Introduction

The Oil and Hazardous Substance Release Prevention and Response Fund (Response Fund) was created by the legislature in 1986 to provide a readily available funding source to investigate, contain, clean up and take other necessary action to protect public health and welfare and the environment from the release or threatened release of oil or a hazardous substance. Alaska Statute 46.080.030 states: “ It is the intent of the legislature and declared to be the public policy of the state that funds for the abatement of a release of oil or a hazardous substance will always be available.” (SLA 1986 Sec.1 Ch. 59).

Statutes governing the Response Fund were amended in 1989, 1990, 1991, 1994, 1999, and 2006. Generally, these amendments increased the purposes for which the Response Fund could be used and increased the Department of Environmental Conservation’s (DEC) reporting requirements. In addition, the 1994 amendment made major changes to the Response Fund structure by dividing the Response Fund into two separate accounts: the “response” account and the “prevention” account. The diagram on page 3 illustrates the current structure of the Response Fund. The 1999 amendment changes the requirement for an annual report to the legislature on the status of the fund to a biennial report. The 2006 amendment changed the surcharge levied on crude oil produced in the state. HB3001C amended Sec. 28 of AS 43.55.300 and imposed a prevention account surcharge of \$.04 (formerly \$.03) per barrel of oil produced from each lease or property in the state, less any oil the ownership or right to which is exempt from taxation. Sec. 26 of AS 43.55.201 was also amended to change the response account surcharge of \$.02 to a \$.01 per barrel of oil produced from each lease or property in the state.

Response Account

The Response Account may be used to finance the state’s response to an oil or hazardous substance release disaster declared by the governor, or to address a release or threatened release that poses an imminent and substantial threat to the public health or welfare, or to the environment. To access the Response Account for any incident other than a declared disaster, DEC must notify the governor and the Legislative Budget and Audit Committee within 120 hours of using the money from this account.

The Response Account was financed with a two cent per barrel surcharge and money recovered from responsible parties until March 31, 2006. Effective April 1, 2006, House Bill 3001C changed the surcharge tax of \$.02 per barrel to a \$.01 per barrel imposed on all oil produced from each lease or property in the state. This surcharge is in addition to the four cent surcharge that finances the Prevention Account.

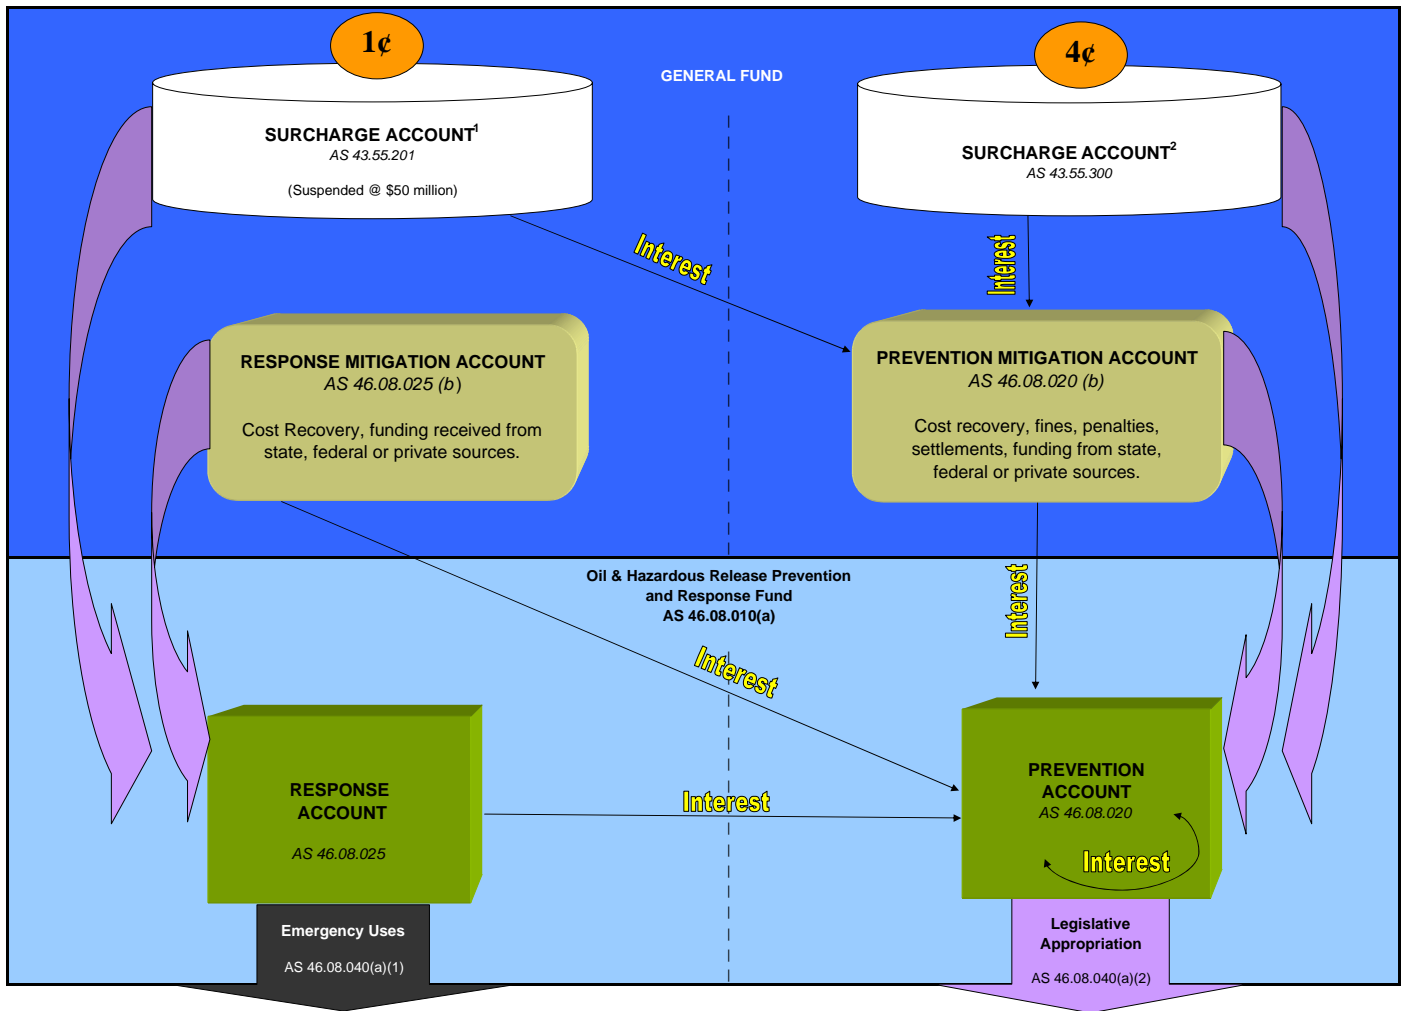

The surcharge is suspended when \$50 million is reached from the combined balances of the surcharge account, the response mitigation account and the unreserved and unobligated balance in the Response Account. The \$50 million balance was exceeded in December, 1994 and the surcharge was suspended as of April, 1995.

Prevention Account

The Prevention Account may be used to respond to oil and hazardous substance releases that have not been declared a disaster by the governor. In addition, the Prevention Account is used to fund Alaska's oil and hazardous substance prevention and response programs. The legislature appropriates money from the Prevention Account to support DEC and other state agencies for spill prevention response and preparedness planning activities (AS46.08.040(a)(2)).

The Prevention Account was financed with a three cent per barrel surcharge and fines, settlements, penalties and interest thru March 31, 2006. Effective April 1, 2006, House Bill 3001C changed the surcharge tax of \$.03 per barrel to \$.04 per barrel imposed on all oil produced from each lease or property in the state.

Oil & Hazardous Substance Release Prevention and Response Fund (OHSRPRF)

- USES:**
- * Investigate, evaluate, contain, cleanup, monitor and assess a release or threatened release of oil or hazardous substance that poses an imminent and substantial threat to public health or welfare or the environment.
 - * Match federal funds for release.
 - * Recover cost to the state, a municipality, a village, or a school district for cleanup.
 - * Recover state costs.

- USES:**
- * Investigate, evaluate, contain, and cleanup a release or threatened release of oil or hazardous substances.
 - * Establish and maintain spill response capability.
 - * Review oil discharge prevention and contingency plans.
 - * Maintain spill response contracts and agreements.
 - * Conduct training, response exercises, inspections, and tests.
 - * Verify or establish preparedness of the state.
 - * Verify proof of financial responsibility.
 - * Acquire, repair and improve spill response equipment caches.
 - * Prepare, review and revise regional and state spill plans and local Hazmat plans
 - * Participate in federal oil discharge cleanup activities.
 - * Assess effects of a release.
 - * Recover state costs.
 - * Restore the environment.

¹ House Bill 3001C amended AS 43.55.201 Sec. 26 and changed the Surcharge from \$.02 to \$.01 effective 4/1/2006

² House Bill 3001C amended AS 43.55.300 Sec. 28 and changed the Surcharge from \$.03 to \$.04 effective 4/1/2006

Table B summarizes, by project, deposits made in Fiscal Year 2005 and 2006 to the prevention and response mitigation accounts. All monies collected by the department as cost recovery, fines, penalties or settlement payments related to activity funded by the Oil and Hazardous Substance Release Prevention and Response Fund (Response Fund) are deposited in the mitigation accounts. These amounts do not include settlements that involved a Supplemental Environmental Project undertaken directly by the spiller.

TOTAL FY 2006 MITIGATION REVENUE	\$ 1,587.10	\$ 2,143.96	\$ 3,731.06

Table C summarizes the various funding sources appropriated to the Oil & Hazardous Substance Release Prevention and Response Fund (Response Fund). "Mitigation Revenue" includes interest earned on surcharge deposits, cost reimbursement, fines, penalties or settlement payments from parties financially responsible for incidents or sites for which the state expended money from the Response Fund. "Oil Surcharge Revenue" represents collection in the prior year of the conservation surcharge imposed on oil produced in the state.

Table C

Revenue Sources

(In Thousands)

Fiscal Year	Mitigation Revenue	3 Cents Oil Surcharge Revenue	2 Cents Oil Surcharge Revenue Note 1	Other General Fund	Total
FY00	\$5,368.1	\$11,075.5	-	-	\$ 16,443.6
FY01	\$5,803.4	\$9,536.0	-	-	\$ 15,339.4
FY02	\$6,194.7	\$9,295.2	-	-	\$ 15,489.9
FY03	\$6,490.0	\$9,597.0	-	-	\$ 16,087.0
FY04	\$3,157.0	\$9,232.9	-	-	\$ 12,389.9
FY05	\$1,392.8	\$9,052.5	-	-	\$ 10,445.3
FY06	\$1,688.8	\$8,330.5	-	-	\$ 10,019.3
FY07	\$3,731.1	\$7,758.7	-	-	\$ 11,489.8

Note 1: AS 43.55.221 (d) provides that imposition and collection of the \$.02 per barrel of oil surcharge levied and collected be suspended under AS 43.55.201 when the cumulative balance of these accounts equals or exceeds \$50,000,000.00. The suspension of the imposition and collection of the surcharge went into effect on April 1, 1995.

Table D lists contracts the department signed that are associated with response activities funded by the Oil and Hazardous Substance Release Prevention and Response Fund (Response Fund) and which exceeded \$10,000 in FY05 & FY06 payments.

Table D **FY05 Summary of Response Contracts & Purchases in Excess of \$10,000**

<i>CONTRACTOR</i>	<i>PROJECT NAME</i>	<i>DESCRIPTION</i>	<i>TOTAL CONTRACT</i>	<i>FY 05 PAYMENTS</i>
ADOT & PF	ADOT & PF, SEF Services	SEF Vector Truck Vehicle Fees	\$39,318.00	\$39,318.00

Tables H, I, and J list all the sites inventoried in the DEC's contaminated sites and leaking underground storage tank sites database as of June 30, 2006.

Table H summarizes the numbers of active sites by location and by priority ranking based on the threat to the public health or welfare or to the environment. The database contains the following totals for each priority category.

High Priority	1,237
Medium Priority	936
Low Priority	522
Unranked	<u>165</u>
Total Active Sites	<u>2,860</u>

Table I lists all DEC active Contaminated and Leaking Underground Storage Tanks sites alphabetically by location as June 30, 2006.

Table J lists all DEC closed Contaminated and Leaking Underground Storage Tanks sites alphabetically by location as of June 30, 2006.

Appendix 1: Community Spill Response - No costs incurred for communities in Fiscal years 2005 and 2006.

Appendix 2: Project Summaries - This appendix summarizes information for contaminated sites or pollution incidents for which the department made direct expenditures of \$10,000.00 or more during Fiscal year 2005 and 2006 from the Oil and Hazardous Substance Release Prevention and Response Fund. Indirect expenditures, expenditures paid from other sources and expenditures for budgeted legal services provided by the Department of Law are not included. Direct department response activities involve cleanup, control, containment, investigation and oversight.

