

## **Statewide Long-Term Employment Projections**

Long-term industry and occupational employment projections are developed on a two-year schedule. The U.S. Employment and Training Administration (ETA) funds all state projections. State analysts have been provided with guidelines, training and technical support for producing projections. The Projections Suite developed by the Utah Department of Employment Security is used to produce industry and occupational projections.

## **Industry Employment Projections**

Oklahoma industry employment projections are developed using the methodology, software tools, and guidelines developed by the Projections Workgroup and the Projections Managing Partnership.

Linear regression, shift-share and time series analysis techniques have been employed as the primary methods of analysis. Projections for some industries are made at the three-digit or four-digit level under the North American Industry Classification System (NAICS).

Historical employment data are from the Quarterly Census of Employment and Wages (QCEW). Agriculture and non-covered employment data are from the American Community Survey and the Current Employment Statistics program, Railroad Retirement Board, respectively. Employment for self-employed is produced from the projection matrix system based on the Occupational Employment Statistics survey and the Bureau of Labor Statistics' Current Population Survey.

Employment is rounded to the nearest ten. Percent changes are based on un-rounded data.

Goods-producing industries include Agriculture, Mining, Construction, and Manufacturing. Services-providing industries include Transportation and Warehousing; Wholesale trade; Retail trade; Information, Finance and Insurance; Real Estate and Rental and Leasing; Professional, Scientific and Technical Services; Management of Companies and Enterprises; Administrative and Support and Waste Management and Remediation Services; Educational Services; Health Care and Social Assistance; Arts, Entertainment, and Recreation; Other Services; and Government.

## **Occupational Employment Projections**

The occupational projections reflect the 2018 Standard Occupational Classification (SOC) system, a federal statistical standard used by federal agencies to classify workers into occupational categories for the purpose of collecting, calculating, or disseminating data. There are more than 800 detailed occupations. Current employment refers to the estimated annual employment by occupation for all industries based on 2020 data. Projected employment refers to the expected annual employment by occupation based on projections made for all detailed industries in Oklahoma for 2030. Average annual openings are job openings resulting from growth in an occupation and replacement needs in that occupation.

Employment is rounded to the nearest ten. Percentage changes are based on un-rounded data and reflect the percent growth or decline in an occupation over the ten-year period based on un-rounded data.

## **Measures of Education and Training**

Bureau of Labor Statistics (BLS) provides information about education and training requirements for hundreds of occupations. BLS uses a system to assign categories for entry-level education, related work experience, and typical on-the-job training to each occupation for which BLS publishes projections data. The assignments allow occupations to be grouped to create estimates

of the education and training needs for the labor force as a whole and estimates of the outlook for occupations with various types of education and training needs.

### **Category System**

BLS assigns occupations to a designation within three categories: typical entry-level education, related work experience, and typical on-the-job training. ([Detailed definitions](#) for the categories are available online). The categories and assignments within each are as follows:

**Typical Entry Level Education**—represents the typical education level needed to enter an occupation. The assignments for this category are the following:

- Doctoral or professional degree
- Master's degree
- Bachelor's degree
- Associate's degree
- Postsecondary non-degree award
- Some college, no degree
- High school diploma or equivalent
- Less than high school

**Work Experience in a Related Occupation**—indicates if work experience in a related occupation is commonly considered necessary by employers for entry into the occupation, or is a commonly accepted substitute for formal types of training. The assignments for this category are the following:

- More than 5 years
- 1-5 years
- Less than 1 year
- None

**Typical On-the-Job Training**—indicates the typical on-the-job training needed to attain competency in the occupation. The assignments for this category are the following:

- Internship/residency
- Apprenticeship
- Long-term on-the-job training: more than 1 year
- Moderate-term on the job training: 1-12 months
- Short-term on-the-job training: 1 month or less
- None

### **Limitations**

Forecasting the future is not an exact science. Projections result from careful analysis of available data. However, they are not a reflection of what might happen under different conditions. International, national and local events can have significant impacts on Oklahoma's economy. Moreover, the projection model does not take into account factors such as immigration, occupational supply, business relocation, emergence of new occupations or industrial and scientific development.

Please do not use these projections as your sole source of information.
