Description of Issue: In October 2021, the Financial Accounting Standards Board (FASB) issued *Accounting Standards Update (ASU) 2021-08, Business Combinations, Accounting for Contract Assets and Contract Liabilities from Contracts with Customers* to require acquiring entities to apply Topic 606 (the topic that specifies the accounting for revenue and liabilities resulting from contracts with customers), when valuing and recognizing contract related assets and liabilities in a business combination.

Prior to the issuance of ASU 2021-08, acquirers would generally only recognize such items based on their fair values on the date of acquisition. When assessing liabilities at fair value, acquirers would generally only recognize an acquiree’s deferred revenue (i.e., a contract liability), to the extent the acquirer had a legal obligation to perform a service or remit a product. However, to only recognize a contract liability to the extent of a legal obligation is contrary to Topic 606 as it states that performance obligations may (and often) extend beyond legal obligations – with examples including implied promises and customer business practices within the contract with a customer, regardless of whether such promises were legally enforceable.

This ASU noted that the amendments will enhance comparability of the business results from before and after the acquisition (as presumably in most cases, the Topic 606 liability of the acquiree would transfer from the acquiree to the acquirer) and thus continuity of presentation would be retained. It is also important to note that the application of Topic 606 (rather than applying fair value standards) for acquired contract liabilities will generally result in a larger liability being recognized by the acquirer. This is because in cases where a provider receives cash in advance of performing a service or providing a product, in many instances some or all of the advanced funds have been spent prior to the date of acquisition, and thus the acquirer, using fair value measurement techniques, will not designate value to the spent funds. However again, the primary goal of these amendments is to improve comparability by providing consistent recognition and measurement guidance for revenue contracts - regardless of if those contracts were or were not acquired in a business combination.

The statutory accounting guidance for business combinations is found in *SSAP No. 68—Business Combinations and Goodwill* and requires business combinations be reported at cost, which in an arms-length transaction; is presumably fair value. SSAP No. 68 also requires that for entities (other than insurance reporting entities), the acquirer use the acquiree’s U.S. GAAP book value for the determination of statutory goodwill. The calculation of statutory goodwill, while beyond the scope of this agenda item, is important to briefly comment on as it adds an additional level of conservatism not recognized by U.S. GAAP – as it requires the recognition of goodwill for the amount of cost in excess of the acquiree’s book value (as opposed to fair value under U.S. GAAP).

So, in essence, for statutory accounting, other than the reporting of statutory goodwill, the acquiree’s book value of all associated assets (and liabilities) are reported on the acquirer’s books. As ASU 2021-08 requires the acquirer to utilize the acquiree’s book value, measured via Topic 606, for contract liabilities, the practice (unless the acquiree

has not previously or has incorrectly applied Topic 606) conceptually consistent statutory accounting requirements, requires a measurement method previously rejected by statutory accounting.

Existing Authoritative Literature: As previously mentioned, the statutory guidance for business combinations is contained in SSAP No. 68 - relevant paragraphs, with applicable guidance is included below.

SSAP No. 68

Business Combinations

2. A business combination shall be accounted for as either a statutory purchase or a statutory merger. Business combinations that create a parent-subsidiary relationship shall be accounted for as a statutory purchase. Business combinations where equity of one entity is issued in exchange for the equity of another entity, which is then canceled, and prospectively only one entity exists, shall be accounted for as a statutory merger.

Statutory Purchases of SCA Investments

3. **The statutory purchase method of accounting is defined as accounting for a business combination as the acquisition of one entity by another.** It shall be used for all purchases of SCA entities including partnerships, joint ventures, and limited liability companies. **The acquiring reporting entity shall record its investment at cost. Cost is defined as the sum of: (a) any cash payment, (b) the fair value of other assets distributed, (c) the fair value of any liabilities assumed, and (d) any direct costs of the acquisition.**^(INT 00-28) Contingent consideration issued in a purchase business combination that is embedded in a security or that is in the form of a separate financial instrument shall be recorded by the issuer at fair value at the acquisition date.

4. **For those acquired SCA entities accounted for in accordance with paragraphs 8.b.i., 8.b.ii., 8.b.iii. or 8.b.iv. of SSAP No. 97, and joint venture, partnership or limited liability company entities accounted for in accordance with paragraph 8 of SSAP No. 48, goodwill is defined as the difference between the cost of acquiring the entity and the reporting entity's share of the book value of the acquired entity.** When the cost of the acquired entity is greater than the reporting entity's share of the book value, positive goodwill exists. When the cost of the acquired entity is less than the reporting entity's share of the book value, negative goodwill exists. Goodwill resulting from assumption reinsurance shall be recorded as a separate write-in for other-than-invested assets. All other goodwill shall be reported in the carrying value of the investment.

5. A business combination accounted for under the statutory purchase method and in which the acquired entity is valued in accordance with paragraphs 8.b.ii., 8.b.iii. or, 8.b.iv. of SSAP No. 97 **shall determine the amount of positive goodwill or negative goodwill created by the combination using the reporting entity's share of the GAAP net book value of the acquired entity,** adjusted to a statutory basis of accounting in accordance with paragraph 9 of SSAP No. 97 in the case of acquired entities valued in accordance paragraphs 8.b.ii. or 8.b.iv. of SSAP No. 97. Business combinations accounted for under the statutory purchase method and in which the acquired entity is valued in accordance with, paragraph 8.b.i. of SSAP No. 97 shall determine the amount of positive or negative goodwill created by the business combination using the insurer's share of the statutory book value of the acquired entity.

6. For those acquired SCA entities accounted for in accordance with paragraph 8.b.i. of SSAP No. 97 under the statutory purchase method, the historical bases of the acquired entity shall continue to be used in preparing its statutory financial statements. Therefore, pushdown accounting is not permitted.

As mentioned above, utilizing an acquiree's book value is likely consistent with current practice, however, all previous Topic 606 guidance has been rejected for statutory accounting as insurance contracts are explicitly excluded from its scope. The rejections are noted within the body of statutory guidance in *SSAP No. 47—Uninsured Plans*.

SSAP No. 47

Relevant Literature

15. This statement rejects *ASU 2014-09, Revenue from Contracts with Customers*; *ASU 2015-14, Revenue From Contracts With Customers*; *ASU 2016-08, Revenue From Contracts with Customers: Principal versus Agent Considerations (Reporting Revenue Gross versus Net)*; *ASU 2016-10, Revenue from Contracts with Customers: Identifying Performance Obligations and Licensing*; *ASU 2016-12, Revenue from Contracts with Customers: Narrow-Scope Improvements and Practical Expedients*; *ASU 2016-20, Technical Corrections and Improvements to Topic 606, Revenue from Contracts with Customers*; *ASU 2018-18, Collaborative Arrangements (Topic 808), Clarifying the Interaction between Topic 808 and Topic 606*, and *ASU 2021-02, Franchisors—Revenue from Contracts with Customers*.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): As previously mentioned, all ASUs related to ASC Topic 606 have been rejected by the Working Group.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): ASC Topic 606 and IFRS 15 are the result of the joint project between the FASB and IASB to improve financial reporting by creating common revenue recognition guidance.

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as SAP clarifications to:

- 1) **Expose revisions to *SSAP No. 47—Uninsured Plans* to reject ASU 2021-08 for statutory accounting.** This recommendation is consistent with how the prior ASUs related to Topic 606 have been treated.
- 2) **Expose revisions to *SSAP No. 68—Business Combinations and Goodwill* to reject the ASU 2021-08 for statutory accounting, while noting that rejection does not impact the determination of U.S. GAAP book value in an acquired entity.** NAIC staff note that as all prior Topic 606 guidance has been rejected for statutory accounting, the explicit rejection of this ASU should not be construed to mean that the U.S. GAAP net book value (which is utilized for the determination of statutory goodwill) will need to be modified by the guidance required in this ASU. The intent is to not modify any U.S. GAAP requirements for the determination of U.S. GAAP net book value within this standard.

Staff Review Completed by: Jim Pinegar - NAIC Staff, February 2022

Status:

On April 4, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to *SSAP No. 47—Uninsured Plans* and *SSAP No. 68—Business Combinations and Goodwill* to reject ASU 2021-08 for statutory accounting. In addition, the proposed revisions to SSAP No. 68 include notations that the rejection of ASU 2021-08 does not impact the determination of U.S. GAAP book value in an acquired entity. The proposed revisions are illustrated above, under the recommended action.

On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated above, to *SSAP No. 47—Uninsured Plans* and *SSAP No. 68—Business Combinations and Goodwill* to reject ASU 2021-08 for statutory accounting. In addition, the revisions to SSAP No. 68 include notations that the rejection of ASU 2021-08 does not impact the determination of U.S. GAAP book value of an acquired entity.

New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue:

To be consistent with what is permitted under U.S. GAAP, this agenda item has been prepared to consider expanding the statutory accounting principles (SAP) guidance in *SSAP No. 86—Derivatives* in the determination of highly effective hedging derivatives. In 2017, the FASB issued *Accounting Standard Update (ASU) 2017-12: Derivatives and Hedging: Targeted Improvements to Accounting for Hedging Activities* to reduce complexity and align hedge accounting with risk management activities. The Working Group previously considered limited revisions from this ASU, mostly on documentation requirements, which occurred in agenda item *2018-30: SSAP No. 86 – Hedge Effectiveness Documentation*. That agenda item was identified as limited-scope and noted further consideration of ASU 2017-12, potentially in a broader derivative project, would subsequently occur. With the focus of other projects, and COVID-19 impacts, this broader derivative project is still pending.

NAIC staff have been contacted by industry and regulators requesting further consideration of ASU 2017-12, particularly with regards to the permitted derivative arrangements that U.S. GAAP allows as highly effective hedges. Due to the revisions from ASU 2017-12, there is a disconnect between U.S. GAAP and SAP regarding certain types of effective hedging relationships. This is problematic as it results in inconsistent documentation of hedging transactions, as well as hinders reporting entities in electing to enter hedging transactions as the benefits are not currently permitted to be reflected in statutory financials.

Although NAIC staff agree that the determination of whether a hedge is highly effective should be consistent between U.S. GAAP and SAP, it is important to highlight that accounting for effective hedges varies greatly between U.S. GAAP and SAP. The effective hedging relationships permitted under ASU 2017-12 have been identified to expand upon these differences and could result with reporting elements that were not originally intended with the statutory accounting guidance adopted under SSAP No. 86. Although consistent effective hedge assessments between U.S. GAAP and SAP are desired, NAIC staff note that it is appropriate to identify how the expanded U.S. GAAP effective hedge assessments would be reflected within statutory financials and identify areas where clarifications or modifications may be needed as part of the process to consider the expanded effective hedge provisions. To be clear, the expanded hedge relationships permitted within ASU 2017-12 do not create the statutory accounting issues identified within this agenda item, however, the expanded effective hedging relationships would exacerbate the reporting issues within SSAP No. 86. (For example, although existing SAP guidance permits derivative adjustments to the hedged item, which can be a liability, such transactions are currently limited as the maturity of the hedging instruments (derivative) likely mirrors the hedged item’s maturity. This is because the matching of maturities under the current SAP guidance facilitates an easier effective hedge determination.) With the ASU’s expanded provisions for “partial term hedges” (as discussed within), adjustments will occur to the hedged item prior to its maturity, resulting in direct impacts to the presentation of the hedged item in statutory financial statements – which may not be easily identifiable to users.)

Overview of U.S. GAAP and SAP Derivative Reporting:

Under U.S. GAAP, the decision to document a hedge as effective has no impact on the balance sheet measurement of the derivative. Under U.S. GAAP, all derivatives are always reported at fair value; therefore, there is no “off-balance sheet” derivative risk exposure. As highly effective hedging derivatives are an income-statement matching tool, when a fair value hedge is effective, the change in fair value of the derivative offsets the change in fair value of the hedged item in the income statement. For cash flow hedges, changes in the fair value of the derivative are reported through other comprehensive income (OCI) and amortized into earnings. When a derivative is not identified as highly effective, the matching of changes through the income statement simply does not occur. Regardless of whether a derivative is used in a highly effective hedge, under U.S. GAAP all derivatives are fully recognized on the balance sheet with fair value changes or cash flows from the derivatives fully recognized either to income or OCI.

Under SAP, the determination of an effective hedge has a significant impact on the reported value of derivatives and the presentation of derivatives in the financial statements. As the statutory guidance permits derivatives to mirror the measurement method of the hedged item, if the hedged item is reported at amortized cost, then a highly effective derivative is also reported at amortized cost. (Under U.S. GAAP, the reporting basis of the hedged item in a fair value hedge is made to match the derivative (i.e., fair value). The opposite is true under SAP.) It should be noted that SSAP No. 86 was originally drafted based on an assumption that it would predominantly be used for the hedging of assets reported at amortized cost or fair value. Hedges of liabilities, particularly reserve liabilities valued using statutory reserve requirements, do not fit neatly into the amortized cost or fair value framework permitted by SSAP No. 86. Such liabilities are not valued using either fair value or amortized cost, therefore reporting the hedging instrument at amortized cost still creates reporting mismatches. Furthermore, adjustments to the hedged item, as permitted under SSAP No. 86, can result with a financial statement presentation that appears to show a reduction of a liability, although the reporting entity’s contractual obligation has not been reduced.

If using an amortized cost measurement method, the initial recognition of the derivative is at cost (which could be zero), and subsequent changes in the fair value of the derivative are not recognized. So, if the fair value of the derivative was to move to a liability position (effectively offsetting a fair value increase in a hedged item), the derivative liability is not recognized. The derivative side of this transaction is considered an off-balance sheet surplus risk that exists until the hedging relationship expires. If a hedging relationship was no longer highly effective, the derivative would be recognized at fair value. At that time, the financial statements would reflect the derivative position that was outstanding. (For a derivative in a liability position, this would be a negative impact to surplus.) As one last point, the determination of a highly effective hedge generally permits a range between 80-125%. As such, a derivative instrument’s fair value that is expected to move in conjunction within a range of 20-25% of the underlying hedged item’s fair value is considered an effective hedge. Under the SAP guidance, this means that if the fair value of the hedged asset was to increase 100 and the fair value of the hedging derivative was to decrease 120, the hedge would still be considered effective and the change in the derivative fair value would not be recognized in the financial statements. At the time the asset matured, and the derivative was closed, the reporting entity would have an additional liability of \$20 that was not previously recognized on the financial statements and not offset by the corresponding increase in the hedged item.

While it is important that the impact of the SAP hedging guidance be clearly understood, as initially noted, NAIC staff agree that assessments of hedge effectiveness are preferred to be consistent between U.S. GAAP and SAP. However, by expanding the SAP guidance to permit effective hedges allowed under ASU 2017-12, pursuant to the existing measurement provisions within SSAP No. 86, there would be an increase to the off-balance sheet surplus risk noted above from the hedging activity. Also note, this increase in off-balance sheet exposure does not necessarily correlate to an increase in economic risk, as the hedging relationships allowed under the GAAP ASU

are expected to allow for prudent risk management strategies that would be expected to decrease economic risk. In addition, other nuances in SAP reporting have the potential to be more pronounced under the expanded effective hedge assessments. As detailed within the recommendation section, NAIC staff recommend review, with possible modification, of certain elements within SSAP No. 86 as part of this review of ASU 2017-12. However, these recommendations do not initially include a fundamental change in the SAP provisions that permit an amortized cost measurement method for highly effective derivatives if hedging an item not reported at fair value. Regulator and industry comments are welcome on whether a fundamental change to the measurement and reporting of derivatives should be considered to be consistent with U.S. GAAP. If there is support for a fair value measurement approach for all derivatives, then consideration of offsetting surplus adjustments for the fair value volatility – similar to what is permitted in *SSAP No. 108—Derivatives Hedging Variable Annuity Guarantees* would also be considered.

Review of Effect Hedge Arrangements Permitted Under ASU 2017-12:

The derivative arrangements / changes permitted under U.S. GAAP through ASU 2017-12 and addressed within this agenda item are identified as follows:

- Partial Term Hedging
- Last of Layer
- Hedges of Interest Rate Risk When the Hedged Item Can be Settled Before Scheduled Maturity
- Expansion of Excluded Derivative Components in Assessment of Hedge Effectiveness

Partial Term Hedging:

This provision allows reporting entities to enter into fair value hedges of interest rate risk for only a portion of the term of the hedged financial instrument. Prior to the ASU, these sorts of arrangements were not successful in being identified as highly effective due to offsetting changes in the fair value as a result of the difference in timing between the hedged item's principal repayment and the maturity date of the hedging derivative. Under ASU 2017-12, an entity may measure the change in the fair value of the hedged item attributable to changes in the benchmark interest rate by "using an assumed term that begins when the first hedged cash flow begins to accrue and ends when the last hedged cash flow is due and payable." Also, the hedged item's assumed maturity will be the date on which the last hedged cash flow is due and payable, therefore a principal payment will be assumed to occur at the end of the specified partial term.

The example provided under U.S. GAAP involves outstanding fixed rate debt. So, if an entity was to issue \$100 million of five-year, noncallable, fixed-rate debt, the entity could designate a two-year, receive-fixed, pay variable, \$100 million notional interest rate swap as a fair value hedge of the interest rate risk for the first two years of the debt's term. When calculating the change in the fair value of the debt attributable to changes in interest rate risk, the entity may assume that 1) the term of the hedged debt is two years, and 2) repayment of the outstanding debt occurs at the end of the second year. The ASU also permits use of the shortcut method to these partial-term fair value hedges of interest rate risk.

SAP Assessment – With the differences in reporting between U.S. GAAP/SAP, the key issue to highlight is that with SAP's amortized cost approach at the conclusion of the hedged period, the reporting entity would close the derivative with an offsetting entry that adjusts the basis of the hedged item. When hedging a liability (such as issued debt), if the derivative were in a liability position (satisfied with a credit to cash), the mechanics would result in an offsetting entry to reduce the debt (debit to the issued debt). However, this reduction to the debt does not reflect an actual reduction of the liability that the entity is legally obligated to pay, it just reduces the amount reported as outstanding debt in the financial statements. The debt would accrete back up to the full liability with increased entries to interest expense over the remaining term of the debt. (Ultimately, under GAAP, the fair value change in

the derivative and debt are recognized concurrently in the income statement. Since SAP does not report these items at fair value, the change reduces the debt at the time of derivative close, and then the debt obligation accretes back up over time with an offsetting entry to interest expense.) Although this is in line with existing SSAP No. 86 guidance, under the past effective hedge provisions, the debt obligation maturity would likely be matched with the derivative term, so there would be no lingering financial statement impact to the debt obligation after the derivative transaction closed. With the partial term hedge, reporting entities have the potential to present an improved financial statement presentation over the remaining life of the hedge item (e.g., debt instrument) until accreted back to the full amount. The SAP guidance also has an alternative to take the adjustment directly to IMR (instead of to the hedged item). There is uncertainty on which approach is used in practice, and whether it varies based on the hedged item (e.g., hedging an asset or liability). Although there is a limited information in Schedule DB on adjustments to the hedged item, that information is only for the current year, and it does not provide detailed information on the overall impact to the financial statements.

Items to Consider: Although the current guidance in SSAP No. 86 is explicit that the effective hedge adjusts the basis of the hedged item (or is reflected in IMR), the Working Group may want to consider revising this guidance to prevent a presentation that shows a reduced outstanding liability when in fact there has been no actual reduction of the obligation. Consideration could be given to directing these derivative adjustments to a specific reporting line. Although this would not change the overall financial statements, (a more favorable presentation could still exist), the debt obligation (or any liability hedged) would still be presented as the amount that corresponds to the obligation outstanding and not reflect the impact of derivative transactions. Furthermore, if a specific line was utilized, the impact of these derivative transactions would be identifiable within the financial statements. As noted, this dynamic exists under the current SSAP No. 86 guidance, but is less pronounced as the derivative term most commonly matches the debt's obligation term. As such, the final resulting entries all occur (generally) at debt maturity. With the increased ability to establish effective hedges that do not mature at the same time as the hedged item, the impact from these derivative transactions would increase situations in which liabilities are presented that do not reflect the full outstanding obligation.

Staff Note – The adjustment to the hedged item also occurs when effectively hedging an asset item. However, in that dynamic for a fair value hedge, the assets would only be increased to reflect the fair value change. (The offsetting entry in response to a derivative in a liability position would be a debit to the hedged asset.) Although the use of effective derivatives may facilitate an ability to increase the reported value of assets to current fair value, the amount reported for the asset would still be subject to impairment and collectability assessments. NAIC staff view this dynamic differently than a hedge of a liability when the resulting transaction reduces the amount shown as an obligation on the financial statements (debit to the liability) as nothing has occurred that has actually reduced the reporting entity's obligation.

Last of Layer / Portfolio Method

Under the “last of layer” hedge method, for a closed portfolio of prepayable financial assets, the entity may designate as the hedged item, a stated amount of the asset or assets that are not expected to be affected by prepayments, defaults and other factors affecting the timing and amount of cash flows if the designation is made in conjunction with the partial term hedging election. The “last of layer” hedge provision is permitted only for a closed portfolio of prepayable financial assets, or one or more beneficial interests secured by a portfolio of prepayable financial instruments (e.g., mortgage-backed securities). Industry comment letters to FASB have requested that liabilities, particularly insurance liabilities, be added to the scope, but that is not currently permitted under U.S. GAAP.

For this option, as part of the initial hedge documentation, an analysis shall be completed and documented to support the entity's expectation that the hedged item (that is, the designated last of layer), is anticipated to be outstanding as of the hedged item's assumed maturity date in accordance with the entity's partial-term hedge election. That

analysis shall incorporate the entity's current expectations of prepayments, defaults, and other events affecting the timing and amount of cash flows associated with the closed portfolio of prepayable financial assets or beneficial interests secured by a portfolio of prepayable financial instruments. For purposes of the analysis, the entity may assume that as prepayments, defaults, and other events affecting the timing and amount of cash flows occur, they first will be applied to the portion of the closed portfolio of prepayable financial assets or one or more beneficial interest that is not part of the hedged item - (i.e., not part of the designated last layer.)

Proposed amendments to the ASU are currently being considered by the FASB to provide additional clarifying guidance. One of those elements clarifies that a closed portfolio is not limited to a single hedge. Rather, there can be multiple-layer hedges utilized in a closed portfolio. In response to this proposed clarification, the FASB is changing the name of "last of layer" and renaming it the "portfolio layer method." Also, since the hedged item reflects a closed portfolio of assets, the FASB has clarified that the change in fair value (gain or loss) of the hedged item (portfolio of assets) attributed to the hedged risk shall not adjust the carrying value of the individual assets in the portfolio. Instead, that amount shall be maintained on a closed portfolio basis and amortized to earnings, with amortization beginning when the hedged item ceases to be adjusted for changes in its fair value attributable to the risk being hedged. However, the gain or loss shall be fully amortized prior to the assumed maturity date of the hedged item. *(Note: FASB has identified that allocating adjustments to individual assets may lead to uneconomic results if an asset is sold or removed from a closed portfolio. They have also noted that an allocation election would lead to a lack of comparability across entities and potential for earning management.)*

A key aspect to note is that the GAAP guidance will allow a single derivative to hedge different portfolio layers. In the event one layer was to no longer be considered highly effective, the portion of the derivative to hedge that layer would be removed, and the effective hedge for the remaining layers could continue.

SAP Assessment: For the last of layer / portfolio method, the overall accounting guidance under U.S. GAAP is consistent with existing derivative structures, just expanded on what can be designated as the hedged item and an exception that the entity shall not adjust the basis of the individual items combined into the portfolio. The biggest aspect with this change will be the assessment and documentation to confirm hedge effectiveness. This hedging option will require more work and documentation than a hedge of a single asset. However, if a reporting entity is effectively hedging under GAAP, without the SAP provisions for hedge accounting, then a reporting entity would have to recognize the hedging derivatives at fair value, which would create surplus volatility in their SAP financials.

Items to Consider: Although it seems that the derivative transaction is generally consistent with what would be anticipated under SSAP No. 86, except on a portfolio basis, there are key elements that should be addressed to facilitate the application of these methods under SAP:

- Incorporating the last of layer / portfolio method into SAP will require discussion (and likely revisions) to ensure that individual assets are not adjusted at hedge termination, and that a portfolio approach is utilized. This would be consistent with the current direction of FASB to clarify the guidance in a subsequent ASU. If revisions are not incorporated to have a "portfolio" basis for adjustment, then revisions will be needed on how to allocate the resulting gain/loss to the individual assets within the closed portfolio.
- Guidance should be considered to limit this derivative strategy to the same scope permitted under U.S. GAAP. This would require an explicit prohibition of the last of layer / portfolio method to liabilities, including insurance liabilities. Although the "framework" of U.S. GAAP derivative guidance is adopted in SSAP No. 86, statutory accounting guidance permits hedging transactions to be classified as highly effective when they would not be permitted that classification under U.S. GAAP. As such, limiting application to the same parameters of U.S. GAAP would be a new addition to SSAP No. 86.

- A key aspect of this proposed method (and of the excluded components expansion discussed below) is that under U.S. GAAP derivatives are permitted to be bifurcated in terms of effectiveness. That is, if a portion of a derivative were deemed to be highly effective in hedging an item, the fair value change related to that portion would be recognized in the income statement to match the fair value change of the hedged item. Fair value changes to other portions of the derivative that were not highly effective would still be recognized, but without the matching concept to the same reporting location as the fair value changes of the hedged item. Under SSAP No. 86, the guidance is explicit that a derivative is not bifurcated as to hedge effectiveness. So, a derivative shall be either classified as an effective hedge and permitted for amortized cost reporting (if consistent with the valuation of the hedged item) or classified as an ineffective hedge and reported at fair value. To mirror U.S. GAAP on the ability to designate a portion of a derivative, revisions would need to be considered to the current SSAP No. 86 guidance. If revisions permit the bifurcating of derivatives, then consideration would have to occur on how bifurcated derivatives would be reported in the *Schedule DB – Derivative Instruments*. (Particularly, on whether the derivative BACV should reflect a combined fair value (FV) and amortized cost (AC) reported value or whether the derivative shall be divided and reported separately based on portions held at FV and AC.) NAIC staff have heard that bifurcating derivatives does already occur in practice, as the guidance in SSAP No. 86 - Exhibit B for the exclusion of the time value of money implies that it should be permitted. From initial information received from industry, in those limited situations it is believed that the derivative is reported on a single line with a combined BACV that reflects a combination of FV and AC. However, NAIC staff believe these instances are uncommon, but would become more prominent if the last of layer / portfolio method approach was adopted for statutory accounting.
- Lastly, it is proposed that this method only be incorporated once the proposed ASU is finalized. (The last of layer is detailed in the 2017 ASU, but the clarifying guidance is in a current proposed ASU which is expected to be finalized by the end of the year.)

Fair Value Hedges of Interest Rate Risk in Which the Hedged Item Can be Settled Before Scheduled Maturity:

Under these U.S. GAAP revisions, an entity may consider only how changes in the benchmark interest rate affect the decision to settle the hedged item before its scheduled maturity. (For example, an entity may consider only how changes in the benchmark interest rate affect an obligor's decision to call a debt instrument - when it has a right to do so.) The entity need not consider other factors that would affect this decision (for example, credit risk) when assessing hedge effectiveness.

With this provision, U.S. GAAP guidance has also been added to specify the measurement of the hedged item. This guidance indicates that the factors incorporated for the purpose of adjusting the carrying amount of the hedged item shall be the same factors that the entity incorporated for the purpose of assessing hedge effectiveness. For example, if an entity considers only how changes in the benchmark interest rate affect an obligor's decision to prepay a debt instrument when assessing hedge effectiveness, it shall also only consider that factor when adjusting the carrying amount of the hedged item. The election to consider only how changes in the benchmark interest rate affect an obligor's decision to prepay a debt instrument does not affect an entity's election to use either the full contractual coupon cash flows or the benchmark rate component of the contractual coupon cash flows determined at hedge inception for purposes of measuring the change in fair value of the hedged item. With this guidance, an investor is not required to consider all factors that will affect the decision to settle the financial instrument before its scheduled maturity when assessing hedge effectiveness and measuring the change in fair value of the debt attributed to changes in the benchmark interest rate. This change was made as estimating the fair value of the prepayment option to the level of precision required in the current reporting and regulatory environment is virtually impossible because an entity is required to incorporate credit and all other idiosyncratic factors that would affect the prepayment option. It was noted that allowing a prepayment option to be modeled considering only the change in the benchmark interest

rate more closely aligns the accounting for those hedges with an entity's risk management activities and more accurately reflects the change in the fair value of the hedged item attributable to interest rate risk.

SAP Assessment: Existing guidance in SSAP No. 86 incorporates the prior criteria for fair value hedges from U.S. GAAP, which includes guidance that has been eliminated in the ASU. The U.S. GAAP guidance has been expanded to specifically capture elements related to assessing effectiveness of prepayable instruments.

Items to Consider: Like other elements, the change in assessment of effectiveness, and determining the measurement / adjustment to the hedged item will require SAP consideration as to the offsetting measurement aspects and how those should be recognized in the financial statements.

Expansion of Excluded Derivative Components from Assessment of Hedge Effectiveness

Industry has also requested consideration of the FASB guidance that expands the ability to exclude components of a derivative from the assessment of hedge effectiveness. Under prior U.S. GAAP (which is adopted in SSAP No. 86), the guidance permitted the exclusion of the time value of money, and the guidance in the ASU has expanded that prior capability to also allow exclusion of the portion of the fair value of a currency swap attributable to a cross-currency basis spread.

SAP Assessment: The current guidance in *SSAP No. 86, Exhibit B – Assessment of Hedging Effectiveness* incorporates U.S. GAAP guidance from FAS 133, with a significant portion addressing the exclusion of a hedging instrument's time value from the assessment of hedging effectiveness. This old U.S. GAAP guidance has been revised from ASU 2017-12, to expand the potential exclusions and update the related guidance. As previously noted, the existing guidance in Exhibit B appears to contradict the guidance in SSAP No. 86 that specifically indicates that derivatives shall not be bifurcated for effectiveness. (The guidance in Exhibit B notes that changes in the excluded components would be included in unrealized gains and losses – which would represent a fair value measurement for these pieces, even if the derivative was classified as highly effective and reported at amortized cost.)

Items to Consider: Although the SSAP No. 86 Exhibit B guidance has incorporated prior U.S. GAAP guidance for excluding components, the guidance for these permissions does not align with the guidance in the body of SSAP No. 86. To ensure clear and consistent application, revisions would need to be considered to specify the reporting when changes in the fair value of a derivative are separated and treated differently.

Existing Authoritative Literature:

SSAP No. 86—Derivatives is the authoritative source of guidance for determining hedge effectiveness and reporting derivatives for statutory accounting. Key aspects to highlight from this SSAP for consideration as part of this agenda item:

- U.S. GAAP and SAP differ with regards to the reporting of derivatives. Under U.S. GAAP, all derivatives are reported at fair value. When a derivative represents a highly effective hedge, the process to recognize changes in fair value through the income statement in earnings or OCI is designed to mirror the recognition of fair value changes in the hedged item. (Under U.S. GAAP, highly effective hedges result in an income statement matching mechanism.) Under SAP, derivatives are reported differently based on whether they are used in a highly effective hedge. If highly effective, then the derivative measurement method mirrors the measurement method of the hedged item – which could be amortized cost. If not highly effective, then the derivative measurement method is fair value.
- Under U.S. GAAP, a fair value hedge approach requires that the hedged item be reported at fair value. (This allows for the matching of fair value changes of the hedged item and the hedging instrument (derivative))

through the income statement.) This is not a required element under SAP. This GAAP-to-SAP difference makes sense as it allows companies that have highly effective hedges under U.S. GAAP to also identify those relationships as highly effective under SAP even though SAP uses an amortized cost (or other non-fair value) measurement method for hedged items.

- Assessment and determination of hedge effectiveness has generally been consistent between U.S. GAAP and SAP. The guidance in SSAP No. 86, Exhibit B – Assessment of Hedging Effectiveness, identifies the intent to remain consistent with U.S. GAAP with respect to assessing hedge effectiveness.
- Although the guidance in SSAP No. 86 prescribes the general concepts for hedges, as well as the measurement guidance for derivatives based on whether they are (or not) highly effective, the application guidance is detailed in Exhibit C – Specific Hedge Accounting Procedures for Derivatives. These procedures are SAP specific due to the fundamental differences in measurement and recognition of derivatives between U.S. GAAP and SAP.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

- Agenda item 2018-30: SSAP No. 86 – Hedge Effectiveness Documentation considered the revised hedge effectiveness documentation provisions incorporated within ASU 2017-12, Derivatives and hedging. The revisions from this agenda item were adopted Nov. 15, 2018 and were effective Jan. 1, 2019, with early adoption permitted. U.S. GAAP filers could only early adopt if they also early-adopted ASU 2017-12.
- Agenda item 2017-33 was drafted to continue the overall accounting and reporting changes in ASU 2017-12 as potential substantive revisions. This item is still pending for statutory accounting. Although still pending, it is recommended that the 2021 limited-scope edits requested by industry be captured in this new agenda item, with agenda item 2017-33 retained as a broader scope project to review other derivative concepts, or subsequently disposed if no longer needed.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Staff Recommendation:

It is recommended that the Working Group move this agenda item to the active listing, categorized as new SAP concepts, and direct NAIC staff to work with regulators and industry in assessing and developing revisions to facilitate effective hedge assessments consistently between SAP and U.S. GAAP. As this guidance will reflect a change from the original concepts reflected in SSAP No. 86, it is recommended that the revisions be detailed in an issue paper for historical reference. This issue paper is recommended to be completed concurrently or subsequently to the consideration of SSAP revisions. The anticipated revisions from this agenda item are considered to reflect new SAP concepts as the effective hedge relationships that will be assessed have not been allowed under existing statutory accounting guidance.

As detailed within this agenda item, the discussion, and potential revisions, are expected to encompass the following elements:

- **Appropriate reporting lines for effective hedges when the hedged item is a liability.**

- **Recognition of hedged-item adjustments (to a closed portfolio) when the last-of-layer / portfolio method of hedging is used.**
- **Scope limitations of the last of layer / portfolio method to mirror U.S. GAAP.**
- **The potential bifurcation of derivatives, and how such items should be reported for statutory accounting, when only portions of derivatives are permitted to be designated as effective. (This pertains to potential mixed-measurement reporting values.)**

As detailed above, the Working Group also welcomes comments from regulators and industry on whether a fundamental change in SAP for derivative measurement (to be more consistent with U.S. GAAP) should be considered. Although specific revisions are not yet detailed, it is recommended that this agenda item be exposed to solicit comments and feedback on the overall summary and potential revisions to be considered.

Status:

On December 11, 2021, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as substantive, and directed NAIC staff to work with regulators and industry in assessing and developing revisions to facilitate effective hedge assessments consistently between U.S. GAAP and statutory accounting.

On April 4, 2022, the Statutory Accounting Principles (E) Working Group exposed two documents for public comment. The first document (labeled 21-20 SSAP No. 86 – Exhibit A 3-2-22), proposes revisions in the form of a new Exhibit A (which will replace both Exhibit A and Exhibit B of SSAP No. 86 that adopts with modification U.S. GAAP guidance in determining hedge effectiveness. The second document (labeled 21-20 SSAP No. 86 – Excluded Components - 3-17-22), proposes measurement methods for excluded components in hedging instruments. The Working Group also directed staff to continue to work with industry representatives on other elements within *ASU 2017-12: Derivatives and Hedging: Targeted Improvements to Accounting for Hedging Activities*.

On August 10, 2022, the Statutory Accounting Principles (E) Working Group took the following actions:

1. Adopted as final, the exposed revisions:
 - New Exhibit A (which will replace both Exhibit A and Exhibit B) of SSAP No. 86 that adopts, with modification, U.S. GAAP guidance in determining hedge effectiveness.
 - Revisions to SSAP No. 86 to incorporate measurement methods for excluded components.
2. Adopted as final revisions, illustrated below, which detail the January 1, 2023 effective date, with early adoption permitted, and relevant U.S. GAAP references.
3. Directed a blanks proposal to incorporate Schedule DB reporting fields and templates to capture the new disclosures for excluded components detailed in paragraph 41g of the exposed revisions.
4. Directed an Issue Paper to detail the derivative revisions from this agenda item and other statutory derivative revisions resulting from ASU 2017-12 and other recent U.S. GAAP issuances.

SSAP No. 86 Revisions**Relevant Literature**

64. This statement adopts the framework established by FAS 133, *FASB Statement No. 137, Accounting for Derivative Instruments and Hedging Activities—Deferral of the Effective Date of FASB Statement No. 133, An amendment of FASB Statement No. 133* (FAS 137) and *FASB Statement No. 138, Accounting for Certain Derivative Instruments and Certain Hedging Activities, An amendment of FASB Statement No. 133* (FAS 138), for fair value and cash flow hedges, including its technical guidance to the extent such guidance is consistent with the statutory accounting approach to derivatives utilized in this statement. This statement adopts the provisions of FAS 133 and 138 related to foreign currency hedges. With the exception of guidance specific to foreign currency hedges and amendments specific to refining the hedging of interest rate risk (under FAS 138, the risk of changes in the benchmark interest rate would be a hedged risk), this statement rejects FAS No. 137 and 138 as well as the various related Emerging Issues Task Force interpretations. This statement adopts paragraphs 4 and 25 of *FASB Statement No. 149: Amendment of Statement 133 on Derivative Instruments and Hedging Activities* (FAS 149) regarding the definition of an underlying and guidance for assessing hedge effectiveness. [\(The adoption from FAS 149 on the assessment of hedge effectiveness is impacted by the adoption with modification of guidance from ASU 2017-12 as detailed in paragraph 65b, with the guidance from ASU 2017-12 superseding the prior adoption to the extent applicable.\)](#) All other paragraphs in FAS 149 are rejected as not applicable for statutory accounting. This statement adopts FSP FAS 133-1 and FIN 45-5: *Disclosures about Credit Derivatives and Certain Guarantees, An Amendment of FASB Statement No. 133 and FASB Interpretation No. 45 and Clarification of the Effective Date of FASB Statement No. 161* (FSP FAS 133-1 and FIN 45-4) and requires disclosures by sellers of credit derivatives. This statement rejects *FSP FIN 39-1, Amendments of FASB Interpretation No. 39, and ASU 2014-03, Derivatives and Hedging – Accounting for Certain Receive-Variable, Pay-Fixed Interest Rate Swaps – Simplified Hedge Accounting Approach*.

[65. This statement adopts, with modification, certain revisions to ASC 815-20 included in ASU 2017-12. Remaining provisions of ASU 2017-12 will be subsequently assessed for statutory accounting and shall not be considered adopted for statutory accounting until that assessment is complete.](#)

[a. Revisions effective January 1, 2019 with early adoption permitted. ~~This adoption is~~are limited to specific provisions, and related transition guidance, pertaining to the documentation and assessment of hedge effectiveness and only includes: 1\) provisions allowing more time to perform the initial quantitative hedge effectiveness assessment; 2\) provisions allowing subsequent assessments of hedge effectiveness to be performed qualitatively if certain conditions are met; and 3\) revisions regarding use of the critical terms and short-cut methods for assessing hedge effectiveness.](#)

[b. Revisions effective January 1, 2023, with early adoption permitted, are limited to the criteria for initial and subsequent hedge effectiveness detailed in the FASB Accounting Standards Codification \(ASC\) paragraphs 815-20-25-72 through 815-20-35-20, as modified through the issuance of ASU 2017-12. This adoption reflects statutory modifications to specify that the accounting and reporting of hedging instruments, including excluded components of the instruments, shall follow statutory specific guidance detailed in the statement. The intent of this guidance is to clarify that the determination of whether a hedging instrument qualifies as an effective hedge shall converge with U.S. GAAP, but that the measurement method shall continue to follow statutory specific provisions. The adoption of the referenced ASC paragraphs only extends to revisions incorporated through ASU 2017-12; therefore, any subsequent U.S. GAAP edits would require statutory accounting consideration before considered adopted.](#)

~~The remaining provisions of ASU 2017-12 will be subsequently assessed for statutory accounting and shall not be considered adopted for statutory accounting until that assessment is complete.~~

Effective Date and Transition

~~74.73~~ This statement is effective for derivative transaction entered into or modified on or after January 1, 2003. A modification is any revision or change in contractual terms of the derivative. SSAP No. 31 applies to derivative transaction prior to January 1, 2003. Alternatively, an insurer may choose to apply this statement to all derivatives to which the insurer is a party as of January 1, 2003. In either case, the insurer is to disclose the transition approach that is being used.

- a. Revisions adopted to paragraph 64 to reject FSP FIN 39-1 is effective January 1, 2013, for companies that have previously reported a position in the balance sheet that was net of counterparty agreements. (Companies that have previously reported derivative instruments and/or related collateral gross shall not be impacted by these revisions.)
- b. Revisions adopted in paragraph 16 clarify the reporting for amounts received/paid to adjust variation margin until the derivative contract has ended and are effective January 1, 2018, on a prospective basis, for reporting entities that have previously considered these amounts to reflect settlement or realized gains/losses. (Companies that have previously reported variation margin changes in line with the revisions shall not be impacted by these revisions.)
- c. Revisions to incorporate limited provisions from ASU 2017-12 pertaining to the documentation of hedge effectiveness (detailed in paragraph 65) are effective January 1, 2019, with early adoption permitted for year-end 2018. However, if the reporting entity is a U.S. GAAP filer, the reporting entity may only elect early adoption if the entity has also elected early adoption of ASU 2017-12 for year-end 2018.
- d. Revisions adopted April 2019 to explicitly include structured notes in scope of this statement are effective December 31, 2019. Revisions adopted July 2020 to define “derivative premium,” require gross reporting of derivatives without the impact of financing premiums and require separate recognition of premiums payable and premiums receivable, are effective January 1, 2021.
- e. Revisions adopted August 2022 that adopt with modification the criteria for initial and subsequent hedge effectiveness detailed in the FASB ASC paragraphs 815-20-25-72 through 815-20-35-20, as modified through the issuance of ASU 2017-12 and that incorporate statutory accounting revisions for the accounting and reporting of excluded components are effective January 1, 2023, with early adoption permitted. These revisions shall be applied prospectively for all new and existing hedges. Entities shall detail the adoption of this guidance as a change in accounting principle pursuant to SSAP No. 3—Accounting Changes and Corrections of Errors.

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

Review of U.S. derivative guidance and the application to SAP is complex with many facets. This initial document considers consistency in the determination of hedge effectiveness between U.S. GAAP and SAP. The second element pertaining to the accounting and reporting of hedging instruments, including excluded components, will be considered separately, as that guidance has been historically different.

1) Assessment of Hedge Effectiveness – Consistency with U.S. GAAP

NAIC staff agree that the assessment of hedge effectiveness for derivatives should be consistent between U.S. GAAP and SAP. This would ensure that transactions identified to be highly effective hedges under U.S. GAAP would also be identified as highly effective hedges under statutory accounting. If a hedging instrument results with offsetting changes (or other permitted aspects) to a hedged item pursuant to the guidelines under U.S. GAAP to qualify as a highly effective hedge, the same assessment as a highly effective hedge should occur under SAP.

NAIC staff highlight that the current guidance in SSAP No. 86 in Exhibit A – Discussion of Hedge Effectiveness and Exhibit B – Assessment of Hedging Effectiveness have not been significantly updated since the original issuance of FAS 133, *Accounting for Derivative Instruments and Hedging Activities* and SSAP No. 86. Exhibit A continues to reference guidance issued by the Derivatives Implementation Group (DIG) in E7 and E8, which were not considered official FASB positions, although these DIG provisions (and other clarifications) been incorporated into the FASB Codification as authoritative. NAIC staff highlight that the list of components permitted to be excluded from the assessment of hedge effectiveness captured in the FASB Codification (815-20-25-82) differs from the statutory accounting guidance in SSAP No. 86, Exhibit B. The statutory accounting guidance in Exhibit B reflects original guidance from FAS 133, paragraph 63, but the statutory accounting guidance has not been updated to reflect provisions from the DIG E19 incorporated into the FASB Codification or the revisions from ASU 2017-12 that pertain to cross-currency basis spread.

To ensure consistency with U.S. GAAP in the assessment of hedge effectiveness, NAIC staff recommend that the Working Group consider adoption, with modification, of U.S. GAAP guidance pertaining to the criteria for initial and subsequent hedge effectiveness detailed in the FASB Accounting Standards Codification (ASC) paragraphs 815-20-25-72 through 815-20-35-20, as modified through the issuance of ASU 2017-12. Although the U.S. GAAP guidance for the assessment and determination of hedge effectiveness is proposed to be adopted, this action recommends statutory modifications to specify that the accounting and reporting of hedging instruments, including excluded components of the instruments, shall follow statutory specific guidance detailed in SSAP No. 86. The intent of this guidance is to clarify that the determination of whether a hedging instrument qualifies as an effective hedge shall converge with U.S. GAAP, but that the measurement method shall continue to follow statutory specific provisions. The proposed adoption only extends to revisions incorporated through ASU 2017-12, as such, any subsequent U.S. GAAP edits would continue to require statutory accounting consideration before they were considered adopted.

Exposure and request for comments - Excerpts of the U.S. GAAP guidance proposed to be adopted are recommended to replace the existing guidance in Exhibit A and Exhibit B of SSAP No. 86. However, these excerpts do not reflect the full U.S. GAAP guidance referenced. This reduction of quoted guidance is simply

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

to manage the extent of detail captured in SSAP No. 86. With exposure of the proposed excerpts and adoption language, the Working Group requests comments on whether certain paragraphs should be removed as unnecessary in the Exhibit and whether other guidance from the referenced U.S. GAAP would be beneficial to be incorporated. (NAIC staff note that the U.S. GAAP themes previously captured within Exhibit A and B have been retained – with updated ASC language.) Unless noted with tracked changes, the cited paragraphs are proposed to be incorporated directly from U.S. GAAP. (The tracked changes most commonly update GAAP references or paraphrase topics captured in GAAP references.)

Proposed New Exhibit A Which Would Replace The Existing Exhibit A and Exhibit B

EXHIBIT A – DISCUSSION OF HEDGE EFFECTIVENESS

The guidance within this exhibit reflects the adoption, with modification, of *FASB Accounting Standards Codification (ASC) 815-20-25-72 through 815-20-35-20*, as revised through the issuance of *ASU 2017-12: Derivatives and Hedging: Targeted Improvements to Accounting for Hedging Activities* (ASU 2017-12) (issued on August 28, 2017). This adoption captures the U.S. GAAP guidance for the assessment and determination of hedge effectiveness, with modification to require the accounting and reporting of hedging instruments, including excluded components of hedging instruments to follow specific statutory accounting guidance in SSAP No. 86. The intent of this guidance is to clarify that the determination of whether a hedging instrument and derivative transaction qualifies as an effective hedge shall converge with U.S. GAAP, but that the measurement and reporting of effective hedge transactions shall follow statutory specific provisions. The adoption only extends to revisions incorporated to the FASB ASC through ASU 2017-12, therefore any subsequent U.S. GAAP edits to the ASC would require statutory accounting adoption before application. The guidance within this Exhibit reflects excerpts from the U.S. GAAP ASC, but do not reflect the full U.S. GAAP guidance referenced in the adopted language. The exclusion of cited guidance is to manage the extent of detail included within SSAP No. 86. Excerpts not duplicated within from the cited U.S. GAAP guidance are considered adopted unless subject to the specific accounting and reporting statutory exclusion. This Exhibit intends to supplement the guidance in SSAP No. 86 on hedge effectiveness. In any event in which this Exhibit could be interpreted as conflicting with the SSAP No. 86 guidance, the guidance in the body of SSAP No. 86 shall be followed.

(Staff Note: Tracked changes show proposed revisions to the U.S. GAAP guidance.)

Hedge Effectiveness Criteria Applicable to Both Fair Value Hedges and Cash Flow Hedges

1. This guidance addresses hedge effectiveness criteria applicable to both fair value hedges and cash flow hedges. *(815-20-25-74)*
2. To qualify for hedge accounting, the hedging relationship, both at inception of the hedge and on an ongoing basis, shall be expected to be highly effective in achieving either of the following: *(815-20-25-75)*
 - a. Offsetting changes in fair value attributable to the hedged risk during the period that the hedge is designated (if a fair value hedge)

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

- b. Offsetting cash flows attributable to the hedged risk during the term of the hedge (if a cash flow hedge), unless the hedging instrument is used to modify the contractually specified interest receipts or payments associated with a recognized financial asset liability from one variable rate to another variable rate. ~~except as indicated in paragraph 815-20-25-50~~
3. If the hedging instrument (such as an at-the-money option contract) provides only one-sided offset of the hedged risk, either of the following conditions shall be met: (815-20-25-76)
 - a. The increases (or decreases) in the fair value of the hedging instrument are expected to be highly effective in offsetting the decreases (or increases) in the fair value of the hedged item (if a fair value hedge).
 - b. The cash inflows (outflows) from the hedging instrument are expected to be highly effective in offsetting the corresponding change in the cash outflows or inflows of the hedged transaction (if a cash flow hedge).
4. There would be a mismatch between the change in fair value or cash flows of the hedging instrument and the change in fair value or cash flows of the hedged item or hedged transaction in any of the following circumstances, among others: (815-20-25-77)
 - a. A difference between the basis of the hedging instrument and the hedged item or hedged transaction, to the extent that those bases do not move in tandem
 - b. Differences in critical terms of the hedging instrument and hedged item or hedged transaction, such as differences in any of the following:
 - i. Notional amounts
 - ii. Maturities
 - iii. Quantity
 - iv. Location (not applicable for hedging relationships in which the variability in cash flows attributable to changes in a contractually specified component is designated as the hedged risk)
 - v. Delivery Dates
5. An entity shall consider hedge effectiveness in two different ways—in prospective considerations and in retrospective evaluations: (815-20-25-79)
 - a. Prospective considerations. The entity's expectation that the relationship will be highly effective over future periods in achieving offsetting changes in fair value or cash flows, which is forward looking, must be assessed on a quantitative basis at hedge inception unless

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

one of the exceptions [detailed in ASU 2017-12](#), paragraph 815-20-25-3(b)(2)(iv)(01)¹ is met. Prospective assessments shall be subsequently performed whenever financial statements or earnings are reported and at least every three months. The entity shall elect at hedge inception ~~in accordance with paragraph 815-20-25-3(b)(2)(iv)(03)~~ whether to perform subsequent [retrospective and prospective hedge effectiveness](#) assessments on a quantitative or qualitative basis. ~~See paragraphs 815-20-35-2A through 35-2F for additional guidance on qualitative assessments of hedge effectiveness.~~ A quantitative assessment can be based on regression or other statistical analysis of past changes in fair values or cash flows as well as on other relevant information. The quantitative prospective assessment of hedge effectiveness shall consider all reasonably possible changes in fair value (if a fair value hedge) or in fair value or cash flows (if a cash flow hedge) of the derivative instrument and the hedged items for the period used to assess whether the requirement for expectation of highly effective offset is satisfied. The quantitative prospective assessment may not be limited only to the likely or expected changes in fair value (if a fair value hedge) or in fair value or cash flows (if a cash flow hedge) of the derivative instrument or the hedged items. Generally, the process of formulating an expectation regarding the effectiveness of a proposed hedging relationship involves a probability-weighted analysis of the possible changes in fair value (if a fair value hedge) or in fair value or cash flows (if a cash flow hedge) of the derivative instrument and the hedged items for the hedge period. Therefore, a probable future change in fair value will be more heavily weighted than a reasonably possible future change. ~~That calculation technique is consistent with the definition of the term expected cash flow in FASB Concepts Statement No. 7, Using Cash Flow Information and Present Value in Accounting Measurements.~~

- b. Retrospective evaluations. An assessment of effectiveness may be performed on a quantitative or qualitative basis on the basis of the entity's election at hedge inception ~~in accordance with paragraph 815-20-25-3(b)(2)(iv)(03)~~. That assessment shall be performed whenever financial statements or earnings are reported, and at least every three months. ~~See paragraphs 815-20-35-2 through 35-4 for further guidance.~~ At inception of the hedge, an entity electing a dollar-offset approach to perform retrospective evaluations on a quantitative basis may choose either a period-by-period approach or a cumulative approach in designating how effectiveness of a fair value hedge or of a cash flow hedge will be assessed retrospectively under that approach, depending on the nature of the hedge [initially documented in accordance with paragraph 815-20-25-3](#). ~~For example, an entity may decide that the cumulative approach is generally preferred, yet may wish to use the period-by-period approach in certain circumstances. See paragraphs 815-20-35-5 through 35-6 for further guidance.~~

Skipping 815-20-25-79A

6. All assessments of effectiveness shall be consistent with the originally documented risk management strategy for that particular hedging relationship. An entity shall use the quantitative

¹ [Reference to this ASU 2017-12 guidance is consistent with the guidance in SSAP No. 86, paragraph 42, footnote 5.](#)

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

effectiveness assessment method defined at hedge inception consistently for the periods that the entity either elects or is required to assess hedge effectiveness on a quantitative basis. (815-20-25-80)

7. This ~~Subtopic~~ guidance does not specify a single method for assessing whether a hedge is expected to be highly effective. The method of assessing effectiveness shall be reasonable. The appropriateness of a given method of assessing hedge effectiveness depends on the nature of the risk being hedged and the type of hedging instrument used. Ordinarily, an entity shall assess effectiveness for similar hedges in a similar manner, including whether a component of the gain or loss on a derivative instrument is excluded in assessing effectiveness for similar hedges. Use of different methods for similar hedges shall be justified. The mechanics of isolating the change in time value of an option discussed beginning in paragraph ~~13 815-20-25-98~~ also shall be applied consistently. (815-20-25-81)

8. In defining how hedge effectiveness will be assessed, an entity shall specify whether it will include in that assessment all of the gain or loss on a hedging instrument. An entity may exclude all or a part of the hedging instrument's time value from the assessment of hedge effectiveness, as follows: (815-20-25-82)

- a. If the effectiveness of a hedge with an option is assessed based on changes in the option's intrinsic value, the change in the time value of the option would be excluded from the assessment of hedge effectiveness.
- b. If the effectiveness of a hedge with an option is assessed based on changes in the option's minimum value, that is, its intrinsic value plus the effect of discounting, the change in the volatility value of the contract shall be excluded from the assessment of hedge effectiveness.
- c. An entity may exclude any of the following components of the change in an option's time value from the assessment of hedge effectiveness:
 - i. The portion of the change in time value attributable to the passage of time (theta)
 - ii. The portion of the change in time value attributable to changes due to volatility (vega)
 - iii. The portion of the change in time value attributable to changes due to interest rates (rho).
- d. If the effectiveness of a hedge with a forward contract or futures contract is assessed based on changes in fair value attributable to changes in spot prices, the change in the fair value of the contract related to the changes in the difference between the spot price and the forward or futures price shall be excluded from the assessment of hedge effectiveness.
- e. An entity may exclude the portion of the change in fair value of a currency swap attributable to a cross-currency basis spread.

