Financial Cryptography and Data Security (2021)

The Internet is a crucial source of COVID-19 information

CCHD **CORONAVIRUS COVID-19** CHESTER COUNTY HEALTH DEPARTMENT **BE INFORMED**
LEARN THE FACTS, SHARE THE FACTS, STOP THE FEAR

INSTRUCTIONS FOR INDIVIDUALS TESTED FOR COVID-19

Note: This guidance is not for antibody or serology testing.

TEST RESULTS Contact the physician who ordered the test for results. Do not call the Health Department for your results. Results are typically available within 7 days of testing, but may be delayed at times depending on testing volume and the laboratory used.

WHILE YOU WAIT FOR YOUR RESULTS

- Self-isolate to your home.
- Others who live in your home should also stay home.
- If you live with others, self-isolate in a private room and use a separate bathroom, if possible.
- Wear a mask when you enter general living areas.
- If your symptoms worsen, call your healthcare provider.
- Make a list of close contacts - within 6 feet for more than 10 minutes - you have from two days before you became sick until you began self-isolating.

WHAT TO DO IF YOU TEST POSITIVE

- Notify your close contacts and let them know to quarantine at home for 14 days.
- If your symptoms worsen or you require hospitalization, notify your healthcare provider immediately.
- Continue to self-isolate at home until you have recovered:

72 HOURS NO Fever without medicine	Other Symptoms have improved	7 DAYS since Symptoms began
-------------------------------------------------	-------------------------------------------	------------------------------------------

WHAT TO DO IF YOU TEST NEGATIVE

- If you had a known exposure to someone with COVID-19, continue to quarantine for 14 days after your exposure.
- If you did not have a known exposure to someone with COVID-19 and do not have symptoms, you can stop your quarantine.
- If you did not have a known exposure to someone with COVID-19 and have symptoms, you may have another illness. Stay home until 3 days after your last day of your symptoms.

Is potentially useful information about COVID-19 being **censored** on the Internet?

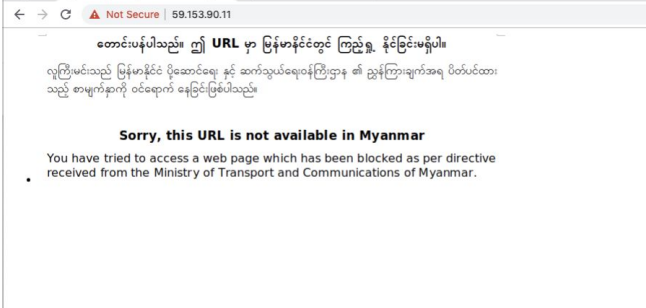

Internet censorship → access to certain websites is blocked for users

Previous COVID-19 Censorship Studies are limited

Myanmar blocks “fake news” websites amid COVID-19 pandemic

Phyu Phyu Kyaw, Maria Xynou, Arturo Filastò, 2020-05-06

Source: OONI

- **Limitations:**
 - Focused on measuring COVID-19 Internet censorship of specific websites
 - In some countries

Our study

Large scale study measuring the global Internet censorship of a potentially useful COVID-19 websites

- Large number of domains
- Many countries

Our study

Large scale study measuring the global Internet censorship of a potentially useful COVID-19 websites

- Large number of domains
- Many countries

Our questions

- Where are potentially useful COVID-19 websites blocked?
- How common is the blocking?
- What categories do these blocked websites belong to?

FORTINET®

Findings

Top 10 filtered domains in Switzerland (DNS)

With their FortiGuard given categories

Domain	Category	% of VPs blocking
www.covid-19.uk.com	Phishing	66.44%
coronavirus-realtime.com	Malicious	66.40%
covid19graph.work	Phishing	66.36%
www.covid19ireland.com	Phishing	66.22%
www.covid19maps.info	Phishing	65.83%
covid-19-stats.info	Phishing	65.74%
coronavirus.zone	Malicious	65.41%
coronavirus-map.com	Phishing	65.36%
coronastats.net	Malicious	63.60%
coronavirusfrance.org	Phishing	1.58%

Findings

Are these websites actually dangerous?

Found categorization of websites filtered by FortiGuard using 3 other classifiers/URL filters available online

3 authors also manually visited websites to inspect them for phishing threats

Findings

What we found

Drastic differences in categorization amongst URL filters

0-36.96% of websites classified as risky

No visible potential threats in all websites but one

Most blocked websites were COVID-19 statistics websites

Many even warned users about inaccuracies in data and mentioned their sources

Sources often included Johns Hopkins University and government websites

URL classifier	Number of websites marked as threats
FortiGuard	46
WatchGuard	17
Palo Alto Networks	8
Checkphish	0

Example of blocked COVID-containing website

The screenshot shows the 'Coronavirus Map' website. At the top left is a coronavirus icon and the title 'Coronavirus Map'. To the right are 'Tweet' and 'Share' buttons. Below the title is the text: 'Contribute to your community's health and help track the COVID-19 outbreak in the United Kingdom'. The main heading is 'How are you feeling?'. There are two buttons: a green one with a heart icon labeled 'Great >' and a red one with a person icon labeled 'Not Feeling Well >'. A dark box on the left contains text about early detection. A red box in the center shows 'Confirmed COVID-19 Cases' as 73,758, with subtext: 'Based on 256,605 individuals tested', 'Last Updated: Fri 10th April 09:00', and 'Source: Public Health England'. On the right, there is a 'Visualised Data' section with a coronavirus icon and text: 'Reports are collected and mapped with confirmed cases from Public Health England'. A white downward arrow is at the bottom center.

Coronavirus Map

Contribute to your community's health and help track the COVID-19 outbreak in the United Kingdom

How are you feeling?

Great >

Not Feeling Well >

Early detection and early response are key to preventing the spread of Coronavirus (COVID-19) in the United Kingdom. We believe that letting individuals report symptoms in real-time can complement traditional tracing while providing useful information directly to the public.

Confirmed COVID-19 Cases **73,758**
Based on 256,605 individuals tested
Last Updated: Fri 10th April 09:00
Source: Public Health England

Visualised Data
Reports are collected and mapped with confirmed cases from Public Health England

Implications

- There are **large discrepancies** from filter to filter
- Web filters are often used by organizations, ISPs, and governments for blocking dangerous websites.
 - Could cause unnecessary blocking for thousands of users during a time when information access is crucial
- There is a lack of
 - Transparency surrounding decisions filters make
 - Proper auditing for web filter-based censorship

Some Limitations & Future work

- Focused on censorship of factual content not misinformation
- Only focused on two methods of blocking
- Investigate the overflow of censorship policies enacted during the pandemic over time
- Search engine censorship
- Incorporate top URLs from non-Western search engines such as Yandex and Baidu
