.

Requirements

The required courses comprise of the following:

Course ID	Title	Credits
Core Health Psychology Courses (Required)		
PSYC 6100	Rsch Methods Behav Hlth	3
PSYC 6700	Health Psychology I	3
PSYC 6710	Health Psychology II	3
Content Depth Requirement (Choose at least 1)		**3**
Advanced Studies in Psychology: Psycho-Oncology OR PSYC 7942		3
PSYC 6610	Adv Studies In Psych	3
	Disease-specific course offered by another department (Graduate Training Committee approval required)	
Advanced Training in Methodology or Pedagogy (Choose at least 1)		**3**
PSYC 6812	Special Topics Advanced Data Analysis using R	3
PSYC 7240	College Teaching Pedagogy	3
PSYC 7420	Advanced Seminar II	3
PSYC 7424	Advanced Seminar II Qualitative Methods in Behavioral Health	3
PSYC 7440	Advanced Seminar IV Mixed Methods Research	3
PSYC 7450	Linear Structural Modeling	3
CELT 7010	The Essentials of Learning and Teaching Must be completed with CELT 7020 and CELT 7030	1
CELT 7020	Practical Course Design and Teaching Skills Must be completed with CELT 7010 and CELT 7030	1
CELT 7030	Teaching Practicum Must be completed with CELT 7010 and CELT 7020	1
Advanced statistical course offered by another department (e.g., R, SAS, STATA, ArcGIS, Meta-Analysis; Graduate Training Committee approval required) OR PSYC 7943		3

A minimum of 15 credit hours are required for the Health Psychology Certificate.

Trauma Focused School Psychology Certificate (Graduate)

Overview

Students enrolled in the School Psychology Ph.D. program can apply to complete a certificate program that provides specialized trauma-focused training. Doctoral students completing this specialized training will be prepared to deliver comprehensive school mental health services with the goals of preventing trauma and treating youth exposed to trauma. Students complete all of the usual requirements of the Ph.D. program plus the requirements of the trauma specialization certificate. School Psychology Ph.D. students who complete the trauma specialization requirements will earn a trauma specialization graduate certificate when their Ph.D. is awarded.

Requirements

Course ID	Title	Credits
Required Course		
PSYC 6590	Stress & Trauma	3
One additional research methodology / statistics course: [1]		**3**
PSYC 7450	Linear Structural Modeling	
PSYC 7424	Advanced Seminar II	
PSYC 7440	Advanced Seminar IV	
PSYC 6100	Rsch Methods Behav Hlth	
PSYC 7420	Advanced Seminar II	
PSYC 7943	Advanced Psychology Statistics - Transfer	
Two years of practicum		**12**

PSYC 7823	Practicum in School Psyc (Two years of practicum (Psyc 7823) with community agencies providing trauma-focused comprehensive school mental health services in New Orleans public schools. These practicum experiences include specialized training in evidence-based interventions.)
Research relevant to stress and trauma	
Students will complete at least one mentored, independent research project, a MS thesis (Psyc 9980), or a PhD dissertation (Psyc 9990) focused on stress, trauma, adversity, and / or related constructs.	
PSYC 9980	Masters Research
PSYC 9990	Dissertation Research
Disciplinary Leadership Experience [2]	

[1] To complete the School Psychology doctoral program all students must take either Psyc 7424 (Qualitative Methods) or Psyc 6100 (Research Methods in Behavioral Health). If a student completes both courses, the course taken second will fill the additional methods requirement for the certificate.

[2] **Disciplinary leadership experiences require a written MOU that documents a plan with the following five elements:**

1. The selection of an advisor. If the advisor is neither of the Specialization co-directors, doctoral students are also required to select one of the co-directors as a co-advisor.

2. A formal learning experience that will occur 1) in a course, 2) in a series of workshops, or 3) under formal mentorship with an independent learning plan.

3. An applied practice or service element. Examples are described with the options below.

4. A final product, which could include a written paper, policy report, preparation of a training workshop, "graduate student corner" *Communiqué* submission, etc.

5. Participation in program-wide shared learning through 1) discussing your project in a large group setting (i.e., large group supervision, colloquium, brown bag), and 2) placing your final product in the program's repository.

Students may choose from one of the following five Disciplinary Leadership options, or petition to design their own:

- Higher education pedagogy and instruction. Complete CELT 7010, 7020, and 7030, a 3-credit teaching sequence.* Final product could include a guest lecture, large group presentation, or school-based professional development presentation. *Note that the CELT course is spread over three semesters.
- Research to practice communication. Identify an area of scholarship that is ripe to translate for a practice audience and co-write an article (final product) with your mentor for *Communiqué* or another practice-oriented publication.
- Advocacy. Complete pre-training advocacy workshops and/or an advocacy training day, research your topic for discussion with legislators and complete a "Hill visit" in DC or Baton Rouge through a professional organization or advocacy group. Final product could include a policy brief. Hill visits may cost money; travel and training funding can be sought through the various graduate student travel funding options.
- Policy. Select a policy organization for a semester-long placement, during which time you will complete a policy-relevant project that aligns with the organization's goals and needs. The project will require partnering with the organization, understanding their needs, conducting research, and preparing a useful final product for the organization such as a policy brief, website, or white paper. Example organizations may include the NOLA Health Department, the Mayor's Office, CYPB, LPHI, Agenda for Children, the International Institute for Child Rights and Development, LACCR, the UP Institute, LCRC, and Beloved Communities.
- Crisis Intervention Training. Participate in the NASP PREPaRE Model's training sequence to become a trainer. Final product is certification as a trainer, which includes delivery of the training. Participating in this training may cost money; travel and training funding can be sought through the various graduate student travel funding options.
- Petition to create your own disciplinary leadership experience.

Civil Engineering-Water Resources and Environmental Minor

Overview

The Minor in Civil Engineering -Water Resources and Environmental is available to students pursuing any undergraduate major in the School of Science and Engineering or in other Tulane colleges. In particular, students majoring in another engineering discipline may find the RCSE minor attractive as an additional skill set for the job market. Students with a major in the physical or environmental sciences might have already covered the pre- or co-requisites for the RCSE minor, making it a relatively easy addition to their expertise while matriculating at Tulane. Students majoring in the environmental sciences (e.g., EEB or EES) could strengthen their undergraduate training in water-related topics. Outside of SSE, any student interested in a career linked to environmental planning, climate change adaptations, the resilience of human and natural systems, and water utilization could benefit from this training. This umbrella includes fields as diverse as law, business, public health, and social sciences. We foresee particular links for students in the (1) Environmental Studies major (School of Liberal Arts), where strengthening their science and engineering background in the water sector would be advantageous in many career tracks, and (2) in the School of Architecture, where a program in landscape architecture and design is under development.

Requirements

The Minor in Civil Engineering - Water Resources and Engineering requires 18 credit hours from the following six courses:

Course ID	Title	Credits
ENGP 1410	Statics	3
RCSE 3010	Water Resources Engineering - I (Or)	3
or BMEN 3440	Biofluid Mechanics	
or CENG 2320	Transport I: Fluids	
RCSE 4010	Water Resources Engineering II (offered Fall semester)	3
RCSE 4030	Water Resources Engineering III (offered Spring semester)	3
RCSE 6800	Intro to River Science & Eng (offered every Spring)	3
RCSE 6802	Introduction to Coastal Science and Engineering (offered Fall semester)	3
Total Credit Hours		**18**

In summary, to complete the RCSE minor, students using RCSE3010 or BMEN 2320 for the fluid mechanics requirement will also need to successfully complete one semester each of calculus and physics. If using CENG23230, they will need three semesters of math (including 2 of calculus), one of physics, one of chemistry, and an additional CENG course (Thermodynamics). Likely the latter track to the RCSE minor will primarily be followed by students seeking a major in chemical engineering.

As further requirements for the RCSE minor, students must maintain a 2.00 GPA in all minor courses. No courses can count toward a second minor in SSE or other Tulane schools. For more information, please contact the department chair at meadallison@tulane.edu.

River-Coastal Science and Engineering Certificate (Graduate)

Overview

Tulane University and the U.S. Army Engineer Corps of Engineers have partnered to provide a unique, graduate-level certificate program that focuses on teaching students both the science and engineering associated with river management. There is an emphasis on the academic underpinnings as well as pragmatic applications, and the interdisciplinary nature of rivers is stressed by including faculty who work in geology, civil engineering, geomorphology, river mechanics and engineering, biogeochemistry, ecology and numerical modeling. This program is offered fully online, combining self-taught modules with weekly Live Sessions and is available to students everywhere. This certificate program can, but does not have to, serve as a step toward a graduate degree in the subject.

Requirements

The River-Coastal Science and Engineering Certificate program will consist of the completion of one required course, RCSE 6800 Intro to River Science & Eng (3 c.h.), and/or RCSE 6802 Introduction to Coastal Science and Engineering (3 c.h.) with additional advanced courses listed below to equal 15 hours. The existing coursework in the program is:

Course ID	Title	Credits
RCSE 6010	Water Resources Engineering II (offered Fall semester)	3
RCSE 6030	Water Resources Engineering III (offered Spring semester)	3
RCSE 6040	Coastal Marine Geology (offered Fall semester, odd years)	3
RCSE 6660	Special Topics (Offered periodically)	1-3
RCSE 6710	Open Channel Flow (offered Spring semester, odd years)	3
RCSE 6800	Intro to River Science & Eng (offered every Spring semester)	3
RCSE 6802	Introduction to Coastal Science and Engineering (offered every Fall semester)	3
RCSE 6810	River and Stream Restoration (offered Spring semester, even years)	3
RCSE 6820	Introduction to River-Coastal Hydrologic and Hydraulic Modeling (offered Spring semester, even years)	3
RCSE 6830	River Mechanics & Management (offered Fall semester, even years)	3
RCSE 6840	Methods in River Sampling (offered Spring semester, odd years)	3
RCSE 6850	Estuarine Processes (offered Spring semester, odd years)	3
RCSE 6860	Environmental Data Analysis in the Anthropocene (offered Spring semester, even years)	3

RCSE 6865	Sea Level Rise (offered Spring semester, odd years)	3
RCSE 6870	Hydroclimatology (offered Fall semester, odd years)	3
RCSE 6875	Ecohydrology (offered Fall, even years)	3
RCSE 7100	Seminar in River Coastal Science and Engineering (Every semester)	1
RCSE 6900	Independent Study (Every semester)	1-3

Students should complete the Introduction courses prior to enrolling in advanced courses unless permission is obtained from the River Science and Engineering Certificate program coordinator, Barb Kleiss (bkleiss@tulane.edu (meadallison@tulane.edu)) and the class instructor. This exception will be made for students who are not initially interested in completing the full certificate program and that also meet the instructor's prerequisites for entrance into the course. Each of the courses in the program will be three credit hours. Those completing 15 credit hours of required coursework will be granted a Graduate Certificate from Tulane. All courses will be taught on the standard Tulane Fall and Spring semester schedule.

River-Coastal Science and Engineering, MS (Non-Residential)

Overview

The River-Coastal Science and Engineering program is an effort by faculty and students to understand a key component of the Earth system—the linked environments of river basins, deltaic river mouths, and coastal ocean systems. Much of our focus surrounds the nexus issue of water: water exerts a strong control over landform evolution and ecosystem health, and is a priority human need for agriculture, industry, and health.

This 30 credit degree for non-residential students is designed to allow professionals to acquire the degree remotely while employed. Non-residential students may elect the thesis pathway (24 hours of classroom credit + 6 research credits) described in the residential Masters description or have the option to complete 30 credit hours of coursework. There is also the opportunity in the non-thesis track to undertake a smaller-scale research project while enrolled in RCSE 6900 Independent Study. Either non-residential pathway can be taken on a part-time or full-time (+9 credit hours per semester) basis. We envision that most students who pursue this degree will have acquired the Graduate Certificate as an intermediate step, which provides an opportunity for the student to arrange their funding through their employer and to potentially conceive a research project they would conduct after becoming degree seeking that fits their individual work-life issues.

Requirements

All students must complete 30 graduate credit hours in order to obtain the degree.

- M.S. students can transfer up to 12 credit hours from previous graduate-level coursework to the degree. The RCSE Graduate Advisor must approve all transfer credits.
- Students hoping to transfer graduate credits should prepare and submit the paperwork at the start of their second semester at Tulane. SSE will only transfer credits when the student has completed one semester (it is at that point that a Tulane transcript is available).
- Academic graduate electives from other Tulane departments may be applied to the degree up to a limit of 9 credit hours. All other courses must originate from RCSE. If a class is not on the approved list, a student may petition the Graduate Advisor for it to be accepted as an elective.
- All credits earned in obtaining the RCSE Graduate Certificate in River-Coastal Science and Engineering will count toward the 30 credit limit required for the MS degree, regardless of whether the student pursues the thesis option or not.
- Thesis track students must enroll in 3 credits of Masters Research (RCSE 9980) over two semesters (6 credits total). Typically, students do this in their 3rd and 4th semesters.
- Note that non-resident MS students typically do NOT register for any credits over the summer as it is anticipated that they will not be supported financially under a research assistantship.
- Unless students have been exposed previously to the material offered, students are strongly encouraged to take two introductory technical courses offered by the RCSE, RCSE 6800 Intro to River Science & Eng (3 c.h.) and RCSE 6802 Intro to Coastal Science and Engineering.

Course ID	Title	Credits
RCSE 6010	Water Resources Engineering II (offered Fall semester)	3
RCSE 6030	Water Resources Engineering III (offered Spring semester)	3
RCSE 6040	Coastal Marine Geology (offered Fall semester, odd years)	3
RCSE 6660	Special Topics (Offered periodically)	1-3
RCSE 6710	Open Channel Flow (offered Spring semester, odd years)	3
RCSE 6800	Intro to River Science & Eng (offered every Spring semester)	3
RCSE 6802	Introduction to Coastal Science and Engineering (offered every Fall semester)	3
RCSE 6810	River and Stream Restoration (offered Spring semester, even years)	3
RCSE 6820	Introduction to River-Coastal Hydrologic and Hydraulic Modeling (offered Spring semester, even years)	3
RCSE 6830	River Mechanics & Management (offered Fall semester, even years)	3
RCSE 6840	Methods in River Sampling (offered Spring semester, odd years)	3
RCSE 6850	Estuarine Processes (offered Spring semester, odd years)	3
RCSE 7100	Seminar in River Coastal Science and Engineering (Every semester)	1
RCSE 6860	Environmental Data Analysis in the Anthropocene (offered Spring semester, even years)	3
RCSE 6870	Hydroclimatology (offered Fall semester, odd years)	3

RCSE 6865	Sea Level Rise (offered Spring semester, odd years)	3
RCSE 6875	Ecohydrology (offered Fall semester, even years)	3
RCSE 6900	Independent Study (Every semester)	1-3
RCSE 9980	Masters Research	3

M.S. students must enroll in three semesters of the 1 credit Seminar course (RCSE7010). The goal of this is to expose students to state-of-the-art research topics and methodologies in concert with the departmental seminar series.

River-Coastal Science and Engineering, MS (Residential)

Overview

The River-Coastal Science and Engineering program is an effort by faculty and students to understand a key component of the Earth system—the linked environments of river basins, deltaic river mouths, and coastal ocean systems. Much of our focus surrounds the nexus issue of water: water exerts a strong control over landform evolution and ecosystem health, and is a priority human need for agriculture, industry, and health.

The resident MS degree program is a 2-year program, in which a student will take 24 graduate credit hours of coursework and write a thesis (6 research credits). Alternately, students may pursue a non-thesis pathway that requires 30 classroom credits and has the option of conducting a smaller-scale research project through RCSE 6900 Independent Study. The program is well suited as a stepping stone for students considering pursuing a Ph.D. degree program at Tulane or elsewhere in this discipline or related areas. The program is also useful for students planning to enter more advanced professional degree programs (e.g., law, public health, business, natural resources management, etc.). It can be useful for students interested in seeking employment with environmental agencies of federal, state, and municipal government; non-governmental organizations; education; and in private industry, including environmental consulting firms.

Requirements

All students must complete 30 graduate credit hours in order to obtain the degree.

- M.S. students can transfer up to 12 credit hours from previous graduate-level coursework to the degree. The RCSE Graduate Advisor must approve all transfer credits.
- Students hoping to transfer graduate credits should prepare and submit the paperwork at the start of their second semester at Tulane. SSE will only transfer credits when the student has completed one semester (it is at that point that a Tulane transcript is available).
- Academic graduate electives from other departments may be applied to the degree up to a limit of 9 credit hours. All other courses must originate from RCSE. If a class is not on the approved list, a student may petition the Graduate Advisor for it to be accepted as an elective.
- Note that resident thesis MS students must register in the summer for health insurance to allow for continuation of the research assistantship.
- Unless students have been exposed previously to the material offered, thesis committees will strongly urge students to take the two introductory technical courses offered by the RCSE, RCSE 6800 Intro to River Science & Eng (3 c.h.) and RCSE 6802 Introduction to Coastal Science and Engineering (3 c.h.) .

Course ID	Title	Credits
RCSE 6010	Water Resources Engineering II (offered Fall semester)	3
RCSE 6030	Water Resources Engineering III (offered Spring semester)	3
RCSE 6040	Coastal Marine Geology (offered Fall semester, odd years)	3
RCSE 6660	Special Topics (Offered periodically)	1-3
RCSE 6710	Open Channel Flow (offered Spring semester, odd years)	3
RCSE 6800	Intro to River Science & Eng (offered every Spring semester)	3
RCSE 6802	Introduction to Coastal Science and Engineering (offered every Fall semester)	3
RCSE 6810	River and Stream Restoration (offered Spring semester, even years)	3
RCSE 6820	Introduction to River-Coastal Hydrologic and Hydraulic Modeling (offered Spring semester, even years)	3
RCSE 6830	River Mechanics & Management (offered Fall semester, even years)	3
RCSE 6840	Methods in River Sampling (offered Spring, odd years)	3
RCSE 6850	Estuarine Processes (offered Spring semester, odd years)	3
RCSE 7100	Seminar in River Coastal Science and Engineering (Every semester)	1
RCSE 6900	Independent Study (Every semester)	1-3
RCSE 9980	Masters Research	3

All M.S. students must enroll in three semesters of the 1 credit Seminar course (RCSE 7100 Seminar in River Coastal Science and Engineering (1 c.h.)). Thesis track students must also enroll in the 3 credit Technical and Research Communication course RCSE 7020 that is offered each Fall. The goal of this course is to expose students to state-of-the-art research topics and methodologies and prepare a prospectus for their thesis project. Generally students take this class in their third semester.

Additionally, thesis track students must enroll in 3 credits of Masters Research (RCSE 9980 Masters Research (0 to 3 c.h.)) over two semesters (6 credits total). Typically, students do this during their 3rd and 4th semesters. The student may register for more Masters Research credits if desired in prior or subsequent semesters; however, these credits do not count toward the 24 course credits necessary for the degree. Masters Research credits are an additional and different type of credit, and they bring the total credits up to 24+6=30. Note that if all other credit requirements are met, the student can enroll in ONLY 3

hrs of Masters Research to maintain enrollment, i.e. this maintains full time enrollment.

River-Coastal Science and Engineering, PhD

Overview

The River-Coastal Science and Engineering program is an effort by faculty and students to understand a key component of the Earth system—the linked environments of river basins, deltaic river mouths, and coastal ocean systems. Much of our focus surrounds the nexus issue of water: water exerts a strong control over landform evolution and ecosystem health, and is a priority human need for agriculture, industry, and health.

Requirements

Tulane requires 48 credit hours of graduate coursework (typically comprised of 16 courses each carrying 3 credit hours) as part of the Ph.D. requirements. For students entering with a Master's degree, the RCSE graduate advisor may approve up to 24 credits of graduate coursework toward the Ph.D. total—this classwork can be earned in SSE or externally. To maintain maximum flexibility in tailoring an interdisciplinary program to the RCSE Ph.D. student, required coursework will be limited to research and writing skill augmentation, as well as typical registration (e.g., dissertation research) required when a student reaches candidacy. To support this tailored program and to rapidly transition decision-making away from the RCSE graduate committee in these matters, we have chosen to institute a very early dissertation committee composition (end of the first semester of matriculation). The Ph.D. student will be required to submit a full program of study (including classwork) approved by their dissertation committee to the RCSE graduate committee by the end of the 2nd full semester of matriculation.

- PhD students can transfer up to 24 credit hours from previous graduate-level coursework to the degree. The RCSE Graduate Advisor must approve all transfer credits.
- Students hoping to transfer graduate credits should prepare and submit the paperwork at the start of their second semester at Tulane. SSE will only transfer credits when the student has completed one semester (it is at that point that a Tulane transcript is available).
- RCSE Ph.D. students will be anticipated to be supported through fellowship, scholarship, or other of the various kinds of assistantships. Hence, they will be required under SSE rules to be registered for at least nine hours of graduate credit until admitted to candidacy to maintain full-time residence status. These nine hours of graduate credit, following SSE standards, may be a combination of course work and research or solely research credit.
- Approved academic graduate electives from other departments can be applied to the degree up to a limit of 12 credit hours. All other courses must originate from RCSE. If a class is not on the approved list, a student may petition the Graduate Advisor for it to be accepted as an elective.
- Note that Ph.D. students must register for credits during the summer due to health insurance reasons
- Unless students have been exposed previously to the material offered, thesis committees will strongly urge students to take two introductory technical course offered by RCSE—the existing RCSE 6800 Introduction to River Science and Engineering, and RCSE 6802 Introduction to Coastal Science and Engineering.

Course ID	Title	Credits
RCSE 6010	Water Resources Engineering II (offered Fall semester)	3
RCSE 6030	Water Resources Engineering III (offered Spring semester, even years)	3
RCSE 6040	Coastal Marine Geology (offered Fall semester, odd years)	3
RCSE 6660	Special Topics (Offered periodically)	1-3
RCSE 6710	Open Channel Flow (offered Spring semester, odd years)	3
RCSE 6800	Intro to River Science & Eng (offered every Spring semester)	3
RCSE 6802	Introduction to Coastal Science and Engineering (offered every Fall semester)	3
RCSE 6810	River and Stream Restoration (offered Fall, even years)	3
RCSE 6820	Introduction to River-Coastal Hydrologic and Hydraulic Modeling (offered Spring semester, even years)	3
RCSE 6830	River Mechanics & Management (offered Spring, even years)	3
RCSE 6840	Methods in River Sampling (offered Spring, odd years)	3
RCSE 6850	Estuarine Processes (offered Spring semester, odd years)	3
RCSE 6900	Independent Study (Every semester)	1-3
RCSE 7100	Seminar in River Coastal Science and Engineering (Every semester)	1
RCSE 9990	Dissertation Research	3

Ph.D. students must enroll in three semesters of the 1 credit Seminar course (RCSE 7100 Seminar in River Coastal Science and Engineering (1 c.h.)). The goal of this is to expose students to state-of-the-art research topics and methodologies in concert with the departmental seminar series. They must also enroll in the 3 credit Technical Writing course (RCSE 7020) that is offered each Fall. Generally students take this class in their third semester.

Additionally, students must enroll in 3 credits of Dissertation Research (RCSE 9990) over two semesters (6 credits total). This is a requirement to advance to candidacy. The student may register for more Dissertation Research credits if desired in previous semesters; however, these credits do not count toward the 48 course credits necessary for the degree. Dissertation Research credits are an additional and different type of credit, and they bring the total credits up to 24+6=30. Note that if all other credit requirements are met, the student can enroll in ONLY 3 hrs of Masters Research to maintain enrollment, i.e. this maintains full time enrollment.

- PhD students must undertake a general (preliminary or qualifying) examination by the beginning of the third academic year of study (5^{th} semester). Following SSE guidelines, a student who fails to take the test within a reasonable length of time will be judged not to be making adequate progress towards the degree and

will be advised by RCSE not to continue graduate study. Prior to scheduling the examination, the student will give an in person preliminary dissertation prospectus presentation to their committee where they outline the proposed topic of original research, a background of the state of knowledge of the topic, and the progress to date in their work.

Following successful completion of the oral qualifying examination, the student will prepare a dissertation prospectus that focuses on the individual novel research projects that will result in dissertation chapters and eventual peer-reviewed publications. This document will be approved by the dissertation committee for submission to SSE, at which point the student will be advanced to candidacy. Preliminary drafts of this prospectus will be produced in the required RCSE 7020 Technical Writing course.

At the time of submission of dissertation for approval by the committee, a Ph.D. student will be required to have submitted at least one, and preferably two manuscripts for peer-reviewed publication as supervised by their dissertation committee.

Interdisciplinary Graduate Degree Programs

Programs

Graduate

- Interdisciplinary, MS (p. 604)
- Neuroscience, MS (p. 605)
- Neuroscience, PhD (p. 605)

Bioinnovation, PhD

Graduate education in the sciences and engineering rarely offers the training and experiences that fully prepare graduates to enter directly into non-academic research and leadership positions. The Interdisciplinary PhD Program in Bioinnovation at Tulane University challenges this paradigm by cultivating in its students the ability to develop clinically-relevant biomedical technologies that have the potential to evolve into marketable products. Participating fellows benefit from and expand upon an environment of translational research at Tulane that spans the School of Science & Engineering (SSE), School of Medicine (SOM) and School of Public Health and Tropical Medicine (SPHTM). Simultaneous collaborations with the Business and Law Schools, industry partners and the FDA provide fellows with a strong foundation in entrepreneurship and regulation. This program was initiated in 2012 by an NSF Integrative Graduate Education and Research Traineeship (IGERT) award.

Training within this program emphasizes bioinnovation, which we define as the development and progression to the marketplace of clinically relevant biomedical technologies and devices.

Requirements

Course ID	Title	Credits
Quantitative Fundamentals (choose two courses)

Interdisciplinary, MS

An interdisciplinary Master of Science degree is a degree granted for a curriculum of graduate study on a coherent and definable field of science and/or engineering. Such fields of study may exist at Tulane at the doctoral level, exist at the MS-level at other major universities, or reflect an emerging discipline (Example: Computer Science).

The M.S. is NOT awarded simply for an accumulation of credits, but for a distinct and definable program of study.

Requirements

An interdisciplinary Master of Science degree is a degree granted for a curriculum of graduate study on a coherent and definable field of science and/or engineering. Such fields of study may exist at Tulane at the doctoral level, exist at the MS-level at other major universities, or reflect an emerging discipline. Examples include Bioinnovation,

Computer Science, Biology, Zoology, and Environmental Biology & Chemistry.

The M.S. is NOT awarded simply for an accumulation of credits, but for a distinct and definable program of study.

Requirements

1. Plan of study including:

- A 25-50 word description of the coherent discipline, which may cite similar programs of study at other universities.
- List of intended courses.
- Endorsement from two regular Tulane SSE faculty members who together represent the interdisciplinary expertise from different departments/programs; for students already enrolled in a PhD program, the dissertation research advisor must approve the plan. One department must agree to monitor the student's progress.

2. A minimum of 30 credit hours of graduate-level course work.

- At least 24 credit hours must be earned in the Tulane School of Science and Engineering (SSE).
- With prior approval, up to 6 relevant graduate credit hours from other Schools of Tulane University may be applied toward the M.S. degree.
- With prior approval, no more than 6 graduate credit hours may be transferred from another university; such credits cannot have been applied to another Masters-level degree.
- With prior approval, students may complete an empirical master's thesis in the defined discipline under the direction of an SSE faculty member. Students who successfully complete a master's thesis may elect to complete only 24 credit hours of graduate-level course work (i.e., the master's thesis substitutes for 6 of the 30 credit hours for the M.S.). In most cases, an interdisciplinary thesis committee will comprise faculty from at least 2 departments or programs.

Neuroscience, MS

Tulane University offers two versions of its Master of Science degree in Neuroscience. One version is for students with baccalaureate degrees from other institutions. The other version is our 4 + 1 program for students who earned their B.S. at Tulane University. The purpose of the 4+1 M.S. Program in Neuroscience is to provide Tulane students with training at the graduate level for one additional year beyond the baccalaureate degree. Completion of an empirical master's thesis under the guidance of an advisor who is a faculty member of the Tulane Brain Institute is optional.

Students in both versions of the M.S. program take courses relevant to their interests in Neuroscience and related fields. The mission of the M.S. program is to prepare students for admission to doctoral programs in the neurosciences, for admission to medical or other professional schools, or the workforce. Completion of the M.S. program does not guarantee acceptance to Tulane's Ph.D. programs or medical school. Students pursuing an advanced degree in Neuroscience benefit from a multidisciplinary education and training in the sciences of the brain and nervous system. In addition, our students develop professional skills such as reading scientific literature, public speaking/presentations, and collaboration/team work.

Students accepted to the Master's in Neuroscience program may follow one of two tracks toward completion of an M.S. in Neuroscience.

For the **Thesis Track option** (24 credit hours of coursework and 6 credits of research), students will take courses relevant to their interests in neuroscience or related fields and complete an empirical master's thesis under the supervision of an adviser who is a member of the Tulane Brain Institute. Because completion of an empirical master's thesis normally requires more than one year, *students who plan to complete a thesis, should already be engaged in research that they can continue during the program.* The thesis adviser will provide guidance in all aspects of the master's thesis. For the **Non-Thesis Track option** (30 credit hours), students will take courses relevant to their interests in neuroscience or related fields, and may participate in research for credit, but are not required to complete an empirical master's thesis.

All MS students will meet with the M.S. program adviser to plan their course schedule.

Requirements

Graduation Requirements

Students must complete 30 credits of coursework if they are pursuing the non-thesis track. If they decide to complete a Master's thesis, 24 credits of coursework, plus six credits of research and an empirical research thesis must be completed.

4+1 Required Courses

Course ID	Title	Credits
NSCI 6030	Brain Institute Seminar	1
NSCI 6040	Trends In Neuroscience	1
NSCI 7110	Graduate Neuroscience I	3
NSCI 6400	Neuroscience Applied	3

M.S. Required Courses

Course ID	Title	Credits
NSCI 6030	Brain Institute Seminar	1
NSCI 6040	Trends In Neuroscience	1
NSCI 6310	Cellular Neuroscience	3
or NSCI 7110	Graduate Neuroscience I	
NSCI 6400	Neuroscience Applied	3

Elective Courses

In addition to the 8 credits of required courses listed above, students should take at least 22 credits of elective graduate courses (https://sse.tulane.edu/neuro/academics/graduate/ms/courses/) to reach the minimum of 30 credits required to graduate. Students may earn up to six credits of independent research.

Neuroscience, PhD

The Neuroscience Doctoral Program is an interdisciplinary graduate program composed of doctoral students and faculty members from departments across five divisions and three campuses of Tulane

University. As an educational branch of the Tulane Brain Institute, the program is administered through the School of Science and Engineering and governed by the Neuroscience Doctoral Training Committee. Appointed by the Director of the Tulane Brain Institute, the Committee is composed of a director and five faculty members representing the Main and Medical School campuses. Contributing divisions include the Schools of Science and Engineering, Liberal Arts, Medicine, Public Health and Tropical Medicine, and Primate Center. Faculty research programs are funded through grants competitively awarded by federal, state, and private agencies under four major themes: *Memory and Cognition*; *Neurodegenerative Disease, Neural Injury and Repair*; *Hormone-Brain Interactions*; and *Brain-Body Health*.

Doctoral students conduct cutting-edge research in modern laboratory environments that foster supportive instruction and intensive training in the neurosciences. The Neuroscience Doctoral Program provides graduate students with a broad education in both the theoretical and applied aspects of basic research in the neurosciences. Through their coursework and research, students receive diversified training in neuroanatomy, neurophysiology, neuropharmacology, neuroendocrinology, molecular and cellular neurobiology, behavioral neuroscience, cognitive neuroscience, and research methods. In addition, students have opportunities to present and publish their research findings, and to gain experience in grant writing and teaching pedagogy. The objective of the Neuroscience Doctoral Program is to prepare graduate students for their future postdoctoral training and careers in academia, industry, and related professions.

All students are guaranteed to receive financial support for five years as long as satisfactory and timely progress is made toward the degree. Financial support includes a full tuition waiver and a stipend paid every other week over twelve months of the year. Students are funded during their first two years by teaching assistantships. After the first two years students are supported by research assistantships arranged though their major advisors in their permanent laboratories.

Requirements

Doctoral Degree Requirements

The pursuit of the Ph.D. degree is a journey with five major milestones. (1) Students must successfully complete a curriculum consisting of core and elective courses taken during the first two years of study. (2) Students complete three rotations in different laboratories, each 6-8 weeks in duration, during the first year of study in order to identify a permanent laboratory. (3) Students must pass written and oral components of a qualifying examination in the third year of study administered by the Qualifying Examination Committees. (4) Students must prepare and defend a dissertation prospectus before their Doctoral Committees in the fourth year of study. (5) Students must complete their dissertation research, prepare a written form of the dissertation, orally defend the dissertation, and receive approval from their Doctoral Committees as the final step toward earning the Ph.D. within five years.

Required Course Work

A minimum of 50 course credits are required for the Ph.D. in Neuroscience. Of these 50 credits, 38 credits are fulfilled by completing core courses (20 credits), research rotations (6 credits), and elective courses (12 credits). Up to 12 additional credits may be satisfied by registration in NSCI 7980 Research In Neuroscience-PhD (1-9 c.h.).

Credits earned in NSCI 9990 Dissertation Research (0 to 3 c.h.) do not count toward the 50 required credits. Course credits taken beyond the 50-credit minimum are included in the tuition waiver. Up to 15 course credits toward the final 50 required credits can be earned in Tulane's Master's Programs in Neuroscience (4+1 and M.S.). However, the following courses taken at the Master's level cannot count toward the Ph.D. degree: (*Brain Institute Seminar*, *Trends in Neuroscience*, *Research in Neuroscience*).

Core Courses

The completion of core courses is required of all doctoral students, which comprise 20 of the 50 total credits required for the Ph.D. in Neuroscience.

NSCI 7110 Graduate Neuroscience I (3 c.h.) – Offered only during fall semesters, this course encompasses the basic principles of neuroscience at the graduate level, focusing on cellular and molecular neurobiology, neurophysiology and plasticity, and developmental neurobiology.

NSCI 7120 Graduate Neuroscience II (3 c.h.) – Offered only during spring semesters, this course encompasses the basic principles of neuroscience at the graduate level, focusing on systems neuroscience and behavioral neuroscience as well as neuroanatomy.

NSCI 6030 Brain Institute Seminar (1 c.h.) – Offered every semester, this seminar series is designed to provide students with exposure to contemporary research conducted by neuroscientists at Tulane and from other local and national institutions. Students are required to take 5 years of Seminar, all S/U graded. Students will receive academic credit during their first two years of Seminar and "0" credit for the remaining 3 years.

NSCI 6040 Trends In Neuroscience (1 c.h.) – Offered every semester, this course is designed to allow students to learn to critically read and interpret scientific literature and to present and discuss research with their peers. Students receive academic credit for *Trends in Neuroscience* during their first four semesters of study in the doctoral program.

PSYC 6090 Univariate I (3 c.h.) – Offered only during fall semesters, this course covers experimental design and statistical analyses used in scientific research. Topics include z-distribution, t-distribution, analysis of variance, post-hoc tests subsequent, correlation, simple and multiple linear regression, and chi-square analysis. Students may petition to substitute other graduate-level statistics courses taught at Tulane for *Univariate Statistics I*.

NSCI 7660 ***Conveying Neuroscience Research (3 c.h)*** – Offered only during spring semesters, this course will cover fundamental principles of scientific communication, specifically focused on neuroscience. The course will be workshop-based, with students creating communication products and receiving peer and instructor feedback. Topics include grant writing, oral presentations, poster presentations, figure making, and public engagement.

INTD 6010 Responsible Conduct of Research (0 c.h.) - Offered during the fall semesters by the Tulane University Research Compliance Office, this course is required by the federal funding agencies for students earning doctoral degrees in a biomedical-related discipline.

Elective Courses

A minimum of 12 course credits (4 elective courses) may be obtained for courses with numbers of 6000 or 7000. A list of some appropriate three-credit elective courses follows. Students should consult other departments and programs for other electives of potential interest, which must be approved by the Director of the Neuroscience Doctoral Program.

SCHOOL OF SOCIAL WORK

Overview

Mailing Address

School of Social Work
127 Elk Place, Mail Code 8906
New Orleans, LA 70112

Administrative Office

Dean: Susan Davies, PhD, MEd

Director of MSW Programs: Kathy Oquelí McGraw, PhD, MPH, LCSW-BACS, LAC, LPP

Interim DSW Program Director: Ngawang Legshe, DSW, LCSW-BACS

Director of DRLA Programs: Reggie Ferreira, PhD

Director of Field Education: Lindsey Fields, DSW, JD, LCSW

Assistant Dean of Enrollment Management: Amanda Rosales, MA

TSSW Mission

The Tulane School of Social Work's mission is to enhance the well-being and equitable treatment of diverse individuals and communities through transformative education, generation of knowledge, service, and community engagement.

TSSW Vision

TSSW strives to build innovative, world-class graduate programs through cutting-edge research and training future leaders to provide evidence-informed, interdisciplinary practice locally and globally that advances the behavioral health and health needs of individuals, families, and communities.

MSW Mission

The mission of the Master of Social Work Program at the Tulane University School of Social Work is to educate and inspire future social work leaders to engage in integrated clinical and community practice that is culturally responsive and relationship-centered, to enhance the well-being and equitable treatment of individuals, families, and communities.

The Tulane University School of Social Work Master of Social Work Program:

- The goals of the Tulane University School of Social Work Master of Social Work Program are:
- Prepare students to engage in integrated clinical and community practice to enhance the well-being and resilience of individuals, families, groups, organizations, and communities;
- Provide a transformative educational experience that teaches students to value human diversity and work to promote social and economic justice;
- Nurture students in their identity formation as clinical and community practitioners through the collective act of modeling professional commitment among the staff, faculty, community partners, and stakeholders;
- Ensure students are self-efficacious and prepared using innovative, world-class knowledge and research to work as leaders in community-based settings to provide relevant, effective, and interdisciplinary social work services; and
- Promote integrative learning by drawing from and contributing to the diverse, culturally rich, and inspiring environment, locally and nationally, to advance the biopsychosocial-spiritual needs of individuals, families, and communities.

History

The Southern School of Social Sciences and Public Services was the first training program for social workers in the deep South. Under the sponsorship of the Kingsley Settlement House, a group of Tulane social science faculty offered the first classes in social welfare in 1914. Sponsored by grants from the American Red Cross, a formal one-year program was implemented in 1921.

By 1927, with funding from a Rockefeller grant, the school became a separate program with a two-year curriculum qualifying students for the Master of Arts. In 1935, the University established the degree of Master of Social Work. The School has awarded the Master of Social Work degree to more than 7,000 students from all 50 of the United States and more than 30 other countries.

Since 1927, the first year of national accreditation for social work education, the School of Social Work has maintained full accreditation status. It is a charter member of the Council on Social Work Education, which is the standard-setting and accreditation body in the field of social work education. Tulane School of Social Work is accredited by the Council on Social Work Education (CSWE). TSSW was recently awarded accreditation of the Master of Social Work Degree program for the full eight-year cycle with no contingencies.

The Tulane School of Social Work built a tradition of leadership in promoting equal access to higher education and employment at the University. This tradition of leadership is evidenced in the following notable events:

- The School of Social Work was the first division to have a female dean when Dr. Elizabeth Wisner was promoted to the position of dean in 1937.
- The School supported the 1960s civil rights and political battle with Mrs. Pearlie Hardin Elloie, who as an African American woman applied for admission to the School of Social Work in order to desegregate the University, which Paul Tulane's will had designated as a white male institution. She was eventually awarded admission and received a MSW from our school.
- The School of Social Work was the first division of Tulane to admit African American students in the 1962-63 academic year.
- The School of Social Work was the first division to appoint African American faculty.
- The School has led the University in developing non-discrimination policies, appointing faculty members and admitting numbers of minority students disproportionate to School size and University enrollments, and in appointing self-identified lesbian and gay faculty.

- The School of Social Work is the most diverse School within Tulane University.
- Enrollment of African American students has increased by 113% and Hispanic students has increased by 121%.
- The current faculty is the most diverse of the university's history which also contributes to the richness of the learning environment. Our faculty has grown from 15 to 26. Diversity of the faculty has increased from 16% to 42%.
- This diversity also extends to the school's administration. Four of the eight people that make-up the administrative team are African American, Latino or African. In terms of the school's history, three administrators of color are the first people of color to hold these positions (e.g. Director of Enrollment Management, Assistant Director of Field, and Assistant Dean of Finance and Human Resources) in the school.

Academic Policies
Graduate School Policies

A full description of academic policies for all students in Graduate Programs (p. 80) can be found in the Office of Graduate and Postdoctoral Studies section of this catalog. Students should review these policies thoroughly.

School of Social Work Policies

Registration and Continued Enrollment

Academic Calendar

The TSSW Academic Calendar is the calendar that should be followed by all TSSW students. The TSSW calendar is different than academic calendars for other programs or for undergraduate schools. The TSSW Academic Calendar can be accessed on the TSSW website. The following information can be found on the academic calendar:

- First and last dates of the semester;
- Holidays/Class cancellations;
- Registration dates;
- Last date to add a course;
- Last date to drop a course without academic penalty;
- Last date to drop a course for a full or partial refund; and
- Final grade due dates

Continuous Registration Requirements

The TSSW academic year includes three semesters, fall, spring, and summer. A student admitted to a degree program must be continuously registered in a degree-granting division of the university during the academic year in either full-time or part-time status from the date of first registration until the awarding of the degree, unless the student takes a Leave of Absence, voluntarily withdraws from school, takes a Medical Withdrawal, or is suspended or dismissed for academic or disciplinary reasons. Students must provide written documentation informing TSSW if continuous enrollment will be affected. Failure to be continuously registered in the program will be considered a withdrawal. TSSW reserves the right to not allow students to be readmitted to the program.

Add & Drop Policy

Students wishing to adjust their course schedule must consult the TSSW Academic Calendar for deadlines and instructions. Failure to make schedule adjustments promptly and accurately may result in financial or academic penalties. Schedule adjustments can be done online by the student during the two weeks following the first day of the semester. The last day to add/drop a course is listed on the academic calendar each semester. If a student wishes to drop all or any one of their courses during a semester, they must do so by the dates outlined in the academic calendar. TSSW will follow the academic calendar and refund schedule. Students will not be allowed to switch sections after the drop/add period, except under extenuating circumstances as decided by the Associate Dean of Academic Affairs (Director of MSW Programs in lieu of).

Due to the fixed nature of the MSW curriculum, dropping a single course can result in a significant delay in earning the required Field Education hours as well as completion of the program. Students must discuss these changes with their Academic Advisor to fully understand the potential consequences. Information regarding the final date to drop out of a course or withdraw from the program can be found on the TSSW Academic Calendar. Please note, these dates will have an impact on whether a student will receive a grade of “W” or “WF” on a transcript.

Transfer Credit - MSW Program

In order to obtain your social work license, you must have completed a Council on Social Work Education (CSWE) accredited Master of Social Work (MSW) Program. Only credits from other Master of Social Work Programs accredited by the Council on Social Work Education (CSWE) at the time you attended the program will be accepted. The credit must have been earned within the last five (5) years with a final grade of at least a "B". TSSW reserves the right to contact the dean or other authorities from the former school(s) to verify that the applicant left the institution in good academic and professional standing. TSSW does not give academic credit for life or work experience. TSSW considers each request to transfer credits on a case-by-case basis.

No more than a total of 15 credit hours will be accepted as transfer credits by TSSW. Additionally, a maximum number of credits in the below categories will be accepted:

- Any transfer credits regarding Field Education hours will be reviewed on a case-by-case basis.
- A maximum of three (3) courses or nine (9) credit hours (whichever is less) of foundation courses will be accepted. These courses include:
  - SOWK 7120 Social Welfare History & Policy (3 c.h.),
  - SOWK 7211 Human Behavior and the Social Environment I (3 c.h.), and
  - SOWK 7310 Introduction to Direct Social Work Practice (3 c.h.).
  - No other courses besides electives will be accepted.
- SOWK 7130 Diversity and Social Justice MAY NOT BE SUBSTITUTED UNDER ANY CIRCUMSTANCES.
- A maximum of nine (9) credit hours of electives courses will be accepted.
- Regardless of the above composition, only a maximum of 15 total transfer credit hours will be accepted.
- A syllabus must be submitted for review for transfer credits to be applied.
- No credit will be given for partial course completion. Credits will not be considered for transfer to TSSW if the student did not complete the course.
- Any questions surrounding transfer credits should be sent to the TSSW Admissions Office at msw@tulane.edu.

Modality/Curriculum Path

If a student wishes to change their modality (from online to on-campus or vice versa), or curriculum path (full-time to part-time or vice versa) they must meet with their Academic Advisor and/or Program Manager to update their curriculum plan. After this is completed, the Academic Advisor and/or Program Manager will review the request with the Director of MSW Programs. The Director of MSW Programs can grant or deny a student’s request

to switch modalities. A student may make this change only once during the Program.

Independent Study Policy

An "Independent Study" course can promote a student's deeper learning and integration of content relevant to their current field practice or area of specialty. Eligible students must demonstrate academic and personal capacity to perform at the graduate level without close supervision as evaluated by TSSW and are in their third semester full time, second semester advanced standing, third semester, part-time advanced standing, or fifth semester part-time or beyond. Independent Studies are not a part of the standard MSW or MS curriculum plans. The Tulane School of Social Work approves requests for independent studies on a highly selective basis in the following circumstances:

- An "Independent Study" course can promote a student's deeper learning and integration of content relevant to their current field practice or area of specialty. Eligible students demonstrate academic and personal capacity to perform at the graduate level without close supervision as evaluated by TSSW. The independent study:
  - Cannot be taken prior to the third semester full time, second semester advanced standing, or fourth semester part-time or beyond;
  - Cannot replace a core course;
  - Cannot replicate an elective already offered;
  - Cannot be granted without a qualified full-time faculty member to facilitate the Independent Study and approval by the Director of MSW Programs.
- The independent study is limited to one independent study course per degree program.
- An independent study course should be comparable to a regular 3-credit, 16-week course.
- A grade of "Incomplete" cannot be granted for any independent study course.

Procedures to request an Independent Study

1. At least one semester before the Independent Study's intended enrollment term, the student should contact their Program Manager in writing (by email) to review the requirements of completing an independent study.
   - ALL procedural steps must be completed within the first two weeks of the prior semester of the intended enrollment term of the independent study.
2. The Program Manager determines whether the basic requirements in the policy statement above are satisfied and may make recommendations for a particular faculty member.
3. The student is ultimately responsible for finding an appropriate full-time faculty member to ask them to facilitate an independent study course. A faculty member is under no obligation to facilitate an independent study course.
4. When a faculty member agrees to facilitate the independent study, they will confirm this in writing (by email using TSSW email) with the student and will include the MSW Program Manager in this confirmation email. The course should be comparable to a regular 3-credit, 16-week course.
5. The faculty member will collaborate with the student to develop course information which must include the following:
   - A syllabus for the course that aligns with current CSWE standards and competencies
   - A brief description of the course, learning objectives of the course, course requirements, and assignments.
   - The "Contract for Independent Study" is submitted to the MSW Program Manager who will obtain approval from the Director of MSW Programs who will make the final determination whether a student qualifies for an independent study. If approval is granted, the contract will be signed and dated by the student, faculty member, and the Director of MSW Programs.
6. Course information will be entered into the "Contract for Independent Study" form and submitted to the MSW Program Manager.
7. The Director of MSW Programs will review the Contract for Independent Study and will make the final determination regarding the request. If the approval is granted, the contract will be signed and dated by the student, faculty member, and the Director of MSW Programs.
8. The MSW Program Manager provides copies of the signed and dated contract to the student, the faculty member, and a copy is placed in the student's file. The program manager will enroll or assist the student with enrolling in the independent study course with the University Registrar.
9. The faculty member agrees to be available for feedback and guidance for the student during the independent study. It is the student's responsibility to initiate contact for questions, feedback, or clarification from the faculty member.
10. The faculty member evaluates the resulting coursework to ensure all learning objectives and activities were accomplished and submits a final grade in line with the TSSW Academic Calendar.
11. A grade of "Incomplete "cannot be granted for any independent study course.
12. Placement Practicum courses (SOWK 7520-7540 and 7910-7960) cannot be replaced by any Independent Study course.

Course Auditing

All students must have at least 60 academic credit hours to receive the MSW degree from the Tulane School of Social Work. To receive credit for a course, students must be assigned a letter grade or in the case of Field Practicum & Seminar "S" or Satisfactory. In certain cases, students may request to audit a course for no grade or credit due to their interest in the material.

Any full-time or part-time student in good standing (not on Academic Probation or under any conditions of the Academic and Professional Review Standards Committee) at the Tulane School of Social Work may audit courses provided the following provisions are met:

- Approval is granted in writing and signed by the Director of MSW Programs the course instructor, and the student;
- student must pay the current tuition per credit hour for the course
- The number of students in the class is less than the cap set at registration; and
- student audits no more than one course per semester and no more than two courses during the MSW program.

Faculty, in conjunction with the Director of MSW Programs, who have students auditing courses:

- may set expectations for those students regarding class attendance, completion of assignments, examinations, and other class requirements;
- must make course expectations known to the auditing students before the class starts or when the student registers;
- may limit the number of students auditing a class; and
- will not allow auditing of the course if the registration cap for a class has been met for that section.

Procedure for course auditing:

1. Students who wish to audit a course should notify the MSW Program Manager.
2. The MSW Program Manager will notify the student that they must obtain approval in writing from the instructor of the course they are requesting to audit.
3. The course instructor must make expectations clearly known in writing to the student. When the student and instructor agree to the audit and conditions of the audit, the student should notify the Program Manager in writing (by email), copying the course instructor in the correspondence.
4. Final approval must be granted in writing by the MSW Director of Programs.

Student Accountability and Standards

The intent of the Academic Standards is to comply with all CSWE (Council on Social Work Education) requirements as the TSSW accrediting body and to best prepare students with the proper social work foundation, education, and tools to begin their career as social workers.

Graduate students must maintain a cumulative grade point average (GPA) of at least 3.0. Courses in which a student earns a grade of "C" or lower cannot be counted towards a master's level degree and will be required to be retaken. Once a student receives one final grade of "B-" or lower, the student will be placed on academic probation. If a student receives two final grades of "B-" or lower, a Student Accountability and Standards Review will be initiated. The student may be considered for dismissal by the school Faculty Review Committee at the conclusion of the Review. Students may also be dismissed for failure to meet departmental milestones, such as finishing coursework, securing placement and other failed competencies set forth by the Field Education Department or school.

It is crucial that the Tulane School of Social Work upholds the academic standards set forth by Tulane University. All students enrolled in a social work program must also abide by the National Association of (https://www.socialworkers.org/About/Ethics/Code-of-Ethics/Code-of-Ethics-English/)Social Workers (NASW) Code of Ethics. which governs social workers' professional and ethical behavior and values. Students must uphold ethical standards of practice established by NASW in the Code of Ethics, maintain professional performance standards required to be licensed as a social worker, and meet the practice behaviors established by the Council on Social Work Education (CSWE). Violation of these standards may be identified by faculty, adjunct instructors or staff members. Violation of these standards includes but is not limited to:

- Failure to meet generally accepted standards of professional conduct as outlined in the NASW Code of Ethics may include personal integrity or emotional stability required for professional practice;
- Tulane University's Office of Student Affairs/Case Management may be involved for any matters related to emotional or mental stability;
- Failure to demonstrate effective interpersonal skills necessary to perform professional helping relationships;
- Failure to adhere to the NASW Code of Ethics;
- Has been found guilty of criminal misconduct that affects the student's ability to be licensed as a social worker; or
- Displays inappropriate or disruptive behavior toward clients, other students, faculty, staff, or other affiliates. Tulane University's Office of Student Affairs/Case Management may be involved for any matters related to inappropriate or disruptive displays of behavior

Grading Policy

TSSW's grading policy complies with Tulane's University policy and students' grades are processed through the Office of the University Registrar. Students may gain access to their previously earned grades throughout the semester and their final grades at the end of the semester through the on-line system known as "Gibson." The privacy of students' records is protected under the Federal Family Educational Rights and Privacy Act of 1974 as amended (P.P. 93-380) and by policies issued by the Tulane Board of Administrators.

Every syllabus in the school reflects the grading system below and specific course requirements and grading weights for each assignment or test. The grading system is as follows:

Points:	%	Letter Grade	
950-1000	(100-95%)	A	Outstanding
900-949	(94 -90%)	A-	Excellent
850-899	(89 - 85%)	B+	Above Expected

800-849 (minimum expectation)	(84 -80%)	B	Expected
750-799 expectation)	(79 -75%)	B-	Marginal (below
700-749 course be retaken	(74 -70%)	C	Requires the
		W	Withdrawal
		WF	Withdrawn/Fail
		WU	Withdrawn/ Unsatisfactory
		I	Incomplete

Please note:

- One grade of "B-" or lower will initiate Academic Probation.
- Two grades of "B-" or lower will initiate a Student Accountability and Standards Review.
- Two grades of "B-" or below is cause for possible dismissal. A grade of "C" is unacceptable and cannot count toward a degree.
- A grade of "C" in any course will require the course to be taken over with passing grade to count toward degree.

For classes that are Satisfactory/Unsatisfactory, students must receive an 80% or higher to pass the class, anything below 80% is considered an Unsatisfactory or a failing grade.

Graduate students at Tulane University must earn a 3.00 cumulative GPA to successfully meet Tulane University's GPA requirement for the MSW degree.

Attendance

Attendance and participation are mandatory for classes. All students will be evaluated on their punctuality, attentiveness, adherence to guideposts and policies on electronic equipment, and participation in meaningful class discussion. Students will be allowed one unexcused absence without points being deducted from the final grade. A second absence must be accompanied by documentation to be excused. Students missing more than two (2) classes will see their final grade lowered by five percent (5%) for each class missed thereafter. At the discretion of the instructor, deductions may also be made for patterns of tardiness or leaving class early. Instructors may take liberty for extenuating circumstances.

Late Assignments

For late assignments five percent will be deducted for each day past the due date and time. After 10 days past due, the assignment will not be accepted or graded. Two (2) late assignments may warrants an Academic Alert. Please check your class syllabus/canvas to see if your professor has a different late policy for specific assignments, if so the late policy listed on Syllabi/Canvas should be followed.

The purpose of due dates is to ensure that you do not fall too far behind in the class and so the professor can provide timely feedback/grading. It is also disrespectful toward the professor when multiple assignments are late. Sometimes this cannot be avoided, but in those instances the **student must communicate with the professor 24 hours in advance prior to missing the due date and the professor will decide whether to accept the assignment late**."

Incomplete Coursework

A temporary grade of "I" (Incomplete) will only be granted in extenuating circumstances and must be submitted to the MSW Program Manager and approved by the Director of MSW Programs at least three weeks prior to the last day of class and Field Education, per the TSSW academic calendar. Moreover, an incomplete may only be requested within the last four weeks of the semester**.** All grades of "I" related to Field Practicum & Seminar will be handled by the Field Education Department and should be presented to the Field Department Program Manager(s) for Field Department Director approval.

Approval for an incomplete is determined based on:

- The student's grade at the time of the request is a grade of "B" or better in the course.
- Students requesting an incomplete must work with their instructor to outline missing assignments and a timeline to complete and submit all outstanding coursework as well as submit approved administrative documentation no later than five weeks from the last day of class. If the grade is not submitted in the time-frame, the "I" will turn to an "F" or "Unsatisfactory."
- For all matters related to a grade of "Incomplete" that are associated with Field Practicum & Seminar classes, please refer to the Field Education Appendix section of this Handbook.

Reasons a request for an incomplete grade can be denied:

- If the request is submitted to the MSW Program Manager less than five business days before final grades are due, as listed on the TSSW academic calendar;
- if at the time of the request the student's overall grade is not a grade of "B" or better;
- If there are more than two requests for Incompletes across the student's tenure at TSSW, or there are any outstanding unresolved Incompletes;
- If the student is in their last semester of courses. Incompletes cannot be granted in the student's final term of the degree curriculum.

The student and instructor must complete and sign an "Incomplete Grade Contract (https://acrobat.adobe.com/link/track/?uri=urn:aaid:scds:US:f1485048-547b-3d47-9b45-a96e678b392e)" and submit the document to the MSW Program Manager who will obtain approval from the Director of MSW Programs. The Director can request amendments to the plan or deny the request. Please keep in mind the following:

- Students will not be allowed to start Field Practicum & Seminar if they have unresolved or outstanding Incompletes. An "I" in any semester could extend the

student's graduation date and may affect student loan eligibility.

- Students will only be granted two grades of "I" during their tenure with TSSW.

If and after all requirements have been resolved within the five-week deadline, the instructor must submit a Grade Change request according to TSSW's established grade change protocol, currently via Gibson, which will automatically be sent to the Associate Dean of Academic Affairs (Dean of TSSW in lieu of) for approval. If the Director of MSW Programs does not have an approved incomplete form, the grade change will not be processed.

If all requirements are not met, documentation is not submitted and completed by the deadline outlined on the agreement, the grade will automatically revert to a FAIL "F" or UNSATISFACTORY "U". Any grade of "F" or "U" will be permanent and will not be changed.

APA/Academic Writing

All courses at TSSW require written submissions to comply with the most current version of APA writing standards.

Code of Academic Conduct and Violations

The Tulane University Code of Academic Conduct shall apply to academic conduct of each student from the time of application for admission through the actual awarding of a degree. A violation of the Tulane University Code of Academic Conduct may occur before classes start, after classes end, or outside of classes as well as during the academic year and during periods between terms of actual enrollment, and even if the academic conduct is not discovered until after a degree is awarded. The Tulane University Code of Academic Conduct shall also apply to a student's academic conduct even if the student withdraws from school while a disciplinary matter is pending.

The Tulane University Unified Code of Academic Conduct can be found at the following link:

https://ogps.tulane.edu/sites/default/files/Unified%20Code%20of%20Graduate%20Student%20Academic%20Conduct%20-%202024%20Final_0.pdf

The Tulane University Unified Code of Academic Conduct states:

"The integrity of Tulane University is based on the absolute honesty of the entire University community in all academic endeavors. As part of the Tulane University community, graduate students have certain responsibilities regarding work that forms the basis for the evaluation of their academic achievement. Students are expected to be familiar with these responsibilities at all times. No member of the University Community should tolerate any form of academic dishonesty because the scholarly community of the University depends on the willingness of both instructors and students to uphold this Unified Code of Graduate Student Academic Conduct. When a violation of the Code is observed, it is the duty of every member of the University's academic community who has evidence of the violation to take action. Students should take steps to uphold the Code by reporting any suspected offense to the instructor or the Dean of their School. Students should not, under any circumstances, tolerate any form of academic dishonesty.

In all work submitted, graduate students are expected to represent themselves honestly. The presence of a student's name on any work submitted in completion of an academic assignment is considered to be an assurance that the work and ideas are the result of the student's own intellectual effort, stated in their own words, and produced independently, unless clear and explicit acknowledgment of the sources for the work and ideas is included (with the use of quotation marks when quoting someone else's words and proper citations). Tools permitted, including but not limited to computer programs, calculators, and artificial intelligence must be noted by the professor in the assignment. This principle applies, but is not limited to, to papers, tests, homework assignments, artistic productions, laboratory reports, computer programs, and other academic assignments."

Academic Rights and Responsibilities

All members of the academic community shall foster an environment that encourages adherence to the principles of honesty and integrity. Every student in the Tulane University School of Social Work is responsible for adhering to and upholding the Code of Academic Conduct, as outlined throughout this document. At or before student orientation, every student will sign the Code of Academic Conduct and Student Handbook Pledge and this will be held in their TSSW student file. Students are responsible for becoming familiar with the Code of Academic Conduct and for behaving in a manner consistent with its principles. Lack of familiarity either with the Code of Academic Conduct or with the application of its principles to any specific assignment will not be an acceptable excuse for non-compliance.

The faculty, administration, and staff also are responsible for adhering to and upholding the Code of Academic Conduct. Faculty, administration, and staff also have the responsibility to become thoroughly familiar with the Code of Academic Conduct and to always conduct themselves in a manner consistent with its principles. As in the case of students, lack of familiarity either with the Code of Academic Conduct or with the application of its principles will not be an acceptable excuse for non-compliance. All parties shall protect the integrity of academic materials including testing materials, software, and copyrighted documents.

Prevention of Academic Violations

The TSSW Administration and larger Tulane community intend to prevent violations of the Code of Academic

Conduct. Academic violations are prevented in the following ways.

Administrative Role in Prevention
Each student will receive the TSSW Student Handbook in electronic format. It is the responsibility of each TSSW student to read the Student Handbook in its entirety as well as participate fully in the provided American Psychological Association (APA) Training course.

Faculty Role in Prevention
Each faculty member will review how the Code of Academic Conduct applies to course assignments and examinations. For example, a faculty member should give students specific directions about the form and extent of collaboration permitted (if any) in course assignments and examinations, as well as APA citation expectations. Moreover, faculty also should inform of the use of "Turnitin" and how it will apply to all academic work.

Student Role in Prevention
It is each student's responsibility to know the Code of Academic Conduct. If a student is unsure about how a particular course assignment is affected by the Code of Academic Conduct, including current APA expectations or provisions regarding collaboration with other students on an assignment, they bear the responsibility for consulting with the instructor.

Academic Conduct Violations

Any student behavior that has the effect of interfering with education, pursuit of knowledge, and/or a fair evaluation of a student's performance is considered a violation of the Code's proscribed academic conduct. Any student found to have committed or to have attempted to commit the following misconduct is subject to the disciplinary sanctions outlined in the Code of Academic Conduct. Any action that indicates a lack of academic honesty and integrity shall be considered a violation of the Code of Academic Conduct.

Examples of violations include, but not limited to:

- **Plagiarism:** Use of ideas, data or specific passages of another person's coursework that is "unacknowledged or falsely acknowledged presentation of another person's ideas, expressions, or original research as one's own coursework. Any paraphrasing or quotation must be appropriately acknowledged. Such an act often gives the reader the impression that the student has written or thought something that he or she has in fact borrowed from another. Any paraphrasing or quotation must be appropriately acknowledged. Plagiarism also includes the unacknowledged use of materials prepared by another person or agency engaged in the selling of term papers or other academic materials.
- **Cheating:** Unauthorized "giving, receiving, or using, or attempting to give, receive, or use unauthorized assistance, information, or study aids, to include generative AI (generative artificial intelligence), in academic coursework, or preventing or attempting to prevent another from using authorized assistance, information, or study aids. Consulting with any persons other than the course professor and teaching assistants regarding a take-home examination between the time the exam is distributed and the time it is submitted by the student for grading. Students should assume the exam is closed book; they may not consult books, notes, or any other reference material unless explicitly permitted to do so by the instructor of the course".
- **Fabrication:** Submission of contrived or altered information in any academic exercise.
- **False Information -** Furnishing false information to any University official, instructor, or University office relating to any academic assignment or academic issue.
- **Falsification of Research:** Fraudulent or deceptive generation of data or the knowing use of data gathered in such a manner.
- **Unauthorized Collaboration:** Unauthorized collaboration in the performance of course assignments.
- **Multiple Submissions:** Presentation of the same assignment, or substantively similar assignment, for credit in two distinct courses or in multiple instances of the same course.
- **Misrepresentation:** Performance of an academic assignment on behalf of another Student.
- **Falsification of Academic Records:** Forging the signature of either an instructor or advisor on registration, course waiver, practicum, or change of grade forms.
- **False Testimony:** Knowingly presenting false accusations or false testimony before the Academic Review Committee or its representatives.

- The above examples of Academic Code of Conduct violations pertain to **all forms** of academic products including, but not limited to papers, tests/exams, knowledge checks, discussion boards, journals, homework assignments, artistic productions, laboratory reports, presentations (power points), and computer programs.

Who Should Report Academic Violations?

Any member of the University community may report Academic Violations. Instructors should complete the MSW Academic and Professional Code of Conduct Violation Form and send it to the MSW Program Manager. The form should be submitted as soon as possible after the complainant becomes aware of the relevant events or issues, preferably within five (5) business days of the discovery of the alleged violation.

Outside a Course
If a faculty member, adjunct, staff member, student, or administrator suspects that a violation of the Code of

Academic Conduct has occurred outside the context of a particular course (e.g., in the case of falsification of records), they should notify the MSW Program Manager in writing preferably within five (5) business days of discovery of the alleged violation.

Within a Course
When a faculty member, a staff member, student or administrator suspects that a violation of the Code of Academic Conduct has occurred within the context of a particular class, they should immediately notify the Instructor of Record for that course. Once an instructor suspects a violation has occurred or is made aware of a potential violation, the instructor should consider the appropriateness of an informal resolution (as outlined in the section "Resolution of Academic Violations") before providing the MSW Program Manager written notification within five business days of the discovery of the suspected violation, preferably within five (5) business days of the discovery of the alleged violation.

Level of severity for academic, as well as professional and ethical violations of the MSW and MS programs are determined by TSSW leadership. The following describes the processes that guide the school when students have not maintained or met any required academic and/or professional and ethical standards.

Resolution of APA Violations (only in response to low-level APA citation violations)

All instructors are encouraged to exercise prudent judgment with APA citation issues. Informal resolution is the preferred course of action if: the APA problems may be related to inadequate skill/knowledge about APA and it is not meant to be intentional plagiarism. The following are examples of low-level APA violations:

- If a student cites, but cited incorrectly;
- If students cite secondary sources instead of primary sources;
- Cite MLA, Chicago or another types of citation besides APA; or
- Cite or paraphrase only one sentence when there are multiple sentences

Procedures:

1. The instructor will complete a Code of Academic Conduct Violation Form, for each student and each offense.
2. The instructor will meet with the student(s) involved to discuss the nature of the APA violation (missing or incorrect citations) and the sanction(s) they will impose including revising of the paper, grading implications and/or further APA training.
3. Even if the violation is informal, instructors ***still*** must complete and submit a MSW Academic and Professional Standards Code of Conduct Violation Form (https://acrobat.adobe.com/link/track/?uri=urn:aaid:scds:US:6e99c426-a91a-3607-9907-1d44b07abe98) for each student and each offense discussing the incident and agreed upon resolution.
4. The form will be signed by the instructor and student(s) to acknowledge the form and discussion that took place.
5. If the student refuses to sign the form, the instructor will note that on the form. Signing the form is an indication that the instructor and student met and discussed the violation. It is not an admission of guilt or an indication that the student agrees with the violation.
6. The form should include a clause about the student being informed of the need for further training and their right to a grievance. The student should be notified that the report will be entered in their student file in case of repeated violation.
7. A student's first low level violation will be treated as a warning and therefore, will not be factored if the student has another violation, especially if the violation is in the student's first semester. If the student has several low-level APA violations in the span of two weeks, they will count as one as this is indicative of a pattern that signals the student needs more assistance. TSSW will require the student use Heartful Editor, retake the APA course, and/or complete some other assignment as identified by the faculty member so they can learn how to cite properly. If the student fails to follow through on recommendations, further action and consequences could result.

Academic Alerts

Academic Alert (Class Performance/Grade-Related Concerns)

Criteria for initiating an academic alert includes but is not limited to:

- The total course grade is below a "B" (80%) at any point in the semester;
- Student has missed two or more assignments;
- Student has missed at least one class sessions; or
- There is concern about a student's attendance and/or academic performance.

Instructors report their concerns or issues to the MSW Program Manager or Academic Success Coach as soon as possible during the semester. The academic alert encourages the student to communicate and work with their professor and support team to ensure that academic standards are maintained.

Procedures:

1. An academic alert may be initiated when a student's attendance, academic performance, or other concerns related to academics are observed. When an Academic Alert is initiated by the instructor, an email to the student, the student's assigned Program

Manager, and Academic Success Coach will be generated.

2. The Academic Success Coach will follow-up with the student within five business days to learn of any challenges the student may be experiencing. While gathering information, the Academic Success Coach will gain permission from the student regarding what information can be shared. Student's acknowledge all employees of the Tulane School of Social Work are mandated reporters and there are certain situations that are mandated to be reported by law.
3. The Academic Success Coach may periodically review the student's academic performance via Canvas to determine if additional resources may be required.

Student Accountability and Standards Review

A student will be called to a Student Accountability and Standards Review where the student may be dismissed from the Tulane School of Social Work. Examples of academic and professional performance issues that will result in a Student Accountability and Standards Review include, but are not limited to:

- If the student has a cumulative GPA at or below 3.0 after final grades are posted for any given term;
- If a student earns a GPA at or below 2.5 after final grades are posted for any given term;
- If a student earns the following final grades at any time during their tenure while at TSSW:
  - Two grades of "B-" or below.
  - One "Unsatisfactory" (U) grade and one additional grade of "B-" or below.
- If a student has more than one incomplete in the program;
- When a violation of the Code of Academic Conduct has been reported;
- The faculty member believes that the APA violation's severity (intended plagiarism) merits consideration of an Academic Review;
- The student has violated any other honor code item (besides APA); i.e. cheating, falsification, multiple submissions, etc.;
- No negotiated informal resolution around APA citation violations can be agreed upon;
- It is a repeated violation of APA requirements in the program beyond their initial violation;
- A field education-related issue. Please follow the Field Education Handbook appendix for guidelines pertaining to field education matters;
- A combination of academic, field, and/or reports regarding behavior in the classroom and/or field setting;
- Professional disrespect of the personal rights and dignity of all persons, including other students, faculty, supervisors, and clients receiving services from the student;
- Discrimination or harassment related to race, sexual orientation, gender, religion, age, etc.;
- Violating the confidentiality of the professional relationship;
- Hostility and disrespect towards other students, faculty, or others at Tulane University, TSSW or while in Field Education or Seminar;
- Consistent failure to demonstrate effective interpersonal skills necessary for forming professional helping relationships;
- Continued inability or unwillingness to demonstrate a nonjudgmental attitude;
- Unable to allow client self-determination;
- Other code violations not specific outlined here; and/or
- Any other violations of the NASW Code of Ethics; violations of the policies of the Tulane University Code of Student Conduct.

Student Accountability and Standards Review - Academic:

Any violation should be submitted as soon as possible after the complainant becomes aware of academic code violations or any relevant events, within five business days of the alleged violation. However, academic violations can be identified and reported at any time during the semester. Written notification by submission of the Code of Academic Conduct Violation form to the MSW Program Manager initiates the formal procedures of the School of Social Work's Accountability and Standards Review process. The steps are as follows:

Academic Violations while semester is in progress:

1. The instructor will complete the MSW Academic and Professional Standards Code of Conduct Violation Form for each student for each offense/violation identified.
2. The instructor will meet with the student(s) involved to discuss the academic code violation, review the MSW Academic and Professional Standards Code of Conduct Violation Form and notify the student that the matter will be referred to the Academic Affairs Team.
3. The Code of Academic Conduct Violation Form must be signed by both the instructor and the student(s) as an indication that the instructor and student met and discussed the violation. A first violation may serve as a warning. Signing the form is not an admission of guilt or an indication that the student agrees with the violation.
4. If the student refuses to sign the form, the instructor will note that on the form. The student will be notified that the report will be entered in their student file. Depending on the violation, the first violation may serve as a warning.
5. The instructor will submit the form to the MSW Program Manager along with any supporting or corroborating documentation.
6. The MSW Program Manager will present all documentation from the professor to the Academic Affairs team in the Academic Affairs weekly meeting. Together, the Program Managers, Success Coaches, Academic Advisors, and Program Directors will review

the information presented and decide on next steps. The Director of MSW Programs will recommend whether a full Student Accountability and Standards Review is warranted. The student's instructor will be informed of this decision.

7. If a formal Student Accountability and Standards Review is recommended, it will be scheduled by the MSW Program Manager. The Student Accountability and Standards Review Committee may include: the Director of the MSW Programs, the Assistant Director of the MSW Programs, the MSW Program Manager, the MSW Academic Advisor, the MSW Student Success Coach , a Field Education Program Manager, or other member of the Field Education Team and three voting Faculty. Please note, the instructor/professor who filed the violation will provide information at the beginning of the Review but will not be part of the formal Commiittee.
8. The Student Accountability and Standards Review Committee will meet 15 minutes before the student arrives to discuss the case and ensure all parties are aware of the Review procedures and understand roles and responsibilities. If the Review is postponed for any reason, the student will be notified. The instructor who submitted the violation will present information on it during the first 15 minutes and will not attend while the student is present. The student will then present to the Review Committee and will answer any questions asked of them regarding the violation that was filed.
9. Once all information is presented, the Review Committee will temporarily excuse the student from the meeting to discuss the information shared and hear recommendations from the Review Committee, including any performance outcomes deemed necessary to correct the behavior(s) and continue in the program. Once the discussion is concluded, the Student Accountability and Standards Review Moderator will call for a deciding vote from the three voting faculty members. Non-voting faculty members may suggest an outcome or provide information but will not have a vote in the final decision. Only the voting faculty members will have a vote.
10. The student will return to the meeting to answer any additional questions and to hear the decision.
11. The MSW Program Manager will complete the Review Outcome Form. The form will be circulated to the voting faculty members to confirm the information included in the form is inclusive and reflects accurately the discussion held and outcomes. The MSW Program Manager will send written communication of the meeting outcome in the form of an email within 5-7 business days of the date of the Review to the student's Tulane email. A certified letter will follow to the address on file in the student's Tulane record. No other written, audio, or video documentation will be provided. This communication will include the following (as applicable):
    a. the Code of Academic Conduct Violation Form;
    b. the Academic Review Outcome Form/ Committee decision;
    c. the re-entry plan for a student being suspended;
    d. the date of exit from the program for a student being dismissed from the program; and
    e. Instructions to information for filing a grievance should the student contest the Committee decision, including the Grievance and Appeals Policy.

Documentation:
The MSW Program Manager will receive all relevant documentation from the instructor prior to the Review. The Committee will meet 15 minutes before the student arrives to review the documentation and decide if a Review is appropriate or if the committee members need more information/documentation to proceed.

Documentation of all Academic Reviews and Professional Standards Review decisions where a student has been judged in violation of the Academic Code of Conduct will be maintained in the student's file in a shared MSW Program folder. The record will include a copy of all documentation submitted to the Review Committee, the Review Outcome Form, and the letter to the student. TSSW will retain a copy of the permanent record. All documentation related to the violation of the Code of Academic Conduct may be reported to the University Office of Student Affairs.

Who can attend Reviews?
Students are not allowed to bring outside parties to the hearing. In special circumstances, prior notification or special consideration will be given. At no time are lawyers allowed to attend. If a student makes a request for an attorney to attend or arrives at the Review with an attorney present, the hearing will be cancelled and referred to Tulane University legal department.

Academic Violations during Review of Final Grades:

1. The MSW Program Manager (MSW Academic Affairs) or the MSW Field Program Manager (Field Education) will present all documentation relevant to final grades in the Academic Affairs weekly meeting and decide on final steps based on final grades presented.
2. A formal Student Accountability and Standards Review will be scheduled and the Student Accountability and Standards Review Committee may include: the Director of the MSW Programs, the Assistant Director of the MSW Programs, the MSW Program Manager, the MSW Academic Advisor, the MSW Student Success Coach, a Field Education Team Program Manager, or other member of the Field Education Department and three voting Faculty.
3. The student will receive an email 72 hours before the Review's established date and time.
4. The Review Committee will meet 15 minutes before the student arrives to discuss the case and ensure all parties are aware of the Review procedures and understand roles and responsibilities. If the hearing is postponed for any reason, the student will be notified. The Committee will wait 15 minutes for the student

to arrive. Should the student not attend, the Student Accountability and Standards Review will commence, and a decision will be made. The decision will be communicated to the student by email to the student's Tulane email.

5. The instructor who submitted the violation will present it during the first 15 minutes and will not attend when the student presents. The student will then present to the Student Accountability and Standards Review Committee and will answer any questions asked of them regarding the violation that was filed. Once all information is presented by the student and the instructor, the Review Committee will temporarily excuse the student from the meeting to discuss the information shared and hear recommendations from the Review Committee, including any performance outcomes deemed necessary to correct the behavior(s) and continue in the program. Once the discussion is concluded, the Review Committee member identified as the Moderator will call for a deciding vote from the three voting faculty members. Other Committee members may suggest an outcome or provide information but will not have a vote in the final decision. Only the voting faculty members will have a vote.
6. The student will return to the meeting to answer any additional questions and to hear the decision.
7. The MSW Program Manager will complete the Review Outcome Form. The form will be circulated to the voting faculty members to confirm the information included in the form is inclusive and reflects accurately the discussion held and outcomes. The MSW Program Manager will send written communication of the meeting outcome in the form of an email within five-seven business days of the date of the Review to the student's Tulane email. A certified letter will follow to the address on file in the student's Tulane record. No other written, audio, or video documentation will be provided. This communication will include the following (as applicable):
    a. a Code of Academic Conduct Violation Form;
    b. the Academic Review Outcome Form/ Committee decision;
    c. the re-entry plan for a student being suspended;
    d. the date of exit from the program for a student being dismissed from the program; and
    e. Instructions to information for filing a grievance should the student contest the Committee decision, including the Grievance and Appeals Policy.

Documentation:
The MSW Program Manager will receive all relevant documentation from the instructor prior to the Review.

Documentation of all Academic Reviews and Professional Standards Review decisions where a student has been judged in violation of the Code of Academic Conduct will be maintained in the student's file in a shared MSW Program folder. The record will include a copy of all documentation submitted to the Review Committee, the Review Outcome Form, and the letter to the student. TSSW will retain a copy of the permanent record. All documentation related to the violation of the Code of Academic Conduct may be reported to the University Office of Student Affairs.

Who can attend Reviews?
Students are not allowed to bring outside parties to the hearing. In special circumstances, prior notification or special consideration will be given. At no time are lawyers allowed to attend. If a student makes a request for an attorney to attend or arrives at the Student Accountability and Standards Review with an attorney present, the hearing will be cancelled and referred to Tulane University legal department.

Possible Outcome(s) of a Student Accountability and Standards Review:

The Tulane School of Social Work has the authority to determine whether a student will be allowed to continue enrollment in their degree program. A Student Accountability and Standards Review may include but are not limited to the following outcomes:

- Creation of a Personal Success Plan;
    - Mandatory advising with an Academic Success Coach.
- Academic probation;
    - Mandatory advising with an Academic Success Coach.
- Resubmit an assignment in question to receive a possible revised grade.
- Re-enroll in a course where a final grade of "C" or below was earned. A final grade of "B" or higher grade must be earned in the course's re-enrollment before the student can continue with other subsequent curriculum courses. Prerequisite classes MUST be passed for a student to continue matriculate through the Program.
- Suspension for up to one year/three semesters;
- Be asked to participate in other activities as assigned by the committee that could include writing a graduate level paper related to matter at hand, complete a live/ synchronous CEU training related to matter at hand, or other as deemed appropriate by the Committee.
- Dismissal from program.

Personal Success Plan (including but not limited to):

- Mandatory meetings with Academic Success Coach;
- Creating a time management plan with the student success coach;
- Other developmental actions as assigned.

Academic Probation
A final grade of "B-" or below will initiate a student to be placed on academic probation.

Any student placed on academic probation must develop a Personal Success Plan with an Academic Success Coach.

After one semester on academic probation, the student will be reassessed for satisfactory completion of their Personal Success

Plan, cumulative GPA, and final grades. If the student's academic performance does not meet the program requirements, a Student Accountability and Standards Review may be scheduled. The outcomes of the Student Accountability and Standards Review as listed above will apply.

Suspension
The length of an academic suspension from TSSW could range from one to three semesters depending on the outcome of the Student Accountability and Standards Review. A student may only be placed on suspension once during their tenure at TSSW. A student reinstated after their academic suspension shall be placed on academic probation for one semester. Further violations of academic standards may result in dismissal.

Dismissal
TSSW students can be dismissed for any of the reasons outlined in this handbook. Students may reapply to return to TSSW following a dismissal after one calendar year. A student may reapply to the program through the regular admissions process. Students should be aware that all relevant information surrounding the student's dismissal from TSSW will be considered. This will include grades at the time of dismissal if the dismissal was due to academic requirements not being met. All re-applications are reviewed by the faculty. If the application is approved, the start date will be determined in consultation with the student's MSW Academic Advisor. Coursework taken at another college or university during the dismissal period is not transferable to TSSW. Returning to TSSW following a second dismissal is not allowed.

Student Accountability and Standards Review Appeal Process
A student may appeal the decision rendered by a Student Accountability and Standards Review by adhering to the following steps:

1. The student may appeal against the decision of a Student Accountability and Standards Review by responding to the TSSW faculty or staff member identified in the student's outcome letter. The student's appeal must be received, in writing, within five business days of receiving the outcome letter sent via email.

2. The Student Accountability and Standards Review Appellate Committee will review the request.

3. The Student Accountability and Standards Review Appellate Committee determines whether or not the the appeal has merit. The student will be notified of the committee's decision in writing and that decision will be sent to the student's Tulane email account.

4. The student may appeal against the decision rendered by the Student Accountability and Standards Review Committee by submitting a second and final appeal to the Dean of the Tulane School of Social Work.

Student Accountability and Standards - Professional and Ethical Standards

All students enrolled in a social work program must abide by the National Association of Social Workers (NASW) code of Ethics which governs social workers' professional and ethical behavior and values. Students must uphold ethical standards of practice established by NASW in the Code of Ethics, maintain professional performance standards required to be licensed as a social worker, and meet the practice behaviors established by the Council on Social Work Education (CSWE). Violation of these standards may be identified by faculty, adjunct instructors, or staff members. Violation of these standards includes but is not limited to:

- Failure to meet generally accepted standards of professional conduct as outlined in NASW Code of Ethics and may include personal integrity or emotional stability required for professional practice; Tulane University's Office of Student Affairs/Case Management may be involved for any matters related to emotional or mental stability.
- Failure to demonstrate effective interpersonal skills necessary to perform professional helping relationships;
- Failure to adhere to the NASW Code of Ethics;
- Has been found guilty of criminal misconduct that affects the student's ability to be licensed as a social worker; or
- Displays inappropriate or disruptive behavior* toward clients, other students, faculty, staff, or other affiliates. Tulane University's Office of Student Affairs/Case Management may be involved for any matters related to or inappropriate or disruptive displays of behavior*
    - *The Tulane Unified Code of Graduate Student Academic Conduct defines this as "any student behavior that has the effect of interfering with education, the pursuit of knowledge, and/or a fair evaluation of a student's performance is considered a violation of the Code's prescribed academic conduct." (p.5).

Resolution of Professional and Ethical Standards

Informal Resolution (only if it is a minor professional standards violation)
All are encouraged to exercise prudent judgment with minor professional standard violations. A professional standard violation is considered minor if the harm is minimal and manageable. Examples of minor violations include, but are not limited to:

- First incidence of a student being disrespectful to another student, faculty member, adjunct, or staff which does not cause harm; or
- A student exercises bad judgment in Filed Practicum & Seminar which does not cause serious harm or other violations.

Procedure:

1. Meet with the student(s) involved to discuss the actions of concern.
2. The individual filing the violation must complete and submit the MSW Academic and Professional Standards Code of Conduct Violation Form f (https://acrobat.adobe.com/link/track/?uri=urn:aaid:scds:US:6e99c426-a91a-3607-9907-1d44b07abe98)or each student and each offense discussing the incident and agreed upon resolution. Please note whether there is a need for the student to have further training. The student should be notified that the form will be

entered in their student file for documentation and for reference in case of future violations.

3. The first low level ethical standard violation will not count against student(s) should they have another violation, especially if the violation is in the student's first semester.

Possible Outcomes:

1. Mandatory Faculty Advising Session - A mandatory faculty advising session will be the outcome if there are minor concerns (not including violations) surrounding the NASW Code of Ethics or TSSW Professional Standards.
2. Complete an assignment or read material related to the offense - The instructor or faculty advisor may require the student to complete an assignment or read an article to reinforce concepts related to the NASW Code of Ethics or TSSW Professional Standards.
3. Complete Continuing Education (CE), webinar, or other training - The MSW Program Administrative team may require completion of an approved CE training, webinar or other training where the student must provide a written summary of relevance to violation of professional or ethical standard.

Formal Resolution (Major Professional Standards Violations)
A Student Accountability and Standards Review will be called for major professional standards and ethical violations. Examples of professional performance issues that may result in dismissal from the program include, but are not limited to:

- Professional disrespect of the personal rights and dignity of all persons, including students, faculty, supervisors, staff, and clients receiving services from the student;
- Discrimination or harassment related to race, sexual orientation, gender, religion, age;
- Violating the confidentiality of the professional relationship;
- Hostility and disrespect towards students, faculty, staff, or others affiliated with Tulane University or within a Field Education placement;
- Consistent failure to demonstrate effective interpersonal skills necessary for forming professional helping relationships;
- Continued inability or unwillingness to demonstrate a nonjudgmental attitude;
- Unable to allow client self-determination; or
- Any other violations of the NASW Code of Ethics; violations of the policies of the Tulane University Code of Student Conduct.

Procedure:

1. A Professional and Ethical Standard Form is submitted identifying the concern.
2. Faculty or a member of the MSW Program Team shall meet with the student to discuss the violation and review the MSW Academic and Professional Standards Code of Conduct Violation that delineates the reasons (evidence) detailing the violation. The instructor or other individual filing the form and student will sign it to acknowledge the discussion. If the student refuses to sign the form, the form should reflect accordingly. Signing the form is an indication that the instructor or the person filing the form and student met and discussed the violation. It is not an admission of guilt or an indication that the student agrees with the violation.
3. The Professional and Ethical Standard Form will be submitted to the MSW Program Manager along with any supporting or corroborating documentation.
4. The MSW Program Manager will inquire with the student to see if there is any additional information that should be brought to light to ensure that academic affairs team has all relevant information from the instructors, classmates, and/or student's vantage point.
5. The MSW Program Manager will present the reported violation at the weekly academic affairs team meeting.
6. Together, the MSW Program Managers, Academic Advisors, Success Coaches, and Program Directors will discuss and recommend whether a full Academic Review is recommended. If a formal Academic Review is recommended, the Professional Standards Review Committee may include the individual bringing forth the evidence, the Director of the MSW Programs, the Assistant Director of the MSW Programs the Dean of Student Experience, the MSW Program Manager, an Academic Advisor, Academic Success Coach and at least three voting faculty members. Other committee members may include representatives from other University offices and/or program administrators from the Field Education Team.
7. The committee will meet 15 minutes before the student is invited to join to review the documentation relevant to the Review.
8. Once the Review Committee has heard separately from the individual filing the violation and the student, the Committee will excuse the student from the meeting to discuss the evidence and recommendations, including any performance outcomes deemed necessary to correct the behavior(s) and continue in the program. Once the discussion is concluded, the Committee will call for a vote by the voting faculty members. Note: Only the voting faculty members will have a vote. Others Committee members may give an opinion or provide information but will not have a vote in the final decision.
9. The student will then join the meeting again to discuss the outcome of the Student Accountability and Standards Review.

10. The MSW Program Manager will complete the Review Outcome Form. The form will be circulated to the voting faculty members to confirm the information included in the form is inclusive and reflects accurately the discussion held and outcomes. The MSW Program Manager will send written communication of the meeting outcome in the form of an email within five-seven business days of the date of the Review to the student's Tulane email. A certified letter will follow to the address on file in the student's Tulane record. No other written, audio, or video documentation will be provided. This communication will include the following (as applicable):
    a. the Academic Code of Conduct Violation Form
    b. the Academic Review Outcome Form/ Committee decision;
    c. the re-entry plan for a student being suspended;
    d. the date of exit from the program for a student being dismissed from the program.
    e. Instructions to information for filing a grievance should the student contest the Committee decision, including the Grievance and Appeals Policy

Documentation

The MSW Program Manager will receive all relevant documentation from the instructor prior to the Review.

Documentation of all Academic Reviews and Professional Standards Review decisions where a student has been judged in violation of the Academic Code of Conduct will be maintained in the student's file in a shared MSW Program folder. The record will include a copy of all documentation submitted to the Review Committee, the Review Outcome Form, and the letter to the student. TSSW will retain a copy of the permanent record. All documentation related to the violation of the Code of Academic Conduct may be reported to the University Office of Student Affairs.

Who can attend Reviews?

Students are not allowed to bring outside parties to the hearing. In special circumstances, prior notification or special consideration will be given. At no time are lawyers allowed to attend. If a student makes a request for an attorney to attend or arrives at the Review with an attorney present, the hearing will be cancelled and referred to Tulane University legal department.

Outcomes of a Student Accountability and Standards Review:

The Tulane School of Social Work has the authority to determine whether a student will be allowed to continue enrollment in their degree program. A Student Accountability and Standards Review may include but are not limited to the following outcomes:

1. Creation of a Personal Success Plan;
    a. Mandatory advising with an Academic Success Coach
2. Academic probation
    a. Mandatory advising with an Academic Success Coach.
3. Resubmit an assignment in question to receive a possible revised grade.
4. Re enroll in a course where a final grade of "C" or below was earned. A final grade of "B" or higher grade must be earned in the course's re-enrollment before the student can continue with other subsequent curriculum courses. Prerequisite classes MUST be passed for a student to continue matriculate through the Program.
5. Suspension for up to one year/three semesters;
6. Be asked to participate in other activities as assigned by the committee that could include writing a graduate level paper related to matter at hand, complete a live/ synchronous CEU training related to matter at hand, or other as deemed appropriate by the Committee.
7. Dismissal from program.

Personal Success Plan (including but not limited to)

- Mandatory meetings with Academic Success Coach;
- Creating a time management plan with the student success coach;
- Other developmental actions as assigned.

Academic Probation

- A final grade of "B-" or below will initiate a student to be placed on academic probation;
- Any student placed on academic probation must develop a Personal Success Plan with an Academic Success Coach;
- After one semester on academic probation, the student will be reassessed for satisfactory completion of their Personal Success Plan, cumulative GPA, and final grades. If the student's academic performance does not meet the program requirements, a Student Accountability and Standards Review may be scheduled. The outcomes of the Student Accountability and Standards Review as listed above will apply.

Suspension

The length of an academic suspension from TSSW could range from one to three semesters depending on the outcome of the Student Accountability and Standards Review. A student may only be placed on suspension once during their tenure at TSSW. A student reinstated after their academic suspension shall be placed on academic probation for one semester. Further violations of academic standards may result in dismissal.

Dismissal

TSSW students can be dismissed for any of the reasons outlined in this handbook. Students may reapply to return to TSSW following a dismissal after one calendar year. A student may reapply to the program through the regular admissions process. Students should be aware that all relevant information surrounding the student's dismissal from TSSW will be considered. This will include grades at the time of dismissal if the dismissal was due to academic requirements not being met. Faculty review all applications from students who reapply. If the application is approved, the start date will be determined in consultation with the student's MSW Academic Advisor. Coursework taken at another college or university during the

dismissal period is not transferable to TSSW. Returning to TSSW following a second dismissal is not allowed.

Reapplication/Reinstatement
Students will be eligible to reapply after one calendar year. Students will reapply the same way they first applied to TSSW. All academic and professional behavior at TSSW will be factored into the admissions decision.

****If the student is dismissed a second time, this dismissal is permanent and any applications to return to TSSW will be denied.**

Academic Grievances

The Tulane School of Social Work supports in principle and in practice the right of any student to initiate a grievance/complaint regarding grades or any other cause affecting their academic experience. This policy covers student grievances of any grade or other concerns related to the course.

For Course or Assignment Grade Grievances

1. Within ten business days of receiving official notice of a course grade or for any other action that affects the student's educational experience, the student should attempt to resolve the grievance by approaching the instructor who is the subject of the complaint.
2. If the student and the instructor cannot arrive at a mutually satisfactory resolution, a formal grievance grievance should be sent by the student to the MSW Program Manager within ten business days of receiving official notice of the course grade using the Grade Grievance and Appeal Form. To maintain the timeline of the overall processes, the student shall communicate any issues they may have while trying to connect with the instructor.
3. A Grade Grievance and Appeal Committee will be chaired by the Director of the MSW Programs and may also include any of the following: the student, the Dean of Student Experience/Affairs, the MSW Program Manager, a member of the Field Education Team, an Academic Advisor, a Student Success Coach and three Faculty Representatives.
4. The student must appear at the meeting to provide their rationale and any supporting information. If the student does not attend the meeting within 15 minutes of the start time, the appeal will be forfeited.
5. The MSW Program Manager will collect the Grade Grievance and Appeal Form from the student and any written documentation from the student and instructor for the committee to review.
6. The Committee shall make a formal decision at the end of the meeting and the decision will be communicated to the student. The decision will be followed by written communication, via the student's Tulane University email, within 5-7 business days following the meeting. The Committee records will contain the decision and an explanation of the grounds upon which the decision was reached. All documentation will be permanently stored in the TSSW Student File.

Appeal of the Grade Grievance Committee's Decision

1. If the student is dissatisfied with the Committee's decision, the student may appeal to the Associate Dean of Academic Affairs (or the Dean in lieu of) within five (5) business days of receiving the decision.
2. In the appeal to the Associate Dean of Academic Affairs (or the Dean in lieu of), the student should provide a written statement explaining their rationale and details as to why they disagree with the committee's decision. The primary purpose of the appeal at this level is to enable the student to demonstrate that one of the following may have occurred during these proceedings:
   - A sanction is grossly disproportionate to the offense.
   - Specified procedural error, or errors, in the interpretation of University regulations are so substantial as to deny the charged student a fair hearing.
   - New and significant evidence appears which could not have been discovered by a student before or during the original hearing.
   - Evidence appears to suggest that the finding was arbitrary and capricious.
   - An arbitrary and capricious finding would be one not supported by any evidence.
3. The Associate Dean of Academic Affairs (or the Dean in lieu of) will notify the Program Director, Program Manager, and the student in writing of their decision. The Program Director will notify the committee of the Associate Dean's (or the Dean in lieu of) decision.

Appeal of the Associate Dean's Grade Appeal Decision

1. If the student is dissatisfied with the Associate Dean of Academic Affairs (or the Dean in lieu of) decision, the student may appeal to the Dean within five (5) business days of receiving the decision.
2. In the appeal to the Dean, the student should provide a written statement explaining their rationale and details as to why they disagree with the committee's decision. The primary purpose of the appeal at this level is to enable the student to demonstrate that one of the following may have occurred during these proceedings:
   - A sanction is grossly disproportionate to the offense.
   - Specified procedural error or errors in the interpretation of University regulations are so substantial as to deny the charged student a fair hearing.
   - New and significant evidence appears which could not have been discovered by a student before or during the original hearing.
   - Evidence appears to suggest that the finding was arbitrary and capricious.
   - An arbitrary and capricious finding would be one not supported by any evidence.
3. The Dean shall seek to settle the matter within five (5) business days and shall notify the Associate Dean of Academic Affairs (or the Dean in lieu of), and the student

in writing of their decision. The Dean will notify the Associate Dean of Academic Affairs, The Director of the MSW Programs, the MSW Program Manager, and the student in writing of their decision.

Student Appeal of Dean's Grade Appeal Decision

If the student is dissatisfied with the Dean's ruling, the student may file, within five (5) business days of receiving the Dean's decision, a written appeal with the Tulane University Senate Committee on Academic Rights, Freedom and Responsibilities of Students. The student should contact the Assistant Vice President & Dean of Students, Student Resources and Support Services

Instructor Appeal of the Grade Appeal

If the instructor believes that their academic freedom or academic responsibilities have been affected by the Associate Dean/ Dean's ruling, the instructor may appeal to the Faculty Grievance Committee of the School. No grade may be changed or final action taken until the instructor's appeal process has been completed.

Student Appeal of Dean's Appeal Decision

If the student is dissatisfied with the Dean's ruling, the student may file, within five (5) business days of receiving the Dean's decision, a written appeal. Per the Office of Graduate and Postdoctoral Studies (OGPS), if the student is not satisfied with the decision reached by the school, they may appeal to the provost or provost's designee. The provost or their designee will review the appeal and the decisions made by the department and school and return a decision within five business days. The decision of the provost is final.

If faculty member who requested the student be brought to a Student Accountability and Standards Review believes that his or her academic freedom or academic responsibilities have been affected by the Dean's ruling, the faculty member may appeal to the Faculty Grievance Committee of the School. The faculty member's appeal must be made within 10 business days of the action provoking the appeal. If the faculty member is dissatisfied with the committee of peers' decision regarding his or her academic freedom or responsibilities, the teacher may appeal to the Senate Committee on Faculty Tenure, Freedom and Responsibility. That appeal also must be made within 10 business days of the action provoking it. No review decision may be changed until the teacher's appeal process has been completed.

If the faculty who requested the student be brought to review believes that his or her academic freedom or academic responsibilities have been affected by the ruling of the Senate Committee on Academic Rights, Freedom and Responsibilities of Students, the matter shall be referred to the Senate Committee on Faculty Tenure, Freedom and Responsibility.

In cases of conflict regarding the decision of the divisional peer committee and the Senate Committee on Academic Freedom and Responsibility of Students, the matter shall be referred to the Senate Committee on Faculty Tenure, Freedom and Responsibility. In cases of conflict regarding the decisions of the Senate Committee on Faculty, Tenure, Freedom and Responsibility and either of the other committees stemming from the deliberations described above or in this item, the committees at odds shall meet jointly to discuss the issue. The ultimate findings of the two committees shall be forwarded to the President of the University within 10 business days. All non-academic concerns may be reported to the University Office of Student Affairs.

Leave of Absence, Withdrawal, and Medical Withdrawal/Leave

Leave of Absence

A Leave of Absence (LOA) may be requested by a student before the next term begins in the academic calendar. A LOA implies the student is planning to return to TSSW at a predetermined date. During a Leave of Absence, a student does not attend Field Education Placement.

The maximum amount of time for a LOA is one calendar year. If a student takes a Leave of Absence and re-enters within one calendar year, the student must follow the procedures below.

Procedures

1. An email message must be sent to an Academic Advisor outlining general reasons for requesting an LOA. A doctor's statement is not necessary for an LOA. If a student does not inform an Academic Advisor of their intentions to take an LOA from TSSW, they will be in violation of TSSW's Enrollment Policy.
2. If applicable, the student should contact their financial aid counselor to discuss how a Leave of Absence may affect financial aid.
3. If the student is registered in courses for the upcoming semester, the student must remove the courses from their schedule.
4. For Field Education courses, the student should contact the Field Education Department and alert them of the impending Leave of Absence for guidance.

Returning to Tulane - Deadlines for Submitting Documentation

The deadline to petition to return from a Leave of Absence, will be stated in the "Return to TSSW" email sent by an Academic Advisor.

Next Steps and re-entering TSSW within one year

The student must respond to "The Return to TSSW" email that will be sent from an Academic Advisor. This email will be sent to all students once on a LOA and to the student's Tulane email. The student must read and follow the directions outlined in "the "Return to TSSW" email and adhere to the deadline outlined. The student must attend the live orientation for the semester they intend to return.

The student must complete the APA mini-course, and Asynchronous Orientation for the semester they intend to return

Re-entry after one year

1. If the student wishes to return after one year or more, the student must re-apply to the program.

2. Faculty will review all students who reapply to a TSSW degree program.
3. If readmission is granted after one year, the student's previous credits are usually counted. However, the student may be required to take additional credits if major curricular changes have occurred, or admission policies or other requirements have significantly changed.
4. No credits can be counted after seven (7) years to ensure that current practice information is learned.
5. Each case will be considered carefully by the Dean, Associate Dean of Academic Affairs and The Office of Admissions to assure integrity of the student's education for beginning professional social work.

Withdraw: Voluntary

In the event a student must withdraw from all currently enrolled courses and pursue a Voluntary Withdrawal (VW), the student must contact their Academic Success Coach and Academic Advisor to discuss what a VW entails and how this will impact their respective curriculum path, field placement and date of degree completion. Students must also consult with the Office of Financial Aid to discuss how a VW may affect their financial aid award, if applicable. TSSW will adhere to the dates identified in the TSSW Academic Calendar to determine the grade reflected on the student's transcript. Based on dates within the TSSW Academic Calendar for each individual term, students will receive a grade of "W" (Withdrawal/without academic penalty) if the withdrawal occurs after the last day to receive a 25% tuition refund until the last day identified on the academic calendar as the last day to withdraw without academic penalty. Withdrawals initiated after the last day to withdraw without academic penalty will result in a grade of "WF" (Withdraw/Fail) reflected on their transcript. It is the student's responsibility to familiarize themselves with the dates identified on TSSW's Academic Calendar.

Procedures

1. An email message must be sent to an Academic Advisor outlining general reasons for requesting a voluntary withdrawal. A doctor's statement is not necessary for a voluntary withdrawal. If a student does not inform an Academic Advisor of their intentions to take a voluntary withdrawal from TSSW, they will violate TSSW's Continuous Enrollment Policy.
2. If applicable, the student should contact their financial aid counselor to discuss how a withdrawal may affect financial aid.
3. If the student is registered in courses for the upcoming semester, the student must remove the courses from their schedule.
4. For Field Education courses, the student should contact the Field Education Department and alert them of the impending withdrawal.

Returning to Tulane - Deadlines for Submitting Documentation

The deadline to petition to return from a withdrawal, will be stated in the "Return to TSSW" email sent by an Academic Advisor.

Next Steps and re-entering TSSW within one year

- The student must respond to "The Return to TSSW" email that will be sent from an Academic Advisor. This email will be sent to all students once on withdrawal and to the student's Tulane email.
- The student must read and follow the directions outlined in the "Return to TSSW" email and adhere to the deadline outlined.
- The student must attend the live orientation for the semester they intend to return.
- The student must complete the APA mini-course, and Asynchronous Orientation for the semester they intend to return.

To re-enter after one year

1. If the student wishes to return after one year or more, the student must re-apply to the program.
2. Faculty will review all students who reapply to a TSSW degree program.
3. If readmission is granted after one year, the student's previous credits are usually counted. However, the student may be required to take additional credits if major curricular changes have occurred, or admission policies or other requirements have significantly changed.
4. No credits can be counted after seven (7) years to ensure that current practice information is learned.

Withdrawal: Medical Leaves and Medical Withdrawals

Students may experience physical, psychological, and substance use conditions that may significantly impact their ability to complete their academic pursuits. During such circumstances, a medical withdrawal and leave of absence from the University provides the student with an opportunity to remain a matriculated student while also allowing time away for appropriate treatment and recovery. A medical withdrawal may occur in situations of acute or chronic psychosocial stress or physical illness that significantly impairs the student's ability to meet the academic and professional requirements. It is given only when a student is withdrawing from all classes.

The maximum time for a medical withdrawal is one year. Beyond the one year deadline, the student must re-apply to the Tulane School of Social Work to continue their studies. Medical withdrawals, medical leaves, and returns are initiated through Tulane University Case Management & Victim Support Services (CMVSS). Also, any student who chooses to pursue a medical withdrawal or medical leave cannot enroll in TSSW courses for at least one semester.

Lastly, any student whose medical withdrawal or leave has been approved must adhere to the established TSSW deadlines to resume their studies.

Field hours accrued during the term when a Medical Leave is taken will not be counted toward the total count of field education hours required for the degree.

Returning to Tulane - Deadlines for Submitting Documentation

A student's return to TSSW following a medical withdrawal/ medical leave will be discussed with the Academic Advisor only after a student has been cleared to return to TSSW by Tulane University's Case Management and Victim Services.

Next Steps

- Once the student has been cleared by CMVSS to return to TSSW, they must contact an Academic Advisor to discuss next steps.
- The student must attend the live orientation for the semester they intend to return.
- The student must complete the APA mini-course, and the Asynchronous Orientation for the semester they intend to return to TSSW.

To re-enter within one year - A return to TSSW will solely depend on CMVSS and TSSW will respond accordingly.

1. If the student wishes to return after one year or more, the student must re-apply to the program.
2. Faculty will review all students who reapply to a TSSW degree program.
3. If readmission is granted after one year, the student's previous credits are usually counted. However, the student may be required to take additional credits if major curricular changes have occurred, or admission policies or other requirements have significantly changed.
4. No credits can be counted after seven (7) years to ensure that current practice information is learned.

   Each case will be considered carefully by the Faculty Reapplication Committee to assure integrity of the student's education for beginning professional social work.

Student Ambassadors

All students applying to work as a Student Ambassador must have completed their first semester in TSSW and be in good academic standing with the school. Part-time students must have successfully completed their second semester at TSSW and be in good standing with the school. Students are eligible to apply for a Student Ambassador position during their first semester. To apply, students must be in good academic standing.

Graduation Requirements and Ceremonies

Certification of Degree

An MSW or MS degree will not be certifed for conferral until/unless all degree requirements are met for the specified degree.

Certification of a degree refers to the process by which the specific degree requirements are confirmed, and the degree is certified through the Tulane University Registrar.

A student must complete an "Application for Degree" through the student's Gibson page by the communicated deadlines for each graduation cycle. The Academic Affairs Team for the identified degree program will review the students' records to assure that all credit hours, curriculum requirements, and minimum cumulative GPA of 3.00 are completed, with no grade of "Incomplete" pending. For a student to receive their diploma and/or final transcript, all University holds must be cleared. Students must work directly with the appropriate office to address any issues related to any University hold.

Graduation:

Graduation refers to the commencement ceremony that celebrates the successful completion of degree requirements. The Tulane School of Social Work commencement ceremony is held in December of each year. TSSW does not hold a spring or summer graduation ceremony. All graduates within the calendar year (Spring, Summer, & Fall terms) are invited to attend the TSSW Commencement in December. Summer and Fall graduates of the previous year, along with Spring graduates are also welcome to participate in the ceremony in May of each year. For example, a student completing degree requirements in the summer 2023, fall 2023 or spring 2024 is all allowed to participate in the larger May 2024 Tulane Commencement ceremony. Unified Commencement (https://commencement.tulane.edu/) ceremony in May of each year. For example, a student completing degree requirements in the summer 2023, fall 2023 or spring 2024 is all allowed to participate in the larger May 2024 Tulane Commencement ceremony.

Please note, individual graduate names are not called, nor do graduates walk across a stage at the Tulane University Unified Commencement Ceremony in May. All students MUST wear the proper academic attire (i.e. cap and gown). Academic attire may be ordered at the Tulane Bookstore. (https://tulane.shopoakhalli.com/purchasewizard/Welcome/) Information related to the Unified Commencement is distributed and communicated by the Graduation office on the uptown campus. TSSW does not have detailed information on those ceremonies.

Student Affairs

Student Government Association (SGA)

The Student Government Association (SGA) represents the concerns and needs of TSSW degree-seeking students to the school's administration. The Student Government Association (SGA) at the Tulane School of Social Work (TSSW) is the official voice of all graduate and professional students at TSSW. The fundamental values of the social work profession, expressing the worth, dignity, and uniqueness indigenous to all persons as well as their rights and opportunities, shall be reflected in the expression of the actions of the organization

The SGA is committed to supporting student development in all systems; promote understanding among students, faculty, administration and alumni; maintain professional standards and ethics; and ensure to the best of its ability the inclusion of all of the student body including full time students, part time students, online students; masters or doctoral level students, advanced standing students, social work students, Disaster Resilience Leadership Academy students, and transfer students for any and all degree-seeking programs.

The TSSW SGA is affiliated with the Associated Student Body (ASB) of Tulane University. All students enrolled at TSSW are eligible for membership in the Student Government Association. All students enrolled in a degree-seeking course of study at TSSW are considered members of the SGA and encouraged to participate in meetings and/ or events. There are no fees required as part of the membership of the TSSW SGA.

The TSSW student body is also a member of GAPSA. The Graduate and Professional Student Association (GAPSA) is the unifying body of the graduate and professional divisions of Tulane University. GAPSA develops and furthers the scholastic, professional, social, and public service interests of all graduate and professional students by promoting an understanding amongst students, faculty, and administrators.

Discrimination

If there is a suggestion of discrimination of race, gender, sexual orientation, religion, disability, age, etc., the situation must be immediately referred to the Tulane Office of Institutional Equity. For more information, please see the Student Affairs Non- Discrimination Policy.

Student Affairs at Tulane School of Social Work is committed to supporting and enhancing the academic experience by facilitating student success, connecting students to opportunities for personal growth, and by providing students with essential skills that allow them to excel as they move through and beyond Tulane.

FERPA

Tulane University complies with the provision of the Family Education Rights and Privacy Act of 1974 (Buckley Amendment), which was enacted to protect the privacy of education records, to establish the right of students to inspect and review their education records, and to provide guidelines for the correction of inaccurate or misleading data. The Family Educational Rights and Privacy Act (FERPA) affords students certain rights with respect to their education records. They are:

1. **The right to inspect and review the student's education records within 45 days of the day the University receives a request for access**. Students should submit to the registrar, dean, head of the academic department, or other appropriate official, written requests that identify the record(s) they wish to inspect. The University official will arrange access and notify the student of the time and place where the records may be inspected. If the records are not maintained by the University official to whom the request was submitted, that official shall advise the student of the correct official to whom the request should be addressed.
2. **The right to request the amendment of the student's education records that the student believes are inaccurate or misleading.** Students may ask the University to amend a record that they believe is inaccurate or misleading. They should write to the University official who was responsible for the record request, clearly identify the part of the record they want changed and specify why it is inaccurate or misleading. If the University decides not to amend the record as requested by the student, the University will notify the student of the decision and advise the student of the student's right to an appeal.
3. **The right to consent to disclosures of personally identifiable information contained in the student's education records, except to the extent that FERPA authorizes disclosure without consent**. One exception which permits disclosure without consent is disclosure to school officials with legitimate educational interests. A school official is a person employed by the University in an administrative, supervisory, academic or research or support staff position (including law enforcement unit personnel and health staff); a person or company with whom the University has contracted (such as an attorney, auditor, or collection agent); a person serving on the Board of Trustees; or a student serving on an official committee, such as a disciplinary or grievance committee, or assisting another school official in performing his or her tasks. A school official has a legitimate educational interest if they need to review an education record to fulfill their professional responsibility. Upon request of a post-secondary institution, Tulane discloses education records without the student's consent to officials of another school in which a student seeks to enroll. Tulane will try to notify the student of the records request.
4. **The right to file a complaint with the U.S. Department of Education concerning alleged failures by Tulane to comply with the requirements of FERPA.** The name and address of the office that administers FERPA:

   Family Policy Compliance Office

   U.S. Department of Education

   600 Independence Avenue

   SW Washington, DC

Institutional Equity

Institutional Equity is dedicated to advancing Tulane's commitment to fair and equitable treatment of all members of the university community in employment and educational opportunities by providing consultative, investigative, and educational services. Increasing diversity on campus and maintaining a harassment free environment are our top priorities.

We have embarked upon a transformational journey to establish a new approach to fostering a diverse and inclusive community for all Tulanians. We will accomplish this through innovative educational programs, by introducing a conflict resolution program, as well as offering a higher level of service as we continuously improve the processes that promote diversity and help ensure our environment is discrimination, harassment and retaliation free.

If at any point, there is a suggestion of discrimination of race, gender, sexual orientation, religion, or any form of harassment or retaliation connected to these issues, the situation must be immediately referred to the Office of Institutional Equity (OIE).

The Institutional Equity Team is dedicated to ensuring that the Tulane community is discrimination, harassment and retaliation free. Tulane enforces a robust policy prohibiting discrimination, harassment, or retaliation. Students, staff, and faculty are strongly encouraged to promptly report concerns or allegations of discrimination, harassment, and/or retaliation so that appropriate action can be taken to address the concern. When a concern is reported, it is thoroughly investigated.For more information regarding Tulane's Office of Institutional Equity please contact (504) 862-8083.

Goldman Center for Accessibility

It is the policy and practice of Tulane University to comply with the Americans with Disabilities Act (Pub. L. No. 101-336), Section 504 of the Rehabilitation Act of 1973 (Pub. L. No. 93-112, § 504, as amended), and state and local requirements regarding individuals with disabilities. Under these laws, no qualified individual with a disability shall be denied access to or participation in services, programs, and activities of Tulane University.

Tulane University School of Social Work is committed to providing accessible, reasonable accommodations and supportive teaching and learning environment. All students requesting accommodations are required to contact the Goldman Office of Accessibility.

The center is committed to providing equal access and a friendly environment for all who study and work at Tulane University. Through a collaborative relationship, reasonable modifications to the academic or work environment accommodations can be offered.

Title IX

Tulane University is committed to a policy of compliance with Federal laws and regulations administered by Title IX which states, ""No person in the United States shall, on the basis of sex, be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any education program or activity receiving Federal financial assistance."

For more information regarding Title IX support and reporting policies within the university, Phone: (504) 865-5611

Case Management and Victim Support Services

Tulane's Office of Case Management and Victim Support Services offers problem resolution services, case management services, victim support services, referral services, coordination and follow-up during and after hospitalization and/or medical leave of absence, and crisis management and resolution.

For after-hour support, the Division of Student Affairs has a crisis line with professionals on call for urgent situations and can be reached by calling or texting the Line (504) 264-6074

For 24/7 Student Resources and Support Services: (504) 902-9900

Emergency Reporting

Tulane requires prompt notification to the University of student emergencies on campus or abroad, which can be made by Tulane faculty, staff or students. Please report all student emergencies or issues to http://tulane.edu/concerns (http://tulane.edu/concerns/).

Field Education (MSW)

The purpose of the field education practicum is to provide an educationally directed practice experience for the MSW student. Historically, the partnership between social service agencies and social work education has been an essential one. The supervised practice experience provided by social service agencies for the education of social work students may also be known as, "field placement," "field instruction," "practicum" or "internship."

Relationship to the Field Practicum to the Overall Curriculum

The field practicum is the link between the experiential aspect of learning and the overall curriculum. Each mode of learning, class and field, reinforces and enhances the other. Some content may receive greater emphasis in the field site or in the classroom, or content may emerge in one and be reinforced in the other. It is in the class/field partnership that integration of theory and practice occurs. The interdependence and complementary nature of the two modes of learning are enhanced through mutual understanding by faculty and field instructors of the theories, content, learning experiences, and assignments offered to students in both environments.