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

9. No other components of a gain or loss on the designated hedging instrument shall be excluded from the assessment of hedge effectiveness nor shall an entity exclude any aspect of a change in an option's value from the assessment of hedge effectiveness that is not one of the permissible components of the change in an option's time value. For example, an entity shall not exclude from the assessment of hedge effectiveness the portion of the change in time value attributable to changes in other market variables (that is, other than rho and vega). (815-20-25-83)

Note – The following ASC Paragraphs 815-20-25-83A and 83B would not be considered adopted under the proposed language as they address measurement and recognition. SAP measurement and recognition guidance will be captured in the body of the SSAP or Appendix C.

For fair value and cash flow hedges, the initial value of the component excluded from the assessment of effectiveness shall be recognized in earnings using a systematic and rational method over the life of the hedging instrument. Any difference between the change in fair value of the excluded component and amounts recognized in earnings under that systematic and rational method shall be recognized in other comprehensive income. Example 31 beginning in paragraph 815-20-55-235 illustrates this approach for a cash flow hedge in which the hedging instrument is an option and the entire time value is excluded from the assessment of effectiveness. (815-20-25-83A)

For fair value and cash flow hedges, an entity alternatively may elect to record changes in the fair value of the excluded component currently in earnings. This election shall be applied consistently to similar hedges in accordance with paragraph 815-20-25-81 and shall be disclosed in accordance with paragraph 815-10-50-4EEEE. (815-20-25-83B)

10. If the critical terms of the hedging instrument and of the hedged item or hedged forecasted transaction are the same, the entity could conclude that changes in fair value or cash flows attributable to the risk being hedged are expected to completely offset at inception and on an ongoing basis. For example, an entity may assume that a hedge of a forecasted purchase of a commodity with a forward contract will be perfectly effective if all of the following criteria are met:

- a. The forward contract is for purchase of the same quantity of the same commodity at the same time and location as the hedged forecasted purchase. Location differences do not need to be considered if an entity designates the variability in cash flows attributable to changes in a contractually specified component as the hedged risk and the requirements in paragraphs 815-20-25-22A through 25-22B of the FASB Codification are met. (815-20-25-84)
- b. The fair value of the forward contract at inception is zero.
- c. Either of the following criteria is met:
 - i. The change in the discount or premium on the forward contract is excluded from the assessment of effectiveness pursuant to paragraphs 7-9~~815-20-25-81 through 25-83~~.

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

- ii. The change in expected cash flows on the forecasted transaction is based on the forward price for the commodity.

11. In a cash flow hedge of a group of forecasted transactions in accordance with paragraph 28a of the SSAP guidance ~~815-20-25-15(a)(2)~~, an entity may assume that the timing in which the hedged transactions are expected to occur and the maturity date of the hedging instrument match in accordance with paragraph 10a ~~815-20-25-84(a)~~ if those forecasted transactions occur and the derivative matures within the same 31-day period or fiscal month. (815-20-25-84A)

12. If all of the criteria in paragraphs 10-11 ~~815-20-25-84 through 25-84A~~ are met, an entity shall still perform and document an assessment of hedge effectiveness at the inception of the hedging relationship and, ~~as discussed beginning in paragraph 815-20-35-9~~, on an ongoing basis throughout the hedge period. No quantitative effectiveness assessment is required at hedge inception if the criteria in paragraphs 10-11 ~~815-20-25-84 through 25-84A~~ are met ~~(see paragraph 815-20-25-3(b)(2)(iv)(01))~~. (815-20-25-85)

Skipped paragraphs 815-20-25-86 to 815-20-25-97

Computing Changes in an Option's Time Value

13. In computing the changes in an option's time value that would be excluded from the assessment of hedge effectiveness, an entity shall use a technique that appropriately isolates those aspects of the change in time value. Generally, to allocate the total change in an option's time value to its different aspects—the passage of time and the market variables—the change in time value attributable to the first aspect to be isolated is determined by holding all other aspects constant as of the beginning of the period. Each remaining aspect of the change in time value is then determined in turn in a specified order based on the ending values of the previously isolated aspects. (815-20-25-98)

14. Based on that general methodology, if only one aspect of the change in time value is excluded from the assessment of hedge effectiveness (for example, theta), that aspect shall be the first aspect for which the change in time value is computed and would be determined by holding all other parameters constant for the period used for assessing hedge effectiveness. However, if more than one aspect of the change in time value is excluded from the assessment of hedge effectiveness (for example, theta and vega), an entity shall determine the amount of that change in time value by isolating each of those two aspects in turn in a prespecified order (one first, the other second). The second aspect to be isolated would be based on the ending value of the first isolated aspect and the beginning values of the remaining aspects. The portion of the change in time value that is included in the assessment of effectiveness shall be determined by deducting from the total change in time value the portion of the change in time value attributable to excluded components. (815-20-25-99)

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

Skipped paragraphs 815-20-25-100 and 815-20-25-101

Assuming Perfect Hedge Effectiveness in a Hedge with an Interest Rate Swap

15. The conditions for the shortcut method do not determine which hedging relationships qualify for hedge accounting; rather, those conditions determine which hedging relationships qualify for a shortcut version of hedge accounting that assumes perfect hedge effectiveness. If all of the applicable conditions in the list in paragraph ~~17 815-20-25-104~~ are met, an entity may assume perfect effectiveness in a hedging relationship of interest rate risk involving a recognized interest-bearing asset or liability (or a firm commitment arising on the trade [pricing] date to purchase or issue an interest-bearing asset or liability) and an interest rate swap (or a compound hedging instrument composed of an interest rate swap and a mirror-image call or put option as discussed in paragraph ~~17e 815-20-25-104(e)~~) provided that, in the case of a firm commitment, the trade date of the asset or liability differs from its settlement date due to generally established conventions in the marketplace in which the transaction is executed. The shortcut method's application shall be limited to hedging relationships that meet each and every applicable condition. That is, all the conditions applicable to fair value hedges shall be met to apply the shortcut method to a fair value hedge, and all the conditions applicable to cash flow hedges shall be met to apply the shortcut method to a cash flow hedge. A hedging relationship cannot qualify for application of the shortcut method based on an assumption of perfect effectiveness justified by applying other criteria. The verb *match* is used in the specified conditions in the list to mean *be exactly the same* or *correspond exactly*. (815-20-25-102)

16. Implicit in the conditions for the shortcut method is the requirement that a basis exist for concluding on an ongoing basis that the hedging relationship is expected to be highly effective in achieving offsetting changes in fair values or cash flows. In applying the shortcut method, an entity shall consider the likelihood of the counterparty's compliance with the contractual terms of the hedging derivative that require the counterparty to make payments to the entity. (815-20-25-103)

17. All of the following conditions apply to both fair value hedges and cash flow hedges: (815-20-25-104)

- a. The notional amount of the interest rate swap matches the principal amount of the interest-bearing asset or liability being hedged.
- b. If the hedging instrument is solely an interest rate swap, the fair value of that interest rate swap at the inception of the hedging relationship must be zero, with one exception. The fair value of the swap may be other than zero at the inception of the hedging relationship only if the swap was entered into at the relationship's inception, the transaction price of the swap was zero in the entity's principal market (or most advantageous market), and the difference between transaction price and fair value is attributable solely to differing prices within the bid-ask spread between the entry transaction and a hypothetical exit transaction. The guidance in the preceding sentence is applicable only to transactions considered *at market* (that is, transaction price is zero exclusive of commissions and other transaction costs, ~~as discussed in paragraph 820-10-35-9B~~). If the hedging instrument is solely an interest rate swap that at the inception of the hedging relationship has a positive or negative

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

fair value, but does not meet the one exception specified in this paragraph, the shortcut method shall not be used even if all the other conditions are met.

- c. If the hedging instrument is a compound derivative composed of an interest rate swap and mirror-image call or put option as discussed in (e), the premium for the mirror-image call or put option shall be paid or received in the same manner as the premium on the call or put option embedded in the hedged item based on the following:
 - i. If the implicit premium for the call or put option embedded in the hedged item is being paid principally over the life of the hedged item (through an adjustment of the interest rate), the fair value of the hedging instrument at the inception of the hedging relationship shall be zero (except as discussed previously in (b) regarding differing prices due to the existence of a bid-ask spread).
 - ii. If the implicit premium for the call or put option embedded in the hedged item was principally paid at inception-acquisition (through an original issue discount or premium), the fair value of the hedging instrument at the inception of the hedging relationship shall be equal to the fair value of the mirror-image call or put option.
- d. The formula for computing net settlements under the interest rate swap is the same for each net settlement. That is, both of the following conditions are met:
 - i. The fixed rate is the same throughout the term.
 - ii. The variable rate is based on the same index and includes the same constant adjustment or no adjustment. The existence of a stub period and stub rate is not a violation of the criterion in (d) that would preclude application of the shortcut method if the stub rate is the variable rate that corresponds to the length of the stub period.
- e. The interest-bearing asset or liability is not prepayable, that is, able to be settled by either party before its scheduled maturity, or the assumed maturity date if the hedged item is measured as a partial-term hedge of interest rate risk in which the assumed maturity of the hedged items occur on the date in which the last hedged cash flow is due and payable, in accordance with paragraph 815-25-35-13B, with the following qualifications:
 - i. This criterion does not apply to an interest-bearing asset or liability that is prepayable solely due to an embedded call option (put option) if the hedging instrument is a compound derivative composed of an interest rate swap and a mirror-image call option (put option).
 - ii. The call option embedded in the interest rate swap is considered a mirror image of the call option embedded in the hedged item if all of the following conditions are met:

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

- (a.) The terms of the two call options match exactly, including all of the following:
 - (1.) Maturities
 - (2.) Strike price (that is, the actual amount for which the debt instrument could be called) and there is no termination payment equal to the deferred debt issuance costs that remain unamortized on the date the debt is called
 - (3.) Related notional amounts
 - (4.) Timing and frequency of payments
 - (5.) Dates on which the instruments may be called.
 - (b.) The entity is the writer of one call option and the holder (purchaser) of the other call option.
- f. Any other terms in the interest-bearing financial instruments or interest rate swaps meet both of the following conditions:
- i. The terms are typical of those instruments.
 - ii. The terms do not invalidate the assumption of perfect effectiveness.
18. All of the following incremental conditions apply to fair value hedges only: *(815-20-25-105)*
- a. The expiration date of the interest rate swap matches the maturity date of the interest-bearing asset or liability or the assumed maturity date if the hedged item is measured [as a partial-term hedge of interest rate risk in which the assumed maturity of the hedged items occur on the date in which the last hedged cash flow is due and payable](#)~~in accordance with paragraph 815-25-35-13B.~~
 - b. There is no floor or cap on the variable interest rate of the interest rate swap.
 - c. The interval between repricings of the variable interest rate in the interest rate swap is frequent enough to justify an assumption that the variable payment or receipt is at a market rate (generally three to six months or less).
 - d. For fair value hedges of a proportion of the principal amount of the interest-bearing asset or liability, the notional amount of the interest rate swap designated as the hedging instrument (~~see (a) in paragraph 815-20-25-104~~) matches the portion of the asset or liability being hedged.

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

- e. For fair value hedges of portfolios (or proportions thereof) of similar interest-bearing assets or liabilities, both of the following criteria are met:
 - i. The notional amount of the interest rate swap designated as the hedging instrument matches the aggregate notional amount of the hedged item (whether it is all or a proportion of the total portfolio).
 - ii. The remaining criteria for the shortcut method are met with respect to the interest rate swap and the individual assets or liabilities in the portfolio.
 - f. The index on which the variable leg of the interest rate swap is based matches the benchmark interest rate designated as the interest rate risk being hedged for that hedging relationship.
19. All of the following incremental conditions apply to cash flow hedges only: (815-20-25-106)
- a. All interest receipts or payments on the variable-rate asset or liability during the term of the interest rate swap are designated as hedged.
 - b. No interest payments beyond the term of the interest rate swap are designated as hedged.
 - c. Either of the following conditions is met:
 - i. There is no floor or cap on the variable interest rate of the interest rate swap.
 - ii. The variable-rate asset or liability has a floor or cap and the interest rate swap has a floor or cap on the variable interest rate that is comparable to the floor or cap on the variable-rate asset or liability. For purposes of this paragraph, comparable does not necessarily mean equal. For example, if an interest rate swap's variable rate is based on LIBOR and an asset's variable rate is LIBOR plus 2 percent, a 10 percent cap on the interest rate swap would be comparable to a 12 percent cap on the asset.
 - d. The repricing dates of the variable-rate asset or liability and the hedging instrument must occur on the same dates and be calculated the same way (that is, both shall be either prospective or retrospective). If the repricing dates of the hedged item occur on the same dates as the repricing dates of the hedging instrument but the repricing calculation for the hedged item is prospective whereas the repricing calculation for the hedging instrument is retrospective, those repricing dates do not match.
 - e. For cash flow hedges of the interest payments on only a portion of the principal amount of the interest-bearing asset or liability, the notional amount of the interest rate swap designated as the hedging instrument ~~(see paragraph 815-20-25-104(a))~~ matches the

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

principal amount of the portion of the asset or liability on which the hedged interest payments are based.

- f. For a cash flow hedge in which the hedged forecasted transaction is a group of individual transactions (as permitted by [paragraph 28a of the SSAP guidance](#) ~~paragraph 815-20-25-15(a)~~), if both of the following criteria are met:
 - i. The notional amount of the interest rate swap designated as the hedging instrument ~~(see paragraph (a))~~ matches the notional amount of the aggregate group of hedged transactions.
 - ii. The remaining criteria for the shortcut method are met with respect to the interest rate swap and the individual transactions that make up the group. For example, the interest rate repricing dates for the variable-rate assets or liabilities whose interest payments are included in the group of forecasted transactions shall match (that is, be exactly the same as) the reset dates for the interest rate swap.
 - g. The index on which the variable leg of the interest rate swap is based matches the contractually specified interest rate designated as the interest rate being hedged for that hedging relationship.
20. The shortcut method may be applied to a hedging relationship that involves the use of an interest rate swap-in-arrears provided all of the applicable conditions are met. (815-20-25-107)
21. Any discount or premium in the hedged debt's carrying amount (including any related deferred issuance costs) is irrelevant to and has no direct impact on the determination of whether an interest rate swap contains a mirror-image call option under [paragraph 17e.i.\(e\)](#). Typically, the call price is greater than the par or face amount of the debt instrument. The carrying amount of the debt is economically unrelated to the amount the issuer would be required to pay to exercise the call embedded in the debt. (815-20-25-108)
22. The fixed interest rate on a hedged item need not exactly match the fixed interest rate on an interest rate swap designated as a fair value hedge. Nor does the variable interest rate on an interest-bearing asset or liability need to be the same as the variable interest rate on an interest rate swap designated as a cash flow hedge. An interest rate swap's fair value comes from its net settlements. The fixed and variable interest rates on an interest rate swap can be changed without affecting the net settlement if both are changed by the same amount. That is, an interest rate swap with a payment based on LIBOR and a receipt based on a fixed rate of 5 percent has the same net settlements and fair value as an interest rate swap with a payment based on LIBOR plus 1 percent and a receipt based on a fixed rate of 6 percent. (815-20-25-109)
23. Comparable credit risk at inception is not a condition for assuming perfect effectiveness even though actually achieving perfect offset would require that the same discount rate be used to determine the fair value of the swap and of the hedged item or hedged transaction. To justify using the same discount rate, the credit risk related to both parties to the swap as well as to the debtor on the hedged interest-bearing asset (in a fair value hedge) or the variable-rate asset on which the interest payments are hedged (in a cash flow

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

hedge) would have to be the same. However, because that complication is caused by the interaction of interest rate risk and credit risk, which are not easily separable, comparable creditworthiness is not considered a necessary condition for assuming perfect effectiveness in a hedge of interest rate risk. (815-20-25-111)

Skipped paragraphs 815-20-25-112 through 815-20-25-143

Hedge Effectiveness – After Designation

24. If a fair value hedge or cash flow hedge initially qualifies for hedge accounting, the entity would continue to assess whether the hedge meets the effectiveness test on either a quantitative basis (using either a dollar-offset test or a statistical method such as regression analysis) or a qualitative basis. ~~See paragraphs 815-20-35-2A through 35-2F for additional guidance on qualitative assessments of effectiveness.~~ If the hedge fails the effectiveness test at any time (that is, if the entity does not expect the hedge to be highly effective at achieving offsetting changes in fair values or cash flows), the hedge ceases to qualify for hedge accounting. At least quarterly, the hedging entity shall determine whether the hedging relationship has been highly effective in having achieved offsetting changes in fair value or cash flows through the date of the periodic assessment.) (815-20-35-2)

Effectiveness Assessment on a Qualitative Basis

25. An entity may qualitatively assess hedge effectiveness if both of the following criteria are met: (815-20-35-2A)

- a. An entity performs an initial quantitative test of hedge effectiveness on a prospective basis (that is, it is not assuming that the hedging relationship is perfectly effective at hedge inception ~~as described in paragraph 815-20-25-3(b)(2)(iv)(01)(A) through (H)~~), and the results of that quantitative test demonstrate highly effective offset.
- b. At hedge inception, an entity can reasonably support an expectation of high effectiveness on a qualitative basis in subsequent periods.

26. An entity may elect to qualitatively assess hedge effectiveness in accordance with paragraph 25 815-20-35-2A on a hedge-by-hedge basis. If an entity makes this qualitative assessment election, only the quantitative method specified in an entity's initial hedge documentation must comply with paragraph 7815-20-25-81. (815-20-35-2B)

27. When an entity performs qualitative assessments of hedge effectiveness, it shall verify and document whenever financial statements or earnings are reported and at least every three months that the facts and circumstances related to the hedging relationship have not changed such that it can assert qualitatively that the hedging relationship was and continues to be highly effective. While not all-inclusive, the following is a list of indicators that may, individually or in the aggregate, allow an entity to continue to assert qualitatively that the hedging relationship is highly effective: (815-20-35-2C)

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

- a. An assessment of the factors that enabled the entity to reasonably support an expectation of high effectiveness on a qualitative basis has not changed such that the entity can continue to assert qualitatively that the hedging relationship was and continues to be highly effective. ~~This shall include an assessment of the guidance in paragraph 815-20-25-100 when applicable.~~
- b. There have been no adverse developments regarding the risk of counterparty default.

28. If an entity elects to assess hedge effectiveness on a qualitative basis and then facts and circumstances change such that the entity no longer can assert qualitatively that the hedging relationship was and continues to be highly effective in achieving offsetting changes in fair values or cash flows, the entity shall assess effectiveness of that hedging relationship on a quantitative basis in subsequent periods. In addition, an entity may perform a quantitative assessment of hedge effectiveness in any reporting period to validate whether qualitative assessments of hedge effectiveness remain appropriate. In both cases, the entity shall apply the quantitative method that it identified in its initial hedge documentation ~~in accordance with paragraph (b)(2)(iv)(03).~~ (815-20-35-2D)

29. When an entity determines that facts and circumstances have changed and it no longer can assert qualitatively that the hedging relationship was and continues to be highly effective, the entity shall begin performing subsequent quantitative assessments of hedge effectiveness as of the period that the facts and circumstances changed. If there is no identifiable event that led to the change in the facts and circumstances of the hedging relationship, the entity may begin performing quantitative assessments of effectiveness in the current period. (815-20-35-2E)

30. After performing a quantitative assessment of hedge effectiveness for one or more reporting periods as discussed in paragraphs ~~28-29~~ ~~815-20-35-2D through 35-2E~~, an entity may revert to qualitative assessments of hedge effectiveness if it can reasonably support an expectation of high effectiveness on a qualitative basis for subsequent periods. ~~See paragraphs 815-20-55-79G through 55-79N for implementation guidance on factors to consider when determining whether qualitative assessments of effectiveness can be performed after hedge inception.~~ (815-20-35-2F)

Quantitative Hedge Effectiveness Assessments After Hedge Designation

31. Quantitative assessments can be based on regression or other statistical analysis of past changes in fair values or cash flows as well as on other relevant information. (815-20-35-2G)

32. If an entity elects at the inception of a hedging relationship to use the same regression analysis approach for both prospective considerations and retrospective evaluations of assessing effectiveness, then during the term of that hedging relationship both of the following conditions shall be met: (815-20-35-3)

- a. Those regression analysis calculations shall generally incorporate the same number of data points.
- b. That entity must periodically update its regression analysis (or other statistical analysis).

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

33. Electing to use a regression or other statistical analysis approach instead of a dollar-offset approach to perform retrospective evaluations of assessing hedge effectiveness may affect whether an entity can apply hedge accounting for the current assessment period. (815-20-35-4)

34. In periodically (that is, at least quarterly) assessing retrospectively the effectiveness of a fair value hedge (or a cash flow hedge) in having achieved offsetting changes in fair values (or cash flows) under a dollar-offset approach, an entity shall use either a period-by-period approach or a cumulative approach on individual fair value hedges (or cash flow hedges): (815-20-35-5)

- a. Period-by-period approach. The period-by-period approach involves comparing the changes in the hedging instrument's fair values (or cash flows) that have occurred during the period being assessed to the changes in the hedged item's fair value (or hedged transaction's cash flows) attributable to the risk hedged that have occurred during the same period. If an entity elects to base its comparison of changes in fair value (or cash flows) on a period-by-period approach, the period cannot exceed three months. Fair value (or cash flow) patterns of the hedging instrument or the hedged item (or hedged transaction) in periods before the period being assessed are not relevant.
- b. Cumulative approach. The cumulative approach involves comparing the cumulative changes (to date from inception of the hedge) in the hedging instrument's fair values (or cash flows) to the cumulative changes in the hedged item's fair value (or hedged transaction's cash flows) attributable to the risk hedged.

35. If an entity elects at inception of a hedging relationship to base its comparison of changes in fair value (or cash flows) on a cumulative approach, then that entity must abide by the results of that methodology as long as that hedging relationship remains designated. Electing to utilize a period-by-period approach instead of a cumulative approach (or vice versa) to perform retrospective evaluations of assessing hedge effectiveness under the dollar-offset method may affect whether an entity can apply hedge accounting for the current assessment period. (815-20-35-6)

Assessing Effectiveness Based on Whether the Critical Terms of the Hedging Instrument and the Hedged Items Match

36. If, at inception, the critical terms of the hedging instrument and the hedged forecasted transaction are the same (see paragraphs [10-11815-20-25-84 through 25-84A](#)), the entity can conclude that changes in cash flows attributable to the risk being hedged are expected to be completely offset by the hedging derivative. Therefore, subsequent assessments can be performed by verifying and documenting whether the critical terms of the hedging instrument and the forecasted transaction have changed during the period in review. (815-20-35-9)

37. Because the assessment of hedge effectiveness in a cash flow hedge involves assessing the likelihood of the counterparty's compliance with the contractual terms of the derivative instrument designated as the hedging instrument, the entity must also assess whether there have been adverse

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

developments regarding the risk of counterparty default, particularly if the entity planned to obtain its cash flows by liquidating the derivative instrument at its fair value. (815-20-35-10)

38. If there are no such changes in the critical terms or adverse developments regarding counterparty default, the entity may conclude that the hedging relationship is perfectly effective. In that case, the change in fair value of the derivative instrument can be viewed as a proxy for the present value of the change in cash flows attributable to the risk being hedged. (815-20-35-11)

39. However, the entity must assess whether the hedging relationship is expected to continue to be highly effective using a quantitative assessment method (either a dollar-offset test or a statistical method such as regression analysis) if any of the following conditions exist: (815-20-35-12)

- a. The critical terms of the hedging instrument or the hedged forecasted transaction have changed.
- b. There have been adverse developments regarding the risk of counterparty default.

Possibility of Default by the Counterparty to Hedging Derivative

40. For an entity to conclude on an ongoing basis that the hedging relationship is expected to be highly effective in achieving offsetting changes in cash flows, the entity shall not ignore whether it will collect the payments it would be owed under the contractual provisions of the derivative instrument. In complying with the requirements of paragraph ~~2b815-20-25-75(b)~~, the entity shall assess the possibility of whether the counterparty to the derivative instrument will default by failing to make any contractually required payments to the entity as scheduled in the derivative instrument. In making that assessment, the entity shall also consider the effect of any related collateralization or financial guarantees. The entity shall be aware of the counterparty's creditworthiness (and changes therein) in determining the fair value of the derivative instrument. Although a change in the counterparty's creditworthiness would not necessarily indicate that the counterparty would default on its obligations, such a change shall warrant further evaluation. (815-20-35-14)

41. If the likelihood that the counterparty will not default ceases to be probable, an entity would be unable to conclude that the hedging relationship in a cash flow hedge is expected to be highly effective in achieving offsetting cash flows. (815-20-35-15)

42. In contrast, a change in the creditworthiness of the derivative instrument's counterparty in a fair value hedge would have an immediate effect because that change in creditworthiness would affect the change in the derivative instrument's fair value, which would immediately affect both of the following: (815-20-35-16)

- a. The assessment of whether the relationship qualifies for hedge accounting
- b. The amount of mismatch between the change in the fair value of the hedging instrument and the hedged item attributable to the hedged risk recognized in earnings under fair value hedge accounting.

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

43. Paragraph ~~16815-20-25-103~~ states that, in applying the shortcut method, an entity shall consider the likelihood of the counterparty's compliance with the contractual terms of the hedging derivative that require the counterparty to make payments to the entity. That paragraph explains that implicit in the criteria for the shortcut method is the requirement that a basis exist for concluding on an ongoing basis that the hedging relationship is expected to be highly effective in achieving offsetting changes in fair values or cash flows. (815-20-35-18)

Change in Hedge Effectiveness Method When Hedge Effectiveness is Assessed on a Quantitative Basis

44. If the entity identifies an improved method of assessing hedge effectiveness in accordance with the guidance in paragraph ~~6815-20-25-80~~ and wants to apply that method prospectively, it shall do both of the following: (815-20-35-19)

- a. Discontinue the existing hedging relationship
- b. Designate the relationship anew using the improved method.

45. The new method of assessing hedge effectiveness shall be applied prospectively and shall also be applied to similar hedges unless the use of a different method for similar hedges is justified. A change in the method of assessing hedge effectiveness by an entity shall not be considered a change in accounting principle as defined in ~~Topic 250~~ *SSAP No. 3—Accounting Changes and Corrections of Errors*. (815-20-35-20)

U.S. GAAP ASC Excerpts Proposed to be Excluded from Exhibit A

This information is included to illustrate the guidance within the adopted ASC references that are not proposed to be captured in Exhibit A. The guidance within these paragraphs would be considered part of the statutory adoption unless they include specific accounting and reporting guidance. Comments are requested on whether any of the following paragraphs should be explicitly captured in Exhibit A.

Skipping 815-20-25-79A

815-20-25-79A See paragraphs 815-20-25-139 through 25-142 about the timing of hedge effectiveness assessments required by paragraph 815-20-25-79 for a private company that is not a financial institution or a not-for-profit entity (except for a not-for-profit entity that has issued, or is a conduit bond obligor for, securities that are traded, listed, or quoted on an exchange or an over-the-counter market).

Skipped paragraphs 815-20-25-86 through 815-20-25-97

815-20-25-86 The remainder of this guidance on hedge effectiveness criteria applicable to both fair value hedges and cash flow hedges is organized as follows:

- a. Hedge effectiveness when the hedging instrument is an option or combination of options
- b. Hedge effectiveness when hedged exposure is more limited than hedging instrument

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

- c. Hedge effectiveness during designated hedge period
- d. Assuming perfect effectiveness in a hedge with an interest rate swap (the shortcut method).

Hedge Effectiveness When the Hedging Instrument Is an Option or Combination of Options

815-20-25-87 The hedge effectiveness criteria applicable to options and combinations of options are organized as follows:

- a. Determining whether a combination of options is net written
- b. Hedge effectiveness of written options
- c. Hedge effectiveness of options in general.

Determining Whether a Combination of Options Is Net Written

815-20-25-88 This guidance addresses how an entity shall determine whether a combination of options is considered a net written option subject to the requirements of paragraph 815-20-25-94. A combination of options (for example, an interest rate collar) entered into contemporaneously shall be considered a written option if either at inception or over the life of the contracts a net premium is received in cash or as a favorable rate or other term. Furthermore, a derivative instrument that results from combining a written option and any other non-option derivative instrument shall be considered a written option. The determination of whether a combination of options is considered a net written option depends in part on whether strike prices and notional amounts of the options remain constant.

Strike Prices and Notional Amounts Remain Constant

815-20-25-89 For a combination of options in which the strike price and the notional amount in both the written option component and the purchased option component remain constant over the life of the respective component, that combination of options would be considered a net purchased option or a zero cost collar (that is, the combination shall not be considered a net written option subject to the requirements of paragraph 815-20-25-94) provided all of the following conditions are met:

- a. No net premium is received.
- b. The components of the combination of options are based on the same underlying.
- c. The components of the combination of options have the same maturity date.
- d. The notional amount of the written option component is not greater than the notional amount of the purchased option component.

815-20-25-90 If the combination of options does not meet all of those conditions, it shall be subject to the test in paragraph 815-20-25-94. For example, a combination of options having different underlying indexes, such as a collar containing a written floor based on three-month U.S. Treasury rates and a purchased cap

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

based on three-month London Interbank Offered Rate (LIBOR), shall not be considered a net purchased option or a zero cost collar even though those rates may be highly correlated.

Strike Prices and Notional Amounts Do Not Remain Constant

815-20-25-91 If either the written option component or the purchased option component for a combination of options has either strike prices or notional amounts that do not remain constant over the life of the respective component, the assessment to determine whether that combination of options can be considered not to be a written option under paragraph 815-20-25-88 shall be evaluated with respect to each date that either the strike prices or the notional amounts change within the contractual term from inception to maturity.

815-20-25-92 Even though that assessment is made on the date that a combination of options is designated as a hedging instrument (to determine the applicability of paragraph 815-20-25-94), it shall consider the receipt of a net premium (in cash or as a favorable rate or other term) from that combination of options at each point in time that either the strike prices or the notional amounts change, such as either of the following circumstances:

- a. If strike prices fluctuate over the life of a combination of options and no net premium is received at inception, a net premium will typically be received as a favorable term in one or more reporting periods within the contractual term from inception to maturity.
- b. If notional amounts fluctuate over the life of a combination of options and no net premium is received at inception, a net premium or a favorable term will typically be received in one or more periods within the contractual term from inception to maturity.

815-20-25-93 In addition, a combination of options in which either the written option component or the purchased option component has either strike prices or notional amounts that do not remain constant over the life of the respective component shall satisfy all of the conditions in paragraph 815-20-25-89 to be considered not to be a written option (that is, to be considered to be a net purchased option or zero cost collar) under paragraph 815-20-25-88. For example, if the notional amount of the written option component is greater than the notional amount of the purchased option component at any date that the notional amount changes within the contractual term from inception to maturity, the combination of options shall be considered to be a written option under paragraph 815-20-25-88 and, thus, subject to the criteria in the following paragraph.

Hedge Effectiveness of Written Options

815-20-25-94 If a written option is designated as hedging a recognized asset or liability or an unrecognized firm commitment (if a fair value hedge) or the variability in cash flows for a recognized asset or liability or an unrecognized firm commitment (if a cash flow hedge), the combination of the hedged item and the written option provides either of the following:

- a. At least as much potential for gains as a result of a favorable change in the fair value of the combined instruments (that is, the written option and the hedged item, such as an embedded

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

purchased option) as exposure to losses from an unfavorable change in their combined fair value (if a fair value hedge)

b. At least as much potential for favorable cash flows as exposure to unfavorable cash flows (if a cash flow hedge).

815-20-25-95 The written-option test in the preceding paragraph shall be applied only at inception of the hedging relationship and is met if all possible percentage favorable changes in the underlying (from zero percent to 100 percent) would provide either of the following:

a. At least as much gain as the loss that would be incurred from an unfavorable change in the underlying of the same percentage (if a fair value hedge)

b. At least as much favorable cash flows as the unfavorable cash flows that would be incurred from an unfavorable change in the underlying of the same percentage (if a cash flow hedge).

815-20-25-96 The time value of a written option (or net written option) may be excluded from the written-option test if, in defining how hedge effectiveness will be assessed, the entity specifies that it will base that assessment on only changes in the option's intrinsic value. In that circumstance, the change in the time value of the options would be excluded from the assessment of hedge effectiveness in accordance with paragraph 815-20-25-82(a).

815-20-25-97 When applying the written-option test to determine whether there is symmetry of the gain and loss potential of the combined hedged position for all possible percentage changes in the underlying, an entity is permitted to measure the change in the intrinsic value of the written option (or net written option) combined with the change in fair value of the hedged item.

Skipped paragraphs 815-20-25-100 and 815-20-25-101

Hedge Effectiveness When Hedged Exposure Is More Limited Than Hedging Instrument

815-20-25-100 An entity may designate as the hedging instrument in a fair value hedge or cash flow hedge a derivative instrument that does not have a limited exposure comparable to the limited exposure of the hedged item to the risk being hedged. However, to make that designation, in accordance with paragraph 815-20-25-75, the entity shall establish that the hedging relationship is expected to be highly effective in achieving offsetting changes in fair value or cash flows attributable to the hedged risk during the period that the hedge is designated. See paragraph 815-20-25-79(a) for additional guidance on prospective considerations of hedge effectiveness in this circumstance.

Hedge Effectiveness during Designated Hedge Period

815-20-25-101 It is inappropriate under this Subtopic for an entity to designate a derivative instrument as the hedging instrument if the entity expects that the derivative instrument will not be highly effective in achieving offsetting changes in fair value or cash flows attributable to the hedged risk during the period

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

Ref #2021-20

that the hedge is designated, unless the entity has documented undertaking a dynamic hedging strategy in which it has committed itself to an ongoing repositioning strategy for its hedging relationship.

Skipped paragraphs 815-20-25-112 through 815-20-25-143

>>>> Application of Prepayable Criterion

815-20-25-112 An interest-bearing asset or liability shall be considered prepayable under the provisions of paragraph **815-20-25-104(e)** if one party to the contract has the right to cause the payment of principal before the scheduled payment dates unless either of the following conditions is met:

- a. The debtor has the right to cause settlement of the entire contract before its stated maturity at an amount that is always greater than the then fair value of the contract absent that right.
- b. The creditor has the right to cause settlement of the entire contract before its stated maturity at an amount that is always less than the then fair value of the contract absent that right.

815-20-25-113 However, none of the following shall be considered a prepayment provision:

a. Any term, clause, or other provision in a debt instrument that gives the debtor or creditor the right to cause prepayment of the debt contingent upon the occurrence of a specific event related to the debtor's credit deterioration or other change in the debtor's credit risk, such as any of the following:

1. The debtor's failure to make timely payment, thus making it delinquent
2. The debtor's failure to meet specific covenant ratios
3. The debtor's disposition of specific significant assets (such as a factory)
4. A declaration of cross-default
5. A restructuring by the debtor.

b. Any term, clause, or other provision in a debt instrument that gives the debtor or creditor the right to cause prepayment of the debt contingent upon the occurrence of a specific event that meets all of the following conditions:

1. It is not probable at the time of debt issuance.
2. It is unrelated to changes in benchmark interest rates, contractually specified interest rates, or any other market variable.
3. It is related either to the debtor's or creditor's death or to regulatory actions, legislative actions, or other similar events that are beyond the control of the debtor or creditor.

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

c. Contingent acceleration clauses that permit the debtor to accelerate the maturity of an outstanding note only upon the occurrence of a specified event that meets all of the following conditions:

1. It is not probable at the time of debt issuance.
2. It is unrelated to changes in benchmark interest rates, contractually specified interest rates, or any other market variable.
3. It is related to regulatory actions, legislative actions, or other similar events that are beyond the control of the debtor or creditor.

815-20-25-114 Furthermore, a right to cause a contract to be prepaid at its then fair value would not cause the interest-bearing asset or liability to be considered prepayable because that right would have a fair value of zero at all times and essentially would provide only liquidity to the holder.

815-20-25-115 Application of this guidance to specific debt instruments is illustrated in paragraph 815-20-55-75.

Application of the Shortcut Method to a Portfolio of Hedged Items

815-20-25-116 Portfolio hedging cannot be used to circumvent the application of the shortcut method criteria beginning in paragraph 815-20-25-102 to a fair value hedge of an individual interest-bearing asset or liability. A portfolio of interest-bearing assets or interest-bearing liabilities cannot qualify for the shortcut method if it contains an interest-bearing asset or liability that individually cannot qualify for the shortcut method.

815-20-25-117 The fair value hedge requirements of paragraph 815-20-25-12(b)(1) ensure that the individual items in a portfolio share the same risk exposure and have fair value changes attributable to the hedged risk that are expected to respond in a generally proportionate manner to the overall fair value changes of the entire portfolio. That requirement restricts the types of portfolios that can qualify for portfolio hedging; however, it also permits the existence of a mismatch between the change in the fair value of the individual hedged items and the change in the fair value of the hedged portfolio attributable to the hedged risk in portfolios that do qualify. As a result, the assumption of perfect effectiveness required for the shortcut method generally is inappropriate for portfolio hedges of similar assets or liabilities that are not also nearly identical (except for their notional amounts). Application of the shortcut method to portfolios that meet the requirements of paragraph 815-20-25-12(b)(1) is appropriate only if the assets or liabilities in the portfolio meet the same stringent criteria in paragraphs 815-20-25-104(e), 815-20-25-104(g), and 815-20-25-105(a) as required for hedges of individual assets and liabilities.

Application of Whether the Shortcut Method Was Not or No Longer Is Appropriate

815-20-25-117A In the period in which an entity determines that use of the shortcut method was not or no longer is appropriate, the entity may use a quantitative method to assess hedge effectiveness and

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

measure hedge results without dedesignating the hedging relationship if both of the following criteria are met:

- a. The entity documented at hedge inception in accordance with paragraph 815-20-25-3(b)(2)(iv)(04) which quantitative method it would use to assess hedge effectiveness and measure hedge results if the shortcut method was not or no longer is appropriate during the life of the hedging relationship.
- b. The hedging relationship was highly effective on a prospective and retrospective basis in achieving offsetting changes in fair value or cash flows attributable to the hedged risk for the periods in which the shortcut method criteria were not met.

815-20-25-117B If the criterion in paragraph 815-20-25-117A(a) is not met, the hedging relationship shall be considered invalid in the period in which the criteria for the shortcut method were not met and in all subsequent periods. If the criterion in paragraph 815-20-25-117A(a) is met, the hedging relationship shall be considered invalid in all periods in which the criterion in paragraph 815-20-25-117A(b) is not met.

815-20-25-117C If an entity cannot identify the date on which the shortcut criteria ceased to be met, the entity shall perform the quantitative assessment of effectiveness documented at hedge inception for all periods since hedge inception.

815-20-25-117D The terms of the hedged item and hedging instrument used to assess effectiveness, in accordance with paragraph 815-20-25-117A(b), shall be those existing as of the date that the shortcut criteria ceased to be met. For cash flow hedges, if the hypothetical derivative method is used as a proxy for the hedged item, the value of the hypothetical derivative shall be set to zero as of hedge inception.

Hedge Effectiveness Criterion Applicable to Fair Value Hedges Only—Effectiveness Horizon

815-20-25-118 In documenting its risk management strategy for a fair value hedge, an entity may specify an intent to consider the possible changes (that is, not limited to the likely or expected changes) in value of the hedging derivative instrument and the hedged item only over a shorter period than the derivative instrument's remaining life in formulating its expectation that the hedging relationship will be highly effective in achieving offsetting changes in fair value for the risk being hedged. The entity does not need to contemplate the offsetting effect for the entire term of the hedging instrument.

Consideration of Prepayment Risk Using the Last-of-Layer Method

815-20-25-118A In a fair value hedge of interest rate risk designated under the last-of-layer method in accordance with paragraph 815-20-25-12A, an entity may exclude prepayment risk when measuring the change in fair value of the hedged item attributable to interest rate risk.

Hedge Effectiveness Criteria Applicable to Cash Flow Hedges Only

815-20-25-119 The hedge effectiveness criteria applicable to cash flow hedges only are organized as follows:

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

- a. Consideration of the time value of money
- b. Consideration of counterparty credit risk
- c. Additional considerations for options in cash flow hedges
- d. Assuming perfect hedge effectiveness in a cash flow hedge of a variable-rate borrowing with a receive-variable, pay-fixed interest rate swap recorded under the simplified hedge accounting approach.

Consideration of the Time Value of Money

815-20-25-120 In assessing the effectiveness of a cash flow hedge, an entity generally shall consider the time value of money, especially if the hedging instrument involves periodic cash settlements.

815-20-25-121 An example of a situation in which an entity likely would reflect the time value of money is a tailing strategy with futures contracts. When using a tailing strategy, an entity adjusts the size or contract amount of futures contracts used in a hedge so that earnings (or expense) from reinvestment (or funding) of daily settlement gains (or losses) on the futures do not distort the results of the hedge. To assess offset of expected cash flows when a tailing strategy has been used, an entity could reflect the time value of money, perhaps by comparing the present value of the hedged forecasted cash flow with the results of the hedging instrument.

Consideration of Counterparty Credit Risk

815-20-25-122 For a cash flow hedge, an entity shall consider the likelihood of the counterparty's compliance with the contractual terms of the hedging derivative instrument that require the counterparty to make payments to the entity. Paragraph [815-20-35-14](#) states that, for an entity to conclude on an ongoing basis that a cash flow hedging relationship is expected to be highly effective in achieving offsetting changes in cash flows, the entity shall not ignore whether it will collect the payments it would be owed under the contractual provisions of the derivative instrument. See paragraphs [815-20-35-14](#) through [35-18](#) for further guidance.

Additional Considerations for Options in Cash Flow Hedges

815-20-25-123 When an entity has documented that the effectiveness of a cash flow hedge will be assessed based on changes in the hedging option's intrinsic value pursuant to paragraph [815-20-25-82\(a\)](#), that assessment (and the related cash flow hedge accounting) shall be performed for all changes in intrinsic value—that is, for all periods of time when the option has an intrinsic value, such as when the underlying is above the strike price of the call option.

815-20-25-124 When a purchased option is designated as a hedging instrument in a cash flow hedge, an entity shall not define only limited parameters for the risk exposure designated as being hedged that would include the time value component of that option. An entity cannot arbitrarily exclude some portion of an option's intrinsic value from the hedge effectiveness assessment simply through an articulation of the risk

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

exposure definition. It is inappropriate to assert that only limited risk exposures are being hedged (for example, exposures related only to currency-exchange-rate changes above \$1.65 per pound sterling as illustrated in Example 26 [see paragraph [815-20-55-205](#)]).

815-20-25-125 If an option is designated as the hedging instrument in a cash flow hedge, an entity may assess hedge effectiveness based on a measure of the difference, as of the end of the period used for assessing hedge effectiveness, between the strike price and forward price of the underlying, undiscounted. Although assessment of cash flow hedge effectiveness with respect to an option designated as the hedging instrument in a cash flow hedge shall be performed by comparing the changes in present value of the expected future cash flows of the forecasted transaction to the change in fair value of the derivative instrument (aside from any excluded component under paragraph [815-20-25-82](#)), that measure of changes in the expected future cash flows of the forecasted transaction based on forward rates, undiscounted, is not prohibited. With respect to an option designated as the hedging instrument in a cash flow hedge, assessing hedge effectiveness based on a similar measure with respect to the hedging instrument eliminates any difference that the effect of discounting may have on the hedging instrument and the hedged transaction. Pursuant to paragraph [815-20-25-3\(b\)\(2\)\(iv\)](#), entities shall document the measure of intrinsic value that will be used in the assessment of hedge effectiveness. As discussed in paragraph [815-20-25-80](#), that measure must be used consistently for each period following designation of the hedging relationship.

Assessing Hedge Effectiveness Based on an Option's Terminal Value

815-20-25-126 The guidance in paragraph [815-20-25-129](#) addresses a cash flow hedge that meets all of the following conditions:

- a. The hedging instrument is a purchased option or a combination of only options that comprise either a net purchased option or a zero-cost collar.
- b. The exposure being hedged is the variability in expected future cash flows attributed to a particular rate or price beyond (or within) a specified level (or levels).
- c. The assessment of effectiveness is documented as being based on total changes in the option's cash flows (that is, the assessment will include the hedging instrument's entire change in fair value, not just changes in intrinsic value).

815-20-25-127 This guidance has no effect on the accounting for fair value hedging relationships. In addition, in determining the accounting for seemingly similar cash flow hedging relationships, it would be inappropriate to analogize to this guidance.

815-20-25-128 For a hedging relationship that meets all of the conditions in paragraph [815-20-25-126](#), an entity may focus on the hedging instrument's terminal value (that is, its expected future pay-off amount at its maturity date) in determining whether the hedging relationship is expected to be highly effective in achieving offsetting cash flows attributable to the hedged risk during the term of the hedge. An entity's focus on the hedging instrument's terminal value is not an impediment to the entity's subsequently deciding to dedesignate that cash flow hedge before the occurrence of the hedged transaction. If the hedging instrument is a purchased cap consisting of a series of purchased caplets that are each hedging an individual

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

Assessment of Hedge Effectiveness

Ref #2021-20

hedged transaction in a series of hedged transactions (such as caplets hedging a series of hedged interest payments at different monthly or quarterly dates), the entity may focus on the terminal value of each caplet (that is, the expected future pay-off amount at the maturity date of each caplet) in determining whether each of those hedging relationships is expected to be highly effective in achieving offsetting cash flows. The guidance in this paragraph applies to a purchased option regardless of whether at the inception of the cash flow hedging relationship it is at the money, in the money, or out of the money.

815-20-25-129 A hedging relationship that meets all of the conditions in paragraph 815-20-25-126 may be considered to be perfectly effective if all of the following conditions are met:

- a. The critical terms of the hedging instrument (such as its notional amount, underlying, maturity date, and so forth) completely match the related terms of the hedged forecasted transaction (such as the notional amount, the variable that determines the variability in cash flows, the expected date of the hedged transaction, and so forth).
- b. The strike price (or prices) of the hedging option (or combination of options) matches the specified level (or levels) beyond (or within) which the entity's exposure is being hedged.
- c. The hedging instrument's inflows (outflows) at its maturity date completely offset the change in the hedged transaction's cash flows for the risk being hedged.
- d. The hedging instrument can be exercised only on a single date—its contractual maturity date.

The condition in (d) is consistent with the entity's focus on the hedging instrument's terminal value. If the holder of the option chooses to pay for the ability to exercise the option at dates before the maturity date (for example, by acquiring an American-style option), the hedging relationship would not be perfectly effective.

815-20-25-129A In a hedge of a group of forecasted transactions in accordance with paragraph 815-20-25-15(a)(2), an entity may assume that the timing in which the hedged transactions are expected to occur and the maturity date of the hedging instrument match in accordance with paragraph 815-20-25-129(a) if those forecasted transactions occur and the derivative matures within the same 31-day period or fiscal month.

Hedge Effectiveness of a Net-Purchased Combination of Options

815-20-25-130 The guidance in the following paragraph addresses a cash flow hedging relationship that meets both of the following conditions:

- a. A combination of options (deemed to be a net purchased option) is designated as the hedging instrument.
- b. The effectiveness of the hedge is assessed based only on changes in intrinsic value of the hedging instrument (the combination of options).

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

815-20-25-131 The assessment of effectiveness of a cash flow hedging relationship meeting the conditions in the preceding paragraph may be based only on changes in the underlying that cause a change in the intrinsic value of the hedging instrument (the combination of options). Thus, the assessment can exclude ranges of changes in the underlying for which there is no change in the hedging instrument's intrinsic value.

Hedge Accounting Provisions Applicable to Certain Private Companies

Assuming Perfect Hedge Effectiveness in a Cash Flow Hedge of a Variable-Rate Borrowing with a Receive-Variable, Pay-Fixed Interest Rate Swap Recorded under the Simplified Hedge Accounting Approach

815-20-25-133 Paragraphs 815-10-35-1A through 35-1C, 815-10-50-3, 815-20-25-3A, 815-20-25-119, 815-20-25-134 through 25-138, 815-20-55-79A through 55-79B, 825-10-50-3, and 825-10-50-8 provide guidance for an entity electing the simplified hedge accounting approach. See paragraph 815-10-65-6 for transition guidance on applying the simplified hedge accounting approach.

815-20-25-134 The conditions for the simplified hedge accounting approach determine which cash flow hedging relationships qualify for a simplified version of hedge accounting. If all of the conditions in paragraphs 815-20-25-135 and 815-20-25-137 are met, an entity may assume perfect effectiveness in a cash flow hedging relationship involving a variable-rate borrowing and a receive-variable, pay-fixed interest rate swap.

815-20-25-135 Provided all of the conditions in paragraph 815-20-25-137 are met, the simplified hedge accounting approach may be applied by a **private company** except for a financial institution as described in paragraph 942-320-50-1. An entity may elect the simplified hedge accounting approach for any receive-variable, pay-fixed interest rate swap, provided that all of the conditions for applying the simplified hedge accounting approach specified in paragraph 815-20-25-137 are met. Implementation guidance on the conditions set forth in paragraph 815-20-25-137 is provided in paragraphs 815-20-55-79A through 55-79B.

815-20-25-136 In applying the simplified hedge accounting approach, the documentation required by paragraph 815-20-25-3 to qualify for hedge accounting must be completed by the date on which the first annual **financial statements are available to be issued** after hedge inception rather than concurrently at hedge inception.

815-20-25-137 An eligible entity under paragraph 815-20-25-135 must meet all of the following conditions to apply the simplified hedge accounting approach to a cash flow hedge of a variable-rate borrowing with a receive-variable, pay-fixed interest rate swap:

- a. Both the variable rate on the swap and the borrowing are based on the same index and reset period (for example, both the swap and borrowing are based on one-month London Interbank Offered Rate [LIBOR] or both the swap and borrowing are based on three-month LIBOR).
- b. The terms of the swap are typical (in other words, the swap is what is generally considered to be a “plain-vanilla” swap), and there is no floor or cap on the variable interest rate of the swap unless the borrowing has a comparable floor or cap.

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

- c. The repricing and settlement dates for the swap and the borrowing match or differ by no more than a few days.
- d. The swap's fair value at inception (that is, at the time the derivative was executed to hedge the interest rate risk of the borrowing) is at or near zero.
- e. The notional amount of the swap matches the principal amount of the borrowing being hedged. In complying with this condition, the amount of the borrowing being hedged may be less than the total principal amount of the borrowing.
- f. All interest payments occurring on the borrowing during the term of the swap (or the effective term of the swap underlying the forward starting swap) are designated as hedged whether in total or in proportion to the principal amount of the borrowing being hedged.

815-20-25-138 A cash flow hedge established through the use of a forward starting receive-variable, pay-fixed interest rate swap may be permitted in applying the simplified hedge accounting approach only if the occurrence of forecasted interest payments to be swapped is probable. When forecasted interest payments are no longer probable of occurring, a cash flow hedging relationship will no longer qualify for the simplified hedge accounting approach and the General Subsections of this Topic shall apply at the date of change and on a prospective basis.

Timing of Hedge Documentation for Certain Private Companies If Simplified Hedge Accounting Approach Is Not Applied

Concurrent Hedge Documentation

815-20-25-139 Concurrent with hedge inception, a **private company** that is not a financial institution as described in paragraph 942-320-50-1 shall document the following:

- a. The hedging relationship in accordance with paragraph 815-20-25-3(b)(1)
- b. The hedging instrument in accordance with paragraph 815-20-25-3(b)(2)(i)
- c. The hedged item in accordance with paragraph 815-20-25-3(b)(2)(ii), including (if applicable) firm commitments or the analysis supporting a last-of-layer designation in paragraph 815-20-25-3(c), or forecasted transactions in paragraph 815-20-25-3(d)
- d. The nature of the risk being hedged in accordance with paragraph 815-20-25-3(b)(2)(iii).

815-20-25-140 A private company that is not a financial institution is not required to perform or document the following items concurrent with hedge inception but rather is required to perform or document them within the time periods discussed in paragraph 815-20-25-142:

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted a new Exhibit A as detailed within this document (This is new guidance and any tracked changes within show changes from U.S. GAAP. That tracking will not be shown in SSAP No. 86.)

SSAP No. 86—Derivatives
Assessment of Hedge Effectiveness

Ref #2021-20

- a. The method of assessing hedge effectiveness at inception and on an ongoing basis in accordance with paragraph 815-20-25-3(b)(2)(iv) and (vi)
- b. Initial hedge effectiveness assessments in accordance with paragraph 815-20-25-3(b)(2)(iv)(01) through (04).

815-20-25-141 Example 1A beginning in paragraph 815-20-55-80A illustrates hedge documentation when the critical terms of the hedging instrument and hedged forecasted transaction match. Although that Example illustrates the documentation of the method of assessing hedge effectiveness, private companies that are not financial institutions may complete hedge documentation requirements in accordance with paragraphs 815-20-25-139 through 25-140.

Hedge Effectiveness Assessments

815-20-25-142 For a private company that is not a financial institution, the performance and documentation of the items listed in paragraph 815-20-25-140, as well as required subsequent quarterly hedge effectiveness assessments, may be completed before the date on which the next interim (if applicable) or annual financial statements are available to be issued. Even though the completion of the initial and ongoing assessments of effectiveness may be deferred to the date on which financial statements are available to be issued the assessments shall be completed using information applicable as of hedge inception and each subsequent quarterly assessment date when completing this documentation on a deferred basis. Therefore, the assessment should be performed to determine whether the hedge was highly effective at achieving offsetting changes in fair values or cash flows at inception and in each subsequent quarterly assessment period up to the reporting date.

Hedge Accounting Provisions Applicable to Certain Not-for-Profit Entities

815-20-25-143 Not-for-profit entities (except for not-for-profit entities that have issued, or are a conduit bond obligor for, securities that are traded, listed, or quoted on an exchange or an over-the-counter market) may apply the guidance on the timing of hedge documentation and hedge effectiveness assessments in paragraphs 815-20-25-139 through 25-142. Specifically, those entities shall document the items listed in paragraph 815-20-25-139 concurrent with hedge inception, but they may perform and document the items listed in paragraph 815-20-25-140 and perform the required subsequent quarterly hedge effectiveness assessments in accordance with paragraph 815-20-25-142 within the time periods discussed in paragraph 815-20-25-142.

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted the proposed revisions shown as tracked changes to SSAP No. 86 within this document.

SSAP No. 86—Derivatives
Measurement of Excluded Components

Ref #2021-20

Review of U.S. derivative guidance and the application to SAP is complex with many facets. This document is the second of two initial documents and focuses on the accounting and reporting of hedging instruments, including excluded components.