Project/Site Name: 6-Mile Groundwater Monitoring

Location: Fairbanks/North Pole

Project Manager: Douglas Bauer

Site ID Number: 1987310924701

Tel: (907) 451-2192

Tracking Number: 14621570

Situation:

In 1995/1996, an area-wide trichloroethylene (TCE) groundwater plume was discovered in the Six-Mile Richardson Highway area. The plume is over a mile in length, up to 1200 feet wide, and up to 100 feet in depth. It extends in a northwesterly direction from south of the New Richardson Highway to the Six-Mile Village Subdivision area.

The plume impacted fifteen residential drinking water wells. The homeowners were given individual grants in 1995 to install water treatment systems (e.g., carbon filters) to remove the TCE from their drinking water.

Individual site investigations were conducted concurrently with the initial phases of the area wide groundwater investigation. Site investigations at the McCall, Holder, Walsky, and 6-Mile Truck Shop properties concluded that there are multiple source areas where TCE was discharged to the ground. The individual source areas are creating groundwater plumes that eventually merge together to form the area-wide plume. The source areas appear to be located on the Holder and Walsky properties.

In 1996, an annual long-term groundwater program was instituted. Additional permanent groundwater monitoring wells were installed throughout the area. A series of permanent groundwater monitoring wells and a selected number of residential wells have been sampled annually since 1996 to monitor the area-wide plume. The results are analyzed, published, and distributed to interested parties.

FY05 Actions:

The long-term ground water monitoring program, and testing and treatment system maintenance of residential water wells that are impacted continues.

FY05 Response Fund Expenditures: \$ 55,370.00

FY05 Cost Recovery: \$ 0.00

FY06 Actions:

Conducted groundwater monitoring and sampling of residential wells. Also, provided filters for water treatment systems on a number of residential wells.

FY06 Response Fund Expenditures: \$ 36,146.00

FY06 Cost Recovery: \$ 0.00

FY07 Projected Actions and Expenditure Amounts:

Continue the ground monitoring program and treatment system maintenance of residential water wells that are impacted. Estimated cost is \$30,000 for long-term monitoring and \$20,000 for residential water well testing and treatment system maintenance.

Estimated FY07 Costs: \$50,000

Project/Site Name: **ADNR Hollowell– Road**

Location: Fairbanks

Project Manager: Larry Johnson

Site ID Number: 1999310926601

Tel: (907) 451-5175

Tracking Number: 14145360

Situation:

The subject property is managed and owned by the Department of Natural Resources (ADNR) and comprises approximately 10 acres in the North Pole area. It was leased in the past and used for a variety of different purposes, including auto repair and salvage work. The lessee abandoned the property leaving behind hazardous materials and/or solid waste - including drums of petroleum products; waste oils; and miscellaneous containers of paint, grease, and solvents. ADNR removed significant amounts of surface debris (including automobile bodies); drums and containers of hazardous substances.

The property is surrounded by residential properties that use groundwater for their private drinking wells and DEC agreed to assist ADNR in the assessment of risk posed by any hazardous substance contamination at the site in order for it to be re-offered for lease or sale.

FY05 Actions:

DEC conducted a site assessment to identify suspected areas of soil contamination. The liquid contents from an abandoned underground storage tank (UST) were recovered and the tank was excavated and removed. There was contaminated soil excavated and stored on site. There are two soil stockpiles (approximately 4 cubic yards total) that exceed DEC cleanup levels. There was also soil contamination remaining in the ground at the base of two of the shallow excavations and at the base of the UST excavation.

FY05 Response Fund Expenditures: \$ 26,000.00

FY05 Cost Recovery: State owned - No Cost Recovery

FY06 Actions:

Excavated and treated the contaminated and collected confirmation soil samples. Properly treated and disposed the 10 gallons of oily water in the drum. Sampled the groundwater for water quality parameters.

FY06 Response Fund Expenditures: \$ 21,719.00

FY05 Cost Recovery: State owned - No Cost Recovery

FY07 Projected Actions and Expenditure Amounts:

Project was completed and conditionally closed. Any further sampling should be conducted by future owner/operator of the site.

Estimated FY07 Costs: \$0.00

Project/Site Name: ADOT&PF Aniak Airport

Location: Aniak, Alaska

Project Manager: David Pikul

Site ID Number: 1992250133501

Tel: 269-7551

Tracking Number: 14103460

Situation:

The City of Aniak is located on the south bank of the Kuskokwim River at the head of Aniak Slough. Access to Aniak is limited to air and water. The City of Aniak has a State-owned airport with an asphalt runway that is 6,000' long by 150' wide. There are seven known contaminated sites located on the ADOT&PF airport property: ADOT&PF City Shop Building; ADOT&PF Aniak Building 301; ADOT&PF Aniak Maintenance Station; ADOT&PF Aniak Runway Apron; Former Mark Air site; Former AST Area and pipeline and the Aniak White Alice Site. Groundwater beneath each site has been investigated through installation of groundwater monitoring wells and contaminated groundwater encountered. The majority of homes, (155) are plumbed and have individual wells. There are six drinking water wells on ADOT&PF owned land southwest of the south end of the airport runway. Groundwater has been impacted in this area from historic releases from a former AST farm and pipeline. The wells are located at the ADOT&PF Maintenance Building, the Aniak City Shop, Northern Air Cargo, Hageland Air, PennAir and one well supplies the two Alaska State Troopers housing/office buildings. Based on the inferred groundwater flow direction, the wells at the ADOT&PF Maintenance Building, PennAir and the Troopers Building should be sampled and laboratory analyzed. A total of 43 55-gallon drums with liquid content and batteries are currently being stored at the property known as the City Maintenance Shop Building located off River Road, Aniak. The drum contents have been characterized. Several totes of lead-acid batteries have accumulated on airport property.

FY 06 Actions:

Completed groundwater sample collection at selected groundwater monitoring locations, collection of drinking water samples from public water wells and management of 43 55-gallon drums and numerous batteries located at the Alaska Department of Transportation & Public Facility (ADOT&PF) Aniak City Shop.

FY06 Response Fund Expenditures: \$ 41,224.00

FY06 Cost Recovery: State owned - No Cost Recovery

FY07 Projected Actions and Expenditure Amounts:

Continued groundwater monitoring, monitoring well repair, installation and decommissioning, and site characterization.

Estimated FY 07 Costs: \$85,000

Project/Site Name: **ADOT&PF Bethel Maintenance Facility**

Location: Bethel, Alaska

Project Manager: Don Fritz

Tel: (907) 262-5210 ext. 245

Site ID Number: 1998250000801

Tracking Number: 14205580

Situation:

The ADOT&PF Bethel Maintenance Facility is a state owned facility. In October 1997, the Alaska Department of Transportation and Public Facilities (ADOT&PF) permanently closed two underground storage tanks (USTs) at the site. The two USTs were known to contain diesel and unleaded gasoline fuel.

After removing the two USTs, the dispenser island, and all associated piping; the excavation was lined with a 20-mil liner and backfilled with clean, imported fill. Groundwater was not encountered during the excavation. Approximately 43 cubic yards of soil was excavated and stockpiled on a 10-mil petroleum resistant liner. The stockpile sample results exceeded ADEC cleanup levels for benzene, Gasoline Range Organics (GRO), and Diesel Range Organics (DRO). The sample results for soil beneath the USTs indicate petroleum hydrocarbon contamination present at levels above the 18 AAC 75.341 Method Two Migration to Groundwater cleanup levels.

FY06 Actions:

A term contractor was hired to identify the nature and extent of soil and /or groundwater contamination in order to allow ADEC to make a risk management decision regarding the need for further cleanup actions.

FY06 Response Fund Expenditures: \$ 13,665.00

FY06 Cost Recovery: State owned - No Cost Recovery

FY07 Projected Actions and Expenditure Amounts:

Evaluate current conditions at the site and determine the appropriate actions that should be taken at the site.

Estimated FY07 Costs: \$0.00

Project/Site Name: **ADOT&PF Cold Bay Airport**

Location: Cold Bay, Alaska

Project Manager: David Pikul

Site ID Number: 1995250120501

Tel: (907) 269-7551

Tracking Number: 14103760

Situation:

There are several former and existing fuel storage facilities and associated piping from the City dock to the airport. Private, State and Federal agencies have conducted operations that have impacted soils and/or groundwater through release of petroleum hydrocarbons or other hazardous materials. To facilitate consistent department decision making and evaluate risk posed by contamination across the State-owned Airport property, all available contaminated site data was compiled into an area-wide, GIS-based project. The area-wide review of the Cold Bay Airport and vicinity documented conditions and inventoried the known and potential contaminant source areas as regulated under 18 AAC 75 that could pose a risk to underlying groundwater resources.

FY05 Actions:

A term contractor researched and compiled contaminated site data at (and adjacent to) the Cold Bay Airport. This data was then formatted into a geographical location system to allow mapping and data manipulation.

FY05 Response Fund Expenditures: \$11,609.00

FY05 Cost Recovery: State owned - No Cost Recovery

FY06 Actions:

Geographic Information System (GIS) was reviewed and updated for current data.

FY06 Response Fund Expenditures: \$ 4,994.00

FY06 Cost Recovery: State owned - No Cost Recovery

FY07 Projected Actions and Expenditure Amounts:

Site assessment of fuel pipeline and monitor ADOTPF former tank farms.

Estimated FY07 Costs: \$75,000.00

Project/Site Name: **ADOT&PF Cordova Locke Property**

Location: Cordova, Alaska

Project Manager: David Pikul

Site ID Number: 1990240129803

Tel: 269-7551

Tracking Number: 14651260

Situation:

The site was used (unauthorized) by Jim Locke for over 30 years as a vehicle/equipment salvage yard on Cordova Airport property. Following the death of Mr. Locke, DEC assumed the lead role in investigating the area for hazardous substance contamination. It required the removal of solid and hazardous wastes over the 8-acre site and subsequent site investigation.

DEC hired a term contractor to perform a release investigation to determine impacts to underlying groundwater. Five soil borings were advanced and completed as groundwater monitoring wells for long-term monitoring. Groundwater samples were collected from the monitoring wells and submitted to a laboratory for analysis. Based on the laboratory results, long-term monitoring will continue for two years to develop contaminant trends. If contaminant trends identify stable or decreasing levels of contaminants, the site will be conditionally closed.

FY 05 Actions:

Site assessment activities and groundwater monitoring.

FY05 Response Fund Expenditures: \$ 14,410.00

FY05 Cost Recovery: State owned - No Cost Recovery

FY 06 Actions:

Site work was completed and ADEC issued a conditional closure decision.

FY06 Response Fund Expenditures: \$ 1,284.00

FY06 Cost Recovery: State owned - No Cost Recovery

FY07 Projected Actions and Expenditure Amounts:

Monitor site conditions of landspread soil and surface water.

Estimated FY07 Costs: \$45,000.00

Project/Site Name: **ADOT&PF Dillingham Vehicle Maintenance**

Location: SE1/4, NE1/4, NW1/4, NW1/4, Sec 21 T13S, R55W, S.M.
Lot QSL 165 and Lot 4 City of Dillingham, Alaska

Project Manager: Don Seagren, Kenai Area Office, Tel: (907) 262-5210 Ext. 233

Site ID Number: 200025000006701 Tracking Number: 14205180

Situation:

In September 1999, three underground storage tanks (USTs) were removed from the Alaska Department of Transportation and Public Facilities (ADOT&PF) vehicle Maintenance Facility in Dillingham, Alaska.

The presence of petroleum hydrocarbon contamination in soil was indicated by field screening results and excavation confirmation sample analytical results included in the UST closure report. Soil excavation sample results indicated diesel range organics (DRO) concentrations significantly above the Alaska Department of Environmental Conservation (ADEC) Method 2 cleanup levels in remaining soil at all three tank locations. No additional excavation to remove this contaminated soil below the tanks had been documented, nor was there documentation of clean soil at excavation limits from soil field screening or laboratory analytical results to suggest the remaining contaminated soil had been removed from the site.

FY 06 Actions:

SLR Alaska was contracted by ADEC to perform remedial activities to remove the DRO contaminated soil documented to remain below the USTs and to install and sample groundwater monitoring wells at the site.

A limited area of soil contamination exceeding ADEC cleanup levels remains at depth. DRO and benzene contamination above cleanup levels exists in the shallow groundwater, which is not used as a drinking water source. The groundwater contaminant plume is attenuating before reaching the property boundaries. The remaining soil and groundwater contamination does not pose a significant risk to human health or the environment. Pending funding availability, a plan to remediate the soil stockpile will need to be developed.

