All global identifiers for AWS Control Tower controls

A *global identifier* for a control is a unique identifier, independent of the Region in which a control is deployed. Global identifiers are associated with controls that are included in [AWS Control Catalog](#), which is a compendium of controls from several AWS services.

This section contains a reference list of global identifiers that are assigned to AWS Control Tower controls. The global identifier fulfills the final portion of the Amazon Resource Name (ARN), which is of the following form:

```
arn:{PARTITION}:controlcatalog:::control/{CONTROL_CATALOG_OPAQUE_ID}
```

The {CONTROL_CATALOG_OPAQUE_ID} values for the controls are shown in the list that follows.

To obtain the complete global identifier programmatically, with the full ARN, you can call the `GetControl` and `ListControls` APIs. You also can view the complete global ARN in the AWS Control Tower console, on the **Control details** page.

Note

Some controls may also have an AWS Control Tower identifier, a Regional identifier, which is of the form

```
arn:{PARTITION}:controltower:{REGION}:::control/{CONTROL_TOWER_OPAQUE_ID}
```

In most cases, the value for {PARTITION} is `aws`.

These Regional identifiers are associated with an `EnabledControl` resource, especially if the control was enabled by calling that Regional identifier initially.

Document history

- **Latest documentation update:** August 1, 2024

The following table describes important changes to the *AWS Control Tower Controls Reference Guide*. For notifications about documentation updates, you can subscribe to the RSS feed.

Change	Description	Date
New AWS Control Catalog API calls added	AWS Control Tower adds a reference to two new Control Catalog APIs for controls.	August 1, 2024
Controls Reference Guide published	AWS Control Tower adds a reference guide specifically for controls.	April 21, 2024

AWS Glossary

For the latest AWS terminology, see the [AWS glossary](#) in the *AWS Glossary Reference*.