This goal of integration is accomplished in part through the Field Practicum & Seminar course, which provides students the opportunity to discuss, process, and integrate their agency-based field placement experience with classroom learning. Teaching methods and learning activities for the Field Practicum Seminar may include readings, skill building exercises, didactic presentations, case presentations, and role play exercises. Faculty Field Liaisons and Field instructors communicate regularly to ensure students' educational goals are being met. Field instructors are encouraged to review syllabi, bibliographies, and assignments.

Prerequisites for Field Practicum

With the exception of those admitted as Advanced Standing, students must successfully complete one full-time or two part-time semesters prior to starting their field practicum placement. The field practicum experience is in addition to students' non-field courses, allowing for both theoretical and practical learning.

Students must have resolved any "Incomplete" grades prior to starting field practicum, as outlined in the TSSW Student Handbook. **In addition, any student whose GPA falls below 3.0 MUST be evaluated by the Academic/Professional Accountability Review procedures to determine whether or not they will be allowed to enter or continue in field practicum.**

Advanced Standing students begin field practicum placement their first semester full-time or part-time semester.

Foundation Field Practicum

The purpose of the Foundation Practice curriculum is to provide students with experience and instruction in foundation social work practice. It offers students an opportunity to learn the wide range of social work roles and functions (advocate, broker, resource developer, teacher, and counselor) and to become more aware of the needs of vulnerable populations. The foundation practice course, Field Practicum & Seminar I (SOWK 7520), is completed in one semester (during the full-time student's second semester in the MSW program). Part-time students complete the foundation practice Field Practicum & Seminar courses PT1 and PT2 (SOWK 7910 & 7920) in two semesters.

Specialized Field Practicum

The second segment of the field instruction sequence is the Specialized Practice Field Practicum. Its purpose is to promote and focus on the integration of theory and practice skills

in advanced clinical/community social work practice. The Specialized Practice curriculum builds upon the Foundation Practice curriculum. Full-time students take Field Practicum & Seminar II and III (SOWK 7530 and SOWK 7540) during their third and fourth semesters in the MSW program. Part-time students take the Specialized Practicums PT3, PT4, PT5, PT6 (SOWK 7930, 7940, 7950, 7960) during the student's fifth through eighth semesters in the MSW program.

Field Education Roles and Responsibilities

DIRECTOR OF FIELD EDUCATION

The Director of Field Education reports to the Dean of the School of Social Work and works collaboratively with the MSW Programs Director and the Associate Dean of Academic Affairs. The Director of Field Education is responsible for the leadership and management of the Field Education Department within the School's budgetary guidelines.

Role and responsibilities of the Director of Field Education include:

- Provides strategic educational and administrative leadership for the Department of Field Education and School of Social Work;
- Ensures compliance with all CSWE field education accreditation standards;
- Works collaboratively with other program directors, curriculum sequence chairs, and faculty committees;
- Oversees the overall direction of the Field Education Department and coordination of the activities of the Field Education Department;
- Maintains visibility in the community for the purpose of developing relationships with agencies and organizations as well as developing field placement sites and creating nontraditional sites, especially for the most under-resourced communities;
- Manages the practicum placement process; reviews and approves final practicum assignment of all MSW students, or delegates to other Field Education Department staff;
- Manages the administrative functions of the department and Field Education Department staff;
- Appoints new Field Liaisons and evaluates all Field Instructors' performance;
- Orients and prepares students in conjunction with Field Liaisons and Field Education Department Program Managers;
- Mediates escalated field problems encountered by the student and/or instructor;
- Plans programs to support and advance the professional development of agency-based field instructors;
- Provides leadership in developing new field educational pedagogical and andragogical resources, including online resources for students, Field Instructors and Field Liaisons to meet the needs diverse intellectual interests and learning styles;
- Oversees the maintenance of relevant department data systems to ensure coordination with the school's larger information systems;
- Engages in program evaluation and planning that includes utilizing input from faculty, students, and agencies, to design an overall program that address each CSWE competency.

PROGRAM MANAGERS/SENIOR FIELD EDUCATION COORDINATORS

The Program Manager(s)/Senior Field Education Coordinator(s) report to the Director of Field Education and work collaboratively with all TSSW stakeholders. Program Managers/Senior Field Education Coordinators are responsible for coordinating services related to the implementation of CSWE and Field Education Department policies and procedures.

Role and responsibilities of the
Program Managers/Senior Field Education Coordinators include:

- Works with the Director of Field Education in locating, cultivating, assigning students to, and evaluating field sites;
- Supports the development of field placements and helps maintain a positive working relationship with partner agencies;
- Trains and provides ongoing guidance for placement advisors regarding TSSW specific policies, criteria, and procedures for selecting field placement sites;
- Facilitates the approval process of field placement sites for MSW students;
- Provides initial training and ongoing support for Field Liaisons and Field Instructors about the policies and procedures of TSSW's Field Education Department;
- Liaises with community, university groups, and field placement sites as appropriate;
- Serves as a proxy for the Director, when necessary, in the mediation of any field problems encountered by the student, Field Instructor, and/or Field Liaisons.

MSW FIELD EDUCATION PROGRAM COORDINATOR

The MSW Field Education Program Coordinator reports to the Director of Field Education and works collaboratively with all TSSW stakeholders MSW Field Education Program Coordinators are responsible for coordinating administrative duties related to the implementation of the Field Education Department.

Role and responsibilities of MSW Field Education Program Coordinator include:

- Provides support as the first point of contact for the Field Education Department;
- Supports the development of field placements and helps maintain a positive working relationship with community agencies;
- Assists with scheduling meetings and site visits within the department;
- Maintains various system databases; and
- Ensures that necessary processes and procedures for student documentation such as background checks, attestations, and letters of verification are completed.

PLACEMENT ADVISORS

Placement Advisers support the Program Managers/Senior Field Education Coordinators by working directly with online students seeking placement. Placement advisers are the first (but not only) point of contact for online students and provide guidance regarding their field application. The placement advisers present options to the program managers, who complete a vetting process with proposed sites, Field Instructors, and Task Managers to ensure they meet accreditation and TSSW standards.

ROLE OF MSW STUDENT

TSSW's MSW program is an accelerated graduate program designed for adult learners. Students are expected to have the capacity, willingness, and motivation to be responsible learners and active participants in their own professional development.

Students must take active ownership of their education and professional development, including but not limited to:

- Completing the minimum CSWE-prescribed 900 hours of field practicum placement concurrently with the associated Field Practicum & Seminar courses;
- Engaging in mandatory one-hour weekly supervision with the approved Field Instructor;
- Actively participate in planning their own learning, including developing specific, measurable, achievable, relevant, and time-oriented (SMART) learning goals each semester (each semester for full-time and alternating semesters for part-time students) with their approved field instructor;
- Following NASW ethical and professional standards by first addressing any concerns directly with their field supervisors then escalating to the field liaison should those concerns not be resolved;
- Reviewing placement hours with their field instructors and submitting biweekly timesheets in TSSW's online internship tracking program.
- Behaving professionally as both a student and a representative of TSSW and their placement agency in the community. Scheduling a mandatory site visit every semester that includes the student, the field instructor, the field liaison and, if applicable, the task supervisor.

ROLE OF THE FIELD INSTRUCTOR

Potential field instructors come to the attention of the TSSW in various ways. Most often, a continuing relationship over the years between TSSW and agency yields the best results. The TSSW and the agency understand each other, are united in the educational endeavor and have worked productively over time. Often agency staff includes graduates of TSSW who identify with TSSW and its program and, with time and experience, are themselves interested in providing field instruction. Open communication between interested parties reveals names of staff members who are ready for and interested in becoming field instructors.

For those seeking placement outside the greater New Orleans area, agency administrators suggest staff members who they think should take on this assignment as a step in professional development. Often agency social workers themselves take the initiative and contact TSSW to express interest in becoming field instructors.

Readiness, qualification, interest, and supportive administration are the necessary backdrop for successful field instruction. The minimum criteria for consideration as a field instructor are:

- A Master of Social Work degree from an accredited program.
- Two to five years' work experience as a social work practitioner, licensure by the Louisiana State Board of Social Work Examiners (for those students located in Louisiana) or licensure in the state where the services are being provided (where the student and agency reside). Note that the Field Education Department is aware that there are certain states where initial licensure (the LMSW) is not required to practice, such as California.
- A full clinical license (LCSW, LICSW, etc.) is preferred by TSSW and is required if the student will be doing direct clinical work with clients.
- An commitment to participating in the education of students
- Submission of a current curriculum vitae.
- Agreement and commitment to participate in a training program at least annually to enable the staff member to make the transition from the role of practitioner to that of educator, if the prospective appointee is new to field instruction. *A Field Orientation is offered in person for field instructors in the New Orleans area and online for those outside the New Orleans geographic area.
- Agreement to participate in meetings, institutes, and workshops essential to the ongoing operation of field instruction and the continuing development of the field instructor.
- If the field agency is unable to provide an on-site Field Instructor with the required credentials, TSSW may work with the agency to provide an off-site licensed social work supervisor - an external field instructor (EFI) - to provide weekly supervision and collaborate with an approved Task Manager to coordinate the field placement.

Responsibilities of the Field Instructor include:

- Ensuring students have enough opportunities at their agency to complete a minimum of CSWE-prescribed 900 hours of field practicum (generally, 24 hours per week for full-time students and 12 hours a week for part-time students).
- Supporting students in developing their CSWE competency-based learning objectives and supplying corresponding learning experiences (from those available within the agency's services) to ensure student's optimal learning within the practicum.
- Scaffolding assignments and learning experiences so that, as student knowledge and skills develop, they receive increasingly advanced and independent assignments at the agency.
- Engaging in at least one hour of weekly individual regularly scheduled supervision-learning conference with the student they are supervising.
- Providing group supervision when appropriate. This is usually found to be feasible when the field instructor (or the agency)

has more than one student assigned, even if students are from different schools. The power of peer learning is such that this learning potential should be made available whether leadership resides within the group of peer learners or is assumed by a member of the agency staff.

- Providing evaluation of the student's performance with ongoing feedback, identifying student progress (or difficulty) in the learning process.
- Contacting the field liaison with any concerns regarding the student's ability to successfully engage in and/or achieve competency in each of the CSWE Competencies. If a serious problem is recognized, the student and/or field instructor must follow the procedures outlined in this Appendix.
- Participating in a mandatory site visit every semester. attended by the field instructor, the student, the field liaison and, if applicable, the task supervisor.
- Participation in school-planned educational opportunities that are designed to assist the field instructor in enhancing their educational ability. These may include, but are not limited to:
  - New or prospective field instructors are required to attend an orientation seminar designed to support the transition from practitioner to educator.
  - Experienced field instructors benefit from occasional meetings with TSSW faculty and staff to stay current on course content; to be acquainted with curriculum changes; to serve as consultants to classroom teachers on course content with respect to social work practice considerations; and/or to engage with colleagues regarding field instruction ideas, challenges, and other considerations related to student learning needs.
  - Special learning opportunities planned by TSSW for the field instruction group, e.g., a workshop or seminar by a special guest, pertinent continuing education seminars, etc.

TASK SUPERVISOR

In situations in which the agency cannot provide a qualified Master's level social worker or Licensed Clinical Social Worker, a Task Supervisor model may be utilized to reinforce the social work perspective and ensure adequate supervision. Qualifications to be a task supervisor include a master's level degree, have been employed by agency for at least six months, express willingness to act as on-site task supervisor.

The responsibilities of the Task Supervisor include.

- Orienting, training, and day-to-day supervision of the student at the agency, including ensuring the student is knowledgeable of agency mission, vision, values, goals and policies;
- Directing the work of the intern by assigning tasks and responsibilities and ensuring they are aligned with the student's agreed-on learning goals;
- Meeting weekly with the student for supervision;
- Maintaining regular communication with the External Field Instructor and field liaison to ensure student learning goals are being met and to address any questions or concerns.
- Attending a mandatory site visit every semester with the student, the Faculty Liaison and the External Field Instructor (note it is the student's responsibility to ensure proper scheduling of the site visits);
- Completing and submitting an evaluation of the student's progress every semester.

EXTERNAL FIELD INSTRUCTOR (EFI)

When an agency does not have a qualified field instructor, as defined by CSWE and TSSW policies, an external supervisor may be brought onto the student's team to provide the CSWE-prescribed weekly supervision. The external field instructor (EFI) must meet CSWE and TSSW field instructor qualifications and will work closely with the task supervisor and the field liaison to ensure the student's practicum experience reflects CSWE competencies and social work values.

The EFI is responsible for:

- Meeting with the student for a minimum of one hour weekly individual supervision sessions. Group supervision may supplement, but not replace, the weekly sessions;
- Communicating regularly with the student's task supervisor and field liaison to ensure the student's learning needs are met at the practicum site;
- Infuse social work values and ethics into the student's experience;
- Encouraging the development as a professional social worker in the context of the student practicum experience;
- Collaboratively developing the student's learning goals with the task supervisor, the student, and field liaison;
- Attending at least one site visit every semester with the student, task supervisor and field liaison (note it is the student's responsibility to ensure proper scheduling of the site visits);
- Completing and submitting an evaluation of the student's progress every semester as per TSSW procedures;
- Contacting the field liaison with any concerns regarding the student's ability to successfully engage in and/or achieve competency in each of the CSWE Competencies.

The EFI's responsibilities do not include:

- The direct oversight of practice at the agency.
- Addressing the policies or functions of the agency. If a student has questions or discomfort related to these types of issues, they should talk with their task supervisor and field liaison.
- Providing task assignments to students outside what the EFI and task supervisor agree to.
- Being listed on disclosure forms, as they are not the primary clinical supervisor.

FACULTY FIELD LIAISON

The Faculty Field Liaison is a professor or adjunct instructor at Tulane University who teaches a Field Practicum & Seminar course. Faculty field liaisons assume responsibility for field advisement of small groups of students, meeting regularly with

them in Field Seminar and conducting field practicum site visits at least once per semester. The emphasis is on a relationship-centered system that supports students' reflection, critical thinking, and relationship skills. Agencies and their students are assigned to faculty liaisons by the Field Education Department.

Role and responsibilities of the Faculty Field Liaison include:

- Providing support as the first point of contact for the field instructor, external field instructor, and task supervisor;
- Meeting with students in the Field Practicum & Seminar course, and individually as needed, to facilitate peer problem-solving, provide support, and ensure integration of learning;
- Engaging in and documenting a minimum of one site visit per semester with field practicum agencies to maximize effective communication with the students, TSSW, and agencies. Site visits should include the student, the field instructor and, if applicable, the task supervisor and external field instructor. It is the student's responsibility to coordinate the scheduling of the site visits. Field site visits for online students are made using web-based technology;
- Assessing and intervening in concerns with the student field practicum experience and referring, as needed, to the Field Education Department program managers;
- Reviewing and verifying documentation as specified in course syllabus, including, but not limited to, student learning goals, field evaluations, and timesheets;
- Monitor student progress and notify Field Education Department at least one month prior to the end of the semester if the student is unlikely to complete the necessary hours or if, for other reasons, the student could receive an Incomplete or Unsatisfactory;
- Ensuring any Incomplete contracts are turned into the Field Education Department based on the timeline required in the MSW Handbook;
- Enter grades for their students each semester in accordance with the deadline provided by TSSW every semester; and
- Evaluating current agency and field instructor practices to ensure ethical and effective social work practices are modeled and supported and the learning environment is aligned with CSWE and TSSW policies and standards.

Procedures for Practicum Placement

The process of assigning students to the field placement is a prescribed, rigorous, and detailed. The field practicum is the signature pedagogy of social work and the most important learning experience for students. As students engage in the delivery of social work services, classroom content takes on a professional reality. Much care, thought, and attention is focused on the assignment of students to field placements.

The placement of students in agencies where social work practice occurs carries with it a serious professional gate-keeping responsibility. Accordingly, students must be in good academic standing and demonstrate professional behavior for admission to field. This standard is articulated in the TSSW Code of Student Ethics that each student reads, discusses, and agrees to in the first semester, prior to placement. Additionally, students are expected to have read and internalized the NASW Code of Ethics that guides social work professional practice. TSSW reserves the right to deny or delay a student's field placement if these academic or professional standards are not met.

The Field Education Department assigns students to field placements following a substantial amount of preliminary work, outlined in the "Agency Vetting Process" section of this document. This includes assessing how many interns an agency can support, and whether the agency will be able to support students' individualized learning goals and desired field experiences. A final practicum assignment is made only after a student has interviewed with an assigned field placement, and there is mutual agreement that the assignment will be productive. The Field Education Department must provide the final approval for an internship to start.

All students must submit proof of individual student professional liability insurance to the TSSW online internship tracking system before entrance into field placement. They must also furnish proof of current and valid liability insurance upon request by TSSW officials or field instructors.

STUDENTS ARE NOT PERMITTED TO CONTACT PROSPECTIVE FIELD PLACEMENT AGENCIES UNTIL A TENTATIVE ASSIGNMENT HAS BEEN MADE OR THEY HAVE BEEN TOLD TO DO SO BY THE FIELD EDUCATION DEPARTMENT.

Practicum Policies

Required Hours of Internship

The Council on Social Work Education requires that students **complete a minimum of 900 hours of field experience during the MSW program**. Each full-time student must spend three semesters in the field practicum. In general, Full-Time students are at their placement agency, eight hours a day for three days per week or 24 hours per week for the semester. Part-Time students complete six semesters in field placement. On average, this is twelve hours per week for the semester. **Field hours earned which exceed the required minimum per semester do not rollover to the next semester. Students will still need to complete the hour requirements for their field practicum courses each semester - 300 hours for full-time and 150 hours for part-time students.**

Students are concurrently completing field practicum hours while also attending classes. Full-time students attend classes on Tuesdays and Thursdays and are in the field on Mondays, Wednesdays, and Fridays. Part-time students have similar schedules. All students negotiate specific schedules with the agency field instructor, based on the needs of the agency/clients.

Students must remain in the placement agency for the duration of the semester. Accumulating additional hours early, in order to complete the internship sooner, is not permissible. For example, a full-time student who completes 350 hours of field one semester will still be required to complete 300 hours of field the following semester, even if it is their final semester. Hours are not the final determination of the student's fulfillment of practicum requirements and the CSWE-mandated 900 hours are a minimum standard. Students must complete the full-time span allocated –

this is part of the agreement between TSSW, students and partner agencies. They must have the time to engage in different types of practice interventions and to see these through to completion. They must be able to experience beginnings, middles and endings of assigned projects involving interventions in social work practice. Students must complete a timesheet through the online field tracking software. The timesheet is reviewed by the field instructor during the one-hour weekly supervision. The timesheet is signed by both the student and the field instructor and submitted with the semester field evaluation at the end of each semester. Students must remain in field practicum placement throughout the semester, even if the required hours have been completed so that they have the opportunity to utilize what is learned in class in their field practicum setting. A student who is having difficulty completing the required hours by the end of the semester is expected to inform the field instructor and field liaison to discuss options as soon as possible. Successful completion of the course is dependent on completion of required hours each semester. If, for some reason, a student anticipates missing field hours in an upcoming semester due to personal issues, they are expected to discuss ways to make up days with the field instructor and field liaison prior to the start of the semester. In extenuating circumstances, with written permission by the field instructor and the Field Education Department, accommodations may be made to ensure completing the required hours. Accommodations and plans for completion of practicum placement hours must be clearly specified in the permission document.

Safety

Social work practice activities sometimes occur in places that may not be safe or may not perceived as safe by the student. Whether it is a perceived threat by a particular client or group and/or the physical or interpersonal environment of the situation, students are encouraged to discuss any concerns regarding personal safety issues with their field instructor. If, after gathering enough information to realistically assess the situation and learn how to provide appropriate protection, the student does not feel sufficiently safe to carry out assignments, they are encouraged to renegotiate those assignments with the help of the field instructor. Any safety concerns should also be brought to the attention of the Faculty Field Liaison as soon as possible.

Sexual Harassment Policy

Federal law provides that it shall be unlawful discriminatory practice for any employer, because of the gender of any person, to discharge without cause, to refuse to hire, or otherwise discriminate against any person with respect to any matter directly or indirectly related to employment or academic standing. Harassment of an employee or student on the basis of gender violates this federal law. In order to set a general standard for judging complaints of sexual harassment without infringing upon the freedom of speech if imposing individual standards of propriety upon the community, the Senate Committee on Academic Freedom and Responsibility of Students believes that it is necessary to approach the problem in terms of circumstances and consequences rather than a definition per se. Verbal or physical behavior constitutes sexual harassment under the terms of these complaint procedures only if it:

- Would be regarded by most Tulane faculty members and students as grossly objectionable;
- Is not stopped by what the student considers, and what, under the circumstances, are normal protests;
- Occurs in a relationship in which the person is in a position to influence the student's academic career objectives through grades, recommendations, or job referrals;
- Creates an offensive or intimidating academic environment.

In the absence of any one of these four elements, the behavior would not constitute sexual harassment. Please see the most current Tulane University sexual harassment policy on the University's website at www.tulane.edu (http://www.tulane.edu/).

Use of Personal Vehicles

Social work practice often requires travel to facilities outside the location of the agency. Some agencies provide reimbursement for student use of their own vehicles and insurance coverage for carrying out agency related activities. Some agencies have their own fleet of vehicles for which the student may qualify as a driver if they are to have assignments requiring use of a vehicle. Other agencies do not have these resources available. Issues related to the use of personal vehicles need to be clarified prior to placement.

University Holidays

All students are entitled to official University holidays and to vacation periods scheduled between semesters. At the beginning of placement, students should provide their field instructors with a TSSW University calendar that outlines official holidays. If the agency has particular holidays (religious, public holidays, etc.) beyond the prescribed University schedule, students will be expected to make up this time. Students are expected to anticipate planned holidays and to make plans for coverage of their practicum related tasks with the field instructor. If a student would like to continue practicum placement activities during a TSSW holiday period, approval must be sought and approved from the faculty field liaison and the Field Education Department. Students cannot be COMPELLED by the site to participate in field practicum placement during university holidays. Students must be aware that their student professional liability insurance may not provide coverage during holidays or university breaks.

Sick Leave, Personal Emergencies and Absences

CSWE Accreditation Standards mandate a minimum number of hours for completion of the MSW practicum. Most states require an MSW from a CSWE-accredited school in order to be licensed to engage in social work; therefore, students

must complete a minimum of 900 hours of practicum in order to work as a social worker in most states. To assure students meet these requirements, sick leave or requested time off for personal emergencies must be made up during the semester in which the absences occurred. Students who miss field for several days should develop a plan to make up the hours with their field instructor and field liaison. Communication is crucial if/when any days must be missed.

It is important that every effort be made to treat all students equitably in regard to particular requests for an alteration in field time. Field instructors are requested not to make unilateral decisions about unusual requests for time off in the field even though it is understood that the student will have to make it up later. The field instructor should discuss such a request with the faculty field liaison who has a better overview of the total student group. In addition, any longer absence anticipated due to medical issues must be discussed with the faculty field liaison, field instructor, and Field Education Department.

Dual Relationships

The field instructor and student are expected to develop and maintain a friendly but professional relationship. Field instructors are prohibited from becoming romantically or sexually involved with field students. Ethical Standard 2.06 in the NASW Code of Ethics states:

"(a) Social workers who function as supervisors or educators should not engage in sexual activities or contact (including verbal, written, electronic, or physical contact) with supervisees, students, trainees, or other colleagues over whom they exercise professional authority." (National Association of Social Workers, 2021).

To avoid a conflict of interest, field instructors should not enter into dual-role relationships with field students that are likely to detract from student development or lead to actual or perceived favoritism. Although there are pedagogical benefits to establishing good rapport with students and interacting with students both inside and outside the agency, there are also serious risks of exploitation, compromise of academic standards, and harm to student development.

NASW Code of Ethics Standard 3.01(c) states, "Social workers should not engage in any dual or multiple relationships with supervisees in which there is a risk of exploitation of or potential harm to the supervisee, including dual relationships that may arise while using social networking sites or other electronic media." (National Association of Social Workers, 2021). It is the responsibility of the field instructor to prevent these risks from materializing into real or perceived conflicts of interest. The faculty field liaisons are available to consult with field instructors to help keep relationships focused on field education goals and requirements.

Related to these issues of dual relationships, TSSW will not assign students to placements involving:

- Supervision by a family member or friend, whether primary field instructor, secondary field instructor, task supervisor, consultant, or practice consultant;
- Supervision by another student in the MSW program, including task supervision;
- Supervision by current supervisor at place of employment;
- Placement in an agency where the student or a family member is an active or recent client; or
- Other placements where existing relationships may impair meeting educational goals.

If a student has an existing relationship with a proposed field instructor or agency, the student and field instructor have the responsibility to disclose this when the placement is proposed. The Director of Field Education will assess the nature of the relationship for its potential impact on field education. (Adapted from College of St. Catherine School of Social Work Policy on Dual Relationships in Field and LSU School of Social Work)

Home Visits

Home visits are a regular part of many placements. Agencies will be expected to take appropriate measures to ensure the safety of students. Students are not permitted to make home visits by themselves during their first semester (full-time) and first two semesters (part-time). Dyads or pairs represent best practice and optimize safety for the student. The same safeguards provided to staff must be provided to students. However, in some cases students may need additional support and security provisions. The Field Liaison and Field Education Department should be consulted immediately if safety is a concern.

Transporting Clients

Students are NEVER permitted to transport clients under any circumstances, whether in their personal vehicles or an agency vehicle, even if accompanied by an agency employee. This is a liability issue for all parties involved. As it is not covered by car or students' liability insurance plans, this could leave a student with a large and unforeseen financial burden, and anything could happen during the transport. **DO NOT TRANSPORT CLIENTS.**

Information Sharing

As with all social work courses, the faculty of TSSW has a responsibility to monitor the student's performance and progress in the program. To this end, faculty share information amongst themselves with respect to the student's status in the program.

Field instructors are co-educators in the Field Practicum & Seminar courses whose input is essential to the information sharing process. Access to information is restricted to the students for whom the field instructor is or will be responsible. This information may include, but is not restricted to the following:

- Strengths, knowledge and skills
- Suitability and readiness for field work
- Grades
- Attendance and/or participation in other social work courses
- Identified learning needs and/or areas requiring particular attention during field education courses
- Verification of required background and medical clearances required for internship

Students are notified that information may be shared with field instructors and field sites as part of the field education process and are required to sign a Student Release of Information Form prior to beginning academic courses.

Professional Ethics

It is understood that students will adhere to the expected standards for professional and ethical conduct in addition to the policies and procedures of the agency as long as those policies and/or procedures are not in conflict with the National Association of Social Workers Code of Ethics. An especially salient issue for students during the field practicum is that of confidentiality of case records, process recordings, and other related materials. As an important component of supervision with their field instructors, students are expected to review their work (audio/video tapes, written materials etc.) and agency records pertinent to their duties. Additionally, students may be asked to share their work with their field liaison. Under no circumstances will students be allowed to remove documentation related to clients from the agency.

A student's failure to adhere to the expected standards for professional and ethical conduct will be considered grounds for termination of the practicum, a failing grade in the placement, and immediate cause for an Academic Standards and Professional Review to determine the student's continuation in the MSW program.

Open Identification of Student Status

Students must identify themselves as students or interns in their work with clients and other agency representatives. It is unethical for students to misrepresent themselves as employees of the agency.

Personal Conduct

Social workers and social work interns serve the most vulnerable populations and are often looked to as role models by the community. Personal conduct can impact how a student is perceived by clients, referral sources, and colleagues and may interfere with their ability to do their work. Students are expected to use the following standards from the NASW Code of Ethics as a guide when making decisions about personal conduct:

Private Conduct

4.03 "Social workers should not permit their private conduct to interfere with their ability to fulfill their professional responsibilities." (National Association of Social Workers, 2021).

Students will want to keep this in mind when engaging in social media and consider making any social media accounts private.

Respect

2.01 "Social workers should avoid unwarranted negative criticism of colleagues in communications with clients or with other professionals. Unwarranted negative criticism may include demeaning comments that refer to colleagues' level of competence or to individuals' attributes such as race, ethnicity, national origin, color, sex, sexual orientation, gender identity or expression, age, marital status, political belief, religion, immigration status, and mental or physical disability." (National Association of Social Workers, 2021).

Professional Liability and Health Insurance

All students are required to submit proof of their own professional liability insurance prior to entering field practicum placement. **Students cannot be in field practicum placement if proof of liability insurance is not on file in the online placement tracking software system.** Students may be responsible for the provision of their own health insurance. Students who are in field placements are advised to be certain their health coverage will provide for any injuries, accidents, or illnesses that may be incurred at the placement site.

Social Media Guidelines

As social workers, we must be aware that our private world has a greater likelihood of becoming public when using social media. Field instructors, colleagues, and even clients may have access to information via the Internet that students would otherwise limit to friends and families. Section 4.03 of the Code of Ethics states that "social workers should not permit their private conduct to interfere with their ability to fulfill their professional responsibilities." (National Association of Social Workers, 2021). It is inappropriate for students to refer to any fieldwork site/agency, client, or client situation, etc. on their personal social media pages (including but not limited to Facebook, Instagram, Snapchat, X, blog posts, etc.) no matter how many security settings have been used.

Students should be clear when sharing personal views and should engage in a clear decision-making process before sharing views related to sensitive issues. Students should verify information before posting it, correct mistakes in a timely manner, and be aware of legal liability issues such as copyright infringement, defamation, and posting proprietary information. Section 4.06(a) of the Code of Ethics states: "Social workers should make clear distinctions between statements made and actions engaged in as a private individual and as a representative of the social work profession, a professional social work organization, or the social worker's employing agency." (National Association of Social Workers, 2021).

Social media channels provide an excellent means to build community; however, as students utilize these tools, they should take care to do no harm to themselves, their field sites, their clients, TSSW, their classmates or to the social work profession in the process.

Dress Guidelines

Students must follow the dress code that is required of agency staff. Agency policies including, but not limited to dress, tattoos, and/or piercings must be adhered to by students. This is another factor to consider when choosing placements. Observe how people in the agency are dressed during your interview and ask questions about the agency expectations on dress and presentation
.

PROCEDURES FOR ADDRESSING ISSUES IN FIELD PRACTICUM PLACEMENT

A problem that surfaces in the field placement practicum setting may be identified initially by either the student or the field instructor. Regardless of who identifies the problem, the first step is a meeting between the student and field instructor to discuss the situation. It is anticipated that the majority of problems related to the field practicum can be resolved at this level. However, if the situation is not resolved between the field instructor and the student, either the field instructor or the student should promptly bring the problem to the attention of the field liaison.

Once a problem has been brought to the attention of the field liaison, the field liaison will meet with both the student and the field instructor to mediate and address the problem. When the field liaison holds the meeting with the student and field instructor, the field liaison will document the meeting, including the identified problems and the proposed methods to remedy the problems. This document (which can be an email) will be sent to the Director of Field Education and the Program Managers / Senior Field Education Coordinators for review and then shared with the student and field instructor.

Notwithstanding the process outlined above, both the agency and TSSW have the unfettered discretion to immediately remove a student from the agency setting if either the agency or TSSW believes such removal is warranted.

IDENTIFYING THE STUDENT WHO IS EXPERIENCING PROBLEMS IN THE FIELD PRACTICUM

Students have different learning styles and subsequently progress at different rates in development and skill attainment. Despite varied learning patterns, it is expected by the time any student has completed the Foundation and Specialized field semesters, they will be capable of providing MSW level practice intervention, as indicated by satisfactory ratings on the Core Competency standards on the Field Performance Evaluation.

When there is concern about a student's progress (for whatever reason), the field instructor must hold a face-to-face meeting with the student to attempt to resolve the concern. If this does not rectify the problem, the process above should be followed.

Some areas of performance which may cause concern include, but are not limited to the following:

- Failure of a student to meet the expected level of performance at any given stage in the curriculum;
- Excessive absences or tardiness;
- Failure to keep records current;
- Failure to prepare appropriately for supervision;
- Apathy or failure to engage and invest in the field placement learning opportunities;
- Inappropriate or questionable professional behavior.

POSSIBLE OUTCOMES

A student's failure to meet the minimum number of satisfactory ratings on Core Competency standards on the Field Performance Evaluation could result in:

- The grade of Unsatisfactory "U" can be given in the following situations:
  - If the problem is sufficiently serious or:
  - If the student does not meet expectations on more than 20 percent of the Competency standards on the Performance Evaluation. This grade may require that the student be reviewed and evaluated by the Academic and Professional Standards Review Committee. But, at a minimum, the student will have to repeat the course for which the "U" was earned.
- The grade of Incomplete "I" is used in the following situations:
  - If due to illness or extraordinary circumstances, the student lacks the required time to meet expectations according to the Performance Evaluation and must make up the time and work;
  - An Incomplete must be converted into an "S" or a "U" during the semester following the one in which it was given.
  - **The proposed plan to make up hours must be approved by both the Director of Field Education and the Director of the MSW Program and cannot be issued in a student's final semester.**

REMOVAL OF A STUDENT FROM FIELD: REASONS FOR REMOVAL

A student may be removed from the field placement if either the agency or the Field Department believes such removal is warranted. Situations where removal will be considered warranted include but are not limited to the following:

1. Level of student performance in the placement is below standards. Using the Competency standards on the Field Performance Evaluation for the appropriate level of field practicum (Foundation or Specialized), the field instructor determines that the student is far below standards and has little or no chance of achieving a level of 'Satisfactory' for the semester. The field instructor and field liaison attempted to remedy sub-standard performance areas, but those efforts were unsuccessful in bringing the student up to the 'Satisfactory' level for that given semester and its Competency standards. For either semester, evidence to the contrary of the above expectations, given appropriate efforts by the field instructor and field liaison to remedy deficiencies, will constitute grounds for an Academic and Professional

Standards Review to determine the student's continuation in the MSW program.

2. A student's failure to meet the expected standards for ethical practice as outlined in the NASW Code of Ethics, Louisiana Professional and Occupational Standards, assigned agency policies or procedures or TSSW policies and procedures;
3. An agency's failure to provide learning experiences and/or appropriate supervision to allow the student the opportunity to meet the Competency standards as defined on the Field Performance Evaluation;
4. Unexpected events in the life of the student or in the agency which prevent the attainment of the Competency standards as defined on the Field Performance Evaluation;
5. The student has demonstrated an inability to work positively and instructively with other students, faculty, staff, clients, and other professionals.
6. The student has attempted to harm him or herself or someone else;
7. Inappropriate behavior which is inconsistent with the principles and practices of the social work profession and is not limited to the classroom or the field placement; or
8. Repeated tardiness or absences from the field site without notification or approval.

PROCEDURES FOR ADDRESSING ISSUES IN FIELD

The student, field liaison and field instructor work together as a team to address issues as they arise. It is incumbent upon the student and the field instructor to identify, discuss and attempt to mediate problems as they occur. If they are unable to reach a solution, they are to contact the field liaison as soon as possible for further assistance.

Upon notification that there are problems with the field placement that need further assistance, the field liaison will:

1. Apprise the Field Education Department of the situation;
2. Meet with the student and field instructor to determine the specific problems and attempt to remediate the situation with a plan for corrective action, specifically articulating the behavioral indicators that would show that the problems are being resolved.
3. Document the findings of the meeting and share that documentation with the Director of Field Education, the student, and the field instructor.
4. If a solution cannot be worked out that will allow the student to remain in the field setting, then the field liaison will convey this in writing to the Director, who can attempt further remediation efforts or terminate the placement. The Director of Field Education will then
   a. Initiate appropriate "next-steps" with the student and the Field Office to facilitate placement in another setting or Request an Academic and Professional Standards Review to determine the student's standing in the MSW program.
   b. To protect students, agencies and TSSW from prematurely changing field placements, every effort will be made to ensure a student will not be removed from the field placement without going through the above-mentioned process.
      - If necessary, the student may be placed on leave from the field placement by the field liaison and Director of Field Education during this process.
      - Field instructors are notified of the process for addressing concerns during orientation and receive a copy of the Field Manual outlining procedures.
      - If the field instructor and agency believe that immediate dismissal of the student without prior notification is warranted, the field liaison and Director of Field Education will obtain information from the field instructor and student to determine appropriate next steps.

DISMISSAL FROM A FIELD PLACEMENT MAY RESULT IN AN ACADEMIC AND PROFESSIONAL STANDARDS REVIEW AND COULD RESULT IN IMMEDIATE DISMISSAL FROM THE PROGRAM.

A student who terminates a field practicum without the knowledge and permission of the field liaison and Director of Field Education may receive a failing grade for the semester, lose credit for the hours worked, and be subject to an Academic and Professional Standards Review to determine the student's standing in the MSW program. The Director of Field Education, in collaboration with the field liaison and field instructor, will determine if any credit will be given for field hours completed if the student transitions to another field placement.

Degree Requirements Certificate (p. 637)

- Disaster Resilience Leadership Studies Certificate (p. 637)

Graduate (p. 638)

- General Graduate School Requirements (p. 638)

- Doctor of Social Work (p. 638)

Certificate

Disaster Resilience Leadership Studies Certificate

Training the Disaster Resilience Leaders of tomorrow! The Disaster Resilience Leadership Academy (DRLA) is dedicated to the systematic strengthening of global humanitarian leadership. The DRLA creates a process that integrates education, research, and application to achieve increased holistic resilience in communities, households and individuals impacted by environmental challenges and disasters.

To earn the **Disaster Resilience Leadership** Certificate, 15 credit hours must be earned consisting of the 5 core DRLS courses:

1. Human and Social Factors
2. Leadership Analytics/Economics of Disaster
3. Disaster Operations and Policy
4. Environment and Infrastructure

5. Leadership

Graduate

General Graduate School Requirements

A full description of Master's (p. 89) requirements for all students can be found in the Office of Graduate and Postdoctoral Studies section of this catalog. Students should review these policies thoroughly.

Master of Social Work

The full-time and part-time MSW program requires a total of 60 credit hours. Our Advanced Standing curriculum requires 48 credit hours. Each student completes 12 credit hours of field practicum, which equates to three full-time semesters of 24 hours per week in field or six part-time semesters of 12 hours per week in field.

Master of Science in Disaster Resilience Leadership

To earn this degree from the School of Social Work, 36 credits must be earned. The 36 credits will consists of 21 credits earned from the DRLA Core Competency courses, 6 credits from DRLA electives, and 9 credits from other electives. The Tulane School of Social Work also offers a dual-degree whereas a student earns both the MSW and the MS concurrently - this option usually adds one semester or course work.

Doctor of Social Work

During their first two years, students will take courses in social work theory, practice and methods. Each semester includes two courses and an independent study during which the student will work with an academic advisor to develop their scholarly portfolio and Advanced Practice Project.

Students are encouraged to develop a possible topic for their advanced practice project early in their doctoral study. Once a topic has been selected, a three-member committee will review a formal proposal and provide feedback to the student. **Final approval of the proposal as fulfillment of a requirement for candidacy for the degree is granted only upon fulfillment of all other requirements for candidacy, including 56 hours of required courses and successful defense of the proposed project.**

Program Description

The Disaster Resilience Leadership Academy (DRLA) is dedicated to the systematic strengthening of global humanitarian leadership, a process that integrates education, research, and application – to achieve increased resilience in communities and individuals impacted by natural and manmade disasters. Such leadership is guided by the ethics of the Triple Bottom Line: Equity, Environment, and Economy.

The Disaster Resilience Leadership Academy is part of the Tulane School of Social Work. The DRLA's mission of strengthening leadership in communities to address root causes of vulnerability, such as chronic poverty and social inequality, is supported by the School of Social Work's dedication to teaching students about human diversity and the importance of promoting social and environmental justice.

Although there are many graduate programs that focus on disaster and risk management, none of them specifically target the role and development of leadership and equitable resilience in producing effective programs or outcomes, making the DRL Academic Program the first with such a dynamic and innovative focus.

The Disaster Resilience Leadership Science (DRLS) Graduate Degree Program is a broad-based, integrative, policy and evidence-based graduate program that addresses relationships among the physical environment, the built environment, and the social, economic, and political institutions and processes that characterize communities that are vulnerable to disasters. The program applies knowledge of the context of disasters to leadership that leads to more resilient and sustainable post-disaster communities. The purpose of the DRL Graduate Program is to prepare students for professional careers in: (a) communities that are affected by and vulnerable to disaster destruction and disruption; (b) organizations that focus on all phases of disaster management (preparedness, response, recovery, and risk reduction); and, (c) leadership and upper level management positions within organizations and communities that require strong leadership for the promotion of an increased level of resilience.

The Graduate Program in Disaster Resilience Leadership equips students with an interdisciplinary view of the challenges and best practice approaches to leadership in the disaster resilience and humanitarian aid fields to prepare them for careers in:

- emergency preparedness
- resilience
- adaptation
- disaster management
- justice advocacy (social, climate, and environmental)
- program monitoring and evaluation
- nonprofit leadership

- grass-root and community development
- risk mitigation
- policy
- disaster risk and recovery

Disaster Resilience Leadership Studies Certificate (Graduate)

The Disaster Resilience Leadership Studies Certificate (DRLS) within The Disaster Resilience Leadership Academy (DRLA) trains Disaster Resilience Leaders of tomorrow. The certificate focuses on the five main DRLA core competency courses for a total of15 credit hours. These courses will concentrate on the economics of disaster, human and social factors surrounding disasters and strengthening leadership within disasters. The Disaster Resilience Leadership Certificate is a stand-alone certificate.

Requirements

Course ID	Title	Credits
DRLA Core Competency Courses		
DRLS 6010	Human and Social Factors	3
DRLS 6020	Disaster Operations	3
DRLS 6030	Leadership and Economic Analytics	3
DRLS 6040	Environment and Infrastructure	3
DRLS 6050	Leadership	3
Total Credit Hours		**15**

[1] DRLS 6050 Leadership (3 c.h.) was previously numbered as DRLS 7000 Leadership (3 c.h.).

Disaster Resilience Leadership Studies, MS

The Master's Degree in Disaster Resilience Leadership Studies program is dedicated to the systematic strengthening of global humanitarian leadership, a process that integrates education, research, and application - to achieve increased resilience in communities and individuals impacted by natural and man-made disasters.

The program aims to advance the field of disaster resilience leadership by training and nurturing current and future leaders while promoting research and stimulating global innovation in the disaster resilience and humanitarian assistance community.

The Master of Science degree from DRLA (Disaster Resilience Leadership Academy) is a 36 credit program - a combination of the DRLA core competency classes and electives. Please refer to the Requirements tab for additional details.

Requirements

Master of Science (MS)

Course ID	Title	Credits
DRLA Core		21
DRLA Electives		6
Other electives	can be from other select graduate level programs at Tulane	9
Total Credit Hours		**36**

Dual-Degree (MSW-MS)

As a dual-degree student, no more than 12 credit hours can be shared/ counted toward both degrees. Students will work closely with their Academic Advisor to track this. Please note, for the dual degree students, SOWK 7421 Research for Program Evaluation and Evidence Based Social Work (3 c.h.) counts for DRLS 6110 Rsh and Eval Crisis - Disaster (3 c.h.) and SOWK 7431 Data Analysis and Interpretation for Program Evaluation Research (3 c.h.) counts for DRLS 6032 Quantitative Analysis in D. R. (3 c.h.). These two classes count automatically toward both degrees.

Course ID	Title	Credits
DRLA Core		15
DRLA Electives		9
Shared credits between MSW and MS		12
Total Credit Hours		**36**

DRL Certificate

Please see the list of DRLS Core Competency classes listed below. For the DRL Certificate, DRLS 6110 Rsh and Eval Crisis - Disaster (3 c.h.) and DRLS 6032 Quantitative Analysis in D. R. (3 c.h.) are not needed.

Course ID	Title	Credits
DRLA Core		15
Total Credit Hours		**15**

Courses can be taken in any order and as part-time or full-time

DRLA Core Competency Courses:

DRLS 6010, 6020, 6030, 6040 and 6050 are required for the MS, the DRL Certificate and the MSW/MS Dual Degree. There is no flexibility or substitutes for these Core courses.

Course ID	Title	Credits
DRLS 6010	Human and Social Factors	3
DRLS 6020	Disaster Operations	3

Social Work

Programs

Graduate

- Social Work, DSW (p. 640)
- Social Work, MSW (p. 641)

Undergraduate

- Social Work Minor (p. 642)

Social Work, DSW

The Tulane University Doctorate in Social Work is ideally suited for social work professionals seeking rigorous training in advanced practice, professional leadership, and applied research.

The DSW curriculum consists of six semesters of coursework over two calendar years, followed by a final semester of dedicated and independent study on the Advanced Practice.

The DSW@Tulane prepares you to:

- Apply innovative and critical thinking to pressing social, economic and environmental problems
- Advance knowledge through research relevant to social work practice
- Collaborate with practitioners in an array of related disciplines
- Conduct action research in partnership with community organizations and groups
- Communicate evidence-informed social work knowledge through teaching and publication
- Continue the legacy of social work through research, leadership and teaching

Requirements

During their first two years, students will take courses in social work theory, practice and methods. Each semester includes two courses and an independent study during which the student will work with an academic advisor to develop their scholarly portfolio and Advanced Practice Project. DSW courses are be taught by Tulane School of Social Work faculty as well as select nationally prominent social work scholars. For a list of courses, please review our program of study. Classes taught by visiting professors will vary by year and their formats may be adapted to maximize offerings.

Year 1		
Fall		**Credit Hours**
SOWK 9010	Portfolio Planning Seminar I	1
SOWK 9101	Leader Evidence Inform Practice	4
SOWK 9102	Theory, Models & Methods	4
	Credit Hours	**9**
Spring		
SOWK 9020	Portfolio Planning Seminar II	1
SOWK 9203	Hist Policy Social Welfare	4
SOWK 9204	Quant Method Research	4
	Credit Hours	**9**
Summer Session		
SOWK 9030	Portfolio Planning Seminar III	1
SOWK 9200	Program & Clinical Evaluation	4
SOWK 9210	Qualitative Methods & Analysis	4

Year 2		
Fall		
SOWK 9040	Portfolio Planning Seminar IV	1
SOWK 9205	Pedagogy Development	4
SOWK 9206	APP Research Ethics	4
	Credit Hours	**9**
Spring		
SOWK 9307	Applied Social Statistics	4
SOWK 9308	Nonprofit Mgmt & Development	4
SOWK 9450	Portfolio Dev Seminar V	1
	Credit Hours	**9**
Summer Session		
SOWK 9309	Community Advocacy and Participatory Research for Applied Practice	4
SOWK 9310	APP Grant Writing	4
SOWK 9460	Portfolio Seminar VI	1
	Credit Hours	**9**
Year 3		
Fall		
SOWK 9470	Portfolio Develop Seminar VII	1
SOWK 9480	Portfolio Develop Seminar VIII	1
	Credit Hours	**2**
	Total Credit Hours	**56**

Note. Schedule is based on Fall start, beginning classes in Spring or Summer will result in a slight change in the order of classes.

Immersion

As part of the DSW curriculum students will complete a 4 day immersion project in New Orleans, Louisiana. The academic residency

will occur during the summer semester and provides an opportunity to network with fellow students and faculty. The residency experience is designed to emphasize applied learning and identifying program outcomes in partnership with a local social service agency. Students will require skills useful in conducting action research with community organizations and further develop a critical frame for designing real world program and clinical evaluations. The immersion program will also provide an opportunity to identify program evaluation or action research questions consistent with their Advanced Practice Project and further develop their APP proposal.

Advanced Practice Project

Students are encouraged to develop a possible topic for their advanced practice project early in their doctoral study. Once a topic has been selected, a three-member committee will review a formal proposal and provide feedback to the student. Final approval of the proposal as fulfillment of a requirement for candidacy for the degree is granted only upon fulfillment of all other requirements for candidacy, including 56 hours of required courses and successful defense of the proposed project.

Program Faculty

DSW courses are by Tulane School of Social Work professors and visiting faculty from a variety of social science disciplines, including social work, sociology, urban studies and psychology. Our visiting faculty are nationally renowned experts in their Geld, bringing with them expertise in grant-writing, program evaluation, academic publication and public policy.

Social Work, MSW

The Tulane School of Social Work's mission is to enhance the well-being and equitable treatment of diverse individuals and communities through transformative education, generation of knowledge, service, and community engagement.

This course of study is designed to offer the best clinical and community training that addresses the unique needs of individuals, families, groups, organizations, and communities. Students in the program enjoy a variety of learning experiences, including traditional and non-traditional class experiences. Team projects, problem-based learning, creative simulation, team teaching, field work, and electronic learning exchanges are just some of the enriching experiences you will enjoy while fulfilling the requirements for the Master of Social Work.

Requirements

MSW Curriculum: Full-Time

Our full-time program requires 60 credit hours. Full-time students can complete the program in four semesters over 16 months with 3 full-time semesters of field. Our advanced standing program requires 48 credit hours. Advanced standing students can complete the program in three semesters over 12 months with 3 full-time semesters of field.

Sample Full-Time Curriculum

Social Work Minor

Overview

The social work minor introduces to students to the knowledge, skills, and values that are required in those jobs, particularly students who are majoring in sociology, psychology, and gender and sexuality studies. The minor also comports with the institutional motto of “not for one’s self, but for one’s own.” In addition, those students interested in any future career opportunities that involves human relationship such as business, public health, medicine, and law will be enhanced by the minor offering a unique perspective to their professional program preparedness. Moreover, it will provide undergraduates across all majors to see social work as meaningful and vital career opportunity and gateway into our MSW program. Those students who successfully complete the social work minor and graduate with a 3.0 GPA, will automatically be accepted into the TSSW MSW program and receive priority consideration of merit scholarships.

Requirements

The social work minor requires 18 credit hours (six classes total) of social work content. Within the minor, there are three required courses (three credits each, totaling nine credit hours) and three additional social work electives (an additional nine hours).

CIRC 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Accounting (ACCN)

ACCN 2000 Introduction to Financial Analysis (3)
This single course covers fundamental concepts of financial accounting, managerial accounting, and corporate finance including valuation techniques. The course is designed for students pursuing an Entrepreneurship and Innovation minor but who are not pursuing a BSM major. It does not count towards a BSM degree. BSM students should plan on taking ACCN 2010, ACCN 3010, and FINE 3010.

ACCN 2010 Financial Accounting (3)
This BSM prerequisite introduces concepts, techniques and conventions for measuring and communicating the results of operations and the financial position of a business enterprise. It emphasizes the development and the use of financial information reported to the public.

ACCN 3010 Managerial Accounting (3)
Course examines how managers use accounting information to formulate plans, control operations and make informed managerial decisions. Students will learn cost behavior and how to use cost information in managerial decisions. Students will also learn how to develop a corporate budget and gather feedback to ensure that the budget is either properly executed or adjusted.

Prerequisite(s): ACCN 2010 and INFO 1010.

ACCN 3100 Intermediate Accounting I (3)
Course focuses on understanding how firms' operating, financing and investing activities are recorded and disclosed in the financial statements, with an emphasis on assets and their related accounts. Throughout this course, students develop the skills required to prepare and analyze corporate financial statements, as well as an understanding of how managerial incentives interplay with financial reporting. The course is appropriate for accounting and finance students, as well as students of other majors who are interested in acquiring an in-depth understanding of firms' performance using financial accounting information. (Restriction: Sophomore Standing or above.)

Prerequisite(s): ACCN 2010, FINE 3010* and MGSC 3010.
* May be taken concurrently.

ACCN 3290 Accounting Analytics (3)
This course investigates the use of accounting and related data to provide empirical evidence on business problems. Students focus on the role of the business person rather than the technology person in data analytics. That said, 'technology' is still an important part of the course. This course is taught with a hands-on approach and an emphasis on solving problems. So contributing to the class is critical. The objective is to take advantage of accounting data to solve one or more business problems. Through the course students work on all aspects of the data analytics process, including issue identification, data preparation, data analysis, and the communication of results.

Prerequisite(s): ACCN 2010.

ACCN 4100 Auditing (3)
Course examines the professional auditing function, particularly emphasizing public accounting. The course is recommended for CPA examination candidates only. This course is designed to familiarize students with the public company auditing environment and introduce them to the audit process. We will discuss such concepts as the need for financial statement audits, the current audit regulatory environment, audit reports, audit evidence, audit planning procedures, inherent risk, internal control, analytical procedures, statistical sampling, tests of controls and substantive audit tests.

Prerequisite(s): ACCN 3100.

ACCN 4110 Intermediate Accounting II (3)
Course focuses on understanding how firms' operating, financing, and investing activities are recorded and disclosed in the financial statements, with an emphasis on liabilities, stockholders' equity and their related accounts. Throughout this course, students develop the skills required to prepare and analyze corporate financial statements, as well as an understanding of how managerial incentives interplay with financial reporting. The course is appropriate for accounting and finance students, as well as students of other majors who are interested in acquiring an in-depth understanding of firms' performance using financial accounting information.

Prerequisite(s): ACCN 3100 and FINE 3010.

ACCN 4140 Advanced Managerial Accounting (3)
Course features quantitative and qualitative approaches to collecting, analyzing, and transmitting cost, revenue, and profit data for internal planning and control. The course also explores the use of current data analysis tools and data visualization to communicate by using problems, large datasets and computer-based cases. The course develops students' skills for problem identification, data analysis, conclusion justification and impact recognition.

Prerequisite(s): ACCN 3010.

ACCN 4550 Accounting Internship (1)
Freeman School majors may elect to do a Business Internship that will appear as a one-credit, 4000-level course on their transcripts; however, the credit does not apply towards the 122 minimum hours required for a BSM degree. The Internship must be related to one of the majors offered through the BSM program, and the Internship must apply (within an ongoing business organization) the intellectual capital obtained from first- through third-year Freeman School courses. To obtain approval of the Internship, the student must visit the Career Management Center for instructions. The student receives the final grade for the Internship on a Satisfactory/Unsatisfactory basis upon submitting the paper/evaluation to a supervising faculty member in the Career Management Center. This course is normally offered during the summer and fulfills the "curricular practical training" option for students with F-1 visa status.

ACCN 4570 Risk Management, Complex Contracts and Accounting (3)
This course provides students with a holistic view of how innovative contracts are used by companies to tailor financing to their customized risk management, leverage and cost of capital needs. Students will learn how to identify and measure risks, evaluate risk management strategies and understand the accounting for these complex transactions. The course also features a significant Data Analytics Component to enable students to use Data to measure, quantify, and even predict risk.

Prerequisite(s): FINE 3010 and ACCN 2010.

ACCN 4900 Independent Study (1-4)
Freeman School seniors who demonstrate academic excellence are allowed to pursue an Independent Study. The work may take the form of directed readings, laboratory or library research, or original composition. Instead of traditional class attendance, the student substitutes conferences, as needed, with the supervising faculty. An Independent Study requires the approval of the supervising instructor and the Associate Dean for Undergraduate Education. The credit does not apply towards the Accounting major requirements for a BSM degree; the independent study counts as Business elective credit only. Interested students should contact the Office of Undergraduate Education at the Freeman School. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ACCN 4910 Independent Study (1-4)
Freeman School seniors who demonstrate academic excellence are allowed to pursue an Independent Study. The work may take the form of directed readings, laboratory or library research, or original composition. Instead of traditional class attendance, the student substitutes conferences, as needed, with the supervising faculty. An Independent Study requires the approval of the supervising instructor and the Associate Dean for Undergraduate Education. The credit does not apply towards the Accounting major requirements for a BSM degree; the independent study counts as Business elective credit only. Interested students should contact the Office of Undergraduate Education at the Freeman School. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ACCN 4920 Independent Study (1-4)
Freeman School seniors who demonstrate academic excellence are allowed to pursue an Independent Study. The work may take the form of directed readings, laboratory or library research, or original composition. Instead of traditional class attendance, the student substitutes conferences, as needed, with the supervising faculty. An Independent Study requires the approval of the supervising instructor and the Associate Dean for Undergraduate Education. The credit does not apply towards the Accounting major requirements for a BSM degree; the independent study counts as Business elective credit only. Interested students should contact the Office of Undergraduate Education at the Freeman School. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ACCN 5380 Business Study Abroad - ACCN (1-20)
Study aboard course in Accounting.

ACCN 5390 Business Study Abroad - ACCN (1-20)
Study aboard course in Accounting.

ACCN 6000 Financial Accounting (2)
This course introduces basic concepts underlying the reporting of economic activities to external users. It emphasizes the concepts and relationships underlying the income statement, balance sheet, statement of cash flows, and statement of changes in shareholders' equity. The course also covers ESG accounting standards, and it builds the accounting skills necessary to help understand and value firms, to assess performance, and to effectively engage in the capital markets.

ACCN 6010 Managerial Accounting (2)
In this course, we delve into the complexities of cost management and control within challenging business landscapes, focusing on essential costing methods like cost allocation, CVP analysis, budgeting, and variance analysis. These techniques are vital for effective navigation in intricate business scenarios and for making strategic financial decisions. Through practical case studies and real-world examples, students will gain hands-on experience in applying these cost management techniques, further enhancing their ability to make informed, strategic decisions. We will also examine the current landscape of corporate sustainability reporting. We examine how companies measure the impact of a company's sustainability efforts and judge the reliability of the information.

Prerequisite(s): ACCN 6000.

ACCN 6030 Financial Reporting I (3)
This is a concept-oriented course that introduces the intensive examination of financial reporting issues and financial statement categories, focusing on the asset side of the balance sheet.

ACCN 6040 Financial Reporting II (3)
This is a concept-oriented course that continues the intensive examination of financial reporting issues and financial statement categories begun in Financial Reporting I, focusing on the liability side of the balance sheet. Prerequisite(s): ACCN 6030.

Prerequisite(s): ACCN 6030.

ACCN 6050 Accounting Measurement, Reporting, and Control (3)
This course introduces basic concepts underlying the measurement and reporting of a business's economic activities, how to use this information to inform managerial decisions, and how accounting information is used as part of the managerial control system. The course is loosely divided into three topics: 1) The concepts and relationships underlying the income statement, balance sheet and statement of cash flows; 2) Using accounting information to make decisions about resource allocations and to evaluate the performance of firms, business units and managers; and 3) Using accounting information as part of an overall control system to ensure that the organization is meeting its goals. The course is intended as an introduction for individuals who will make business decisions, evaluate other firms, business units, or managers, or be evaluated themselves via accounting information.

ACCN 7000 Environmental, Social, and Governance (ESG) Reports (3)
This course is a hands-on experiential learning course. Students will work with a local or regional company and review its operations through an ESG lens and develop an ESG report for the company. As part of this exercise, students will learn about metrics and standards of ESG reporting and learn about how firms are thinking about an acting on ESG concerns in practice.

ACCN 7100 Ethics in Accounting and Finance (3)
This course focuses on the practice of accounting and finance and what common sense morality (informed by philosophy, professional expectations, and peer conversation) says is ethical. Current ethical questions and controversies in the fields of accounting and finance are explored. Through class exercises, group discussions, presentations, lectures, and readings, students cultivate their own moral sense and improve their capacity for ethical decisions and conduct.

ACCN 7110 Auditing (3)
This course introduces students to the auditing profession with an emphasis on financial statement audits of public and private companies. Fundamental auditing concepts, including how auditors assess and respond to various types of risks, are studied to provide students with a conceptual understanding of audit procedures used in practice.

Prerequisite(s): (ACCN 3100 and 4110) or ACCN 6040.

ACCN 7120 Advanced Financial Accounting (3)
Advanced and problem areas in financial accounting and reporting are examined. Topics include the equity method of reporting investments, accounting for mergers and acquisitions, consolidated financial statements, accounting for partnerships, foreign currency transactions, and accounting for governmental and other not-for-profit organizations.

Prerequisite(s): ACCN 2010, 6000 or 6050.

ACCN 7130 Financial Statement Analysis (3)
This course provides an overview of the use of financial accounting information for evaluating past performance and predicting future performance of a company or division. Managerial incentives affecting various accounting and reporting policy choices are considered, as well as the related regulatory and ethical issues. While a significant part of the course centers on estimating the value of publicly-traded common stocks, the techniques covered in the course can be used in many other settings, such as credit analysis, management consulting, and auditing.

Prerequisite(s): ACCN 2010, 6000, 6030 or 6050.

ACCN 7140 Advanced Managerial Accounting (3)
This course explores recent developments in managerial accounting theory and practice. The course features quantitative and qualitative approaches to collecting, analyzing, and transmitting cost, revenue, and profit data for internal planning and control, and it uses readings, problems, cases, and computer exercises.

Prerequisite(s): ACCN 3010, 6010, 6030 or 6050.

ACCN 7150 Accounting Information Systems (3)
Concepts of accounting and computer systems are integrated to develop an understanding of accounting information systems. Through extensive use of computer systems, this course emphasizes the development, use, and maintenance of such systems.

Prerequisite(s): ACCN 2010, 6000, 6030 or 6050.

ACCN 7200 Accounting Research (3)
This course employs an experiential case approach to build accounting research skills. Each case presents a complex accounting issue. Students are required to use research sources to reach conclusions regarding the correct accounting treatment for the issue. The primary research sources are (a) the U.S. Accounting Standards Codification (ASC) and the International Financial Reporting Standards (IFRS). Additional sources include FASB concept statements, the AICPA Code of Professional Conduct, AICPA GAAP and Audit Guides, academic articles, and professional articles. AI tools, such as Chat GPT, can also be helpful. For many cases, students will work with a partner to write memorandums to present their conclusions, much as they would in practice. For other cases, students will form teams for in-class competitions. Each case enables students to develop a unique research skill. These skills fall into three main categories: (a) identifying relevant code sections and other research sources, (b) appropriately applying the research sources to the issue at hand, and (c) effectively communicating conclusions.

Prerequisite(s): (ACCN 2010 and 3010) or (ACCN 6000 and 6010) or ACCN 6050.

ACCN 7240 Forensic Accounting (3)
In the context of this course, “forensic” means “suitable for the courts.” The main areas of forensic accounting are the interpretation of financial statements, fraud, business valuation, and economic damages with specific topics including lost profits, personal injury, wrongful death, bankruptcy, divorce, lost value, embezzlement, graft, money laundering, and fraud investigation and prevention. This course will focus on the concepts and tools that extend the material covered in other accounting courses and will touch on many of the areas covered by the CPA exam.

Prerequisite(s): ACCN 7110 or 4100.

ACCN 7270 Advanced Risk Analytics (3)
This course explores concepts of risk and uncertainty applied to the financial management of organizations in achieving business objectives and strategies. Emphasis is placed on the role of data-driven accounting measurement and reporting in the management of such risks.

Prerequisite(s): ACCN 2010, 6000, 6030 or 6050.

ACCN 7280 Operational Risk Management (3)
This course is for students who want to start their own business, manage a department or even a whole firm. In this course, we study operational risk and examine how control systems can guard against these risks. We examine how to establish controls that will provide reasonable assurance that the organization will achieve its overall goals (i.e., strategy) in an effective and efficient manner. We specifically focus on employee control; we will explore different ways to use the control system to motivate employee effort and to direct this effort towards organizational success. In the course, students extensively analyze and discuss cases of real organizations.

ACCN 7290 Accounting Analytics (3)
The use of accounting and related data to provide empirical evidence on business problems is investigated. The course focuses on the role of the business person rather than the technology person in data analytics. That said, technology is still an important part of the course. It is taught with a hands-on approach and an emphasis on solving problems. The objective is to take advantage of accounting data to solve one or more business problems. All aspects of the data analytics process, including issue identification, data preparation, data analysis, and the communication of results are explored.

Prerequisite(s): ACCN 2010, 6000, 6030 or 6050.

ACCN 7420 Government and Not-for-Profit Accounting (3)
This course covers generally accepted accounting principles (GAAP) that govern the reporting of assets, liabilities, revenues, transfers, expenditures, gains, losses, and net assets of governmental and not-for-profit entities. Discussion of the theoretical underpinnings of GAAP, as well as the "disconnects" still present in governmental GAAP vs. "for profit" GAAP, will be included in this course.

Prerequisite(s): ACCN 6030, 6050 or 2010.

ACCN 7550 Public Accounting Internship (3)
The busy season internship is a full-time, paid internship with a major accounting firm in the spring semester. Typically, the internship takes place in the city and state in which the student plans to live and work. Students earn three graduate-level credit hours for the internship, which runs from approximately January 1 through April 15. Because this internship is full-time, students may not take coursework concurrent to the internship. Following completion of the internship, students return to campus for nine credit hours of intensive coursework until mid-May. The busy season internship provides students with a realistic introduction to the accounting profession. Since seniority in most CPA firms is primarily measured by the number of busy seasons worked, graduates who pursue the internship will have a professional advantage over students who graduated the previous May. Students should seek approval for ACCN 7550 from their MACCT faculty adviser.

Prerequisite(s): (ACCN 7110 or 4100) and (TAXN 7100 or 4100).

ACCN 7560 Professional Accounting Internship (1-3)
The corporate accounting internship lasts for at least 10 weeks and includes, but is not limited to, accounting-related functions in industry, banking, hospitals, government, not-for-profit, universities, CPA firms, or service organizations. The corporate internship can be part-time and may sometimes be a paid internship. The internship carries responsibilities above entry-level and involves the same difficulty of work and training that any new full-time hire experiences when entering a firm. The student and the firm agree on the schedule of hours, financial arrangements, and field supervision. Students should seek approval for ACCN 7560 from their MACCT faculty adviser.

ACCN 7900 Independent Study (1-3)
Independent study: Accounting.

Admiralty Law (ADMR)

ADMR 2010 Admiralty I (3)
This course will survey substantive matters, including carriage of goods by sea; charter parties; personal injury and death; collision; towage, pilotage, and salvage. Admiralty I is not a prerequisite for the course in Admiralty II; however, both Admiralty I and II are required for J.D. students prior to enrollment in any other Admiralty courses that are regularly offered. Advanced Admiralty courses may not be taken by J.D. students simultaneously with either Admiralty I or II.

ADMR 2020 Admiralty II (3)
This course deals mostly with jurisdictional and procedural matters, including jurisdiction over maritime claims, considerations of federalism, forum non conveniens, choice of law, special procedures in admiralty cases, limitation of liability, and maritime liens. Admiralty II may be taken prior to Admiralty I. Both courses must be taken by J.D. students as prerequisites to any other regularly offered admiralty courses.

ADMR 6000 Admiralty Seminar (2-3)
The Seminar will have one or more common themes to be selected by the class with some suggestions from the professor. Two possible themes are: (1) the shipping industry's decarbonization efforts and (2) the problem of abandoned seafarers and mistreatment of seafarers, particularly in the fishing industry. Students attending the first class should have given some thought as to what they would like to see the Seminar cover. Admiralty I is a prerequisite. This seminar may be taken to satisfy the upper-class writing requirement.

Prerequisite(s): ADMR 2010.

ADMR 6080 Carriage of Goods By Sea (2)
This course involves the legal problems arising out of damage to cargoes transported between the United States and foreign ports and focusing on the Carriage of Goods by Sea and Harter Acts, as well as under the Rotterdam Rules. There is an emphasis placed on the actual practice of maritime law. Students must participate in an ungraded mock cargo negotiation. Admiralty I and II are prerequisites. The course is taught by Raymond Waid who is a Shareholder in the New Orleans office of Liskow & Lewis, APLC.

Prerequisite(s): ADMR 2010 and 2020.

ADMR 6220 Personal Injury & Death (2)
An advanced course in admiralty law concentrating on rights and liabilities arising out of the personal injury and death of seamen, longshoremen, harbor-workers, and third parties under both federal and state law. Admiralty I an II are prerequisites. The course is taught by Stevan Dittman, Of Counsel with the firm of Gainsburgh, Benjamin, David, Meunier & Warshauer, L.L.C.

ADMR 6350 Collision Law and Limitation of Liability (3)
This course presents the general principles of maritime collision law, including causation, legal presumptions, the effect of statutory violations, apportionment of fault, damages, special evidentiary rules and an overview of navigation Rules of the Road and their interpretation. This course then provides an in-depth study of limitation of liability from a practical point of view. After study of the theory of limitation of liability and governing law, the procedural aspects of asserting this right will be considered in detail, as well as the content of the limitation fund and how it is distributed. This course also covers a basic comparative analysis of limitation of liability laws in the United States against the limitation of liability laws in other areas of the world.

Prerequisite(s): minimum score of PASS in 'Law Graduate Student' or (ADMR 2010 and 2020).

ADMR 6430 Marine Insurance I (2)
An advanced admiralty course that focuses on the legal problems involved in insurance against physical loss or damage to maritime property (builder's risk and hull), against maritime liabilities (protection and indemnity), and for damage to cargo. JD students must have taken Admiralty I and II. JD students must write the exam, but LLM candidates may write an advanced level paper if they so choose. This course will be taught by Brandon Thibodeaux, an associate with Frilot LLC.

Prerequisite(s): (ADMR 2010 and 2020) or minimum score of PASS in 'Law Graduate Student'.

ADMR 6440 Marine Insurance II (2)
Marine Insurance II is an advanced admiralty course that focuses on the legal problems arising out of marine insurance policies. The course examines hull, cargo, P&I, commercial marine property and liability policies including the liability of agents, brokers, and underwriters, the effect of the insolvency of an insurance company, excess and surplus lines coverage, the duty of defend, reinsurance, and current problems in the law of marine insurance coverage. Admiralty I and II are prerequisites. The course is taught by Richard Cozad who is a Partner at Schouest, Bamdas, Soshea & BenMaier P.L.L.C.

Prerequisite(s): ADMR 2010 and 2020.

ADMR 6540 Personal Injury & Death (2)
An advanced course in admiralty law concentrating on rights and liabilities arising out of the personal injury and death of seamen, longshoremen, harbor-workers, and third parties under both federal and state law. J.D. students must have taken Admiralty I and II. The course is taught by Stevan Dittman, Of Counsel with the firm of Gainsburgh, Benjamin, David, Meunier & Warshauer, L.L.C.

Prerequisite(s): ADMR 2010 and 2020.

ADMR 6730 Regulation of Shipping (2)
This survey course addresses the regulation of domestic shipping and foreign shipping calling at United States ports. Primary emphasis is on the various governmental agencies that regulate shipping and maritime commerce with secondary emphasis on the role of international treaties and conventions. Specifically examined are the activities of agencies such as the Coast Guard, the Army Corps of Engineers, The Federal Maritime Commission, the Maritime Administration, the National Transportation Safety Board and various state agencies. Areas addressed include vessel inspections, pollution regulation, navigation rules, marine casualty investigations, vessel and waterfront facility security, merchant mariner licensing and license revocation, pilotage and ocean shipping regulation. This course is taught by Brian K. McNamara, a Commander and judge advocate with the United States Coast Guard. J.D. Students must have taken Adm. I and II. (2)

ADMR 6800 Towage & Offshore Services (2)
Tugboats, barges, offshore support vessels, and offshore petroleum and renewable energy installations like offshore wind farms provide crucial services in today's global economy, all of which impact towage and offshore services in the admiralty context. This course examines the history, development, and current state of laws – some familiar, some quite specialized – that apply in the context of towage and offshore services. Both casualties and contracts are studied. The course focus is on U.S. law, but the laws of other countries like the U.K. are compared and contrasted when relevant, and internationally recognized contract forms are analyzed. Admiralty I and II are prerequisites. This course is taught by David B. Sharpe who is a Partner at Lugenbuhl, Wheaton, Peck, Rankin & Hubbard.

Prerequisite(s): ADMR 2010 and 2020.

ADMR 6880 Admiralty: Vessel Documentation & Finance (2)
Students in this course work with materials concerning the documentation of vessels and financing from initial decision to construct to permanent financing. A knowledge of maritime law, commercial law and security rights is recommended. The course is conceived of as a practical course, with emphasis on the financial decisions of vessel operators and financiers. Attention is also given to maritime insurance issues affecting financiers. Admiralty I and II are prerequisites.

Prerequisite(s): ADMR 2010 and 2020.

Africana Studies (AFRS)

AFRS 1290 Semester Abroad (1-20)
Semester Abroad.

AFRS 1550 New Orleans Hip Hop I (3)
This course surveys major locations, musical influences, and aesthetic elements of New Orleans hip hop culture, with special emphasis on Bounce and the defining features of local spoken word. The course includes a required service learning component, which guides students through the completion of a public event designed to showcase New Orleans hip hop's educational and entertainment value.

AFRS 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

AFRS 1940 Transfer Coursework (0-20)
Transfer coursework at the 1000 level. Departmental approval required.

Maximum Hours: 99

AFRS 2000 Introduction to Africana Studies (3)
This course serves as an introduction to the study of Africa and its Diaspora and is intended to help students understand the complexities of interdisciplinary approaches to area studies. Emphasis will be placed on the complementary nature of such scholarship and a portion of the course is devoted to learning how the same issue or thematic is treated in diverse ways depending on the disciplinary perspective of the scholar.

AFRS 2390 Semester Abroad (1-20)
Semester Abroad.

AFRS 2810 Special Topics (3,4)
Course Limit: 99

AFRS 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

AFRS 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

AFRS 3100 Issues in Afro-Atlantic Studies (3)
An exploration of some of the central themes of Afro-Atlantic Studies through the study of selected issues arising out of the Afro-Atlantic moral, cultural, political, and religious experience.

Course Limit: 99

AFRS 3200 Issues in African Studies (3,4)
An exploration of some of the central themes of African studies through the study of selected issues arising out of the African moral, cultural, political, and religious experience.

Course Limit: 99

AFRS 3300 Issues in Africana Diaspora Studies (3,4)
An exploration of some of the central themes of African Diaspora Studies through the study of selected issues arising out of the African Diasporic moral, cultural, political, and religious experience.

Maximum Hours: 99

AFRS 3333 Hip Hop Culture & Theory (3)
This course uses a hip hop centered framework to examine issues of identity formation, economic deprivation, and policing as they impact Black people.

AFRS 3350 Black Music & Performance in New Orleans (3)
This course provides an historically situated introduction to African American music and performance traditions in New Orleans. The course opens with an exploration of the historical currents and racial economies that contributed to the making of New Orleans as a particularly Caribbean-esk site of early colonial North America. The course then considers the ways culture, race, and plays of social power gave rise to early "creolized" forms of cultural practice and artistic expression, foundational to the fashioning of black New Orleanian music and performance traditions. The syllabus then follows this conversation chronologically through a thematic exploration of various African American performance genres and spaces from Congo Square, to jazz, to brass bands and second-lines, to Mardi Gras Indians, through today's hip hop and bounce musics. Additional attention will be given to the social impacts of tourism and the aftermath of hurricane Katrina on black performance traditions, questions of citizenship, and related economies of consumption.

AFRS 3400 Black Cities (3-4)
For centuries, cities have been the primary loci for black social mobility, political activism, and creativity. This course is designed as an interdisciplinary encounter with a specific urban space in Africa or the African Diaspora that engages a wide range of materials, including historical narratives, fiction, cinema, popular music, and visual culture. This course may be repeated two times for credit.

Course Limit: 2

AFRS 3450 Race and Performance in Brazil (3)
This course explores Brazilian afro diasporic performative practices (music, dance, festivals, artistic production). Students will have an opportunity to engage with Brazilian artists, musicians, and activists to learn about samba, candomblé and capoeira. Students will be asked to connect questions of culture with politics, race, nationalism, gender and class. This culturally immersive study abroad course will build understanding of how cultural performances have been at different times celebrated, marginalized or criminalized over the course of Brazil's history. From protest movements to popular music and performance, students will explore how affective and intimate bodies are made political as repositories of national heritage or transgressive communities of dissent.

AFRS 3460 Senegal and New Orleans in the Atlantic World (3)
New Orleans and Senegal are closely linked by culture and history dating from the 18th century Atlantic World to the present. Students in this course will engage in a cultural immersion program that explores the connected and comparative histories and cultural traditions of New Orleans and Senegal. The Republic of Senegal, which achieved independence in 1960 after more than a century of French colonial rule, is arguably one of the most democratic countries in West Africa. Senegal has a population of nearly13.5 million, with 2.5 million living in Dakar, the political and economic capital, and one of West Africa's most vibrant cities. St Louis, a major port and administrative center during French colonization, and New Orleans have often been described as sister cities, and in many ways that's accurate. Students will gain a deeper understanding of the vitality, resilience, and global breadth of contemporary African and African diaspora communities.

AFRS 3470 Migration, Race, and Identity in the Dominican Republic (3)
The history of Hispaniola, currently divided into the countries of Haiti and Dominican Republic, has remained pivotal to the development of the Caribbean and the Atlantic world. The two parts of the island evolved in unique ways, thus creating distinct but interconnected societies. In the east the plantation economy went into decline very early on, thus creating a remarkable rural society, the first in the Caribbean in which free people of African descent predominated; in the west, a brutal plantation regime ended in a spectacular slave revolt (The Haitian Revolution) that shook the foundations of the Atlantic world. Students will explore the Dominican-Haitian relationship from colonial times to present and highlight the ways that the DR and Haiti are interconnected and ways in which they have developed differently.

AFRS 3722 Blackness in Latin America (3)
A principal idea in anthropology regarding identities is that they are created. Individuals and groups construct identities using a variety of forms of representation made available in music, media and various forms of cultural production, and in response to sociohistorical and political happenings. Experiences, both personal and collective, are also fodder for identity construction. Given these bases for understanding identity, Blackness in Latin America will interpret the factors that have undergirded the formation of Black racial identities in different sites of the African Diaspora, and also how Black racial identities are used to redress political, social, and economic exclusion. We will focus on case studies in Latin America including Colombia, Honduras, Cuba, and Costa Rica. The course will additionally give attention to the Caribbean and its diaspora, including Trinidad, Jamaica, and also West Indians and Puerto Ricans in the U.S. Students will examine the ways in which racial identities are communicated looking in part at the transnational flows of information filtered through music, media, art, and literature that provide the "raw materials" for identity construction, and political basis for their mobilization.

AFRS 3750 From Community to Stage (3)
This course introduces students to the story circle methodology as formulated by the Free Southern Theater and Junebug Productions. Students also learn the history of the Free Southern Theater and the Black Arts Movement in the South. Collaboration with local artists will result in the production of an original theatrical performance at the end of the semester.

AFRS 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

AFRS 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

AFRS 4180 African Cinema (3)
This course will provide a critical and interdisciplinary look at the development of African cinema from its inception in the 1960s to the present. In looking at this period, we will move from the sociopolitical upheavals of late colonialism to the recent phase of introspection and diversification. The relationship of cinematic practices to transformation in the social and economic sphere will be examined, as well as the creation of distinctively African film styles based on oral traditions. In pursuing these topics, we will consider the impact of technology, history and culture, ties to the cinema of other developing nations and co-productions.

AFRS 4300 Cultural Politics and Film (3)
This course is designed to explore developments in the cross-cultural use of media from Hollywood feature films to ethnographic documentaries, from Caribbean liberationist literature to African allegories of colonialism, and from indigenous use of film and video to Black Diasporan oppositional film practice. Issues to be addressed include Afrocentrism, Eurocentrism, ethnocentrism, multiculturalism, racism, sexism, gender, and class bias.

AFRS 4400 Afro-Brazilians (3)
Once heralded internationally as a racial democracy, Brazil has been the subject of an ongoing critical re-evaluation that has revealed a vast gap between the national ideal and the social reality. The ideas of race and the various forms of institutional and quotidian racism in Brazil make for compelling contrasts and comparisons with the United States. This course will focus on a wide range of themes, issues, and problems in Afro-Brazilian Studies since the abolition of slavery in 1888. Combining cultural history, anthropology, sociology, literature, and popular music, this course will offer a multidisciplinary approach to black culture and race relations in Brazilian society.

AFRS 4450 Black Diasporic Culture (3)
In this seminar students will look at Black cultural forms as they are created, shared, and participated in across national borders. In this process students will interpret the connections of Black culture shared across the diaspora to belonging, power, and practices of collective, and individual social resistance. We will also investigate the relationships that Black communities have with the nations in which they reside in efforts to understand why the transnational exchange becomes socially and politically important. In consideration of the ways in which Black culture takes shape and is shared transnationally the course will ask: What does it mean to think of Black culture as being transnational or diasporic? What are the political investments in the term "Black"? What does "Black culture" hope to explain? In addressing these questions, the seminar will engage transnational theory and discussions of art, politics, gender, sexuality, performance, and belief. The seminar takes a theoretical approach to understanding diasporic Black culture and incorporates case studies to root theory in everyday practice.

AFRS 4560 Internship (1-3)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Notes: A maximum of six credits may be earned in one or two courses toward the African and African Diaspora Studies major. See also the college requirements for internships. Pre-requistites: Approval of instructor and director. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

AFRS 4570 Internship (1-3)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Notes: A maximum of six credits may be earned in one or two courses toward the African and African Diaspora Studies major. See also the college requirements for internships. Pre-requistites: Approval of instructor and director. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

AFRS 4600 African American Culture & the Arts (3)
This course provides an introductory historical survey of African American culture and the arts with an emphasis on questions of identity and the social politics of culture. Moving from the "birth" of African American culture on through the rise of black cultural forms, artistic movements and their key figures, attention will be paid to the ways African Americans have historically used realms of culture to negotiate historical conditions in the making of black selves, community and fields of social vision. Whether the Blues, the Harlem Renaissance, or Hip Hop, the central question to be explored is the extent to which "culture" has and continues to serve as a "political" medium in forging of black experience and agency in the U.S. and into the diaspora.

AFRS 4800 Black Women's Health (3)
This course examines intersectional issues of health, wellness, public policy, and identity formation for black women and girls in a variety of texts and historical contexts.

Corequisite(s): AFRS 4890.

AFRS 4810 Special Topics (3,4)
Special topics in African and African Diaspora studies. Notes: May be used to fulfill African and African Diaspora studies distribution requirements in consultation with the program director.

Maximum Hours: 99

AFRS 4811 Special Topics (3,4)

Maximum Hours: 99

AFRS 4812 Special Topics (3,4)
Special topics course as designed by visiting or permanent Africana Studies program faculty. For description, consult with the instructor or program director. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

AFRS 4821 Special Topics (1-4)
Special topics in African and African Diaspora studies. Notes: May be used to fulfill African and African Diaspora studies distribution requirements in consultation with the program director.

AFRS 4830 Special Topics (3,4)
Special topics in African and African Diaspora studies. Notes: May be used to fulfill African and African Diaspora studies distribution requirements in consultation with the program director.

Maximum Hours: 99

AFRS 4831 Special Topics (3)
Special topics in African and African Diaspora studies. Notes: May be used to fulfill African and African Diaspora studies distribution requirements in consultation with the program director.

AFRS 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): AFRS 4800.

Maximum Hours: 99

AFRS 4910 Independent Study (1-3)
Open to advanced student with approval of the director and subject to availability of faculty mentor.

AFRS 4920 Independent Study (1-3)
Open to advanced student with approval of the director and subject to availability of faculty mentor.

AFRS 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

AFRS 4990 Honors Thesis (3)
For especially qualified juniors and seniors with approval of the director and the Honors Committee. Students must have a minimum of a 3.000 overall grade-point average and a 3.500 grade-point average in the major.

AFRS 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): AFRS 4990.

AFRS 5380 Junior Year Abroad (1-20)
Semester Abroad.

AFRS 5390 Junior Year Abroad (1-20)

AFRS 6050 Black Feminism and Social Movement in the United States (3)
This course surveys major thought and development in black feminism to understand its application to political, social, and economic issues relevant to black women's lives.

AFRS 6090 Criminal Justice and African and African Diaspora Studies (3)
This course broadens ADST course offerings at advanced levels; in addition, it enhances the disciplinary range of ADST courses.

AFRS 6875 Special Topics (3,4)

Maximum Hours: 99

AFRS 7450 Black Diasporic Culture (3)
In this seminar students will look at Black cultural forms as they are created, shared, and participated in across national borders. In this process students will interpret the connections of Black culture shared across the diaspora to belonging, power, and practices of collective, and individual social resistance. We will also investigate the relationships that Black communities have with the nations in which they reside in efforts to understand why the transnational exchange becomes socially and politically important. In consideration of the ways in which Black culture takes shape and is shared transnationally the course will ask: What does it mean to think of Black culture as being transnational or diasporic? What are the political investments in the term “Black”? What does “Black culture” hope to explain? In addressing these questions, the seminar will engage transnational theory and discussions of art, politics, gender, sexuality, performance, and belief. The seminar takes a theoretical approach to understanding diasporic Black culture and incorporates case studies to root theory in everyday practice.

AFRS 7810 Special Topics (3)

Maximum Hours: 99

AFRS 7922 Blackness in Latin America (3)
A principal idea in anthropology regarding identities is that they are created. Individuals and groups construct identities using a variety of forms of representation made available in music, media and various forms of cultural production, and in response to sociohistorical and political happenings. Experiences, both personal and collective, are also fodder for identity construction. Given these bases for understanding identity, Blackness in Latin America will interpret the factors that have undergirded the formation of Black racial identities in different sites of the African Diaspora, and also how Black racial identities are used to redress political, social, and economic exclusion. We will focus on case studies in Latin America including Colombia, Honduras, Cuba, and Costa Rica. The course will additionally give attention to the Caribbean and its diaspora, including Trinidad, Jamaica, and also West Indians and Puerto Ricans in the U.S. Students will examine the ways in which racial identities are communicated looking in part at the transnational flows of information filtered through music, media, art, and literature that provide the “raw materials” for identity construction, and political basis for their mobilization.

AFRS 7990 Independent Study (1-4)

Aging Studies (AGST)

AGST 6200 Advanced Research Methods and Design (3)
In this course, students will be introduced to the strengths and limitations of various research techniques using examples based on psychological research. During the semester, we will cover methodologies used in basic, applied, and clinical research contexts.

AGST 6300 Brain and Behavior: Structure, Physiology, and Cognition in Adult and Aging Brains (3)
This course is an introduction to the relations between the brain and behavior with particular emphasis on cognition and changes with aging. It is intended to be an overview and to prepare students to be knowledgeable about the neurobiology and changes associated with aging. After taking this course, students should have a basic understanding of a) the structure and function of nervous systems, b) the mechanisms of sensory input and motor output, c) the neurobiology underlying important higher cognitive functions such as emotion, learning and memory, language and executive function, and 4) neurodegeneration and the use of tools to assess cognitive decline.

AGST 7020 Interdisciplinary Seminar on Aging I (3)
This course is the first in a two-part, team-taught seminar series designed to introduce students to the behavioral, biological, cognitive, physiological, and societal impact of aging. In particular, presenters in this course will focus on the interactive relationships between common and diverse disciplines. Special emphasis will be given to integrating knowledge and practices from across the academic community into a research approach that will serve to expand the general understanding of aging but also translate into applied practices or technologies. This course will also discuss what it means to become older within a community, what a person can expect during the aging process, and what kind of control an older person has over their aging body.

AGST 7040 Interdisciplinary Seminar on Aging II (3)
This course is the continuation of a two-part seminar series designed to introduce students to the behavioral, biological, cognitive, physiological, and societal changes associated with aging. In particular, presenters in this course will focus on the interactive relationships between common and diverse disciplines. Special emphasis will be given to integrating knowledge and practices from across the academic community into a research approach that will serve to expand the general understanding of aging but also translate into applied practices or technologies. This course will also discuss what it means to become older within a community, what a person can expect during the aging process, and what kind of control an older person has over their aging body.

AGST 7060 Topics in Aging Research I (1)
This team-taught course introduces students to aging research topics and methods.

AGST 7080 Topics in Aging Research II (1)
This team-taught course is a treatment of select topics and methods in aging research for advanced students.

AGST 7100 Seminar in Aging (1)
This team-taught course is a treatment of advanced topics and methods in aging research for graduate students.

Course Limit: 99

AGST 7120 Independent Study/Research (0-6)
Independent Study/Research.

Maximum Hours: 99

AGST 7140 Dissertation Research (0-9)
Dissertation Research.

AGST 7160 Internship (1-6)
Internship.

AGST 7200 Advanced Research Methods and Design (3)
In this course, students will be introduced to the strengths and limitations of various research techniques using examples based on psychological research. During the semester, we will cover methodologies used in basic, applied, and clinical research contexts.

AGST 7300 Brain and Behavior: Structure, Physiology, and Cognition in Adult and Aging Brains (3)
This course is an introduction to the relations between the brain and behavior with particular emphasis on cognition and changes with aging. It is intended to be an overview and to prepare students to be knowledgeable about the neurobiology and changes associated with aging. After taking this course, students should have a basic understanding of a) the structure and function of nervous systems, b) the mechanisms of sensory input and motor output, c) the neurobiology underlying important higher cognitive functions such as emotion, learning and memory, language and executive function, and 4) neurodegeneration and the use of tools to assess cognitive decline.

AGST 9990 Dissertation Research (0-9)
Dissertation Research. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

American Sign Language Studies (ASLS)

ASLS 1010 American Sign Language I (4)
The purpose of this course is to enable students to acquire introductory knowledge of American Sign Language. A linguistic, communicative, and cultural approach will allow students to explore this visual-spatial language used by up to two million people in the United States. Instruction will focus on the development of receptive and expressive signing skills and on the acquisition of the fundamentals of applied grammar.

ASLS 1020 American Sign Language II (4)
Continuation of American Sign Language I, with focus on the expansion of vocabulary, a deepening of the understanding of grammatical structures, and the further development of communicative skills.

Prerequisite(s): ASLS 1010, LING 1010 or minimum score of PASS in 'ASLS 1020 Placement'.

ASLS 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

ASLS 2030 American Sign Language III (4)
Continuation of intermediate/advanced study in American Sign Language, with focus on the expansion of vocabulary, conversational skills, demonstrative skills, and receptive skills in a seminar setting. Use of grammatical structure in natural and informative settings and the further development of communicative skills. Students may enroll in Optional 20-hour service-learning course ASLS 2890-11. The co-requisite course enrollment is required.

Prerequisite(s): ASLS 1020 or minimum score of PASS in 'ASLS 2030 Placement'.

ASLS 2890 Service Learning (0-1)

Maximum Hours: 99

ASLS 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level.

Maximum Hours: 99

ASLS 3050 Introduction to Interpreting ASL to English to ASL (3)
This course offers an overview of the history, philosophy, and theory of interpreting, specifically focusing on American Sign Language to English to American Sign Language. Students will discuss the mandate for equal access required by the ADA as well as agencies' application. We will learn about the market needs, the population served, the schema where interpreting takes place, certifications required, ethical requirements and testing systems.

Prerequisite(s): ASLS 1010 or minimum score of PASS in 'ASLS 3050 Placement'.

ASLS 3890 Service Learning (0-1)
Corequisite(s): ASLS 3050.

Maximum Hours: 99

ASLS 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level.

Maximum Hours: 99

Anatomy - Graduate (ANAT)

ANAT 6010 Histology (5)

ANAT 6090 Gross Anatomy/Embryology (11)
Enrollment limited to students in the Anatomy department.

ANAT 7055 Graduate Histology I (3)
To acquire knowledge and develop skills in microscopic anatomy and its application and relevance to human physiology, biochemical function and disease.

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7056 Graduate Histology 2 (2)
To acquire knowledge and develop skills in microscopic anatomy and its application and relevance to human physiology, biochemical function and disease.

Prerequisite(s): ANAT 7055.

ANAT 7065 Graduate Anatomy I (7)
Provide students with a fundamental working knowledge of normal human gross, developmental, and radiological anatomy. Understanding of the structure of the human body forms the foundation of basic medical science.

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7066 Graduate Anatomy 2 (4)
Provide students with a fundamental working knowledge of normal human gross, developmental, and radiological anatomy. Understanding of the structure of the human body forms the foundation of basic medical science.

Prerequisite(s): ANAT 7065.

ANAT 7090 Select Topics In Anatomy (0-4)
Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7120 Anatomy Research Sem I (1)
To learn and understand recent advances in biomedical sciences; To develop critical thinking, literature search, and presentation skills.

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7130 Anatomy Research Sem II (2)
To learn and understand recent advances in biomedical sciences, To develop the skills required for evaluating research presentations and learn how to present professional work

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7240 Advances in Anatomical Sciences I (1)
Students present one original research paper on a current topic in anatomical science research (cell, animal model, human).

ANAT 7250 Advances in Anatomical Sci II (1)
To develop the skills required for evaluating research, its application and relevance to human structure, physiology and disease. To understand how to develop new ideas for solving old and new clinical science questions

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7350 Anatomical Techniques (3)
To develop an understanding of the knowledge and skills involved in anatomical research and tissue preparation, as well as its application and relevance to human structure, physiology and disease

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7360 Leadership in Healthcare (3)
To confront the challenges facing modern health care , experts and organizations are calling for an increase in leadership· capabilitles. The Association of American Medical Colleges (AAMC) calls for a "focus on organizational leadership in a new era of health care.' The mission statement or the Tulane University School of Medicine states "...to deliver the highest quality patient care and prepare the next generation of distinguished clinical and scientific leaders. To meet this need, this course, Leadership In Health Care, will engage with leadership topics to intentionally train students in the qualities consistently demonstrated by leaders when performing at their personal best with a focus on topics particularly crucial to healthcare.

ANAT 7410 Grad Intro Functional Anatomy (1)
This course provides an introduction to the physical principles of normal function and physiology in cells and tissues.

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7420 Graduate Systems Functional Anatomy (1)
This course provides an analysis of the physical principles of normal function and physiology in organ system.

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7510 Teaching Micro Anatomy 1 (1)
To develop the skills required for evaluating and applying teaching skills in microscopic anatomy

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7520 Teaching Microscopic Anat 2 (2)
To develop the skills required for evaluating and applying teaching skills in microscopic anatomy

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7560 Signal Transduction/Hormone Ac (2)
This course provides in-depth knowledge of cell signaling.

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7575 Graduate Neuroscience (6)
To acquire knowledge and develop skills in dissection-oriented neuroanatomy and neuroscience, and its application and relevance to human physiology and clinical disease.

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7600 Anatomy Research (1-9)
Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7610 Teaching Techniques in Hlth Sc (2)
To develop the skills required for non-interactive educational formats in health sciences education and the application of these skills in medical and health sciences education

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7620 Interactive Teaching Technique (2)
To develop the skills required for evaluating and applying interactive teaching formats in health sciences education and the application of these skills to medical and health sciences education

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7630 Clinical Grand Rounds Surgery (1)
To learn and understand current advances in clinical management of patients in surgery; To develop the skills required for evaluating patient and case presentations

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7640 Clinical Grand Rounds Medicine (1)
To learn and understand current advances in clinical management of patients in surgery; To develop the skills required for evaluating patient and case presentations

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7750 Teaching Gross & Deve Anatomy (3)
To develop the skills required for evaluating and applying teaching skills in dissection-based gross and developmental anatomy.

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7760 Teaching Neuroanatomy (1)
To develop the skills required for evaluating and applying teaching skills in dissection-based gross and developmental neuroanatomy.

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7790 Adv Surgery based Anat Dissect (5)
Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7810 Research Design & Methods 1 (3)
Students will attend a series of lectures and practical sessions on the principles of centrifugation, tissue preparation for protein extractions, western blotting, RNA isolation and real time PCR, plating and cell culture techniques, and gel doc recording.

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7820 Research Design & Methods 2 (3)
Students will attend a series of lectures and practical sessions on the principles of tissue processing for microtomy, tissue microtomy for light microscopy, paraffin types and paraffin embedding of tissue, and histochemistry of tissue staining.

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 7830 Research Project Presentation (5)
To develop the skills required for evaluating research, its application and relevance to human structure, physiology and disease.

ANAT 7840 Research Thesis (6)
The student will present research as a written record and present, discuss and defend the research before a thesis committee.

Enrollment limited to students in the Structural Cell Biology (MD) department.

ANAT 9980 Master's Research (0)
Course may be repeated up to unlimited credit hours.

Enrollment limited to students in the Structural Cell Biology (MD) department.

Maximum Hours: 99

ANAT 9990 Dissertation Research (0)
Course may be repeated up to unlimited credit hours.

Enrollment limited to students in the Structural Cell Biology (MD) department.

Maximum Hours: 99

Anthropology (ANTH)

ANTH 1010 Introduction to Biological Anthropology (3)
This course provides an introduction to the study of Homo Sapiens from an evolutionary, biological, behavioral, and biocultural perspective. Topics covered include: the history of evolutionary thought, basic human genetics, the anatomy and behavioral ecology of the living primates, human evolution via the study of fossil hominins, modern human variation and adaptation, and the study of the human skeleton in forensic anthropology and bioarchaeology.

ANTH 1020 Cultural Anthropology (3)
The observed range of variation of ways of life around the world. The cross-cultural investigation of becoming and being human. Comparative treatment of social organization, subsistence activities, values, and religion.

ANTH 1030 Languages of The World (3)
This course aims to equip students with some basic facts about the world's languages, a fundamental prerequisite to understanding the nature of human language. We will be examining: (1) the diversity of languages across space and time, and (2) the fundamental similarities of languages. We will address a range of questions about language through an exploration of the following areas: language families and historical relationships, linguistic typology, language universals, sound and structure features of the world's languages, and writing systems.

ANTH 1040 Ancient Societies (3)
Introduction to key transformations in human history and prehistory as they have been identified and discussed by anthropological archaeologists. Consideration of basic principles of archaeology, human evolution and expansion, origins of agriculture and sedentary village societies, development of archaic states and ancient civilizations. Of interest to majors and prospective majors in anthropology and related fields.

ANTH 1101 Native America: Introduction (3)
Though only 0.9% of the US population, Native Americans have played and continue to play an important part in American society. Largely invisibilized by the foregrounding of other ethnic minority groups, Native Americans in the US struggle for recognition (federal, state, and local), for survival as cultural groups (cf. Ile de Jean Charles evacuation/resettlement), and for basic rights (legal protections, religious freedom, education, health services, and subsistence). While focusing primarily on Native American groups in the US, this course will explore the histories of indigenous peoples. Vignettes of the cultures, languages, philosophies and lifeways of indigenous Americans provide the backdrop for coming to know the modern autochthonous peoples.

ANTH 1103 Great Hoaxes and Fantasies in Archaeology (3)
This course studies popular fantasies, cult theories, and hoaxes in the study of the ancient world to explore the role of archaeology in the development of popular notions versus scientific understandings about the past. Furthermore, this course will explore how archaeology can, in fact, identify unscientific research approaches, determine the validity of these notions, and counteract those modern biases and prejudices that give rise to them.

ANTH 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

ANTH 2030 The Anthropology of Women and Men (3)
A cross-cultural survey of women in society and culture among hunters and gatherers, pastoral nomads and agriculturalists of Oceania, the Near East, Africa, and the New World. Kinship and female symbolism in Africa, women and men in myths in traditional societies. Cross-cultural variability of women's roles and status and the variability of women's and men's language and behavior.

ANTH 2340 Introduction to Archaeology (3)
Introduction to basic principles of archaeological method and theory. Consideration of the history of archaeology, major paradigms in archaeological thought, basic techniques of fieldwork, basic techniques in analyzing archaeological finds, and intellectual frameworks for interpreting patterns in archaeological datasets. Consideration of selected case studies. Of interest to majors and prospective majors in anthropology, and potentially to majors in classical archaeology and related fields.

ANTH 2350 Architecture and Power in the Ancient World (3)
This class will explore how political, religious, ideological and cultural ideas among the world’s earliest urban civilizations were inscribed in the landscape in the form of monumental construction. To achieve these objectives the class will study five different regions of the ancient world with the goal of evaluating how built space (buildings, monuments, and public plazas) helped develop and maintain socio-political hierarchy, i.e., "civilization".

ANTH 2360 Ancient Trade and Commerce (3)
Introduction to the study of regional and interregional trade and exchange in ancient times based on archaeological evidence. This course considers diverse theories and methods developed to make archaeological inferences about ancient trade and exchange and examines how the study of trade and exchange informs us about sociopolitical systems and economic relations and how they vary over time and space. Of interest to majors and prospective majors in anthropology and related fields.

ANTH 2370 Anthropology and Global Health (3)
This course explores how anthropologists study global health as a cultural practice. It also explores how anthropologists and anthropological methods contribute to the creation and current practice of global health. Students examine the globalization of public health, the relationship between culture, health, and development, and the cultural construction of health. Of interest to majors and prospective majors in anthropology, public health, and related disciplines.

ANTH 2810 Special Topics in Anthropology (3-4)
Special topics in Anthropology. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

ANTH 3010 Hunters and Gatherers (3)
Comparative study of selected modern and past groups of hunter-gatherers. Anthropological approaches to understanding subsistence practices, social organization, and cultural change in non-agricultural societies. Both ethnographic and archaeological cases will be considered.

ANTH 3020 Ethnobiology (3)
In general, ethnobiology explores relationships between local societies and surrounding biota. Trajectories within the field over time have researched nomenclature, classification, use, and management of natural resources in diverse cultural contexts on several continents. This course investigates the past, present, and future of the field while presenting its applications as it relates to conservation of traditional knowledge, culture, and natural resources. Delving into branches of ethnobiology, namely ethnobotany, anthrozoology, ethnomycology and ethnoecology we will explore the vast human-nature relationships across the globe, while concomitantly interrogating our own relationship with the natural world.

ANTH 3035 Race and Migration (3)
Race and Migration explores how race and culture impact the settlement experiences of migrating people. We will focus primarily on Latinos, West Indians, and Asians and use New York City as a primary sight of investigation, but also examine case studies of migration within the Caribbean and Latin America. Questions the course will address include: how do people go from having diverse national and cultural identities to being people with a "race?" How does becoming a "raced" person shape identity, economic mobility, and social and cultural belonging? How are people differently affected by being placed in social categories in adoptive homes? How do migrants both preserve and create new culture? How do they remain connected to their countries of origin? Where do they find power? In pursuit of these questions, we will consider theories on race, culture, diaspora, nation, transnationalism, exclusion, and belonging.

ANTH 3060 Ethnology of South America (3)
Ethnology of the indigenous peoples of lowland South America and adjacent southern Central America. The course examines cultural developments from prehistory to the present. Models for the classification of indigenous cultures, societies, and languages are critically reviewed.

ANTH 3090 Selected Cultural Systems (3,4)
Selected Cultural Systems. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 3091 Selected Cultural Systems (3,4)
Selected Cultural Systems. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 3092 Selected Cultural Systems (3,4)
Selected Cultural Systems. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 3093 Selected Cultural Systems (3,4)
Selected Cultural Systems. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 3094 Selected Cultural Systems (3)
Selected Cultural Systems. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 3095 Selected Cultural Systems (3,4)
Selected Cultural Systems. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 3096 Selected Cultural Systems (3,4)
Selected Cultural Systems. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 3097 Selected Cultural Systems (3,4)
Selected Cultural Systems. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 3098 Selected Cultural Systems (3)
Selected Cultural Systems. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 3099 Selected Cutural Systems (3)
Selected Cultural Systems. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 3110 Cultures of Sub-Saharan Africa (3)
A survey of the cultures of sub-Saharan Africa from the time of European contact to the present. A detailed study of selected African cultures, identifying, and explaining cultural diversity and unity of African cultures, and comparing African cultures with cultures of other geographic areas. Inequality, development, the family, gender roles, kinship systems, and world view are considered.

ANTH 3120 Anthropology of Sex and Reproduction (3)
An exploration of the interrelatedness of biological, behavioral, cultural, social, and political aspects of human sex and reproduction. Current issues, such as new reproductive technologies, the biology and culture of pregnancy and childbirth, mate choice, will be examined from within an evolutionary framework and/or using a cross-cultural approach.

ANTH 3140 Primate Ecology and Behavior (3,4)
An introduction to the social and physical diversity of the Order Primates, emphasizing the biology, ecology, and behavior of living nonhuman primates. Social structure will be explored from an evolutionary perspective, and the ecological and social constraints on behavioral flexibility will be examined. Examples will cover both field and laboratory investigations of nonhuman primates.

ANTH 3160 Peoples of The Pacific (3)
Introduction to the cultures of Polynesia, Micronesia, Melanesia, and Australia from the first settlement to the emergence of modern nation-states.

ANTH 3190 Economic Anthropology (3)
The study of economic behavior in band, tribal, and peasant societies. Emphasis on the impact of culture and environment on economic decision-making in the Third World. Competing theoretical approaches, particularly evolutionary, ecological, substantivist and Marxist are critically reviewed.

ANTH 3195 Financial Lives (3,4)
This course focuses on the expansion of financial services on daily life in both U.S. and non-U.S societies. We will use ethnographic case-studies to explore different institutions and mechanisms by which people organize their debt and credit relations. The first part of the course will be an overview of anthropological concepts and frameworks for understanding debt and sociality. The second part will focus on the diverse meanings of homeownership in U.S. society, Brazil, and China.

ANTH 3200 Magic, Witchcraft and Religion (3)
This course is an exploration into religion and the occult. We will examine a wide range of topics, such as hauntings, spirit possession, the role of evil in the moral imagination, and the construction of symbols as well as various practices associated healing, witchcraft (or sorcery) accusations, and the experience of suffering and death. Anthropological approaches challenge the categories of "religion" and "witchcraft", which stem from Western conceptions of reality, Christianity, and ethnocentric views of the "other".

ANTH 3240 Ancient Civilizations of Mesoamerica (3)
Survey of the ancient civilizations of Mexico and Central America. Overview of culture history from the first settled villages through the Spanish conquest. Special emphasis on the cultural developments of the Olmec, Zapotec, Maya, Toltec, and Aztec societies of highland Mexico, Gulf coast, and lowland Central America. Although the course stresses archaeological data, it will also include pre-Columbian aesthetic achievements, social organization, values, written records, and adaptation to varying environments.

ANTH 3290 The Nature of Language (3)
Language as a reflection of the human mind and the role of language in defining the essence of humanity. Language and the expression of social values. Emphasis on analysis of primary linguistic data. Critical examination of theories of linguistic structure.

ANTH 3300 History of Writing (3,4)
This course looks at the different systems of writing which have been used in various cultures through time with attention to the materials and purpose in relation to the cultures. Orientation to and practice in decipherment are included. Finally, the issues of modern script development are introduced.

ANTH 3310 Historical Linguistics (3,4)
Survey of the field of paleopathology, the study of health and disease in ancient populations. Topics include methods for identifying evidence of injury and disease in bones, teeth, and mummified tissue; ancient medicine and surgery; chemical approaches to reconstructing diet; and human health trends through time.

ANTH 3320 Archaeology of Gender (3)
Gender refers to the cultural norms, ideals, expectations, and rules that shape the relationships and activities of men, women, and children. People in the present and recent past have conceptualized gender in many different ways, and there is great diversity in the range of gender roles and gender relations seen in different cultures. With ethnographic and historic evidence as interpretive guides, archaeologists can offer insights into the nature of gender roles and gender relations in past societies, and into the ways that gender norms have contributed to major trends in the history and prehistory of humankind. This course is an introduction to the archaeological study of the roles of men, women, and children in past societies; the relationships among women, men, and children in past communities; and the ideologies that have legitimized and naturalized those gender roles and gender relations. Case studies covered in the course are drawn from the archaeology of the Americas, Africa, Asia, and Europe.

ANTH 3330 Anthropology of Gender (3)
A theoretical and ethnographical examination of how gender is constructed across cultures. Topics include sex and gender, gender identity, bodily experiences, masculinity and femininity, gender roles, kinship and gender, gender stratification, and gender equality, as well as gender, ethnicity, and class.

ANTH 3350 Culture and Religion (3)
Religions, ideas, ritual, and organization of primitive peoples; nativistic and messianic movements; function of religion in social systems.

ANTH 3360 Anthropology of Cities (3)
This course focuses on anthropological approaches to cities and urban life. Topics include the cultural meanings of public space and the built environment, processes of social differentiation and class formation, the role of capital, and the emergence of social movements. The second half of the course is organized around a comparison of four ethnographic case-studies of cities outside the United States and Europe. Throughout the semester, studies will also discuss how anthropological approaches may be applied to New Orleans.

ANTH 3365 The Anthropology of Sex Work (3)
This course examines sex work as a form of labor in different sites around the world. More specifically it explores what compels people to become involved in the industry, who its participants are, who seeks sex workers and why. It also considers the factors that impact the differing ways sex work is practiced and how it affects families. Tourism and its implications for sex work is an important focus of the course as well. The class proceeds as a survey of literature that will introduce students to relevant theories regarding sex work and ethnographic information that will help understand debates on its regulation and legalization. The latter part of the course will focus on these debates and moral, health, and human rights concerns. The case studies examined in the course take place primarily in the Caribbean and Latin America. As such, the course will ask important questions regarding the intersections of race, class, and sexual orientation with sex work and consider how these intersecting dynamics shape the experiences and decision making processes of both sex workers and their clientele.

ANTH 3370 Locating Southeast Asia (3,4)
This course examines contemporary Southeast Asia. As one of the most diverse regions in the world, the region confounds easy characterization. The first part of the course provides students with a broad overview of the social, cultural, and political institutions of the region with a focus on Indonesia, Thailand, the Philippines, and Vietnam. The second part turns to contemporary issues including political and economic development, religious change, and cultural constructions of identity. Readings include academic essays, short stories, and full-length ethnographies.

ANTH 3380 Stone Age Europe (3)
Europe's history is widely studied, but in terms of years, the continent's written record represents far less than 1% of the total time humans have lived there. In this course we explore the bulk of that vast (pre)history via the investigation of the Paleolithic ("Old Stone Age") Mesolithic ("Middle Stone Age") and Neolithic ("New Stone Age"). We begin with the first Homo erectus-like hominins who expanded into Europe as early as 1.7 million years ago, and examine the lifeways of European Neandertals and their presumed ancestors ca. 600,000 to 40,000 years ago. We then cover the arrival of our own species, Homo sapiens, around 54,000 years ago and explore interactions between them and the Neandertals. Around 20,000 years ago, the icy cold of the Last Glacial Maximum leads to the abandonment of northern Europe, while the end of the Last Ice Age ca. 11,700 BCE reforests the continent (bringing new challenges to the continent's Mesolithic inhabitants). The rapid spread of domestication from the Near East (the Neolithic) follows shortly thereafter, and in the Middle Neolithic megalithic monuments are built across the continent.

ANTH 3385 Creoles & Creolization (3)
Overview of theory and ethnography of current and historic processes of sociocultural contact and comingling primarily in the New World African-European-Indigenous societies that result in emergent shared group identifications. The course examines how creolization allows for cultural continuity and creativity in such new social orders where a Creole language and/or identity may be formed. Admission: anthropology and linguistics majors at level of Jr. or above; graduate students; others by permission of instructor

ANTH 3395 Ethnography of Performance and Identity in New Orleans and French Louisiana (3)
This course focuses on symbolic meaning in the vernacular expressive culture or folkloric forms of community groups in New Orleans, French Louisiana, the Gulf South region and selected out migrant locations. It addresses differential identities of tribal, ethnic, regional, religious, linguistic, occupational, class and gender affiliations--and examines aesthetic forms as a primary means to do so. Some of these are largely intangible such as music and dance, ritual and festival, narrative and jokes; others are tangible or material culture to varying degrees such as the built environment (houses, boats, landscape use), crafts, costumes and cuisine. All are examined via ethnographic and historical writing, oral histories and documentary media as to how shared cultural knowledge is performed in an array of contexts. These include dancehalls, Carnival parades, second lines, work settings, festivals, neighborhood museums, sacred spaces and so on.

ANTH 3400 Language and Culture (3)
Language is created by people and is constantly changing as the people who speak it change and adapt to new ways of being. Culture likewise is a creation of the interaction of people. Language indexes the values, beliefs, practices, power relationships and social identities of its speakers. This course will examine these facets of language use across a variety of cultures.

ANTH 3420 Semantics: Linguistic Approaches to Meaning (3)
Semantics is the study of meaning in language. As humans use language they produce meaning in any number of ways: through intonation, through body language, through contextual (in)congruities, and through the linguistic structures used. Semanticians try to limit their study to the last of these, while always aware of other meaning-creating tools. In this course, we begin with the study of logic-based theories of meaning, examining propositional meanings. At each stage in this initial investigation, we will keep in mind how this carefully restricted corpus compares with situated language use. In the second part of the course, we will systematically build in context to approach an understanding of natural semantics, the way human beings mean.

ANTH 3430 Archaeology of Cultural Landscapes (3)
Landscapes are outcomes of natural and cultural activity. Natural landscapes are formed by geological processes and climatic patterns. Cultural landscapes are shaped by the intentional and unintentional effects of human activity on the environment. The archaeological study of cultural landscapes, therefore, concerns both the social and symbolic dimensions of local and regional environments as well as anthropogenic effects on environments at local, regional, and global scales. Archaeologists interested in cultural landscapes study features such as earthen mounds, embankments, monumental architecture, ritual places and cemeteries, the built environment of human settlements, canals, ditches, fields, and signs of human impacts on natural environments. Archaeologists typically study specific sites, but the archaeological study of landscapes emphasizes the significance of specific sites within broader regional contexts. An archaeological perspective benefits the study of landscapes because archaeologists are inherently interested in the effects of both long-term trends and short-term changes on the ways that groups of people interact with each other and with their environment. In this course, emphasis is placed on selected case studies from Europe, the North Atlantic, the South Pacific, and the Americas, although selected comparative cases and examples shall also be drawn from Africa and Asia.

ANTH 3435 Disasters and Past Societies (3)
Consideration of case studies in how past societies have prepared for or responded to disasters, critical reflection on "natural" and "cultural" forces that contribute to catastrophic events and that shape the aftermath of disasters, comparative assessment of relationships between culture and environment, and application of resilience theory and models of cultural collapse towards understanding the effects of disasters on past societies.

ANTH 3440 Dialect in America (3)
Introduction to language variation both geographically and socially. The course looks at the development of dialects, the methods for studying language variation, and the ways language may be a tool for both personal expression and reinforcing social structures.

ANTH 3441 Lexicography (3)
Lexicography is the making of dictionaries. Dictionaries take many forms and fulfill many functions. Dictionaries have evolved new formats; professional lexicographers share word gleaning with internet users. Dictionaries may be monolingual, di-, tri-, or multi-lingual, etymological or encyclopedic, synchronic or diachronic, prescriptive or descriptive, terminological or generic. Dictionary construction requires a number of skills which co-vary with the type of dictionary to be produced. This course provides an overview of dictionaries, their forms, formats and histories, while fostering a basic skill set for harvesting words and compiling lexicons. Dictionaries provide a cognitive map to communities of speakers, both past and present.

