

Create healthier and safer physical therapy environments with Tuflex® Force® Premium-Engineered Sports Flooring

1 As our population ages, the demand for physical therapy services and dedicated facilities is expected to grow 18% by 2029.

2 Creating safe, protective spaces that are physically and mentally supportive, is critically important to achieving positive patient journeys.

3 Rubber flooring helps stop the spread of infection, prevent and/or cushion patient falls, and create quieter, more comfortable spaces.

6 Slip- and impact-resistant Tuflex Force can help meet both needs of patients and demands of busy practices.

5 The rubber content and structure eases muscle fatigue and absorbs shock to reduce stress on joints and spines for patients as well as therapists and caregivers.

4 Tuflex Force is stable for patients unsure on their feet or maneuvering with canes and walkers; 3/8" gauge provides cushion should a fall occur.

7 The only sports floor that is Red List Free, Tuflex Force doesn't contain chemicals harmful to people or the environment. It also meets stringent FloorScore® standards for indoor air quality.

8 Tuflex Force contributes to more hygienic environments – the non-porous surface won't capture or trap moisture, sweat, or bacteria—plus, it repels dirt, making it easier to keep clean.
