

2024 Northern Rockies Standard Operating Guide for I-BPA Resources

The Competitive Agreements

This guide serves as a quick reference to maintain standard operating guidance and consistency in the mobilization of contracted equipment for the Northern Rockies Geographic Area. It is intended for use by dispatchers, incident support personnel and Incident Management Teams. The Northern Rockies Coordinating Group (NRCG) has established a Competitive Solicitation Plan for equipment resources in the Northern Rockies:

[2024 Northern Rockies Solicitation Plan](#)

Not all the solicited contract equipment is listed in this guide. Reference the National Solicitation Plan:

<https://www.fs.usda.gov/business/incident/static/2024%20Nat%20Sol%20Plan%20I-BPAs%205%20year%20cycles.pdf>

In the NRGAs the agreements are solicited by the Forest Service which establish dispatch priority based upon price and other established factors. The agencies within the geographic area have taken the lead on specific resource categories. As a result, contracted resources may be on a dispatch priority list. The awarded preseason agreements are typically for a period of 3 years.

Type of Lists

Within the NRGAs the competitive solicitations are awarded using acceptable past performance, qualified personnel, minimum equipment standards, and other factors to generate a Dispatch Zone Dispatch Priority List and Out of Area Dispatch Priority List. Equipment is dispatched by ranking order on the DPL. There is also the Geographic Out of Area DPL that is unique to the Northern Rockies.

Dispatch Priority List (DPL)

Equipment assigned according to ranking on the DPL. The Host Dispatch Center must ensure the most recent version of the DPL is utilized. List of contracted resources located within the dispatch zone, ranked on the DPL. Centers will follow the priority list when dispatching resources. This is not a rotation, if the number one priority on the list is unavailable that day, the resource should be checked for each order because they are highest on the priority list. Once Zone DPL is exhausted the neighborhood policy will normally be enacted. Once the Zone and neighbors' resources are exhausted orders will be placed to NRCC.

Out of Area Geographic Dispatch Priority List (OA DPL)

An overall dispatch priority list compiled from the zones dispatch priority lists. Utilized for Out of Area orders. If unable to fill with the resource specified in IROC documentation, document because in IROC and UTF the order back to Northern Rockies Coordination Center so the order may be placed with the next Vendor on the OA list. This list is generated once a year.

Incident Only Emergency Equipment Rental Agreements (EERA)

Beyond initial attack, incident only agreements may be entered into only after competed agreements have been exhausted, cannot meet ordering specifications or, resources are not under a competitive solicitation in the Northern Rockies. The agreement is valid only for the duration of the incident. A Contracting Officer can enter an Incident Only Agreement or EERA with a vendor for a piece of equipment. This is normally done in the event local and neighbor resources are unavailable and DPL's have been exhausted. Dispatchers or Expanded Dispatch have no authority to order or generate an agreement. Documentation on an Incident Only Agreement or EERA order should include that there are no DPL resources available in the area to meet the date and time needed. The resource shall not be reassigned without validating that competed equipment is not available, then a new Incident Only Agreement must be written for that specific resource for the new incident. For orders outside the NR's, it is the responsibility of the Ordering Geographic Area to negotiate EERA's. NR will identify known resources and the hiring will be done by that ordering geographic area; the piece of equipment should be negotiated to include transport if needed. For equipment inspections, discuss with the ordering GA, in the best interest of all parties involved, the local dispatch center may assist in pre-use inspections.

At-Incident Management Support Branch

<https://www.fs.usda.gov/business/incident/aims/?tab=home>

Ordering Procedures

Regional procedures may differ from National Guidelines. Agreements do not preclude the Government from using any agency owned, agency (Federal, State, or Local) cooperator resources or Tribal preference policy established within reservation jurisdiction for initial attack or extended attack and large fire support before ordering or mobilizing contracted resources under agreement. Agency owned or agency cooperator resources may be requested at any time. Actual fire conditions and jurisdiction at the time of dispatch may require a deviation from normal procedures to respond effectively.

For exceptions to policy on lands protected by IDL and MT DNRC

National Standard Operating Guide for Dispatching Contracted Resources.

https://www.nifc.gov/sites/default/files/document-media/National_SOG_Contracted_Resources_Guide.pdf

Attributes

Agreements may have special attributes listed for that specific type of equipment. Dispatchers may only deviate from the DPL's when orders include attributes for the specific type of equipment listed on the DPL. (Example: Feller Buncher w/ Harvester Head, Skidgine w/ Detachable Tank). When resource requests are received requiring attributes, the dispatcher shall order the first piece of equipment from the DPL that meets the criteria and document in the order the reason for deviation. Attributes should be listed in Special Needs.

Typing Information

Throughout this guide, typing information is per the awarded contract. Some resource items in IROC may not be identified by type as named in the solicitation agreements. The type and size of resource requested should be specified in Special Needs.