2) Measurement of Excluded Components In Hedging Instruments

Existing guidance in SSAP No. 86, paragraph 40, Exhibit B – Assessment of Hedging Effectiveness, and Exhibit C – Specific Hedge Accounting Procedures for Derivatives address components permitted to be excluded when determining hedge effectiveness and/or the measurement of excluded components. Key elements to note with regards to the existing guidance:

- Components permitted for exclusion in Exhibit B were adopted from U.S. GAAP (FAS 133, paragraph 63) at the time of initial SSAP adoption. Although these have not been updated since original issuance, NAIC staff is proposing (in the Hedge Effectiveness review document) to continue the adoption of U.S. GAAP in determining hedge effectiveness. This will ensure that hedging instruments identified as effective hedges under U.S. GAAP will be considered effective hedges under statutory accounting principles.
- The guidance in paragraph 40 and Exhibit B appears to adopt U.S. GAAP with the treatment of accounting for excluded components at fair value, with changes in fair value recognized as unrealized gains or losses.
- The existing guidance adopted from U.S. GAAP (in paragraph 40 and Exhibit B) is contradictory to guidance in SSAP No. 86, paragraph 23 and Exhibit C. Pursuant to paragraph 23, entities should not bifurcate the effectiveness of derivatives and a derivative instrument is either classified as an effective hedge or an ineffective hedge. If classified as an effective hedge, then the measurement method of the hedged item is used for the hedging instrument (e.g., amortized cost). This guidance does not seemingly permit reporting entities to report part of a hedging instrument at amortized cost, with excluded components reported at fair value. (However, NAIC staff believes this may in fact occur in practice under the provisions of paragraph 40 and Exhibit B.)
- Furthermore, the guidance in Exhibit C for foreign currency swaps and forwards identifies that premiums / discounts shall be amortized into income over the life of the contract. This treatment is different than the fair value / change in unrealized recognition for excluded component detailed in paragraph 40 and Exhibit B. (This guidance has been part of Exhibit C since the original adoption of the SSAP and reflects a difference from U.S. GAAP.)

Interested parties have identified that the SAP treatment of excluded components related to foreign currency transactions are hindering the ability to engage in those transactions and have requested consideration to 1) clarify the inconsistent guidance in SSAP No. 86, and 2) consider SAP specific measurement methods for excluded components to prevent surplus volatility from derivative transactions.

As background information, the classification of derivatives as highly effective is ultimately an income-statement matching tool. Although all derivatives are reported at fair value under U.S. GAAP, if effective

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted the revisions noted herein.

SSAP No. 86—Derivatives
Measurement of Excluded Components

Ref #2021-20

hedges, then changes in fair value are allocated to either net income or other comprehensive income (OCI) in a manner that matches and predominantly offsets the fluctuations from the hedged item. (For example, under U.S. GAAP, a fair value hedge requires both the hedging instrument and the hedged item to be reported at fair value, so fluctuations on one of offset by the other.) Under SAP, as the hedged items are not commonly reported at fair value, the guidance in SSAP No. 86 permits the derivative to reflect a measurement method that is more akin to the hedged item. (So, if hedging a bond at amortized cost, the hedging instrument would also be reported at amortized cost. This prevents fair value fluctuations from the highly effective hedge from causing ‘noise’ in the financial statements throughout the hedge duration.)

Interested parties have communicated that requiring excluded components for foreign currency hedges to be recognized at fair value, with changes in fair value recognized as unrealized gains / losses, the financial statements show volatility that is not reflective of the underlying hedging transaction:

- For foreign currency forward contracts that have a premium / discount (e.g., forward point – difference between the forward contract rate and the spot rate at derivative execution), the amount required is set at origination. Although the change in spot rate over the hedge term could result with a fair value change of the forward point / premium, this change in fair value does not impact the required amount that was set at derivative execution. (Under Exhibit C, the existing guidance would require amortization of the premium, but this is conflicting with paragraph 40 and Exhibit B.) Regardless of if the derivative is terminated early or is identified as ineffective, there is no change to the amount required from the forward point determined at derivative execution. **(As such, requiring recognition at fair value, and the change of fair value, does not result with a presentation of the amount owed by the reporting entity.)**
- For a foreign currency swap with a cross-currency basis spread, the fair value changes are captured as part of the foreign currency periodic interest accruals. (A forward contract does not have periodic interest accruals, which is why the premium / forward point is proposed to be amortized under the prior example). Furthermore, regardless of if the derivative transaction continues to be effective, at the time of derivative maturity, the cross-currency basis spread is zero. The only time a reporting entity would be obligated to provide payment for a cross-currency basis spread is if the currency swap is terminated prior to maturity. Interested parties have noted that this is unlikely for the following reasons:
 - Most foreign bond exposures come through private investments that are generally more difficult to sell, providing a disincentive to selling the bond exposure.
 - The investment was originally acquired as the risk profile of the foreign bond was attractive to the reporting entity over the term of the investment. So, unless the bond issuer is having significant credit deterioration, it is unlikely an insurer will sell the bond.
 - In the event the foreign bond is terminated early, the derivative would also be terminated early. This will result in both items being removed from the balance sheet, and the offsetting economics would be recognized together in the same period. (So, in this situation, even if a cross-currency basis spread is obligated, it would be offset by the foreign currency impact of the bond.)

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted the proposed revisions shown as tracked changes to SSAP No. 86 within this document.

SSAP No. 86—Derivatives
Measurement of Excluded Components

Ref #2021-20

- Industry representatives have identified that it would be even more unlikely for the derivative to be sold while retaining the foreign bond, however, if that was to occur, then the existing guidance for derivative termination would occur.

After considering the scenarios and industry comments for foreign currency excluded components, NAIC staff agrees that requiring these foreign currency excluded components to be reported at fair value, with changes in fair value recognized as unrealized gains / losses throughout the derivative term, results with financial statement impacts that are not reflective of the derivative transactions. Ultimately, the fair value recognition of these components creates surplus volatility / noise, that is not reflective of the intent, nor the final outcome of the derivative instrument. NAIC staff highlights that the key exception to this conclusion would be for scenarios in which a reporting entity was to elect to terminate a derivative in advance of the maturity date. Although existing guidance requires recognition at fair value with the impact in net income (realized gain/loss) at the time of such termination, NAIC staff believes it would be more appropriate to require recognition at fair value at the time that an entity has decided to terminate a hedging instrument prior to its maturity date. This would be consistent with other statutory accounting guidance that requires recognition at fair value (other than amortized cost) at the time such decisions are made. NAIC staff believe this would be appropriate in situations in which both the hedging instrument and hedged item would be terminated together and situations in which the hedging instrument is terminated while the hedged item continues to be held.

Although the prior discussion, and current industry comments, were focused on foreign currency excluded components, NAIC staff highlights that U.S. GAAP permits other elements to be excluded from the assessment of hedge effectiveness. These include the following:

- a. If the effectiveness of a hedge with an option is assessed based on changes in the option's intrinsic value, the change in the time value of the option would be excluded from the assessment of hedge effectiveness.
- b. If the effectiveness of a hedge with an option is assessed based on changes in the option's minimum value, that is, its intrinsic value plus the effect of discounting, the change in the volatility value of the contract shall be excluded from the assessment of hedge effectiveness.
- c. An entity may exclude any of the following components of the change in an option's time value from the assessment of hedge effectiveness:
 - i. The portion of the change in time value attributable to the passage of time (theta)
 - ii. The portion of the change in time value attributable to changes due to volatility (vega)
 - iii. The portion of the change in time value attributable to changes due to interest rates (rho).

Even if specific guidance is established for the foreign currency forward point and the cross-currency basis spread, statutory accounting guidance would still need clarification on the accounting and reporting for the other excluded components. If these excluded components are reported at fair value, with changes in unrealized gain/loss, NAIC staff highlights that the guidance should be clear in SSAP No. 86 and in the Schedule DB reporting instructions. Based on preliminary information, it seems current reporting for

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted the revisions noted herein.

SSAP No. 86—Derivatives
Measurement of Excluded Components

Ref #2021-20

effective hedges is likely inconsistent for hedging instruments that have excluded components. NAIC staff has the impression that the following two options may currently be occurring:

- BACV reflects amortized cost. This would be consistent with SSAP No. 86, paragraph 23, but would be contrary to paragraph 40 and Exhibit B. (This would mean that the excluded components are not being recognized in the statutory financial statements.)
- BACV reflects a combination of amortized cost and fair value for the excluded components. This would be consistent with SSAP No. 86, paragraph 40 and Exhibit B, but would present an odd representation in Schedule DB as a derivative reported as an effective hedge would have an unrealized gain/loss, and the amount shown as an unrealized gain or loss would only be a specific portion of the change in fair value and could not be calculated from the information reported.

Unless subsequent information and discussion supports a different approach for the non-foreign currency excluded components detailed above, NAIC staff agrees that reporting these components at fair value, with fair value changes recognized through unrealized gains/losses is appropriate. In order to facilitate this recognition, NAIC staff recommends clarifications to SSAP No. 86 to specify the commingled reporting of BACV for effective hedges with excluded components, as well as revisions to Schedule DB to capture information on excluded components in new electronic-only columns. NAIC staff also recommends a new disclosure that captures information on all excluded components by classification type.

Proposed SSAP Revisions To Incorporate / Clarify Guidance for Excluded Components

Derivatives Used in Hedging Transactions

22. Derivative instruments used in hedging transactions that meet the criteria of a highly effective hedge shall be considered an effective hedge and are permitted to be valued and reported in a manner that is consistent with the hedged asset or liability (referred to as hedge accounting). For instance, assume an entity has a financial instrument on which it is currently receiving income at a variable rate but wishes to receive income at a fixed rate and thus enters into a swap agreement to exchange the cash flows. If the transaction qualifies as an effective hedge and a financial instrument on a statutory basis is valued and reported at amortized cost, then the swap would also be valued and reported at amortized cost. Derivative instruments used in hedging transactions that do not meet or no longer meet the criteria of an effective hedge, or that meet the required criteria but the entity has chosen not to apply hedge accounting, shall be accounted for at fair value and the changes in the fair value shall be recorded as unrealized gains or unrealized losses (referred to as fair value accounting)¹.

23. Entities shall not bifurcate the effectiveness of derivatives. A derivative instrument is either classified as an effective hedge or an ineffective hedge. Entities must account for the derivative using fair value accounting if it is deemed to be ineffective or becomes ineffective. [Derivative instruments classified as effective with excluded components in determining hedge effectiveness pursuant to Exhibit A, paragraph 8, shall account for the derivative and excluded components pursuant to the guidance in paragraph 40.](#) Entities may redesignate a derivative in a hedging relationship even though the derivative was used in a previous hedging relationship that proved to be ineffective. A change in the counterparty

¹ Pursuant to paragraph 19, the gross reported value of a derivative and the determination of unrealized gains or losses shall exclude the impact of financing premiums. Premiums payable or receivable from the acquisition or writing of a derivative shall not be reflected in the gross reporting of derivatives or in determining the fair value change in a derivative.

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted the proposed revisions shown as tracked changes to SSAP No. 86 within this document.

SSAP No. 86—Derivatives
Measurement of Excluded Components

Ref #2021-20

to a derivative instrument that has been designated as the hedging instrument in an existing hedging relationship would not, in and of itself, be considered a termination of the derivative instrument. An entity shall prospectively discontinue hedge accounting for an existing hedge if any one of the following occurs:

- a. Any criterion in paragraphs 26-38 is no longer met;
- b. The derivative expires or is sold, terminated, or exercised (the effect is recorded as realized gains or losses or, for effective hedges of firm commitments or forecasted transactions, in a manner that is consistent with the hedged transaction – see paragraph 24);
- c. The entity removes the designation of the hedge; or
- d. The derivative is deemed to be impaired in accordance with paragraph 18. A permanent decline in a counterparty's credit quality/rating is one example of impairment required by paragraph 18, for derivatives used in hedging transactions.

Hedge Effectiveness

39. The measurement of hedge effectiveness for a particular hedging relationship shall be consistent with the entity's risk management strategy and the method of assessing hedge effectiveness that was documented at the inception of the hedging relationship, as discussed in paragraph 41.

40. The gain or loss on a derivative designated as a hedge and assessed to be effective is reported consistently with the hedged item. (Therefore, if the hedged item is reported at amortized cost, and the hedging instrument is consistent with that measurement method, fluctuations in fair value would not be recognized as unrealized gains or losses for either the hedging item or hedging instrument.) If an entity's defined risk management strategy for a particular hedging relationship excludes a specific component of the gain or loss, or related cash flows, on the hedging derivative from the assessment of hedge effectiveness (as discussed in Exhibit ~~BA~~, paragraph 8), specific accounting treatment shall be followed for the that excluded component: ~~of the gain or loss shall be recognized as an unrealized gain or loss. For example, if the effectiveness of a hedge with an option contract is assessed based on changes in the option's intrinsic value, the changes in the option's time value would be recognized in unrealized gains or losses. Time value is equal to the fair value of the option less its intrinsic value.~~

- a. If the excluded component pertains to the difference between a foreign currency spot price and the forward or future price (e.g., a forward spot rate), then this premium / discount shall be amortized into income over the life of the contract or hedged program. (This guidance addresses the excluded component in Exhibit A, paragraph 8d.)
- b. If the excluded component pertains to a foreign currency swap cross-currency basis spread, the impact of fair value changes shall be reflected as a component of the foreign currency swap's periodic interest accrual. (This guidance addresses the excluded component in Exhibit A, paragraph 8e.)
- c. For all other excluded components, the excluded component shall be measured and reported at fair value, with changes in fair value recognized as unrealized gains or losses. (This guidance shall be applied to excluded components detailed in Exhibit A, paragraphs 8a-8c.)

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted the revisions noted herein.

SSAP No. 86—Derivatives
Measurement of Excluded Components

Ref #2021-20

41. Hedging instruments with excluded components shall be identified in the financial statement investment schedule (Schedule DB) and shall be disclosed pursuant to paragraph 41g.

Proposed New Disclosure Paragraph (This is proposed as a new subparagraph 41g with reordering of subsequent paragraphs.)

g. For hedging instruments with excluded components for determining hedge effectiveness:

i. In the investment schedule, identify hedging instruments with excluded components, and report the current fair value of the excluded component, the fair value of the excluded component that is reflected in the reported BACV for the hedging instrument (this item would not be applicable for foreign-currency forwards and currency swaps where the forward points or cross-currency basis, respectively, are the excluded component), and the change in fair value reported as an unrealized gains/loss. (Note – These items will be proposed in electronic columns to Schedule DB.)

ii. In the notes to the financial statements, provide information on the aggregate excluded components by category: Time Value, Intrinsic Value, Forward Points and Cross Currency Basis Spread. The aggregate amounts reported should include the following (as applicable): current fair value, recognized unrealized gain/loss, the fair value reflected in BACV, and for the excluded forward points (e.g., forward spot rates), the aggregate amount owed at maturity, along with current year and remaining amortization. (Note – These items will be captured in a blanks proposal / template.)

Proposed Edits to Exhibit C – Foreign Currency Swaps and Forwards

Note: Only Specific Excerpts Included

Specific hedge accounting procedures for derivative instruments are outlined below.

1. Call and Put Options, Warrants, Caps, and Floors:
 - a. Accounting at Date of Acquisition (purchase) or Issuance (written): The premium paid or received for purchasing or writing a call option, put option, warrant, cap or floor shall either be (i) recorded as an asset (purchase) or liability (written) on the Derivative line on the Assets (or) Liabilities pages or (ii) combined with the hedged item(s) individually or in the aggregate;
 - b. Statement Value:
 - i. Open derivatives hedging items recorded at amortized cost:
 - (a) Options, warrants, caps, and floors purchased or written shall be valued at amortized cost in a manner consistent with the hedged item. (Components of a hedging instrument excluded from the determination of hedge effectiveness shall be recognized at fair value, with changes in fair value recognized as unrealized gains/losses throughout the duration of the hedging instrument. These components are not captured within the guidance for effective hedges detailed within this section.);

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted the proposed revisions shown as tracked changes to SSAP No. 86 within this document.

SSAP No. 86—Derivatives

Measurement of Excluded Components

Ref #2021-20

- (b) The amortization period and methods used shall result in a constant effective yield over the life of the hedged item or program. (For floating rate hedged items, the estimated effective yield shall be based on the current rate so the changes in yields attributable to changes in interest rates will be recognized in the period of change). Specific treatment includes:
- (1) Holdings in derivatives purchased or written within a year of maturity or expiry need not be amortized;
 - (2) For hedges of forecasted transactions or firm commitments, the derivative may be recorded at cost until the hedged transaction occurs or it is determined that the hedge was not effective (see (d) in this section 1.b.i.);
 - (3) For other derivatives, the amortization period is usually from date of acquisition (issuance) of the derivative to maturity of the hedged item or program.
- (c) For hedges where the cost of the derivative is combined with the hedged item, the statement value is zero. The fair value of the derivative and hedged item shall be determined and reported separately, either individually or in the aggregate;
- (d) For hedges of forecasted transactions or firm commitments, the derivative shall be recorded at cost until (1) the hedged transaction occurs or (2) it is determined that the hedge was not effective (when the derivative is valued in accordance with (e) in this section);
- (e) If during the life of the derivative it or a designated portion of the derivative is no longer effective as a hedge, valuation at amortized cost ceases and the derivative or the designated portion of the derivative shall be valued at its current fair value with gains and losses recognized in unrealized gains or unrealized losses to the extent it ceased to be an effective hedge.
- d. Gain/Loss on Termination of an option, warrant, cap or floor accounted for under hedge accounting (includes closing, exercise, maturity, and expiry):
- i. Exercise of an Option: The remaining book value of the derivative shall become an adjustment to the cost or proceeds of the hedged item(s) received or disposed of individually or in aggregate;
 - ii. Sale, maturity, expiry, or other closing transaction of a derivative which is an effective hedge—Any gain or loss on the transaction, except for excluded components, will adjust the basis (or proceeds) of the hedged item(s) individually or in aggregate. Alternatively, if the item being hedged is subject to IMR, the gain or loss on the terminated hedging derivative may be realized and shall be subject to IMR upon termination. For hedging instruments with excluded components in determining hedge effectiveness, the unrealized gain/loss from the change in fair value of the excluded component shall be realized upon the closing transaction.

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted the revisions noted herein.

SSAP No. 86—Derivatives
Measurement of Excluded Components

Ref #2021-20

[This gain/loss shall not be used to adjust the basis or proceeds of the hedged item.](#)

- iii. Gain/loss on termination of derivatives will be recognized currently in net income (realized gain/loss) to the extent they ceased to be effective hedges.
 - iv. Upon the redesignation of a derivative from a currently effective hedging relationship:
 - (a) with an item(s) carried at amortized cost to another effective hedging relationship with an item(s) carried at amortized cost, the derivative shall continue to be recorded at amortized cost and no gain or loss on the derivative shall be recognized.
 - (b) with an item(s) carried at amortized cost or fair value to an effective relationship with an item(s) carried at fair value, the accounting for the derivative shall be consistent with (ii) above.
 - (c) with an item(s) carried at fair value to an effective relationship with an item(s) carried at amortized cost, the accounting for the derivative shall be consistent with (ii) above.
2. Swaps, Collars, and Forwards (see also discussion in Introduction above):
- a. Accounting at Date of Opening Position:
 - i. Any premium paid or received at date of opening shall either be (a) recorded on the Derivative line on the Assets (or) Liabilities pages or (b) combined with the hedged item(s), individually or in the aggregate;
 - b. Statement Value:
 - i. Open derivatives hedging items recorded at amortized cost:
 - (a) Swaps, collars, and forwards shall be valued at amortized cost in a manner consistent with hedged item. [\(Components of a hedging instrument excluded from the determination of hedge effectiveness not addressed in 2.b.iii shall be recognized at fair value, with changes in fair value of the excluded component recognized as unrealized gains/losses throughout the duration of the hedging instrument. These components are not captured within the guidance for effective hedges detailed within this section.\)](#)
 - (b) The amortization period and methods used shall result in a constant effective yield over the life of the hedged item or program. (For floating rate hedged items the estimated effective yield shall be based on the current rate so the changes in yields attributable to changes in interest rates will be recognized in the period of change.) Specific treatment includes:

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted the proposed revisions shown as tracked changes to SSAP No. 86 within this document.

SSAP No. 86—Derivatives
Measurement of Excluded Components Ref #2021-20

- (1) Holdings in derivatives purchased or written within a year of maturity or expiry need not be amortized;
 - (2) For hedges of forecasted transactions or firm commitments, the derivative shall be recorded at cost until (a) the hedged transaction occurs or (b) it is determined that the hedge was not effective (see (5) in this section 2.b.i.);
 - (3) For other derivatives the amortization period is usually from date of acquisition (issuance) of the derivative to maturity of the hedged item or program;
 - (4) For hedges where the cost of the derivative is combined with the hedged item, the statement value is zero. The fair value of the derivative and hedged item shall be determined and reported separately, either individually or in the aggregate;
 - (5) If during the life of the derivative it or a designated portion of the derivative is no longer effective as a hedge, valuation at amortized cost ceases and the derivative or a designated portion of the derivative shall be valued at its current fair value with gains and losses recorded in unrealized gains or unrealized losses to the extent that it ceased to be an effective hedge. Upon redesignation into an effective hedging relationship, the derivative's mark to fair value through unrealized gain or loss shall be reversed.
- ii. Open derivatives hedging items recorded at fair value (where gains and losses on the hedged item are recognized as adjustments to unassigned funds (surplus)):
 - (a) Swaps, collars, or forwards shall be valued at current fair value with changes in fair value recognized currently consistent with the hedged item; this will result in unrealized gain/loss treatment with adjustment to unassigned funds (surplus);
 - (b) For hedges where the derivative is combined with the hedged item, the fair value of the derivative and hedge item shall be determined and reported separately, either individually or in the aggregate. The cost (book value) basis used to figure gain/loss on the derivative is zero.
 - iii. Open foreign currency swap and forward contracts hedging foreign currency exposure on items denominated in a foreign currency and translated into U.S. dollars where fair value accounting is not being used:
 - (a) ~~The foreign exchange premium (discount) on the currency contract shall be amortized into income over the life of the contract or hedge program.~~ The foreign exchange premium (discount) is defined as the foreign currency (notional) amount to be received (paid) times the net of the forward rate minus the spot rate at the time the contract was opened. [For forward contracts, an excluded component representing a foreign](#)

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted the revisions noted herein.

SSAP No. 86—Derivatives
Measurement of Excluded Components

Ref #2021-20

exchange premium (discount) (forward points) on the currency contract shall be amortized into income over the life of the contract or hedge program. Amortization is not required if the contract was entered into within a year of maturity. For foreign currency swaps, an excluded component representing a cross-currency basis spread, is recognized into income through the foreign currency swap's periodic interest accruals.

~~Amortization is not required if the contract was entered into within a year of maturity;~~

- (b) A foreign currency translation adjustment shall be reflected as an unrealized gain/loss (unassigned funds (surplus) adjustment) using the same procedures as done to translate the hedged item;
- (c) The unrealized gain/loss for the period equals the foreign currency (notional) amount to be received (paid) times the net of the current spot rate minus the prior period end spot rate;
- (d) The statement value of the derivative equals the amortized cost plus:
 - 1. For forward contracts, the amortized (premium) discount plus the cumulative unrealized gain/(loss) on the contract.
 - 2. For foreign currency swaps, ~~the~~ the cumulative unrealized gain/(loss) on the contract. The cross-currency basis spread is recorded through the Investment Income Due and Accrued or Other Liabilities, as a component of the foreign currency swap's periodic interest accrual.

The cumulative unrealized gain/loss equals the foreign currency (notional) amount to be received (paid) times the net of the current spot rate minus the spot rate at the time the contract was opened;
- (e) Recognition of unrealized gains/losses and amortization of foreign exchange premium/discount on derivatives hedging forecasted transactions or firm commitments shall be deferred until the hedged transaction occurs. These deferred gains/losses will adjust the basis or proceeds of the hedged transaction when it occurs;
- (f) For hedges where the cost of the foreign currency contract is combined with the hedged item, the statement value on Schedule DB is zero. The fair value of the derivative and hedged item shall be determined and reported separately, either individually or in the aggregate;
- (g) ~~If during the life of the currency contract it or a designated portion of the currency contract is not effective as a hedge,~~ The derivative shall be recorded at fair value and valuation at amortized cost shall cease. To the extent it ceased to be an effective hedge, a cumulative unrealized gain/loss (surplus adjustment) ~~will~~ shall be recognized equal to the difference between the carrying value of the derivative on the balance sheet and the fair value of the derivative if either of the following occur:

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted the proposed revisions shown as tracked changes to SSAP No. 86 within this document.

SSAP No. 86—Derivatives
Measurement of Excluded Components

Ref #2021-20

1. During the life of the currency contract it or a designated portion of the currency contract is not effective as a hedge.

2. The entity decides to terminate the derivative in advance of scheduled maturity.

~~notional amount or designated notional amount times the difference between the forward rate available for the remaining maturity of the contract (i.e., the forward rate as of the balance sheet date) and the forward rate at the time it ceased to be an effective hedge.~~

- iv. Open derivatives hedging items recorded at fair value, where gains and losses on the hedged item are recognized currently in earnings: swaps, collars and forwards shall be valued at current fair value with changes in fair value recognized currently in earnings together with the gains and losses on the hedged item.
 - (a) If during the life of the derivative it or a designated portion of the derivative is no longer effective as a hedge, recognition of changes in fair value through earnings ceases. The derivative shall continue to be valued at its current fair value, but thereafter gains or losses shall be recognized in unrealized gains or unrealized losses to the extent it ceased to be an effective hedge.
- c. Cash Flows and Income:
 - i. Where the cost of the derivative is not combined with the hedged item:
 - (a) Amortization of premium paid or received on derivatives is an adjustment to net investment income or another appropriate caption within operating income consistent with the reporting of the hedged item;
 - (b) Periodic cash flows and accruals of income/expense are to be reported in a manner consistent with the hedged item, usually as net investment income or another appropriate caption within operating income.
 - ii. Where the cost of the derivative is combined with the hedged item, the cash flows and income of the derivative on Schedule DB is zero. All related amortization and cash flow accounting shall be reported with the hedged item instead of with the derivative.
- d. Gain/Loss on Termination of a swap, collar or forward accounted for under hedge accounting (includes closing, exercise, maturity, and expiry):
 - i. Exercise—The remaining book value of the derivative shall become an adjustment to the cost or proceeds of the hedged item(s) received or disposed of individually or in aggregate;
 - ii. Sale, maturity, expiry, or other closing transaction of a derivative which is an effective hedge—Any gain or loss on the transaction, except for excluded components, will adjust the basis (or proceeds) of the hedged item(s) individually or in aggregate. Alternatively, if the item being hedged is subject to IMR, the gain

Note: On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted the revisions noted herein.

SSAP No. 86—Derivatives
Measurement of Excluded Components

Ref #2021-20

or loss on the terminated hedging derivative may be realized and shall be subject to IMR upon termination.

- iii. Gain/loss on termination of derivatives will be recognized currently in net income (realized gain/loss) to the extent they ceased to be effective hedges.
- iv. Upon the redesignation of a derivative from a currently effective hedging relationship-
 - (a) with an item(s) carried at amortized cost to another effective hedging relationship with an item(s) carried at amortized cost, the derivative shall continue to be recorded at amortized cost and no gain or loss on the derivative shall be recognized.
 - (b) with an item(s) carried at amortized cost or fair value to an effective relationship with an item(s) carried at fair value, the accounting for the derivative shall be consistent with (ii) above.
 - (c) with an item(s) carried at fair value to an effective relationship with an item(s) carried at amortized cost, the accounting for the derivative shall be consistent with (ii) above.

Issue: SSAP No. 48 – Alternative Valuation of Minority Ownership Interests

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* establishes the statutory accounting principles for investments in joint ventures, partnerships, or limited liability companies (herein collectively referred to as SSAP No. 48 investments). This agenda item is presented to review the alternative valuation methods permitted in limited circumstances where the investee has a minor ownership interest (less than 10%) or lacks control as discussed in paragraphs 15 and 16 (see Authoritative Literature), and where audited U.S. GAAP basis financial statements are not available.

In general, SSAP No. 48 requires a financial statement audit for admission of investments with a more than minor ownership interest or where control is present. If an investee owns greater than 10% measured at the holding company level, or can exercise control, the SSAP No. 48 investment is to be reported using the equity method as defined in *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*, which effectively directs the valuation based on the nature of the operations (e.g., requiring statutory accounting for insurance operations or U.S. GAAP accounting for other various entities). Embedded in SSAP No. 97, the proxy for SSAP No. 48 investments in which the investor owns greater than 10% or can exercise control, is the requirement for a statutory or a U.S. GAAP financial statement audit. (The requirement for audited financial statements in these instances is not proposed to be the subject of discussion.)

If insurer has less than 10% ownership (minor ownership interest) or lacks control the preference is to use audited U.S. GAAP financial statements. However, when audited U.S. GAAP financials statements are not available, paragraph 9 provides the following three alternatives, which includes: 1) investee’s audited foreign GAAP with an audited U.S. GAAP reconciliation footnote, 2) audited IFRS financial statements, or 3) audited U.S. tax equity financial statements. The permissible exceptions for when audited U.S. GAAP basis financials are not available are detailed in paragraph 9 below:

9. **If audited U.S. GAAP basis financial statements of the investee are not available, joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest (i.e., less than 10%) or lacks control as stipulated in paragraphs 15 and 16 may be recorded based on either of the valuation methodologies allowed under paragraphs 9.a. or 9.b.** If either one of the valuation methodologies allowed under paragraphs 9.a. or 9.b. is used to value the investment, documentation must be maintained regarding the reason that audited U.S. GAAP basis financial statements could not be provided.
 - a. Non U.S. joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest of less than 10% and for which audited U.S. GAAP basis financial statements of the investee are not available, may be recorded based on:
 - i the U.S. GAAP basis equity as set forth in the audited footnote reconciliation of the investee's equity and income to U.S. GAAP within the investee's audited foreign GAAP prepared financial statements or,

- ii the IFRS basis equity as set forth in the investee's audited IFRS financial statements prepared in compliance, both annually and quarterly, with IFRS as issued by the International Accounting Standards Board (IASB).
- b. **If audited U.S. GAAP basis financial statements of the investee are not available, joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest of less than 10%, measured at the holding company level, may be recorded based on the underlying audited U.S. tax basis equity.** For investments recorded based on the underlying audited U.S. tax basis equity, the reporting entity shall review investments held by the joint venture, partnership or limited liability company in accordance with the impairment guidance in paragraphs 18 and 19. The reporting entity must first attempt to obtain audited U.S. GAAP basis financial statements and, if such financial statements are unavailable, must maintain documentation regarding the reason that audited U.S. GAAP basis financial statements could not be provided.

NAIC staff believe the intent of the U.S. GAAP audit exceptions provided in paragraph 9 was meant to accommodate limited situations where an insurer has a minor ownership interest and or lacks control and therefore, they are unable to require or entice the entity to acquire a U.S. GAAP audit. NAIC staff note this distinction, as SSAP No. 48, paragraph 9 currently permits that if an insurer owns less than 10% **or** lacks control, they are permitted the exceptions which still require audits if audited U.S. GAAP basis financial statements are unavailable. It is important to note that technically SSAP No. 48, paragraph 16 could permit a significant ownership percentage and as long as an insurer has rebutted control of the investment, they would be permitted to use the paragraph 9 exceptions, that is if the insurer could articulate why audited U.S. GAAP basis financials statements were not available.

This agenda item has been drafted to propose two alternative clarifications to SSAP No. 48. The first option presented is to propose deletion of the U.S. GAAP audit exception provided in SSAP No. 48, paragraph 9.b as this exception does not appear to be utilized by insurers. The second option presented is to retain the U.S. GAAP audit exception in paragraph 9.b but clarify that the U.S. tax basis audit is to reside at the investee level – that is the investee must have an audit in order for this valuation be permitted for admission of the investment. This clarification would eliminate any ambiguity regarding the level at which the audit is required.

Existing Authoritative Literature: While a significant portion of the potentially impacted paragraphs have been included above, all relevant SSAP No. 48 guidance is included below, with pertinent items bolded for emphasis.

SCOPE OF STATEMENT

1. **This statement establishes statutory accounting principles for investments in any joint ventures, partnerships, and limited liability companies, including investments** in certified capital companies (CAPCO) per *INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO)*, whether or not it is considered to be controlled by or affiliated with the reporting entity. Single real estate property investments that are wholly-owned by an LLC that is directly and wholly-owned by the reporting entity, and that meet the criteria established in *SSAP No. 40R—Real Estate Investments*, are excluded from this statement. This statement does not address the accounting for investments in partnerships and limited liability companies that invest in Low-Income Housing Tax Credit Properties as discussed in *SSAP No. 93—Low-Income Housing Tax Credit Property Investments*. However, investments in certain state Low-Income Housing Tax Credit Property Investments that do not fall within the scope of SSAP No. 93 are covered by the requirements of this statement.

SUMMARY CONCLUSION

2. **Investments in joint ventures shall include investments in corporate joint ventures and unincorporated joint ventures** (also referred to as undivided interests in ventures). A corporate joint venture is defined as a corporation owned and operated by a small group (the joint venturers) as a separate and specific business or project for the mutual benefit of the members of the group. A corporate joint venture usually provides an arrangement under which each joint venturer may participate, directly or indirectly, in the overall management of the joint venture. Joint venturers thus have an interest or relationship other than as passive investors. An unincorporated joint venture is similar in its purpose but is not incorporated.

3. **Investments in partnerships shall include investments in general partnership interests and limited partnership interests.** A general partnership is defined as an association in which each partner has unlimited liability. Each partner assumes joint and several liability for all partnership debts. A limited partnership shall be defined as a partnership having two classes of partners: (a) general partners who manage the partnership, subject to the partnership agreement, and have personal liability for the general obligations of the partnership and (b) limited partners who are passive investors and have no personal liability beyond their investment.

4. A limited liability company is defined as a business organization which is a hybrid of a corporation and partnership whereby the owners have limited liability like a corporation and profits may pass through to the owners for tax purposes like a partnership if certain criteria are met. The owner's personal liability is limited to his own acts and the owners can fully participate in the management of the business with no adverse impact on their limited liability.

5. Investments in the ventures defined in paragraphs 2-4 meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement. Investments in joint ventures, partnerships, and limited liability companies shall be reported in Other Invested Assets in the financial statements.

6. **Investments in these ventures, except for joint ventures, partnerships and limited liability companies with a minor ownership interest, shall be reported using an equity method as defined in SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities, paragraphs 8.b.i. through 8.b.iv.** (The equity method calculation may result with a negative valuation of the investment; therefore, the SSAP No. 97 equity method calculation shall occur regardless of whether the investment is supported by an audit and the reporting entity will nonadmit the investment.) A reporting entity whose shares of losses in a SSAP No. 48 entity exceeds its investment in the SSAP No. 48 entity shall disclose the information required by SSAP No. 97, paragraph 35.a.

7. Investments reported using an equity method from SSAP No. 97, paragraph 8.b.ii. through 8.b.iv. may have fiscal year ends, not calendar year ends. To recognize a change to the reporting year-end of an equity method investee, including changes in, or the elimination of, previously existing differences (lag period) due to the reporting entity's ability to obtain financial results from a reporting period that is more consistent with, or the same as, that of the reporting entity's, the guidance included in *FASB Emerging Issues Task Force No. 06-9: Reporting a Change in (or the elimination of) a Previously Existing Difference Between the Fiscal Year-End of a Parent Company and That of a Consolidated Entity or Between the Reporting Period of an Investor and That of an Equity Method Investee* that defines such reporting period changes as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors* shall be followed.

8. **Joint ventures, partnerships and limited liability companies in which the entity has a minor ownership interest (i.e., less than 10%) or lacks control as stipulated in paragraphs 15 and 16, shall be recorded based on the underlying audited U.S. GAAP equity of the investee.** The investment shall be nonadmitted if the audited financial statements include substantial doubt about the entity's ability to

continue as a going concern. Additionally, the investment shall be nonadmitted on the basis/contents of the audit opinion as detailed in paragraph 21 of SSAP No. 97.

9. If audited U.S. GAAP basis financial statements of the investee are not available, joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest (i.e., less than 10%) or lacks control as stipulated in paragraphs 15 and 16 may be recorded based on either of the valuation methodologies allowed under paragraphs 9.a. or 9.b. If either one of the valuation methodologies allowed under paragraphs 9.a. or 9.b. is used to value the investment, documentation must be maintained regarding the reason that audited U.S. GAAP basis financial statements could not be provided.

- a. Non U.S. joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest of less than 10% and for which audited U.S. GAAP basis financial statements of the investee are not available, may be recorded based on:**
 - i the U.S. GAAP basis equity as set forth in the audited footnote reconciliation of the investee's equity and income to U.S. GAAP within the investee's audited foreign GAAP prepared financial statements or,**
 - ii the IFRS basis equity as set forth in the investee's audited IFRS financial statements prepared in compliance, both annually and quarterly, with IFRS as issued by the International Accounting Standards Board (IASB).**
- b. If audited U.S. GAAP basis financial statements of the investee are not available, joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest of less than 10%, measured at the holding company level, may be recorded based on the underlying audited U.S. tax basis equity. For investments recorded based on the underlying audited U.S. tax basis equity, the reporting entity shall review investments held by the joint venture, partnership or limited liability company in accordance with the impairment guidance in paragraphs 18 and 19. The reporting entity must first attempt to obtain audited U.S. GAAP basis financial statements and, if such financial statements are unavailable, must maintain documentation regarding the reason that audited U.S. GAAP basis financial statements could not be provided.**

10. The amount to be recorded shall be defined as the initial investment in an investee at cost (as defined in paragraph 3 of *SSAP No. 68—Business Combinations and Goodwill*) plus subsequent capital contributions to the investee. The carrying amount of the investment shall be adjusted for the amortization of the basis difference (difference between the cost and the underlying GAAP equity), as well as to recognize the reporting entity's share of: (i) the audited U.S. GAAP basis earnings or losses of the investee after the date of acquisition, adjusted for any distributions received, or (ii) if audited U.S. GAAP basis financial statements of the investee are not available, the earnings or losses of the investee after the date of acquisition, adjusted for any distributions received, based on either one of the valuation methodologies allowed under paragraphs 9.a. or 9.b. A reporting entity's share of adjustments, excluding changes in capital contributions to the investee, that are recorded directly to the investee's stockholders' equity shall also be recorded as adjustments to the carrying value of the investment with an offsetting amount recorded to unrealized capital gains and losses on investments.

11. **Entities may recognize their investment in joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest based on an unaudited basis for investment determination (i.e., foreign GAAP, IFRS, or tax basis as allowed under paragraph 9) if annual audited information is not complete as of the annual statement filing deadline.** The recorded investment shall be adjusted for annual audit adjustments, if any, as soon as annual audited information is available. If financial statements of an investee are not sufficiently timely for the reporting entity to apply an

equity method to the investee's current results of operations, the reporting entity shall record its share of the earnings or losses of an investee from the most recent available financial statements. A lag in reporting shall be consistent from period to period.

15. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by common management, or (d) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

16. Control as defined in paragraph 15 shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13% and therefore each member of the affiliated group shall be presumed to have control. This presumption will stand until rebutted by an evaluation of all the facts and circumstances relating to the investment based on the criteria in *FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18*. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting interests of an investee. The insurer shall maintain documents substantiating its determination for review by the domiciliary commissioner. Examples of situations where the presumption of control may be in doubt include the following:

- a. **Any limited partner investment in a Limited Partnership, unless the limited partner is affiliated with the general partner.**
- b. **An entity where the insurer owns less than 50% of an entity and there is an unaffiliated individual or group of investors who own a controlling interest.**
- c. **An entity where the insurer has given up participation rights as a shareholder to the investee.**

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups):

In May 2008, in agenda item 2007-34R: SSAP 48, the Working Group adopted revisions in SSAP No. 48 permitting the use of an audited U.S. tax basis equity valuation method in cases where the insurer is a minor interest or lacks control and audited U.S. GAAP financial statements of the investee were not available.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose two possible options for the U.S. GAAP audit exception in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*. Option #1 proposes to delete the audited U.S. tax basis equity as a permissible valuation method as this method does not appear to be utilized by insurers. Option #2 proposes to retain the audited U.S. tax basis equity valuation method but clarifies that the audit must reside at the investee level.

Option 1: Delete the valuation method permitted in SSAP No. 48, paragraph 9b.

9. If audited U.S. GAAP basis financial statements of the investee are not available, joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest (i.e., less than 10%) or lacks control as stipulated in paragraphs 15 and 16 may be recorded based on either of the valuation methodologies allowed under paragraphs 9.a. or 9.b. If either one of the valuation methodologies allowed under paragraphs 9.a. or 9.b. is used to value the investment, documentation must be maintained regarding the reason that audited U.S. GAAP basis financial statements could not be provided.

- a. Non U.S. joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest of less than 10% and for which audited U.S. GAAP basis financial statements of the investee are not available, may be recorded based on:
 - i the U.S. GAAP basis equity as set forth in the audited footnote reconciliation of the investee's equity and income to U.S. GAAP within the investee's audited foreign GAAP prepared financial statements or,
 - ii the IFRS basis equity as set forth in the investee's audited IFRS financial statements prepared in compliance, both annually and quarterly, with IFRS as issued by the International Accounting Standards Board (IASB).

~~b. If audited U.S. GAAP basis financial statements of the investee are not available, joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest of less than 10%, measured at the holding company level, may be recorded based on the underlying audited U.S. tax basis equity. For investments recorded based on the underlying audited U.S. tax basis equity, the reporting entity shall review investments held by the joint venture, partnership or limited liability company in accordance with the impairment guidance in paragraphs 18 and 19. The reporting entity must first attempt to obtain audited U.S. GAAP basis financial statements and, if such financial statements are unavailable, must maintain documentation regarding the reason that audited U.S. GAAP basis financial statements could not be provided.~~

Option 2: Retain the alternative valuation method but clarify that the required U.S. tax basis equity audit is to reside at the investee level.

9. If audited U.S. GAAP basis financial statements of the investee are not available, joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest (i.e., less than 10%) or lacks control as stipulated in paragraphs 15 and 16 may be recorded based on either of the valuation methodologies allowed under paragraphs 9.a. or 9.b. If either one of the valuation methodologies allowed under paragraphs 9.a. or 9.b. is used to value the investment, documentation must be maintained regarding the reason that audited U.S. GAAP basis financial statements could not be provided.

- a. Non U.S. joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest of less than 10% and for which audited U.S. GAAP basis financial statements of the investee are not available, may be recorded based on:
 - i the U.S. GAAP basis equity as set forth in the audited footnote reconciliation of the investee's equity and income to U.S. GAAP within the investee's audited foreign GAAP prepared financial statements or,
 - ii the IFRS basis equity as set forth in the investee's audited IFRS financial statements prepared in compliance, both annually and quarterly, with IFRS as issued by the International Accounting Standards Board (IASB).

- b. If audited U.S. GAAP basis financial statements of the investee are not available, joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest of less than 10%, measured at the holding company level, may be recorded based on the underlying audited U.S. tax basis equity. [The U.S. tax basis equity audit shall occur at the investee level.](#) For investments recorded based on the underlying audited U.S. tax basis equity, the reporting entity shall review investments held by the joint venture, partnership or limited liability company in accordance with the impairment guidance in paragraphs 18 and 19. The reporting entity must first attempt to obtain audited U.S. GAAP basis financial statements and, if such financial statements are unavailable, must maintain documentation regarding the reason that audited U.S. GAAP basis financial statements could not be provided.

Staff Review Completed by: Jim Pinegar– NAIC Staff, February 2022

Status:

On April 4, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed two possible options for the U.S. GAAP audit exception in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*. The options are described below while the revisions are illustrated above in the recommended action.

Option #1 proposes to delete the audited U.S. tax basis equity as a permissible valuation method as this method does not appear to be utilized by insurers.

Option #2 proposes to retain the audited U.S. tax basis equity valuation method but clarifies that the audit must reside at the investee level.

On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions detailed in option #2, as illustrated below, to *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*. These revisions clarify that the audit of an entity utilizing the U.S. tax basis equity valuation exception shall occur at the investee level.

Adopted revisions to SSAP No. 48:

9. If audited U.S. GAAP basis financial statements of the investee are not available, joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest (i.e., less than 10%) or lacks control as stipulated in paragraphs 15 and 16 may be recorded based on either of the valuation methodologies allowed under paragraphs 9.a. or 9.b. If either one of the valuation methodologies allowed under paragraphs 9.a. or 9.b. is used to value the investment, documentation must be maintained regarding the reason that audited U.S. GAAP basis financial statements could not be provided.

- a. Non U.S. joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest of less than 10% and for which audited U.S. GAAP basis financial statements of the investee are not available, may be recorded based on:
- i the U.S. GAAP basis equity as set forth in the audited footnote reconciliation of the investee's equity and income to U.S. GAAP within the investee's audited foreign GAAP prepared financial statements or,
 - ii the IFRS basis equity as set forth in the investee's audited IFRS financial statements prepared in compliance, both annually and quarterly, with IFRS as issued by the International Accounting Standards Board (IASB).

- b. If audited U.S. GAAP basis financial statements of the investee are not available, joint ventures, partnerships, and limited liability companies in which the entity has a minor ownership interest of less than 10%, measured at the holding company level, may be recorded based on the underlying audited U.S. tax basis equity. [The U.S. tax basis equity audit shall occur at the investee level.](#) For investments recorded based on the underlying audited U.S. tax basis equity, the reporting entity shall review investments held by the joint venture, partnership or limited liability company in accordance with the impairment guidance in paragraphs 18 and 19. The reporting entity must first attempt to obtain audited U.S. GAAP basis financial statements and, if such financial statements are unavailable, must maintain documentation regarding the reason that audited U.S. GAAP basis financial statements could not be provided.

Issue: Conceptual Framework – Updates

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: In December 2021, the Financial Accounting Standards Board (FASB) issued two new chapters of its conceptual framework. The conceptual framework is a body of interrelated objectives and fundamentals that provides the FASB with a foundation for setting standards and concepts to consider when it resolves questions or develops/modifies accounting and reporting guidance.

It is important to note that the Statements of Financial Accounting Concepts are not authoritative and do not establish new or change existing U.S. GAAP. Per the FASB chair, these concepts are “a tool for the Board to use in setting standards that improve the understandability of information entities provide to existing and potential investors, lenders, donors, and other resource providers.”

This agenda item reviews and summarizes each of the two newly issued concept chapters and reviews their potential impact on statutory accounting. Again, while the conceptual framework statements are not authoritative, they are the guiding principles for standard setting and these new updates have superseded chapters currently referenced in the *Accounting Practices and Procedures Manual (AP&P Manual)*. In addition, and most notably, in the case of one of these chapters, FASB changed certain key fundamental definitions, specifically the definition of an asset and a liability, which have historically been mirrored by statutory accounting.

Update 1:

FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements* introduced updated definitions of certain key elements used in financial reporting – the definition of an asset and liability. The chapter states that assets and liabilities have conceptual and definitional primacy because assets and liabilities (and changes in those elements) are foundational to all the other items reported in the financial statements. To correctly identify and represent an asset or liability is the beginning basis for all financial reporting and due to their importance, updates to both financial statement elements have been adopted. A summary of each, comparing the historical and current definitions, is provided below:

Changes regarding the definition of an ASSET:

- **Historical definition:** a probable future economic benefit obtained or controlled by a particular entity as a result of past transactions or events.
- **Historical Characteristics: Three essential characteristics:**
 1. it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows,
 2. a particular enterprise can obtain the benefit and control others' access to it, and
 3. the transaction or other event giving rise to the enterprise's right to or control of the benefit has already occurred.

- **New Definition:** a present right of an entity to an economic benefit.
- **Current Characteristics: Two essential characteristics:**
 1. it is a present right, and
 2. the right is to an economic benefit.

The combination of these two characteristics allows an entity to obtain the economic benefit and control others' access to the benefit. A present right of an entity to an economic benefit entitles the entity to the economic benefit and the ability to restrict others' access to the benefit to which the entity is entitled. For clarity, an "economic benefit" represents services or other items of economic value and generally result in net cash inflows to the entity.

Commentary regarding definitional changes:

The current definition of an asset no longer includes the term *probable* or the phrases *future economic benefit* and *past transactions or events*. The FASB concluded that the term *probable* has historically been misunderstood as implying that a future benefit must be probable to a certain threshold before the definition of an asset was met. Thus, if the probability of a future benefit was low, an asset could not be recognized. FASB also struck the phrase *future economic benefit* as this phrase often was interpreted that the asset must represent a certain future economic benefit (such as eventual cash inflows), however with this update, FASB clarified that the asset represents the rights to the benefit, not the actual benefit itself – nor the probability of realization.

Finally, FASB struck the phrase as the result of *past transactions or events*. It was concluded that if the asset represents a *present right*, by default, the right must have occurred as the result of a past transaction or event and thus this phraseology was deemed redundant and unnecessary.

Changes regarding **the definition of a LIABILITY:**

- **Historical definition:** are [certain or] probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events.
- **Historical Characteristics: Three essential characteristics:**
 1. it embodies a present duty or responsibility to one or more other entities that entails settlement by probable future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand,
 2. the duty or responsibility obligates a particular enterprise, leaving it little or no discretion to avoid the future sacrifice, and
 3. the transaction or other event obligating the enterprise has already happened.
- **New Definition:** a present obligation of an entity to transfer an economic benefit.
- **Current Characteristics: Two essential characteristics:**
 1. it is a present obligation, and
 2. the obligation requires an entity to transfer or otherwise provide economic benefit to others. (For the purposes of this characteristic, *transfer* is typically used to describe obligations to pay cash or convey assets, while the term *provide* is used to describe obligations to provide services or stand by to do so).

Commentary regarding definitional changes:

The current definition of a liability no longer includes the term *probable* or the phrase *in the future as a result of past transactions or events*. The FASB concluded that the term *probable* has historically been understood as implying that a future obligation must meet a probability to a certain threshold before the definition of a liability was met. Thus, if the probability of a future transfer of an asset (or the requirement to provide a service) was low, a liability would likely not be recognized. In removing the term *probable* (and replacing it with “present obligation”), FASB concluded that in almost all situations, the presence of an obligation will be apparent. It stated that most present obligations are legally enforceable, including obligations arising from binding contracts, agreements, statutes, or other legal or contractual means. Chapter 4 also discusses the prevalence of certain business risks and how to assess if they result in the recognition of a liability. It concluded that while certain businesses pose risk of future events occurring that will cause them to transfer an economic benefit (an asset), the risk itself does not represent a present obligation because exposure to a potential negative consequence does not constitute a present obligation.

However, FASB also stated situations lacking clear legal or contractual evidence of a present obligation may pose particular challenges that may make it difficult to discern whether a present obligation exists. In these settings, the FASB stated that constructive obligations or other noncontractual obligations are created by circumstance rather than by explicit agreement. In the absence of an explicit agreement, sufficient information to distinguish a present obligation is likely only available at the specific standards level. Thus, the FASB concluded that the specific facts and circumstances at the standards level (or in the case of statutory accounting, at the SAP level) must be utilized to determine whether the entity has created a constructive obligation and must recognize a liability.

FASB also struck the phrase as the result of *past transactions or events*. It was concluded that if the liability represents a *present right*, by default, the right must have occurred as the result of a past transaction or event and thus this phraseology was deemed redundant and unnecessary.

Update 2:

FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 7, Presentation* identifies factors that the FASB will consider when deciding **how** items should be displayed on the financial statements. Chapter 7 describes the information to be included in the financial statements and how appropriate presentation can contribute to the objective of financial reporting – to communicate financial information about an entity that is useful to existing and potential investors, lenders, and other creditors in making decisions about providing resources (goods and services) to the entity. These decisions typically involve buying or selling of goods/services or holding equity and debt instruments as well as providing or settling loans or other forms of credit. This chapter articulates that the financial statements meet a “general purpose” and should not be considered to meet all purposes for possible users – and thus a common set of conceptual standards is appropriate.

Chapter 7 also describes the importance of financial statement notes, or supplementary information so that financial statement users are provided with a more complete picture of an entity’s accounting policy or any particular unique circumstance or event. In terms of general reporting, the conceptual statement relays that a distinction between nonhomogeneous items should be depicted in the financial statements with different reporting line items and subtotals and that the information should be provided based on recognition and measurement standards. In essence, reporting should be sufficiently aggregated, but not aggregated to a level in which the information is too consolidated for general use and understanding. Once reported, then any significant accounting policy or circumstance would further be defined with accompanying notes.

The chapter broadly states that to meet the objectives of financial reporting, line items should be distinct based on the information being provided – as the information should distinguish between various types of transactions/events and should assist users in their estimates in the amounts and timing of future cash flows or the entity’s ability to

provide other economic value. The financial statements should depict the results of different types of transactions, including changes in events or other circumstances that may vary the frequency or predictability of performance based on many items, including changes in economic conditions.

In summary, while Chapter 7 does supersede sections of *Statement of Financial Accounting Concept 5*, it did not result in fundamental changes to the principal concepts of financial reporting. The chapter articulates the need for complete financial reporting, describes the interconnectedness of a ‘complete set of financial statements’ and relays the importance of these documents as the information in the financial statements is the primary (and typically the sole) source for analyzing current and potential future performance of an organization and its ability to meet its long-term financial objectives. At a high level, the chapter discusses what information should broadly be categorized as revenues, expenses, gains, and losses and to the extent equity is impacted by operations as well as changes in owners’ equity through investments or distributions.

In terms of the impact to statutory accounting, the updated concepts in this chapter are not expected to modify current guidance, other than to update references to superseded accounting concepts.

Existing Authoritative Literature:

NAIC Staff Note – the Preamble contains reference to certain concept statements in footnotes 2 and 4 and have been bolded below for ease of identification. It is important to note that while these footnotes currently reference superseded conceptual statements, the conceptual statements noted do not represent adopted guidance - they are noted as reference for overarching guiding principles regarding financial reporting.

Preamble

IV. Statutory Accounting Principles Statement of Concepts

25. This document states the fundamental concepts on which statutory financial accounting and reporting standards are based. These concepts provide a framework to guide the National Association of Insurance Commissioners (NAIC) in the continued development and maintenance of statutory accounting principles (“SAP” or “statutory basis”) and, as such, these concepts and principles constitute an accounting basis for the preparation and issuance of statutory financial statements by insurance companies in the absence of state statutes and/or regulations.

26. The NAIC and state insurance departments are primarily concerned with statutory accounting principles that differ from GAAP reflective of the varying objectives of regulation. Recodification of areas where SAP and GAAP are parallel is an inefficient use of limited resources.

27. SAP utilizes the framework established by GAAP. **FN2** This document integrates that framework with objectives exclusive to statutory accounting. The NAIC’s guidance on SAP is comprehensive for those principles that differ from GAAP based on the concepts of statutory accounting outlined herein. Those GAAP pronouncements that are not applicable to insurance companies will not be adopted by the NAIC. For those principles that do not differ from GAAP, the NAIC must specifically adopt those GAAP Pronouncements to be included in statutory accounting. GAAP Pronouncements do not become part of SAP until and unless adopted by the NAIC.

28. The body of statutory accounting principles is prescribed in the statutory hierarchy of accounting guidance. This hierarchy provides the framework for judging the presentation of statutory financial statements in conformance with statutory accounting principles.

29. Statutory requirements vary from state to state. While it is desirable to minimize these variations, to the extent that they exist it is the objective of NAIC statutory accounting principles to provide the standard against which the exceptions will be measured and disclosed if material.

