EPIDEMIOLOGICAL ESTIMATES

	Estimate	Notes / Interpretation
Cases		
Cumulative incidence*	7,997.7 (per 100,000 persons)	From March 7, 2020 to January 7, 2021 there were about 7,997 (per 100,000) new cases of COVID-19 in Oklahoma.
Absolute change in cumulative incidence from previous week	153.1 (per 100,000 persons)	Compared to December 25 – December 31 there were 153 (per 100,000) less cases of COVID-19 reported in Oklahoma during the past week (Jan 1– Jan 7).
Disease Severity		
Case-fatality risk (crude)	0.8%	The estimate is not adjusted for the lag time from reporting to death (i.e., delay between the time someone dies and the time their death is reported). The fatality estimate could be lower due to cases that were undiagnosed or had milder symptoms.
Cumulative Hospitalization rate (overall)	461.4 (per 100,000 persons)	About 461 people per 100,000 have ever been hospitalized for COVID-19 during this outbreak.

CASES AND DEATHS

New cases (by date of onset) and new deaths (by date of death) of COVID-19 in Oklahoma, February 2020–January 2021

Please note the different axes for new cases (top—from 0 to 5,000 for new cases) and new deaths (bottom—from 0 to 35 for new deaths). Additionally, a 7-day lag has been applied to the trend line based on information collected to-date for 7/19 and 7/25 where within 7 days of onset date approximately 80% of the cases had been reported.

IMPACT OF MASK MANDATES

There are several important factors to consider in examining the data on case rates in mask mandate communities vs. those without:

1. As can be seen in this week's figure, there have been several municipalities adopt a mask mandate recently. Because mask usage prevents new infections but does not impact those currently in the incubation period, it is not appropriate to include these recent additions in the same group as communities that adopted mandates prior to October. Indeed, it is likely that increasing disease rates in these communities influenced the decision to adopt mandates.
2. The percentage change in case rates provided represent only a comparison from one single day to another. The full difference in rates can only be estimated by comparing data on all days within the period of interest. Such analysis is beyond the scope of this summary.
3. Mask mandates have been implemented primarily in densely populated metropolitan areas. Experience has shown that, in absence of mitigation efforts, such urban areas will have higher rates of disease transmission than in less populated areas. This can be observed in the graph above in the period before mid-July. The rate of increase was clearly higher in those communities that eventually adopted mask mandates. If urban populations have rates at or below those of less populated areas, it is likely that mitigation efforts are having a beneficial impact. Of course, mask mandates are not the only mitigation effort being employed, and it is not possible to determine what effect that alone has.