ANTH 3450 Methods of Observation in Behavioral Research (3)
This course focuses on the development, design, analysis, and presentation of research on behavior using observational methods. While these methods can be used on captive populations (zoo, research center) they are also appropriate for studies of free-ranging animals, including human beings. The student will be exposed to the specific challenges of observational research, and learn appropriate levels of analysis.

ANTH 3470 Many Faces of Islam (3)
Islam is a fundamental human experience in diverse socio-historic and cultural milieux. Ethnographies of Muslim communities highlight the heterogenity of Islamic perspectives and traditions. Focus on culturally situated Islamic practices and belief systems fosters a critical understanding of the emergent Islamic identities and their historico-cultural underpinnings.

ANTH 3480 African Modernities (3)
This course focuses on the problem of conceptualizing modernity in Africa. Examining cases from throughout the continent, we will consider cultural developments such as romantic love, fashion, and consumption as well as new forms of religiosity and novel developments in established religions, economic change, state corruption, and violence.

ANTH 3490 Ancient Ireland (3)
This class explores the “history before history” of Ireland as revealed through the field of archaeology. Archaeologists reconstruct prehistoric “lifeways” via the examination of artifacts (tools as well as food remains [both animal and plant]), humanly-created features on the landscape such as dwellings, burials and tombs, and even entire settlements. For this course, we will cover the original peopling of Ireland by Mesolithic hunter-gatherers at the end of the last Ice Age ca. 11,700 years ago, through the introduction of agriculture to the island (the Neolithic), and the Bronze Age through the Iron Age. We finish by discussing Medieval Ireland, including Viking settlements.

ANTH 3495 In Sickness and in Health: Disease, Death, and the Living in Ireland (3)
This class provides a bioanthropological perspective on health in Ireland from prehistory to today. We begin by introducing key concepts in medical anthropology. We then discuss epidemics, followed by an examination of infectious and metabolic diseases associated with urbanization and industrialization, the Great Famine, and health of marginalized people in nineteenth century to present-day Ireland. We next use paleopathology, the study of ancient disease, to look at specific cases of morbidity from Irish prehistory, including so-called “bog people.”

ANTH 3520 Diaspora Yoruba (3)
Familiarizes students with the fundamentals of Yoruba language and culture; shows students how Diaspora dynamics have changed Yoruba language and culture; uses Diaspora Yoruba to teach students the principles of language death and innovation involving tones, vowels, nasalization, word formation, and sentence structure.

ANTH 3535 Native American Language and Linguistics (3)
This course will explore the richness of the linguistic diversity still preserved in the Native American languages of this hemisphere. Two thirds of the Native American languages spoken at time of European immigration have perished. Today even languages with large communities of fluent speakers face heavy assimilatory pressures. Language loss and simplification are rapidly changing the wordscape of the Americas.

ANTH 3545 Urban Music: Race Class and Sexuality (3)
Urban Music: Race, Class, and Sexuality will examine how hip-hop and dancehall reggae music cultures are informed by racial and class identities, are used as tools to express these identities, and are mediums through which people address marginalization. The course will also consider how these music cultures are tied to representations of gender and sexuality, and the meaning that can be made from their connections. Through this exploration, students will analyze how music and performance can impact listeners in contradicting ways. For example: providing a sense of esteem and empowerment, but perhaps also perpetuating racial and gender stereotypes, and violence. As an overarching theme, the course will consider the ways in which popular cultural forms are political, and are reflections of society at large, therefore serving as important microcosms through which to interpret it.

ANTH 3550 Social Change, Sustainability, and Postcolonial Identity in the Caribbean (3)
The St. Martin Program is an intensive, immersive service-learning program that combines a 3-credit class (ANTH 3550: Social Change, Sustainability, and Postcolonial Identity in the Caribbean) with community engagement. The course is based in the small binational island of St. Martin (Lesser Antilles). It includes a mandatory, zero-credit service-learning component, which will satisfy one tier of the public service graduation requirement. The primary purpose of the program is for students to meaningfully engage with locals, work and meet with community members committed to cultural, food, and economic sustainability, as well as gain an in-depth understanding of anthropological concepts and research methodology, especially as they relate to postcolonial contexts and the shaping of cultural/linguistic identities and socio- economic/political systems.

ANTH 3560 Environmental Archaeology (3)
This course examines the fundamentally important relationship between human behavior and environmental change in the past. It looks at both the ways in which humans have responded to their environmental circumstances and the ways in which human activities have influenced environmental conditions at various scales. The course explores methods for learning about environmental conditions in the past and the nature of human interaction with the environment. The course also presents basic information on some particularly important topics concerning past human/environment interactions, including (1) causes of global climate change, (2) human roles in Pleistocene megafauna, (3) post-Pleistocene adaptation, (4) the origins of agriculture and animal domestication, (5) agricultural landscape modification and environmental over-exploitation, and (6) Holocene changes in human health, including the origins of modern disease epidemics.

ANTH 3570 Indigenous Movements in Latin America (3)
This course will give an overview of indigenous movements in Latin America and reflect on the advantages and shortcomings of these movements' recent approaches to rights discourses in the face of legal and extrajudicial forms of state violence. By comparing cases from Mexico, Guatemala, and Bolivia, we will analyze the connections between colonialism, the implementation of neoliberal policies, institutional racism, and states' recognition and application of indigenous rights.

ANTH 3580 The Politics of Fieldwork (3)
This course will give an overview of some of the main discussions in anthropology around the theories, methods, and politics of ethnographic fieldwork. Students will engage with critical perspectives on issues of positionality, reflexivity, representation, and embodiment, which are essential aspects in designing a research project, engaging in fieldwork, interpreting and analyzing data, and disseminating the research products. Throughout the course, we will analyze how each one of these issues and phases is enmeshed in interlocking power dynamics involving race, gender, class, ethnicity, sexuality, and nationality. We will interrogate the objectivity paradigm, learn about activist, collaborative, decolonizing, and Indigenous methodologies, their multiple challenges and critiques, and discuss anthropologists' reflections on their own fieldwork experiences. The main goal of the course is to guide students in the process of developing a creative, ethical approach to fieldwork.

ANTH 3590 Introduction To Syntax (3)
Introduction of transformational generative syntax, with examples from selected areas of English grammar. Formal models in grammatical description. Emphasis on the logic of linguistic argumentation.

ANTH 3630 Linguistic Phonetics (3)
The course offers an overview of articulatory and acoustic phonetics with emphasis on matching acoustic cues closely with the articulatory gestures. The first part of the course will study the articulatory and acoustic cues to range of English and non-English speech sounds with information about the normal range of variation. The second part will focus on collecting and interpreting acoustic data, and using such data as evidence to solve phonological problems in normal and pathological speech.

ANTH 3640 Phonology (3)
This course provides an introduction to phonological analysis and theory, with strong emphasis on description and analysis of data from a wide variety of languages. Major issues to be addressed include universal principles of human phonological systems, language-specific variation, constraints on representation of rules, the relationship of phonology to morphological and syntactic components of the grammar, and the historical underpinnings of current theoretical models.

ANTH 3650 Morphology (3)
This course provides an introduction to prosodic and non-prosodic morphology with emphasis on data analysis and argumentation. With data from a variety of languages, the first part of the course will examine non-prosodic morphological processes to highlight the typology of word structure across languages. The second part will examine morphological processes conditioned by prosody, and consider the various frameworks for analyzing the data; eventually, the course will work toward a dormal model like that of McCarth and Prince's Theory of Prosodic Morphology". The main objectives of the course are: (1) to learn to analyze morphological data; (2) to learn to compare alternative analysis for a given set of data and to find evidence to choose between the alternative, and (3) to learn to present linguistic analysis and argumentation in a coherent essay.

ANTH 3660 Discourse Analysis (3,4)
Study of written and spoken texts from a variety of languages and language use contexts. Focus on structural aspects of language (noun phrase construction and anaphora, topicalization, focus constructions, word order, deictics, and definite reference) as they relate to the situated use of language.

ANTH 3670 Language & Acquisition (3)
This course provides an introduction to issues such as the genetic basis of language ability and acquisition; neurological aspects of linguistic knowledge; first language acquisition. Emphasis will be laid on child language data collection, description and analysis. Other issues covered are: (1) language acquisition in special populations (deaf children, blind children, children with mental retardation, children with autism and children with specific language impairment); (2) childhood bilingualism.

Prerequisite(s): ANTH 1030 or 3290.

ANTH 3680 Language and Power (3)
Exploration of the ways that language indexes, reflects, and constructs power. Cross-cultural study of the interrelationship of social ascriptions, attitudes toward groups and their members, and the speech patterns of in-group/out-group members. Examination of the manipulation of power and its linguistic correlates in the domains of medicine, the media, education, and the law. Effects of language policy, especially officialization and standardization, on speakers of minority languages or codes.

ANTH 3690 Language and Gender (3,4)
An exploration of the structures of language, phonological, morphological, syntactic, semantic, and pragmatic, as they index, inter-relate with, and construct gender identities cross-culturally.

ANTH 3700 Environmental Anthropology (3)
Critically reviews case studies of ecosystemic and energetic relations between human populations, cultures, and the environment in diverse ethnographic settings of the world, such as Amazonia, the Great Basin, New Guinea, and Southeast Asia. Examines the historical emergence of ecological paradigms in anthropology. Compares the modern contributions of cultural ecology, evolutionary ecology, ethnoecology, and historical ecology. Evaluates potential contributions of ecological anthropology to general ecology.

ANTH 3710 Historical Ecology of Amazonia (3)
Interactions between local peoples and Amazonian landscapes from prehistory to the present. Amazonian landscapes as an analytic unit will be examined from the interdisciplinary perspective of historical ecology. Changes and development of forests and savannas since the arrival of human beings. Historical, ecological, cultural forces involved in biological and edaphic diversity in modern forests. Long-term effects of prehistoric and historic human occupations and manipulation of landscapes. Implications for conservation and development.

ANTH 3720 Adaptation and Human Variability (3)
Biological adaptations of living human populations to their environments, and the interaction of these adaptations with cultural patterns. Relationships of body size, form, and composition to climatic and nutritional factors in various geographical groups of modern man. Major adaptive problems facing the human species are discussed and implications for the future explored.

ANTH 3725 Menstruation: Biology and Culture (3)
This is a 3-credit course designed for upper-level undergraduates and graduate students from any discipline who are interested in learning about menstruation as a biological and cultural phenomenon. As part of this course, you'll practice talking about and writing about menstruation in ways that are inclusive and respectful of individual experience. We'll also develop a deeper understanding of underlying physiology, past and present theoretical approaches to studying menstruation, and the role science and technology plays in our ongoing interaction with and interpretation of menstruation. Equivalent graduate course: ANTH 6725.

ANTH 3730 Principles of Forensic Anthropology (3)
Introduction to forensic anthropology, a subdiscipline of physical anthropology concerned with the identification of human skeletal remains in medico-legal contexts. Surveys the history of the field and the techniques used to determine age, sex, and physical characteristics of an individual from skeletonized remains, as well as methods used for positive identification, estimating time since death, and determining cause and manner of death.

ANTH 3735 Bioarchaeology of Human Sacrifice (3)
This course will examine the literary, archaeological, and skeletal evidence of human sacrifice in past societies. It will critically review written accounts and physical evidence of the offering of human lives in ritual contexts, with a focus on archaeological sites that show convincing evidence of such activities. Case studies will be used to explore the question of why human lives were offered in particular places and times, while critically evaluating the evidence used to document and interpret such practices.

ANTH 3745 Bioarchaeology of Mummies (3,4)
Mummified human remains open a fragile window into the past. They provide unique information about the physical characteristics, health and diet of ancient peoples, as well as information on cultural modification of the body (head shaping, piercing, tattooing, hair styles), funerary practices, and cultural concepts of death and the afterlife. Mummies can be investigated from various perspectives (textual, iconographic, biomedical, ethnographical, archaeological), but are studied most effectively using a multidisciplinary approach involving archaeologists, biological anthropologists, conservators, and specialists in medical imaging, paleogenetics and geochemistry. Bioarchaeology, the application of biological anthropology to archaeological research questions, is a term commonly used today to describe this multidisciplinary approach to studying the dead. This course will examine preserved human bodies from around the world, with an emphasis on scientific studies that seek to reconstruct their life histories and postmortem treatment.

ANTH 3750 Bones, Bodies and Disease (3)
Survey of the field of paleopathology, the study of health and disease in ancient populations. Topics include methods for identifying evidence of injury and disease in bones, teeth, and mummified tissue; ancient medicine and surgery; chemical approaches to reconstructing diet; and human health trends through time.

ANTH 3755 Human Osteology (3)
The objective of this course is to learn the anatomy of the human skeleton and dentition and the techniques physical anthropologists use to excavate, identify, and analyze human skeletal remains. You will learn how to identify the various bones of the skeleton, how to distinguish human from non-human bone, how to determine sex and estimate age at death; and how to measure bones in order to reconstruct living stature and physical characteristics from skeletal remains. Examples from archaeological excavations and forensic cases will be used to illustrate the kinds of information human skeletons can provide about ancient and modern populations. Practical and written exams and laboratory exercises hone your skills at recognizing anatomical landmarks, identifying fragmentary osteological material. measuring bones, and conducting a detailed skeletal inventory.

ANTH 3760 Primate Evolution and Adaptation (3)
This course will focus on the anatomy, evolution and adaptive radiation of the Order Primates. Basic information on living primates and detailed investigation of the primate fossil record will be presented. The dynamic nature of the field will be the subject of class discussion and investigative essays.

ANTH 3770 Global Vietnam (3,4)
In this class, we draw on a variety of resources—historical essays, short stories, ethnographic essays, memoirs, and videos—in order to gain a better understanding of how refugees, migrants, and their children are forging their sense of self in order to become Vietnamese anew in places far from their presumed geographic home. We will use global Vietnamese communities as case-studies to explore theoretical concepts around critical refugee studies, diaspora, and transnationalism.

ANTH 3780 Language Death (3)
Every fortnight a human language dies. Half the languages spoken in the Western Hemisphere at the turn of the 19th century have died. This course examines the forces that lead to language death, strategies that speakers whose linguistic heritage is endangered may deploy to revitalize their languages, and tools that linguists have used to preserve the knowledges of human speech communities.

ANTH 3850 The Four-Field Model (3)
Philosophical underpinnings of general anthropology. Epistemological ramifications of four anthropological fields (subdisciplines) as complete coverage of the subject matter. Contingency vs. rationale in the amalgamation of the four fields, as distinctive and definitive of the holistic study of Homosapiens. Initial development of the model in the British Isles; institutionalization in 20th century North America. Connections to study of natives of the New World and salvage ethnography. Growth and specialization in subdisciplines. Debates over the logic and practicality in continuing cohesion of the model. May be taken as capstone, with ANTH 5110. Students who sign up for the capstone, will have an extra class session, times listed under ANTH 7850.

ANTH 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): ANTH 3770.

Maximum Hours: 99

ANTH 3892 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 3899 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

ANTH 4060 Anthropology Proseminar (3)
It is a four-field seminar course, covering archaeology, linguistics, physical anthropology and socio-cultural anthropology. Topics vary with the current research interests of the faculty presenting the course. Students do primary and secondary research, present their findings orally and in writing. This course draws together the four subdisciplines of anthropology, integrating them in the approach to a body of theory, an array of methods and an emerging set of data congruent with the topical theme.

ANTH 4120 Conquest and Colonialism (3)
Comparative and global perspectives on the archaeology of culture contact and colonialism.

ANTH 4130 North American Prehistory (3)
A survey of the archaeology of Canada and the United States from the appearance of man in the New World to the arrival of the Europeans.

ANTH 4150 African Prehistory (3)
Survey of African prehistory from the earliest tool-makers (Olduvai Gorge, etc.) to protohistoric times. Emphasis on Africa south of the Sahara for later prehistory. Africa's role in human origins, development and spread of food-producing economies, the African Iron Age, early contacts with Arabic and European peoples.

ANTH 4210 Seminar in Historical Ecology (3)
The scientific and philosophical basis of the research program of historical ecology. Comparisons with cultural ecology, cultural materialism, evolutionary biology, landscape ecology. Distinctions and convergences between evolution and history. Hard-core postulates. Case studies from Amazonia, tropical Africa, Europe, Southeast Asia, East Asia (especially the Japanese archipelago and adjoining Pacific Rim).

ANTH 4410 Olmec and Maya Civilization (3)
Examines the development of highly advanced cultures and societies in one of the centers of native American civilization. Although the presentation stresses archaeological data, the course considers pre-Hispanic aesthetic achievements, social organization, values, written records, and adaptation to varying environments.

ANTH 4510 Species Concepts in Human Paleontology (3)
The number of proposed fossil hominid/hominin species has mushroomed in recent years yet the recognition of species in the human fossil record remains a daunting task. However, in order to reconstruct the phylogenetic (ancestor-descendent) relationships among humans, our ancestors, and close collateral relatives, we must group hominin fossils into meaningful taxonomic categories, ones that likely reflect truly monophyletic (shared common ancestor) descent patterns. This course explores different evolutionary species concepts and their applicability to human paleontology. Current approaches to the reconstruction of phylogenetic relationships are then discussed, and the taxonomic status of hominin species is assessed.

ANTH 4560 Internship Studies (1-3)
Internships in anthropology are available to qualified juniors and seniors on a limited basis for individual projects conducted in association with various private firms, public and private organizations, or governmental institutions in New Orleans. Students will work under professional supervision at these sites, and consult with a faculty sponsor. Requirements include a written report on the experience, and an evaluation by the supervisor. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 4570 Internship (1-3)
Internships in anthropology are available to qualified juniors and seniors on a limited basis for individual projects conducted in association with various private firms, public and private organizations, or governmental institutions in New Orleans. Students will work under professional supervision at these sites, and consult with a faculty sponsor. Requirements include a written report on the experience, and an evaluation by the supervisor.

Maximum Hours: 99

ANTH 4610 Ceramic Analysis (3)
A laboratory course dealing with the descriptive analysis of archaeological ceramics. Introduction to aspects of ceramic technology, classification, description, and the use of ceramics in archaeological research. Emphasis will be on practical methods and techniques for analyzing, describing, reporting, and graphically representing ceramic artifacts.

ANTH 4620 Lithic Analysis (3)
A laboratory course dealing with the technological analysis of lithic artifacts. Introduction to fracture mechanics and flint napping, debitage analysis and classification. Application of principles and methods of technological classification, description, and graphical representation to archaeological specimens and modern replicates.

ANTH 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 4891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 4910 Independent Study (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 4920 Independent Study (1-3)
By arrangement.

Maximum Hours: 99

ANTH 4930 Languages of Louisiana (3,4)
Examines the current and historical linguistic situation in Louisiana, from indigenous languages spoken at the time of contact with Europeans to the present. Covers basic features of the languages as well as their social settings. Students will further conduct independent field research projects, alone or in small groups, focusing on languages spoken in southern Louisiana, in particular in the city of New Orleans.

ANTH 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

ANTH 4950 Special Projects (3)
By arrangement. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 4960 Special Projects (3)
By arrangement. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 4990 Honors Thesis (3)
Honors Thesis.

ANTH 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): ANTH 4990.

ANTH 5190 Semester Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 5380 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 5390 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

ANTH 6001 Introduction to Anthropology (1)
Anthropology is the scientific study of humankind. This course provides a broad overview of the different sub-disciplinary approaches to knowledge of humans and our close relatives. Anthropological archaeology examines artifacts and other physical remains to construct a picture of lifeways. Biological Anthropology collates evidence from primatology, paleoanthropology, bioarchaeology, forensic science and biology. Linguistics studies natural human communication, aural-oral, gestural, and written, as well as exploring constructed languages, codes and analogous animal systems. Sociocultural anthropology encompasses both the specific and comparative study of contemporary human societies and cultures.

ANTH 6010 Quantitative Methods in ANTH (3)
An introduction to mathematical methods relevant to anthropology.

ANTH 6020 The Neandertal Enigma (3)
The Neandertals are the best-understood group of non-modern fossil hominids, having been known to science since 1856. Yet even today they inspire many provocative questions. Who were the Neandertals? How were they different from us? Did they have language? How and why did they disappear? Were they our ancestors, or did our ancestors out compete them? And if the Neandertals were not our ancestors, then who were? These are some of the questions we will explore in this class on the classic cavemen.

ANTH 6060 Ethnology of South America (3)
Ethnology of the indigenous peoples of lowland South America and adjacent southern Central America. The course examines cultural developments from prehistory to the present. Models for the classification of indigenous cultures, societies, and languages are critically reviewed.

ANTH 6090 Selected Cultural Systms (3)
Selected Cultural Systems. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

ANTH 6091 Selected Cultural Systems (3)
Selected Cultural Systems. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 6092 Selected Cultural Systems (3)
Selected Cultural Systems. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 6093 Selected Cultural Systems (3)
Selected Cultural Systems.

ANTH 6094 Selected Cultural Systems (3-4)
Selected Cultural Systems.

ANTH 6095 Selected Cultural Systems (3-4)
Selected Cultural Systems. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 6096 Selected Cultural Systems (3,4)
Selected Cultural Systems. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 6097 Selected Cultural Systems (3)
Selected Cultural Systems.

ANTH 6100 South American Archaeology (3)
Survey of South American archaeology with primary focus on the Andean area. Overview of culture history from the Paleoindian period through the Spanish conquest.

ANTH 6120 Anthropology of Sex and Reproduction (3)
An exploration of the interrelatedness of biological, behavioral, cultural, social, and political aspects of human sex and reproduction. Current issues, such as new reproductive technologies, the biology and culture of pregnancy and childbirth, mate choice, will be examined from within an evolutionary framework and/or using a cross-cultural approach.

ANTH 6130 Southeastern U.S. Prehistory (3)
Survey of the various problems of archaeology of the Southeastern United States.

ANTH 6140 Primate Ecology and Behavior (3,4)
This course will familiarize students with the Order Primates, with an emphasis on the rules" of and constraints on nonhuman primate social structure

ANTH 6210 Development of Anthropological Theory (3)
Origin and development of anthropology since the Renaissance.

ANTH 6220 Material Culture (3)
This course considers how objects embody social relationships and cultural meanings from a variety of perspectives. The major goal of the course is to enhance our understanding of the diversity of people's engagement with the material world to shape social relations. This course is also an attempt to re-connect sub-disciplines of anthropology (socio-cultural anthropology, archaeology, physical anthropology, and linguistics) and to build a general anthropology" of material culture. The course is also relevant to students in related disciplines such as art history

ANTH 6230 Archaeological Theory (3,4)
An introduction to theoretical basis of modern archaeology. The implications of theory for excavation, analysis, and interpretation.

ANTH 6240 Technical Analyses for Archaeology (3)
A survey of scientific analytic techniques that have been adapted for application to common archaeological problems such as site discovery, dating, site formation processes, artifact source and function, and subsistence and diet. Examination of methodological literature and case studies.

ANTH 6340 Medical Anthropology (3)
Survey of the relationships among disease, curing, culture and environment. Topics include problems of adapting modern medicines to diverse cultures; explication of the social and cultural correlates of physical and mental health and disease (social epidemiology); cross-cultural variation in disease concepts, medical practices, role of patients, and mental health; health and nutritional implications of planned culture change; contributions of anthropology to health-policy decisions of development organizations.

ANTH 6350 Culture and Religion (3)
Religions, ideas, ritual, and organization of primitive peoples; nativistic and messianic movements; function of religion in social systems.

ANTH 6370 Locating Southeast Asia (3)
As one of the most diverse regions in the world, Southeast Asia confounds easy characterization. This course introduces students to the extraordinary diversity of Southeast Asian peoples, cultures, and political economy. We will locate the region through a comparative survey as well as through interdisciplinary and ethnographic inquiries that explore key elements of the region, including livelihoods, family ties, middle class aspirations, literature and music, rapid urbanization, economic transformations, and ecological challenges.

ANTH 6380 Stone Age Europe (3)
Europe's history is widely studied, but in terms of years, the continent's written record represents far less than 1% of the total time humans have lived there. In this course we explore the bulk of that vast (pre)history via the investigation of the Paleolithic ("Old Stone Age") Mesolithic ("Middle Stone Age") andNeolithic ("New Stone Age"). We begin with the first Homo erectus-like hominins who expanded into Europe as early as1.7 million years ago, and examine the lifeways of European Neandertals and their presumed ancestors ca. 600,000 to40,000 years ago. We then cover the arrival of our own species, Homo sapiens, around 54,000 years ago and explore interactions between them and the Neandertals. Around 20,000 years ago, the icy cold of the Last Glacial Maximum leads to the abandonment of northern Europe, while the end of the Last Ice Age ca. 11,700 BCE reforests the continent(bringing new challenges to the continent's Mesolithic inhabitants). The rapid spread of domestication from the Near East(the Neolithic) follows shortly thereafter, and in the Middle Neolithic megalithic monuments are built across the continent.

ANTH 6385 Creoles & Creolization (3)
Overview of theory and ethnography of current and historic processes of sociocultural contact and comingling primarily in the New World African-European-Indigenous societies that result in emergent shared group identifications. The course examines how creolization allows for cultural continuity and creativity in such new social orders where a Creole language and/or identity may be formed. Admission: anthropology and linguistics majors at level of Jr. or above; graduate students; others by permission of instructor

ANTH 6395 Ethnography of Performance and Identity in New Orleans and French Louisiana (3)
This course focuses on symbolic meaning in the vernacular expressive culture or folkloric forms of community groups in New Orleans, French Louisiana, the Gulf South region and selected out migrant locations. It addresses differential identities of tribal, ethnic, regional, religious, linguistic, occupational, class and gender affiliations--and examines aesthetic forms as a primary means to do so. Some of these are largely intangible such as music and dance, ritual and festival, narrative and jokes; others are tangible or material culture to varying degrees such as the built environment (houses, boats, landscape use), crafts, costumes and cuisine. All are examined via ethnographic and historical writing, oral histories and documentary media as to how shared cultural knowledge is performed in an array of contexts. These include dancehalls, Carnival parades, second lines, work settings, festivals, neighborhood museums, sacred spaces and so on.

ANTH 6400 Language and Culture (3)
Language is created by people and is constantly changing as the people who speak it change and adapt to new ways of being. Culture likewise is a creation of the interaction of people. Language indexes the values, beliefs, practices, power relationships and social identities of its speakers. This course will examine these facets of language use across a variety of cultures.

ANTH 6415 Pidgins and Creoles (3)
An overview of the world's pidgin and creole languages and a survey of the theories of their origins. Capstone in Linguistics and Anthropology.

ANTH 6420 Linguistic Field Methods (3)
Acquiring and using techniques for conducting linguistic field work. Investigation of one or more languages by working with native speakers. Emphasis on defining problems, developing and testing hypotheses.

ANTH 6430 Archaeology of Cultural Landscapes (3)
Landscapes are outcomes of natural and cultural activity. Natural landscapes are formed by geological processes and climatic patterns. Cultural landscapes are shaped by the intentional and unintentional effects of human activity on the environment. The archaeological study of cultural landscapes, therefore, concerns both the social and symbolic dimensions of local and regional environments as well as anthropogenic effects on environments at local, regional, and global scales. Archaeologists interested in cultural landscapes study features such as earthen mounds, embankments, monumental architecture, ritual places and cemeteries, the built environment of human settlements, canals, ditches, fields, and signs of human impacts on natural environments. Archaeologists typically study specific sites, but the archaeological study of landscapes emphasizes the significance of specific sites within broader regional contexts. An archaeological perspective benefits the study of landscapes because archaeologists are inherently interested in the effects of both long-term trends and short-term changes on the ways that groups of people interact with each other and with their environment. In this course, emphasis is placed on selected case studies from Europe, the North Atlantic, the South Pacific, and the Americas, although selected comparative cases and examples shall also be drawn from Africa and Asia.

ANTH 6435 Disasters and Past Societies (3)
Consideration of case studies in how past societies have prepared for or responded to disasters, critical reflection on "natural" and "cultural" forces that contribute to catastrophic events and that shape the aftermath of disasters, comparative assessment of relationships between culture and environment, and application of resilience theory and models of cultural collapse towards understanding the effects of disasters on past societies.

ANTH 6480 Human Functional Morphology (3)
This course covers the functional anatomy of the human body, with emphasis on the structure, function, evolution, and development of the musculo-skeletal and nervous systems. The principle of biological uniformitarianism is used to correlate hard tissue (i.e., teeth and bone) structure with soft tissue function, since soft tissues are only rarely recovered in archaeological or paleontological settings.

ANTH 6500 Human Evolution (3)
An investigation into the evolution of modern Homo sapiens (italics) over the last ten million years. Emphasis will be placed on the fossil record of human and nonhuman primates, the role of changing environments, and migration patterns. Models from technologically simple cultures and modern nonhuman primates will be included in the consideration of developing social organizations.

ANTH 6520 Ethnographic Methods (3)
Theory and techniques involved in collecting, analyzing, and reporting ethnographic data. Validity, reliability, and precision of participant observation: probes and free lists; sampling frames and types of samples appropriate to the unit of analysis; surveys and questionnaires; selection of key informants; interdisciplinary methods; research design. Consideration of ethical issues, potential conflicts of interest, and university review board procedures and policies. Classroom exercises and field projects.

ANTH 6545 Urban Music: Race Class and Sexuality (3)
Urban Music: Race, Class, and Sexuality will examine how hip-hop and dancehall reggae music cultures are informed by racial and class identities, are used as tools to express these identities, and are mediums through which people address marginalization. The course will also consider how these music cultures are tied to representations of gender and sexuality, and the meaning that can be made from their connections. Through this exploration, students will analyze how music and performance can impact listeners in contradicting ways. For example: providing a sense of esteem and empowerment, but perhaps also perpetuating racial and gender stereotypes, and violence. As an overarching theme, the course will consider the ways in which popular cultural forms are political, and are reflections of society at large, therefore serving as important microcosms through which to interpret it.

ANTH 6570 Indigenous Movements in Latin America (3)
This course will give an overview of indigenous movements in Latin America and reflect on the advantages and shortcomings of these movements' recent approaches to rights discourses in the face of legal and extrajudicial forms of state violence. By comparing cases from Mexico, Guatemala, and Bolivia, we will analyze the connections between colonialism, the implementation of neoliberal policies, institutional racism, and states' recognition and application of indigenous rights.

ANTH 6580 The Politics of Fieldwork (3)
This course will give an overview of some of the main discussions in anthropology around the theories, methods, and politics of ethnographic fieldwork. Students will engage with critical perspectives on issues of positionality, reflexivity, representation, and embodiment, which are essential aspects in designing a research project, engaging in fieldwork, interpreting and analyzing data, and disseminating the research products. Throughout the course, we will analyze how each one of these issues and phases is enmeshed in interlocking power dynamics involving race, gender, class, ethnicity, sexuality, and nationality. We will interrogate the objectivity paradigm, learn about activist, collaborative, decolonizing, and Indigenous methodologies, their multiple challenges and critiques, and discuss anthropologists' reflections on their own fieldwork experiences. The main goal of the course is to guide students in the process of developing a creative, ethical approach to fieldwork.

ANTH 6700 Spoken Nahuatl (3)
The essentials of Nahuatl phonology, morphology, and syntax. Conversational practice and laboratory sessions along with emphasis on linguistic analysis of the language.

ANTH 6710 Historical Ecology of Amazonia (3)
Interactions between local peoples and Amazonian landscapes from prehistory to the present. Amazonian landscapes as an analytic unit will be examined from the interdisciplinary perspective of historical ecology. Changes and development of forests and savannas since the arrival of human beings. Historical, ecological, cultural forces involved in biological and edaphic diversity in modern forests. Long-term effects of prehistoric and historic human occupations and manipulation of landscapes. Implications for conservation and development.

ANTH 6720 Spoken Yoruba (3)
This course provides an introduction to the Yoruba language. Emphasis on grammar and vocabulary development, listening, speaking, reading, and writing skills. Practice in oral discussion will be enhanced by weekly dramatical presentations, poetry recitals, and story-telling.

ANTH 6725 Menstruation: Biology and Culture (3)
This is a 3-credit course designed for upper-level undergraduates and graduate students from any discipline who are interested in learning about menstruation as a biological and cultural phenomenon. As part of this course, you'll practice talking about and writing about menstruation in ways that are inclusive and respectful of individual experience. We'll also develop a deeper understanding of underlying physiology, past and present theoretical approaches to studying menstruation, and the role science and technology plays in our ongoing interaction with and interpretation of menstruation. Equivalent undergraduate course: ANTH 3725.

ANTH 6745 Bioarchaeology of Mummies (3)
Mummified human remains open a fragile window into the past. They provide unique information about the physical characteristics, health and diet of ancient peoples, as well as information on cultural modification of the body (head shaping, piercing, tattooing, hair styles), funerary practices, and cultural concepts of death and the afterlife. Mummies can be investigated from various perspectives (textual, iconographic, biomedical, ethnographical, archaeological), but are studied most effectively using a multidisciplinary approach involving archaeologists, biological anthropologists, conservators, and specialists in medical imaging, paleogenetics and geochemistry. Bioarchaeology, the application of biological anthropology to archaeological research questions, is a term commonly used today to describe this multidisciplinary approach to studying the dead. This course will examine preserved human bodies from around the world, with an emphasis on scientific studies that seek to reconstruct their life histories and postmortem treatment.

ANTH 6770 Global Vietnam (3)
In this class, we draw on a variety of resources—historical essays, short stories, ethnographic essays, memoirs, and videos—in order to gain a better understanding of how refugees, migrants, and their children are forging their sense of self in order to become Vietnamese anew in places far from their presumed geographic home. We will use global Vietnamese communities as case-studies to explore theoretical concepts around critical refugee studies, diaspora, and transnationalism.

ANTH 6800 Spoken Yucatecan Maya (3)
The essentials of Yucatecan Maya phonology, morphology, and syntax. Oral/aural exercises and conversational practice with a native speaker.

ANTH 6810 Introduction to Maya Hieroglyphs (3)
A survey of present knowledge about the nature of the pre-Columbian Maya writing system, including calendrical notation, astronomical calculations, the structure and content of phoneticism, and its relationship to other Mesoamerican writing systems.

ANTH 6840 Beginning Kaqchikel (Maya) Language (3,4)
Kaqchikel is one of the four largest Mayan groups in Guatemala, having over a million self-identified members, about half of whom speak their native mother tongue. Taught in three Kaqchikel communities in Guatemala, this six week course enables students to achieve conversational fluency and elementary reading/writing skills.

ANTH 6845 Beginning K'iche' Language (3)
K'iche' is the largest Mayan language spoken in Guatemala, with about 2.5 million speakers. Situated in Highland Guatemala, it is second only to Spanish in number of speakers. This six week summer course is taught primarily in Nahualá, a town of about 90,000 in the Department of Sololá. Students acquire basic oral and written proficiency in the language.

ANTH 6850 Intermediate K'iche' Language (3)
K'iche' is the largest Mayan language spoken in Guatemala, with about 2.5 million speakers. Situated in Highland Guatemala, it is second only to Spanish in number of speakers. This six week summer course is taught primarily in Nahualá, a town of about 90,000 in the Department of Sololá. Students acquire basic oral and written proficiency in the language.

Prerequisite(s): ANTH 6845.

ANTH 6855 Advanced K'iche' Language (3)
K'iche' is the largest Mayan language spoken in Guatemala, with about 2.5 million speakers. Situated in Highland Guatemala, it is second only to Spanish in number of speakers. This six week summer course is taught primarily in Nahualá, a town of about 90,000 in the Department of Sololá. Students acquire basic oral and written proficiency in the language.

Prerequisite(s): ANTH 6850.

ANTH 6860 Introduction to K'iche' Culture (3)
This course in an introduction to K'iche' (Maya) culture for students participating in the Mayan Language Institute realized in Guatemala in the municipalities of Antigua and Nahualá. The course will cover basic issues in K'iche' culture and society and present hands-on workshops dealing with specific aspects of the culture. Topics will include kinship patterns and relationships, social interactions, gender roles, religious practices, arts and crafts, and economic structures. Students will have direct experience learning about K'iche' cuisine, milpa agriculture, weaving, religious ceremonies, calendrical practices, and ceremonial and ritual observances. In addition, students will study examples of contemporary art, music, and literature, including the work of K'iche' poets such as Humberto Ak'abal and Pablo Garcia.

ANTH 6870 Kaqchikel Maya Culture (3)
Contemporary culture practices of the Kaqchikel in four communities of Guatemala will be examined as exemplary of the processes of cultural revitalization, integration into national and local political arenas, participation in world markets, and interaction with world religions. Culture practitioners will participate as facilitators and guest speakers.

ANTH 6890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 6950 Special Topics in Anthropology (3)
This special topics course in anthropology is designed to explore cutting-edge research and emerging themes across the four fields of anthropology, including cultural anthropology, biological anthropology, archaeology, and linguistic anthropology. The course is tailored to a small class size, allowing for in-depth discussions and personalized research opportunities. Students will critically engage with contemporary issues and debates within the discipline, offering a deeper understanding of the dynamic nature of anthropological research and practice.

Course Limit: 3

ANTH 7010 Readings (3)
Readings.

ANTH 7020 Readings (3)

ANTH 7031 Special Readings (1-3)

ANTH 7032 Special Readings (1-3)

ANTH 7033 Special Readings (1-3)

ANTH 7035 Race and Migration (3)
Race and Migration explores how race and culture impact the settlement experiences of migrating people. We will focus primarily on Latinos, West Indians, and Asians and use New York City as a primary sight of investigation, but also examine case studies of migration within the Caribbean and Latin America. Questions the course will address include: how do people go from having diverse national and cultural identities to being people with a "race?" How does becoming a "raced" person shape identity, economic mobility, and social and cultural belonging? How are people differently affected by being placed in social categories in adoptive homes? How do migrants both preserve and create new culture? How do they remain connected to their countries of origin? Where do they find power? In pursuit of these questions, we will consider theories on race, culture, diaspora, nation, transnationalism, exclusion, and belonging.

ANTH 7040 Special Readings (1-3)
Special Readings. Course may be repeated 3 times for credit.

Course Limit: 3

ANTH 7041 Special Readings (1-3)
Special Readings.

ANTH 7042 Special Readings (1-3)
Special Readings.

ANTH 7043 Special Readings (1-3)
Special Readings.

ANTH 7090 Selected Cultural Systms (3)
Selected Cultural Systems. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 7091 Selected Cultural Systems (3)
Selected Cultural Systems.

Maximum Hours: 99

ANTH 7092 Selected Cultural Systems (3)
Selected Cultural Systems.

ANTH 7093 Selected Cultural Systems (3)
Selected Cultural Systems.

Maximum Hours: 99

ANTH 7094 Selected Cultural Systems (3)
Selected Cultural Systems.

Maximum Hours: 99

ANTH 7095 Selected Cutural Systems (3)
Selected Cultural Systems. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 7096 Selected Cultural Systems (3)
Selected Cultural Systems.

Maximum Hours: 99

ANTH 7097 Selected Cultural Systems (3)
Selected Cultural Systems.

Maximum Hours: 99

ANTH 7098 Selected Cutural Systems (3)
Selected Cultural Systems.

Maximum Hours: 99

ANTH 7099 Selected Cultural Systems (3)
Selected Cultural Systems.

Maximum Hours: 99

ANTH 7100 Quantitative Methods Arc (3)

ANTH 7110 Cultures of Sub-Saharan Africa (3)
A survey of the cultures of sub-Saharan Africa from the time of European contact to the present. A detailed study of selected African cultures, identifying, and explaining cultural diversity and unity of African cultures, and comparing African cultures with cultures of other geographic areas. Inequality, development, the family, gender roles, kinship systems, and world view are considered.

ANTH 7120 Conquest & Colonialism (3)
Comparative and global perspectives on the archaeology of culture contact and colonialism.

ANTH 7130 North American Prehistory (3)
A survey of the archaeology of Canada and the United States from the appearance of man in the New World to the arrival of the Europeans.

ANTH 7170 Seminar In Archaeology (3)
Graduate seminar on selected topics of contemporary interest and emphasis in anthropological archaeology. Offered irregularly. Seminar topics identified by archaeology faculty members.

ANTH 7180 Adv Middle American Arch Adv Middle American Arch Advanced Middle American Archaeology (3)
Graduate seminar on selected topics of contemporary interest and emphasis in Middle American archaeology. Offered irregularly. Seminar topics identified by archaeology faculty members.

ANTH 7190 Economic Anthropology (3)
The study of economic behavior in band, tribal, and peasant societies. Emphasis on the impact of culture and environment on economic decision-making in the Third World. Competing theoretical approaches, particularly evolutionary, ecological, substantivist and Marxist are critically reviewed.

ANTH 7215 Sem. Historical Ecology (4)
The scientific and philosophical basis of the research program. Comparisons with cultural ecology, cultural materialism, evolutionary biology, landscape ecology. Distinctions and convergences between evolution and history. Hard-core postulates. Case studies from Amazonia, tropical Africa, Europe (especially France) Southeast Asia, East Asia (especially the Japanese archipelago and the adjoining Pacific Rim).

ANTH 7230 Research Design and Grant Writing (3)
This seminar for advanced graduate students considers strategies for designing and conducting theoretically driven research in anthropology, and it considers the principal characteristics of major paradigms and theoretical perspectives that shape anthropology in its contemporary forms. Designing research plans and making linkages between theory, strategies of inquiry, specific methodologies, and empirical datasets is both challenging and rewarding, and research design can take considerable amounts of time and effort. Crafting research proposals can also be both challenging and rewarding, especially given the need to communicate research plans to specialists in particular disciplines and proposal reviewers from fields of study and practice other than our own. Each student in this course will develop theoretical perspectives and methodological approaches that form the basis for the research she or he plans to conduct as a dissertation project. Each student will write a draft a proposal for dissertation research. Some discussion throughout the course will be devoted to professional development and to specific funding programs that support doctoral and postdoctoral research in anthropology and related fields of study.

ANTH 7240 Ancient Civilizations of Mesoamerica (3)
Survey of the ancient civilizations of Mexico and Central America. Overview of culture history from the first settled villages through the Spanish conquest. Special emphasis on the cultural developments of the Olmec, Zapotec, Maya, Toltec, and Aztec societies of highland Mexico, Gulf coast, and lowland Central America. Although the course stresses archaeological data, it will also include pre-Columbian aesthetic achievements, social organization, values, written records, and adaptation to varying environments.

ANTH 7250 Selected Research Topics (3)
Selected Research Topics.

ANTH 7290 Linguistic Analysis (3)
Language as a reflection of the human mind and the role of language in defining the essence of humanity. Language and the expression of social values. Emphasis on analysis of primary linguistic data. Critical examination of theories of linguistic structure.

ANTH 7300 History of Writing (3)
This course looks at the different systems of writing which have been used in various cultures through time with attention to the materials and purpose in relation to the cultures. Orientation to and practice in decipherment are included. Finally, the issues of modern script development are introduced.

ANTH 7310 Prehistory of Languages (3)
Historical Linguistics traces language change over time. Reconstruction through comparative method and internal paradigm examination is used to retro-project earlier stages of a language or a language family, elucidating interrelationships among languages, paths of migration, spheres of influence, and varieties of contact. Reconstructed vocabulary yields inferences about ancient homelands, social organization, and culture constructs. The processes observed in language change yield insights into human cognition and the language faculty.

ANTH 7320 Archaeology of Gender (3)
Gender refers to the cultural norms, ideals, expectations, and rules that shape the relationships and activities of men, women, and children. People in the present and recent past have conceptualized gender in many different ways, and there is great diversity in the range of gender roles and gender relations seen in different cultures. With ethnographic and historic evidence as interpretive guides, archaeologists can offer insights into the nature of gender roles and gender relations in past societies, and into the ways that gender norms have contributed to major trends in the history and prehistory of humankind. This course is an introduction to the archaeological study of the roles of men, women, and children in past societies; the relationships among women, men, and children in past communities; and the ideologies that have legitimized and naturalized those gender roles and gender relations. Case studies covered in the course are drawn from the archaeology of the Americas, Africa, Asia, and Europe.

ANTH 7330 Anthropology of Gender (3)
Introduction to forensic anthropology, a subdiscipline of physical anthropology concerned with the identification of human skeletal remains in medico-legal contexts. Surveys the history of the field and the techniques used to determine age, sex, and physical characteristics of an individual from skeletonized remains, as well as methods used for positive identification, estimating time since death, and determining cause and manner of death.

ANTH 7340 Dialectology (3)
Introduction to language variation both geographically and socially. The course looks at the history and methods of dialectology as well as the ways speakers demonstrate identity through speech patterns.

ANTH 7360 Anthropology of Cities (3)
This course focuses on anthropological approaches to cities and urban life. Topics include the cultural meanings of public space and the built environment, processes of social differentiation and class formation, the role of capital, and the emergence of social movements. The second half of the course is organized around a comparison of four ethnographic case-studies of cities outside the United States and Europe. Throughout the semester, studies will also discuss how anthropological approaches may be applied to New Orleans.

ANTH 7365 The Anthropology of Sex Work (3)
This course examines sex work as a form of labor in different sites around the world. More specifically it explores what compels people to become involved in the industry, who its participants are, who seeks sex workers and why. It also considers the factors that impact the differing ways sex work is practiced and how it affects families. Tourism and its implications for sex work is an important focus of the course as well. The class proceeds as a survey of literature that will introduce students to relevant theories regarding sex work and ethnographic information that will help understand debates on its regulation and legalization. The latter part of the course will focus on these debates and moral, health, and human rights concerns. The case studies examined in the course take place primarily in the Caribbean and Latin America. As such, the course will ask important questions regarding the intersections of race, class, and sexual orientation with sex work and consider how these intersecting dynamics shape the experiences and decision making processes of both sex workers and their clientele.

ANTH 7370 Locating Southeast Asia (3)
This course examines contemporary Southeast Asia. As one of the most diverse regions in the world, the region confounds easy characterization. The first part of the course provides students with a broad overview of the social, cultural, and political institutions of the region with a focus on Indonesia, Thailand, the Philippines, and Vietnam. The second part turns to contemporary issues including political and economic development, religious change, and cultural constructions of identity. Readings include academic essays, short stories, and full-length ethnographies.

ANTH 7400 Language & Culture (3)
Language is created by people and is constantly changing as the people who speak it change and adapt to new ways of being. Culture likewise is a creation of the interaction of people. Language indexes the values, beliefs, practices, power relationships and social identities of its speakers. This course will examine these facets of language use across a variety of cultures.

ANTH 7410 Prehistory of Eastern Mesoamerica (3)
Examines the development of highly advanced cultures and societies in one of the centers of native American civilization. Although the presentation stresses archaeological data, the course considers pre-Hispanic aesthetic achievements, social organization, values, written records, and adaptation to varying environments.

ANTH 7420 Semantics: Linguistic Approaches to Meaning (3)
Semantics is the study of meaning in language. As humans use language they produce meaning in any number of ways: through intonation, through body language, through contextual (in)congruities, and through the linguistic structures used. Semanticians try to limit their study to the last of these, while always aware of other meaning-creating tools. In this course, we begin with the study of logic-based theories of meaning, examining propositional meanings. At each stage in this initial investigation, we will keep in mind how this carefully restricted corpus compares with situated language use. In the second part of the course, we will systematically build in context to approach an understanding of natural semantics, the way human beings mean.

ANTH 7441 Lexicography: Dictionaries (3)
Lexicography is the making of dictionaries. Dictionaries take many forms and fulfill many functions. Dictionaries have evolved new formats; professional lexicographers share word gleaning with internet users. Dictionaries may be monolingual, di-, tri-, or multi-lingual, etymological or encyclopedic, synchronic or diachronic, prescriptive or descriptive, terminological or generic. Dictionary construction requires a number of skills which co-vary with the type of dictionary to be produced. This course provides an overview of dictionaries, their forms, formats and histories, while fostering a basic skill set for harvesting words and compiling lexicons. Dictionaries provide a cognitive map to communities of speakers, both past and present.

ANTH 7450 Methods of Observation in Behavioral Research (3)
This course focuses on the development, design, analysis, and presentation of research on behavior using observational methods. While these methods can be used on captive populations (zoo, research center) they are also appropriate for studies of free-ranging animals, including human beings. The student will be exposed to the specific challenges of observational research, and learn appropriate levels of analysis.

ANTH 7470 Many Faces of Islam (3)
Islam is a fundamental human experience in diverse socio-historic and cultural milieux. Ethnographies of Muslim communities highlight the heterogenity of Islamic perspectives and traditions. Focus on culturally situated Islamic practices and belief systems fosters a critical understanding of the emergent Islamic identities and their historico-cultural underpinnings.

ANTH 7510 Fossil Hominin Taxonomy and Systematics (3)
The number of proposed fossil hominid/hominin species has mushroomed in recent years yet the recognition of species in the human fossil record remains a daunting task. However, in order to reconstruct the phylogenetic (ancestor-descendent) relationships among humans, our ancestors, and close collateral relatives, we must group hominin fossils into meaningful taxonomic categories, ones that likely reflect truly monophyletic (shared common ancestor) descent patterns. This course explores different evolutionary species concepts and their applicability to human paleontology. Current approaches to the reconstruction of phylogenetic relationships are then discussed, and the taxonomic status of hominin species is assessed.

ANTH 7535 Native American Language and Linguistics (3)
This course will explore the richness of the linguistic diversity still preserved in the Native American languages of this hemisphere. Two thirds of the Native American languages spoken at time of European immigration have perished. Today even languages with large communities of fluent speakers face heavy assimilatory pressures. Language loss and simplification are rapidly changing the wordscape of the Americas.

ANTH 7560 Environmental Archaeology (3)
This course examines the fundamentally important relationship between human behavior and environmental change in the past. It looks at both the ways in which humans have responded to their environmental circumstances and the ways in which human activities have influenced environmental conditions at various scales. The course explores methods for learning about environmental conditions in the past and the nature of human interaction with the environment. The course also presents basic information on some particularly important topics concerning past human/environment interactions, including (1) causes of global climate change, (2) human roles in Pleistocene megafauna, (3) post-Pleistocene adaptation, (4) the origins of agriculture and animal domestication, (5) agricultural landscape modification and environmental over-exploitation, and (6) Holocene changes in human health, including the origins of modern disease epidemics.

ANTH 7570 Intermediate Kaqchikel Language (3)
Kaqchikel is one of the four largest Mayan groups in Guatemala, having over a million self-identified members, about half of whom speak their native mother tongue. Taught in three Kaqchikel communities in Guatemala, this six week course enables students to achieve conversational fluency and elementary reading/writing skills.

ANTH 7580 Advanced Kaqchikel Language (3)
Kaqchikel is one of the four largest Mayan groups in Guatemala, having over a million self-identified members, about half of whom speak their native mother tongue. Taught in three Kaqchikel communities in Guatemala, this six week course enables students to achieve conversational fluency and elementary reading/writing skills.

ANTH 7590 Syntactic Theory (3)
Introduction of transformational generative syntax, with examples from selected areas of English grammar. Formal models in grammatical description. Emphasis on the logic of linguistic argumentation.

ANTH 7610 Ceramic Analysis (3)
A laboratory course dealing with the descriptive analysis of archaeological ceramics. Introduction to aspects of ceramic technology, classification, description, and the use of ceramics in archaeological research. Emphasis will be on practical methods and techniques for analyzing, describing, reporting, and graphically representing ceramic artifacts.

ANTH 7620 Lithic Analysis (3)
A laboratory course dealing with the technological analysis of lithic artifacts. Introduction to fracture mechanics and flint napping, debitage analysis and classification. Application of principles and methods of technological classification, description, and graphical representation to archaeological specimens and modern replicates.

ANTH 7630 Linguistic Phonetics (3)
The course offers an overview of articulatory and acoustic phonetics with emphasis on matching acoustic cues closely with the articulatory gestures. The first part of the course will study the articulatory and acoustic cues to range of English and non-English speech sounds with information about the normal range of variation. The second part will focus on collecting and interpreting acoustic data, and using such data as evidence to solve phonological problems in normal and pathological speech.

ANTH 7640 Phonology (3)
This course provides an introduction to phonological analysis and theory, with strong emphasis on description and analysis of data from a wide variety of languages. Major issues to be addressed include universal principles of human phonological systems, language-specific variation, constraints on representation of rules, the relationship of phonology to morphological and syntactic components of the grammar, and the historical underpinnings of current theoretical models.

ANTH 7650 Morphology (3)
This course provides an introduction to prosodic and non-prosodic morphology with emphasis on data analysis and argumentation. With data from a variety of languages, the first part of the course will examine non-prosodic morphological processes to highlight the typology of word structure across languages. The second part will examine morphological processes conditioned by prosody, and consider the various frameworks for analyzing the data; eventually, the course will work toward a dormal model like that of McCarth and Prince's "Theory of Prosodic Morphology". The main objectives of the course are: (1) to learn to analyze morphological data; (2) to learn to compare alternative analysis for a given set of data and to find evidence to choose between the alternative, and (3) to learn to present linguistic analysis and argumentation in a coherent essay.

ANTH 7660 Discourse Analysis (3)
Study of written and spoken texts from a variety of languages and language use contexts. Focus on structural aspects of language (noun phrase construction and anaphora, topicalization, focus constructions, word order, deictics, and definite reference) as they relate to the situated use of language.

ANTH 7670 Language & Acquisition (3)
This course provides an introduction to issues such as the genetic basis of language ability and acquisition; neurological aspects of linguistic knowledge; first language acquisition; childhood bilingualism; language acquisition in special populations (deaf children, blind children, children with mental retardation, children with autism and children with specific language impairment). Emphasis will be on child language data collection, description, and analysis.

ANTH 7680 Language and Power (3)
Exploration of the ways that language indexes, reflects, and constructs power. Cross-cultural study of the interrelationship of social ascriptions, attitudes toward groups and their members, and the speech patterns of in-group/out-group members. Examination of the manipulation of power and its linguistic correlates in the domains of medicine, the media, education, and the law. Effects of language policy, especially officialization and standardization, on speakers of minority languages or codes.

ANTH 7690 Language and Gender (3)
An exploration of the structures of language, phonological, morphological, syntactic, semantic, and pragmatic, as they index, inter-relate with, and construct gender identities cross-culturally.

ANTH 7700 Ecological Anthropology (3)
Critically reviews case studies of ecosystemic and energetic relations between human populations, cultures, and the environment in diverse ethnographic settings of the world, such as Amazonia, the Great Basin, New Guinea, and Southeast Asia. Examines the historical emergence of ecological paradigms in anthropology. Compares the modern contributions of cultural ecology, evolutionary ecology, ethnoecology, and historical ecology. Evaluates potential contributions of ecological anthropology to general ecology.

ANTH 7720 Bioanthropology of Modern Humans (3)
Biological adaptations of living human populations to their environments, and the interaction of these adaptations with cultural patterns. Relationships of body size, form, and composition to climatic and nutritional factors in various geographical groups of modern man. Major adaptive problems facing the human species are discussed and implications for the future explored.

ANTH 7730 Forensic Anthropology (3)
Introduction to forensic anthropology, a subdiscipline of physical anthropology concerned with the identification of human skeletal remains in medico-legal contexts. Surveys the history of the field and the techniques used to determine age, sex, and physical characteristics of an individual from skeletonized remains, as well as methods used for positive identification, estimating time since death, and determining cause and manner of death.

ANTH 7735 Bioarcheology of Human Sacrifice (3)
This course will examine the literary, archaeological, and skeletal evidence of human sacrifice in past societies. It will critically review written accounts and physical evidence of the offering of human lives in ritual contexts, with a focus on archaeological sites that show convincing evidence of such activities. Case studies will be used to explore the question of why human lives were offered in particular places and times, while critically evaluating the evidence used to document and interpret such practices.

ANTH 7750 Human Paleopathology (3)
Survey of the field of paleopathology, the study of health and disease in ancient populations. Topics include methods for identifying evidence of injury and disease in bones, teeth, and mummified tissue; ancient medicine and surgery; chemical approaches to reconstructing diet; and human health trends through time.

ANTH 7780 Language Death (3)
Every fortnight a human language dies. Half the languages spoken in the Western Hemisphere at the turn of the 19th century have died. This course examines the forces that lead to language death, strategies that speakers whose linguistic heritage is endangered may deploy to revitalize their languages, and tools that linguists have used to preserve the knowledges of human speech communities.

ANTH 7850 The Four-Field Model (3)
Philosophical underpinnings of general anthropology. Epistemological ramifications of four anthropological fields (subdisciplines) as complete coverage of the subject matter. Contingency vs. rationale in the amalgamation of the four fields, as distinctive and definitive of the holistic study of Homosapiens. Initial development of the model in the British Isles; institutionalization in 20th century North America. Connections to study of natives of the New World and salvage ethnography. Growth and specialization in subdisciplines. Debates over the logic and practicality in continuing cohesion of the model.

ANTH 7930 Languages of Louisiana (3)
Examines the current and historical linguistic situation in Louisiana, from indigenous languages spoken at the time of contact with Europeans to the present. Covers basic features of the languages as well as their social settings. Students will further conduct independent field research projects, alone or in small groups, focusing on languages spoken in southern Louisiana, in particular in the city of New Orleans.

ANTH 7950 Special Projects (3)
Special Projects. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 7960 Special Projects (3)
Special Projects. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 7961 Special Projects (3)
Special Projects.

ANTH 7980 Thesis Research (3)
Two semester course for students writing an MA thesis in Anthropology 4+1 program.

Maximum Hours: 6

ANTH 9980 Masters Research (0)
Masters Research. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

ANTH 9990 Dissertation Research (0)
Dissertation Research. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

Anthropology (PAAN)

PAAN 2100 Land of the Pharaohs: An Introduction to Ancient Egypt (3)
In Land of the Pharaohs, we will use a combination of reading, writing, lecture, and discussion to address some of the most common questions people have about ancient Egypt and about how we are able to reconstruct parts of its history and culture, including (but not limited to): What motivated the ancient Egyptians to invest so much effort and wealth into their tombs and temples? What was life like for most ancient Egyptians? What was expected of members of society? How did this differ if one was a man or a women? How do Egyptian hieroglyphs work? Are they "picture writing"? What do we really know about ancient Egypt and how do we know it? The primary sources that we will use to answer these and other questions include: literature, letters, and administrative records; mythological stories about ancient Egyptian gods and goddesses and about creation; material culture/archaeological remains, such as artifacts found in graves; and art and architecture.

PAAN 2110 Ancient Egyptian Religion & Magic (3)
In Ancient Egyptian Religion and Magic, we will use a combination of reading, writing, lecture, and discussion to address some of the most common questions people have about ancient Egypt and about its religion, including (but not limited to): Why and how were the Great Pyramids of Giza built? What motivated the ancient Egyptians to invest so much effort and wealth into their tombs and temples? What practices in ancient Egypt should we consider part of religion? Which should we call magic? Should we even differentiate between the two? Can religion be separated from other aspects of life in ancient Egypt? Were the ancient Egyptians "religious to excess" as the historian Herodotus said? The sources that we will use to answer these and other questions include: literature, prayers, employment records, and letters; mythological stories about ancient Egyptian gods and goddesses and about creation; archaeological materials, and art and architecture.

PAAN 2120 Pyramids, Tombs, and Mummies: Death and Burial in Ancient Egypt (3)
In Pyramids, Tombs, and Mummies (Death and Burial in Ancient Egypt), we will use a combination of reading, writing, lecture, and discussion to address some of the most common questions people have about ancient Egypt and about how and why people were buried the way that they were, including (but not limited to): What motivated the ancient Egyptians to invest so much effort and wealth into their tombs? During some periods, kings were buried in pyramids, but what about everyone else? How did afterlife and other religious beliefs influence the way that people wished to be cared for after death? Why did the ancient Egyptians sometimes go to great lengths to preserve bodies through mummification? The primary sources that we will use to answer these and other questions include: literature, letters, and administrative records; material culture/archaeological remains, such as artifacts found in graves; art and architecture; and Tulane's own Egyptian Collection.

PAAN 2911 Special Topics (3)
Special topics in anthropology.

PAAN 2912 Special Topics (3)
Special Topics in Anthropology.

PAAN 2913 Special Topics (3)
Special Topics in Anthropology.

PAAN 2914 Special Topics (3)
Special Topics in Anthropology.

PAAN 2915 Special Topics (3)
Special Topics in Anthropology.

PAAN 3150 Culture and Place: Historical Cultural Adaptation to a Tropical Island (6)
This course provides an introduction to the ways in which basic principles of ethnography, ethnohistory, and material culture studies can be used to understand the cultural landscape. Normally offered during the Summer Session, the course will usually be conducted abroad. The emphasis will be on collaborative research skills, understanding of other cultures, and appreciation of the interrelationship of anthropology and geography.

PAAN 3190 Pirate Societies (3)
This course is an exploration of pirates from the perspective of the social sciences, with an emphasis on the study of traditions, values, and social statuses and relationships that were characteristic of a variety of pirate societies in historic times. Our objectives in this course will be to discover how historic pirate societies were formed in different areas of the world, how they were organized; and how and why their values and traditions differed from those of the larger societies from which they came.

PAAN 3200 Anthropology of Healing & Ritual (3)
This course engages a cross-cultural study of healing rituals, emphasizing how social relations and power shape the experiences, roles, practices, and interactions of patients and healers. How is healing—and its related concepts of suffering and illness— defined, managed, and understood in different social and cultural contexts? What is the relationship between healer and patient/client and the public? How are rituals, as social performances, transformative ? How do rituals designed to help manage suffering, enforce, reproduce or challenge cultural ideas about power, gender, and social order? Students will critically examine these questions through reading ethnographies, critical theory and historical essays in order to gain a deeper understanding of healing modalities throughout the world and over time. Readings for this course will examine a wide array of healing rituals and modalities including shamanism, curanderismo, Vodou/Voodoo, western biomedicine and others. Specific aspects of healing rituals will also be analyzed, including symbolism, the role of music and soundscapes, altered states of consciousness, as well as the socio-economic and political dimensions of healing. Because this course zeroes in on anthropological inquiry around the social performance of healing, it is an excellent complement to courses in health and medicine which focus on health systems. Lastly, students will reflect on what healing means in their own local communities, by composing their own research project on a healing ritual including an (optional) auto-ethnographic component.

PAAN 3230 Historical Anthropology of Caribbean (3)
This course is an exploration of the historic factors which created the cultural diversity and themes that characterize the Caribbean islands today. We will examine the cultural backgrounds of the major national and ethnic groups that came to the islands of the West Indies from pre-Columbian times through the twentieth century. This is not a traditional history course, but rather an examination of the factors that gave rise to certain cultural patterns that are distinctively Caribbean. Topics will include pre-Columbian adaptations to life on small islands; ethnicity among Native Americans in the early historic period; the demise of Native American peoples; the cultural backgrounds of enslaved Africans; Caribbean Creole languages; differences in slavery among the various European colonial powers; the emergence of Voodoo; the daily lives of buccaneers and runaways; & the role of plantations in shaping Afro-Caribbean cultural identities; immigration after the end of slavery.

PAAN 3250 Historical Anthropology of New Orleans (3)
This course is an exploration of the historic factors that created the cultural diversity and themes which characterize New Orleans today. The course examines the cultural backgrounds of the major national and ethnic groups that came to Louisiana in the 18th, 19th, and 20th centuries. The course also examines the ongoing attempts to secure the city from risks inherent in its natural environment.

PAAN 3400 Maps, Myths, and Reality (3)
We usually think of maps as objective depictions of the elements (streets, towns, rivers, etc.) that make up the natural and cultural terrain. However, the stories told by maps, like those told by history, are inherently selective. In addition -- again like history -- the features that are depicted on maps sometimes have no basis in reality. This is especially true of maps that attempt to describe places and people that were recently discovered, or that have not been extensively explored. When their subjects are unknown or poorly understood lands and people, maps can become playgrounds for the interaction of geographic fact, speculation, and myth. This course is an exploration of maps produced by European cartographers during the Age of Exploration, from roughly 1450-1700 A.D. (and brief consideration of the 18th and early 19th centuries), with particular attention to what maps of these periods can tell us about the evolving European understanding of the lands and cultures that lay beyond their own continent.

Arabic (ARBC)

ARBC 1010 Elementary Arabic I (4)
Basic introduction to the Arabic language. Emphasis on listening, speaking, reading, and writing.

ARBC 1020 Elementary Arabic II (4)
Second semester of Arabic language.

Prerequisite(s): ARBC 1010 or minimum score of PASS in 'ARBC 1020 Placement'.

ARBC 1290 Junior Year Abroad (1-20)
Junior year abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARBC 1940 Transfer Coursework (1-4)
Transfer coursework at the 1000 level.

Course Limit: 99

ARBC 2030 Intermediate Arabic (4)
Third semester of Arabic language. Continues development of reading and writing Arabic, but emphasis is placed on oral performance.

Prerequisite(s): minimum score of PASS in 'ARBC 2030 Placement' or ARBC 1020.

ARBC 2810 Special Topics (1-4)
Special Topics

Maximum Hours: 99

ARBC 2910 Independent Study (1-3)
Independent study in Arabic.Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARBC 3010 Special Topics (3)
Special topics in language, literature, and culture of the Arab world. Course may be repeated 3 times for credit.

Course Limit: 3

ARBC 3060 Business Arabic (3)
Introduction to the vocabulary and topics related to business in the Arabic speaking world.

Prerequisite(s): ARBC 3150.

ARBC 3150 Advanced Arabic (3)
A continuation of skills developed in ARBC 2030, which is a prerequisite for ARBC 3150. The Arabic language is used as the medium of instruction, and in addition to the further development of reading, writing, listening, and speaking skills, a greater emphasis is placed on culture.

Prerequisite(s): minimum score of PASS in 'ARBC 3150 Placement' or ARBC 2030.

ARBC 3170 Media Arabic (3)
This course will introduce students to vocabulary and topics related to contemporary Arabic media.

Prerequisite(s): ARBC 3150.

ARBC 3220 Introduction to Arabic Literature (3)
A general survey of modern Arabic literature. Major trends and genres such as romanticism and realism. Focus on modern Arabic fiction, especially post-colonial period. Sample authors studied include, among others: Hanan Al-Shaykh, Baha' Tahir.

Prerequisite(s): minimum score of PASS in 'ARBC 3000 Placement', minimum score of PASS in 'ARBC 3150 Placement' or ARBC 3150.

ARBC 3250 Arab Modern Culture (3)
Intensive language and culture training and a "hands on" learning experience. May combine academic instruction on Contemporary Arab social and cultural issues with community service focusing on critical, reflective thinking and personal and civic responsibility.

Prerequisite(s): ARBC 3150.

ARBC 3300 Arabic for International Relations and Diplomacy (3)
Introduction to vocabulary and topics related to contemporary politics, foreign service, international relations and diplomacy through Arabic media. Lexical knowledge and structures related to the topics above through authentic materials, including broadcast media.

Prerequisite(s): ARBC 3150.

ARBC 3810 Special Topics (1-4)
Special Topics

Maximum Hours: 99

ARBC 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): ARBC 3250.

Maximum Hours: 99

ARBC 4910 Independent Study (1-4)
Independent Study in Arabic. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARBC 5380 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARBC 5390 Junior Year Abroad (1-20)
Junior Year Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Architecture (ARCH)

ARCH 1001 Tactile Design in Architecture (3)
At the root of the architecture discipline is the study of design. In this two-week course, students will focus on analog techniques of design utilizing hand drawing, mixed media exploration, and physical model making. The course will allow students to embrace the tactile facets of the creative process as a foundation of Architecture and its allied fields. You will explore the city of New Orleans with your sketchbook, experiencing the spatial, environmental, and cultural context of New Orleans, while creating beautiful work that will be digitally archived for your professional portfolio.

ARCH 1002 Digital Design in Architecture (3)
This two-week course will focus on visual and spatial communication through digital media. Students will learn the Adobe Creative Suite (Photoshop, Illustrator, InDesign) as well as 3d modeling software to express their design ideas. We will explore the realms of digital design, representation, and production as a means of communicating information in a visual and compelling way. Students will have also the opportunity to create within our digital laboratory that includes laser cutters, 3d printers, a CNC router, and 3d scanner. You will work with innovative digital tools to compile a portfolio of work that is lively, relevant and professional.

ARCH 1003 Architecture: Real Estate (3)
Real Estate will introduce students to the fundamentals of real estate development, focusing on the complex forces and relationships that shape the built environment. In addition to class time and field trips, students will spend 15-hours of the curriculum collaborating on the Urban Land Institute's (ULI) Urban Plan project, which is a nationally recognized case assignment requiring students to form development teams to respond to a "request for proposals" for the redevelopment of a blighted site in a fictional community. The UrbanPlan project is conducted nationally at the high school, undergraduate, and graduate levels.

ARCH 1011 Architecture Studio (6)
As an introduction to the basic fundamental methods and principles of architectural design, students are given an immediate experience of the design process, developing their capacity to conceive, manipulate and analyze architectural form and space. An emphasis on verbal skills, and graphic and material techniques for architectural representation, enable students to express and communicate their ideas. The studio develops the students' capacity for critical thinking through constructive evaluation.

ARCH 1012 Architecture Studio (6)
As an introduction to the basic fundamental methods and principles of architectural design, students are given an immediate experience of the design process, developing their capacity to conceive, manipulate and analyze architectural form and space. An emphasis on verbal skills, and graphic and material techniques for architectural representation, enable students to express and communicate their ideas. The studio develops the students' capacity for critical thinking through constructive evaluation.

Prerequisite(s): ARCH 1011.

ARCH 1110 Intro to Architecture (3)
As a broad introduction to architecture, this course stresses the diversity of architectural discourse historically and presents the principle works and issues of the architectural profession today. The course serves as both a required foundation for architecture majors/minors and as a general introduction to architectural thought for non-majors. Architecture is a notoriously vast subject with many areas of consensus and a few areas of serious contention. This course will present a generalized framework of architectural thought and help to understand works of architecture and design in the larger cultures they serve.

ARCH 1111 Topics in Architecture History/Theory (1.5)
This is one of four required half-semester courses introducing students to architectural history and theory by exposing them to a broad range of architectural origins, buildings examples and influences. The goal of the architecture history and theory course sequence is to prepare students to become accomplished researchers—well able to connect a useful taxonomy of architectural examples to contemporary issues and ambitions. Each of the courses begins with a contemporary figure in architectural practice and proceeds in a reverse chronology to explore the precedents and linages of thought that have been synthesized in the work of that contemporary practice. Teaching by example, these courses will offer a lesson in how distant antecedents support and continue to inform the discipline today. By exploring both a western and a non-western canon from a broader range of voices and vantage points, students will learn to further contextualize the basic architectural vocabulary acquired in their introductory courses.

Corequisite(s): ARCH 1112.

ARCH 1112 Topics in Architecture History/Theory (1.5)
This is one of four required half-semester courses introducing students to architectural history and theory by exposing them to a broad range of architectural origins, buildings examples and influences. The goal of the architecture history and theory course sequence is to prepare students to become accomplished researchers—well able to connect a useful taxonomy of architectural examples to contemporary issues and ambitions. Each of the courses begins with a contemporary figure in architectural practice and proceeds in a reverse chronology to explore the precedents and linages of thought that have been synthesized in the work of that contemporary practice. Teaching by example, these courses will offer a lesson in how distant antecedents support and continue to inform the discipline today. By exploring both a western and a non-western canon from a broader range of voices and vantage points, students will learn to further contextualize the basic architectural vocabulary acquired in their introductory courses.

Corequisite(s): ARCH 1111.

ARCH 1121 History and Theory of Architecture and Urbanism I (3)
Discover the foundation and evolution of architectural tradition in this survey course, starting with prehistoric developments in Europe and continuing through the medieval period. This course is global in focus, including both Western and non-Western developments. The survey highlights a variety of aspects of the built environment such as architecture, urban settlements and landscapes. Coursework investigates monumental civic architecture, religious structures, as well as domestic buildings, the urban form, and architectural theory.

ARCH 1901 Special Topics (1-3)
Special Topics in Career Explorations. These are special workshops for pre-college students. Title and content may vary by summer term. See the Schedule of Classes or Summer School website for specific offerings.

Course Limit: 99

ARCH 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

ARCH 2021 Architecture Studio (6)
Second year studio concentrates on developed architectural form and design methodologies through processes of analysis, synthesis and transformation. Students work on the conceptual frameworks for their designs, with emphasis on issues of environmental context, urban design, and cultural and technological systems and their impact on architectural form. Different approaches to the making of form are investigated, along with principles of organization, such as spatial hierarchy, circulation, structure, and site relationships. Second semester will emphasize the relationship of design to cultural precedents, site conditions, programs, and material tectonics through the study of housing. Second year studios will be fully integrated with digital media classes to ensure that students gain fluency in computer aided design processes, drawing, spatial modeling and digital design techniques.

Prerequisite(s): ARCH 1012.

ARCH 2022 Architecture Studio (6)
Second year studio concentrates on developed architectural form and design methodologies through processes of analysis, synthesis and transformation. Students work on the conceptual frameworks for their designs, with emphasis on issues of environmental context, urban design, and cultural and technological systems and their impact on architectural form. Different approaches to the making of form are investigated, along with principles of organization, such as spatial hierarchy, circulation, structure, and site relationships. Second semester will emphasize the relationship of design to cultural precedents, site conditions, programs, and material tectonics through the study of housing. Second year studios will be fully integrated with digital media classes to ensure that students gain fluency in computer aided design processes, drawing, spatial modeling and digital design techniques.

Prerequisite(s): ARCH 2021.

ARCH 2113 Topics in Architecture History/Theory (1.5)
This is one of four required half-semester courses introducing students to architectural history and theory by exposing them to a broad range of architectural origins, buildings examples and influences. The goal of the architecture history and theory course sequence is to prepare students to become accomplished researchers—well able to connect a useful taxonomy of architectural examples to contemporary issues and ambitions. Each of the courses begins with a contemporary figure in architectural practice and proceeds in a reverse chronology to explore the precedents and linages of thought that have been synthesized in the work of that contemporary practice. Teaching by example, these courses will offer a lesson in how distant antecedents support and continue to inform the discipline today. By exploring both a western and a non-western canon from a broader range of voices and vantage points, students will learn to further contextualize the basic architectural vocabulary acquired in their introductory courses. Corequisite(s): ARCH 2114.

Corequisite(s): ARCH 2114.

ARCH 2114 Topics in Architecture History/Theory (1.5)
This is one of four required half-semester courses introducing students to architectural history and theory by exposing them to a broad range of architectural origins, buildings examples and influences. The goal of the architecture history and theory course sequence is to prepare students to become accomplished researchers—well able to connect a useful taxonomy of architectural examples to contemporary issues and ambitions. By exploring both a western and a non-western canon from a broader range of voices and vantage points, students will learn to further contextualize the basic architectural vocabulary acquired in their introductory courses. Corequisite(s): ARCH 2113.

Corequisite(s): ARCH 2113.

ARCH 2122 History and Theory of Architecture and Urbanism II (3)
The course covers the period from the Enlightenment through the early-Modern and high-Modern periods. While the course will emphasize the late-eighteenth (Enlightenment) creation of canonical pedagogies and strategies as foundational texts, it will also include nineteenth-century urbanism and landscapes, both of which condition the formation of material culture in the early- and mid-twentieth centuries. The course is written expressly for students of architecture; we will concentrate not only on the identification and formation of urban artifacts, buildings, architects, and movements, but also on the social, political, and historical context surrounding their genesis and development. The course material is presented according to successive themes, thereby facilitating not only an emphasis on the artifacts and their context, but also on the discourse that supports architecture as a discipline. These themes provide insight into the various motivations and ideas, upon which the history of Modern Architecture rests. In presenting the material in this manner, it is hoped that students will understand that history--in particular the history embedded in the material of architecture--indeed resonates through time, becoming relevant and vital to the genesis and formation of current and future architectural discourse.

Prerequisite(s): ARCH 1121 or AHST 3010.

ARCH 2211 Site Strategies (3)
Site Strategies is designed to prepare students of Architecture for site analysis prior to placing architectural projects in urban and non-urban contexts. Architects need to be aware of the complexities of a site in order to place a structure, understand the impacts of that placement, and to positively contribute to mitigating climate change. This class also teaches a few key skills for understanding a site: first, to understand drawing as a mode of inquiry and as a disciplinary tool to dissect the reality; and two, to develop the 'ecological view' of the reality.

ARCH 2212 Materials and Methods (3)
This course introduces the basic materials, types, and systems of building construction. After completing the course, students will be able to choose the appropriate construction materials and system for a building project and will be able to develop the preliminary structural design for a building.

ARCH 2213 Building, Climate, Comfort (4)
Creating energy-efficient homes is becoming increasingly crucial for our environment and for the wellbeing of individuals and communities. This course looks at efficiency through the strategic implementation of both passive and active systems. Students will learn about a series of building design strategies including active systems for Heating, Ventilating, and Cooling as well as passive strategies such as thermal insulation, high-performance glazing, outdoor solar shading, the use of thermal mass, and night ventilation passive.

Prerequisite(s): PHYS 1050, 1210 or 1310.

ARCH 2223 Building, Climate, Comfort Lab (0)
Building, Climate, Comfort Lab

Corequisite(s): ARCH 2213.

ARCH 2311 Digital Media (3)
An introductory course to 3D digital media concepts and techniques with a focus on the fundamental aspects of the Computer Aided Design process. Framed by a general introduction to digital media theory, students will gain fluency in a variety of software applications for the purpose of expanding the architectural design process. Specific emphasis is placed on the role of the computer as a tool for analysis, spatial investigation, and representation. Basic 3D modeling software such as AutoCad, Form.z and Rhino, will constitute the majority of course content.

ARCH 2322 Digital Media Workshop I (1)
Each one-credit course in the digital media workshop series provides intermediate and/or advanced instruction in digital media tools and techniques in coordination with its co-required second or third-year architectural design studio course.

Corequisite(s): ARCH 2022.

ARCH 2327 Intro to Spatial Painting (3)

ARCH 2710 The City I (3)
City I is the first semester of a two-semester-long survey introduction to the multi-disciplinary field of Urban Studies. Three broad substantive themes are explored: (1) History and Morphology of Cities and City Systems; (2) Urban Ecology and Demographics; and (3) Urban Design/ Aesthetics/ Land Use /Planning. Attention is given to historically, geographically, and culturally diverse cases in order to provide a comparative framework and backdrop to contemporary practices.

ARCH 2720 The City II (3)
City II is the second semester of a two-semester-long survey introduction to the multi-disciplinary field of Urban Studies. Four broad substantive themes are examined: (1) Urban Political Economy; (2) the Social Psychology of Cities; (3) Urban Culture and Expressive Arts; and (4) Urbanism and Urban Issues. Course employs a modular focus and historical-comparative framework, but primary emphasis will be on the contemporary era.

ARCH 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARCH 2892 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARCH 2930 Special Topics (0-6)

Maximum Hours: 99

ARCH 2931 Special Topics (3,4)
Special Topics in Architecture. Course may be repeated unlimited times for credit.

Course Limit: 99

ARCH 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

ARCH 3031 Architecture Studio (6)
The first semester of third year will introduce students to urbanism and the city, focusing on the larger environmental context for architectural design. The second semester of third year is the culmination of the required studio sequence and is fully integrated with coursework in history/theory, technology, visual/digital media and professional concerns. Architecture 320 provides an opportunity for the student to synthesize the skills and ideas developed through two and a half years of work and apply these to the comprehensive development of a design project. Students will engage in a complex architectural project situated within an urban environment. The studio will include analysis and design at the scale of the neighborhood or the city, as well as thorough and detailed design of a large building with a complex program. Emphasis is placed on a comprehensive process including the thorough analysis of site issues and architectural precedents, detailed design development of the project, and the coordination and integration of structural, environmental and material systems in the design-work. Students will also develop skills in programming, building information modeling and management, digital fabrication methods and the production of complex digital models and working drawings through fully integrated coursework which will act as a support for the design process.

Prerequisite(s): ARCH 2022.

ARCH 3032 Architecture Studio (6)
The first semester of third year will introduce students to urbanism and the city, focusing on the larger environmental context for architectural design. The second semester of third year is the culmination of the required studio sequence and is fully integrated with coursework in history/theory, technology, visual/digital media and professional concerns. The studio provides an opportunity for the student to synthesize the skills and ideas developed through two and a half years of work and apply these to the comprehensive development of a design project. Students will engage in a complex architectural project situated within an urban environment. The studio will include analysis and design at the scale of the neighborhood or the city, as well as thorough and detailed design of a large building with a complex program. Emphasis is placed on a comprehensive process including the thorough analysis of site issues and architectural precedents, detailed design development of the project, and the coordination and integration of structural, environmental and material systems in the design-work. Students will also develop skills in programming, building information modeling and management, digital fabrication methods and the production of complex digital models and working drawings through fully integrated coursework which will act as a support for the design process.

Prerequisite(s): ARCH 3031*.
* May be taken concurrently.

ARCH 3130 Architectural Research Methods (3)
This course introduces students to various research paradigms to engage and produce architectural scholarship. Architectural Research Methods will include weekly readings and written responses, a literature review of relevant texts, and a proposal for a research topic. Students will develop skills necessary to support their work in research-based Option Studios and other courses with expectations of scholarly outputs.

ARCH 3142 Contemporary Swiss Architecture (3)
This seminar will explore significant achievements in contemporary Swiss architecture focusing on the work of Peter Zumthor, Herzog & de Meuron, and Gion Caminada. By studying a relatively limited number of key buildings and architects, the seminar will engage broader discussions regarding contemporary architectural practice in general. Where helpful or relevant, works of architecture from various global settings and time periods will be referenced.

Prerequisite(s): ARCH 2113, 2114 or 2122.

ARCH 3144 Philosophies of Architecture (3)
This seminar begins with a consideration of philosophy as a foundation for the development of an architectural theory. After a discussion of some basic concepts and terms we sketch a broad outline of the categories and organization of the discipline of philosophy. We then study the rationalist and empiricist positions in architectural theory, the emergence of Kantian critical philosophy, the shift in emphasis in 20th century philosophy from epistemology to ontology that is characteristic of Existentialism, and the late 20th century attack on traditional epistemology characteristic of poststructuralism. We then discuss the emergence of literary theory as a paradigmatic discipline in the last 30 years as well as the expansion of western philosophy to include aspects of Zen Buddhism, Taoism, and eastern mystical traditions. With this foundation, the course focuses more specifically on theories of architecture and aesthetics and their relationships to various philosophical positions.

Prerequisite(s): ARCH 1111, 1112, 2113 or 2114.

ARCH 3150 Identity & Agency in Architecture (3)
This course confronts the simple fact that the practice of architecture has a substantial diversity deficit among its professionals and argues that this has negative impacts for design of our built environment. Winston Churchill famously said, "We shape our buildings. Thereafter, they shape us." So what is the impact when our built environment is shaped through the lens of only one part of our population? How does the result shape the rest of us? This course delves into the interplay between identity and the built environment in the United States, both in the historical context and today. It focuses on how underrepresented people have and have not had voice and agency in the shaping of the American built environment and explores future potentials for a built environment that is more reflective of, and improved by, a multiplicity of identities. This is a seminar and a service learning course in which we will use both the readings and discussion of a traditional seminar and the outside-of-the-classroom engagement of service learning to understand the paradigm that we are studying and attempt to change the narrative. By bringing architectural studies to 11-13 year-old students who might not otherwise have direct access to them, we will shift the potential of identity and agency in the built environment of tomorrow. At the same time, we will learn about the built environment through the perspectives of our younger co-learners. Together, we will reshape our own experiences of the built environment and how we envision its creators. Twenty hours of service learning working with our partners in architectural studies, fieldtrips, and an exhibit installation is required. Students do not need to be architecture majors to take this course, but they must possess a seriousness of interest and intent to contribute meaningfully to both the academic and service aspects of the course.

ARCH 3214 Structural Systems (4)
This course teaches students about the performance of structural framing systems in buildings. Students gain an understanding of the relationships amongst parameters of structural framing systems and their impact on design decisions. The course covers the effects of gravitational and lateral structural loads on framing members, connections and foundation, investigated through quantitative analysis.

Prerequisite(s): PHYS 1050, 1210 or 1310.

ARCH 3215 Integrated Building Systems (4)
This course will explore the integration of building systems – structure, circulation, environmental systems and building envelope in the architectural design process. Using the knowledge of systems gained from previous Technology Systems courses, we will develop a greater understanding of the critical interrelations of these systems, their requisite calibration to environmental concerns, and the essential role they play in supporting design intent.

Prerequisite(s): ARCH 2211*, 2212*, 2213* and 3214*.
* May be taken concurrently.

ARCH 3233 Energy Modeling (3)
The application of building modeling using computer simulation tools plays an integral role in the design and evaluation of energy efficient and sustainable buildings. Architects use these simulation to understand and assess building performance at various stages of the design process. A basic understanding of energy systems, and the ability to design and manipulate them, will be especially important as we move into a future where climate change has become a reality, and environmental regulations on the built environment will tighten.

ARCH 3234 Tectonics of Anisotropic Material Properties (3)
This seminar focuses on the tectonic characteristics of component assembly through the lens of anisotropic material properties. Our goal is to gain insight into how the visual intention and the material execution are reconciled through the design and construction process, informing the tectonics of the assembly as a whole.

ARCH 3239 Space Arch/Walking Cities/Fut. (3)

ARCH 3312 Advanced Digital Media (3)
The second course of the digital media sequence covers advance techniques for digital drawing, modeling, and image production. Students will continue to explore techniques for orthographic, axonometric, and perspective projection drawing. Advanced topics will include representation techniques such as texture mapping, rendering (raytracing, global illumination, high dynamic range images, etc.), animation, procedural modeling, and parametric modeling. Software covered in the course will include Rhino, Grasshopper, V Ray, and 3DS Max.

Prerequisite(s): ARCH 2311.

ARCH 3331 Digital Media Workshop II (1)
Each one-credit course in the digital media workshop series provides intermediate and/or advanced instruction in digital media tools and techniques in coordination with its co-required second or third-year architectural design studio course.

Corequisite(s): ARCH 3031.

ARCH 3332 Digital Media Workshop III (1)
Each one-credit course in the digital media workshop series provides intermediate and/or advanced instruction in digital media tools and techniques in coordination with its co-required second or third-year design studio course.

Corequisite(s): ARCH 3032.

ARCH 3335 Computional Design (3)
Prerequisite(s): ARCH 2311.

Prerequisite(s): ARCH 2311.

ARCH 3351 Digital Fabrication (3)
Prerequisite(s): ARCH 2311 or ADGM 3100.

Prerequisite(s): ARCH 2311 or ADGM 3100.

ARCH 3360 Cinematic Architecture (3)

ARCH 3363 Theories In Digital Media (3)
Prerequisite(s): ARCH 2311 or ADGM 3100.

Prerequisite(s): ARCH 2311 or ADGM 3100.

ARCH 3511 Professional Concerns I (3)
This course provides an overview of professional concerns involving Professional Practice & Ethics. The course focuses on an examination of the history of the profession and the activities, services, markets, clients, culture, and organization of professional firms. Issues relating to project management, marketing, and the economic base of architectural practice, as well as ethical issues confronting individual practitioners and the profession at large.

ARCH 3530 Ethics, Efficacy & Arch (3)

ARCH 3620 CONTEXT: Dsgn & Existing Bldgs (3)
Prerequisite(s): AHST 1121 or 3010.

Prerequisite(s): AHST 1121 or 3010.

ARCH 3630 Housing and the City (3)
Prerequisite(s): ARCH 1121 or AHST 3010.

Prerequisite(s): ARCH 1121 or AHST 3010.

ARCH 3640 Contemporary Swiss Arch (3)
Prerequisite(s): ARCH 2122 or AHST 3020.

Prerequisite(s): ARCH 2122 or AHST 3020.

ARCH 3644 Philosophies of Architecture (3)
This seminar begins with a consideration of philosophy as a foundation for the development of an architectural theory. After a discussion of some basic concepts and terms we sketch a broad outline of the categories and organization of the discipline of philosophy. We then study the rationalist and empiricist positions in architectural theory, the emergence of Kantian critical philosophy, the shift in emphasis in 20th century philosophy from epistemology to ontology that is characteristic of Existentialism, and the late 20th century attack on traditional epistemology characteristic of poststructuralism. We then discuss the emergence of literary theory as a paradigmatic discipline in the last 30 years as well as the expansion of western philosophy to include aspects of Zen Buddhism, Taoism, and eastern mystical traditions. With this foundation, the course focuses more specifically on theories of architecture and aesthetics and their relationships to various philosophical positions.

Prerequisite(s): ARCH 2122 or AHST 3020.

ARCH 3731 Urban Geography and New Orleans as a Case Study (4)
Open to everyone, this fall-semester class introduces students to the sub-discipline of urban geography by using greater New Orleans as our study area. We will explore the spatial dimensions of urbanization, investigating the underlying physical geography of cities, why they form where they do, where and how they expand, how they alter their environment, and how neighborhoods form in various demographic configurations. Through illustrated lectures and nine hours of field trips, students will come away with an expanded vocabulary and knowledge of urbanism, geography, and of New Orleans.

ARCH 3742 Design in the Public Interest (3)
Design in the Public Interest invites students to critically reflect on the role of designers, methodologies of design practice, and how we might expand our capacities to engage more diverse communities. Through lectures, readings, discussions, workshops, and local trips, students will explore the interplay between societal factors and the built environment, develop skills to explore the relationships between space, mind, and body in our environments, and merge community engagement principles with design practice to effect real-world change. Past semesters have included planning level studies, storytelling projects, design proposals for public spaces, and ideas for making interactive exhibitions. This seminar is open to all majors, offering opportunities for interdisciplinary learning in addition to interactions with community partners, practicing artists, and guest scholars.

Prerequisite(s): ARCH 1110.
Corequisite(s): ARCH 3890.

ARCH 3764 NOLA Geography for Architects (3)
This spring-semester class uses greater New Orleans to focus on the intersection between the discipline of geography and the profession of architecture. While it is particularly relevant to those in the School of Architecture, all students are welcome to enroll. Through 15+ hours of field trips and illustrated lectures on architecture, geography, and the built environment, students will come away with research skills based on an enriched understanding of both fields, and of greater New Orleans.

ARCH 3771 Latin Amer. Urban Experience (3)

ARCH 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): ARCH 3742.

Maximum Hours: 99

ARCH 3891 Service Learning (0-1)

Maximum Hours: 99

ARCH 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

ARCH 4041 Advanced Studio Elective / Research (6)
Upon completion of ARCH 3032, Bachelor of Architecture students are encouraged to engage research, and research-based design opportunities. Research studios, taught by both fulltime and visiting faculty, offer a range of topics and projects which explore a variety of architectural issues and areas of research. Students choose elective studios that suit their interests, needs and goals, through focused, faculty led research topics. Advanced Studio Electives develop areas of knowledge depth as well as experience within a broader cultural and disciplinary field. Recently, research studios have ranged in focus from urban design and landscape issues to housing, materials, and design-build (through URBANbuild and Small Center). Some research studios include international travel funded by Mintz Global Travel Studio funding. Travel abroad programs (refer to section on International Study) are also available to students at this point in their education. Prerequisite(s): ARCH 3032 if pursuing a B.Arch. ARCH 2022 if pursuing a BSA.

Prerequisite(s): ARCH 2022 or 3032.

ARCH 4042 Advanced Studio Elective / Research (6)
Upon completion of ARCH 3032, Bachelor of Architecture students are encouraged to engage research, and research-based design opportunities. ARCH 2022 if pursuing a BSA.

Prerequisite(s): ARCH 2022 or 3032.

ARCH 4133 Museums: History, Design, Culture (3)
This seminar-style course investigates museums as preeminent cultural institutions of the 21st century. It is developed in weekly modules through substantive readings and case studies that range across architectural and programmatic typologies, sites and contexts, functional requirements, and theories and practices of display. The geographic reach of the course is international. Selected readings focus on the institutional development of museums, the roles that museums play in the construction of individual and communal identities, and the contributions that museums make particularly to urban cultural economies. Readings also address current research concerning the development of new museum publics through the application of cutting-edge digital technologies and web-based applications.

ARCH 4140 Sectional Strategies (3)
The seminar explores spatial and social themes that are revealed and explored through the vertical cut of the section. Lectures, readings and student presentations will look at both historic and contemporary projects for buildings, cities and landscapes.

Prerequisite(s): ARCH 1110 and 1012.

ARCH 4225 Engaged Urban Design (3)
Urban design includes everything from the visionary to the mundane; from the shape and endless possibilities of the public commons to the rules and regulations of equine stabling. Tulane's Small Center for Collaborative Design has long worked with cities and towns both globally and here at home, engaging with mayors, neighborhood groups, and businesses to help them envision the future of their neighborhoods and cities. In the Gulf South, Small Center has aided cities in reimagining public spaces after disaster, preserving cultural landmarks, engaging residents around public art, and more. This seminar centers around real-time, engaged projects in collaboration with local residents, neighborhoods, and cities. Students will work directly with local residents, business owners, city officials, and others working to make the City of New Orleans more engaging and equitable. Student research and design will directly support local businesses and non-profits in promoting their work through pedestrian-friendly urban design, wayfinding, parks, community gardens, zoning changes, and more.

Prerequisite(s): ARCH 1012.

ARCH 4252 Urbanbuild Technology (3)
The activities in this course, along with ARCH 4552, URBANbuild Professionalism, will require each student to demonstrate a range of abilities, and an awareness of important issues and knowledge. The research will allow students to address and solve problems of coordination and construction at varying scales. At the same time, events will continue to emphasize considerations that transcend practicality, such as spatial definition and hierarchy, formal composition, massing, proportion, and other aesthetic and psychological issues. As a continuation of research and developments initiated in the URBANbuild design studio, design/build activities are carefully coordinated in effort to satisfy the requirements of two courses: (1) ARCH 4552 URBANbuild Professionalism and (2) ARCH 4252 URBANbuild Technology

ARCH 4253 Advanced Tech Fabrication (3)

ARCH 4335 Computational Design (3)
Prerequisite(s): ARCH 2311 or ADGM 3100.

Prerequisite(s): ARCH 2311 or ADGM 3100.

ARCH 4345 The Architecture of Observation (3)
This course articulates the power of in situ sketching for recording both the logos and pathos of place. More than observation, this pattern of documen- tation will be taught as a method of field work, or on-site data collection. The sketchbook is your arsenal for observation. Composition, catalog and collage will be employed to not only articulate tangi- bles but to perhaps also capture an ethos. The media by which the explorations will occur will be largely graphite, ink and watercolor and at a scale commen- surate with field work, the sketchbook. Precedent research will occur through analysis of the field work of notable architects. As the course instructs in the cataloging of place and less in the fundamentals of sketching, some freehand drawing aptitude is expected.

Prerequisite(s): ARCH 1011.

ARCH 4347 Spatial Painting (3)
Prerequisite(s): ARCH 2327.

Prerequisite(s): ARCH 2327.

ARCH 4352 Advanced Digital Fabrication (3)

ARCH 4512 Professional Concerns II (3)
This course exams the role BIM [Building Information Modeling] takes in defining and shaping the way we imagine and construct buildings in contemporary architectural thinking and practice. The course is structured around the idea that BIM is not truly a program for modeling: it is a medium for the communication and dissemination of information to different stakeholders in a project – and as such is a tool for practice. The semester will use one BIM software, Autodesk Revit, as a case study, and through and by developing proficiency in this software and questioning its place in the discourse students will be equipped to enter the field of practice with the skills and critical thinking required to be thought leaders.

ARCH 4522 Ethics in the Built Environment (3)
Ethics is fundamentally a system of shared principles, and as such requires active discussion. These discussions can happen at the scale of a profession, an industry association, or an individual firm–but too often we are more comfortable using only the language of business or economics in a business setting, and so avoid ethical or values-based discussions. And yet, any group of professionals is hired both for their skill and for their judgment. This course will evaluate ethical and public policy dilemmas in the built environment, building a fluency with this language in a professional context. We will identify genuine moral dilemmas in current professional practice and connect them to underlying professional values. In doing so, we will consider the effects of decisions nominally made by senior practitioners and principals; but we will also emphasize opportunities for more junior professionals to instigate a discussion of professional ethics in their own firm or professional setting.

ARCH 4550 Career Development Lab (1)

ARCH 4552 Urbanbuild Professionalism (3)
The activities in this course, along with ARCH 4252, URBANbuild Technology, will require each student to demonstrate a range of abilities, and an awareness of important issues and knowledge. The research will allow students to address and solve problems of coordination and construction at varying scales. At the same time, events will continue to emphasize considerations that transcend practicality, such as spatial definition and hierarchy, formal composition, massing, proportion, and other aesthetic and psychological issues. As a continuation of research and developments initiated in the URBANbuild design studio, design/build activities are carefully coordinated in effort to satisfy the requirements of two courses: (1) ARCH 4552 URBANbuild Professionalism and (2) ARCH 4252 URBANbuild Technology

ARCH 4560 Architecture Internship (3)

Maximum Hours: 99

ARCH 4570 Architecture CPS Internship (3)

ARCH 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours

Maximum Hours: 99

ARCH 4891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARCH 4892 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARCH 4905 Teaching Practicum (1-6)
Teaching courses give upper-level undergraduate and graduate students an opportunity to work with a faculty advisor to work as a teaching assistant for academic credit. Qualified students must develop a syllabus and schedule with the faculty advisor to be approved by the program directors prior to registration. This course may be repeated 2 times for credit.

Course Limit: 2

ARCH 4910 Independent Study (1-6)

ARCH 4915 Research Practicum (1-6)
Teaching courses give upper-level undergraduate and graduate students an opportunity to work with a faculty advisor to work as a research assistant for academic credit. Qualified students must develop a syllabus and schedule with the faculty advisor to be approved by the program directors prior to registration. This course may be repeated 2 times for credit.

Course Limit: 2

ARCH 4920 Independent Study Abroad (1-6)

ARCH 4930 Special Topics (3,4)
Special Topics in Architecture. Course may be repeated unlimited times for credit.

Course Limit: 99

ARCH 4931 Special Topics (3)
Special Topics in Architecture. Course may be repeated unlimited times for credit.

Course Limit: 99

ARCH 4932 Special Topics (3)
Special Topics in Architecture. Course may be repeated unlimited times for credit.

Course Limit: 99

ARCH 4933 Special Topics (3)
Special Topics in Architecture. Course may be repeated unlimited times for credit.

Course Limit: 99

ARCH 4934 Special Topics (3)
Special Topics in Architecture. Course may be repeated unlimited times for credit.

Course Limit: 99

ARCH 4935 Special Topics (3)
Special Topics in Architecture. Course may be repeated unlimited times for credit.

Course Limit: 99

ARCH 4936 Special Topics (3)
Special Topics in Architecture. Course may be repeated unlimited times for credit.

Course Limit: 99

ARCH 4937 Special Topics (3)
Special Topics in Architecture. Course may be repeated unlimited times for credit.

Course Limit: 99

ARCH 4938 Special Topics (3)
Special Topics in Architecture. Course may be repeated unlimited times for credit.

Course Limit: 99

ARCH 4939 Special Topics (3)
Special Topics in Architecture. Course may be repeated unlimited times for credit.

Prerequisite(s): ARCH 2122 or AHST 3020.
Course Limit: 99

ARCH 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

ARCH 4950 Special Topics (3)
Special Topics in Architecture.

Maximum Hours: 6

ARCH 4990 Honors Thesis (3)

ARCH 4991 Senior Honors Project in Fine Arts (3)
Senior Honors Project in Fine Arts

ARCH 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): ARCH 4990.

ARCH 5001 Senior Honors Project in Fine Arts (3)
Senior Honors Project in Fine Arts

Prerequisite(s): ARCH 4991.

ARCH 5051 Advanced Studio Elective / Research (6)
Upon completion of ARCH 3032, Bachelor of Architecture students are encouraged to engage research, and research-based design opportunities. Research studios, taught by both fulltime and visiting faculty, offer a range of topics and projects which explore a variety of architectural issues and areas of research. Students choose elective studios that suit their interests, needs and goals, through focused, faculty led research topics. Advanced Studio Electives develop areas of knowledge depth as well as experience within a broader cultural and disciplinary field. Recently, research studios have ranged in focus from urban design and landscape issues to housing, materials, and design-build (through URBANbuild and Small Center). Some research studios include international travel funded by Mintz Global Travel Studio funding. Travel abroad programs (refer to section on International Study) are also available to students at this point in their education. Prerequisite(s): ARCH 4042 if pursuing a B.Arch. ARCH 4041 or 4042 if pursuing a BSA.

Prerequisite(s): ARCH 4041 or 4042.

ARCH 5380 Junior Year Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARCH 5390 Junior Year Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARCH 5580 Architecture Preceptorship (6)

Maximum Hours: 12

ARCH 5891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARCH 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

ARCH 5980 Thesis Preparation (3-4)
A thesis at Tulane School of Architecture is the pursuit of innovation in the field of architecture, by connecting architectural topics, societal concerns, and personal lines of inquiry. It is developed by first investigating an architectural topic and developing a position on it (a hypothesis), then developing a design proposal through which that topic is explored, and the position is “demonstrated” (a thesis). In the fall semester students conduct investigations and process work that explores the concept of an architectural thesis. The goal is to grasp the societal concerns to which the thesis responds and to identify a personal take both through a precedent study and through the analysis of one’s personal trajectory. At the end of the fall semester, students state their hypothesis and the “vehicle” (project) for its development.

Prerequisite(s): ARCH 3130.

ARCH 5990 Thesis Studio (6)
The final architectural thesis project is the culmination of the architectural design curriculum and the capstone project for architecture students. Thesis is a course that asks student to synthesize their architectural knowledge and education - making design decisions within a complex project while demonstrating broad integration and consideration of architectural history and theory, environmental stewardship, technical documentation, accessibility, site context, life safety, structural systems, materials, and assemblies. Students should have prepared a thesis proposal by the beginning of the fall semester, and have approval for this proposal by the thesis directors which they develop in the fall in Thesis Research and then expand in a design studio context in the spring semester.

Prerequisite(s): ARCH 5980.

ARCH 6011 Architecture Studio (6)
ARCH 6011 is the first studio in our 3.5 year MArch degree program, and as such is an introduction to architectural culture. This studio is an intensive summer course that builds foundational skills and a spoken and visual architectural vocabulary through an iterative project-based design studio. The class covers methods of representation, the analysis of existing architectural projects and asks students to transform their ideas and programmatic requirements into spatial organizations. Starting from a case study, each student goes through a process of extraction, abstraction, exploration, relocation and re-programming, to arrive at their proposal integrated into the urban fabric of New Orleans. The use of diagrams, catalogs, 2D orthogonal representation (plans, sections, elevations), axonometric projections and perspectives of each student’s design proposal help underscore the main representation strategies and form a core set of skills and strategies that students will draw from in their subsequent studios.

ARCH 6012 Architecture Studio (6)
ARCH 6012 is the second half of a two-studio sequence for our 3.5-year graduate students during their initial summer. This studio expands on the lessons learned in 6011 and introduces construction systems, material properties, and multiple scales of design. Case study projects ground this second studio project and asks students to think critically about the components and materials of a project and how they might be re-deployed in different climates with sustainable strategies in mind. During this course, the students explore different representational scales: the territory scale, to analyze and understand the problems and challenges of the placement through mapping, and the small scale to explore the structural systems and construction details.

ARCH 6015 Architecture Studio (1)
This studio is intended for students in the advanced standing M. Arch I track. Working alongside students entering the MArch I regular track, students will expand on the tools, skills, and concepts acquired in their previous design experience, through digital drawing, 3-D modeling, and making. The goal is to instill students with the ability to navigate the digital and the physical realm fluidly by focusing on efficient digital work-flows and processes. The studio will be structured through a series of prescribed exercises assisted by assigned readings, slide presentations, and skill instructions. Students will gain the ability to digitally model and extract 2D orthographic drawings as well as 3D print or laser-cut and assemble physical models.

ARCH 6021 Architecture Studio (6)
Second year studio concentrates on developed architectural form and design methodologies through processes of analysis, synthesis and transformation. Students work on the conceptual frameworks for their designs, with emphasis on issues of environmental context, urban design, and cultural and technological systems and their impact on architectural form. Different approaches to the making of form are investigated, along with principles of organization, such as spatial hierarchy, circulation, structure, and site relationships. Second semester will emphasize the relationship of design to cultural precedents, site conditions, programs, and material tectonics through the study of housing. Second year studios will be fully integrated with digital media classes to ensure that students gain fluency in computer aided design processes, drawing, spatial modeling and digital design techniques.

ARCH 6022 Architecture Studio (6)
Second year studio concentrates on developed architectural form and design methodologies through processes of analysis, synthesis and transformation. Students work on the conceptual frameworks for their designs, with emphasis on issues of environmental context, urban design, and cultural and technological systems and their impact on architectural form. Different approaches to the making of form are investigated, along with principles of organization, such as spatial hierarchy, circulation, structure, and site relationships. Second semester will emphasize the relationship of design to cultural precedents, site conditions, programs, and material tectonics through the study of housing. Second year studios will be fully integrated with digital media classes to ensure that students gain fluency in computer aided design processes, drawing, spatial modeling and digital design techniques.

ARCH 6031 Architecture Studio (6)
ARCH 6031 is a core graduate studio focusing on contemporary architectural interventions in a historic context. The studio develops deeper understandings of urban analysis and fundamental issues of the regulatory environment (such as zoning and life safety codes) to ground a mixed use building proposal within an existing, historical urban context. Students also explore issues of programming and building use within complex contexts, as well as techniques of site analysis and the insightful development of a site strategy for specific architectural proposals. The studio also serves as a reinforcement of fundamental techniques in two and three dimensional representation and preparation for meeting presentation objectives for conceptual, technical and strategic elements of a project.

ARCH 6032 Architecture Studio (6)
This studio is the culmination of the core studio sequence and is fully integrated with coursework in history/theory, technology, visual/digital media and professional concerns. The studio provides an opportunity for the student to synthesize the skills and ideas developed through two and a half years of work and apply these to the comprehensive development of a design project. Students will engage in a complex architectural project situated within an urban environment. The studio will include analysis and design at the scale of the neighborhood or the city, as well as thorough and detailed design of a large building with a complex program. Emphasis is placed on a comprehensive process including the thorough analysis of site issues and architectural precedents, detailed design development of the project, and the coordination and integration of structural, environmental and material systems in the design-work. Students will also develop skills in programming, building information modeling and management, digital fabrication methods and the production of complex digital models and working drawings through fully integrated coursework which will act as a support for the design process.

ARCH 6041 Advanced Studio Elective (6)
Advanced level graduate studio design courses, characterized by architectural problems of varying scale and complexity, require solutions that are thorough in their conception, development, and execution. Approximately 4-8 studio sections are offered each semester, each with a unique focus as determined by individual faculty teaching these studios. These various sections offer a range of topics and projects which explore a variety of architectural issues and areas of research. Examples include: aesthetic, cultural, and symbolic issues, housing, community design, urban design, historic preservation, and design/build. Students choose elective studios that suit their interests, needs, and goals, in order to focus their studies while gaining experience within a broader cultural and disciplinary field. This concentration develops areas of expertise beneficial to future professional growth.

ARCH 6042 Advanced Studio Elective (6)
Advanced level graduate studio design courses, characterized by architectural problems of varying scale and complexity, require solutions that are thorough in their conception, development, and execution. Approximately 4-8 studio sections are offered each semester, each with a unique focus as determined by individual faculty teaching these studios. These various sections offer a range of topics and projects which explore a variety of architectural issues and areas of research. Prerequisite(s): ARCH 6032.

ARCH 6110 Intro to Architecture (3)
As a broad introduction to architecture, this course stresses the diversity of architectural discourse historically and presents the principle works and issues of the architectural profession today. The course serves as both a required foundation for architecture majors/minors and as a general introduction to architectural thought for non-majors. Architecture is a notoriously vast subject with many areas of consensus and a few areas of serious contention. This course will present a generalized framework of architectural thought and help to understand works of architecture and design in the larger cultures they serve.

ARCH 6111 Topics in Architecture History/Theory (1.5)
This is one of four required half-semester courses introducing students to architectural history and theory by exposing them to a broad range of architectural origins, buildings examples and influences. The goal of the architecture history and theory course sequence is to prepare students to become accomplished researchers—well able to connect a useful taxonomy of architectural examples to contemporary issues and ambitions. Each of the courses begins with a contemporary figure in architectural practice and proceeds in a reverse chronology to explore the precedents and linages of thought that have been synthesized in the work of that contemporary practice. Teaching by example, these courses will offer a lesson in how distant antecedents support and continue to inform the discipline today. By exploring both a western and a non-western canon from a broader range of voices and vantage points, students will learn to further contextualize the basic architectural vocabulary acquired in their introductory courses.

Corequisite(s): ARCH 6112.

ARCH 6112 Topics in Architecture History/Theory (1.5)
This is one of four required half-semester courses introducing students to architectural history and theory by exposing them to a broad range of architectural origins, buildings examples and influences. Corequisite(s): ARCH 6113.

ARCH 6121 History and Theory of Architecture and Urbanism I (3)
Discover the foundation and evolution of architectural tradition in this survey course, starting with prehistoric developments in Europe and continuing through the medieval period. This course is global in focus, including both Western and non-Western developments. The survey highlights a variety of aspects of the built environment such as architecture, urban settlements and landscapes. Coursework investigates monumental civic architecture, religious structures, as well as domestic buildings, the urban form, and architectural theory.

ARCH 6122 History and Theory of Architecture and Urbanism II (3)
The course covers the period from the Enlightenment through the early-Modern and high-Modern periods. While the course will emphasize the late-eighteenth (Enlightenment) creation of canonical pedagogies and strategies as foundational texts, it will also include nineteenth-century urbanism and landscapes, both of which condition the formation of material culture in the early- and mid-twentieth centuries. The course is written expressly for students of architecture; we will concentrate not only on the identification and formation of urban artifacts, buildings, architects, and movements, but also on the social, political, and historical context surrounding their genesis and development. The course material is presented according to successive themes, thereby facilitating not only an emphasis on the artifacts and their context, but also on the discourse that supports architecture as a discipline. These themes provide insight into the various motivations and ideas, upon which the history of Modern Architecture rests. In presenting the material in this manner, it is hoped that students will understand that history--in particular the history embedded in the material of architecture--indeed resonates through time, becoming relevant and vital to the genesis and formation of current and future architectural discourse.

ARCH 6130 Architectural Research Methods (3)
This course introduces students to various research paradigms to engage and produce architectural scholarship. Architectural Research Methods will include weekly readings and written responses, a literature review of relevant texts, and a proposal for a research topic. Students will develop skills necessary to support their work in research-based Options Studios and other courses with expectations for scholarly outcomes.

ARCH 6133 Museums: History, Design, Culture (3)
This seminar-style course investigates museums as preeminent cultural institutions of the 21st century. It is developed in weekly modules through substantive readings and case studies that range across architectural and programmatic typologies, sites and contexts, functional requirements, and theories and practices of display. The geographic reach of the course is international. Selected readings focus on the institutional development of museums, the roles that museums play in the construction of individual and communal identities, and the contributions that museums make particularly to urban cultural economies. Readings also address current research concerning the development of new museum publics through the application of cutting-edge digital technologies and web-based applications.

ARCH 6140 Sectional Strategies (3)
The seminar explores spatial and social themes that are revealed and explored through the vertical cut of the section. Lectures, readings and student presentations will look at both historic and contemporary projects for buildings, cities and landscapes.

ARCH 6142 Contemporary Swiss Architecture (3)
This seminar will explore significant achievements in contemporary Swiss architecture focusing on the work of Peter Zumthor, Herzog & de Meuron, and Gion Caminada. By studying a relatively limited number of key buildings and architects, the seminar will engage broader discussions regarding contemporary architectural practice in general. Where helpful or relevant, works of architecture from various global settings and time periods will be referenced.

ARCH 6144 Philosophies of Architecture (3)
This seminar begins with a consideration of philosophy as a foundation for the development of an architectural theory. After a discussion of some basic concepts and terms we sketch a broad outline of the categories and organization of the discipline of philosophy. We then study the rationalist and empiricist positions in architectural theory, the emergence of Kantian critical philosophy, the shift in emphasis in 20th century philosophy from epistemology to ontology that is characteristic of Existentialism, and the late 20th century attack on traditional epistemology characteristic of poststructuralism. We then discuss the emergence of literary theory as a paradigmatic discipline in the last 30 years as well as the expansion of western philosophy to include aspects of Zen Buddhism, Taoism, and eastern mystical traditions. With this foundation, the course focuses more specifically on theories of architecture and aesthetics and their relationships to various philosophical positions.

ARCH 6150 Identity & Agency in Architecture (3)
This course confronts the simple fact that the practice of architecture has a substantial diversity deficit among its professionals and argues that this has negative impacts for design of our built environment. Winston Churchill famously said, "We shape our buildings. Thereafter, they shape us." So what is the impact when our built environment is shaped through the lens of only one part of our population? How does the result shape the rest of us? This course delves into the interplay between identity and the built environment in the United States, both in the historical context and today. It focuses on how underrepresented people have and have not had voice and agency in the shaping of the American built environment and explores future potentials for a built environment that is more reflective of, and improved by, a multiplicity of identities. This is a seminar and a service learning course in which we will use both the readings and discussion of a traditional seminar and the outside-of-the-classroom engagement of service learning to understand the paradigm that we are studying and attempt to change the narrative. By bringing architectural studies to 11-13 year-old students who might not otherwise have direct access to them, we will shift the potential of identity and agency in the built environment of tomorrow. At the same time, we will learn about the built environment through the perspectives of our younger co-learners. Together, we will reshape our own experiences of the built environment and how we envision its creators. Twenty hours of service learning working with our partners in architectural studies, fieldtrips, and an exhibit installation is required. Students do not need to be architecture majors to take this course, but they must possess a seriousness of interest and intent to contribute meaningfully to both the academic and service aspects of the course.

