EPIDEMIOLOGICAL ESTIMATES

	Estimate	Notes / Interpretation
Cases		
Cumulative incidence*	2,060.4 (per 100,000 persons)	From March 7 to September 24, there were about 2,060 (per 100,000) new cases of COVID-19 in Oklahoma.
Absolute change in cumulative incidence from previous week	33.2 (per 100,000 persons)	Compared to September 11 – September 17 there were 33 (per 100,000) more cases of COVID-19 reported in Oklahoma during the past week (Sep 18– Sep 24).
Disease Severity		
Case-fatality risk (crude)	1.2%	The estimate is not adjusted for the lag time from reporting to death (i.e., delay between the time someone dies and the time their death is reported). The fatality estimate could be lower due to cases that were undiagnosed or had milder symptoms.
Cumulative Hospitalization rate (overall)	155.5 (per 100,000 persons)	About 155 people per 100,000 have ever been hospitalized for COVID-19 during this outbreak.

CASES AND DEATHS

New cases (by date of onset) and new deaths (by date of death) of COVID-19 in Oklahoma, February–September 2020

Please note the different axes for new cases (top—from 0 to 1,400 for new cases) and new deaths (bottom—from 0 to 14 for new deaths). Additionally, a 7 day lag has been applied to the trend line based on information collected to-date for 7/19 and 7/25 where within 7 days of onset date approximately 80% of the cases had been reported.