FN 2 - The GAAP framework applicable to insurance accounting is set forth in *Statements of Financial Accounting Concepts One, Two, Five, and Six*. These documents, promulgated by the Financial Accounting Standards Board, set forth the objectives and concepts which are used in developing accounting and reporting standards.

V. Statutory Hierarchy

42. The following Hierarchy is not intended to preempt state legislative and regulatory authority.

Level 1

SSAPs, including U.S. GAAP reference material to the extent adopted by the NAIC from the FASB Accounting Standards Codification (FASB Codification or GAAP guidance)

Level 2

Consensus positions of the Emerging Accounting Issues (E) Working Group as adopted by the NAIC (INTs adopted before 2016)

Interpretations of existing SSAPs as adopted by the Statutory Accounting Principles (E) Working Group (INTs adopted in 2016 or beyond)

Level 3

NAIC Annual Statement Instructions

Purposes and Procedures Manual of the NAIC Investment Analysis Office

Level 4

Statutory Accounting Principles Preamble and Statement of Concepts FN4

Level 5

Sources of nonauthoritative GAAP accounting guidance and literature, including: (a) practices that are widely recognized and prevalent either generally or in the industry, (b) FASB Concept Statements, (c) AICPA guidance not included in FASB Codification, (d) International Financial Reporting Standards, (e) Pronouncements of professional associations or regulatory agencies, (f) Technical Information Service Inquiries and Replies included in the AICPA Technical Practice Aids, and (g) Accounting textbooks, handbooks and articles

43. If the accounting treatment of a transaction or event is not specified by the SSAPs, preparers, regulators and auditors of statutory financial statements should consider whether the accounting treatment is specified by another source of established statutory accounting principles. If an established statutory accounting principle from one or more sources in Level 2 or 3 is relevant to the circumstances, the preparer, regulator or auditor should apply such principle. If there is a conflict between statutory accounting principles from one or more sources in Level 2 or 3, the preparer, regulator or auditor should follow the treatment specified by the source in the higher level—that is, follow Level 2 treatment over Level 3. Revisions to guidance in accordance with additions or revisions to the NAIC statutory hierarchy should be accounted for as a change in accounting principle in accordance with SSAP No. 3—*Accounting Changes and Corrections of Errors*.

44. Because of developments such as new legislation or the evolution of a new type of business transaction, there sometimes are no established statutory accounting principles for reporting a specific transaction or event. In those instances, it might be possible to report the event or transaction on the basis of its substance by selecting a statutory accounting principle that appears appropriate when applied in a manner similar to the application of an established statutory principle to an analogous transaction or event. In the absence of a SSAP or another source of established statutory accounting principles, the preparer, regulator or auditor of statutory financial statements may consider other accounting literature, depending on its relevance in the circumstances. Other accounting literature includes the Statutory Accounting Principles Statement of Concepts and GAAP reference material and accounting literature identified in Level 5. The appropriateness of other accounting literature depends on its relevance to the particular circumstances, the specificity of the guidance, and the general recognition of the issuer or author as an authority. For example, the Statutory Accounting Principles Statement of Concepts would be more authoritative than any other sources of accounting literature. Similarly, FASB Concepts Statements would normally be more influential than other sources of nonauthoritative GAAP pronouncements.

FN 4 - The Statutory Accounting Principles Statement of Concepts incorporates by reference FASB Concepts Statements One, Two, Five and Six to the extent they do not conflict with the concepts outlined in the statement. However, for purposes of applying this hierarchy the FASB Concepts Statements shall be included in Level 5 and only those concepts unique to statutory accounting as stated in the statement are included in Level 4.

SSAP No. 4—Assets and Nonadmitted Assets

NAIC Staff Note – this SAP contains the definition of the financial statement element of an **Asset**. Relevant items have been bolded below for ease of identification.

2. For purposes of statutory accounting, **an asset shall be defined as: probable future economic benefits obtained or controlled by a particular entity as a result of past transactions or events. An asset has three essential characteristics: (a) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (b) a particular entity can obtain the benefit and control others' access to it, and (c) the transaction or other event giving rise to the entity's right to or control of the benefit has already occurred.** These assets shall then be evaluated to determine whether they are admitted. The criteria used is outlined in paragraph 3.

3. As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third-party interests should not be recognized on the balance sheet," and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2, which is accorded limited or no value in statutory reporting, and is one which is:

- a. Specifically identified within the *Accounting Practices and Procedures Manual* as a nonadmitted asset; or
- b. Not specifically identified as an admitted asset within the *Accounting Practices and Procedures Manual*.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the *Accounting Practices and Procedures Manual*. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, shall be expensed when purchased.

4. Transactions which do not give rise to assets as defined in paragraph 2 shall be charged to operations in the period the transactions occur. Those transactions which result in amounts which may meet the definition of assets, but are specifically identified within the *Accounting Practices and Procedures Manual* as not giving rise to assets (e.g., policy acquisition costs), shall also be charged to operations in the period the transactions occur.

5. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

FN1 - FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements, states: Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in FASB Statement No. 5, Accounting for Contingencies, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

FN2 - If assets of an insurance entity are pledged or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third-party interests. Thus, pursuant to paragraph 2(c), such assets shall not be recognized as an admitted asset on the balance sheet. Additional guidance for assets pledged as collateral is included in INT 01-31.

SSAP No. 5—Liabilities, Contingencies and Impairments of Assets

NAIC Staff Note – this SAP contains the definition of the financial statement element of a **Liability**. Relevant items have been bolded below for ease of identification.

2. A liability is defined as certain or probable FN1 future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of a past transaction(s) or event(s).

3. A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable FN1 future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity's financial statements when incurred.

4. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies.

FN1 - FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements, states: Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in FASB Statement 5, Accounting for Contingencies, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): While slightly different, the updated FASB asset & liability definitions do closer align with IFRS definitions. While IFRS retains the phrase “as a result of past events,” it also explicitly retains the term “control,” which is now implicit with the FASB updates. The elimination of the explicit term “control” was a deliberate action of the FASB as they noted that the notion of control has been historically misunderstood (control is to the right that gives rise to the economic benefit rather than to the economic benefits themselves). For reference *IFRS Chapter 4 – The Elements of Financial Statements*, defines an **asset** as a present economic resource controlled by the entity as a result of past events; with the economic resource representing a right that has the potential to produce economic benefits. Additionally, the chapter defines a **liability** as a present obligation of an entity to transfer an economic resource as a result of past events.

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to the Preamble, *SSAP No. 4—Assets and Nonadmitted Assets* and *SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets*, as illustrated below and in the issue papers, to incorporate updates from *Chapter 4, Elements of Financial Statements* and *Chapter 7, Presentation of the FASB’s Conceptual Framework for Financial Reporting*.

Proposed edits to the Preamble: proposed modifications reflect updates for superseded FASB Financial Accounting Concepts.

IV. Statutory Accounting Principles Statement of Concepts

25. This document states the fundamental concepts on which statutory financial accounting and reporting standards are based. These concepts provide a framework to guide the National Association of Insurance Commissioners (NAIC) in the continued development and maintenance of statutory accounting principles (“SAP” or “statutory basis”) and, as such, these concepts and principles constitute an accounting basis for the preparation and issuance of statutory financial statements by insurance companies in the absence of state statutes and/or regulations.

26. The NAIC and state insurance departments are primarily concerned with statutory accounting principles that differ from GAAP reflective of the varying objectives of regulation. Recodification of areas where SAP and GAAP are parallel is an inefficient use of limited resources.

27. SAP utilizes the framework established by GAAP. **FN2** This document integrates that framework with objectives exclusive to statutory accounting. The NAIC’s guidance on SAP is comprehensive for those principles that differ from GAAP based on the concepts of statutory accounting outlined herein. Those GAAP pronouncements that are not applicable to insurance companies will not be adopted by the NAIC. For those principles that do not differ from GAAP, the NAIC must specifically adopt those GAAP Pronouncements to be included in statutory accounting. GAAP Pronouncements do not become part of SAP until and unless adopted by the NAIC.

28. The body of statutory accounting principles is prescribed in the statutory hierarchy of accounting guidance. This hierarchy provides the framework for judging the presentation of statutory financial statements in conformance with statutory accounting principles.

29. Statutory requirements vary from state to state. While it is desirable to minimize these variations, to the extent that they exist it is the objective of NAIC statutory accounting principles to provide the standard against which the exceptions will be measured and disclosed if material.

FN 2 - The GAAP framework applicable to insurance accounting is set forth in *Statements of Financial Accounting Concepts* ~~One, Two, Five, and Six~~Eight. These documents, promulgated by the Financial Accounting Standards Board, set forth the objectives and concepts which are used in developing accounting and reporting standards.

V. Statutory Hierarchy

42. The following Hierarchy is not intended to preempt state legislative and regulatory authority.

Level 1

SSAPs, including U.S. GAAP reference material to the extent adopted by the NAIC from the FASB Accounting Standards Codification (FASB Codification or GAAP guidance)

Level 2

Consensus positions of the Emerging Accounting Issues (E) Working Group as adopted by the NAIC (INTs adopted before 2016)

Interpretations of existing SSAPs as adopted by the Statutory Accounting Principles (E) Working Group (INTs adopted in 2016 or beyond)

Level 3

NAIC Annual Statement Instructions

Purposes and Procedures Manual of the NAIC Investment Analysis Office

Level 4

*Statutory Accounting Principles Preamble and Statement of Concepts **FN4***

Level 5

Sources of nonauthoritative GAAP accounting guidance and literature, including: (a) practices that are widely recognized and prevalent either generally or in the industry, (b) FASB Concept Statements, (c) AICPA guidance not included in FASB Codification, (d) International Financial Reporting Standards, (e) Pronouncements of professional associations or regulatory agencies, (f) Technical Information Service Inquiries and Replies included in the AICPA Technical Practice Aids, and (g) Accounting textbooks, handbooks and articles

FN 4 - The Statutory Accounting Principles Statement of Concepts incorporates by reference FASB Concepts Statements ~~One, Two, Five and Six~~Eight to the extent they do not conflict with the concepts outlined in the statement. However, for purposes of applying this hierarchy the FASB Concepts Statements shall be included in Level 5 and only those concepts unique to statutory accounting as stated in the statement are included in Level 4.

Proposed edits SSAP No. 4—Assets and Nonadmitted Assets: proposed modifications reflect an updated definition of the term **Asset** – to match the newly issued definition in FASB Statement of Financial Accounting Concepts No. 8

2. For purposes of statutory accounting, an asset shall be defined as: a present right of an entity to an economic benefit, ~~probable **FN4** future economic benefits obtained or controlled by a particular entity as a result of past transactions or events~~. An asset has ~~two~~three essential characteristics: (a) it is a present right, ~~embodies a probable future benefit that involves a capacity, singly or in combination with other assets,~~

~~to contribute directly or indirectly to future net cash inflows, and (b) the right is to an economic benefit, a particular entity can obtain the benefit and control others' access to it **FN1 FN2**, and (c) the transaction or other event giving rise to the entity's right to or control of the benefit has already occurred.~~ These assets shall then be evaluated to determine whether they are admitted. The criteria used is outlined in paragraph 3.

3. As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third-party interests should not be recognized on the balance sheet," and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2, which is accorded limited or no value in statutory reporting, and is one which is:

- a. Specifically identified within the *Accounting Practices and Procedures Manual* as a nonadmitted asset; or
- b. Not specifically identified as an admitted asset within the *Accounting Practices and Procedures Manual*.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the *Accounting Practices and Procedures Manual*. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, shall be expensed when purchased.

4. Transactions which do not give rise to assets as defined in paragraph 2 shall be charged to operations in the period the transactions occur. Those transactions which result in amounts which may meet the definition of assets, but are specifically identified within the *Accounting Practices and Procedures Manual* as not giving rise to assets (e.g., policy acquisition costs), shall also be charged to operations in the period the transactions occur.

5. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

FN1 - *FASB Statement of Financial Accounting Concepts No. 86, Elements of Financial Statements*, states that the combination of these two characteristics allows an entity to obtain the economic benefit and control others' access to the benefit. A present right of an entity to an economic benefit entitles the entity to the economic benefit and the ability to restrict others' access to the benefit to which the entity is entitled. ~~Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in *FASB Statement No. 5, Accounting for Contingencies*, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.~~

FN2 - If assets of an insurance entity are pledged or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third-party interests. Thus, pursuant to paragraph 2(c), such assets shall not be recognized as an admitted asset on the balance sheet. Additional guidance for assets pledged as collateral is included in INT 01-31.

SSAP No. 5—Liabilities, Contingencies and Impairments of Assets: proposed modifications reflect an updated definition of the term **Liability** – to match the newly issued definition in FASB Statement of Financial Accounting Concepts No. 8

2. A liability is defined as [a present obligation of an entity to transfer an economic benefit](#). ~~certain or probable FN1 future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of a past transaction(s) or event(s).~~

3. A liability has ~~three~~ [two](#) essential characteristics: (a) it [is a present obligation](#) ~~embodies a present duty or responsibility to one or more other entities that entails settlement by probable FN1 future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, and~~ (b) the [obligation requires an entity to transfer or otherwise provide economic benefit to others](#) ~~duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and~~ (c) ~~the transaction or other event obligating the entity has already happened.~~ This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity's financial statements when incurred.

4. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies.

~~FN1—FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements, states: Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in FASB Statement 5, Accounting for Contingencies, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.~~

Recommendation:

NAIC staff recommends that the Working Group move this item to the active listing, categorized as a SAP clarification, and expose revisions to the Preamble, SSAP No. 4—Assets and Nonadmitted Assets and SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets, as illustrated in the agenda item and in the draft issue papers, to incorporate updates from Chapter 4, Elements of Financial Statements and Chapter 7, Presentation of the FASB’s Conceptual Framework for Financial Reporting.

Staff Review Completed by: Jim Pinegar– NAIC Staff, January – 2022

Status:

On April 4, 2022, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as a SAP clarification, and exposed revisions to the Preamble, SSAP No. 4—Assets and Nonadmitted Assets and SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets to incorporate 1) updates from FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 7, Presentation* which identifies factors to consider when deciding how items should be displayed on the financial statements, and 2) Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements*, which updates the definitions of an asset and a liability. The Working Group also exposed two draft issue papers for historical documentation of these SAP clarifications.

On August 10, 2022, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, as illustrated above, to the Preamble and SSAP No. 4—Assets and Nonadmitted Assets. The revisions incorporate updates from FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 7, Presentation*, which identifies factors to consider when deciding how items should be displayed on the financial statements, and Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements*, which updates the definition of an asset. In addition, the Working Group adopted *Issue Paper No. 166—Updates to the Definition of an Asset*, which documents the revisions to SSAP No. 4.

Additionally, on August 10, 2022, the Working Group re-exposed the proposed revisions and draft issue paper related to the definition change of a liability in SSAP No. 5R—Liabilities, Contingencies and Impairment of Assets.

This exposure intends to provide additional time for industry to review the changes in accordance with statutory accounting statements. These revisions are also shown above under the SSAP No. 5R heading.

Statutory Issue Paper No. 166

Updates to the Definition of an Asset

STATUS

Finalized – August 10, 2022

Original and Current Authoritative Guidance: SSAP No. 4

Type of Issue:

Common Area

SUMMARY OF ISSUE

1. This issue paper documents the SAP clarification revisions to *SSAP No. 4—Assets and Nonadmitted Assets*. The intent of the revisions is to align current statutory accounting guidance, specifically the definition of an “asset,” with the term utilized by the Financial Accounting Standards Board (FASB).

SUMMARY CONCLUSION

2. The statutory accounting principle clarifications to SSAP No. 4 (illustrated in Exhibit A), reflect that for the purposes of statutory accounting, an asset shall be defined as: a present right of an entity to an economic benefit. An asset has two essential characteristics: (1) it is a present right, and (2) the right is to an economic benefit. The combination of these two characteristics allows an entity to obtain the economic benefit and control others’ access to the benefit. A present right of an entity to an economic benefit entitles the entity to the economic benefit and the ability to restrict others’ access to the benefit to which the entity is entitled. For clarity, an “economic benefit” represents services or other items of economic value and generally result in net cash inflows to the entity. Pursuant to current guidance, assets are then evaluated, as outlined in paragraph 3 below, to determine whether they are admitted for statutory accounting purposes.

3. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third-party interests should not be recognized on the balance sheet, and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2, which is accorded limited or no value in statutory reporting, and is one which is:

- a. Specifically identified within the *Accounting Practices and Procedures Manual* as a nonadmitted asset; or
- b. Not specifically identified as an admitted asset within the *Accounting Practices and Procedures Manual*.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the *Accounting Practices and Procedures Manual*. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, shall be expensed when purchased.

4. Transactions which do not give rise to assets as defined in paragraph 2 shall be charged to operations in the period the transactions occur. Those transactions which result in amounts which may meet the definition of assets but are specifically identified within the *Accounting Practices and Procedures*

Manual as not giving rise to assets (e.g., policy acquisition costs), shall also be charged to operations in the period the transactions occur.

5. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

DISCUSSION

6. In December 2021, FASB issued *Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements*, which introduced updated definitions of certain key elements used in financial reporting – most notably updating the fundamental definition of an asset. Through the FASB’s adoption of Concept Statement No. 8, the original Concept Statement No. 6 has been superseded. As statutory accounting currently reflects FASB’s historical definition, this issue paper is to review the prior concept definition (currently utilized by statutory accounting) and compare it to FASB’s updated concept definition and assess whether the revised concept definition shall be reflected in statutory accounting.

7. FASB concept statements do not reflect authoritative U.S. GAAP guidance. Rather concept statements are intended to set forth objectives and fundamental concepts that will be the basis for development of financial accounting and reporting guidance. The term “asset” is not captured or defined in the FASB Accounting Standards Codification (which is the source of authoritative U.S. GAAP.) Furthermore, although the concept statement is intended to be used as a guide in establishing authoritative U.S. GAAP, the FASB is not restricted to the concepts when developing guidance, and the FASB may issue U.S. GAAP which may be inconsistent with the objectives and fundamental concepts set forth in Concept Statements. A change in a FASB Concept Statement does not 1) require a change in existing U.S. GAAP, 2) amend, modify or interpret the Accounting Standards Codification, or 3) justify either changing existing generally accepted accounting and reporting practices or interpreting the Accounting Standards Codification based on personal interpretations of the objectives and concepts in the concepts statement.

8. Under the prior FASB concept statement, which was reflected in SSAP No. 4, an asset was defined as a probable future economic benefit obtained or controlled by a particular entity as a result of past transactions or events. In addition, the historical definition possessed three essential characteristics in that (1) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (2) a particular enterprise can obtain the benefit and control others' access to it, and (3) the transaction or other event giving rise to the enterprise's right to or control of the benefit has already occurred.

9. Pursuant to the prior concept statement, and as incorporated in SSAP No. 4, *probable*, as referenced both in the definition and essential characters, was used in a usual general meaning, rather than in a specific accounting or technical sense and referred to which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

10. With the new FASB conceptual framework chapter, an asset is now defined as a present right of an entity to an economic benefit. In addition, the current definition only has two essential characteristics in that the asset is (1) a present right, and (2) the right is to an economic benefit. The combination of these two characteristics allows an entity to obtain the economic benefit and control others’ access to the benefit. A present right of an entity to an economic benefit entitles the entity to the economic benefit and the ability to restrict others’ access to the benefit to which the entity is entitled. For clarity, an “economic benefit” represents services or other items of economic value to the asset holder and generally result in net cash inflows to the entity.

11. The updated asset definition from Concept Statement No. 8 no longer includes the term *probable* or the phrases *future economic benefit* and *as a result of past transactions or events*. The FASB concluded that the term *probable* has historically been misunderstood as implying that a future benefit must be probable to a certain threshold before the definition of an asset was met. Thus, if the probability of a future benefit was low, an asset could not be recognized. The FASB also struck the phrase *future economic benefit* as this phrase often was interpreted that the asset must represent a certain future economic benefit (such as eventual cash inflows), however with this action, the FASB clarified that the asset represents the rights to the benefit, not the actual benefit itself – nor the probability of realization. Finally, FASB struck the phrase *as the result of past transactions or events*. It was concluded that if the asset represents a *present right*, by default, the right must have occurred as the result of a past transaction or event and thus this phraseology was deemed redundant and unnecessary.

12. To meet the definition of an asset, the right must be a “present right,” that is the right must exist at the financial statement date, not a right that is expected to occur in the future. The existence of a present right at the financial statement date means that the right and therefore the reasons why that asset was obtained, must have arisen from a past transaction or event. A right entitles its holder to have or obtain something, or act in a certain manner. Rights can be obtained in various ways and are often obtained through legal ownership. Legal ownership gives the owner access to the economic benefits, including the ability to possess, use, and enjoy the right. However, legally enforceable rights to economic benefits can also be obtained without legal ownership of the underlying property. This occurs in cases where the underlying benefit itself, as is the example in the right of use or rights to specified cashflows in contract provisions, are possessed by an entity other than the legal title holder. One important aspect of the change in definition is the removal of the term “control.” The FASB clarified that while the term control has been removed, the notion of control has been maintained in the updated definition. In the prior definition, control was a required element and thus without control, an asset was not recognized. However, control often refers to the ability to direct, manage, or have power over something. The FASB stated that in many instances, constituents misunderstood the notion of control by 1) believing it represented a probable future economic benefit, or 2) failing to properly identify what was specifically controlled. An example provided was a trade receivable – the definition of control might be misapplied to mean the successful collection; however, the correct application should refer to the rights of collection – not the successful collection itself. Citing this as an example, the FASB concluded that while the notion of control was an important aspect, the explicit term did not sufficiently add to the definition – thus the term “control” was removed.

13. When reviewing the substance of the revisions, the FASB concluded that the updated definition resulted in a clearer and more precise definition and it did not fundamentally change the historical concept of an asset, nor should the revisions result in any material changes in instrument reclassification (e.g., items now being classified as an asset when previously they were not considered assets). For statutory accounting purposes, the updated definition should be viewed similarly, that is it does not change fundamental concepts, change current practices, or introduce a new, original or a modified accounting principle. The revisions to the definition of an asset clarify the definitional language and do not modify the original intent of SSAP No. 4 and thus the changes are deemed to be a statutory accounting principle clarification.

14. One concept articulated in SSAP No. 4, and one that is not proposed for revision, is the concept of nonadmitted assets. As revisions are not proposed to this concept, further discussion is not included in this issue paper.

Actions of the Statutory Accounting Principles (E) Working Group

15. During the Spring 2022 National Meeting, the Working Group exposed this issue paper for public comment.

16. During the Summer 2022 National Meeting, the Working Group adopted the exposed revisions to SSAP No. 4 and affirmed the SAP clarification classification of these revisions.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

17. Relevant excerpts of SSAP No. 4, paragraphs 2-5 regarding the definition of an asset and a nonadmitted asset (nonadmitted asset as it is referenced in definition of an asset paragraph) utilized by statutory accounting is:

2. For purposes of statutory accounting, an asset shall be defined as: probable¹ future economic benefits obtained or controlled by a particular entity as a result of past transactions or events. An asset has three essential characteristics: (a) it embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows, (b) a particular entity can obtain the benefit and control others' access to it², and (c) the transaction or other event giving rise to the entity's right to or control of the benefit has already occurred. These assets shall then be evaluated to determine whether they are admitted. The criteria used is outlined in paragraph 3.

3. As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third-party interests should not be recognized on the balance sheet," and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2, which is accorded limited or no value in statutory reporting, and is one which is:

- a. Specifically identified within the *Accounting Practices and Procedures Manual* as a nonadmitted asset; or
- b. Not specifically identified as an admitted asset within the *Accounting Practices and Procedures Manual*.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the *Accounting Practices and Procedures Manual*. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, shall be expensed when purchased.

4. Transactions which do not give rise to assets as defined in paragraph 2 shall be charged to operations in the period the transactions occur. Those transactions which result in amounts

¹ FASB Statement of Financial Accounting Concepts No. 6, *Elements of Financial Statements*, states:

Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in *FASB Statement No. 5, Accounting for Contingencies*, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.

² If assets of an insurance entity are pledged or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third-party interests. Thus, pursuant to paragraph 2(c), such assets shall not be recognized as an admitted asset on the balance sheet. Additional guidance for assets pledged as collateral is included in INT 01-31.

which may meet the definition of assets, but are specifically identified within the *Accounting Practices and Procedures Manual* as not giving rise to assets (e.g., policy acquisition costs), shall also be charged to operations in the period the transactions occur.

5. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

Generally Accepted Accounting Principles

18. Relevant paragraphs from *Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements* have been included below:

Assets

E16. An asset is a present right of an entity to an economic benefit.

Characteristics of Assets

E17. An asset has the following two essential characteristics: a. It is a present right. b. The right is to an economic benefit.

The combination of those two characteristics allows an entity to obtain the economic benefit and control others' access to the benefit. A present right of an entity to an economic benefit entitles the entity to the economic benefit and the ability to restrict others' access to the benefit to which the entity is entitled.

E19. Essential to the definition of an asset is a right to an "economic benefit"—the capacity to provide services or benefits to the entities that use them. Generally, in a business entity, that economic benefit eventually results in potential net cash inflows to the entity. In a not-for-profit entity, that economic benefit is used to provide desired or needed goods or services to beneficiaries or other constituents, which may or may not directly result in net cash inflows to the entity. Some not-for-profit entities rely significantly on contributions or donations of cash to supplement selling prices or to replace cash or other assets used in providing goods and services. The relationship between the economic benefit of an entity's assets and net cash inflows to that entity can be indirect in both business entities and not-for-profit entities.

E22. A right entitles its holder to have or obtain something or to act in a certain manner. Rights can be obtained in various ways. Often, rights are obtained by legal ownership, for example, owning a building. Legal ownership gives the owner access to economic benefits, including the ability to possess, use, and enjoy the right; to sell, donate, or exchange the right; or to exploit the right's value by, for example, pledging it as a security for borrowing.

E23. Legally enforceable rights to economic benefits can be obtained without legal ownership of the underlying benefit itself as is the case, for example, when property is leased or intellectual property is licensed or when an entity has the rights to specified certain cash flows, as in the case of a contract providing rights only to interest flows from a specified debt instrument. Other legally enforceable rights that give rise to assets include the right to require other parties to make payments or render services and the right to use a patent or a trademark. Legally enforceable rights include, among other rights, contractual rights (for example, rights from options held).

E31. Another essential characteristic of an asset is that the right of an entity must be to an economic benefit. An asset of an entity might be represented by rights to a particular property (such as the right to possess, use, and enjoy a parcel of land) or by rights to some or all the economic benefits derived from the property.

19. One of the most notable changes to the definitional change was the explicit removal of the term *control*, however the notion of control was retained. *Chapter 4, Elements of Financial Statements* included commentary regarding the FASB's rationale of the change.

BC4.17. The definition of an asset in Concepts Statement 6 associated assets with a particular entity by inclusion of the term control. Control often refers to the ability to direct, manage, or have power over something to obtain or access benefits or to increase, maintain, or protect those benefits. Control goes beyond legal rights and includes the ability to obtain and control the benefit in other ways, including restricting, or otherwise prohibiting, the access of others to the economic benefit of the asset.

BC4.18. In applying the definition of an asset in Concepts Statement 6, however, many constituents misunderstood the notion of control. Some improperly viewed control of a probable future economic benefit in the same manner as described in business combinations or consolidation accounting. Additionally, in applying the term control, some failed to properly identify that which was controlled under the asset definition. For example, in the instance of trade receivables, the definition could be misunderstood to indicate that what is controlled is the successful collection of the receivable in the future. When applied appropriately, however, the definition in Concepts Statement 6 would conclude that the present right to collection is what is controlled. Similarly, if an entity has an option to acquire an asset, the present right of that entity is to the option itself, not the underlying asset that the option provides the right to acquire. Thus, control references the existing right that has the ability to generate economic benefits, or potential economic benefits, and to restrict others' access to those benefits.

BC4.19. While the Board concluded that the notion of control was an important aspect of the asset definition, it was not clear to the Board whether the explicit term control added anything significant to the definition of an asset. Those considerations are addressed by including the term present right in the definition in this chapter. If an entity has a present right to an economic benefit, that would seem to be sufficient to establish the fact that the asset is an asset of that entity. 37 Indeed, if an entity has exclusive rights, it presumably can deny or regulate access to that benefit by others, thereby implying control

BC4.22. The Board redeliberated the issue and decided that the term control should not be used in the definition of an asset for the following reasons:

- a. It eliminates redundancy. If an entity has a present right, that would seem to be sufficient to establish the fact that the asset is an asset of that entity. In fact, the Board used the phrase of the entity in the definition of an asset to clarify that point. Indeed, if an entity has exclusive rights, it presumably can deny or regulate access to that benefit by others.
- b. It eliminates misunderstanding of the term. The term control has two issues in the existing definition of an asset. First, many have a different definition of the term control. Second, many associate the term control with whether one has control of the economic benefit. The Board notes that what is controlled is the existing right that gives rise to economic benefits, or potential economic benefits, rather than the economic benefits themselves. The Board's reasoning for removing the term control is the same as removing other terms, such as future and probable, from the definition of an asset.
- c. It avoids confusion with the IASB's Conceptual Framework use and meaning of the term. The IASB defines an asset as "a present economic resource controlled by the entity as a result of past events." In the basis for conclusions to the IASB's Conceptual Framework's discussion on control, footnote 19 references both IFRS 10, Consolidated Financial Statements, and IFRS 15, Revenue from Contracts with Customers. The Board is concerned about the references to IFRS 10 and

IFRS 15 because those standards refer to control of an economic benefit, not control of the right. The Board notes that convergence with the IASB's asset definition on this point is not critical because it could perpetuate the misunderstanding discussed above.

20. Other changes regarding the definition of an asset included removal of the term *probable* and the phrases *future economic benefit* and *past transactions of events*. Rationale for these changes were documented in *Chapter 4, Elements of Financial Statements* commentary as follows:

BC4.11. The definitions of both an asset and a liability in Concepts Statement 6 include the term *probable* and the phrases *future economic benefit* and *past transactions or events*. The term *probable* in the definitions in Concepts Statement 6 has been misunderstood as implying that a future economic benefit or a future sacrifice of economic benefit must be probable to a certain threshold before the definition of an asset or a liability is met. In other words, if the probability of future economic benefit is low, the asset definition is not met under that interpretation. A similar interpretation could be made for liabilities. The footnotes to the Concepts Statement 6 definition of assets and liabilities also were not helpful in clarifying the application of the term *probable* as used in the definitions of assets and liabilities. Accordingly, the Board decided to eliminate that term from the definitions of both assets and liabilities.

BC4.12. The term *future* in the definitions in Concepts Statement 6 focused on identifying a future flow of economic benefits to demonstrate that an asset exists or identifying a future transfer of economic benefits to demonstrate that a liability exists. The definitions in Concepts Statement 6 were often misunderstood as meaning that the asset (liability) is the ultimate future inflow (outflow). For example, in the instance of trade receivables, the definition in Concepts Statement 6 could be misunderstood to indicate that the asset is the successful collection of the receivable in the future. When applied appropriately, however, the definition would conclude that the asset is the present right to collection. Similar misunderstandings occurred in applying the liability definition. As a result, the Board concluded that a focus on the term *present* would appropriately shift the focus from identifying a future occurrence. Therefore, the Board decided to include the term *present right* to demonstrate that an asset exists and emphasize the term *present obligation* to demonstrate that a liability exists.

BC4.13. The definitions of assets and liabilities in Concepts Statement 6 both include the phrase *past transactions or events*. The Board concluded that if an entity has a present right or a present obligation, one can reasonably assume that it was obtained from some past transaction or event. Therefore, that phrase is considered redundant and has been eliminated from the definitions.

Effective Date

21. As issue papers are not authoritative and are not represented in the Statutory Hierarchy (see Section V of the Preamble), the consideration and adoption of this issue paper will not have any impact on the SAP clarifications adopted to SSAP No. 4 by the Working Group on August 10, 2022.

EXHIBIT A – SAP Clarification Revisions to SSAP No. 4—Assets and Nonadmitted Assets**Statement of Statutory Accounting Principles No. 4****Assets and Nonadmitted Assets**

SCOPE OF STATEMENT

1. This statement establishes the definition of an “asset” for use in statutory accounting and establishes the criteria for consistent treatment of nonadmitted assets.

SUMMARY CONCLUSION

2. For purposes of statutory accounting, an asset shall be defined as: a present right of an entity to an economic benefit~~probable³ future economic benefits obtained or controlled by a particular entity as a result of past transactions or events.~~ An asset has three~~two~~ essential characteristics: (a) it is a present right~~embodies a probable future benefit that involves a capacity, singly or in combination with other assets, to contribute directly or indirectly to future net cash inflows,~~ and (b) the right is to an economic benefit, a particular entity can obtain the benefit and control others’ access to it⁴⁵, and (c) ~~the transaction or other event giving rise to the entity’s right to or control of the benefit has already occurred.~~ These assets shall then be evaluated to determine whether they are admitted. The criteria used is outlined in paragraph 3.

3. As stated in the Statement of Concepts, "The ability to meet policyholder obligations is predicated on the existence of readily marketable assets available when both current and future obligations are due. Assets having economic value other than those which can be used to fulfill policyholder obligations, or those assets which are unavailable due to encumbrances or other third-party interests should not be recognized on the balance sheet," and are, therefore, considered nonadmitted. For purposes of statutory accounting principles, a nonadmitted asset shall be defined as an asset meeting the criteria in paragraph 2, which is accorded limited or no value in statutory reporting, and is one which is:

- a. Specifically identified within the *Accounting Practices and Procedures Manual* as a nonadmitted asset; or
- b. Not specifically identified as an admitted asset within the *Accounting Practices and Procedures Manual*.

¹ ~~FASB Statement of Financial Accounting Concepts No. 6, Elements of Financial Statements, states:~~

~~Probable is used with its usual general meaning, rather than in a specific accounting or technical sense (such as that in FASB Statement No. 5, Accounting for Contingencies, paragraph 3), and refers to that which can reasonably be expected or believed on the basis of available evidence or logic but is neither certain nor proved.~~

² FASB Statement of Financial Accounting Concepts No. 8, Elements of Financial Statements, states that the combination of these two characteristics allows an entry to obtain the economic benefit and control others’ access to the benefit. A present right of an entity to an economic benefit entitles the entity to the economic benefits and the ability to restrict other’s access to the benefit to which the entity is entitled.

⁵ If assets of an insurance entity are pledged or otherwise restricted by the action of a related party, the assets are not under the exclusive control of the insurance entity and are not available to satisfy policyholder obligations due to these encumbrances or other third-party interests. Thus, pursuant to paragraph 2(c), such assets shall not be recognized as an admitted asset on the balance sheet. Additional guidance for assets pledged as collateral is included in INT 01-31.

If an asset meets one of these criteria, the asset shall be reported as a nonadmitted asset and charged against surplus unless otherwise specifically addressed within the *Accounting Practices and Procedures Manual*. The asset shall be depreciated or amortized against net income as the estimated economic benefit expires. In accordance with the reporting entity's written capitalization policy, amounts less than a predefined threshold of furniture, fixtures, equipment, or supplies, shall be expensed when purchased.

4. Transactions which do not give rise to assets as defined in paragraph 2 shall be charged to operations in the period the transactions occur. Those transactions which result in amounts which may meet the definition of assets, but are specifically identified within the *Accounting Practices and Procedures Manual* as not giving rise to assets (e.g., policy acquisition costs), shall also be charged to operations in the period the transactions occur.

5. The reporting entity shall maintain a capitalization policy containing the predefined thresholds for each asset class to be made available for the department(s) of insurance.

Assets Pledged as Collateral or Otherwise Restricted

6. Assets that are pledged to others as collateral or otherwise restricted (not under the exclusive control of the insurer, subject to a put option contract, etc.) shall be identified in the investment schedules pursuant to the codes in the annual statement instructions, disclosed in accordance with *SSAP No. 1—Accounting Policies, Risks & Uncertainties, and Other Disclosures*, reported in the general interrogatories, and included in any other statutory schedules or disclosure requirements requesting information for assets pledged as collateral or otherwise restricted. Restricted assets should be reviewed to determine admitted or nonadmitted assets status in the statutory financial statements per the terms of their respective SSAPs. Asset restrictions may be a factor in determining the admissibility of an asset under a respective SSAP⁶. However, determining that a restricted asset is an admitted asset does not eliminate the statutory requirements to document and identify the asset as one that is pledged as collateral or otherwise restricted.

7. Assets pledged as collateral are one example of assets that are not under the exclusive control of the insurer, and are therefore restricted, even if the assets are admitted under statutory accounting guidelines (e.g., the asset is substitutable and/or other related SSAP conditions are met). As such, the asset shall be coded as pledged in the investment schedules pursuant to the annual statement instructions, disclosed in accordance with *SSAP No. 1*, reported in the general interrogatories, and included in any other statutory schedules or disclosure requirements requesting information for assets pledged as collateral or otherwise restricted.

Disclosure

8. The financial statements shall disclose if the written capitalization policy and the resultant predefined thresholds changed from the prior period and the reason(s) for such change.

Relevant Literature

9. This statement [incorporates the definition of an asset from ~~adopts~~ FASB Statement of Financial Accounting Concepts No. 86, Chapter 4, Elements of Financial Statements](#), paragraphs [E16-E18](#)~~25-33~~.

Effective Date and Transition

10. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No.*

⁶ An example of such a situation is detailed in footnote 2 pertaining to assets restricted by the action of a related party. This is only a single example and each restricted asset would need to be reviewed to ensure it qualifies as an admitted asset.

Ref # 2022-01

3—*Accounting Changes and Corrections of Errors*. Guidance reflected in paragraphs 3, 5 and 8, incorporated from SSAP No. 87, was originally effective for years beginning on and after January 1, 2004. The guidance in footnote 2 to paragraph 2 was originally contained within *INT 01-03: Assets Pledged as Collateral or Restricted for the Benefit of a Related Party* and was effective June 11, 2001.

MEMORANDUM

TO: Dale Bruggeman (MO), Chair, Statutory Accounting Principles (E) Working Group
Kevin Clark, (IA), Vice Chair, Statutory Accounting Principles (E) Working Group

FROM: Mike Boerner (TX), Chair, Life Actuarial (A) Task Force,
Craig Chupp (VA), Vice Chair, Life Actuarial (A) Task Force

DATE: July 27, 2022

RE: Life Actuarial (A) Task Force Coordination with the Statutory Accounting Principles (E) Working Group
Summer 2022

The Statutory Accounting Principles (E) Working Group charges requires the Working Group to *coordinate with the Life Actuarial (A) Task Force on changes to the AP&P Manual related to the Valuation Manual VM-A, Requirements, and VM-C, Actuarial Guidelines, as well as other Valuation Manual requirements. This process will include the receipt of periodic reports on changes to the Valuation Manual on items that require coordination.* To facilitate the coordination, the Task Force will provide to the Working Group a memorandum of Valuation Manual amendments, actuarial guidelines and valuation related NAIC model revisions prior to each NAIC National Meeting. This memorandum provides the Working Group updates to the publications since the 2021 NAIC Summer Meeting.

Valuation Manual – Attachment A to this memo includes a detailed listing of the amendments made to the Valuation Manual since the 2021 NAIC Summer Meeting. The amendments were adopted by the Life Insurance and Annuities (A) Committee on July 20, 2022. The amendments will be considered for adoption by the Executive (EX) Committee and Plenary at the 2022 NAIC Summer Meeting.

Actuarial Guidelines – Since the 2021 NAIC Summer Meeting the Task Force has created or revised the actuarial guidelines created listed below:

Actuarial Guideline XXV – Calculation of Minimum Reserves and Minimum Nonforfeiture Values for Policies with Guaranteed Increasing Death Benefits Based on an Index
Life Insurance and Annuities (A) Committee adoption – Dec. 15, 2021
Executive (EX) Committee and Plenary adoption – Dec. 16, 2021

Actuarial Guideline LIII – Application of the Valuation Manual for Testing the Adequacy of Life Reserves
Life Insurance and Annuities (A) Committee adoption - July 20, 2022
Executive (EX) Committee and Plenary consideration at the 2022 NAIC Summer Meeting.

NAIC Models – The Task Force has not created or revised any models since the 2021 NAIC Summer Meeting

Re: Referral from the Plan for the List of MWG Considerations

The NAIC Macroprudential (E) Working Group (MWG) of the Financial Stability (E) Task Force (FSTF) was charged with coordinating the various NAIC activities related to private equity (PE) owned insurers. As an initial step, the MWG developed a list of 13 regulatory considerations. These considerations are frequently referenced as private equity (PE) concerns, but the Working Group developed the list with an activities-based frame of mind, recognizing that any ownership type and/or corporate structure could participate in these activities, including but not limited to PE owned insurers. The MWG members discussed detailed elements of the considerations and potential regulatory work, including explicit reference to the 2013 guidance added to the NAIC Financial Analysis Handbook for Form A reviews when a private equity owner was involved, and interested parties added useful comments to these during an exposure period. The MWG and FSTF adopted a final plan for addressing each of the 13 considerations, including many referrals to other NAIC committee groups.

The Financial Condition E Committee adopted this plan with no changes made during its virtual meeting on July 21, 2022. NAIC staff support drafted this referral letter to accomplish the actions captured in the adopted plan. It is unlikely any further modifications will occur to the adopted plan when it is considered for adoption by the full Plenary, but it is a possibility. Please begin work to address these referrals, recognizing the adoption by Plenary is still outstanding.

Each MWG consideration referred to your group is listed below. The summarized notes from the MWG regulator-only discussions follow the consideration in blue font and any interested party comments are also provided in purple font. Please consider these discussion points and comments in addition to your own discussion ideas when developing proposals to address the MWG consideration.

NAIC staff support for the MWG will follow the work your group performs and summarize your activities for reporting up to the FSTF. If you have any questions or need further direction, please contact Todd Sells (tsells@naic.org).

MWG Consideration Items Referred:

12. The trend of life insurers in pension risk transfer (PRT) business and supporting such business with the more complex investments outlined above. (Enhanced reporting in 2021 Separate

Washington, DC 444 North Capitol Street NW, Suite 700, Washington, DC 20001-1509

p | 202 471 3990

Kansas City 1100 Walnut Street, Suite 1500, Kansas City, MO 64106-2197

p | 816 842 3600

New York One New York Plaza, Suite 4210, New York, NY 10004

p | 212 398 9000

Accounts blank will specifically identify assets backing PRT liabilities.) Considerations have also been raised regarding the RBC treatment of PRT business.

- a. **LATF has exposed an Actuarial Guideline** to achieve a primary goal of ensuring claims-paying ability even if the complex assets (often private equity-related) did not perform as the company expects, and a secondary goal to require stress testing and best practices related to valuation of non-publicly traded assets (note – LATF’s considerations are not limited to PRT). Comment period for the 2nd exposure draft ends on May 2.

Regulator discussion results:

- Regulators focused on the need to have disclosures on the risks to the General Account from the Separate Account PRT business – for guarantees but also reporting/tracking when the Separate Account is not able to support its own liabilities. Regulators noted the need to address the differences between buy in PRT transactions and buy out.
- Regulators are comfortable LATF is addressing the reserve considerations. *To address the disclosure considerations, regulators support sending a referral to the Statutory Accounting Principles (E) Working Group since regulators suggested it be an item in the Notes to Financial Statements.* (Regulators noted it might help to discuss such disclosure concepts with LATF’s Valuation Manual 22 (A) Working Group.)
 - While the exposed AG is not limited to PRT, and general disclosures may be helpful, regulators recognized additional and/or more specific disclosures may be needed for PRT business.

(Consideration 3 has been referred to the Risk-Focused Surveillance (E) Working Group. A copy follows since the Statutory Accounting Principles (E) Working Group (SAPWG) is referenced in the regulator discussion.)

3. The material terms of the IMA and whether they are arm’s length or include conflicts of interest –including the amount and types of investment management fees paid by the insurer, the termination provisions (how difficult or costly it would be for the insurer to terminate the IMA) and the degree of discretion or control of the investment manager over investment guidelines, allocation, and decisions.

Regulator discussion results:

- Refer this item to the NAIC Risk-Focused Surveillance (E) Working Group. Regulators recognized similar dynamics to the first two considerations, but this Working Group was selected because it is already currently focused on a project involving affiliated agreements and Form D filings. Items discussed:
 - o Consider training and examples, such as unique termination clauses and use of sub-advisors with the potential for additive fees, and strategies to address these.
 - This included addressing pushback on obtaining sub-advisor agreements as Form D disclosures and some optional disclosures for the Form A.
 - o Given the increasing prevalence of bespoke agreements, does it make sense to tie this work in to the work of the NAIC Valuation of Securities (E) Task Force and/or the NAIC Securities Valuation Office? If yes, how best to do so?
 - o Surplus Notes and appropriate interest rates given their special regulatory treatment, including whether floating rates are appropriate; *follow any Statutory Accounting Principles (E) Working Group projects related to this topic and provide comments needed.*

Risk & Regulatory Consulting (RRC) Comment: “With respect to an Investment Management Agreement, RRC encourages an approach that includes a thorough review of the IMA to ensure it is fair and reasonable to the insurer. In addition to the specific items noted for consideration:

- ♣ Are there detailed and reasonable investment guidelines?
- ♣ Is there sufficient expertise at the insurer and on the insurer’s Board to properly assess the performance and compliance of the investment manager?
- ♣ Is the investment manager registered as such under the Investment Advisers Act of 1940, and recognizes the standard of care as a fiduciary?

AIC Comments on “Conflict of Interest, Fees, and Termination” (3 individual comments):

Conflict of Interest

As a general matter, the terms of a contractual agreement should not be viewed as giving rise to a conflict of interest when the agreement is negotiated on an arm’s length basis. Notwithstanding the foregoing, current law provides an established process to address potential conflicts (for example, requirements to appoint independent directors and traditional corporate law processes to ensure fairness and, under certain circumstances, review of transactions by regulators pursuant to Form D filings). Accordingly, investments sourced and allocated by alternative asset managers on behalf of insurance company clients should not, absent other factors, be viewed as presenting a potential conflict of interest, particularly where insurers retain full control over asset allocation (for example, insurers retain control over the asset classes in which they invest, as well as the amounts and periods of time over which such asset exposure is achieved).

Fees

Importantly, as an initial consideration, any fees paid to investment managers cannot be considered in isolation, rather they should be considered on a “net” basis - i.e., on the basis of total return (after fees are taken into account). Sophisticated institutional investors (including insurers) have a successful history of investing in a range of strategies despite certain investment products generally having higher fees than other available investment opportunities. On a net basis, private equity has consistently outperformed more traditional asset classes such as publicly traded stocks and public mutual funds⁸ Net-of-fees private debt funds have also consistently outperformed bond and equity market benchmarks.⁹ Insurers continue to recognize the value of investment opportunities that outperform when considered on a net basis.¹⁰ This approach has enabled the consistent delivery of industry leading investment results, which ultimately leads to a high level of financial strength.

Termination

Asset managers often dedicate extensive resources at the outset of a new arrangement in support of managing an insurer’s general account assets (e.g., dedicating or reassigning existing personnel, hiring new employees, investing in information technology systems, expanding office space, further enhancing compliance and regulatory processes). As such, and because, in our experience, insurers have the right to terminate their investment management agreements (e.g., upon 30 days’ notice), the desire for external asset managers to seek contractual protections (subject to arms’ length negotiations) should an insurer decide to terminate the arrangement earlier than was originally anticipated by the parties is entirely appropriate.

(Similarly, Considerations 7, 8 and 9 are included because of reference to SAPWG work related to these considerations and the MWG regulators' decision to forward an RRC comment to the SAPWG due to its work related to these three considerations.)

7. The lack of identification of related party-originated investments (including structured securities). This may create potential conflicts of interests and excessive and/or hidden fees in the portfolio structure, as assets created and managed by affiliates may include fees at different levels of the value chain. For example, a CLO which is managed or structured by a related party.
 - a. *An agenda item and blanks proposal are being re-exposed by SAPWG.* Desire for 2022 year-end reporting to include disclosures identifying related-party issuance/acquisition.

Regulator discussion results:

- Regulators are comfortable the SAPWG's work is sufficient as a first step since it involves code disclosures to identify various related party issues. They also recognize that existing and/or referred work at the Risk-Focused Surveillance (E) Working Group may address some items in this consideration. *Once regulators work with these SAPWG disclosures and other regulatory enhancement, further regulatory guidance may be considered as needed.)*
8. Though the blanks include affiliated investment disclosures, it is not easy to identify underlying affiliated investments and/or collateral within structured security investments. Additionally, transactions may be excluded from affiliated reporting due to nuanced technicalities. Regulatory disclosures may be required to identify underlying related party investments and/or collateral within structured security investments. This would include, for example, loans in a CLO issued by a corporation owned by a related party.
 - a. *An agenda item and blanks proposal are being re-exposed by SAPWG.* The concept being used for investment schedule disclosures is the use of code indicators to identify the role of the related party in the investment, e.g., a code to identify direct credit exposure as well as codes for relationships in securitizations or similar investments.

Regulator discussion results:

- Like the previous consideration, regulators are looking forward to using these code disclosures to help target areas for further review. However, specific to CLO/structured security considerations, regulators support a referral to the Examination Oversight (E) Task Force. Specific items discussed include:
 - o Since investors in CLOs obtain monthly collateral reports, regulators should consider asking for such reports when concerns exist regarding a company's potential exposure to affiliated entities within their CLO holdings.
 - o Regulators would like to have more information regarding the underlying portfolio companies affiliated with a CLO manager to help quantify potential exposure between affiliates and related parties.
 - o Regulators request NAIC staff to consider their ability to provide tools and/or reports to help regulators target CLOs/structured securities to consider more closely.

RRC Comments on "collateralized loan obligations (CLOs) as a source of concern and therefore a focus for additional disclosure. "While there has been a continuing level of concern about CLOs in general, RRC encourages the working group to take a broader view as well. As a general matter, investments in

CLOs are at least subject to disclosure and conflicts of interest standards under various securities laws and regulations. On the other hand, there are other potentially problematic investments that do not benefit from that regulatory oversight.

- ♣ Private funds – Some of the issues noted with respect to concerns about overlapping interests in CLOs may also be prevalent in various kinds of funds, especially privately placed funds that are reported on Schedule BA. Such investment vehicles may have significant areas that have the potential for a conflict of interest that would not be captured by securities laws. Such investment vehicles may also include substantial management fees for management of the fund.
 - ♣ Collateral Loans – The U.S. insurance industry’s reported exposure to Collateral Loans that are reported on Schedule BA has grown substantially in the last ten years. In addition to the same potential conflicts, it may be appropriate to revisit valuation and reporting guidance.
9. Broader considerations exist around asset manager affiliates (not just PE owners) and disclaimers of affiliation avoiding current affiliate investment disclosures. A new Schedule Y, Pt 3, has been adopted and is in effect for year-end 2021. This schedule will identify all entities with greater than 10% ownership – regardless of any disclaimer of affiliation – and whether there is a disclaimer of control/disclaimer of affiliation. It will also identify the ultimate controlling party.
- a. Additionally, SAPWG is developing a proposal to revamp Schedule D reporting, with primary concepts to use principles to determine what reflects a qualifying bond and to identify different types of investments more clearly. For example, D1 may include issuer credits and traditional ABS, while a sub-schedule of D1 could be used for additional disclosures for equity-based issues, balloon payment issues, etc. This is a much longer-term project, 2024 or beyond.

Regulator discussion results:

- Regulators recognize the new Schedule Y, Part 3, will give them more insights for owners of greater than 10%, but it does not provide insights for owners of less than 10%. However, regulators also recognize that existing and/or referral work of the Risk-Focused Surveillance (E) Working Group may help with some of this dynamic. Additionally, since the SAPWG 2022 code project and its longer-term Schedule D revamp project will help provide further disclosures that will assist with this consideration, regulators are comfortable waiting to see if further regulatory guidance is needed after using the resulting disclosures and other enhancements from these projects.
 - o Specific to owners of less than 10%, regulators discussed the April 19, 2022, Insurance Circular Letter No. 5 (2022) sent by the New York Department of Financial Services to all New York domiciled insurers and other interested parties. This letter highlights that avoiding the levels deemed presumption of control, e.g., greater than 10% ownership, does not create a safe harbor from a control determination and the related regulatory requirements. The circular letter was distributed to all MWG members and interested regulators.

For Considerations 7, 8, and 9 above, the following RRC comment was directed to the SAPWG for its work related to these considerations:

RRC Comments on “collateralized loan obligations (CLOs) as a source of concern and therefore a focus for additional disclosure. “While there has been a continuing level of concern about CLOs in general, RRC encourages the working group to take a broader view as well. As a general matter, investments in CLOs are at least subject to disclosure and conflicts of interest standards under various securities laws

and regulations. On the other hand, there are other potentially problematic investments that do not benefit from that regulatory oversight.

- ♣ Private funds – Some of the issues noted with respect to concerns about overlapping interests in CLOs may also be prevalent in various kinds of funds, especially privately placed funds that are reported on Schedule BA. Such investment vehicles may have significant areas that have the potential for a conflict of interest that would not be captured by securities laws. Such investment vehicles may also include substantial management fees for management of the fund.
- ♣ Collateral Loans – The U.S. insurance industry’s reported exposure to Collateral Loans that are reported on Schedule BA has grown substantially in the last ten years. In addition to the same potential conflicts, it may be appropriate to revisit valuation and reporting guidance.

(For Consideration 10, referrals were made to the Examination Oversight (E) Task Force and the RBC Investment Risk and Evaluation (E) Working Group. A copy is included below due to a reference to SAPWG’s Schedule D revamp project.)

10. The material increases in privately structured securities (both by affiliated and non-affiliated asset managers), which introduce other sources of risk or increase traditional credit risk, such as complexity risk and illiquidity risk, and involve a lack of transparency. (The NAIC Capital Markets Bureau continues to monitor this and issue regular reports, but much of the work is complex and time-intensive with a lot of manual research required. The NAIC Securities Valuation Office will begin receiving private rating rationale reports in 2022; these will offer some transparency into these private securities.)
- a. LATF’s exposed AG includes disclosure requirements for these risks as well as how the insurer is modeling the risks.
 - b. SVO staff have proposed to VOSTF a blanks proposal to add market data fields (e.g., market yields) for private securities. If VOSTF approves, a referral will be made to the Blanks WG.