ARCH 6211 Site Strategies (3)
Site Strategies is designed to prepare students of Architecture for site analysis prior to placing architectural projects in urban and non-urban contexts. Architects need to be aware of the complexities of a site in order to place a structure, understand the impacts of that placement, and to positively contribute to mitigating climate change. This class also teaches a few key skills for understanding a site: first, to understand drawing as a mode of inquiry and as a disciplinary tool to dissect the reality; and two, to develop the 'ecological view' of the reality.

ARCH 6212 Materials and Methods (3)
This course introduces the basic materials, types, and systems of building construction. After completing the course, students will be able to choose the appropriate construction materials and system for a building project and will be able to develop the preliminary structural design for a building.

ARCH 6213 Building, Climate, Comfort (4)
Creating energy-efficient homes is becoming increasingly crucial for our environment and for the wellbeing of individuals and communities. This course looks at efficiency through the strategic implementation of both passive and active systems. Students will learn about a series of building design strategies including active systems for Heating, Ventilating, and Cooling as well as passive strategies such as thermal insulation, high-performance glazing, outdoor solar shading, the use of thermal mass, and night ventilation passive.

ARCH 6214 Structural Systems (4)
This course teaches students about the performance of structural framing systems in buildings. Students gain an understanding of the relationships amongst parameters of structural framing systems and their impact on design decisions. The course covers the effects of gravitational and lateral structural loads on framing members, connections and foundation, investigated through quantitative analysis.

ARCH 6215 Integrated Building Systems (4)
The Integrated Building Systems is the capstone of the core building technology sequence in support of the co-requisite ARCH 6032 Integrated Architecture Studio. It draws on the knowledge gained in previous courses to methodically integrate multiple building systems in the design process. The course instills an innate under- standing of critical interrelation amongst the systems, their requisite calibration to environmental concerns, and their essential role in supporting design intent.

ARCH 6223 Building, Climate, Comfort Lab (0)
Corequisite(s): ARCH 6213.

Corequisite(s): ARCH 6213.

ARCH 6225 Engaged Urban Design (3)
Urban design includes everything from the visionary to the mundane; from the shape and endless possibilities of the public commons to the rules and regulations of equine stabling. Tulane's Small Center for Collaborative Design has long worked with cities and towns both globally and here at home, engaging with mayors, neighborhood groups, and businesses to help them envision the future of their neighborhoods and cities. In the Gulf South, Small Center has aided cities in reimagining public spaces after disaster, preserving cultural landmarks, engaging residents around public art, and more. This seminar centers around real-time, engaged projects in collaboration with local residents, neighborhoods, and cities. Students will work directly with local residents, business owners, city officials, and others working to make the City of New Orleans more engaging and equitable. Student research and design will directly support local businesses and non-profits in promoting their work through pedestrian-friendly urban design, wayfinding, parks, community gardens, zoning changes, and more.

ARCH 6233 Energy Modeling (3)
The application of building modeling using computer simulation tools plays an integral role in the design and evaluation of energy efficient and sustainable buildings. Architects use these simulation to understand and assess building performance at various stages of the design process. A basic understanding of energy systems, and the ability to design and manipulate them, will be especially important as we move into a future where climate change has become a reality, and environmental regulations on the built environment will tighten.

ARCH 6234 Tectonics of Anisotropic Material Properties (3)
This seminar focuses on the tectonic characteristics of component assembly through the lens of anisotropic material properties. Our goal is to gain insight into how the visual intention and the material execution are reconciled through the design and construction process, informing the tectonics of the assembly as a whole.

Course Limit: 2

ARCH 6239 Space Arch/Walking Cities/Fut. (3)

ARCH 6252 Urbanbuild Technology (3)
The activities in this course, along with ARCH 6552, URBANbuild Professionalism, will require each student to demonstrate a range of abilities, and an awareness of important issues and knowledge. The research will allow students to address and solve problems of coordination and construction at varying scales. At the same time, events will continue to emphasize considerations that transcend practicality, such as spatial definition and hierarchy, formal composition, massing, proportion, and other aesthetic and psychological issues. As a continuation of research and developments initiated in the URBANbuild design studio, design/build activities are carefully coordinated in effort to satisfy the requirements of two courses: (1) ARCH 6552 URBANbuild Professionalism and (2) ARCH 6252 URBANbuild Technology

ARCH 6253 Advanced Tech Fabrication (3)

ARCH 6311 Digital Media (3)
An introductory course to 3D digital media concepts and techniques with a focus on the fundamental aspects of the Computer Aided Design process. Framed by a general introduction to digital media theory, students will gain fluency in a variety of software applications for the purpose of expanding the architectural design process. Specific emphasis is placed on the role of the computer as a tool for analysis, spatial investigation, and representation. Basic 3D modeling software such as AutoCad, Form.z and Rhino, will constitute the majority of course content.

ARCH 6312 Advanced Digital Media (3)
The second course of the digital media sequence covers advance techniques for digital drawing, modeling, and image production. Students will continue to explore techniques for orthographic, axonometric, and perspective projection drawing. Advanced topics will include representation techniques such as texture mapping, rendering (raytracing, global illumination, high dynamic range images, etc.), animation, procedural modeling, and parametric modeling. Software covered in the course will include Rhino, Grasshopper, V-Ray, and 3DS Max.

Prerequisite(s): ARCH 6311 or 8311.

ARCH 6322 Digital Media Workshop I (1)
Each one-credit course in the digital media workshop series provides intermediate and/or advanced instruction in digital media tools and techniques in coordination with its co-required second or third-year architectural design studio course.

Corequisite(s): ARCH 6022.

ARCH 6327 Intro to Spatial Painting (3)

ARCH 6331 Digital Media Workshop II (1)
Each one-credit course in the digital media workshop series provides intermediate and/or advanced instruction in digital media tools and techniques in coordination with its co-required second or third-year architectural design studio course.

Corequisite(s): ARCH 6031.

ARCH 6332 Digital Media Workshop III (1)
Each one-credit course in the digital media workshop series provides intermediate and/or advanced instruction in digital media tools and techniques in coordination with its co-required second or third-year design studio course.

Corequisite(s): ARCH 6032.

ARCH 6335 Computational Design (3)

ARCH 6341 Drawing and Analysis (3)

ARCH 6345 The Architecture of Observation (3)
This course articulates the power of in situ sketching for recording both the logos and pathos of place. More than observation, this pattern of documen- tation will be taught as a method of field work, or on-site data collection. The sketchbook is your arsenal for observation. Composition, catalog and collage will be employed to not only articulate tangi- bles but to perhaps also capture an ethos. The media by which the explorations will occur will be largely graphite, ink and watercolor and at a scale commen- surate with field work, the sketchbook. Precedent research will occur through analysis of the field work of notable architects. As the course instructs in the cataloging of place and less in the fundamentals of sketching, some freehand drawing aptitude is expected.

ARCH 6347 Spatial Painting (3)
Prerequisite(s): ARCH 6327.

Prerequisite(s): ARCH 6327.

ARCH 6351 Digital Fabrication (3)

ARCH 6352 Advanced Digital Fabrication (3)

ARCH 6360 Cinematic Architecture (3)

ARCH 6363 Theories In Digital Media (3)

ARCH 6511 Professional Concerns I (3)
This course provides an overview of professional concerns involving Professional Practice & Ethics. The course focuses on an examination of the history of the profession and the activities, services, markets, clients, culture, and organization of professional firms. Issues relating to project management, marketing, and the economic base of architectural practice, as well as ethical issues confronting individual practitioners and the profession at large.

ARCH 6512 Professional Concerns II (3)
This course exams the role BIM [Building Information Modeling] takes in defining and shaping the way we imagine and construct buildings in contemporary architectural thinking and practice. The course is structured around the idea that BIM is not truly a program for modeling: it is a medium for the communication and dissemination of information to different stakeholders in a project – and as such is a tool for practice. The semester will use one BIM software, Autodesk Revit, as a case study, and through and by developing proficiency in this software and questioning its place in the discourse students will be equipped to enter the field of practice with the skills and critical thinking required to be thought leaders.

ARCH 6522 Ethics in the Built Environment (3)
Ethics is fundamentally a system of shared principles, and as such requires active discussion. These discussions can happen at the scale of a profession, an industry association, or an individual firm--but too often we are more comfortable using only the language of business or economics in a business setting, and so avoid ethical or values-based discussions. And yet, any group of professionals is hired both for their skill and for their judgment. This course will evaluate ethical and public policy dilemmas in the built environment, building a fluency with this language in a professional context. We will identify genuine moral dilemmas in current professional practice and connect them to underlying professional values. In doing so, we will consider the effects of decisions nominally made by senior practitioners and principals; but we will also emphasize opportunities for more junior professionals to instigate a discussion of professional ethics in their own firm or professional setting.

ARCH 6530 Ethics, Efficacy & Arch (3)

ARCH 6550 Career Development Lab (1)

ARCH 6552 Urbanbuild Professionalism (3)
The activities in this course, along with ARCH 6252, URBANbuild Technology, will require each student to demonstrate a range of abilities, and an awareness of important issues and knowledge. The research will allow students to address and solve problems of coordination and construction at varying scales. At the same time, events will continue to emphasize considerations that transcend practicality, such as spatial definition and hierarchy, formal composition, massing, proportion, and other aesthetic and psychological issues. As a continuation of research and developments initiated in the URBANbuild design studio, design/build activities are carefully coordinated in effort to satisfy the requirements of two courses: (1) ARCH 6552 URBANbuild Professionalism and (2) ARCH 6252 URBANbuild Technology

ARCH 6560 Architecture Internship (3)

Maximum Hours: 6

ARCH 6580 Architecture Preceptorship (6)

Maximum Hours: 12

ARCH 6620 CONTEXT: Dsgn & Existing Bldgs (3)

ARCH 6630 Housing and the City (3)
Prerequisite(s): ARCH 6121 or AHST 6610.

Prerequisite(s): ARCH 6121 or AHST 6610.

ARCH 6640 Contemporary Swiss Arch (3)

ARCH 6731 Urban Geograph & NO Case Study (3)
Open to everyone, this fall-semester class introduces students to the sub-discipline of urban geography by using greater New Orleans as our study area. We will explore the spatial dimensions of urbanization, investigating the underlying physical geography of cities, why they form where they do, where and how they expand, how they alter their environment, and how neighborhoods form in various demographic configurations. Through illustrated lectures and nine hours of field trips, students will come away with an expanded vocabulary and knowledge of urbanism, geography, and of New Orleans.

ARCH 6742 Design in the Public Interest (3)
Design in the Public Interest invites students to critically reflect on the role of designers, methodologies of design practice, and how we might expand our capacities to engage more diverse communities. Through lectures, readings, discussions, workshops, and local trips, students will explore the interplay between societal factors and the built environment, develop skills to explore the relationships between space, mind, and body in our environments, and merge community engagement principles with design practice to effect real-world change. Past semesters have included planning level studies, storytelling projects, design proposals for public spaces, and ideas for making interactive exhibitions. This seminar is open to all majors, offering opportunities for interdisciplinary learning in addition to interactions with community partners, practicing artists, and guest scholars.

ARCH 6764 NOLA Geography for Architects (3)
This spring-semester class uses greater New Orleans to focus on the intersection between the discipline of geography and the profession of architecture. While it is particularly relevant to those in the School of Architecture, all students are welcome to enroll. Through 15+ hours of field trips and illustrated lectures on architecture, geography, and the built environment, students will come away with research skills based on an enriched understanding of both fields, and of greater New Orleans.

ARCH 6771 Urban Planning in Latin America (3)
This seminar examines a select number of Latin American metropolitan centers that have been unique symbols of Latin America's urbanity. They include Tenochtitlan/Mexico City, Cuzco, Potosí, Havana, Lima, Quito, Bogotá, Ouro Preto, Buenos Aires, Rio de Janeiro, and São Paulo. Through reading and discussing a curated selection of critical, historical essays, we study the many distinct ways in which scholars have analyzed and characterized the urban development of these cities. We emphasize the singular historical conditions that created their distinctive urban settings, and we focus on the form and meaning of their built environments as evidenced in buildings and urban landscapes and their representations in maps, prints, paintings, literary descriptions, and photographs, as well as in data drawn from a broad range of social, economic, and institutional sources. One key goal of the course is to demonstrate the critical role that visual and other expressive representations play in shaping our assessments of the qualities of life that cities offer.

ARCH 6905 Teaching Practicum (1-6)
Teaching courses give upper-level undergraduate and graduate students an opportunity to work with a faculty advisor to work as a teaching assistant for academic credit. Qualified students must develop a syllabus and schedule with the faculty advisor to be approved by the program directors prior to registration. This course may be repeated 2 times for credit.

Course Limit: 2

ARCH 6910 Independent Study (1-6)

ARCH 6915 Research Practicum (1-6)
Teaching courses give upper-level undergraduate and graduate students an opportunity to work with a faculty advisor to work as a research assistant for academic credit. Qualified students must develop a syllabus and schedule with the faculty advisor to be approved by the program directors prior to registration. This course may be repeated 2 times for credit.

Course Limit: 2

ARCH 6920 Independent Study Abroad (1-6)

ARCH 6925 Independent Thesis Research (3)
Students will conduct supervised research in support of their project in the Thesis Studio course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARCH 6930 Special Topics (3)
Special Topics in Architecture. Course may be repeated unlimited times for credit.

Course Limit: 99

ARCH 6931 Special Topics (3)
Special Topics in Architecture. Course may be repeated unlimited times for credit.

Course Limit: 99

ARCH 6932 Special Topics (3)
Special Topics in Architecture. Course may be repeated unlimited times for credit.

Course Limit: 99

ARCH 6933 Special Topics (3)
Special Topics in Architecture. Course may be repeated unlimited times for credit.

Course Limit: 99

ARCH 6934 Special Topics (3)
Special Topics in Architecture. Course may be repeated unlimited times for credit.

Course Limit: 99

Special Topics in Architecture. Course may be repeated unlimited times for credit.

Course Limit: 99

ARCH 6939 Special Topics (3)
Special Topics in Architecture. Course may be repeated unlimited times for credit.

Course Limit: 99

ARCH 6940 Transfer Coursework (0-20)
Transfer coursework at the 6000 level. Departmental approval required.

Maximum Hours: 99

ARCH 6950 Special Topics (0-3)
Special Topics in Architecture. Course may be repeated 2 times for credit.

Course Limit: 2

ARCH 6980 Thesis Research (3)
ARCH 6980, Thesis Research, is a course in which graduate students in their final year work toward the development of a thesis proposal to address a significant issue in the built environment, overseen by a faculty thesis director. The goal of this fall semester course is for students to identify a research topic, understand the context and precedents of the topic (in theory and built form), formulate a hypothesis, develop or adapt appropriate research methods, and summarize the trajectory of your research as a thesis proposal. Students work with their thesis director to establish weekly meeting times and a timeline for proposal development. Upon successful completion of this course, and with approval of the proposal's content, students advance to the thesis semester, which includes ARCH 6990: Thesis (6 credits) and ARCH 6925: Independent Thesis Research (3 credits)

ARCH 6990 Thesis Studio (6)
ARCH 6990, Thesis Studio, is a course in which graduate students in their final year develop and test a thesis addressing a significant issue in the built environment, overseen by a faculty thesis director. The final graduate thesis project is the culmination of the architectural design curriculum and the capstone of research and design synthesis for students. Graduate students can choose to pursue a thesis project in their final year of study or may opt to take the research studio track. Students who elect to do an independent Thesis Studio must fulfill specific academic requirements and have prepared a thesis topic over the preceding summer, and have approval for this proposal by a thesis director and graduate program director, and must take ARCH 6980 in the fall semester to develop their thesis proposal before taking 6990, Thesis Studio.

Architecture (PAAR)

PAAR 1230 New Orleans Architecture (3)
This illustrated course examines New Orleans architecture from the city's founding in 1718 to the present time, as well as its historic neighborhoods. The city's architectural legacy will be explored from the standpoint of broad architectural stylistic trends, their relationship to national and international trends, the forces and architects that helped shape the styles, and local building types. Thirty-eight architectural styles will be examined, including Colonial, Revivals, Aesthetic, Eclectic, Arts and Crafts, and Modern Movement. Identifying characteristics and materials of each style will be discussed through numerous illustrations of demonstrating the variety of each style based on the most current research. Historic interiors and landscapes will be perfunctorily addressed. Field observations of historic architecture will be included, as well as urban history of New Orleans.

PAAR 2600 Old & Green Restoration (3)
The purpose of this class is to provide an introduction on where Historic Preservation and Environmental Conservation overlap in practice and theory. Topics include sustainability, preservation and environmental planning, rural preservation, easements and transfer of development rights, Smart Growth, adaptive reuse, green building, heritage eco-tourism, historic places and global climate change, and interior environmental health.

PAAR 2610 If These Buildings Could Talk (3)
The future of the past is the heart of historic preservation, the topic of “If These Buildings Could Talk”. It is a field of study that offers insight into a variety of fields that deal with change and what should be saved for the next generation. Our culture is reflected in our buildings, landscapes, material culture, and intangible heritage. This class will provide a broad introductory background on the field of historic preservation, looking at issues of conservation, planning, management, and methodology. Besides buildings, we will also study the people who used them, historical events and significance, vehicles, and architectural design for a more holistic understanding of preservation.

PAAR 2620 City Streets Urban Living (3)
This class is an introduction to the diverse range of disciplines and approaches to the study of all aspects of cities and suburbs. This includes economics, planning, architecture, ecology, transportation systems, politics, social relations, etc. This is in contrast to rural studies.

PAAR 2910 Special Topics (3)
Special topics in architecture. Course may be repeated unlimited times for credit.

Course Limit: 99

Architecture - Design (DESG)

DESG 1005 Fundamentals of Design & Making (4)
Project-based course that provides an introduction to the fundamentals of the iterative design process, focusing on cultivating the visualization and communication skills necessary to analyze design problems and to synthesize creative solutions. Students work in a collaborative, studio environment and will have an introduction to various types of 2D and 3D design media, both analog and digital. Students maintain an active sketchbook throughout the course, though no previous drawing experience is required.

DESG 1105 Intro Design/Creative Thinking (3)
This course will offer a broad introduction to the fundamental principles of design, visual communication, and creative problem-solving. Students will gain a greater understanding and appreciation for design by looking deeply and analytically at the constructed world around them. From the scale of the body to the scale of the city, course content will explore two-dimensional and three-dimensional design as a vehicle for considering the aesthetics and utility of man-made objects. No prerequisites are necessary.

DESG 1110 Introduction to Design History (3)
This course comprehensively explores the evolution of design throughout history, encapsulating profound concepts spanning from prehistory to the modern era. Serving as a foundational platform, it invites students to cultivate and nurture their intellectual curiosity regarding material culture and our engagement with, comprehension of, and enhancement of it. Design history delves into the multifaceted influences of social trends, historical events, technological advancements, architecture, and the fine arts on contemporary design. Employing a pedagogical approach encompassing lectures, visual examples, creative workshops, independent research, and written assessments, students will acquire an understanding of printed media, typography, as well as interior, graphic, and fashion design. The curriculum highlights designed objects considered pivotal by scholars, covering diverse topics such as 20th Century Design, Design in America, BIPOC and Under-Represented Designers, and the Earliest Makers.

DESG 1880 Foundations of Textile Construction (4)
This course is an introduction to textile and fashion design. Students will develop their creativity and ideation skills as they explore the fashion design process, from concept development to final presentation. Students will be introduced to the history of textiles, fabric properties, color theory, and pattern design with industry-standard techniques. They will also learn how to generate and refine ideas for sustainability and technology in textile and fashion design. This course includes a lab component for production including garment construction, prototyping, textile engineer printing, and use of the Textile Lab's Juki industrial sewing machines.

Prerequisite(s): DESG 1005 or ARCH 1012.

DESG 1930 Special Topics (0-6)
Special Topics in Design

Course Limit: 99

DESG 1940 Transfer Coursework (0-20)
Transfer coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

DESG 2005 Design Studio I (4)
This 4-credit design studio is one in a series of three sequential design studios that offer interrelated lessons to advance knowledge and skill sets in analog and digital design. The curriculum engages a variety of project-based exercises that emphasize creative problem-solving, visual communication, and spatial composition. Studios will build upon one another as students learn to develop large-scale drawings, physical models, digital models, and calibrated images to explore the relationship between the virtual and physical in contemporary design production.

Prerequisite(s): DESG 2305.

DESG 2305 Visual Comm & Advocacy (4)
This course explores graphic design as a tool for communicating information and advocating for various purposes, in both print and digital forms. Students will gain skills in Adobe Creative Cloud programs including Illustrator, In Design, and Photoshop. The course will cover topics such as visual analysis and design research methods, informational hierarchy and typographic layout, and how to effectively apply design principles to create impactful visual communication and elicit a meaningful audience response. Coursework will be largely project based, with lectures, demos, group critique, and in-class lab time included.

Prerequisite(s): DESG 1005 and 1105.

DESG 2705 Design & Society (3)
Conversations about design often focus on an individual object. Yet, design's impact goes beyond the scale of an individual object and physical form at any scale is shaped by historic, cultural, economic, and social forces. This course will use topical case studies to investigate the role of design in society. A focus on the relationship between lived experience and design will allow the course to consider the roles and responsibilities of designers to address issues ranging from affordable housing to climate change and larger questions of inequity and accessibility. Overall, the course will look at policies and programs, natural and built environments, fashion and products and people and space relationships. The course will examine these and many other subjects with a focus on specific populations meant to explore global and local relationships within the purview of the past, present and future.

Prerequisite(s): DESG 1005 and 1105.

DESG 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a co-requisite course.

Maximum Hours: 99

DESG 2930 Special Topics (0-6)
Special Topics in Design

Course Limit: 99

DESG 2940 Transfer Coursework (0-20)
Transfer coursework at the 2000 level. Departmental approval may be required.

Maximum Hours: 99

DESG 3005 Design Studio II (4)
This 4-credit design studio is one in a series of three sequential design studios that offer interrelated lessons to advance knowledge and skill sets in analog and digital design. The curriculum engages a variety of project-based exercises that emphasize creative problem-solving, visual communication, and spatial composition. Studios will build upon one another as students learn to develop large-scale drawings, physical models, digital models, and calibrated images to explore the relationship between the virtual and physical in contemporary design production.

Prerequisite(s): DESG 2005.

DESG 3010 Prototyping Solutions (3)
This upper-level course draws upon foundational design skills from studio prerequisites to explore form-making through physical prototypes. Students will first analyze an archetype (e.g, stool, table, sawhorse), then will work to develop concepts, uses, and formal qualities to be tested on their own design. The iterative process will include material studies, physical and digital model-making, and constructed fabrication drawings that inform individual projects at full scale. Understanding design as inseparable from making is central to this course. The final builds are simultaneously a studied work and an object for refinement.

Prerequisite(s): DESG 2005.

DESG 3320 Designing with Dynamic Data (4)
This course will explore how design thinking can be applied to organize and effectively communicate complex data in order to create powerful and cohesive visual stories. After designing still-image infographics, students will explore how time-based media can add deeper viewer comprehension. Students will expand their confidence in Adobe Illustrator for graphic creation and infographic design, and will be introduced to Adobe AfterEffects for motion graphics. Bring your own laptop; Adobe software access will be provided. Coursework will be largely project based, with lectures, demos, group critique, and in-class lab time included.

Prerequisite(s): DESG 2305.

DESG 3940 Transfer Coursework (0-20)
Transfer coursework at the 3000 level. Departmental approval may be required.

Maximum Hours: 99

DESG 4005 Design Studio III (4)
This 4-credit design studio is one in a series of three sequential design studios that offer interrelated lessons to advance knowledge and skill sets in analog and digital design. The curriculum engages a variety of project-based exercises that emphasize creative problem-solving, visual communication, and spatial composition. Studios will build upon one another as students learn to develop large-scale drawings, physical models, digital models, and calibrated images to explore the relationship between the virtual and physical in contemporary design production.

Prerequisite(s): DESG 2005.

DESG 4560 Design Internship (1-3)
Open to upper level students in good standing, the Design Internship course provides students with an opportunity to reinforce and expand their skills and knowledge through professional internship experiences during the course of their studies. Students must consult with the Design Major Advisor to get approval for selected work assignment prior to registration.

Course Limit: 1

DESG 4570 Design CPS Internship (1-3)
This course is for students pursuing an internship in Design via the Public Service Internship Program managed by the Center for Public Service (CPS). The student must apply directly to CPS by the predetermined deadline. If the internship is approved, CPS will coordinate registration with the Design Program. Students must contact the Center for Public Service for additional information.

DESG 4910 Independent Study (1-6)
The Independent Study course gives upper-level undergraduate students an opportunity to work with a faculty advisor to pursue a personal academic interest with greater focus. Qualified students must develop a syllabus and schedule with the help of the faculty advisor. The course must be approved by the Design Major Advisor prior to registration.

DESG 4930 Special Topics (0-4)
Special Topics in Design. These are newly developed courses or courses taught by visiting faculty. Title and content may vary by semester. See the Schedule of Classes for specific offerings. Course may be repeated unlimited times for credit.

Course Limit: 99

DESG 4931 Special Topics (1-6)
Special Topics in Design

Maximum Hours: 99

DESG 4932 Special Topics (0-4)

Maximum Hours: 99

DESG 4933 Special Topics (1-6)
Special Topics in Design.

Corequisite(s): DESG 4931.

DESG 4940 Transfer Coursework (0-20)
Transfer coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

DESG 4950 Senior Capstone (1-3)
The capstone seminar provides a forum for seniors in the Bachelor of Arts Design degree major to synthesize their undergraduate work in Design through a culminating project with the guidance of a faculty member. The final design product may involve 2D and/or 3D visual representation. As students reach the zenith of their undergraduate design education, this final course challenges students to reflect, integrate conceptual knowledge, and apply innovative design thinking to solve a single complex problem. Students will also engage in discussion of professional practices and design ethics, and will curate their formal design portfolio.

Prerequisite(s): DESG 3005.

DESG 4990 Honors Thesis (3)

DESG 4991 Senior Honors Project in Fine Arts (3)
Senior Honors Project in Fine Arts

DESG 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): DESG 4990.

DESG 5001 Senior Honors Project in Fine Arts (3)
Senior Honors Project in Fine Arts

Prerequisite(s): DESG 4991.

DESG 5380 Junior Year Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

DESG 5390 Junior Year Abroad (1-20)
Semester Abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

DESG 5980 Junior Year Abroad (0-20)
Semester Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

DESG 5990 Junior Year Abroad (0-20)
Semester Abroad. Courses may be repeated up to unlimited credit hours.

Maximum Hours: 99

DESG 6930 Special Topics (1-3)
Special Topics in Design. These are newly developed courses or courses taught by visiting faculty. Title and content may vary by semester. See the Schedule of Classes for specific offerings. Course may be repeated unlimited times for credit.

Course Limit: 99

Art History (ARHS)

ARHS 1010 Art Survey I: Prehistory through the Middle Ages (3)
An introduction to the history of painting, sculpture and architecture from the Old Stone Age through the ancient Mediterranean world to the end of the medieval period in Western Europe. Considers issues including technique, style, iconography, patronage, historical context, and art theory.

ARHS 1020 Art Survey II: Renaissance to the Present (3)
An introduction to the history of Western European and American painting, sculpture and architecture from the Renaissance through the baroque, rococo, and early modern periods to the late 20th century. Considers issues including technique, style, iconography, patronage, historical context, and art theory.

ARHS 1030 Introduction to Asian Art (3)
This course introduces students to the arts of Asia, covering a broad geographical span, including South Asia, Central Asia, East Asia, and Southeast Asia, as well as an extensive chronological frame from the prehistorical period to the present day.

ARHS 1040 Introduction to Ancient American Art: Self and Sacrifice (3)
An introduction to the art and architecture produced by the sophisticated and urbanized cultures of the Americas: the Olmec, the Maya, the Mexica (or Aztec), Chavín, Moche, Nazca and Inka. It focuses on how rulers and other elites, over time, used art and architecture to bring themselves and their societies into synch with the natural world, and how sacrifice, of one's self, of other humans or of non-human animals, was represented in art and commemorated in architecture.

ARHS 1050 Introduction to African Art (3)
An introduction to the art and architecture produced by the sophisticated and urbanized cultures of Africa.

ARHS 1290 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARHS 1810 Special Topics (3)
Special topics course as designed by visiting or permanent Art History faculty. For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

ARHS 1811 Special Topics (3)
Special topics course as designed by visiting or permanent Art History faculty. For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

ARHS 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

ARHS 2910 Special Topics in the History of Art (3)
Special topics in the history of art. Subjects will vary and may not be available every semester. Individual topics will be listed in the Schedule of Classes.

Maximum Hours: 99

ARHS 3111 Tombs and Temples: East Asian Art before 1300 (3)
An introduction to the art, architecture and visual culture of China, Korea and Japan from the beginnings to about 1200 CE. The course considers technique, iconography and style and will approach art works in theoretical contexts such as social functions and aesthetic discourses of art.

ARHS 3112 Monks and Merchants: East Asian Art from Medieval to Contemporary (3)
This course introduces students to the visual and material culture of China, Korea, and Japan from the medieval period to the present. We will focus on the East Asian tradition in painting, calligraphy, ceramics, and architecture. We also explore the social, economic, and intellectual forces behind the production, circulation, and appreciation of artworks. Among the topics discussed in class are art and politics, art and identity, transmission of Buddhist art, etc. Special attention will be given to the transcultural exchange among China, Korea, and Japan as well as the encounter between the East and the West.

ARHS 3200 Early Christian and Byzantine Art (3)
A survey of art and architecture in the Mediterranean from the third through the fourteenth centuries, with a focus on the rise of Christian art in the late Roman world and the art of the Byzantine state.

ARHS 3210 Art and Experience in the Middle Ages (3)
A survey in which both modern and historical categories of experience are used to understand the art of the Middle ages, especially as it manifested itself in the most characteristic of all medieval forms, the church. Along a chronological and geographical trajectory from Early Christian Rome to Gothic Paris this course will move through topics such as memory, poetry, pilgrimage, the body, gesture, devotion, narrative and liturgy.

ARHS 3220 Romanesque and Gothic Art (3)
This course will examine painting, sculpture, architecture, mosaics, tapestries, metalwork, ivories, and stained glass windows of the late Middle Ages in Europe. Through weekly readings and discussions will also explore themes such as religion, women, the Classical tradition, and cross-cultural contact. Various critical and theoretical approaches to art history will be considered.

ARHS 3230 Visual Culture in Golden Age Spain (3)
This course will study the cultural role of images, largely painting, in Spain during the period 1500-1700. Topics to be explored include: the pictorial use of mythological themes in the projection of imperial power, the importance of portraiture in the legitimization of the Spanish monarchy, the art market and the social status of the artist. While painting will be our main focus, we will examine other visual documents such as maps and read literary works that illuminate the functions of images in the period.

ARHS 3240 Museums and Monuments in Rome (3)
Through readings and site visits to museums and monuments throughout Rome, this course will examine the history and theory of archaeological and other public historical monuments, sites, and museums within an international framework. With a specific focus on Etruscan and Roman art history and archaeology, we will consider how issues of cultural heritage, preservation, and display impact the visiting of historical sites. We will also spotlight the growing field of museum education, considering methods used by museum professionals and other educators who teach using museum collections.

ARHS 3310 Early Renaissance Art (3)
This course will explore the art and architecture of central Italy from ca. 1300-1500 CE, with a special emphasis on the art of the city of Rome. Through site visits and in-depth analyses of works by well-known artists, Giotto, Botticelli, Leonardo da Vinci, Michelangelo, etc. as well as lesser-known artists (especially those working in Rome), students will gain an understanding of the development and impact of the Italian Renaissance.

ARHS 3350 Renaissance & Baroque Architecture (3)
This course provides a survey of architectural history in Europe from 1400-1750, stressing a critical approach to architecture through the analysis of social and cultural context, expressive content, function, structure, style, building technology, and theory. Lectures will range from close examinations of specific monuments to broader engagements with architectural forms as they cut across time. Particular attention will be paid to the socio-cultural dimensions of architecture and the ways in which individual buildings and the built environment have shaped humanity's experience of the world. Class meetings will focus on a range of issues, including civic and corporate identity, political and religious power, the status of the architect, the dissemination of architectural knowledge, building technology, construction techniques, patronage, and symbolic meaning.

ARHS 3360 Art and Desire at the Renaissance Courts (3)
An overview of the art and culture of the European courts between about 1300 and 1700, with a particular focus on the themes of love and eroticism. Artists to be discussed include Mantegna, Raphael, Titian, and others.

ARHS 3375 Leonardo's World (3)
This course uses Leonardo da Vinci's paintings, drawings, and writings to explore the interrelation of art and nature in early modern Italy. Using Leonardo as a focus, the course is divided in two halves; the first half considers ways of seeing and picturing the natural world. The second considers the ways man changes the environment, including its practical and aesthetic uses. These themes are not easily divided, and in the early modern world their intersections had significant implications for intellectual thought, artistic practices, and manmade interventions in the landscape, be they fountains, fortifications, gardens or urban planning. Leonardo will be our interlocutor throughout the term, although the course is not intended to be a monographic study of the artist per se. Instead, we will examine Leonardo's and his peers' artworks as a way to investigate early modern conceptions of nature, its transformative potential, and the natural and built environment.

ARHS 3380 Italian Renaissance Art (3)
This course introduces students to the study of the visual culture of Renaissance Italy (1350–1600). By examining how artists, architects, critics, and patrons used and discussed artworks including paintings, prints, sculpture, and architecture, students explore themes such as the revival of antiquity, the study of nature, the training of the artist, the role of competition, and the public and private display of art.

ARHS 3410 Theaters of the Baroque (3)
This course surveys the visual and material culture of the Baroque world, roughly the period 1575-1750, considering the diverse locales, styles and objects of Baroque artistic production, as related to early modern notions of theatricality. The course is composed of two acts. First, we will investigate the visual culture of several key cities (Rome, Antwerp, Madrid, Mexico City, Munich and Versailles). In the second half of the course will focus on diverse spaces of baroque theatricality (churches, theaters, palaces, civic spaces and the art collection itself). Through these case studies, the course aims to explore how the local economic, religious, political and social contexts for artistic production interact with global networks of exchange and the performance of individual and national artistic identity.

ARHS 3420 Van Eyck to Bruegel (3)
This course explores the artistic production of the Low Countries, Germany and France in the fifteenth and sixteenth centuries, including painting sculpture, manuscripts, metalwork, tapestries and printmaking. The course will focus on a range of topics, including: technical and iconographic innovations in artistic production, art's devotional function, the changing market for art in this period as well as the early impact of the Reformation on the visual arts in the Low Countries and Germany.

ARHS 3430 Rubens to Rembrandt (3)
This course explores the artistic production of the early modern Spanish Netherlands and the Dutch Republic, focusing on key artists (including Rubens, Anthony Van Dyck, Frans Hals, Rembrandt, Vermeer), as well as emerging critical literature on the function and value of art/artists. This course will consider how art was bought and sold; how art was evaluated for its commercial and aesthetic value.

ARHS 3510 Rococo To Romanticism (3)
In this course we will explore art produced in Europe from the early18th century through the mid-19th century. We will consider the work, careers, and reputations of key artists such as Fragonard, David, Friedrich, Turner, Ingres, and Delacroix, among others, situating their work in relation to the political, socio-economic, and intellectual developments of the period.

ARHS 3540 Impressionism and Post-Impressionism (3)
This course will analyze art produced in Europe from the mid-19th century through the early 20th century, with a particular emphasis on French painting. We will consider the work and reputations of key artists such as Manet, Monet, Cassatt, Seurat, and Cézanne, situating their work in relation to the political, socio-economic, and cultural changes that took place during this period.

ARHS 3580 Impressionism in Paris Museums (3)
In this class, we will explore the work, careers, and reputations of key Impressionist and Post-Impressionist artists such as Monet, Degas, Renoir, Van Gogh, and Cézanne, among others, by studying the rich collections of the Musée d'Orsay and the Musée de l'Orangerie, and by visiting exhibitions of 19th-century art in Paris and elsewhere.

ARHS 3590 Art, Montmartre, and the Pleasures of Paris (3)
This class will explore different artists' representations of the various forms of pleasure and entertainment that were an essential part of Paris's identity in the later 19th and early 20th centuries. We will study the work of some of the key artists of the period and visit some of the entertainment sites and activities that they featured in their work, such as the Montmartre neighborhood and the Eiffel Tower, as well as visit museum collections and special exhibitions related to the course.

ARHS 3600 American Art, 1700-1950 (3)
An analysis of visual and material culture from the first European artists in the colonies to the onset of World War II. Considers the transformation of cultural forms from the old world to the new in developments such as the formation of a national iconography as seen in portraiture, genre painting, landscape painting and the development of a distinctive modernist tradition specific to the United States. This course will examine the ways in which art and material culture reflect the social, intellectual, and political life of the nation up to World War II.

ARHS 3620 Contemporary Art Since 1950 (3)
Explores the developments in the visual arts in the U.S. and Europe since 1950. Concentrates upon the social historical formation of artistic development beginning with the aftermath of World War II, and continuing to the present. Emphasizes movements such as Pop, Minimalism, Earth art and Postmodernism. Issues surrounding the objects will include poststructuralism, post-colonialism as well as African-American, feminist, and gay and lesbian strategies for self-representation.

ARHS 3650 Early Twentieth Century European Modernism (3)
This course will explore the developments in the visual arts in Europe from 1890 to 1945. We will concentrate upon the social-historical formations of artistic production beginning in the late-nineteenth century with Post-Impressionism and continuing into the first half of the twentieth century examining movements such as Fauvism, Cubism, Dada, Surrealism, Russian Suprematism.

ARHS 3680 History of Photography (3)
This course introduces students to the history of photography from the "invention" of chemical photographic techniques in the first third of the nineteenth century through the contemporary turn to the digital. The primary regions covered will be Western Europe and the Americas, with particular attention to debates about photography as an art, the role of technology in shaping photographic imagery, and the status of photography in fields such as journalism, science, politics, advertising, art, etc., in relation to social and historical contexts.

ARHS 3700 Art and Architecture of Ancient America (3)
The course focuses on the sophisticated and urbanized cultures of the Americas: the Olmec, the Maya, the Mexica (or Aztec), Chavin, Moche, Nazca and Inka. Taking a contextual approach, it pays attention to the ways ancient makers constructed meaning by creating constellations of objects, often collations of buildings, sculptures and cashed offerings. It will also look at large scale environmental manipulations, meant to align human occupations with a divine design.

ARHS 3710 Colonial Art of Latin America (3)
Renaissance and baroque architecture, painting and sculpture of the metropolitan centers of the Spanish and Portuguese colonies from the 16th to the early 19th century with a major emphasis on Mexico.

ARHS 3720 Aztec Art in Mexico Tenochtitlan (3)
Intensive investigation of Aztec art as a fundamental manifestation of political and religious ideas. The course will examine the relation between art and sacrifice, and the role of ritual and performance in "activating" works of art and architecture. It will center on the art and architecture of the city of Tenochtitlan, now known as Mexico City, the heart of the empire in the past, and the current site of ongoing archeological excavations. Students will learn how to apply art historical methodologies to works of Aztec art, and share those results with a broad public through contributions to Wikipedia.

ARHS 3730 Collecting Maya Art: Praxis and Politics (3)
This course focuses on the art created by Maya artists from 300-900 CE, a time when Maya cities and royal courts flourished. These objects had long lives, continuing into the modern era, when they were eagerly collected and displayed, particularly in the US and Europe. We will study how and why Maya art was first made, and then look at how and why it found its way into modern collections. We will learn about the legal regimes of collecting, and how they have changed over time. We will focus on how Maya art is collected and displayed today, with attention to the ethical questions around collecting practices, and the role of the art market in collection formation. Students will gain hands-on experience in working with local collections, particularly the Middle American Research Institute at Tulane, and the New Orleans Museum of Art, and practice designing a virtual exhibition of Maya art of their own, taking into consideration the contemporary praxis and politics around Indigenous arts.

ARHS 3750 Global Contemporary Art (3)
This Art History course examines contemporary art in a global context. We will begin by considering early contemporary art, from the late 1960s and 1970s, focusing on issues, theories, and artworks emerging in selected geographic zones: Latin America, East Asia, Sub-Saharan Africa, the Caribbean, Western Europe, the United States, and Eastern Europe. Next, we will consider artists working worldwide from the 1980s through the present, examining emergent mediums such as installation and social practice, and themes such as collectives, the body, and activism.

ARHS 3760 Modern Arts Latin America (3)
This course introduces students to the study of modernity and visual arts In Latin America, from the late 19th-century through roughly 1950. We will trace the radical social transformations of this period and the art that reflected. resisted, or intervened In these processes. emphasizing key themes: the formation of collective Identities (and the intersections of race, class, and nation); the impact of social and political revolutions and counter-revolutions; the reception and reconstitution of European avant-garde art; and national, regional, and universal definitions of artistic traditions.

ARHS 3770 Art in Latin America since 1950 (3)

ARHS 3780 Contemporary Art Latin America (3)
This course introduces students to the study of visual arts In Latin America from the 1950s through the present. Examining Latin America as part of transnational networks. this course explores artistic innovations in response to the still-developing modernist canon of Latin American art. This course investigates radical formal transformations of the art object over this period and the particular social and political contexts of Latin America within which such transformations took place.

ARHS 3790 Art and Architecture of Brazil (3)
This course introduces students to the study of visual arts and architecture in Brazil from around 1500 through the present. This course foregrounds the development of Brazilian art resulting from a historically-contingent intertwining of indigenous, European, and Afro-descendent cultural traditions, as an artistic tradition inextricable from transnational networks. This course investigates the formal transformations of art and architecture over this period. paying close attention to he particular social and political conditions within which Brazilian art took shape.

ARHS 3871 Introduction to African American Art and Visual Culture, c. 1700-1940 (3)
This course explores the production of visual and material culture related to the African American presence in what is now the United States from the eighteenth century through the mid twentieth century. The course considers visual materials made by African American artists and artisans as well as materials by non-African Americans that feature African American subject matter (and the relationship between these two types of visual production). We will work to understand the objects featured in this course within both the specific context of the history of African American art and visual culture and the larger context of American art history in general. Arranged roughly chronologically but more strongly guided by a thematic and topical approach, the course aims to communicate basic content information while providing students with an understanding of the kinds of dominant questions and concerns engaged by current African American art scholarship.

ARHS 3872 Art of the African Diaspora, c. 1925 to Present (3)
Does it necessarily make sense to consider the work of artist of African descent together as a unit (in other words, should this course exist?)? What persistent themes, issues, and debates inform the work by African diaspora artist? What makes art "Black" (or "African" or "African American")? Is an artist of African descent necessarily a "Black artist"? Do artist of African descent have a particular obligation to make artwork that advances a black cultural or political agenda? Is not doing so in and of itself a political statement? How might a landscape or Abstract Expressionist work be racially charged? How do vectors of identity other than race inform the work of African diaspora artist? How does the artwork studied in this course fit into the context of other art histories? Through these questions and others, this course explores the major themes and issues that have occupied artists of African descent as well as examines individual artists' motivations and intentions.

ARHS 3910 Special Topics in Art History (3,4)
Special topics in the history, criticism, or theory of art. The subjects will vary and may not be available every semester. Individual topics will be listed in the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARHS 3911 Special Topics in Art History (3,4)
Special topics in the history, criticism, or theory of art. The subjects will vary and may not be available every semester. Individual topics will be listed in the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARHS 3912 Special Topics in Art History (3,4)
Special topics in the history, criticism, or theory of art. The subjects will vary and may not be available every semester. Individual topics will be listed in the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARHS 3913 Special Topics in Art History (3,4)
Special topics in the history, criticism, or theory of art. The subjects will vary and may not be available every semester. Individual topics will be listed in the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARHS 3915 Special Topics in Art History (3)
Special topics in the history, criticism, or theory of art. The subjects will vary and may not be available every semester. Individual topics will be listed in the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARHS 3916 Special Topics in Art History (3)
Special topics in the history, criticism, or theory of art. The subjects will vary and may not be available every semester. Individual topics will be listed in the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARHS 3921 Special Topics in Art History (3,4)

Maximum Hours: 99

ARHS 3922 Special Topics in Art History (3,4)

Maximum Hours: 99

ARHS 3923 Special Topics in Art History (3,4)

Maximum Hours: 99

ARHS 4560 Museum Internship (3)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARHS 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): ARHS 4560.

Maximum Hours: 99

ARHS 4910 Independent Study (3)
Open to qualified juniors and seniors with approval of instructor and chair of department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARHS 4920 Independent Study (1-4)
Open to qualified juniors and seniors with approval of instructor and chair of department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARHS 4990 Honors Thesis (3)

ARHS 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): ARHS 4990.

ARHS 5190 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARHS 5380 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARHS 5390 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARHS 6040 Spaces of Art (3)
This course will provide a capstone experience for undergraduate majors in art history through an investigation of the various places Western art has been made, exchanged and critically evaluated, from the late medieval period to today. Each week, students will consider distinct space-for example, the studio, the academy, the auction house-its definition, history and conceptual impacts on the history of Western art. Students will analyze the material and intellectual culture of each of these spaces, utilizing key case studies drawn from the fifteenth to the twenty-first centuries.

ARHS 6050 Scandals of Modern Art (3,4)
In this capstone seminar, we will examine key works of controversial modern art from the 19th century to the present. Over the course of the semester, we will explore the scandals that surrounded the work of Edouard Manet, Henri Matisse, Marcel Duchamp, Constantin Brancusi, Richard Serra, Maya Lin, and Sally Mann, among others.

ARHS 6060 Capstone: Gender, Race & Body (3)

ARHS 6090 Intersect Art & Science (3)
This seminar explores key moments in the relationship between art and science in Europe and the United States from the Renaissance to the present. We will analyze a range of topics that span time and place, such as Leonardo de Vinci's anatomical drawings and interest in optics. Enlightenment theories of perception, Impressionist and neo-Impressionist painting, and abstraction in the 20th century, among others.

ARHS 6210 Medieval Pilgrimages: Saints, Bones, and Art (3)
This course will examine some of the most popular medieval Christian pilgrimage centers of Europe. We will focus mostly on Santiago de Compostela and Rome, with brief looks at other pilgrimage centers such as Jerusalem, Assisi, and Canterbury. Topics to be covered include the cult of the saints, the pilgrimage roads, architectural settings and their decoration as well as reliquary shrines and related works of art, images and their use in imaginary or mental pilgrimage.

ARHS 6220 Women and Gender in Medieval Art (3,4)
This seminar will focus on the relationships between gender and the production and reception of medieval European art and architecture. Topics to be explored include images of women, works of art commissioned by women, images made for women, architectural spaces designed for women and/or men specifically (i.e. monastic architecture), women as artists, etc. Comparative material known to have been made for/by men specifically will also be explored as we consider the meaning of the concept of gender. Feminist theory and various contemporary critical approaches to gender and medieval art will enhance our exploration of specific works.

ARHS 6230 Art and Architecture of Medieval Italy (3)
This course will examine the art and architecture of the late Middle Ages and early Renaissance in Italy from approximately 1250 to 1350 A.D./C.E. We will focus particularly on the rise of the mendicant orders in the thirteenth century and their impact on art and the narrative of the Renaissance.

ARHS 6310 Global Renaissance (3)

ARHS 6320 Colonialisms in Latin American Art (3-4)
According to the conventional geography of art history, “colonial” art was produced in peripheral spaces, lacking political (and consequently artistic) autonomy. An art history that centered metropolitan and imperial capitals inevitably cast on “colonial” art as something less than –in quality, in originality—that of these centers. New paradigms, however, have emerged in the wake of critiques of a Euro-centric world order, and the practice of art history shaped by it. This course focuses on recent art historical scholarship and exhibitions, almost all from the past decade, that deals with colonial art and the new paradigms of research and theory being developed for it. While much of the course will deal with colonial Latin America, we will also look to other colonial situations, including British India, Australia, and Ghana. During the last weeks of the course, we will also look at the work of post-colonial contemporary artists, who see themselves as the inheritors and interrogators of colonial legacies.

ARHS 6330 Prints & Ways of Knowing (3-4)
How did the visual arts and sciences interact in the Early Modern period? In what ways have these interactions defined and ruptured boundaries between empirical investigation and artistic practice? This new seminar on the rise of printmaking c. 1500-1800 investigates print as a new technology and artistic medium. Printmaking allowed for changes not only in art production, but in intellectual inquiry. What new representational techniques emerged? What is the rhetoric of the illustrations themselves? Topics include the study and representation of anatomy, botany, and the celestial spheres in print, and how their artistic representation fundamentally changed our understanding of the natural world. In tandem with these new technologies, optical instruments such as microscopes and telescopes opened previously invisible worlds to scrutiny. We will discuss the intellectual, social worlds such devices and images inhabited.

ARHS 6350 Landscape Theory (1450–1800) (3,4)
The ways in which our society figures in relation to the natural environment has never been so urgent. This seminar studies the history of that entanglement through an examination of the significance and meaning of "landscape" in art, literature, architecture, and landscape design. This course studies how conceptions of landscape, evident in physical forms as well as poetic and artistic representations shaped the ideological and natural terrain of Europe from antiquity to the 18th century, with particular emphasis on the period of 1450–1800. The course stresses a critical approach to landscape through the analysis of social and cultural context, expressive content and function, style, and theory.

ARHS 6375 Michelangelo and His Reception (3,4)
Within his lifetime Michelangelo Buonarrotti (1475–1564) found himself inexplicably hailed as "Divine". This seminar investigates the work of this Renaissance titan and the impact of his art production on Renaissance art theory and its aftermath. Topics include his early training, specific uses of media (drawing, painting, sculpture, architecture), major projects (the David, the Sistine Chapel frescoes, the architecture of St. Peter's) case studies of specific competitions and rivalries (Leonardo vs. Michelangelo and Michelangelo vs. Raphael), and themes such as artistic collaboration and the non-finito. The final classes will be devoted to art theory and reception, including Michelangelo's own writings on art and the legacy of the artist's biography generated by Giorgio Vasari and Condivi, concluding with his 19th-century reception in France.

ARHS 6410 Amsterdam and the Global Dutch Golden Age (3,4)
This course examines the visual and material culture of the Dutch Golden Age, centered in Amsterdam, as the product of global forces. Rather than solely tracing the domestic consumption of international goods or the ways in which Dutch demands shaped artistic production in Batavia (Indonesia), Brazil, South Asia and North America, this seminar critically examines concepts of influence, exoticism and cross-cultural exchange. We will focus on objects and art works produced in , imported and exported through Amsterdam. By investigating the economic realities that enabled the flourishing of Amsterdam as cultural center, this course seeks to complicate readings of seventeenth-century Dutch visual culture (particularly genre scenes and still-lifes) as culturally introspective.

ARHS 6420 Early Modern Copies (3,4)
This course considers the uses, technologies and theories of the early modern copy from the miraculous icon to the forgery, the emulative imitation to the workshop replica, and the pastiche to the reenactment. Copying was a crucial part of artistic pedagogy; the early modern period is characterized by imitation and emulation of classical art, architecture and literature, but the Renaissance also saw innovative technologies of reproductive art-making and new concerns with how to distinguish good copies from the bad.

ARHS 6430 Jesuits and the Globe (3,4)
This seminar considers the art and architecture commissioned and utilized by the Jesuit Order in the late sixteenth and seventeenth centuries, as the Society of Jesus embarked upon a worldwide project of evangelization. With missions and missionaries from Japan to Germany, Goa to Peru, we will consider how this missionary order both adapted to local contexts and attempted to forge a communal identity that stretched across the early modern globe.

ARHS 6510 Seminars in the History of Art (3)
Course may be repeated up to unlimited credit hours.

Course Limit: 99

ARHS 6511 Seminars in the History of Art (3)
Course may be repeated up to unlimited credit hours.

Course Limit: 99

ARHS 6512 Seminars in the History of Art (3)
Course may be repeated up to unlimited credit hours.

Course Limit: 99

ARHS 6513 Seminars in the History of Art (3)
Course may be repeated up to unlimited credit hours.

Course Limit: 99

ARHS 6514 Seminars in the History of Art (3)
Course may be repeated up to unlimited credit hours.

Course Limit: 99

ARHS 6520 Seminars in the History of Art (3)
Course may be repeated up to unlimited credit hours.

Course Limit: 99

ARHS 6525 Social Practice Art (3,4)
This Art History course examines the history and theory of Social Practice art, a recent mode of artmaking in which artists and art institutions collaborate with individuals and organizations to create community-specific works of art. Classroom readings and discussions will examine forms of Social Practice in relation to histories and theories of participatory, political, and activist art since the 1960s. This course includes a 20 hour service learning component with Prospect New Orleans, a citywide triennial of contemporary art with the social mission of connecting high art to the larger cultural landscape of New Orleans through community-specific works.

ARHS 6530 Degas (3)
In-depth examination of Degas' works and career in light of various historical and critical approaches, ranging from formalism and iconography to sociopolitical and cultural studies, Marxism, psychoanalysis, and feminism. Attention will be paid to male and female spectatorship and to relevant works by Degas' Impressionist contemporaries, including Cassatt, Gonzales, Manet, Morisot, and Whistler, as well as other artists including Daumier, Delacroix, Ingres, Tissot, and Toulouse-Lautrec. Additional comparative topics include academic art, photography, journalistic illustration, and Japanese prints.

ARHS 6540 Paris: Capital of the Nineteenth Century (3,4)
This seminar explores the transformation of Paris during the second half of the nineteenth century into a great modern metropolis. Throughout the course we analyze the ways that the architecture, painting, photography, literature, and visual culture of the era shaped and reflected various facets of this modern city.

ARHS 6550 Van Gogh (3)

ARHS 6620 Reading Abstract Expressionism (3,4)
Examines the ways in which Abstract Expressionism has been interpreted, both from the view of American critics and historians and their European counterparts. Emphasizes the extent to which formalist criticism evolved around Abstract Expressionism, and that only recently have scholars challenged those apolitical reading of this art, considering the political and economic factors which contributed to its international predominance on the global stage. Artists will include De Kooning, Frankenthaler, Hofmann, Krasner, Newman, Pollock, and Still.

ARHS 6640 Rauschenberg, Johns & Early Warhol (3-4)
Artists Robert Rauschenberg and Jasper Johns are credited with expanding the field of visual art at mid-century in terms of content and media. As members of the Neo-Dada group, alongside composer John Cage and choreographer Merce Cunningham, they charted a course out of abstract expressionism that pointed away from painting as an exclusive artistic practice, and toward a reinvigoration of subject matter that culminated in pop art. Johns and Rauschenberg were both intimate partners and business partners, and their commercial design-work often brought them into partnership with Andy Warhol, who would make his mark as a pop artist a few years later. Rauschenberg, Johns and Warhol were queer men who negotiated their sexualities in different ways during the McCarthy era when homosexuality in New York city was a crime. This seminar will examine the development of each artist's work within the context of postwar American art and criticism while charting the strategies and codes each artist employed—even the persona's they adopted, whether it be Jasper Johns, the "Organization Man," or Andy Warhol, the "Cool Cat"—to locate discursive space in the conformist culture of the 1950's.

ARHS 6650 Postmodern Formations: Art Since 1980 (3)
Examines both European and American conceptions of postmodernism, as it originated in post-structural and psychoanalytic theory. Emphasis will be place upon artists working since 1980, including Basquiat, Jenny Holzer, Barbara Kruger, Mapplethorpe, Cindy Sherman, Warhol and the politically based art project of Gran Fury, the Guerrilla Girls and the Names Project. Interpretive strategies will be taken from readings in European literary theory, with emphasis place upon the shift in criticism in art-making, away from Europe, toward an ideology formed around the issues of racial, sexual, and gender performance of identity.

ARHS 6660 Art Acquisitions, Collect Mgmt (3)
This course will examine art industry best practices for the acquisition of art objects for institutional, investment and private uses, as well as explore the central issues for collection management. We will explore art industry platforms for art acquisition: galleries, art fairs, auctions (brick & mortars. online), and private dealers. The course will stress methods for due diligence in acquisitions including research on provenance, authenticity, and research strategies for identifying stolen or forged objects.We will examine how monetary value is determined across art industries, from the retail gallery to the insurance company. Writing assignments will focus upon research methods for art objects and antiques, incorporating strategies of collection management such as condition, conservation, and best practices for art storage and maintenance.

ARHS 6750 Material Meaning in the Ancient Americas (3)
This class examines the materials and technologies used to make art in the Ancient Americas to understand how worldviews are expressed in matter. It covers a wide sweep of indigenous empires (Maya, Aztec, Inca, Olmec, Chavin, Moche) and media (jade, gold, feathers, ceramic, paper, flint, obsidian, shell, and bones). It considers Indigenous categories of art and materials—as expressed in language and the facture of objects themselves—as a way of decentering traditional art historical categories of "art" and part of a decolonizing practice. By moving to center Indigenous categories we will be moving away from normative Euro-American theory, which posits that to make the work of art, human minds exert their will over inert matter, and human beings are radically separate from their environment. One approach to understanding Indigenous objects within the contexts of their origin are theories, sometimes called "eco-criticism" or the "new materialism" that posit new ways of understanding human animals, the environment in which they are immersed, and the objects that are the result of that integration. By the end of class, we will be able to explore whether the most radical of those ideas, and the most radically decolonial of them, perspectivism, can be extended to the work of art.

ARHS 6810 Seminars in the History of Art (3,4)
Advanced topics in the history, criticism, or theory of art. The subjects of the seminars vary according to the needs of the students and the scholarly interests of the individual instructor. Specialized topics are listed in the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARHS 6811 Seminars in the History of Art (3,4)
Advanced topics in the history, criticism, or theory of art. The subjects of the seminars vary according to the needs of the students and the scholarly interests of the individual instructor. Specialized topics are listed in the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Course Limit: 99

ARHS 6812 Seminars in the History of Art (3,4)
Advanced topics in the history, criticism, or theory of art. The subjects of the seminars vary according to the needs of the students and the scholarly interests of the individual instructor. Specialized topics are listed in the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Course Limit: 99

ARHS 6813 Seminars in the History of Art (3,4)
Advanced topics in the history, criticism, or theory of art. The subjects of the seminars vary according to the needs of the students and the scholarly interests of the individual instructor. Specialized topics are listed in the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Course Limit: 99

ARHS 6814 Seminars in the History of Art (3,4)
Advanced topics in the history, criticism, or theory of art. The subjects of the seminars vary according to the needs of the students and the scholarly interests of the individual instructor. Specialized topics are listed in the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Course Limit: 99

ARHS 6815 Seminars in the History of Art (3,4)
Advanced topics in the history, criticism, or theory of art. The subjects of the seminars vary according to the needs of the students and the scholarly interests of the individual instructor. Specialized topics are listed in the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Course Limit: 99

ARHS 6820 Seminars in the History of Art (3)
Advanced topics in the history, criticism, or theory of art. The subjects of the seminars vary according to the needs of the students and the scholarly interests of the individual instructor. Specialized topics are listed in the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARHS 6821 Seminars in the History of Art (3,4)

Maximum Hours: 99

ARHS 6822 Seminars in the History of Art (3,4)

Maximum Hours: 99

ARHS 6823 Seminars in the History of Art (3,4)

Maximum Hours: 99

ARHS 6830 Seminars in the History of Art (3)
Advanced topics in the history, criticism, or theory of art. The subjects of the seminars vary according to the needs of the students and the scholarly interests of the individual instructor. Specialized topics are listed in the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARHS 6860 Seminars in the History of Art (3)
Advanced topics in the history, criticism, or theory of art. The subjects of the seminars vary according to the needs of the students and the scholarly interests of the individual instructor. Specialized topics are listed in the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARHS 6870 Mapping the Renaissance (3,4)
This course examines the production of maps during the medieval and early modern periods. The expanding world required firsthand observation, oftentimes aided by tools, as well as effective means of transcribing and interpreting terrain. Key to map production, the use of optical devices and measuring instruments, i.e., the compass and rule, magnetic compasses, astrolabes, and sextants, shaped habits of visualization formed through the use of pen and ink. In turn, artistic representation provided an expressive pictorial idiom for synthesizing the quantitative assessment and visual apprehension of land and sea. Emphasis will be placed on recent literature applying the most current methodologies applied to the analysis of maps.

Maximum Hours: 99

ARHS 6871 Art of Death: Funerary Art and Ritual in Ancient China (3,4)
This course introduces funeary art and ritual in ancient China from the Bronze Age to the Medieval Period. By examining the architecture, mural paintings, and mortuary objects produced for e the funerary purpose, student will inquiry into the mortuary rites that reveal the complexity of social relationships, the intersection of art and politics, and the tension between the public and the private.

ARHS 6874 Race and the Art of Empire (3,4)
This seminar considers the role of art and visual culture in constructing. reifying, representing and, in some cases. challenging ideas of race and national identity in relationship to the joint enterprises of colonialism and Empire. Concentrating primarily on the 18th and 191h centuries (but with some temporal projection in both directions to consider both precursors and postcolonial reverberations) and exploring examples from the British. Spanish. and French empires. we _will consider a diverse array of material drawings, paintings, prints. sculpture, decorative arts. fashion, museum display, private collections, photography and film-in order to think about the ways that visual and material culture informed colonial identities and supported imperial enterprise and also could be used to resist them. Students are encouraged to offer perspectives and bring in supplemental material that expands the scope of the course dialogue and to pursue their own particular interests related to the concerns of the course in their final papers/projects (included exploring different time periods or colonial empires). Finally, while race will be the primary vector of identity explored. its inevitable intersections with gender, class, and sexuality will necessarily receive attention.

ARHS 6875 Race and National Mythologies in American Art and Visual Culture (3,4)
How does American art and visual culture implicitly and explicitly reify notions of America as a "white" nation, and how has this changed over time? How have images shaped and been shaped by historic moments of racially-implicated upheaval or conflict (e.g. Westward Expansion; the abolition movement, the Civil War and Emancipation; periods of mass immigration)? How has the idea of what it means to be "American" been defined against the racialized images of American "Others"? Can contemporary artists of color successfully appropriate and re-deploy racist imagery? This seminar considers these and other questions in investigating constructions and representations in American art and visual culture from the 16th century to the present. We will explore the ways in which these images are implicated as both products and producers of fundamental mythologies about the United States as a nation and about what it means to be "an American" (and who gets to be one). (Counts as Capstone)

ARHS 6876 Interracial Themes in Western Art and Visual Culture (3,4)
This course investigates the depiction of interracial contact and the mixed-race body in modern Western art, primarily American and British. (Counts as Capstone)

ARHS 6877 Contested Vision Civil War I (3-4)
Exploring a wide range of art and visual culture including painting, sculpture, photography, film, performance and popular culture, this course explores contested visions of the Civil War from before the firing of the first shot at Fort Sumter to the present. In addition to the period of the war itself, our study will necessarily look both backward and forward, including consideration of the art and visual culture surrounding slavery and abolition, emancipation, and Reconstruction and reunion, as well as narratives romanticizing the culture of the Old South.

ARHS 6878 Contested Vision Civil War II (4)
In the first semester of this 2 part course (ARHS 6877) we investigated a wide range of art and visual culture including painting, sculpture, photography, film, performance, and public history sites to explore contested visions of the Civil War and related issues including slavery and abolition, Emancipation, Reconstruction and reunion, and narratives romanticizing the culture of the Old South. This semester, you will use that foundational knowledge to work with your peers to develop an online exhibition of art and material culture that engages these concerns.

ARHS 6891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): ARHS 6525.

Maximum Hours: 99

ARHS 6900 Approaches To Histry Art (3)

ARHS 6910 Independent Study (3)
Course Limit: 99

ARHS 7800 Canon in Crisis: Challenging the Tenets of Art Theory (3)
This seminar engages with core themes and concepts of art theory and critique as they are applied in art and visual culture. Through class discussions and end-of-term presentations, we will explore the ways in which contemporary artists are contributing to or cultivating their own discourses. Our goal is to debate the arguments presented by philosophers, curators, and artists to develop our understanding of these theoretical tools such that we gain confidence in our ability to scrutinize contemporary artistic practices, the connectivity and conversations with art of the past, and the relationship with our own artistic practice.

ARHS 7920 Spec Research Art Hist (3)

ARHS 7960 Crossroads Cohort: Black Studies Bootcamp (3)
This course will serve as an introduction to the history and contemporary scholarly landscape of Africana Studies as its own interdisciplinary intellectual enterprise with a distinct history and scholarly legacy and underpinned by unique critical and methodological approaches. It is designed for students who are prepared for graduate-level study but who may not have had the opportunity to take Black studies coursework as undergraduates and to expand the depth and breadth of knowledge for students who do have formal Black studies training by through more critical engagement with foundational texts and current work by contemporary thinkers. Africana studies embraces interdisciplinary methodologies for the study of Africa and its diasporas across the globe, as well as for the critical study of race and anti-Black racism. It centers Blackness and the critical study of race, amplifying the significance of Black history, the beauty of Black creativity, the power of Black resistance, the commitment to Black freedom, and the insight of Black critical perspectives. While the study of Black people will be centered in this course, students will become familiar with the ways that interdisciplinary, intersectional, and transnational grounding of Africana Studies provides frameworks to make sense of all of humanity.

ARHS 9980 Master's Research (0-6)
Course may be repeated up to unlimited non-earned credit hours.

Maximum Hours: 99

ARHS 9990 Dissertation Research (0)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Art History (PAAH)

PAAH 3300 Traditions in Louisiana and Southern Art (3)
The class “Tradition in Louisiana Art: 1780-2020” will provide an in-depth study of the development of artistic styles in Louisiana and the American South from the late eighteenth century up to the twentieth-first century. Among the topics that will be explored are the work of the nineteenth-century portrait and landscape artists, African American artists, women artists, Woodward Brothers and Newcomb Pottery, regional southern impressionism, southern outsider and folk art, Florida Highway Men, Louisiana and southern photography, Charleston Renaissance, Mississippi art in the mid twentieth century, and twentieth century Louisiana art

PAAH 3310 Photography in Louisiana and the American South (3)
The class "Photography in the Louisiana and the American South" will provide an in-depth study of the development of photography in Louisiana and the American South from 1839 when the Frenchman Louis Jacques Mande Daguerre announced the invention of the photographic process. Photography reflected the times and history of the Louisiana and South thought portraiture, the documentation of the Civil War from a southern perspective, rural southern communities, effects of weather along the Mississippi River, documentation of historical architecture, life in the French Quarter and musical traditions of jazz and Zydeco music. The pictorialism work of "Pops" Whitesell and Arnold Genthe, early documentary style of Theodore Lilienthal and George François Mugnier, straight photography of Fonville Winans, Eudora Welty, and Michael P. Smith, Storyville images of Ernst Bellocq and the 20th century art photography of Debbie Fleming Caffery and Jerry Uelsmann will be explored.

PAAH 3910 Special Topics (1-3)
Special topics in Art History.

Maximum Hours: 99

Art Studio (ARST)

ARST 1050 Drawing I (4)
This course focuses on drawing from life as the translation of three-dimensional objects onto a two-dimensional surface. This perceptual and technical endeavor requires the development and disciplining of both hand and eye. To aid us in such development, we will systematically address line, shape, proportion, three-dimensional space, value, texture, and composition. Addressing these drawing basics provides the student with the beginnings of a visual vocabulary aimed to serve a variety of personal artistic concerns.

ARST 1101 Studio Art Principles I (3)

ARST 1130 Ceramics I (4)
This course focuses on elements of composition, craftsmanship and visual innovation within the context of contemporary ceramic art. Students will be introduced to a variety of forms, building and firing techniques, as well as materials, processes and aesthetic concerns associated with vessels and ceramic sculpture. Emphasis will be placed on skill building, visual invention and exploration.

ARST 1170 Glass I (4)
This course offers an introduction to hot glass forming and techniques. Students will learn how to work safely in the 'hot shop', gathering glass from the furnace and shaping the glass with specialized tools. We will begin by using solid 'punti' rods and move on to blow pipes later in the semester. Basic techniques will be introduced with attention given to issues of composition, perception, communication, and expression. Emphasis also will be placed on the relationships between glass art and other art mediums. Required class and lab time totals 9 hours a week.

ARST 1250 Painting I (4)
This course is the first in a sequence of painting classes offered to the Tulane student, focusing on observational painting from life. Students will acquire the perceptual, conceptual, and technical tools necessary to translate three-dimensional forms and spaces to a two-dimensional surface using acrylic paint. Additionally, the course involves the application of compositional and color concepts to a two-dimensional image and the critique of such work. Critique will occur on both a personal and peer basis in the pursuit of developing the language essential to the analysis of visual art.

ARST 1310 Photo I: Black & White (4)
This introductory-level course covers traditional and experimental B&W photographic techniques. Students will learn exposure and metering through the use of 35mm single-lens reflex cameras. Through a series of exercises, students will be immersed in the craft of the medium: the physical and chemical development of film and print materials, the means of making fine art silver gelatin prints, hybrid/experimental darkroom techniques, and scanning film. Intensive darkroom time and demonstrations of advanced printing control will refine students' printing skills. Exposure to a selection of historical and contemporary photographers will inform class discussions and the creative process. Through hands-on experimentation, students will explore the construction and manipulation of photographic media in order to strengthen their own artistic voice and practice.

ARST 1330 Photo I: Digital (4)
This introductory-level course covers a wide range of digital photographic techniques and concepts. This course is designed to familiarize students with fundamental techniques of photographic equipment, processes, materials, philosophies of digital photography, and the cultural uses of photography. Students will learn exposure and the use of the camera, as well as scanning, digital workflow, color theory, and digital output methods. Upon completion of the class, students will know how to digitize, edit, and manipulate images in Photoshop, prepare images for inkjet printing in Photoshop, and output images via printers and other output devices. Exposure to a selection of historical and contemporary photographers will inform class discussions and the creative process. Students will explore the construction and manipulation of photographic media in order to strengthen their own artistic voice and practice.

ARST 1350 Photo I: Analog and Digital (4)
This introductory-level course covers both traditional B&W and digital photographic image-making. Students will learn exposure and metering through the use of 35mm single-lens reflex cameras. B&W film processing, the creation of silver gelatin prints, hybrid/experimental darkroom techniques, scanning film, digital capture, digital workflow, color theory, and digital output methods will all be presented as tools for artistic inquiry. Exposure to a selection of historical and contemporary photographers will inform class discussions and the creative process. Through hands-on experimentation, students will explore the construction and manipulation of photographic media in order to strengthen their own artistic voice and practice.

ARST 1370 Printmaking I (4)
This course is designed as an introduction to a wide range of techniques in printmaking. It is developed to give the student an overview of the possibilities with the processes of relief and intaglio printing. Through a series of demonstrations, projects, critiques, and powerpoint presentations the student will explore the rich diversity of the medium and become exposed to the strong tradition of printmaking. Areas covered include: linoleum cuts, woodcuts, collagraph, mono type, and dry point on copper plates.

ARST 1490 Sculpture I (4)
An introductory study of three-dimensional form and spatial relationships making use of a variety of media and processes. Slide lectures supplement studio work and present examples of contemporary sculpture within a historical context.

ARST 1550 Digital Arts I (4)
This course introduces students to different aspects of design in the digital realm from digital imaging to time-based media. Students will learn the basics of digital imaging, 2D animation, video editing, and the fundamental principles of color and composition. The course will also explore the history and evolution of digital art, as well as its impact on contemporary culture and society. Students will use industry-standard software, such as Photoshop, Illustrator, After Effects, and Premiere during this class.

ARST 1810 Special Topics (3)
Special topics course as designed by visiting or permanent Studio Art faculty. For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

ARST 1811 Special Topics (3)
Special topics course as designed by visiting or permanent Studio Art faculty. For description, consult the department. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

ARST 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

ARST 2040 Drawing II- Collage (4)
Making a collage involves the use of multiple images or materials to assemble a new "whole." Building on drawing fundamentals gleaned in Drawing I, ARST 1050, this course introduces the student to a variety of collage methods and practices, as well as the contemporary discourse surrounding them.

Prerequisite(s): ARST 1050 or 1060.

ARST 2050 Drawing II: Color (4)
“Color drawing” implies the process of one “describing” an object or form from observation in a dry color medium. In this course, we will hone our ability to describe the appearance of three-dimensional forms and space onto a two-dimensional surface, a process begun in Drawing I 105. The quest for verisimilitude begun in Drawing I 105 will be continued in 205 to through the reexamination of line, value, and perspective in graduated complexity, and will examine the relationship of color to these familiar formal properties. However, the course will also explore additional means of being “true” to an object or a space beyond the transcriptive nature of verisimilitude. The course will also deal heavily with the nature of color and color theory.

Prerequisite(s): ARST 1050 or 1060.

ARST 2060 Drawing II: Materials and Strategies (4)
In this course, we will build upon skills, techniques, and disciplines learned in Drawing I (ARST 1050). Drawing fundamentals, coupled with new and experimental approaches to drawing, will be employed in an investigation of the relationship between subject matter, execution, and the resulting content or meaning. The student will begin to unite their ability to render from observation with communicating specific and personal concerns. Individual goals, visions, and content are provided forum for display in the drawing assignments.

ARST 2070 Drawing II: Descriptive Drawing (4)
“Descriptive drawing” implies the process of describing an object or form from observation. In this course, we will hone our ability to describe the appearance of three-dimensional forms and space onto a two-dimensional surface. The development of verisimilitude begun in Drawing I will be continued here through the reexamination of line, value, and perspective in graduated complexity, and will examine the a variety of markmaking and material approaches to these fundamentals. This course will also explore additional means of being “true” to an object or a space beyond the transcriptive nature of verisimilitude. This exploration will involve the student systematically considering the relationship of how one draws to what one draws in course assignments.

Prerequisite(s): ARST 1050 or 1060.

ARST 2080 Drawing II: Figure Drawing (4)
Observational drawing of nude, semi-nude, and clothed models will allow for the thorough study of the anatomy and vitality of the human form. Students will further the usage of perceptual and technical rendering skills gleaned from Drawing I while employing the human figure as a vehicle of expression and communication. The course will foreground the issue of representation in contemporary artistic practice.

Prerequisite(s): ARST 1050 or 1060.

ARST 2101 Sequence and Series (4)
Within foundation courses in Studio Art, the singular image or object often occupies the student's primary attention as they work towards technical and conceptual refinement. Energy, effort, and focus are frequently poured into the creation of a stand-alone work of art. This course will involve the creation of multiple images or objects in a determined sequence within a single work of art or project. These images or objects will be employed to advance a specific narrative when taken in total. Moving beyond the preciousness or comprehensiveness of the singular image or object, Sequence and Series will employ a cumulative and aggregate approach to communication, exploring the advantages that multiplicity, layout, duration, and viewer participation open within art making.

ARST 2130 Ceramics II: Wheel Throwing (4)
The course focuses on the use of the potter's wheel in developing ceramic forms. A variety of techniques and forms will be covered with emphasis on their aesthetic and conceptual potential in the field of ceramic art. Historical and contemporary approaches are presented in slide lectures and demonstration.

Prerequisite(s): ARST 1130.

ARST 2140 Ceramics II: Mold Making (4)
The course focuses on hand working processes with plaster molds and use of extruded elements in the development of original works. Press molding and slip casting will be covered. Students participate in developing clays, glazes and firing procedures.

Prerequisite(s): ARST 1130.

ARST 2150 Ceramics II: Contemporary Ceramic Sculpture (4)
This course introduces students to issues and formats in contemporary ceramic sculpture. Students will develop original works in clay within the formats of wall platters, figurative sculpture and site specific installations. The course will make use of skills developed in ARST 1130 with some new construction, glazing and firing processes introduced, and students sharing responsibility for clay making and firing of the finished pieces. The development and articulation of original ideas will be emphasized through and studio work time, demonstrations, discussions, slide lectures and critiques.

Prerequisite(s): ARST 1130.

ARST 2170 Glass II: Hot Casting (4)
The goal of this class is to achieve a functional understanding of glass art. This general course focuses on blowing, casting, and forming glass. Attention is given to using the approaches to glass for individual expression.

Prerequisite(s): ARST 1170.

ARST 2180 Glass II: Hot Casting (4)
The goal of this class is to achieve a functional understanding of glass art. This general course focuses on blowing, casting, and forming glass. Attention is given to using the approaches to glass for individual expression.

Prerequisite(s): ARST 1170.

ARST 2270 Painting II: Abstraction (4)
This course focuses on the formal and expressive qualities of both nature-based and pure abstraction. Abstraction is investigated through historic and contemporary ideologies, technical issues and the use of nontraditional materials. Systematic exploration of a variety of approaches will serve as a structure for development of the student's own goals and sensibility.

Prerequisite(s): ARST 1250.

ARST 2280 Painting II: Realism (4)
This course focuses on the descriptive and representational abilities of painting, building on techniques and skills developed in Painting I. Systematic exploration of a variety of approaches to description will serve as a structure for development of the student's own goals and sensibility. Students will critically reflect on contemporary painters alongside of projects designed to cultivate a breadth of understanding about paint as a medium.

Prerequisite(s): ARST 1250.

ARST 2350 Photography II: Expansive Practice (4)
This intermediate course in photography builds on the foundations established in introductory courses to enhance both technical skills and conceptual abilities. Skill development in this course includes digital and analog photographic processes, and the course is open to the full breadth of lens-based production techniques. Artist lectures, critiques, class discussions, and critical reflection will all be used to explore how diverse lens-based practices can expand creative production. Operating within a studio environment that nurtures experimentation and collaboration, students will not only advance their technical expertise but also cultivate their artistic identity and style.

Prerequisite(s): ARST 1310, 1330 or 1350.

ARST 2370 Print II: Screen Printing (4)
This class will focus on a detailed exploration of the art of screen printing, starting with simple paper stencil techniques through more complex photo-based emulsions. You will be exposed to historical and contemporary examples of the medium and produce works that explore a variety of ideas. Much consideration will be given to conceptual and formal issues and how these aspects manifest themselves through the medium.

Prerequisite(s): ARST 1370.

ARST 2380 Print II: Stone and Plate Lithography (4)
This course is designed as an in-depth study of plate and stone lithography. We will explore a wide range of drawing and painting materials on aluminum lithography plates and limestone slabs. Through a series of demonstrations, projects, critiques, readings and reading discussions, as well as image lectures you will explore the rich diversity of this medium and become familiar with the process of lithography.

Prerequisite(s): ARST 1370.

ARST 2490 Sculpture II (4)
This course explores and expands on the basic concepts, techniques, and processes of sculpture. Students work with projects that develop understanding of both sculptural ideas and materials. A wide variety of media and approaches are explored in this course, including wood, plaster, welding and casting metals, mixed media, and working from the figure.

Prerequisite(s): ARST 1490.

ARST 2500 Sculpture II (4)
This course explores and expands on the basic concepts, techniques, and processes of sculpture. Students work with projects that develop understanding of both sculptural ideas and materials. A wide variety of media and approaches are explored in this course, including wood, plaster, welding and casting metals, mixed media, and working from the figure.

Prerequisite(s): ARST 1490.

ARST 2550 Digital Arts II: Creative Computing (4)
This course emphasizes core competencies in creative computing, including programming graphics and interactive applications. Students will create projects through the medium of code, learning to create and manipulate images, audio and video by writing custom software. No programming experience required.

Prerequisite(s): ARST 1550.

ARST 2560 Intro to Digital Fabrication (4)
This course is an experimental studio geared toward the exploration of several new technologies in digital fabrication, including computer–controlled routers and 3D printers. What are the affordances of these technologies and what do they mean in the context of the fine arts? These machines can produce works that are finished products or that are steps along the way in more traditional art media. How can we use these tools to enhance our artistic practice? What do they mean for the future of fabrication, craft, and aesthetics? These are the questions we'll work to explore together.

ARST 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARST 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

ARST 3010 Special Courses (1-4)
Coursework for additional credit in conjunction with 2000- or 3000-level studio courses. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARST 3011 Special Courses (1-4)
Coursework for additional credit in conjunction with 2000- or 3000-level studio courses. Course may be repeated up to unlimited credit hours.

ARST 3012 Special Topics (0-4)
Coursework for additional credit in conjunction with 2000- or 3000-level studio courses. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARST 3013 Special Topics (4)
Special Topics course. Course may be repeated up to unlimited credit hours with different course title.

Maximum Hours: 99

ARST 3014 Special Topics (4)
Special Topics course. Course may be repeated up to unlimited credit hours with different course title.

Maximum Hours: 99

ARST 3015 Special Topics (4)
Special Topics course. Course may be repeated up to unlimited credit hours with different course title.

Maximum Hours: 99

ARST 3020 Special Courses (1-4)
Coursework for additional credit in conjunction with 2000- or 3000-level studio courses. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARST 3040 Art and Activism (4)
This course explores art making as a tool for change. Through the lens of current social and environmental issues, we will examine why and how artists create meaning. The discussion of texts and visual material will be supplemented by visits with local activists and field trips to artist studios and exhibitions. The service learning component of the course involves working with an art/activist community partner on social or environmental projects. We will work to fulfill their organizational needs while enhancing our own civically engaged artistic practice. Thinking across disciplinary fields, we will focus on the potential to transform our political and personal experiences through art and action. The culmination of the course will be the creation of an individual or collaborative project that combines research, aesthetics, and activism. Prerequisites: two 1000 level or above courses in ARST. Course may be repeated 3 times for credit.

Course Limit: 3

ARST 3130 Advanced Ceramics (4)
Further examination of the aesthetic and conceptual applications of the ceramic medium. The development of individual concerns and vocabulary of form will be stressed. Clay and glaze formulation will be covered. Students are responsible for developing clays and glazes and firing their work.

Prerequisite(s): ARST 2130, 2140 or 2150.

ARST 3140 Advanced Ceramic: Wheel Throwing (4)
Development of advanced throwing techniques and concepts related to creating original works on the potter's wheel. More complex forms, as well as glazing and firing processes will be covered. Lectures, demonstration and critiques will supplement studio work time.

Prerequisite(s): ARST 2130 or 2140.

ARST 3170 Advanced Glass (4)
This class further develops the student's ability to study methods and processes for forming molten glass into sculpture. Instruction in glass casting and blowing are taught with a focus on creating specific ideas.

Prerequisite(s): ARST 1170 and 2170.

ARST 3180 Advanced Glass (4)
This class further develops the student's ability to study methods and processes for forming molten glass into sculpture. Instruction in glass casting and blowing are taught with a focus on creating specific ideas.

Prerequisite(s): ARST 2170 or 2180.
Course Limit: 2

ARST 3250 Advanced Painting (4)
Advanced Painting will address the union of material, formal, and technical decisions with the student's conceptual concerns within the framework of their painting practice. Projects are designed to provide the student with the opportunity to consider complex problems in their craft and to stimulate focused, individual solutions and direction. Additionally, the student will be equipped to sustain independent production beyond graduation and will be exposed to the contemporary context of painting through readings, slides, gallery and studio visits, and research.

Prerequisite(s): (ARST 1250 and 2270 or ARST 2280) or (ARST 1050 and 2040 or ARST 2050, 2060, 2070 or 2080).

ARST 3260 Advanced Painting (4)
Advanced Painting will address the union of material, formal, and technical decisions with the student's conceptual concerns within the framework of their painting practice. Projects are designed to provide the student with the opportunity to consider complex problems in their craft and to stimulate focused, individual solutions and direction. Additionally, the student will be equipped to sustain independent production beyond graduation and will be exposed to the contemporary context of painting through readings, slides, gallery and studio visits, and research.

Prerequisite(s): (ARST 1250 and 2270 or ARST 2280) or (ARST 1050 and 2040 or ARST 2060, 2070 or 2080).

ARST 3300 Decolonizing the Camera (4)
In this course students will examine their own visual practice through the framework of decolonization. Through this process, students will engage with topics of race, representation, and power, while they build a visual practice that takes into account the complicated colonial legacy of photography. We will investigate the ways in which the camera has historically been used as a weapon of violence against those deemed as the Other. By approaching photography in such a way, students will gain a better understanding of how the camera works in racial time, which will result in a more informed and intentional practice of art-making. Throughout the course, students will engage in critiques, readings, and visual analyses that will support the cultivation of language to directly address the formation of otherness in image-making. Simultaneously students will be looking at contemporary lens-based artists who are working to correct this legacy from behind the camera in order to leverage the medium of photography as a tool of liberation. Students will employ these contemporary techniques to develop their own artistic practice.

Prerequisite(s): (ARST 1050, 1060, 1130, 1170, 1250, 1310, 1330, 1350, 1370, 1490, 1550, ARHS 1010, 1020, DESG 1005, 1105 or DMPC 1110).

ARST 3350 Advanced Photography: Skills and Concepts (4)
This course covers the development of various lens-based skills, with attention given to issues of representation and aesthetics within contemporary art discourse. Students must have completed both a 1000-level course and a 2000-level course in photography (or equivalent) and are expected to enter the class with an intermediate level of understanding of camera operations and printing techniques. Through technical exercises, students will learn targeted methods and tools catered to advancing their conceptual projects. These skills include, but are not limited to, advanced darkroom processes, experimental chemical processes, large format film cameras, advanced lighting, advanced photoshop, large format scanning, large format printing, video work, performance, and installation. Although there is a large amount of technical ground covered in this course, everything presented is intended to be a tool used for creative expression.

Prerequisite(s): (ARST 1310, 1330 or 1350) and ARST 2350.

ARST 3360 Advanced Photography: Individual Projects (4)
This course provides a laboratory to advance creative production and develop critical thinking. Students must have completed both a 1000-level course and a 2000-level course in Photography (or equivalent) and are expected to enter the class with an intermediate level of understanding of camera operations and printing techniques. The foundation of this course is continued advanced experimentation with lens-based media. Students will explore the aesthetic aspects of photography through self-directed assignments geared toward improving their technical and conceptual abilities. Group critiques will challenge students to further develop the technical, aesthetic, and conceptual skills necessary for establishing a strong individual photographic practice and style.

Prerequisite(s): (ARST 1310, 1330 or 1350) and ARST 2350.
Course Limit: 2

ARST 3370 Advanced Printmaking: Etching (4)
This course is designed as a concentrated study in the art and technique of copper plate etching. Through a series of demonstrations, PowerPoints presentations, projects, and critiques students will explore the rich diversity of this medium and become proficient with the mark making, processes and materials. The Techniques covered will include line etching; soft ground texture etching; aquatint the creation of tonal areas; sugar-lift which encompasses direct image painting on the plate, spit bite involving direct acid painting on the plate, and various techniques of printing including à la poupée, chine colle and multi color viscosity printing.

Prerequisite(s): ARST 1370.

ARST 3380 Advanced Printmaking: Woodcut and Relief (4)
This course is an intense investigation into the advanced processes with woodcut and relief printmaking. You will explore possibilities with different substrates and different ways of printing relief. This will include the Japanese style of block printing called Moku-hanga, installation prints and other experimental applications. You will be exposed to historical and contemporary examples of the medium and produce original works that explore a variety of ideas. Much consideration will be given to conceptual, formal and technical issues and how these aspects manifest themselves through the medium and contribute to the discourse in contemporary art

Prerequisite(s): ARST 1370.

ARST 3400 Printmaking: The Art of the Book (4)
This Course is an in-depth exploration into the Art of the Book and Book Arts. The course will incorporate various binding techniques with conceptual and formal projects. A History of Book Arts will be presented as well as examples of popular trends in hand made books. Instruction will be given on setting type and using the letterpress. Also covered will be page design, page flow, and digital development of images and text. Readings will accompany slide lectures and demonstrations. Prerequisite(s): ARST 1370.

Prerequisite(s): ARST 1370.

ARST 3490 Advanced Sculpture (4)
Advanced Sculpture students will have a significant opportunity to work in a self-guided fashion for a large portion of the semester. Advanced students will meet with the professor in the first week to determine an individualized trajectory for the semester. The instructor asks that Advanced students begin the semester by responding to a site-specific context to be negotiated between the professor and individual student and additional project outlines will be developed and implemented as needed. The instructor will work directly with the student in editing artist statements and project documentation. Students in enrolled in Advanced Sculpture will be expected to apply for professional opportunities as a component of the course. Advanced students will culminate the semester with an exhibition in a location of their choosing, this could include the Carrol Gallery.

Prerequisite(s): ARST 1490 and 2490.

ARST 3500 Advanced Sculpture (4)
Advanced Sculpture students will have a significant opportunity to work in a self-guided fashion for a large portion of the semester. Advanced students will meet with the professor in the first week to determine an individualized trajectory for the semester. The instructor asks that Advanced students begin the semester by responding to a site-specific context to be negotiated between the professor and individual student and additional project outlines will be developed and implemented as needed. The instructor will work directly with the student in editing artist statements and project documentation. Students in enrolled in Advanced Sculpture will be expected to apply for professional opportunities as a component of the course. Advanced students will culminate the semester with an exhibition in a location of their choosing, this could include the Carrol Gallery.

Prerequisite(s): ARST 2490 or 2500.

ARST 3550 Time-Based Media (4)
This course is designed to explore the various forms of time-based media and their applications in the fine arts. In this class students will study the techniques and technologies used to create time-based media including video, animation, and sound design. Through a combination of hands-on projects and critical analysis, students will gain a deep understanding of how time-based media can be used to convey messages, tell stories, and create immersive experiences. Industry-standard software such as After Effects, Premier, and Audition will be used as students develop their time-based media projects.

Prerequisite(s): ARST 1550.

ARST 3560 Print-Based Media (4)
This course is designed for students interested in book design, complex graphics, and large-scale prints. Through a combination of hands-on projects and critical analysis, students will have the opportunity to explore the latest tools and techniques used in digital printing along with learning about color management, file preparation, and print output. Students will work with industry-standard software programs, such as Photoshop, InDesign, and Illustrator to create original digital prints.

Prerequisite(s): ARST 1550.

ARST 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARST 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARST 3900 Studio Internship (3)
Studio internships are available for individual projects done in association with various firms and institutions in New Orleans. Students will work under professional supervision at these sites, and consult with an art studio faculty member. Requirements include a written report on the experience, and an evaluation by the supervisor.

ARST 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

ARST 4130 Studio: Ceramics (3-4)
Further examination of the aesthetic and conceptual applications of the ceramic medium. The development of individual concerns and vocabulary of form will be stressed. Clay and glaze formulation will be covered. Students are responsible for developing clays and glazes and firing their work.

Prerequisite(s): ARST 2130, 2140 or 2150.

ARST 4140 Studio: Ceramics (3-4)
Development of advanced throwing techniques and concepts related to creating original works on the potter's wheel. More complex forms, as well as glazing and firing processes will be covered. Lectures, demonstration and critiques will supplement studio work time.

Prerequisite(s): ARST 3130 and 3140.

ARST 4170 Studio: Glass (3-4)
Continuing instruction in glass casting and forming techniques. The emphasis will be on professional presentation of specific ideas.

Prerequisite(s): ARST 3170 or 3180.

ARST 4180 Studio: Glass (3-4)
Continuing instruction in glass casting and forming techniques. The emphasis will be on professional presentation of specific ideas.

Prerequisite(s): ARST 3170 or 3180.

ARST 4250 Studio: Painting (3-4)
Individual projects in a class situation. Each student explores special interests with the opportunity of working with other advanced students doing diverse projects arrived at in consultation with faculty.

Prerequisite(s): ARST 1250 and (ARST 2270 or 2280) and (ARST 3250 or 3260).

Maximum Hours: 99

ARST 4260 Studio: Painting (3-4)
Individual projects in a class situation. Each student explores special interests with the opportunity of working with other advanced students doing diverse projects arrived at in consultation with faculty.

Prerequisite(s): (ARST 3250 or 3260).

Maximum Hours: 99

ARST 4350 Studio: Photography (3-4)
Individual projects in a class situation. Each student explores special interests with the opportunity of working with other advanced students doing diverse projects arrived at in consultation with faculty.

Prerequisite(s): ARST 3350 or 3360.

Maximum Hours: 99

ARST 4360 Studio: Photography (3-4)
Individual projects in a class situation. Each student explores special interests with the opportunity of working with other advanced students doing diverse projects arrived at in consultation with faculty.

Prerequisite(s): ARST 3350 and 3360.

Maximum Hours: 99

ARST 4370 Studio: Printmaking (3-4)
Personal exploration into the expansive world of printmaking. Emphasis is placed on personal growth and development both on the conceptual and technical level. The course consists of individual and group projects in a class setting.

Prerequisite(s): ARST 3370.

ARST 4380 Studio: Printmaking (3-4)
Personal exploration into the expansive world of printmaking. Emphasis is placed on personal growth and development both on the conceptual and technical level. The course consists of individual and group projects in a class setting.

Prerequisite(s): ARST 3370 or 3380.

ARST 4490 Studio: Sculpture (3-4)
Individual exploration within a cooperative format. Attention given to the development of personal style with seminars supplementing studio research.

Prerequisite(s): ARST 3490 and 3500.

ARST 4500 Studio: Sculpture (3-4)
Individual exploration within a cooperative format. Attention given to the development of personal style with seminars supplementing studio research.

Prerequisite(s): ARST 3490 and 3500.

ARST 4910 Independent Study (3-4)
Open to especially qualified juniors and seniors with approval of instructor and chair of department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARST 4920 Independent Study (1-4)
Open to especially qualified juniors and seniors with approval of instructor and chair of department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARST 4930 Senior Capstone Studio (3)
This course constitutes a capstone experience for senior B.A. students in Studio Art. The course will culminate in an exhibition of the students' work in the B.A. Exhibition in the Carroll Gallery which the students will design, install, promote, and document. The course will also cover contemporary art criticism, assisting students in understanding their work in the broader context of contemporary art. Students will visit and critique professional exhibitions, develop the ability to present their own work in a slide presentation and a digital portfolio, and study other professional art practices, resources, and opportunities.

ARST 4940 BFA Senior Capstone Experience (3)
This course constitutes a capstone experience for senior BFA art majors and culminates in an exhibition in the Carroll Gallery of the Newcomb Art Department. The course intends to explore the framework of a professional studio practice: sustaining healthy work habits following graduation, creating/selecting/installing/presenting/documenting a body of work in an exhibition venue, writing clear and articulate artist statements and exhibition or residency proposals, and actively interfacing with other artists, gallerists, critics, and curators in the field. Through in-class presentations, group critiques, field trips, and written assignments, students will formulate plans and practices for a post-graduation career in the arts.

ARST 4990 Honors Thesis (3)

ARST 4991 Senior Honors Project in Fine Arts (3)
Senior Honors Project in Fine Arts

ARST 5000 Honors Project (3-4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): ARST 4990.

ARST 5001 Senior Honors Project in Fine Arts (3)
Senior Honors Project in Fine Arts

Prerequisite(s): ARST 4991.

ARST 5010 Studio Research (3)
This course is designed for senior BFA and BA students in Studio Art to explore the research skills and methods employed by professional artists. Through case studies of contemporary and diverse creative practices, majors will develop an understanding of how research habits drawn from different disciplines can impact both the artistic process and its resulting output. The course covers topics and methodologies such as site-specific research and fieldwork, influence mapping, the use of archives, and the relationships between visual work and language. Functioning as a collaborative think tank, students will investigate approaches to contemporary artistic practice, fostering the evolution of each student's emerging practice as both a maker and thinker. As participants engage in collective exploration, they will simultaneously make progress toward the development of a cohesive body of individual work in preparation for the Senior Capstone course taken the subsequent semester, ultimately culminating in the BA and BFA exhibitions. NOTE: During the senior year, Studio Art majors are required to take a 4-credit studio art course above the 2000-level each semester—one in conjunction with 'ARST 5010: Studio Research' in the fall and one in conjunction with 'ARST 5020: Capstone' in the spring.

ARST 5020 Senior Capstone Studio (3)
This course constitutes a capstone experience for senior BFA and BA students in Studio Art. The course will culminate in an exhibition of the students' work in the BFA and BA Exhibitions in the Carroll Gallery, where the students will design, install, promote, and document their projects. Through an examination of contemporary art criticism, students will develop a deeper understanding of their work in the broader context of contemporary art. Additionally, students will visit and critique external exhibitions while simultaneously studying professional art practices, resources, and opportunities. Writing clear and articulate artist statements, creating exhibition or residency proposals, and presenting their work in presentations and a digital portfolio are also integral components. The course explores the framework of a professional studio practice by actively interfacing with artists, gallerists, critics, and curators in the field, formulating plans and practices for post-graduation careers in the arts.

ARST 5380 Junior Year Abroad (1-20)

Maximum Hours: 99

ARST 5390 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARST 6010 Special Advanced Courses (1-4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARST 6020 Special Advanced Courses (1-4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ARST 7010 Graduate Art Studio (3)

ARST 7020 Graduate Art Studio (3-6)

ARST 7030 Graduate Art Studio (3)

ARST 7040 Graduate Art Studio (3-6)

ARST 7320 Printmaking (3)

ARST 7400 Special Problems I (6)

ARST 7410 Special Problems II (6)

ARST 7420 Special Problems II (3)

ARST 7430 Special Projects (3)

ARST 7450 Thesis Project (3-6)

ARST 7800 MFA Seminar (3)

Maximum Hours: 99

ARST 7810 Studio Art MFA Critique Class (3)
The purpose of this class is to provide focused time critiquing graduate student work. Throughout the course of the semester, students will have multiple opportunities to present work to the entire MFA cohort for essential discussion and feedback. Course may be repeated up to 4 times for credit.

Course Limit: 4

ARST 7820 Mfa Seminar (3)

ARST 7830 Mfa Seminar (3)

ARST 9980 Thesis Research (0)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Asian Studies (ASTA)

ASTA 1800 Intro to Asian Studies (3)
This course is designed to provide a general introduction to the field of Asian Studies and to familiarize students with its primary regions: East Asia, South Asia, and Southeast Asia. Each of these regions is complex, rich in history and diverse cultures, and important in the global community. Introduction to Asian Studies provides students with a framework with which they can understand each major area in terms of aesthetic expression, cultural and linguistic groups, economics, geography, history, politics, philosophy, and religion.

ASTA 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

ASTA 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

ASTA 3180 Peoples & Cultures of S. Asia (3)
A survey of the peoples and cultures of India, Pakistan, Nepal, Bangladesh, Bhutan, Sikkim, and Sri Lanka. Emphasis is placed upon the social organization and cultural history of the diverse peoples who have inhabited the Indian Triangle.

ASTA 3511 Intro to Chinese Linguistics (3)
Introduction to Chinese Linguistics is designed to help Chinese learners understand Chinese grammar in a systematic manner as well as gain a theoretical perspective on Chinese language structure, give linguistic students a sense of how Chinese languages, in particular, Mandarin Chinese works and help (future) Chinese instructors gain the meta-linguistic knowledge in teaching Mandarin language. This course will be conducted in the form of lectures and student-led discussions. At the end of this course, students are expected to build a schema on Chinese language structure, gain a better pragmatic knowledge of Chinese language and have a better understanding of Chinese socio-cultural conventions in its language usage.

ASTA 3520 Modern Japanese Culture (3)
Study of contemporary Japanese culture and society.

ASTA 3540 Anime, Japan & Globalization (3)
This course will engage the interdisciplinary field of anime, globalization, and cultural policy studies to better understand the broader relationship between popular media, culture and politics. We will engage with select anime texts and articles to better understand how anime has developed into a global medium, and further analyze these texts through readings that deal with Japan's postwar development. Students will develop a better understanding of the history of Japanese anime as well as the global market flows that influenced the current development of anime into a massive international phenomenon.

ASTA 3550 Feudal Japan: Age of the Samurai (3)
Feudal Japan examines Japanese culture, history, and society from the dawn of the Samurai class until its demise in the last half of the nineteenth century. During this period, Japan evolved from a highly warlike society to one in which peace prevailed for more than 250 years. Topics to be covered include geography, prehistory, class/caste development, religion, warfare, urban development, theatre, fine arts, social control, and western contact. No prerequisites.

ASTA 3770 Chinese Cinema (3-4)
Critical survey of Chinese Cinema taught in English with historical coverage but focusing on contemporary (post-80s) cinema, covering a range of genres including art films, comedies. Melodramas, science fiction, and historical films from Mainland China, Hong Kong, and Taiwan. A key question we address is how cinema becomes "national," highlighting the geopolitical and historical issues that inhere in the global circulation of films and their interpretation. Students will learn skills in film analysis and criticism with a view of problems of cross cultural analysis and key themes in modem Chinese culture, including the meaning of revolution, shifting gender roles. and the relation between politics and art.

ASTA 3810 Modern Chinese Lit and Society (3)
This course is a general introduction to the modern Chinese fiction, poetry, and prose from the early twentieth century to the present.

ASTA 3910 Special Offerings In Asian Studies (3-4)
Courses offered by visiting professors. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ASTA 3911 Special Topics (3-4)
Special topics course as designed by visiting or permanent Asian Studies faculty or affiliates. For description, consult the academic program. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

ASTA 4500 Special Topics (3)
Special topics in Asian studies. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ASTA 4560 Internship (3)
Internship Studies in Asian Studies

Maximum Hours: 99

ASTA 4600 Dragon and Lotus (3-4)
This course, focusing the visual and material culture of China from the prehistoric to the medieval period, is to interrogate the dynamics between art, politics, and rituals. Students will investigate how ancient Chinese made use of a variety of mediums for different social and political purposes and how a myriad of motifs conveyed symbolic meanings.

ASTA 4910 Independent Study (1-3)
Independent study in Asian studies. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ASTA 4990 Honors Thesis (3)
Honors thesis.

ASTA 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): ASTA 4990.

ASTA 5190 Semester Abroad (1-20)
Semester abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ASTA 5380 Junior Year Abroad (1-20)
Junior year abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ASTA 5390 Junior Year Abroad (1-20)
Junior year abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ASTA 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

ASTA 6810 Special Topics (3,4)
Special topics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Astronomy (ASTR)

ASTR 1000 Descriptive Astronomy (3)
A one-semester survey of astronomy for the liberal arts student. The solar system, properties and evolution of stars and galaxies, and cosmology. Recent discoveries in astronomy are emphasized.

ASTR 1010 The Solar System (3)
The organization and origin of the solar system, the earth in motion, the sun, the moon, the planets, comets, and meteors.

ASTR 1020 Stellar Astronomy (3)
The stars, their distances, spectra, magnitudes. Stellar atmospheres and interiors, stellar evolution. Variable and collapsing stars, nebulae, galaxies and cosmology.

ASTR 1100 Observational Astronomy (4)
Activities, readings, and projects in observational astronomy. This course provides students with practical experience in observational techniques, while guiding them to an understanding of the role of measurement in the scientific method.

ASTR 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

ASTR 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

ASTR 5380 Study Abroad (1-20)
Semester abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ASTR 5390 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Biochemistry & Molecular Biol (GBCH)

GBCH 6010 Graduate Biochemistry (4)
The course objectives are to provide graduate level exposure to basic biochemistry, including the structure and function of proteins, membranes and lipids, the basis of enzyme function and metabolic cycles, glycoconjugate biochemistry, and DNA/RNA structure and function. Grades are assigned based on three exams given over the semester.

GBCH 6020 Biochemistry and Molecular Biology Seminar (1)
Students are required to attend and participate in the seminars given by the Department of Biochemistry and Molecular Biology.

GBCH 6110 Basic Medical Biochemistry (3)
The course focuses on topics, mechanisms, and analyses that are most relevant to human health and disease, including biomolecule structure and function, gene regulation, and metabolism in cancer, diabetes, and heart disease. Instructional methods include those currently employed in the Tulane Medical School, such as the flipped classroom and team-based learning. Students will be provided an array of learning aids, including instructional videos.

GBCH 7090 Seminar (1)

GBCH 7100 Seminar (1)

GBCH 7110 Selected Topics (1-4)

GBCH 7120 Special Problems (1-6)

GBCH 7130 Selected Topics (1-4)

GBCH 7140 Selected Topics (1-3)

GBCH 7150 Tutorial Topics (1-6)

GBCH 7160 Tutorial Topics (1-6)

GBCH 7170 Principles of Genetics (4)
This four credit-course on the Principle of Genetics textbook by Griffiths et al that proceed from the basic experiments that established the principles of genetic behavior and gene regulation to the molecular genetics of higher organisms. The course is intended to fill a gap of knowledge in our curriculum for molecular genetics that nicely show the foundations of current studies using the broad range of organisms that are still being used as model organisms. An increasing number of students lack this information which we consider vital for their current work and their future studies. We use the textbook by Griffiths et al that is a favorite since it moves from genetics to a greater focus on molecular genetics.

GBCH 7190 Seminar Presentation (2)

GBCH 7230 Introduction to Bioinformatics (3)
This three credit course on Introduction to Bioinformatics provides students with essential concepts, tools, and databases on integrating computer science with biology and medicine to access, format, manage, visualize, and analyze biological data, especially for genomics, transcriptomics, metagenomics, and epigenomics. A major focus is to help students gain detailed knowledge and hands-on computer skills on next-generation sequencing (NGS) data analyses, particularly DNASeq, RNASeq, small RNASeq, and epigenomics analyses. This course addresses the high demand of bioinformatics training for students who can apply critical software tools, data repositories, and analytical methods in their current student and future research.

Prerequisite(s): GBCH 6010.

GBCH 7250 Biomedical Statistics and Data Analysis (2)
The objective of this course is to provide biomedical graduate students with the knowledge needed to apply statistical tests and analyses to their own data and with the knowledge to understand the statistical analyses they are likely to encounter in the literature. Subjects include single and multiple parameter analyses for measured and counted variables, as well as linear and non-linear regression. Grades are based on exams that require students to apply what they learned to solving statistical problems.

GBCH 7330 Advanced Bioinformatics (3)
The goal of this course is to introduce foundational concepts, algorithms and applications of advanced bioinformatics, particularly machine learning and artificial intelligence (AI) in biomedical research. The major topics include machine learning, deep learning, and AI and their state-of-the-art applications in biomedicine. Students will acquire mathematical formulations and computer algorithms in regression modeling, data clustering and dimensionality reduction, data classifications (including deep learning), and reinforcement learning. Students will also gain detailed knowledge and hands-on experience in proteomics) and develop programming skills in applying open-source software programs in analyzing and interpreting omics data. Prerequisite: A Biochemistry course.

GBCH 7500 Human Medical Cellular Biochemistry (5)
The objectives and content of the Human Medical Cellular Biochemistry course are designed to provide students with a comprehensive understanding of cellular structure and function, and the manner by which cellular processes are normally integrated and regulated. This course stresses both the normal cellular function, and why disease states occur if normal cellular processes are disrupted.

GBCH 7520 Metabolic Biochemistry of Human Disease (5)
The objectives and content of the Metabolic Biochemistry of Human Disease course are designed to provide students with a comprehensive understanding of the metabolic pathways involving the four major metabolic compounds: carbohydrates, lipids, amino acids and nucleotides; and the manner by which metabolism is normally integrated and regulated. This course stresses both the normal metabolic function, and why disease states occur if normal metabolic processes are disrupted.

GBCH 7540 Medical Biochemistry Grand Rounds Externship (3)
Students are required to actively attend each of the Grand Rounds offered by the Department of Medicine and an elective seminar offered by the various departments in the School of Medicine, and to give a one-page report post Grand Round. This report will summarize clinical and research topics, background knowledge, major experimental/diagnostic/therapeutic approaches discussed, key results, conclusions and significance of the studies presented in each Grand Round, as well as some critiques on the Grand Round. A one-hour discussion section on Friday will follow the seminars. Grades are based on participation and reports.

GBCH 7550 Med Biochem Grand Rounds Exter (3)

GBCH 7560 Academic Writing & Critique (2)
Students will review the structure and syntax of papers from the primary literature and of grant proposals, investigate and report the validity of an advertised health claim, prepare a two-page grant proposal, and review a grant proposal. Review activities will be carried out in small groups with facilitation by the instructor. The grade will be based on class participation, student feedback, the report, and the proposal.

GBCH 7570 Signal Transduction and Hormone Action (2)
Current molecular mechanisms for cellular signal transduction pathways and hormone action including membrane receptors and downstream pathways, second messenger systems, receptor-ion channels, kinase/phosphatases, extracellular matrix signaling, signaling and cell death, Wnt signaling pathways and nuclear receptor signaling.

GBCH 7580 Research Methods in Biochemistry and Molecular Biology (2)
Each student will work in a laboratory to learn how different methods are used to carry out research in Biochemistry and Molecular Biology. At the end of the semester, the student is required to write a 2 to 3-page report describing the principle of the methods and the results of the work. The grade will be based on the feedback of the laboratory PI and the report.

GBCH 7590 Cases in Research Ethics (2)
This course is to emphasize the importance of research ethics through the use of examples from real life. They will be a brief explanation of the case by the instructor, students will break up into groups, and decide on the appropriate response in their opinion and discuss that opinion.

GBCH 9980 Master's Research (0)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

GBCH 9990 Dissertation Research (0)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Bioethics and Medical Humanities (BEMH)

BEMH 4000 Philosophy of Medicine (3)
This course provides an in-depth treatment of the philosophical foundations of medicine. It considers problems relating to the nature of health and illness, the basis of medical knowledge, the nature of the physician/patient relationship, and more. Junior or Senior standing required.

Prerequisite(s): PHIL 1010, 1030, 3050 or 3550.

BEMH 4001 Neuroethics: The Ethics of Neuroscience and the Neuroscience of Ethics (3)
Neuroethics, as an area of study, can be divided into two sub-fields: the neuroscience of ethics and the ethics of neuroscience (Roskies 2002). The neuroscience of ethics deals with our growing understanding of the underlying mechanism of social behavior relevant to morality – for instance, the origins and nature of empathy, altruism, aggression, self-control, reasoning, and the role of our emotions and intuitions in moral decision making. The ethics of neuroscience is a branch of applied ethics or bioethics. It focuses on ethical issues that originate in new advances and possibilities in neuroscience. Especially relevant here is the fact that advances in neuroscience not only extend our understanding of the brain, but also raise the possibility of interventions to modify our brain. This course is designed to give students a philosophical overview of these topics, and opportunities to think critically about ethical implications related to neuroscience and advances in medicine. We will explore fundamental topics in both branches of Neuroethics. Drawing from a variety of fields—neuroscience, philosophy, social psychology, cognitive psychology, developmental psychology, and evolutionary theory—we will investigate and discuss questions like: What are the evolutionary origins of moral judgment? Does evolutionary theory shed light on normative moral questions? Do our moral motivations derive from reason or pre-reflective intuition? Do psychopaths have moral responsibility? Do we have free will? Is there an obligation to enhance ourselves? Should drugs be used to enhance mental functioning? Junior or Senior standing required.

Prerequisite(s): PHIL 1030, 3050, 3510, 3550, 3580 or 6050.

BEMH 4002 Foundations in Bioethics (3)
This course examines the theoretical foundations of bioethics. It begins by considering foundational questions regarding the nature of medicine, illness, and the physician/patient relationship. It then turns to discussion of the various ethical frameworks that guide decision-making in medicine. Finally, it closes by bringing these frameworks to bear on theoretical issues relating to social justice.

BEMH 4003 Medical Humanities (3)
Medical humanities draws on many disciplines and fields—including history, literature, art history, media studies, philosophy, law, ethics, religion, theology, anthropology, psychology, sociology, and other arts and sciences—to study the context of medicine, the experience of medicine, the goals of medicine, and concepts in and of medicine. A common goal of medical humanities is to make clinicians, at all levels of their training, more "humane" or "compassionate." Another common goal includes making clinicians more "well-rounded." Still another goal includes promoting teaching and learning in medical humanities simply for its own sake. But what is "medical humanities"? While there is no single answer to this question, this much is clear: Medical humanities draws from many disciplines and fields to examine issues related to the development and the practice of medicine. In this sense, medical humanities is similar to other fields such as religious studies or gender studies—fields that use various disciplines and methods to study a subject such as religion or gender. What is different, however, is that medical humanities, unlike many other academic fields, seems to require or to imply an essential practical component because all medical humanities knowledge has some relationship to (1) the care of patients and/or populations or (2) the care of physicians themselves. This course will explore a vast array of topics in medical humanities, including the boundaries and the goals of medicine (philosophy); the relationship between narrative and medicine (literature); contemporary health issues (policy); human rights and human rights abuses (ethics); and death and dying (religion). It is my hope that we will come away with an increased understanding of ourselves and our relation to the world of medicine—that, in other words, we will examine our own lives, learning how to love and to work with all the fullness that life affords.

BEMH 4004 Environmental Ethics (3)
This course examines the theoretical foundations, assumptions, and practical implications of environmental ethics. It begins by considering foundational questions regarding the moral value of nature. It then turns to discussion of the various frameworks within which theorists and activists have analyzed and evaluated humanity's obligation to the environment. Finally, it closes by considering the significance of the environment to issues of social justice.

BEMH 4005 Studies in Bioethics through Film (3)
This elective will provide students with a method for analyzing bioethical issues using films and short videos as case studies. This course will provide students a method for identifying conflicts productively, theoretical models to understand and address such conflicts, and an opportunity to reflect on the edges of ethics and what to do there. Topics covered will include: The Edges of Sickness, Defining Sick and Well, What is Medicine, The Health Care System, Justice and Responsibility, Medical History and History of Medicine--Who Should Tell the Story of Medicine, and When Rights Collide—Right to Die and Right to Kill.

BEMH 4006 The Doctor As Author (3)
This course explores some of the many doctor-writers who have reflected on the practice of medicine and the qualities of a good doctor. Beginning with a discussion of the merged scientific and humanistic sensibilities of these writers, it will examine the work of prominent figures like Atul Gawande, Anton Chekhov, Mona Hanna-Attisha, Paul Kalanithi, and Damon Tweedy. Then, with a focus on their pleas that we attend to the patient's illness and life-world as well as to the patient's ailing body, it will consider how their work helps us to think about what it means to practice purposefully.

BEMH 4007 Ethical Theory (3)
This course provides an in-depth treatment of the theoretical foundations of ethics. It introduces students to foundational problems and theories in metaethics, moral psychology, and normative theory.