FY06 Response Fund Expenditures: \$21,675.46

FY06 Cost Recovery: State Owned – No Cost Recovery

FY 07 Projected Actions and Expenditure Amounts:

Nothing currently projected

Project/Site Name: **ADOT&PF Homer Facility**

Location: SW1/4, NE1/4, S28, T6N, R14W, S.M.
3450 Sterling Highway, Homer, Alaska

Project Manager: Don Seagren, Kenai Area Office,

Tel: (907) 262-5210, Ext 233

Site ID Number: 1998230000701 & 1989230023003

Tracking Number: 14205380

Situation:

There are two release sites documented in the Leaking Underground Storage Tank (LUST) database for the ADOT&PF Homer Maintenance Facility: Spill 1989230023003 is associated with an oil/water separator and a waste oil tanks; and Spill 1998230000701 is associated with two LUSTs that were formerly used to store and dispense gasoline and diesel fuel.

The oil/water separator and he waste oil tank had leaked or spilled in 1989 and 1992. Interim corrective measures were employed to address the contamination associated with the releases. Soil was excavated to the extent practicable and stored on site. Elevated levels of petroleum and halogenated volatile organics (HVOs) were identified in the soil remaining beneath the shop building.

Monitor wells identified low levels of petroleum hydrocarbons and chlorinated solvents. The facility well has not shown any contamination. Bottled water is used for drinking purposes. The on-site well is used only for equipment maintenance and wash down. A conditional closure determination was issued in 2005 with the requirement of annual long term groundwater monitoring.

The two LUSTs consisted of one 4,000 gallon diesel and one 3,000 gallon gasoline underground storage tank. Both were decommissioned in October 1997. Groundwater was not encountered in the 10 foot deep UST excavations. Soil samples indicated that the soil was contaminated with DRO, GRO and benzene at levels exceeding ADEC cleanup levels. The nature and extent of the soil and groundwater contamination was not fully characterized in the vicinity of the former USTs.

FY 06 Actions:

Site assessment and groundwater monitoring defined the extent of the remaining soil and groundwater contamination in the vicinity of the former USTs. The monitor wells associated with the waste oil release were repaired and sampled.

FY06 Response Fund Expenditures: \$32,415.00

FY 06 Cost Recovery: State owned – No Cost Recovery

FY 07 Projected Actions and Expenditure Amounts:

Long term ground water monitoring event will be conducted.

Estimated costs: \$9,069.81

Project/Site Name: ADOT&PF King Salmon Airport

Location: King Salmon, Alaska

Project Manager: David Pikul

Tel: 269-7551

Site ID Number: NONE

Tracking Number: 14146460

Situation:

King Salmon is located on the north bank of the Naknek River on the Alaska Peninsula, 284 miles southwest of Anchorage. Approximately 80% of households have individual wells which are mostly shallow and range from 30 to 40 feet below ground surface (bgs). King Salmon is a transportation hub for Bristol Bay and was formerly an Air Force Base. It is currently a State-owned (and operated) airport with an 8,500 foot paved, lighted runway and FAA air traffic control tower. The area has been used by private, state and/or federal entities that may have impacted soils and/or groundwater through release of petroleum hydrocarbons or other hazardous materials.

FY 06 Actions:

The contaminated sites within the airport area boundaries, extended to King Salmon creek were inventoried and documented in a GIS-based ARCVIEW maps. Pertinent site data was gathered and compiled in geodatabase tables. Soil generated during UST closure activities at the Mark Air King Salmon site was characterized, treated and disposed of on airport property.

FY06 Response Fund Expenditures: \$ 18,774.00

FY06 Cost Recovery: State owned - No Cost Recovery

FY07 Projected Actions and Expenditure Amounts:

Estimated FY 07 Costs: NONE

Project/Site Name: ADOT&PF North Kenai Maintenance Facility

Location: 511050 Island Lake Road, Kenai, Alaska

Project Manager: Don Seagren, Kenai Area Office

Tel: (907) 262-5210, Ext 233

Site ID Number: 1998230000702

Tracking Number: 14684780

Situation:

Two, 2,000 gallon USTs, one gasoline and one diesel, were removed from the ground in 1997. Soil contamination exceeding ADEC cleanup levels was observed during the UST closures. No groundwater was encountered. A third tank used to store waste oil was removed in 1998. No assessment was conducted at the time of the waste oil tank closure.

Further site assessment was conducted during 2006 to determine the current nature and extent of soil and groundwater contamination at the site and to remediate any contamination that was found exceeding the most stringent ADEC cleanup levels. No contamination exceeding ADEC cleanup levels was found in-situ. No groundwater was encountered during the investigations. The soil stockpile was found to slightly exceed the ADEC cleanup level. The stockpile was landspread on-site to allow natural attenuation to complete the remediation process. The site has been closed.

FY 06 Actions:

Site assessment.

FY06 Response Fund Expenditures: \$15,836.30

FY 06 Cost Recovery: State owned – No Cost Recovery

FY 07 Projected Actions and Expenditure Amounts:

Site is closed. No further remedial actions or assessments planned related to this release

Estimated costs: \$0

Project/Site Name: **ADOT&PF Peger Road Maintenance Facility**

Location: Fairbanks

Project Manager: Douglas Bauer

Tel: (907) 451-2192

Site ID Number: 1991310907201

Tracking Number: 14800760

Situation:

The Alaska Department of Transportation and Public Facilities (ADOT&PF) Operations and Maintenance facility is located on Peger Road in Fairbanks. Environmental investigations began in the early 1990s, first under the direction of the ADOT, then continuing since 1998 under the direction of the Alaska Department of the Environmental Conservation (ADEC). The investigations are the result of compliance with Underground Storage Tank (UST) regulations and a federal Resource Conservation and Recovery Act (RCRA) compliance audit.

The release of chlorinated solvents, specifically trichloroethylene (TCE), and gasoline and diesel fuels have contaminated soil and groundwater within the facility. There are ground water contaminant plumes that extend off-site in the general direction of the regional ground water flow (southeast to northwest). There are two TCE ground water plumes: one originating at the Materials Laboratory, and the other originating in the vicinity of the Cat House. A petroleum plume originates near the former USTs at the Operation & Maintenance building. The TCE ground water plume associated with the Materials Laboratory is the longest off-site plume.

The plume from the Materials Laboratory extends beyond 17th Avenue. During site characterization, there were other contaminants detected in the ground water in addition to TCE. This might indicate other releases not associated with the ADOT&PF facility that are contributing to the area-wide ground water contamination. Additional investigation is required to locate the distal end of the TCE ground water plume and other possible source areas.

FY05 Actions:

The efforts to delineate the TCE plume continued. Additional ground water monitoring wells were installed to identify other possible source areas.

In 2004, about 700 cubic yards of TCE contaminated soil was excavated in support of building an extension to the Materials Laboratory. The soil was landspread as an interim corrective action on adjacent municipal property. There were also residential drinking water wells identified and sampled to determine any impacts from the TCE ground water plume.

FY05 Response Fund Expenditures: \$ 227,674.00
FY05 Cost Recovery: State owned - No Cost Recovery

FY06 Actions:

Conducted additional site assessment activities to define the nature and extent of the groundwater plume and identify possible source area(s).

FY06 Response Fund Expenditures: \$ 112,771.00
FY06 Cost Recovery: State owned - No Cost Recovery

FY07 Projected Actions and Expenditure Amounts:

Continue to monitor the groundwater plume and investigate state owned source areas (Alaska State Troopers) and identify potentially responsible parties in area to assess their properties.

Estimated FY07 Costs: \$75,000.00

Project/Site Name: ADOT&PF Silvertip Highway Maintenance

Location: MP 58.8 Seward Hwy: Sec 25, T8N, R1W, S.M.

Project Manager: Don Seagren, Kenai Area Office

Tel: (907) 262-5210, Ext 233

Site ID Number: 1990230013606

Tracking number: 14950780

Situation:

The former ADOT&PF Silvertip Maintenance Facility operated from 1953 to 1975. The facility was used to perform road maintenance for the Seward Highway on the upper Kenai Peninsula. The site activities included vehicle fueling and power generation, and housing was present at the site for ADOT&PF employees.

Four 500 gallon ASTs were removed from the site in 1986. In 1989, two 2,000 gallon USTs, one diesel and one gasoline were removed from the former facility. Soil contamination was observed during tank removal. The extent of the contamination was not assessed.

FY 06 Actions:

Site assessment, installation and sampling of groundwater monitoring wells were conducted. No contaminated soil, above ADEC cleanup levels was discovered. DRO contamination, exceeding ADEC cleanup levels, was found in two monitor wells. Also the presence of an UST remaining in the ground was discovered.

FY06 Response Fund Expenditures: \$19,931.73

FY 06 Cost Recovery: State owned – No Cost Recovery

FY 07 Projected Actions and Expenditure Amounts:

UST Removal, UST Closure Assessment, Soil remediation/disposal Long term ground water monitoring event will be conducted.

Estimated costs: \$35,860.00

Project/Site Name: ADOT &PF Sand Point, ARFF and SRE Buildings

Location: Sec. 19, T56S, R73W, S.M. – Located at the Sand Point Airport

Project Manager: Don Seagren, Kenai Area Office

Tel: (907) 262-5210, Ext 233

Site ID Number: 1999250035401

Tracking Number: 14205780

Situation:

In 1998, a diesel UST and impacted soil were removed from the southern end of the SRE building at the Sand Point Airport. In 2000, diesel impacted soil was encountered in the vicinity of a heating oil AST and associated fuel distribution piping, and a former furnace inside the building. DRO and benzene contaminated soil & groundwater was encountered during assessment in November & December 2000. The estimated extent of the impacted soil was assumed to extend beneath the building and along the eastern portion of the SRE building.

In 1999 a 1,200 gallon diesel UST was removed adjacent to the ARFF building's southern corner. Diesel contaminated soil was excavated and stockpiled on site for later remediation.

In 2006, additional assessment and monitoring further defined the contaminant plume and determined the current site conditions. Impacted soil and groundwater appears to be limited to the areas around the release sites and under the buildings. Under current site conditions, the risk to human health and the environment is low. A Conditional Closure has been issued for this site. Full site closure will be considered when future sampling shows that soil and groundwater contamination meets ADEC's most stringent cleanup standards.

FY 06 Actions:

Site assessment & monitoring

FY06 Response Fund Expenditures: \$19,986.06

FY 06 Cost Recovery: State Owned – No Cost Recovery

FY 07 Projected Actions and Expenditure Amounts:

Long term ground water monitoring event will be conducted.

Estimated costs: Not determined yet

Project/Site Name: ADOT&PF Tudor Road Maintenance Facility
Location: Boniface Parkway and Tudor Road, Anchorage
Project Manager: David Pikul Tel: (907) 269-7551
Site ID Number: 1990210918601 **Tracking Number:** 14978960

Situation:

The project areas are situated on the 20 acre Alaska Department of Transportation & Public Facilities (ADOT&PF) Tudor Road maintenance facility located at the southernmost terminus of Boniface Parkway, Anchorage, Alaska. The facility has been in operation since the early 1970's and has generally been used for the storage of heavy equipment, maintenance and storage of State agency vehicles, storage of road maintenance materials and chemicals, and a materials testing laboratory. Releases, leaks, spills, etc. from five former underground storage tanks (USTs), direct discharge of liquid waste to the ground surface, along with facility practices has resulted in soil and groundwater contamination at the property. In addition to soil contamination vertically distributed from the ground surface to the groundwater table, free-phase petroleum and groundwater contamination exists beneath the property. Forty-five soil borings completed as groundwater monitoring wells have been installed for the characterization of three main source areas and smaller, localized release points. Free-phased petroleum product (gasoline) remains on the groundwater. Concentrations of chlorinated hydrocarbons remain in soil & groundwater above DEC cleanup levels. Fate and transport modeling has predicted that on-site contamination will not leave the property boundary.

FY06 Actions:

Collection of representative groundwater and surface water samples was completed at selected locations. A site figure depicting well locations was provided. Laboratory analytes for each sample were tabulated. Water table elevation measurements were collected from each well being sampled. Geochemical parameters of temperature, pH, dissolved oxygen, and oxidation/reduction potential were recorded for all samples collected. A flow-through cell was used to measure all geochemical parameters. Measurements of water table elevations and free product thickness were recorded in wells containing free-phased product. Additional geochemical data was gathered from groundwater samples collected from monitoring wells MW-6, MW-22 S&D, MW23S&D, MW24 S&D, and MW-25 S&D. Geochemical parameters included: nitrates, dissolved iron, sulfates, methane, ethane, ethane and chlorides. Data collection was implemented to support contaminant fate and transport modeling predicted at the site.

FY06Response Fund Expenditures: \$21,726.00
FY06Cost Recovery: NONE

FY07 Projected Actions and Expenditure Amounts:

Data collection will be completed to support fate and transport modeling predictions. Monitoring well repairs and decommissioning will be completed.

