Tables of control metadata

This section contains tables that show the metadata for controls. Each control has a unique API identifier for each Region in which AWS Control Tower is available. Each control also has a [global identifier](#). When you are working with the control APIs, you can provide the identifier for the Region in which you are making the API call, or the global identifier. We recommend that you provide the global identifier in most cases.

Last updated August 30, 2024.