Regulator discussion results:

- Regulators focused on the need to assess whether the risks of these investments are adequately included in insurers’ results and whether the insurer has the appropriate governance and controls for these investments. Regulators discussed the potential need for analysis and examination guidance on these qualifications.
- To assist regulators in identifying concerns in these investments, regulators expressed support for the VOSTF proposal to obtain market yields to allow a comparison with the NAIC Designation. Once such data is available, regulators ask NAIC staff to develop a tool or report to automate this type of initial screening. *Also, regulators again recognized the SAPWG Schedule D revamp work will help in identifying other items for initial screening.*
- The regulators discussed LATF’s exposed AG, noting the Actuarial Memorandum disclosures that would be required for these privately structured securities along with the actuarial review work, and recognizing how those would be useful for analysts and examiners when reviewing these investments. Additionally, the Valuation and Analysis (E) Working Group would be able to serve as a resource for some of these insights for states without in house actuaries.
- As a result of the above discussions, regulators agreed to a referral to the Examination Oversight (E) Task Force to address the disclosures that will be available from LATF’s exposed AG. *They agreed to wait for any further work or referral until they have an opportunity to work with the results of the VOSTF proposal and the SAPWG Schedule D revamp project.*

- Since reserves are not intended to capture tail risk, refer this item to the NAIC RBC Investment Risk and Evaluation (E) Working Group and monitor the Working Group’s progress. (Regulators adopted this recommendation from the RRC comment letter.)

RRC Comments on “privately structured securities which introduce other sources of risk or increase traditional credit risk, such as complexity risk and illiquidity risk, and involve a lack of transparency.”

- ♣ While the lack of available public data does present a significant issue and does mean there is in theory a lower degree of liquidity, we caution at being overly concerned about the private nature of such transactions.
 - Any highly structured transaction is going to lack liquidity.
 - The NAIC had at one time a disclosure for Structured Notes. This allowed regulators to see when that represented an excessive risk. We encourage the reinstatement of that disclosure.
- ♣ A potential consideration related to complex asset structures would be to incorporate this risk factor into the criteria for additional liquidity risk analysis outlined in the NAIC 2021 Liquidity Stress Test Framework (Framework). Considering the amount of effort spent on developing the Framework, it may be helpful to leverage its requirements for situations in which significant complex securities are used to back insurer liabilities.

AIC Comment on “Privately Structured Securities” (the comment and its 6 bullets follow) – *Regulators asked the AIC to follow the work of the NAIC Examination Oversight (E) Task Force and the NAIC Valuation of Securities (E) Task Force and provide comments on specific recommendations if needed.*

Insurers are increasingly seeking the services of alternative asset managers with significant asset origination capabilities and private credit expertise to manage a portion of their assets, which provide a number of benefits to the insurer and their policyholders. Those benefits include:

- ♣ A natural alignment between the long-dated insurance liabilities and the long-term investment approach taken by alternative asset managers, including in the private credit space;
- ♣ Alternative asset managers have the ability to source, underwrite and execute private credit transactions that require skill sets, experience, and scale that many insurance companies do not possess in-house;
- ♣ Private equity and private credit firms also provide an opportunity for smaller and midsized insurers to access these asset classes, which historically have been the primary purview of large insurers that have the scale to afford in-house asset management functions that can originate these assets, making the industry more competitive to the ultimate benefit of policyholders;
- ♣ Engaging asset managers with differentiated capabilities can be more cost efficient than making significant investments in an internal asset management function. By availing themselves of these advantages, insurers can benefit from cost-effective sourcing and origination capabilities in attractive asset classes, resulting in enhanced long-term adequacy margins for policyholders, increased spread/earnings, and more competitive product pricing that inures to the benefit of policyholders;
- ♣ Asset-backed security default rates are substantially similar to corporate investment grade debt default rates while CLO default rates are substantially lower than corporate default rates; and
- ♣ The focus on private investments is belied by the fact that institutions with higher allocations to private investments have outperformed (with less volatility) those with less.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

Virtual Meetings

BLANKS (E) WORKING GROUP

June 8, 2022 / May 25, 2022

Summary Report

The Blanks (E) Working Group conducted an e-vote that concluded on June 8, 2022 (Attachment Two-A), to adopt:

1. 2022-13BWG – Modifies life blank Five-Year Historical Data questions 68 and 69 to reference group comprehensive and questions 70 and 71 to reflect the inclusion of all health lines of business other than group comprehensive. The crosschecks for these questions are being modified accordingly. Interested parties requested an annual 2022 effective date.

The Blanks (E) Working Group met May 25, 2022 (Attachment Two-B). During this meeting, the Working Group:

1. Adopted its Spring National Meeting minutes (*see NAIC Proceedings – Spring 2022, Accounting Practices and Procedures (E) Task Force, Attachment Two*).
2. Adopted the following proposals:
 - A. 2021-22BWG – Add a new reporting requirement in the investment schedules for investment transactions with related parties. In addition to capturing direct loans in related parties, it will also capture information involving securitizations (or other similar investments) where the related party is a sponsor/originator along with whether the underlying investment is in a related party.
 - B. 2022-01BWG – Add new questions to General Interrogatories Part 1 asking if the reporting entity accepts cryptocurrency for payment of premiums, which cryptocurrencies are accepted, and whether they are held for investment or immediately converted to U.S. dollars (2021-24 SAPWG).
 - C. 2022-02BWG – Add four new electronic-only columns to Schedule D, Part 6, Section 1, for Prior Year Book/Adjusted Carrying Value (BACV) (Column 16), Prior Year Nonadmitted Amount (Column 17), Prior Year Sub-2 Verified Value (Column 18), and Prior Year VISION Filing Number (Column 19) (2021-22 SAPWG).
 - D. 2022-03BWG – Split Line 5 of the Quarterly Part 1 – Loss Experience and Part 2 – Direct Premiums Written into Line 5.1 – Commercial multiple peril (non-liability portion) and Line 5.2 – Commercial multiple peril (liability portion).
 - E. 2022-04BWG – Add a new supplement to capture premium and loss data for Annual Statement Line 17.1, 17.2, and 17.3 of the Exhibit of Premiums and Losses (State Page) – Other Liability by more granular lines of business.
 - F. 2022-05BWG – Add line numbers to the status data points in the Life/Fraternal, Health, and Property/Casualty (P/C) Schedule T footnote.
 - G. 2022-06BWG – Revise the Health Annual Statement Test language in the annual statement instructions.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

- H. 2022-07BWG – Modify the Health Actuarial Opinion Instructions. Add definitions of “actuarial asset” and “actuarial liability.” Modify Section 4 – Identification, Section 5 – Scope, and Section 7 – Opinion to clarify that the actuary’s opinion covers actuarial assets, as well as actuarial liabilities. Modify Section 9 to clarify that the guidance related to the type of opinion rendered by an appointed actuary covers both actuarial assets and actuarial liabilities.
 - I. 2022-08BWG – Modify the instructions in Section 1, Section 3, and Section 8 of the Property/Casualty (P/C) Actuarial Opinion Instructions to reflect the changes adopted by the Actuarial Opinion (C) Working Group.
 - J. 2022-09BWG – Changes to the Life/Fraternal VM-20, Requirements for Principle-Based Reserves for Life Products, Reserves Supplement blank.
 - K. 2022-10BWG – Add instructions to Schedule T, State pages and the Accident and Health (A&H) Policy Experience Exhibit to clarify guidance for reporting premium adjustments by jurisdiction.
 - L. 2022-11BWG Modified – Update the life/fraternal blank asset valuation reserve (AVR) factors to correspond with the adopted risk-based capital (RBC) factors for the expanded bond designation categories.
- 3. Adopted its editorial listing.
 - 4. Deferred proposal:
 - A. 2021-18BWG – Modify the Life Insurance (State Page) to include the line of business detail reported on the Analysis of Operations by Lines of Business pages.
 - 5. Exposed two new proposals for a public comment period ending Oct. 25.
 - 6. Received a Property and Casualty Risk-Based Capital (E) Working Group memorandum.

Draft: 6/9/22

Blanks (E) Working Group
E-Vote
June 8, 2022

The Blanks (E) Working Group of the Accounting Practices and Procedures (E) Task Force conducted an e-vote that concluded June 8, 2022. The following Working Group members participated: Pat Gosselin, Chair (NH); Kim Hudson, Vice Chair (CA); Kevin Richard (AK); Michael Shanahan (CT); N. Kevin Brown (DC); Daniel Mathis (IA); Roy Eft (IN); Dan Schaefer (MI); Debbie Doggett (MO); John Sirovetz (NJ); Diane Carter (OK); Jake Garn (UT); Steve Drutz (WA); and Jamie Taylor (WV).

1. Adopted Proposal 2022-13BWG

The Working Group held an e-vote for proposal 2022-13BWG, which modifies life blank Five-Year Historical Data questions 68 and 69 to reference group comprehensive and questions 70 and 71 to reflect the inclusion of all health lines of business other than group comprehensive. The crosschecks for these questions are being modified accordingly. Interested parties requested an annual 2022 effective date. That change and the wording order on the lines has been modified within the proposal to address the comments received.

Mr. Eft made a motion, seconded by Mr. Mathis, to adopt proposal 2022-13BWG with the modifications (Attachment Two-A1). The motion passed unanimously.

Having no further business, the Blanks (E) Working Group adjourned.

Draft: 6/7/22

Blanks (E) Working Group
Virtual Meeting
May 25, 2022

The Blanks (E) Working Group of the Accounting Practices and Procedures (E) Task Force met May 25, 2022. The following Working Group members participated: Pat Gosselin, Chair (NH); Kim Hudson, Vice Chair (CA); Kevin Richard (AK); Michael Shanahan (CT); N. Kevin Brown (DC); Tom Hudson (DE); Jason Reynolds (FL); Kevin Clark and Daniel Mathis (IA); Roy Eft (IN); Dan Schaefer (MI); Lindsay Crawford (NE); John Sirovetz (NJ); Dale Bruggeman and Tracy Snow (OH); Kim Lopez (OK); Melissa Greiner (PA); Miriam Fisk and Jamie Walker (TX); Jake Garn (UT); Steve Drutz (WA); Adrian Jaramillo (WI); and Jamie Taylor (WV).

1. Adopted its March 29 Minutes

Ms. Gosselin referenced the Blanks (E) Working Group's March 29 minutes, where the sponsor withdrew the previously exposed agenda item 2021-13BWG. During this meeting, the Working Group took the following action: 1) deferred proposal 2021-18BWG to allow for additional discussion; 2) re-exposed proposal 2021-22BWG related to the concurrent Statutory Accounting Principles (E) Working Group exposure; 3) adopted items previously exposed; 4) exposed 11 new proposals for a public comment period ending April 25; 5) adopted its editorial listing; and 6) received the Statutory Accounting Principles (E) Working Group memorandum.

Mr. Snow made a motion, seconded by Mr. Eft, to adopt the Working Group's March 29 minutes (*see NAIC Proceedings – Spring 2022, Accounting Practices and Procedures (E) Task Force, Attachment Two*). The motion passed unanimously.

2. Item Previously Deferred

a. Agenda Item 2021-18BWG

Ms. Walker stated that this proposal modifies the Life Insurance exhibit (State Page) to capture information by lines of business to align with the Analysis of Operations by Lines of Business pages. Since the March 29 meeting, she stated that she had discussions with interested parties to better understand their concerns. At that time, they discussed an overall approach and will consider possible changes to this proposal. Ms. Walker stated that more time is needed to address regulatory needs without creating overly burdensome reporting for industry. She asked others that want to join the discussions to contact her or NAIC staff.

Ms. Walker made a motion, seconded by Mr. Eft, to defer the proposal for further discussions between state insurance regulators, interested parties and NAIC staff. The motion passed unanimously.

3. Adopted Items Previously Re-Exposed

a. Agenda Item 2021-22BWG – Effective 12/31/2022

Mr. Bruggeman stated that this blanks agenda item is in response to the Statutory Accounting Principles (E) Working Group agenda item 2021-21 regarding related party reporting, which the Working Group adopted on May 24. He stated that the agenda item had two main goals: 1) to clarify reporting of affiliate transactions within existing reporting lines in the investment schedules, and 2) to incorporate new reporting requirements for Investment transactions with related parties. Pursuant to recent discussions, state insurance regulators desired

additional information on investment transactions involving related parties, regardless of whether the related party is “affiliated” pursuant to the *Insurance Holding Company System Regulatory Act* (#440). The identification of certain investments/transactions would be identified using a reporting code in the 2022 year-end investment schedules.

Mr. Bruggeman stated that the Statutory Accounting Principles (E) Working Group affirmed that the related party electronic column is effective for year-end 2022 reporting. He also stated that in response to requesting clarity on reporting schedules, the Working Group affirmed that the new code is effective for the following investments reported, in any reporting line, on Schedule B - Mortgage Loans, Schedule D - Bonds, Schedule DB - Derivatives, Schedule BA - Other Invested Assets, Schedule DA – Short-Term Investments, Schedule E Part 2 - Cash Equivalents and Schedule DL – Securities Lending. He stated that while the Blanks (E) Working Group interested parties suggested that the scope should be limited to Schedule D and Schedule BA, the Statutory Accounting Principles (E) Working Group affirmed that all these schedules have sufficient investments which warrant identification of related party involvement. He stated that in terms of the comments received regarding the recently exposed Code 6 which indicates no related party relationship, the Statutory Accounting Principles (E) Working Group supported this option to eliminate potential confusion on whether a “blank” field represents an incomplete reporting or a non-related party relationship. This is intended to help eliminate any ambiguity that occurs currently with other disclosures or schedules that have “null reporting.”

Mr. Bruggeman stated that this proposal will assist in capturing information in response to the Macroprudential (E) Working Group’s regulatory considerations and will specifically address the identification of related party investments which is numbers 7 and 8 in the Macroprudential exposure.

Mr. Bruggeman made a motion, seconded by Ms. Crawford, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Bruggeman made a motion, seconded by Mr. Drutz, to adopt the modified proposal (Attachment Two-B1). The motion passed unanimously.

4. Adopted Items Previously Exposed

a. Agenda Item 2022-01BWG – Effective 12/31/2022

Mr. Bruggeman stated that this blanks proposal is in response to the Statutory Accounting Principles (E) Working Group agenda item 2021-24, which was adopted during the 2022 Spring National Meeting. The proposal adds a new general interrogatory within the annual reporting blanks, specific to the use or acceptance of cryptocurrencies. Mr. Bruggeman stated that there are examples of inquiries within the interrogatory, including the identification regarding whether: 1) cryptocurrencies are held by an insurance reporting entity, and if so, which reporting schedules are the cryptocurrencies reported; and 2) cryptocurrencies are accepted for the payment of premiums. This general interrogatory was requested by state insurance regulators after the Statutory Accounting Principles (E) Working Group’s May 2021 adoption of *Interpretation (INT) 21-01: Accounting for Cryptocurrencies*, which established that directly held cryptocurrencies do not meet the definition of an admitted asset for statutory accounting.

Mr. Bruggeman made a motion, seconded by Mr. Hudson, to adopt the proposal (Attachment Two-B2). The motion passed unanimously.

b. Agenda Item 2022-02BWG – Effective 12/31/2022

Mr. Bruggeman stated that this blanks proposal is in response to Statutory Accounting Principles (E) Working Group agenda item 2021-22, which was adopted during the 2022 Spring National Meeting. This agenda item expands, through electronic-only columns, the reporting on Schedule D, Part 6 Section 1: Valuation of Shares of Subsidiary, Controlled or Affiliated Entities. Schedule D-6-1 captures investments, which are defined in *Statement of Statutory Accounting Principles (SSAP) No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*. The expansion in reporting captures items consistent with current requirements in SSAP No. 97 and includes items such as the prior year's book/adjusted carrying value (BACV), nonadmitted amount, sub-2 verified value, and VISION filing number. The addition of these items to the Schedule D-6-1 tables were proposed, as they will assist state insurance regulators in: 1) ensuring that Sub 1 and Sub 2 filings are being submitted by reporting entities; and 2) identifying situations where the NAIC approved value varies significantly from the value reported on Schedule D-6-1.

Mr. Bruggeman stated that interested parties recommended two minor editorial adjustments updating column references, which were agreed to and are reflected in the final proposal. In addition, interested parties sought additional background on this agenda item, specifically why the electronic-only columns capture prior-year data. During a phone call with interested parties on May 17, NAIC staff provided additional background indicating that these new data elements will assist state insurance regulators in the review of the subsidiary, controlled, and affiliated (SCA) process, and the SCA review process occurs in arrears, sometimes more than a year in arrears, which is why the new electronic columns capture relevant prior-year data.

Mr. Bruggeman made a motion, seconded by Mr. Hudson, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Bruggeman made a motion, seconded by Mr. Hudson to adopt the modified proposal (Attachment Two-B3). The motion passed unanimously.

c. Agenda Item 2022-03BWG – Effective 1/01/2023

Mary Caswell (NAIC) stated that this proposal is intended to fix the reporting of line 5 to be reported as line 5.1 – commercial multiple peril (non-liability portion) and line 5.2 – commercial multiple peril (liability portion) on the quarterly Part 1 and Part 2 pages to be consistent with the annual reporting. There were no interested party comments.

Mr. Hudson made a motion, seconded by Mr. Sirovets, to adopt the proposal (Attachment Two-B4). The motion passed unanimously.

d. Agenda Item 2022-04BWG – Effective 12/31/2023

Ms. Gosselin stated that this proposal adds a new supplement to capture premium and loss data for Annual Statement Lines 17.1, 17.2 and 17.3 of the Exhibit of Premiums and Losses (State Page) – Other Liability by more granular lines of business. She stated that there was a minor word correction which has been made. Interested parties are interested in evaluating the results of this exhibit with state insurance regulators and NAIC staff in 2024 to better understand if the results are what state insurance regulators had expected.

Ms. Gosselin made a motion, seconded by Mr. Drutz, to adopt the proposal with the minor modification of a word correction from “or” to “of” (Attachment Two-B5). The motion passed unanimously.

e. Agenda Item 2022-05BWG – Effective 12/31/2022

Ms. Caswell stated that this proposal adds line numbers to the status data points in the Life/Fraternal, Health, and Property/Casualty (P/C) Schedule T footnote for ease in electronic data capture of the lines and clarification of reporting.

Mr. Hudson made a motion, seconded by Mr. Drutz, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Hudson made a motion, seconded by Mr. Snow to adopt the modified proposal (Attachment Two-B6). The motion passed unanimously.

f. Agenda Item 2022-06BWG – Effective 12/31/2022

Mr. Drutz stated that the purpose of the change was to encourage those filers who write predominantly health business and file on the life blank to begin filing on the health blank. There were some clarifications and reference corrections requested by interested parties, which have been incorporated in the modifications. The primary purpose was to remove the requirement that life and P&C companies had to write in five states or less and write 75% of premiums in their domiciliary state to pass the health test.

Mr. Drutz stated that the Health Test Ad Hoc Group of the Health Risk-Based Capital (E) Working Group continues to discuss and review any potential modifications to the premium and reserve ratios. The ad hoc group will continue to evaluate if there should be a change, and if so, what those changes should be, and present to the Blanks (E) Working Group for consideration at a future date.

Mr. Drutz made a motion, seconded by Ms. Crawford, to adopt the modifications to the proposal. The motion passed unanimously. Mr. Drutz made a motion, seconded by Mr. Garn, to adopt the modified proposal (Attachment Two-B7). The motion passed unanimously.

g. Agenda Item 2022-07BWG – Effective 12/31/2022

Ms. Gosselin stated that this proposal modifies the Health Actuarial Opinion Instructions to add definitions of “actuarial asset” and “actuarial liability” and modifies Section 4—Identification, Section 5—Scope, and Section 7—Opinion to clarify that the actuary’s opinion covers actuarial assets as well as actuarial liabilities. It modifies Section 9 to clarify that the guidance related to the type of opinion rendered by an appointed actuary covers both actuarial assets and actuarial liabilities. Ms. Gosselin stated that no interested party comments were received.

Mr. Eft made a motion, seconded by Mr. Hudson, to adopt the proposal (Attachment Two-B8). The motion passed unanimously.

h. Agenda Item 2022-08BWG – Effective 12/31/2022

Ms. Fisk stated that this proposal makes minor changes to the Property/Casualty Actuarial Opinion instructions. The changes were adopted by the Actuarial Opinion (C) Working Group on March 1. She stated that the proposal deletes the paragraph on continuing education (CE) log procedures because this is no longer needed, as the Casualty Actuarial and Statistical (C) Task Force has ended its project of studying the CE logs. The proposal adds guidance on documenting the review of the qualification documentation for companies that are part of a larger group. It adds an additional requirement in the Identification paragraph for appointed actuaries to confirm that qualification documentation has been provided to the board of directors, as well as clarification on the signature block requirements that they apply only to the Statement of Actuarial Opinion (SAO), and the information should be provided in the actuarial report but does not have to be in the same format.

Ms. Greiner made a motion, seconded by Mr. Hudson, to adopt the proposal (Attachment Two-B9). The motion passed unanimously.

i. Agenda Item 2022-09BWG– Effective 12/31/2022

Jennifer Frasier (NAIC) stated that this proposal is effective for annual 2022. She stated that this change allows for an ongoing statement of assumptions meaning that if a filed statement of exemption is not rejected, then subsequent filings are not required as long as the company continues to qualify for the exemption. To address the ongoing statement of exemption, the Life Actuarial (A) Task Force suggested three changes for the blanks. A question 8 was also added to the Supplemental Exhibits and Schedules Interrogatories asking if the principles-based reserves (PBR) statement of exemption is going to be filed. She stated that instructions were also added to help the company in responding.

Ms. Frasier stated that for the reserve supplement, a question was added to Part 2 asking about the use of an ongoing exemption. This is where the company would indicate the year a live exemption was filed and then provide confirmation that the company continues to qualify for the exemption. Clarifying language was also added to describe the PBR exemption as being “allowed” rather than “granted.” The intent of the wording change is that “allowed” would be a broader term to encompass “granted,” “acknowledged,” and “not rejected.”

Mr. Hudson made a motion, seconded by Mr. Garn, to adopt the proposal (Attachment Two-B10). The motion passed unanimously.

j. Agenda Item 2022-10BWG – Effective 12/31/2022

Mr. Bruggeman stated that this proposal is in response to the Statutory Accounting Principles (E) Working Group agenda item 2022-03 adopted on May 24. He stated that the item was drafted to propose blanks instructional changes primarily to Schedule T, which reflects premiums allocated by states and territories. NAIC staff received inquiries from three states in the fourth quarter of 2021 regarding a minor number of entities, roughly 20, that primarily wrote health business related to the federal Affordable Care Act (ACA), which are believed to have not properly allocated premium adjustments by jurisdiction on the statutory financial statement. In summary, the agenda item directs that all premium adjustments (both increases and decreases), including, but not limited to, the ACA premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction.

Mr. Bruggeman made a motion, seconded by Mr. Drutz, to adopt the proposal (Attachment Two-B11). The motion passed unanimously.

k. Agenda Item 2022-11BWG – Effective 12/31/2022

Ms. Gosselin stated that this proposal updates the Life/Fraternal asset valuation reserve (AVR) factors to correspond with the adopted risk-based capital (RBC) factors for the expanded bond designation categories. This is strictly a mechanical update. The maximum reserve factor is set to the after-tax RBC factor, and the basic contribution and reserve objective factors are a percentage of those updated maximum reserve factors.

Mr. Bruggeman made a motion, seconded by Mr. Hudson, to adopt the proposal (Attachment Two-B12). The motion passed unanimously.

5. Exposed New Items

a. Agenda Item 2022-12BWG

Mr. Drutz stated that this proposal creates a “health supplement” for the life/fraternal blank, combining the Health Analysis of Operations by Lines of Business Supplement page and the Health Care Receivable Supplement pages (Exhibits 3 and 3A), similar to the life supplement in the health blank.

Hearing no objection, Ms. Gosselin stated that the proposal will be considered exposed with a public comment period ending of Oct. 14.

b. Agenda Item 2022-13BWG

Mr. Garn stated that this proposal modifies the Five-Year Historical Data questions 68 and 69 on the life/fraternal blank to reference group comprehensive and modifies questions 70 and 71 to reflect inclusion of all health lines of business other than group comprehensive. He stated that interested parties have asked again to change the effective date to be annual 2022 rather than annual 2023 to coincide with the changes made to Schedule H. To accommodate this request, Mr. Garn suggested a one-week exposure period followed by an e-vote to consider adoption.

Hearing no objection to the shortened exposure period, Ms. Gosselin stated that the proposal will be considered exposed with a public comment period ending June 1 and subsequent e-vote.

6. Adopted the Editorial Listing

Mr. Garn made a motion, seconded by Mr. Hudson, to adopt the Blanks (E) Working Group editorial listing (Attachment Two-B13). The motion passed unanimously.

7. Received the Property and Casualty Risk-Based Capital (E) Working Group Memorandum

Ms. Gosselin stated that a memorandum has been received from the Property and Casualty Risk-Based Capital (E) Working Group. She stated that when the reinsurance recoverable credit risk charge was implemented in 2018, a load of operational risk was embedded in the charge. Now that the operational risk is separately addressed in RBC as a standard-alone capital add-on, it results with duplication of the operational risk charge on the reinsurance recoverable component in the RBC report. An RBC proposal was developed to remove the embedded 2% operational risk contained in the R3 credit risk component, and it was adopted during the Capital Adequacy (E) Task Force meeting on March 28. The factor changes referenced in the memorandum should be made to the Annual Statement, Schedule F, Part 3, as the R3 charge is derived from the Schedule F, Part 3, Columns 35 and 36, Line 9999999.

Mr. Drutz made a motion, seconded by Mr. Snow, to receive the Property and Casualty Risk-Based Capital (E) Working Group memorandum (Attachment Two-B14). The motion passed unanimously.

Having no further business, the Blanks (E) Working Group adjourned.

Anticipated Effective Date: Annual 2022

IDENTIFICATION OF ITEM(S) TO CHANGE

This item proposes new reporting requirements for investment transactions with related parties. In addition to capturing direct loans in related parties, it will also capture information involving securitizations (or other similar investments) where the related party is a sponsor / originator along with whether the underlying investment is in a related party.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

Pursuant to recent discussions, regulators desire additional information on investment transactions involving related parties, regardless of whether the related party is “affiliated” pursuant to Model #440. To preserve the affiliate definition and reporting categories for affiliated investments, these additional proposed reporting elements will be captured outside of the current affiliate reporting requirements. The new electronic columns will capture investments issued by a related party or acquired through a related party transaction or arrangement, regardless if the specific affiliate definition has been met or if there has been a disclaimer of affiliation / control.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: _____

Other Comments:

** This section must be completed on all forms.

ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE

SCHEDULE BA – PART 1

=====
 ==**Detail Eliminated to Conserve Space**====

** Columns 21 through ~~26~~27 will be electronic only. **

=====
 ==**Detail Eliminated to Conserve Space**====

Column 27 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

- 1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.
- 2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.
- 3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.
- 4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.
- 5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.
- 6. The investment does not involve a related party.

NAIC Designation Category Footnote:

Provide the total book/adjusted carrying value amount by NAIC Designation Category that represents the amount in reported in Column 12.

SCHEDULE BA – PART 2

Provide the total book/adjusted carrying value amount by NAIC Designation Category Equivalent that represents the amount reported in Column 7.

The sum of the amounts reported for each NAIC Designation Category Equivalent in the footnote should equal Line 2509999999.

SCHEDULE DL – PART 1**SECURITIES LENDING COLLATERAL ASSETS**

Reinvested Collateral Assets Owned December 31 Current Year
(Securities lending collateral assets reported in aggregate on Line 10 of the asset page
and not included on Schedules A, B, BA, D, DB and E.)

↓ **====** **Detail Eliminated to Conserve Space** **====** ↓

** Columns 8 through ~~11~~12 will be electronic only. **

↓ **====** **Detail Eliminated to Conserve Space** **====** ↓

Column 12 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.
2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.
3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.
4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.
5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.
6. The investment does not involve a related party.

The code reported for this column should be determined in a manner consistent with the instructions of other schedules for the lines shown below:

- Lines 001999999 through 250999999 Schedule D, Part 1, Column 35
- Lines 401999999 through 450999999 Schedule D, Part 2, Section 1, Column 28
- Lines 501999999 through 598999999 Schedule D, Part 2, Section 2, Column 25
- Line 930999999 Schedule B, Part 1, Column 20
- Line 940999999 Schedule BA, Part 1, Column 27
- Line 950999999 Schedule DA, Part 1, Column 23
- Line 970999999 Schedule E, Part 2, Column 12

The column should be left blank for the following lines:

- Real Estate (Schedule A type) 920999999
- Cash (Schedule E, Part 1 type)..... 960999999
- Other Assets..... 980999999

General Interrogatories:

1. The total activity for the year represents the net increase (decrease) from the prior year-end to the current year-end.
2. The average balance for the year is the average daily balance.

Average daily balance: Total of daily balances divided by the number of days. Always calculate based on a 365/366 day year. If data is missing for a given date (e.g., weekend, holiday), count the previous day’s value multiple times. The actual day count for the year (365/366) would serve as the denominator in the average calculation.

3. NAIC Designation Category:

Provide the total book/adjusted carrying value amount by NAIC Designation Category that represents the amount reported in Column 6.

SCHEDULE DL – PART 2

SECURITIES LENDING COLLATERAL ASSETS

Reinvested Collateral Assets Owned December 31 Current Year
 (Securities lending collateral assets included on Schedules A, B, BA, D, DB and E
 and not reported in aggregate on Line 10 of the asset page.)

↓ **====** **Detail Eliminated to Conserve Space** **====** ↓

** Columns 8 through ~~11~~12 will be electronic only. **

↓ **====** **Detail Eliminated to Conserve Space** **====** ↓

Column 12 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.
2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.
3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.
4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.
5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.
6. The investment does not involve a related party.

The code reported for this column should be same for the security as reported in other schedules for the lines shown below:

- Lines 0019999999 through 2509999999 Schedule D, Part 1, Column 35
- Lines 4019999999 through 4509999999 Schedule D, Part 2, Section 1, Column 28
- Lines 5019999999 through 5989999999 Schedule D, Part 2, Section 2, Column 25
- Line 9309999999 Schedule B, Part 1, Column 20
- Line 9409999999 Schedule BA, Part 1, Column 27
- Line 9509999999 Schedule DA, Part 1, Column 23
- Line 9709999999 Schedule E, Part 2, Column 12

The column should be left blank for the following lines:

- Real Estate (Schedule A) 9209999999
- Cash (Schedule E, Part 1) 9609999999
- Other Assets 9809999999

General Interrogatories:

1. The total activity for the year represents the net increase (decrease) from the prior year-end to the current year-end.
2. The average balance for the year is the average daily balance.

Average daily balance: Total of daily balances divided by the number of days. Always calculate based on a 365/366 day year. If data is missing for a given date (e.g., weekend, holiday), count the previous day’s value multiple times. The actual day count for the year (365/366) would serve as the denominator in the average calculation.

SCHEDULE E – PART 2 – CASH EQUIVALENTS

⌄ ════════════════════════ **Detail Eliminated to Conserve Space** ════════════════════════ ⌄

** Columns 10 ~~and~~ through 11-12 will be electronic only. **

⌄ ════════════════════════ **Detail Eliminated to Conserve Space** ════════════════════════ ⌄

Column 12 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

- 1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.
- 2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.
- 3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.
- 4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.
- 5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.
- 6. The investment does not involve a related party.

NAIC Designation Category Equivalent Footnote:

Provide the total book/adjusted carrying value amount by NAIC Designation Category Equivalent that represents the amount reported in Column 7.

The sum of the amounts reported for each NAIC Designation Category Equivalent in the footnote should equal Line 2509999999.

4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.
5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.
6. The investment does not involve a related party.

SCHEDULE D – PART 3**LONG-TERM BONDS AND STOCKS ACQUIRED DURING THE CURRENT QUARTER**

Detail Eliminated to Conserve Space

** Columns 11 through ~~15~~16 will be electronic only. **

Detail Eliminated to Conserve Space

Column 15 – ISIN Identification

The International Securities Identification Numbering (ISIN) system is an international standard set up by the International Organization for Standardization (ISO). It is used for numbering specific securities, such as stocks, bonds, options and futures. ISIN numbers are administered by a National Numbering Agency (NNA) in each of their respective countries, and they work just like serial numbers for those securities. Record the ISIN number only if no valid CUSIP, CINS or PPN exists to report in Column 1.

Column 16 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.
2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.
3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.
4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.
5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.
6. The investment does not involve a related party.

SCHEDULE D – PART 4**LONG-TERM BONDS AND STOCKS SOLD, REDEEMED OR OTHERWISE
DISPOSED OF DURING THE CURRENT QUARTER**

Detail Eliminated to Conserve Space

** Columns 23 through ~~27~~28 will be electronic only. **

Detail Eliminated to Conserve Space

Column 27 – ISIN Identification

The International Securities Identification Numbering (ISIN) system is an international standard set up by the International Organization for Standardization (ISO). It is used for numbering specific securities, such as stocks, bonds, options and futures. ISIN numbers are administered by a National Numbering Agency (NNA) in each of their respective countries, and they work just like serial numbers for those securities. Record the ISIN number only if no valid CUSIP, CINS or PPN exists to report in Column 1.

Column 28 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.
2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.
3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.
4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.
5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.
6. The investment does not involve a related party.

SCHEDULE DL – PART 1

SECURITIES LENDING COLLATERAL ASSETS

Reinvested Collateral Assets Owned Current Statement Date
 (Securities lending collateral assets reported in aggregate on Line 10 of the asset page
 and not included on Schedules A, B, BA, D, DB and E.)

↓ **====** **Detail Eliminated to Conserve Space** **====** ↓

** Columns 8 ~~and~~ through 9-10 will be electronic only. **

↓ **====** **Detail Eliminated to Conserve Space** **====** ↓

Column 10 – Investments Involving Related Parties

Required for all investments involving related parties including, but not limited to, those captured as affiliate investments. This disclosure intends to capture information on investments held that reflect interactions involving related parties, regardless of whether the related party meets the affiliate definition, or the reporting entity has received domiciliary state approval to disclaim control/affiliation.

Enter one of the following codes to identify the role of the related party in the investment.

1. Direct loan or direct investment (excluding securitizations) in a related party, for which the related party represents a direct credit exposure.
2. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer, or other similar influential role and for which 50% or more of the underlying collateral represents investments in or direct credit exposure to related parties.
3. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies involving a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role and for which less than 50% (including 0%) of the underlying collateral represents investments in or direct credit exposure to related parties.
4. Securitization or similar investment vehicles such as mutual funds, limited partnerships and limited liability companies in which the structure reflects an in-substance related party transaction but does not involve a relationship with a related party as sponsor, originator, manager, servicer or other similar influential role.
5. The investment is identified as related party, but the role of the related party represents a different arrangement than the options provided in choices 1-4.
6. The investment does not involve a related party.

The code reported for this column should be determined in a manner consistent with the instructions of other schedules for the lines shown below:

- Lines 001999999 through 250999999 Schedule D, Part 1, Column 35
- Lines 401999999 through 450999999 Schedule D, Part 2, Section 1, Column 28
- Lines 501999999 through 598999999 Schedule D, Part 2, Section 2, Column 25
- Line 930999999 Schedule B, Part 1, Column 20
- Line 940999999 Schedule BA, Part 1, Column 27
- Line 950999999 Schedule DA, Part 1, Column 23
- Line 970999999 Schedule E, Part 2, Column 12

The column should be left blank for the following lines:

- Real Estate (Schedule A type) 9209999999
- Cash (Schedule E, Part 1 type)..... 9609999999
- Other Assets..... 9809999999

General Interrogatories:

1. The total activity for the year to date represents the net increase (decrease) from the prior year-end to the current statement date.
2. The average balance for the year to date is the average daily balance.

Average daily balance: Total of daily balances divided by the number of days that have passed in the year as of the reporting date. If data is missing for a given date (e.g., weekend, holiday), count the previous day’s value multiple times. The actual day count for the year to date would serve as the denominator in the average calculation.

SCHEDULE DL – PART 2

SECURITIES LENDING COLLATERAL ASSETS

Reinvested Collateral Assets Owned Current Statement Date
 (Securities lending collateral assets included on Schedules A, B, BA, D, DB and E
 and not reported in aggregate on Line 10 of the asset page.)

IDENTIFICATION OF ITEM(S) TO CHANGE

Add new questions to General Interrogatories Part 1 on whether the reporting entity accepts cryptocurrency for payment of premiums, which cryptocurrencies are accepted and whether they are held for investment or immediately converted to U.S. dollars.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

Per the Statutory Accounting Principles (E) Working Group’s (SAPWG) related agenda item (Ref 2021-24), the proposal adds a new general interrogatory to get some additional information on the when cryptocurrencies are directly held or permitted for the remittance of premiums, and to better understand if and how cryptocurrencies are being utilized by insurance companies.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: _____

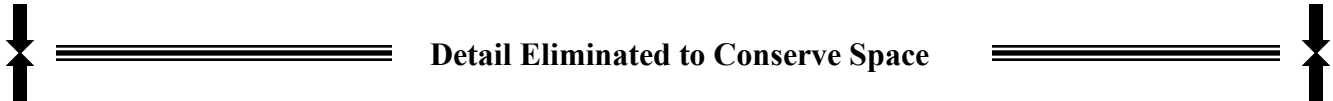

Other Comments:

** This section must be completed on all forms.

ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE

GENERAL INTERROGATORIESPART 1 – COMMON INTERROGATORIESGENERAL

- 1.2 N/A is an acceptable response only if Interrogatory 1.1 was answered NO.

INVESTMENT

25. For the purposes of this interrogatory, “exclusive control” means that the company has the exclusive right to dispose of the investment at will, without the necessity of making a substitution thereof. For purposes of this interrogatory, securities in transit and awaiting collection, held by a custodian pursuant to a custody arrangement or securities issued subject to a book entry system are considered to be in actual possession of the company.

If bonds, stocks and other securities owned December 31 of the current year, over which the company has exclusive control are: (1) securities purchased for delayed settlement, or (2) loaned to others, the company should respond “NO” to 25.01 and “YES” to 26.1.

33. This interrogatory applies to any investment required to be filed with the SVO (or that would have been required if not exempted in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*), whether in the general account or separate accounts.

The existence of Z securities does not mean that a reporting entity is not complying with the procedures. As long as the entity has filed its Z securities with the SVO within 120 days of purchase, compliance with the procedures has been met. If an entity wishes to provide the counts of Z securities, include those counts in the explanation lines. An explanation is only expected if the answer to the compliance question is NO.

38.1 [Answer “YES” if the company directly owns cryptocurrencies. Answer “NO” if the company does not directly own cryptocurrencies or only holds cryptocurrencies indirectly through funds \(ETFs, Mutual Funds, etc.\)](#) *INT 21-01: Accounting for Cryptocurrencies* established that directly held cryptocurrencies do not meet the definition of cash or an admitted asset and are therefore considered to be a nonadmitted asset for statutory accounting.

38.2 [If the answer to 38.1 is “YES”, specify on which schedule they are reported. \(e.g., Schedule BA, etc.\)](#)

39.2 [If the answer to 39.1 is “YES”, indicate if it is the policy of the reporting entity to directly hold cryptocurrency accepted as payment for premiums or immediately convert to U.S. dollars. Select “YES” for both questions if some cryptocurrencies are held directly and others are immediately converted to U.S. dollars.](#)

39.21 [Answer “YES” if it is the policy of the reporting entity to directly hold cryptocurrency that was accepted as payment for premiums.](#)

39.22 Answer “YES” if it is the policy of the reporting entity to immediately convert cryptocurrency accepted as payment for premiums to U.S. dollars.

39.3 If the answer to 38.1 or 39.1 is “YES”, complete Columns 1 through 3 for each cryptocurrency accepted for payments of premiums or held directly.

Name of Cryptocurrency:

Provide the name of each cryptocurrency accepted for payments of premiums or held directly.

Immediately Converted to USD, Directly Held, or Both:

For each cryptocurrency listed, provide one of the following responses:

- Immediately converted to USD
- Directly held,
- Both.

Accepted for Payment of Premiums:

If the cryptocurrencies are accepted for the payment of premiums provide the response of “YES” in the column otherwise the response in the column should be “NO”.

OTHER

3840. The purpose of this General Interrogatory is to capture information about payments to any trade association, service organization, and statistical or rating bureau. A “service organization” is defined as every person, partnership, association or corporation that formulates rules, establishes standards, or assists in the making of rates or standards for the information or benefit of insurers or rating organizations.

3941. The purpose of this General Interrogatory is to capture information about legal expenses paid during the year. These expenses include all fees or retainers for legal services or expenses, including those in connection with matters before administrative or legislative bodies. It excludes salaries and expenses of company personnel, legal expenses in connection with investigation, litigation and settlement of policy claims, and legal fees associated with real estate transactions, including mortgage loans on real estate. Do not include amounts reported in General Interrogatories No. 3840 and No. 4042.

4042. The purpose of this General Interrogatory is to capture information about expenditures in connection with matters before legislative bodies, officers or departments of government paid during the year. These expenses are related to general legislative lobbying and direct lobbying of pending and proposed statutes or regulations before legislative bodies and/or officers or departments of government. Do not include amounts reported in General Interrogatories No. 3840 and No. 3941.

25.01 Were all the stocks, bonds and other securities owned December 31 of current year, over which the reporting entity has exclusive control, in the actual possession of the reporting entity on said date? (other than securities lending programs addressed in 25.03) Yes [] No []

⌵
⌶

Detail Eliminated to Conserve Space

37. By rolling/renewing short-term or cash equivalent investments with continued reporting on Schedule DA, Part 1 or Schedule E Part 2 (identified through a code (%) in those investment schedules), the reporting entity is certifying to the following:

- a. The investment is a liquid asset that can be terminated by the reporting entity on the current maturity date.
- b. If the investment is with a nonrelated party or nonaffiliate, then it reflects an arms-length transaction with renewal completed at the discretion of all involved parties.
- c. If the investment is with a related party or affiliate, then the reporting entity has completed robust re-underwriting of the transaction for which documentation is available for regulator review.
- d. Short-term and cash equivalent investments that have been renewed/rolled from the prior period that do not meet the criteria in 37.a -37.c are reported as long-term investments.

Has the reporting entity rolled/renewed short-term or cash equivalent investments in accordance with these criteria? Yes [] No [] N/A []

38.1 Does the reporting entity directly hold cryptocurrencies? Yes [] No []

38.2 If the response to 38.1 is yes, on what schedule are they reported?

39.1 Does the reporting entity directly or indirectly accept cryptocurrencies as payments for premiums on policies? Yes [] No []

39.2 If the response to 39.1 is yes, are the cryptocurrencies held directly or are they immediately converted to U.S. dollars?

39.21 Held directly Yes [] No []

39.22 Immediately converted to U.S. dollars Yes [] No []

39.3 If the response to 38.1 or 39.1 is yes, list all cryptocurrencies accepted for payments of premiums or that are held directly.

IDENTIFICATION OF ITEM(S) TO CHANGE

Add four new electronic only columns to Schedule D, Part 6, Section 1 for Prior Year Book/Adjusted Carrying Value (Column 16), Prior Year Nonadmitted Amount (Column 17), Prior Year Sub-2 Verified Value (Column 18) and Prior Year VISION Filing Number (Column 19).

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

Per the Statutory Accounting Principles (E) Working Group’s (SAPWG) related agenda item (Ref 2021-22), the addition of these electronic only columns will help regulators 1) ensure Sub-1 and Sub-2 filings are being submitted by reporting entities, and 2) identify situations where the NAIC approved value varies significantly from the value reported on Schedule D, Part 6, Section 1.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: _____

Other Comments:

** This section must be completed on all forms.

ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH, PROPERTY AND TITLE

SCHEDULE D – PART 6 – SECTION 1

VALUATION OF SHARES OF SUBSIDIARY, CONTROLLED OR AFFILIATED COMPANIES

If a reporting entity has any common stock or preferred stock reported for any of the following required categories or subcategories, it shall report the subtotal amount of the corresponding category or subcategory, with the specified subtotal line number appearing in the same manner and location as the pre-printed total or grand total line and number:

↓ **=====
↑** **Detail Eliminated to Conserve Space** **=====
↓**

**** Column 12 through [15-19](#) will be electronic only. ****

Column 12 – Legal Entity Identifier (LEI)

Provide the 20-character Legal Entity Identifier (LEI) for any issuer as assigned by a designated Local Operating Unit. If no LEI number has been assigned, leave blank.

↓ **=====
↑** **Detail Eliminated to Conserve Space** **=====
↓**

Column 15 – ISIN Identification

The International Securities Identification Numbering (ISIN) system is an international standard set up by the International Organization for Standardization (ISO). It is used for numbering specific securities, such as stocks, bonds, options and futures. ISIN numbers are administered by a National Numbering Agency (NNA) in each of their respective countries, and they work just like serial numbers for those securities. Record the ISIN number only if no valid CUSIP, CINS or PPN exists to report in Column 1.

[Column 16 – Prior Year Book/Adjusted Carrying Value](#)

[This should equal the Book/Adjusted Carrying Value \(Column 7\) amount reported in the prior year annual statement for each specific security.](#)

[Column 17 – Prior Year Nonadmitted Amount](#)

[This should equal the Nonadmitted Amount \(Column 9\) amount, if any, reported in the prior year annual statement for each specific security. ~~Provide the amount nonadmitted, if any, included in Column 10 of the prior year Annual Statement.~~](#)

[Column 18 – Prior Year Sub-2 Verified Value](#)

[If per SSAP No. 97 or by direction of the domiciliary regulator, the SCA is required to be filed with the NAIC, provide the prior year’s Sub-2 “Total Value Claimed.”](#)

[Column 19 – Prior Year VISION Filing Number](#)

[If per SSAP No. 97 or by direction of the domiciliary regulator, the SCA is required to be filed with the NAIC, provide the prior year NAIC VISION filing number.](#)

IDENTIFICATION OF ITEM(S) TO CHANGE

Split Line 5 of the Quarterly Part 1 – Loss Experience and Part 2 – Direct Premiums Written into Line 5.1 – Commercial multiple peril (non-liability portion) and Line 5.2 – Commercial multiple peril (liability portion).

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to fix the reporting of Line 5 to be reported as Line 5.1 – Commercial multiple peril (non-liability portion) and Line 5.2 – Commercial multiple peril (liability portion) on the Quarterly Part 1 and Part 2 to be consistent with the annual reporting. This change was missed on proposal 2020-33BWG.

IDENTIFICATION OF ITEM(S) TO CHANGE

Add a new supplement to capture premium and loss data for Annual Statement Lines 17.1, 17.2 & 17.3 of the Exhibit of Premiums and Losses (State Page) – Other Liability by more granular lines of business.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to provide regulators more granular detail of the premium and losses of the diverse lines of business reported on Annual Statement Lines 17.1, 17.2 & 17.3 of the Exhibit of Premiums and Losses (State Page).

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: _____

Other Comments:

** This section must be completed on all forms.

ANNUAL STATEMENT INSTRUCTIONS – PROPERTY

Exhibit of Other Liabilities by Lines of Business
As Reported on Line 17 of The Exhibit of Premiums and Losses

All reporting entities reporting “Other Liability” on Line 17 of the Exhibit of Premiums and Losses must prepare this exhibit. The exhibit is to be prepared and filed by all reporting entities no later than March 1 of each year.

The purpose of the Exhibit of Other Liabilities by Lines of Business is to provide more information on the diverse lines of business filed on Annual Statement Line 17. The exhibit should be reported on a direct basis (before assumed and ceded reinsurance).

Column 1 – Prior Year Written Premium

Line 12 should equal Exhibit of Premiums and Losses Grand Total Page Column 1, Line 17.1 + Line 17.2 + Line 17.3 from the prior year annual statement.

Column 2 – Current Year Written Premium

Line 12 should equal Exhibit of Premiums and Losses Grand Total Page Column 1, Line 17.1 + Line 17.2 + Line 17.3 from the current year annual statement.

Column 3 – Current Year Losses Paid (Deducting Salvage)

Line 12 should equal Exhibit of Premiums and Losses Grand Total Page Column 5, Line 17.1 + Line 17.2 + Line 17.3 from the current year annual statement.

Column 4 – Current Year Losses Unpaid (Case Base)

Line 12 should equal Underwriting and Investment Exhibit, Part 2A Column 1, Line 17.1 + Line 17.2 + Line 17.3 from the current year annual statement.

Line 1 – Completed Operations

For definitions of lines of business, see the appendix of these instructions.

Line 2 – Errors & Omissions (E&O)

Include: Errors and Omissions Liability Professional Liability Other Than Medical

Professional Errors and Omissions Liability

Fiduciary Liability

For definitions of lines of business, see the appendix of these instructions.

Line 3 – Directors & Officers (D&O)

For definitions of lines of business, see the appendix of these instructions.

Line 4 – Environmental LiabilityInclude: Environmental Pollution LiabilityNuclear Energy LiabilityFor definitions of lines of business, see the appendix of these instructions.Line 5 – Excess Workers' CompensationFor definitions of lines of business, see the appendix of these instructions.Column 1 should equal Exhibit of Premiums and Losses Grand Total Page Column 1, Line 17. 3 from the prior year annual statement.Column 2 should equal Exhibit of Premiums and Losses Grand Total Page Column 1, Line 17. 3 from the current year annual statement.Column 3 should equal Exhibit of Premiums and Losses Grand Total Page Column 5, Line 17. 3 from the current year annual statement.Column 4 should equal Underwriting and Investment Exhibit, Part 2A Column 1, Line 17. 3 from the current year annual statement.Line 6 – Commercial Excess & UmbrellaInclude: Commercial portion of excess and umbrella liabilityExclude: Personal umbrella liability reported on Line 7For definitions of lines of business, see the appendix of these instructions.Line 7 – Personal UmbrellaInclude: Personal umbrella liabilityExclude: Commercial portion of excess and umbrella liability reported on Line 6For definitions of lines of business, see the appendix of these instructions.Line 8 – Employment LiabilityInclude: Contingent LiabilityEmployee Benefit LiabilityEmployers' LiabilityEmployment Practices LiabilityFor definitions of lines of business, see the appendix of these instructions.Line 9 – Aggregate Write-ins for Facilities & Premises (CGL)Enter the total of the write-ins listed in schedule Details of Write-ins Aggregated at Line 9 for Facilities & Premises (CGL).

Line 10 – Internet & Cyber

Include: Internet Liability

Cyber Liability

For definitions of lines of business, see the appendix of these instructions.

Line 11 – Aggregate Write-ins for Other

Enter the total of the write-ins listed in schedule Details of Write-ins Aggregated at Line 11 for Other.

Line 12 – Total

Should equal the sum of Lines 1 through 11.

Details of Write-ins Aggregated at Line 9 for Facilities & Premises (CGL)

List separately each category of Facilities & Premises (CGL).

Include: Construction and Alteration Liability

Contractual Liability

Elevators and Escalators Liability

Liquor Liability

Personal Injury Liability

Premises and Operations Liability

Commercial General Liability (CGL)

Comprehensive Personal Liability

Day Care Centers

Fire Legal Liability

Municipal Liability

Veterinarian

For definitions of lines of business, see the appendix of these instructions.

If the total of Line 9 is less than 10% of the total reported on Line 12 then the aggregate amount can be reported as a lump sum. The description used should be “Aggregate of facilities & premises (CGL) lines of business less than 10% of category”.

If the total of Line 9 is 10% or greater of the total reported on Line 12 then each line of business (shown above) that is 10% or greater of the total reported on Line 9 should be listed separately. The description used should be one of the lines of business shown above.

All lines of business less than 10% of the total reported on Line 9 can be reported as a lump sum. The description used should be “Aggregate of facilities & premises (CGL) lines of business less than 10% of category”.

Example 1:

	<u>Amount</u>	<u>Percent</u>
<u>Current Year Direct Written Premium</u>		
<u>Total Line 12</u>	<u>\$1,000,000</u>	
<u>Total Line 9</u>	<u>\$400,000</u>	<u>40.00%</u>
<u>10% of Line 12</u>	<u>\$100,000</u>	
<u>10% of Line 9</u>	<u>\$40,000</u>	
<u>Lines of Business in Line 9</u>		
<u>Commercial General Liability</u>	<u>\$250,000</u>	<u>62.50%</u>
<u>Personal Injury Liability</u>	<u>\$100,000</u>	<u>25.00%</u>
<u>Municipal Liability</u>	<u>\$25,000</u>	<u>6.25%</u>
<u>Day Care Centers</u>	<u>\$15,000</u>	<u>3.75%</u>
<u>Elevators and Escalators Liability</u>	<u>\$10,000</u>	<u>2.50%</u>
<u>Total</u>	<u>\$400,000</u>	<u>100.0%</u>

In this example the total reported on Line 9 is \$400,000 and is 10% or greater of the total reported on Line 12 passing the initial threshold of reporting detail of the lines of business reported on Line 9.

The detail of the lines of business reported on Line 9 shows five lines of business reported on the line. Two of those lines (Commercial General Liability and Personal Injury Liability) are 10% or greater of the total reported on Line 9 and three of those lines of business (Municipal Liability, Day Care Centers and Elevators and Escalators Liability) are less than 10% of the total reported on Line 9.

Commercial General Liability and Personal Injury Liability pass the threshold for reporting as a separate item in the aggregate write-ins and would be reported individually and not aggregated with any other lines of business.

Municipal Liability, Day Care Centers and Elevators and Escalators Liability do not pass the threshold for reporting as a separate item in the aggregate write-ins and would be aggregated together with the line description “Aggregate of facilities & premises (CGL) lines of business less than 10% of category”.

Example 2:

	<u>Amount</u>	<u>Percent</u>
<u>Current Year Direct Written Premium</u>		
<u>Total Line 12</u>	<u>\$5,000,000</u>	
<u>Total Line 9</u>	<u>\$400,000</u>	<u>8.00%</u>
<u>10% of Line 12</u>	<u>\$500,000</u>	
<u>10% of Line 9</u>	<u>\$40,000</u>	
<u>Lines of Business in Line 9</u>		
<u>Commercial General Liability</u>	<u>\$250,000</u>	<u>62.50%</u>
<u>Personal Injury Liability</u>	<u>\$100,000</u>	<u>25.00%</u>
<u>Municipal Liability</u>	<u>\$25,000</u>	<u>6.25%</u>
<u>Day Care Centers</u>	<u>\$15,000</u>	<u>3.75%</u>
<u>Elevators and Escalators Liability</u>	<u>\$10,000</u>	<u>2.50%</u>
<u>Total</u>	<u>\$400,000</u>	<u>100.0%</u>

In this example the total reported on Line 9 is \$400,000 and is less than 10% of the total reported on Line 12 failing the initial threshold of reporting detail of the lines of business reported on Line 9.

All the lines of business reported on Line 9 would aggregated together and reported in the write-ins with the line description “Aggregate of facilities & premises (CGL) lines of business less than 10% of category”.

Details of Write-ins Aggregated at Line 11 for Other

List separately each category of other not included in Lines 1 through 10 for which there is no pre-printed line.

For definitions of lines of business, see the appendix of these instructions.

If the total of Line 11 is less than 10% of the total reported on Line 12 then the aggregate amount can be reported as a lump sum. The description used should be “Aggregate of other lines of business less than 10% of category”.

If the total of Line 11 is 10% or greater of the total reported on Line 12 then each line of business that is 10% or greater of the total reported on Line 11 should be listed separately.

All lines of business less than 10% of the total reported on Line 11 can be reported as a lump sum. The description used should be “Aggregate of other lines of business less than 10% of category”.