Estimated FY07 Costs: \$50,000.00

Project/Site Name: Aleknagik Traditional Council Washeteria Well

Location: Aleknagik, Alaska

Project Manager: David Pikul

Tel: 269-7551

Site ID Number: 1997250127501

Tracking Number: 14695560

Situation:

The washeteria site has had numerous spills or releases from the above ground heating oil tank resulting in both soil and groundwater contamination. It is suspected that a release of heating oil from the fuel tank 10 or 15 years ago impacted the community drinking water well. A second release from the same system occurred during the winter of 1999. Other releases are suspected but have not been reported. The community was requested to investigate the releases but indicated they are financially unable to do so.

DEC assumed the lead role investigating the site and determined that groundwater in the immediate vicinity of the washeteria well is impacted by both diesel-range organics and gasoline-range organics. Fuel constituents were measured in tap water from the washeteria and the community was notified of the contaminated water and advised not to drink it.

FY 05 Actions:

Release investigation performed which included, installation of soil borings and groundwater monitoring wells and soil and groundwater sample collection and analysis.

FY05 Response Fund Expenditures: \$ 74,846.00

FY05 Cost Recovery: \$ 0.00

FY 06 Actions:

No assessment work conducted during FY06. The community is aware of the groundwater problem and have taken appropriate measures to minimize use of impacted groundwater.

FY06 Response Fund Expenditures: \$ 407.00

FY06 Cost Recovery: \$ 0.00

FY07 Projected Actions and Expenditure Amounts:

Evaluate current conditions at the site and possibly conduct a groundwater monitor event to assess status.

Estimated FY 07 Costs: \$65,000.00

Project/Site Name: **Askinuk Corporation Tank Farm**

Location: Scammon Bay

Project Manager: Bob Carlson

Site ID Number: 04-27-99-252-01

Tel: (907) 543-3215

Tracking Number: 14136060

Situation:

During the evening of September 8, 2004, an estimated fifteen-hundred (1500) gallons of unleaded gasoline were discharged to the lined Askinuk Corporation (Scammon Bay) tank farm, when a transfer pump was inadvertently left running. ADEC was notified of the spill on the morning of September 10, 2004. Bethel ADEC staff immediately called the Askinuk Corporation (Corporation) to ascertain the status of the spill, and to assess its potential human health and environmental impacts. In order to reduce the explosive threat, staff directed Corporation employees to cease operations and seal off the area in the vicinity of the tank farm. By late afternoon, Anchorage staff had arranged to send a term contractor, Emerald Alaska, Inc. to the site.

FY 05 Actions:

On September 11, 2004, a crew of four Emerald hazmat responders arrived on site and began recovering the gasoline floating upon the water in the tank farm containment. Bethel ADEC staff provided on-site guidance for the cleanup. The Emerald crew completed the cleanup on September 12, 2004, by pumping a gasoline/water mixture into an empty ten-thousand (10,000) gallon tank. After a final cleanup inspection, ADEC staff authorized the Corporation to re-open the tank farm. The Emerald hazmat crew was able to demobilize its equipment and return to Bethel later that day.

On September 28, 2004, Bethel ADEC staff traveled to Scammon Bay with equipment to pump and filter the contaminated water recovered from the spill. After training by staff, Corporation employees completed the water filtration. The recovered gasoline was usable and was placed back into inventory.

FY05 Response Fund Expenditures: \$ 35,256.53

FY05 Cost Recovery: \$ 0.00

FY06 Actions:

No activity.

FY06 Response Fund Expenditures: \$0.00

Project/Site Name: **Badger Road Area-wide**

Location: Fairbanks/North Pole

Project Manager: Douglas Bauer

Site ID Number:

Tel: 907-451-2192

Tracking Number: 14136260

Situation:

There were volatile organic compounds (VOC) detected at low concentrations (below drinking water cleanup levels) in several residential drinking water wells. The residential wells were originally tested as part of the Badger Chevron leaking underground storage tank (LUST) investigation in 2002.

The contaminants are not normally associated with a typical LUST release and additional assessment activity was determined appropriate. The residential wells were re-tested in 2005 to determine if there might be other source areas not associated with Badger Chevron.

The 2005 test results were not conclusive and the source of the low level ground water contamination remains unknown.

FY05 Actions:

Residential drinking water wells were tested for VOCs and the data was analyzed.

FY05 Response Fund Expenditures: \$ 31,548.00

FY05 Cost Recovery: \$ 0.00

FY06 Actions:

Researched potentially responsible parties in the are and contacted them for information.

FY06 Response Fund Expenditures: \$ 5,154.00

FY06 Cost Recovery: \$ 0.00

FY07 Projected Actions and Expenditure Amounts:

Conduct assessment of the McPeak General Store and determine environmental status – if the owner/operator is unwilling or unable to do so.

Estimated FY07 Costs: \$75,000.00

Project/Site Name: **Bentley Trust Tax Lot 201**

Location: Fairbanks

Project Manager: Douglas Bauer

Site ID Number: 2000310925901

Tel: (907) 451-2192

Tracking Number: 14893260

Situation:

This property was used in the 1970s as a construction and/or storage yard for pipeline materials. It was used as a staging area for construction activities associated with the Trans Alaska Pipeline System. It is suspected that the chlorinated solvent, Trichloroethene (TCE), was spilled or released on Tax Lot 201 resulting in soil and ground water contamination. The industrial use of the site only lasted until the late 1970s/early 1980s when construction activities ceased.

In 2000, the landowner, the Bentley Family Charitable Trust, initiated plans to prepare the property for sale. There were several underground storage tanks removed and during the process, TCE contaminated soil and ground water was discovered. The Trust began site characterization activities and performed interim cleanup actions. By 2004, the extent of the TCE ground water plume was determined and cleanup actions were employed to allow for portions of the tax lot to be sold and developed for commercial purposes. The extent of the groundwater plume was identified off the property and into an adjacent residential subdivision (Lemeta Subdivision).

The former site operator (Alyeska Pipeline Service Company) has assumed some share of the responsibility for the contamination at the site. They propose to use the risk assessment process to identify possible exposure pathways and develop alternative cleanup levels for the remaining portion of the site that is impacted by the contamination. Since the property could be developed for commercial or residential use, Alyeska has been asked to address the potential risk posed by vapor intrusion into future buildings/structures. Since this is a developing science, DEC required technical assistance in evaluating the vapor intrusion testing protocols and analysis methods as proposed by Alyeska.

FY05 Actions:

DEC contracted with a term contractor for technical assistance during the initial review of the Alyeska risk assessment proposal.

FY05 Response Fund Expenditures: \$ 20,453.00

FY05 Cost Recovery: \$ 955.0

FY06 Actions:

Ecology and Environment provided technical assistance on the review and approval of the risk assessment conducted by Alyeska Pipeline Service Company.

FY06 Response Fund Expenditures: \$ 28,465.00

FY06 Cost Recovery: \$ 29,364.00

FY07 Projected Actions and Expenditure Amounts:

It is not anticipated that further assistance on Tax Lot 201 will be required. Please refer to Tax Lot 203 for future actions.

Estimated FY05 Costs: \$0,000.

Project/Site Name: **Chevron Refinery**

Location: Nikiski, Alaska

Project Manager: Don Fritz

Site ID Number: 1987230119802

Tel: (907) 262-5210 ext. 245

Tracking Number: 14944260

Situation:

The Chevron Refinery site was formerly an active petroleum refinery located in Nikiski, Alaska. The refinery had a 20,000 to 25,000 barrel-per-day capacity to produce fuels and asphalt using distillation processes. The site is situated on a bluff adjacent to Cook Inlet.

The refinery has had numerous petroleum releases due to past work practices and has contaminated the soils and groundwater below the facility. Environmental impacts from releases at the site were discovered in 1987 when petroleum contamination migrated to the base of the bluff and onto the beach of Cook Inlet below the facility. Based on the assessment information available, the heavily contaminated soils are confined to just a few areas or operable units, however, in excess of 1 million cubic yards of contaminated soil exists.

A groundwater recovery system (approximately 900 feet long) was installed to capture free product and contaminated groundwater prior to discharge to the beach and Cook Inlet. Chevron is currently evaluating alternate groundwater treatment options due to the expense of maintaining the existing groundwater remediation system. Chevron has undertaken numerous assessment activities and has begun several pilot studies to evaluate current contaminant levels and the best methodology to treat the contamination prior to reaching the waters of Cook Inlet. Chevron is also evaluating in-situ treatment options that would allow Chevron to more proactively remediate soil and groundwater contamination throughout the site.

FY06 Actions:

Review submittals and proposals and oversee site cleanup actions and investigations undertaken by Chevron and their consultants. This includes participating in meetings and making recommendations on the appropriate cleanup technologies (chemical oxidation; reactive barrier wall) to address groundwater contamination.

FY06 Response Fund Expenditures: \$ 12,196.00

FY06 Cost Recovery: \$ 0.00

FY07 Projected Actions and Expenditure Amounts:

Continued oversight of Chevron's assessment and cleanup activities.

Estimated FY07 Costs: \$10,000

Project/Site Name: DeBarr-Wal-Mart Site

Location: Anchorage, Alaska

Project Manager: Eileen Olson

Tel: (907) 269 - 7527

Site ID Numbers: 2000210926401 (East Yard 2100.38.452)
2002210930601 (North Yard 2100.38.442)
2002210930602 (West Yard 2100.38.451)

Tracking Number: 14112860

Situation:

The three sites listed on the CS database as M-B Contracting East Yard, M-B Contracting West Yard and M-B Contracting North Yard ("M-B sites") comprise 8 to 9 acres each for a total of approximately 26 acres. The sites are contiguous, and were used since the 1950's for fueling, maintaining, cleaning, and storing heavy equipment and vehicles associated with John Miller's road construction company, M-B Contracting. Numerous surface releases of diesel and waste oil are documented on the sites. Aerial photographs indicate that petroleum hydrocarbons were applied to the unpaved roadways on the sites for dust suppression. Although some work was done in the East Yard in 2000, major investigation of the M-B sites was initiated following a fall 2002 walk-through and records review by a consultant for a prospective buyer.

The East Yard was contaminated by numerous surface and subsurface spills including petroleum products and solvents associated with use of the property. A partial investigation and cleanup in 2000 resulted in conditional site closure status in 2001 that was later rescinded after renewed investigation documented additional contamination. The North yard was contaminated by numerous surface petroleum spills and the discharge from the oil-water separator system in the West Yard. Contamination was also present as heavy oils and asphalt associated with a former asphalt disposal area in the northwest area of the North Yard, and in soil adjacent to a drum storage area along the eastern boundary of the North Yard.

The West Yard was contaminated by surface spills and an oil-water separator system associated with the highest levels of soil and groundwater contamination identified on the three sites. The West Yard was also a LUST site that was closed in 1993. The oil-water separator system was connected to a heavy equipment wash-down area located in the West Yard that discharged into the subsurface of the North and West Yards by a leachfield piping system. Soil and groundwater were contaminated by solvents, primarily tetrachloroethylene (TCE), diesel range organics (DRO) and residual range organics (RRO). Based on historic air photographs, the wash-down area was associated with an open discharge pit located in both the North and West yards and was replaced in the 1980's by the oil-water separator and leachfield system. The system was removed in 2005. Contamination associated with the open pit and oil-water separator system impacted both the North and West Yards. A groundwater treatment program using potassium permanganate was conducted by the former owner's consultant in conjunction with the excavation of thousands of yards of contaminated soil that is currently landspread on the east side of the West Yard. Soil excavated from the North and East Yards was also landspread in the West Yard so that an estimated 7,000 cubic yards of soil have been landspread.

FY 06 Actions:

In late 2005 Wal-Mart purchased the three M-B sites pursuant to a Prospective Purchaser Agreement (PPA) that caps Wal-Mart's financial liability and incorporates conditions that include stringent timelines, reporting requirements and ADEC oversight that is intended to ensure that the site will not pose a risk to human health or the environment, and that the State will be reimbursed for its oversight expenses. ADEC also approved workplans for continued investigative work including landfarming of excavated contaminated soil.

FY06 Response Fund Expenditures: \$15,967.00

FY06 Cost Recovery:

FY07 Projected Actions and Expenditure Amounts:

The proposed work for FY07 includes reviewing workplans and reports associated with the continued assessment, monitoring and cleanup of the site in accordance with the PPA with the overall objective of reducing the risk from solvent and petroleum contamination exposure to human health and the environment. Estimated FY 07 Costs: \$2,500.00

Project/Site Name: **Dresser Atlas**
Location: Nikiski
Project Manager: Paul Horwath
Site ID Number: 1986230014001

Tel: (907) 262-5210, ext. 250
Tracking Number: 14971060

Situation:

Gasoline releases from an underground storage tank system probably occurred at the site sometime in the 1960s to the early 1970s. Contamination associated with the fuel releases was detected in the on-site drinking water well in the mid-1980s, and that drinking water well was replaced with a deeper, clean well. Site investigations confirmed that elevated hydrocarbon constituents were present in the soil and groundwater. The property was owned by the Alaska Department of Natural Resources (ADNR) at the time of the gas releases. The ADNR was leasing the property to gas station operator, and who is since deceased. From the late 1980s until the mid 1990s, ADEC funded assessment and cleanup work at the site initially from a special legislative appropriation, and later from the Oil and Hazardous Substance Release Response Fund.