How to Order & Fill

Orders for contracted equipment will be processed through IROC. Determine the type of resource needed, including specific needs such as amount, gallon capacity, length, off road, etc. Do not assign a resource located in another dispatch zone. DPL resources located in a neighboring dispatch zone will be ordered through that host dispatch center. Unless otherwise specified you should choose the most advantageous vendor based upon needed date and time, cost, availability, location, and the ability to meet incident needs. Consult the appropriate list and choose the piece of equipment that best meets the needs of the incident.

Assign the vendor highest in priority from the DPL, that can meet the needed Date and Time Needed.

Document all actions taken as you go through your list such as: No answer, Resource/Vendor is NA.

Dispatch must use the Host Dispatch Center DPL until it is exhausted.

Once all options/resources are depleted, including ordering from your neighbors, document in IROC and place to NRCC. (Nothing available-physically checked neighbors)

If any contractors within the Host Dispatch Area declined a resource order based on the original Date/Time needed, and that Date/Time needed is renegotiated, it is imperative that the Host Dispatch Center reoffer the request to resources that declined the original order because they may be able to meet the "new" Date/Time needed.

Do not use "Fill with Agreement" for resources that are statuses resource Items in IROC. Fill by Agreement when a resource item is not in IROC. Do not create a new resource.

You have no authority to allow/negotiate any substitutions of resources/personnel under an agreement.

If an order is for Out of Area, the Geographic List will be utilized for appropriate resources.

If a center is unable to fill with the specified resource listed in IROC documentation, they must document in IROC and UTF order back to Northern Rockies, the order will then be placed to the center whose vendor is next in the out-of-area priority.

Inspections:

The filling dispatch will coordinate the Incident Pre-Use Inspection of assigned equipment and personnel. Generally, the Government will perform inspections utilizing form OF-296 Vehicle and Heavy Equipment Safety Inspection Checklist. Follow Local Dispatch procedures. Reference the specific agreement for guidance. Contract compliance inspections may be performed at the discretion of the Government using Contract Compliance Inspection Checklists or other appropriate forms. If the resource does not pass inspection at the incident or designated inspection station, it is considered noncompliant. Per specification, personnel need to be verified for position currency, physical fitness, and qualifications.

Demobilization:

The Incident Commander (IC) will determine the priority of demobilization.

General Information:

For heavy equipment the agreements state the vendor is responsible for transport of equipment, a separate E-number is not issued for the transport. If the owner is unable to provide transport for the equipment, document and move on to next vendor on the list. All permits are the vendor's responsibility. When creating equipment requests order specific Catalog Item.

Resources under Competitive Agreements & Emergency Equipment Rental Agreement & Resource Lists

Heavy Equipment Task Force (w/Transport)

General Information Regional solicitation agreement managed by the USFS. Only available to incidents in the NRG & GBGA. Not to exceed 6 Components, one E # for HETF. Each piece of equipment must be fully operated. This includes the transport remaining at the incident. Vendor to determine # of transports to meet date & time needed. Once mission is complete HETF will be released in IROC. Refer to solicitation agreement for specific requirements.

Standard Configuration: Only Dozer may be exchanged for an excavator.

Job Site Foreman with 4-wheel drive transportation.

One leveling Feller Buncher (bar or rotating disc) Capable of bunching several stems in a bundle.

One rubber-tired Skidder equipped w/grapple and light duty piling blade.

One Type 2 Dozer w/6-way (PAT) blade or manual angle w/hydraulic tilt.

One drop tank Skidgine or Pumpercat capable of skidding logs w/min 200 gallons tank.

Removal and reinstallation of the tank must be accomplished in one hour or less.

One Transport w/operator stays w/the Task Force.

Second Transport - may be un operated.

Additional Transports – Optional.

Options: (Only if Vendor has awarded agreement w/options 1 or 2 & must have Standard Configuration Components)

2nd Leveling Feller Buncher (If vendor has capability.)

Option 1 Excavator - min 85 hp 25,000 lbs.

Option 2 Boom Mounted Masticator - min 111 hp.

Detailed & solicitation information:

https://gacc.nifc.gov/nrcc/dispatch/equipment_supplies/agree-contract/solicitations.htm

Type of List: VIPR DPL by NRCC & GBCC & Dispatch Center

How to Order: Create new request in IROC (In special needs request HETF Standard or w/Option 1 or 2 or 2nd Feller Buncher. If ordered HETF Standard follow DPL Standard configuration. Fill with first available HETF that can meet Date & Time needed. If ordered HETF w/Options 1 or 2 or 2nd Feller Buncher, follow DPL and document in the request HETF w/Options 1 or 2 or 2nd Feller Buncher. Fill with first available HETF w/Options 1 or 2 or 2nd Feller Buncher that can meet Date & Time needed. If the options are known advise the vendor and the incident, Operations re-configures and is responsible for communicating directly with filling resource.)