Example 1:

	<u>Amount</u>	<u>Percent</u>
<u>Current Year Direct Written Premium</u>		
<u>Total Line 12</u>	<u>\$1,000,000</u>	
<u>Total Line 11</u>	<u>\$100,000</u>	<u>10.00%</u>
<u>10% of Line 12</u>	<u>\$100,000</u>	
<u>10% of Line 11</u>	<u>\$10,000</u>	
<u>Lines of Business in Line 11</u>		
<u>Other LOB #1</u>	<u>\$45,000</u>	<u>45.00%</u>
<u>Other LOB #2</u>	<u>\$30,000</u>	<u>30.00%</u>
<u>Other LOB #3</u>	<u>\$9,000</u>	<u>9.00%</u>
<u>Other LOB #4</u>	<u>\$8,000</u>	<u>8.00%</u>
<u>Other LOB #5</u>	<u>\$8,000</u>	<u>8.00%</u>
<u>Total</u>	<u>\$100,000</u>	<u>100.0%</u>

In this example the total reported on Line 11 is \$100,000 and is 10% or greater of the total reported on Line 12 passing the initial threshold of reporting detail of the lines of business reported on Line 11.

The detail of the lines of business reported on Line 11 shows five lines of business reported on the line. Two of those lines (Other LOB #1 and Other LOB #2) are 10% or greater of the total reported on Line 11 and three of those lines of business (Other LOB #3, Other LOB #4 and Other LOB #5) are less than 10% of the total reported on Line 11.

Other LOB #1 and Other LOB #2 pass the threshold for reporting as a separate item in the aggregate write-ins and would be reported individually and not aggregated with any other lines of business.

Other LOB #3, Other LOB #4 and Other LOB #5 do not pass the threshold for reporting as a separate item in the aggregate write-ins and would be aggregated together with the line description “Aggregate of other lines of business less than 10% of category”.

Example 2:

	<u>Amount</u>	<u>Percent</u>
<u>Current Year Direct Written Premium</u>		
<u>Total Line 12</u>	<u>\$5,000,000</u>	
<u>Total Line 11</u>	<u>\$100,000</u>	<u>2.00%</u>
<u>10% of Line 12</u>	<u>\$500,000</u>	
<u>10% of Line 11</u>	<u>\$10,000</u>	
<u>Lines of Business in Line 11</u>		
<u>Other LOB #1</u>	<u>\$45,000</u>	<u>45.00%</u>
<u>Other LOB #2</u>	<u>\$30,000</u>	<u>30.00%</u>
<u>Other LOB #3</u>	<u>\$9,000</u>	<u>9.00%</u>
<u>Other LOB #4</u>	<u>\$8,000</u>	<u>8.00%</u>
<u>Other LOB #5</u>	<u>\$8,000</u>	<u>8.00%</u>
<u>Total</u>	<u>\$100,000</u>	<u>100.0%</u>

In this example the total reported on Line 11 is \$100,000 and is less than 10% of the total reported on Line 12 failing the initial threshold of reporting detail of the lines of business reported on Line 11.

All the lines of business reported on Line 11 would aggregated together and reported in the write-ins with the line description “Aggregate of other lines of business less than 10% of category”.

IDENTIFICATION OF ITEM(S) TO CHANGE

Revise the Health Annual Statement Test language

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of the change is to move those filers who write predominantly health business and file on the life blank to begin filing on the health blank.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: _____

Other Comments:

The Health Test Ad Hoc Group of the Health Risk-Based Capital (E) Working Group continues to discuss and review any potential modifications to premium and reserve ratios. The group will continue to evaluate if there should be changes and if so, will propose this to the Blanks (E) Working Group in a separate proposal for consideration in future years.

The references to the Life & Property & Casualty General Interrogatories were changed from pulling from RBC to instead pull from the Analysis of Operations By Lines of Business – Accident and Health and Underwriting & Investment Exhibit, Part 1B, respectively. The life General Interrogatory references will be further updated if proposal 2021-17BWG is adopted.

12-16-21 – Exposed to the Health and Life Risk-Based Capital (E) Working Groups for 40 days.

1-5-22 – Revised Health Annual Statement Instructions – General Interrogatories – Line 2.1 – Premium Numerator for additional clarity.

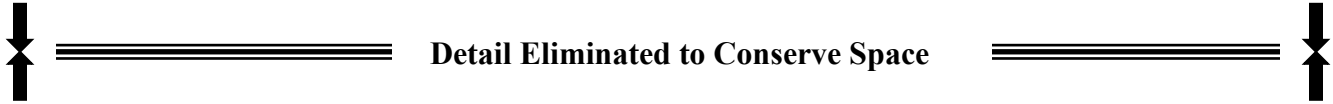

1-27-22 – Revised the Life and P/C Annual Statement Instructions – General Interrogatories for the Reserve Numerator.

1-28-22 – Two comment letters received. Re-exposed to the Health and Life Risk-Based Capital (E) Working Groups for changes to the Reserve Numerator for 15 days. Comments due 2-14-22.

2-14-22 – No comments were received.

2-25-22 – Health Risk-Based Capital Working Group agreed to refer the proposal to the Blanks (E) Working Group for exposure and consideration.

** This section must be completed on all forms.

ANNUAL STATEMENT INSTRUCTIONS – HEALTH**INSTRUCTIONS****For Completing Health Annual Statement Blank****Detail Eliminated to Conserve Space****GENERAL**

The annual statement is to be completed in accordance with the *Annual Statement Instructions* and *Accounting Practices and Procedures Manual* except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the health annual statement will be filed pursuant to such state's filing requirements. The domiciliary state's insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

1. Health Statement Test:

If a reporting entity completes the health annual statement for the reporting year, the reporting entity must complete the Health Statement Test.

The Health Statement Test is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers' compensation, accidental death and dismemberment policies and long-term care policies.

Passing the Test:

A reporting entity is deemed to have passed the Health Statement Test if the values for the premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year [and will continue to report on the Health Statement](#).

Failing the Test:

If a reporting entity, licensed as a life, accident and health or property and casualty insurer in its domiciliary state, is required to file the health annual statement for the reporting year and does not pass the Health Statement Test in the reporting year, it will revert to the annual statement form and risk-based capital report associated with the type of license held in its domestic state in the first quarter of the second year following the reporting year. If a reporting entity, licensed as a health insurer in its domiciliary state, is required to file the health annual statement for the reporting year and does not pass the Health Statement Test in the reporting year, it should continue to file the health annual statement.

Variations from following these instructions:

If a reporting entity’s domestic regulator requires the reporting entity to complete an annual statement form and risk-based capital report that differs from these instructions, the domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which a Health Statement Test is submitted.

Detail Eliminated to Conserve Space

ANNUAL STATEMENT INSTRUCTIONS – LIFE\FRATERNAL**INSTRUCTIONS****For Completing Life, Accident and Health Companies/Fraternal Benefit Societies Annual Statement Blank****FOREWORD**

=====
Detail Eliminated to Conserve Space
 =====

GENERAL

The annual statement is to be completed in accordance with the *Annual Statement Instructions* and *Accounting Practices and Procedures Manual* except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the life, accident and health annual statement will be filed pursuant to such state's filing requirements. The domiciliary state's insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

1. Health Statement Test:

If a reporting entity is licensed as a life and health insurer and completes the life, accident and health annual statement for the reporting year, the reporting entity must complete the Health Statement Test. However, a reporting entity that is required to also file the Separate Accounts Statement is not subject to the results of the Health Statement Test, and should continue to complete the life, accident and health/fraternal blank.

The Health Statement Test is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers' compensation, accidental death and dismemberment policies and long-term care policies.

Passing the Test:

A reporting entity is deemed to have passed the Health Statement Test if:

The values for the premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year.

~~AND~~

~~The entity passing Health Statement Test is licensed and actively issuing and/or renewing business in five states or less.~~

~~AND~~

~~At least seventy five percent (75%) of the entity's current year premiums are written in its domiciliary state.~~

~~OR~~

~~The values for the premium and reserve ratios in the Health Statement Test equal 100% for both the reporting and prior year, regardless of the number of states in which the entity is licensed.~~

If a reporting entity is a) licensed as a life and health insurer; b) completes the Life, Accident and Health annual statement for the reporting year; and c) passes the Health Statement Test (as described above), the reporting entity must complete the health statement beginning with the first quarter’s statement for the second year following the reporting year in which the reporting entity passes the Health Statement Test and must also file the corresponding risk-based capital report and the life supplements for that year-end.

Variations from following these instructions:

If a reporting entity’s domestic regulator requires the reporting entity to complete an annual statement form and risk-based capital report that differs from these instructions, the domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which a Health Statement Test is submitted.

ANNUAL STATEMENT INSTRUCTIONS – PROPERTY**INSTRUCTIONS****For Completing Property and Casualty Annual Statement Blank****FOREWORD****Detail Eliminated to Conserve Space****GENERAL**

The annual statement is to be completed in accordance with the *Annual Statement Instructions* and *Accounting Practices and Procedures Manual* except to the extent that state law, rules or regulations are in conflict with these publications. In cases of conflict, the property and casualty annual statement will be filed pursuant to such state's filing requirements. The domiciliary state's insurance regulatory authority shall maintain full discretion in determining which NAIC annual statement blank must be filed. The annual statement blank filed with the domiciliary state shall be the blank submitted to, and maintained by, the NAIC, and barring conflict as described above, should be filed with all jurisdictions in which the reporting entity is licensed.

1. Health Statement Test:

If a reporting entity is licensed as a property and casualty insurer and completes the property and casualty annual statement for the reporting year, the reporting entity must complete the Health Statement Test. However, a reporting entity that is required to also file the Protected Cell Statement is not subject to the results of the Health Statement Test and should continue to complete the property blank.

The Health Statement Test is designed to determine whether a reporting entity reports predominantly health lines of business. Health lines include hospital or medical policies or certificates, comprehensive major medical expense insurance and managed care contracts and exclude other health coverage such as credit insurance, disability income coverage, automobile medical coverage, workers' compensation, accidental death and dismemberment policies and long-term care policies.

Passing the Test:

A reporting entity is deemed to have passed the Health Statement Test if:

The values for the premium and reserve ratios in the Health Statement Test equal or exceed 95% for both the reporting and prior year.

AND

~~The entity passing Health Statement Test is licensed and actively issuing and/or renewing business in five states or less.~~

AND

~~At least seventy-five percent (75%) of the entity's current year premiums are written in its domiciliary state.~~

OR

~~The values for the premium and reserve ratios in the Health Statement Test equal 100% for both the reporting and prior year, regardless of the number of states in which the entity is licensed.~~

If a reporting entity is a) licensed as a property and casualty insurer; b) completes the property and casualty annual statement for the reporting year; and c) passes the Health Statement Test (as described above), the reporting entity must complete the health statement beginning with the first quarter’s statement for the second year following the reporting year in which the reporting entity passes the Health Statement Test and must also file the corresponding risk-based capital report and the property/casualty supplements for that year-end.

Variations from following these instructions:

If a reporting entity’s domestic regulator requires the reporting entity to complete an annual statement form and risk-based capital report that differs from these instructions, the domestic regulator shall notify the reporting entity in writing by June 1 of the year following the reporting year in which a Health Statement Test is submitted.

IDENTIFICATION OF ITEM(S) TO CHANGE

Instructions to Annual Health Statement Blank, Actuarial Opinion (Actuarial Opinion Instructions):

Modify section 1A. (Definitions), of the actuarial opinion instructions to add definitions of “actuarial asset” and “actuarial liability”.

Modify sections 4 (Identification section), section 5 (Scope section), and section 7 (Opinion section) of the actuarial opinion instructions to ensure that the opinion’s prescribed wording clearly indicates that the actuary’s opinion covers actuarial assets as well as actuarial liabilities.

Modify section 9 of the actuarial opinion instructions to ensure that guidance related to the type of opinion rendered by an appointed actuary covers both actuarial assets and actuarial liabilities.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to revise the language in sections 1A 4, 5, 7 and 9 of the orange blank annual statement instructions related to the actuarial opinion to ensure that all items (actuarial assets and liabilities) within the scope of the statement of actuarial opinion are treated consistently. Currently, reserves and liabilities are referenced in sections 1A 4, 5, 7 and 9 of the orange blank annual statement instructions. Since actuarial assets are included in the scope of the actuarial opinion, it is important that these instructions provide guidance to appointed actuaries that apply to all actuarial items, assets as well as liabilities, included in the scope of the actuarial opinion.

ANNUAL STATEMENT INSTRUCTIONS – HEALTH

ACTUARIAL OPINION

Detail Eliminated to Conserve Space

1A. Definitions

“Insurer” means an entity authorized to write accident and health contracts under the laws of any state and which files on the Health Blank.

“Actuarial Memorandum” means a document or other presentation prepared as a formal means of conveying the appointed actuary’s professional conclusions and recommendations, of recording and communicating the methods and procedures, of assuring that the parties addressed are aware of the significance of the appointed actuary’s opinion or findings and that documents the analysis underlying the opinion. The expected content of the memorandum is further described in Section 1C.

[“Actuarial asset” means an actuarial item presented as an asset in the annual statement and included in the scope of the Statement of Actuarial Opinion.](#)

[“Actuarial liability” means an actuarial item presented as a liability in the annual statement and included in the scope of the Statement of Actuarial Opinion.](#)

Detail Eliminated to Conserve Space

- 4. The IDENTIFICATION section should specifically indicate the appointed actuary’s relationship to the company, qualifications for acting as appointed actuary, date of appointment, and should specify that the appointment was made by the Board of Directors, or its equivalent or by a committee of the Board.

A person who is not a Member of the American Academy of Actuaries but is recognized by the Academy as qualified must attach, each year, a copy of the approval letter from the Academy.

This section should contain only one of the following:

For a Member of the American Academy of Actuaries who is an employee of the organization, the opening paragraph of the opinion should contain all the following sentences if the appointed actuary is using the prescribed wording:

“I, (name and title of actuary), am an employee of (named organization) and a member of the American Academy of Actuaries. I was appointed on [date of appointment] in accordance with the requirements of the annual statement instructions. I meet the Academy qualification standards for rendering the opinion.”

For a consultant who is a Member of the American Academy of Actuaries, the opening paragraph of the opinion should contain all the following sentences if the appointed actuary is using the prescribed wording:

“I, (name and title of consultant), am associated with the firm of (name of firm). I am a member of the American Academy of Actuaries and have been retained by the (name of organization) to render an opinion with regard to loss reserves, actuarial liabilities, [actuarial assets](#) and related items. I was appointed on [date of appointment] in accordance with the requirements of the annual statement instructions. I meet the Academy qualification standards for rendering the opinion.”

For an employee other than a member of the American Academy of Actuaries, the opening paragraph of the opinion should contain both the following sentences if the appointed actuary is using the prescribed wording:

“I, (name and title), am an employee of (name of organization) and am recognized by the American Academy of Actuaries as qualified to perform actuarial valuations for organizations of this kind. I was appointed on [date of appointment] in accordance with the requirements of the annual statement instructions.”

For a consultant other than a member of the American Academy of Actuaries, the opening paragraph of the opinion should contain all the following sentences if the appointed actuary is using the prescribed wording:

“I, (name and title of consultant), am associated with the firm of (name of firm). I am recognized by the American Academy of Actuaries as qualified to perform actuarial valuations for organizations of this kind and have been retained by the (name of organization) with regard to such valuation. I was appointed on [date of appointment] in accordance with the requirements of the annual statement instructions.”

Detail Eliminated to Conserve Space

5. The SCOPE section should contain only the following statement (including all specified lines even if the value is zero) if the appointed actuary is using the prescribed wording:

“I have examined the assumptions and methods used in determining loss reserves, actuarial liabilities, [actuarial assets](#), and related items listed below, as shown in the annual statement of the organization as prepared for filing with state regulatory officials, as of December 31, 20__.

- A. Claims unpaid (Page 3, Line 1);
- B. Accrued medical incentive pool and bonus payments (Page 3, Line 2);
- C. Unpaid claims adjustment expenses (Page 3, Line 3);
- D. Aggregate health policy reserves (Page 3, Line 4) including unearned premium reserves, premium deficiency reserves and additional policy reserves from the Underwriting and Investment Exhibit, Part 2D;
- E. Aggregate life policy reserves (Page 3, Line 5);
- F. Property/casualty unearned premium reserves (Page 3, Line 6);
- G. Aggregate health claim reserves (Page 3, Line 7);
- H. Any other loss reserves, actuarial liabilities, or related items presented as liabilities in the annual statement; and
- I. Specified actuarial items presented as assets in the annual statement.”

Items H and I are not intended to include the liabilities and assets associated with benefits provided to employees of the organization, or the organization’s directors or trustees, except to the extent that such benefits are provided through insurance or annuity contracts of a type that the organization is authorized to issue in the ordinary course of its business. For example, liabilities for employee pensions generally would not be within the scope of the Actuarial Opinion. However, if the organization is licensed to issue life insurance, then liabilities arising from life insurance policies or certificates issued by the organization to its employees would be within the scope of the Actuarial Opinion just as would the comparable liabilities arising from policies or contracts issued to unrelated parties.

If there are any items included in items H or I, they should be listed using appropriate annual statement captions and line references. The phrase “Not Applicable” should be placed under the item description for either item H or I if there is nothing to be listed. Any listings under items H and I do not constitute either “additional wording” or “revised wording” for purposes of the Table of Key Indicators.

If for either item H or item I there is more than one line item to be listed, the line items under the general H or I heading should be numbered sequentially.

The amounts of any assets listed under item I should be the gross amount of the asset (Page 2, Column 1 of the Annual Statement), not the net admitted amount (Page 2, Column 3).

For items A through G listed in the SCOPE section and each sub-line for items H and I, the item label should be followed by the amount of that item as reported in the annual statement. These stated amounts do not constitute either “additional wording” or “revised wording” for purposes of the Table of Key Indicators. Where the phrase “Not Applicable” is used in item H or item I, it means that there are no such items to be included in the Opinion, so there should be no value shown as a stated amount.

For example:

- I. Specified actuarial items presented as assets in the annual statement, as follows:
 - 1. Accrued retrospective premiums (Page 2, line 15.3, column 1)

- 7. The OPINION section should include only the following statement if the appointed actuary is using the prescribed wording:

“In my opinion, the amounts carried in the balance sheet on account of the items identified above:

- A. Are in accordance with accepted actuarial standards consistently applied and are fairly stated in accordance with sound actuarial principles;
- B. Are based on actuarial assumptions relevant to contract provisions and appropriate to the purpose for which the statement was prepared;
- C. Meet the requirements of the Insurance Laws and regulations of the state of [state of domicile] and:

(Use of one the following phrases, as appropriate, is considered prescribed wording. Replacing “[list states]” with an actual list of states in parentheses is also considered prescribed wording.)

[the loss reserves and actuarial liabilities](#) are at least as great as the minimum aggregate amounts required by any state,

or

[the loss reserves and actuarial liabilities](#) are at least as great as the minimum aggregate amounts required by any state with the exception of the following states [list states]. For each listed state a separate statement of actuarial opinion was submitted to that state that complies with the requirements of that state;

- D. Make a good and sufficient provision for all unpaid claims and other actuarial liabilities of the organization under the terms of its contracts and agreements;
- E. Make a reasonable provision for all actuarial assets of the organization under the terms of its contracts and agreements;
- F. On a combined basis, make a reasonable provision for all actuarial assets and actuarial liabilities of the organization under moderately adverse conditions;
- ~~GE.~~ Are computed on the basis of assumptions and methods consistent with those used in computing the corresponding items in the annual statement of the preceding year-end; and
- ~~HF.~~ Include appropriate provision for all actuarial items that ought to be established.

The Underwriting and Investment Exhibit, Part 2B was reviewed for reasonableness and consistency with the applicable Actuarial Standards of Practice.

Actuarial methods, considerations, and analyses used in forming my opinion conform to the relevant Standards of Practice as promulgated from time to time by the Actuarial Standards Board, which standards form the basis of this statement of opinion.”

=====
Detail Eliminated to Conserve Space
=====

9. If the appointed actuary is able to form an opinion that is not qualified, adverse or inconclusive as those terms are defined below, he or she should issue a statement of unqualified opinion. If the opinion is adverse, qualified or inconclusive, the appointed actuary should issue an adverse, qualified or inconclusive opinion explicitly stating the reason(s) for such opinion. In all circumstances the category of opinion should be explicitly identified in the TABLE of KEY INDICATORS section of the Actuarial Opinion.

An adverse opinion is an actuarial opinion in which the appointed actuary determines that the reserves and liabilities are not good and sufficient, actuarial assets are not reasonable, or the actuarial assets and actuarial liabilities on a combined basis are not reasonable under moderately adverse conditions. (An adverse opinion does not meet one or more of items D, E, or F of Section 7.)

When, in the actuary’s opinion, the reserves or actuarial assets included in the scope of the opinion for a certain item or items are in question because they cannot be reasonably estimated or the actuary is unable to render an opinion on those items, the actuary should issue a qualified opinion. Such a qualified opinion should state whether the stated reserve amount makes a good and sufficient provision for the actuarial liabilities associated with the specified reserves, actuarial assets are reasonable, and combined actuarial assets and actuarial liabilities are reasonable under moderately adverse conditions except for the item or items to which the qualification relates. The actuary is not required to issue a qualified opinion if the actuary reasonably believes that the item or items in question are not likely to be material. (A qualified opinion does not meet one or more of the items A, B, C or ~~HF~~ of Section 7.)

The actuary’s ability to give an opinion is dependent upon data, analyses, assumptions and related information that are sufficient to support a conclusion. If the actuary cannot reach a conclusion due to deficiencies or limitations in the data, analyses, assumptions or related information, then the actuary should issue an inconclusive opinion. An inconclusive opinion shall include a description of the reasons a conclusion could not be reached.

IDENTIFICATION OF ITEM(S) TO CHANGE

Changes and clarifying guidance in Sections 1, 3, and 8 of the Actuarial Opinion Instructions.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

See next page for details

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: _____

Other Comments:

** This section must be completed on all forms.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE

Proposed changes include some clean-up and clarifications in the P/C Statement of Actuarial Opinion Instructions. Changes were adopted by Actuarial Opinion (C) Working Group on 3/1/2022.

Section 1:

- Guidance on continuing education (CE) logs is no longer required because the Casualty Actuarial and Statistical (C) Task Force's CE Log project will not be reoccurring. Actuaries will refer to their respective societies for guidance on CE Logs.
- Additional guidance is provided on documentation of the board review of Qualification Documentation (QD) for companies that are part of a group whose parent board reviews QD on behalf of all subsidiaries. Guidance on this question has been requested by the industry and the Working Group has consulted the Financial Examination Handbook (E) Technical Group on the appropriate response.

Section 3: An additional requirement is added in the IDENTIFICATION paragraph for Appointed Actuaries to confirm that qualification documentation has been provided to the Board of Directors. This statement in the IDENTIFICATION paragraph will assist regulators in determining whether this requirement has been met.

Section 8: Clarification that the signature block requirements apply to the Statement of Actuarial Opinion only. The Actuarial Report should reproduce the same information, though not necessarily in the same format. It has been reported that Appointed Actuaries often provide the required information in a slightly different format within the Actuarial Report, necessitating Financial Examiners to create meaningless findings/objections just because the information doesn't follow the exact format. The Working Group members agree that the prescribed format is applicable to the Actuarial Opinion only and the format in the Actuarial Report may vary.

ANNUAL STATEMENT INSTRUCTIONS – PROPERTY**ACTUARIAL OPINION**

1. There is to be included with or attached to Page 1 of the Annual Statement the statement of the Appointed Actuary, entitled “Statement of Actuarial Opinion” (Actuarial Opinion), setting forth his or her opinion relating to reserves specified in the SCOPE paragraph. The Actuarial Opinion, both the narrative and required Exhibits, shall be in the format of and contain the information required by this section of the *Annual Statement Instructions – Property and Casualty*.

Upon initial engagement, the Appointed Actuary must be appointed by the Board of Directors by Dec. 31 of the calendar year for which the opinion is rendered. The Company shall notify the domiciliary commissioner within five business days of the initial appointment with the following information:

- a. Name and title (and, in the case of a consulting actuary, the name of the firm).
- b. Manner of appointment of the Appointed Actuary (e.g., who made the appointment and when).
- c. A statement that the person meets the requirements of a Qualified Actuary (or was approved by the domiciliary commissioner) and that documentation was provided to the Board of Directors.

Once this notification is furnished, no further notice is required with respect to this person unless the Board of Directors takes action to no longer appoint or retain the actuary or the actuary no longer meets the requirements of a Qualified Actuary.

If subject to the *U.S. Qualification Standards*, the Appointed Actuary shall annually attest to having met the continuing education requirements under Section 3 of the *U.S. Qualification Standards* for issuing Actuarial Opinions. As agreed with the actuarial organizations, the Casualty Actuarial Society (CAS) and Society of Actuaries (SOA) will determine the process for receiving the attestations for their respective members and make available the attestations to the public. An Appointed Actuary subject to the *U.S. Qualification Standards* and not a member of the CAS or SOA shall select one of the above organizations to submit their attestation.

~~In accordance with the CAS and SOA’s continuing education review procedures, an Appointed Actuary who is subject to the *U.S. Qualification Standards* and selected for review shall submit a log of their continuing education in a form determined by the CAS and SOA. The log shall include categorization of continuing education approved for use by the Casualty Actuarial and Statistical Task Force. As agreed with the actuarial organizations, the CAS and SOA will provide an annual consolidated report to the NAIC identifying the types and subject matter of continuing education being obtained by Appointed Actuaries. An Appointed Actuary subject to the *U.S. Qualification Standards* and not a member of the CAS or SOA shall follow the review procedures for the organization in which they submitted their attestation.~~

The Appointed Actuary shall provide to the Board of Directors qualification documentation on occasion of their appointment, and on an annual basis thereafter, directly or through company management. The documentation should include brief biographical information and a description of how the definition of “Qualified Actuary” is met or expected to be met (in the case of continuing education) for that year. The documentation should describe the Appointed Actuary’s responsible experience relevant to the subject of the Actuarial Opinion. The Board of Directors shall document ~~the company’s~~ their review of those materials and any other information they may deem relevant, including information that may be requested directly from the Appointed Actuary. It is generally expected that the review of the Appointed Actuary’s qualification documentation should take place at the level within a holding company structure that is responsible for overseeing insurance operations. If a statutory entity is a subsidiary or a non-lead pool member with an Appointed Actuary whose qualifications were reviewed by the pool lead or principal’s Board, the statutory entity’s Board can satisfy the review requirement by acknowledging the parent Board’s review. This can be done by noting in the meeting minutes the name of the principal or lead entity and the date the parent Board reviewed the qualification documentation, or by attaching a copy of the parent Board’s meeting minutes reflecting their review of the qualification documentation. The qualification documentation shall be considered workpapers and be available for inspection upon regulator request or during a financial examination.

If an actuary who was the Appointed Actuary for the immediately preceding filed Actuarial Opinion is replaced by an action of the Board of Directors, the Insurer shall within five (5) business days notify the Insurance Department of the state of domicile of this event. The Insurer shall also furnish the domiciliary commissioner with a separate letter within ten (10) business days of the above notification stating whether in the twenty-four (24) months preceding such event there were any disagreements with the former Appointed Actuary regarding the content of the opinion on matters of the risk of material adverse deviation, required disclosures, scope, procedures, type of opinion issued, substantive wording of the opinion or data quality. The disagreements required to be reported in response to this paragraph include both those resolved to the former Appointed Actuary's satisfaction and those not resolved to the former Appointed Actuary's satisfaction. The letter should include a description of the disagreement and the nature of its resolution (or that it was not resolved). Within this same ten (10) business days, the Insurer shall in writing also request such former Appointed Actuary to furnish a letter addressed to the Insurer stating whether the Appointed Actuary agrees with the statements contained in the Insurer's letter and, if not, stating the reasons for which he or she does not agree. The former Appointed Actuary shall provide a written response to the insurer within ten (10) business days of such request, and the Insurer shall furnish such responsive letter from the former Appointed Actuary to the domiciliary commissioner together with its own responses.

The Appointed Actuary must report to the Board of Directors each year on the items within the scope of the Actuarial Opinion. The Actuarial Opinion and the Actuarial Report must be made available to the Board of Directors. The minutes of the Board of Directors should indicate that the Appointed Actuary has presented such information to the Board of Directors and identify the manner of presentation (e.g., webinar, in-person presentation, written). A separate Actuarial Opinion is required for each company filing an Annual Statement. When there is an affiliated company pooling arrangement, one Actuarial Report for the aggregate pool is sufficient, but there must be addendums to the Actuarial Report to cover non-pooled reserves for individual companies.

The Actuarial Opinion and the supporting Actuarial Report and workpapers should be consistent with the appropriate Actuarial Standards of Practice (ASOPs), including, but not limited to, ASOP No. 23, ASOP No. 36, ASOP No. 41 and ASOP No. 43, as promulgated by the Actuarial Standards Board.

Detail Eliminated to Conserve Space

1C. Reporting Requirements for Pooled Companies

For each company in the pool, the Appointed Actuary shall include a description of the pool, identification of the lead company and a listing of all companies in the pool, their state of domicile and their respective pooling percentages.

Exhibits A and B for each company in the pool should represent the company's share of the pool and should reconcile to the financial statement for that company.

The following paragraph applies to companies that have a 0% share of the pool (no reported Schedule P data). The company shall submit an Actuarial Opinion that reads similar to that provided for the lead company. For example, the IRIS ratio and risk of material adverse deviation discussions, and other relevant comments shall relate to the risks of the lead company in the pool. The Exhibit B responses to question 5 should be \$0 and to question 6 should be "not applicable." Exhibits A and B of the lead company should be attached as an addendum to the PDF file and/or hard copy being filed (but would not be reported by the 0% companies in their data capture).

2. The Actuarial Opinion must consist of an IDENTIFICATION paragraph identifying the Appointed Actuary; a SCOPE paragraph identifying the subjects on which an opinion is to be expressed and describing the scope of the Appointed Actuary's work; an OPINION paragraph expressing his or her opinion with respect to such subjects; and one or more additional RELEVANT COMMENTS paragraphs. These four sections must be clearly designated.

- 3. The IDENTIFICATION paragraph should indicate the Appointed Actuary’s relationship to the Company, qualifications for acting as Appointed Actuary and date of appointment and specify that the appointment was made by the Board of Directors. Additionally, the IDENTIFICATION paragraph should include a statement asserting that the Appointed Actuary has complied with the requirement to provide qualification documentation to the Board of Directors, either directly or through company management.

If the Appointed Actuary was approved by the Academy to be a “Qualified Actuary,” with or without limitation, or if the Appointed Actuary is not a Qualified Actuary but was approved by the domiciliary commissioner, the company must attach, each year, the approval letter and reference such in the identification paragraph.

Detail Eliminated to Conserve Space

- 8. The Actuarial Opinion ~~and the Actuarial Report~~ should conclude with the signature of the Appointed Actuary responsible for providing the Actuarial Opinion and the ~~respective dates~~ date when the Actuarial Opinion was rendered ~~and the Actuarial Report finalized~~. The signature and date should appear in the following format:

 Signature of Appointed Actuary
 Printed name of Appointed Actuary
 Employer’s name
 Address of Appointed Actuary
 Telephone number of Appointed Actuary
 Email address of Appointed Actuary
 Date opinion was rendered

The same information should be reproduced within the Actuarial Report, along with the date the Actuarial Report was finalized.

IDENTIFICATION OF ITEM(S) TO CHANGE

See next page for details of changes to the VM-20 Reserves Supplement and Supplemental Exhibits and Schedules Interrogatories (Quarterly Statement).

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

Changing the reporting for the Life PBR Exemption, corresponding to changes in the Life PBR Exemption in the Valuation Manual.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: _____

Other Comments:

** This section must be completed on all forms.

IDENTIFICATION OF ITEM(S) TO CHANGE

VM-20 Reserves Supplement Blank:

- Part 2: Add Question 3, a disclosure of the year that the Life PBR Exemption was actively filed and a confirmation of the eligibility criteria in the case of ongoing exemptions. Also, correct references to a state “granting” an exemption, since this is often not the case (e.g., the exemption may be allowed).

VM-20 Reserves Supplement Instructions:

- Add instructions for the new disclosure item, Question 3. Also, correct references to a state “granting” an exemption, since this is often not the case (e.g., the exemption may be allowed).

Supplemental Exhibits and Schedules Interrogatories (Quarterly Statement):

- For Question 8, add instructions for how to respond if the company is utilizing the ongoing exemption. The same instructions can also be found in the *Valuation Manual*, Section II, Subsection 1.G.1.

ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL

VM-20 RESERVES SUPPLEMENT – PART 2**Life PBR Exemption**

This section of the Supplement should be completed by a company that ~~has filed~~ was allowed and been granted a Life PBR Exemption ~~from~~ by its state of domicile. Depending on state requirements, “allowed” may mean “granted”, “acknowledged”, “not rejected”, or similar language.

If a company ~~has~~ was allowed a Life PBR Exemption by its state of domicile ~~been granted a Life PBR Exemption~~, the company must indicate the source of the Life PBR Exemption, which could be defined in a state statute, a state regulation or in the NAIC-adopted *Valuation Manual*. If the source of the ~~granted~~ Life PBR Exemption is not the NAIC-adopted *Valuation Manual*, the company must disclose the criteria of the state’s Life PBR Exemption that the company has met, and the company must disclose the minimum reserve requirements that are required by the state of domicile. If the minimum reserve requirements of the state of domicile are the same as those specified in the NAIC-adopted *Valuation Manual*, the company may indicate: “Same as NAIC VM”. If the criteria for the Life PBR Exemption is the same as or substantially similar to the NAIC-adopted *Valuation Manual*, the company must also disclose the calendar year that the Life PBR Exemption was filed with and allowed by its state of domicile. If that calendar year is prior to the year of the annual statement, then the company must confirm that they meet the criteria for an ongoing exemption.

Companies whose individual ordinary life business is exempted from the requirements of VM-20 pursuant to a Life PBR Exemption are not required to complete Part 1 of this VM-20 Supplement.

VM-20 RESERVES SUPPLEMENT – PART 2
Life PBR Exemption
For The Year Ended December 31, 20__
(To Be Filed by March 1)

Life PBR Exemption as defined in the NAIC adopted Valuation Manual (VM)

1. Has the company ~~been allowed~~ ~~filed and been granted~~ a Life PBR Exemption from the reserve requirements of VM-20 of the Valuation Manual by their state of domicile? Yes [] No []

2. If the response to Question 1 is "Yes", then check the source of the ~~granted~~ "Life PBR Exemption" definition? (Check either 2.1, 2.2 or 2.3)

2.1 NAIC Adopted VM []

2.2 State Statute (SVL) [] Complete items "a" and "b", as appropriate.

a. Is the criteria in the State Statute (SVL) different from the NAIC adopted VM? Yes [] No []

b. If the answer to "a" above is "Yes", provide the criteria the state has used to ~~grant~~ allow the Life PBR Exemption (e.g., Group/Legal Entity criteria) and the minimum reserve requirements that are required by the state of domicile (if the minimum reserve requirements are the same as the Adopted VM, write SAME AS NAIC VM):

.....
.....
.....
.....

2.3 State Regulation [] Complete items "a" and "b", as appropriate.

a. Is the criteria in the State Regulation different from the NAIC adopted VM? Yes [] No []

b. If the answer to "a" above is "Yes", provide the criteria of the state's Life PBR Exemption that the company has met ~~the state has used to grant the Life PBR Exemption (e.g., Group/Legal Entity criteria)~~ and the minimum reserve requirements that are required by the state of domicile (if the minimum reserve requirements are the same as the Adopted VM, write SAME AS NAIC VM):

.....
.....
.....
.....

3. If the criteria for the "Life PBR Exemption" is the same as or substantially similar to the NAIC adopted VM (i.e., Question 2.1 is checked or Question 2.2.a is "No" or Question 2.3.a is "No"), then provide the most recent year that the company filed a statement of exemption that was allowed. If such calendar year is not the current calendar year for this statement, also provide confirmation that the company meets the criteria for utilizing an ongoing statement of exemption, meaning that none of the following apply: 1) the company fails to meet either of the conditions in VM Section II, Subsection 1.G.2.2) the policies exempted contain those in VM Section II, Subsection 1.G.3, or 3) the domiciliary commissioner contacted the company prior to Sept. 1 and notified them that the statement of exemption was not allowed:

.....

QUARTERLY STATEMENT BLANK – LIFE/FRATERNAL

SUPPLEMENTAL EXHIBITS AND SCHEDULES INTERROGATORIES

The following supplemental reports are required to be filed as part of your statement filing. However, in the event that your company does not transact the type of business for which the special report must be filed, your response of **NO** to the specific interrogatory will be accepted in lieu of filing a “NONE” report and a bar code will be printed below. If the supplement is required of your company but is not being filed for whatever reason enter **SEE EXPLANATION** and provide an explanation following the interrogatory questions.

Response

8. Will the Life PBR Statement of Exemption be filed with the state of domicile by July 1st and electronically with the NAIC with the second quarterly filing per the Valuation Manual (by August 15)? (2nd Quarter Only) The response for 1st and 3rd quarters should be N/A. A NO response resulting with a bar code is only appropriate in the 2nd quarter. [In the case of an ongoing statement of exemption, enter “SEE EXPLANATION” and provide as an explanation that the company is utilizing an ongoing statement of exemption.](#)

AUGUST FILING

9. Will the regulator-only (non-public) Communication of Internal Control Related Matters Noted in Audit be filed with the state of domicile and electronically with the NAIC (as a regulator-only non-public document) by August 1? The response for 1st and 3rd quarters should be N/A. A NO response resulting with a bar code is only appropriate in the 2nd quarter.

Anticipated Effective Date: Annual 2022

IDENTIFICATION OF ITEM(S) TO CHANGE

Add instructions to Schedule T, State pages and Accident and Health Policy Experience Exhibit to clarify guidance for reporting premium adjustments by jurisdiction.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The purpose of this proposal is to clarify the reporting premium adjustments by jurisdiction due to an issue identified in reporting of Affordable Care Act (ACA) premium adjustments not being reported by jurisdiction. A minority of companies put premium adjustments in aggregate other alien instead of allocating by jurisdiction. Although ACA premium was the issue identified, the reporting instructions revisions are for premium adjustments.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: _____

Other Comments:

Proposal being exposed concurrently with SAPWG.

** This section must be completed on all forms.

ANNUAL STATEMENT INSTRUCTIONS – HEALTH

EXHIBIT OF PREMIUMS, ENROLLMENT AND UTILIZATION

A schedule must be prepared and submitted to the state of domicile for each jurisdiction in which the company has written direct business, or has direct amounts paid, incurred or unpaid for provisions of health care services. In addition, a schedule must be prepared and submitted that contains the grand total (GT) for the company. To other states in which the company is licensed it should submit a schedule for that state.

Written premium is defined as the contractually determined amount charged by the reporting entity to the policyholder for the effective period of the contract based on the expectation of risk, policy benefits, and expenses associated with the coverage provided by the terms of the insurance contract. For health contracts without fixed contract periods, premiums written will be equal to the amount collected during the reporting period plus uncollected premiums at the end of the period less uncollected premiums at the beginning of the period.

[All premium adjustments \(both increases and decreases\), including but not limited to Affordable Care Act \(ACA\) premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction.](#)

↓ **====** **Detail Eliminated to Conserve Space** **====** ↓

SCHEDULE T – PREMIUMS AND OTHER CONSIDERATIONS

ALLOCATED BY STATES AND TERRITORIES

Premiums are reported on a written basis, gross of reinsurance.

Written premium is defined as the contractually determined amount charged by the reporting entity to the policyholder for the effective period of the contract based on the expectation of risk, policy benefits, and expenses associated with the coverage provided by the terms of the insurance contract. For health contracts without fixed contract periods, premiums written will be equal to the amount collected during the reporting period plus uncollected premiums at the end of the period less uncollected premiums at the beginning of the period.

[All premium adjustments \(both increases and decreases\), including but not limited to Affordable Care Act \(ACA\) premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction.](#)

↓ **====** **Detail Eliminated to Conserve Space** **====** ↓

Line 58 – Aggregate Other Alien

Enter the total of the write-ins listed in schedule “Details of Write-ins Aggregated at Line 58 for Other Alien.” All U.S. business shall be allocated by state regardless of license status.

Line 60 – Reporting Entity Contributions for Employee Benefit Plans

Report the reporting entity’s share of costs for employee benefit plans. Exclude any premiums paid by employees; these should be allocated to the states as above.

Line 61 – Total (Direct Business)

The sum of Column 2, 3, 4, 5, 6, 7 and 8, Line 61 should equal the Underwriting and Investment Exhibit, Part 1, Column 1, Line 12.

Details of Write-ins Aggregated at Line 58 for Other Alien

List separately each alien jurisdiction for which there is no pre-printed line on Schedule T.

All premium adjustments (both increases and decreases), including but not limited to Affordable Care Act (ACA) premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction.

If the premium from an alien jurisdiction is due to relocation of current policyholders, the amount may be aggregated and reported as “Other Alien.” Premiums from jurisdictions in which there is active writing must be reported by jurisdiction and include premium from relocated policyholders residing in the respective jurisdiction.

Identify each alien jurisdiction by using a **three-character (ISO Alpha 3) country code followed by the name of the country (e.g., DEU Germany)**. For premium that can be aggregated and reported as “Other Alien” as stated in the previous paragraph, use “ZZZ” for the country code and “Other Alien” for the country name. A comprehensive listing of country codes is available in the appendix of these instructions.

Include summary of remaining write-ins for Line 58 from the Overflow page on the separate line indicated.

ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL

STATE PAGE

A schedule should be prepared and submitted to the state of domicile for each jurisdiction in which the company has written direct business, has direct losses paid or direct losses incurred. To other states in which the company is licensed it should submit only a schedule for that state.

Direct premiums by state may be estimated by formula on the basis of countrywide ratios for the respective lines of business except where adjustments are required to recognize special situations.

[All premium adjustments \(both increases and decreases\), including but not limited to Affordable Care Act \(ACA\) premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction.](#)

Company’s participation in the FEGLI and SGLI policies is shown in this exhibit as direct business.

This exhibit should be shown excluding reinsurance assumed. Reinsurance ceded should not be deducted.

↓ **====** **Detail Eliminated to Conserve Space** **====** ↓

SCHEDULE T – PREMIUMS AND ANNUITY CONSIDERATIONS

ALLOCATED BY STATES AND TERRITORIES

This schedule is intended to exhibit the amount of premium and annuity considerations, and deposit-type contracts allocated to each state. For Life Companies only, this Schedule also provides: (a) the starting point for the calculation of state premium taxes, and (b) the starting point for the calculation of premium-based, state guaranty association assessments. (The basis for such assessments is developed in the Life, Health and Annuity Guaranty Association Assessable Premium Exhibit, not in Schedule T.) See the instructions to the Life, Health and Annuity Guaranty Association Assessable Premium Exhibit for allocated and unallocated annuities reported in Columns 3, 5, and 7.

Report premiums and annuity considerations for life and health contracts and deposit-type contracts for direct business. Exclude contract proceeds left with the reporting entity, such as amounts for supplemental contracts, dividend or refund accumulations and other similar items. Dividends or refunds on contracts that are used to pay renewal life and accident and health insurance premiums or annuity considerations should be included in the amounts allocated to the states and territories in Columns 2, 3, 4 and 5.

[All premium adjustments \(both increases and decreases\), including but not limited to Affordable Care Act \(ACA\) premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction.](#)

Refer to *SSAP No. 50—Classifications of Insurance or Managed Care Contracts* for life, accident and health and deposit-type contract definitions, *SSAP No. 51R—Life Contracts* and *SSAP No. 52—Deposit-Type Contracts* for accounting guidance.

↓ **====** **Detail Eliminated to Conserve Space** **====** ↓

Line 58 – Aggregate Other Alien

Enter the total of the write-ins listed in schedule “Details of Write-ins Aggregated at Line 58 for Other Alien.” All U.S. business must be allocated by state regardless of license status.

ANNUAL STATEMENT INSTRUCTIONS – PROPERTY

EXHIBIT OF PREMIUMS AND LOSSES

DIRECT BUSINESS IN THE STATE OF...

(Statutory Page 14 Data)

A schedule should be prepared and submitted to the state of domicile for each jurisdiction in which the company has written direct business, has direct losses paid, direct losses incurred or direct losses unpaid. To other states in which the company is licensed it should submit only a schedule for that state.

[All premium adjustments \(both increases and decreases\), including but not limited to Affordable Care Act \(ACA\) premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction.](#)

For definitions of lines of business, see the appendix of these instructions.

Data for Annual Statement Line 30 – Warranty should be reported prospectively (i.e., prior-year amounts need not be restated) starting with the 2008 reporting year.

Data for Annual Statement Line 29 – International should be reported on the page for “Other Alien” and the “Grand Total” page.

↓

SCHEDULE T – EXHIBIT OF PREMIUMS WRITTEN

ALLOCATED BY STATES AND TERRITORIES

This schedule is intended to report premiums, losses and other items allocated to each state or territory during the current reporting period, regardless of the reporting entity’s license status in that state or territory. Allocation of premiums and the other items reported on this schedule should be based on the physical location of the insured risk (except individual and group health insurance). Amounts reported as losses should be assigned to the state in which the associated premium has been allocated.

All U.S. business must be allocated by state regardless of license status.

[All premium adjustments \(both increases and decreases\), including but not limited to Affordable Care Act \(ACA\) premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction.](#)

A comprehensive listing of country codes is available in the appendix of these instructions.

Include summary of remaining write-ins for Line 58 from the Overflow page on the separate line indicated.

Explanation of basis of allocation of premiums by states, etc

Provide a detailed explanation of the by-state and territory allocation of premium and other considerations used by the reporting entity. The explanation should be detailed enough to determine compliance with state laws and regulations.

Footnote (a):

Provide the total of each active status code in Column 1. The sum of all the counts of all active status codes should equal 57.

ANNUAL STATEMENT INSTRUCTIONS – LIFE/FRATERNAL, HEALTH AND PROPERTY

SCHEDULE T – PART 2

**INTERSTATE COMPACT – EXHIBIT OF PREMIUMS WRITTEN
ALLOCATED BY STATES AND TERRITORIES**

This exhibit is to be completed by all reporting entities. The purpose of the Interstate Compact is to promote and protect the interest of consumers of individual and group annuity, life insurance, disability income and long-term care insurance products through establishing a central clearinghouse to receive and provide prompt review of insurance products covered under the Compact pursuant to adopted uniform product standards. The Interstate Compact uses premium volume information statutorily reported to the NAIC for several purposes including the composition of the Compact Commission Management Committee. Data to be reported on this schedule should include all premiums for that line of business, not just for those policies that apply to the Compact.

Report direct business only.

Report premiums based on the instructions for allocating premiums between lines of business and jurisdictions for Schedule T.

All premium adjustments (both increases and decreases), including but not limited to Affordable Care Act (ACA) premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction.

↓ **====** **Detail Eliminated to Conserve Space** **====** ↓

Line 58 – Aggregate Other Alien

Enter the total of all alien business in the appropriate columns. Details by countries are not required.

All premium adjustments (both increases and decreases), including but not limited to Affordable Care Act (ACA) premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction.

Life and Fraternal

Line 59 – Totals

Column 1 amount should equal Schedule T, Line 59, Column 2.

Column 2 amount should equal Schedule T, Line 59, Column 3.

Column 5 amount should equal Schedule T, Line 59, Column 7.

ACCIDENT AND HEALTH POLICY EXPERIENCE EXHIBIT

This exhibit is required to be filed no later than April 1.

A schedule must be prepared and submitted to the state of domicile for each jurisdiction in which the company has Written Premium (Direct), Earned Premium (Direct, Assumed and Ceded) or Incurred Claims (Direct, Assumed and Ceded). In addition, a schedule must be prepared and submitted that contains the grand total (GT) for the company.

1. The name of the company must be clearly shown at the top of each page or pages.
2. The Exhibit will show information concerning direct business on policy forms approved for use in the United States with a final total for all policy forms (including non-U.S. policy forms) on the bottom line of the Exhibit.

The Exhibit will show information for each listed product for Individual, Group, and Other business categories. Subtotals by product within the individual category are required for all columns.

3. This Exhibit should not include any data pertaining to double indemnity, waiver of premiums and other disability benefits embodied in life contracts.
4. Include membership charges, modal loadings, and policy fees, if any, with premiums earned (Column 2).

[All premium adjustments \(both increases and decreases\), including but not limited to Affordable Care Act \(ACA\) premium adjustments related to the risk adjustment program, shall be allocated as premium in the respective jurisdiction.](#)

Anticipated Effective Date: Annual 2022

IDENTIFICATION OF ITEM(S) TO CHANGE

Update the AVR factors to correspond with the adopted RBC factors for the expanded bond designation categories.

REASON, JUSTIFICATION FOR AND/OR BENEFIT OF CHANGE**

The AVR factors are linked to the after-tax RBC factors. The Life Risk-Based Capital (E) Working Group adopted changes to the life and fraternal RBC factors for the expanded NAIC Designation Categories for bonds for 2021 yearend reporting. The AVR factors will need to be adjusted where the RBC factors have been changed.

NAIC STAFF COMMENTS

Comment on Effective Reporting Date: _____

Other Comments:

A worksheet showing comparison of AVR and after-tax RBC factors for 2017, the changes made for the 2018 tax changes and the AVR factors being proposed for 2022 is posted at the Life Risk-Based Capital (E) Working Group website.

The AVR maximum reserve factors were updated to reflect the existing relationship to the RBC after-tax factors. The AVR basic contribution and reserve object factors were updated to reflect the existing relationships to the maximum reserve factors.

** This section must be completed on all forms.

**Blanks (E) Working Group
Editorial Revisions to the Blanks and Instructions
(presented at the May 25, 2022, Meeting)**

Statement Type:

H = Health; **L/F** = Life/Fraternal Combined; **P/C** = Property/Casualty; **SA** = Separate Accounts; **T** = Title

Effective	Table Name	Description	Statement Type	Filing Type
2022	Asset Valuation Reserve-Equity	CHANGE TO BLANK Change line 93, columns 5, 7 and 9 to block data entry on percentage columns. Missed on proposal 2021-23BWG.	L/F	Annual
2022	Underwriting and Investment Exhibit, Part 2A	CHANGE TO BLANK Footnote reference inadvertently removed from column 8 when accident and health lines of business were expanded. Reference (a) added to column 8 for all lines 13 and 15. 2020-33BWG	P	Annual
2022	Exhibit 7	CHANGE TO BLANK Make changes to the line description or Lines 1, 2, 5 and 6 of the footnote. (a) FHLB Funding Agreements 1. Reported as + GICs (captured in column 2): 2. Reported as + Annuities Certain (captured in column 3): 3. Reported as Supplemental Contracts (captured in column 4): 4. Reported as Dividend Accumulations or Refunds (captured in column 5) 5. <u>Reported as Premium or Other Deposit Funds (captured in column 6):</u> 6. <u>Total Reported as Deposit-Type Contracts (captured in column 1): (Sum of Lines 1 through 6)</u>	L\F	Annual
2022	Insurance Expense Exhibit, Parts II and III Exhibit of Premiums and Losses Underwriting and Investment Exhibits Quarterly: Part I and Part 2	CHANGE TO BLANK For line 15.8 – Federal Employees Health Benefit Plan, Proposal 2020-33BWG included the word “premium” after the FEHBP line description. Many of these tables also cover losses, reserves, etc. Therefore, the premium reference is misleading and/or unnecessary. This also makes the row label consistent with the 2022 quarterly blank.	P	Quarterly/ Annual

Effective	Table Name	Description	Statement Type	Filing Type
2022	Five-Year Historical Data	<p>CHANGE TO BLANK</p> <p>Crosschecks for Lines 68 through 71 as they are no longer valid for 2022.</p> <p><u>A & H Claim Reserve Adequacy</u></p> <p>68. MEMORANDUM

TO: Pat Gosselin (NH), Chair of the Blanks (E) Working Group

FROM: Tom Botsko (OH), Chair of the Property and Casualty Risk-Based Capital (E) Working Group

DATE: April 1, 2022

RE: Reinsurer Designation Equivalent Rating Factors

When the reinsurance recoverable credit risk charge was implemented in 2018, a load of operational risk was embedded in the charge. Now that the operational risk is separately addressed in risk-based capital (RBC) as a standard-alone capital add-on, it results with duplication of the operational risk charge on the reinsurance recoverable component in the RBC report. An RBC proposal was developed to remove the embedded 2% operational risk contained in the R3 credit risk component, and it was adopted during the Capital Adequacy (E) Task Force meeting on March 28. The following factor changes should be made to the Annual Statement, Schedule F, Part 3, as the R3 charge is derived from the Schedule F, Part 3, Columns 35 and 36, Line 9999999.

Description	Secure 1	Secure 2	Secure 3	Secure 4	Secure 5	Vulnerable 6 or Unrated
AM Best	A++	A+	A	A-	B++, B+	B, B-, C++, C+, C, C-, D, E, F

**PROPOSED 2023 CHARGES OF THE
ACCOUNTING PRACTICES AND PROCEDURES (E) TASK FORCE
(Unchanged from the 2022 Charges)**

The mission of the Accounting Practices and Procedures (E) Task Force is to identify, investigate and develop solutions to accounting problems with the ultimate goal of guiding insurers in properly accounting for various aspects of their operations; modify the *Accounting Practices and Procedures Manual* (AP&P Manual) to reflect changes necessitated by Task Force action; and study innovative insurer accounting practices that affect the ability of state insurance regulators to determine the true financial condition of insurers.

Ongoing Support of NAIC Programs, Products or Services

1. The **Accounting Practices and Procedures (E) Task Force** will:
 - A. Oversee the activities of the Blanks (E) Working Group and the Statutory Accounting Principles (E) Working Group.
2. The **Blanks (E) Working Group** will:
 - A. Consider improvements and revisions to the various annual/quarterly statement blanks to:
 1. Conform these blanks to changes made in other areas of the NAIC to promote uniformity in reporting of financial information by insurers.
 2. Develop reporting formats for other entities subject to the jurisdiction of state insurance departments.
 3. Conform the various NAIC blanks and instructions to adopted NAIC policy.
 4. Oversee the development of additional reporting formats within the existing annual financial statements as needs are identified.
 - B. Continue to monitor state filing checklists to maintain current filing requirements.
 - C. Continue to monitor and improve the quality of financial data filed by insurance companies by recommending improved or additional language for the *Annual Statement Instructions*.
 - D. Continue to monitor and review all proposals necessary for the implementation of statutory accounting guidance to ensure proper implementation of any action taken by the Accounting Practices and Procedures (E) Task Force affecting annual financial statements and/or instructions.
 - E. Continue to coordinate with other task forces of the NAIC to ensure proper implementation of reporting and instructions changes as proposed by these taskforces.
 - F. Coordinate with the Life Actuarial (A) Task Force to use any special reports developed and avoid duplication of reporting.
 - G. Review requests for investment schedule blanks and instructions changes in connection with the work being performed by the Capital Adequacy (E) Task Force and its working groups.
 - H. Review changes requested by the Valuation of Securities (E) Task Force relating to its work on other invested assets reporting for technical consistency within the investment reporting schedules and instructions.
3. The **Statutory Accounting Principles (E) Working Group** will:
 - A. Maintain codified statutory accounting principles by providing periodic updates to the guidance that address new statutory issues and new generally accepted accounting principles (GAAP) pronouncements. Provide authoritative responses to questions of application and clarifications for existing statutory accounting principles. Report all actions and provide updates to the Accounting Practices and Procedures (E) Task Force.
 - B. At the discretion of the Working Group chair, develop comments on exposed GAAP and International Financial Reporting Standards (IFRS) pronouncements affecting financial accounting and reporting. Any comments are subject to review and approval by the chairs of the Accounting Practices and Procedures (E) Task Force and the Financial Condition (E) Committee.
 - C. Coordinate with the Life Actuarial (A) Task Force on changes to the AP&P Manual related to the *Valuation Manual* VM-A, Requirements, and VM-C, Actuarial Guidelines, as well as other *Valuation Manual* requirements. This process will include the receipt of periodic reports on changes to the *Valuation Manual* on items that require coordination.
 - D. Obtain, analyze and review information on permitted practices, prescribed practices or other accounting treatments suggesting that issues or trends occurring within the industry may compromise the consistency and uniformity of statutory accounting, including, but not limited to, activities conducted by insurers for which there is currently no statutory accounting guidance or where the states have prescribed statutory accounting that differs from the guidance issued by the NAIC. Use this information to consider possible changes to statutory accounting.