FY06 Actions:

An ADEC contractor performed groundwater quality sampling and based on that and previous water quality data, and based on prior assessment and cleanup efforts at this site, a soil and groundwater treatment system that had been installed and operated during the 1990s was decommissioned. In addition, the contractor installed two new groundwater monitoring wells for purposes of future groundwater quality monitoring. Based on this work, ADEC issued a conditional closure decision for this site, contingent on periodic groundwater quality monitoring.

FY06 Response Fund Expenditures: \$ 29,672.00
FY06 Cost Recovery: None

FY 07 Projected Actions and Expenditure Amounts:

Continue to monitor the groundwater plume, and abandon an additional groundwater monitoring well that could not be accessed at the time the last field work was performed.

Estimated FY07 Costs: \$ 4,000.00

Project/Site Name: **Drill Site 11 Methanol Release**

Location: Drill Site 11, Prudhoe Bay, North Slope

Project Manager: Amanda Stark

Tel: (907) 451-2175

Site ID Number: 05399904801

Tracking Number (LC): 14101460

Situation:

On February 17, 2005, a spill was discovered on Drill Site 11 pad (DS 11), which is in the Greater Prudhoe Bay oil production field. BPXA estimated that a maximum of 1,092 gallons of a solution of equal parts water and methanol were spilled to snow, ice and gravel.

The spill was from an injection line that normally carries seawater from the DS 11 manifold building to injections wells 7 & 8. The line was out of service at the time of the spill due to the discovery of a seawater leak in the line four days prior to this incident. The 50/50 methanol and water mixture, used as a freeze protect fluid, was used to displace the seawater from the line while waiting on repairs.

The BPXA investigation determined the causal factors included failure of the seawater flowline while freeze protected with the methanol/water mixture and also the failure to follow the appropriate isolation procedures. On March 13, 2005 the seawater line was stripped of its insulation to reveal a small pencil-tip size hole located in the noon position on the line. The hole was due to internal corrosion.

BPXA had to isolate and evacuate the line prior to any cleanup commencing. Once the evacuation was completed, both the aerial and vertical extent of contamination was delineated. An area of approximately 10,000 square feet had been impacted from the spill. Clean overburden snow was removed both manually and with heavy equipment. The spill site was flushed with fresh water to remove the methanol and any residual seawater. Confirmation sampling was conducted and the analyses indicated that the spill site met or exceeded the State established cleanup levels for both seawater (conductivity) and methanol. A letter of "No Further Action" was issued to BPXA on June 2, 2005.

FY 05 Actions:

DEC staff participated in the BPXA incident investigation team and also oversaw all cleanup, disposal and sampling activities at the spill site.

FY05 Response Fund Expenditures: \$ 12,123.00
FY05 Cost Recovery: \$ 0.00

FY06 Actions:

No activity.

FY06 Response Fund Expenditures: \$ 0.00

Project/Site Name: Drill Site 2H Produced Water/Seawater Spill

Location: Drill Site 2H, Kuparuk, , North Slope

Project Manager: Amanda Stark

Tel: (907) 451-2175

Site ID Number: 05399908501

Tracking Number (LC): 14101860

Situation:

On March 26, 2005, a spill was discovered on Drill Site 2H pad (DS 2H), which is in the Kuparuk oil production field. ConocoPhillips Alaska, Inc. (CPAI) initially reported that approximately 111,300 gallons (2,650 barrels) of a mixture of 30% seawater and 70% produced water was released to both gravel pad and tundra. Produced water is a mixture of water and crude oil. Later calculations based on hole size, flow rate, and pressure data analysis refined the spilled volume to be 51,198 gallons (1219 barrels).

The source of the spill was a 6-inch produced water/seawater injection line that transports water from the Central Processing Facility #2 (CPF-2) to DS 2H for injection. The leak was located in the below-grade section of the cased pipeline located under the gravel pad. CPAI reported to ADEC that the cause of the spill was attributed to internal corrosion of the water injection pipeline.

The Incident Management Team (IMT) was activated and the spill response team (SRT) was mobilized to the site. Efforts to delineate the aerial and vertical extent of the spill were immediately undertaken. The gravel near the manifold building was flushed with fresh water. The SRT conducted snow removal operations and divided the tundra into seven sections with shore seal boom. The tundra was then flushed with fresh water. Confirmation sampling was conducted and the analyses indicated that the spill site met or exceeded the State established cleanup levels for both seawater (conductivity) and oil. A letter of "No Further Action" was issued to CPAI on June 1, 2005.

FY 05 Actions:

DEC staff participated in the IMT and also oversaw all cleanup, disposal and sampling activities at the spill site.

FY05 Response Fund Expenditures: \$ 22,451.00

FY05 Cost Recovery: \$ 0.00

FY06 Actions:

No activity.

FY06 Response Fund Expenditures: \$ 0.00

Project/Site Name: **Elim School**
Location: Elim, Alaska
Project Manager: David Pikul
Site ID Number: 2001320117701

Tel: (907) 269-7551
Tracking Number: 14130360

Situation:

During construction of the new Elim School in June 2001, contaminated soil was discovered in the foundation excavation. The diesel-range organics (DRO) impacted soil was removed and stored near the school until it was re-located to a parcel of land (approximately five miles out of town) for treatment.

DEC assumed the lead role in this matter because the soil was generated at a state operated school facility. A contractor was hired in 2004 to treat (aerate) the soil and sample it to determine current contaminant levels. The contractor was informed there was one treatment cell prior to their mobilization but discovered three separate cells on their arrival. They had only prepared (and had supplies) for one cell which was treated and sampled. The sample results indicated only a portion of the soil cell had elevated levels of DRO.

Based on the results of the performance sampling, DEC will determine if additional remedial activities are required.

FY05 Actions:

A term contractor was hired to aerate the two remaining treatment cells and collect soil samples to determine the regulatory status of the soil. The work was completed, but no report has been delivered to DEC at this time.

FY05 Response Fund Expenditures: \$ 11,840.00
FY05 Cost Recovery: State owned - No Cost Recovery

FY06 Actions:

Sampled the soil stockpile in order to make a decision regarding environmental status

FY06 Response Fund Expenditures: \$ 23,282.00
FY06 Cost Recovery: State owned - No Cost Recovery

FY07 Projected Actions and Expenditure Amounts:

It is not anticipated that further work is required and no actions are proposed in FY07.

Estimated FY07 Costs: \$0.00

Project/Site Name: **Eskimo Creek Seep**

Location: King Salmon, Alaska

Project Manager: Rich Sundet

Site ID Number: 1994250122801

Tel: (907) 269 - 7578

Tracking Number: 14875960

Situation:

The Alaska Department of Environmental Conservation (ADEC) was contacted in 1994 regarding a petroleum hydrocarbon seep into Eskimo Creek in the vicinity of Eddie's Fireplace Inn. The source(s) of contamination was unknown but sample analysis indicated a diesel range fuel product. Possible suspect areas included a former heating oil tank buried behind Eddie's Fireplace Inn and possible debris and/or runoff from the King Salmon Airport.

ADEC assumed the lead role in the site investigations at Eddie's Fireplace Inn because the owner had died and his estate was unwilling or unable to do so. The former heating oil tank had previously been decommissioned by the former owner without any sample data. It was suspected as a source and the ADEC investigation identified soil and groundwater contamination in the former tank location. Interim corrective action included the installation of recovery wells to intercept product before it entered the creek. However, soil contamination at (and adjacent to) the seep area continued to cause sheen and product release to the creek.

In November 2001, ADEC's term contractor installed an interception trench and recovery system. The 70 cubic yards of petroleum contaminated soil excavated from the trench was transported off site and stored at the community landfill. In October 2002, 30 cubic yards of contaminated soil was excavated adjacent to Eskimo Creek and transported off site to the landfill. The contaminated soil was thermally treated in 2003 and used as landfill cover material.

FY05 Actions:

Continued operation of the interception trench and free phase product recovery system. Groundwater and surface water was also sampled to determine water quality conditions.

FY05 Response Fund Expenditures: \$ 26,621.00

FY05 Cost Recovery: \$ 2,400.00

FY06 Actions:

Continue the operation and maintenance of the interception trench and free phase product recovery system. Sample ground water for water quality conditions, including the public drinking water well on site.

FY06 Response Fund Expenditures: \$ 9,308.00

FY06 Cost Recovery: \$ 4,400.00

FY07 Projected Actions and Expenditure Amounts:

Continued operation of the interception trench and groundwater monitoring.

Estimated FY07 Costs: \$35,000.00

Project/Site Name: **Former Sani Klean Services**

Location: Moose Creek, Alaska

Project Manager: John B. Carnahan

Site ID Number: EI - 2141

Tel: (907) 451-2166

Tracking Number: 14989460

Situation:

The property was foreclosed on by the Fairbanks North Star Borough, who applied for and received a DEC Brownfield Assessment (DBA) grant. It served as a former fuel service station but was abandoned with the underground storage tanks (USTs) remaining onsite. The use of the DBA funding was limited to site assessment actions and did not allow for the removal of tanks or any cleanup activity. Based on the results of the site investigation, DEC determined that it would be cost effective to remove the tanks and conduct limited source removal at the time that equipment was onsite. Other cleanup funding was allocated to address these work tasks.

There is limited petroleum contamination remaining on the site that could either be excavated and treated or managed (with conditions) to ensure there is no risk to human health or the environment. The site is available for re-development provided the use is restricted to commercial/industrial use (not residential).

FY05 Actions:

The USTs were removed. The actions included: excavation and disposal of seven tanks and limited soil excavation and treatment.

FY05 Response Fund Expenditures: \$ 59,784.00

FY05 Cost Recovery: \$ 0.00

FY06 Actions:

No activity.

FY05 Response Fund Expenditures: \$ 0.00

Project/Site Name: Gaffney Road Area-Wide Groundwater Investigation

Location: Fairbanks

Project Manager: Larry Johnson

Tel: (907) 451-5175

Site ID Number: 19973100931001

Tracking Number: 14622260

Situation:

The Gaffney Road area in Fairbanks has an area-wide groundwater contamination plume. The contaminants of concern include chlorinated hydrocarbons - primarily tetrachloroethylene (PCE); trichloroethene (TCE) and the dichloroethenes. Since there were no reported spills or releases in the area, DEC initiated a groundwater investigation in 1997. The assessment used passive soil gas (PSG) surveys, groundwater monitoring wells, and sewer line sampling methodologies to define the nature and extent of the contamination.

Two groundwater plumes were identified originating in the Gaffney Road area and extending downgradient, generally north-northwest towards the Chena River. The smaller, eastern plume was approximately 600 feet in length while the western plume was approximately 3000 feet long. It was generally concluded that the distribution of contaminants was associated with the sanitary sewer lines in the area. A major concern was the migration of the groundwater plume(s) towards the Chena River and the possible risk to the community's public drinking water supply.

The groundwater monitoring data from 2000 through 2004 identified two short TCE and PCE plumes east of Cushman Street and one longer PCE plume west of Cushman Street. The contamination had not reached the public water wells. There were a small number of private water wells in the area but they reportedly are not used for drinking water. There were two suspect source areas (former dry clean facilities) identified on Gaffney Road and DEC must still pursue site assessment actions at those locations to determine if they are responsible for the contamination.

The information to date indicates that natural attenuation of the contaminants is occurring and there is a documented decrease in concentrations from the Gaffney Road area toward the public water wells. The highest levels of contamination are in the western plume near Gaffney Road.

FY05 Actions:

The sampling of existing groundwater monitoring wells verified that the plumes were not migrating. The eastern TCE plume appears to be naturally attenuating and is relatively stable. The western PCE plume exhibits some localized fluctuations in concentrations but is not considered a risk to the public water wells. Additional soil investigations near the head of the western plume identified soil contamination above DEC cleanup levels that appeared to be associated with wood stove sewer lines rather than surface spills.

FY05 Response Fund Expenditures: \$ 90,331.00

FY05 Cost Recovery: \$ 55,000.00

FY06 Actions:

Groundwater monitoring data and status of wells were reviewed. An RFP was prepared to solicit bids on revised monitor plan and repair (or replacement) of damaged wells..

FY06 Response Fund Expenditures: \$ 7,663.00

FY06 Cost Recovery: \$ 00.00

FY07 Projected Actions and Expenditure Amounts:

Continue the groundwater monitoring program and repair / replace damaged wells. Evaluate remediation options for any identified soil contamination and recommend soil treatment alternatives.