BEMH 4008 History of Medicine (3)
During this course, health maintenance, disease, and therapeutics will be explored from antiquity until the mid-20th century. This course will relate care of the sick and methods of treatment to the patients' and healers' social, political, religious, and cultural contexts. Additionally, we will also discuss special topics pertaining to the history of women's reproductive health; military medicine; native American, Meso-American, Pacific Island, and Afro-Caribbean medical practices; the history of mental healthcare; and the formalization of medical education and the rise of the medical marketplace.

BEMH 4009 Current Controversies in Bioethics (3)
This course examines a wide variety of controversial issues that arise within bioethics. Part I of the course focuses on conceptual controversies relating to disease, illness, and death. Part II of the course looks at particular issues relating to death and dying, such as euthanasia and abortion. Part III examines problems that challenge principles of human dignity. Finally, Part IV concerns problems relating to social justice.

BEMH 4010 Research Ethics (3)
This course is a comprehensive seminar on the theory, history, and practical application of ethics to the conduct of research with humans. This course will examine ethics in research in light of scientific, moral, and political considerations. These include autonomy, individual rights, coercion, justice, community and the common good, the norms of research and the community of researchers, and multi-cultural values. The learner will acquire a working knowledge of the professional life of the clinical researcher and the application of ethics to their practice. The application of ethics over a range of issues in clinical research will be addressed through case studies and dialogue among all seminar participants. All participants will have the opportunity to serve as discussion facilitator for one session.

BEMH 4011 Clinical Ethics (3)
This course is a comprehensive seminar on the theory and practice of clinical ethics consultation, examining bioethics from the perspective of a practicing clinician, Integrated Ethics Program Officer of the Southeast Louisiana Veterans Health Care System (SLVHCS), and former chair of three Hospital Ethics Committees (UofL Health Care Ethics Committee, University of Michigan Health System Ethics Committee, and Chelsea Community Hospital Ethics Committee [Michigan]). This course will familiarize learners with the basic modes and styles of ethics consultation in clinical settings. Learners will also study policy development and educational aspects of hospital ethics committees. Participants will apply philosophical and sociological concepts to cases and policy in clinical settings, will consider methods of mediation, as well as the arguments regarding certification in clinical consultation. Clinical ethics topics of particular emphasis will include informed consent, refusal of treatment, reproductive health, and end-of-life issues.

BEMH 4012 The End of Life in Film & Lit. (3)
This course examines representations of dying and death in literature and film. The focus of the course will be on discussing and analyzing these representations for the purpose of gaining a richer understanding of lived experiences of health, illness, and death. Topics to be discussed include the following: illness and suffering, definitions of health, politics of suffering and death, definitions of death, narratives of death and dying.

BEMH 4013 Medicine and Identity (3)
After a one-week introduction, the course will cover three modules —Race (weeks 2-5), Gender (weeks 6-9), and Ability (weeks 10-13)— followed by a final project in week 14. Each module will contain four parts: (1) Historical Context and Framing; (2) First-person and third-person perspectives; (3) Fiction and nonfiction; and (4) Contemporary voices

BEMH 4014 Pandemic Ethics (3)
This course is split into three Units. Unit I discusses issues relating to the duty of physicians to care for patients during times of pandemic. Are physicians obligated to care for patients with highly infectious disease? How much personal risks are physicians morally required to take on? In Unit II students will consider questions relating to the just distribution of scarce resources in the context of pandemic medicine. How can we ethically decide which patients will receive life-sustaining resources and which will not? Should younger patients receive higher priority than older patients? How should we go about distributing vaccines or other preventive measures throughout the general population? Finally, Unit III focuses on problems relating to social justice in times of pandemic. How do we ensure that the burdens of a pandemic are equitably distributed between social groups? How far may the government go in constraining individual rights for the sake of public health? How should we understand the obligations of the average citizen to promote the public good? The overall goal of the course will be to help students think carefully and constructively about the ethical issues raised by the current public health crisis.

BEMH 4015 Pro-Natalism, Anti-Natalism and the Ethics of Human Reproduction (3)
This course will explore in-depth the ethical and philosophical issues arising from views that encourage procreation and those that claim that procreation is morally bad, and the practice of artificial reproductive services and technologies. We will investigate and discuss questions such as: Is there a duty to have children? Do we cause harm by having children? Can it be wrong to reproduce? Is it better never to have come into existence? Is abortion morally permissible? Do pregnant women have a duty to aid the fetus by allowing it the use of their body? Is there a moral difference between killing someone and letting her die? Is it wrong to reproduce through cloning? With the assistance of surrogate mothers and donated eggs? Should we avoid having children with disabilities? Should we use genetic screening or genetic engineering to have the “best” kids we possibly can? Is it wrong to have a child if there are known genetic risk factors? Should parents be permitted to select for disability? How much autonomy are children entitled to? Are transgender people entitled to the same access to assisted reprodctive treatments as everyone else?

BEMH 4910 Independent Study (1-3)

Maximum Hours: 99

BEMH 6000 Philosophy of Medicine (3)
This course provides an in-depth treatment of the philosophical foundations of medicine. It considers problems relating to the nature of health and illness, the basis of medical knowledge, the nature of the physician/patient relationship, and more.

BEMH 6001 Neuroethics: The Ethics of Neuroscience and the Neuroscience of Ethics (3)
Neuroethics, as an area of study, can be divided into two sub-fields: the neuroscience of ethics and the ethics of neuroscience (Roskies 2002). The neuroscience of ethics deals with our growing understanding of the underlying mechanism of social behavior relevant to morality – for instance, the origins and nature of empathy, altruism, aggression, self-control, reasoning, and the role of our emotions and intuitions in moral decision making. The ethics of neuroscience is a branch of applied ethics or bioethics. It focuses on ethical issues that originate in new advances and possibilities in neuroscience. Especially relevant here is the fact that advances in neuroscience not only extend our understanding of the brain, but also raise the possibility of interventions to modify our brain. This course is designed to give students a philosophical overview of these topics, and opportunities to think critically about ethical implications related to neuroscience and advances in medicine. We will explore fundamental topics in both branches of Neuroethics. Drawing from a variety of fields—neuroscience, philosophy, social psychology, cognitive psychology, developmental psychology, and evolutionary theory—we will investigate and discuss questions like: What are the evolutionary origins of moral judgment? Does evolutionary theory shed light on normative moral questions? Do our moral motivations derive from reason or pre-reflective intuition? Do psychopaths have moral responsibility? Do we have free will? Is there an obligation to enhance ourselves? Should drugs be used to enhance mental functioning?

BEMH 6002 Foundations in Bioethics (3)
This course examines the theoretical foundations of bioethics. It begins by considering foundational questions regarding the nature of medicine, illness, and the physician/patient relationship. It then turns to discussion of the various ethical frameworks that guide decision-making in medicine. Finally, it closes by bringing these frameworks to bear on theoretical issues relating to social justice.

BEMH 6003 Medical Humanities (3)
Medical humanities draws on many disciplines and fields—including history, literature, art history, media studies, philosophy, law, ethics, religion, theology, anthropology, psychology, sociology, and other arts and sciences—to study the context of medicine, the experience of medicine, the goals of medicine, and concepts in and of medicine. A common goal of medical humanities is to make clinicians, at all levels of their training, more "humane" or "compassionate." Another common goal includes making clinicians more "well-rounded." Still another goal includes promoting teaching and learning in medical humanities simply for its own sake. But what is "medical humanities"? While there is no single answer to this question, this much is clear: Medical humanities draws from many disciplines and fields to examine issues related to the development and the practice of medicine. In this sense, medical humanities is similar to other fields such as religious studies or gender studies—fields that use various disciplines and methods to study a subject such as religion or gender. What is different, however, is that medical humanities, unlike many other academic fields, seems to require or to imply an essential practical component because all medical humanities knowledge has some relationship to (1) the care of patients and/or populations or (2) the care of physicians themselves. This course will explore a vast array of topics in medical humanities, including the boundaries and the goals of medicine (philosophy); the relationship between narrative and medicine (literature); contemporary health issues (policy); human rights and human rights abuses (ethics); and death and dying (religion). It is my hope that we will come away with an increased understanding of ourselves and our relation to the world of medicine—that, in other words, we will examine our own lives, learning how to love and to work with all the fullness that life affords.

BEMH 6004 Environmental Ethics (3)
This course examines the theoretical foundations, assumptions, and practical implications of environmental ethics. It begins by considering foundational questions regarding the moral value of nature. It then turns to discussion of the various frameworks within which theorists and activists have analyzed and evaluated humanity's obligation to the environment. Finally, it closes by considering the significance of the environment to issues of social justice.

BEMH 6005 Medicine in Literature & Film (3)
This course examines representations of medicine, sickness, and death in literature and film. The focus of the course will be on discussing and analyzing these representations for the purpose of gaining a richer understanding of lived experiences health and illness. Topics to be discussed may include the following: death, illness and suffering, the physician/patient relationship, poverty, AIDS, racism, and war.

BEMH 6006 The Doctor As Author (3)
This course explores some of the many doctor-writers who have reflected on the practice of medicine and the qualities of a good doctor. Beginning with a discussion of the merged scientific and humanistic sensibilities of these writers, it will examine the work of prominent figures like Atul Gawande, Anton Chekhov, Mona Hanna-Attisha, Paul Kalanithi, and Damon Tweedy. Then, with a focus on their pleas that we attend to the patient's illness and life-world as well as to the patient's ailing body, it will consider how their work helps us to think about what it means to practice purposefully.

BEMH 6007 Ethical Theory (3)
This course provides an in-depth treatment of the theoretical foundations of ethics. It introduces students to foundational problems and theories in metaethics, moral psychology, and normative theory.

BEMH 6008 History of Medicine (3)
During this course, health maintenance, disease, and therapeutics will be explored from antiquity until the mid-20th century. This course will relate care of the sick and methods of treatment to the patients' and healers' social, political, religious, and cultural contexts. Additionally, we will also discuss special topics pertaining to the history of women's reproductive health; military medicine; native American, Meso-American, Pacific Island, and Afro-Caribbean medical practices; the history of mental healthcare; and the formalization of medical education and the rise of the medical marketplace.

BEMH 6009 Current Controversies in Bioethics (3)
This course examines a wide variety of controversial issues that arise within bioethics. Part I of the course focuses on conceptual controversies relating to disease, illness, and death. Part II of the course looks at particular issues relating to death and dying, such as euthanasia and abortion. Part III examines problems that challenge principles of human dignity. Finally, Part IV concerns problems relating to social justice.

BEMH 6010 Research Ethics (3)
This course is a comprehensive seminar on the theory, history, and practical application of ethics to the conduct of research with humans. This course will examine ethics in research in light of scientific, moral, and political considerations. These include autonomy, individual rights, coercion, justice, community and the common good, the norms of research and the community of researchers, and multi-cultural values. The learner will acquire a working knowledge of the professional life of the clinical researcher and the application of ethics to their practice. The application of ethics over a range of issues in clinical research will be addressed through case studies and dialogue among all seminar participants. All participants will have the opportunity to serve as discussion facilitator for one session.

BEMH 6011 Clinical Ethics (3)
This course is a comprehensive seminar on the theory and practice of clinical ethics consultation, examining bioethics from the perspective of a practicing clinician, Integrated Ethics Program Officer of the Southeast Louisiana Veterans Health Care System (SLVHCS), and former chair of three Hospital Ethics Committees (UofL Health Care Ethics Committee, University of Michigan Health System Ethics Committee, and Chelsea Community Hospital Ethics Committee [Michigan]). This course will familiarize learners with the basic modes and styles of ethics consultation in clinical settings. Clinical ethics topics of particular emphasis will include informed consent, refusal of treatment, reproductive health, and end-of-life issues.

BEMH 6012 The End of Life in Film & Lit. (3)
This course examines representations of dying and death in literature and film. The focus of the course will be on discussing and analyzing these representations for the purpose of gaining a richer understanding of lived experiences of health, illness, and death. Topics to be discussed include the following: illness and suffering, definitions of health, politics of suffering and death, definitions of death, narratives of death and dying.

BEMH 6013 Medicine and Identity (3)
After a one-week introduction, the course will cover three modules —Race (weeks 2-5), Gender (weeks 6-9), and Ability (weeks 10-13)— followed by a final project in week 14. Each module will contain four parts: (1) Historical Context and Framing; (2) First-person and third-person perspectives; (3) Fiction and nonfiction; and (4) Contemporary voices

BEMH 6014 Pandemic Ethics (3)
This course is split into three Units. Unit I discusses issues relating to the duty of physicians to care for patients during times of pandemic. Are physicians obligated to care for patients with highly infectious disease? How much personal risks are physicians morally required to take on? In Unit II students will consider questions relating to the just distribution of scarce resources in the context of pandemic medicine. How can we ethically decide which patients will receive life-sustaining resources and which will not? Should younger patients receive higher priority than older patients? How should we go about distributing vaccines or other preventive measures throughout the general population? Finally, Unit III focuses on problems relating to social justice in times of pandemic. How do we ensure that the burdens of a pandemic are equitably distributed between social groups? How far may the government go in constraining individual rights for the sake of public health? How should we understand the obligations of the average citizen to promote the public good? The overall goal of the course will be to help students think carefully and constructively about the ethical issues raised by the current public health crisis.

BEMH 6015 Pro-Natalism, Anti-Natalism and the Ethics of Human Reproduction (3)
This course will explore in-depth the ethical and philosophical issues arising from views that encourage procreation and those that claim that procreation is morally bad, and the practice of artificial reproductive services and technologies. We will investigate and discuss questions such as: Is there a duty to have children? Do we cause harm by having children? Can it be wrong to reproduce? Is it better never to have come into existence? Is abortion morally permissible? Do pregnant women have a duty to aid the fetus by allowing it the use of their body? Is there a moral difference between killing someone and letting her die? Is it wrong to reproduce through cloning? With the assistance of surrogate mothers and donated eggs? Should we avoid having children with disabilities? Should we use genetic screening or genetic engineering to have the “best” kids we possibly can? Is it wrong to have a child if there are known genetic risk factors? Should parents be permitted to select for disability? How much autonomy are children entitled to? Are transgender people entitled to the same access to assisted reprodctive treatments as everyone else?

BEMH 6016 Narrative in Medicine (3)
This course is a comprehensive seminar on the importance of narrative in the practice of medicine. In it, students will examine uncertainty in clinical medicine—its sources and ineradicability—and seek to understand the role of narrative in coping with the difficulties that clinical uncertainty presents. Students will familiarize themselves with the uses of narrative in the culture of medicine and of medical education, clinical ethics, public health policy, and, especially, clinical reasoning and everyday practice.

BEMH 6018 Feminist Theory and Practice in Medicine (3)
This course introduces students to the history of feminist activity and the development of the discrete discipline known as feminism today. Students will hear a panoply of feminist voices. The course will trace carefully the intersection of queerness, race, and gender, with special attention paid to the ways in which identities unfold uniquely with respect to intersectionality. Students will be able to analyze and apply feminist theory to their own clinical experiences to deepen their understanding of their own practice of medicine.

BEMH 6020 Capstone (3)
This course is a capstone seminar for Bioethics MS program in the form of a collaborative seminar. Students produce a culminating project, whose development and final formal presentation they share with others in seminar format. This course seeks to integrate the knowledge gained through Bioethics MS program courses to inform previous, current, and expected future health ethics and humanities decision-making. Students use critical thinking skills through self-reflection toward a collaborative project in education or policy in order to serve others in health care, whether as providers, patients or family members. Students use their skills, insights to collaborate and challenge the status quo.

Prerequisite(s): BEMH 6002 and 6003.

BEMH 6521 History of Medicine in the US (3)
Students in this course will study the social dimensions of medicine, disease, and health in U.S. history. We will examine how ordinary people were affected by pandemics, advances in medical technologies, and changing ideas about health care. Students will consider how ideas about medicine have been shaped by economic, military, political, and social transformations in U.S. history.

BEMH 6535 Contagious Surveillance (3)
This seminar examines the historical and contemporary relationships between contagions and practices of surveillance. This course will introduce students to the interdisciplinary theories of surveillance studies using historical frameworks such as discipline, control, capitalism, media, and privacy during times of crisis, as it relates to race, gender, and class. Seminar discussions will include cases where patriarchal power and racialized systems were used to promote perceptions of security, fear, exposure, and control, while constructing medical knowledge. As praxis, students will use historical research strategies to design and produce a digital history project that uses technology tools such as maps, visualizations, textual analysis, and/or audio-visual production. All digital history skills will be taught in this course. All technical skill-levels are welcome.

BEMH 6810 Special Topics (1-3)

Maximum Hours: 99

BEMH 6811 Special Topics (1-3)
Course Limit: 99

BEMH 6812 Special Topics (1-3)
Special Topics Course.

Course Limit: 99

BEMH 6813 Special Topics (1-3)
Special Topics Course.

Course Limit: 99

BEMH 6910 Independent Study (1-3)
Independent Study Course

Maximum Hours: 99

BEMH 6940 Transfer Coursework (0-20)
Transfer Coursework at the 6000 level.

Maximum Hours: 99

Biology (PABI)

PABI 1200 Humanistic Biology (3)
An investigation of all of the systems of the human body as well as an overview of common abnormal conditions associated with each system. Case studies of the effects of external influences on human biology will also be investigated.

Biomedical Engineering (BMEN)

BMEN 1005 Introduction to Musculoskeletal Anatomy and Biomechanics (3)
This course will introduce high school students to basic biomedical concepts and measurements, as well as lay a foundation for understanding and using technical terminology employed by preclinical students and medical professionals. We will focus on the anatomy and physiology of the musculoskeletal systems and their interplay with other systems in the human body. In addition to lectures, students will gain hands-on measurement experience utilizing modern techniques while also gaining hands-on biomedical design experience through labs and activities. This course is limited to high school students.

BMEN 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

BMEN 2020 Computing Concepts & Applic (4)
This course introduces students to the foundations of algorithm development and programming, basics of matrix algebra and numerical analysis, solving ordinary differential equations.

Corequisite(s): BMEN 2021.

BMEN 2021 Computing Concepts & App. Lab (0)
Lab for ENGP 2020

BMEN 2310 Product & Experimental Design (3)
The objective of this course is to introduce students to the design process as they are starting the BMEN Curriculum. Through team projects geared toward translating bench research into product development, students will be challenged to begin thinking critically and applying physical fundamentals to complex systems. Weekly lectures will highlight phases of the design process, including problem identification, conceptual design, and early prototyping. Additionally, in the context of product and experimental design, students will gain experience with computer aided design and be provided an introduction to statistics. Course restricted to BMEN majors, or by permission of the instructors.

Corequisite(s): BMEN 2311.

BMEN 2311 Product & Experimntl Dsgn Lab (0)
Lab section for BMEN 2310

BMEN 2600 Intro Organic & Biochem (3)
This course introduces the main principles of Organic Chemistry and Biochemistry, preparing the student for BMEN 3030/3040. Topics include nomenclature of organic compounds and bio-molecules, major reactions of organic chemistry, relationship between chemical structures and biological functions, and the reaction pathways of major metabolic processes. Students will be introduced to the three-dimensional structure of organic compounds and biomolecules using molecular models and software tools.

Prerequisite(s): CHEM 1080 and (CHEM 1085 or 1180).

BMEN 2730 Biomedical Electronics (4)
Rectifiers, filters, regulators and power supplies. Analog amplifiers and active filters of interest for medical devices. Combinational and sequential digital logic design techniques and circuits. Brief overview of modulation, encoding, and interfacing. Electrical safety. Extensive weekly lab projects.

Prerequisite(s): ENGP 2010.
Corequisite(s): BMEN 2731.

BMEN 2731 Biomedical Electronics Lab (0)
Lab section for BMEN 2730.

Corequisite(s): BMEN 2730.

BMEN 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

BMEN 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

BMEN 3030 Anatomy & Physio for Engr (3)
This course is a single semester course in human structural anatomy. Course participants will examine both typical and pathological examples for the various subsystems including body tissues; the musculoskeletal; neurological; cardiovascular; respiratory; digestive; and reproductive systems.

Prerequisite(s): CELL 1010 or EBIO 1010.
Corequisite(s): BMEN 3035.

BMEN 3035 Anatomy & Physiology for Engineers Cadaver Lab (1)
This single-semester laboratory coordinates hands on learning in human structural anatomy. Course participants will dissect and examine both typical and pathological examples for the various subsystems including body tissues; the musculoskeletal; neurological; cardiovascular; respiratory; digestive; and reproductive systems.

Corequisite(s): BMEN 3030.

BMEN 3070 Quantitative Physiology (3)
This course places emphasis upon the chemical basis of life; cells and cellular metabolism; histology and tissues; the endocrine, skeletal and nervous systems; respiratory, digestive, cardiovascular, lymphatic and reproductive systems; nutrition and metabolism; water, electrolyte and acid-base balance, and human growth and development.

Prerequisite(s): CHEM 1070, 1080, CELL 1010 and BMEN 2600.
Corequisite(s): BMEN 3075.

BMEN 3075 Quant. Physiology Lab (1)
Subject matter will include blood, nutrition, and metabolism; and the cardiovascular, lymphatic, digestive, respiratory, urinary, and reproductive systems.

Corequisite(s): BMEN 3070.

BMEN 3400 Biomaterials & Tissue Engineering (3)
This course will focus on fundamental materials science and biological principles that impact the engineering design of biomaterials and tissue-engineered products. Topics addressed will include structural hierarchies of materials and tissues, physical and chemical properties of surfaces, degradation of materials, and cell-surface, cell-cell, and cell-matrix interactions. The course will conclude with inflammatory, immunological, and pathological events associated with responses to such products. Laboratory exercises will be utilized to illustrate selected concepts, introduce assessment methods, and provide hands-on experiences with cells and materials. Fulfills departmental domain requirement. An additional non-graded once a week lab section to accompany lectures.

Prerequisite(s): CELL 1010, ENGP 3120 and BMEN 2600.
Corequisite(s): BMEN 3401.

BMEN 3401 Biomaterials & Tissue Engineering Lab (0)
Lab section for BMEN 3400

BMEN 3440 Biofluid Mechanics (3)
This class focuses on fundamental concepts and properties of fluid mechanics with applications to the body. Topics to be covered include basic equations of fluid statics, dynamics and mass transport in differential and integral form using both system and control volume viewpoints. Rheological properties of biological fluids are studied as well as dimensional analysis and similitude. Advanced applications are investigated using the finite element method.

Prerequisite(s): ENGP 1410, 2430 and MATH 2240.

BMEN 3650 Biomechanics and Biotransport (3)
This course introduces students to biomechanics and biotransport. Specific topics include: the analysis of forces and stresses/strains in biological structures under loading; constitutive models for biological materials; the relationship between structure and function in tissues and organs. These topics will be related to fundamental principles of fluid mechanics and mass transport of biological systems at the cellular, tissue, and organ levels including cell adhesion and migration; intracellular, transmembrane and transvascular transport; drug transport and pharmacokinetics. Fulfills departmental 'domain" requirement.

Prerequisite(s): ENGP 2430 and BMEN 3440.
Corequisite(s): BMEN 3651.

BMEN 3651 Biomechanics & Biotrans Lab (0)
Lab section for BMEN 3650.

Corequisite(s): BMEN 3650.

BMEN 3730 Biomedical Signals and Systems (3)
Fundamentals of biomedical Signals and analysis and introduction to control systems. Topics include Laplace and Fourier transforms, the convolution theorem, time- and space-frequency-domain analysis, signals and noise, the mathematics of imaging, and examples and applications to biomedical signals. The use of MATLAS and Simulink to analyze biomedical systems will be reinforced.

Prerequisite(s): BMEN 2020 and (ENGP 2010 or MATH 2240).

BMEN 3820 Math Analysis Bio Systms (3)
The objective of this course is to teach basic mathematical modeling constructs and analysis techniques that are used for studying biological processes. Topics to be covered include ordinary differential equations, compartment systems, basics of dynamic systems, stability, statistical inference and model construction. These will be applied to study models of chemical kinetics, physiological control, AIDS transmission, population dynamics, and growth. Students will use Mathematica to develop and analyze models.

Prerequisite(s): MATH 2240.

BMEN 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

BMEN 3932 Elements of BMEN Design (3)
This course develops the fundamental aspects of the mechanical performance of devices and components. Topics include a review of stress analysis, failure criteria, fatigue analysis and stress concentrations, as well as the mechanical behavior of fasteners, welded joints, spring selection, bearing design, and introduction to finite element analysis; with applications to biomedical engineering.

Prerequisite(s): ENGP 2430.

BMEN 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

BMEN 4030 BMEN Team Dsgn Project I (2)
Techniques and experience in the solution of constrained and open-ended design problems. Lecture topics include all aspects of the design process, including goal setting, idea generation, prototyping, fabrication, and product and evaluation. Also included are technical presentation, project planning and management. Included as needed are other topics such as standards, fastening and joining, motors and control, esthetics and finish. Each team will design and construct a device or system to assist an individual with a disability. These designs are presented in a public show during the second semester. Corequisite(s): BMEN 4031.

BMEN 4031 BMEN Team Design Project I Lab (0)
Lab section for 4030

BMEN 4040 BMEN Team Dsgn Proj II (3)
Techniques and experience in the solution of constrained and open-ended design problems. Lecture topics include all aspects of the design process, including goal setting, idea generation, prototyping, fabrication, and product and evaluation. Also included are technical presentation, project planning and management. Included as needed are other topics such as standards, fastening and joining, motors and control, esthetics and finish. Each team will design and construct a device or system to assist an individual with a disability. These designs are presented in a public show during the second semester.

BMEN 4090 Spec Prob In Biomed Engr (1-4)
Independent study and investigation of special problems in biomedical engineering. Details can be arranged with individual biomedical engineering faculty members. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

BMEN 4100 Spec Prob In Biomed Engr (1-4)
Independent study and investigation of special problems in biomedical engineering. Details can be arranged with individual biomedical engineering faculty members.

BMEN 4560 BME Professional Internship I (1-3)
Internship relevant to professional practice in biomedical engineering, 1-3 letter-graded credits (no S/U option), may count as credits towards graduation. May only be taken once.

BMEN 4570 BME Professional Internship II (1-3)
Internship relevant to professional practice in biomedical engineering, 1-3 credits graded S/U, may NOT count as credits towards graduation. May only be taken once.

Prerequisite(s): BMEN 4560.

BMEN 4660 Special Topics (1-3)
Special Topics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

BMEN 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

BMEN 4900 Art of Professional Eng (1)
Research and Professional Practice (RPP) is a 2-semester sequence beginning in Spring of the Junior year. It satisfies the University's "Writing Intensive" requirement. A lecture series in the Spring semester, called "Art of Professional Engineering" includes economic analysis, ethics, professional communication including writing and oral presentation, research techniques including literature searching, citation, and the structure of a scientific paper. Students must also register for either 4901 or 4902 in the Spring semester, and continue the sequence with 4911 or 4912/4930 in the following Fall semester.

BMEN 4902 SR Research Prof Experience I (2)
This two-course sequence is designed to facilitate an individual biomedical research or design experience in a laboratory. Students will be intorduced to the tools, techniques, and rules necessary to function independently and professionally as a researcher or engineer. Topics include thesis writing, technical communication, and time management. The main component of the course is a two semester long research or design project under the direction of a faculty member, scientist or other professional. The course sequence culminates in a formal written report and Senior Research Conference presentation.

Prerequisite(s): BMEN 4900.

BMEN 4912 SR Research Prof Experience II (2)
This two-course sequence is designed to facilitate an individual biomedical research or design experience in a laboratory. Students will be intorduced to the tools, techniques, and rules necessary to function independently and professionally as a researcher or engineer. Topics include thesis writing, technical communication, and time management. The main component of the course is a two semester long research or design project under the direction of a faculty member, scientist or other professional. The course sequence culminates in a formal written report and Senior Research Conference presentation.

Prerequisite(s): BMEN 4902.

BMEN 4920 Senior Research and Design Conference (0)
This course is for seniors who have completed projects in Research and Professional Practice or Grand Challenges. Students will be required to give a 15 minute formal podium presentation to faculty, peers, and guests as the culmination of their year-long research or design project. This public presentation will be part of a professionally-styled senior-class conference at the beginning of the spring semester. Students may also be expected to attend invited seminars on an as needed basis. While this course carries 0 credit hours, satisfactory completion is a graduation requirement, commensurate with earning an accredited degree in biomedical engineering.

Prerequisite(s): BMEN 4911 or 4912.

BMEN 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

BMEN 5380 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

BMEN 5390 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

BMEN 6010 Physical Dimen of Aging (3)
This course is designed to introduce students to the physiological, behavioral, and socio-economic changes associated with aging. In particular, we will focus on the effects of exercise on the aging human system. We will also discuss what it means to become older within a community, what can a person expect during the aging process, and what kind of control a person has over his/her aging body.

Prerequisite(s): CELL 1010 or EBIO 1010.

BMEN 6030 Anatomy & Physio for Engr (3)
This is a single-semester course in human structural anatomy. Course participants will examine both typical and pathological examples for the various subsystems including, body tissues; the musculoskeletal, neurological, cardiovascular, respiratory, digestive and reproductive systems.

Corequisite(s): BMEN 6035.

BMEN 6035 Anatomy & Physiology for Engineers Cadaver Lab (1)
This single-semester laboratory coordinates hands-on learning in human structural anatomy. Course participants will dissect and examine both typical and pathological examples for the various subsystems including, body tissues; the musculoskeletal, neurological, cardiovascular, respiratory, digestive and reproductive systems.

Corequisite(s): BMEN 6030.

BMEN 6060 Biomedical Acoustics (3)
Introduction to sounds in the physiological and medical arena. Topics include: physics of sound propagation, sources and mechanisms of cardiac and respiratory sound production, sound transmission, auscultation and stethoscope evaluation, psychoacoustics and auditory perception, speech production and structure of the speech signal, medical ultrasound applications and safety.

Prerequisite(s): PHYS 1310 and 1320.

BMEN 6070 Quant Physio Lec (3)
Tulane University Health Sciences Center Staff. This course places emphasis upon the chemical basis of life; cells and cellular metabolism; histology and tissues; the endocrine, skeletal and nervous systems; respiratory, digestive, cardiovascular, lymphatic and reproductive systems; nutrition and metabolism; water, electrolyte and acid-base balance, and human growth and development.

Corequisite(s): BMEN 6075.

BMEN 6075 Quant. Physiology Lab (1)
Subject matter will include blood, nutrition, and metabolism; and the cardiovascular, lymphatic, digestive, respiratory, urinary, and reproductive systems.

Corequisite(s): BMEN 6070.

BMEN 6080 Tech Invent &Commercialization (3)
This course models innovation and entrepreneurial theory and practices from across a range of commercial size-scales, from small startup companies to intrapreneurial units within large, established companies. The twin poles of theory and practice are balanced through classroom lectures and experiential training. Weekly lectures furnish students with effective and portable theoretical frameworks for identifying, selecting and executing opportunities for technological innovations in healthcare, energy, water and the environment. In the experiential training, students will apply their classroom learning to targeted innovation and entrepreneurship opportunities within these sectors. Completion of this course will supply students with intellectual groundwork and practical experience in advancing inventive technological ideas towards commercialization and ultimately public benefit.

BMEN 6170 Biomedical Optics (3)
The field of biophotonics is a rapidly-expanding re-search area in which the interactions of photons with matter are leveraged to increase our understanding of biology and to improve the outcomes in human medicine. The objectives of this course are to familiarize students with the fundamental interactions between light and biological samples, and how these are implemented in an array of technologies that are finding successful application in biomedical research and clinical application. Topics will include fundamentals of photon transport in turbid media; optical spectroscopy variants (reflectance, fluorescence, Raman; steady-state and time-resolved); diffuse optical imaging; biological microscopy; coherence techniques; hybrid technologies (e.g. photo-acoustic imaging); and optical molecular imaging. Special attention will be paid to quantitative methods for spectroscopy and imaging in solid tissues. The class will be composed of lectures, and interactive discussions on recent papers representing the state of the art in the field.

BMEN 6220 Neural Microengineering (3)
In recent years, a number of technologies have been developed and utilized for probing the nervous system. This course will focus on microscale tools, technologies, and techniques employed for the control, manipulation, and study of the nervous system in vitro. Course material will be presented primarily by students who prepare presentations from extensive background literature review. A number of projects will be assigned as design challenges in which multiple interdisciplinary groups will research and present proposed solutions to the same challenge. Background in neuroscience not required. Generally offered every other Spring.

BMEN 6260 Molec Princ Funct Biomatr (3)
Functional biomaterials are non-viable materials that have been designed or modified in order to elicit specific biological responses when interacting with human fluids, cells, tissues, or organs. This course will focus on chemical principles utilized in endowing polymeric materials with biological functionality for medical applications. Following a brief review of polymer properties with a focus on hydrogels, topics addressed will include attachment of proteins to materials, induction of cell-binding and differentiation, responsive polymers, and spatial and temporal control of material properties for biological signaling. Unifying concepts will be introduced by directed reading and discussion of landmark papers in the biomaterials literature. Supplemental laboratory exercises will be utilized to illustrate selected concepts and introduce experimental procedures.

Prerequisite(s): BMEN 3400 or 6400.

BMEN 6310 Continuum Models In BMEN (3)
The course begins with a presentation of the kinematics of continuous media and elementary tensor manipulations. We will then cover the conservation principles of mass, linear momentum, angular momentum, and energy. Additional topics will include the formulation of constitutive laws, continuum models in electrodynamics, and simple descriptions of piezoelectric materials. These concepts will be applied to fundamental problems in bio-solid mechanics, bio-fluid mechanics, and bio-electromagnetism.

Prerequisite(s): (ENGP 2430, BMEN 3440 and 3650) or BMEN 6650.

BMEN 6330 Advanced Biofluid Mech (3)
This course will cover general intermediate/advanced fluid mechanics, and will provide a foundation from which to base one's studies of biofluid mechanics. Issues pertinent to the study of biofluid mechanics will be emphasized. Topics to be studied include kinematic principles, the Navier-Stokes equations, boundary conditions for viscous flows, basic solutions to steady and unsteady Navier-Stokes equations, turbulence, analysis of the vorticity equation, and interfacial phenomena. Whenever possible, problems of a biological nature will be used as examples.

BMEN 6340 Soft Tissue Mechanics (3)
This course provides an introduction to the various approaches used in modeling soft tissues, with particular attention paid to those of the musculoskeletal system (e.g. ligament, tendon, cartilage). Particular emphasis will be placed on the theoretical and experimental consequences of the large deformation behavior of these tissues. An important objective of this class is to enable the student to develop a sense for the physical and mathematical relationships between the many types of models (and the associated experiments) currently being utilized in soft tissue mechanics.

Prerequisite(s): BMEN 3650 or 6650.

BMEN 6400 Biomaterials & Tissue Engineering (3)
This course will focus on fundamental materials science and biological principles that impact the engineering design of biomaterials and tissue-engineered products. Topics addressed will include structural hierarchies of materials and tissues, physical and chemical properties of surfaces, degradation of materials, and cell-surface, cell-cell, and cell-matrix interactions. The course will conclude with inflammatory, immunological, and pathological events associated with responses to such products. Laboratory exercises will be utilized to illustrate selected concepts, introduce assessment methods, and provide hands-on experiences with cells and materials. An additional non-graded once a week lab section to accompany lectures.

BMEN 6401 Biomaterials & Tissue Engr Lab (0)
Lab section for BMEN 6400

BMEN 6420 Transport in Cells and Organs (3)
Open only to graduate students. Fundamental principles of fluid mechanics and mass transport will be applied to biological systems at the cellular, tissue, and organ levels. The topics of this course will be the cardiovascular and respiratory systems; and cell adhesion and migration, intracellular, transmembrane and transvascular transport: drug transport and pharmacokinetics, and transport-related pathophysiological conditions (inflammation, atherosclerosis, thrombosis, sickle cell disease, cancer metastasis). The lab sessions will provide training in measurement and analysis of cell transport in parallel-plate flow systems.

BMEN 6421 Transport in Cells&Organs Lab (0)
Lab section for BMEN 6420

BMEN 6430 Vascular Bioengineering (3)
The objectives of this graduate-level course are to familiarize students with contemporary research areas that cover the field of vascular biology, and to provide an understanding of bioengineering principles related to physiological function and therapeutic modalities. Example topics include smooth muscle cell and endothelial cell lineage, leukocyte-endothelial cell interactions, angiogenesis, drug targeting via the microcirculation, neural vascular control, atherosclerosis, and hypertension. These topics will be presented in the context of four overarching sections: 1) Vascular Cell Biology; 2) Principles of Vascular Function and Design; 3) Vascular Pathophysiology, and 4) Therapeutic Design. For each section of the course students will be required to read, critically analyze, and present relevant articles. As indicated by the section titles, the course will culminate by highlighting how our basic understanding of physiological function/dysfunction can be translated to therapeutic design.

BMEN 6440 Microphysiological Systems (3)
Microphysiological Systems (MPS) and organ-on-a-chip technology broadly refer to biologically-inspired engineered systems which integrate cells and 3D tissue constructs to model human physiology and disease in vitro. The term “chip” refers to fluidic culture devices that function in concert with other process control elements to emulate, manipulate, and monitor the biochemical activities, dynamic mechanical environments, and physiological responses of engineered human tissues, organs or organ systems. MPS engineering integrates multiple disciplines including design, microfabrication, cell culture technology, cellular physiology, tissue engineering, microelectromechanical systems, and human disease modeling. Course content covering these MPS foundations guides students through current literature reviews, interactive class discussions, and a semester-long MPS design project.

BMEN 6600 Comput Model Biomed Sys (4)
The objective of this graduate course is to provide students with the skills and knowledge necessary for computational modeling of biological and physiological systems. The first half of the course will cover introduction to UNIX, elements of programming (Matlab and FORTRAN), and numerical methods commonly used in biomedical research. The second half will immerse the students in specific biomedical applications including hemodynamics, respiratory flow, cellular mechanobiology, and neural dynamics. Most lectures will be accompanied by computer labs.

BMEN 6601 Comp Model Biomed Sys Lab (0)
Lab section for BMEN 6600.

Corequisite(s): BMEN 6600.

BMEN 6610 Intro Comp Biomechanics (3)
This course covers fundamentals of computational methods with the emphasis in biomechanics applications. The computational methods include finite element methods and finite difference methods at the introductory level. The course will use MATLAB to implement these methods. The underlying theories of these numerical methods will be taught, and example problems will be discussed during the lecture. Example problems will include those from implant design, bone biomechanics, soft tissue biomechanics, etc. in static and dynamic conditions. The course will also discuss some special issues such as the stability/convergence criteria and the error estimation. The student will work on a term project to exercise these issues on a biomechanics problem of his/her choice.

BMEN 6630 Cell Mechanics (3)
Fundamental principles of continuum mechanics will be applied to problems of biomechanics at the cellular level. Topics covered include structure of mammalian cells, cell membrane mechanics, mechanics of the cytoskeleton, models of cell viscoelasticity, cell adhesion, active cell processes, flow-induced deformation of blood cells, and experimental techniques (micropipette aspiration, biointerface probe, atomic force microscopy, magnetic twisting cytometry, optical tweezers, and flow chamber assays).

BMEN 6650 Biomechanics and Biotransport (3)
This course provides a review of the mechanics of finitely deformable structures and thermomechanics with applications to the study of biological tissues. The focus of the course will be on the development of mathematical models describing fluid-solid interactions in biological tissues, nutrient transport, damage repair, and discontinuities. In particular, we will cover mixture theory, poroelasticity, microstructural models of cortical and cancellous bone, tendon, ligament, and other tissues, transient and steady-state nutrient transport, and continuum damage theories.

Corequisite(s): BMEN 6651.

BMEN 6651 Biomechanics and Biotrans Lab (0)
Lab section for BMEN 6650.

Corequisite(s): BMEN 6650.

BMEN 6660 Special Topics (1-3)
Special Topics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

BMEN 6680 Orthopaedic Bioengineering (3)
Concentration on various engineering aspects of the human knee and the treatment of its common orthopaedic pathologies. Topics include histophysiology of wound healing, synovial joint anatomy and tissue biomechanics, knee biomechanics, osteochondral and ligamentous graft reconstruction, prosthetic ligaments, and knee arthroplasty with emphasis on the design issues involved and the integration of clinical practice. Prerequisites: ENGP 2430 and ENGP 3120, or graduate standing

Prerequisite(s): ENGP 2430 and 3120.

BMEN 6710 Departmental Seminar (1)
Each week, a one-hour seminar on research within or outside the department is presented. During the Spring semester, all seniors are required to give a presentation on their project or internship. Attendance of all seniors and graduate students is required in the Fall semester. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

BMEN 6730 Biomedical Signals and Systems (3)
Fundamentals of biomedical Signals and analysis and introduction to control systems. Topics include Laplace and Fourier transforms, the convolution theorem, time- and space-frequency-domain analysis, signals and noise, the mathematics of imaging, and exam

BMEN 6790 Design Studio (3)
This course is intended to provide students with a realistic design experience from virtual design, to rapid prototype fabrication, to testing, through redesign. It will focus on the practical application of leading commercial design software, including the creative extension of this software to innovate research applications. The course will be project intensive with commensurate report submissions and future design recommendations. Projects will include analyses of existing clinical problems, as well as research development of cell scaffolds and cell mechanotransduction.

Corequisite(s): BMEN 6791.

BMEN 6791 Design Studio Lab (0)
Lab for BMEN 6790.

Corequisite(s): BMEN 6790.

BMEN 6800 BME Data Science: Medical Imaging/Machine Learning (3)
The objective of this course is to teach graduate students the concepts, algorithms and programming of image processing and machine learning techniques and apply them to address real world biomedical imaging challenges. The basic image processing techniques such as image geometric transforms, Fourier analysis and linear systems theory will be introduced to model and process biomedical images. In addition, we will study some machine learning approaches such as feature extraction and classification for the analysis of biomedical image data. Finally, students will learn how to use MATLAB as a tool and apply the image processing and machine learning techniques to solve some medical imaging problems such as image enhancement, segmentation and classification.

BMEN 6820 Math Analysis Bio Systms (3)
The objective of this course is to teach basic mathematical modeling constructs and analysis techniques that are used for studying biological processes. Topics to be covered include ordinary differential equations, compartment systems, basics of dynamic systems, stability, statistical inference and model construction. These will be applied to study models of chemical kinetics, physiological control, AIDS transmission, population dynamics, and growth. Students will use Mathematica to develop and analyze models.

BMEN 6830 Intro Biomed Imaging & Process (3)
The objective of this course is to teach graduate students the concepts, algorithms and programming of image analysis techniques and apply them to address real world biomedical imaging challenges. The physics of medical imaging modalities including x-ray, MRI, CT, PET and microscopic imaging will be introduced. The basic underlying mathematical signal processing techniques such as Fourier analysis and linear system theory will be studied to model and process biomedical images. Finally, students will learn how to use MATLAB as a tool and apply the image processing techniques to solve some medical imaging problems such as image enhancement, segmentation and pattern classification.

BMEN 6840 Medical Imaging Physics (3)
This course will introduce imaging methods in medicine, including radiography, computed tomography (CT), magnetic resonance imaging (MRI), nuclear medicine (PET and SPECT), and ultrasound imaging. The basic physical principles of each imaging modality will be introduced, including the imaging energy source, properties and interaction with tissue. Basic concepts of image reconstruction will be discussed. This course will include laboratory visits to the School of Medicine Department of Radiology to explore real world uses of medical imaging systems. A course project will be assigned for students to assess new and emerging medical imaging systems.

Prerequisite(s): BMEN 3730 or 6730.

BMEN 6930 Special Topics (1-3)
The objective of this course is to introduce students to TRIZ (Russian acronym for "Theory of Inventive Problem Solving") a design method initially developed in the Soviet Union and used today by many Fortune 500 companies. TRIZ is an algorithmic approach to solving technical problems. In this course, students will learn and apply TRIZ principles to the design of technical systems in their area of interest-including but not limited to medical implant design, scientific research, and assistive device technology. Patent search and application of TRIZ to design around a patent also required.

Maximum Hours: 99

BMEN 6932 Elements of BMEN Design (3)
This course develops the fundamental aspects of the mechanical performance of devices and components. Topics include a review of stress analysis, failure criteria, fatigue analysis and stress concentrations, as well as the mechanical behavior of fasteners, welded joints, spring selection, bearing design, and introduction to finite element analysis; with applications to biomedical engineering. ·

BMEN 6940 Transfer Coursework (0-20)
Transfer coursework at the 6000 level. Departmental approval required.

Maximum Hours: 99

BMEN 6970 TRIZ - Theory of Inventive Design (3)
The objective of this course is to introduce students to TRIZ (Russian acronym for "Theory of Inventive Problem Solving")—a design method initially developed in the Soviet Union and used today by many Fortune 500 companies. TRIZ is an algorithmic approach to solving technical problems. In this course, students will learn and apply TRIZ principles to the design of technical systems in their area of interest—including but not limited to medical implant design, scientific research, and assistive device technology. BMEN 6970 fulfills departmental design "domain" requirement for undergraduates; BMEN 6970 additionally requires patent search and application of TRIZ to "design around a patent."

BMEN 7210 Direct Reads In BME Engr (1-6)
Taught on a tutorial basis, this course allows a student to make an in-depth study in an area of expertise of members of the department. Some recent and current topics include non-Newtonian fluid mechanics; the mechanics of the inner ear; the mechanics of bone; the mechanics of soft tissue; ceramics engineering; physical metallurgy; laser applications in medicine; and modeling of neural networks.

BMEN 7220 Direct Reads In BME (1-6)
Taught on a tutorial basis, this course allows a student to make an in-depth study in an area of expertise of members of the department. Some recent and current topics include non-Newtonian fluid mechanics; the mechanics of the inner ear; the mechanics of bone; the mechanics of soft tissue; ceramics engineering; physical metallurgy; laser applications in medicine; and modeling of neural networks.

BMEN 7320 Research In BME (1-6)
Individual research supervised by faculty.

Maximum Hours: 99

BMEN 7410 Research Methods (3)
Methods and resources for experimental studies in engineering science are introduced. Topics include the nature of scientific inquiry, literature search and writing techniques, experimental design and control, data analysis and presentation, and statistical methods. An original proposal is required.

BMEN 7560 Professional Internship I (1-3)
Internship relevant to professional practice in bioinnovation and biomedical engineering. 1-3 credits graded P/F. May only be taken once.

BMEN 7570 Professional Internship II (1-3)
Internship relevant to professional practice in bioinnovation and biomedical engineering. 1-3 credits graded P/F. May only be taken once (to follow Grad Pro Internship I).

BMEN 7940 Transfer Credit-Grad (1-12)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

BMEN 9980 Master's Research (3)
Research toward completion of a masters degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

BMEN 9990 Dissertation Research (0)
Research toward completion of a doctoral degree. Course may be repeated unlimited number of times.

Maximum Hours: 99

Biomedical Informatics (BIMI)

BIMI 6100 Elements in Biomedical Informatics (4)
Goals/Mission: To develop an understanding of biomedical informatics, the biomedical data, the practice modern medicine, conduct modern biological research, and health sciences education with information technology. Prerequisites: Students should have a basic understanding of intermediate mathematics. Designation: This course is for graduate students and advanced undergraduate students

BIMI 6200 Introduction to Data Science for Biomedical Informatics (3)
Goals/Mission: The goal is to provide a comprehensive orientation to data science using SQL, R, Phyton, and programs with application to biomedical informatics Prerequisites: The course does not require prior programming knowledge. Designation: This course is for graduate students and advanced undergraduates

BIMI 6300 Fundamentals of Data Analytics (3)
Goals/Mission: To develop an understanding of the integrated behavior of random variables multivariate data sets using R/ Python with application to complex biomedical data. Prerequisites: Students should have a basic understanding of statistics, multivariable calculus, and linear/matrix algebra. Designation: This course is for graduate students and advanced undergraduate students.

BIMI 6400 Health Informatics (3)
Goals/Mission: To develop an understanding of the advanced approaches of bioinformatics and its application. Prerequisites: Students should have a basic understanding of biomedical informatics and statistics. Designation: This course is for graduate students.

BIMI 7100 Statistical Machine and Deep Learning in Biomedical Practice (3)
Goals/Mission: To develop a comprehensive understanding of modeling for pattern recognition in data and utilizing these models to predict future data. This course is for graduate students and advanced undergraduate students with permission of instructor.

Prerequisite(s): BIMI 6200 and 6300.

BIMI 7210 Biomedical Informatics Workshop I - IV (1)
The Biomedical Informatics Workshop is designed to promote reading, writing, oral presentation skills, and critical analysis of biomedical data, and research related to are a key tool for critically appraising articles and keeping up to date with the current literature. BIMI 7210 Workshop I - IV (1 credit hour) allows credit for participation in these journal clubs.

Maximum Hours: 4

BIMI 7220 Biomedical Informatics Research Methods (4)
The first two years are generally devoted to coursework and research. In conjunction with the course work in the first year, students rotate in 6-8 week blocks through three of the division's participating research laboratories of the student's choice. BIMI 7220 Research Methods allows 2 credit hours per rotation. Subsequent years focus on independent research that culminates in a dissertation. Students accepted into the BMS BMI track are required to join faculty in the Division of Biomedical Informatics and Genomics, but may consider one of other faculty outside of the Division for committee members or co-mentors (with approval of the Division Chief).

Maximum Hours: 99

BIMI 7230 Biomedical Informatics Research Methods (2)
The first two years are generally devoted to coursework and research. In conjunction with the course work in the first year, students rotate in 6-8 week blocks through three of the division's participating research laboratories of the student's choice. BIMI 7230 Research Methods allows 2 credit hours per rotation. Subsequent years focus on independent research that culminates in a dissertation. Students accepted into the BMS BMI track are required to join faculty in the Division of Biomedical Informatics and Genomics, but may consider one of other faculty outside of the Division for committee members or co-mentors (with approval of the Division Chief).

Maximum Hours: 99

BIMI 7300 Biomedical Data Science with Cloud Computing (3)
Goals/Mission: To develop an understanding of programming and high-performance computing techniques in data science with cloud computing. This course is for graduate students and advanced undergraduate students with permission of instructor.

Prerequisite(s): BIMI 6100 and 6200.

BIMI 7500 Genomic Sequence and Omics Data Analysis (3)
Goals/Mission: To understand how to use and analyze high-throughput genomics and omics data in biomedical informatics. The course covers various high-throughput omics data, including genomics, transcriptomics, and proteomics data, as well as their data analysis methods and applications in biological and disease studies. Designation: This course is for graduate students and advanced undergraduate students.

Prerequisite(s): BIMI 6100 and 6200.

BIMI 7700 Algorithms in Biomedical Informatics (3)
To develop an understanding of various algorithm design techniques, such as exhaustive search, greedy search, divide-and conquer, dynamic programming, graph-based algorithms, and randomized algorithms, as well as various computational problems in biomedical informatics, such as sequence alignment, genome arrangement, motif finding, and peptide identifications. These problems are used as examples to demonstrate how to solve biomedical problems by mathematical modeling and algorithm design. Designation: This course is for graduate students and advanced undergraduates.

Prerequisite(s): BIMI 6200.

BIMI 7990 Biomedical Informatics Directed Independent Study (3)
The first two years are generally devoted to coursework and research. Subsequent years focus on independent research that culminates in a dissertation. Students accepted into the BMS BMI track are required to join faculty in the Division of Biomedical Informatics and Genomics, but may consider one of other faculty outside of the Division for committee members or co-mentors (with approval of the Division Chief). BIMI 7990 Directed Independent Study (3 credit hours) allows credit for independent research under the direction of a mentor or co-mentor in the Division of Biomedical Informatics and Genomics.

Maximum Hours: 99

BIMI 8500 Research Methodology of Biomedical Informatics (2)
Goals/Mission: Journal clubs are a key tool for critically appraising articles and keeping up to date with the current literature. Designation: This course is for graduate students only.

Prerequisite(s): BIMI 7500.

Maximum Hours: 99

BIMI 8550 Computational Biology: Structure and Organization (3)
Goals/Mission: To develop an understanding of the advanced approaches of computational biology, and their application. Designation: This course is for graduate students and advanced undergraduate students.

Prerequisite(s): BIMI 6100 and 6200.

BIMI 8600 Advanc Data Sci Ana Tech (3)
Goals/Mission: To develop an understanding of the advanced approaches with algorithms in representation learning, generative adversarial networks, and their application to imaging multi-omics data. Designation: This course is for graduate students and advance undergraduate students.

Prerequisite(s): BIMI 6100, 6200 and 6300.

BIMI 9980 Master's Thesis Research (0)
Goals/Mission: The goal is to develop a deeper understanding of a research field in biomedical informatics and gain capability to design a conceptual framework, conduct data analysis , and write a dissertation proposal. Designation: This course is for graduate students

Prerequisite(s): BIMI 6100, 6200 and 6300.

Biomedical Sciences (BMSP)

BMSP 6050 Advanced Cell Biology - MS (3)
This course introduces all major aspects of cellular structure and function. It specifically covers cytoplasmic membranes, protein trafficking, cellular signaling and cell proliferating mechanisms.

BMSP 6070 Advanced Cell Biology (3)

BMSP 7100 Biomed Sciences Workshop (1)
Course Limit: 2

BMSP 7110 Workshop (1)
Course Limit: 2

BMSP 7120 Research Topics and Rotations (4)
This course allows for research faculty mentors to present potential dissertation projects available for BMS PhD students to undertake upon choosing a dissertation lab. Research rotations will also be completed in this course.

BMSP 7130 Research Topics and Rotations (4)
This course allows for research faculty mentors to present potential dissertation projects available for BMS PhD students to undertake upon choosing a dissertation lab. Research rotations will also be completed in this course.

BMSP 7140 Biomedical Sci Seminar (1)
Course Limit: 2

BMSP 7150 Seminar (1)
Course Limit: 2

BMSP 7160 Research Topics and Rotations (2)
This course allows for BMS PhD students to complete a summer research rotation with BMS faculty to assist with choosing a dissertation advisor.

BMSP 7500 Special Topics (1-6)
Course Limit: 4

BMSP 7770 Physiological Basis of Disease (3)
BMSP 7770 is for first year PhD students in the Biomedical Sciences Graduate Program. This course will provide PhD students with a basic knowledge of physiology organ systems (neuroscience, kidney, GI, cardiovascular, reproduction, endocrinology, respiration), highlighting the pathophysiology of disease mechanisms, and integrates pharmacology and sex differences into the curriculum. The course is team-taught, and faculty emphasize their particular research field. Student performance will be assessed with four examinations. All lectures have learning objectives, and exams will cover the material outlined in the learning objectives and covered in class. No textbook is required but some may be recommended.

BMSP 7990 Independent Study (1-6)
Course Limit: 4

BMSP 9980 Masters Research (0)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

BMSP 9990 Dissertation Research (0)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Biostatistics (BIOS)

BIOS 6040 Intermediate Biostatistics (3)
This is an intermediate course in applied biostatistics. The course covers Analysis of Variance and Multiple Regression and Correlation Analysis, and Logistic Regression. The focus will be on numerical computation and interpretation of results of statistical application using statistical packages. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030, SPHL 6850 or 6050).

BIOS 6220 Database Management (3)
An introduction to the principles and application of data management, techniques in data collection, data cleaning, data reporting, database design, and implementing databases for managing large data systems. After taking the course, students will be able to create databases with applications to public health intervention and surveillance, use SQL to administrate, manage, and retrieve data for statistical analysis. Prerequisite(s): Basic knowledge of MS Office.

BIOS 6290 Data Management and Statistical Computing (3)
This course presents basic knowledge and techniques in data management and practice. Topics include data import and export, processing and cleaning data, variable and data manipulation, descriptive summary report development, and graphic report creation. The course emphasizes hands-on experience, particularly, allowing students to develop a working knowledge and essential programming skills of commonly used statistical packages, such as SAS, R and STATA, for managing and characterizing public health-related data.

BIOS 6300 Introduction To ArcGIS (1)
This course covers the elementary concepts and applications for mapping using the ArcGIS software. The course focuses on a wide variety of public health applications and is applicable to virtually all academic and professional settings where mapping is used. Each lecture begins with a PowerPoint presentation to introduce fundamental mapping concepts and is followed with in-class exercises to reinforce hands-on application. Two in-class, paper-based exams are given to monitor and assess students' understanding of the course concepts.

Prerequisite(s): (BIOS 6030* or SPHL 6050*).
* May be taken concurrently.

BIOS 6800 Public Health GIS II (3)
The course is an introduction to desktop mapping and spatial analysis. The first part of the course covers geographic information systems (GIS) concepts and mapping using the ArcGIS software. The second part of the course covers introductory spatial analytical techniques, including spatial autocorrelation quantification, cluster analysis, and spatial modeling. The student will develop a public health GIS project that requires the synthesis of mapping and spatial analysis.

BIOS 7040 Statistical Inference I (3)
The course is the first of a sequence in the theory of statistical interference and probability. The first part of the course covers probability theory; discrete, continuous, and exponential distribution functions; moment generating functions; and differentiation. The latter part of the course covers joint and marginal distributions and concepts of random samples. Students taking this course need to have completed at least one year of college calculus. Students will develop a project that synthesizes the course learning objectives through an applied course project. The course focuses on the theoretical underpinnings of biostatistics and improving understanding of statistical application and problem solving approaches.

BIOS 7050 Statistical Inference II (3)
The course is the second part of a sequence for introduction to statistical inference and probability. The first part of the course covers data reduction, point estimation, hypothesis testing, and interval estimation. The latter part of the course covers asymptotic evaluations, analysis of variance, and regression modes. The student will develop a project that synthesizes the course learning objectives through an applied course project. The course focuses on the theoretical underpinnings of biostatistics and improving understanding of statistical application and problem solving approaches.

Prerequisite(s): BIOS 7040.

BIOS 7060 Regression Analysis (3)
This is an advanced course on selected statistical techniques for analyzing data on multiple variables, both continuous and categorical. This course ultimately provides the student with insight into the application of regression techniques to the medical and health sciences. It focuses on statistical methodology with emphasis on selection of appropriate applications and interpretation of results. Elementary knowledge of the use of statistical computing package is needed.

Prerequisite(s): (BIOS 6030, SPHL 6850 or 6050) and BIOS 6040.

BIOS 7080 Design of Experiments (3)
This course deals with fundamental topics in design of experiments including principle theory of experimental designs (randomization, replication, and balance). It focuses the main elements of statistical thinking in the context of experimental design such as completely randomized design, randomized complete block design, experiments with two factors, factorial design, Latin Square, nested designs, repeated measurement design, and split-pot designs. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030, SPHL 6850 or 6050) and BIOS 6040.

BIOS 7150 Categorical Data Analysis (3)
Fundamental concepts and methods for analysis of categorical outcomes. Topics include analysis of 2-way tables, unconditional and conditional logistic regression, power and sample size computation, and modeling of dependent categorical outcomes via mixed models and GEE methods. Course covers the mathematical basis of the statistical procedures but the emphasis is on application of the methods using statistical software and interpretation of results. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030, SPHL 6850 or 6050) and BIOS 6040.

BIOS 7220 Nonparametric Statistics (3)
Nonparametric inferential statistical methods are introduced. Topics include single, paired, independent, and multiple sample hypothesis testing and confidence interval methods; non parametric regression and correlation methods; categorical data and measures of concordance. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030 or SPHL 6050) and BIOS 6040.

BIOS 7250 Principles of Sampling (3)
This course introduces core principles of survey sampling, with emphasis on sampling plans, methods of estimating unknown parameters of population and subdomain, and techniques for calculating precisions of the estimators. Topics include: basic concepts in survey sampling, simple random sampling; stratified random sampling; systematic sampling; one-, two-, and multi-stage cluster sampling; probability proportionate to size sampling. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030, SPHL 6850 or 6050).

BIOS 7300 Survival Data Analysis (3)
Topics include analysis of survivorship data including estimation and comparison of survival curves, regression methods in the analysis of prognostic and etiologic factors, concepts of competing risks, and the analysis of clinical trial data. Software used for problem solving. Emphasis placed on the application of methods to the analysis of public health data with examples of clinical trials, cancer survivorship, and other data sets for which there is partial follow-up of subjects. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030, SPHL 6850 or 6050) and BIOS 6040.

BIOS 7380 Bayesian Inference (3)
This course examines theoretical foundations and applications of Bayesian paradigm, including Bayes' theorem, prior distribution, likelihood function, deriving posterior distributions, and point and interval estimations. A variety of topics are covered, which encompass Bayesian inference for single- and multi-parameter models, linear regression, hierarchical models, and commonly used Gibbs sampler and Metropolis-Hastings algorithm. Assessment of convergence, the evaluation of models, and the presentation of the results are also illustrated. Real world examples drawn from medical research are used to show practicality of Bayesian approach, particularly how to update beliefs and make inferences from observed data. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030 or SPHL 6050) and BIOS 6040.

BIOS 7400 Clinical Trials (3)
Covers design, implementation, analysis and reporting of clinical trials. Topics encompass trial design, hypothesis formulation and testing, methods of randomization, ethics, sequential trials, sample size determination, blinding, subject recruitment, data collection and management, quality control, monitoring outcomes and adverse events, interim analysis, statistical methods in analyzing trial data, and addressing scientific issues in reporting and interpreting trial results. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030*, SPHL 6850 or 6050*) and BIOS 6040.
* May be taken concurrently.

BIOS 7650 Statistical Learning in Data Science (3)
This course provides detailed overviews over the evaluation and application of statistical learning theories and techniques for inference and prediction in data science, particularly for biological and public health data. Topics include linear and nonlinear models, resampling techniques, tree-based methods, unsupervised learning such as clustering, support vector machine, graphical models, etc. Working on real and/or simulated data through assignments, students will apply the knowledge learned and practice their skills in solving various biological and public health problems, such as sequence alignment, gene prediction, subtype identification and classification, and disease risk and prognosis prediction. Discussion on model assessment and selection are also included. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030 or SPHL 6050) and BIOS 6040.

BIOS 7990 Masters Independent Studies (1-3)
Masters students and advisor select a topic for independent study and develop learning objectives and the expected written final product.

BIOS 8350 Clustered and Longitudinal Data Analysis (3)
This is an advanced course in analysis of clustered and longitudinal data, with or without missing values. Students will compute power and sample size for clustered and longitudinal data using generalized linear mixed effect models and estimating equations. Class discussion, lecture, and assignments emphasize application of methods to the analysis of public health data with examples of clinical trials and epidemiological observational studies. Use of standard statistical software and methods required. Elementary knowledge of the use of statistical computing packages is needed.

Prerequisite(s): (BIOS 6030, SPHL 6850 or 6050) and (BIOS 6040 or 7060).

BIOS 8500 Monte Carlo and Bootstrapping Methods (3)
This hands-on course introduces the methods used for Monte Carlo simulations and nonparametric bootstrapping. Students learn how to design, program, and interpret a simulation study, uses of bootstrapping for estimation and inference, jackknifing, and other resampling methods. Monte Carlo Markov Chain methods and Bayesian inference in Monte Carlo methods will be introduced. This is an advanced, computer-intensive course, so knowledge of programming language (SAS or R preferred) as well as ability to work independently are required.

Prerequisite(s): (BIOS 7060, 7080, 7150, 7220 or 7300).

BIOS 8820 Multivariate Methods (3)
This is a doctorate level course that covers techniques used to conduct analysis with more than one outcome variable. The focus will be on association methods and predictive models between multiple independent and multiple dependent variables. Additionally the students will learn techniques for variable reduction, path models, and factor analysis. Students will conduct numerical computation and interpretation of results of statistical application using statistical packages. Doctoral status required. Students should have completed at least two 7000 level biostatistics courses and have working knowledge of programmable statistical software, (SAS, R, STATA).

BIOS 8990 Doctoral Independent Study (1-3)
Doctoral students and advisors select a topic for independent study and develop learning objectives and the expected final written product.

BIOS 9980 Master's Thesis Research (0)
MS Students engaging in thesis research. Course may be repeated up to unlimited credit hours.

Course Limit: 99

Business & Leadership Studies (BSLS)

BSLS 1000 Economics for Non-Majors (3)
Students examine how the economy works as a whole and how individuals and companies make economic decisions and interact with one another within the economy; evaluate the frameworks economists use to analyze economic data and transactions; and investigate methodologies for projecting the allocation of resources for production and the distribution of goods and services among the individuals and households in the society. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. credit hours: 3 Notes: Only School of Professional Advancement students may receive credit for BSLS 1000. (Previously numbered as BSEC 1000)

BSLS 1110 Accounting I (3)
In this interactive online course, students explore the concepts, techniques, and conventions for measuring and communicating the results of operations and the financial position of a business enterprise, based upon generally accepted accounting principles (GAAP) and using Microsoft Excel as a tool. The course emphasizes the development and the use of the financial information that is evaluated internally and reported to the public. Students master the preparation of the adjusting and closing entries and worksheet presentations necessary for monthly financial statements and the principles and theories supporting the proper accounting treatment of cash, accounts receivable, inventories, sales and payroll taxation, and other concepts. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. Credit Hours: 3 (Previously numbered as BSAC 1110)

BSLS 1120 Accounting II (3)
In this interactive online course, which builds upon the accounting knowledge acquired in Accounting I and provides hands-on instruction in the use of accounting software systems such as QuickBooks, students will develop in-depth skills in financial accounting and examine the basic concepts of managerial and cost accounting and the role of accounting information in management decision-making for businesses. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. 3 credits (Previously numbered as BSAC 1120)

Prerequisite(s): BSLS 1110* or BSAC 1110.
* May be taken concurrently.

BSLS 1940 Transfer Coursework (0-20)
Elective for credit transfer purposes.

Maximum Hours: 99

BSLS 2210 Accounting Information Systems (3)
Through further instruction in the use of accounting software systems, including QuickBooks and others, with software certification as a goal, students in this interactive online course will investigate the development, use, interaction, and maintenance of the information systems currently used in the accounting profession and develop the skills necessary to employ these software systems effectively to enhance the accounting process. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. Credit Hours: 3 (Previously numbered as BSAC 2210)

Prerequisite(s): BSLS 1120* or BSAC 1120.
* May be taken concurrently.

BSLS 2220 Intro to Finance (3)
Students develop the knowledge and skills necessary to analyze financial positions, risks, opportunities, and problems from the financial manager's point of view, focusing upon the identification and assessment of discounted cash flow and the various analytical techniques and methods used to structure a firm's balance sheet. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. credit hours: 3 (Previously numbered as BSFN 2210)

BSLS 2230 Intro to Investing (3)
Through lectures and practical exercises focusing upon the principles and practices of security analysis and the methods commonly employed in the analysis of financial statements, students master the fundamental principles of investment and explore the analytical methods underlying the selection of investment securities to meet specific needs. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. credit hours: 3 (Previously numbered as BSFN 2540)

BSLS 2240 Personal Financial Planning (3)
Through lectures and practical assignments, students explore the process of making effective decisions and building financial security and develop the knowledge and skills necessary to identify and engage competent bankers, brokers, accountants, insurance, and real estate professionals. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. credit hours: 3 (Previously numbered as BSFN 3650)

BSLS 2250 Business Communications (3)
By identifying and creating clear, concise, and correct business language, students develop and hone their business writing and communication skills; analyzing each audience to target and tailor messages appropriately; and using critical thinking and a problem-solving approach to analyze business issues. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. credit hours: 3 (Previously numbered as BSMT 2250)

BSLS 2310 Principles of Management (3)
Students examine the evolution of contemporary management approaches in response to changing circumstances; apply planning principles to set clear, verifiable or measurable goals and objectives; assess the methods managers use to plan in today's dynamic environment; describe a socially responsible organization and the manager's role in encouraging ethical behavior; identify the motivational principles that improve productivity and human relations, develop leadership and communication skills; and evaluate personal aptitude for management. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. (Previously numbered as BSMT 2310)

BSLS 2450 Career Success Strategies (3)
Students explore career options and develop long-term career plans, focusing upon in-depth investigation of lifestyle and career options and self-assessment and culminating in the creation and execution of a successful job search campaign. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. credit hours: 3 (Previously numbered as HRDV 2450)

BSLS 2500 Princ & Prac Real Estate (3)
Through lectures and practical exercises, students examine the laws governing real property and the tenets of real estate practice, including preparing for transactions; retrieving and compiling property information; performing title searches; preparing preliminary abstracts and opinions of title, mortgages and transfer of ownership; requisitioning deeds and leases; and other functions associated with real estate negotiations and closings. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. credit hours: 3 (Previously numbered as REAL 2320)

BSLS 2750 Intro to Franchising (3)
In this online course, students examine franchising as a business form, from the perspectives of both the franchisor and the franchisee, and addressing franchising agreements and related documents, financing, site selection, marketing, financial management and operations, the franchisee/franchisor relationship, contractual requirements, trademarks, territorial rights, compliance issues, legal considerations, and evolving issues. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. credit hours: 3 (Previously numbered as BSMT 2750)

BSLS 2910 Special Topics (1-3)
These courses introduce new business concepts to the curriculum. Courses are chosen based upon levels of activity, interest, and new trends in business.

BSLS 2940 Transfer Coursework (0-20)
Elective for credit transfer purposes.

Maximum Hours: 99

BSLS 3200 Introduction to Marketing Principles (3)
This course focuses upon the use of marketing to enable small and large businesses to achieve their goals. Students will identify and apply the basic principles of marketing practices, including research and analysis, strategy development, product development and pricing, consumers and target market analysis, promotion methods, distribution channels, feasibility analysis, and global marketing. In the Final Marketing Plan Project, students will apply and execute these theories in a scenario set in the current business environment. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. (Previously numbered as BSMK 3200)

BSLS 3210 Business Taxation (3)
Using the U.S. Internal Revenue Code as a basis, students examine the federal system of taxation, emphasizing the laws governing tax matters and analyzing the taxation of corporations, S corporations, and partnerships; and addressing payroll and sales taxation and the tax impacts of formation, ongoing operations, disposition of a business entity, and other transactions upon shareholders, partners, and other stakeholders. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business.

Prerequisite(s): BSLS 2210* or BSAC 2210.
* May be taken concurrently.

BSLS 3250 Business Statistics (3)
Through the lens of practical business operations, students in this interactive course examine and evaluate the key concepts and techniques of statistics, including time series analysis and index number and computer implementation of statistical procedures. Successful completion of high school algebra is recommended. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. Note: Meets math proficiency requirement for School of Professional Advancement Bachelor of Arts degrees only. credit hours: 3 (Previously numbered as BSMT 3250)

BSLS 3260 Essential Business Skills (3)
The Essential Business Schools Course teaches the foundational skills required to be successful in a variety of businesses or non-profit settings. The course learning modules include communication and writing skills for the workplace, critical thinking and power (aka “soft”) skills, analysis and interpretation of financial statements and reports, data analysis using Excel, project management skills and tools, and presentation skills. The course will use project-based learning, individual analysis, scenario planning and group work throughout the semester, culminating in a final project that allows students to apply the acquired skills in a practical setting.

BSLS 3310 Writing in the Workplace (3)
Through writing-intensive assignments and skill-building exercises, students examine and apply techniques for communicating effectively and professionally, organizing and presenting ideas clearly and concisely, and identifying the appropriate voice, style, and channel for contracting business scenarios. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. Notes: This course is approved as a Designated Writing Course for School of Professional Advancement majors. (Previously numbered as BSEN 3310)

Prerequisite(s): ENGL 1010.

BSLS 3320 Compensation & Benefits (3)
Students analyze the purpose, structure, and effectiveness of compensation systems; identify governing laws and resulting legal issues; examine methods of job design, analysis, and evaluation; review pay systems and the incentives and psychological and motivational aspects of pay, executive compensation, and compensation and benefits plan administration. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. (Previously numbered as HRDV 3520)

Prerequisite(s): BSLS 3330 or HRDV 3330.

BSLS 3330 Intro To Human Resources (3)
Students examine the organizational, legal, and psychological frameworks governing modern human resources administration and evaluate both the overall human resources function and the key role of the human resources department in furthering employee and organizational goals. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. credit hours: 3 (Previously numbered as HRDV 3330)

BSLS 3340 Managing Org Behavior (3)
Students analyze the methods by which organizations function; identify techniques for diagnosing and responding flexibly to organizational needs; evaluate the key themes that drive modern organizations, including teams, globalization and diversity, interpersonal and group communication, and organizational cultures; and explore the challenges inherent in negotiating the fit between the individual and the organization. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. (Previously numbered as BSMT 3340)

BSLS 3350 Professional Interviewing (3)
Through lectures and practical exercises, students examine and demonstrate the art of interviewing victims, witnesses, suspects, job applicants, and other persons in contrasting scenarios, focusing upon revealing deceit and corroborating truthfulness, identifying the objectives of the interview, establishing rapport, and analyzing the role of stress and discomfort in the interview process. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. credit hours: 3 (Previously numbered as HRDV 3450)

BSLS 3360 Plan, Recruit & Selection HR (3)
From the perspectives of both the employee and the organization, students examine the strategic, legal, and administrative issues associated with recruitment and selection of employees, including the assessment of staffing needs, coordination of human resources planning and organizational competitive strategy, and psychological aspects of human resources flow systems. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. credit hours: 3 (Previously numbered as HRDV 3650)

Prerequisite(s): BSLS 3330 or HRDV 3330.

BSLS 3370 Perf Appraisal & Productivity (3)
Focusing upon an organization's competitive strategy, students explore the development and implementation of performance appraisal systems and examine productivity-enhancing work designs, such as Total Quality Management, teams, empowerment, and Business Process Reengineering. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. credit hours: 3 (Previously numbered as HRDV 3700)

Prerequisite(s): BSLS 3330 or HRDV 3330.

BSLS 3380 Business Ethics (3)
Applying theoretical critique and case-oriented methods, students analyze the moral, ethical, and value issues that challenge business, industry, and corporate life, with a focus upon identifying the ethical principles and strategies that govern the management process and developing a personal business ethics code of conduct. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. Note: Satisfies one Humanities course requirement for School of Professional Advancement majors. (Previously numbered as BSMT 3380)

BSLS 3390 Employment & Labor Law (3)
Focusing upon the disputes that may arise in the workplace, students explore the state and federal laws governing employment in the U.S. Through practical exercises, students identify and apply best practices for establishing, maintaining, and terminating the employment relationship; evaluating employment claims; and adhering to ethical practices. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. credit hours: 3 (Previously numbered as HRDV 3920)

Prerequisite(s): BSLS 3330 or HRDV 3330.

BSLS 3400 Legal Aspects of Business (3)
Through lectures and practical exercises, students examine the laws governing various business organizations and relationships, including sole proprietorships, agencies, partnerships, corporations; assess the responsibilities of businesses toward their consumers; evaluate the requirements, rights, and obligations that contracts create; recognize the impacts of bankruptcy laws upon creditors and debtors; evaluate the consequences of willful and negligent acts; and identify methods for functioning successfully in corporate and business transactions. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business (Previously numbered as BSBL 3400)

BSLS 3410 Human Resource Training & Development (3)
Students will identify the elements of human resource training and development, including conducting a training needs assessment, implementing and evaluating training, calculating the return on investment; and linking performance and career development needs to employee training. In the process, students will formulate methods for assessing an organization; applying the ADDIE model (assessment, design, development, implementation, and evaluation); comparing learning styles; performing needs assessments and SWOT analyses; and linking organizational strategy with training and development strategies to establish the training program as another tool for competitive advantage. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. 3 credits

Prerequisite(s): BSLS 3330.

BSLS 3450 Commercial Law (3)
Through lectures and practical exercises, students evaluate the concepts, principles, and laws that govern business transactions; examine the drafting, execution, and enforcement of contracts, mortgages, pledge assignments, and other security devices; explore the allocation of liability; identify legal procedures for enforcement and collection; and develop the professional skills and judgment necessary to function ethically and successfully in a commercial endeavor. . This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. credit hours: 3 Cross-listed with GLSP 4150 – Commercial Law (Previously numbered as BSBL 3450)

BSLS 3500 Adv. Real Estate Princples (3)
Through lectures and practical written exercises, students identify and apply the principles that govern real estate marketing and inform the decisions necessary to the successful purchase and sale of real estate, examining factors of supply and demand, financing options, investment analysis, and the real estate development process. (Previously numbered as REAL 3320)

BSLS 3600 Entrepreneurship (3)
In this interactive online course, students examine the concept and quality of entrepreneurship, identify the personality traits common to entrepreneurs, explore methods for analyzing new venture opportunities from marketing, production, and organizational perspectives; and analyze the legal considerations involved in developing and financing a new business venture and protecting intellectual property. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business Credit hours: 3 (Previously numbered as BSMT 3600)

BSLS 3650 Developing a Small Business (3)
Through lectures and practical exercises, students analyze the essential principles of small business start-up and management, including methods for identifying and evaluating opportunities, establishing the operating structure, developing marketing and financial plans, and using financial reports to enhance the effective management of nascent and growing small business. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. credit hours: 3 (Previously numbered as BSMT 3650)

BSLS 3700 Global Business (3)
Students examine the strategies, benefits, costs, ethical practices, and conduct of businesspeople, government leaders, workers, and customers in the global marketplace, including the economic, legal, and cultural impact of global business and current business and political events upon local and national communities. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. Note: Note: Satisfies one Non-Western Culture requirement for School of Professional Advancement majors. (Previously numbered as BSMT 3700)

BSLS 3800 Leadership: Navigating for Success (3)
This course introduces students to the core ideas in leadership. Through a discussion of various principles, students will understand their own leadership capabilities and styles. The class will focus on key theoretical as well as practical foundations of leadership, including task and relationship-oriented styles, the role of personality and environment, emotional intelligence, followership, and servant as well as destructive leadership. Through an articulation of cases and current examples, students will understand the myriad factors that influence leadership. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business.

BSLS 3900 Human Resource Information Systems & Data Analysis (3)
Students will identify and examine the functions and implementation of Human Resources Information Systems (HRIS), including record-keeping, collection and storage of compliance data, supporting efficiency, tracking data to advance business strategies, and employee self-service; investigate the uses of HRIS to support applicant tracking systems, payroll, benefits administration, workhours and attendance, training, performance management, reporting & analytics, and succession planning; and recognize the methods and benefits of HRIS certification. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. credit hours: 3

Prerequisite(s): BSLS 3330.

BSLS 3910 Special Topics (1-3)
These courses introduce new business concepts to the curriculum. Courses are chosen based upon levels of activity, interest, and new trends in business. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

BSLS 4100 Internship & Professional Dev (1-3)
This course is designed to prepare students for success in the career development process by gaining work experience in their chosen field of study, developing a portfolio of their work and accomplishments, and networking with industry professionals. Students will complete a minimum of 100 hours of field experience in an organization and attend classroom sessions that focus on career choices, job searching skills, and portfolio development. The course is to be taken during the student's last semester of study or with the approval of their program director. All internships must be approved by the program director or internship instructor.

BSLS 4750 Advanced Perspectives in HR Management: Theory & Practice (3)
This upper-level elective course provides students in all disciplines with the knowledge and skills to manage human resources in a variety of business settings. Focusing on essential management skills and presented in synchronous remote or in-person format, the course emphasizes the dynamic principles of Human Resources, along with the current workplace legislation that guides the process. The course includes an experiential learning component in which students will work with a community organization on a human resources project central to that organization's strategy. The class will enable students to analytically implement HR functions' including recruitment & selection, performance management, compensation, and job analysis. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business.

Prerequisite(s): ENGL 1010.

BSLS 4910 Independent Study (1-3)
Limited to specifically defined circumstances, with prior Program Director approval only.

BSLS 4970 Human Resources Capstone (3)
Through an assigned case study and/or field experience in an internship or through their own jobs, students will examine the role of the HR professional as an internal consultant, integrating the major principles developed through the Human Resources curriculum with real-world issues and applying the SHRM competencies, to include staffing and selection, performance management, decision-making using HR metrics, change management, communication, ethical practice, global and cultural effectiveness, and leadership and navigation. The capstone project will serve as a summative learning experience in the HURE major. This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. credit hours: 3

Prerequisite(s): BSLS 3330.

BSLS 4980 Organizational Behavior & Management Capstone (3)
Through an assigned case study and/or field experience in an internship or through their own jobs, students will integrate the major theories and principles developed through the Organizational Behavior & Management curriculum applying the concepts, principles, and practices of organizational behavior to address real-world issues. The capstone project will serve as a summative learning experience in the OBMS major. 3 credits This online course includes 2-4 synchronous video conferences, the scheduling of which will be confirmed during the first week of classes, with recordings available for students who are unable to attend. This course will not satisfy requirements toward majors in the School of Liberal Arts or the A.B. Freeman School of Business. credit hours: 3

Prerequisite(s): BSLS 3330.

Business General Courses (BUSG)

BUSG 3200 Introduction to Financial Analysis (3)
This course covers fundamental concepts of financial accounting, managerial accounting, and corporate finance including valuation techniques. The course is only offered to non-BSM majors pursuing business minors or certificates that are made available to students majoring in areas outside the business school.

BUSG 4180 The Business of Sports (3)
While the business of sports continues to be defined by dramatic change, the industry's financial returns have always been a function of how franchises can create, leverage, and "activate" a diverse set of revenue streams. This class emphasizes the key concepts and issues faced within the various and interrelated disciplines of the global sports industry. The course begins with a comprehensive survey of the industry, exploring the historical context and contemporary trends that are currently driving team valuations. Traditional topics, such as ticket pricing and player valuation, are covered, as are the tax implications of player depreciation. Additional topics include ownership arrangements, real estate development, entertainment, and media channels. With a focus on practical application, this course is also designed to expose students to potential careers in the sport industry and prepare them for advancement in the Sports Management Certificate program.

BUSG 4500 Real Estate Private Equity (3)
The course in Real Estate Private Equity offers students a comprehensive understanding of the strategies and practices involved in real estate investment through the private equity lens. Students will delve into the intricacies of real estate private equity, including deal structuring, fundraising, asset management, and exit strategies. Through theoretical learning, case studies, and interactive discussions, students will gain insights into the unique aspects of private equity in the real estate industry and develop the skills necessary to excel in this dynamic field. The course is capped off with an experiential learning project in which students have a hands-on experience in the operation of a hypothetical private real estate investment fund.

Prerequisite(s): FINE 4010.

BUSG 4600 Cases in Sports Management (3)
In this case-based, highly experiential course. Students simultaneously learn best practices from the world's leading sports organizations while participating in a real-time client consulting engagement. The global sports industry is diverse, multidisciplinary, and expanding rapidly. Cases in Sports Management covers a range of professional sports scenarios. From strategy planning for a community hockey club to tracking the history of the National Football League's evolving business model, this course covers all major business disciplines and touches nearly every type of sport in a diverse set of geographical locations. As students gain knowledge through class discussion and rigorous case analysis, they will concurrently form groups to tackle real-world business problems with an actual client in the sports industry. Topics covered include: product innovation; price "bundling"; crisis management; growth strategy; business model development; data analytics and implementation; and much more. Lectures are purposely kept to a minimum in this highly interactive class to make room for extensive in-class discussion, activities, and a variety of guest lectures.

Business Doctoral Courses (BUSN)

BUSN 7010 Financial Economics Theory (3)
This is the first doctoral course on financial economics theory.

BUSN 7020 Investments and Asset Pricing (3)
This course is designed for doctoral students who intend to research in financial accounting, finance, or economics. The course will cover important and recent empirical papers in the investments area.

BUSN 7030 Empiracl Rsrch Acct/Finc (3)

BUSN 7040 Optimization Theory (3)

BUSN 7050 Micro-Economic Th I (3)

BUSN 7060 Micro-Economic Th II (3)

BUSN 7070 Incentives & Asymmetric Info (3)

BUSN 7080 Econ Theory of Organztns (2-3)

BUSN 7110 Analytical Acctng Theory (3)

BUSN 7120 Empirical Methods in Finance (3)

BUSN 7130 Corporate Finance Theory (3)

BUSN 7140 Empirical Research Paper (3)

BUSN 7141 Empirical Research Paper II (3)
Research.

BUSN 7150 Empirical Rsh in Acctg Seminar (3)
Research.

BUSN 7160 Empirical Acctg Research UU (3)

BUSN 7170 Empirical Research in Acct II (3)
This course provides an introduction to and overview of selected topics in financial accounting research. We will cover a broad area of research. Papers will be a mix of classic, contemporary, and review papers. Our main objective is to continue building your research skills, so that you will become a productive researcher in accounting.

BUSN 7180 Mathematical Economics I (3)

BUSN 7210 Empirical Finance Research I (3)
This is a doctoral seminar course on topics in empirical research, primarily in the area of corporate finance.

BUSN 7220 Empirical Finance Research II (3)
This is a doctoral course on topics in empirical finance research, primarily in the area of corporate finance.

Enrollment limited to students in the Economics or School of Business departments.

BUSN 7230 Selected Topics in Fin and Acc (3)
This seminar covers selected topics in empirical Finance and Accounting research. The objectives of this course are to (i) provide an introduction to the basic building blocks of market-based research (ii) enable an understanding of the economic theory-based motivation for empirical hypotheses, and (iii) provide an introduction to, and evaluation of the empirical methods employed to test those hypotheses. The course seeks to prepare students for research careers in archival-empirical research.

BUSN 7300 3rd YR Empirical Paper & Pres (3)

BUSN 7330 Seminar: Mngment Commun (0)

BUSN 7410 Seminar On Acct & Econ (3)

BUSN 7510 Seminar In Org Beh I (2-3)

BUSN 7520 Sem Organiza Behavior II (3)

BUSN 7530 Seminar Org Behavior III (3)

BUSN 7540 Group Dynamics (3)

BUSN 7810 Strategic Management (3)

BUSN 8010 Studies In Account I (1-3)

BUSN 8020 Studies In Account II (1-3)

BUSN 8030 Studies In Account III (1-3)

BUSN 8040 Studies In Account IV (1-3)

BUSN 8310 Studies In Org Behav I (1-3)

BUSN 8320 Studies In Org Behav II (1-3)

BUSN 8330 Studies In Org Behav III (1-3)

BUSN 8340 Studies In Org Behav IV (1-6)

BUSN 8510 Studies In Finance I (1-3)

BUSN 8520 Studies In Finance II (1-3)

BUSN 8530 Studies In Finance III (1-3)

BUSN 8540 Studies In Finance IV (1-3)

BUSN 8550 PhD Investment Seminar (3)

BUSN 9950 Independent Study (1-6)

BUSN 9960 Thesis Development (3)

BUSN 9980 Advanced Financial Seminar (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

BUSN 9990 Dissertation Research (0)
Course may be repeated without limit.

Maximum Hours: 99

Career Devel & Mgmt (CDMA)

CDMA 1010 BMSI Career Discussions I (1)
In this course, Business Minor Summer Institute students will complete an online Career Assessment to understand how their interests, motivators and skills can provide insight into future careers. In addition, they will learn how to take stock of the skills they already have and how to use them to create effective resumes, network and interview. A representative from the Turchin Library will demonstrate how to do effective career research on industries, organizations and jobs. Guest speakers will visit each class to share their personal career journeys and answer questions. Students will also have access to the Freeman CMC and meet one-on-one with a Career Consultant.

CDMA 1110 BMSI Career Discussions II (0.5)
In this course, Business Minor Summer Institute students will learn about the use of social media career tools, networking techniques and the various types of interviews in preparation for an eventual career search. Guest speakers will visit each class to share their personal career journeys and answer questions. Students will also visit a local business or non-profit organization to learn more about its operation.

Prerequisite(s): CDMA 1010.

CDMA 1201 Career Development and Management I (2)
This course is the required foundational career education course for all Freeman undergraduates. The course offers a blended approach with online content, videos and interactives that can be revisited and reinforced during the entire academic tenure at Freeman. Students learn how to interpret their individual career assessment, do extensive research and targeting, develop an effective contact network and execute successful internship and job search strategies. Students will leave the class with the tools necessary to build a career plan. Guest speakers from a variety of business backgrounds and one-on-one meetings with CMC Career Consultants supplement course learnings.

CDMA 2201 Career Development and Management I (2)
This course is the required foundational career education course for all Freeman undergraduates. The course offers a blended approach with online content, videos and interactives that can be revisited and reinforced during the entire academic tenure at Freeman. Students learn how to interpret their individual career assessment, do extensive research and targeting, develop an effective contact network and execute successful internship and job search strategies. Students will leave the class with the tools necessary to build a career plan and communicate it effectively. Guest speakers from a variety of business backgrounds and one-on-one meetings with CMC Career Consultants supplement course learnings.

CDMA 4020 Adv Career Dev & Management (1)
Advanced Career Development & Management is designed to draw on students' knowledge developed in previous Career Education classes and give them the confidence to launch and manage a job search strategy that will result in multiple offers. Students will practice presenting a case interview and explore how they can use their job search skills to build a lifelong career. Using the tools provided in this course along with one-on-one Career Consulting in the Career Management Center, students will be able to master the seemingly complex task of finding that next important career opportunity.

Prerequisite(s): CDMA 1201.

CDMA 5380 Business Study Abroad - CDMA (1-20)

CDMA 5390 Business Study Abroad - CDMA (1-20)

CDMA 6010 Career Development I (0)
Career Development I, tailored specifically to target the Career Development and Management needs of MBA candidates, is designed to draw on students' knowledge developed in previous professional experience or Career Education classes and give them the confidence to launch and manage a job search strategy that will result in multiple offers. Graded on a pass/fail basis, this course begins during MBA orientation and is designed to provide students with the tools and information to identify professional career goals, define a career strategy, network their way into an organization, and ace the interview. Using the tools provided in this course, along with one-on-one Career Consulting in the Career Management Center, students will be able to master the seemingly complex task of finding that next important career opportunity.

CDMA 6020 Career Development II (0)
Career Development II, tailored specifically to target the Career Development and Management needs of MBA candidates, builds on the knowledge students receive in CDMA 6010. Graded on a pass/fail basis, this course is designed to provide students with the tools and information to nail a case interview, respond to job offers, onboard into a company, make the most of mentoring, and understand their personal career legacy. Using the tools provided in this course along with one-on-one Career Consulting in the Career Management Center, students will be able to develop and manage their careers over the course of a lifetime.

Prerequisite(s): CDMA 6010.

Maximum Hours: 0

CDMA 6030 Advanced Career Development and Management (0)
Advanced Career Development and Management is designed to draw on students' knowledge developed in previous career education classes and give them the confidence to launch and manage a job search strategy that will result in multiple offers. Students will practice presenting a case interview and explore how they can use their job search skills to build a lifelong career. Using the tools provided in this course along with one-on-one career consulting in the Career Management Center, students will be able to master the seemingly complex task of finding that next important career opportunity.

CDMA 6110 Strategic Career Planning (2)
Strategic Career Planning is designed to draw on knowledge developed in previous career education classes and give students the confidence to launch and manage a job search strategy that will result in multiple offers. Students will explore how they can use their job search skills to build a lifelong career (identifying target companies, networking, building a professional brand, interviewing, etc.), practice presenting a case interview, with one-on-one career consulting in the Career Management Center, students will be able to master the seemingly complex task of finding that next important career opportunity.

CDMA 6120 Strategic Career Planning Lab (0)
Strategic Career Planning Lab is designed to put into practice the skills students gained in Strategic Career Planning. Using the tools provided in the prerequisite course along with one-on-one career consulting in the Career Management Center, and engagement with peers in a small group setting, students will put into practice their career strategy and begin exploring opportunities for after their graduation.

Prerequisite(s): CDMA 6110*.
* May be taken concurrently.

Career Development (CRDV)

CRDV 1060 Exploring Majors and Careers (1)
Students will engage in self-assessment and exploration surrounding their major and career goals to concretely identify avenues to achieve career-related goals such as major declaration, securing internships, and exploring different career paths. The course may only be taken once for credit.

CRDV 1070 Preparing for Jobs, Internships, and Graduate School (1)
Students will learn the importance of developing their personal brand, establishing a professional network, and applying current career knowledge to achieve career-related goals such as applying for graduate school, securing a job after graduation, and preparing for a successful post-graduation transition.

CRDV 1090 Majors, Internships & Jobs (1)
Using four phases of career development, students will explore the importance of developing a professional identity and concretely identify avenues to achieve career related goals such as major declaration, securing internships, and preparing for a successful transition from college post-graduation. Course may be repeated 2 times for credit.

Course Limit: 2

Cell & Molecular Biology (CELL)

CELL 1010 Intro to Cell & Molec Biology (3)
This course is an introduction to the fundamental concepts that apply to all living systems. Major topics include the chemistry of life, primarily cellular respiration and photosynthesis; cell biology and organization; and an introduction to genetics.

CELL 1030 Heredity and Society (3)
Biology course for non-majors focusing on genetics. The explosive growth in information and knowledge established from the studies on molecular genetics has profound implications for science, medicine, law, economy, and our society itself. This course provides fundamental concepts of genetics to understand the ramifications of biology. Does not count toward CMB major.

CELL 1035 Heredity & Society Lab (1)
This introductory biology lab course provides hands-on lab experiences to reinforce concepts discussed in CELL 1030. Students will learn basic laboratory skills, including microscopy and molecular biological techniques. For non-majors.

Prerequisite(s): CELL 1010 or 1030*.
* May be taken concurrently.

CELL 1040 Forensic Biology (3)
Lectures, readings, and discussion of the literature in the fields of forensic biology. For non-majors.

CELL 1050 Introduction to Human Metabolism (3)
This course is designed to introduce you to human metabolism from a biochemical perspective. We will explore the composition of human bodies, how our cells utilize various fuel sources, and the relative nutritional value of different types of foods through discussions of scientific literature, laboratory experiments and environmental explorations. Open to high school students only.

CELL 1500 Biology Lecture (3)

CELL 1505 Biology Lab (1)

CELL 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CELL 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

CELL 1945 Transfer Coursework (0-20)
Course Limit: 99

CELL 2050 Genetics (3)
The principles of genetic analysis and the nature of genes. Discussion of DNA, chromosomes, and molecular mechanism of replication, mutation, expression, and transmission of heritable characteristics.

Prerequisite(s): CELL 1010.

CELL 2115 General Biology Lab (1)
Laboratory exercises emphasizing concepts in cell, molecular, and developmental biology. Designed for majors in the biological sciences.

Prerequisite(s): CELL 1010, CHEM 1080 and 1085*.
* May be taken concurrently.

CELL 2220 Careers in Cell & Molec Biol (1)
This course will examine different careers in medicine, the distribution of hours spent in practice each week, and some of the disease processes and treatments seen by physicians. It will be taught from a practical, clinical point of view and is intended to help students identify their areas of interest in medicine or medical research. Does not count toward the requirements for a major or minor in cell and molecular biology.

CELL 2660 Special Topics (0-4)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department.

CELL 2665 Special Topics Lab (0-4)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CELL 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CELL 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

CELL 2945 Transfer Credit (0-20)

Maximum Hours: 99

CELL 3030 Molecular Biology (3)
The course is designed to provide basic knowledge of molecular biology. Topics covered include DNA replication, gene structure and regulation, transcription, translation, and protein structure and regulation. Basic laboratory techniques and experimental design in molecular biology are emphasized.

Prerequisite(s): CELL 2050.

CELL 3035 Molecular Biology Lab (1)
Laboratory experience in molecular biology techniques. Students will learn to analyze DNA via gel electrophoresis; isolate, detect, and quantitate RNA and/or protein; and use plasmids to clone and express a gene.

Prerequisite(s): CELL 2115 and 3030*.
* May be taken concurrently.

CELL 3050 Foundations of Pharmacology (3)
This course explains cellular mechanisms by which drugs act in the body. Specific topics include basic pharmacokinetics, drug receptor interactions, drug tolerance, toxicity and drug interactions. The course integrates biology and chemistry by using examples of drug action on the autonomic and central nervous systems, cardiovascular and endocrine systems as well as the treatment of infections. Concepts from cell biology, anatomy, biochemistry, neurochemistry and physiology are covered.

Prerequisite(s): CELL 1010 and (CHEM 2420 or 2440).

CELL 3210 Physiology (3)
This course is a survey of the organ systems of the human body. The cellular and molecular mechanisms of organ function are discussed. Emphasis is placed on clinical implications.

Prerequisite(s): CELL 1010.

CELL 3215 Physiology Lab (1)
This class includes a series of on-line laboratory simulations designed to demonstrate basic principles of Physiology. The course is meant to follow and reinforce material from Physiology, CELL 3210, taught in the Fall semester. Each class will start with a brief discussion of the material, how it relates to the physiology of the organism as a whole, and the clinical significance. Students will spend the rest of the class conducting the exercises for that day's lab. The results are saved as a PDF, printed and turned in to the instructor at the next class.

Prerequisite(s): CELL 3210*.
* May be taken concurrently.

CELL 3230 Virology (3)
In the virology lecture course you will learn about the structural and reproductive cycles for the major classes of viruses. You will gain an understanding of the structural and genetic factors involved in the virus-host cell interaction. You will also learn about the techniques used to study viruses. You will be using all this knowledge to identify new viruses, solve case studies, hypothesize how specific features of viruses evolved, and propose experiments to study the virus life cycle.

Prerequisite(s): CELL 2050 or EBIO 2070.

CELL 3310 Cellular Neuroscience (3)
In-depth coverage of the basic principles of cellular neuroscience, including the biophysical basis of the membrane potential, action potential generation and propagation, and synaptic signaling. Students will be introduced to the synaptic organization of higher neural systems, such as the visual system and somatic sensory system.

Prerequisite(s): CELL 1010.

CELL 3315 Cellular Neuroscience Lab (1)
This is an interactive lab class giving students hands-on experience working with techniques used in the study of cellular neuroscience. Techniques include: behavioral testing using invertebrates, tissue staining, immunocytochemistry, and intracellular electrophysiological recordings.

Prerequisite(s): CELL 3310 or NSCI 3310.

CELL 3320 Systems Neuroscience (3)
The subject of this course is the human nervous system, its anatomy, connectivity and function. Discusses the normal structure of the nervous system and the relationship of that structure to physiological function. The course is taught from a practical, clinical point of view and is intended to prepare students for further study in the neurosciences.

Prerequisite(s): CELL 1010 and (CELL 3310 or NSCI 3310).

CELL 3400 Regenerative Biology (3)
This course provides the various cellular and molecular mechanisms of natural or injury-induced regeneration in vertebrates and the applications to development of therapies to restore tissues and organs damaged by injury or disease. Attribute: Capstone.

Prerequisite(s): CELL 3750*.
* May be taken concurrently.

CELL 3560 Pathophysiology (3)
This course focuses on the molecular pathophysiology of infectious disease, immunopathology of the cardiovascular system and skin disorders. The impact of a diseased cardiovascular system will be examined. Concepts from cell biology, anatomy, biochemistry, and physiology are covered.

Prerequisite(s): CELL 3210.

CELL 3750 Cell Biology (3)
An examination of the structure and function of eukaryotic cells. Emphasis is placed on mechanisms of intracellular and transmembrane transport, cellular control, and intercellular and intracellular signaling. Experimental methods and applications will be emphasized.

Prerequisite(s): CELL 3030.

CELL 3755 Cell Biology Laboratory (1)
Laboratory experience in in vitro methodologies. Students will learn to maintain and manipulate mammalian cell cultures.

Prerequisite(s): CELL 2115 and 3750*.
* May be taken concurrently.

CELL 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CELL 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CELL 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

CELL 4010 Cellular Biochemistry (3)
An examination of the structure and function of biological molecules, energetics of biological reactions, enzyme kinetics, metabolism, synthesis of macromolecules, and assembly of structures. Emphasis is placed on mammalian metabolism and mechanisms of control used to regulate metabolic pathways. Detailed explorations into the chemical function of biomolecules lay the foundation for the course.

Prerequisite(s): CELL 2050 and (CHEM 2420 or 2440).

CELL 4020 Integrative Fundamentals of Biochemistry (3)
Exploration of the structure and function of biological molecules, energetics, metabolism, synthesis of macromolecules, and assembly of structures. Fundamental concepts are taught through reading, analysis, and presentation of primary literature.

Prerequisite(s): CELL 3030 and (CHEM 2410 or 2430).

CELL 4110 Human Histology (4)
Descriptive study of mammalian microscopic anatomy in a physiological context. Lectures and laboratory. Course may be repeated 2 times for credit.

Prerequisite(s): CELL 1010.
Corequisite(s): CELL 4111.
Course Limit: 2

CELL 4111 Human Histology Lab (0)
Lab section for CELL 4110.

Prerequisite(s): CELL 1010.
Corequisite(s): CELL 4110.

CELL 4130 Embryology (3)
This course focuses on the vertebrate embryogenesis with specific emphasis on humans. Topics include fertilization, implantation, gastrulation, neurulation, and organogenesis of a variety of structures. Students are expected to understand and describe anatomical and morphological changes that occur during human embryogenesis at organ, tissue, cellular, and molecular levels.

Prerequisite(s): CELL 3750.

CELL 4160 Developmental Biology (3)
The origin and development of form and patterns in organisms. Recent investigations and research methodology on the processes of growth and differentiation are stressed.

Prerequisite(s): CELL 2050.

CELL 4180 Biomedical Research in Animals (3)
Lectures, readings, presentations, and discussion of the use of animal models in biomedical research.

Prerequisite(s): CELL 3750 or 4010.

CELL 4200 General Endocrinology (3)
This course explains the basics of hormone action and hormone interactions with their receptors, with an emphasis on the molecular mechanisms by which homeostasis is maintained in multicellular organisms. Physiological outcomes of hormone actions on different organs, as well as aberrant hormone action will be covered.

Prerequisite(s): CELL 1010 and 2050.

CELL 4220 Microbiology (3)
Taxonomy, physiology, genetics and ecology of microorganisms. This course will cover the role of microbes in medicine and industry, and as model systems for research.

Prerequisite(s): CELL 3750.

CELL 4225 Microbiology Laboratory (1)
Laboratory studies of microbial taxonomy, physiology, biochemistry, and genetics.

Prerequisite(s): CELL 4220* and 2115.
* May be taken concurrently.

CELL 4250 Principles In Immunology (3)
An introduction to the biology of the human immune system with review of relevant literature. Students will learn to critically read scientific articles and analyze experimental data.

Prerequisite(s): CELL 3750 or 3010.

CELL 4260 Princ of Biomed Write Capstone (3)
An examination of various types of scientific literature, scientific writing and presentation. Exploration of scientific databases such as PubMed. Emphasis on critical reading of scientific literature and writing in a scientific style. Also satisfies writing intensive requirement.

CELL 4340 Neurobiology of Disease (3)
This is an advanced course which reviews the physiology of the nervous system and the various pathologies that attack the system. The course focuses on the cellular mechanisms of the pathology, what treatments are available, and what the current research literature has to say about the diseases. Emphasis is placed on readings from original clinical and research papers. Pathologies discussed range from motor control and neuromuscular diseases to high cognitive function, autism, and dementia.

Prerequisite(s): CELL 3310 or NSCI 3310.

CELL 4350 Developmental Neurobiol (3)
A broad overview of the different stages of neural development. Examination of the molecular aspects of developmental neurobiology, with reference to some important signaling pathways involved in neural growth and specification. Particular attention will be given to those active research fields, such as growth cone guidance and collapse, activity-dependent development, and applications of these to injury and disease.

Prerequisite(s): CELL 3750, 3010, 3030, 3310 or NSCI 3310.

CELL 4370 Molecular Neurobiology (3)
Introduction to the molecular biology of neurons and neuronal functions. Topics of study will include: the molecular composition of nerve cells, and how this provides a basis for their functional properties; their synaptic connectivity; how they receive, transmit, and retain information at a molecular level. Studies will focus on current research in the field of molecular neurobiology.

Prerequisite(s): CELL 3310, 3320, NSCI 3310 or 3320.

CELL 4430 Introductory Bioinformatics (3)
The aim of this course is to introduce biology and computer science students to computational research techniques using biological data. This field, generally referred to as bioinformatics, is growing faster then the current workforce available. We will cover the experimental methods used to create the biological data, how to understand the data in the context of biology, and the common computational methods used to derive understanding and make hypothesis from this data. The course will be taught through relevant, hands on projects, and all the tools are computer based. The projects will be based around "omics" data, which is the basis of personalized medicine and precision oncology. This course is designed to be approachable for all students, regardless of their current computational abilities or computer ownership.

Prerequisite(s): CELL 3030*.
* May be taken concurrently.

CELL 4440 Advanced Molecular Biology (3)
Current topics in molecular biology with emphasis on higher-order chromatin structure and transcription, mutability, and DNA repair mechanisms in prokaryotes and eukaryotes. Other topics include: nuclear hormone receptors, HOX gene activation in development, RNAi, and genome organization.

Prerequisite(s): CELL 3030, 6030 or 6030.

CELL 4450 Genome Biology (3)
Genome-level science is changing the pace of biomedical research and medicine. This course will examine how whole genomes, transcriptomes, and proteomes are studied, and what we are learning about the biology of multiple organisms using these novel techniques. Epigenetics, genomics. and proteomics will be covered in the context of disease and the development of novel therapeutics.

Prerequisite(s): CELL 3030.

CELL 4480 Head and Neck Anatomy (3)
This 3 credit lecture and laboratory course focuses on the gross anatomy of the head and neck, as well as central nervous system anatomy. This includes cadaver dissection of the head, neck, cranial nerves, and brain. This class mirrors dental and medical school anatomy courses and will prepare students to succeed in medical school, dental school, or allied health professions. Does not count toward CMB major.

Prerequisite(s): CELL 4490 or 6490.

CELL 4490 Anatomy (4)
An exploration of the back, upper and lower extremities with an emphasis on bones, muscles, arteries, nerves, and veins in these regions of the human body. Does not count toward CMB major.

Corequisite(s): CELL 4491.

CELL 4491 Anatomy Lab (0)
Does not count toward CMB major.

Corequisite(s): CELL 4490.

CELL 4500 Adv Molec Neurobiology (3)
This course provides detailed description and in-depth discussion of current techniques and experimental topics in the field of molecular neurobiology.

Prerequisite(s): CELL 4370 or NSCI 4370.

CELL 4560 Internship (1-3)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Registration is completed in the CMB Department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CELL 4570 Internship (1-3)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Registration is completed in the CMB Department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CELL 4660 Special Topics (0-4)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department. Course may be repeated up to unlimited credit hours.

Prerequisite(s): CELL 3030 and 3750.

Maximum Hours: 99

CELL 4665 Special Topics Lab (1-3)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CELL 4710 Molecular Biology of Cancer (3)
The complex multistep process which transforms a normal cell into a cancer cell, carcinogenesis, will be examined with emphasis on current molecular insights. Major topics include oncogenes, tumor suppressor genes, tumor viruses, genetic instability, metastasis, the regulation of gene expression in cancer cells, and cancer treatment strategies. This course also requires students to analyze and present research papers.

Prerequisite(s): CELL 3750.

CELL 4730 Neurodevelopment and Disease (3)
The assembly of a functional nervous system is one of the most complex developmental processes in nature. This course provides advance knowledge on the mechanisms controlling nervous system development, at the cellular, circuit, and functional levels, and how failure on these mechanisms underlie neurodevelopmental disorders. Also, this course will introduce the student to most current techniques and research topics on neurodevelopment.

Prerequisite(s): CELL 3310 or NSCI 3310.

CELL 4780 Developmental Genetics (3)
This course examines the genetic pathways regulating development and the underlying molecular mechanisms by which these pathways are regulated. The goal of the course is to expose students to topics and techniques shaping the field of development biology.

CELL 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CELL 4910 Independent Study (1-3)
The student will participate in laboratory research under direction of a faculty member. Students may perform their independent study in a laboratory outside of the CMB department or even at another institution; the student will still need a departmental sponsor to act as the instructor of record, and the grade for the project will be submitted by the CMB faculty sponsor in consultation with the host laboratory supervisor. The student may sign up for 1, 2, or 3 hours of independent study, depending on the time that can be devoted to the project. 1 credit can be earned for 3 - 4 hr/wk during the semester or 45-60 total hours over the summer. 2 credits can be earned for 6 - 8 hr/wk during the semester or 90-120 total hours over the summer. 3 credits can be earned for 9 - 12 hr/wk during the semester or 135-180 total hours over the summer. Independent study may be used once to fulfill a laboratory elective requirement for the major. Independent study can fulfill the capstone requirement for the major if the student learns how to read the scientific literature under supervision and presents the project before the end of the semester. The format can be a written paper, a poster defense, or an oral presentation, but it must include the rationale for the project, the materials and methods, the experimental results, and an interpretation of those data. Course may be repeated up to six credit hours.

Maximum Hours: 6

CELL 4920 Independent Study (1-3)
Can only be taken for S/U credit after 6 credits of CELL 4910. The student will participate in laboratory research under direction of a faculty member. Students may perform their independent study in a laboratory outside of the CMB department or even at another institution; the student will still need a departmental sponsor to act as the instructor of record, and the grade for the project will be submitted by the CMB faculty sponsor in consultation with the host laboratory supervisor. The student may sign up for 1, 2, or 3 hours of independent study, depending on the time that can be devoted to the project. The hours needed per credit are similar to CELL 4910. Independent study may be used once to fulfill a laboratory elective requirement for the major. Independent study can fulfill the capstone requirement for the major if the student learns how to read the scientific literature under supervision and presents the project before the end of the semester. The format can be a written paper, a poster defense, or an oral presentation, but it must include the rationale for the project, the materials and methods, the experimental results, and an interpretation of those data. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CELL 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

CELL 4990 Honors Thesis (3)
Honors thesis research, first semester. Register in department.

CELL 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): CELL 4990.

CELL 5110 Capstone Component: CELL 4910 (0)
Corequisite(s): CELL 4910.

Corequisite(s): CELL 4910.

CELL 5111 Capstone Component: CELL 4920 (0)
Corequisite(s): CELL 4920.

Corequisite(s): CELL 4920.

CELL 5380 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CELL 6010 Cellular Biochemistry (3)
An examination of the structure and function of biological molecules, energetics of biological reactions, enzyme kinetics, metabolism, synthesis of macromolecules, and assembly of structures. Emphasis is placed on mammalian metabolism and mechanisms of control used to regulate metabolic pathways. Detailed explorations into the chemical function of biomolecules lay the foundation for the course. In addition, a term paper or oral presentation is required.

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

CELL 6020 Integrative Fundamentals of Biochemistry (3)
Exploration of the structure and function of biological molecules, energetics, metabolism, synthesis of macromolecules, and assembly of structures. Fundamental concepts are taught through reading, analysis, and presentation of primary literature.

CELL 6030 Molecular Biology (3)
The course is designed to provide basic knowledge of molecular biology. Topics covered include DNA replication, gene structure and regulation, transcription, translation, and protein structure and regulation. Basic laboratory techniques and experimental design in molecular biology are emphasized.

Prerequisite(s): CELL 2050.

CELL 6035 Molecular Biology Lab (1)
Laboratory experience in molecular biology techniques. Students will learn to analyze DNA via gel electrophoresis; isolate, detect, and quantitate RNA and/or protein; and use plasmids to clone and express a gene.

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

CELL 6040 Trends in Neuroscience (1)
Students select, analyze, present, and discuss recent empirical articles in the field of Neuroscience.

CELL 6050 Foundations of Pharmacology (3)
This course explains cellular mechanisms by which drugs act in the body. Specific topics include basic pharmacokinetics, drug receptor interactions, drug tolerance, toxicity and drug interactions. The course integrates biology and chemistry by using examples of drug action on the autonomic and central nervous systems, cardiovascular and endocrine systems as well as the treatment of infections. Concepts from cell biology, anatomy, biochemistry, neurochemistry and physiology are covered.

CELL 6070 Neurobiology of Aging (3)
This course will survey the current literature in clinical and research journals regarding the Neurobiology of the aging process. Emphasis is placed on the state of research in aging, looking at experimental design issues as well as published results. Connections will be drawn between the research literature and current clinical practice, as well as what the research literature says regarding aging and lifestyle.

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

CELL 6080 Adv Dev & Cell Biol II (3)
Lectures, readings, and discussion of the literature in the fields of cellular, developmental, and molecular biology.

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

CELL 6110 Human Histology (4)
Descriptive study of mammalian microscopic anatomy in a physiological context. Lectures and laboratory. In addition, a term paper is required.

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

CELL 6111 Human Histology Lab (0)
Lab section for CELL 6110

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

CELL 6130 Embryology (3)
Anatomical study of developmental processes in humans. Lecture. In addition, a term paper is required. Course may be repeated 2 times for credit.

Prerequisite(s): CELL 3750.
Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

Course Limit: 2

CELL 6131 Embryology Lab (0)
Lab section for CELL 6130

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

CELL 6140 Research Methods in Cellular and Molecular Biology (3)
A team-taught lecture course exposing students to contemporary theories and techniques used in cellular and molecular biology by Tulane researchers in their own research programs.

CELL 6160 Developmental Biology (3)
The origin and development of form and patterns in organisms. Recent investigations and research methodology on the processes of growth and differentiation are stressed. In addition, a term paper is required.

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

CELL 6170 Psychedelics (3)
This course will examen the pharmacology, neuroscience, and sociological impacts of psychedelic drugs. Emphasis will be on the actions of these agents at the cellular and neuronal network level. Potential therapeutic applications and existing published data will be examined.

CELL 6180 Biomedical Research in Animals (3)
Lectures, readings, presentations, and discussion of the use of animal models in biomedical research. A term paper is required.

CELL 6200 General Endocrinology (3)
This course explains the basics of hormone action and hormone interactions with their receptors, with an emphasis on the molecular mechanisms by which homeostasis is maintained in multicellular organisms. Physiological outcomes of hormone actions on different organs, as well as aberrant hormone action will be covered.

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

CELL 6210 Physiology (3)
This course is a survey of the organ systems of the human body. The cellular and molecular mechanisms of organ function are discussed. Emphasis is placed on clinical implications. Oral presentations are required.

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

CELL 6220 Microbiology (3)
Taxonomy, physiology, genetics and ecology of microorganisms. This course will cover the role of microbes in medicine and industry, and as model systems for research. In addition, a term paper is required.

Prerequisite(s): CELL 3750.
Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

CELL 6225 Microbiology lab (1)
Laboratory studies of microbial taxonomy, physiology, biochemistry, and genetics.

Enrollment limited to students in the Cell Molecular Biology department.