Capital Adequacy (E) Task Force
Portland, Oregon
August 11, 2022

The Capital Adequacy (E) Task Force met in Portland, OR, Aug. 11, 2022. The following Task Force members participated: Judith L. French, Chair, represented by Tom Botsko and Dale Bruggeman (OH); Doug Ommen, Vice Chair, represented by Mike Yanacheak (IA); Lori K. Wing-Heier represented by David Phifer (AK); Mark Fowler represented by Sheila Travis and Jennifer Li (AL); Ricardo Lara represented by Thomas Reedy (CA); Andrew N. Mais represented by Wanchin Chou (CT); Trinidad Navarro represented by Charles Santana (DE); Karima M. Woods represented by Philip Barlow; David Altmaier represented by Jane Nelson (FL); Dana Popish Severinghaus represented by Bruce Sartain (IL); Vicki Schmidt represented by Tish Becker; Sharon P. Clark represented by Bill Clark (KY); Kathleen A. Birrane represented by Dmitriy Valekha (MD); Chlora Lindley-Myers represented by John Rehagen and Debbie Dogget (MO); Edward M. Deleon Guerrero represented by Charlette C. Borja (MP); Troy Downing represented by Kari Leonard (MT); Mike Causey represented by Jackie Obusek (NC); Eric Dunning represented by Lindsay Crawford (NE); Marlene Caride (NJ); Michael Wise represented by Tom Baldwin (SC); Cassie Brown represented by Jamie Walker (TX); Mike Kreidler represented by Steve Drutz (WA); and Nathan Houdek (WI).

1. Adopted its June 30, April 28, and Spring National Meeting Minutes

Mr. Botsko said the Task Force met June 30, April 28, and March 28. During these meetings, the Task Force took the following action: 1) adopted proposals 2022-02-P, 2022-05-L, 2022-06-L, 2021-17-CR MOD, 2022-01-P, 2022-03-L; and 2) discussed affiliated investments.

Mr. Yanacheak made a motion, seconded by Mr. Chou, to adopt the Task Force's June 30 (Attachment One), April 28 (Attachment Two), and March 28 (*see NAIC Proceedings – Spring 2022, Capital Adequacy (E) Task Force*) minutes. The motion passed unanimously.

2. Adopted the Reports of its Working Groups

a. Health Risk-Based Capital (E) Working Group

Mr. Drutz said that the Health Risk-Based Capital (E) Working Group met July 21 and took the following action: 1) adopted its May 11, May 4, and April 20 minutes; 2) adopted its working agenda; 3) adopted its 2022 newsletter; 4) adopted the 2021 health risk-based capital (RBC) statistics; 5) referred the health affiliated investment instructions and blanks to the Capital Adequacy (E) Task Force for discussion; and 6) exposed the American Academy of Actuaries' (Academy) response letter on its recommendation and timeline for the H2 – Underwriting Risk review for a 31-day public comment period ending Aug. 22.

b. Life Risk-Based Capital (E) Working Group

Mr. Barlow said the Life Risk-Based Capital (E) Working Group met July 27 and took the following action: 1) adopted its June 17, June 3, April 22, April 7, and Spring National Meeting minutes; 2) adopted its 2022 newsletter; 3) adopted the 2021 life and fraternal RBC statistics; and 4) adopted its working agenda.

c. Property and Casualty Risk-Based Capital (E) Working Group and Catastrophe Risk (E) Subgroup

Mr. Botsko said the Property and Casualty Risk-Based Capital (E) Working Group met Aug. 9 in joint sessions with the Catastrophe Risk (E) Subgroup and took the following action: 1) adopted Subgroup's June 14 and April 19 minutes; 2) adopted the Working Group's June 24, June 7, and April 26 minutes; 3) referred the property/casualty (P/C) affiliated investment instructions and blanks to the Capital Adequacy (E) Task Force for discussion; 4) adopted proposal 2022-04-CR, which included the 2013–2021 U.S. and non-U.S. lists of wildfire events; 5) adopted its 2022 newsletter; 6) exposed proposal 2022-07-P, which modified the PR035 lines of business categories to be consistent with the Annual Statement, Underwriting and Investment Exhibit, Part 1B categories for a 30-day public comment period ending Sept. 8; 7) exposed proposal 2022-08-CR, which provided further clarification of the independent model review instructions for a 30-day public comment period ending Sept. 8; 8) heard updates from the Academy regarding current P/C RBC projects; 9) adopted the 2021 P/C RBC statistics; 10) adopted the P/C working agenda; 11) discussed other catastrophe risks for possible inclusion in the Rcat component; and 12) heard a presentation from the National Oceanic and Atmospheric Administration (NOAA) regarding forecasting and resilience of severe thunderstorms .

d. Risk-Based Capital Investment Risk and Evaluation (E) Working Group

Mr. Barlow said that the Risk-Based Capital Investment Risk and Evaluation (E) Working Group met Aug. 11 and took the following action: 1) adopted its Spring National Meeting minutes; 2) adopted its working agenda; 3) received updates from the Valuation of Securities (E) Task Force and the Statutory Accounting Principles (E) Working Group; and 4) discussed the Working Group's next steps.

Mr. Drutz made a motion, seconded by Mr. Yanacheak, to adopt the reports of the Health Risk-Based Capital (E) Working Group (Attachment Three), the Life Risk-Based Capital (E) Working Group (Attachment Four), the Catastrophe Risk (E) Subgroup and the Property and Casualty Risk-Based Capital (E) Working Group (Attachment Five), and the Risk-Based Capital Investment Risk and Evaluation (E) Working Group (Attachment Six). The motion passed.

3. Adopted Proposal 2022-04-CR (2013-2021 Wildfire Event Lists)

Mr. Botsko said the wildfire peril has been adopted for informational purposes only in the 2022 RBC formula. He stated that NAIC staff developed the U.S. and non-U.S. lists of wildfire events based on the variable sources of information. Mr. Botsko said the Subgroup received one comment letter from Swiss Re America during the exposure period. It believed that the insurance direct incurred losses for the Southern California Woolsey wildfires should be \$2.9 billion based on the reports from the California Department of Insurance (DOI). Mr. Botsko said the Subgroup agreed; the incurred losses amount for this event has been updated in the event list.

Mr. Chou made a motion, seconded by Mr. Rehagen, to adopt proposal 2022-04-CR (Attachment Seven). The motion passed unanimously.

4. Exposed Proposal 2022-09-CA (Revised Affiliated Investments Structures and Instructions)

Mr. Botsko said the Property and Casualty Risk-Based Capital (E) Working Group and Health Risk-Based Capital (E) Working Group exposed the affiliated investment instructions for a 60-day and 61-day comment period, respectively. He also stated that no comments were received during the exposure period. Mr. Botsko also said the Life Risk-Based Capital (E) Working received one comment from the American Council of Life Insurers (ACLI) on issue regarding the non-admission. Brian Bayerle (ACLI) said the current exposed guidance requires reporting insurers to include the carrying values and RBC requirements for all directly owned subsidiaries even if they are non-admitted. He asked the Task Force to consider sending a referral to Statutory Accounting Principles (E)

Working Group to consider aligning between the statutory accounting and the RBC. Mr. Bruggeman believed that reporting insurers should carry some liabilities on the non-admitted subsidiaries as they do not go through the audit processes. Mr. Botsko said the Task Force welcomes any comments during the exposure period.

The Task Force agreed to expose proposal 2022-09-CA (Attachment Eight) for a 60-day public comment period ending Oct. 10.

5. Adopted its Working Agenda

Mr. Drutz said the only added priority #1 item for the Health Risk-Based Capital (E) Working Group in 2022 working agenda is the evaluation of the affiliated investment changes. Mr. Barlow said the Life Risk-Based Capital (E) Working Group updated item #7 to “work with the Academy on creating guidance for the adopted C-2 mortality treatment for 2022 and next steps for 2023.” He also stated that the Risk-Based Capital Investment Risk and Evaluation (E) Working Group added a new item to “evaluate the appropriate RBC treatment of Residual Tranches” with the expected completion date as 2023 or later. Mr. Botsko said the Catastrophe Risk (E) Subgroup changed the following items: 1) the expected completion date for items #15 and #20 to year-end 2023; 2) eliminated the items of a) “implement wildfire peril in the Rcat component”; and b) “evaluate the possibility of modifying exemption criteria for different cat perils in the PR027 interrogatories.” He also said the Working Group: 1) added a new item of “changing the RBC PR035 Line of Business categories”; and 2) eliminated the “remove the trend test footnote in PR033” items from the 2022 working agenda.

Mr. Houdek made a motion, seconded by Mr. Drutz, to adopt the revised 2022 working agenda (Attachment Nine). The motion passed unanimously.

6. Discussed Other Matters

Mr. Botsko said the Property and Casualty Risk-Based Capital (E) Working Group received a request from the Restructuring Mechanisms (E) Subgroup earlier to ask the Working Group to take the lead in addressing the charge of “considering the need to make changes to the RBC formula to better assess the minimum surplus requirements for companies in runoff.” He said one of the recommendations that the Working Group has is to share its findings with the other two RBC working groups as each line of business has its unique condition of runoff companies. Mr. Botsko said the referral from the RMSG and the recommendations from the Property and Casualty Risk-Based Capital (E) Working Group will be shared with the Health Risk-Based Capital (E) Working Group and the Life Risk-Based Capital (E) Working Group in the near future. Lastly, Mr. Botsko said the Task Force will have a more in-depth discussions on this issue during its upcoming meetings.

Having no further business, the Capital Adequacy (E) Task Force adjourned.

Draft: 7/15/22

Capital Adequacy (E) Task Force
Virtual Meeting
June 30, 2022

The Capital Adequacy (E) Task Force met June 30, 2022. The following Task Force members participated: Judith L. French, Chair, represented by Tom Botsko (OH); Doug Ommen, Vice Chair, represented by Mike Yanacheak (IA); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ahmad Kamil (CA); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by Philip Barlow (DC); Trinidad Navarro represented by Adrienne Lupo and Steve Kinion (DE); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Russell Coy (KY); Kathleen A. Birrane represented by Lynn Beckner (MD); Chlora Lindley-Myers represented by William Leung (MO); Mike Causey represented by Jackie Obusek (NC); Eric Dunning represented by Lindsay Crawford (NE); Elizabeth Kelleher Dwyer represented by Ted Hurley (RI); Michael Wise represented by Tom Baldwin (SC); Cassie Brown represented by Jamie Walker (TX); Mike Kreidler represented by Steve Drutz (WA); and Nathan Houdek represented by Amy Malm (WI).

1. Adopted Proposal 2022-02-P (Underwriting Risk Line 1 Factors)

Mr. Botsko said the purpose of this proposal is to provide a routine annual update to the Line 1 premium and reserve industry underwriting factors in the property/casualty (P/C) risk-based capital (RBC) formula. He stated that the Property and Casualty Risk-Based Capital (E) Working Group received a comment letter from Connecticut regarding proposing the new factors for reserves and premiums on an international line during the initial exposure period. The Working Group agreed to re-expose the proposal with the alternative factors proposed by Connecticut for another 10-day public comment period during its June 7 meeting. The Working Group members agreed to adopt the original calculated factors because: 1) the factors do not have a material impact to most companies; and 2) the Working Group received no other comments during the re-exposure period.

Mr. Chou made a motion, seconded by Mr. Drutz, to adopt proposal 2022-02-P (Attachment One-A). The motion passed unanimously.

2. Adopted Proposal 2022-05-L (Residual)

Mr. Barlow said the intent of proposal 2022-05-L is to update the instruction for Line 49.2 to include the total of residual tranches on Life RBC formula page LR008, as the Annual Statement, Schedule BA and the Asset Valuation Reserve (AVR) were both modified for year-end 2022 to isolate residual tranches.

Mr. Barlow made a motion, seconded by Mr. Leung, to adopt proposal 2022-05-L (Attachment One-B). The motion passed unanimously.

3. Adopted Proposal 2022-06-L (C-2 Mortality Instructions)

Mr. Barlow said the purpose of this proposal is to update the C-2 mortality instructions and factors as the structure to expand the categories for 2023 reporting, which was adopted during the Task Force's April 28 meeting. He said the Life Risk-Based Capital (E) Working Group adopted two motions during its June 17 meeting: 1) the instructions that were developed by the American Academy of Actuaries (Academy) with the alternative updated mortality factors that were previously included in one of the Academy sensitivity runs; and 2) the phase-in approach to reduce the impact on ceding insurers. He stated that after reviewing the impact of the phase-in with the approved

factors, it suggested that the need for a phase-in for the adopted factors is unnecessary. He also stated that he received no objections from the Working Group on eliminating the phase-in approach. Therefore, he asked the Task Force to accept the adoption of the new factors and instructions but reject the adoption of the phase-in approach.

Mr. Barlow made a motion, seconded by Mr. Yanacheak, to adopt proposal 2022-06-L but reject the adoption of the phase-in approach from the Life Risk-Based Capital (E) Working Group to adopt proposal 2022-06-L (Attachment One-C). The motion passed unanimously.

4. Discussed Other Matters

Mr. Botsko said the results of the Affiliated Investment Ad Hoc Group have been shared with the Life Risk-Based Capital (E) Working Group, the Health Risk-Based Capital (E) Working Group, and the Property and Casualty Risk-Based Capital (E) Working Group. The Health Risk-Based Capital (E) Working Group and the Life Risk-Based Capital (E) Working Group have exposed the proposed changes ending July 5 and July 20, respectively. The Property and Casualty Risk-Based Capital (E) Working Group ended its exposure period on June 25, and no comments were received during the exposure period. Mr. Botsko said he hopes the Life Risk-Based Capital (E) Working Group and the Health Risk-Based Capital (E) Working Group will discuss comments during their next meetings prior to the Task Force considering the changes at the Summer National Meeting.

Mr. Botsko also said the RBC Investment Risk and Evaluation (E) Working Group is working on its charges and will provide periodic updates to the Task Force starting at the Summer National Meeting.

Having no further business, the Capital Adequacy (E) Task Force adjourned.

DESCRIPTION OF CHANGE(S)

The proposed change would update the Line 1 Factors for PR017 and PR018.

REASON OR JUSTIFICATION FOR CHANGE **

The proposed change would provide routine annual update of the industry underwriting factors (premium and reserve) in the PCRBC formula.

Additional Staff Comments:

4/26/22 – the Working Group exposed this proposal for a 30-day public comment period ending 5/26.
 5/22/22 – CT submitted alternative proposal.
 6/7/22 – the Working Group re-exposed this proposal with CT alternative factors for a 10-day public comment period ending 6/16.
 6/24/22 – the Working Group adopted the proposal.
 6/30/22 – the Capital Adequacy (E) Task Force adopted at their 6/30/22 meeting.

DESCRIPTION OF CHANGE(S)

This proposal adds instruction for line 49.2 on LR008 to include the total of residual tranches.

REASON OR JUSTIFICATION FOR CHANGE **

Schedule BA and the Asset Valuation Reserve (AVR) were both modified for year end 2022 to isolate residual tranches. This proposal adds instruction to include the total of those reported in the AVR in line 49.2 on LR008.

Additional Staff Comments:

- 4/22/22: Proposal was exposed for comments (DBF)
- 6/3/22 : Adopted by the Working Group.
- 6/30/22: Capital Adequacy (E) Task Force adopted at their meeting on 6/30/22.

** This section must be completed on all forms.

Revised 2-2019

OTHER LONG-TERM ASSETS

LR008

Basis of Factors

Recognizing the diverse nature of Schedule BA assets, the RBC is calculated by assigning different risk factors according to the different type of assets. Assets with underlying characteristics of bonds and preferred stocks designated by the NAIC Capital Markets and Investment Analysis Office have different factors according to the NAIC assigned classification. Unrated fixed-income securities will be treated the same as Other Schedule BA Assets and assessed a 30 percent pre-tax charge. Rated surplus and capital notes have the same factors applied as Schedule BA assets with the characteristics of preferred stock. Where it is not possible to determine the RBC classification of an asset, a 30 percent pre-tax factor is applied.

*Specific Instructions for Application of the Formula*Line (49.1)

Schedule BA affiliated common stock – all other should be included in C-1cs. Specifically this means that all subs with an affiliate code 13 in the current life-based framework and “holding company in excess of indirect subsidiaries” or subsidiaries with affiliate code 7 are to be included in C-1cs.

Line (49.2)

New lines were added for yearend 2022 reporting to Schedule BA and the AVR Equity Component to capture amounts related to residual tranches or interest. For yearend 2022 life RBC reporting, AVR Equity Component, Column 1, Line 93 will be included in Line (49.2).

Line (57)

Total Schedule BA assets [LR008 Other Long-Term Assets Column (1) Line (57) plus LR007 Real Estate Column (1) Line (14) plus Lines (17) through Line (21) plus LR009 Schedule BA Mortgages Column (1) Line (20)] should equal the total Schedule BA assets reported in the Annual Statement Page 2, Column 3, Line 8.

DESCRIPTION OF CHANGE(S)

Instructional changes and factors for LR025.

REASON OR JUSTIFICATION FOR CHANGE **

Structural changes necessary to facilitate the implementation of updated C-2 life mortality factors and expanded categories were adopted by the Working Group 4/22/22. This proposal provides the instruction and factor changes to complete implementation of the update to the treatment of C-2.

Additional Staff Comments:

Exposed for comment by the Working Group 4/22/22
 Re-exposed for comment by the Working Group along with an alternative version with modified factors 6/3/22
 Adopted with the alternative factors by the Working Group 6/17/22
 6/30/22 – The Capital Adequacy (E) Task Force adopted at their 6/30/22 meeting.

** This section must be completed on all forms.

LIFE INSURANCE - OPTION 2

LR025

Basis of Factors

The factors developed represent surplus needed to provide for life insurance mortality risk, which is defined as adverse variance in life insurance deaths (i.e., insureds dying sooner than expected) over the remaining lifetime of a block of business while appropriately reflecting the pricing flexibility to adjust current mortality rates for emerging experience. The mortality risks included in the development of the factors were volatility, level, trend, and catastrophe. The factors were developed by stochastically simulating the run-off of in force life insurance blocks typical of U.S. life insurers.

The capital need, expressed as a dollar amount, is determined as the greatest present value of accumulated deficiencies at the 95th percentile of the stochastic distribution of scenarios over the remaining lifetime of a block of business while appropriately reflecting the pricing flexibility to adjust current mortality rates. Statutory losses are defined as the after-tax quantification of gross death benefits minus reserves released minus mortality margin present in reserves. The after-tax statutory losses are discounted to the present by using 20-year averages for U.S. swap rates. By selecting the largest present value accumulated loss across all projection years, the solved for capital ensures non-negative capital at all projection periods. Earlier period losses are not allowed to be offset by later period gains to reduce capital. The 95th percentile is the commonly accepted statistical safety level used for Life RBC C-2 mortality risk to identify weakly capitalized companies. The after-tax capital needs are translated to a factor expressed as a percentage of the net amount at risk (NAR). The pre-tax factor is determined by taking the after-tax factor divided by (1 minus the tax rate).

The factors are differentiated between individual & industrial life and group & credit life, and by in force block size. Within individual & industrial life, the factors are differentiated into categories by contract type depending on the degree of pricing flexibility. Within group & credit life, the factors are differentiated into categories by the remaining length of the premium rate term by group contract. There are distinct factors for contracts that have remaining premium rate terms 36 months and under and for contracts that have remaining premium rate terms over 36 months. The Federal Employees' Group Life Insurance (FELI) and Servicemembers' Group Life Insurance (SGLI) receive a separate factor applied to the amounts in force.

Specific Instructions for Application of the Formula

Lines 2, 5 and 21-41 are not applicable to Fraternal Benefit Societies.

The NAR is derived for each of the factor categories using annual statement sources and company records. In Force and Reserves amounts are net of reinsurance throughout. The In Force amounts throughout derived from company records need to be consistent with the Exhibit of Life Insurance. The Reserves amounts throughout derived from company records need to be consistent with Exhibit 5, Separate Accounts Exhibit, and Schedule S.

The NAR size bands apply to the total amounts for individual & industrial life and group term & credit life. The size bands are allocated proportionately to the NAR for each of the factor categories. Size band 1 is for NAR amounts up to \$500 million. Size band 2 is for NAR amounts greater than \$500 million and up to \$25 billion. Size band 3 is for NAR amounts greater than \$25 billion.

Pricing Flexibility for Individual Life Insurance is defined as the ability to materially adjust rates on in force contracts through changing premiums and/or non-guaranteed elements as of the valuation date and within the next 5 policy years and reflecting typical business practices. For the purposes of assessing whether business is categorized as having "Pricing Flexibility", grouping of gross amounts may be done at either the contract level or at a cohort level consistent with grouping for pricing purposes. Direct insurers may assess pricing flexibility for gross amounts at either the contract level or at the cohort level used to make pricing decisions. The categorization for ceded amounts for direct insurers should be based on the terms of each reinsurance treaty. Non-affiliated reinsurers are to assess the flexibility to adjust rates on in force contracts based on the terms of each reinsurance treaty and constraints based on typical business practices. For example, if a non-affiliated reinsurer has historical precedent for changing in force rates, then that may provide support for assigning policies to the category with pricing flexibility. Affiliated reinsurers are to assign the factor category based on the direct policies. In force contracts may move between categories throughout their remaining lifetime if the degree of pricing flexibility changes as of each valuation date. A material rate adjustment is defined as the

ability to recover, on a present value basis, the difference in mortality provided for in the factors below for contracts with and without pricing flexibility. These differences in factors are shown in the Line (13) table below in the Permanent Life Flexibility Factor and Term Life Flexibility Factor columns. The flexibility factor for each category multiplied by the NAR results in the minimum dollar margin needed for a material rate adjustment, which can then be compared against margins available to adjust rates. In force contracts that have margin available that is greater than or equal to the minimum dollar margin needed may be assigned to the category for policies with pricing flexibility. Insurers may choose to assign contracts to the categories without pricing flexibility if the evaluation of margins is not completed or if the degree of pricing flexibility is uncertain.

Lines (11) and (12) Life Policies with Pricing Flexibility In Force and Reserves are derived from company records. Examples of products intended for this category include, but aren't limited to, participating whole life insurance, universal life insurance without secondary guarantees, and yearly renewable term insurance where scheduled premiums may be changed on an annual basis from the date of issue. The table below illustrates the RBC requirement calculation embedded in Line (13) for Life Policies with Pricing Flexibility.

Line (13)	Life Policies with Pricing Flexibility	(1) Statement Value	Factor	(2) RBC Requirement	Permanent Life Flexibility Factor	Term Life Flexibility Factor
	Allocation of First \$500 Million		X 0.00190 = .00220		0.0020000230	0.0008000110
	Allocation of Next \$24,500 Million		X 0.00075 = .00105		0.0009900120	0.0003500065
	Allocation of Over \$25,000 Million		X 0.00050 = .00080		0.0006000085	0.0002500055
	Total Life Policies with Pricing Flexibility Net Amount at Risk					

Lines (14) and (15) Term Life Policies without Pricing Flexibility In Force and Reserves are derived from company records. Examples of products intended for this category include, but aren't limited to, level term insurance with guaranteed level premiums and yearly renewable term insurance where scheduled premiums may not be changed. The table below illustrates the RBC requirement calculation embedded in Line (16) for Term Life Policies without Pricing Flexibility.

Line (16)	Term Life Policies without Pricing Flexibility	(1) Statement Value	Factor	(2) RBC Requirement
	Allocation of First \$500 Million		X 0.00270 = .00280	
	Allocation of Next \$24,500 Million		X 0.00140 = .00120	
	Allocation of Over \$25,000 Million		X 0.00075 = .00085	
	Total Term Life Policies without Pricing Flexibility Net Amount at Risk			

Lines (17) and (18) Permanent Life Policies without Pricing Flexibility In Force and Reserves are derived from the aggregate amounts derived in lines (1) to (10) minus the amounts recorded in the other individual life categories. Examples of products intended for this category include, but aren't limited to, universal life with secondary guarantees and non-participating whole life insurance. Policies that aren't recorded in the other individual life categories default to this category which has the highest factors. The table below illustrates the RBC requirement calculation embedded in Line (19) for Permanent Life Policies without Pricing Flexibility.

Line (19)	Permanent Life Policies without Pricing Flexibility	(1) Statement Value	Factor	(2) RBC Requirement
	Allocation of First \$500 Million		X 0.00390	

<u>Allocation of Next \$24,500 Million</u>		
	<u>00400 =</u>	
	X <u>0.400165</u>	
<u>Allocation of Over \$25,000 Million</u>		
	<u>00175 =</u>	
	X <u>0.400110</u>	
	<u>00120 =</u>	
Total Permanent Life Policies without Pricing Flexibility Net Amount at Risk		

Lines (35) and (36) Group & Credit Life In Force and Reserves with Remaining Rate Terms 36 Months and Under are derived from company records. This category includes group contracts where the premium terms have 36 months or fewer until expiration or renewal. Insurers may choose to assign contracts to the category for remaining rate terms over 36 months if the evaluation of remaining rate terms is not completed. The in force amount classified in this category needs to be consistent with the Exhibit of Life Insurance. The reserves amount classified in this category needs to be consistent with Exhibit 5 used for Lines (28) and (29), Separate Accounts Exhibit used for Line (30), and Schedule S used for Lines (31) and (32). Federal Employees' Group Life Insurance (FEGLI) and Servicemembers' Group Life Insurance (SGLI) contracts are excluded. The table below illustrates the RBC requirement calculation embedded in Line (37) for Group & Credit Life Net Amount at Risk with Remaining Rate Terms 36 Months and Under.

Line (37)	(1)	(2)
<u>Group & Credit Life with Remaining Rate Terms 36 Months and Under</u>	<u>Statement Value</u>	<u>RBC Requirement</u>
<u>Allocation of First \$500 Million</u>		
		X <u>0.400130</u>
<u>Allocation of Next \$24,500 Million</u>		<u>00140 =</u>
		X <u>0.400045</u>

All amounts should be entered as required. The risk-based capital software will calculate the RBC requirement for individual and industrial and for group and credit.

Draft: 5/3/22

Capital Adequacy (E) Task Force
Virtual Meeting
April 28, 2022

The Capital Adequacy (E) Task Force met April 28, 2022. The following Task Force members participated: Judith L. French, Chair, represented by Tom Botsko (OH); Doug Ommen, Vice Chair, represented by Mike Yanacheak (IA); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Thomas Reedy (CA); Andrew N. Mais represented by Wanchin Chou (CT); Karima M. Woods represented by Philip Barlow (DC); Trinidad Navarro represented by Adrienne Lupo and Steve Kinion (DE); David Altmaier represented by Virginia Christy (FL); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Russell Coy (KY); Kathleen A. Birrane represented by Vincent O’Grady (MD); Chlora Lindley-Myers represented by William Leung (MO); Troy Downing represented by Steve Matthews (MT); Eric Dunning represented by Lindsay Crawford (NE); Marlene Caride represented by Diana Sherman (NJ); Elizabeth Kelleher Dwyer represented by Jack Broccoli (RI); Michael Wise represented by Michael Shull (SC); Cassie Brown represented by Jamie Walker (TX); Mike Kreidler represented by Steve Drutz (WA); and Nathan Houdek represented by Amy Malm (WI).

1. Adopted Proposal 2021-17-CR MOD (Wildfire Information-Only Reporting Exemption)

Mr. Botsko said a modification of proposal 2021-17-CR was created for those smaller companies, where the modeling requirements would impose a cost and compliance burden that represents an outsized cost relative to the incremental benefit of providing the modeled data for information-only purposes. He also stated that this modification would no longer be valid when the wildfire peril is added to the Rcat component unless the companies qualify under the exemptions listed in PR027 Interrogatory items C(7), C(8), or C(9). In addition, revisions were made during the exposure period based on one comment letter from the Missouri Department of Commerce and Insurance (DCI) regarding some non-substantive editorial updates in the instructions.

Mr. Chou made a motion, seconded by Mr. Yanacheak, to adopt proposal 2021-17-CR MOD (Attachment Two-A). The motion passed unanimously.

2. Adopted Proposal 2022-01-P (Remove Trend Test Footnote)

Mr. Botsko said the intent of proposal 2022-01-P is to remove the trend test for information-only wordings in the PR033 footnote, as it has been adopted by every state. He also stated that the Working Group did not receive any comments during the exposure period.

Mr. Drutz made a motion, seconded by Mr. Chou, to adopt proposal 2022-01-P (Attachment Two-B). The motion passed unanimously.

3. Adopted Proposal 2022-03-L (Investment Income Guidance)

Mr. Barlow said the purpose of this proposal is to provide structural changes necessary to facilitate the implementation of updated C2 life mortality factors and expanded categories.

Mr. Barlow made a motion, seconded by Mr. Leung, to adopt proposal 2022-03-L (Attachment Two-C). The motion passed unanimously.

4. Discussed Other Matters

Mr. Botsko said that the results of the Affiliated Investment Ad Hoc Group have been shared with the Life Risk-Based Capital (E) Working Group, the Health Risk-Based Capital (E) Working Group, and the Property and Casualty Risk-Based Capital (E) Working Group. The Property and Casualty Risk-Based Capital (E) Working Group has exposed its proposed changes and hopes the Life Risk-Based Capital (E) Working Group and the Health Risk-Based Capital (E) Working Group can expose their changes and discuss comments in the next couple of months prior to the Task Force considering the changes.

Mr. Botsko said the Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group will begin working on its charges and will provide periodic updates to the Task Force.

Having no further business, the Capital Adequacy (E) Task Force adjourned.

DESCRIPTION OF CHANGE(S)

The proposed change may add wildfire as one of the catastrophe risk perils for informational purposes only in the Reat component.

REASON OR JUSTIFICATION FOR CHANGE **

While the Catastrophe Risk (E) Subgroup reviewed the possibility of expanding the current catastrophe framework to include other perils that may experience a greater tail risk under projected climate-related trends, the wildfire has been identified as one of the major drivers of the U.S. insured losses. The Subgroup decided to consider adding wildfire as one of the catastrophe perils in the Reat component.

Additional Staff Comments:

- 12/16/21 – The Catastrophe Risk (E) Subgroup exposed the proposal for a 60-day comment period ending by 02-13-22.
 2/22/22 – The Catastrophe Risk (E) Subgroup adopted this proposal during the Feb. 22, 2022, virtual meeting.
 3/22/22 -The Catastrophe Risk (E) Subgroup exposed the modification of this proposal for a 14-day comment period ending by 04-05-22.
 3/23/22 – The P/C RBC (E) Working Group adopted the proposal during 3/23/22 virtual meeting.
 3/28/22 – The Capital Adequacy (E) Task Force adopted the proposal during the 3/28/22 virtual meeting.

** This section must be completed on all forms.

Revised 2-2019

CALCULATION OF CATASTROPHE RISK CHARGE RCAT PR027A, PR027B, PR027C, PR027, AND PR027INT

The catastrophe risk charge for earthquake (PR027A), hurricane (PR027B), and wildfire for Informational purposes only (PR027C) risks is calculated by multiplying the RBC factors by the corresponding modeled losses and reinsurance recoverables. The risk applies on a net basis with a corresponding contingent credit risk charge for certain categories of reinsurers. Data must be provided for the worst year in 50, 100, 250, and 500; however, only the worst year in 100 will be used in the calculation of the catastrophe risk charge. While projected losses modeled on an Aggregate Exceedance Probability basis is preferred, companies are permitted to report on an Occurrence Exceedance Probability basis if that is consistent with the company's internal risk management process.

The projected losses can be modeled using the following NAIC approved third party commercial vendor catastrophe models: AIR, Corelogic, RMS, KCC, the ARA HurLoss Model, or the Florida Public Model for hurricane, as well as catastrophe models that are internally developed by the insurer or that are the result of adjustments made by the insurer to vendor models to represent the own view of catastrophe risk (hereinafter "own models").

However, an insurer seeking to use an own model must first obtain written permission to do so by the domestic or lead state insurance regulator. In the situation where the model output is used to determine the catastrophe risk capital requirement for a single entity, the regulator granting permission to use the own model is the domestic state. In the situation where the model output is used to determine the catastrophe risk capital requirement for a group, the grantor is the lead state regulator. In the situation where the insurer seeking permission is a non-U.S. insurer, the grantor shall be the lead state regulator. Under all scenarios, the regulator that is granting permission should inform other domestic states that have a catastrophe risk exposure and share the results of the review.

To obtain permission to use the own model, the insurer must provide the domestic or lead state insurance regulator with written evidence of each of the following:

1. The use of the own model is reasonable considering the nature, scale, and complexity of the insurer's catastrophe risk;
2. The own model is used for catastrophe risk management, capital assessment, and the capital allocation process and the model has been used for at least the last 3 years;
3. The perils included in the RBC Catastrophe Risk Charge have been validated by the insurer and that these perils include both US and global exposures, where applicable;
4. The own model has been developed using reasonable data and assumptions and that model results used in determining the RBC Catastrophe Risk Charge reflect exposure data that is no older than six months;
5. The insurer has individuals with experience in developing, testing and validating internal models or engages third parties with such experience. The insurer must provide supporting model documentation and a copy of the latest validation report and the insurer is solely responsible for the relevant cost. For each peril included in the RBC Catastrophe Risk Charge, the validation report should attest that the projected losses are a reasonable quantification of the exposure of the reporting entity. The validation report must provide a description of the scope, content, results and limitations of the validation, the individual qualifications of validation team and the date of the validation. Both the model documentation and the model validation report must be provided at a minimum once every five years, or whenever the lead or domestic state calls an examination; whenever there is a material change in the model; or whenever there is a material change in the insurer's exposure to catastrophe exposure.
6. The results of the own model should be compared with the results produced by at least one of the following models: AIR, Corelogic, RMS, KCC, ARA HurLoss, or the Florida Public Model. The insurer must provide the comparison and an explanation of the drivers of differences between the results produced by the internal model vs. results produced by the selected prescribed model.
7. If the own model has been approved or accepted by the non-U.S. group-wide supervisor for use in the determination of regulatory capital, the insurer must submit evidence, if available, from the non-US group-wide supervisor of the most recent approval/acceptance including the description of scope, content, results and limitations of the approval/acceptance process and dates of any planned future approval/acceptance, if known. The name and the contact information of a contact person at the non-US group-wide supervisor should also be provided for questions on the approval/acceptance process.

If the lead or domestic state determines that permission to use the own model cannot be granted, the insurer shall be required to determine the RBC Catastrophe Risk Charge through the use of one of the third-party commercial vendor models (AIR, Corelogic, RMS, KCC, ARA HurLoss (hurricane only)), or the Florida Public Model for hurricane, as advised by the lead state or domestic state.

10/15/2021

If the lead or domestic state determines that permission to use the own model can be granted to determine the RBC Catastrophe Risk Charge, the model will be subject to additional review through the ongoing examination process. If, as a result of the examination, the lead or domestic state determines that permission to use the own model should be revoked, the insurer may be required to resubmit the risk-based capital filing and any past filings so impacted where own model was used, as directed by the lead state or domestic state. If the insurer obtains permission to use the own model, it cannot revert back to using third party commercial vendor models to determine the RBC Catastrophe Risk Charge in subsequent reporting periods, unless this is agreed with the lead or domestic state that granted permission.

The contingent credit risk charge should be calculated in a manner consistent with the way the company internally evaluates and manages its modeled net catastrophe risk.

Note that no tax effect offsets or reinstatement premiums should be included in the modeled losses. Further note that the catastrophe risk charge is for earthquake and hurricane risks only.

As per the footnote on this page, modeled losses to be entered PR027A, PR027B and PR27C in Lines (1) through (4) are to be calculated using one of the third party commercial vendor models – AIR, Corelogic, RMS, KCC, ARA HurLoss (hurricane only); or the Florida Public Model (hurricane only) or the insurer's own catastrophe model; and using the insurance company's own insured property exposure information as inputs to the model. The insurance company may elect to use the modeled results from any one of the models, or any combination of results of two or more of the models. Each insurer will not be required to utilize any prescribed set of modeling assumptions but will be expected to use the same exposure data, modeling, and assumptions that the insurer uses in its own internal catastrophe risk management process. Any exceptions must be explained in the required *Attestation Re: Catastrophe Modeling Used in RBC Catastrophe Risk Charges* within this RBC Report.

The Interrogatory on page (PR027INT) supports an exemption from filing the catastrophe risk charge.

Any company qualifying for exemption from the earthquake risk charge must identify the particular criteria from among (1a), (1b), (2) and (3) that provides its qualification for exemption and may leave the other three items from this group of four possible qualifications for exemption blank; except identification of criteria (3) as the basis for the exemption requires a further answer to (3a) and (3b). If an insurer does not write or assume earthquake risks leaving no gross exposure, enter an "X" in PR027INT interrogatory 3, with no need to fill in (3a) and (3b). If the company qualifies for exemption from the earthquake risk charge, page PR027A and line (1) on PR027 may be left blank.

Any company qualifying for exemption from the hurricane risk charge must identify the particular criteria from among (4a), (4b), (5) and (6) that provides its qualification for exemption and may leave the other three items from this second group of four possible qualifications for exemption blank. If an insurer does not write or assume hurricane risks leaving no gross exposure, enter an "X" in PR027INT interrogatory 6. If the company qualifies for exemption from the hurricane risk charge, page PR027B and line (2) on PR027 may be left blank.

Any company qualifying for exemption from the wildfire risk charge must identify the particular criteria from among (7a), (7b), (8) and (9) that provides its qualification for exemption and may leave the other three items from this third group of four possible qualifications for exemption blank. If an insurer does not write or assume hurricane risks leaving no gross exposure, enter an "X" in PR027INT interrogatory 9. If the company qualifies for exemption from the wildfire risk charge, page PR027C and line (3) on PR027 may be left blank.

In general, the following conditions will qualify a company for exemption: if it uses an intercompany pooling arrangement or quota share arrangement with U.S. affiliates covering 100% of its earthquake, hurricane and wildfire risks such that there is no exposure for these risks; if it has a ratio of Insured Value – Property to surplus as regards policyholders of less than 50%; or if it writes Insured Value – Property that includes hurricane earthquake and/or wildfire coverage in catastrophe-prone areas representing less than 10% of its surplus as regards policyholders.

"Insured Value – Property" includes aggregate policy limits for structures and contents for policies written and assumed in the following annual statement lines – Fire, Allied Lines, Earthquake, Farmowners, Homeowners, and Commercial Multi-Peril.

"Catastrophe-Prone Areas in the U.S." include:

10/15/2021

- i. For hurricane risks, Hawaii, District of Columbia and states and commonwealths bordering on the Atlantic Ocean and/or the Gulf of Mexico including Puerto Rico.
- ii. For earthquake risk or for fire following earthquake, any of the following commonwealth or states: Alaska, Hawaii, Washington, Oregon, California, Idaho, Nevada, Utah, Arizona, Montana, Wyoming, Colorado, New Mexico, Puerto Rico, and geographic areas in the following states that are in the New Madrid Seismic Zone - Missouri, Arkansas, Mississippi, Tennessee, Illinois and Kentucky.
- iii. For wildfire risk, California, Idaho, Montana, Oregon, Nevada, Wyoming, Colorado, New Mexico, Washington, Arizona, and Utah.

Specific Instructions for Application of the Formula

Column (1) – Direct and Assumed Modeled Losses

These are the direct and assumed modeled losses per the first footnote. Include losses only; no loss adjustment expenses. For companies that are part of an inter-company pooling arrangement, the losses in this column should be consistent with those reported in Schedule P, i.e. losses reported in this column should be the gross losses for the pool multiplied by the company's share of the pool.

Column (2) – Net Modeled Losses

These are the net modeled losses per the footnote. Include losses only; no loss adjustment expenses.

Column (3) – Ceded Amounts Recoverable

These are the modeled losses ceded under any reinsurance contract. Include losses only, no loss adjustment expenses, and should be associated with the Net Modeled Losses.

Column (4) – Ceded Amounts with Zero Credit Risk Charge

Per the footnote, modeled catastrophic losses that would be ceded to the categories of reinsurers that are not subject to the RBC credit risk charge (i.e., U.S. affiliates and mandatory pools, whether authorized, unauthorized, or certified).

Column (6) – Amount

These are automatically calculated based on the previous columns.

Column (7) – RBC Requirement

A factor of 1.000 is applied to the reported modeled catastrophe losses calculated on both AEP and OEP basis, and a factor of 0.018 is applied to the reinsurance recoverables. The RBC Requirement is based on either AEP reported results or OEP reported results (not both), consistent with the way the company internally evaluates and manages its modeled net catastrophe risk.

Column (5) – Y/N

Please indicate “Y” for OEP basis and “N” for AEP basis. This column should not be blank.

10/15/2021

ATTESTATION RE: CATASTROPHE MODELING USED IN RBC CATASTROPHE RISK CHARGES PR002

(1) [Redacted] hereby certifies that the modeled catastrophe losses for earthquake risk, hurricane risk, and wildfire risk entered on lines 1 through 4 of Schedule PR027 of this Risk-Based Capital Report were applying the same catastrophe models or combination of models to the same underlying exposure data, and using the same modeling assumptions, as the company uses in its own internal risk management process, with the following exceptions:

(1a) [Redacted]

These exceptions, if any, are made for the following reasons:

(1b) [Redacted]

The following describes the company's application of catastrophe modeling to the determination of the Rcat risk charges: (Include which models are used in what combinations for each of the Rcat charges; what key modeling assumptions are used, including but not limited to time dependency, secondary uncertainty, storm surge, demand surge, and fire following earthquake; and the rationale for treatment of each issue or item): (provide attachments if necessary):

(2) [Redacted]

The company further certifies that the underlying exposure data used in the catastrophe modeling process is accurate and complete to the best of our knowledge and ability, with the following limitations:

(3) [Redacted]

The following describes the extent to which the exposure location data is accurate to GPS coordinates; to zip code; and to a level less accurate than zip code: (provide attachments if necessary):

(4) [Redacted]

The following describes the steps taken to validate, to the best of the Company's knowledge and belief, the accuracy and completeness of the exposure data used in the modeling process to determine the Rcat catastrophe risk charges (provide attachments if necessary):

(5) [Redacted]

Provide an explanation of the methodology used to derive the amounts in columns 3 and 4 of page PR027A, PR027B and PR027C.

			0 1,000	0	
			0 1,000	0	

Lines (1)-(4): Modeled losses to be entered on these lines are to be calculated using one of the following NAIC approved third party commercial vendor catastrophe models - AIR, RMS, or KCC; or a catastrophe model that is internally developed by the insurer and has received permission of use by the lead or domestic state. The insurance company's own insured property exposure information should be used as inputs to the model(s). The insurance company may elect to use the modeled results from any one of the models, or any combination of the results of two or more of the models. Each insurer will not be required to utilize any prescribed set of modeling assumptions, but will be expected to use the same data, modeling, and assumptions that the insurer uses in its own internal catastrophe risk management process. An attestation to this effect and an explanation of the company's key assumptions and model selection may be required, and the company's catastrophe data, assumptions, model and results may be subject to examination.

† Column (3) is modeled catastrophe losses that would be ceded under reinsurance contracts. This should be associated with the Net Modeled Losses shown in Column (2).

†† Column (4) is modeled catastrophe losses that would be ceded to the categories of reinsurers that are not subject to the RBC credit risk charge (i.e., U.S. affiliates and mandatory pools, whether authorized, unauthorized, or certified).

PR027

INTERROGATORY TO SUPPORT EXEMPTION FROM COMPLETING PR027 (To be completed by companies reporting no RBC charge in either Lines 1 through 3) PR027INT

Place an "X" in the appropriate cell for the criteria under which the company is claiming an exemption

A. Earthquake Exemption (To be completed by companies reporting no RBC charge in PR027 Line 1) -

- (1) The company has not entered into a reinsurance agreement covering earthquake exposure with a non-affiliate or a non-US affiliate and, either
 - (1a) the company participates in an inter-company pooling arrangement with 0% participation, leaving no net exposure for earthquake risks; Or
 - (1b) the company cedes 100% of its earthquake exposures to its US affiliate(s), leaving no net exposure for earthquake risks
- (2) The Company's Ratio of Insured Value - Property to surplus as regards policyholders is less than 50%
- (3) The company has written Insured Value - Property that includes earthquake coverage in the Earthquake-Prone areas representing less than 10% of its surplus as regards policyholders

For any company qualifying for the exemption under 3 provide details about how the "geographic areas in the New Madrid Seismic Zone" were determined.

(3a) What resource was used to define the New Madrid Seismic Zone?

(3b) Was exposure determined based on zip codes or counties in the zone, was it based on all of the earthquake exposure in the identified states or was another methodology used? Describe any other methodology used.

Note: "Earthquake-Prone areas" include any of the following states or commonwealths: Alaska, Hawaii, Washington, Oregon, California, Idaho, Nevada, Utah, Arizona, Montana, Wyoming, Colorado, New Mexico, Puerto Rico, and geographic areas in the following states that are in the New Madrid Seismic Zone - Missouri, Arkansas, Mississippi, Tennessee, Illinois and Kentucky.

B. Hurricane Exemption (To be completed by companies reporting no RBC charge in PR027 Line 2) -

- (4) The company has not entered into a reinsurance agreement covering hurricane exposure with a non-affiliate or a non-US affiliate and, either
 - (4a) the company participates in an inter-company pooling arrangement with 0% participation, leaving no net exposure for hurricane risks; Or
 - (4b) the company cedes 100% of its hurricane exposures to its US affiliate(s), leaving no net exposure for hurricane risks
- (5) The Company's Ratio of Insured Value - Property to surplus as regards policyholders is less than 50%
- (6) The company has written Insured Value - Property that includes hurricane coverage in the Hurricane-Prone areas representing less than 10% of its surplus as regards policyholders

Note: "Hurricane-Prone areas" include Hawaii, District of Columbia and states and commonwealths bordering on the Atlantic Ocean, and/or Gulf of Mexico including Puerto Rico.

C. Wildfire Exemption (To be completed by companies reporting no RBC charge in PR027 Line 3) -

- (7) The company has not entered into a reinsurance agreement covering wildfire exposure with a non-affiliate and, either
 - (7a) the company participates in an inter-company pooling arrangement with 0% participation, leaving no net exposure for wildfire risks; Or
 - (7b) the company cedes 100% of its wildfire exposures to its US affiliate(s), leaving no net exposure for wildfire risks
- (8) The Company's Ratio of Insured Value - Property to surplus as regards policyholders is less than 50%
- (9) The company has written Insured Value - Property that includes wildfire coverage in the wildfire-Prone areas representing less than 10% of its surplus as regards policyholders

Note: "Wildfire-Prone areas" include any of the following states: California, Idaho, Montana, Oregon, Nevada, Wyoming, Colorado, New Mexico, Washington, Arizona, and Utah.

Denotes items that must be manually entered on the filing software.

vector link items
manual data entry items

* Please provide losses only; no expenses. Catastrophe losses should 1.) be the net losses incurred for the reporting entity; not net losses incurred for the group; 2.) be a subset of, and therefore, less than, total net losses reported in Column (28); 3.) be reported in 000s to be consistent with all values reported in this exhibit; and 4.) not be reported as negative amounts.
 ** If this line of business has incurred U.S. catastrophe losses arising from events either included on the list of U.S. catastrophe events approved by the Catastrophe Risk Subgroup as available on the NAIC's website or numbered and labeled by PCS as a hurricane, tropical storm, or earthquake, provide only the amount of those catastrophe losses in Catastrophe Experience of Items (24A) and (28A).
 *** If this line of business has incurred non-U.S. catastrophe losses arising from a hurricane, tropical storm, or earthquake from an event included on the list of non-U.S. catastrophe events approved by the Catastrophe Risk Subgroup as available on the NAIC's website, provide only the amount of those catastrophe losses in Catastrophe Experience Columns (24B) and (28B).
 **** Columns 241 through 2811 are for informational purposes only.

DESCRIPTION OF CHANGE(S)

The proposed change would remove the trend test for information only footnote in PR033.

REASON OR JUSTIFICATION FOR CHANGE **

All States in U.S are in compliance on PC Trend Test. This became part of the Accreditation Standards effective Jan 1, 2012.

Additional Staff Comments:

3/23/22 – The PCRBCWG exposed for comment.
 4/26/22 – No comments were received.
 4/26/22 – The PCRBCWG adopted the proposal on 4/26/22.
 4/28/22 – The CapAd TF adopted the proposal on 4/28/22.

**** This section must be completed on all forms.**

DESCRIPTION OF CHANGE(S)

Updated blank for C2 Life Mortality on LR025, LR030 and LR031. Draft instructions are included for informational purposes and are subject to a different exposure deadline of 4/30/22.

REASON OR JUSTIFICATION FOR CHANGE **

Structural changes necessary to facilitate the implementation of updated C-2 life mortality factors and expanded categories.

Additional Staff Comments:

Exposed for comment by the Working Group 1/20/22 (df)
Adopted by the Working Group 4/22/22 (df)
Adopted by the Task Force 4/28/22

LR031

LIFE INSURANCE - OPTION 2 - DRAFT

LR025

Basis of Factors

The factors chosen developed represent surplus needed to provide for excess claims over life insurance mortality risk, which is defined as adverse variance in life insurance deaths (i.e., insureds dying sooner than expected, both from random fluctuations and from inaccurate pricing for future levels) over the remaining lifetime of claims. For a large number block of risks, each insured either lives or dies based on a "roll of the dice" business while appropriately reflecting the probability of death from both normal and excess claims pricing flexibility to adjust current mortality rates for emerging experience. The present value of mortality risks included in the claims generated by this process, less expected claims, will be the amount of surplus needed under that risk development of the factors were volatility, level, trend, and catastrophe. The factors chosen underwent development by stochastically simulating the formula produce a level of surplus at least as much run-off of in force life insurance blocks typical of U.S. life insurers.

The capital need, expressed as needed in 95 percent of a dollar amount, is determined as the risks' greatest present value of accumulated deficiencies at the 95th percentile of the stochastic distribution of scenarios over the remaining lifetime of a block of business while appropriately reflecting the pricing flexibility to adjust current mortality rates. Statutory losses are defined as the after-tax quantification of gross death benefits minus reserves released minus mortality margin present in reserves. The after-tax statutory losses are discounted to the present by using 20-year averages for U.S. swap rates. By selecting the largest present value accumulated loss across all projection years, the solved for capital ensures non-negative capital at all projection periods. Earlier period losses are not allowed to be offset by later period gains to reduce capital. The 95th percentile is the commonly accepted statistical safety level used for Life RBC C-2 mortality risk to identify weakly capitalized companies. The after-tax capital needs are translated to a factor expressed as a percentage of the net amount at risk (NAR). The pre-tax factor is determined by taking the after-tax factor divided by (1 minus the tax rate).

The model was developed for portfolios of 10,000, 100,000 and one million lives, and it was found that the surplus needs decreased with larger portfolios, consistent with the law of large numbers.

Net amount at risk was chosen as a base because expected claims are difficult to calculate on a consistent basis from company to company. The factors are differentiated between individual & industrial life and group & credit life, and by in force block size. Within individual & industrial life, the factors are differentiated into categories by contract type depending on the degree of pricing flexibility. Within group & credit life, the factors are differentiated into categories by the remaining length of the premium rate term by group contract. There are distinct factors for contracts that have remaining premium rate terms 36 months and under and for contracts that have remaining premium rate terms over 36 months. The Federal Employees' Group Life Insurance (FEGLI) and Servicemembers' Group Life Insurance (SGLI) receive a separate factor applied to the amounts in force.

Specific Instructions for Application of the Formula

Lines 3, 4, 5 and 9-21-41 are not applicable to Fraternal Benefit Societies.

Annual statement reference is for the total net amount at risk for the category (e.g., Individual & Industrial is one category). The net amount at risk is then further broken down by size as in a tax table to reflect the decrease in risk for larger blocks of life insurance. This breakdown will not appear on the RBC fitting software or on the printed copy, as the application of factors to amounts in force is completed automatically. The calculation is as follows:

The NAR is derived for each of the factor categories using annual statement sources and company records. In Force and Reserves amounts are net of reinsurance throughout. The In Force amounts throughout derived from company records need to be consistent with the Exhibit of Life Insurance. The Reserves amounts throughout derived from company records need to be consistent with Exhibit 5, Separate Accounts Exhibit, and Schedule S.

Pricing Flexibility for Individual Life Insurance is defined as the ability to materially adjust rates on in force contracts through changing premiums and/or non-guaranteed elements as of the valuation date and within the next 5 policy years. A material rate adjustment is defined as the ability to recover, on a present value basis, the difference in mortality provided for in the factors below for contracts with and without pricing flexibility.

Lines (11) and (12) Life Policies with Pricing Flexibility In Force and Reserves are derived from company records. Examples of products intended for this category include, but aren't limited to, participating whole life insurance, universal life insurance without secondary guarantees, and yearly renewable term insurance where scheduled premiums may be changed. The table below illustrates the RBC requirement calculation embedded in Line (13) for Life Policies with Pricing Flexibility.