Estimated FY07 Costs: \$150,000.00

Project/Site Name: GC 2 Oil Transit Line Release

Location: Prudhoe Bay, Alaska

Project Manager: Tom DeRuyter

Tel: (907) 451-2145

Site ID Number: 06399906101

Tracking Number: 14163060

Situation:

On March 2, 2006 an individual driving the access road along the Oil Transit Line (OTL) running from GC2 to GC1 noticed an odor. In his initial investigation he discovered that a large amount of oil had leaked to tundra. The release was reported to both ADEC and USEPA. A subsequent cause investigation by BPXA focused on an area of the OTL located under a caribou crossing. It was discovered that the OTL had developed a hole in the 6:00 o'clock position on the pipe about 10 feet from the eastern end of the caribou crossing. The cause of the hole was determined to be corrosion. Further inspection of the OTL indicated that the line was suffering from corrosion damage at many of the caribou crossings. Although the volume of oil has not yet been determined the spill area was measured at 1.9 acres of tundra, lake ice and lake margin/bottom.

FY06 Actions:

By the afternoon of March 2, 2006 an incident management team made up of representatives from BPXA, USEPA, and ADEC had been assembled. Vacuum trucks were dispatched to the spill site to begin recovery of the liquid oil and response teams delineated the spill area. Tankage was identified so that the recovered oil could be stored and then gauged and sampled at a later date. After all of the removable liquid oil had been taken from the spill site the contaminated snow was removed and stored in a lined pit at the old Ball Mill. Two snow melters were brought in and set up at the old Ball Mill to melt the contaminated snow. The water and oil mixture was then taken to the tankage at FS2 for separation and storage. Contaminated soil was removed with trimmers and stockpiled. The spill site was then sampled and the removal actions ceased. Restoration of the site consisted of backfilling with a tundra aggregate overburden that had been removed from a mine site expansion program.

FY06Response Fund Expenditures: \$ 135,572.00

FY06Cost Recovery: \$ 0.00

FY07 Projected Actions and Expenditure Amounts:

Efforts for FY07 will consist of monitoring of the spill site and continued implementation of the revegetation plans that were approved. Also, efforts to evaluate the spill volume and settlement negotiations with BPXA will continue through much of FY07.

Estimated FY 07 costs: \$20,000.00

Project/Site Name: Horseshoe Lake Mystery Oil Sheen

Location: Kodiak, AK
Project Manager: Randall Dowd
Site ID Number: 05249902001

Tel: (907) 262-5210
Tracking Number: 14144860

Situation:

On January 20, 2005 the Department received notification of an oil sheen flowing from a storm drain outflow into Upper Horseshoe Lake. The Coast Guard, City of Kodiak Public Works, Kodiak Fire Department and the consulting engineering firm that designed and installed the new storm water drainage system located the general area of oil input to the storm water system but not the source.

The Department hired a cleanup contractor to assist in locating and terminating the source of the spill, preventing additional oil from entering Horseshoe Lake, and cleaning up any recoverable oil. An ADEC responder accompanied the cleanup contractor and identified an active spill at a nearby residence located 1/8 of a mile uphill from Horseshoe Lake.

The homeowner hired Anderson Construction and BGES, Inc., both cleanup contractors, to excavate and inspect his underground storage tank. The contractors found at least 3 holes in the tank and extensive pitting. Anderson Construction and BGES excavated contaminated soil at his property and sampled the soil in the excavation. The soil analysis met the Department's cleanup criteria, although oil sheens were present in the water in the excavation at time of backfilling. The cleanup was completed on February 28, 2005 but light oil sheen continued to discharge from the storm drain outflow indicating that there are likely additional sources contributing to the contamination in Horseshoe Lake.

During the course of the Department's investigation of the mystery spill source, the Alderwood Townhouse Association was contacted and requested to verify the integrity of their underground fuel tank. To address this concern, the Townhouse Association emptied their underground fuel tank and replaced it with an above ground tank in an attempt to find out if the tank was leaking. The Townhouse Association President reported that a flare fitting on the fuel line for the new tank was faulty. This resulted in a secondary heating oil spill that drained the entire contents of the 400 gallon tank onto the ground. Appearing to follow the same path as the mystery release, the oil then flowed down to a french drain that empties into the city's storm water system and then into Horseshoe Lake.

The recovery of the townhouse complex 400 gallon oil spill is nearing completion and the discharge of fuel into the lake has slowed to minor oil sheen only at times of heavy rainfall.

FY05 Actions:

The Horseshoe Lake mystery oil sheen situation remains under investigation by the Department at this time. Two potential responsible parties with underground storage tanks have been identified as possible sources. The Department is currently working with them to determine the source of the spill. If additional sources are identified, necessary actions will be taken to stop the release.

FY05 Response Fund Expenditures: \$19,746.60
FY05 Cost Recovery: \$ 0.00

FY06 Actions:

Continue monitoring cleanup activities being performed by the Alderwood Townhouse Association. The Responsible Party will pay for all costs associated with the cleanup. State costs will be limited to oversight of the cleanup.

FY06 Response Fund Expenditures: \$ 0.00
FY06 Cost Recovery: \$ 0.00

FY07 Projected Actions and Expenditure Amounts:

Verify cleanup completion.

Estimated FY07 Costs: \$1000.00

Project/Site Name: **M & M Enterprises – Wyoming Drive**

Location: Anchorage, Alaska

Project Manager: Rich Sundet

Site ID Number: 1987210912701

Tel: (907) 269 - 7578

Tracking Number: 14670960

Situation:

M&M Enterprises processed scrap metal and automobile batteries at the above referenced property. The facility is located in a residential neighborhood in Anchorage and was originally investigated based on a complaints regarding the discharge of waste at the property. The site was first investigated in 1991 and elevated concentrations of metals and petroleum were detected. Efforts were made to have the property owner and/or their estate conduct further investigations but it was not until 2000 that DEC assumed the lead role in the investigation.

A site investigation in 2004 identified elevated levels of metals: lead at 84,000 milligrams per kilogram (mg/kg), arsenic at 78 mg/kg, total chromium at 32.1 mg/kg, and mercury at 10.29 mg/kg. In addition, total petroleum hydrocarbons (TPH) were detected at 24,800 mg/kg. Concentrations of mercury, cadmium, lead and total chromium in groundwater were found to exceed drinking water levels.

FY05 Actions:

Additional investigation work determined that the majority of contaminated soil would be classified as hazardous waste according to federal Resource Conservation & Recovery Act (RCRA) regulations. Further sampling efforts identified lead at 92,000 mg/kg in surface soils above the health risk based levels for ingestion and inhalation. The site assessment data was used to conduct a feasibility study and several remedial options were considered on how best to mitigate any human health or environmental risk there. The study recommended excavation of the surface soils to two feet in depth to be replaced by clean surface material and installation of a fence.

FY05 Response Fund Expenditures: \$ 16,092.54

FY05 Cost Recovery: \$ 0.00

FY06 Actions:

Excavated the upper two feet of the contaminated soil at the site and transported it to an approved RCRA disposal facility. An ADEC decision document was issued with institutional controls attached to the property for any notice or restrictions on land use.

FY06 Response Fund Expenditures: \$ 354,967.00

FY06 Cost Recovery: \$ 0.00

FY07 Projected Actions and Expenditure Amounts:

Monitor site status and seek cost recovery from responsible party and/or insurance company.

Estimated FY07 Costs : \$25,000.00

Project/Site Name: **Mark Air Dillingham**

Location: Dillingham, Alaska

Project Manager: David Pikul

Site ID Number: **1992250135701**

Tel: (907) 269-7551

Tracking Number: 14115960

Situation:

The project area is described as the main apron at the Dillingham Airport. There are seven buildings/structures along the western edge of the main apron that support flying service businesses. Fuel storage in both above and under ground storage tanks has been documented at various locations over time. There are also documented releases of fuel from tanks, pipelines and dispensing systems that have resulted in petroleum impacts to soil. The groundwater has not been adequately characterized from past petroleum releases. Available data indicates that groundwater flow direction has a southerly component. An area-wide groundwater investigation was conducted during May 2006. The information gathered during the investigation indicates that release(s) of petroleum hydrocarbons has occurred that have impacted soil and groundwater. Eleven groundwater monitoring wells were installed designated MW1 thru MW-11. An existing well was located and designated Lynden 1. Five drinking water wells were sampled.

FY06 Actions:

A groundwater assessment was conducted in the vicinity of the Main Apron of the Dillingham Airport. Eleven soil borings were advanced and completed as groundwater monitoring wells. Soil and groundwater was collected for laboratory analysis to characterize the area. Drinking water samples were collected from five nearby drinking water wells for laboratory analysis.

FY06 Response Fund Expenditures: \$ 59,993.00

FY06 Cost Recovery: \$ 0.00

FY07 Projected Actions and Expenditure Amounts:

Collect groundwater samples from study area monitoring wells in order to determine the current quality, flow direction and gradient of groundwater at the Dillingham Airport (Main Apron Area).

Estimated FY07 Costs: \$10,000

Project/Site Name: M/V Selendang Ayu

Location: Unalaska Island

Project Manager: Gary Folley

Site ID Number: 04259934301

Tel: (907) 262-5210, x234

Tracking Number: 14142160

Situation:

On December 7th, the crew of the M/V Selendang Ayu, a Malaysian flag bulk freighter carrying 60 thousand tons of soybeans, reported that they had lost power and were adrift off Unalaska Island. Efforts to tow the vessel failed and it went aground and broke apart between Skan Bay and Spray Cape on December 8th. The total volume of fuel initially on board the vessel was approximately 446,280 gallons of intermediate fuel oil (IFO 380) and 31,573 gallons of marine diesel oil. An estimated 321,052 gallons of IFO 380 and 14,680 gallons of marine diesel/miscellaneous oils were released to the environment.

To manage the ensuing oil spill cleanup, an Incident Command Post was established at the Grand Aleutian Hotel in Dutch Harbor on December 9th, with a Unified Command comprised of the State of Alaska, U.S. Coast Guard and Gallagher Marine Services representing the responsible party. Photographs, press releases and other spill information are available at: <http://www.dec.state.ak.us/selendang>

FY 05 Actions:

An extensive response and cleanup was conducted that involved all of the Prevention and Emergency Response Program (PERP), as well as a considerable number of staff from the Industry Preparedness (IPP) and Contaminated Sites (CSR) Programs and participation from Alaska Dept. of Fish & Game and Alaska Dept. of Natural Resources. Response activities included the placement of protective boom at sensitive areas such as salmon streams, lightering of fuel from the wreck, shoreline cleanup assessment (SCAT), shoreline cleanup, spill tracking, and water quality monitoring and other measures to limit the impact on the extensive local fisheries. These response actions continued until February 9th, at which time a “winter operations” plan went into effect. Shoreline Cleanup Assessment resumed on April 5th and actual cleanup work started again on April 23rd and continued through the remainder of FY 05. During the height of the clean-up, there were 26 vessels on scene providing berthing and support for over 200 workers.

Response mileposts for FY 05 included:

- 763 km of shoreline surveyed by SCAT Teams (806 beach segments)
- 113 km of shoreline (123 segments) identified by SCAT as requiring treatment
- By the end of FY 05, cleanup was completed on 75% of oiled area identified for treatment
- Successful completion of opilio crab and Pollock fisheries with no tainted product
- 146,774 gallons of oil lightered from the stern section of the wreck

FY05 Response Fund Expenditures: \$ 1,611,676.14

FY05 Cost Recovery: \$ 452,585.00

FY06 Actions:

Shoreline Cleanup Assessment Team (SCAT) surveys were completed on May 23, 2006 for the 26 segments that did not satisfy the end-point criteria for cleanup at the end of the 2005 cleanup season. The results of the SCAT surveys indicated that natural forces over the winter had substantial impact on the shorelines. The SCAT Team determined that, as a result of natural attenuation, 14 of these segments now met end-point criteria. In addition, the SCAT team recommended “no further treatment” as the best course of action at three segments that did not quite meet the end-point criteria. The reason for this was that natural forces were effectively scouring these segments at a rate sufficient to reach end-point in the near future. The SCAT team recommended that additional shoreline treatment be conducted on eight of the 26 segments. Shoreline treatment recommendations ranged from removal of oiled debris to mechanical tilling and sediment relocation. The SCAT team also conducted reconnaissance surveys at six segments that had attained end-point in 2005. These segments were considered by the Unified Command to have the potential to be impacted by the oil release that occurred in October 2005 when a severe storm caused the stern section of the wreck to shift. No impacts were noted at four of the segments. Touch up, consisting of manual pick-up of scattered tar balls and oiled debris, was recommended at two segments.