CELL 6230 Virology (3)
In the virology lecture course you will learn about the structural and reproductive cycles for the major classes of viruses. You will gain an understanding of the structural and genetic factors involved in the virus-host cell interaction. You will also learn about the techniques used to study viruses. You will be using all this knowledge to identify new viruses, solve case studies, hypothesize how specific features of viruses evolved, and propose experiments to study the virus life cycle. A mock research proposal is required.

CELL 6310 Cellular Neuroscience (3)
In-depth coverage of the basic principles of cellular neuroscience, including the biophysical basis of the membrane potential, action potential generation and propagation, and synaptic signaling. Students will be introduced to the synaptic organization of higher neural systems, such as the visual system and somatic sensory system.

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

CELL 6320 Systems Neuroscience (3)
The subject of this course is the human nervous system, its anatomy, connectivity and function. Discusses the normal structure of the nervous system and the relationship of that structure to physiological function. The course is taught from a practical, clinical point of view and is intended to prepare students for further study in the neurosciences. In addition, a term paper is required.

Prerequisite(s): CELL 6310 or NSCI 6310.
Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

CELL 6325 Neuroanatomy Lab (1)
The subject of this course is the anatomy of the human nervous system. Students will learn to identify and map the structure and position of nuclei, pathways, and anatomical divisions of the brain and spinal cord. The course is a practical correlate to Systems Neuroscience, and is intended to prepare students for further study in the neurosciences.

Prerequisite(s): CELL 3320* or NSCI 3320*.
* May be taken concurrently.
Enrollment limited to students in the Cell Molecular Biology department.

CELL 6340 Neurobiology of Disease (3)
Advanced course on the higher neural functions of the nervous system and neurological diseases resulting from disruption of these functions. An emphasis is placed on the physiology of the nervous system and neural dysfunction caused by inherited and acquired diseases. Topics range from motor control and neuromuscular diseases to high cognitive function and dementia. In addition, a term paper is required.

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

CELL 6350 Developmental Neurobiol (3)
A broad overview of the different stages of neural development. Examination of the molecular aspects of developmental neurobiology, with reference to some important signaling pathways involved in neural growth and specification. Particular attention will be given to those active research fields, such as growth cone guidance and collapse, activity-dependent development, and applications of these to injury and disease. In addition, a term paper is required.

CELL 6370 Molecular Neurobiology (3)
Introduction to the molecular biology of neurons and neuronal functions. Topics of study will include: the molecular composition of nerve cells, and how this provides a basis for their functional properties; their synaptic connectivity; how they receive, transmit, and retain information at a molecular level. Studies will focus on current research in the field of molecular neurobiology. In addition, a term paper is required.

Enrollment limited to students in the Cell Molecular Biology department.

CELL 6400 Regenerative Biology (3)
This course provides the various cellular and molecular mechanisms of natural or injury-induced regeneration in vertebrates and the applications to the development of therapies to restore tissues and organs damaged by injury or disease. Attributes: Capstone

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

CELL 6430 Introductory Bioinformatics (3)
The aim of this course is to introduce biology and computer science students to computational research techniques using biological data. This field, generally referred to as bioinformatics, is growing faster then the current workforce available. We will cover the experimental methods used to create the biological data, how to understand the data in the context of biology, and the common computational methods used to derive understanding and make hypothesis from this data. The course will be taught through relevant, hands on projects, and all the tools are computer based. The projects will be based around "omics" data, which is the basis of personalized medicine and precision oncology. This course is designed to be approachable for all students, regardless of their current computational abilities or computer ownership.

Prerequisite(s): CELL 6030*.
* May be taken concurrently.

CELL 6440 Adv Molecular Biology (3)
Current topics in molecular biology with emphasis on higher-order chromatin structure and transcription, mutability, and DNA repair mechanisms in prokaryotes and eukaryotes. Other topics include: nuclear hormone receptors, HOX gene activation in development, RNAi, and genome organization. In addition, a term paper is required.

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

CELL 6450 Genome Biology (3)
Genome-level science is changing the pace of biomedical research and medicine. This course will examine how whole genomes, transcriptomes, and proteomes are studied, and what we are learning about the biology of multiple organisms using these novel techniques. Epigenetics, genomics. and proteomics will be covered in the context of disease and the development of novel therapeutics.

Prerequisite(s): CELL 3030 or NSCI 4370.

CELL 6480 Head and Neck Anatomy (3)
This 3 credit lecture and laboratory course focuses on the gross anatomy of the head and neck, as well as central nervous system anatomy. This includes cadaver dissection of the head, neck, cranial nerves, and brain. This class mirrors dental and medical school anatomy courses and will prepare students to succeed in medical school, dental school, or allied health professions.

Prerequisite(s): CELL 6490.

CELL 6490 Anatomy (0-4)
An exploration of the back, upper and lower extremities with an emphasis on bones, muscles, arteries, nerves, and veins in these regions of the human body.

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

Corequisite(s): CELL 6491.

CELL 6491 Anatomy Lab (0)
Co-requisite lab for CELL 6491 Anatomy

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

Corequisite(s): CELL 6490.

CELL 6550 Synaptic Organization of the Brain (3)
The goal of this course is to discuss and understand functional connections within and between areas of the brain to lead to a greater understanding of brain function and behavior. We will focus on limbic and memory systems. A strong emphasis will be placed on in- class discussions and student presentations to enhance critical thinking and oral presentation skills.

Prerequisite(s): CELL 3310 or NSCI 3310.
Enrollment limited to students in the Cell Molecular Biology department.

CELL 6560 Pathophysiology (3)
This course focuses on the molecular pathophysiology of infectious disease, immunopathology of the cardiovascular system and skin disorders. The impact of a diseased cardiovascular system will be examined. Concepts from cell biology, anatomy, biochemistry, and physiology are covered. Oral presentations are required.

CELL 6660 Special Topics (0-4)
Courses offered by visiting professors or permanent faculty. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CELL 6665 Special Topics Lab (1-3)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CELL 6710 Molecular Biology of Cancer (3)
The complex multistep process which transforms a normal cell into a cancer cell, carcinogenesis, will be examined with emphasis on current molecular insights. Major topics include oncogenes, tumor suppressor genes, tumor viruses, genetic instability, metastasis, the regulation of gene expression in cancer cells, and cancer treatment strategies. This course also requires students to analyze and present research papers.

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

CELL 6730 Neurodevelopment and Disease (3)
The assembly of a functional nervous system is one of the most complex developmental processes in nature. This course provides advance knowledge on the mechanisms controlling nervous system development, at the cellular, circuit, and functional levels, and how failure on these mechanisms underlie neurodevelopmental disorders. Also, this course will introduce the student to most current techniques and research topics on neurodevelopment.

CELL 6750 Cell Biology (3)
An examination of the structure and function of eukaryotic cells. Emphasis is placed on mechanisms of intracellular and transmembrane transport, cellular control, and intercellular and intracellular signaling. Experimental methods and applications will be emphasized. A term paper is required as part of this course.

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

CELL 6755 Cell Biology Lab (1)
Laboratory experience in in vitro methodologies. Students will learn to maintain and manipulate mammalian cell cultures.

Students in the Biochemistry (SSE) or Cell Molecular Biology departments may **not** enroll.

CELL 6840 Current Topics Dev Biol (2)
Reports and discussions of current literature on developmental processes. Course may be repeated up to unlimited credit hours.

Enrollment limited to students in the Biochemistry (SSE) or Cell Molecular Biology departments.

Maximum Hours: 99

CELL 6910 Independent Study (1-3)
Independent Study course in Cell and Molecular Biology; topics vary.

Maximum Hours: 6

CELL 6920 Independent Study (1-3)
Independent Study course in Cell and Molecular Biology; topics vary.

Maximum Hours: 6

CELL 6940 Transfer Coursework (0-20)
Transfer coursework at the 6000 level. Departmental approval required.

Maximum Hours: 99

CELL 7110 Research Rotations (1-3)
Individual research supervised by faculty.

CELL 7120 Research Rotations (1-3)
Individual research supervised by faculty.

CELL 7130 Research (2-10)
Individual research supervised by faculty. Course may be repeated 2 times for credit.

Course Limit: 2

CELL 7260 Graduate Communications (3)
In today's competitive science market place, effective communication can be the deciding factor in obtaining postdoctoral fellowships, faculty positions or alternative career options, as well as in getting grants funded and manuscripts published. Deliberate practice of these skills is therefore critical for graduate level science trainees. This course will involve extensive discussion and practice of oral and written communication. By the end of the semester, students will have prepared a draft of their proposals required for qualifying exams and will receive input on the clarity, rigor, format, grammar, and writing style of this document. This course is open to Ph.D. students only, and is recommended to students in their 4th semester of graduate study.

CELL 7450 Genome Biology (3)
Genome-level science is changing the pace of biomedical research and medicine. This course will examine how whole genomes, transcriptomes, and proteomes are studied, and what we are learning about the biology of multiple organisms using these novel techniques. Epigenetics, genomics. and proteomics will be covered in the context of disease and the development of novel therapeutics.

CELL 7860 Master's Seminar (3)
Course may be repeated up to unlimited credit hours.

Enrollment limited to students in the Cell Molecular Biology department.

Maximum Hours: 99

CELL 7870 Doctoral Seminar (1)
Course may be repeated up to unlimited credit hours.

Enrollment limited to students in the Cell Molecular Biology department.

Maximum Hours: 99

CELL 7940 Trasfer Credit-Grad (1-12)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CELL 7990 Research (1-9)
Individual research supervised by faculty.

Enrollment limited to students in the Cell Molecular Biology department.

CELL 8000 Research (3)
Individual research supervised by faculty.

Enrollment limited to students in the Cell Molecular Biology department.

CELL 9980 Masters Research (1-9)
Research course.

Maximum Hours: 99

CELL 9990 Dissertation Research (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Center for Engaged Learning and Teaching (CELT)

CELT 7010 The Essentials of Learning and Teaching (1)
This course provides the framework upon which excellence in teaching is built. Students will explore the science of learning, evaluate different course designs, discuss ways to ensure inclusive and diverse classroom environments and the pedagogy of service learning. The course will culminate with the writing of a teaching philosophy.

CELT 7020 Practical Course Design and Teaching Skills (1)
This course is designed to provide students feedback on actual teaching opportunities. Some students maybe the faculty of record for a course in their department, others will be a guest lecturer or give lectures to peers.

Prerequisite(s): CELT 7010.

CELT 7030 Teaching Practicum (1)
This course is designed to provide students feedback on actual teaching opportunities. Some students maybe the faculty of record for a course in their department, others will be a guest lecturer or give lectures to peers.

Prerequisite(s): CELT 7010 and 7020.

Chemical Engineering (CENG)

CENG 1005 Intro Electronics with Lab (3)
Introductory course designed for high school students enrolled in the TSSP summer program.

CENG 1100 Innovations in Chem Eng w/ Lab (3)
This course will introduce students to the basic concepts and calculations in the field of chemical engineering. In addition to lectures, students will gain hands-on experience utilizing modern techniques and exposure to real-world applications through labs and activities. This course is limited to high school students.

CENG 1180 Impacts in Chem Engineering (1)
This course will connect core chemical engineering concepts to real-world applications- showcasing the global impact that chemical engineers have on our planet and the grand challenges that they are working to address. Topics include energy generation and renewability, advances in medicine, large-scale food production, revolutionary materials, and pollution prevention and sustainability. Students will learn through relevant readings, discussions, tours of local businesses, hands-on projects, and guest lectures from leaders in the field.

Prerequisite(s): CHEM 1070.

CENG 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

CENG 2110 Matl & Energy Balances (3)
Basic concepts in mass and energy balances are presented in this introduction to chemical process engineering. Properties of pure materials and relevant equations of state are reviewed in illustrative examples.

Prerequisite(s): CHEM 1080 and (MATH 1220 or 1310).

CENG 2120 Thermodynamics I (3)
Concepts of energy, equilibrium, and reversibility are presented in the setting of the theoretical development of classical thermodynamics. Energy conversion cycles and elementary fluid mechanics are used to illustrate applied thermodynamics in chemical process technology. Optional co-requisite: CENG 2320.

Prerequisite(s): MATH 2210*, CENG 2110*, CHEM 1070 and PHYS 1310.

* May be taken concurrently.

CENG 2230 Prof Dev for Chem Engr (3)
This course is designed for students who wish to enhance the soft skills necessary for life-long success as a professional engineer. Topics include effective written and oral communication, resume building, networking, employment search strategies, the interview process, teamwork and critical thinking. Learning will be reinforced through practical activities including a mock interview, a staged networking event and oral presentations with class discussion and feedback.

CENG 2320 Transport I: Fluids (3)
Principles of hydrostatics and fluid mechanics. Emphasis is on mass, energy and momentum balances. Fluid flow through pipes and other types of chemical engineering equipment are considered in detail. The fundamental operations of vector analysis and the development of basic differential equations that govern fluid flow are used to solve representative problems in which viscosity is important. Prerequisites: CENG 2120* and MATH 2240* *May be taken concurrently.

Prerequisite(s): MATH 2240* and CENG 2120*.
* May be taken concurrently.

CENG 2500 Intro To Biotechnology (3)
This course begins with an introduction to physical and biological properties of cells through cell and molecular biology teachings, and then expands with the application of these principles to the realm of biotechnology. Theory and practice of specific laboratory techniques will be covered and demonstrated, and typical data sets will be interpreted. Applications of biotechnology in the business and medical communities will be discussed.

CENG 2505 Intro Biotech Lab (1)
This course is designed to introduce students to essential laboratory skills and modern techniques utilized in the field of biotechnology. These include aseptic technique, microbial and mammalian cell culturing, flow cytometry, and engineering and analysis of genes in E. coli. Laboratory notebook maintenance, executing protocols, analyzing data and teamwork are emphasized. This course is intended for students without any prior research experience.

Corequisite(s): CENG 2500.

CENG 2780 Special Topics (1-3)
Course may be repeated up to unlimited credit hours.

Prerequisite(s): CHEM 1070.

Maximum Hours: 99

CENG 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

CENG 3020 Chem & Eng Sci in Community (1)
This course satisfies the university's public-service requirement. Topics include public outreach, application of engineering principles to community issues, and educating the community on scientific and engineering issues.

CENG 3110 Thermodynamics II (3)
Basic concepts in physical and chemical equilibria. Systems of variable composition. Chemical reaction equilibria. Thermodynamic analysis of processes. Principles of statistical mechanics. Partition functions.

Prerequisite(s): CENG 2120 and CHEM 1080.

CENG 3120 Materials Science & Engr (3)
The structure and properties of engineering materials are considered. Coverage includes basic atomic and microscopic structure, testing methods, phase relationships, and strengthening techniques. Emphasis is placed on common industrial materials. Thermodynamics and kinetics aspects of material science are discussed.

Prerequisite(s): CHEM 1080 and PHYS 1320.

CENG 3230 Numr Meth For Chem Eng (3)
Numerical solution of linear and nonlinear algebraic equations, and ordinary and partial differential equations. Numerical differentiation and integration. Linear and nonlinear regression analysis. Optimization methods. Applications to chemical and biomolecular engineering design-oriented problems. Excel spreadsheets are used for all computations. An introduction to Visual Basic for Applications programming is included. All applications and homework problems are related to Chemical and Biomolecular Engineering. A brief introduction to MatLab is included.

Prerequisite(s): MATH 2240.

CENG 3240 Unit Operations Lab (4)
Bench scale laboratory experiments in Unit Operations. Report writing, safety, oral presentations, ethics and group activities are emphasized.

Prerequisite(s): CENG 3110 and 3390.

CENG 3340 Separation Processes (3)
The analysis and design of mass-transfer based separation processes. Fundamental concepts are derived and applied to representative industrial process configurations. Subject area coverage includes the fundamentals of mass transfer, as well as the design of countercurrent operations such as gas-liquid absorption, distillation, liquid-liquid extraction and leaching.

Prerequisite(s): CENG 3390.

CENG 3390 Transport II: Heat and Mass (3)
The analysis of problems in conductive, convective, and radiative heat transfer. The formulation and solution of heat and mass transfer problems by means of shell balances. Exact and numerical solutions to heat and mass transfer problems. Correlations for convective heat transfer. Analogies between heat and mass transfer. The application of basic principles of heat/mass transfer to heat exchange, evaporation, condensation, boiling and drying operations.

Prerequisite(s): CENG 2320 and MATH 2240*.
* May be taken concurrently.

CENG 3420 Transport in Cells & Organs (3)
Fundamental principles of fluid mechanics and mass transport will be applied to biological systems at the cellular, tissue, and organ levels. The topics of this course will be the cardiovascular and respiratory systems, transmembrane and transvascular transport, cell adhesion and intracellular transport, drug transport and pharmacokinetics, and transport-related diseases (atherosclerosis, sickle cell disease, embolism, cancer metastasis).

CENG 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

CENG 4130 Surf. & Colloid Phenomen (3)
A study of surface and colloid chemistry. Topics include characterization of particles and surfaces, stability of colloidal systems, interactions of charged particles, and electrokinetic phenomena.

Prerequisite(s): CHEM 1080 and PHYS 1320.

CENG 4140 Electrochemistry (3)
This course will cover the fundamentals of electrochemistry followed by more detailed consideration of the thermodynamics and kinetics involved in electrochemical deposition processes. Faradaic and non-faradaic processes at electrode/electrolyte interfaces will be covered in addition to electrochemical methods used to characterize such interfaces. The course will include reviewing research papers followed by class discussions. Towards the end of the course, the use of electrochemistry in sensor applications will be covered. The graduate equivalent of this course is CENG 6140.

Prerequisite(s): CHEM 1080, PHYS 1320 and MATH 2210.

CENG 4150 Reactor Design (3)
The design and analysis of chemical, biological, and polymerization reactor systems are achieved by application of the principles of chemical kinetics and equilibrium coupled with mass and energy transport. Specific areas of study include kinetics, ideal reactors, multiple reactor systems, nonideal flow and mixing, and catalysis.

Prerequisite(s): MATH 2240 and CENG 2120.

CENG 4160 Heterogeneous Catalysis (3)
A study of the fundamental concepts underlying catalytic processes in the petroleum processing industry and in synthetic fuels research. Topics include molecular theories of adsorption and catalysis, catalyst design and formulation, instrumental methods of catalyst characterization, transport in catalysts, shape-selective catalysis, etc. Applications discussed include catalytic cracking, reforming, hydrodesulfurization, Fischer-Tropsch synthesis, direct and indirect coal liquefaction, etc.

CENG 4310 Chemical Process Design (3)
The elements of industrial design and supporting economics are presented in the context of a representative design project. Extension of the student's early background in unit operations through practical design considerations including materials of construction is accomplished. Methods are presented for capital and operating cost estimation, raw materials and utilities pricing, and assembly of investment costs, taxes, environmental and other site requirements. Realistic design constraints are included; e.g., economic factors, safety, reliability aesthetics, ethics, and social impact.

Prerequisite(s): CENG 4150.

CENG 4400 Intro. To Gene Therapy (3)
A survey into the fundamental aspects of gene delivery and their application to gene therapy. Topics include various gene carriers, carrier/DNA interaction and complex formation, complex interactions with cells and cell structures, targeting, gene therapy applications, host response. A knowledge of cell and molecular biology is not required.

CENG 4420 Survey Contemporary Poly Rsh (3)

CENG 4450 Applied Biochemistry I (3)
Biochemistry is the study of the chemistry and chemical processes involved with the molecules that are utilized by living organisms. This two-semester series will provide an in-depth coverage of carbon- and nitrogen-containing molecules such as proteins and DNA and certain cofactors. In the first semester enzyme kinetics and catalysis will be covered, along with carbohydrates and their metabolism. The metabolic pathways and associated bioenergetics of glycolysis and the TCA cycle will be examined in detail. The material will be related to everyday life, diet, nutrition, and exercise performance.

Prerequisite(s): CHEM 2420 or 2440.

CENG 4460 Applied Biochemistry II (3)
This course is a continuation of CENG 4450 (please refer to the related course description). Principles taught in CENG 4450 will be extended as they are applied to lipids and nitrogen-containing molecules, and the metabolism of each. Example molecules include fats, triglycerides, DNA, amino acids, heme, and urea. The interplay of biochemistry and molecular biology will also be examined.

Prerequisite(s): CENG 4450.

CENG 4500 Chemical Process Control (3)
An introduction to linear control theory is presented in which processes are described mathematically through transfer functions and flow diagrams. Laplace transforms are used on state space models to allow for description of control systems in algebraic ways. On/off controllers are introduced, and conventional three-mode (PID) controllers are specified. Other topics include feedback, feed-forward, closed-loop, and open-loop systems, damping and stability, plus low-order, higher-order, and nonlinear systems.

Prerequisite(s): CENG 2120 and MATH 2240.

CENG 4650 Synthetic Biology and Genetic Engineering (3)
Introduces the basics of synthetic biology and genetic engineering for biotechnological and health applications. Focuses on synthetic biology and genetic engineering techniques and methods in bacterial and mammalian systems within the context of an engineering-driven approach for reprogramming existing, and constructing new, biological systems via the design-build-test-learn paradigm. Topics include DNA synthesis, DNA recombineering, CRISPR/Cas methods and techniques, modular genetic parts, next generation DNA sequencing, and metabolic engineering. The course will comprise lectures, reading and discussion of primary and secondary literature, and a written project.

Prerequisite(s): CENG 4450, 4460, CHEM 3830 or CELL 3030.

CENG 4680 Data Science and Machine Learning for Scientific Research (3)
This course will cover data science and machine learning principles and techniques, such as visualization, linear and nonlinear regression, and regularization. The course will be project-focused, and will emphasize application to scientific research problems. Students should have familiarity with basic linear algebra, statistics, and coding.

CENG 4710 Biochemical Engineering (3)
An advanced course in biochemical engineering. Topics include enzyme catalyzed and cell-associated reactions, engineering aspects of recombinant DNA technology, cell culture, bioreactors and tissue engineering.

CENG 4750 Practice School (6)
Students are placed in groups of three or four and are assigned to a project at a local industrial facility, hospital, or government agency. The project is one of current concern to the organization and may range from a study of an operating process to the development of a new process. The projects are open ended and the students are expected to apply the principles of good design practice involving realistic constraints such as economics, safety, reliability, aesthetics, ethics, and social impact. Students normally are assigned to a project which fulfils certain career goals. This internship, under the direction of a faculty member, utilizes engineers and other personnel at the host site. Students are required to submit interim and final written and oral reports.

Prerequisite(s): CENG 3240, 3340 and 4150*.
* May be taken concurrently.

CENG 4760 Energy and Sustainability (3)
This class will provide an introduction to current energy production technologies, as well as an introduction to potential alternative technologies being touted. Both categories of technologies will be analyzed and assessed through a variety of Chemical Engineering principles. The goal of the course is to provide students with a foundational framework for meaningfully evaluating current and proposed routes for energy production and their implications.

CENG 4770 Advances In Biotechnolog (3)
The objectives of the course are to enhance understanding of the basic principles of biotechnology and to introduce the most current biotechnology research. Topics include gene therapy, microbial pesticides, genetically engineered food, stem-cell technology and tissue engineering.

CENG 4780 Special Topics (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 4781 Special Topics (3)

CENG 4810 Independent Study (2-4)
Under special circumstances, course credit is granted to students undertaking independent research studies. A project adviser should be identified and permission for enrollment filed with the department chair prior to registration.

CENG 4820 Independent Study (2-4)
Under special circumstances, course credit is granted to students undertaking independent research studies. A project adviser should be identified and permission for enrollment filed with the department chair prior to registration.

CENG 4870 Biomolecular & Cellular Engr (3)
Introduction to genetic and environmental manipulation of cells for production of proteins and other bioproducts. Topics include biomolecular interactions (protein energetics, binding equilibria, association kinetics), protein aggregation, cloning and gene expression in different host systems, posttranslational processing, and protein engineering. Will include case studies class discussions of primary literature.

Prerequisite(s): CENG 2500, 4450 or GBCH 6010.

CENG 4890 Polymer Engr & Science (3)
Fundamentals of polymer science and engineering, including synthesis, characterization, properties and processing of polymeric materials. An overview of polymer structure, including classification, tacticity, conformation and configuration will be given. Synthetic techniques will be reviewed, including addition and condensation polymerization and copolymerization. Polymer thermodynamics will be described, including an introduction to Flory-Huggins theory, as well as polymer-polymer miscibility and blends. A brief overview of characterization will be given, including molecular weight and glass transition temperature determination. Properties will be discussed, including mechanical properties of semi-crystalline polymers and elastomers. The time-temperature superposition principle will be described, as well as a brief introduction to processing techniques. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 4891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 4910 Independent Study (1-3)
Under special circumstances, course credit is granted to students undertaking independent research studies. A project adviser should be identified and permission for enrollment filed with the department chair prior to registration. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 4920 Independent Study (1-4)
Under special circumstances, course credit is granted to students undertaking independent research studies. A project adviser should be identified and permission for enrollment filed with the department chair prior to registration. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 4930 Independent Studies (1-3)

CENG 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

CENG 4990 Honors Thesis (3)
Honors thesis research, first semester. Register in department.

CENG 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): CENG 4990.

CENG 5380 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 5390 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 6000 Chemical Eng. Seminar (0)
Students are exposed to the important research findings, presented by invited speakers as well as by professors and advanced PhD candidates of our own department.

CENG 6010 Math Meth For Engineers (3)
Review of calculus and ordinary differential equations, series solutions and special functions, complex variables, partial differential equations, and integral transforms.

CENG 6130 Surf. & Colloid Phenomen (3)
A study of surface and colloid chemistry. Topics include characterization of particles and surfaces, stability of colloidal systems, interactions of charged particles, and electrokinetic phenomena.

CENG 6140 Electrochemistry (3)
This course will cover the fundamentals of electrochemistry followed by more detailed consideration of the thermodynamics and kinetics involved in electrochemical deposition processes. Faradaic and non-faradaic processes at electrode/electrolyte interfaces will be covered in addition to electrochemical methods used to characterize such interfaces. The course will include reviewing research papers followed by class discussions. Towards the end of the course, the use of electrochemistry in sensor applications will be covered. The undergraduate equivalent of this course is CENG 4140.

Prerequisite(s): CHEM 1080, PHYS 1320 and MATH 2210.

CENG 6150 Reactor Design (3)
The design and analysis of chemical, biological, and polymerization reactor systems are achieved by application of the principles of chemical kinetics and equilibrium coupled with mass and energy transport. Specific areas of study include kinetics, ideal

CENG 6160 Heterogeneous Catalysis (3,4)
A study of the fundamental concepts underlying catalytic processes in the petroleum processing industry and in synthetic fuels research. Topics include molecular theories of adsorption and catalysis, catalyst design and formulation, instrumental methods of catalyst characterization, transport in catalysts, shape-selective catalysis, etc. Applications discussed include catalytic cracking, reforming, hydrodesulfurization, Fischer-Tropsch synthesis, direct and indirect coal liquefaction, etc.

CENG 6210 Molec Biophysics & Polymer Phy (3)
An introduction to the physics of polymers and the physical bases underlying the biofunctionality of macromolecules in living systems. Themes of molecular self-organization, conformation, complementarity, and information content are emphasized and related

CENG 6390 Transport Phenomena II (3)
The analysis of problems in conductive, convective, and radiative heat transfer. The formulation and solution of heat and mass transfer problems by means of shell balances. Exact and numerical solutions to heat and mass transfer problems. Correlations for

CENG 6400 Intro. To Gene Therapy (3)
A survey into the fundamental aspects of gene delivery and their application to gene therapy. Topics include various gene carriers, carrier/DNA interaction and complex formation, complex interactions with cells and cell structures, targeting, gene therapy applications, host response. A knowledge of cell and molecular biology is not required.

CENG 6420 Survey Contemp Polymers Rsh (3)
Fundamentals of condensed matter are elaborated upon, namely bonding, structure, physical properties, phase equilibria and thermodynamics of solids. Characterization of condensed phases as it reviewed. Manipulation of material properties for specific applications is discussed.

CENG 6450 Applied Biochemistry I (3)
Biochemistry is the study of the chemistry and chemical processes involved with the molecules that are utilized by living organisms. This two-semester series will provide an in-depth coverage of carbon- and nitrogen-containing molecules such as proteins and DNA and certain cofactors. In the first semester enzyme kinetics and catalysis will be covered, along with carbohydrates and their metabolism. The metabolic pathways and associated bioenergetics of glycolysis and the TCA cycle will be examined in detail. The material will be related to everyday life, diet, nutrition, and exercise performance.

CENG 6460 Applied Biochemistry II (3)
This course is a continuation of CENG 6450 (please refer to the related course description). Principles taught in CENG 6450 will be extended as they are applied to lipids and nitrogen-containing molecules, and the metabolism of each. Example molecules include fats, triglycerides, DNA, amino acids, heme, and urea. The interplay of biochemistry and molecular biology will also be examined.

CENG 6650 Synthetic Biology and Genetic Engineering (3)
Introduces the basics of synthetic biology and genetic engineering for biotechnological and health applications. Focuses on synthetic biology and genetic engineering techniques and methods in bacterial and mammalian systems within the context of an engineering-driven approach for reprogramming existing, and constructing new, biological systems via the design-build-test-learn paradigm.Topics include DNA synthesis, DNA recombineering, CRISPR/Cas methods and techniques, modular genetic parts, next generation DNA sequencing, protein engineering, and metabolic engineering.The course will comprise lectures, reading and discussion of primary and secondary literature, and a written project.

Prerequisite(s): CENG 4450, 4460, CHEM 3830 or CELL 3030.

CENG 6680 Data Science and Machine Learning for Scientific Research (3)
This course will cover data science and machine learning principles and techniques, such as visualization, linear and nonlinear regression, and regularization. The course will be project-focused, and will emphasize application to scientific research problems. Students should have familiarity with basic linear algebra, statistics, and coding.

CENG 6710 Biochemical Engineering (3)
An advanced course in biochemical engineering. Topics include enzyme catalyzed and cell-associated reactions, engineering aspects of recombinant DNA technology, cell culture, bioreactors and tissue engineering.

CENG 6720 Nanostructured Materials (3)
An introductory graduate course on nanoscale materials focusing on soft materials. The course will emphasize fundamentals.

CENG 6760 Energy and Sustainability (3)
This class will provide an introduction to current energy production technologies, as well as an introduction to potential alternative technologies being touted. Both categories of technologies will be analyzed and assessed through a variety of Chemical Engineering principles. The goal of the course is to provide students with a foundational framework for meaningfully evaluating current and proposed routes for energy production and their implications.

CENG 6770 Advances In Biotechnolog (3)
The objectives of the course are to enhance understanding of the basic principles of biotechnology and to introduce the most current biotechnology research. Topics include gene therapy, microbial pesticides, genetically engineered food, stem-cell technology and tissue engineering.

CENG 6780 Special Topics (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 6781 Special Topics (3)

CENG 6800 Special Topics (1-3)

CENG 6860 Readings and Research (2-4)

CENG 6870 Biomolecular & Cellular Engr (3)
Introduction to genetic and environmental manipulation of cells for production of proteins and other bioproducts. Topics include biomolecular interactions (protein energetics, binding equilibria, association kinetics), protein aggregation, cloning and gene expression in different host systems, posttranslational processing, and protein engineering. Will include case studies class discussions of primary literature.

Prerequisite(s): CENG 2500.

CENG 6890 Polymer Engr & Science (3)
Fundamentals of polymer science and engineering, including synthesis, characterization, properties and processing of polymeric materials. An overview of polymer structure, including classification, tacticity, conformation and configuration will be given. Synthetic techniques will be reviewed, including addition and condensation polymerization and copolymerization. Polymer thermodynamics will be described, including an introduction to Flory-Huggins theory, as well as polymer-polymer miscibility and blends. A brief overview of characterization will be given, including molecular weight and glass transition temperature determination. Properties will be discussed, including mechanical properties of semi-crystalline polymers and elastomers. The time-temperature superposition principle will be described, as well as a brief introduction to processing techniques. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 6940 Transfer Coursework (0-20)
Transfer coursework at the 6000 level. Departmental approval required.

Maximum Hours: 99

CENG 7010 Graduate Mentoring Seminar I (1)
The graduate mentoring seminar will provide students an opportunity to improve their communication skills, develop a basic appreciation of the science of learning, and engage with faculty on a variety of professional development topics. Class Hours: (Lecture 1)

Enrollment limited to students in the Chemical Biomolecular Eng department.

CENG 7020 Graduate Mentoring Seminar II (1)
The graduate mentoring seminar will provide students an opportunity to improve their presentation skills, provide basics in lab safety, and engage with faculty on a variety of professional development topics. Class Hours: (Lecture 1)

CENG 7110 Modern Thermodynamics (3)

CENG 7120 Thermo of Macromolecules (3)
Thermodynamics is applied to macromolecules. Fundamentals of the thermodynamics of polymers in solution and in the melt. Topics of polymer self-assembly, polymer-surfactant interactions, and polymer nanocomposites are incorporated in the course. Students will learn methods of characterization of polymer thermodynamics using spectroscopy, microscopy and scattering techniques.

CENG 7150 Advanced Reactor Design (3)
Coupled reaction and transport phenomena as they are involved in major reactor configurations are studied with attention to data resources and computational capabilities.

CENG 7320 Advanced Transport Phenomena (3)

CENG 7520 Applied Statistical Mech (3)
The course covers the fundamental principles and methods of statistical mechanics. Emphasis is placed on applications to thermodynamics, phase behavior, polymer science and self-assembly phenomena.

CENG 7780 Special Topics (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 7810 Adv Independent Research (1-9)
Research studies performed under faculty tutelage by prior arrangement. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 7820 Adv Independent Research (1-9)
Research studies performed under faculty tutelage by prior arrangement. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 7870 Special Topics (3)

CENG 7910 Research Orientation (1)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 7920 Research Methods (1)

CENG 7940 MA Research Orient & Methods (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 8910 Doctoral Research Seminar (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 8920 Doctoral Research Seminar (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 9980 Master's Research (3)
Research toward completion of a masters degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CENG 9990 Dissertation Research (3)
Research toward completion of a doctoral degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Chemistry (CHEM)

CHEM 1000 Special Topics (3)

Maximum Hours: 99

CHEM 1010 Introduction to Chemical Purification (3)
We are all continually surrounded by chemicals, from drugs to fuel to food additives. Ensuring these materials are free of dangerous contaminants is essential for human health and development. This course will introduce students to the most important techniques for purifying chemicals. We will use what we have learned in the classroom to isolate a number of different molecules in the lab, from ethanol to inorganic materials of eye-catching color. Open to high school students only.

CHEM 1070 General Chemistry I (3)
An introduction to chemical principles. Stoichiometry, thermochemistry, states of matter, periodic relationships, atomic structure and bonding. Three hours of lecture per week. Concurrent registration in 1075 required.

Corequisite(s): CHEM 1075.

CHEM 1075 General Chemistry Lab I (1)
Laboratory to accompany 1070. Basic principles of chemical safety. Introduction to laboratory techniques in chemistry. Experiments dealing with stoichiometry, thermochemistry, properties of gases, and simple analytical techniques. One three hour lab per week. Concurrent registration in 1070 required.

Corequisite(s): CHEM 1070.

CHEM 1080 General Chemistry II (3)
The chemistry of solutions, equilibrium, thermodynamics, electrochemistry, kinetics. Three hours of lecture per week. Concurrent registration in 1085 required.

Prerequisite(s): CHEM 1070 and 1075.
Corequisite(s): CHEM 1085.

CHEM 1085 General Chemistry Lab II (1)
A continuation of 1075. Chemical safety in the workplace. Experiments to illustrate principles of chemical equilibrium, electrochemistry, kinetics, thermodynamics, qualitative and quantitative analysis. One three hour laboratory per week.

Prerequisite(s): CHEM 1070 and 1075.
Corequisite(s): CHEM 1080.

CHEM 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

CHEM 1945 Transfer Credit (0-20)
Transfer Coursework

Maximum Hours: 99

CHEM 2310 Quantitative Analysis (3)
Basic theory of gravimetric, volumetric and selected instrumental methods of analysis. Three hours of lecture per week. Offered by arrangement.

Corequisite(s): CHEM 2315.

CHEM 2315 Quantitative Analysis Lab (1)
Laboratory to accompany 2310. Practice of gravimetric, volumetric and selected instrumental methods of analysis. Two four hour laboratory periods per week. Offered by arrangement.

Corequisite(s): CHEM 2310.

CHEM 2410 Organic Chemistry I (3)
An introduction to organic reaction mechanism and organic spectroscopy. Three hours of lecture per week.

Prerequisite(s): CHEM 1080 and 1085.
Corequisite(s): CHEM 2415.

CHEM 2415 Organic Chemistry Lab I (1)
Laboratory to accompany 2410. Introduction to laboratory techniques in organic chemistry. Synthesis of organic compounds. One four-hour laboratory period per week.

Prerequisite(s): CHEM 1080 and 1085.
Corequisite(s): CHEM 2410.

CHEM 2420 Organic Chemistry II (3)
Laboratory to accompany 2420. A continuation of 2415. Includes identification of unknown organic compounds. One four-hour laboratory period per week.

Prerequisite(s): (CHEM 2410 and 2415) or (CHEM 2430 and 2435).
Corequisite(s): CHEM 2425.

CHEM 2425 Organic Chemistry Lab II (1)
Laboratory to accompany 2420. A continuation of 2415. Includes identification of unknown organic compounds. One four-hour laboratory period per week.

Prerequisite(s): (CHEM 2410 and 2415) or (CHEM 2430 and 2435).
Corequisite(s): CHEM 2420.

CHEM 2430 Organic Chemistry I: Deep-learning (3)
An advanced introduction to organic chemistry and organic reaction mechanisms. This small class is focused on group-learning, peer-instruction, and problem solving. Evaluations will be based on non:standard testing, e.g., open-book and/or (effectively) open-ended testing. Three hours of lecture per week.

Prerequisite(s): CHEM 1080 and 1085.
Corequisite(s): CHEM 2435.

CHEM 2435 Organic Chemistry I Laboratory: Deep-learning (1)
An advanced laboratory to accompany CHEM 2430. Introduction to laboratory techniques inorganic chemistry. Separation/purification, synthesis, and characterization of organic molecules. One four-hour laboratory period per week.

Prerequisite(s): CHEM 1080 and 1085.
Corequisite(s): CHEM 2430.

CHEM 2440 Organic Chemistry II: Deep-learning (3)
An advanced analysis of the major classes of molecules and reaction types, the spectroscopic analysis of organic molecules, and the major classes of bio(macro)molecules. This small class is focused on group-learning, peer-instruction, and problem solving. Evaluations will be based on non-standard testing, e.g., open-book and/or (effectively) open-ended testing.

Prerequisite(s): (CHEM 2410 and 2415) or (CHEM 2430 and 2435).
Corequisite(s): CHEM 2445.

CHEM 2445 Organic Chemistry Laboratory II: Deep-learning (1)
An advanced laboratory to accompany CHEM 2440 (and therefore limited to 30 students). A continuation of CHEM 2435. The laboratory continues to introduce organic synthesis techniques with a range of illustrative chemical syntheses combined with accompanying chromatographic, and Nuclear Magnetic Resonance (NMR) and Infrared (IR) Spectroscopic characterization of reaction components and products.

Prerequisite(s): (CHEM 2410 and 2415) or (CHEM 2430 and 2435).
Corequisite(s): CHEM 2440.

CHEM 2480 Chemistry of Energy (3)
Chemistry associated with natural as well as human caused energy changes. The course is designed for students with a serious interest in environmental issues.

Prerequisite(s): CHEM 1070.

CHEM 2500 Environmental Chemistry (3)
An overview of the many aspects of environmental chemistry. Topics include: aquatic chemistry, including water pollution and water treatment; atmospheric chemistry, air pollution and major threats to the global atmosphere; geochemistry and soil chemistry; nature, sources, and environmental chemistry of hazardous wastes; and toxicology chemistry.

Prerequisite(s): CHEM 1070 and 1080.

CHEM 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

CHEM 2945 Transfer Credit (0-20)
Transfer Coursework

Maximum Hours: 99

CHEM 3110 Physical Chemistry I (3)
Elementary quantum mechanics, quantum theory of molecular structure and bonding, fundamentals of spectroscopy. Three hours of lecture per week.

Prerequisite(s): CHEM 1080, 1085 and MATH 2240.
Corequisite(s): CHEM 3115.

CHEM 3115 Physical Chemistry Lab I (1)
Laboratory to accompany 3110. Experiments in spectroscopy and spectroscopic analysis. One four-hour laboratory period per week. Concurrent registration in 3110 required.

Prerequisite(s): CHEM 1080, 1085 and MATH 2240.
Corequisite(s): CHEM 3110.

CHEM 3120 Physical Chemistry II (3)
First, Second, and Third laws of thermodynamics, thermodynamic energy state functions, phases of pure substances, properties of mixtures, chemical equilibrium, equilibrium electrochemistry, statistical thermodynamics. Three hours of lecture per week.

Prerequisite(s): CHEM 1080, 1085 and MATH 2210.
Corequisite(s): CHEM 3125.

CHEM 3125 Physical Chemistry Lab II (1)
Laboratory to accompany CHEM 3120. Experiments illustrate thermodynamic and statistical mechanical principles. One four-hour laboratory period per week.

Prerequisite(s): CHEM 1080, 1085 and MATH 2210.
Corequisite(s): CHEM 3120.

CHEM 3210 Inorganic Chemistry (3)
Periodic relationships, types of bonding, coordination complexes, acid-base concepts, inorganic reaction mechanisms. Three hours of lecture per week. Concurrent registration in 3230 required. Prerequisite(s): CHEM 3110 and 3115. Corequisite(s): CHEM 3215.

Prerequisite(s): CHEM 3110 and 3115.
Corequisite(s): CHEM 3215.

CHEM 3215 Inorganic Chemistry Lab (1)
Laboratory to accompany 3210. Synthetic methods in inorganic and organometallic chemistry. Use of instrumental methods in organic chemistry. One four hour laboratory period per week.

Prerequisite(s): CHEM 3110 and 3115.
Corequisite(s): CHEM 3210.

CHEM 3310 Instrumental Analysis (3)
Introduction to modern methods of instrumental analysis including separation techniques and spectroscopic and electrochemical methods. Three hours of lecture per week. Concurrent registration in 3330 required. Offered in alternate years.

Prerequisite(s): (CHEM 2410 and 2415) or (CHEM 2430 and 2435).

CHEM 3315 Instrumental Analysis Lab (1)
Laboratory to accompany 3310. Practice of separation techniques and spectroscopic and electrochemical methods of analysis. Two four-hour laboratory periods per week. Concurrent registration in 3310 required. Offered in alternate years.

Prerequisite(s): (CHEM 2410 and 2415) or (CHEM 2430 and 2435).
Corequisite(s): CHEM 3310.

CHEM 3410 Macromolecular, Supramolecular, and Nanochemistry (3)
An advanced courses for those interested in chemistry of nanomaterials and polymers. This should be beyond the two courses of general chemistry and the two courses of organic chemistry. Evaluations will be based on quizzes, tests, plus the final exam. The class will be schedule three hours per week.

Prerequisite(s): (CHEM 2420 and 2425) or (CHEM 2440 and 2445).

CHEM 3510 Python Programming for Chemistry (3)
Introduction to basic Python programming skills with applications in Chemistry.

Prerequisite(s): CHEM 1070 and 1080.

CHEM 3660 Special Topics (1-3)
Special topics in Chemistry. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 3665 Special Topics Lab (1-3)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 3830 Intro To Biochemistry (3)
Properties of biological compounds. Bioenergetics, basic metabolic pathways, general biochemical mechanisms. Offered jointly with the cell and molecular biology department.

Prerequisite(s): CHEM 2420 or 2440.

CHEM 3835 Intro to Biochem Lab (2)
Eight hours of laboratory per week. Offered in the Fall semester.

CHEM 3840 Intermediate Biochem (3)
Intermediary metabolism with emphasis on the integration of lipid, saccharide, and amino acid metabolism. Electron transport and oxidative phosphorylation. Photosynthesis. Purine and pyrimidine metabolism. Offered jointly with the cell and molecular biology department.

Prerequisite(s): CHEM 3830.

CHEM 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 3915 Special Topics in Chemistry (1-3)

CHEM 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

CHEM 4010 Research (1-3)
Individual research supervised by the faculty. Students are expected to present a short seminar based on their research. At least 10 hours of research effort per week. Course may be repeated up to 3 credit hours.

Maximum Hours: 3

CHEM 4020 Research and Seminar (1-3)
Individual research supervised by the faculty. Students are expected to present a short seminar based on their research. At least 10 hours of research effort per week. A maximum of three credits may be taken.

Maximum Hours: 3

CHEM 4030 Research (1-3)
Individual research supervised by the faculty. Students are expected to present a short seminar based on their research. At least 10 hours of research effort per week. A maximum of three credits may be taken.

Maximum Hours: 3

CHEM 4080 Computational Neurochemistry (3)
Introduction to 3D computational modeling of electrochemical signaling, including laws of diffusion, electrochemisty, resting and action potentials, synaptic communication between neurons, and synaptic plasticity.

Prerequisite(s): CHEM 1080 and (CELL 3310 or NSCI 3310).

CHEM 4660 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 4910 Independent Study (1-4)
Laboratory or library research under direction of a faculty member.

CHEM 4920 Independent Study (1-3)

CHEM 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

CHEM 4990 Honors Thesis (3)
Honors thesis research, first semester. Register in department.

CHEM 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): CHEM 4990.

CHEM 5380 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 5390 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 6080 Computational Neurochemistry (3)
Introduction to 3D computational modeling of electrochemical signaling, including laws of diffusion, electrochemisty, resting and action potentials, synaptic communication between neurons, and synaptic plasticity.

Prerequisite(s): NSCI 6310 or CELL 6310.

CHEM 6150 Interm Physical Chem I (3)
Elementary quantum mechanics, quantum theory of molecular structure and bonding, fundamentals of spectroscopy.

CHEM 6160 Interm Physical Chemistry II (3)
First, Second, and Third Laws of thermodynamics, thermodynamic energy state functions, phases of pure substances, properties of mixtures, chemical equilibrium, equilibrium electrochemistry, statistical thermodynamics.

CHEM 6250 Intermediate Inorganic (3)
Periodic relationships, types of bonding, coordination complexes, acid-base concepts, inoganic reaction mechanisms.

CHEM 6460 Intermediate Organic (3)
Structural, chemical, and physical properties of organic compounds.

CHEM 6510 Python Programming for Chemistry (3)
Introduction to basic Python programming skills with applications in Chemistry

Prerequisite(s): CHEM 1070 and 1080.

CHEM 6660 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 6830 Intro To Biochemistry (3)
Properties of biological compounds, Bioenergetics, basic metabolic pathways, general biochemistry mechanisms.

CHEM 6840 Intermediate Biochemistry (3)
Intermediary metabolism with emphasis on the integration of lipid, saccharide, and amino acid metabolism. Electron transport and oxidative phosphorylation.

CHEM 6940 Transfer Coursework (0-20)
Transfer coursework at the 6000 level. Departmental approval required.

Maximum Hours: 99

CHEM 7010 Independent Study (1-3)
This is a directed study course that allows a graduate student to pursue a topic of particular interest under the direction of a faculty member.

CHEM 7020 Independent Study (1-3)

CHEM 7110 Intro to Quantum Mechanics (3)
The classical wave equation; the Schrödinger equation; principles of quantum mechanics; harmonic oscillator; rigid rotor; hydrogen atom; approximate methods: perturbation theory, variational principle.

CHEM 7120 Statistical Mechanics (3)
Review of the principles of thermodynamics; canonical and other ensembles; Bose-Einstein, Fermi-Dirac, and Boltzmann statistics; non-interacting system; Monte Carlo methods; phase transitions, classical fluids; non-equilibrium systems.

CHEM 7130 Advanced Quantum Chemistry (3)
Advanced topics in quantum chemistry and dynamics.

CHEM 7140 Computational Quantum Chemistry (3)
This introductory course in computational quantum chemistry will discuss selected topics of molecular modelling with an emphasis on quantum mechanical methods. The scope of this course incorporates ab initio methods, density functional theory, molecular mechanics, and semiempirical approaches. This course is set up for graduate-level requirements, but should be accessible to advanced undergraduates. Graduate-level quantum mechanics is not required, but a good undergraduate-level quantum chemistry background is expected.

CHEM 7150 Chemical Physics (3)
Classical and quantum theory of radiation.

CHEM 7190 Selected Topics Physical Chemi (3)
Selected topics in experimental and/or theoretical physical chemistry. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 7210 Inorganic Stru & Bond (3)
Descriptions of bonding theories as applied to inorganic systems. The course covers symmetry and group theory, crystal field theory, and generalized aspects of molecular orbital theory. Three hours of lecture per week.

CHEM 7220 Inorganic Reaction Mechanics (3)
The course discusses the primary reactions of transition metal, organometallic and main group compounds. Concepts of chemical kinetics are applied to inorganic substitution, isomerization, oxidation/reduction, catalysis and photochemistry. The theoretical framework associated with electron and atom transfer reactions is also presented.

CHEM 7230 Organomet/Trans. Metals (3)
The chemistry of compounds containing transition metal-carbon bonds. A survey of major classes of organotransition metal compounds, their bonding, and their reaction chemistry. The role of transition metal organometallic compounds in homogeneous catalysis. Three hours of lecture per week.

CHEM 7240 Organometallic Chemistry (Main Group Metals) (3)
The chemistry of compounds containing main group metal-carbon bonds. A survey of major classes of organometallic compounds, their bonding, and their reaction chemistry. The role of main group organometallic compounds in organic synthesis and polymer chemistry. Three hours of lecture per week.

CHEM 7250 Phys Meth Inorganic Chem (3)
This course is a problem solving based course focusing on characterization of inorganic substances using methods common to Inorganic Chemistry including multinuclear NMR, ESR, Mass Spectrometry, IR, electrochemical methods, magnetic methods and other more specialized techniques.

CHEM 7260 Crystallography (3)
Basic principles of single crystal x-ray diffraction and their applications to the determination of the structures of small molecules. Each student will collect x-ray data on a crystal and determine the structure of the molecule.

CHEM 7270 Photochemistry (3)
Photophysical processes, experimental methods, photochemistry of transition metal complexes, photosynthesis, solar photochemistry, photoinduced energy and electron transfer processes, photochromism.

CHEM 7280 Inorganic Nanochemsitry (3)
The course will explore a variety of systems 0D (nanoparticles), 1D (nanotubes, nanoribbons), and 2D (nanosheets) using a number of illustrative examples, including gold and silica nanoparticles, silicon nanotubes, fullerenes, and graphenes. Emphasis will be placed on synthetic methods, characterization techniques, and applications.

CHEM 7290 Selected Topics Inorg Chem (3)
The chemistry of metals in biology. An overview of the important metalloenzyme systems and other metallobiomolecules, such as O2 transport proteins. The course also covers inorganic pharmaceuticals and metal-based imaging agents in medicine. Three hours of lecture per week. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 7390 Selected Topics Biolog Chem (3)
Biochemical and biophysical methods, mechanisms of enzyme catalysis, membrane structure and function, metabolic regulation, physical biochemistry, protein folding related topics. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 7410 Adv Organic Physical Organic (3)
This course focuses on the fundamentals of Organic Chemistry, including molecular orbital theory, thermochemistry/strain/stability, stereochemistry, acid/base chemistry, reactivity, kinetics, and catalysis. The course is designed to provide the theoretical foundation behind experimental synthetic chemistry.

CHEM 7420 Adv Organic Spectroscopy (3)
This course covers the elementary theory and slightly more advanced interpretation of common instrumental methods employed by organic chemists. These include NMR spectroscopy (including some 2D, multinuclear, and dynamic NMR), mass spectrometry, X-ray crystallography, IR, UV, and EPR spectroscopy, and various chiroptical methods.

CHEM 7430 Adv Organic Chem Natural Prod (3)
Structural determination, synthesis, and biosynthesis of both classical and modern natural product target molecules. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 7440 Adv Organic Polymer Chemistry (3)
This course establishes a basic fundamental background for polymer chemists, including the major synthetic techniques for preparing polymers, the strengths and weakness of various techniques for determining molecular weight and structure, as well as correlation between polymer molecular structure and the resultant physical properties (and therefore useful applications).

CHEM 7450 Adv Organic Supramolecular Che (3)
This course focuses on a variety of aspects of supramolecular chemistry. It includes the fundamental physical chemistry important to the field and a review of the current state-of-the-art. The course also includes hands-on experience with analyzing supramolecular systems using spectroscopic and/or calorimetric approaches.

CHEM 7460 Adv Organic-Synthetic Ap (3)
Design of syntheses for complex organic molecules. The strategies involved for constructing molecules with complex stereo and regio chemistry, while addressing issues of efficiency and yield.

CHEM 7470 Adv Organic Chem Nucleic Acids (3)
This course provides a background to understanding the structure of nucleic acids and the forces involved in their binding and recognition. A particular focus involves the how to design sequences that enable binding, including topics such as using aptamers for selective binding and recognition.

CHEM 7480 Medicinal Chemistry (3)
Medicinal chemistry deals with the method of developing new drugs. This class will discuss the drug development process, techniques that are used to develop new drugs (e.g., screening, computer modelling), and the mode of action of existing drugs. The prerequisites are successful completion of an organic chemistry course (e.g., CHEM 2410) and a biochemistry course (e.g., CHEM 3830).

CHEM 7490 Selected Topics Org Chem I (3)
This is a survey course covering key topics in contemporary organic chemistry. The focus is on growing and far-reaching issues that are central to all forms of organic chemistry research.

CHEM 7491 Selected Topics Org Chem II (3)
This is an in-depth course covering a key, topic of contemporary organic chemistry. The focus is on growing and far-reaching issues that are central to organic chemistry research in an academic or industrial setting. Can be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 7660 Special Topics (0-4)
Special Topics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 7870 Division Seminar (1)
Weekly seminars by visiting faculty and students. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 7880 Division Seminar (1)
Weekly seminars by visiting faculty and students. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 7890 Techniques of Research (1-9)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 7900 Techniques of Research (1-9)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 7940 Transfer Credit-Grad (1-12)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 9980 Masters Research (3)
Research toward completion of a masters degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CHEM 9990 Dissertation Research (0-3)
Research toward completion of a doctoral degree.

Maximum Hours: 99

Chinese Language (ASTC)

ASTC 1010 Beginning Chinese I (4)
Designed for students to acquire a knowledge of the fundamentals of the Chinese language to be demonstrated in four areas of basic language skills: oral and listening comprehension, speaking, writing (Chinese characters), and some reading ability.

ASTC 1020 Beginning Chinese II (4)
A continuation of the objectives presented in Beginning Chinese I. Attention is given to practical and topics-oriented conversational skills, moods of speech, and complex level of syntax.

ASTC 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ASTC 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

ASTC 2030 Intermediate Chinese I (4)
An intensive study of communicative Chinese in both speaking and writing on daily topics. Continued emphasis on reading, writing, listening, and speaking abilities.

ASTC 2040 Intermediate Chinese II (4)
A continuation of intensive study of communicative Chinese in both speaking and writing with greater length and more diverse topics. Continued emphasis on reading, writing, listening, and speaking abilities.

ASTC 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ASTC 2940 Transfer Coursework (0-4)

Maximum Hours: 99

ASTC 2990 Foreign Language Exempt (0)
Foreign language exempt.

ASTC 3050 Adv Chinese Language I (4)
First semester advanced instruction in the Chinese language, including conversation, reading, and writing.

ASTC 3051 Heritage Chinese (4)
ASTC 3051 is tailored to accommodate students who grew up in an environment in which Chinese is spoken by parents or guardians at home and for those who are familiar with the language and possess intermediate-mid proficiency level in listening comprehension and speaking. Students will be listening to and read about topics about their surroundings, such as colors and shapes, forms of objects, types of products, materials and specifications, physical features of a person, apparels and attires, industry and professions, nature and disaster, geographical environment and natural resources, city and urban characteristics etc.

Prerequisite(s): ASTC 3050.

ASTC 3060 Adv Chinese Language II (4)
An advanced course with emphasis on language functions (making comparison, detailed description, reporting, etc.) This course aims to continue improving students' Chinese communicative and presentational competence.

Prerequisite(s): minimum score of PASS in 'ASTC 3060 Placement' or ASTC 3050.

ASTC 3065 Issues in Contemporary China (4)
An advanced course aimed to develop students' advanced language skills in both spoken and written forms as well as knowledge of contemporary Chinese culture and society. Students are expected to listen, watch and read multi-media materials in Chinese about modern Chinese society.

Prerequisite(s): ASTC 3060.
Course Limit: 3

ASTC 3070 Business Chinese (3)
This course is for students who have achieved intermediate-low/mid Chinese language proficiency. The goal is for students to acquire the necessary linguistic competence and understand the business culture in China to function effectively in a business setting. At the end of the semester, students are expected to the proficiency level of intermediate-mid to advanced low in listening, speaking, reading and writing (based on ACTFL foreign language proficiency guidelines).

Prerequisite(s): ASTC 3050 or 1040.

ASTC 3890 Service Learning (0-1)
Service Learning

Maximum Hours: 99

ASTC 3910 Special Topics (1-3)
Special topics in Asian studies. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

ASTC 3940 Transfer Coursework (3)
Course Limit: 99
Maximum Hours: 99

ASTC 4070 Adv Chinese Read & Write (3)
The course aims to improve students' proficiency in Mandarin Chinese at advanced level as well as knowledge of Chinese culture and society.

Maximum Hours: 9

ASTC 4080 Chinese Media Literacy (3)
An advanced course that focuses on developing students' skills in Mandarin Chinese as well as knowledge of contemporary Chinese culture and society. Students will be listening to, watching or reading multi-media materials from the media on modern Chinese society.

Maximum Hours: 9

ASTC 4350 Chinese Lit and Culture (3)
This course aims at improving students reading and writing proficiency in the language through the study of the writings of Chinese authors. Students will read, discuss, and write about essays written in the contemporary period.

Prerequisite(s): ASTC 3060 or 1030.

ASTC 4360 Special Topics in Chinese Lang (3)
Course Limit: 4

ASTC 4810 Special Topics (0-4)

Maximum Hours: 99

ASTC 4890 Service Learning (0-1)
Service Learning

Corequisite(s): ASTC 4070.

Maximum Hours: 99

ASTC 4920 Independent Studies (3-4)
Independent study in Asian studies.

ASTC 4940 Transfer Coursework (0-4)

Maximum Hours: 99

ASTC 5380 Junior Year Abroad (1-20)
Junior year abroad.

Maximum Hours: 99

ASTC 5390 Junior Year Abroad (1-20)
Junior year abroad.

Maximum Hours: 99

ASTC 6910 Independent Study (0-3)

Maximum Hours: 99

Cinema Studies (CINE)

CINE 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

CINE 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

CINE 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

CINE 4570 Internship Studies (3)
Internship Studies course for the Cinema Studies program.

Maximum Hours: 99

CINE 4910 Independent Study (1-3)
Independent study on film topic. Approval of Director required.

CINE 4920 Independent Study (1-3)
Independent study on film topic. Approval of Director required.

CINE 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

CINE 4990 Honors Thesis (3)
Honors Thesis.

CINE 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): CINE 4990.

CINE 5110 Capstone (0)
This course will enable students to integrate knowledge about the specific nature of film as a medium and the history of theoretical debates that have shaped the study of film and of cinema. It will also provide students with an opportunity to apply the formal and theoretical knowledge gained from the two required courses for the major to consider new theoretical problems about cinema, revisions, and reassessments of earlier debates in film studies and related fields, questions of national cinema, and/or new developments in filmmaking. Notes: This course, which carries 0 credit, is combined with a capstone designated course (3 credits) or a special topics course that is designated as a capstone (3 credits). Consult the Cinema Studies catalog page for approved courses.

CINE 5380 Junior Year Abroad (1-20)
Junior year abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CINE 5390 Junior Year Abroad (1-20)
Junior year abroad.

Maximum Hours: 99

City, Culture, and Community (CCCC)

CCCC 6040 Introductory Data Analysis (3)
This course provides basic training in descriptive and inferential statistics with social science applications.

CCCC 7010 CCC Pro-Seminar I (3)
The course covers a wide range of topics central to the professional development of CCC students

CCCC 7100 CCC Theory I (3)
First course in a two-semester graduate-level introduction to key theoretical issues, debates, figures, and works in the interconnected program core

CCCC 7140 Special Topics (3)
Special topics in Sociology, Social Work, and Urban Studies.

CCCC 7150 CCC Theory II (3)
Second course in a two-semester graduate-level introduction to key theoretical issues, debates, figures, and works in the interconnected program core areas of city, culture, and community.

CCCC 7200 Research Design (3)
This course focuses on the logic and processes of research design, with emphasis on the fit between substantive research questions and empirical

CCCC 7300 Quantitative Analysis (3)
This course develops in-depth knowledge of multivariate data analysis.

CCCC 7350 Qualitative Analysis (3)
This course develops in-depth knowledge of, and practical experience with, the collection and analysis of qualitative data.

CCCC 7700 Teaching Seminar (3)
This course is a professional development seminar in which participants explore a variety of pedagogies and gain practical experience in the mechanics of teaching

CCCC 7750 Teaching Practicum (0)
Teaching/research apprenticeship in collaboration with supervising faculty member

Maximum Hours: 99

CCCC 7800 Research Practicum I (1)
First semester research collaboration with Area Exam 1 supervising faculty member.

Course Limit: 1
Maximum Hours: 1

CCCC 7850 Research Practicum II (1)
Second semester research collaboration with Area Exam 2 supervising faculty member.

CCCC 7950 CCC Pro-Seminar II (3)
The final academic course is led by a team of CCC program faculty and focuses on the students' emerging dissertation projects

CCCC 7980 Independent Study (1-3)
Independent Study in Sociology.

Maximum Hours: 99

CCCC 9990 Dissertation Research (0)
Dissertation Research. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Classics (CLAS)

CLAS 1010 The Rise of Rome (3)
This course traces the history of Rome from its earliest foundations to the fall of the Roman republic. While learning about major historical events, we will also explore various aspects of Roman cultural and social history. Topics for discussion include politics, social status, gender roles, religion, warfare, murder and conspiracy, and ancient spectacle. No prerequisites. (Note: Not open to senior history majors)

CLAS 1030 The Greeks (3)
This course offers an introduction to the literature, history, culture, art and architecture of the ancient Greeks. Focusing on Greeks living throughout the Mediterranean from the Bronze Age down to the Hellenistic Period, the course is organized around targeted investigations that explore important aspects of ancient Greek civilization such as colonial expansion, the invention of alphabetic writing, the birth of drama, etc. The aim of the course is not to be exhaustive, but rather to introduce students to the study of antiquity. We will regularly delve into scholarly debate, consider what kinds of evidence underlie our knowledge, and examine the limits of interpretation all while developing our familiarity with the ancient Greeks.

CLAS 1040 Mythology (3)
This course will introduce you to the gods, heroes, and monsters of Greek and Roman mythology. The focus of the course involves reading and discussing selected works of ancient Greek and Roman literature in English translation, but we will also move beyond these narratives to examine how the Greeks and Romans portrayed their myths in other media, including art and architecture.

CLAS 1050 The Romans (3)
The Romans focuses on the social and cultural history of the ancient Roman world. We will examine Roman identity, institutions, society, technology, architecture, religion, and other aspects of Roman life using a variety of Roman texts alongside examples of material culture (i.e., archaeological objects, architecture, and art). The texts used in this course include excerpts of literary and historical works as well as inscriptions and graffiti.

CLAS 1290 Semester Abroad (1-20)
Study abroad in Classical Studies. Department approval required. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CLAS 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

CLAS 2020 The High Roman Empire (3)
This course introduces the institutional, social, and cultural changes of the empire from Augustus to Diocletian. Emphasis is placed upon the birth of imperial administration, cultural change and continuity, and the rise of Christianity.

CLAS 2120 The Archaeology of Israel (3)
This course explores the archaeology of the southern Levant from the Bronze Age to the creation of the state of Israel (ca. 3330 B.C.E. - 1948 C.E.). It provides an introduction to the methodology and theory of archaeology and an overview of the material cultures of the complex societies that inhabited the region. Special attention will be paid to cultures of the Israelites, Phoenicians, Philistines, and Arabs and the impact of external imperial rule (from the Egyptians, Assyrians, and Babylonians to the Greeks and Romans) on the life and culture of these socieites. We will also investigate the transformation of the region from the rise of Christianity and the Muslim conquest through emergence of Israel as a modern nation-state. Throughout we will focus on extant texts, inscriptions, material culture such as pottery, figurines, and sculpture, and public, religious, and domestic architecture to reconstruct a detailed picture of this region as a dynamic crossroads of civilizations.

CLAS 2220 New Testament Historical Intro (3)
This course is a literary and historical introduction to the canonical New Testament. It will engage issues of authorship, dating, theology, genre, and special problems related to the scientific" (or scholarly) study of the New Testament. There will be some engagement with literature outside of the canonical New Testament but only as it relates to special issues and topics in New Testament interpretation."

CLAS 2310 Tyrants & Democrats Anc Greece (3)
This course examines the origins and characteristics of basic Greek forms of government in their historical context, concentrating on tyranny and democracy in the archaic and classical periods. The course stresses the development of Greek political institutions and political thought.

CLAS 2320 Ancient Greek Religion (3)
What was the ancient Greek religion about? And how can we know about the religious experience of a population that is long gone? Both these questions are interconnected and represent the core of this course. Week after week, we will reconstruct the principles and articulation of religious beliefs and practice in ancient Greece, reflecting on the evidence we can use. We will discover the ways that religious system mirrors a specific understanding of human society and its place in the universe. And, with it, we will find that, surprisingly or not, that religious system provided a solid base to several modern religious practices.

CLAS 2330 Alexander the Great (3)
Alexander the Great (356-323) is justifiably one of the most celebrated figures of antiquity. Conquering all of the Greek world and Asia from the Mediterranean to the Indus River in Pakistan by the age of 30, he unquestionably changed the world, bringing Greeks, Macedonians, Persians, Egyptians and Jews into close contact and exchange. But who was the historical Alexander? Was he a charismatic strategist, a genius and visionary? Or a paranoid, alcoholic, and violent megalomaniac who brought about the end of his dynasty and left his empire, and much of the world, in chaos? Many wrote about his life in exploits, but the problematic nature if the ancient sources presents serious difficulties in reconstructing an account of the 'historical' Alexander. We will explore various genres (history, fiction, myth, biography) and sources (literary, visual, archaeological) to analyze critically the sources and uses of Alexander in various periods and places of history.

CLAS 2340 Troy: Beyond the Myth (3)
The Trogan War: famous heroes against each other, astute decoys, tragic deaths, plotting, intrigue, and the gods in the midst of it. Was it all fiction? In this class, we will use literary and archaeological evidence to answer this question.

CLAS 2390 Semester Abroad (1-20)
For transfer of credit. Department approval required. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CLAS 2400 Ancient Medicine (3)
This course traces the evolution of the practice of medicine in Ancient Greece and Rome via a multitude of ancient literary, documentary, and material sources. Topics include medicine in mythology, theories of medicine, pharmacology, military medicine, medical tools, women's health, and physicians in society. Students will not only gain a knowledge of the foundation of medicine, but also better understand the practice of medicine as it exists today through guest lectures and a field trip to the Pharmacy Museum in the French Quarter.

CLAS 2410 Race: Antiquity to U.S. (3)
This course will examine cultural constructions of race, moving between the ancient Mediterranean to the modern United States. Together, we will explore literary and artistic evidence to understand how the Greeks and Romans conceptualized the world and the humans within it. As we will see, ancient thinkers found numerous ways to explain human variety, none of which correspond precisely to modern notions of race. Flowing forwards and backwards in time, we will investigate how the authors of America's racial caste system pressed Greece and Rome into the service of contemporary power structures, reimagining them as ancestors of White America. Additionally, we will study Black Americans—enslaved and free—who have pushed against this reconstruction, reclaiming the ancient Mediterranean as their own.

CLAS 2600 The Classical World in Film (3)
This interdisciplinary course investigates the use of themes from classical history, literature, and mythology in modern cinematography. Its focal point is the artistic appropriation of these themes in service of a fresh literary and cinematic vision. Films with classical themes are viewed as a part of the process of creative imitation and reinvention of a "classic". Each segment of the course discusses a specific theme, starting with the thorough analysis of the relative ancient texts and material culture/archaeology. Reading assignments will include selections from Greek and Roman, such as epic, tragedy, history, lyric poetry, philosophy, and novel. The readings will be flanked by a selection of movies and clips that show modern adaptations of the same theme discussed in the readings.

CLAS 2610 Sex and Gender in Antiquity (3)
This course explores a wide range of topics related to sexuality and gender in the ancient Mediterranean. Using ancient literary sources, inscriptions, artwork, and modern scholarship, we will try to reconstruct Greek and Roman attitudes about sexuality and gender at different places and different times. In particular, we will focus on the depiction of female leadership in ancient literature, and will consider the following questions: How do the male writers of antiquity describe female leaders? Do they display the same attributes of leadership as their male counterparts, or is there something distinctly feminine about their mode of leadership? Are women depicted in leaders in various spheres of activity (battle, home, politics, etc.)? Is there always a sense of transgression or inferiority associated with female leadership? Do literary depictions match the primary evidence that documents the roles of women in their communities? How can these ancient texts inform the current debates about women in leadership roles?

CLAS 2810 Special Topics (3)
Special topics in Classical Studies focused on particular areas and issues in the fields of ancient culture, religion, history, and/or archaeology. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CLAS 2811 Special Topics (3)
Special topics in Classical Studies focused on particular areas and issues in the fields of ancient culture, religion, history, and/or archaeology.

Corequisite(s): CLAS 2890.

CLAS 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): CLAS 2811.
Course Limit: 99

CLAS 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

CLAS 3060 Greek Drama (3)
In this class, we will read several ancient plays (in English translation) written in 5th century BCE Athens alongside a series of 20th and 21st century plays from Nazi-occupied France, apartheid-era South Africa, and Nigeria (during the Iraq War) that draw on these ancient plays for inspiration in radically different political and cultural climates.

CLAS 3090 Law & Society In Ancient Rome (3)
In this course we will focus on the law of the Roman family, covering such topics as personal status, marriage, divorce, and inheritance, as well as the situation of women and children within the Roman family.

CLAS 3120 Etruscans & Early Rome (3)
From the Late Bronze Age until their assimilation into the Roman world, the Etruscans were building cities, decorating tombs, and establishing trade networks at home and abroad. While their literature and written history are lost, their extensive material culture survives. In this course, students will learn how to examine a culture known primarily from its artifacts and discover how it influenced early Rome.

CLAS 3160 The Aegean Bronze Age (3)
The civilizations that populated the Aegean during the Bronze Age were later remembered in mythology, fabulous tales, and epic poetry. Homer sang about the cultural wealth of those earlier kingdoms, from Crete to Mainland Greece. This course offers you the chance to explore their rich and varied archaeological remains. From the majestic palaces to the elaborate frescoes, the decorated pottery, the administrative records, and other material evidence, we will reconstruct the life and activities of the populations of the Aegean from the beginning to the end of the Bronze Age. In our journey, we will also stop and discuss the archaeological methodologies and the current topics of investigation on the Aegean Bronze Age.

CLAS 3170 Greek Art & Archaeology (3)
In this course, we will explore the archaeological remains and the development and use of specific artistic trends of the ancient Greek culture. Human inhabitation of Greece left the remains of a rich and complex society, with grandiose public architecture, elaborate vase painting, and a legacy that still lives on. Working together as a class, we will explore how to use these material remains to find the Greeks, interpret their lives, and understand their choices and the impact they had on their culture. By studying a variety of archaeological remains, from pottery to art and architecture, we will bring the Greeks back to life, in class, with us! We will cover aspects of Greek political organization, trade and contact with other civilizations in the ancient Mediterranean, funerary habits. At the same time, we will be discussing about our modern approach to the study of the Greeks, focusing on the use of art and archaeology in politics and propaganda, current problems and controversies in Greek archaeology, archaeological methods, and issues of archaeological ethics.

CLAS 3180 Roman Art & Archaeology (3)
The Roman Empire encompassed the entire rim of the Mediterranean Sea and much of western Europe. This course will undertake an intensive analysis of the material culture of ancient Rome through its art and archaeology. In successfully completing the semester, you will gain a thorough knowledge of the art and archaeology of ancient Rome and its world, focusing especially on changes through time and on the political, social, and economic developments that are illuminated by material remains. We will also discuss current issues related to Roman antiquities and the preservation of world cultural heritage. Working together as a class, we will learn how to use the archaeological record to reconstruct the past, while at the same time examining our own culture and its role in human history.

CLAS 3190 Pompeii:Life in a Roman Town (3)
The Roman city of Pompeii, utterly destroyed by the eruption of Mt. Vesuvius in 79 C.E., has captured the world's imagination for nearly three centuries. This semester, we will examine the material remains of Pompeii, analyzing how evidence as diverse as standing architecture, monumental inscriptions, portable and permanent art, and even garbage and graffiti can be used to reconstruct ancient lives. Working together as a class, we will investigate the development of Pompeian studies from the earliest systematic excavations of the 1750s to current projects utilizing groundbreaking technologies, and propose new directions for future research in a city that has many more secrets to reveal.

CLAS 3230 Ancient Christianity (3)
In this course we examine the development of Christianity in the Roman Empire during the first four centuries CE. We will consider both the development of the Church from its beginnings as a religious movement to its becoming one of the dominant institutions in the Roman Empire. We will investigate how the Church gained converts, how it was structured, the relationship between orthodox Christianity and 'heresies,' the Church's conflicts with the Roman Empire, and the changes in the Church resulting from the conversion of Constantine in the early fourth century.

CLAS 3510 The Ancient Novel (4)
We are all familiar today with the literary form called the novel: a lengthy fictional narrative in prose. It was ancient Greek and Latin authors, however, who first created this form. Many of these works survive and they always intrigue and delight readers with their highly sophisticated plotting of love affairs, comical depictions of pirates, and teasing explorations of sexuality. We will closely read, in English translation, the major ancient novels and some of their literary predecessors in order to understand the originality of the form and content of the novels. The class concludes with a consideration of the ancient novel's contribution to the development of fiction in the West.

CLAS 3810 Special Topics (3)
Special topics in Classical Studies focused on particular areas and issues in the fields of ancient culture, religion, history, and/or archaeology. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CLAS 3811 Special Topics (3)
Special topics in Classical Studies focused on particular areas and issues in the fields of ancient culture, religion, history, and/or archaeology.

CLAS 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CLAS 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CLAS 3899 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CLAS 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

CLAS 4060 Classical Epic (3)
This course will offer a detailed survey of Greek and Roman epic poetry from Homer's Iliad to Lucan's Bellum Civile, with specific attention paid to the production and performance contexts of each text. Over the course of the semester, students will become familiar with the central themes and issues of the epic genre and consider what differentiates poems written in different times and places. Specific topics to be investigated include the role of the gods in mortal affairs, tensions between fate and human agency, how to negotiate personal tragedies within larger conflicts, the relationship between individuals and their society, and the intimate connection between poet and his subject. All texts will be read in translation.

CLAS 4080 Sem Anc Society & Econ (3,4)
Seminar on topics involving ancient society and economy, for example, Slavery in Ancient Society or Family in Ancient Rome. May be repeated when the topic is different. (NOTE: 3 credits/4 credits when offered as Tier 2 writing intensive). Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CLAS 4110 Classical Leadership Lab (3)
What can the ancient Mediterranean world teach us about leadership now? How can we apply the lessons of the past to modern communities and organizations, or even our own lives? This course will use a case-study approach to issues of leadership in across the ancient Mediterranean, including questions about becoming a leader, the role emotional intelligence plays in leadership, and navigating transitions in power. We will examine in depth the questions of how studying the humanities can be a method of leadership development, and what the limitations are to this approach to leadership

CLAS 4170 Seminar: Greek Art & Archaeology I (3,4)
This is a seminar featuring current topics in Greek art and archaeology that are studied through the use of primary texts (histories, literature, inscriptions) as well as secondary scholarship. The topics offered under this heading may include Monuments of Ancient Athens and Knossos & Its Afterlife. May be repeated when topic is different. (NOTE: 3 credits/4 credits when offered as Tier 2 writing intensive).

CLAS 4180 Seminar: Greek Art & Archaeology II (3,4)
This seminar features topics in Greek art and archaeology where the analysis of material culture and what it can illuminate about Greek society are emphasized. Methods and scholarship from the social sciences are included. Students should expect to do close readings of second scholarship and perform independent research. Topics in this seminar may include Greek Pottery and Topics in Aegean Prehistory. (NOTE: 3 credits/4 credits when offered as Tier 2 writing intensive).

Course Limit: 3

CLAS 4190 Seminar: Greek Art & Archaeology III (3,4)
This seminar features topics in Greek art and archaeology that employ methods of art history, including the appreciation of the aesthetics of ancient art. (NOTE: 3 credits/4 credits when offered as Tier 2 writing intensive).

Maximum Hours: 99

CLAS 4200 Seminar: Roman Art & Archaeology I (4)
The seminar features topics in Roman art and archaeology that are studied through the use of primary texts (histories, literature, inscriptions) as well as secondary scholarship. The topics offered under this heading may include Monuments of Ancient Rome. (NOTE: 3 credits/4 credits when offered as Tier 2 writing intensive). Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CLAS 4210 Seminar: Roman Art & Archaeology II (3,4)
This seminar features topics in Roman art and archaeology where the analysis of material culture and what it can illuminate about Roman society are emphasized. Methods and scholarship from the social sciences are included. Student should expect to do close readings of secondary scholarship and perform independent research. Topics may include Gender in Roman Archaeology. May be repeated when topic is different. (NOTE: 3 credits/4 credits when offered as Tier 2 writing intensive).

Course Limit: 3

CLAS 4220 Sem Roman Art & Archaeo III (3,4)
This seminar features topics in Roman art and archaeology that employ methods of art history, including the appreciation of the aesthetics of ancient art. Topics include Ancient Painting and Mosaics and Roman Sculpture in Context. May be repeated when topic is different (NOTE: 3 credits/4 credits when offered as Tier 2 writing intensive). Course may be repeated 3 times for credit.

Course Limit: 3

CLAS 4810 Special Topics (3)
Special topics in Classical Studies focused on particular areas and issues in the fields of ancient culture, religion, history, and/or archaeology. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CLAS 4811 Special Topics (3-4)
Special topics in Classical Studies focused on particular areas and issues in the fields of ancient culture, religion, history, and/or archaeology.

CLAS 4890 Service Learning (0-1)
Corequisite(s): CLAS 4110.

CLAS 4900 Seminar in Classical Culture (3,4)
The seminar features topics that examine aspects of society and culture in the Greek and/or Roman world. While these topics are approached primarily through literature in translation and historical texts, where appropriate, these topics may also include some units on material culture and art. Topics of this course may include Alexandria Cosmopolis, Afterlives of Antigone, Athens in Persia.

Course Limit: 3

CLAS 4910 Independent Study (3)
Independent study on particular areas or issues of ancient culture, religion, history, and/or archaeology. Open to superior students provided approval of department is granted and an appropriate faculty director is available. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CLAS 4920 Independent Study (3)
Independent study on particular areas or issues of ancient culture, religion, history, and/or archaeology. Open to superior students provided approval of department is granted and an appropriate faculty director is available. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CLAS 4990 Honors Thesis (3)
Course reserved for students writing an honors thesis for a major in classical studies. Requires approval of the department and an appropriate faculty director.

CLAS 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): CLAS 4990.

CLAS 5190 Semester Abroad (1-20)
Study abroad in Classical Studies. Department approval required. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CLAS 5370 Washington Semester (1-20)
For transfer of credit. Department approval required. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CLAS 5380 Junior Year Abroad (1-20)
Study abroad in Classical Studies. Department approval required. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CLAS 5390 Junior Year Abroad (1-20)
Study abroad in Classical Studies. Department approval required. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CLAS 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

CLAS 6080 Sem Anc Society & Econ (3)
Seminar on topics involving ancient society and economy, for example, Slavery in Ancient Society or Family in Ancient Rome. May be repeated when the topic is different. Open to Graduate Students. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CLAS 6170 Sem Greek Art & Archaeo I (3)
This is a seminar featuring current topics in Greek art and archaeology that are studied through the use of primary texts (histories, literature, inscriptions) as well as secondary scholarship. The topics offered under this heading may include Monuments of Ancient Athens, Greece in the Archaic Age, Knossos & Its Afterlife, and Mycenaean Citadels. May be repeated when topic is different. (NOTE: 3 credits/4 credits when offered as Tier 2 writing intensive).

CLAS 6180 Sem Greek Art & Archaeo II (3)
This seminar features topics in Greek art and archaeology where the analysis of material culture and what it can illuminate about Greek society are emphasized. Methods and scholarship from the social sciences are included. Students should expect to do close readings of second scholarship and perform independent research. Topics in this seminar may include Greek Pottery, Greece in the Iron Age, and Topics in Aegean Prehistory.

CLAS 6190 Sem Greek Art & Archaeo III (3)
This seminar features topics in Greek art and archaeology that employ methods of art history, including the appreciation of the aesthetics of ancient art. Topics may include Greek Vase Painting, Greek Sculpture, and Classical Athens.

CLAS 6200 Sem Roman Art & Archaeo I (3)
The seminar features topics in Roman art and archaeology that are studied through the use of primary texts (histories, literature, inscriptions) as well as secondary scholarship. The topics offered under this heading may include Monuments of Ancient Rome, Building the City of Rome, and the World of Augustus.

CLAS 6210 Sem Roman Art & Archaeo II (3)
This seminar features topics in Roman art and archaeology where the analysis of material culture and what it can illuminate about Roman society are emphasized. Methods and scholarship from the social sciences are included. Student should expect to do close readings of secondary scholarship and perform independent research. Topics may include Gender in Roman Archaeology and The Roman Way of Death. Open to graduate students.

CLAS 6220 Sem Roman Art & Archaeo III (3)
This seminar features topics in Roman art and archaeology that employ methods of art history, including the appreciation of the aesthetics of ancient art. Topics include Ancient Painting and Mosaics and Roman Sculpture in Context. Open to graduate students. May be repeated when topic is different.

CLAS 6300 Summer Seminar in Rome (1-6)
Study abroad in Classical Studies. Open to Graduate Students only. Registration requires department approval.

CLAS 6320 War & Power in Ancient Greece (3)
In this course we will look at ancient Greek warfare and state formation, including how states developed and changed, how and why the ancient Greeks interacted and fought with each other and with outsiders, and what were the immediate outcomes and long-term consequences of endogenous and exogenous power struggles. Students will gain an understanding of the particular roles played by factors such as geography, military innovations, socio-political institutions, individual leaders, ideological shifts, and specific series of decisions and events

CLAS 6810 Special Topics (3)
Special topics in Classical Studies focused on particular areas and issues in the fields of ancient culture, religion, history, and/or archaeology. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CLAS 6811 Special Topics (3)
Special topics in Classical Studies focused on particular areas and issues in the fields of ancient culture, religion, history, and/or archaeology.

CLAS 6900 Seminar in Classical Culture (3)
The seminar features topics that examine aspects of society and culture in the Greek and/or Roman world. While these topics are approached primarily through literature in translation and historical texts, where appropriate, these topics may also include some units on material culture and art. Topics of this course may include The Age of Perikles, Individuals & Communities in Greece and Rome, Alexandria Cosmopolis, Greeks and Barbarians, and Afterlives of Antigone. Course may be repeated 3 times for credit.

Course Limit: 3

CLAS 6910 Independent Study (1-3)
Independent study on particular areas or issues of ancient culture, religion, history, and/or archaeology. Open to graduate students provided approval of department is granted and an appropriate faculty director is available.

CLAS 6920 Independent Study (1-3)
Independent study on particular areas or issues of ancient culture, religion, history, and/or archaeology. Open to graduate students provided approval of department is granted and an appropriate faculty director is available.

CLAS 7890 Thesis Research (3)
Course reserved for students writing a thesis for the Master's degree in classical studies. Requires approval of the department and an appropriate faculty director.

CLAS 7910 Independent Study (3)
Graduate-level independent study in Classical Studies. Department approval required.

CLAS 9980 Masters Research (0)
Course reserved for students writing a thesis for the Master's degree in classical studies. Requires approval of the department and an appropriate faculty director. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Clinical Research (MSCR)

MSCR 6420 Responsible Conduct of Resrch (1)

MSCR 6430 Introduction to Clinical and Translational Research (3)
In this course, students will study IRB relations and regulations, discuss the required elements in a clinical research contract and the responsibilities of the clinical researcher, identify effective use of research personnel, and develop negotiating skills to facilitate support for clinical research. The course will also encompass the principle of randomization and “intention-to-treat” analysis in experimental studies, integration of clinical trials and lab support, specimen collections and laboratory problem-based learning. A researcher/clinician centric insight into the logistics of technology transfer and intellectual property (IP) development will be studied. The practical aspects of technology transfer in an academic context will be investigated. Discussed topics will include local academic tech transfer policy, related procedures and available resources. Career pathways and opportunities open to the clinical researcher in the academic and private sector will be explored and discussed.

MSCR 6440 Protocol Design and Writing (1-3)

MSCR 6450 Therapeutics Seminar (4)

MSCR 7070 Molecular Medicine (4)

MSCR 7080 Cultural Competence Research (3)

MSCR 7090 Grant Writing (3)

MSCR 7150 Journal Club (1)
Course Limit: 99

MSCR 7300 Clerkship (0.5-5.75)

MSCR 7400 Surgical Education Conference (1)

Maximum Hours: 99

MSCR 7410 Surgical Research Consortium (0.5)

Maximum Hours: 99

MSCR 7420 Clinical Mentorships (2)

Maximum Hours: 99

MSCR 7430 Residency Didactics (0.5-0.75)

MSCR 7440 Independent Study (0-3)

MSCR 7450 Practical Skills (3)

Maximum Hours: 99

MSCR 9980 Mentored Research Component (2)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Colloquia (COLQ)

COLQ 1010 Freshmen Colloquium Seminar (1-3)
First-year Seminar Colloquium course.

COLQ 1020 Freshman Colloquium (1-3)
First-year seminar course; topics vary by instructor.

COLQ 1025 Freshmen Colloquia Lab (0)

COLQ 1030 Quest for Answers (1.5)

COLQ 1290 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COLQ 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Course Limit: 99

COLQ 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

COLQ 2010 Honors Soph Colloquium (1.5-3)

COLQ 2030 Sophomore Colloquium (1-3)

COLQ 2050 Grant Writing for Non-Profit Organizations (3)
Students in this course learn elements of successful grant writing for non-profit organizations in a series of seminars/workshops. Topics include the elements of a proposal, persuasive writing, researching funding sources, and building relationships with community partners and prospective funding sources. Students identify and collaborate with community partner non-profit organizations to assess program needs and goals and research potential funding sources. Teams of students prepare and submit a funding proposal to support a partner organization. The course consists of 3 hours of seminar per week and fulfills the Newcomb-Tulane college intensive writing requirement. Enrollment in co-requisite Tier 1 service learning is required. Enrollment is limited to sophomores.

Corequisite(s): COLQ 2890.

COLQ 2390 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COLQ 2890 Service Learning (1)
Service Learning course to be taken with a 2000-level COLQ course that offers a service component.

Corequisite(s): COLQ 2050.

Maximum Hours: 99

COLQ 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

COLQ 3010 Science & Human Values (3)
Prerequisite(s): PSYC 1000 or 1010.

Prerequisite(s): PSYC 1000 or 1010.

COLQ 3020 God(S) and Science (3)

COLQ 3030 Science and Religion (3)

COLQ 3040 Honors Junior Colloquium (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COLQ 3041 Honors Junior Coloquim (1-3)

COLQ 3050 Junior Colloquium (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COLQ 3601 Adverse Childhood Experiences: Intersections of violence, neuroscience, law, and public health (3)
This course takes a unique 360 perspective on early adversity, violence, and child maltreatment. Through integrating hands on experiences, small group discussions, internationally renowned guest speakers, community engagement and writing and social media assignments students are expected to increase their ability to think across disciplines, specifically neuroscience, public health, law, public policy and psychology.

COLQ 3602 Professional and System Responses to Adverse Childhood Experiences (3)
This course is designed to provide the student with both a unique and an integrated perspective of the individual professions (e.g., psychology, pediatrics, social work, education, forensic interviewing, legal, law enforcement, etc.) and professional and system responses related to a child's exposure to, the prevention of, and the identification and treatment of early adversity, violence, and child maltreatment. Through integrating hands-on experiences, internationally renowned guest speakers, community engagement, writing and social media assignments utilizing a rhetorical appeals approach to effective communication, students are expected to increase their ability to critically evaluate this issue across disciplines while building their skills in effective scientific translation and communication simultaneously to multi-disciplines. This course expands the students' understanding of the different professional and system responses to adverse childhood experiences (ACEs).

Prerequisite(s): PSYC 1000, SPHU 1010 or EDLA 2000.

COLQ 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COLQ 4010 Honors Humanities Colloq (3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COLQ 4011 Honors Humanities Colloq (1-3)

COLQ 4012 Honors Humanities Colloq (1-3)

COLQ 4013 Honors Thesis Workshop (1-3)

COLQ 4020 Honors Humanities Colloq (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COLQ 4120 The Grand Canyon (3,4)
This course covers central aspects of the geology, biology, anthropology and history of the US Southwest, concentrating on the areas contiguous with the path of the Colorado River through what is today Northern Arizona. After a semester of classroom work, familiarizing the students with geography, geology, flora, fauna, peoples, cultures and histories of the region, the class will travel to Lee's Ferry and the float for seven days on Hatch River Expeditions rafts through a natural laboratory. Those students taking this course as a capstone in Environmental Studies will pay special attention to landforms and waterways, water law, the environmental and biological consequences of damming, and endangered species. Students taking this course for elective credit in Anthropology or Geology must write their term papers on a topic in their discipline.

COLQ 4140 Nat History Arch Mesoame (3)
Geologic history of Mesoamerica, archaeology of Mesoamerica, history of the conquest and colonial period, flora and economic botany of the region.

COLQ 4200 Honors Senior Colloquium (3)
Prerequisite(s): PSYC 1000.

Prerequisite(s): PSYC 1000.

COLQ 4210 Senior Colloquium (3)

COLQ 4570 Public Service Internshp (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COLQ 5000 Honors Thesis (4)
Honors Thesis

COLQ 5190 Semester Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COLQ 5380 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COLQ 5390 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COLQ 5940 Transfer Coursework (0-20)
Transfer coursework at the 5000 level. Departmental approval required.

Maximum Hours: 99

COLQ 6010 Mellon Professorship-Hum (3)
An interdisciplinary course offered by a scholar of notable achievements both in teaching and research in humanistic learning. This course is not assigned to any particular discipline but spans the broad area of the humanities: classical, English, foreign languages and literatures, history, history of fine arts, and philosophy.

COLQ 6020 Mellon Professorship-Hum (3)
An interdisciplinary course offered by a scholar of notable achievements both in teaching and research in humanistic learning. This course is not assigned to any particular discipline but spans the broad area of the humanities: classical, English, foreign languages and literatures, history, history of fine arts, and philosophy.

Communication (COMM)

COMM 1150 Introduction to Cinema (3)
Historical survey of international cinema focusing on political, social, economic, technological, and aesthetic factors. Major film movements and historical developments from 1895 to the present are covered including U.S. silent cinema, Soviet montage, German expressionism, French impressionism and surrealism, the transition to sound, classical Hollywood cinema, the impact of WWII, Italian neorealism, the French New Wave, art cinema, new German cinema, and new Hollywood cinema.

COMM 1250 Introduction to Television (3)
This course is an introduction to the study of television as a unique audio-visual culture with its own history, aesthetics, and meaning production. Students will learn about the television industry, its audiences, and its programming. Examples from television programming from the 1950s to the present will supplement readings.

COMM 1350 Intro to Cultural Studies (3)
This course introduces students to the terms, analytical techniques, and interpretive strategies commonly employed in cultural studies. Emphasis on interdisciplinary approaches to exploring how cultural processes and artifacts are produced, shaped, distributed, consumed and responded to in diverse ways. This course follows Cultural Studies from its inception at the Center for Contemporary Cultural Studies in Birmingham in postwar Britain, to its present loosely defined formation. As students become more familiar with how the scholars of previous generations used Cultural Studies, they will develop the skills to begin develop their own cultural studies research agenda.

COMM 1450 Introduction to Global Media (3)
We are living in an increasingly globalized world and the media have a significant role in the process of globalization. In today's world, communication students need to be thoroughly knowledgeable about the communication systems in different parts of the world, media institutions, and the larger processes that affect the global, regional and national media systems. In this course we are going to discuss the concept of media globalization from various perspectives, look into the history of global communication and analyze different theoretical perspectives that aim to explain this complex process with its actors and institutions. Throughout the course we will have different case studies that exemplify the current controversies and issues in the field of global media and communication studies

COMM 1550 Intro to New Media & Internet (3)
An investigation of the histories and theories associated with the Internet and other forms of new media. The main course objectives are to learn how to analyze Internet settings and employ new media methods. Conceptions of new technologies and newness will be theorized and examined. We consider how new media technologies are identified as tools and the ways they are critiqued for producing gendered, racial, and sexual identities. Topics include Afrofuturism, cyber feminism, science fiction, the web, social networking, fan fiction, hypertext, Internet authorship, and surveillance.

COMM 1650 Introduction to Media Studies (3)
This course is designed for students who have grown up in a rapidly changing global multimedia environment and want to become more literate and critical consumers and producers of culture. Through an interdisciplinary comparative and historical lens, the course defines "media" broadly as including oral, print, theatrical, photographic, broadcast, cinematic, and digital cultural forms and practices. The course looks at the nature of mediated communication, the functions of media, the history of transformations in media and the institutions that help define media's place in society.

COMM 2230 Interpersonal Communication (3)
Introduction to theories and models of interpersonal communication, which enhance understanding, and development of interpersonal relationships. Course content covers topics such as listening behavior, intrapersonal processing, dyadic interaction, conflict management, intercultural, intimate and nonverbal communication.

COMM 2300 Political Communication (3)
A survey of theories, empirical research, and critical analysis of contemporary political communication processes in the United States. Topics may include the role of the media in electoral campaigns, strategies of presidential communication, as well as the relationship between media and political institutions, including Congress and the Courts. News coverage of social movements and political protest will also be discussed. The course covers a variety of political communication genres, such as journal ism, political advertising, talk shows and political websites.

COMM 2350 Media and Criminal Justice (3)
This class examines the interrelationships between crime, criminal justice, and Media, Television, film, newspaper and electronic/internet media intersect with crime and the criminal justice system in a number of important ways. The point of this course is to explore how the media represents influences, distorts, and/or filters crime and justice issues. Also, the media is used as a mechanism to explore issues (e.g., political ideology, corrections policy, causes of crime) that are central to the study of crime. The impact of media images of crime and violence on individuals, groups, and public policy will be considered. Issues regarding the future of crime, criminal justice, and mass media also will be discussed. In addition, the course requires 20 hours of service learning. Students will work with local community organizations involved with criminal justice.

COMM 2400 Topics in Int'l Film Movements (3)
This course focuses on specific film movements in international cinema, with an emphasis on understanding stylistic and aesthetic innovations in their social-historical context. Topics may include European film movements, Chinese cinemas and others. Notes: May be repeated for credit up to 2 times if different topic with the permission of the Film Studies Director.

Course Limit: 2

COMM 2405 Topics in Comparative and Transnational Asian Media (3)
Asian media industries have played a crucial role in shaping the global mediascape. This course employs comparative and transnational approaches to media studies to examine the transnational character of Asian media in relation to media cultures and practices in other global regions. Topics include the international circulation of genres and aesthetic innovations, the transnational political economy of media production and distribution, and spectatorship across national contexts and cultures. The media examined (e.g. film, television, radio, digital media) as well as specific national and regional contexts may change with different iterations of the course

Course Limit: 3

COMM 2450 Topics Gender/Race/Class/Media (3)
This course introduces students to the research about gender, race, and class in the media. We will cover the main concepts, theories, methods, and debates in media and communication scholarship about multiple forms of inequalities. We will explore the intersections of gender, race, and class and how different types and technologies of media (television shows, news, movies, magazines, commercials, digital media etc.) reinforce, challenge or re-shape existing power differences in society. The course explores these topics by focusing on the institutional structures of commercial media, representations, and audiences. Throughout the course, we will examine a broad range of media texts as examples.

COMM 2500 Film and Society (3)
This class investigates various social issues that emerge from an examination of films produced in the United States, Europe and the developing world. Students consider societal forces such as class, race, gender, youth, family, prejudice, education and homelessness. The cinematic depiction of these factors as well as the connection between cinematic language, syntax, structure and a films ultimate meaning or message are explored.

COMM 2650 Mass Communication Law (3)
Studies federal and state regulation of both print and broadcast media in the United States to understand how legal mandates and constraints have defined the roles of media in society. Historical and contemporary analyses include laws in areas such as libel, privacy, free press versus fair trial, access to government information, regulation of advertising and regulation of broadcasting.

COMM 2700 Visual Communication (3)
This course examines the history and theory of visual communication and its application in a variety of cultural contexts. Topics include the transition from print to visual media, the development of visual literacy and the role of emerging technology. Students will complete applied projects using photography, video and electronic media, digital imaging, and web-based visual technology.

COMM 2720 Media & Reproductive Rights (3)
This course focuses on the relationships between reproductive politics, popular and social media, and movements for reproductive rights and justice in the United States. Students will learn key concepts and theories related to reproductive rights and justice, as well as media studies and analysis. The course covers historical and contemporary portrayals of reproduction within popular and alternative media with a focus on their racial, sexual, class, and gendered dimensions. Students will also learn about various ways in which television, film, and new media technologies function within government and nonprofit advocacy around reproductive issues. In sum, this course maps the intersections between reproductive politics and media technologies, while helping students develop their analytical prowess, communication skills, and knowledge of media, culture, and social inequity in the United States.

Corequisite(s): COMM 2890.

COMM 2730 Childhood, Sex & the Media (3)
The course examines contemporary and historical U.S. popular media texts for how they represent dominant notions of childhood, sexuality, and racial and gender politics. Students read scholarship that examines the socially and historically contingent construct of childhood. They also read about and practice media analysis, applying ideas about the social construction of childhood to media they consume in their everyday lives.

COMM 2750 Latin American Icons (3)
This course examines the rise of political icons in modern and contemporary Latin American societies. In particular, it highlights the intersections between historical context, individual biographies and mass media. The course emphasizes how symbolic representations have been mobilized to construct and challenge the iconic status of political actors and explores some of the most important political movements and conflicts that have shaped Latin America's history, including nationalism, populism, and revolution.

COMM 2810 Special Topics (3)
Special topics course as designed by visiting or permanent Communication department faculty. For description, consult the department. Course may be repeated up to unlimited credit hours under separate title. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 2811 Special Topics (3)
Special Topics in Communication.

Course Limit: 99

COMM 2812 Special Topics (3)
Special Topics in Communication.

COMM 2813 Special Topics (3)
Special Topics in Communication.

Maximum Hours: 99

COMM 2814 Special Topics (3)
Special Topics in Communication.

COMM 2815 Special Topics (3)
Special Topics in Communication.

COMM 2820 Special Topics (3)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 2821 Special Topics (3)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 2822 Special Topics (3)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. May be taken twice for credit on different topics.

COMM 2823 Special Topics (3)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. May be taken twice for credit on different topics.

COMM 2824 Special Topics (3)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. May be taken twice for credit on different topics.

Course Limit: 2

COMM 2825 Special Topics (3)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. Course may be repeated unlimited times for credit.

Course Limit: 99

COMM 2826 Special Topics (3)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. Course may be repeated unlimited times for credit.

Course Limit: 99

COMM 2827 Special Topics (3)

COMM 2828 Special Topics (3)

COMM 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): COMM 2720.

Maximum Hours: 99

COMM 3140 Cross-Cultural Analysis (3)
A critical examination of communication in intercultural, interethnic and international contexts. An overview of models and approaches designed to explain cultural differences in communication with emphasis on the dimensions of symbolization, acculturation, prejudice, stereotyping and ideology. Conceptual frameworks are applied and tested within a range of cultural populations as defined by race, ethnicity, gender, physical disability, sexuality, socio-economic class and geographic location.

Prerequisite(s): COMM 1150, 1250, 1350, 1450, 1550 or 1650.

COMM 3150 Film Analysis (4)
Introduction to film analysis designed to help students develop a visual literacy with regard to film and a critical understanding of how films produce meanings. Focus is on formal analysis of film including elements such as narrative, mise-en-scene, editing, camera movement, sound and on key critical and theoretical approaches such as neoformalism and psychoanalysis. Classical Hollywood cinema and avant-garde and independent filmmaking traditions are studied in order to focus on the politics of form required film journal helps students develop analytical and critical skills. Required course for the film studies minor.

Prerequisite(s): COMM 1150, 2550, 1250, 1350, 1450, 1550 or 1650.

COMM 3160 Technology Analysis (3,4)
The study of the structure of technology industries and their properties based on humanistic and social science approaches. Theorizes history and major trends in technology ownership and governance: the function of materialities and their infrastructures in reinforcing or altering societal relations: and the effects of this political economy on users and citizens. Familiarizes students with research methods for analyzing technology in society.This course fulfills a core course for Communication majors in the area of Structures and Institutions and a Social and Behavioral Course in the Core Curriculum.

Prerequisite(s): COMM 1150, 1250, 1350, 1450, 1550 or 1650.

COMM 3250 Rhetorical Criticism (3,4)
The description, analysis, interpretation and evaluation of persuasive uses of language. Emphasis on classical, situational, generic, dramatistic and ideological methods of criticism. Judgments about aesthetic, pragmatic, logical and ethical dimensions of rhetoric.

Prerequisite(s): COMM 1150, 1250, 1350, 1450, 1550 or 1650.

COMM 3260 Media Industry Analysis (3,4)
The study of the structure of media industries and their contents based on humanistic and social science approaches. Theorizes major trends in industry ownership and practices; the effects of political economy on textual symbols, discourses and genres; the function of media programming in reinforcing or altering perceptions of ideas, events, and people. Familiarizes students with research methods for analyzing media.

Prerequisite(s): COMM 1150, 1250, 1350, 1450, 1550 or 1650.

COMM 3270 Topics in Authors and Genres (3)
Questions of authorship and of genre are two key paradigms of film criticism. This course examines the aesthetic and theoretical bases for notions of authorship and genre in the cinema including romantic theories of art, auteur criticism, structuralism and post-structuralism. It also considers the historical development of the oeuvre of individual directors as author e.g. Hitchcock) and of particular film genres both in Hollywood cinema (e.g. film noir) and in non-mainstream and non-U.S. cinema. Genres and directors studied will change. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 3310 Comm for Feminism Activitism (3)
What is feminist activism? Words like “feminism” or “activism” often carry socialized meanings beyond their textbook definitions. Advocacy and feminism are about action, and students will learn about the many different kinds of social change activities available to them. Students will learn tactics and strategies to communicate their persuasive messages to stakeholders, including clients, news media, and decision makers

COMM 3320 Politics of Popular Culture (3)
This course will introduce students to critical thinking through the theories of cultural studies, ranging from culturalism, Marxism, psychoanalysis, gender and sexuality, and postcolonialism to postmodernism. Theories of cultural studies critically contextualize, examine and theorize culture as it influences and shapes our everyday lives and social structures. Students will learn about the various approaches to analyzing culture based on the canonical works of cultural study theorists and how to apply their critical theories to contemporary examples.

COMM 3350 New Media Analysis (3)
In this course, we study key issues in contemporary new media studies and engage in close textual analysis. We focus on the multi-layered textual aspects of the Internet and computer. These texts are some combination of images.

Prerequisite(s): COMM 1150, 1250, 1350, 1450, 1550 or 1650.

COMM 3410 Reality TV (3,4)
This course is a critical examination of the ever-growing roster of reality television programs. It is impossible for us to consume and analyze every reality television show or sub-genre this term. Instead, we will study the contours of the genre and critically engage with a sample platter of reality televisual offerings. Through scholarly readings, lectures, group discussions, in-class and at-home episode screenings, and creative projects, we will study reality television's history; its deep ties to neoliberalism and surveilance culture; its role as a celebrity-making apparatus; and the voyeuristic experience of watching and being watched. Moreover, we will pay particular attention to the intersection of gender, race, class, sexuality, and citizenship in reality TV representations and reception, as well as depictions of New Orleans and Louisiana culture on reality TV.

COMM 3420 Disability & Reality TV (3)
This course examines the ever growing-roster of reality television programs focused on the disabled body and mind. Bridging critical disability studies of reality television together we will explore the politics of ability in reality televisual texts with emphasis on representations of disability and their intersection with gender, race, class, sexuality, and citizenship. This course contextualizes our analysis in a broader history of disability as a site of public spectacle and the emergency of reality television as a genre. Students will interrogate the social function and consequences of these televisual texts as well as critically consider their own relationships to them.

COMM 3500 British Cultural Studies (3)
This course examines British contemporary multicultural society through the field and method known as cultural studies, which also has its intellectual roots in Britain. This course will introduce students to the terms, analytical techniques, and interpretive strategies commonly employed in cultural studies. Emphasis is on interdisciplinary approaches to exploring how everyday cultural processes and cultural artifacts are produced and how meaning is shaped through contestations of race, class and gender, and national identity. Through discussion, research, and writing, class members investigate these varied dimensions of British multiculture; learn to understand them in their broader historical, aesthetic, and political contexts.

COMM 3510 Environmental Comm (3)
The purpose of this course is to provide an understanding and analysis of communication processes used in defining environmental issues and shaping environmental policies. Topics include defining nature and environment; diverse audiences and environmental messages; developing strategies for risk communication; and creating effective environmental campaigns. Case studies of successful and unsuccessful environmental communication will be examined.

COMM 3520 Topics in Cinema and Politics (3,4)
This course focus on the relationship between cinema and politics as it pertains to formal, historical, and institutional ways of analyzing film. Topics will include environmentalism and contemporary eco cinema, sexual representation and pornography, and social problem films during the progressive Era in the United States Hollywood, silent cinema, global and national cinemas will be included as they are relevant to the topic covered.

COMM 3560 History of Animation (3,4)
This course examines the history of animation within the field of film studies. The shift to digital cinema has encouraged historians and theorists to revise distinctions between animation and film and to reckon with the pervasiveness of moving image media created through diverse techniques. To understand the implications of this shift and the significance of animation within media history, this course analyzes animation genres, techniques, and styles and investigates theories of animation as they developed from the late 19th century up to the present.

COMM 3600 Documentary Film (3)
The films to be studied in this course are selected from the spectrum of documentary film practice from the 1920s to the present. Concentration will be on specific topics as well as an historical overview. Consideration placed on the developing and shifting conception of documentary film practice, social issues, political and propagandistic values, and documenting other.

COMM 3610 Alternative Journalism (3,4)
This course is rooted in building community engagement journalism practice as well as examining media coverage of underrepresented histories through a social justice lens.

COMM 3620 Digital Civic Engagement (1-3)
Digital Civic Engagement is a course that studies, analyzes, and teaches how citizens engage communities online to improve public knowledge and civic dialogue. The connectivity created by digital platforms to foster citizen engagement is one of the most important and distinctive organizing features of contemporary political life. Dispersed knowledge and community engagement helps define and deconstruct boundaries of the social and political community while redefining, and at times erasing, divisions that are founded on inequity and exclusion. Given largely asynchronously with synchronous check-ins, students choose how they apply this knowledge by serving a digital nonprofit through one of five service projects: content creation, content curation, media archiving, development/fundraising, online research.

COMM 3650 Feminist Doc & New Media (3)
A service-learning, praxis-oriented course in which students develop analytical and reflective skills by critiquing and creating feminist documentation in various media. Study of history and theory of feminist documentary filmmaking and new media will be complemented with learning production and postproduction skills. Weekly volunteer work will be done with an organization serving women and girls in New Orleans.

COMM 3720 Disability Media Studies (3)
In this class, we will explore the relationship between disability and media. Our analyses will span film, television, advertisement, new media, social media, media technologies, and other cultural mediums across history and into the present. The beginning of the course will introduce students to the field of disability studies and its relevance to media studies. Through an interdisciplinary lens, students will consider how people with disabilities were and are represented in the media with particular attention to how disability intersects with gender, race, sexuality, and class identity. Beyond themes of representation, our course deeply interrogates disability media access. We will consider how people with disabilities have responded to inaccurate and inaccessible media and innovatively used media outlets to represent themselves and produce culture on their own terms.

COMM 3730 Race, Nature, and Disaster (3)
This interdisciplinary course examines the intersections of race, politics, and environmental and biological disaster. We will look at how ideas about race in the U.S. have shaped and been shaped by social policy, global politics and economics, and U.S. foreign policy, and investigate how certain populations within and outside the U.S. become disproportionately vulnerable to wide-scale disaster. Readings and discussions focus on the human-made dimensions of biological disasters, such as typhus, the bubonic plague, HIV/AIDS, the cholera outbreak in Haiti after the 2010 earthquake, and the current COVID-19 crisis. In thinking about how vulnerability is created and maintained according to a racial logic, we will interrogate the following questions: How is the construct of “nature” framed in opposition to “humanity”? How do claims to objective knowledge about nature operate in political realms? In what ways has the nature/humanity binary informed the construction of racial categories and racism? How do ideas of nature serve to obscure the complex intersections of environmental and social factors in our daily realities? How do discussions of crisis and disaster (in other words, exceptional situations) serve to authorize extreme measures? How do certain versions of international humanitarianism deny the global interconnectedness of nation-states and the culpability of those giving aid in the dire circumstances of those receiving it?

COMM 3750 Digital Cinema (3,4)
This course introduces students to the history of digital cinema and examines the cultural and political implications of our evolving digital media environment. The transition to the everyday use of digital technologies has been theorized as remediating, relocating, and converging earlier media forms. This course explores the place of film history and theory in this transition and it considers whether this transition marks the end of cinema.

COMM 3800 Cine Reception & Cult Memory (3)
This course investigates historical changes in film audiences, film exhibition and film reception from the silent to the contemporary period as well as the issue of cultural memory and cinema. Issues focusing on who the audience for cinema has been during different historical periods, that changes have taken place in the venues in which films have been shown and cinema reception as cultural history are explored. The course also theorizes questions of reception and memory in terms of psychoanalysis, oral history and the public sphere. This course includes an optional service learning component. COMM 3150, Film Analysis, is recommended but not required.

COMM 3810 Special Topics (1-4)
Special Topics in Communication. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 3811 Special Topics (3-4)
Special Topics in Communication. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 3812 Special Topics (3-4)
Special Topics in Communication. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 3813 Special Topics (3-4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 3814 Special Topics (3)
Special Topics in Communication. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 3820 Special Topics (3-4)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 3821 Special Topics (3-4)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 3822 Special Topics (3-4)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 3823 Special Topics (3-4)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 3824 Special Topics (3-4)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. May be taken twice for credit on different topics.

Maximum Hours: 99

COMM 3825 Special Topics (3-4)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 3940 Transfer Coursework (3)

Maximum Hours: 99

COMM 4140 Black Internationalism in U.S. (3,4)
Throughout the twentieth century, African American cultural producers used international travel to see beyond the limits of racial discrimination in the U.S. Traveling abroad allowed these authors to imagine new configurations of race, gender, and class back at home. This course will trace the vibrant, ongoing tradition of black internationalism, focusing on its often utopian undercurrents—in particular, its frequent crossing of racial and sexual hierarchies. In so doing, this course will address the relationship between internationalism as a unifying movement of resistance and nationally enforced oppressions; between a solidarity of what Richard Wright termed “scattered but kindred spirits” and enfranchisementat home. Our course will investigate black internationalism as a diverse appropriation of socialist thought as developed by key theorists and activists of the African Diaspora.

COMM 4150 Contemporary Hollywood Cinema (3)
This course focuses on three key aspects of contemporary Hollywood cinema, namely, the film industry, film form and style, and the production, distribution, and reception of films in the digital age. Key topics include conglomeratization of the film industry, the blockbuster film, films as a franchises, the rise of independent cinema, and independent films, digital distribution, the role of film festivals, and ·pop-up cinema. The course concludes with how the film experience is changing in the era of digital distribution and multiple screens.

COMM 4160 Contemporary Chinese Cinema (3)
This course offers a survey of Chinese-language films made from mid-1980s to early 2000s. The class will focus on three aspects of contemporary Chinese cinema: its artistic features, historical context, and socio-political implications and tackle the following questions: What is a Chinese" cinema? How do contemporary Chinese filmmakers inherit

COMM 4170 U.S. Film History (3,4)
This course covers major formal, industrial and cultural issues in the history of cinema in the United States from 1895 to the present Course topics include the formal distinctiveness of the early period, the emergence of continuity editing and the classical Hollywood style, post-classical cinema. Monopolistic industry practices, exhibition venues, the studio system, synchronized sound. Contemporary independent production, and the relationship between film and commodity culture. Case studies on censorship, the representation of race and black radical politics, and female spectatorship integrate formal, industrial and cultural analysis.

COMM 4190 Intro to Latin American Film (3)
The development of cinema in Latin American from its arrival as an imported technology to the present. Films studied in relation to the sociopolitical environment and emphasis placed on close analysis as well as a contextual understanding of the material. Topics include the struggle to create national Film industries, the art film and New Cinema movements, and recent trends in countries such as Mexico and Argentina.

COMM 4200 Media Literacy/Media Educ II (3)
This is the second semester of a two-semester course that introduces students to media literacy–what it is, media education, and basic media pedagogy. In the second semester, students put to use the media literacy knowledge gained in the first semester by applying those pedagogical considerations in the classroom, assessing student outcomes, and effectively teaching media literacy concepts.

Prerequisite(s): COMM 3200.

COMM 4261 Feminism, Sci-Fi & Technology (3,4)
This course considers how contemporary science fiction, new technologies and critical writings about feminism, gender, identity and the body interconnect. Topics under consideration include differently gendered worlds, horror, alien invasions, parasitical relationships, cyborg embodiment, and the gendering of computer and Internet settings.

COMM 4262 Dangerous Women: Communication, Culture & Body (3,4)
An investigation of how human bodies communicate cultural identities and relations historically and across spaces. May repeat under a different topic. May repeat under a different topic (COMM 4260, 4261) for credit.

COMM 4270 SciFi, Sex and Race (3)
While science fiction forces us to see what is familiar in new and surprising ways, imagining the unfamiliar also builds upon the familiar. This makes sci-fi a good 'venue' to study the widespread assumptions about human nature in different settings. This course interrogates how we negotiate these basic human categories through various science fiction films and theoretical essays. Reflection on these topics will hopefully provoke fascinating and difficult philosophical questions about the nature of reality, the limits of human knowledge, the notions of personal (racial, ethnic, sexual) identity, and the nature and foundations of universality of these categories.

COMM 4280 Race, Ethnicity & Television (3)
This course examines race and ethnicity in American television from the 1950s to the present. More specifically, it explores the social, political, historical and institutional contexts that have shaped representations of Asian/Americans, Latino/as, and African Americans on television. By analyzing racial and ethnic images within the development of television, students will gain a deeper understanding of the complex histories that shaped the formation of each ethnic group. While the focus of the course centers on the politics of representation, it moves the discussion beyond the question of stereotypes to explore how concepts such as Orientalism, whiteness, multiculturalism, and post-race contribute to our understanding of racial politics in the United States.

COMM 4300 Cultural Politics & Cinema (3)
This course examines the relationship between media, society, and political discourse as they manifest in the complexities of cultural production beyond US borders. As such, it will be framed around issues pertaining to historical formation and broader political dynamics. This course presumes familiarity with methods of film or media analysis. May repeat under a different topic (COMM 4301, 4302) for credit. Notes: Fulfills capstone requirement for FMST. For capstone credit, students should register for FMST 5110 with 0 credits.

COMM 4301 Media & Democracy in Latin Am (3)
This course examines the role of the mass media in contemporary Latin American democracies. In particular, it investigates whether communication institutions and practices have contributed to promote or to curb the regions' process of democratization, especially in terms of the quality of political representation and political accountability. The course also examine the impact of social and political democratization on the region's media systems.

COMM 4350 Gender and The Cinema (4)
Explores the position of women in Hollywood and other cinemas by studying the evolution of women's cinema and of feminist film theories from the 1920s to the present. The history of feminist film analysis, focusing on theoretical sociological, psychoanalytic, semiological underpinning of feminist critiques of both commercial and independent avant-garde film practices.

COMM 4360 Formation of Cultural Space (3)
This course will serve as an introduction to the concept of "space" as it applies to theories of technology, emerging media and communication. Students will be exposed to the foundational theorists in each of these areas as well as the threads connecting them. Students will be asked to take these models and apply them to the rich media landscape that surrounds them. They will be asked to evaluate the changing relationship between theory and practice as well as the problem of increased technological advancement

COMM 4400 Media and the Public Sphere (3,4)
This course explores theories of and debates about the public sphere, with a particular focus on the role of media in shaping power an democracy. Taking canonical theorists such as Hannah Arendt and Jürgen Habermas as our starting point, we explore the rich potential and the limitations of classic conceptualizations of the public sphere for understanding contemporary politics. We consider the role played by dynamics such as public debate, gender, sexuality, race, crowds, mass culture, political paranoia, and fake news in shaping twentieth and twenty-first century political ideals and practices, examining the similarities and difference in how these dynamics work in global contexts from capitalism to state socialism, in the Global North and in the Global South. We also consider what insights might be gained by an interdisciplinary approach to questions of the public sphere.

COMM 4410 Ethnography of Digital Media (3,4)
In this course, we consider how ethnographers have adapted to new 21 st century methodological challenges, what new challenges are posed by COVID-19, and how ethnography can shed light on a range of pressing topics in media studies, including the politics of infrastructure, representations of the self, labor and the information economy, media piracy, fan cultures, fake news, and contemporary social movements. As part of the course, students also conduct their own ethnographic research project on a digital media topic of their choosing.

COMM 4440 Critical Race Theory (3,4)
Critical race theory was a term that was coined to refer to an area of legal studies developed by African American, Latino, and Asian American scholars to address questions of racial injustice. However, the broader field of critical race theory today incorporates multi-disciplinary scholarship that works to create critical knowledge about social inequalities and racialized power relations.

COMM 4553 Brazilian TV & Culture (3,4)
This course analyzes the dynamic interactions between television, culture and power in Brazil. It emphasizes the role of television as one of the central institutions that mediate the constitution of hegemonic values and meanings in Brazilian society, with an emphasis on the dominant media company (TV Globo) and on the most popular TV genre (telenovelas).

COMM 4560 Internship Studies (3)
This course will challenge the student to apply intelligently the principles, methods, and skills that they have learned in academic settings to the practical experience of an internship with a nonprofit, social service organization. Topics include learning about communication within a complicated political and cultural context, how context affects rhetorical strategies, adaptive communication among diverse social groups, and how these experiences work to prepare the student for a career in a communication field. Provides combination of academic work, and practical experiences in communication with specific service learning organizations. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 4570 Internship Studies (3)
This course will challenge the student to apply intelligently the principles, methods, and skills that they have learned in academic settings to the practical experience of an internship with a nonprofit, social service organization. Topics include learning about communication within a complicated political and cultural context, how context affects rhetorical strategies, adaptive communication among diverse social groups, and how these experiences work to prepare the student for a career in a communication field. Provides combination of academic work, and practical experiences in communication with specific service learning organizations. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 4580 Media Moral Panics & Crisis (3)
This course will focus primarily on how fears spread, become a major public concern, and turn into a social and political crisis. We will look at controversies, panics around issues such as pedophilia, drugs and terrorism, and analyze the processes that elicit alarm about perceived threats to society and produce 'folk devils' (enemies of society).

COMM 4610 National Cinema Latin Am (3)
A detailed historical, thematic, and stylistic analysis of individual national cinemas in Latin America (Cuban cinema, Brazilian cinema, Mexican cinema, for example). Emphasis will be placed on understanding the development of national cinema industries and movements in the context of other social, economic, political, and aesthetic forces. Notes: May be repeated for credit if the national cinema studied is different. COMM 4190, Intro to Latin American Cinema, is highly recommended, although not a prerequisite.

COMM 4650 Asians in American Film & TV (3)
This course examines representations of Asian/Americans in American film, video and television, from the silent era to the present, situating them within their social, cultural, political, and historical contexts. The course will address a series of key questions including but not limited to: Orientalism. Yellow Peril, the Model Minority myth, masculinity, and Asian American aesthetics. By critically exploring these issues, we will gain a deeper understanding of the complex history that has shaped Asian/American experiences and identity formations. The course further expands beyond the question of stereotypes to situate Asian/American media in dialogue with concepts such as Third Cinema. diaspora, identity politics, and racial performance.

COMM 4670 Creative Economy Topics (3,4)
This course explores the intersections between political economy and culture in the formation and sustainability of creative economies and creative production. Topics to be covered in this course may include: creative and cultural policy, creative classes, cultural labor, specific cultural industries, and film and media economies. Course may be repeated up to unlimited credit hours. Topics courses may be repeated for credit under different topic titles, such as: Creative Cities, Creative Labor, and Creative Industries. At the undergraduate level, this course fulfills the tier-2 service learning requirement. It is one of the possible 4000-level electives for the major. At the graduate level, this course fulfills an elective in programs in the School of Liberal Arts. Please consult your program advisor for the course's commensurability with your area of study.

Corequisite(s): COMM 4890.

Maximum Hours: 99

COMM 4750 New Media Theory (3)
This course will explore the conceptual frameworks and theories that are essential to an understanding of modern media, a succession of new media including photography, film and digital media. We will focus on theories of semiotics, ideology, psychoanalysis, narrative, modernism, and postmodernism, which have formed the bases for analyzing forms of reproduction from the mechanical to the digital. We will consider the interrelationships, linkages and ruptures, between different media and the process of remediation in which the content of a new medium is the older medium that it has replaced. We will end by examining digital media in the context of social/cultural/political formations, gender, race, community, public sphere and global flows.

COMM 4770 Theories of Consumption & Prod (3)
This course analyzes theoretical construction of media audiences and media producers historically and in contemporary contexts. Liberal, Marxist and feminist paradigms will be explored along with a variety of research methods used in audience and producer studies.

Prerequisite(s): COMM 3260.

COMM 4810 Special Topics (3,4)
Special Topics in Communication. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 4811 Special Topics (3,4)
Special Topics in Communication.

Maximum Hours: 99

COMM 4812 Special Topics (3-4)
Special Topics in Communication.

COMM 4813 Special Topics (3)

COMM 4814 Special Topics (3-4)
Special Topics in Communication.

Maximum Hours: 99

COMM 4820 Special Topics (3,4)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. May be taken twice for credit on different topics. This course satisfies the capstone requirement. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 4821 Special Topics (1-4)
A detailed study of particular issues, problems and developments in the history, theory and criticism of communication. Topics may be drawn from any of the departmental areas of concentration, for example, the concept of invention, the rhetoric of religion, non-verbal communication, mass media and culture and similar themes. May be taken twice for credit on different topics. Course may be repeated up to unlimited credit hours.

COMM 4830 Spectacular Cinema (4)
This course investigates the spectacular nature of cinema and the function of spectacle and visual/special effects in the history of cinema. Filmic expressions of spectacle are studied in dialogue with philosophers and theorists equally interested in spectacular aesthetics and concepts ranging from the sublime and uncanny to commodity fetishism and attention economy.

COMM 4840 Cinema, History, Archive (3,4)
This course focuses on cinema as a site for interrogating historical, textual, institutional and theoretical issues about the archive. Topics include tropes of archive, the media/ted archive, films as cultural memory, histories of cinema archives, the electronic archive, theories of the archive, and archives in relation to power and knowledge. Film examples are drawn from contemporary Hollywood cinema, silent cinema, classical Hollywood cinema, experimental documentary, and independent and avant-garde cinema.

COMM 4850 Cinema Technology Modernity (3-4)
Focus on cinema as a cultural practice during the early and late periods especially as it has shaped perception and experience. Films are assessed for the way they reenact the logic of key technologies and for the way they represent technologies. Cinema is also viewed as a technology of vision in its own right. In particular, 19th century optical toys, the railroad, photography , the computer and cinema are assessed in relation to shifting conceptions of space and time, modes of experience, the terms of everyday life, and the status of mass culture and reproduction in the modern and postmodern periods.

COMM 4860 Film Theory (4)
An advanced course focusing on contemporary French, British and U.S. film theory. Topics include realism and phenomenology, Russian Formalism, neoformalism, structuralism, narratology, Marxism and ideology, psychoanalysis, cinema semiotics, feminism and poststructuralism. Debates covered assess film as a text; the relationship between film and the spectator; and the implications of cinema as a historical phenomenon, including the status of digital cinema. Early, classical Hollywood, contemporary, and avant-garde films screened. A required film journal helps students develop analytical skills. Required for the Film Studies major or minor.

Prerequisite(s): COMM 3150.

COMM 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): COMM 4670.

Maximum Hours: 99

COMM 4910 Independent Study (1-3)
Open to qualified juniors and seniors only. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 4920 Independent Study (1-3)
Open to qualified juniors and seniors only. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 4990 Honors Thesis (3)
This course will enable students to integrate knowledge about the specific nature of film as a medium and the history of theoretical debates that have shaped the study of film and of cinema. It will also provide students with an opportunity to apply the formal and theoretical knowledge gained from the two required courses for the major to consider new theoretical problems about cinema, revisions, and reassessments of earlier debates in film studies and related fields, questions of national cinema, and/or new developments in filmmaking. Fulfills capstone requirement for FMST when approved as film topic. In this case, students should also register for FMST 5110 with 0 credits.

COMM 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): COMM 4990.

COMM 5110 Capstone Component (0)
The zero credit add-on that designated an approved upper-level course to satisfy the capstone requirement. Consult the department for this list of courses.

Corequisite(s): COMM 4830.

COMM 5380 Junior Year Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 5390 i (0-20)

Maximum Hours: 99

COMM 6210 Seminar In Comm Studies (3)
An intensive study of a specific issue or set of issues in rhetoric and public address, interpersonal communication, or mass communication (e.g. propaganda, legal communication research), or of an individual theorist (e.g. Aristotle. Kenneth Burke), or genre of discourse (e.g. ideological argumentation, the rhetoric of social movements). Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 6220 Seminar In Comm Studies (3)
An intensive study of a specific issue or set of issues in rhetoric and public address, interpersonal communication, or mass communication (e.g. propaganda, legal communication research), or of an individual theorist (e.g. Aristotle, Kenneth Burke), or genre of discourse (e.g. ideological argumentation, the rhetoric of social movements). May be taken twice for credit on different topics. This course satisfies the capstone requirement. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

COMM 6670 Topics in Creative Economy (3)
This course explores the intersections between political economy and culture in the formation and sustainability of creative economies and creative production. Topics to be covered in this course may include: creative and cultural policy, creative classes, cultural labor, specific cultural industries, and film and media economies. Course may be repeated up to unlimited credit hours. Topics courses may be repeated for credit under different topic titles, such as: Creative Cities, Creative Labor, and Creative Industries. This course fulfills an elective in programs in the School of Liberal Arts. Please consult your program advisor for the course's commensurability with your area of study.

Course Limit: 99

COMM 6910 Independent Study (1-3)

Maximum Hours: 99

Computational Science (COSC)

COSC 2020 Comput Concepts & Applic (4)
This course introduces students to the foundations of algorithm development and programming, basics of matrix algebra and numerical analysis, solving ordinary differential equations.

Corequisite(s): COSC 2021.

COSC 2021 Computing Concepts & App Lab (0)
Lab for ENGP 2020.

Corequisite(s): COSC 2020.

COSC 3000 C++ Prog For Sci & Engr (3)
This course begins with an introduction to C++ and will cover up to relatively sophisticated programming techniques including data structures, abstract data types, interfaces, and algorithms. The goal is for the student to get a taste of the design and implementation of large programs and to become proficient at programming in C++.

COSC 3100 Data Visualization (3)

COSC 3200 Large Scale Computation (3)

COSC 6000 C++ Prog For Sci & Engr (3)
This course begins with an introduction to C++ and will cover up to relatively sophisticated programming techniques including data structures, abstract data types, interfaces, and algorithms. The goal is for the student to get a taste of the design and im

COSC 6100 Data Visualization (3)

COSC 6200 Large Scale Computation (3)

COSC 6600 Comput Model Biomed Sys (4)
The objective of this graduate course is to provide students with the skills and knowledge necessary for computational modeling of biological and physiological systems. The first half of the course will cover introduction to UNIX, and elements of programming.

Corequisite(s): COSC 6601.

COSC 6601 Comp Model of Biomed Sys Lab (0)
Lab section for COSC 6600.

Corequisite(s): COSC 6600.

COSC 6700 Math Models Ecol & Evolution (3)
An introductory course in mathematical modeling in biology with emphasis on construction and interpretation of models in ecology. The goals of the course are to provide training in a wide variety of mathematical and computational techniques that are used

Computer Science (CMPS)

CMPS 1005 Python Programming (3)
An introductory course on computer programming, in which the students design, implement, test, and debug programs for computational problems using Python programming language. This course emphasizes program design process, object-oriented software development approach, and practical programming skills that translate to programming in other modern languages. Assignments include practical problems drawn from various fields (e.g. biology, linguistics, graphics, and games). Open to high-school students only, no prerequisites. Credits don't count toward Coordinate Major in Computer Science.

CMPS 1100 Foundations of Programming (3)
An introductory practice-oriented course on computer programming, in which the students design, implement, test and debug programs for computational problems drawn from various fields using Python programming language, while working individually and in groups. This course emphasizes program design process, object-oriented software development approach, and development of practical programming skills that translate to programming in other modern languages. This is a stand-alone introductory computer science course that is not a part of the coordinate major in computer science program. It is aimed at students with no prior computing background who wish to learn the foundations of programming and computational problem solving.

CMPS 1500 Intro to Computer Science I (4)
Computational tools are a critical part of our everyday lives. Software is the driving force behind cutting-edge scientific discovery, blockbuster entertainment, and today's fast-paced marketplace. This course is an introduction to techniques, ideas, and problem-solving approaches that are used to develop some of these tools. At a high level, we focus on developing "computational thinking", which is the practice of using abstraction to design and implement algorithms and software to solve problems that arise in many different areas of our daily lives, such as networks, social media, and scientific computing, to name just a few. At a practical level, students will design, implement, test and document their programs to learn introductory programming concepts, such as: data types and data structures (e.g. lists, dictionaries, trees); programming techniques (modular design using functions, recursion, object-oriented programming); performance analysis via theoretical estimate, profiling and timing. Most assignments in this course are programming assignments aimed to teach the students to express their ideas in efficient and elegant code; no prior programming experience is necessary to join and succeed in the course. Lecture periods are dedicated to introducing new material, discussions, individual and group activities. Lab periods are used for programming practice. CMPS 1500 is the first course for the Coordinate Major in Computer Science.

Corequisite(s): CMPS 1501.

CMPS 1501 Intro to Computer Sci I Lab (0)
Corequisite lab of CMPS 1500.

Corequisite(s): CMPS 1500.

CMPS 1600 Intro to Computer Science II (4)
This course is an introductory breadth course for computer science, focusing on several core topics in the design, analysis and implementation of computational tools that are drawn from the fields of data structures, software engineering, and programming languages (such as Java, C, Haskell). Object-oriented programming, test-driven development, data structures and abstract data types, imperative programming and memory management, and functional programming will all be covered. By solving practical, real-life problems in different programming languages and in different ways, students learn to select a language and approach most appropriate for the situation and prepare to learn new languages independently. The high-level goal of this course is to train students to be able to draw from a versatile set of skills, which in turn will provide a strong foundation for further study in computer science.

Prerequisite(s): CMPS 1500, BMEN 2020, ENGP 2020 or CMPS 3160.
Corequisite(s): CMPS 1601.

CMPS 1601 Intro to Comp Science II Lab (0)
Corequisite lab of CMPS 1600.

Prerequisite(s): CMPS 1500 or (CMPS 1100 and 3160).
Corequisite(s): CMPS 1600.

CMPS 1660 Special Topics in Computer Sci (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CMPS 1940 Intro Topics in Computer Sci (1-4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CMPS 1950 Computer Science Principles (3)

CMPS 2120 Programming and Prob Solving (3)
An introductory course on computer programming and problem-solving using computers. In this course students design, implement, test and debug programs for computational problems using Python programming language. This course emphasizes program design process, object-oriented software development approach, and practical programming skills that translate to programming in other modern languages. Assignments include practical problems drawn from various fields (such as biology, linguistics, graphics, and games).

CMPS 2170 Intro to Discrete Math (3)
This course is an introduction to several areas of mathematics that are particularly useful in computer science. The topics include an introduction to predicate and propositional logic, mathematical induction, combinatorics and counting, and discrete probability theory. In lieu of prerequisites please contact instructor for consideration.

Prerequisite(s): MATH 1210, 1310, 1150 or 1110.
Corequisite(s): CMPS 2171.

CMPS 2171 Intro to Discrete Math Lab (0)
Co-requisite lab of CMPS 2170.

CMPS 2200 Intro to Algorithms (3)
This course is an introduction to the design and analysis of algorithms, and covers several basic algorithmic paradigms and their application to core computational problems in graph theory and optimization, as well as analysis of time and space complexity. The primary focus of the course will be on understanding the divide-and-conquer, greedy and dynamic programming paradigms for algorithm design as well as the problem areas to which they can be applied. Example application areas include graph theory, discrete optimization, numeric and scientific computing and machine learning. Topics usually include: asymptotic analysis and big-O notation; divide-and-conquer algorithms; recurrences and the master method; greedy algorithms; graph algorithms (Breadth-First Search, Depth-First Search, Connectivity and Shortest Paths); dynamic programming; linear programming; lower bounds and computational complexity.

Prerequisite(s): CMPS 1600 and (MATH 2170 or CMPS 2170).

CMPS 2201 Intro to Algorithms Lab (0)
Corequisite lab of CMPS 2200.

Prerequisite(s): CMPS 1600 and (MATH 2170 or CMPS 2170).
Corequisite(s): CMPS 2200.

CMPS 2300 Intro to Comp Sys & Networking (3)
Modern computer systems must take advantage not only of the latest hardware technology, but also of the ability to compute and communicate over a network. In this course the students will study the principles behind the design of modern operating systems and distributed systems through theoretical study of classic solutions and hands-on programming assignments in C. The study of architecture and organization of modern operating systems focuses on the concepts of virtualization, concurrency, and persistence. In the study of distributed systems we will examine topics such as protocol design, asynchronous and synchronous communication, and layered network architecture.

Prerequisite(s): CMPS 1600.
Corequisite(s): CMPS 2301.

CMPS 2301 Intro to Comp Sys & Netwk Lab (0)
Corequisite lab of CMPS 2300.

Prerequisite(s): CMPS 1600.
Corequisite(s): CMPS 2300.

CMPS 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

CMPS 3130 Intro Computational Geometry (3)
This course provides an introduction to geometric algorithms and geometric data structures. Computational Geometry is a young discipline which enjoys close relations to mathematics and to various application areas such as geometric databases, molecular biology, sensor networks, visualization, geographic information systems (GIS), VLSI, robotics, computer graphics and geometric modeling. Covered topics include fundamental geometric algorithm design and analysis paradigms, geometric data structures for planar subdivisions and range searching, algorithms to compute the convex hull, Voronoi diagrams, and Delaunay triangulation, as well as selected advanced topics.

Prerequisite(s): CMPS 2200.

CMPS 3140 Intro Artificial Intelligence (3)
The aim of this course is to provide the student with an introduction to the main concepts and techniques playing a key role in the modern arena of artificial intelligence. In addition to covering the main topics that concern modern AI, particular attention will be devoted to its applications in several fields. Among the topics covered are: "What is an intelligent artificial agent?", problem solving using search and constraint satisfaction, uncertainty, Bayesian networks and probabilistic inference, supervised learning, planning, sequential decision problems, as well as several additional topics.

Prerequisite(s): CMPS 2200.

CMPS 3160 Introduction to Data Science (3)
The aim of this course is to provide the student with an introduction to the main concepts and techniques required for collecting, processing, and deriving insight into data. Data Science is an interdisciplinary set of topics that includes everything you need to create data driven answers and solutions to specific business, scientific, or sociological questions. Topics typically covered include an introduction to one or more data collection and management systems, e.g., SQL, web scraping, and various data repositories; exploratory and statistical data analysis, e.g., bootstrapping, measures of central tendency, hypothesis testing and machine learning techniques including linear regression and clustering; data and information visualization, e.g., plotting and interactive charts using various technologies; and presentation and communication of the results of these analyses.

Prerequisite(s): CMPS 1500, 1100, ENGP 2020 or BMEN 2020.

CMPS 3170 Introduction to Game Programming (3)
This course covers the fundamentals of 3D game development. We will focus on the Unity game engine and object-oriented programming with C#. You will learn various topics including vector math, event-driven programming, and Unity tools and techniques, the majority of which are applicable to all state-of-the-art game engines.

Prerequisite(s): CMPS 1600* or DMPC 2510.
* May be taken concurrently.

CMPS 3210 Algs Comp Struct Bio (3)
Over the last few decades, as we have been able to determine whole genome sequences, structural biologists have sought to determine and catalog protein structures with an increasing reliance on computational methods. Automated methods to analyze protein structure make it possible to leverage information from previously solved structures, and to interpret experimental data in a principled way. In this course, we will focus on the myriad of algorithms for analyzing numerous aspects of protein structure and protein-protein interactions.

Prerequisite(s): CMPS 2200.

CMPS 3240 Intro to Machine Learning (3)
This course provides an introduction to the fundamental concepts of machine learning and statistical pattern recognition. In addition, several examples of applications will be described. The topics covered include generative/discriminative and parametric/non-parametric supervised learning, including neural networks; unsupervised learning, including clustering, dimensionality reduction and kernel methods; learning theory, including tradeoffs, large margins and VC theory; reinforcement learning, including criteria for optimality, brute force methods, value function methods and direct policy search; feedforward/feedback adaptive control, direct/indirect adaptive control methods; and various applications.

Prerequisite(s): CMPS 2200.

CMPS 3250 Theory of Computation (3)
This course is an introduction to the theory of computation. It begins with regular languages and their representation as finite state automata, and continues with context free languages and pushdown automata. Turing machines and the Church-Turing Thesis are also considered, as well as decidability and reducibility. The basic notions of complexity theory area also covered, including P and NP for time complexity, as well as basic results about space complexity.

Prerequisite(s): MATH 2170 or CMPS 2170.

CMPS 3260 Advanced Algorithms (3)
This course focuses on advanced techniques in the design and analysis of algorithms and illustrates how they are used in deriving a variety of now-classic results. Topics include graph algorithms, randomized algorithms, parallel computing, linear programming, and approximation algorithms.

Prerequisite(s): CMPS 2200.

CMPS 3280 Information Theory (3)
This course is an introduction to Shannon's mathematical theory of information. It considers basic concepts such as information content, entropy and the Kullback-Leibler distance, as well as areas such as data compression and Shannon's Source Coding Theorem, coding, prefix codes, lossless channels and their capacity, and Shannon's Noisy Coding Theorem. Applications to various areas are also featured in the course.

Prerequisite(s): MATH 3050 or 3090.

CMPS 3300 Software Studio (3)
This is a project-oriented course on fundamentals of software development and software engineering. Working in teams, students apply a recognized software engineering methodology, a modern programming language, and software development tools (including an IDE, debugger, version control system, and testing framework) to design and implement a semester-long project – a software solution for a real-world problem. The high goal of the course is to train students to function efficiently in a real-world software development environment. To help reach that goal, the students do a lot of independent learning, teamwork, documentation and public presentation of their product and design process. The particular technologies employed in the course may change in synchrony with changes in the software engineering field, currently the focus is on engineering software-as-a-service using Ruby for programming language and Rails for web development framework.

Prerequisite(s): CMPS 2200.

CMPS 3310 Logic in Computer Science (3)
This course is an introduction to logic and its applications in computer science. The topics covered include soundness and completeness of propositional logic, predicate logic, linear time temporal logic and branching time temporal logics, and their expressive power, frameworks for software verification, Hoare triples, partial and total correctness, modal logics and agents, and binary decision diagrams.

Prerequisite(s): CMPS 2200 and (CMPS 2170 or MATH 2170).

CMPS 3340 Introduction to Deep Learning (3)
Introduction to concepts, algorithms, and practices of deep learning. Topics include mathematical building blocks of neural networks, deep learning libraries, stochastic gradient descent, machine learning fundamentals, classification and regression, computer vision, time series analysis, generative deep learning. (CMPS 6340 for graduate credit)

Prerequisite(s): CMPS 3160, 3240 or 4720.

CMPS 3350 Intro to Computer Graphics (3)
A comprehensive introduction to the mathematics and algorithms that drive today's digital special effects, animation, and games. Designed as a hands-on course, students will gain experience in building 2D/3D interactive applications using OpenGL. Topics covered will include geometric transformations, projections, raster algorithms, 3D object models (surface and volume), visible surface algorithms, texture mapping, lighting/shading, ray-tracing, anti-aliasing, and compositing.

Prerequisite(s): CMPS 1600.

CMPS 3360 Data Visualization (3)
An introduction on how graphical representations of data can be used to aid understanding. This course details the theory and practice of designing effective information or scientific visualizations. The techniques learned in this class have wide applications to all fields in engineering and science, where due to increasing sizes and complexity, data now demands effective presentation and analysis. Topics will include iso-surfacing, volume rendering, transfer functions, vector/tensor fields, topological analysis, large data visualization, and uncertainty in visualizations.

Prerequisite(s): CMPS 1600.

CMPS 3370 Digital Image Processing (3)
In this course, we will cover the fundamentals of processing digital imagery. Planned topics will include filtering, restoration, enhancement, segmentation, compression, features, and patterns. This will be a practical course with a combination of lectures covering the theory behind processing images and practical programming assignments.

Prerequisite(s): CMPS 1500.

CMPS 3510 Computer Organization (3)
Structure and organization of computer systems; instruction sets; arithmetic; data path and control design; memory hierarchy.

Prerequisite(s): CMPS 2300 or ENGP 3140.

CMPS 3660 Special Topics in Computer Sci (1-3)
This course varies from time to time, focusing on topics of interest to the faculty and students. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CMPS 3661 Special Topics in Computer Science (1-3)
Special topics in computer science

Maximum Hours: 99

CMPS 3662 Special Topics in Computer Science (1-3)

Maximum Hours: 99

CMPS 3663 Special Topics in Computer Science (1-3)

Maximum Hours: 99

CMPS 3665 Special Topics Lab (1-3)
Special Topics Lab. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CMPS 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): CMPS 3160.

Maximum Hours: 99

CMPS 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

CMPS 4010 Capstone Project I (2)
This is the first semester of a two-semester course devoted to the development of the student's capstone project, a required component of the Computer Science coordinate major. Under supervision of a faculty advisor in computer science, students use the tools of computer science to solve a problem from another discipline, usually their primary major area.

Prerequisite(s): CMPS 2200 and 2300.

CMPS 4020 Capstone Project II (2)
This is the second of a two-semester course devoted to the development of the student's capstone project, a required component of the Computer Science coordinate major. Under supervision of a faculty advisor in computer science, students use the tools of computer science to solve a problem from another discipline, usually their primary major area.

Prerequisite(s): CMPS 4010.

CMPS 4150 Multi-agent Systems (3)
This course has two main goals. The first one is to give a broad overview of the fundamentals of multi-agent systems (MAS). MAS are playing an increasingly important role in Artificial Intelligence as distributed resources push for highly distributed forms of intelligence. The second aim is to provide a more in-depth discussion of selected MAS topics: game theory and voting from a computational point of view. Situated at the nexus between economics and computer science, these research areas provide a perfect example of interdisciplinary cross-fertilization and mutual enrichment and lie at the core of multi-agent systems theory. The course will provide the student with an understanding of how self-interested behavior and coordination can be formally modeled and implemented in societies of artificial agents. Course may be repeated up to unlimited credit hours.

Prerequisite(s): CMPS 2200.

Maximum Hours: 99

CMPS 4250 Math Found Comp Security (3)
This course studies the mathematics underlying computer security, including both public key and symmetric key cryptography, crypto-protocols and information flow. The course includes a study of the RSA encryption scheme, stream and clock ciphers, digital signatures and authentication. It also considers semantic security and analysis of secure information flow.

Prerequisite(s): (MATH 1220 or 1310) and (MATH 2170 or CMPS 2170).

CMPS 4330 Human-Computer Interaction (3)
Human-Computer Interaction (HCI) is a rapidly expanding field of research and development that continues to transform how we use computers over the past five decades. This course is designed for both graduate and undergraduate students interested in understanding fundamental HCI theories, techniques, and research methods. The course covers various topics, including human factors (perception and cognition) in computing, graphical design fundamentals, qualitative and quantitative user research methods, interaction modeling, prototyping, and evaluations. The course also briefly reviews emerging areas in HCI research, including human-AI interaction, accessible computing, ubiquitous computing, and augmented reality. Both undergraduate and graduate students will work on semester-long projects.

CMPS 4410 Information Security (3)
This is a hands-on introductory security course designed for upper-level undergraduate students. The course covers the basics of cryptography, methods for safeguarding computer systems from attacks, and malicious software. Students will also learn about network attacks and perimeter defenses used to prevent them. The course further includes an in-depth study of program vulnerabilities that lead to most of the security issues in computing today. Lastly, the course will cover administrative issues that security professionals must consider in their jobs.

Prerequisite(s): CMPS 2300.

CMPS 4610 Algorithms (3)
This course covers fundamental algorithm design principles and data structures, basic notions of complexity theory, as well as an advanced introduction to parallel algorithms, randomized algorithms, and approximation algorithms. Topics include: divide-and-conquer, dynamic programming, amortized analysis, graph algorithms, network flow, map reduce, and more advanced topics in approximation algorithms and randomized algorithms.

Prerequisite(s): (CMPS 2170 or MATH 2170) and (CMPS 2200).

CMPS 4620 Artificial Intelligence (3)
This course is designed for graduate students interested in understanding the design of autonomous intelligent agents. The course will cover fundamental notions and concepts such as uninformed and informed search, local search, constraint satisfaction and constraint-based optimization, Bayesian Networks, Markov Decision Problems and a short introduction on machine learning. Furthermore, advance topics and applications in the context of natural language processing, reasoning about time, algorithmic game theory and computational social choice will be considered as well.

Prerequisite(s): CMPS 2200.

CMPS 4630 Computational Biology & Bioinformation (3)
This course is an introduction to computational methods in molecular biology. Topics covered include: sequence analysis and alignment, sequencing technologies, genome and metagenomic sequencing, protein structure and structure prediction, and phylogenetic analysis. No prior background in biology is assumed.

Prerequisite(s): (CMPS 2170 or MATH 2170) and CMPS 2200.

CMPS 4640 Advanced Computational Geometry (3)
This course focuses on advanced principles for designing and analyzing geometric algorithms and data structures, and their application to other disciplines. Selected topics may include: Dynamic and kinetic data structures, geometric algorithms and data structures in two and higher dimensions, shape analysis and matching, robustness and implementation issues, geometric approximation algorithms. Prerequisites: Introduction to Algorithms or equivalent, or permission by the instructor. CMPS 3130/6130 preferred.

Prerequisite(s): CMPS 2200.

CMPS 4660 Special Topics (1-3)
Special topics in Computer Science. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CMPS 4661 Special Topics in Computer Science (1-3)
Special topics in computer science

Maximum Hours: 99

CMPS 4662 Special Topics in Computer Science (1-3)

Maximum Hours: 99

CMPS 4663 Special Topics in Computer Science (1-3)

Maximum Hours: 99

CMPS 4710 Computational Complexity (3)
This course is an advanced introduction to the area of computational complexity. Topics covered include: impossibility and separability results for classical computation, interactive theorem proving and the PCP theorem, derandomization and hardness of approximation, and the quantum model of computation.

Prerequisite(s): CMPS 3260, MATH 3260, CMPS 4610, 6610 or 3250.

CMPS 4720 Machine Learning (3)
This course will cover fundamental and advanced topics in machine learning. Topics will include linear and logistic regression, Lasso, preceptrons, deep neural networks, support vector machines, kernel methods, graphical models, principal and independent component analysis and Gaussian processes. In addition to thoroughly addressing theoretical aspects, several examples will illustrate the application of the different techniques.

Prerequisite(s): (CMPS 2170 or MATH 2170) and CMPS 2200.

CMPS 4730 Natural Language Processing (3)
This course investigates computational methods to work with human language, analyzing its lexical, syntactic, and semantic aspects. Examples include document classification and clustering, syntactic parsing, information extraction, speech recognition, and machine translation. Theoretical and practical aspects of the latest techniques will be covered, including probabilistic modeling, neural networks, and deep learning.

Prerequisite(s): CMPS 3140, 3160, 3240, 4620, 4720 or 4790.

CMPS 4740 Reinforcement Learning (3)
Reinforcement learning (RL) has found successful applications in various domains, including recommender systems, health care, energy, finance, robotics, transportation, and computer systems. Many people believe that RL is a step toward Artificial General Intelligence (AGI). This course introduces both the classic results and state-of-the-art research in RL at the graduate level. We will cover both the theoretical foundation of RL and its applications through case studies.

Prerequisite(s): CMPS 2200.

CMPS 4750 Computer Networks (3)
The objective of the course is to introduce students to the core concepts and analytic techniques in the design and analysis of computer networks and network protocols. We will explain both how computer networks work using the Internet as the paradigm and why they work from an optimization and control perspective.

Prerequisite(s): (CMPS 2170 or MATH 2170) and CMPS 2200.

CMPS 4760 Distributed Systems (3)
This course covers the fundamental concepts in distributed computing. The objective is to introduce students to the core notions, algorithms, and analytic tools in the design of distributed systems. Recent developments in peer-to-peer systems, cloud computing, sensor networks, etc. will be used as case studies to help students establish a firm understanding of the philosophy and pitfalls in the design of computer systems when there is no global clock and when unpredictable failures and variable latency are the norm.

Prerequisite(s): (MATH 2170 or CMPS 2170) and CMPS 2200 and 2300.

CMPS 4780 Computer Architecture (3)
This course teaches students fundamental knowledge in Computer Architecture and Microarchitecture. The objective is to train students in the concepts and methodology of design and the evaluation of computer processors. The topics include fundamentals of computer design, instruction-level parallelism, memory hierarchy, multiprocessors and thread-level parallelism, and recent advances in this area.

Prerequisite(s): CMPS 2300.

CMPS 4790 Data Science (3)
This course is designed for both graduate students and advanced undergraduate students interested in understanding of both the fundamental and advanced concepts, techniques, and technologies required for collecting, processing, and deriving insight into data. Data Science is an interdisciplinary set of topics that includes everything you need to create data driven answers and solutions to specific business, scientific, or sociological questions. Topics typically covered include an introduction to one or more data collection and management systems, e.g., SQL, web scraping, and various data repositories; exploratory and statistical data analysis, e.g., bootstrapping, measures of central tendency, hypothesis testing and machine learning techniques including linear regression and clustering; data and information visualization, e.g., plotting and interactive charts using various technologies; and presentation and communication of the results of these analyses. Students should be comfortable programming in Python and familiar with the fundamentals of algorithmic analysis and computer systems.

Prerequisite(s): CMPS 2200.

CMPS 4830 Computer Vision (3)
This course provides a comprehensive introduction to computer vision techniques and applications. Major topics include image processing, image segmentation (semantic segmentation, co-segmentation), image enhancement (super-resolution, image recovery), 3D reconstruction, image generation, and video segmentation. It will also touch several advanced computer vision topics, such as multi-modal visual understanding, transfer learning, style transfer and image translation. Students will learn the basic concepts of computer vision as well as gain hands-on experience in solving real-life vision problems

Prerequisite(s): CMPS 2200.

CMPS 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit corequisite course.

Corequisite(s): CMPS 4020.

Maximum Hours: 99

CMPS 4891 Public Service Internship (3)
Service Learning Internship

Maximum Hours: 99

CMPS 4910 Independent Study (1-3)
This is a directed study course that allows a student to pursue a topic of particular interest under the direction of a computer science faculty member. No more than three hours of 4910-4920 may be counted toward satisfying the major requirements. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CMPS 4920 Independent Study (1-3)
This is a directed study course that allows a student to pursue a topic of particular interest under the direction of a computer science faculty member. No more than three hours of 4910-4920 may be counted toward satisfying the major requirements.

CMPS 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

CMPS 4990 Honors Thesis (3)

CMPS 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): CMPS 4990.

CMPS 5380 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CMPS 5390 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CMPS 6100 Introduction to Computer Science (3)
This course is a graduate level introduction to computer science. Not assuming a background in computer science, it introduces programming fundamentals such as modular design, recursion, and object-oriented programming, key ideas from algorithms and analysis including algorithm design, computational complexity, and parallelism, fundamental data structures, crucial concepts from operating systems, and the organization and design of computer networks. Students in this course will establish a broad foundation for the future study and exploration of computer science. This is a stand-along graduate introductory computer science course that does not count towards any graduate program in computer science.

CMPS 6130 Intro Comp Geom (3)
This course provides an introduction to geometric algorithms and geometric data structures. Computational Geometry is a young discipline which enjoys close relations to mathematics and to various application areas such as geometric databases, molecular biology, sensor networks, visualization, geographic information systems (GIS), VLSI, robotics, computer graphics and geometric modeling. Covered topics include fundamental geometric algorithm design and analysis paradigms, geometric data structures for planar subdivisions and range searching, algorithms to computer the convex hull, Voronoi diagrams, and Delaunay triangulation, as well as selected advanced topics.

CMPS 6140 Intro Artificial Intelligence (3)
The aim of this course is to provide the student with an introduction to the main concepts and techniques playing a key role in the modern arena of artificial intelligence. In addition to covering the main topics that concern modern AI, particular attention will be devoted to its applications in several fields. Among the topics covered are: "What is an intelligent artificial agent?", problem solving using search and constraint satisfaction, uncertainty, Bayesian networks and probabilistic inference, supervised learning, planning, sequential decision problems, as well as several additional topics.

CMPS 6150 Multi-agent Systems (3)
This course has two main goals. The first one is to give a broad overview of the fundamentals of multi-agent systems (MAS). MAS are playing an increasingly important role in Artificial Intelligence as distributed resources push for highly distributed forms of intelligence. The second aim is to provide a more in depth discussion of selected MAS topics: game theory and voting from a computational point of view. Situated at the nexus between economics and computer science, these research areas provide a perfect example of interdisciplinary cross-fertilization and mutual enrichment and lie at the core of multi-agent systems theory. The course will provide the student with an understanding of how self-interested behavior and coordination can be formally modeled and implemented in societies of artificial agents. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CMPS 6160 Introduction to Data Science (3)
The aim of this course is to provide the student with an introduction to the main concepts and techniques required for collecting, processing, and deriving insight into data. Data Science is an interdisciplinary set of topics that includes everything you need to create data driven answers and solutions to specific business, scientific, or sociological questions. Topics typically covered include an introduction to one or more data collection and management systems, e.g., SOL, web scraping, and various data repositories; exploratory and statistical data analysis, e.g., bootstrapping, measures of central tendency, hypothesis testing and machine learning techniques including linear regression and clustering; data and information visualization, e.g., plotting and interactive charts using various technologies; and presentation and communication of the results of these analyses.

CMPS 6170 Introduction to Game Programming (3)
This course covers the fundamentals of 3D game development. We will focus on the Unity game engine and object-oriented programming with C#. You will learn various topics including vector math, event-driven programming, and Unity tools and techniques, the majority of which are applicable to all state-of-the-art game engines.

CMPS 6180 Game Programming (3)
This course focuses on 3D game development using Unity game engine and object-oriented programming with C#. You will learn various topics including vector math, event-driven programming, and Unity tools and techniques, the majority of which are applicable to all state-of-the-art game engines, as well as several more advanced topics in game development.

CMPS 6210 Algs Comp Struct Bio (3)
Over the last few decades, as we have been able to determine whole genome sequences, structural biologists have sought to determine and catalog protein structures with an increasing reliance on computational methods. Automated methods to analyze protein structure make it possible to leverage information from previously solved structures, and to interpret experimental data in a principled way. In this course, we will focus on the myriad of algorithms for analyzing numerous aspects of protein structure and protein-protein interactions.

CMPS 6240 Intro to Machine Learning (3)
This course provides an introduction to the fundamental concepts of machine learning and statistical pattern recognition. In addition, several examples of applications will be described. The topics covered include generative/discriminative and parametric/non-parametric supervised learning, including neural networks; unsupervised learning, including clustering, dimensionality reduction and kernel methods; learning theory, including tradeoffs, large margins and VC theory; reinforcement learning, including criteria for optimality, brute force methods, value function methods and direct policy search; feedforward/feedback adaptive control, direct/indirect adaptive control methods; and various applications.

CMPS 6250 Math Found Comp Security (3)
This course studies the mathematics underlying computer security, including both public key and symmetric key cryptography, crypto-protocols and information flow. The course includes a study of the RSA encryption scheme, stream and clock ciphers, digital signatures and authentication. It also considers semantic security and analysis of secure information flow.

CMPS 6260 Advanced Algorithms (3)
This course focuses on advanced techniques in the design and analysis of algorithms and illustrates how they are used in deriving a variety of now-classic results. Topics include graph algorithms, randomized algorithms, parallel computing, linear programming and approximation algorithms.

CMPS 6280 Information Theory (3)
This course is an introduction to Shannon's mathematical theory of information. It considers basic concepts such as information content, entropy and the Kullback-Leibler distance, as well as areas such as data compression and Shannon's Source Coding Theorem, coding, prefix codes, lossless channels and their capacity, and Shannon's Noisy Coding Theorem. Applications to various areas are also featured in the course.

CMPS 6300 Software Studio (3)
This is a project-oriented course on fundamentals of software development and software engineering. Working in teams, students apply a recognized software engineering methodology, a modern programming language, and software development tools (including an IDE, debugger, version control system, and testing framework) to design and implement a semester-long project – a software solution for a real-world problem. The high goal of the course is to train students to function efficiently in a real-world software development environment. To help reach that goal, the students do a lot of independent learning, teamwork, documentation and public presentation of their product and design process. The particular technologies employed in the course may change in synchrony with changes in the software engineering field, currently the focus is on engineering software-as-a-service using Ruby for programming language and Rails for web development framework.

CMPS 6310 Logic in Computer Science (3)
This course is an introduction to logic and its applications in computer science. The topics covered include soundness and completeness of propositional logic, predicate logic, linear time temporal logic and branching time temporal logics and their expressive power, frameworks for software verification, Hoare triples, partial and total correctness, modal logics and agents, and binary decision diagrams.

CMPS 6330 Human-Computer Interaction (3)
Human-Computer Interaction (HCI) is a rapidly expanding field of research and development that continues to transform how we use computers over the past five decades. This course is designed for both graduate and undergraduate students interested in understanding fundamental HCI theories, techniques, and research methods. The course covers various topics, including human factors (perception and cognition) in computing, graphical design fundamentals, qualitative and quantitative user research methods, interaction modeling, prototyping, and evaluations. The course also briefly reviews emerging areas in HCI research, including human-AI interaction, accessible computing, ubiquitous computing, and augmented reality. Graduate students will work on semester-long independent projects.

CMPS 6340 Introduction to Deep Learning (3)
Introduction to concepts, algorithms, and practices of deep learning. Topics include mathematical building blocks of neural networks, deep learning libraries, stochastic gradient descent, machine learning fundamentals, classification and regression, computer vision, time series analysis, generative deep learning. (Undergraduate-level course is CMPS 3340.)

CMPS 6350 Intro to Computer Graphics (3)
A comprehensive introduction to the mathematics and algorithms that drive today's digital special effects, animation, and games. Designed as a hands-on course, students will gain experience in building 2D/3D interactive applications using OpenGL. Topics covered will include geometric transformations, projections, raster algorithms, 3D object models (surface and volume), visible surface algorithms, texture mapping, lighting/shading, ray-tracing, anti-aliasing, and compositing.

CMPS 6360 Data Visualization (3)
An introduction on how graphical representations of data can be used to aid understanding. This course details the theory and practice of designing effective information or scientific visualizations. The techniques learned in this class have wide applications to all fields in engineering and science, where due to increasing sizes and complexity, data now demands effective presentation and analysis. Topics will include iso-surfacing, volume rendering, transfer functions, vector/tensor fields, topological analysis, large data visualization, and uncertainty in visualizations.

CMPS 6410 Information Security (3)
This is a hands-on introductory course on Software Security. This course covers several key topics critical to understanding software security and analyzing malicious software. These topics include cryptography, software security analysis techniques, program vulnerabilities, binary disassembly, fuzzing, and malicious Windows programs. This course will also dive into malware functionality and behavior on computers and over the network to include techniques used to evade detection.

CMPS 6510 Computer Organization (3)
Structure and organization of computer systems; instruction sets; arithmetic; data path and control design; memory hierarchy.

CMPS 6610 Algorithms (3)
This course covers fundamental algorithm design principles and data structures, basic notions of complexity theory, as well as an advanced introduction to parallel algorithms, randomized algorithms, and approximation algorithms. Topics include: divide-and-conquer, dynamic programming, amortized analysis, graph algorithms, network flow, map reduce, and more advanced topics in approximation algorithms and randomized algorithms.

CMPS 6620 Artificial Intelligence (3)
This course is designed for graduate students interested in understanding the design of autonomous intelligent agents. The course will cover fundamental notions and concepts such as uninformed and informed search, local search, constraint satisfaction and constraint-based optimization, Bayesian Networks, Markov Decision Problems and a short introduction on machine learning. Furthermore, advance topics and applications in the context of natural language processing, reasoning about time, algorithmic game theory and computational social choice will be considered as well.

CMPS 6630 Computational Bio & Bioinform (3)
This course is an introduction to computational methods in molecular biology. Topics covered include: sequence analysis and alignment, sequencing technologies, genome and metagenomic sequencing, protein structure and structure prediction, and phylogenetic analysis. No prior background in biology is assumed.

CMPS 6640 Advanced Computational Geometry (3)
This course focuses on advanced principles for designing and analyzing geometric algorithms and data structures, and their application to other disciplines. Selected topics may include: Dynamic and kinetic data structures, geometric algorithms and data structures in two and higher dimensions, shape analysis and matching, robustness and implementation issues, geometric approximation algorithms. CMPS 3130/6130 preferred.

Prerequisite(s): CMPS 2200.

CMPS 6660 Special Topics in Computer Sci (1-3)
This course varies from time to time, focusing on topics of interest to the faculty and students. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CMPS 6661 Special Topics in Computer Science (1-3)
Special topics in computer science

Maximum Hours: 99

CMPS 6662 Special Topics in Computer Science (1-3)

Maximum Hours: 99

CMPS 6663 Special Topics in Computer Science (1-3)

Maximum Hours: 99

CMPS 6710 Computational Complexity (3)
This course is an advanced introduction to the area of computational complexity. Topics covered include: impossibility and separability results for classical computation, interactive theorem proving and the PCP theorem, derandomization and hardness of approximation, and the quantum model of computation.

CMPS 6720 Machine Learning (3)
This course will cover fundamental and advanced topics in machine learning. Topics will include linear and logistic regression, Lasso, preceptrons, deep neural networks, support vector machines, kernel methods, graphical models, principal and independent component analysis and Gaussian processes. In addition to thoroughly addressing theoretical aspects, several examples will illustrate the application of the different techniques.

CMPS 6730 Natural Language Processing (3)
This course investigates computational methods to work with human language, analyzing its lexical, syntactic, and semantic aspects. Examples include document classification and clustering, syntactic parsing, information extraction, speech recognition, and machine translation. Theoretical and practical aspects of the latest techniques will be covered, including probabilistic modeling, neural networks, and deep learning.

CMPS 6740 Reinforcement Learning (3)
Reinforcement learning (RL) has found successful applications in various domains, including recommender systems, health care, energy, finance, robotics, transportation, and computer systems. Many people believe that RL is a step toward Artificial General Intelligence (AGI). This course introduces both the classic results and state-of-the-art research in RL at the graduate level. We will cover both the theoretical foundation of RL and its applications through case studies.

CMPS 6750 Computer Networks (3)
The objective of the course is to introduce students to the core concepts and analytic techniques in the design and analysis of computer networks and network protocols. We will explain both how computer networks work using the Internet as the paradigm and why they work from an optimization and control perspective.

CMPS 6760 Distributed Systems (3)
This course covers the fundamental concepts in distributed computing. The objective is to introduce students to the core notions, algorithms, and analytic tools in the design of distributed systems. Recent developments in peer-to-peer systems, cloud computing, sensor networks, etc. will be used as case studies to help students establish a firm understanding of the philosophy and pitfalls in the design of computer systems when there is no global clock and when unpredictable failures and variable latency are the norm.

CMPS 6770 Operating Systems (3)
This course covers the design and implementation of operating systems. Operating systems serve as an interface between the hardware of a computer and the software running on it. This course addresses how operating systems enable the sharing of limited resources - CPU, memory, hard disks - robustly, securely, and efficiently amongst all running processes on a computer. CPU virtualization, concurrency, memory virtualization, file systems APIs and implementations, and security are all covered with a focus on the key design ideas and abstractions within the topics. In addition, students get practical experience implementing their own operating system.

CMPS 6780 Computer Architecture (3)
This course teaches students fundamental knowledge in Computer Architecture and Microarchitecture. The objective is to train students on the concepts and methodology of the design and evaluation of computer processors. The topics include fundamentals of computer design, instruction-level parallelism, memory hierarchy, multiprocessors and thread-level parallelism, and recent advances in this area. It is recommended that students have taken CMPS 3510/6510, or have equivalent experience before taking this course.

Prerequisite(s): CMPS 2300.

CMPS 6790 Data Science (3)
This course is designed for both graduate students and advanced undergraduate students interested in understanding of both the fundamental and advanced concepts, techniques, and technologies required for collecting, processing, and deriving insight into data. Data Science is an interdisciplinary set of topics that includes everything you need to create data driven answers and solutions to specific business, scientific, or sociological questions. Topics typically covered include an introduction to one or more data collection and management systems, e.g., SQL, web scraping, and various data repositories; exploratory and statistical data analysis, e.g., bootstrapping, measures of central tendency, hypothesis testing and machine learning techniques including linear regression and clustering; data and information visualization, e.g., plotting and interactive charts using various technologies; and presentation and communication of the results of these analyses. Students should be comfortable programming in Python and familiar with the fundamentals of algorithmic analysis and computer systems.

CMPS 6830 Computer Vision (3)
This course provides a comprehensive introduction to computer vision techniques and applications. Major topics include image processing, image segmentation (semantic segmentation, co-segmentation), image enhancement (super-resolution, image recovery), 3D reconstruction, image generation, and video segmentation. It will also touch several advanced computer vision topics, such as multi-modal visual understanding, transfer learning, style transfer and image translation. Students will learn the basic concepts of computer vision as well as gain hands-on experience in solving real-life vision problems

CMPS 6910 Independent Study (3)
This is a directed study course that allows a student to pursue a topic of particular interest under the direction of a computer science faculty member.

Maximum Hours: 99

CMPS 6940 Transfer Coursework (0-20)
Transfer coursework at the 6000 level. Departmental approval required.

Maximum Hours: 99

CMPS 7010 Research Seminar (3)
This seminar course introduces students to research methods in Computer Science and to the research conducted in the department. Students will read research papers, participate in active research projects, and practice preparing and presenting research presentations. Department faculty will present on their research in order to expose students to the research projects conducted in the department. Research methods such as literature search, experiment design, technical writing, etc. will also be covered. This course is required for all PhD students in Computer Science. The content of this course varies from semester to semester.

CMPS 7020 Research in Computer Science (3)
In this course PhD students engage in a research project in Computer Science, under the direction of a faculty member, normally the student's faculty advisor. At the beginning of the course the scope of the project will be determined by a project proposal prepared by the student. Research will be conducted on an individual basis with the faculty advisor. The student will prepare a final report that summarize the research methodologies and the research outcomes. The content of this course varies from semester to semester.

Course Limit: 2

CMPS 7021 Research in Computer Science (3)
In this course PhD students engage in a research project in Computer Science, under the direction of a faculty member, normally the student's faculty advisor. At the beginning of the course the scope of the project will be determined by a project proposal prepared by the student. Research will be conducted on an individual basis with the faculty advisor. The student will prepare a final report that summarize the research methodologies and the research outcomes. The content of this course varies from semester to semester.

CMPS 7022 Research in Computer Science (3)
In this course PhD students engage in a research project in Computer Science, under the direction of a faculty member, normally the student's faculty advisor. At the beginning of the course the scope of the project will be determined by a project proposal prepared by the student. Research will be conducted on an individual basis with the faculty advisor. The student will prepare a final report that summarize the research methodologies and the research outcomes. The content of this course varies from semester to semester.

CMPS 7120 Advanced Topics in Computer Sc (3)
This course varies from time to time, focusing on advanced topics of interest to the faculty and students.

CMPS 7940 Transfer Coursework (0-20)
Transfer coursework at the 7000 level. Departmental approval required.

Maximum Hours: 99

CMPS 7980 Independent Study (3)
This is a directed study course that allows a graduate student to pursue a topic of particular interest under the direction of a computer science faculty member. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CMPS 9980 Masters Research (0-3)
Research toward completion of a masters degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

CMPS 9990 Dissertation Research (0-3)
Research toward completion of a doctoral degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Cybersecurity Management (CSMT)

CSMT 7050 Leadership for CS Profnls (3)
This course is designed to provide the advanced knowledge and skills for management of cybersecurity throughout the enterprise. The course examines internal and external security threats against a network, documenting and advocating for cybersecurity spending, managing resources (including vendors) and development of a security governance plan to establish standards and a framework to protect an organization's information.

CSMT 7300 Data & Database Security (3)
This course provides in-depth study of database architecture (including Cloud based data structures and applications) and database management systems from the perspective of securing data. This course covers principles and methodologies of database design from security, and techniques for database application auditing, aggregating, reporting, analysis and response from a cybersecurity management perspective. Best practices in securing data at rest, data in transit and data in use will be reviewed in depth against the context of recent noteworthy breaches. (Virtual Lab)

CSMT 7500 IT Sec Auditing & Monitoring (3)
This course will review tools and methods to audit and monitor a network, including auditing, aggregating, reporting, analysis and response from a cybersecurity management perspective. This will include in-depth coverage of System event, intrusion detection, intrusion prevention, firewalls, packet monitoring and endpoint secuirty and detection. (Virtual Lab)

CSMT 7700 Cyber Network & Tele Security (3)
This course provides in-depth technical knowledge on securing enterprise networks and telcommunications. The course examines defense and defensible architecture, along with best practice implementations of security tools and solutions, and is designed to equip the student with methods and constructs used to test network security. By the end of the course, students will be able to design a basic network from a security perspective to include tools and technologies to best secure an organization's information.

CSMT 7750 Wireless, Mobile & Cloud Secur (3)
This course reviews architecture, vulnerabilities and security methods for Wireless, Mobile and Cloud Computing technologies in the enterprise. Included topics will be reviewing these network constructs as well as vulnerabilities, and attack vectors. Also covered are best practices for implementing and securing IEEE 802.11 wireless networks, wireless access and BYOD, wireless security protocols, mobile IP communications, and cloud computing categories and services. This course also looks at current and emerging cloud services and cloud-based applications, including the "Internet of Things".

CSMT 7800 Cyber Law & Policy (3)
In this course, students study existing and evolving laws, agreements, legal decisions, regulation and compliance pertaining to cybersecurity and enterprise IT. Students will also explore ethical considerations of cybersecurity practices, including social networking and privacy in the context of enterprise cybersecurity management.

CSMT 7870 Cyber Incident Res & Forensics (3)
This course takes a 360 degree study of cyber incident response and investigation from the standpoint of a cybersecurity manager. This includes securing a cyber-incident scene, preserving digital evidence, establishing and maintaining chain of custody, safeguarding evidence, forensic analysis and tools as well as examination and review of evidence. As part of this review, students will consider decision matrices for notifying and working with government and law enforcement agencies. (VIrtual Lab)

CSMT 7900 Sec & Cyber Threats for Mgrs (3)
This course provides advanced information on current threats to IT systems including an array of current and evolving exploitation methods and vulberabilities. Through research as well as lecture, students examine an array of attack types and goals of attackers with an analysis of the anatomy of an attack including motivation, purpose, types, and phases. This course also considers emergent technologies and technical uses (such as Blockchain, Internet of Things, and Quantam Computing) from the standpoint of threat and security.

CSMT 7920 Software and Web App Security (3)
The goal of this course is to provide cybersecurity managers and practitioners with an in-depth review of the technologies, models, best implementation practices and known software and web application vulnerabilities. The course reviews activities and processes pertaining to the planning, programming, and management of software (and systems that manage software) including ways to secure applications through design and control interfaces. This includes in-depth reviews of application architecture, trust models, key management, web protocols, and digital certificates. This course also delves into means and measures to assess effectiveness of application security.

CSMT 7950 Cryptography (3)
The goal of this course is to provide Cybersecurity Management candidates with an in-depth understanding of ciphers, cryptology, and encryption and their use in safeguarding information and systems in the enterprise. The course covers the standard uses of encryption including access control, authentication, data application security, and virtual private networking and examines technical direction and trends in regards to the future of cryptology. The course will also review legal decisions and implications of encryption in the debate on privacy/civil liberties versus business and secuirty/safety goals.

CSMT 7990 Enterprise CS Mgt Capstone (3)
In this Capstone course, students will apply cybersecurity management concepts, best practices, technical knowledge and principles as learned throughout the Program from the perspective of an organizational CSO/CISO. Through Case Study, students will display mastery of these through the creation of deliverables necessary to manage an effective enterprise cybersecurity program. This will include review/documentation of an IT organization's security posture, and creation of a Risk Management structure, Security Policy/Operational Framework, and Budget. Finally, each student will produce a professional-grade White Paper on a Cybersecurity/Cybersecurity Management topic to be assessed by the MPS in Cybersecurity Management Assessment Board.

Prerequisite(s): CSMT 7050, 7900, 7700, 7800, 7500, 7950, 7300* and CPST 7150.
* May be taken concurrently.

Dance (DANC)

DANC 1470 Transfer Coursework (0-20)
Transfer Coursework.

Maximum Hours: 99

DANC 1510 Dance Composition I (3)
An introduction to dance composition with an emphasis on spatial design, sources of movement, viewing choreography, and the basic elements of space, time, shape, and motion. Course may be repeated 2 times for credit.

Course Limit: 2

DANC 1810 Tap Dance I (2)
A beginning course in tap introducing basic rhythmic movement skills necessary for various tap styles. Course may be repeated 2 times for credit.

Course Limit: 2

DANC 1910 African Dance I (2)
Introduction to basic technique and African ethnic dance forms including three traditional dances. Course may be repeated 2 times for credit.

Course Limit: 2

DANC 1920 Brazilian Dance (2)
Introduction to Brazilian dance, focusing especially on samba, the overview of history and cultural context. Course may be repeated 2 times for credit.

Course Limit: 2

DANC 1930 Ballet I (2)
An introduction to classical ballet. Basic theory and techniques of classical ballet as well as the appreciation of the art form. Course may be repeated 2 times for credit.

Course Limit: 2

DANC 1940 Transfer Coursework (0-20)

Maximum Hours: 99

DANC 1950 Jazz Dance I (2)
An introductory course to the basic foundations of jazz dance, emphasizing body placement, isolations, and rhythmic qualities of jazz. Course may be repeated 2 times for credit.

Course Limit: 2

DANC 1970 Contemporary Dance I (2)
Introduction to contemporary dance technique, with emphasis on alignment and basic elements of space, shape, time, and motion. Includes theory and application of dance as an art form. Course may be repeated 2 times for credit.

Course Limit: 2

DANC 2000 Movement Optimums Vital to Embodiment-MOVE (3)
An introductory movement class designed to provide beginning level students with an embodiment of mind/body/movement skills associated with the concept of movement literacy. Activities: movement sessions, improvisational activities, meaningful reflection and analysis of body language used as experiences in moving/thinking that progress toward a confident person moving with physical intelligence through life.

DANC 2010 Performance I (3)
A structured and at times spontaneous exploration of space, time, shape, sound, scenario, motion, and expenditure of energy to the end of attracting and holding the attention of the audience.

DANC 2020 Performance II (3)

DANC 2050 Embodied Writing (3)
Embodied Writing: This introductory course activates the body and movement to fine tune and discover creative writing modalities. Movement will be the nexus (the connective tissue) agent to discover tools to support existing writing strategies and new ways of writing. Dancers and non-dance majors are welcome.

DANC 2210 Intro. To Dance- Ballet (3)
An introduction to classical ballet including beginning ballet technique and an overview of ballet history from its inception to the present day.

DANC 2220 Intro. To Dance- Modern (3)
An introduction to modern dance including beginning modern dance technique and an overview of modern dance history from its inception to the present day.

DANC 2230 Intro. To Dance- Jazz (3)
An introductory course for students who seek information regarding the different aspects of the dance world, including different genres (ballet, modern, jazz, and world dance). Special emphasis is given to the role of American Vernacular dance - jazz dance and its identity in the dance scene of America.

DANC 2500 Yoga: Fundamentals and Beyond (2)
This course offers an exploration of several aspects of yoga, including the physical practice, breathing techniques, yoga philosophy and meditation. This class is open to students of all levels and we will start with fundamentals and progress into a more vigorous, vinyasa style yoga class. We will use the breath to flow through sequences of yoga postures, including sun salutations, standing asanas, balancing asanas, arm balances, back bends, and inversions. Delving into yoga philosophy and meditation, in class and through outside assignments, will provide students with tools for cultivating mindfulness.

Course Limit: 3

DANC 2520 Dance Composition II (3)
Continuation of DANC 2010.

Prerequisite(s): DANC 2010 or THEA 2010.

DANC 2810 Tap Dance II (2)
Continuation of Tap I. Course may be repeated 4 times for credit.

Course Limit: 4

DANC 2910 African Dance II (2)
Continuation of the development of African dance skills with emphasis on understanding and demonstrating basic components necessary to choreograph traditional African dance movements. Course may be repeated 4 times for credit.

Course Limit: 4

DANC 2930 Ballet II (2)
Continuation of 1930. Course may be repeated 4 times for credit.

Course Limit: 4

DANC 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

DANC 2950 Jazz Dance II (2)
A continuation of the development of movement skills with emphasis on alignment and expanded jazz dance vocabulary. Course may be repeated 4 times for credit.

Course Limit: 4

DANC 2960 Hip-Hop Dance (2)
Continuation of the development of movement skills with emphasis on hip-hop jazz vocabulary and performance. May be taken for credit four times.

Course Limit: 4

DANC 2970 Contemporary Dance II (2)
This 2-credit class offers a continuation of the development of contemporary dance skills with emphasis on coordination, body awareness, alignment and an expanded movement vocabulary. This is a studio course, but includes some aspects of theory, history, and appreciation of modern and contemporary dance. Course may be repeated 4 times for credit.

Course Limit: 4

DANC 3240 US/Caribe Social Dance (3)
This course will study, compare selected social and vernacular dances from early American vernacular jazz dance and selected Afro-Caribbean dance idioms: Coursework includes assigned reading, lecture, research, videotape viewing and studio dancing.

DANC 3330 Pedagogy (3)
A seminar and practicum course providing opportunities for dance students to acquire skills in dance teaching methodologies and strategies. Topics include organization of subject matter, weekly and unit lesson planning, development of assessments, utilization of information technology for instruction, working with diverse populations of students. Activities include observation in college classrooms (shadowing), seminars and conferences with teachers in field, in-class/micro/peer teaching, and 50 hours of field work including observation and consultation with dance field professor and field-experience teaching of assistant teaching at NOPS in discipline-based or curriculum-based programs.

Prerequisite(s): DANC 2010, 2520 and 3520.

DANC 3520 Dance Composition III (3)
An in-depth study of dance composition with an emphasis on choreographic design and dynamics, creating new movement materials, working with music, and choreographing complete solo works.

Prerequisite(s): DANC 1520 or 2520.

DANC 3550 Laban Movement Studies (3)
Laban Movement Analysis (LMA), developed by Rudolph Laban, is a theoretical framework and language for describing movement through movement experiences, observations and theoretical discussions. It is a system of observing, analyzing, and synthesizing patterns of movement within the context of the actions. The goal of LMA is to be fully embodied, to access maximum movement potential, to find authentic movement, and to integrate the body and mind in the study of effort, shape, and space.

DANC 3700 Dance Movement Science (3)
Dance Movement Science is an introduction to the field of Dance Science. This course will explore various somatic practices and benefits of cross-training. Additionally students will learn anatomy, anatomical analysis, conditioning principals and develop applicable skills that they may apply to their studio practice and dance performance.

DANC 3710 Conditioning for Dance (3)
In this course you will learn the principles of conditioning and how to use them to train, maintain and care for your body, the instrument of the art of dance. You will also build physical capacities to improve your dance performance and reduce injury. Additionally, students will be introduced to various somatic practices that support their studio work.

DANC 3800 Contemporary Dance III (2)
This 2-credit class offers a continuation of the development of contemporary dance skills with emphasis on coordination, body awareness, alignment and an expanded movement vocabulary. This is a studio course, but includes some aspects of theory, history, and appreciation of modern and contemporary dance. Can be repeated for credit.

Course Limit: 6

DANC 3810 Tap Dance III (2)
An intermediate course in tap dance with emphasis on alignment and rhythmic skills. Course may be repeated 6 times for credit.

Course Limit: 6

DANC 3820 Ballet III (2)
Continuation of the development of classical ballet technique with emphasis on alignment and expanded movement vocabulary. Includes theory of ballet and appreciation of ballet as an art form. Class meets 2 times per week. Course may be repeated 6 times for credit.

Course Limit: 6

DANC 3830 Intensive Contemporary Dance III (3)
This 2-credit class offers a continuation of the development contemporary dance skills with emphasis on coordination, body awareness, alignment and an expanded movement vocabulary. This is a studio course, but includes some aspects of theory, history, and appreciation of modern and contemporary dance.

Course Limit: 6

DANC 3840 Intensive Ballet III (3)
Continuation of the development of classical ballet technique with emphasis on alignment and expanded movement vocabulary. Includes theory of ballet and appreciation of ballet as an art form. Course meets 4 days per week. Course may be repeated 6 times for credit.

Course Limit: 6

DANC 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit croquets course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

DANC 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

DANC 3950 Jazz Dance III (2)
A study of jazz dance at the intermediate level, including warm-ups, isolations, and locomotor movements specific to the jazz dance style. Historical developments of jazz and musical theatre dance are emphasized. Course may be repeated 6 times for credit.

Course Limit: 6

DANC 3960 Jazz: Newc Sum Danc Fest (2)
The New Orleans Jazz Project: Newcomb College Summer Dance Festival is presented for two weeks annually in June offering an intensive schedule of technique classes in jazz, African, musical theatre, tap, hip hop, and modern dance forms, with repertory classes which culminates in performance by the participants. Lecture-demonstration projects, special lectures, and professional performances complete programming for evening events. Final decision on placement of students in technique and repertory classes will be determined by the faculty at the beginning of the workshop. Course may be repeated 6 times for credit. Course may be repeated up to unlimited credit hours.

Course Limit: 6
Maximum Hours: 99

DANC 3990 Dance Performance Pract (1)
Practical performing experience in dance. Required for the dance minor. Course may be repeated 6 times for credit.

Course Limit: 6

DANC 4520 Dance Composition IV (3)
A continuation of DANC 3520 with emphasis on group forms, sound sources for dance and development of fully designed dance pieces.

DANC 4560 Internship Studies (1-3)
An experiential learning process coupled with pertinent academic course work, e.g. Internship seminars offered by the Tulane University Center for Public Service for fulfillment of second tier public service. Only one internship may be completed per semester. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

DANC 4580 Dance Company (1)
Performing experience, advanced-level dance techniques and practical experience in dance production. Course may be repeated 8 times for credit.

Course Limit: 8

DANC 4590 Senior Project (3)
A continuation of dance composition with emphasis on development, research and production of senior concert pieces with written analysis of process. Course may be repeated 8 times for credit.

Prerequisite(s): DANC 2010, 2520 and 3520.
Course Limit: 8

DANC 4600 Choreography & Media (3)
An introduction to dance for camera in its various forms. It provides a brief overview of aesthetic, historic, and cultural representations of the body through image and media and offers a context in which to explore visual imagery and narrative within the frame of camera/screen.

DANC 4650 Senior Choreographic Project (3)
Advanced choreographic projects.

Prerequisite(s): DANC 3520.

DANC 4710 Dance Hist:Prim To 19 C. (3)
A survey of dance, including the anthropological aspects of dance, in primitive cultures and the development of dance in the Western World.

DANC 4720 Dance Hist:20th C. & Beyond (3,4)
A survey of dance in the 20th-century United States emphasizing the development of modern dance, its impact on classical ballet and on dance in the Western World.

DANC 4730 Dance History: The History of Ballet and Modern Dance (3-4)
This survey course traces the development and evolution of Ballet and Modern Dance from the Renaissance through the present day

DANC 4800 Contemporary Dance IV (2)
This 2-credit class offers a continuation of the development of contemporary dance skills with emphasis on coordination, body awareness, alignment and an expanded movement vocabulary. This is a studio course, but includes some aspects of theory, history, and appreciation of modern and contemporary dance. Course may be repeated for credit.

Course Limit: 8

DANC 4810 Special Topics (1-3)
Specialty courses in dance techniques, projects, and dance related subjects as designed by dance faculty. Course may be repeated 8 times for credit.

Corequisite(s): DANC 4890.
Course Limit: 8
Maximum Hours: 99

DANC 4820 Ballet IV (2)
Classical ballet technique with emphasis on alignment, complex movement combinations, and precision in execution. Includes pointe work and theory of ballet as an art form. Class meets 2 days per week. Course may be repeated 8 times for credit.

Course Limit: 8

DANC 4830 Intensive Contemporary Dance IV (3)
This 2-credit class offers a continuation of the development of contemporary dance skills with emphasis on coordination, body awareness, alignment and an expanded movement vocabulary. This is a studio course, but includes some aspects of theory, history, and appreciation of modern and contemporary dance. Courses may be repeated for credit.

Course Limit: 8

DANC 4840 Intensive Ballet IV (3)
Classical ballet technique with emphasis on alignment, complex movement combinations, and precision in execution. Includes pointe work and theory of ballet as an art form. Class meets 4 days per week. Course may be repeated 8 times for credit.

Course Limit: 8

DANC 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): DANC 4810.

Maximum Hours: 99

DANC 4900 Building Comm Thru Arts (3,4)
This course will be taught in coordination with courses offered at Xavier and Dillard Universities. The course examines the theory and practice of community-based arts, civic engagement in higher education, and the relationship between art and community development. Students will work in teams with local artists on Home, New Orleans?, a multi-disciplinary, art-and-community-development project grounded in 4 selected New Orleans neighborhoods, the 9th Ward, the 7th Ward, Central City and Lakeview.

Corequisite(s): DANC 4890.

DANC 4910 Independent Study (1-3)
Independent projects with professors. Course may be repeated 8 times for credit.

Course Limit: 8
Maximum Hours: 99

DANC 4950 Jazz Dance IV (2)
An advanced study of dance devoted to movement exploration involving spatial, dynamic, and rhythmic combinations of various jazz and musical theatre dance styles. Historical study of jazz dance development is emphasized. Course may be repeated 8 times for credit.

Course Limit: 8

DANC 4960 Tap Dance IV (2)
An advanced course in rhythm tap with emphasis on complex rhythm patterns requiring intricate foot articulations and stylistic dance movements. Course may be repeated 8 times for credit.

Course Limit: 8

DANC 4990 Honors Thesis (3)
Honors Thesis.

DANC 4991 Senior Honors Project in Fine Arts (3)
Senior Honors Project in Fine Arts

DANC 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): DANC 4990.

DANC 5001 Senior Honors Project in Fine Arts (3)
Senior Honors Project in Fine Arts

Prerequisite(s): DANC 4991.

DANC 5380 Junior Year Abroad (1-20)

Maximum Hours: 99

DANC 5390 Junior Year Abroad (1-20)
Junior year abroad. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

DANC 6010 Creative Projects and Movement Practice (3)
Creative Projects (CP) are advanced level choreographic and creative studies or projects coordinated by DGS. Movement Practice (MP) is participation in either existing dance technique classes offered by the department or in existing individual movement practices. CP consists of advanced assignments taught by various dance faculty members, undergraduate student projects, and/or guest artist projects. For MP if students participate in technique classes offered by the department, these classes are combined with undergraduate students. Graduate students are expected to participate in the entire semester of the classes with advanced engagement with class materials. Graduate students, as returning professionals with existing individual movement practice, may elect to continue that practice. This course is core for IDP MFA. Required 5 of 6 semesters and repeatable up to 6 times.

Course Limit: 6

DANC 6210 Sem I: Text & Movement Studies (3)
A graduate level course where choreographers work on individual and collaborative projects that examine the relationship between a variety of texts, existent and original, and communication through movement. Projects/studies are presented throughout the semester. Taught in conjunction with MFA in Playwriting, and with direct in-program experience with Performance I (DANC/THEA 2010) for undergraduate students.

DANC 6220 Seminar II: Dance and Performance Topics (3)
This seminar introduces graduate students to dance and performance research and dance and performance theory by examining the work of contemporary scholars/researchers, dance/performance historians, and dance/performance critics. The class will include creative assignment correlated with theory and will cover several aspects of writing, including: research methods; literature review: dance and performance evolution and history; analysis of choreography and performance; performance descriptions; writing about dance and the moving body; and theoretical approaches to create original scholarship.

DANC 6310 Creative Projects/Rehearsal (2)
Advanced level choreographic or creative projects

DANC 6410 Choreography & Media (3)
This course provides an introduction to dance for camera in its various forms, from the video-taping and editing of dance for the purpose of documentation, to the creation of dances made specifically for the screen. It provides a brief overview of aesthetic, historic and cultural representations of the body through image and media, and offers a context in which to explore visual imagery and narrative within the frame of the camera/screen, in contrast to that of the proscenium stage. This material is intended as a springboard for further in-depth exploration.

DANC 6520 Teaching Practices (3)
Survey of teaching practices.

DANC 6550 Laban Movement Studies (3)
Laban Movement Analysis (LMA), developed by Rudolph Laban is a theoretical framework and language for describing movement through movement experiences observations and theoretical discussions. It is a system of observing, analyzing, and synthesizing patterns of movement within the context of the actions. The goal of LMA is to be fully embodied, to access maximum movement potential, to find authentic movement, and to integrate the body and mind to the study of effort, shape, and space.

DANC 6553 Philanthropy and Social Change (3)
This course focuses on current. not-for-profit. performing arts organizations in New Orleans through real time grant making. Working directly with two local performing arts organizations. students will create project proposals with their community partner, and collectively award $10,000 over the course of the semester. With this experiential philanthropy. we will study the nonprofit sector. civil society. and social justice by having students confront the power and privilege of managing scarce resources in the face of abundant need.

DANC 6820 Special Topics (3)
Special topics in Dance.

Maximum Hours: 99

DANC 6821 Special Topics (3)
Special offering.

DANC 6822 Special Topics (3)
Special topics in Dance.

DANC 6890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Course Limit: 99
Maximum Hours: 99

DANC 6910 Independent Study (1-3)
Independent Study in Dance.

DANC 7580 MFA Internship (3-9)
MFA Internship, Elective, unpaid, 3, 6, or 9 credits (1/3, 2/3, or full semester variable). The MFA internship is a professional learning experience that offers meaningful, practical work related to a student's field of study or career interest. This elective course is for exceptional cases with opportunity to work with an outside organization, arts-specific or otherwise, that benefit the final thesis or work post-MFA of the graduate student. Student is responsible for finding internship partner, presenting an internship prospectus for approval, with student and internship partner signatures, by Tulane registration period during the semester prior to registration for the internship. DGS/faculty approval required prior to registration for the course. See department DGS for specific requirements for each credit level.

DANC 7890 MFA Internship (3-9)
MFA Internship, Elective, unpaid, 3, 6, or 9 credits (1/3, 2/3, or full semester variable). The MFA internship is a professional learning experience that offers meaningful, practical work related to a student's field of study or career interest. This elective course is for exceptional cases with opportunity to work with an outside organization, arts-specific or otherwise, that benefit the final thesis or work post-MFA of the graduate student. Student is responsible for finding internship partner, presenting an internship prospectus for approval, with student and internship partner signatures, by Tulane registration period during the semester prior to registration for the internship. DGS/faculty approval required prior to registration for the course. See department DGS for specific requirements for each credit level

DANC 7900 Management / Portfolio (3)
Development of electronic portfolio, including arts administration topics. This course will prepare the student's portfolio, as well as the student, for the professional world, with emphasis on development of digital vitae/resumes, artistic statements, choreography reel, web site, portfolio, organization of materials, job search techniques, grant writing, and interview preparation.

DANC 7990 MFA Thesis Project I - Production (3)
Performance and Written project

DANC 7991 MFA Thesis Project II - Analysis (3)
DANC 7991 is the culminating written component of the IDP MFA thesis project. It is the analysis, dramaturgy, and written thesis of the project developed and presented for DANC 7990, Thesis Project I - Performance. Oral presentation and defense of the thesis project production (DANC 7990) and the written thesis (DANC 7991) is required at the end of the semester for DGS, Dance Faculty, Committee of Study, and invited guests. Graduate school guidelines apply for completion of the written thesis.

Prerequisite(s): DANC 7990*.
* May be taken concurrently.

DANC 9980 Masters Research (3)
Continuation of MFA Thesis work. Course may be repeated up to unlimited credit hours

Maximum Hours: 99

Data Hub (DATA)

DATA 1010 Introduction to Data (3)
DATA 1010 aims to provide students with an overview to what data is, how it is used correctly and incorrectly, how it is found, stored, and managed, and how it can be used as a basis for decision making and analysis. The overall goal of this course is to increase data literacy, such that students are more confidently able to work with the increasing amounts of data in their lives, jobs, and academic careers. This course is aimed towards students in all schools and fields and has no prerequisites.

DATA 1940 Transfer Course Work (0-4)
Transfer Coursework

Maximum Hours: 99

DATA 2020 Data Analysis (3)
This course provides an overview of the statistical tools most commonly used to analyze quantitative data. Topics include describing data, statistical inference, statistical significance, hypothesis testing, and regression analyses. The course focuses on understanding how to use appropriate analytical techniques and interpret the results of statistical analyses for variables with different levels of measurement. For each topic area, the methodology, including the underlying theory, assumptions, and mechanics of how each analytical tool works, is discussed, along with the appropriate interpretation of results. Concepts are presented in the context of real-world examples using publicly available data sets. The course will also introduce students to statistical software. Students of all skill levels are welcome, including those with limited or no statistical, mathematical, or programming backgrounds. All data analysis skills will be taught in class.

DATA 2030 Data Visualization (3)
Students will examine different creative and analytical theories and techniques for understanding and developing data visualizations, including maps, graphs, charts, and interactive tools such as dashboards. Students will access and clean data for visualizing potential, analyze data visualizations for bias and persuasive intent, and create data visualizations to communicate findings and tell engaging stories for diverse audiences. Students will also consider the societal role that data visualizations play in validating knowledge while exploring ethical concerns and critiques around communicating arguments visually. As practice, students will storyboard, create, peer review, and justify design choices when using a variety of open-source data visualizations. Students of all skill levels are welcome, and all data visualization skills will be taught in class.

DATA 2040 Text and Qualitative Data Analysis (3)
This course provides an overview of the tools most commonly used to analyze data from textual or qualitative sources such as written or digital text, interviews, focus groups, and opened-ended survey questions. Both manual (i.e., by hand) and software analytic approaches will be explored. For each type of analysis, the underlying theory, assumptions, and mechanics of how each analytical tool works, are discussed, along with appropriate interpretation of results. The course is designed for students from any major with real-world examples drawn from the humanities, social and behavioral sciences, business, and government. Students of all skill levels are welcome, including those with limited or no statistical, mathematical, or programming backgrounds. All analysis skills will be taught in class.

DATA 2150 Applied Generative Artificial Intelligence (3)
The introduction of widely available and accessible generative Artificial Intelligence tools, such as ChatGPT, democratizes expertise, unlocks knowledge, and bestows impressive abilities. This hands-on course provides students with practical experience employing generative AI to perform real-world tasks. By the end of the course, students will be able to effectively collect accurate historical and real-time information, generate high-quality text and media, transform content between formats, analyze data to derive insights and deploy generative AI to tackle private and professional challenges.

DATA 2810 Special Topics (3)
Special Topics in Data Literacy. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

DATA 2940 Transfer Coursework (0-20)
Transfer Coursework

Maximum Hours: 99

DATA 3010 Introduction to Data Collection and Wrangling (3)
This course provides an intensive introduction to data collection, wrangling, and summarization using the R programming language. Students will learn the fundamental skills required to collect, re-shape, transform, manipulate, analytically explore, summarize, and visualize data. Students will learn how data must be organized and formatted in order to perform effective data analysis or be inputted into a machine learning algorithm. Further, students will learn how to produce data-driven dynamic web applications. The time students allocate to learn these data-related skills will allow them to create data sets that promote more efficient, reproducible, and understandable data science products. The course is designed for students from any major with real-world examples drawn from a variety of domains. Students of all skill levels are welcome, including those with limited or no statistical, mathematical, or programming backgrounds. All necessary skills will be taught in class.

DATA 3030 Data Science Research and Communication (3)
This course will examine how knowledge production processes relate to designing and communicating data and science research across various digital mediums. Students will develop their expertise in epistemology theories and practices relating to data research. This course will also cover ethical considerations when developing and promoting research using data. They will also examine how political and social issues such as race, gender, sexuality, and disability often affect how data stories are told and interpreted and the treatment of researchers online. This interdisciplinary course will engage a variety of fields, including data science, technology studies, and digital scholarship. Students will learn to use digital tools to convey science communication products. All technical skills will be taught in the course.

DATA 3530 GIS and Mapping Global Issues (3)
Geographic information systems (GIS) involve creating, storing, retrieving, analyzing, and visualizing spatial data. This course examines the global impact on social, political, economic, and environmental dynamics when using geographic information systems (GIS), global positioning systems (GPS), and other geospatial technologies in daily life. Readings and discussions will focus on global affairs, such as critical cartography, GIS integration with social theories, implications for crime, urban planning, scientific research, health, environmental justice, feminist perspectives, and the intersection of economic development with environmental shifts. This course will also introduce students to foundational concepts and skills in working with spatial data, including finding and creating data, spatial analysis, and GIS-based map production. Specific global affairs topics will be analyzed using ESRIs ArcGIS. Students will gather GIS data, analyze global affairs topics using GIS, and produce their own data projects.

DATA 3810 Special Topics (3)
Special Topics in Data Literacy. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

DATA 3940 Transfer Course Work (0-4)
Transfer Coursework

Maximum Hours: 99

DATA 4030 Data Ethics, Privacy, and Governance (3)
This seminar uses social frameworks to examine historical and contemporary questions around ethics, privacy, and governance. Students will be introduced to concepts relating to critical data studies, such as algorithm bias, machine learning, data colonialism, and critical code studies. Students will examine data in the context of medicine, privacy, capitalism, violence, moral responsibility, biometrics, governance, and labor practices. Readings and seminar discussions will involve identifying data problems and discussing solutions for creating responsible and beneficial data practices for their society. Students will storyboard, write, revise, and present a data ethics paper where they apply ethical reasoning to data issues. All technical skills will be taught in this course.

DATA 4040 Network Data Science (3)
This course provides an overview of the tools most commonly used to collect, analyze, and visualize network data. For each type of analysis, the underlying theory, assumptions, and mechanics of how each analytical tool works, are discussed, along with appropriate interpretation and visualization of the results. The course is designed for students from any major with real-world examples drawn from the social and behavioral sciences, economics and finance, biology, history, anthropology, social media, public health, and government. Students of all skill levels are welcome, including those with limited or no statistical, mathematical, or programming backgrounds. All analysis skills will be taught in class. However, it is highly recommended, but not required, that students complete DATA 2020 or an equivalent course in statistics and/or data analysis, preferably one that utilized the statistical computing programs R and RStudio, prior to enrollment.

Digital Design (DDSN)

DDSN 1100 Digital Design Foundations (3)
This studio course involves inquiry into the nature of the graphic design and interactive fields. Topics introduced in this course are color theory for print and the screen, file types, design terminology, project workflow, aesthetics, visual concepts, typography and Adobe software fundamentals. The course also introduces students to oral and written communication for design practices, presentation techniques and the client-designer relationship. Lectures, readings, class demonstrations, group exercises and writing assignments are used.

DDSN 1101 Digital Imaging (3)
This studio course explores raster image-making in the digital platform while creating historical and practical connections between technology and creative problem solving. Topics introduced in this course are the Adobe Photoshop and Lightroom interfaces, photo manipulation, historical perspectives in digital imaging, digital painting, digital darkroom techniques and preparation of digital images for various media. Additionally, students engage in written and verbal communication for ideation and presentation. Lectures, readings, class demonstrations, group exercises and writing assignments are used. Prerequisites: DDSN 1100.

Prerequisite(s): DDSN 1100.

DDSN 1102 Digital Illustration (3)
This studio course explores illustration in the digital platform while creating historical and practical connections between technology and creative problem solving. Topics introduced in this course are the Adobe Illustrator interface, illustration tools and techniques, color, photo-realism, historical perspectives in digital illustration and challenges within the digital interface. Additionally, students engage in written and verbal communication for ideation and presentation. Lectures, readings, class demonstrations, group exercises and writing assignments are used.

Prerequisite(s): DDSN 1100.

DDSN 1103 Foundations of Art (3)
This studio course examines the fundamental practices of art making. Students will analyze the Principles of Art, Elements of Design, and Color Theory. Students will explore varied drawing styles, techniques, and instruments. This course will introduce students to critique etiquette and the vocabulary of fine art.

DDSN 1400 Typography Studio I (3)
This studio course examines typography from historical and practical perspectives while creating connections between type as a communication tool and type as visual expression. Topics introduced in this course are the history of type, type anatomy, classifications, terminology, type setting for the screen versus print, rules of typography, hierarchy and formalism. Additionally, students engage in written and verbal communication for ideation and presentation. Lectures, readings, class demonstrations, group exercises and writing assignments are used.

Prerequisite(s): DDSN 1102.

DDSN 1401 History of Graphic Design (3)
This studio course examines the history of graphic design from 15,000 B.C. through the invention of writing to present day composition and strictly follows Meggs' History of Graphic Design. Students will explore various movements in graphic design history and create design works that reflect these periods. Parallels between fine art history will be drawn. Students are expected to produce written projects in this course displaying content knowledge.

Prerequisite(s): DDSN 1101 and 1102.

DDSN 1940 Transfer Coursework - 1000 Lvl (0-20)
Transfer coursework: Digital Design

Maximum Hours: 99

DDSN 2000 Branding & Semiotics (3)
This studio course examines semiotics and identity (logo) design from historical and practical perspectives. Topics introduced in this course are the study of signs and symbols and the fundamentals of branding with a specific focus on identity (logo) design. Various types of logos will be analyzed and identified and the elements that make them iconic and memorable will be studied. With this knowledge, students will use the entire design process to create logos, symbols and app icons. Additionally, students will engage in written and verbal communication for ideation and presentation. Lectures, readings, class demonstrations, group exercises and writing assignments are used.

Prerequisite(s): DDSN 1101, 1102 and 1400.

DDSN 2100 Intro to UX Design (3)
This studio course explores the field of user-experience design, empathy, user-engagement and best practices. Students will explore and evaluate case studies, create concept-driven strategies to meet the needs to of mock-clients and produce wireframes and prototypes.

Prerequisite(s): DDSN 1101 and 1102.

DDSN 2101 Foundations of Interactive Design (3)
This studio course investigates the practice of interactive design from both front and back-end perspectives. User-experience and user-interface design techniques are employed to develop online interactive content. Topics introduced in this course are image and type for the web, HTML basics, development, testing and updating of effective interfaces, visual, navigational and structural approaches to CSS, visual hierarchy, basic animation for online content, image and file preparation and historical perspectives in interactive design. Additionally, students engage in written and verbal communication for ideation and presentation. Lectures, readings, class demonstrations, group exercises and writing assignments are used.

Prerequisite(s): DDSN 1400.

DDSN 2102 Digital Photography (3)
This studio course will explore the history of digital photography in the context of digital design and put into practice photographic compositions and image editing. The digital camera will be used to create compelling visual compositions based on a concept, explore product photography, green screen photography and lighting scenarios. Practice and experimentation with digital image manipulation and compositional techniques is also included in this course.

DDSN 2103 Intro to Copywriting (3)
This online course introduces students to the fundamentals of advertising copywriting. Lectures, readings, and online resources explore how to begin an assignment, find a brand voice, connect with and influence an audience, and develop concise, meaningful copy for traditional and digital media. Students will work alone and in pairs to research, concept, and write ads and campaigns for mock clients and service-learning projects. They will also analyze and critique their own and others' writing through written assignments and in-class discussion. Class meets synchronously once each week.

Prerequisite(s): ENGL 1010.

DDSN 2222 Lower-Level Assessment (3)
This course provides students the opportunity to master skills within lower- level coursework as determined by faculty advisors. Students may take this course with permission by the program directors.

DDSN 2400 Digital Page Layout (3)
This studio course utilizes multi-page layout software to explore long-format design challenges. Topics introduced in this course include advanced InDesign software techniques, design for publication, and file preparation for long-format printing. Students will create concept-driven works for mock clients. Printing and production techniques for long-format design will be employed.

Prerequisite(s): DDSN 1400.

DDSN 2401 Design Studio I (3)
This studio course explores development of printed branding materials within the Adobe interface. Students will create concept-driven projects exploring execution via various media to communicate an event, promotion or series. Students will work with mock clients to create professional written and verbal presentations for portfolio-ready printed works.

Prerequisite(s): DDSN 2100 and 2400.

DDSN 2502 Digital Art Studio III Modular (3)
This studio course explores to use of modular components to allow for efficient reuse in the game design environment. Students will understand how to create these assets with a focus on modularity. Prerequisites: DDSN 1100, 1500, 1501, 1502, 1503, 1504, 1505.

Prerequisite(s): DDSN 1504 and 1505.

DDSN 2600 Interactive Design Studio I (3)
This studio course explores design for mobile, display, aesthetics, UX, UI and interactive solutions. Students are introduced to the latest authoring and animation tools and learn how to apply their knowledge of the software to create dynamic and responsive interactive experiences. Students will communicate ideas via written and verbal presentation.

Prerequisite(s): DDSN 1401, 1400 and 2101.

DDSN 2601 Digital Narrative Studio I (3)
This studio course uses story-telling techniques to communicate to an audience from a variety of platforms. Students will engage in techniques for video editing and visual storytelling through lecture and class projects. Digital editing software is introduced as well as production materials. Students will create short narrative stories to solve a problem, entertain diverse audiences, and market ideas. They will explore various formats, including film, TV, and social media, as well as how each channel has evolved and presents unique opportunities for messaging.

Prerequisite(s): DDSN 1401 and 1400.

DDSN 2602 Motion Design Studio 1 (3)
This course introduces the history and theory of motion graphics and animation. Students will adapt their graphic design acumen for use in timeline-based software to create industry-standard assets for video production, web, and social media using the essential functions and properties of Adobe After Effects. Students will develop a professional process for communicating and iterating motion ideas from concept to delivery including storyboarding, style frames, and animatics as well as rendering, compressing, and exporting files for handoff with stakeholders.

Prerequisite(s): DDSN 1400 and 2000.

DDSN 2603 Interactive Technologies (3)
This special topics course introduces students to basic web language standards and vocabulary, beginner level development procedures and protocols, and interactive technologies used in marketing, design, PR, and online markets. Students will learn how to apply their knowledge to solve interconnectivity issues, articulate development goals with computer science professionals, and complete basic level development edits in online environments. Students will communicate ideas via written and verbal presentations.

Prerequisite(s): DDSN 1401 and 2101.

DDSN 2940 Transfer Courswork - 2000 Lvl. (0-20)
Transfer coursework: Digital Design

Maximum Hours: 99

DDSN 3100 Sound Design (3)
This studio course introduces sound design principles, historical perspectives and case studies. Students are expected to story board and compose sound for characters, video, motion graphics or interactive elements. Students will create professional written and verbal presentations.

Prerequisite(s): DDSN 1101 and 1102.

DDSN 3333 Upper-Level Assessment (3)
This course provides students the opportunity to master skills within upper-level coursework as determined by faculty advisors. Students may take this course with permission by the program directors.

DDSN 3400 Design Studio II (3)
This studio course explores development of three-dimensional packaging to communicate a brand or persona paired with two-dimensional supporting materials. Students will work alone and in groups to create original works for mock clients and service-learning experiences. Students will create professional written and verbal presentations for portfolio-ready printed works.

Prerequisite(s): DDSN 2401.

DDSN 3401 Letterpress Studio (3)
This studio course explores traditional letterpress techniques within a design context. Students will use their original typographic compositions and translate them to the physical letterpress printing method. Students will critique and analyze design solutions via written assignments and verbal class discussions.

Prerequisite(s): DDSN 1100 and 1400.

DDSN 3402 Poster Design (3)
This studio course explores using the poster as a means for visual communication within various projects. Students will work alone and in groups to find concept-driven solutions to design problems translated into the poster medium. Students will critique and analyze design solutions via written assignments and verbal class discussions.

Prerequisite(s): (DDSN 1100, 1101 and 1400).

DDSN 3403 M. A. D. Studio (3)
Marketing and advertising for designers explores the role designers play in the marketing and advertising industries. Students use marketing and advertising to better communicate a brand or persona within various media. Students will work within service-learning projects to articulate a call to action via multiple media platforms both alone and in groups. Students will critique and analyze design solutions via written assignments and verbal class discussions and presentations.

DDSN 3404 Copywriting Studio (3)
This online studio course advances students' understanding of the discipline of copywriting. Lectures, readings, and case studies explore the many ways language functions in advertising — to educate, sell, influence, entertain, shock, and shape culture. Students will work alone and in pairs to research, concept, and write ads and campaigns for mock clients and service-learning projects. This could include writing for projects in concurrent design courses or refining and extending existing portfolio pieces. Students will also analyze and critique their own and others' writing through written assignments and in-class discussion. Class meets synchronously once each week.

Prerequisite(s): ENGL 1010 and DDSN 2103.

DDSN 3505 Typography 2 (3)
This studio course closely examines lettering, typography and the structure and nuances of the Roman alphabet. Attention will be given to form, history and concept in type. Topics discussed are customizing typefaces, creating glyphs and alphabets, custom display lettering, the relationship between type and image, and working with large amounts of text and multiple pages. Additionally, students engage in written and verbal communication for ideation and presentation. Lectures, readings, videos, exercises, projects and writing assignments are used.

Prerequisite(s): DDSN 1400 and 2400.

DDSN 3600 Social Media Studio (3)
This studio course examines the use of social media within the design field. Students will create graphics for various new media and social media landscapes and develop strategy for implementation. Students will recognize and evaluate social media platforms based on user interaction and outcomes, design strategic graphics for social media campaigns, develop ongoing social media and digital strategy for service-learning client and communicate project via professional written and verbal presentation.

Prerequisite(s): DDSN 1100 and 1102.

DDSN 3602 Interactive Design Studio II (3)
This studio courses uses advanced UX, UI, interactive design techniques and software to communicate a concept to an audience. Students will understand advanced interactive design techniques and apply techniques to class assignments. Students will create content-rich design solutions showcased within an interactive context using working prototypes in mobile-first design.

Prerequisite(s): DDSN 1400.

DDSN 3603 Digital Narrative Studio II (3)
This studio course explores video production within a team environment to create concept-driven, strategic solutions for a real-world client. Students will work in teams to create storytelling experiences via video and motion. Students will understand and analyze advanced principles of the digital narrative, study different approaches to genre and style, develop multimodal approach to digital problem solving, create concept-driven solutions to class assignments, work in groups to develop strategy for service-learning client, communicate project via professional written and verbal presentation. They will explore platforms and brand messaging, along with creative means of achieving goals in these channels.

Prerequisite(s): DDSN 1400 and 2601.

DDSN 3604 Motion Design Studio II (3)
This studio course builds on foundations of motion and uses advanced motion techniques to create animation narratives that synthesize motion graphics with video elements and user interfaces. The vast suite of Adobe After Effects will allow designers to explore complex features to aid storytelling and creative problem solving. Students will create concept-driven motion projects with motion tracking, 3D layers, and cameras with an emphasis on detailed gestures, micro animations, and design patterns as well as best practices for interactive compatibility to incorporate motion design into mobile and web interfaces to aid user experience.

Prerequisite(s): DDSN 2000, 1400, 2602, 3601, 3602 and 3603.

DDSN 3605 Illustration Studio (3)
This studio course explores digital illustration in the Procreate platform with some cross-over in Adobe Illustrator while creating historical and practical connections between technology and creative problem solving. Topics introduced in this course are the Procreate and Adobe Illustrator interfaces, illustration tools and techniques, color, good illustration practices and processes, and challenges within the digital interface. Additionally, students engage in written and verbal communication for ideation and presentation. Lectures, readings, class demonstrations, group exercises and writing assignments are used.

DDSN 3890 Service Learning (0-1)
Corequisite(s): DDSN 3400.

Maximum Hours: 99

DDSN 4100 Portfolio & Prof Practices (3)
This studio course prepares students for entry into the workforce. Students will create a personal brand and translate that brand into their portfolio, stationery package and other media for marketing purposes. Students will undergo rigorous self-reflection, mock interviews, presentation techniques and portfolio reworking. Students can expect to create written and verbal communication regarding their brand, personal attributes and portfolio works.

DDSN 4400 Business of Design (3)
This studio course provides students with real-world applications of business practices within the graphic design industry, contracts, the law, business planning, strategy and marketing. Students will assemble a strategic approach to estimating and planning, project workflow in a design business environment and create original work for service-learning client.

Prerequisite(s): DDSN 1100 and 1102.

DDSN 4401 Design for Good (3)
This studio course explores the greater purpose of design as an agent of change. Students will create multiple projects supporting a cause with a specific call to action. 2D, 3D and interactive elements will be employed to create meaningful works based on a concept. Students will work for personal and service-learning clients and communicate projects via professional written and verbal presentation.

Prerequisite(s): DDSN 1100, 1101, 1102, 1400, 2000 and 1401.

DDSN 4402 Packaging Design (3)
This studio course uses good design techniques paired with visual marketing and advertising strategies to apply design to three-dimensional packaging objects. Students will work alone and in groups to create concept-driven solutions to appeal to an audience via packaging media. Students will communicate projects via professional written and verbal presentation.

Prerequisite(s): DDSN 1100, 1101, 1102, 1400, 1401 and 2000.

DDSN 4403 Corporate Identity (3)
This studio course greater explores the field of corporate identity and branding within a design context. Students will work alone and in groups to create concept-driven works for mock clients and service-learning projects. Students will explore logo design, branding, brand standards, brand strategy and brand application as part of this course. Students will communicate projects via professional written and verbal presentation.

Prerequisite(s): DDSN 1100, 1101, 1102, 1400, 1401 and 2000.

DDSN 4404 Environmental Design (3)
This studio course greater explores the field of environmental design within a design context. Students will work alone and in groups to create concept-driven works for mock clients and service-learning projects. Students will explore large-scale graphics for a variety of out-of-home media including billboards, transportation design, way finding and accessibility design. Students will communicate projects via professional written and verbal presentation. Prerequisites: DDSN 1100, 1101, 1102, 1400, 1401, 2100, 2400, 2401, 3400, 3403, 3600, 4400.

Prerequisite(s): DDSN 1100, 1101, 1102, 1400, 1401 and 2000.

DDSN 4405 Design Studio III (3)
This studio course explores development of multi-media works surrounding project themes. Students will use print (2D), packaging (3D) and interactive media to communicate a project solution. Students will work alone and in groups to create original works for mock clients and service-learning experiences. Students will create professional written and verbal presentations for portfolio-ready printed works.

Prerequisite(s): DDSN 1100, 1101, 1102, 1400, 1401, 2401, 3400, 2400 and 2000.

DDSN 4406 Designer as Author (3)
This accelerated studio course explores development of a project where the student is the author of the concept, product, persona, client, research, execution and implementation from start to finish. This course is reserved for students with a 3.5 or higher GPA who can demonstrate exceptional design skills in two-dimensional, three-dimensional and interactive design techniques. Students interested in taking this course should apply the semester prior via portfolio and written proposal for the course topic.

DDSN 4600 Multi-Media Studio (3)
This studio course encourages the use of multiple media to communicate to an audience. Students will use narrative, social media, motion, website design and other interactive applications per their strategy to create a multimodal user-experience. Students will present ideas both in written and verbal form.

Prerequisite(s): DDSN 1100, 1101, 1102, 1400, 1401, 2101, 2600, 2000 and 3602.

DDSN 4601 Digital Design Co-op (1)
This 1 credit seminar course acts as a mock agency and allows students to create projects for local businesses in the New Orleans community. The professor will act as the account executive to manage work-flow while students mimic the team roles within a creative agency setting. Students may be expected to create 2D works, 3D works, interactive elements, illustrative elements, and branding packages. Students will gain experience working one-on-one with a real client as well as with printing and production houses. The course is by application only and students are selected by the Program Director. Departmental Approval Required.

DDSN 4900 Special Topics (3)
Special Topics in Digital Design.

Maximum Hours: 99

DDSN 4901 Special Topics (3)
Special Topics in Digital Design.

DDSN 4902 Special Topics (3)
Special Topics in Digital Design. Course may be repeated up to unlimited credit hours

Course Limit: 99

DDSN 4903 Special Topics (3)
Special Topics in Digital Design. Course may be repeated up to unlimited credit hours

Course Limit: 99

DDSN 4904 Special Topics (3)
Special Topics in Digital Design. Course may be repeated up to unlimited credit hours.

Course Limit: 99

DDSN 4905 Special Topics (3)
Special Topics in Digital Design. Course may be repeated up to unlimited credit hours.

Course Limit: 99

DDSN 4910 Independent Study (1-3)
This course explores special topics with the Digital Design field. The student will work one-on-one with the faculty member to create portfolio ready works in a concept-driven environment. The independent study may be taken twice for credit if the topics vary.

Maximum Hours: 99

DDSN 5050 Digital Design Practicum (3)
This course assists in the student's internship experience by providing weekly direction and feedback. The student is responsible for securing an internship during the practicum course period and completing at least 100 total hours during the semester. In addition to the contact hours, each student must maintain a PDF portfolio of works created during the semester for review during the final exam period. Both the student and employer will be given entrance and exit surveys regarding their experiences.

Digital Media Practices (DMPC)

DMPC 1000 Digital Media Practices (3)
This course is designed to introduce students to the languages and histories of moving images and media arts, and the diverse ways in which artists and filmmakers have contributed to them. The course will examine ideas of radical content and experimental form by establishing normative models and procedures while showing the ways artists challenge these conventions.

DMPC 1110 Introduction to Film Production Cultures (3)

DMPC 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

DMPC 2001 Introduction to Digital Filmmaking (3)
Introduction to Digital Filmmaking is an introduction to the basic theoretical and practical techniques of film production in the documentary, experimental, and narrative modes. Topics include digital storytelling basics, essential cinematography tenets and techniques, introductory sound recording and mixing, and foundational editing skills.

DMPC 2002 Narrative Filmmaking (3)
Narrative Filmmaking is a continuation of skills and techniques covered in Introduction to Digital Filmmaking. This course will introduce the student to the techniques of lighting, makeup, scheduling, budgeting, directing, and editing. This is a laboratory course in which a major portion of the student's grade is based on his/her successful execution of several film production projects.

Prerequisite(s): DMPC 2001 or DMPR 2001.

DMPC 2003 Documentary Filmmaking (3)
This course analyzes documentary film aesthetics and practices while employing hands on production & coordination, post-production, editing, and distribution. Previously listed as DMPC 3050.

Prerequisite(s): DMPC 2001.

DMPC 2050 Documentary Visual Language (1)
This experiential, workshop-style course will teach students the fundamentals of documentary visual language and allow students to practice various documentary filming techniques. May be taken for credit up to 3 times.

Prerequisite(s): DMPC 2001*.
* May be taken concurrently.
Course Limit: 3

DMPC 2060 Movement in Cinematography (1)
This experiential, workshop style course will allow students to explore and practice the many ways they might employ camera movement in films. May be taken for credit up to 3 times.

Prerequisite(s): DMPC 2001*.
* May be taken concurrently.
Course Limit: 3

DMPC 2099 DMPC Collaborative Lab (1)
This course serves as a collaborative practicum lab for students in Acting for Other Media, Directing Actors, and Lighting & Cinematography. It meets once per week for 3 hours and is required of all students enrolled in these courses.

Course Limit: 3

DMPC 2500 Game Studies (3)
This course offers an exploration of games as media and investigates methods by which game authors extend the visual traditions and conceptual ideals of contemporary media theory and visual communication into the gaming medium. Games represent a rapidly emerging medium, the history of which must be analyzed through the lenses of art history, representation, new media studies, and game studies in order to be fully contextualized. Students will explore different game genres while analyzing and playing games in order to gain an understanding of their frameworks and programmatic strategies. The readings and lectures in this course are intended to incite an active and critical perspective on contemporary game practices in art, digital interfaces, game culture, and the game industry. There will be a focus more on independent game designers and artists and different strategies for gaming, such as VR, internet-based games, personal narratives, and machinima. No coding experience is required for this class.

DMPC 2510 Game Studio 1: Experimental Game Design (3)
Video games are a huge part of the entertainment industry and a vital part of many people's lives. Open source programs have made it easier for individuals outside of the game industry to make poetic, personal, political, critical and revelatory games. In this class, we will be looking at tools for independent game making (Twine, Bitsy and Unity) to ultimately create mini games of our own. While we are learning to make games, we will also explore different game genres while analyzing and playing games in order to gain an understanding of their frameworks and programmatic strategies. The readings and lectures in this course are intended to incite an active and critical perspective on contemporary game practices in art, digital interfaces, game culture and the game industry.

DMPC 2600 Personal Data Visualization (3)
We produce caches of data within our networked lives, from social media interactions to mass surveillance systems, mostly to the benefit of corporate or state entities. These data sets also reveal a story about us, although sometimes abstract and obfuscated. Through a combination of lectures and workshops, we will explore how data has been used, both historically and contemporaneously, to control, manipulate and influence the body and how artists, writers and activists have responded to issues of privacy, representation, gender and identity. We will look at how our physical, social and personal digital presence is reduced to data, surveilled and analyzed through our online behavior, mobile devices, CCTV, 3D scanning, computer vision and machine learning algorithms. Throughout the semester, students will learn how to code for the web while collecting and visualizing data about themselves to form a personalized narrative about how they interact with these spaces and how these spaces might see them.

DMPC 2700 Introduction to Podcasting and Social Justice (3)
This course investigates the historical, political, and technical dimensions of podcasting as a technology for advancing social and economic justice in the United States and across the world. We will explore pertinent theories of sound, genre, and storytelling while learning some of the fundamentals of podcast production. We will also interact with guest speakers who are both experienced practitioners of the form and politically engaged advocates and organizers.

DMPC 2710 Podcasting Production I (3)
In this course, students will develop intermediate skills with all components of the podcast production process, including interviewing, audio recording, and audio editing. They will do so through producing, recording, and editing three episodes of a podcast with a partner in three discrete formats: interview-based, essayistic, and experimental or avant garde. These efforts will be supported by close study of cutting-edge scholarship in podcast studies and sound studies throughout the semester. By the end of the course, students will have gained competencies as both practitioners of podcasting and theorists of sound.

DMPC 2940 Transfer Coursework (0-20)
Transfer Coursework

Maximum Hours: 99

DMPC 3000 Screenwriting (3)
This course introduces the art and craft of screenwriting by learning the essential principles necessary to analyze and write screenplays.

Prerequisite(s): DMPC 2001.
Course Limit: 1

DMPC 3010 Development: From Pitch to Picture (3)
This course familiarizes students with the complex process by which film and television projects are found, proposed, sold, and produced. The course covers the search for stories, writing coverage, pitch pages, beat sheets, script notes, developing screenplays, and packaging a project for presentation to potential buyers.

Prerequisite(s): DMPC 2001.

DMPC 3020 Directing Actors for Screen (3)
This course is designed as a laboratory for directors who wish to develop skills and techniques for collaborating to achieve compelling and believable on-screen performances. During the course students write, direct, and edit short dialogue scenes in collaboration with actors.

Prerequisite(s): DMPC 2002.
Corequisite(s): DMPC 2099.

DMPC 3030 TV & Film Sound Design (3)
Professional, high quality sound design practices in narrative film are analyzed and implemented in this course. This hands-on experience will explore techniques of recording, mixing, processing, synthesis, sampling, and analysis of digital audio with emphasis on the fundamental elements of producing, designing and editing sound specifically for the moving image. Topics to be covered include microphone techniques, field and studio recording, stereo and 5.1 surround sound distribution, and Foley and ADR techniques. Students will collaborate in designing the sound for the Senior films.

Prerequisite(s): DMPC 2001 or DMPR 2001.

DMPC 3040 Lighting & Cinematography (3)
Techniques in the art and craft of lighting and digital cinematography are covered, from angles, frame composition, filters, and camera movement to image control through lighting, exposure, focus and lenses. Students learn from in-class demonstrations, out of class assignments, and analysis of the techniques of the masters in cinematography. The duties of camera department personnel are addressed. The class also includes instruction in the use of the dolly, slate, signal monitoring equipment, lighting styles and Steadicam.

Prerequisite(s): DMPC 2002, DMPR 2002 or THEA 2080.
Corequisite(s): DMPC 2099.

DMPC 3080 Color Correction and Grading for Television and Film (3)
This course covers the history and technique of color correction for the digital image in television and film.

Prerequisite(s): DMPC 2002.

DMPC 3090 Producing I (3)
The objective of this 3-credit course is to introduce students to the fundamentals of producing for the theatre, as well as cinema, television, and emerging media. Students will receive an overview of the role of the producer, from the initial steps of putting together script, talent, and the team (writer(s), director, actors, designers), through financing, and into marketing and the launch of a new production.

Prerequisite(s): DMPC 2001.

DMPC 3220 Digital Production Non-Profits (3)
This course emphasizes the role of communication in building understanding and nurturing change. It will consider the art of expressing ideas combined with the science of transmitting information. In this hands-on experience, students will analyze a communication situation or problem and then design and implement a communication plan that will help the nonprofit community partner achieve positive social change, fulfill it's mission, advance its program and policies and make its value known. Service Learning is a required element in this course.

Prerequisite(s): DMPC 2001, DMPR 2001 or THEA 2070.

DMPC 3290 Digital Production Non-Profits (3)
Prerequisite(s): THEA 2070.

Prerequisite(s): THEA 2070.

DMPC 3300 Educational Game Design - Service Learning (1)
This 1 credit course centers on the development of educational video game resources for Louisiana teachers in collaboration with the Louisiana Environmental Action Network's resources for K-12 Environmental Justice education. Students must have taken or be co-enrolled in at least one of the collaborating courses: DMPC 2500, DMPC 2510, DMPC 2700, DMPC 2700, DMPC 2710, DMPC 3000, DMPC 3750, ARST 1550, ARST 2550, MUSC 2300, APMS 3330, MUSC 4400.

Course Limit: 3

DMPC 3510 Game Studio 2: Narrative and VR (3)
In this class, we will be expanding on the skills we learned from Experimental Game Design and look at different frameworks for creating interactive, personal and narrative driven games using the game engine Unity. In addition to narrative games, we will be looking at virtual reality (VR) using the Index Valve VR system and motion capture using the Azure Kinect and a motion capture suit. VR is a burgeoning space for experimentation, and we will be making small VR experiences for PC and uploading them to the social VR platform VRChat. Motion capture allows for real-time applications using game software, such as in theatrical performances, musical performances, architectural projection, etc. as well as options for generating custom animations for avatars in games. We will also explore, play, and analyze different narrative driven games and VR applications in order to gain an understanding of their frameworks and programmatic strategies. The readings and lectures in this course are intended to incite an active and critical perspective on contemporary game practices in art, digital interfaces, game culture and the game industry. Formerly listed as DMPC 3500: Game Design 2.