Project/Site Name: M/V Selendang Ayu (continued)

FY06 Actions: (continuation)

To complete shoreline cleanup on the eight segments recommended by the SCAT Team, a cleanup crew consisting of 20 primarily local responders, a cleanup manager, and an on-site safety officer, was mobilized on the vessel M/V Mt. Mitchell. Cleanup operations continued until June 23, 2006, at which point the Unified Command determined that the cleanup was complete.

Also during FY 06, Magone Marine Services completed wreck removal operations of the engine room funnel and engine room casing down to the main deck level of the remaining stern section of the wreck. A side scan survey of the area was completed to establish that the sunken pieces of the wreck were in their original position. A dive inspection was also made which documented the continuing colonization of the wreck area by marine flora and fauna.

FY06 Response Fund Expenditures:	\$ 576,609.00
FY06 Cost Recovery:	\$ 1,566,920.00

FY07 Projected Actions and Expenditure Amounts:

Response operations initiated as a result of the grounding and breakup of the M/V Selendang Ayu are complete. Some limited final wreck removal actions may occur and the Subsistence Work Group may convene by teleconference to evaluate Spring 2006 subsistence sampling results.

Estimated FY07 Costs: \$5,000.00

Project/Site Name: **Nabors Well Control Investigation**

Location: Prudhoe Bay

Project Manager: John Dixon

Site ID Number: 04399934103

Tel: 907-451-2164

Tracking Number: 14101360

Situation:

The Alaska Department of Environmental Conservation (ADEC) investigated allegations brought forth in correspondence addressed to Senator Ted Stevens dated January 20, 2005 by Mr. Charles Hamel. Of interest to the Department were the allegations of two releases of drilling mud caused by well blowouts on the Nabors Alaska Drilling, Inc. (Nabors) Rig 9ES. Interviews of rig personnel and records reviews were conducted to determine if the alleged events occurred and if reportable spills were the result.

It was determined that the events occurred and should have been reported. This case was forwarded to the Department of Law for civil enforcement action.

FY 05 Actions:

ADEC investigated an allegation of two releases of drilling mud caused by well blowouts and determined that the responsible party failed to reports these reportable events. The case was transferred to the Department of Law for civil enforcement.

FY05 Response Fund Expenditures:

\$10,123.41

FY05 Cost Recovery:

\$ 0.00

FY06 Actions

No cost in FY 06. Investigation is complete.

Project/Site Name: Nikiski Airstrip

Location: SW1/4, Section 36, T8N, R12W, S.M., Niksiki, Alaska

Project Manager: Don Seagren, Kenai Area Office

Tel: (907) 262-5210, Ext 233

Site ID Number: 1989-23-09-059-12

Tracking Number: 14949660

Situation:

The site is property formerly owned by the State of Alaska that was transferred to the Kenai Peninsula Borough under their municipal entitlement program. The site was used as an airstrip, with unrestricted access, from the 1960s through the early 1980s. There were two areas adjacent to the airstrip used as solid waste disposal sites for many years. One of the areas was used for the disposal of petroleum hydrocarbons (bunker C fuel and/or weathered petroleum products). The areas were subsequently covered with fill material and no longer used for disposal purposes.

Based on its past use, the site was suspected of hazardous substance contamination and ADEC assumed the lead role in the investigation. In 1998, there were numerous soil borings and monitor wells installed to determine the nature and extent of contamination. Soil and groundwater contamination was identified including free phase petroleum product in the groundwater. The nature of the product indicated it was a thick residual product that made recovery and/or remediation technically difficult.

In order to assess the risk posed by hazardous substance contamination at the site, ADEC evaluated the 1998 assessment and determined there were data gaps. As a result, additional assessment work was completed in 2004 to fill data gaps and define the contaminant plume. The contaminant plume appeared stable and was not migrating.

FY05 Actions:

A risk management decision of No Further Remedial Action Planned was issued in February 2005 with a condition that long term ground water monitoring program be conducted in 2006. The use of groundwater is also restricted until groundwater cleanup levels are achieved.

The monitoring program will be the responsibility of ADEC as a formerly owned state property. However, in the event ADEC is unable to secure funding for the monitoring program, then the Kenai Peninsula Borough, as the current landowner, will be responsible for monitoring.

FY05 Response Fund Expenditures: \$ 19,216.48

FY05 Cost Recovery: State owned - No Cost Recovery

FY06 Actions:

Continued to monitor the groundwater at the Nikiski Airstrip site.

FY06 Response Fund Expenditures: \$ 17,304.00

FY06 Cost Recovery: State owned - No Cost Recovery

FY07 Projected Actions and Expenditure Amounts: Continue monitoring program until established cleanup levels are achieved.

Estimated FY07 Costs: \$25,000.00

Project/Site Name: Prescott Equipment – Rampart Drive

Location: Anchorage, Alaska

Project Manager: Rich Sundet

Tel: (907) 269 - 7578

Site ID Number: 2001210928401

Tracking Number: 14896860

Situation:

The property (1.88 acres) is located at 2774 Rampart Drive in Anchorage. In October 2001, DEC received notice that trichloroethene (TCE) was discovered in groundwater above DEC cleanup levels on the Prescott Equipment property. In 2002, the Municipality of Anchorage (MOA) reported TCE in the groundwater in two of the three monitoring wells on their adjacent property.

Prescott Equipment performed a soil vapor investigation on their property and the adjacent MOA property in 2003. The investigation identified TCE in some areas along the property line between the MOA and Prescott property but the findings were inconclusive on identifying a source area. In an effort to determine the source area(s), DEC requested Prescott Equipment, the MOA and the Alaska Army National Guard (former tenants of the MOA property) to pursue further investigation of the groundwater contamination but they all declined.

In 2003, DEC determined that further work was necessary to define the source(s) of the TCE groundwater contamination at the Prescott Equipment Pipeyard and began to plan for budget funds to assume state lead.

FY05 Actions:

In December 2004, DEC's term contractor Oasis Environmental (Oasis) sampled nine existing groundwater monitoring wells and the sample results showed similar results to the 2003 data. The TCE levels were above DEC cleanup level but the plume was not migrating and did not pose an imminent risk since the groundwater is not used as a drinking water source in this area.

FY05 Response Fund Expenditures: \$ 21,866.61

FY05 Cost Recovery: State owned - No Cost Recovery

FY06 Actions:

No activity.

FY05 Response Fund Expenditures: \$0.00

FY05 Cost Recovery: \$0.00

FY07 Projected Actions and Expenditure Amounts:

No work is proposed in FY07

Estimated FY07 Costs: \$0.00

Project/Site Name: Red Dog Mine Fugitive Dust Project

Location: Near Kivalina

Project Manager: Rich Sundet

Tel: (907) 269 - 7578

Site ID Number: 1991320926601

Tracking Number: 14864860

Situation:

Red Dog Mine is located about 20 miles south of Kivalina and is one of the world's largest zinc and lead mines. The port and mine sites are operated by Teck Cominco and owned by NANA Corporation. The road is owned by Alaska Industrial Development and Export Authority (AIDEA) which passes through the Cape Krusenstern National Monument, managed by the National Park Service. The mineral soil is processed at the mine, which is located about 50 miles from the ocean, and the concentrate ore is transported by covered trucks to storage buildings at the port. During the open water period, the ore is moved by conveyor belt system from the buildings to barges, and transported from the barges to 3.0 miles off shore and placed into larger vessels.

Elevated levels of zinc and lead were detected along the road corridor between the mine and port in 1991. Subsequent investigations have determined that fugitive dust from the road corridor has resulted in zinc, lead and cadmium contamination along the 52 mile road.

In 2001, Teck Cominco elected to perform a risk assessment to determine whether the contamination poses a risk to human health and the environment. They began collecting soil and water data to assist in characterizing the site and for use in the risk assessment.

FY 05 Actions:

DEC and its term contractor Ecology & Environment (E&E) participated in informal comment resolution with Teck Cominco and their consultant (Exponent) to finalize the risk assessment work plan. DEC reviewed and approved a plan to sample the marine sediment at the port, which was then used in the development of the risk assessment. DEC and E&E reviewed the draft risk assessment report, and in May 2005, DEC began a public involvement process by public noticing the draft report and participating in several meetings with Teck Cominco to discuss the findings of the risk assessment.

FY05 Response Fund Expenditures: \$ 56,459.58

FY05 Cost Recovery: \$ 55,131.94

FY 06 Actions:

Technical assistance from Ecology & Environment on the review of the Red Dog risk assessment document.

FY06 Response Fund Expenditures: \$ 42,751.00

FY06 Cost Recovery: \$ 70,308.00

FY07 Projected Actions and Expenditure Amounts:

It is anticipated that the risk assessment will be completed in FY 07 and technical assistance will be required to complete the review and approval.

Estimated FY 07 Costs: \$45,000.00

Project/Site Name: **Spring Creek Correctional Facility**

Location: Seward

Project Manager: Paul Horwath

Tel: (907) 262-5210, ext. 250

Site ID Number: 1994230111702

Tracking Number: 14987260

Situation:

Diesel fuel was released from two different locations at the facility during the period 1993-1995, associated with emergency power generating fuel storage and delivery systems. In addition diesel fuel contamination was detected at 30,000 gallon heating oil tank in 1999 and at two underground storage tank systems in 1998, which were used to supply gasoline and diesel fuel to facility vehicles in. Contaminated soil stockpiled from prior assessment and cleanup work associated with these releases remained on site, as well as miscellaneous investigation derived wastes. Groundwater monitoring wells were installed and present at this site, but hadn't been sampled on any scheduled basis.

FY06 Actions:

An ADEC contractor performed contamination assessment work to further evaluate the nature and extent of soil and groundwater contamination, and to characterize and properly dispose of petroleum contaminated materials stored on site. Groundwater monitoring wells were installed, soil and groundwater samples collected and analyzed. Some contaminated soil was transferred offsite for final treatment and disposal, while some soils were able to be land spread on site.

FY06 Response Fund Expenditures: \$ 37,531.00

FY06 Cost Recovery: None

FY 07 Projected Actions and Expenditure Amounts:

Hire an ADEC contractor to decommission the remaining groundwater monitoring wells. Based on the field work completed in FY06, ADEC then expects to conditionally close this site in FY07.

Estimated FY07 Costs: \$ 7,500.00

Project/Site Name: **Sterling Landing**

Location: Sterling Landing - Takotna

Project Manager: David Pikul

Tel: 269-7551

Site ID Number: 2001250124401

Tracking Number: 14135060

Situation:

A preliminary investigation by a DEC contractor in 2001 indicated there was a petroleum seep into the Kuskokwim River at the Sterling Landing site. The Sterling Landing was a former staging area for miners in the area and there were eleven above ground storage tanks located there on State of Alaska land.

In 2002, a site investigation was conducted to take advantage of personnel and equipment mobilized to the area to investigate a formerly used defense site. There were seven soil borings drilled and completed as groundwater monitoring wells. The soil and groundwater results identified limited soil contamination by diesel range organics and benzene but no groundwater impacts. The “seep” was not evident during the investigation but the current evidence does not indicate the tank farm could impact the Kuskokwim River.

The “seep” had not been reported prior to 2001 and has not been seen again. There is no additional work projected for the site at this time.

Additional investigation in the vicinity of the former above ground storage tanks may be required should the State interests involve transfer of the property.

FY05 Actions:

FY05 Response Fund Expenditures: \$ 30,055.63

FY05 Cost Recovery: State owned - No Cost Recovery

FY06 Actions:

No Activity.

FY07 Projected Actions and Expenditure Amounts:

No further action is proposed at this time.

Project/Site Name: **Sterling ZipMart**

Location: Sterling, Alaska

Project Manager: Don Fritz

Site ID Number: 1995230028501

Tel: (907)262-5210 (Ext 245)

Tracking Number: 14662160

Situation:

The Sterling ZipMart facility was a gas station which opened in 1985. The original underground storage tank (UST) system consisted of two 10,000 gallon steel tanks with a single wall pipe leading to a dispenser island. Whittier Properties, Inc. owned and operated the facility from April 1990 to December 2000. In August-September, 1993, the pipeline system was upgraded to double walled piping. In August, 1995, a new 20,000 gallon, three-compartment tank was installed to replace the two original steel tanks. Prior to the tank upgrade, only gasoline was dispensed. After installation of the three compartment tank, both gasoline and diesel fuels were available. Minor soil and groundwater contamination was encountered at the time of a 1995 tank upgrade. No cleanup action was conducted because it was not reported as a significant problem.

In December 2001, when Whittier Properties was closing the facility, additional contamination assessment was performed. The 2001 fieldwork (conducted initially by the Responsible Party (RP) under the ADEC Financial Assistance Program) identified significant soil and groundwater contamination associated with the piping and fuel dispensers. Thirteen inches of fuel product were detected in two 40 foot deep monitor wells.

A broken fill pipe in the upgraded underground storage tank system has been determined to be the cause of significant fuel releases at the Sterling ZipMart facility. The exact quantity of fuel spilled is unknown, but the Department of Environmental Conservation (DEC) has determined that the quantity exceeds 50,000 gallons, based on a review of fuel records.

DEC assumed the lead role on the project following the RP's indication that they were unable to continue. There were numerous monitor wells installed at the site and on properties adjacent to and downgradient of the Sterling ZipMart. The contamination migrated in a southeasterly direction and poses a risk to several drinking water wells in the area. A free product recovery system was installed resulting in more than 14,500 gallons of product recovered.

FY05 Actions:

DEC continued to monitor the groundwater wells and drinking water wells in the area. The investigation was expanded to further define the extent of the contamination. The cleanup actions included: continued operation of a free product recovery system and installation of a soil vapor extraction system in March of 2005.

FY05 Response Fund Expenditures: \$ 288,898.85

FY05 Cost Recovery: \$ 33,272.98

FY06 Actions:

DEC monitored the groundwater and drinking water wells in the area. The product recovery system and the vapor extraction system were operated. Evaluation of the vapor extraction system will be made, and cost effective refinements will be implemented to allow for a more practical recovery of the vapors surrounding the free product recovery system. New monitor wells were installed to define the extent of the plume.

FY06 Response Fund Expenditures: \$ 196,387.00

FY06 Cost Recovery: \$ 599,042.00

FY07 Projected Actions and Expenditure Amounts:

DEC will continue to monitor the groundwater and drinking water wells. The soil vapor extraction system will be operated to continue to extract benzene vapors from the ground.

Estimated FY07 Cost: \$175,000

Project/Site Name: **Stevens Village School**

Location: Stevens Village, Alaska

Project Manager: David Pikul

Tel: (907) 269-7551

Site ID Number: 1998310133601

Tracking Number: 14103060

Situation:

The site is the location of a former BIA school, support buildings, above ground fuel storage tank farm and generator building in the community of Stevens Village. The site was selected as the new location for the community's health clinic and bath house. DEC worked with DNR and the community to facilitate a property transfer which began with an assessment of contaminant issues.

In 2003, DEC term contractor, Hart Crowser, performed a site investigation based on a 1998 assessment by Nortech. The site investigation by Hart Crowser identified five areas of petroleum contamination. DEC contracted with Hart Crowser to remove the tanks and contaminated soil in order to allow the property to be re-used for the health clinic.

In January 2004, Hart Crowser performed the following tasks:

- Removal of three 20,000-gallon diesel ASTs and associated piping, transport, and staging at the barge loading area, approximately 1/4-mile west of the site,
- Excavation of approximately 1,500 cubic yards of petroleum-contaminated soil from five areas, collection of 26 soil samples from the limits of excavation,
- Construction of two soil stockpile cells for containment of the diesel- and gasoline-contaminated soils and backfill of the five soil excavations

Confirmation soil samples collected from the limits of the excavations identified diesel-range organics (DRO) concentrations remaining in the ground up to 25,300 mg/kg. Several locations exhibited DRO concentrations above the maximum allowable.

FY05 Actions:

Payment for the Hart Crowser work in 2004 was delayed based on contractual disputes and cost over runs.

FY05 Response Fund Expenditures: \$ 94,434.49

FY05 Cost Recovery: State owned - No Cost Recovery

FY06 Actions:

Contract disputes were settled and final payments made.

FY06 Response Fund Expenditures: \$ 49,539.00

FY06 Cost Recovery: State owned - No Cost Recovery

FY07 Projected Actions and Expenditure Amounts:

Evaluate site conditions and manage soil stockpiles.

Estimated FY07 Costs: \$65,000

Project/Site Name: **Suntrana Mine Site**

Location: Healy, Alaska

Project Manager: Deborah Williams

Site ID Number: 1990310915701

Tel: (907)451-5174

Tracking Number: 14887160

Situation:

The Suntrana Mine Site is located approximately four miles east of Healy, Alaska. The site consisted of a variety of buildings including a Coal Tipple and other buildings that were used for operating and maintaining the main Tipple structure that processed, stored and delivered coal to transport vehicles and coal cars of the Alaska Railroad. The Usibelli Coal Company is believed to have been the last to use the facility before its subsequent closure and abandonment around 1983. The Alaska Department of Natural Resources, Division of Mining, Land and Water (ADNR MLW) took the responsibility for cleaning up the site under the Abandoned Mine Lands (AML) Program.

In the summer and fall of 2004, the ADNR MLW contracted NORTECH to demolish and dispose of the building debris, drums, transformers, contaminated soil, and other debris located at the mine site. During the cleanup process approximately 42,682 pounds of polychlorinated biphenyl (PCB) contaminated soil was generated. ADNR MLW exhausted all the AML funds so they were unable to pay for the disposal of the PCB contaminated soil.

FY 06 Actions:

ADEC (in accordance with the State Memorandum of Agreement regarding contaminated sites on state owned property) paid for the contaminated soil to be transported to United States Ecology Idaho, Inc. for disposal.

FY06 Response Fund Expenditure: \$ 34,812.00

FY06 Cost Recovery: \$ 0.00

FY07 Projected Actions and Expenditure Amounts:

No further action anticipated for this site.

Estimated FY07 Costs: \$0

Project/Site Name: **T/V Seabulk Pride**

Location: Cook Inlet

Project Manager: Gary Folley

Site ID Number: 06239903301

Tel: (907) 262-5210, x234

Tracking Number: 14204860

Situation:

In the early morning hours of February 2, 2006, the 574-foot double-hulled/double-bottomed tanker Seabulk Pride broke away from its mooring at the Kenai Pipeline Company (KPL) Dock while loading oil products. This marine casualty occurred during extremely heavy icing conditions. Heavy vacuum gas oil (HVGO) and gasoline were the two products being loaded using two HVGO hoses and one gasoline hose. All motor operated valves were closed prior to the hoses parting minimizing the spillage of oil; however, approximately 2 barrels (84 gallons) of gasoline spilled into the waters of Cook Inlet, approximately 2 barrels of HVGO spilled to the KPL Dock, and approximately 3 barrels (126 gallons) of HVGO spilled to the deck of the Seabulk Pride.

The vessel drifted for a short time and ran aground approximately 200 yards north of the KPL Dock at 5:25 a.m.. The vessel had the following oil cargoes on board: 94, 951 barrels of vacuum tower bottom blend (VTBB), 5, 346 barrels of bunker oil, 1,135 barrels of gasoline, 12, 400 gallons of HVGO, and 2,393 barrels of #2 diesel fuel. Initial soundings indicated that the cargo tanks were intact.

FY06 Actions:

On February 2, 2006, a unified command was established and an incident management team including Tesoro, Seabulk International, the ADEC, and U.S. Coast assembled at the CISRPI Command Post in Nikiski. Tugs were dispatched from Anchorage, Kachemak Bay, and Prince William Sound to assist with the re-floating of the tanker. The tanker was pulled free of the grounding location at 8:34 a.m the next morning, February 3rd, after removing ballast water from the double hull tanks. No additional oil was released while the vessel was aground. Under escort, the Seabulk Pride proceeded to Kachemak Bay where surveys were conducted by the classification society (ABS) and the U.S. Coast Guard. Two small cracks were found in the #5 port ballast wing/double-bottom tank for which a cement patch was installed as a temporary repair. The tanker departed Kachemak Bay on February 8th for Puget Sound, to offload cargo in Anacortes, Washington.

FY06 Response Fund Expenditures: \$ 12,496.00

FY06 Cost Recovery: \$ 0.00

FY07 Projected Actions and Expenditure Amounts:

None

Estimated FY07 Costs: \$ 0.00

Project/Site Name: **Trailside General Store**

Location: Homer

Project Manager: Paul Horwath

Tel: (907) 262-5210, ext. 250

Site ID Number: 1999230011901

Tracking Number: 14695860

Situation:

In the spring of 1999, gasoline emerged through fissures in the pavement around the Trailside General Store's underground storage tank systems. Trailside's contractors initially responded to the release and initiated cleanup actions, eventually excavating approximately 5000 cubic yards of soil. Trailside's contractor ceased all work on the project, claiming a lack of payment by Trailside in the spring/summer of 2000. The contractor left an open excavation at the site, and high concentrations of fuel remained in site soils. The Department of Law filed a lawsuit against Trailside. By the fall of 2000, it became clear that Trailside was not going to proceed with additional cleanup work at the site, in spite of repeated requests by the ADEC. ADEC hired a contractor to continue with the cleanup work at the site, and to stabilize the excavation site.

FY 06 Actions:

An ADEC contractor collected groundwater, indoor air, and outdoor air samples and evaluated the risk this site could pose to indoor air quality, human health, and the environment.

FY 06 Response Fund Expenditures: \$12,674.00

FY 06 Cost Recovery: \$ 0.00

FY07 Projected Actions and Expenditure Amounts:

Continue long-term groundwater quality monitoring.

Estimated FY07 Costs: \$5,000

Project/Site Name: **Wrangell Institute**

Location: Wrangell, Alaska

Project Manager: Anne Marie Palmieri

Site ID Number: 1999130128001

Tel: (907) 766-3184

Tracking Number: 14646860

Situation:

The Wrangell Institute was constructed in the 1930s and used as a boarding school and rental housing until the early 1980s. Underground heating oil tanks were present at each building and connected to bulk tanks by an underground pipeline. Leaks occurred at many points along the pipeline and at most of the tank locations causing substantial soil and groundwater contamination. Past owners and operators (Potentially Responsible Parties) of the site are the US Bureau of Indian Affairs, U.S. Bureau of Land Management, U.S. Forest Service, Cook Inlet Regional Inc. Native Corporation, and the current landowner, the City of Wrangell.

The City of Wrangell conducted soil removal action in 1999 and 2001. In 2003, DEC requested that the Potentially Responsible Parties conduct site characterization activities. When all entities refused, DEC characterized the site and the nature and extent of the contamination determined. DEC provided the report to the Potentially Responsible Parties and began negotiations for the funding of cleanup and reimbursement of past costs.

FY05 Actions:

Negotiations involving the Department of Justice (representing the US government), Cook Inlet Regional Inc., and the City of Wrangell regarding cleanup of the site began in FY05. Actions included: participation in a meetings and biweekly teleconferences; DEC contracted to have cleanup costs calculated for 3 different types of actions with each action further evaluated based upon 2 different soil cleanup levels (which would effect the volume of soil to be remediated

FY05 Response Fund Expenditures: \$ 16,801.76

FY05 Cost Recovery: \$ 0.00

FY06 Actions:

Negotiations with the Department of Justice, Cook Inlet Regional Inc. and the City of Wrangell are currently underway. It is anticipated that a cost-sharing agreement will be reached in the near future and DEC's past costs will be reimbursed. Limited Response Fund expenditures are expected in FY06 which would cover staff oversight costs for negotiations until a settlement is reached.

FY06 Response Fund Expenditures: \$ 7,434.00

FY6 Cost Recovery: \$ 0.00

FY07 Projected Actions and Expenditures:

Estimated FY07 Costs:

OIL AND HAZARDOUS SUBSTANCE RELEASES

ALASKA STATUTES

Sec. 46.08.060. Report. (a) The commissioner shall make available a report to the legislature not later than the 10th day following the convening of each first regular session of the legislature. The commissioner shall notify the legislature that the report is available. The report may include information considered significant by the commissioner but must include:

- (1) the amount of money expended by the department under AS 46.08.040(a) during the preceding two fiscal years.
 - (2) The amount and source of money received and money recovered by or on behalf of the department during the preceding two fiscal years under
 - (A) AS 46.08.020; and
 - (B) AS 46.08.025;
 - (3) a summary of municipal participation in the department's responses that were paid for by the fund;
 - (4) a detailed summary of department activities in responses paid for by the fund during the preceding two fiscal years, including response descriptions and statements outlining the nature of the threat; in this paragraph, "detailed" includes information describing each personal services position and total compensation for that position, each contract in excess of \$10,000, and each purchase in excess of \$10,000; and
 - (5) the projected cost to the department for the next two fiscal years of monitoring, operating, and maintaining sites where response has been completed or is expected to be continued during the next two fiscal years.
- (b) As part of the department's on-going identification efforts associated with oil spill or hazardous substance release or waste sites, the commissioner shall include in the report under this section
- (1) the number of sites that are included in the department's contaminated sites data base, whether the site is active or closed; and
 - (2) a prioritized listing of those sites, both statewide and by community, based on the immediate and long-term threats to the public health or welfare or to the environment.
- (c) In addition to the department's report required under (a) of this section, the governor shall submit a report about use of the fund during the previous two fiscal years to the legislature not later than the 10th day following the convening of each first regular session of the legislature. In the report, the governor shall describe in detail the governor's use of money from the fund, with separate explanations, by agency, of the activities that were paid for under the authority of AS 46.08.045.