Prerequisite(s): DMPC 2510.
Course Limit: 2

DMPC 3710 Podcast Production 2 (3)
Students in this course will develop advanced skills with all components of the podcast production process, including recording, editing, and mixing for conventional and leading edge audio-first content. They will do so through production of audio-first features in collaboration with a preselected community partner or organization.

Prerequisite(s): DMPC 2700 or 2710.

Maximum Hours: 6

DMPC 3750 Media for Community Health and Well Being (3)
This course immerses students in selected aspects of health communication using the digital media technologies currently revolutionizing the health communication field. The course highlights student mastery through tutorials using some of the new computer technologies and touches on theoretical and research approaches to studying "new media" and what this trend implies for community health practice. There is also exploration of the developing field of health literacy for both patients in the health care systems as well as the general public. This course requires a mandatory 20-hour service learning co-requisite.

DMPC 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

DMPC 3910 Special Topics (3)
Specialty courses for undergraduates in Digital Media Production techniques and projects as designed by visiting or permanent faculty teaching in the program. Topics may be drawn from any area of film, television and multimedia production, for example advanced cinematography, film scoring, or documentary filmmaking and similar topics. May be repeated for credit on different topics. Prerequisites vary depending on the topic.

Maximum Hours: 99

DMPC 3911 Special Topics (3-4)
Specialty courses for undergraduates in Digital Media Production techniques and projects as designed by visiting or permanent faculty teaching in the program. Topics may be drawn from any area of film, television and multimedia production, for example advanced cinematography, film scoring, or documentary filmmaking and similar topics. May be repeated for credit on different topics. Prerequisites vary depending on the topic.

Maximum Hours: 99

DMPC 3912 Special Topics (3)
Specialty courses for undergraduates in Digital Media Production techniques and projects as designed by visiting or permanent faculty teaching in the program. Topics may be drawn from any area of film, television and multimedia production, for example advanced cinematography, film scoring, or documentary filmmaking and similar topics. May be repeated for credit on different topics. Prerequisites vary depending on the topic.

Maximum Hours: 99

DMPC 3913 Special Topics (3)
Specialty courses for undergraduates in Digital Media Production techniques and projects as designed by visiting or permanent faculty teaching in the program. Topics may be drawn from any area of film, television and multimedia production, for example advanced cinematography, film scoring, or documentary filmmaking and similar topics. May be repeated for credit on different topics. Prerequisites vary depending on the topic.

DMPC 3920 Special Topics (3)
Specialty courses for undergraduates in Digital Media Production techniques and projects as designed by visiting or permanent faculty teaching in the program. Topics may be drawn from any area of film, television and multimedia production, for example advanced cinematography, film scoring, or documentary filmmaking and similar topics. May be repeated for credit on different topics. Prerequisites vary depending on the topic.

Maximum Hours: 99

DMPC 3940 Transfer Coursework (0-20)
Transfer Coursework

Maximum Hours: 99

DMPC 3990 Producing Media for Social Change (1-4)
Producing Media for Social Change is an experiential, Tier 1/2 service-learning course in which students will produce visual media stories (short documentaries, PSAs, photo essays, or social media campaigns) over the course of four weeks in Athens, Greece. These group projects will be developed, produced, and published in collaboration with local organizations working in the area of climate change and the intersection of climate change and Greek life, landscape, and public health.

Prerequisite(s): DMPC 2001.
Course Limit: 1

DMPC 4070 Contemp Film as Art & Industry (3)
The Hollywood filmmaking process from conception through distribution is analyzed in this course through the critique and reflections of some of the most significant contemporary contributors to the medium including directors, writers and producers and scholars. Many critique the industry in their films as well as in writing. These films will also be analyzed.

DMPC 4560 Internship (1-3)
Internship in Digital Media Practices. May be repeated for up to 6 credits. Students are advised consult with their individual schools' policy on degree-applicable internship credit.

Maximum Hours: 6

DMPC 4570 Public Service Internship (1-3)
This seminar is designed for students completing internships for elective and public service credit. The seminar offers students an opportunity to discuss and explore issues related to their internship experience including the topics of community and civic engagement, social justice, the nonprofit sector, and service-learning in higher education. Finally, the seminar is meant to complement the public service internship experience in facilitating individual growth and career development. This seminar is worth 1 to 3 credits and satisfies the Tier 2 service-learning requirement. You must also register for SRVC 4890 with this class (0 credits) to have it on your audit. Course may be repeated up to 2 times.

Course Limit: 2

DMPC 4910 Independent Study (1-3)
A planned learning experience covering material not included in regular course offerings accomplished independent of formal classroom and/or laboratory sessions through written contract between a student and faculty member. A plan of study must be proposed by the student and approved by the faculty member who supervises and grades the project outcomes. The course is usually completed within one semester.

Course Limit: 99

DMPC 4920 Independent Study (1-3)
A planned learning experience covering material not included in regular course offerings accomplished independent of formal classroom and/or laboratory sessions through written contract between a student and faculty member. A plan of study must be proposed by the student and approved by the faculty member who supervises and grades the project outcomes. The course is usually completed within one semester.

DMPC 4990 Honors Thesis (3)
Senior Honors Thesis.

DMPC 4991 Senior Honors Project in Fine Arts (3)
Senior Honors Project in Fine Arts

DMPC 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): DMPC 4990.

DMPC 5001 Senior Honors Project in Fine Arts (3)
Senior Honors Project in Fine Arts

Prerequisite(s): DMPC 4991.

DMPC 5380 Junior Year Abroad (1-20)

DMPC 5390 Junior Year Abroad (1-20)

DMPC 5510 Advanced Digital Media Production I (3)
This advanced production course focuses on the development and pre-production phases of your capstone project. The aim is to help you develop your ideas, complete your script or proposal, hone your directing/project management skills, and prepare you for a smooth production. You may choose to complete a multi-episode podcast series or radio drama, an interactive media exhibition, an experimental video game or a combination of all these elements. For Majors only. Prerequisites: Junior Standing and at least 12 credits completed in the major.

DMPC 5520 Advanced Digital Media Production II (3)
This advanced production and post-production course supports the creation of Digital Media Practices students' capstone projects. Students begin the semester with production on their projects. The remainder of the semester will be spent in the post-productive phase, as students hone and edit their stories into compelling digital works. Ultimately, their polished projects are exported for exhibition a DMP exhibition, or another public venue, in a celebration of student creativity and productivity. The projects students undertake in DMPC 5520 must be those "greenlit" in the DMPC 5510, Advanced DMP I. If a student decides to radically alter their project, they must re-enroll in DMPC 5510 and complete the pre-production process again.

DMPC 5550 Advanced Digital Filmmaking I (3-4)
Professional, high quality narrative film preproduction practices are analyzed and implemented in this course. Writing the script, selecting the cast, choosing locations, budgeting, financing, securing rights, art directing, and breaking the script down for scheduling the capstone film will be completed. At the completion of this two-semester course, each student will participate in a public screening of his or her film.

Prerequisite(s): DMPC 2002 or DMPR 2002.

DMPC 5560 Adv Digital Filmmaking II (3-4)
In this capstone experience, each student will produce, direct, promote and complete postproduction of the short narrative film he or she pre-produced in Advanced Digital Filmmaking I, the prerequisite class. Crew organization, responsibilities for narrative synch-sound shooting, the management of the set and the shooting day, and script supervision will be analyzed and implemented. Editing, color correction, sound design and scoring will encompass the post-production phase. At the completion of this two-semester course, each student will participate in a public screening of his or her film.(Students enrolling in DMPC 5560 must have received a grade of C or higher in DMPC/DMPR 5550.)

Prerequisite(s): DMPC 5550 or DMPR 5550.

DMPC 5570 Advanced Screenwriting (Feature Films) (3)
In this capstone experience, students will apply the art and craft of story, character, and plot development within a cohesive three act cinematic narrative to both create and analyze a feature-length screenplay. Successful completion of this course (with DMPC 3000 as a pre-requisite) counts as one option for the two-course DMP capstone project, required for graduation in the major. This course is not an exclusive capstone experience; students may choose to take this course and take the Advanced Digital Filmmaking I/II sequence.

Prerequisite(s): DMPC 3000.
Course Limit: 1

Disaster Resilience Leader Sci (DRLS)

DRLS 6010 Human and Social Factors (3)
Outline terminology relevant to the field of disaster resilience leadership (DRL) as it pertains to human and social factors; Understand and apply relevant global, national and state policies and legislation in the field of disaster resilience; Discuss critically the ethical considerations in disaster work (social justice, human dignity, anti-oppressive); Describe, explain and apply human and social theories for DRL (Eco-systemic; structural functionalism, social capital, conservation of resources and progression of vulnerability); Discuss critically the disaster recovery process of the individual exposed to disasters as a life event from a multi-dimensional approach; Evaluate the dynamics within the family/household affected by disasters and disaster recovery; Define and outline building disaster-resilient communities; Outline and explain the role of the media and social media in DRL; Plan intervention programs within the context of the disaster management cycle; Plan disaster-related crisis and stress management programs that promote resilience; Identify the psychosocial needs of specific populations (vulnerable populations, e.g. children, the aged, animal owners, people with disabilities, poorest of the poor, HIV/AIDS, etc.); Understand and explain disaster research.

DRLS 6015 Disaster Displace & Resilience (3)
Course will provide future disaster resilience leaders with a humanistic framework for understanding the cultural dynamics of forced migration and its connection to contemporary processes of global social transformation, the proliferation of transnational communities, and emergent conceptual spaces of identity formation during exile.

DRLS 6016 Vulnerable Populations (3)
The Vulnerable Populations course will provide future disaster resilience leaders with a fundamental understanding of the social constructions of human vulnerability to disasters, conceptualizing populations at risk in a disaster framework and review of best practices in vulnerability reduction through capacity-building. The course offers a cross-cultural and interdisciplinary exploration of culturally sensitive strategies responsive to the needs of vulnerable populations, a comprehensive approach to engaging communities through the use of vulnerability and capacity assessment (VCA), and the social, political, economic, and cultural inequalities that represent intersecting vulnerabilities. The study of vulnerable populations will incorporate a humanistic perspective, investigating the role of cultural competence and the need for a participatory multi-stakeholder approach in community-based disaster risk reduction and sustainable development.

DRLS 6017 Gender and Disaster Risk Red (3)
This course examines the critical role that women play in strengthening community resilience to multiple disasters, the importance of women's knowledge and experience in the formulation of comprehensive adaptive strategies, and the need for their inclusion in disaster risk reduction and sustainable development planning. The course offers a cross-cultural exploration of the unique needs of women throughout the complete life-cycle of a disaster event and the advantages gained from female participation in disaster preparedness and response. The interdisciplinary study of disasters and their effects on women will investigate gender-bias in disaster practices, the cultural and organizational vulnerability of women, familial disruption and hazard perception, post-disaster domestic and sexual violence against women, and the plight of female refugees.

DRLS 6020 Disaster Operations (3)
Disaster Operations is an advanced professional level examination of modern emergency management concepts, national and international trends, practical and political issues and policies, technological applications to emergency management, and the development and practical implementation of sound emergency management practices designed to protect people, communities, critical infrastructure and key assets. Included will be a brief review of the history of emergency management, legal issues, social science perspectives, planning concepts and techniques, disaster modeling, operational problems, analytical methods, special populations, and management styles. Case studies will be examined and discussed to determine the extent of effective or ineffective planning, responding, and recovering from natural and technological disasters.

DRLS 6023 Emerging Trends Resilience and Recovery (3)
This course will review the most recent trends in resilience and recovery efforts as it relates to natural disasters and catastrophic events.

DRLS 6030 Leadership and Economic Analytics (3)
This course provides an introduction to economic recovery and resilience in relation to natural and technological hazards. It particularly focuses on issues facing small businesses, community and regional planners, and non-profit advocates in preparing for and recovering from disasters. It also analyzes issues of justice in relation to economic shock. The economic recovery of areas affected by natural and technological disasters is critical to the overall recovery of regions. The return of industries plays an integral part in the production of capital and other resources required by local residents to pursue their own personal recovery. Similarly, in cases of evacuation, the return of businesses and services provides signals to evacuees that their communities may be stable enough to return to. This course therefore explores the fundamentals of economic recovery and resilience by considering the typical impacts that disasters have on businesses, the institutional environment for economic preparation and planning, and the contemporary philosophies and practices of economic resilience.

DRLS 6032 Quantitative Analysis in D. R. (3)
Introduces students to quantitative data principles, methods, and applications relevant to disaster resilience practice and research. It emphasizes the practical application of data to assess quality of evidence and contribute to knowledge through systematic inquiry, including comprehension of data collection and research methods relevant to disaster resilience data creation. Understanding the scope and application of data in disasters is stressed. Methods in statistics and epidemiology are foundational. The one-credit lab section builds on the lecture, introducing skills in computation for data processing and interpretation.

DRLS 6035 Leadership Amidst Crisis (3)
This course is designed to provide the student with the ability to read, research, write, and discuss the tenants of effective leadership and leading during crisis and disaster. This course will enable the student to learn about this critical pillar of effective disaster and crisis response leadership through literature review, dynamic seminar discussions, written expression, and subject matter expert lecture experiences,. It will begin through the introduction of the concepts of effective leadership including principles, traits, and universal concepts then transition into a more in-depth review of leading through organizational change, common leadership pitfalls to avoid, creating visionary leadership, and will culminate with a focus on leadership amidst crisis. From this, the student will be able to discuss and write about effective leadership in the design of their own leadership philosophy in their individual pursuit in disaster resilience leadership.

DRLS 6040 Environment and Infrastructure (3)
To understand and evaluate: the risks that natural and technological disasters pose to the human environment, the ways that land use, resource use, and environmental policy affect the risks posed by natural and technological disasters, the ways in which the natural environment functions as a "public good," providing a range of "services"—including protection from disaster-based harms—for human and non-human populations, the ways in which the built environment functions as a "public good," providing a range of "services"—including protection from disaster-based harms—for human and non-human populations, the ways that climate change impacts affect disaster risk and how actors in the public and private sectors are seeking to reduce climate-change-based risks; To understand in general terms the history of the environmental movement, the development of modern environmental policy, and the development of modern disaster risk-reduction policy in the United States, how social vulnerability (based on factors related to wealth, race, age, sex, disability, education level, etc.) affects a community's disaster risk in an environmental setting, and the ways that actors in the public and private sectors are addressing or might address the special risks posed by social vulnerability.

DRLS 6042 Integrating Climate Change (3)
The course is an advanced professional-level examination of the fields of climate change adaptation and disaster risk reduction and ongoing efforts both domestically and internationally to integrate these two hazard mitigation efforts. Class presentations and discussions will examine the various issues relevant to the design and implementation of climate change adaptation and disaster risk reduction plans and actions including costs, benefits, legal issues, impact on development, environmental links and concerns, as well as governance issues. Students will analyze the assessment of climate-related risk and the design methods and technological tools used to develop and implement climate and hazard risk reduction plans and actions. The role and leadership of stakeholders from the public and private sectors will be closely examined. Case studies will be introduced to generate examination of and discussions on the ways climate change adaptation and disaster risk reduction actions have been successfully implemented and how local, regional and national governments are working to integrate these two activities.

DRLS 6050 Leadership (3)
This course will dive into recent disasters as the backdrop to explore how theories of leadership ring true or are challenged in practice. Students will be invited to recognize that leaders in the disaster space must be students of people - their needs, motivations, and expectations. Students will have the opportunity to hear from a number of seasoned leaders who will speak to experiences navigating policy, power dynamics and personalities. The course will conclude with the opportunity for students to identify traits and behaviors of leaders to be emulated and to craft those into a personal development roadmap for use in their careers as leaders in the disaster space.

DRLS 6060 Disasters and Social Justice (3)
"The course offers an interdisciplinary exploration of the ways in which disasters disproportionately affect different communities across the US and internationally. Why are some individuals or communities more vulnerable than others? The course will use the feminist sociological theory of "intersectionality" an underlying theory and mode of looking at the multiple identifies that affect one's ability to prepare, respond or recover from disasters. We will look at what role issues of race, ethnicity, gender/gender identity, class, age, dis/ability, sexual orientation and other social categories play in disaster resilience and management. The overall objective of this course is to gain a holistic understanding of the unnatural phenomenon of environmental disasters, including the social construction of disasters, environmental justice, disaster capitalism, normalization of deviance, Black Swan theory, individual blame logic and contaminated communities. Case studies - of local, national and international disasters - will be used to illustrate the principles involved. The course will combine theory with practical approaches to the issue, drawing on resources from different disciplines with a particular focus on the fields of sociology, social work, environmental and social justice, disaster management, community psychology, health, cross-cultural studies and urban planning. "

DRLS 6070 Program Development and Grant Management (3)
This course will provide future disaster resilience leaders with the knowledge and skills necessary to develop a competitive grant proposal to secure external funding from government agencies, corporations, and private foundations. Understanding the fundamental components of a grant proposal, as well as gaining familiarity with the current funding environment, and managing a successful program grant to completion will be examined. The course presents a brief overview of philanthropy while identifying potential funders, exploring how the generic structure of proposals varies according to sociocultural and institutional settings and understanding the linkages between proposal development and program implementation.

DRLS 6110 Rsh and Eval Crisis - Disaster (3)
Evaluation is the key organizational tool for both accountability to affected people and those providing the funding as well as learning from individual responses to improve performance. This is a practical skills based course that will build a student's capacity to conduct, manage, and use the results of evaluations (impacts and process evaluation methods) in emergency response and humanitarian action.

DRLS 6710 Special Topics (3)
This course aims to provide students with the tools needed to understand and critically appraise resilience implementation within an environment of change through the principles of disaster resilience and evidence-based practice application. Students are expected to apply the knowledge gained through this course to promote disaster resilience. Through the educational activities presented in this course, students will acquire academic knowledge and relevant applied skills. The institute theme and topics covered vary per semester. Please consult with the program for course delivery modes.

Course Limit: 99

DRLS 6720 Special Topics (3)
Topics will vary.

DRLS 6730 Special Topics (1-3)
Topics will vary.

DRLS 6740 Summer Instit: Special Topics (3)
Topics will vary.

DRLS 6910 Special Topics (1-3)
Topics will vary.

DRLS 6911 Special Topics (1-3)
Topics will vary.

DRLS 6940 Transfer Credit (1-12)
Topics will vary.

DRLS 7010 Sustainability and Resilience (3)
This course explores the relationship between environmental sustainability and disaster resilience. The terms "sustainability" and "resilience" are often [incorrectly] used interchangeably and each have numerous definitions depending on context. According to Cutter,1 "Sustainability is the potential to maintain the long term well-being of communities based on social, economic, and environmental requirements of present and future generations. It stresses the interdependencies of environmental protection, human needs, and societal well-being, acknowledging the primary goal of improving the human condition without harming the environment." In this course, we will discuss a range of topics—from water to energy to food to climate change—and the challenges and pathways to sustainable practices and how these can support or limit disaster resilience. We will pay special attention to the ways environment and equity are intertwined. Students will gain knowledge about sustainable systems and applying these concepts to disaster planning, management, and recovery.

DRLS 7020 Disaster Recovery and Resilience (3)
The purpose of the course is to focus on the short and long-term reality of the environmental disaster facing the South Louisiana Coastal in the physical area between the mouth of the Mississippi and the Atchafalaya basin outlet. Using the tools of implementation science we will collectively segment and organize evidence to understand and chart a path to resilience for the different local populations directly impacted. Multiple pedagogical approaches including lectures, field trips, readings, interviews with local residents and outside speakers will be utilized to render the scope of the experience as inclusive as possible. The course focuses on building analytical skills and methodological tools for understanding and increasing the rate of implementation of resilience strategies for effected communities. Specific skills of implementation science will be taught which when combined with contextual knowledge of the training site will lead to the competency of being able to execute and prepare and implement a plan for assisting communities in becoming rapidly more prepared and more resilient to environmental threats. The subject will be the long term disaster of coastal degradation and global warming on the Louisiana gulf coast.

DRLS 7500 Continuity of Operations (3)
Planning for Continuity of Operations (COOP) is an introductory course designed to provide students with a foundation in continuity planning. Continuity planning is an important part of the emergency management process and of resilience. Without COOP the resilience of an organization (whether it be a small non-profit, a corporation, a city, etc.) is diminished. Furthermore, the recovery phase of emergency management is not as seamless as it could be, which can cause significant delays and setbacks in returning to business as usual. This interactive online course will cover the foundations of continuity of operations planning cycle from the business impact analysis through exercising the COOP; additionally, students will learn about the importance of COOP, where COOP fits into emergency management, and how to engage stakeholders. Course work shall include case studies, independent research, discussion board posts, group work, and presentations.

DRLS 7830 Independent Study (0-3)
Independent Study courses gives graduate students an opportunity to work with a faculty advisor to pursue a personal academic interest with greater focus. Permission must be given by the DRLA Director to sign up for an Independent Study. Qualified students must develop a syllabus and schedule with the faculty advisor that is approved by the program Director prior to registration.

DRLS 7940 Transfer Credit-Graduate Level (3)
Transfer Credit - Graduate Level. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Earth & Environmental Sciences (EENS)

EENS 1110 Planet Earth (3)
The origin, nature and evolution of the Earth-Moon system and their constituent materials; development of Earth's surface features through interaction of physical, chemical, and biological processes over geologic time; considerations of interactions between Earth processes and present day human activity.

Corequisite(s): EENS 1115.

EENS 1115 Planet Earth Lab (1)
A hands-on study of rocks, minerals, landforms and geologic structures using topographic maps, aerial photographs, physical models, field examination and independent research projects. One laboratory per week; field trips.

Corequisite(s): EENS 1110.

EENS 1300 Earth as a Living Planet (3)
An introduction to the interaction of earth systems and man; anthropogenic impacts of population growth and economic development; renewable and non-renewable resources, air, water and soil pollution and mitigation; ecosystems and biological diversity; and environmental problem solving using the scientific method. Students develop a holistic understanding of environmental science using class discussions and laboratories to reinforce basic scientific principles.

Corequisite(s): EENS 1305.

EENS 1305 Earth as a Living Planet Lab (1)
Lab section for EENS 1300.

Corequisite(s): EENS 1300.

EENS 1410 Our Neighborhood in the Galaxy (3)
We will explore the Solar System in this class. Lecture material will provide both overviews of the bodies in the planetary bodies and more detailed examination of fundamental geologic processes like volcanism, tectonism and impact cratering. Our bias will be towards the rocky inner planets, but we will not leave asteroids or the outer Solar System out. An emphasis will be placed throughout on how observations of the Solar System are made, and in this context the class will also develop a visible light spectrometer so that we can understand the essential engineering, physics, and data associated with this fundamental observational technique. Only open to high school students.

EENS 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

EENS 1945 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

EENS 2020 Environmental Geology (3)
The interaction of humans and their geologic environment. A study of Earth processes and their action on rocks, soil, fluids, and life in ways that either affect or control the human environment. The effect of humans on their environment with consideration of the feedback between Earth processes and human activities. Lectures and field trips.

EENS 2050 Dinosaurs (3)
An introduction to dinosaurs, their relatives, and the Mesozoic world. Students will examine the fossil record of dinosaurs to explore dinosaur anatomy, physiology, systematics, ecology, biogeography, behavior, and macroevolution. Course also includes overviews of plate tectonics, sedimentary environments, fossil preservation, geologic time, and biotic evolution.

EENS 2060 Introductory Geography (3)
An introduction to the basic facts concerning the physical environment: landforms, climates, vegetation and soils, followed by a comprehensive survey of the relationship between the physical environment and human activity in the major geographic regions of the world. The geography of Louisiana is considered in relation to the region. Recommended to students working toward Louisiana certification in elementary education.

EENS 2070 Weather and Climate (3)
An introduction to the Earth's atmosphere with particular emphasis on weather and climate. Topics covered include: heating and cooling of the atmosphere; atmospheric circulation and wind; air masses and cyclonic storms; tropical weather and hurricanes; and global climates and climatic change.

EENS 2080 Extreme Weather (3)
This course is designed to give students a fundamental understanding of severe weather and its impact on man and the environment. Students focus on life cycles of thunderstorms, tornadoes, hurricanes, blizzards, and ice storms, as well as the impacts of temperature and precipitation extremes.

EENS 2090 Shaping the Earth's Surface (4)
The region between the tops of trees to the surface of unweathered rock houses diverse ecosystems, natural resources, and where we as humans reside. This region is known as the critical zone and processes shaping the critical zone can have profound impacts on vegetation, animals, and natural resources like soil and water. Students will learn the physics behind surface and shallow subsurface water flow in the critical zone and how the routing of water shapes the Earth's surface from the top of mountains to the deep ocean. The role humans play in shaping the land surface and our impacts on the severity of natural disasters will also be covered.

Prerequisite(s): (MATH 1210* or 1310*) or (MATH 1150* and 1160*).
* May be taken concurrently.
Corequisite(s): EENS 2091.

EENS 2091 Shaping the Earth's Surface Laboratory (0)
Lab section for EENS 2090

Corequisite(s): EENS 2090.

EENS 2100 Dynamic Planets (4)
This course will explore the physical processes that operate within Earth, affecting how the geosphere interfaces with the biosphere, hydrosphere, cryosphere, and atmosphere. We will examine different processes, like volcanism, and forces, like gravity, and how affect the Earth and its inhabitants. Additionally, we will cover topics related to alternative energy resources, earthquakes, water resources and magnetism.

Prerequisite(s): (MATH 1210* or 1310*) or (MATH 1150* and 1160*).
* May be taken concurrently.

EENS 2101 Dynamic Planets Lab (0)
Laboratory course for EENS 2100 Dynamic Planets.

Corequisite(s): EENS 2100.

EENS 2110 How to Build a Habitable Planet (4)
Within our solar system Earth is unique in that it has a chemical composition and distribution of those elements and molecules that makes it habitable towards life. This course will examine the chemical composition of and processes operating within and between Earth's systems. After this course, students will have a sound understanding of Earth's chemical systems and how the chemistry of Earth shapes and is shaped by climate and environments, solid Earth processes, and processes shaping Earth's surface across and range of spatial and temporal scales.

Prerequisite(s): CHEM 1070 and 1075.
Corequisite(s): EENS 2111.

EENS 2111 How to Build a Habitable Planet Laboratory (0)
Lab section for EENS 2110.

Corequisite(s): EENS 2110.

EENS 2120 Climate and Extinction (4)
Climate change and biodiversity loss are the two greatest threats to the planet. This course addresses the causes, consequences, and solutions to anthropogenic climate change and the current extinction crisis by exploring the relationship between climate and life over human and deep time scales. Students will learn the physics behind the climate system, how climate has changed in the past, and reasons why contemporary climate change is different from natural climate change. The course will also cover the fundamentals of ecology and evolution, major biotic events in earth's history, and the relationship between climate change and mass extinctions.

Prerequisite(s): EBIO 1010* and 1015*.
* May be taken concurrently.

EENS 2121 Climate and Extinction lab (0)
Climate and Extinction Laboratory

Corequisite(s): EENS 2120.

EENS 2220 Earth & Life Through Time (3)
The evolution of earth and life over the past 4.54 billion years.

Corequisite(s): EENS 2225.

EENS 2225 Earth & Life Through Time Lab (1)
A hands-on exploration of the rock and fossil record of planet earth.

Corequisite(s): EENS 2220.

EENS 2230 Oceanography (3)
A broad survey of chemical, physical, and geological oceanography with a brief historical overview and a consideration of current concepts.

EENS 2240 Geology of Our National Parks (3)
The course provides students with an overview of the National Park System using specific examples from the following geologic environments: 1) landscapes developed on flat-lying sedimentary rocks; 2) vistas developed in caves and caverns by corrosion of sedimentary rocks; 3) glacial and alpine landscapes; and 4) volcanic landscapes.

EENS 2400 Global Climate Change (3)
This course provides a broad overview of the causes of climate change and its impacts on Earth and its inhabitants. The first part of the course focuses on the climate system and its components, the second part zeroes in on climate impacts (including those in coastal Louisiana) as well as policy aspects.

EENS 2880 Writing Practicum (1)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

EENS 2945 Transfer Coursework (0-20)

Maximum Hours: 99

EENS 3050 Natural Hazards & Mitigation (3)
The broad aim of this course is to introduce students to the processes causing volcanic eruptions, earthquakes, landslides, tsunamis, and tropical storms, and to outline the steps to their mitigation. These dynamic Earth process are placed within the general context of plate tectonics, as well as the financial, social, and political implications of these catastrophic events. All of these processes are moderated by climate change and rising sea level, which are also considered in group discussions and scenerios. In lieu of a final exam, students prepare and present a hazard case study emphasizing geologic, economic, health, or sociological implications.

EENS 3100 Planetary Geology (3)
This course will introduce students to the geology of other planetary bodies, focusing on fundamental geologic processes like volcanism, tectonism and impact cratering. The course will focus on rocky planet surfaces but will also include discussions of asteroid surfaces and rocky and icy moons. The class will begin with discussions of interior processes and over the course of the semester we will move towards the surface, exploring volcanism, tectonism, sedimentary processes, and atmospheres. Lectures will focus on discussing these topics for a week and then present a case study of these topics. For example, case studies that may be discussed include plate tectonics, oceans, habitability, and climate change. Interspersed among the discussion of geologic processes will be discussions about how geologic landforms are studied on other planets, including the satellites and instruments used to make remote measurements.

Prerequisite(s): EENS 1110.

EENS 3120 Soils and Soil Formation (3)
Lecture and discussion-based survey of soils, soil formation, classification, physical & chemical properties, and applications in geologic, environmental, and paleoclimatic investigations. This course requires participation in a multi-day field trip for soil description and sampling.

Prerequisite(s): EENS 1110 or 1300.

EENS 3150 Intro to GIS (4)
This course is designed to give students a general understanding of geographic information systems (GIS) and the Environmental Systems Research Institute (ESRI) ArcGIS software. The approach taken is detailed instruction in utilizing ArcGIS to solve problems in the earth and environmental sciences.

Corequisite(s): EENS 3151.

EENS 3151 Intro to GIS lab (0)
Co-requisite lab for Intro to GIS.

Corequisite(s): EENS 3150.

EENS 3170 Geomorphology (3)
The study of processes leading to landform creation and development in response to climate and tectonics. Overview of fundamental and applied activities undertaken by geomorphologists.

Prerequisite(s): (EENS 1110 or 1300) and MATH 1210*.
* May be taken concurrently.

EENS 3171 Geomorphology Discussion (0)
A discussion section to accompany EENS 3170/6170, Geomorphology.

EENS 3180 Making Landscapes (3)
In this course, we will explore how different "iconic" landscapes were formed such as Niagara Falls and Mount Everest. Iconic landscapes can still be awe inspiring for those who can't see them if we are creative about how we share these landscapes. We will also learn about best practices for teaching students with disabilities and different abilities. As part of the class, we will teach K-12 who are visually impaired or have autism spectrum disorder about awe-inspiring landscapes using the 3D models. Mandatory Service Learning component.

Prerequisite(s): EENS 1110, 1120 or 1300.

EENS 3190 Earth Materials (4)
In this course you will investigate the materials that comprise the Earth and how they are made. You will learn about mineral structure and chemistry and be able to relate these parameters to the physical properties of minerals. An analysis of phase stability will follow that will build towards interpreting phase diagrams. These new skills will be applied to understanding the formation of igneous and metamorphic rocks of Earth as organized by tectonic setting.

Corequisite(s): EENS 3191.

EENS 3191 Earth Materials Lab (0)
In this course you will investigate the materials that comprise the Earth and how they are made. You will learn about mineral structure and chemistry and be able to relate these parameters to the physical properties of minerals. An analysis of phase stability will follow that will build towards interpreting phase diagrams. These new skills will be applied to understanding the formation of igneous and metamorphic rocks of Earth as organized by tectonic setting.

Corequisite(s): EENS 3190.

EENS 3270 Sedimentation and Strat (3)
Composition, primary textures, and structures of sediments in major sedimentary environments. Environmental interpretation of ancient sedimentary sequences. The basic principles utilized in interpretation of the stratigraphic column. The associated laboratory focuses primarily on methods of sedimentary analysis. Mandatory field trip to Ouachita Mountains, Arkansas. Course may be repeated 2 times for credit.

Corequisite(s): EENS 3271.
Course Limit: 2

EENS 3271 Sedimentation & Strat Lab (0)
Lab section for EENS 3270.

Corequisite(s): EENS 3270.

EENS 3410 Structural Geology (3)
Principles and mechanics of rock deformation, the evolution of geological structures, and the relations between structures and plate tectonics. Laboratory section focuses on geological problem solving. Field trip to the Southern Appalachian Mountains.

EENS 3411 Structural Geology Lab (0)
Lab section for EENS 3410

EENS 3550 Shark Paleobiology (3,4)
This course examines the processes and patterns of shark speciation, diversification, macroevolution, and extinction within the framework of developing a problem-based learning activity using shark teeth for a K-12 classroom. Particular emphasis is placed on the systematics and functional morphology of shark teeth.

Corequisite(s): EENS 3890.

EENS 3600 Science of Climate Change (3)
This course emphasizes the scientific basis for anthropogenic climate change. Students will learn the physics behind the climate system, how climate has changed in the past and reasons why contemporary climate change is different, the scientific basis for anthropogenic climate change theory and how scientists use models to predict future climate. The course will also provide an overview of the physical, ecological, biological, social and economic impacts of climate change. Finally, students will examine various mitigation and adaptation strategies which society can employ in a warmer world.

EENS 3650 Marine Environmental Geology (3)
This course is an introduction to the aspects of coastal and marine geology and oceanography that are societally linked through environmental issues and marine resource availability. This will provide a basic science introduction to topics that include estuarine oceanography and sedimentation, eutrophication of coastal waters, primary productivity and deep sea sedimentation, waves and tides, sea level history and the evolution of coastlines, and the geology of the Gulf coastal region. However, the larger goal of the course will be to focus on a series of societally relevant environmental issues with a marine geological connection either in causation or in mitigation/adaptation/solution strategies. These issues are divided broadly into topics relevant to land-ocean connectivity, natural hazards, global climate change, and local/regional anthropogenic effects. In addition to a critical analysis of global (marine) environmental issues, another goal will be to improve presentation skills, both oral and written.

EENS 3660 Special Topics (1-3)
Special Topics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 3661 Special Topics (1-3)
Special Topics. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

EENS 3662 Special Topics (1-4)

Maximum Hours: 99

EENS 3730 Pathways to Urban Sustainability (3)
Common environmental impacts of urbanization and approaches to minimize them, drawing on case studies from the Greater New Orleans Region and elsewhere.

EENS 3840 Planetary Geophysics (3)
The interior structure, composition, and dynamics of Earth and the terrestrial planets can be deduced from a number of different physical, chemical, and thermodynamic observations and models. Topics include: Early bombardment and formation of proto-planetary discs, core formation, Earth and planetary composition, thermal and density structure from seismology, gravity, and thermodynamics, geomagnetic dynamo, mantle convection, isostasy and solid Earth contributions to sea level change. Special topics for in-class seminars will explore the methodologies used to determine the internal structure (e.g., seismology, gravity), and the dynamics of systems (e.g., geomagnetism, plate tectonics, the water and carbon cycle). Assessment: 2 in-class quizzes, 6 problem sets, 2 class presentations, and a final critical review of 2 linked research papers on a special topic to be assigned in class.

Prerequisite(s): PHYS 1210 or 1310.
Corequisite(s): EENS 3841.

EENS 3841 Geophysics Lab (1)
Corequisite(s): EENS 3840.

EENS 3880 Writing Practicum (1)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): EENS 3550.

Maximum Hours: 99

EENS 3892 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

EENS 3945 Transfer Credit (0-20)
Transfer Coursework

Maximum Hours: 99

EENS 3990 Field Geoscience (3-8)
The acquisition and application of basic geoscience methods in field settings. Students typically complete this course at an approved field camp or course offered by another college or university. Approval of the EES undergraduate major advisor is required in advance. Credits and grade are transferred.

EENS 4030 Advanced GIS (3)
This course is designed to advance student's knowledge in the rapidly developing field of Geographic Information Science and Systems (GIS). This course is built on the techniques learned in the Introduction to Geographic Information Systems (GIS) course (EENS 3150/EENS 6150) by exposing the student to more advanced methods in developing and utilizing GIS data. Students will gain skills and knowledge of design, planning, and error within GIS data management, analytical decision making techniques, and advanced spatial analysis. Students will gain deep understanding of the potential value of GIS through lectures, exercises of the latest versions of ArcGIS software, and research projects in a broad range of application.

EENS 4040 Coastal Marine Geology (3)
Geomorphic features of estuarine, coastal, and continental shelf environments: erosional, depositional, and geochemical processes; field and laboratory methods; emphasis on dynamic coastal environments of the northern Gulf of Mexico.

Prerequisite(s): EENS 1110 and 1115.

EENS 4060 Tectonic Geomorphology (3)
The interplay between tectonic processes and the development and modification of landforms, from the scale of earthquake ruptures to mountain building. The course will also include an overview of techniques for analyzing tectonic and geomorphic data, and an introduction to geochronology and thermochronology. Lecture and seminar format; field trip; optional service learning component.

EENS 4080 Special Topics (0-3)
A special course taught by Tulane faculty or visiting faculty. The topic will be listed in the Schedule of Classes.

EENS 4081 Special Topics (0-3)
Special Topics

EENS 4082 Special Topics (0-3)
Special Topics

EENS 4160 3D Stratigraphy (3)
Introduction to Remote Sensing From Earth surface to subsurface, this course uses three-dimensional volumes of basin-filling stratigraphy to explore how depositional landscapes are preserved in the sedimentary record and how sedimentary deposits can be analyzed to produce quantitative reconstructions of past environmental states.

Prerequisite(s): EENS 3270.

EENS 4180 Intro Remote Sensing (3)
Remote sensing is a rapidly evolving science and technology with numerous contributions to the Earth, environmental, and ocean sciences, such as monitoring of natural hazards including droughts, floods, landslides, volcanic eruptions, earthquakes, and forest fires. This course introduces the students to the principles of remote sensing with its wide applications in the Earth and environmental sciences. Fundamental knowledge is offered on the physics of remote sensing, photogrammetry, remote sensing data acquisition, remote sensing data types (multispectral, hyperspectral, RADAR, and LiDAR), and numerous applications. The course consists of two components: lectures and labs. In the lectures, the above topics will be reviewed and explained. The laboratory part of this course will cover digital image processing and analysis techniques using ENVI software.

EENS 4230 Tectonics (3)
Tectonics encompasses the processes of large-scale deformation and the formation of structures that define, or are association with, Earth's tectonic plate boundaries. The course will include the historical development and testing of plate tectonic hypotheses, as well as a detailed overview of plate tectonics as a current unifying theory. Lecture format, but will include a limited number of discussions of published papers; field trip component is not graded, but participation is expected.

EENS 4250 Isotopes in The Environm (3)
The use of stable and radioactive isotopes as tools to trace the movement of air, water, and sediments through the atmosphere, hydrosphere, biosphere, and lithosphere.

EENS 4300 Groundwater Hydrology (3)
Occurrence of water in the near-surface environment. Topics include saturated and unsaturated flow in aquifers, aquifer characterization, well hydraulics, and groundwater chemistry.

EENS 4320 Subsurface Geology (3)
Principles of subsurface mapping with emphasis on 3-dimensional seismic reflection data. Utilization of geophysical data to construct subsurface maps. Students gain hands on experience with Seismic Micro-Technology's state-of-the-art software, The Kingdom Suite, in work-station based laboratory sessions. Lectures and laboratory.

Prerequisite(s): EENS 3270*.
* May be taken concurrently.

EENS 4350 Geologic Dating Methods (3)
IN this course the student will explore the development of methods used to date and establish rates of Earth and planetary processes via radiogenic isotopic methods. Students will come away with deeper understanding of age of the Universe, Solar system, and Earth and understand how radiogenic isotopic techniques can be used to study, for example, differentiation of the earth into its major components (crust, mantle, core).

EENS 4360 Environmental Geochemistry (3)
Quantitative examination of the fundamental processes that control the chemistry of natural waters. Topics will include equilibrium thermodynamics, kinetics, oxidation-reduction reactions , solution and surface complexation (adsorption), chemical weathering and biogeochemical cycling of chemical elements in the environment.

Prerequisite(s): CHEM 1070, 1080, MATH 1210, 1220 and EENS 2110.

EENS 4370 Independent Study in GIS and Remote Sensing (3)
A semester-long independent research project designed and completed by the student. Students will apply a working knowledge of geographic information systems and/or remote sensing to solve geospatial problems by designing and conducting an original and reasoned investigation. The project will culminate in a technical research paper written in scientific-style and containing professional figures and graphics. Students are encouraged to design a project that compliments their degree program or thesis, but the project must be original and distinct from their proposed undergraduate or graduate thesis/dissertation. The instructor will advise the research project through periodic meetings to establish goals and assess progress. Instructor approval required. Students interested in completing an independent study should coordinate with the GIS Certificate Program Director to determine a topic and instructor.

Prerequisite(s): EENS 3150 or 4180.

EENS 4380 Remote Sensing for Environmental Analysis (3)
Continued advancements in remote sensing technologies have resulted in an extraordinary increase in the availability of remotely sensed data of Earth. Remote sensing data are now used in geology, hydrology, meteorology, environmental sciences, geography, urban planning, anthropology, civil engineering, and environmental monitoring. This course is built on the techniques learned in the introduction to Remote Sensing course (EENS 4180/6180) by exposing the student to more image processing and analysis for different environmental applications. Students will use the multispectral, hyperspectral, thermal, Radar, and LiDAR data for watersheds, wetlands, water quality, coastal changes, vegetation analysis, mineral resources, land use and land cover changes. Students will develop technical skills of digital image processing, analysis, and interpretation using the ENVI software.

Prerequisite(s): EENS 4180 or 6180.

EENS 4390 Geospatial and Numerical Methods (4)
Satellites probe Earth's ionosphere, atmosphere, oceans, and subsurface over periods of days to weeks, building large 4D data sets. Earth based data from the internet of things to sophisticated monitoring provide even denser 4D data sets. The broad aims of this course are to learn theory and application of the following broad topics, and to use open source command line software (GMT, Google Earth, QGIS), or commercial (ArcGIS), and Matlab or python programming to solve geospatial data analyses problems.

Prerequisite(s): MATH 1220 and EENS 1110.

EENS 4440 Introduction to Geophysics (3)
Introduction to Geophysics This course provides an introduction to applied geophysical methods, with a focus on the application of these techniques in environmental and engineering studies. The material will provide the technical foundation needed to understand the commonly used geophysical methods: gravity, magnetics, electrical resistivity, seismic, electromagnetics, and ground penetrating radar.

Prerequisite(s): MATH 1220 and EENS 1110.

EENS 4480 Natural Climate Solutions (3)
The urgency of the climate crisis means we must use all available options to mitigate climate change. Natural climate solutions have gained particular attention, using biological systems such as forests to sequester carbon dioxide from the atmosphere. This course will discuss the pros and cons of different natural approaches to carbon capture, including the human and ecological impacts such approaches can have.

EENS 4560 Public Service Internship (0-4)
Open to sophomores, juniors and seniors having min. GPA 3.0, or 2.7 with recommendation letter. A public service learning experience provided through an internship. May fulfill the 2nd tier service learning requirement; refer to the Center for Public Service website for information on how to apply. Notes: Only one internship may be completed per semester. A maximum of six credits may be earned in two internships. Pre-requistites: Approval of department and approval of CPS if used to fulfill the 2nd tier requirement. Co-registration in SRVC 4890 if fulfilling 2nd tier service requirement. credit hours: 0-4 Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 4570 Internship (0-4)
Open to sophomores, juniors and seniors having min. GPA 3.0, or 2.7 with a recommendation letter. An experiential learning opportunity provided through an internship. Application is typically through a government agency, business or industry, or non-profit. Appropriate supervision must be provided and communication is required between the department and the internship provider in order for credit hours to be accrued. Notes: Only one internship may be completed per semester. A maximum of six credits may be earned in two internships. Pre-requisites: Approval of the department. credit hours: 0-4 Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 4660 Special Topics (1-3)
Special Topics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 4665 Special Topics Lab (0-4)
Special Topics Lab. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 4700 Earth & Env Sci. Field Studies (3)
This course will take students into the field and provide them with their first in depth experience with earth and environmental science. Students will spend the first part of the course in a seminar type course discussing fundamental papers. The course will then culminate with an approximately week long field outing. Course location will rotate. The course will not supllant the field geology camp requirement for geology majors.

EENS 4910 Independent Study (1-3)
Laboratory or library research under direction of a faculty member. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 4930 Lumcom Summer Special Topics (1-3)

EENS 4990 Honors Thesis (3)
Honors thesis research, first semester. Register in department.

EENS 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): EENS 4990.

EENS 5380 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 5390 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 6030 Advanced GIS (3)
An introduction to the art and science of mapmaking with the aid of state-of-the-art Geographic Information Systems (GIS), specifically Environmental Sciences Research Institute (ESRI), ArcGIS and Golden Software Surfer. An introduction to geodetic models, map projections, geographic coordinate systems, global position systems, geographic information systems, satellite photogrammetry, and database design. Practical skills will be developed through mapping projects designed to illustrate the use of contouring algorithms and other spatial analysis tools.

EENS 6040 Coastal Marine Geology (3)
Geomorphic features of estuarine, coastal, and continental shelf environments: erosional, depositional, and geochemical processes; field and laboratory methods; emphasis on dynamic coastal environments of the northern Gulf of Mexico.

EENS 6050 Natural Hazards & Mitigation (3)
The broad aim of this course is to introduce students to the processes causing volcanic eruptions, earthquakes, landslides, tsunamis, and tropical storms, and to outline the steps to their mitigation. These dynamic Earth process are placed within the general context of plate tectonics, as well as the financial, social, and political implications of these catastrophic events. All of these processes are moderated by climate change and rising sea level, which are also considered in group discussions and scenerios. In lieu of a final exam, students prepare and present a hazard case study emphasizing geologic, economic, health, or sociological implications.

EENS 6060 Tectonic Geomorphology (3)
The interplay between tectonic processes and the development and modification of landforms, from scale of earthquake ruptures to mountain building. The course will also include an overview of techniques for analyzing tectonic and geomorphic data, and an introduction to geochronology and thermochronology. Lecture and seminar format; mandatory field trip; optional service learning component.

EENS 6070 Independent Research (1-3)
Topical and timely course, typically in a seminar format in which students lead discussions based on current scientific literature. The topics will be listed on a semester-by-semester basis in the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 6080 Special Topics (3)
Special course taught by Tulane faculty or visiting faculty. The topics will be listed in the Schedule of Classes. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 6081 Special Topics (1-4)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 6082 Special Topics (3)
Special Topics Course.

EENS 6100 Planetary Geology (3)
This course will introduce students to the geology of other planetary bodies, focusing on fundamental geologic processes like volcanism, tectonism and impact cratering. The course will focus on rocky planet surfaces but will also include discussions of asteroid surfaces and rocky and icy moons. The class will begin with discussions of interior processes and over the course of the semester we will move towards the surface, exploring volcanism, tectonism, sedimentary processes, and atmospheres. Lectures will focus on discussing these topics for a week and then present a case study of these topics. For example, case studies that may be discussed include plate tectonics, oceans, habitability, and climate change. Interspersed among the discussion of geologic processes will be discussions about how geologic landforms are studied on other planets, including the satellites and instruments used to make remote measurements.

EENS 6120 Soils and Soil Formation (3)
Lecture and discussion-based survey of soils, soil formation, classification, physical & chemical properties, and applications in geologic, environmental, and paleoclimatic investigations. This course requires participation in a multi-day field trip for soil description and sampling. Course may be repeated up to unlimited credit hours.

Prerequisite(s): EENS 1110 or 1300.
Course Limit: 2

EENS 6150 Intro to GIS (4)
This course is designed to give students a general understanding of geographic information systems (GIS) and the Environmental Systems Research Institute (ESRI) ArcGIS software. The approach taken is detailed instruction in utilizing ArcGIS to solve problems.

Corequisite(s): EENS 6151.

EENS 6151 Intro to GIS lab (0)
Co-requisite lab for Intro to GIS.

Corequisite(s): EENS 6150.

EENS 6160 3D Stratigraphy (3)
Study of the geomorphological, sedimentological, and stratigraphic responses of rivers to tectonics, climate, and sea-level changes. Discussion of recent scientific literature on river changes and associated stratigraphic records over time scales of 1 to millions of years. Formerly Fluvial Responses to Allogenic Controls.

EENS 6170 Geomorphology (3)
The study of processes leading to landform creation and development in response to climate and tectonics. Overview of fundamental and applied activities undertaken by geomorphologists.

EENS 6171 Geomorphology Discussion (0)
A discussion section to accompany EENS 3170/6170, Geomorphology.

EENS 6180 Intro Remote Sensing (3)
Remote sensing is a rapidly evolving science and technology with numerous contributions to the Earth, environmental, and ocean sciences, such as monitoring of natural hazards including droughts, floods, landslides, volcanic eruptions, and earthquakes.

EENS 6190 Earth Materials (4)
In this course you will investigate the materials that comprise the Earth and how they are made. You will learn about mineral structure and chemistry and be able to relate these parameters to the physical properties of minerals. An analysis of phase stability will follow that will build towards interpreting phase diagrams. These new skills will be applied to understanding the formation of igneous and metamorphic rocks of Earth as organized by tectonic setting.

Corequisite(s): EENS 6191.

EENS 6191 Earth Materials Lab (0)
In this course you will investigate the materials that comprise the Earth and how they are made. You will learn about mineral structure and chemistry and be able to relate these parameters to the physical properties of minerals. An analysis of phase stability will follow that will build towards interpreting phase diagrams. These new skills will be applied to understanding the formation of igneous and metamorphic rocks of Earth as organized by tectonic setting.

Corequisite(s): EENS 6190.

EENS 6230 Tectonics (3)
Tectonics encompasses the processes of large-scale deformation and the formation of structures that define, or are association with, Earth's tectonic plate boundaries. The course will include the historical development and testing of plate tectonic hypotheses, as well as a detailed overview of plate tectonics as a current unifying theory. Lecture format, but will include a limited number of discussions of published papers; field trip component is not graded, but participation is expected.

EENS 6250 Isotopes In The Environm (3)
The use of stable and radioactive isotopes as tools to trace the movement of air, water, and sediments through the atmosphere, hydrosphere, biosphere, and lithosphere.

EENS 6260 Paleoclimatology (3)
Understanding past climate change is necessary to effectively predict the future of our planet, which is currently in a state of rapid transition. The main focus of the course is on the reconstruction and modeling of climates of the Quaternary, the past two million years of Earth's history.

EENS 6300 Groundwater Hydrology (3)
Occurrence of water in the near-surface environment. Topics include saturated and unsaturated flow in aquifers, aquifer characterization, well hydraulics, and groundwater chemistry.

EENS 6310 Depositional Mechanics (3)
This course emphasizes a quantitative description of the mechanics of sediment transport in steady and unsteady flows based on hydrodynamic principles. Aspects of flow and sediment-transport mechanics that are relevant to understanding the construction of landscapes and depositional systems including modes of particle entrainment and motion in turbulent shear flows will be considered. The course includes consideration of the equations of motion for particles in a turbulent flow, entrainment, bedload, and suspended load in addition to the mechanics of bedforms, ripples, and dunes, parameters responsible for channelization, erosion, and deposition of cohesive and non-cohesive sediments, and the mechanics of sediment gravity flows. Finally, quantitative methods relating properties of stratigraphy to paleo-environmental conditions are considered.

EENS 6320 Subsurface Geology (3)
Principles of subsurface mapping with emphasis on 3-dimensional seismic reflection data. Utilization of geophysical data to construct subsurface maps. Students gain hands on experience with Seismic Micro-Technology's state-of-the-art software, The Kingdom Suite, in work-station based laboratory sessions. Lectures and laboratory.

EENS 6350 Geologic Dating Methods (3)
Geologic Dating Methods IN this course the student will explore the development of methods used to date and establish rates of Earth and planetary processes via radiogenic isotopic methods. Students will come away with deeper understanding of age of the Universe, Solar system, and Earth and understand how radiogenic isotopic techniques can be used to study, for example, differentiation of the earth into its major components (crust, mantle, core).

EENS 6360 Environmental Geochemstr (3)
Quantitative examination of the fundamental processes that control the chemistry of natural waters. Topics will include equilibrium thermodynamics, kinetics, oxidation-reduction reactions, solution and surface complexation (adsorption), chemical weathering and biogeochemical cycling of chemical elements in the environment.

EENS 6370 Independent Study in GIS and Remote Sensing (3)
A semester-long independent research project designed and completed by the student. Students will apply a working knowledge of geographic information systems and/or remote sensing to solve geospatial problems by designing and conducting an original and reasoned investigation. The project will culminate in a technical research paper written in scientific-style and containing professional figures and graphics. Students are encouraged to design a project that compliments their degree program or thesis, but the project must be original and distinct from their proposed undergraduate or graduate thesis/dissertation. The instructor will advise the research project through periodic meetings to establish goals and assess progress. Instructor approval required. Students interested in completing an independent study should coordinate with the GIS Certificate Program Director to determine a topic and instructor.

Prerequisite(s): (EENS 3150 or 6150) and (EENS 4030 or 6030).

EENS 6380 Remote Sensing for Env Anlys (3)
Continued advancements in remote sensing technologies have resulted in an extraordinary increase in the availability of remotely sensed data of Earth. Remote sensing data are now used in geology, hydrology, meteorology, environmental sciences, geography, urban planning, anthropology, civil engineering, and environmental monitoring. This course is built on the techniques learned in the introduction to Remote Sensing course (EENS 4180/6180) by exposing the student to more image processing and analysis for different environmental applications. Students will use the multispectral, hyperspectral, thermal, Radar, and LiDAR data for watersheds, wetlands, water quality, coastal changes, vegetation analysis, mineral resources, land use and land cover changes. Students will develop technical skills of digial image processing, analysis, and interpretation using the ENVI software.

EENS 6390 Geospatial and Numerical Methods (4)
Satellites probe Earth's ionosphere, atmosphere, oceans, and subsurface over periods of days to weeks, building large 4D data sets. Earth based data from the internet of things to sophisticated monitoring provide even denser 4D data sets. The broad aims of this course are to learn theory and application of the following broad topics, and to use open source command line software (GMT, Google Earth, QGIS), or commercial (ArcGIS), and Matlab or python programming to solve geospatial data analyses problems.

EENS 6400 The Scientific Enterprise (3)
Scientific research has evolved into a complex activity that requires numerous skills which are typically not captured by traditional curricula. This course covers such topics as science funding, publishing, misconduct, media, and politics, and is specifically intended for (aspiring) graduate students.

EENS 6410 Structural Geology (3)
Principles and mechanics of rock deformation, the evolution of geological structures, and the relations between structures and plate tectonics. Laboratory section focuses on geological problem solving. Field trip to the Southern Appalachian Mountains.

EENS 6411 Structural Geology Lab (0)
Lab section for EENS 6410

EENS 6420 Applied Basin Analysis (3)
This course focuses on practical applications of stratigraphy, structural geology and petroleum geology. It is designed around a dataset for an individual hydrocarbon basin that will typically include seismic reflection data and well data. Datasets will vary from year to year, as the course will be coordinated with AAPG's Imperial Barrel award program. Students work as a team, however each student has a clear role and responsibility to the ultimate goal, which is a geologically valid interpretation of the basin that makes predictions about the hydrocarbon prospectively of the study area. Emphasis is on teamwork, participation, oral and written communication of results. Practicum format (non-lecture).

EENS 6440 Introduction to Geophysics (3)
Introduction to Geophysics This course provides an introduction to applied geophysical methods, with a focus on the application of these techniques in environmental and engineering studies. The material will provide the technical foundation needed to understand the commonly used geophysical methods: gravity, magnetics, electrical resistivity, seismic, electromagnetics, and ground penetrating radar.

EENS 6480 Natural Climate Solutions (3)
The urgency of the climate crisis means we must use all available options to mitigate climate change. Natural climate solutions have gained particular attention, using biological systems such as forests to sequester carbon dioxide from the atmosphere. This course will discuss the pros and cons of different natural approaches to carbon capture, including the human and ecological impacts such approaches can have.

EENS 6550 Shark Paleobiology (3)
This course examines the processes and patterns of shark speciation, diversification, macroevolution, and extinction within the framework of developing a problem-based learning activity using shark teeth for a K-12 classroom. Particular emphasis is placed on the systematics and functional morphology of shark teeth.

EENS 6660 Special Topics (1-3)
Special Topics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 6661 Special Topics (1-3)
Special Topics. Course may be repeated up to unlimited credit hours under separate title.

Maximum Hours: 99

EENS 6700 Earth & Env Sci.Field Studies (3)
This course will take students into the field and provide them with their first in depth experience with earth and environmental science. Students will spend the first part of the course in a seminar type course discussing fundamental papers. The course will then culminate with an approximately week long field outing. Course location will rotate. The course will not supllant the field geology camp requirement for geology majors.

EENS 6840 Earth & Planetary Geophysics (3)
The interior structure, composition, and dynamics of Earth and the terrestrial planets can be deduced from a number of different physical, chemical, and thermodynamic observations and models. Topics include: Early bombardment and formation of proto-planetary discs, core formation, Earth's composition and age from radioactivity and thermal considerations, thermal and density structure, geomagnetic dynamo, mantle convection, and plate tectonics, and their absence on other terrestrial planets. Special topics for in-class seminars will explore the methodologies used to determine the internal structure (e.g., seismology, gravity), and the dynamics of systems (e.g., geomagnetism, plate tectonics, the water and carbon cycle). Assessment: 2 in-class quizzes, 5 problem sets, 2 class presentations, and a final critical review of 2 linked research papers on a special topic to be assigned in class.

EENS 6841 Planetary Geophysics Lab (1)
Corequisite(s): EENS 6840.

EENS 6910 Independent Study (1-3)
Independent Study

Course Limit: 4
Maximum Hours: 12

EENS 6930 Lumcom Summer Special Topics (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 6931 Lumcom Summer Special Topics (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 6932 Lumcon Summer Special Topics (1-3)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 6940 Transfer Coursework (0-20)
Transfer coursework at the 6000 level. Departmental approval required.

Maximum Hours: 99

EENS 7010 Techniques Geoscience Writing (3)
This graduate-level course will introduce students to methods and best practices for writing scientific paper and as scientific proposal. General practices for clear and concise writing will also be discussed. Students will be required to write and rewrite either a scientific proposal (PhD students) or a thesis prospectus (MS students). Students will be required to critique classmates' writing and provide constructive feedback. Best practices for reviewing scientific writing will also be discussed. This course should be taken in a graduate student's third or fourth semester, so that the student will have some of their own research completed.

EENS 7100 EENS Seminar (1-3)
Course Limit: 3

EENS 7101 EENS Seminar (1-3)

EENS 7150 Adv Top Sedimentary Geol (3)

EENS 7200 Solid Earth and Planetary Science Reading Group (1)
We will read and discuss scientific papers of broad interest to Solid Earth and Planetary Science Research Group. Student will summarize the key findings of papers and lead the discussion.

Maximum Hours: 99

EENS 7660 Special Topics (0-4)
Special Topics. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 7940 Transfer Credit-Grad (1-12)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EENS 7990 Research In Geosciences (1-9)
Individual research supervised by faculty.

Maximum Hours: 99

EENS 9980 Masters Research (0-3)
Research toward completion of a masters degree. Course may be repeated up to unlimited credit hours

Maximum Hours: 99

EENS 9990 Dissertation Research (0-3)
Research toward completion of a doctoral degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Ecology & Evolutionary Biology (EBIO)

EBIO 1010 Diversity of Life (3)
An introduction to key concepts in ecology and evolutionary biology emphasizing the diversity among individuals, population, species, communities, and ecosystems.

Corequisite(s): EBIO 1015.

EBIO 1015 Diversity of Life Lab (1)
Laboratory and field exercises designed to augment the lecture material in EBIO 1010.

Corequisite(s): EBIO 1010.

EBIO 1040 Humans & Environmental Change (3)
An introduction to the physical and biological processes that regulate the function of the Earth system. The composition, formation, and stabilization of the Earth's atmosphere and ecosystem will be examined, emphasizing biological processes and ecosystem ecology. With an understanding of the historical rates and mechanisms of natural global change, the means by which human activities alter Earth system function at local to global scales will be explored, along with the consequences of and solutions to human-induced global change. EBIO 1040 is mutually exclusive with EBIO 1050 and EBIO 2050. Students may receive credit for only one of EBIO 1040, 1050, or 2050 in the undergraduate degree.

EBIO 1050 Intro to Conservation Genetics (3)
This course is designed to introduce students to the general principals behind the field of conservation genetics. We will explore evolutionary genetics, the importance of genetics in conservation, and conservation management practices. The class will cover these topics in lecture, hands-on lab activities, and field trips. Course is for high school students only. EBIO 1050 is mutually exclusive with EBIO 1040 and EBIO 2050. Students may receive credit for only one of EBIO 1040, 1050, or 2050 in the undergraduate degree.

EBIO 1070 Climate Change in Coastal Ecos (3)
How do coastal plants, animals, and microbes respond to climate change? Are coastal ecosystems resilient to climate change? This course will introduce students to the complex ways that climate change affects ecological systems in coastal areas. We will explore topics through lectures, readings, debates, field trips, and group research projects.We will learn about restoration and mitigation techniques and discuss ways students can act on behalf of threatened ecosystems

EBIO 1080 Intro to Plant & Human Affairs (3)
This course is designed to introduce you to plants and how different plants and plant products have shaped human existence. We will explore plant history, plant domestication, and plant products through lectures, readings, discussion, and field trips. (High School Students Only)

EBIO 1230 Diversity of Animal Behavior (3)
Basic concepts in animal behavior, emphasizing diversity among animals and their behaviors and the ecological and evolutionary influences on those behaviors. Course will include discussion of how behaviors are studied, physiological mechanisms of behaviors, animal diversity, and how animals communicate, find mates, reproduce, care for their young, defend and feed themselves and move within their environment.

EBIO 1231 Exploring Animal Behavior (3)
The goal of this course is to provide an introduction to animal behavior. The course will begin with an introduction to the application of the scientific method to the study of behavior. Topics that will follow include the ontogeny(development) of behavior, neuronal and hormonal control of behavior, migration, communication, reproductive behavior, mating systems, parental care, and the evolution of social behavior. It will involve both a lecture component as well as a hands-on laboratory component in which students will engage in activities to observe the concepts in action. This class is only open to high school students who are participating in the Tulane Science Scholars Program (TSSP). For students who pass this course with a B or higher and choose to enroll at Tulane University, this course can be applied towards three hours of general elective credit. These credits will not count towards any of the Ecology and Evolutionary Biology Department majors.

EBIO 1240 Reptile & Amphibian Diversity (3)
The goal of this course is to provide an introduction to the field of herpetology. Students will 1) become familiar with the diversity of form and function exhibited by living reptiles and amphibians, 2) gain an introductory understanding of the evolutionary histories and relationships of reptiles and amphibians to each other and to other tetrapods, 3) follow the steps of the scientific method to design and carry out experiments to test hypotheses they devise, and 4) gain experience with field and laboratory methods used to study amphibians and reptiles. The class will involve a lecture component and a hands-on laboratory component. This class is only open to high school students participating in the Tulane Science Scholars Program (TSSP). For students who pass this course with a B or higher and choose to enroll at Tulane University, this course can be applied toward three hours of general elective credit. These credits will not count toward any of the Ecology and Evolutionary Biology Department majors.

EBIO 1890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): EBIO 1040.

Maximum Hours: 99

EBIO 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

EBIO 1945 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Department approval may be required.

Maximum Hours: 99

EBIO 2010 Evolution of Human Health & Disease (3)
An introduction to the study of infectious and non-infectious human diseases from an evolutionary perspective.

EBIO 2020 Theory and Methods in Ecology and Evolutionary Biology (3)
EBIO 2020 is an introduction to the fundamental theories and methods in ecology and evolutionary biology for EEBI and ENVB majors. Students will acquire the knowledge and skills needed to succeed in their major through direct, active experiences evaluating and communicating scientific evidence. The course topics are designed to reflect current research interests in the department, such as tropical ecology and behavioral evolution, as well as classic case studies in the discipline. Irrespective of topic, the course emphasizes a practical understanding of the scientific process and focuses on developing the skills needed for upper-level courses in EBIO. The course also provides opportunities for students to become familiar with the research interests of department faculty members, enabling them to identify future research opportunities.

Prerequisite(s): EBIO 1010 and 1015.

EBIO 2030 History of Life (3)
A multidisciplinary introduction for majors and non-majors to the evolution of life on Earth, from its origin through the Pleistocene. The course will focus on the evolution and ecology of organisms in primitive environments, with special attention given to key taxa and events, such as the transition to land, the origin of angiosperms, the rise and fall of dinosaurs, and the origin and early evolution of reptiles, birds, and mammals. Emphasis will be placed on the reconstruction of ancient environments, using modern ecological and evolutionary principles as a guideline to the nature of early biological communities and ecosystems.

EBIO 2040 Conservation Biology (3)
A consideration of biological diversity and its persistence, threats, human value, conservation efforts, and biological bases. Specific topics include extinction, global change, population viability, habitat loss and degradation, ecosystem management, restoration, agricultural ecosystems, economic and legal considerations, and the human population.

Prerequisite(s): EBIO 1010 and 1015.

EBIO 2050 Global Change Biology (3)
This course explores the biological basis of environmental issues and the changes occurring at a global scale, divided approximately into halves. The first half will provide a strong foundation in the interactions among biological and physical systems. The second half will be devoted to specific issues including global climate change, atmospheric pollution, community stability, habitat fragmentation, and loss of biodiversity. Changes that have occurred over geological time will be compared with changes in the modern industrial era. EBIO 2050 is mutually exclusive with EBIO 1040 and EBIO 1050. Students may receive credit for only one of EBIO 1040, 1050, or 2050 in the undergraduate degree.

Prerequisite(s): EBIO 1010 and 1015.

EBIO 2070 Molecular and Evolutionary Genetics (4)
This course will introduce students to fundamental principles concerning the molecular nature of DNA and chromosomes; the molecular processes of replication, transcription, transition, and mutation/repair; the transmission of genetic traits (Mendelian and non-Mendelian modes); and the application of genetic analysis to population and evolutionary biology. EBIO 2070 includes a required, no credit recitation (EBIO 2071). Students may not earn credit for both EBIO 2070/2071 and CELL 2050.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.
Corequisite(s): EBIO 2071.

EBIO 2071 Molecular and Evolutionary Genetics Recitation (0)
This course is a required accompaniment to EBIO 2070-01 (Molecular and Evolutionary Genetics). Through readings, discussions, interactive exercises, and assignments, students will discuss the concepts and principles of genetics in an applied way, i.e. to apply genetics information to solving crosses and problems.

Corequisite(s): EBIO 2070.

EBIO 2072 Quantitative, Population & Evolutionary Genetics (1)
This course will introduce students to fundamental principles concerning the application of genetic analysis to quantitative, population and evolutionary genetics. If you have taken EBIO 2070/2071, then you do not need to take this course: it is designed only for those students who have taken CELL 2050 and wish to pursue a major within the Department of EEB. This course includes those topics missing from CELL 2050 that will help prepare all EEB majors for upper-level courses offered within the department including Processes of Evolution, Molecular Ecology and Evolution, Speciation, Systematics, Evolutionary Genomics, etc.

Prerequisite(s): EBIO 1010, 1015 and CELL 2050.

EBIO 2100 Marine Biology (3)
A systematic treatment of the organisms and habitat in the marine environment.

Prerequisite(s): EBIO 1010 and 1015.

EBIO 2110 Tropical Biology (3)
Introduction to ecological, evolutionary, and organismal studies of living organisms in the neotropics.

Prerequisite(s): EBIO 1010.

EBIO 2120 Climate, Biodiversity and Tropical Forests (3)
This course is offered as part of the Stone Center for Latin American Studies' Summer in Costa Rica Program. Students may not register on-line for this course; they must register directly with the Stone Center Summer Program office. The course will introduce students to the structure and ecology of tropical forests. Students will be expected to integrate what they learn about the real social and economic causes of deforestation and grass roots efforts to revert it with the social, political, economic and biological logic of world climate change agreements and disagreements.

EBIO 2130 Intro to Animal Behavior (3)
The goal of this course is to provide an introduction for majors and non-majors to the field of animal behavior using an evolutionary approach. The course will begin with an introduction to the application of the scientific method to the study of behavior (levels of analysis, hypothesis testing and Darwinian theory). Topics that will follow include the ontogeny (development) of behavior, neuronal and hormonal control of behavior, foraging and anti-predator behavior, habitat selection, migration, communication, reproductive behavior, mating systems, parental care, the evolution of social behavior, and the evolution of human behavior. The course emphasizes a practical understanding of animal behavior and will focus on developing the skills needed for upper-level behavior courses in EBIO.

EBIO 2210 Insects and Human Interactions (3)
This course is an introduction to the evolution, ecology and conservation of insects. The course will focus heavily on interactions between humans and insects, both historically and in modern times. A goal of the course is that you will develop the foundation and tools you need to continue learning about the importance of insects, their impacts on human society and/or other environmental issues of importance to you.

EBIO 2230 Oceanography (3)
A broad survey of chemical, physical, and geological oceanography with a brief historical overview and a consideration of current concepts.

EBIO 2240 Oceans and Human Health (3)
An overview of the relationship and interconnectivity of impacts and well-being between humans and oceans/coasts.

Prerequisite(s): CELL 1010 or (EBIO 1010 and 1015) or EBIO 1040 or (EENS 1300 and 1305) or SPHU 1020.

EBIO 2250 Vertebrate Biology (3)
An introduction to vertebrate natural history, including evolution, systematics, zoogeography, population dynamics, behavior, ecology, conservation, and extinction.

Prerequisite(s): EBIO 1010 and 1015.

EBIO 2330 Natural History of Louisiana (3)
A survey of terrestrial and aquatic ecosystems of southern Louisiana. Lectures cover the ecology of regional plant and animal communities, with special emphasis on environmental issues such as invasive species, hurricane disturbance, conservation and management. The geology, geography, history, and culture that contribute to the formation and maintenance of each ecosystem will also be examined, from barrier islands to upland forests.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.
Corequisite(s): EBIO 2335.

EBIO 2335 Natural History of Louisiana Lab (1)
The Natural History of Louisiana Laboratory introduces students to diverse biological communities of southern and central Louisiana, from barrier islands to upland forests. Field trips focus on the ecology of regional flora and fauna and provide opportunities to observe and evaluate the impacts of invasive species, hurricane disturbance, and restoration projects. Students will practice identification skills, maintain a field journal, and participate in local research projects.

Corequisite(s): EBIO 2330.

EBIO 2360 Wetlands Ecology (3)
This course explores relationships between water, soil, plants, animals, fungi and microorganisms in various types of wetlands. Wetland types include floodplain forests, fens, bogs and marshes, with an emphasis on wetlands of the Mississippi Delta Region and the Gulf Coast. The course will further examine how climate-driven sea level rise has required coastal restoration and retreat strategies.

EBIO 2553 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department. Course may be repeated unlimited times for credit.

Course Limit: 99

EBIO 2580 Urban Ecology (3)
Urban Ecology is the study of cities, including human inhabitants, as functioning ecosystems, supporting a complex web of life. In this course students will learn how basic ecological principles can be applied to the study of urban ecosystems and the effects of cities and urbanization on regional and global environments. Through a combination of lectures, readings and discussions, site visits and service learning, this course will provide an overview of interactions, at multiple scales, between the built environment and the natural environment with particular focus on New Orleans and the Gulf coast region.

EBIO 2600 Natural Resource Conservation (3)
This course examines the theory and practice of natural resource preservation in the United States, and the agencies and organizations involved in this endeavor.

Prerequisite(s): EBIO 1010 and 1015.

EBIO 2660 Special Topics (1-4)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department. Course may be repeated unlimited times for credit.

Course Limit: 99

EBIO 2661 Special Topics (0-3)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department. Course may be repeated unlimited times for credit.

Course Limit: 99

EBIO 2662 Special Topics (1-3)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department. Course may be repeated unlimited times for credit.

Course Limit: 99

EBIO 2770 Nature Study in Scandinavia (3)
More than a Walk in the Park: Nature Study in Scandinavia has two components. Half of the course is a survey of the ecosystems of Scandinavia, from boreal forests to rocky intertidal zones. We will explore the diversity and ecology of regional plant and animal communities, with reference to environmental issues including non-native species, disturbance, conservation, and management. Information about the geology, history, and culture that contribute to the formation and maintenance of each ecosystem will be included. The other half of the course will involve observing, identifying, recording, and developing questions about the local diversity of the region. Be prepared to spend a considerable amount of time outside... where nature is!

EBIO 2890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 2891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): EBIO 2210.

Maximum Hours: 99

EBIO 2910 Independent Study (1-3)
Laboratory or library research under direction of a faculty member. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 2920 Independent Study (1-3)
Laboratory or library research under direction of a faculty member. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 2940 Transfer Coursework (0-20)
Transfer Coursework at the 2000 level. Department approval may be required.

Maximum Hours: 99

EBIO 2945 Transfer Coursework (0-4)

Maximum Hours: 99

EBIO 3040 General Ecology (3)
A survey of the patterns and mechanisms of interaction among all organisms and their environments, including examples of human impacts on the biosphere.

Prerequisite(s): EBIO 1010, 1015 and 2020.
Corequisite(s): EBIO 3045.

EBIO 3045 General Ecology Lab (1)
Quantitative laboratory and field exercises designed to augment the lecture material. Includes data collection, sampling, experimentation, statistical hypothesis testing, modeling, discussion of research results, and writing up of results in the form of three scientific papers.

Prerequisite(s): EBIO 2020.
Corequisite(s): EBIO 3040.

EBIO 3080 Processes of Evolution (3)
Patterns and processes in the evolution of species and populations, including discussions of natural selection, gene flow, genetic drift, adaptation, speciation, origins of evolutionary novelty, and selected trends in the fossil record.

Prerequisite(s): EBIO 2070 and 2071.

EBIO 3150 Intro to GIS (4)
This course is designed to give students a general understanding of geographic information systems (GIS) and the Environmental Systems Research Institute (ESRI) ArcGIS software. The approach taken is detailed instruction in utilizing ArcGIS to solve problems in the earth and environmental sciences. (SAME AS EBIO 6150, EENS 3150, EENS 6150,)

Corequisite(s): EBIO 3151.

EBIO 3151 Intro to GIS lab (0)
Co-requisite lab for Intro to GIS.

Corequisite(s): EBIO 3150.

EBIO 3180 Plants & Human Affairs (3)
Since ancient times, people have relied on plants for food, clothing, shelter, medicines, and more. This course investigates some of the ways in which plants support and shape human life. Topics include: early ideas about plants and the origin of plant lore; plant domestication and the rise of agriculture; plant products in commercial economies; cultural uses of plants; plants and the future of civilization.

EBIO 3185 Plants Human Affairs Lab (1)
Laboratory course to accompany EBIO 3180. A survey of plant products and their sources, emphasizing the structure, chemistry, and diversity of economic plants.

Corequisite(s): EBIO 3180.

EBIO 3190 Darwin and Darwinism (4)
A consideration of Charles Darwin's theory of Natural Selection, including the history of evolutionary thought before Darwin's time, the circumstances surrounding Darwin's research, and the effect of Darwin's ideas on the development of contemporary biology. Readings, discussions, and written assignments.

Prerequisite(s): EBIO 1010 and 1015.

EBIO 3290 Behavioral Ecology (3)
This course addresses the ecological and evolutionary causes and consequences of animal behavior, using both proximate and ultimate approaches. Topics include sociality, mating systems, sexual selection, animal movement, signals, behavior and conservation, and cognition.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.

EBIO 3320 Microbial Diversity & Ecology (3)
A survey of micro-organisims and their rules in and relationships within their respective ecosystems. (Same as EBIO 6320)

Prerequisite(s): EBIO 1010, 1015 and CELL 1010 and (EBIO 2070 or CELL 2050).
Corequisite(s): EBIO 3325.

EBIO 3325 Microbial Diversity & Ecology Lab (1)
Laboratory activities focused on observing/ascertaining microbial taxonomy (viral, bacterial, archaeal, fungal, and protistan) and methods relating to isolating/identifying microbes and measuring growth rates and metabolisms.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010 and (EBIO 2070 or CELL 2050).
Corequisite(s): EBIO 3320.

EBIO 3500 Sharks and their Relatives (3)
Biology of Sharks and their Relatives is a detailed study of the evolution, ecology, morphology, functional anatomy, physiology, and conservation of the cartilaginous fishes.

Prerequisite(s): CELL 1010, EBIO 1010 and 1015.

EBIO 3550 Shark Paleobiology (3,4)
This course examines the processes and patterns of shark speciation, diversification, macroevolution, and extinction within the framework of developing a problem-based learning activity using shark teeth for a K-12 classroom. Particular emphasis is placed on the systematics and functional morphology of shark teeth.

Corequisite(s): EBIO 3890.

EBIO 3551 Shark Paleobiology Lab (0)
Lab section for EBIO 3550

EBIO 3590 Plant Biology and Adaptation (4)
An introduction to the biology of plants, with an emphasis on the aspects of physiology, anatomy, morphology, and ecology that have resulted in their successful adaptation and diversification.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.
Corequisite(s): EBIO 3591.

EBIO 3591 Plant Biology and Adaptation Lab (0)
Lab section for EBIO 3590.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.
Corequisite(s): EBIO 3590.

EBIO 3690 Experimental Animal Behavior (4)
This course provides students the opportunity to design, implement, write-up, and present an independent research project related to animal behavior .Research will be conducted on live animals at the Audubon Zoo or Audubon Park. The course will emphasize general principles of literature review and synthesis; experimental design; the collection; organization and analysis of data; and written and oral presentation of results. The course consists of 3 hours of laboratory per week (at the park or zoo) and 2 hours of seminar per week (on campus). This course fulfills the Newcomb-Tulane intensive writing requirement. This course serves as an elective for the SISE minor and fulfills the upper tier Service Learning Requirement.

Prerequisite(s): EBIO 2020.
Corequisite(s): EBIO 3691.

EBIO 3691 Experimental Animal Behavior Lab (0)
Lab section for EBIO 3690.

Corequisite(s): EBIO 3690.

EBIO 3780 Tropical Field Biolgy (3)
This study abroad course deepens student's theoretical, factual, and hands-on understanding of biological research and conservation in the tropics. Prerequisite(s): EBIO 2020.

Prerequisite(s): EBIO 2020.

EBIO 3890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): EBIO 3550.

Maximum Hours: 99

EBIO 3891 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit co-requisite course. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 3940 Transfer Coursework (0-20)
Transfer Coursework at the 3000 level. Department approval may be required.

Maximum Hours: 99

EBIO 4030 Field Botany (4)
A plant identification course focusing on terrestrial and aquatic flora of Louisiana. Lab field trips include visits to a variety of local ecosystems from coastal wetlands to upland forests. Lectures cover botany, taxonomy, and the ecological and evolutionary processes that structure plant communities, with special emphasis on how these topics apply to Louisiana ecosystems.

Prerequisite(s): EBIO 1010.
Corequisite(s): EBIO 4031.

EBIO 4031 Field Botany Lab (0)
Lab section for EBIO 4030.

Corequisite(s): EBIO 4030.

EBIO 4060 Stream Ecology (4)
Ecology of freshwater stream environments, including physical forces influencing water flow, sediment and solute geochemistry, and composition and interactions of stream biota.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.
Corequisite(s): EBIO 4061.

EBIO 4061 Stream Ecology Lab (0)
Lab section for EBIO 4060.

Corequisite(s): EBIO 4060.

EBIO 4080 Biostatistics and Experimental Design (3)
This course will teach students how to interpret statistical data in an evolutionary and ecological context. Special emphasis will be placed on understanding the nature of ecological field experiments, and experimental design. In addition, issues regarding how ecological and evolutionary analyses are perceived in the public media will be discussed. We will cover statistical methods for dealing with such problems (regression, correlation, ANOVA, etc.), and also read papers in ecological and evolutionary journals that highlight statistical issues. The class is designed for students who have not had prior experience with statistics.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.

EBIO 4090 Invertebrate Paleontology (4)
Principles of invertebrate paleontology; a systematic treatment of the fossil invertebrates and their living relatives. Emphasis on functional morphology, ontogeny, and paleoecology. Lectures, laboratory, field trip.

Corequisite(s): EBIO 4091.

EBIO 4091 Invertebrate Paleontology Lab (0)
Lab section for EBIO 4090.

Corequisite(s): EBIO 4090.

EBIO 4110 Tropical Ecology & Agriculture (3)
Through lectures and discussion, we develop a sound background in modern tropical ecology and agriculture, including conservation. This background will include knowledge of how scientists come to reach understanding about tropical ecosystems by using natural history/observational studies, experiments and models/theory. Finally, we will develop the analytical tools that are needed to continue learning about and acting on behalf of tropical ecosystems and/or other environmental issues of importance.

Prerequisite(s): EBIO 3040.

EBIO 4200 Ornithology (4)
An investigation into the early evolution of birds, origins and mechanics of flight, anatomy and physiology, systematics, social and breeding behavior, and the diverse life histories of birds. Tulane investigators share current research and methodologies for studying birds, and highlight the most pressing conservation issues. We spend as much time as possible in the field, visiting unique habitats across southeast Louisiana and the Gulf Coast, in search of birds to observe, describe, and identify by sight and sound.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.
Corequisite(s): EBIO 4201.
Course Limit: 2

EBIO 4201 Ornithology Lab (0)
Lab section for EBIO 4200.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.
Corequisite(s): EBIO 4200.

EBIO 4210 Vertebrate Morphology (4)
Comparative morphology, evolution, and bionomics of representative vertebrates. Lectures supplemented by weekly labs.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.
Corequisite(s): EBIO 4211.

EBIO 4211 Vertebrate Morphology lab (0)
Lab section for EBIO 4210.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.
Corequisite(s): EBIO 4210.

EBIO 4230 Molecular Evolution and Ecology (4)
Molecular ecology employs principles of population genetics and phylogenetics to answer questions about organismal diversity, population dynamics, community assembly and macroecology. Having a foundation in molecular evolution and genomics allows for broad topical applications, including the study of infectious diseases, conservation of endangered species, organismal responses to global environmental change, and the evolutionary origins of biological diversity. Students will first learn the principles of molecular evolution, after which they will be introduced to the core techniques used to generate molecular data. Students will learn how molecular data can be developed and analyzed to address questions in ecology and evolutionary biology. It is strongly recommended that students also have taken CELL 2050, EBIO 3080, and EBIO 3040 or have an understanding of genetics, organismal evolution and ecological principles. This class consists of 3 lectures per week supplemented with a weekly lab.

Prerequisite(s): EBIO 2020, 2070 and CELL 1010.
Corequisite(s): EBIO 4231.

EBIO 4231 Molecular Evolution and Ecology Lab (0)
Lab section for EBIO 4230.

Corequisite(s): EBIO 4230.

EBIO 4250 Biology of Marine Invertebrates (4)
Biology, taxonomy and distribution of the invertebrates with emphasis on the local fauna. Lectures, laboratories, and field trips. Course may be repeated 2 times for credit.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.
Corequisite(s): EBIO 4251.
Course Limit: 2

EBIO 4251 Biology of Marine Invertebrates Lab (0)
Co-requisite lab for EBIO 4250.

Corequisite(s): EBIO 4250.

EBIO 4270 Population Ecology (3)
Principles of population dynamics in space and time, population regulation, and population interactions as determined from an integrated study of plants and animals, followed by exploration of the applicability of these principles to an understanding of the contemporary growth and control of the human population.

Prerequisite(s): EBIO 3040*.
* May be taken concurrently.

EBIO 4280 Ichthyology (4)
Biology of fish-like vertebrates, including taxonomy, evolution, anatomy, physiology, and biogeography. Course may be repeated 2 times for credit.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.
Corequisite(s): EBIO 4281.
Course Limit: 2

EBIO 4281 Ichthyology Lab (0)
Lab section for EBIO 4280.

Corequisite(s): EBIO 4280.

EBIO 4300 Biology of Amphibians and Reptiles (4)
This course will provide an introduction to herpetology, the study of reptiles and amphibians. Topics covered will include the evolutionary history, systematics, physiology, ecology, life history, behavior and conservation of amphibians and reptiles. The course consists of two lectures and a lab or field trip each week. Occasional weekend field trips may also be scheduled.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.
Corequisite(s): EBIO 4301.

EBIO 4301 Biology of Amphibians and Reptiles Lab (0)
Co-requisite lab for EBIO 4300.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.
Corequisite(s): EBIO 4300.

EBIO 4310 Plant Systematics (4)
A review of the structure and evolution of land plants and a survey of the major families of flowering plants. Laboratory emphasis on structural terminology and plant identification. Course may be repeated 2 times for credit.

Corequisite(s): EBIO 4311.
Course Limit: 2

EBIO 4311 Plant Systematics Lab (0)
Lab section for EBIO 4310.

Corequisite(s): EBIO 4310.

EBIO 4370 Aquatic Autotrophs (3)
This course will survey and provide a systematic treatment of the most common autotrophic organisms found in oceanic, coastal, estuarine, and freshwater habitats with particular emphasis on those organisms along the northern Gulf of Mexico.

Prerequisite(s): EBIO 1010 and 1015.

EBIO 4430 Entomology (4)
In this course we will study the organismal, ecological, and evolutionary biology of insects, while surveying recent literature. In addition to learning about insects as organisms and as integral parts of our ecosystem, we will study the scientific process. This course will discuss how scientists come to reach understanding about nature in general, using insects as our model. Insect collection required.

Prerequisite(s): EBIO 1010, 1015 and CELL 1010.

EBIO 4431 Entomology Lab (0)
Lab section for EBIO 4430

EBIO 4440 Urban Agroecology and Sustainability in New Orleans (3)
Urban Agroecology and Sustainability in New Orleans is a project centered, 3-credit undergraduate course with mandatory tier 2 service learning. This is a course designed for students from all disciplines with a general interest in urban agriculture, ecology and sustainable food production systems. This course will provide a socio-ecological approach to the study of urban food production, by evaluating the pressures driving biodiversity, energy cycling conservation, job creation, human health and well-being. The core of this course is to successfully grow culturally appropriate produce in an urban landscape following the four principles of agroecology: environmental/ecosystem principle(table 7), social and cultural principle(table 8), economic principle(table 9) and political principle(table 10).This course will be very collaborative and hands-on where students will put theory into practice and service to the community.

Prerequisite(s): EBIO 1010.
Corequisite(s): EBIO 4890.

EBIO 4460 Biodiversity and Environmental Informatics (3)
This upper-level course explores theory and practice in biodiversity informatics, an emerging field of cyber-enabled discovery and innovation. Topics to be discussed include natural history collection databases and networks, data mining, morphological databases and ontology, digital libraries, phyloinformatics, cybertaxonomy, Georeferencing methods and algorithms, GIS and predictive niche modeling.

Prerequisite(s): EBIO 3080 and (CELL 2050 or EBIO 2070).

EBIO 4480 Community Ecology (3)
Communities consist of resident populations of all species (e.g., animals, plants, microbes) that coexist in the same place at the same time. The field of community ecology seeks to understand the distribution and abundance of species. Elucidating the processes that give rise to these patterns requires an understanding of how populations of different species interact within communities, and with their abiotic environment. The objectives of this course are to become familiar with the main concepts and theories of community ecology and its applications to pragmatic societal issues.

Prerequisite(s): EBIO 1010 and 2020.

EBIO 4560 Internship (1-3)
An experiential learning process coupled with pertinent academic course work. Open only to juniors and seniors in good standing. Registration is completed in the academic department sponsoring the internship on BANNER. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 4660 Special Topics (1-4)
Courses offered for undergraduate students by visiting professors and permanent faculty. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 4661 Special Topics (1-4)
Courses offered for undergraduate students by visiting professors and permanent faculty. Course may be repeated unlimited times for credit.

Course Limit: 99

EBIO 4662 Special Topics (1-4)
Courses offered for undergraduate students by visiting professors and permanent faculty. Course may be repeated unlimited times for credit.

Course Limit: 99

EBIO 4663 Special Topics (1-3)
Courses offered for undergraduate students by visiting professors and permanent faculty. Course may be repeated unlimited times for credit.

Course Limit: 99

EBIO 4665 Special Topics Lab (1-3)
Special Topics Lab. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 4670 Topics In Marine Science (1-4)
Reserved for courses offered by LUMCON on a temporary basis or for courses taken at other marine field stations. EBIO 4680/6680 - Topics in Field Biology would be reserved for summer field courses taken at non-marine biological field stations.

EBIO 4672 Marine Field Ecology (4)
Relationships of marine and estuarine organisms to environmental factors; interactions among organisms; ecological processes of energy and materials flow; field studies of communities and ecosystems of the Louisiana coastal zone.

EBIO 4673 Marine Fish Ecology (3)
This course will explore the ecology of coastal marine fishes emphasizing aspects of how fish utilize coastal habitats and how environmental factors influence that distribution, movement, growth, reproduction, abundance and interspecific interactions of fishes, especially in early life history stages.

EBIO 4674 Marine Invertebrate Ecology (3)
In-depth study of the interaction of marine and estuarine invertebrates with their environment. Emphasis will be placed on understanding the functional role of invertebrates and how the environment shapes morphology, physiology and behavior.

EBIO 4890 Service Learning (0-1)
Students complete a service activity in the community in conjunction with the content of a three-credit corequisite course. Course may be repeated up to unlimited credit hours.

Corequisite(s): EBIO 4440.

Maximum Hours: 99

EBIO 4910 Independent Study (1-3)
Laboratory or library research under direction of a faculty member. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 4920 Independent Study (1-4)
Laboratory or library research under direction of a faculty member. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 4930 Capstone Indep Study (3-4)
A senior capstone experience for students majoring in Environmental Science-Ecology and Evolutionary Biology Track and for departmental majors unable to complete EBIO 4970/4980 due to extenuating circumstances. Under faculty supervision, students select a topic in ecology and evolutionary biology, write an expository paper on that topic and give an oral presentation of their findings. Students also attend departmental research seminars and meet to discuss contemporary issues in ecology and evolutionary biology.

EBIO 4940 Transfer Coursework (0-20)
Transfer coursework at the 4000 level. Departmental approval required.

Maximum Hours: 99

EBIO 4960 Special Projects (1-3)
Individual studies in a selected field. Open to qualified juniors and seniors with approval of instructor and advisor. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 4990 Honors Thesis (3)
Honors thesis research, first semester. Register in department.

EBIO 4992 Honors Thesis Cohort (0)
The Ecology and Evolutionary Biology Honors Thesis Cohort is a weekly meeting directed by an upper-level graduate student mentor in coordination with the faculty honors thesis advisors. Students working on an independent research project will have the opportunity to discuss the scientific method, research and design, data analysis, written communication and oral presentation with their peers and mentor. The group will serve as a sounding board, a writing community and a means of meeting deadlines and achieving the expectations of the thesis. EBIO4990/5000 are co-requisites (a total of 7 credits over the course of the full academic year).

EBIO 5000 Honors Thesis (4)
For especially qualified seniors with approval of the faculty director and the Office of Academic Enrichment. Students must have a minimum of a 3.400 overall grade-point average and a 3.500 grade-point average in the major.

Prerequisite(s): EBIO 4990.

EBIO 5380 Study Abroad (1-20)
Courses taught abroad by non-Tulane faculty. Does not count toward Tulane GPA. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 5390 Study Abroad (1-20)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 5970 Capstone Research Seminars (3)
EBIO5970/5971 is the capstone experience for majors in Ecology and Evolutionary Biology and Environmental Biology. A working assumption of our capstone is that you will go on to use your biological training in a professional capacity. Therefore, the course is designed to synthesize the major experience and prepare you for future career opportunities. You will engage in discussions of contemporary issues in EBIO and hone your skills in critical thinking and communication. EBIO5970 is the writing intensive version of the course. EBIO5971 students do not complete a paper. Enrollment in EBIO 5970 requires that the student is an EBIO or ENVB senior who will be graduating within the academic year.

EBIO 5971 Capstone Research Seminars (2)
EBIO5970/5971 is the capstone experience for majors in Ecology and Evolutionary Biology and Environmental Biology. A working assumption of our capstone is that you will go on to use your biological training in a professional capacity. Therefore, the course is designed to synthesize the major experience and prepare you for future career opportunities. You will engage in discussions of contemporary issues in EBIO and hone your skills in critical thinking and communication. EBIO5970 is the writing intensive version of the course. EBIO5971 students do not complete a paper. Enrollment in EBIO 5971 is restricted to seniors who are graduating within the academic year.

EBIO 6030 Field Botany (4)
A plant identification course focusing on terrestrial and aquatic flora of Louisiana. Lab field trips include visits to a variety of local ecosystems from coastal wetlands to upland forests. Lectures cover botany, taxonomy, and the ecological and evolutionary processes that structure plant communities, with special emphasis on how these topics apply to Louisiana ecosystems.

Corequisite(s): EBIO 6031.

EBIO 6031 Field Botany Lab (0)
Lab section for EBIO 6030.

Corequisite(s): EBIO 6030.

EBIO 6040 General Ecology (3-4)
A survey of the patterns and mechanisms of interaction among all organisms and their environments, including examples of human impacts on the biosphere. Lectures plus two field trips.

EBIO 6045 General Ecology Lab (1)

EBIO 6060 Stream Ecology (4)
Ecology of freshwater stream environments, including physical forces influencing water flow, sediment and solute geochemistry, and composition and interactions of stream biota. Class Hours: Lectures supplemented by weekly labs, some day field trips, and one weekend field trip.

Corequisite(s): EBIO 6061.

EBIO 6061 Stream Ecology lab (0)
Lab section for EBIO 6060.

Corequisite(s): EBIO 6060.

EBIO 6080 Biostatistics and Experimental Design (3)
This course will teach students how to interpret statistical data in an evolutionary and ecological context. Special emphasis will be placed on understanding the nature of ecological field experiments, and experimental design. In addition, issues regarding how ecological and evolutionary analyses are perceived in the public media will be discussed. We will cover statistical methods for dealing with such problems (regression, correlation, ANOVA, etc.), and also read papers in ecological and evolutionary journals that highlight statistical issues. The class is designed for students who have not had prior experience with statistics.

EBIO 6090 Invertebrate Paleontology (4)
Principles of invertebrate paleontology; a systematic treatment of the fossil invertebrates and their living relatives. Emphasis on functional morphology, ontogeny, and paleontology. Course may be repeated 2 times for credit.

Corequisite(s): EBIO 6091.
Course Limit: 2

EBIO 6091 Invertebrate Paleontology Lab (0)
Lab section for EBIO 6090.

Corequisite(s): EBIO 6090.

EBIO 6110 Tropical Ecology and Agriculture (3)
Through lectures and discussion, we develop a sound background in modern tropical ecology and agriculture, including conservation. This background will include knowledge of how scientists come to reach understanding about tropical ecosystems by using natural history/observational studies, experiments and models/theory. Finally, we will develop the analytical tools that are needed to continue learning about and acting on behalf of tropical ecosystems and/or other environmental issues of importance.

EBIO 6150 Intro to GIS (4)
This course is designed to give students a general understanding of geographic information systems (GIS) and the Environmental Systems Research Institute (ESRI) ArcGIS software. The approach taken is detailed instruction in utilizing ArcGIS to solve problems in the earth and environmental sciences. (SAME AS EBIO 3150, EENS 3150, EENS 6150,)

Corequisite(s): EBIO 6151.

EBIO 6151 Intro to GIS lab (0)
(Same as EBIO 3151, EENS 3151, EENS 6151)

Corequisite(s): EBIO 6150.

EBIO 6180 Plants & Human Affairs (3)
Since ancient times, people have relied on plants for food, clothing, shelter, medicines, and more. This course investigates some of the ways in which plants support and shape human life. Topics include: early ideas about plants and the origin of plant lore; plant domestication and the rise of agriculture; plant products in commercial economies; cultural uses of plants; plants and the future of civilization.

EBIO 6190 Darwin and Darwinism (4)
A consideration of Charles Darwin's theory of Natural Selection, including the history of evolutionary thought before Darwin's time, the circumstances surrounding Darwin's research, and the effect of Darwin's ideas on the development of contemporary biology. Readings, discussions, and written assignments.

EBIO 6200 Ornithology (4)
An investigation into the early evolution of birds, origins and mechanics of flight, anatomy and physiology, systematics, social and breeding behavior, and the diverse life histories of birds. Tulane investigators share current research and methodologies for studying birds, and highlight the most pressing conservation issues. We spend as much time as possible in the field, visiting unique habitats across southeast Louisiana and the Gulf Coast, in search of birds to observe, describe, and identify by sight and sound.

Corequisite(s): EBIO 6201.

EBIO 6201 Ornithology lab (0)
Lab section for EBIO 6200

Corequisite(s): EBIO 6200.

EBIO 6210 Vertebrate Morphology (4)
Comparative morphology, evolution, and bionomics of representative vertebrates.

Corequisite(s): EBIO 6211.

EBIO 6211 Vertebrate Morphology Lab (0)
Lab section for EBIO 6210.

Corequisite(s): EBIO 6210.

EBIO 6230 Molecular Evolution and Ecology (4)
Molecular ecology employs principles of population genetics and phylogenetics to answer questions about organismal diversity, population dynamics, community assembly and macroecology. Having a foundation in molecular evolution and genomics allows for broad topical applications, including the study of infectious diseases, conservation of endangered species, organismal responses to global environmental change, and the evolutionary origins of biological diversity. Students will first learn the principles of molecular evolution, after which they will be introduced to the core techniques used to generate molecular data. Students will learn how molecular data can be developed and analyzed to address questions in ecology and evolutionary biology. It is strongly recommended that students also have taken CELL 2050, EBIO 3080, and EBIO 3040 or have an understanding of genetics, organismal evolution and ecological principles. This class consists of 3 lectures per week supplemented with a weekly lab. (Same as EBIO 6230)

Corequisite(s): EBIO 6231.

EBIO 6231 Molecular Evolution and Ecology Lab (0)
Lab section for EBIO 6230.

Corequisite(s): EBIO 6230.

EBIO 6250 Biology of Marine Invertebrates (4)
Biology, taxonomy and distribution of the invertebrates with emphasis on the local fauna.

Corequisite(s): EBIO 6251.

EBIO 6251 Biology of Marine Invertebrates Lab (0)
Co-requisite lab for EBIO 6250.

Corequisite(s): EBIO 6250.

EBIO 6270 Population Ecology (3)
Principles of population dynamics in space and time, population regulation, and population interactions as determined from an integrated study of plants and animals, followed by exploration of the applicability of these principles to an understanding of the contemporary growth and control of the human population.

EBIO 6280 Ichthyology (4)
Biology of fish-like vertebrates, including taxonomy, evolution, anatomy, physiology, and biogeography. Class Hours: Lectures supplemented by weekly labs, some day field trips, and one weekend field trip.

Corequisite(s): EBIO 6281.

EBIO 6281 Ichthyology Lab (0)
Lab section for EBIO 6280.

Corequisite(s): EBIO 6280.

EBIO 6290 Behavioral Ecology (3)
This course addresses the ecological and evolutionary causes and consequences of animal behavior, using both proximate and ultimate approaches. Topics include sociality, mating systems, sexual selection, animal movement, signals, behavior and conservation, and cognition.

EBIO 6300 Biology of Amphibians and Reptiles (4)
This course will provide an introduction to herpetology, the study of reptiles and amphibians. Topics covered will include the evolutionary history, systematics, physiology, ecology, life history, behavior and conservation of amphibians and reptiles. The course consists of two lectures and a lab or field trip each week. Occasional weekend field trips may also be scheduled.

Corequisite(s): EBIO 6301.

EBIO 6301 Biology of Amphibians and Reptiles Lab (0)
Co-requisite lab for EBIO 6300.

Corequisite(s): EBIO 6300.

EBIO 6320 Microbial Diversity & Ecology (3)
A survey of micro-organisims.and their rules in and relationships within their respective ecosystems. (Same as EBIO 3320)

Corequisite(s): EBIO 6325.

EBIO 6325 Microbial Diversity and Ecology (1)
Corequisite: EBIO 3320/6320. Laboratory activities focused on observing/ ascertaining microbial taxonomy (viral, bacterial, archaeal, fungal, and protistan) and methods relating to isolating/identifying microbes and measuring growth rates and metabolisms.

Corequisite(s): EBIO 6320.

EBIO 6340 Ecological Analysis (3)
Study of powerful methods for designing ecological studies and analyzing ecological data, assuming a knowledge of basic parametric and nonparametric statistics.

EBIO 6370 Aquatic Autotrophs (3)
This course will survey and provide a systematic treatment of the most common autotrophic organisms found in oceanic, coastal, estuarine, and freshwater habitats with particular emphasis on those organisms along the northern Gulf of Mexico.

EBIO 6380 Phylogenetics (3)
A consideration of biological homology, species definition, problems of character data analysis, and Hennigian cladistics as a means of reconstructing the evolutionary history of life. The implications of phylogenetic hypotheses for biological classification, biogeography, paleontology, comparative ecology, and conservation biology. Seminars, readings, and projects.

EBIO 6430 Entomology (4)
In this course we will study the organismal, ecological, and evolutionary biology of insects, while surveying recent literature. In addition to learning about insects as organisms and as integral parts of our ecosystem, we will study the scientific process. This course will discuss how scientists come to reach understanding about nature in general, using insects as our model. Insect collection required.

EBIO 6431 Entomology Lab (0)
Lab section for EBIO 6430.

EBIO 6440 Introduction to Data Science for Ecologists (3)
This course will introduce a set of data-science and computing skills, equivalent to basic lab skills, necessary for conducting reproducible, collaborative, and efficient analyses, with an emphasis on ecological problems. The primary tools will be R and RStudio, other tools for data management and collaboration will be introduced as needed (e.g., git, GitHub, OpenRefine). Students will learn, basics of data management, manipulation, visualization, and analysis as well as the concepts of literate programming – writing code that a computer can execute and a human reader can understand – and reproducibility / repeatability in research. In this course, we will learn by doing, replicating a genuine research experience. After some training in the basics, students will be assigned published scientific articles and work in teams (that include the instructor) to repeat analyses from those articles. No previous experience in R or programming is required.

EBIO 6460 Biodiversity and Environmental Informatics (3)
This upper-level course explores theory and practice in biodiversity informatics, an emerging field of cyber-enabled discovery and innovation. Topics to be discussed include natural history collection databases and networks, data mining, morphological databases and ontology, digital libraries, phyloinformatics, cybertaxonomy, Georeferencing methods and algorithms, GIS and predictive niche modeling. A computer laboratory is a required corequisite.

EBIO 6480 Community Ecology (3)
Communities consist of resident populations of all species (e.g., animals, plants, microbes) that coexist in the same place at the same time. The field of community ecology seeks to understand the distribution and abundance of species. Elucidating the processes that give rise to these patterns requires an understanding of how populations of different species interact within communities, and with their abiotic environment. The objectives of this course are to become familiar with the main concepts and theories of community ecology and its applications to pragmatic societal issues.

EBIO 6500 Sharks and Their Relatives (3)
Biology of Sharks and Their Relatives is a detailed study of the evolution, ecology, morphology, functional anatomy, physiology, and conservation of the cartilaginous fishes.

EBIO 6550 Shark Paleobiology (3,4)
This course examines the processes and patterns of shark speciation, diversification, macroevolution, and extinction within the framework of developing a problem-based learning activity using shark teeth for a K-12 classroom. Particular emphasis is placed on the systematics and functional morphology of shark teeth.

EBIO 6551 Shark Paleobiology Lab (0)
Lab section for EBIO 6550

EBIO 6580 Urban Ecology (3)
Urban Ecology is the study of cities, including human inhabitants, as functioning ecosystems, supporting a complex web of life. In this course students will learn how basic ecological principles can be applied to the study of urban ecosystems and the effects of cities and urbanization on regional and global environments. Through a combination of lectures, readings and discussions, site visits and service learning, this course will provide an overview of interactions, at multiple scales, between the build environment and the natural environment with particular focus on New Orleans and the Gulf coast region.

EBIO 6590 Plant Biology and Adaptation (4)
An introduction to the biology of plants, with an emphasis on the aspects of physiology, anatomy, morphology, and ecology that have resulted in their successful adaptation and diversification. Lectures supplemented by weekly labs and occasional field trips.

Corequisite(s): EBIO 6591.

EBIO 6591 Plant Biology & Adaptation Lab (0)
Lab section for EBIO 6590.

Corequisite(s): EBIO 6590.

EBIO 6660 Special Topics (0-4)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 6661 Special Topics (0-4)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department. Course may be repeated unlimited times for credit.

Course Limit: 99

EBIO 6662 Special Topics (0-4)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department. Course may be repeated unlimited times for credit.

Course Limit: 99

EBIO 6663 Special Topics (0-4)
Courses offered by visiting professors or permanent faculty primarily for undergraduates. For description, consult department. Course may be repeated unlimited times for credit.

Course Limit: 99

EBIO 6665 Special Topics Lab (1-3)
Special Topics Lab. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 6670 Topics in Marine Science (1-4)
Reserved for courses offered by LUMCON on a temporary basis or for courses taken at other marine field stations. EBIO 4680/6680 - Topics in Field Biology would be reserved for summer field courses taken at non-marine biological field stations.

EBIO 6672 Marine Field Ecology (4)
Relationships of marine and estuarine organisms to environmental factors; interactions among organisms; ecological processes of energy and materials flow; field studies of communities and ecosystems of the Louisiana coastal zone.

EBIO 6673 Marine Fish Ecology (3)
In-depth study of the interaction of marine and estuarine invertebrates with their environment. Emphasis will be placed on understanding the functional role of invertebrates and how the environment shapes morphology, physiology and behavior.

EBIO 6690 Experimental Animal Behavior (4)
This course provides students the opportunity to design, implement, write-up, and present an independent research project related to animal behavior .Research will be conducted on live animals at the Audubon Zoo or Audubon Park. The course will emphasize general principles of literature review and synthesis; experimental design; the collection; organization and analysis of data; and written and oral presentation of results. The course consists of 3 hours of laboratory per week (at the park or zoo) and 2 hours of seminar per week (on campus). This course fulfills the Newcomb-Tulane intensive writing requirement.

Corequisite(s): EBIO 6691.

EBIO 6691 Experimental Animal Behavior Lab (0)
Lab section for EBIO 6690.

Corequisite(s): EBIO 6690.

EBIO 6700 Math Models in Ecology and Evolution (3)
An introductory course in mathematical modeling in biology with emphasis on construction and interpretation of models in ecology. The goals of the course are to provide training in a wide variety of mathematical and computational techniques that are used to describe ecological systems, to learn to construct ecological models and provide instruction in the biological interpretation of mathematical results.

EBIO 6777 Foundations in Ecology and Evolutionary Biology (3)
This course is intended to provide graduate students with a conceptually-oriented foundation in ecology and evolutionary biology. Students use primary sources to study classic literature (e.g., Darwin's "On the Origin of Species") and discuss it with respect to contemporary and pressing issues in ecology and evolutionary biology.

EBIO 6810 EEB Journal Review (1)
Discussion of significant new publications in ecology, evolutionary biology, and related fields. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 6850 Current Topics in Ecology and Evolutionary Biology (3)
In-depth examination of a selected topic in ecology and evolutionary biology. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 6910 Independent Study (1-4)
Advanced independent studies in a selected field of biology. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 6911 Independent Study (1-4)
This is a directed study course that allows a graduate student to pursue a topic of particular interest under the direction of a faculty member.

Maximum Hours: 99

EBIO 6920 Independent Study (1-4)
Advanced independent studies in a selected field of biology. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 6940 Transfer Coursework (0-20)
Transfer coursework at the 6000 level. Departmental approval required.

Maximum Hours: 99

EBIO 7010 Process of Science in Ecology and Evolutionary Biology (3)
The class presents a thorough review and experimental exposure to the process of funding and disseminating results of scientific research. Students will write and submit fundable grant proposals, give research seminars, participate in the peer review process, and examine job opportunities within and outside academia.

EBIO 7150 Problems in Environmental Biology (3)
Restricted to 5 graduate year students; Directed independent study applying field and laboratory methods to environmental problems.

Maximum Hours: 99

EBIO 7160 Problems in Environmental Biology (3)
Restricted to 5 graduate year students; Directed independent study applying field and laboratory methods to environmental problems.

EBIO 7660 Internship in Environmental Biology (3)
Restricted to 5 graduate year students: Experimental learning in cooperation with federal, state, municipal or private agencies and industry.

EBIO 7670 Internship in Environmental Biology (3)
Restricted to 5 graduate year students: Experimental learning in cooperation with federal, state, municipal or private agencies and industry.

EBIO 7940 Transfer Credit-Grad (1-12)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 7990 Doctoral Pre-Candidacy RSH (1-9)
Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 9980 Masters Research (3)
Research toward completion of a masters degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

EBIO 9990 Dissertation Research (3)
Research toward completion of a doctoral degree. Course may be repeated up to unlimited credit hours.

Maximum Hours: 99

Economics (ECON)

ECON 1010 Introduction to Microeconomics (3)
An introduction to theory of prices and the allocation of resources. Topics include the pricing of goods and services, the determination of wages and returns to capital, market structure, and international trade.

ECON 1020 Introduction to Macroeconomics (3)
An introduction to theory of aggregate income, employment, and the price level. Topics include unemployment, alternative monetary and fiscal policies, and economic growth.

ECON 1940 Transfer Coursework (0-20)
Transfer Coursework at the 1000 level. Departmental approval may be required.

Maximum Hours: 99

ECON 3010 Intermediate Microeconomics (3)
An exposition of modern microeconomic theory. Theory of consumer choice, production cost, product markets, and input markets.

Prerequisite(s): ECON 1010 or 1030.

ECON 3020 Intermediate Macroeconomics (3)
An exposition of modern macroeconomic theory. Theory of national income, employment, and the price level. The role of monetary and fiscal policy in economic stabilization and growth.

Prerequisite(s): ECON 1020 or 1040.

ECON 3100 Economics of Money & Banking (3)
The course provides students with a comprehensive understanding of the role of money, financial institutions, and central banks in the economy. Topics covered include money (definition, functions, and evolution); structure and functions of financial markets; types and roles of financial institutions; central banking and monetary policy; financial crises and regulation; and international finance and exchange rates.

Prerequisite(s): ECON 1020 or 1040.

ECON 3230 Econometrics (3)
This course introduces classical econometric theory and its practical applications. The course begins with a review of probability theory, descriptive statistics, and inferential statistics, then it delves into various econometric models, including linear regression, nonlinear regression, panel data models, logit/probit models, and selected time series models. The course also provides a very brief introduction to econometric software and its applications.

Prerequisite(s): ECON 1010 and (MATH 1110, 1140, 1230 or 3070).

ECON 3240 Econometrics Lab (1)
An introduction to the use of a statistical programming language. Students will learn skills such as graphing, regression analysis, and data manipulation. Ways to avoid common mistakes and good programming techniques are also provided.

Prerequisite(s): ECON 1010.

ECON 3250 Data Analysis Using Stata (1)
This course provides an introduction on how to use the statistical software Stata, which is commonly used by professional economists. Students will learn how to import and clean data, create variables, generate summary statistics, create figures, and do basic programming (e.g., loops). The course will also provide a light introduction to how to use Stata to conduct regression analysis, which is more formally taught in econometrics and other courses.

Prerequisite(s): ECON 1010.

ECON 3270 Economics of Pandemics (3)
To introduce students to the ways in which economics can be applied to a set of basic epidemiological phenomena. The goal is to provide a starting point for a discussion between three groups of people interested in the spread of infectious diseases: students pursuing a medical degree, students in the social sciences, and students of public health.

Prerequisite(s): (ECON 1020 and 1010).

ECON 3320 Urban Economics (3)
A survey of topics in the field of urban economics, which focuses on economic questions facing geographical areas and cities. Topics covered include geographical data, economic development, crime, housing, neighborhood effects, transportation, and the concentration of economic activity in particular locations (agglomeration).

Prerequisite(s): ECON 1010 or 1030.

ECON 3330 Environmental & Natural Resource (3)
An introduction to economic theory and evidence of how and why people make decisions that have consequences for the natural environment and the availability of renewable and nonrenewable resources. The course will address current environmental challenges, including decarbonization, greenhouse gas emissions, energy transition, and climate change. The course will also introduce economic tools for understanding optimal policies to address these challenges, including valuation of pollution damages and regulations, and analysis of optimal rates of extraction and utilization of natural resources.

Prerequisite(s): ECON 1010 or 1030.

ECON 3340 Government and The Economy (3)
This course introduces the government's roles as a regulator, tax authority, and producer of public goods in the economy. We are particularly interested in understanding what governments spend money on, the tools governments can use to finance their spending, why and how governments seek to correct market failures (e.g., due to externalities or non-competitive business practices), and how governments make decisions. Topics may include externalities and public goods, non-competitive markets and antitrust legislation, taxation, education, social insurance, voting and political economy, or macroeconomic policy.

Prerequisite(s): ECON 1010 or 1030.

ECON 3370 World Economy (3)
This course offers a non-technical introduction to the analysis of international economic issues. While we will be primarily interested in developing standard economic approaches to these issues we will also offer a variety of other useful approaches from political science, sociology, and less mainstream parts of economics. Among specific issues to be treated: protectionism, multinational firms, debt crisis, international macroeconomic policy coordination and European integration.

Prerequisite(s): ECON 1010 and 1020.

ECON 3420 Economic History of the United States (3-4)