Line (8) (13)	Individual & Industrial Life Policies with Pricing Flexibility	Statement Value (1)	Factor	RBC Requirement (2)
	First 500 Million		X 0.0022300190	
	Next 424,500 Million		X 0.0014600075	
	Next 20,000 Million		X 0.00116	
	Over 25,000 Million		X 0.0008700050	
	Total Individual & Industrial Life Policies with Pricing Flexibility, Net Amount at Risk			
Line (20)	Group & Credit First 500 Million	Statement Value	Factor	RBC Requirement
	Next 4,500 Million		X 0.00175	
	Next 20,000 Million		X 0.00116	
	Over 25,000 Million		X 0.00087	
			X 0.00078	
	Total Group & Credit Term Life Policies without Pricing Flexibility In Force and Reserves are derived from company records. Ex. examples of products intended for this category include, but aren't limited to, level term insurance with guaranteed level premiums and yearly renewable term insurance where scheduled premiums may not be changed. The table below illustrates the RBC requirement calculation embedded in Line (16) for Term Life Policies without Pricing Flexibility.			
Line (16)	Term Life Policies without Pricing Flexibility	Statement Value (1)	Factor	RBC Requirement (2)
	First 500 Million		X 0.00270	
	Next 24,500 Million		X 0.00110	
	Over 25,000 Million		X 0.00075	
	Total Group & Credit Term Life Policies without Pricing Flexibility, Net Amount at Risk (Less FFL & SGL in force)			
Line (19)	Permanent Life Policies without Pricing Flexibility	Statement Value (1)	Factor	RBC Requirement (2)
	First 500 Million		X 0.00390	

Formatted: Underline
Formatted: Centered
Formatted: Font: Not Bold, Not Italic, Underline

Next 24,500 Million		X 0.00165 =
Over 25,000 Million		X 0.00110 =
Total Permanent Life Policies without Pricing Flexibility Net Amount at Risk		

Lines (35) and (36) Group & Credit Life In Force and Reserves with Remaining Rate Terms 36 Months and Under are derived from company records. This category includes group contracts where the premium terms have 36 months or fewer until expiration or renewal. The in force amount classified in this category needs to be consistent with the Exhibit of Life Insurance. The reserves amount classified in this category needs to be consistent with Exhibit 5 used for Lines (28) and (29). Separate Accounts Exhibit used for Line (30), and Schedule S used for Lines (31) and (32). Federal Employees' Group Life Insurance (FEGLI) and Servicemembers' Group Life Insurance (SGLI) contracts are excluded. The table below illustrates the RBC requirement calculation embedded in Line (37) for Group & Credit Life Net Amount at Risk with Remaining Rate Terms 36 Months and Under.

Line (37)	Group & Credit Life with Remaining Rate Terms 36 Months and Under	(1) Statement Value	Factor	(2) RBC Requirement
	First 500 Million		X 0.00130 =	
	Next 24,500 Million		X 0.00045 =	
	Over 25,000 Million		X 0.00030 =	
	Total Group & Credit Life Net Amount at Risk with Remaining Rate Terms 36 Months and Under			

Lines (38) and (39) Group & Credit Life In Force and Reserves with Remaining Rate Terms Over 36 Months are derived from the aggregate amounts derived in lines (21) to (34) minus the Group & Credit Life In Force and Reserves with Remaining Rate Terms 36 Months and Under in lines (35) and (36). FEGLI and SGLI contracts are excluded. The table below illustrates the RBC requirement calculation embedded in Line (40) for Group & Credit Life Net Amount at Risk with Remaining Rate Terms Over 36 Months.

Line (40)	Group & Credit Life with Remaining Rate Terms Over 36 Months	(1) Statement Value	Factor	(2) RBC Requirement
	First 500 Million		X 0.00180 =	
	Next 24,500 Million		X 0.00070 =	
	Over 25,000 Million		X 0.00045 =	
	Total Group & Credit Life Net Amount at Risk with Remaining Rate Terms Over 36 Months			

Line (41) FEGLI/SGLI In Force amounts are retrieved from the Exhibit of Life Insurance. The capital factor assigned is the same as the largest size band for group & credit life contracts with remaining rate terms 36 months and under.

Line (41)	FEGLI/SGLI In Force	(1) Statement Value	Factor	(2) RBC Requirement
			X 0.00030 =	

All amounts should be entered as required. The risk-based capital software will calculate the RBC requirement for individual and industrial and for group and credit.

Draft: 7/25/22

Health Risk-Based Capital (E) Working Group
Virtual Meeting (*in lieu of meeting at the 2022 Summer National Meeting*)
July 21, 2022

The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met July 21, 2022. The following Working Group members participated: Steve Drutz, Chair (WA); Matthew Richard and Aaron Hodges, Co-Vice Chairs (TX) Wanchin Chou (CT); Tish Becker (KS); Michael Muldoon (NE); and Tom Dudek and Frank Horn (NY).

1. Adopted is May 11, May 4, and April 20 Minutes

The Working Group met May 11, May 4, and April 20. During these meetings, the Working Group took the following action: 1) heard a presentation from the American Academy of Actuaries (Academy) on the methodologies considered in the H2 – Underwriting Risk review; 2) exposed the affiliated investment instructions and blanks; 3) received an update on the Health Test Ad Hoc Group and Excessive Growth Charge Ad Hoc Group; 4) heard a presentation from AM Best on Best’s Capital Adequacy Ratio (BCAR); and 5) adopted its Spring National Meeting minutes.

Mr. Chou made a motion, seconded by Mr. Dudek, to adopt the Working Group’s May 11 (Attachment Three-A), May 4 (Attachment Three-B), and April 20 (Attachment Three-C) minutes. The motion passed unanimously.

2. Adopted its Revised 2022 Working Agenda

Mr. Drutz said the working agenda was revised to add the “review of the affiliated investment” as a new item. This item was given a priority status of 1 and an expected completion date of year-end 2023.

Mr. Chou made a motion, seconded by Mr. Muldoon, to adopt the revised 2022 working agenda (*see NAIC Proceedings – Summer 2022, Capital Adequacy (E) Task Force, Attachment Nine*). The motion passed unanimously.

3. Adopted its 2022 Newsletter

Mr. Drutz said the 2022 health risk-based capital (RBC) newsletter reflects the adopted proposal and editorial changes for year-end 2022. He said the newsletter appears different from past years; the purpose of the adoption is to consider the content of the newsletter as the format will later be revised. He said that when the formatting of the newsletter is complete, it will be posted to the Working Group’s web page.

Mr. Dudek made a motion, seconded by Mr. Muldoon, to adopt the 2022 health RBC newsletter (Attachment Three-D). The motion passed unanimously.

4. Adopted the 2021 Health RBC Statistics

Mr. Drutz said the 2021 health statistics were run on July 1. He said there were 1,095 health RBC filings loaded onto the NAIC database, up from 1,067 in 2020. Mr. Drutz said there were 12 companies that triggered an action level in 2021: five were in a company action level; two were in a regulatory action level; two were in an authorized control level (ACL); and three were in a mandatory control level. Mr. Drutz said there were 15 companies that triggered the trend test, and the ACL and total adjusted capital (TAC) amounts increased from 2020 to 2021.

Mr. Drutz said there were revisions to the statistics report to create consistency across life, property/casualty (P/C) and health statistical reports. He noted that the column for “Excluding ACA Fee” was removed due to the removal of the federal Affordable Care Act (ACA) fee sensitivity test from the health RBC formula in 2021. He said two new categories were added to the statistics: 1) “# of Companies with and RBC Ratio of <300% and >250%”; and 2) “# of companies with an RBC ratio of <250% and >200%.” These categories will replace the category “# of companies with an RBC ratio of <300% & > 200%.”

Mr. Muldoon made a motion, seconded by Mr. Chou, to adopt the 2021 health RBC statistics report (Attachment Three-E). The motion passed unanimously.

5. Referred the Health Affiliated Investments Instructions and Blank to the Capital Adequacy (E) Task Force

Mr. Drutz said that during its May 4 meeting, the Working Group exposed the affiliated investment instructions and blanks changes for a 61-day comment period. There were no comments received.

Mr. Hodges made a motion, seconded by Mr. Dudek, to refer the health affiliated instructions and blanks to the Capital Adequacy (E) Task Force for discussion. The motion passed unanimously.

6. Exposed the Academy’s Response on the H2 - Underwriting Risk Review

Mr. Drutz said the Working Group heard presentations from AM Best and the Academy on the different methodologies considered in the Academy’s report of the H2 - Underwriting Risk review. He said that because of those presentations, the Working Group requested the Academy provide its recommended approach and timeline for moving forward with the project. Matthew Williams (Academy) gave a summary of the letter (Attachment Three-F) and said that he would take any questions or comments back to the Academy Health Solvency Subcommittee. He said the estimated time frame to complete the work was 18 weeks given the complexity of the project. Mr. Drutz asked if the Academy would be able to use the Analysis of Operations page given the adopted changes to break out comprehensive medical into group and individual, which will be effective for year-end 2023. Mr. Drutz also asked if the other underwriting business and limited benefit plans would be able to be incorporated or later reviewed if the Academy were to have the data needed for this business. Mr. Williams agreed to bring these questions back to the Academy to discuss.

Hearing no objections, the Working Group agreed to expose the Academy letter for a 30-day comment period ending Aug. 22.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

Health Risk-Based Capital (E) Working Group
Virtual Meeting
May 11, 2022

The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met May 11, 2022. The following Working Group members participated: Steve Drutz, Chair (WA); Matthew Richard and Aaron Hodges, Co-Vice Chairs, and David McElroy (TX); Wanchin Chou (CT); Kyle Collins (FL); Tish Becker (KS); Danielle Smith (MO); Michael Muldoon and Margaret Garrison (NE); Tom Dudek (NY).

1. Heard a Presentation from the Academy on the Methodologies Considered in the H2 – Underwriting Risk Review

Derek Skoog (American Academy of Actuaries—Academy) said the purpose of the Academy’s presentation is to review the property/casualty (P/C) risk-based capital (RBC) methodology. In terms of intended philosophy and purpose, the P/C RBC formula is similar in nature to the health RBC. Mr. Skoog said the focus of the presentation would be on the P/C RBC underwriting risk premium and reserve factors, particularly the risk factors that are the core P/C accident and health (A&H) lines of business. These lines would be functionally like the health RBC lines; however, premium and reserve risk factors are different from how it is currently considered in the health RBC formula.

Mr. Skoog said the underwriting risk is similarly large for P/C companies but not as significant as it is for health companies. The factors that are focused on the reserve risk (represents that the reserves held on the balance sheet are an estimate, and potentially volatile), and the premium risk. These are captured within the P/C formula separately; however, they are treated almost identically within the formula for calculating the required capital. Mr. Skoog summarized the concepts and components of the underwriting risk formula. He said the P/C factors are experience driven. He said line 1 is the industry average development, which reflects how reserves have run out relative loss and defense and cost containment expense across the industry using nine years of data to establish the industry reserve development. The industry average development is how favorably or unfavorably the industry reserves developed by line of business. Mr. Skoog said line 2 looks at actual company experience, which is calculated based on the company's own data within the P/C RBC formula. He said this is to the extent that a company experiences significantly different reserve run-out than the industry that gets accounted for in line 2. He said if the company data is not determined to be “creditable,” then just the industry average is used. Line 3 then compares the industry results to the company’s results; if the company experienced worse run-out patterns than the industry, then that would serve to increase base risk charges.

Mr. Skoog said line 4 may be the most important factor; this is the actual industry loss and expense RBC percent. He said this factor is run every few years by the Academy P/C Work Group to analyze industry losses and assess development at the 87.5 percentile. This is called the safety level, and this looks at what the adverse development on claims expense is at this safety level and sets the base capital charge to that level. Mr. Skoog said this percentile has been stable for some time now, and if the Working Group chooses to follow a similar approach to the P/C in construct, then this will be a number worth thinking about, as this could be the single biggest driver to what the RBC result is. To the extent that the Working Group wants a higher safety level, that would potentially bump up reserves.

Mr. Skoog said line 5 is a simple weighted average between the two RBC factors of the company development and industry average development. Line 5 multiplies out industry-wide losses and risk factor adjusted for company

experience; it takes a 50/50 blend between the industry-wide factor on its own and the industry-wide risk factor adjusted for line 3. To the extent that a company's reserve development has been 10% worse than the industry, then the company's RBC percentage on line 5 would show 5% higher than the industry.

Mr. Skoog said line 8 is the adjustment for investment income; it is newer in concept and somewhat significant to the formula. The reason this is included and particularly important is because P/C products tend to have much longer tails than A&H products, so being able to earn investment returns on claims reserves or on capital charges can have a material impact. The idea is that if the adjustment for investment income is not included, the fact that the company is earning some amount of investment returns on the reserves that they are holding is not being accounting for. Mr. Skoog said these factors are divergent from 1.0, which implies that there are some significant investment return assumptions that are included within the formula, and which are the shorter tail lines in terms of reserve run-out compared to the longer tail lines can be determined.

Mr. Skoog said lines 10 and 11 are the Percent Loss Sensitive Direct and Percent Loss Sensitive Assumed, and they are similar in concept to the managed care credit on the health side in that it is a discount for retrospectively rated products. He said there is an adjustment for loss sensitive products that provides a discount for retrospectively rated contracts; this is an area that may not be quite as impactful as the safety level but may need to be tailored more to the health formula if this is something the Working Group is to consider. There are several risk sensitive products in the health industry, and to the extent that industry data and industry reserve development or industry loss ratio volatility were analyzed, that retrospectively rated premium would be incorporated in that industry data, and it is a material part of health contracts. There are a lot of contracts that have risk corridors or minimum loss ratios (MLRs), and the Working Group may or may not want to give any credit for or ensure that the factor used is the right one or reflective for health business.

Mr. Skoog said line 14 is the loss concentration factor, and this is developed to account for the fact that P/C companies often have many different lines of business that are not perfectly correlated, and adverse development on one line of business might be offset by favorable development for another line of business. The loss concentration factor looks at premium distribution for all lines of business; the calculation takes the premium for the largest line of business and calculates the percentage of that line of business to total business. That line of business then gets a weight of 30% and a base weight of 70%; then, as a result, that factor can move anywhere between 0.7 and 1.0. More or less, if one is perfectly diversified in the sense of participation in every P/C line of business and to an equal degree, a diversification factor would be right around 0.72 or 0.73, which reflects the first part of the formula.

Mr. Skoog said the net reserve RBC calculation is included in line 15, and this is like the health formula; however, in health, the reserve is not calculated on its own but instead in a kind of combined conception of underwriting risk. He said the net written premium formula is fundamentally the same as the reserves, except the net written premium uses 10 years of experience to provide a long-term view, or a rolling 10-year window of analysis.

Mr. Skoog summarized the net written premium calculation on page PR018. He said the format for the net written premium page is like the reserves page with the differences looking at average loss ratios as opposed to looking at the reserve development on line 1. The company-specific average loss ratio for the period in which business is written business is compared to the industry, like the reserve development; to the extent that a company is consistently writing lower loss and loss adjustment expense ratios than the industry, they are effectively getting a credit. Line 4 is the same as the reserves in nature and uses the 87.5 percentile risk charge, and these are significant for P/C companies, as there is a lot of volatility for P/C companies relative to what is seen on the health side. Mr. Skoog said there is a similar contemplation of loss sensitive products and loss concentration on the premium side as the reserves.

Mr. Skoog said the adjustment for investment income on the reserve side is applied a 1, plus the risk factor, multiplied by the investment income adjustment, minus 1 to get to the net risk factor; that adjustment can end up being substantial. For example, instead of a .83 factor for the adjustment to investment income being applied to workers' compensation to the line 4 factor, the line 9 amount would be calculated as .83, multiplied by 1, plus .344, minus 1. This results in a more significant impact because the investment income is not being earned on just the capital charge, but investment income is also being earned on the underlying reserve as well. Mr. Skoog said the premium side does something a little different, because there is not a big reserve balance that is earning investment income. In this case, there is not a big balance that investment income is being earned on, so the income is essentially earned just on the premium collected less what has been paid out in claims.

Mr. Skoog said the detail paid to lines of business, as reported in the statutory financials, is an attractive feature, as well as rolling views of the industry experience and risk and adjustments for company-specific experience in the P/C formula. The investment income adjustment is not as important for health's heavily short-tailed products; some conception of the loss sensitive products and the managed care credit would need to be considered. Mr. Skoog said the managed care credit is likely to be important to the health formula to use an approach like the loss sensitive products in the health formula. The loss sensitive product approach in the P/C formula is not the complete concept that health would need to capture, given that health has both loss sensitive products, as well as paying providers that both serve to mitigate risk.

Mr. Drutz asked if the health formula has a similar built-in safety level like the P/C formula. Mr. Skoog said the current health formula was not as elegantly designed as the P/C formula, and the safety level as it was calculated when the health formula was first developed is nowhere near what it is today. The health risks of today are quite different from when the formula was first developed. Mr. Skoog suggested that if the Working Group were to move forward, it would look at the results of various safety levels before making a final determination of the safety level to use.

Mr. Drutz asked if the Academy has suggestions on how to move forward with reviewing the H2 – Underwriting Risk. Mr. Skoog suggested that the Working Group request that the Academy review the factors based on the latest experience, and the Academy would respond with the suggested methodology and outcomes. This would then set off the chain of events that could serve to update the factors. They could provide a more prescriptive approach for how to update the factors in a more current and rigorous manner. Mr. Drutz asked if there are thoughts of having a separate reserve charge in the health formula. Mr. Skoog said based on his personal perspective and given the state of the annual statement blanks, what would be reported in the claims expense is some amount of reserve development; therefore, as opposed to expanding the underwriting risk factor into the two pieces like P/C, it would potentially be to use some amount of reserve development. Reserve development for health companies does not have the same amount of uncertainty as it does for P/C companies.

Mr. Chou asked if the Academy is planning to have a separate group to look at this. Mr. Skoog said it would be the Academy's Health Solvency Subcommittee that would work on this and input from its P/C Academy counterparts to the extent that any of the P/C methodologies are used.

Hearing no concerns, the Working Group asked the Academy to move forward with drafting the prescriptive letter on how to move forward with the H2 – Underwriting Risk review.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings

Draft: 7/6/22

Health Risk-Based Capital (E) Working Group
Virtual Meeting
May 4, 2022

The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met May 4, 2022. The following Working Group members participated: Steve Drutz, Chair (WA); Wanchin Chou (CT); Benjamin Ben (FL); Tish Becker (KS); Debbie Doggett, Jay Buschmann, and Danielle Smith (MO); Michael Muldoon and Margaret Garrison (NE); and Tom Dudek (NY).

1. Exposed Affiliated Investment Instructions and Blanks

Mr. Drutz said the Affiliated Investments Ad Hoc Group was established six years ago to review the risk-based capital (RBC) instructions and formulas for consistency across all lines. He said it was composed of state insurance regulators and industry participants for each line of business. The group modified the formulas and the instructions to allow state insurance regulators to more easily identify and explain discrepancies and more closely align with the group capital calculation (GCC). The health and property/casualty (P/C) structure are consistent across the formulas for the affiliated investment charge except for the factors used. Health retained the 30% factor for certain affiliate types, while property retained the 22.5% factor. For increased consistency across the blanks, page names and headings have been updated to align with the P/C formula.

Hearing no objections, the Working Group agreed to expose the health affiliated investment instructions and blanks for a 60-day public comment period ending July 5.

2. Received an Update on the Health Test Ad Hoc Group and the Excessive Growth Charge Ad Hoc Group

Mr. Drutz said the Health Test Ad Hoc Group met March 30 to discuss the history of the current reserve ratio in the health test. The group identified the need for careful consideration of the reserve ratio prior to suggesting any changes and will discuss possible alternatives during future meetings. Mr. Drutz said the Blanks (E) Working Group exposed the previously referred Health Test language as proposal 2022-06BWG. Comments were received that seemed to be editorial in nature and added additional clarity, including: 1) modifying the proposed language that did not change the original intent; and 2) adding a sentence to the property blank to clarify that an entity required to file a Protected Cell Statement would not be subject to the results of the test but would still be required to file the test. This would be similar to language used in the life blank for an entity filing a Separate Account Statement.

Mr. Drutz said the Excessive Growth Charge Ad Hoc Group continues to meet every four weeks. During its last meeting on April 13, it continued to review the data and is now looking at data sets based on company size using member months to differentiate the companies. This review will provide for group members to review different member month ranges to see if there is a correlation of excessive growth to underwriting losses for different company sizes.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

Draft: 7/6/22

Health Risk-Based Capital (E) Working Group
Virtual Meeting
April 20, 2022

The Health Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met April 20, 2022. The following Working Group members participated: Steve Drutz, Chair (WA); Mathew Richard and Aaron Hodges, Co-Vice Chairs, and Sean Fulton (TX); Wanchin Chou (CT); Kyle Collins (FL); Sarah Smith (KS); Debbie Doggett and Danielle Smith (MO); Michael Muldoon and Margaret Garrison (NE); and Tom Dudek (NY).

1. Adopted its March 18 Minutes

The Working Group met March 18 and took the following action: 1) adopted its Feb. 25, 2022; Jan. 28, 2022; and Dec. 16, 2021, minutes; 2) adopted its 2022 working agenda; and 3) discussed the American Academy of Actuaries (Academy) H2 – Underwriting Risk Report.

Mr. Chou made a motion, seconded by Mr. Dudek, to adopt the Working Group's March 18 minutes (*see NAIC Proceedings – Spring 2022, Capital Adequacy (E) Task Force, Attachment Three*). The motion passed unanimously.

2. Heard a Presentation from AM Best on BCAR

George Hansen (AM Best), Tom Mount (AM Best), and Bruno Caron (AM Best) provided a presentation (Attachment Three-C1) to the Working Group on the Life/Health Best's Capital Adequacy Relativity (BCAR) adjustment system. Mr. Hansen provided an overview of the model and the components contained within. He said BCAR is similar to the NAIC risk-based capital (RBC) formula in that there are similar buckets of risk, such as various asset risks, separate accounts, mortality, morbidity, interest rate, market, and business risk. The model is set up as stochastic factor-based model that is based on four key metrics: value at risk (VaR) levels of 95.0, 99.0, 99.5, and 99.6. The ratio is calculated as the difference between the available capital and the required capital and expresses it as a percentage of available capital. Available capital is reported capital adjusted for certain equity adjustments, while gross required capital is the asset risk, insurance risk, interest rate/market risk, business risk, and covariance adjustment. There are five VaR levels that are used to determine the BCAR assessment that are based purely on BCAR results. A score of 25 at the 99.6 VaR level is considered the strongest BCAR assessment. This is the start of the balance sheet strength assessment. BCAR is used to start the rating process, and it includes the balance sheet strength assessment (reserve adequacy, reinsurance programs, and the quality of assets held). The balance sheet strength assessment, operating performance, business profile, enterprise risk management (ERM), comprehensive adjustment, and rating lift/drag make up the insurer credit rating.

Mr. Hansen said the primary tool for the morbidity risk is the Supplemental Rating Questionnaire, which is submitted to companies each year. The questionnaire includes a section on individual and group health for premiums, claims, and expenses. He said they are primarily modeling the underwriting risk to the net premiums earned.

Mr. Mount said the premium factors were calculated by accident year, as well as the underwriting profit or loss for each company, for each accident year, and for each line of business. He said they took that ultimate underwriting profit or loss as a ratio to premiums. Those ratios were then combined into one pool and compared to the volatility within those underwriting profit and loss ratios. Mr. Mount said the data was later separated into quartiles as companies got larger (larger companies = decreased volatility) and applied normal curves to that profit

and loss data. The risk factors get smaller, and the premiums get larger. The factors are reduced for those companies that are profitable because there is an implicit cushion in those risk factors because they can absorb more loss before getting to an underwriting loss. The factors are increased for those companies losing money to reflect that their pricing is underpriced, and they are at greater risk for downside losses. A line-by-line diversification factor is also applied on a line-by-line basis.

Mr. Mount said that when they developed the property/casualty (P/C) reserve factors, the Schedule P data was used. He said that they looked at the adverse or favorable development that would run off in Schedule P for an ultimate basis by looking at what the reserve originally booked for was and then compared it to where it was run off. This is then taken as a ratio of the original reserves. The percentage for each company is then taken and broken into quartiles. Smaller reserves would be more volatile, and more companies with adverse development than those companies with a large reserve base would have more stability. Mr. Mount said that a one-year development was used for short-tail lines of business for health companies to compare to the prior-year reserves. He said they looked at those percentages and then broke them out into quartiles. This led to larger risk factors for a smaller reserve basis than for the larger reserve basis. He said they also did an industry total reserve development and looked at them line by line to see if there is any correlation in terms of the movement. Line-by-line diversification credits are given because it is unlikely that all the lines will move at the same time.

Mr. Hansen said the long-tailed lines of business were modeled separately from short-tail lines. He summarized the modeling process for long-term care (LTC) and long-term disability lines of business factors. Mr. Hansen said there is variability in the premium and reserve factors based on the line of business and the size factor. A diversification factor is also applied based on the number of lines of business that a company writes; the more lines a company writes, the more credit that will be applied. A managed care credit is applied to the premium side, which is based on the claims payments that are reported in Exhibit 7 of the annual statement. The reserve ratios have their own size thresholds, which are broken out in the criteria paper.

Mr. Chou said the federal employees' factor is much smaller than the other categories. He asked what the logic is for this difference. Mr. Hansen said the federal employees' line of business has a large government back-stop, so writers of this business have a government back-stop to limit the company's exposure. Mr. Chou asked for further clarification on what would determine a +1 or -4 in terms of the ERM component. Mr. Hansen said the basic concept is that there are several risks outlined, such as investments and operational risks, and then what is the risk management capability, where companies have demonstrated that they have managed this risk. The various categories are on a one to 10 scale as far as the level of risk that is there and the risk management capability. He said that then rolls into a score of +1 (best) to -4 (worst).

Mr. Caron said that within the rating process, the +1 ERMs are usually reserved for those companies that have an extremely strong developed ERM program, where ERM will drive the boat and make significant impact on the company. On the other hand, 0 or -1 ERM programs are where a company looks at ERM risk in general but is not as developed as the +1. Those companies that do not have an integrated ERM program would get the lowest scores. The governance structure is taken into consideration when it comes to the assessment of the ERM program.

Mr. Chou asked if the available capital and net required capital are similar to the RBC's total adjusted capital (TAC) and authorized control level. Mr. Hansen said that it is similar to RBC, but RBC may separate out some other risks. Mr. Hansen said that the baseline factors for bonds are capped at 10-year maturities, so everything over a 10-year maturity would get a 10-year factor. The factors are durational and based on rating class.

Mr. Muldoon asked for further clarification on the reserve risk calculation given that reserve risk is not really a part of the current health RBC formula. Mr. Mount said that they look to see if the development was positive or negative on the reserves booked in the year before and if the reserve booked in the prior year was adequate or not adequate, and what percentage development was there. Mr. Muldoon asked what reserve categories were used. Mr. Mount said that they used the definitions/lines of business as defined in the life, accident and health (A&H), fraternal annual statement and health annual statement. Mr. Hansen said that they use the Underwriting and Investment Exhibit 2B for claim liability held. He said they look at how much in claims came in the prior year against the liability and then do a three-year average to measure against the industry factors. Mr. Muldoon asked if they only looked at the claim liability and did it pick up any other types of reserves, such as premium deficiency. Mr. Mount said that they looked at the net unpaid claims in the previous years. Mr. Muldoon asked if there was anything in BCAR that would prohibit its use in a statutory model. Mr. Mount it would depend on if the reserves were discounted. He said for most of the lines, the assumption is that they are undiscounted, and AM Best applies a discount factor to them. If a company had discounted them, they would want to undiscount them and rediscount them based on their discount factor so that all are discounted on a consistent basis. Mr. Mount noted that there may be some other reasons, such as international, that would result in differences in discounting.

Having no further business, the Health Risk-Based Capital (E) Working Group adjourned.

NAIC Health RBC Group Agenda

Our Insight, Your Advantage™

Model Overview

- Summary Scores-with/without adjustments
- C1.1-Fixed Income Assets
- C1.2-Fixed BA Assets
- SOR Factor
- C1.3-Separate Account Assets (related to interest rate guarantees)
- C1.4 Equity, Real Estate (Base/BA), Reinsurance Counterparty, Derivatives, Other Assets
- C2-Mortality Risk
- C2 Morbidity Risk
- C3 Interest Rate Risk
- C3 Market Risk
- C4 Business Risk
- Available Capital

Our Insight, Your Advantage™

Key Model Highlights

- Net Required Capital Using Value at Risk (VaR) metric
 - VaR levels: 95.0, 99.0, 99.5, 99.6
- Ratio based on Available Capital
 - Difference between Available Capital and Required Capital, as a ratio to Available Capital
 - Required Capital calculated using VAR metrics
 - Better alignment with risk appetite/tolerance statements

Our Insight, Your Advantage™

New Structure – L/H BCAR

$$\text{BCAR Ratio} = \frac{\text{Available Capital} - \text{Net Required Capital}}{\text{Available Capital}}$$

Available Capital (AC)
Reported Capital (PHS)
Equity Adjustments:
 AVR Reserves
 Interest Maintenance Reserve
 Unearned Premiums
Debt Adjustments:
 Surplus Notes
Other Adjustments:
 Future Operating Losses
 Future Dividends
 Derivatives Off Balance Sheet

Net Required Capital
Gross Required Capital (GRC):
 (C1) Asset Risk
 (C2) Insurance Risk
 (C3) Interest Rate/Market Risk
 (C4) Business Risk
 Covariance Adjustment
Net Required Capital (NRC)*

$$*NRC = \text{SQRT} [(C1\text{NonEq} + C3\text{Interest})^2 + (C1\text{Eq} + C3\text{Market})^2 + (C2)^2] + C4$$

Our Insight, Your Advantage™

Application of BCAR

VaR Confidence Level (%)	BCAR	BCAR Assessment
99.6	> 25 at 99.6	Strongest
99.6	> 10 at 99.6 and ≤ 25 at 99.6	Very Strong
99.5	> 0 at 99.5 and ≤ 10 at 99.6	Strong
99	> 0 at 99 and ≤ 0 at 99.5	Adequate
95	> 0 at 95 and ≤ 0 at 99	Weak
95	≤ 0 at 95	Very Weak

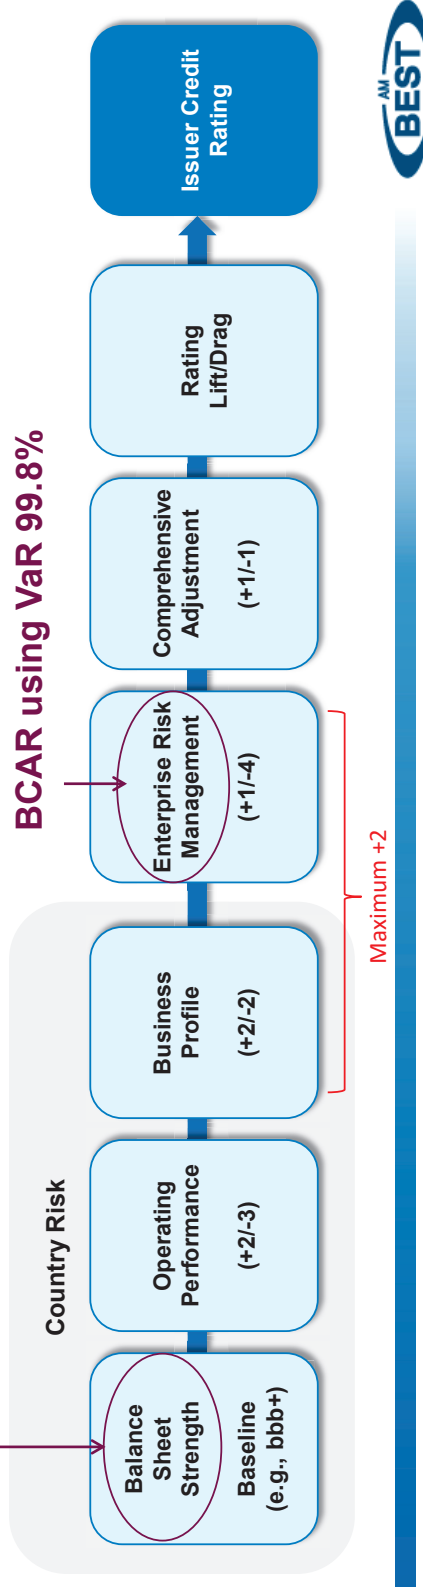

Our Insight, Your Advantage™

BCAR in the Rating Process

- Balance Sheet Strength Assessment
- Enterprise Risk Management (ERM)

BCARs using VaR 95%, 99%, 99.5%, & 99.6%

Our Insight, Your Advantage™

Morbidity Risk

- Short-Tailed Lines of Business-Premium based
 - Profitability analyzed over 10 year period
 - Loss curve built for each line of business and for each of four size categories: very small, small, medium, large (industry curves)
 - Industry factors (determined for each VaR level) will be adjusted for each company's profitability over a 3 year period
 - Initial testing assumes companies get industry profitability factors
 - After line of business factors determined, correlation matrix applied to reflect diversification

Our Insight, Your Advantage™

Morbidity Risk

- Long-Tailed Lines of Business (LTC,LTD)-Premium based
 - Long-Term Care
 - External models developed using industry level experience from business priced in early 2000's
 - Risk factors determined by reviewing profitability of run-off block 15+ years forward (statutory losses emerge around this period and going forward)
 - Factors based on amounts needed to cover present value of future losses, adjusted for assumed target surplus held
 - Factors do not vary by premium size (assumes industry wide trends)
 - Group LTC factors assumed to be lower than individual
 - New business with current pricing assumptions may be reviewed for adjustments to risk factors

Our Insight, Your Advantage™

Morbidity Risk

- Long-Tailed Lines of Business (LTC,LTD)-Premium based
 - Long Term Disability
 - Inforce population developed based on industry data
 - Population includes age, gender, disability coverage period (benefit period to age 65 and lifetime)
 - Disability incidence simulated for 10,000 scenarios using internal simulation model (similar to mortality risk modeling)
 - Factors determined based on amounts needed to cover future disability claims relative to cumulative premiums for each VaR level
 - For most cells, claims exceed premiums around 15 years from model start date
 - Factors do not vary by size as disability incidence rates do not show much volatility
 - Baseline factors set higher for non-cancellable, lower for other IDI and group DI
 - Group Short-Term disability modeled as short-tail lines of business

Our Insight, Your Advantage™

Newsletter Items for Adoption for 2022 for Health RBC:

Date: July 2022

Volume: 24.1

Page 1: Intro Section:

What RBC Pages Should Be Submitted?

For the year-end 2022 health risk-based capital (RBC) filing, submit hard copies of pages **XR001 through XR027** to any state that requests a hard copy in addition to the electronic filing. Beginning with year-end 2007, a hard copy of the RBC filings was not required to be submitted to the NAIC. Other pages, outside of pages XR001 through XR027, do not need to be submitted. Those pages would need to be retained by the company as documentation.

Page 1+: Items Adopted for 2022:

Investment Income Benchmarks

The Capital Adequacy (E) Task Force adopted proposal 2021-18-H (MOD) to add benchmarking guidelines to the underwriting instructions for investment income during its March 28 meeting.

Page 2+: Editorial Changes:

1. An editorial change was made to the add “- BONDS” to the header of page XR007.
2. An editorial change was made to remove “Miscellaneous Fixed Income Assets” as a separate line, and “- MISCELLANEOUS” was added to the header of page XR008.
3. An editorial change was made to the Annual Statement Source column on page XR007 to reference the new Schedule D, Part 1; Schedule DA, Part 1; and Schedule E, Part 2 line numbers: Line (1) = C(1) = Sch. D, Pt 1, C11, L0109999999, C(2) = Sch. DA, Pt 1, C7, L0109999999, and C(3) = Sch. E, Pt 2, C7, L0109999999 + L8209999999; and Line (2) C(3) = Footnote Amt 1 L000001A – SCE, Pt 2, C7, L0109999999.
4. An editorial change was made to the instructions and Annual Statement Source column on page XR008 to reference the new Schedule DA, Part 1 and Schedule E, Part 2 line numbers: “instructions and Line (34) = Schedule DA, Part 1, Column 7, Line 2509999999; (30) = Schedule E, Part 2, Column 7, Line 2509999999; and (31) = Schedule E, Part 2, Column 7, Line 8209999999.”
5. An editorial change was made to the Annual Statement Source on page XR015, Line (24) to update the column reference to Column 7 from Column 6.

Last Page: RBC Forecasting & Warning:**RBC Forecasting and Instructions**

The Health RBC forecasting spreadsheet calculates RBC using the same formula presented in the *2022 NAIC Health Risk-Based Capital Report Including Overview & Instructions for Companies*, and it is available to download from the NAIC Account Manager. The *2022 NAIC Health Risk-Based Capital Report Including Overview & Instructions for Companies* publication is available for purchase in an electronic format through the NAIC Publications Department. This publication is available for purchase on or about Nov. 1 each year. The User Guide is no longer included in the Forecasting & Instructions.

WARNING: The RBC forecasting spreadsheet CANNOT be used to meet the year-end RBC electronic filing requirement. RBC filing software from an annual statement software vendor should be used to create the electronic filing. If the forecasting worksheet is sent instead of an electronic filing, it will not be accepted, and the RBC will not have been filed.

AMERICAN ACADEMY of ACTUARIES

Objective. Independent. Effective.™

July 13, 2022

Steve Drutz
Chair, Health Risk-Based Capital (E) Working Group
National Association of Insurance Commissioners (NAIC)

Re: Request for Comprehensive Review of the H2—Underwriting Risk Component and
Managed Care Credit Calculation in the Health Risk-Based Capital Formula

Dear Mr. Drutz:

On behalf of the American Academy of Actuaries (Academy)¹ Health Solvency Subcommittee (“subcommittee”), I am pleased to provide this letter to the NAIC Health Risk-Based Capital (E) Working Group (“working group”). The subcommittee drafted this letter in response to the request from the working group after its [previous report](#) to provide a timeline to analyze and comprehensively review the H2—Underwriting Risk component and the managed care credit calculation in the health risk-based capital (HRBC) formula.

The subcommittee’s [January 2022 report](#) included the following six recommendations for the HRBC Working Group’s consideration:

1. Refresh factors based on updated insurer data
2. Develop factors at a more granular product level
3. Develop factors specific to more relevant block sizes and consider an indexing factor for cut points to change over time
4. Model risk factors over an NAIC-defined prospective time horizon with a defined safety level that can be refreshed regularly
5. Refresh of managed care credit formula and factors to be more relevant and reflective of common contracting approaches and other risk factors associated with these contracting approaches
6. Analyze long-term care insurance (LTCI) underwriting performance to create a more nuanced set of risk factors that considers pricing changes over time

The subcommittee plans to proceed with an analysis to support recommendations 1-5 above across three work tracks. Concerning recommendation No. 6, the subcommittee suggests that the working group discuss any potential changes to LTCI risk factors with the NAIC Life Risk-

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

Based Capital (E) Working Group because most LTCI premium is written on life blanks. Please revisit the previous report for additional detail related to the six recommendations.

The three work tracks that will be needed to support the recommendations are:

1. Redesign HRBC Pages XR013/XR014 (Experience Fluctuation Risk)²
2. Develop Tiered RBC Factors
3. Redesign HRBC Pages XR018/XR019 (Managed Care Credit)

As the subcommittee completes each work track, it will share the results with the working group for their consideration and feedback. The remainder of this letter provides more details regarding our proposed analyses.

1. HRBC Pages XR013 and XR014 (Experience Fluctuation Risk) redesign

The current RBC formula for Experience Fluctuation Risk utilizes data from Page 7—Analysis of Operations by Line of Business—then aggregated to six product columns instead of the nine shown on Page 7. Alternatively, the RBC formula could use the Supplemental Health Care Exhibit (“SHCE”)—Part 1, the Accident and Health Policy Experience Exhibit (“A&H Exhibit”), or the Exhibit of Premiums, Enrollment, and Utilization. While the SHCE and A&H Exhibits benefit from additional product detail, the limitation is that they are not filed until April 1—after insurers have filed their RBC calculations. The alternative—the Exhibit of Premiums, Enrollment, and Utilization—is limited by the fact that premiums and claims are presented on a gross basis.

Given that the later timing of the supplements would create a mismatch in timing between the RBC calculation and the availability of data, the subcommittee would suggest utilizing Exhibit of Premiums, Enrollment, and Utilization, at least until insurers file the supplements with the rest of the core financial statement pages.

The subcommittee will likely need to make some adjustments during the risk factor development process (e.g., utilizing data from the historical supplements or other sources) to remedy the gross basis presentation. Additionally, for the RBC filing, Company Records may be required to move from gross to net premiums and claims. Lastly, given the significant A&H volume on life blanks, the Analysis of Operations by Lines of Business—Accident and Health would likely need to be utilized.

Additional changes to XR013/XR014 would include:

- Company-specific experience adjustments, based on historical company-specific experience—likely between five and 10 years
- An adjustment for investment income, tailored to the cash flows of health products
- A premium diversification discount factor

² Based on the 2021 HRBC formula and layout. Additionally, the subcommittee does not expect to make changes to XR015 as part of this exercise given potential data limitations on the Supplemental pages and the Exhibit of Premiums, Enrollment, and Utilization.

- Adjustments to the tiering thresholds

This work track would produce a brief discussion document with a corresponding workbook with the proposed calculation and health blank data sourcing with mock data. The subcommittee expects this work track to take approximately 18 weeks, given the complexity of the redesign.

2. Tiered RBC factor development

The development of the new Tiered RBC factors would be conceptually similar to the exercise performed by the Academy's Property and Casualty Risk-Based Capital Committee for the P&C RBC formula. That is, the premium risk factors would reflect the risk that the subsequent year³ of net premium would produce adverse underwriting experience. The Premium Risk Factors for each line of business would be derived from the net loss ratio for each company that has submitted statutory financials over some predefined period (potentially up to 10 years). The premium risk factors would correspond to some percentile confidence level, as determined by the working group.

This work track would ultimately produce a brief discussion document with a corresponding workbook summarizing the data and results for each line of business at various confidence levels. Given the time needed for data collection and analysis, the subcommittee expects this work track to take approximately 28 weeks.

3. HRBC XR018 and XR019 (Managed Care Credit) redesign

As discussed in the previous January 2022 report, the current Managed Care Credit does not reflect the current nature of provider contracts or contractual risk-sharing provisions. As a result, the subcommittee recommended that the Managed Care Credit be updated. Given the limited data collected within Exhibit 7, this exercise would only include the design of a new HRBC page based on company records (or potentially a new health blank exhibit) for the working group's consideration. As the new data is collected, the new Managed Care Credit could eventually be incorporated into the Experience Fluctuation Risk calculation. Alternatively, to accelerate the redesigned Managed Care Credit adoption, the working group could ask that the subcommittee estimate both the effectiveness of each Managed Care mechanism (and the corresponding discount factor) and the industry distribution of claim payment based on Exhibit 7 reporting. This estimation would require some speculation, which may be inaccurate once the NAIC collects and analyzes data in the future.

This work track would produce a brief discussion document with a corresponding workbook with the proposed Managed Care Credit data collection template and calculation. The subcommittee expects this work track to take approximately 18 weeks, given the complexity of the redesign.

³ This one-year time horizon would imply that contractual obligations and pricing are generally locked in for a year; however, the NAIC may consider (and request) an alternative time horizon

4. Next Steps

The subcommittee would like to discuss the timing of this work and data availability with the working group. The subcommittee would also like to discuss the approach for factor development—namely:

- Which schedules from the health blanks should be utilized for the Experience Fluctuation Risk calculation? Relatedly, is there any receptivity to either delaying the RBC calculation until the supplemental reports are filed or to accelerating the timing of when the supplemental reports need to be filed?
- Should the Managed Care Credit changes be included as part of this Experience Fluctuation Risk refresh or later, when data becomes available?

Thank you for the opportunity to provide this response to the request of the working group to provide a work plan to perform an update for the Experience Fluctuation Risk calculations. Members of the subcommittee welcome the opportunity to speak with you in more detail and answer any questions you might have regarding this letter. If you would like to discuss this letter and its recommendations, please contact Matthew Williams, the Academy's senior health policy analyst, at williams@actuary.org.

Sincerely,

Derek Skoog, MAAA, FSA
Chairperson
Health Solvency Subcommittee
American Academy of Actuaries

Life Risk-Based Capital (E) Working Group
Virtual Meeting (*in lieu of meeting at the 2022 Summer National Meeting*)
July 27, 2022

The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met July 27, 2022. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); William Watson (FL); Mike Yanacheak and Carrie Mears (IA); Fred Andersen (MN); William Leung (MO); Derek Wallman (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Adopted its June 17, June 3, April 22, April 7, and Spring National Meeting Minutes

Mr. Leung made a motion, seconded by Mr. Chou, to adopt the Working Group's June 17 (Attachment Four-A), June 3 (Attachment Four-B), April 22 (Attachment Four-C), April 7 (Attachment Four-D), and March 23 (*see NAIC Proceedings – Spring 2022, Capital Adequacy (E) Task Force, Attachment Four*) minutes. The motion passed unanimously.

2. Adopted the 2022 Life and Fraternal RBC Newsletter

Ms. Hemphill made a motion, seconded by Mr. Leung, to adopt the content for the 2022 Life and Fraternal Risk-Based Capital (RBC) Newsletter (Attachment Four-E). The motion passed unanimously.

3. Consider Adoption of the 2021 Life and Fraternal RBC Statistics

Mr. Chou made a motion, seconded by Mr. Reedy, to adopt the 2021 Life and Fraternal RBC Statistics (Attachment Four-F). Mr. Barlow said a subgroup of the Working Group has been reviewing the statistics to enhance or otherwise change the statistics to provide useful information in reviewing RBC results. He said there has been a lot of good work done so far, and no changes have been made yet. The motion passed unanimously.

4. Discussed Affiliated Investments

Mr. Barlow said one comment letter was received on the affiliated investments proposal. Brian Bayerle (American Council of Life Insurers—ACLI) presented the ACLI's comment letter (Attachment Four-G). He said the ACLI reviewed the proposal, and while it has no specific concerns with the proposal, the ACLI notes that the exposed guidance requires reporting insurers to include the carrying values and RBC requirements for all directly owned subsidiaries even if they are non-admitted. If such entities are to be included in RBC, he said it does not seem reasonable to classify them as non-admitted given this reporting requirement. He said the ACLI suggests consideration of a referral to the Statutory Accounting Principles (E) Working Group. He said the affiliated investments are being reviewed by each of the RBC working groups and will be considered together by the Capital Adequacy (E) Task Force.

5. Adopted its Working Agenda

Mr. Barlow said the item to update the C-2 treatment was changed to indicate the development of additional guidance. Mr. Bayerle said the ACLI is requesting the expedited development of the guidance so companies can review it and see if there are still outstanding questions with respect to the adopted factor change. Ryan Fleming (American Academy of Actuaries—Academy) said the Academy will be beginning work on this shortly. He asked

about the desired time frame for getting this completed. Mr. Barlow said it would be helpful to have something circulated for review prior to its adoption. He asked Mr. Bayerle when this would be needed to help with the completion of the following year's RBC calculation. If a first draft is available in October, Mr. Bayerle said this will give companies an opportunity to review it to see if there are additional questions on the implementation. He said they have done their first review, and a lot of the questions could be addressed through this guidance. He said the ACLI will work with the Working Group on any remaining questions towards the goal of a final version in the last quarter of this year. Mr. Fleming said the Academy considers this timing reasonable, and it is open to input from interested parties to address questions on the implementation. Mr. Barlow suggested that the ACLI provide its input to the Academy for consideration as the Academy prepares its first draft. He said the Working Group could schedule calls for discussion if it would be helpful to move the process along.

With respect to the item to update the C-3 Phase I (C3P1) and C-3 Phase II (C3P2) methodologies, Mr. Bayerle said the VM-22, Statutory Maximum Valuation Interest Rates for Income Annuities, principle-based reserving (PBR) effort is underway with a field test scheduled for February 2023. He said there will be a C3P1 component, which will need to be discussed by the Working Group, and he asked if this working agenda item could be modified accordingly. Mr. Barlow asked NAIC staff to work with Mr. Bayerle and the Academy to make item four on the working agenda more comprehensive.

Mr. Yanacheak made a motion, seconded by Mr. Schallhorn, to adopt the working agenda (*see NAIC Proceedings – Summer 2022, Capital Adequacy (E) Task Force, Attachment Nine*). The motion passed unanimously.

6. Discussed Other Matters

Mr. Barlow said Mr. Carmello and Mr. Yanacheak have expressed interest in reviewing the C3P1 mean reversion parameter. He said it might be beneficial to consider this after the Working Group gets results from the field test, and she asked the Working Group if this is a reasonable approach to take. Mr. Carmello said he was surprised that the VM-20, Requirements for Principle-Based Reserves for Life Products, generator had not been used, which he believes was unacceptable. Mr. Yanacheak said he believes this is something that should have been addressed and asked for comments from industry. Mr. Barlow suggested having someone from the Economic Scenario Generator (ESG) Drafting Group explain their work in detail at the next Working Group meeting and having a discussion logistically about what needs to be done to change the mean reversion parameter. Mr. Carmello suggested switching the generator over to the VM-20, as opposed to the mean reversion parameter only. Nancy Bennett (Academy) said the Academy has been working on a document to discuss with the Working Group all three C-3 phases. There are different methodologies between C3P1 and C3P2, and she said she believes it may not be as simple as just changing the mean reversion parameter in the C3P1 generator. Mr. Barlow said he believes Mr. Carmello is looking for something that could be done relatively quickly as an interim step. Mr. Carmello said he agrees. Mr. Barlow said the Working Group will have this as an agenda item for an upcoming call.

Andrew Holland (Sidley Austin LL), on behalf of J.P. Morgan, reminded the Working Group of the presentation on reinsurance and comfort trusts provided in March, and he asked for the opportunity to provide follow up requested by the Working Group. Mr. Barlow asked NAIC staff to add this as an agenda item for an upcoming call.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/2022 Summer National Meeting/LRBCWG 7--22 Minutes.docx

Draft: 7/25/22

Life Risk-Based Capital (E) Working Group
Virtual Meeting
June 17, 2022

The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met June 17, 2022. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); William Watson (FL); Mike Yanacheak and Carrie Mears (IA); Vincent Tsang (IL); Ben Slutsker (MN); Derek Wallman (NE); Seong-min Eom (NJ); Bill Carmello (NY); Mike Boerner (TX); and Tomasz Serbinowski (UT).

1. Discussed Comments Received on the Academy's C2 Mortality Risk Work Group Recommendation

Mr. Barlow said the goal of the meeting is to adopt instructions because the modified structure for 2022 year-end was previously adopted by the Working Group. As part of the Working Group's June 3 meeting, he said a proposed alternative to the American Academy of Actuaries' (Academy's) factors was introduced and exposed, along with the Academy's version. During this last exposure period, Mr. Barlow said a new issue was raised. He said there is a third version of the instructions for the Working Group to consider, which includes his suggestion for a phase-in period as a means to address this additional issue.

Tom Kalmbach (Globe Life) presented Globe Life's comments (Attachment Four-A1). He reiterated Globe Life's recommendation to delay the implementation of the new structure and factors but described recommended changes to the instructions to define pricing flexibility more broadly and to remove references to specific products. With respect to the type of product that is being considered in Globe Life's comments, Chris Trost (Academy), chair of the Academy C2 Mortality Risk Work Group, questioned whether this was significant enough or prevalent enough to change the structure. With respect to references to specific products, he said the language included in the Academy's proposed instructions indicates that it is not all-inclusive. The Working Group agreed to retain the Academy's proposed language.

Brian Bayerle (American Council of Life Insurers—ACLI) presented the ACLI's comment letter (Attachment Four-A2) and described the ACLI's concern with potentially unintended outcomes related to non-guaranteed yearly renewable term (YRT) reinsurance and other similar reinsurance structures. He presented an illustration of four cases and described how these demonstrate the issue detailed in the ACLI's comments regarding the capital requirements for ceding companies and the reinsurer. He noted that the appendix of its comment letter outlined other areas the ACLI believes need to be addressed in the proposed instructions. Mr. Trost said the new structure is more granular and the intent is to better match the capital requirements to the type of product. With respect to the situation the ACLI has highlighted, he said the Academy's work has identified that because of the length of the guarantee, the inability to adjust has a greater capital factor. In a situation where that risk is reinsured, he said the Academy's approach is to only allow an offset that is consistent with the factor. Mr. Bayerle said he does not believe companies have had an opportunity to process the potential ramifications of this issue and that it may require a significant amount of work to make a determination on their various reinsurance treaties as to whether the products covered truly have pricing flexibility. While he thinks there is some merit to the concern with the relative amounts of risk-based capital (RBC) for the ceding company and the reinsurer in the ACLI's example and losing RBC by the use of reinsurance is not appropriate, Mr. Slutsker said he believes there has been a lot of work and thoughtful analysis on the Academy's part that goes beyond reinsurance. Mr. Barlow said the issue is illustrated by a somewhat extreme example for illustration purposes and expressed reservation that it would be the case for too many companies. He also noted that some of the impact of the comparison provided is the result of a change in factors.

Mr. Slutsker asked if the phase-in option addressed some of the ACLI's concerns. Mr. Barlow said he believes the Academy has done what was asked and determined factors that are appropriate for the risks. He said he is comfortable with the Academy's proposal and said the suggestion to possibly phase in is not because he thinks there is a problem with what the Academy has proposed but to address the ACLI's concern with companies needing time to manage the change. Mr. Bayerle said the phase-in may address that concern but may also produce a level of complexity if the instructions are revised.

2. Adopted Instructions and Factors for the Academy's C2 Mortality Risk Work Group Recommendation

Mr. Barlow said the Working Group has three options presented for instructions to support the structure adopted for year-end 2022: 1) the Academy's proposal; 2) Mr. Slutsker's suggested changes to the factors based on one of the Academy's sensitivities tests that had higher factors; and 3) the Academy's factors but with a three-year phase-in to allow companies to manage the transition.

Mr. Carmello made a motion, seconded by Mr. Tsang, to adopt the alternative factors suggested by Mr. Slutsker (see *NAIC Proceedings – Summer 2022, Capital Adequacy (E) Task Force, Attachment One-C*). The motion passed, with Nebraska opposing the motion.

Mr. Serbinowski made a motion, seconded by Mr. Yanacheak, to phase in the adopted factors. The motion passed, with California, Minnesota, New Jersey, and New York opposing the motion.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.

Mr. Philip Barlow
Chair, NAIC Life Risk-Based Capital (E) Working Group

Re: C-2 Mortality Factor Proposal

Dear Mr. Barlow:

Globe Life appreciates the opportunity to comment on the proposed changes to the mortality factors and draft instructions in the C-2 component of the NAIC RBC calculation for life companies. We strongly recommend delaying the implementation of the new structure and factors such that a more comprehensive analysis can be completed to better understand the implications and avoid unintended consequences on both individual companies and consumers.

Today more than ever, consumers realize the need and recognize the value of life insurance. Since 2020, the industry has been faced with one of its largest mortality events in recent history. The industry has performed well as we are unaware of any solvency issues with carriers resulting from the pandemic as a result of inadequate target capital levels related to mortality risk. Most recently, consumers are now facing the impact of inflation, which is limiting the amount of disposable income available to purchase insurance. We should be looking to increase access, particularly for those individuals underinsured or uninsured. We do not believe that this is the right time for the NAIC to make a change which is unnecessary and that will potentially translate into increasing the cost of providing insurance coverage; translating into higher premiums for many of consumers that intend to purchase these products.

Specifically, the NAIC Life Risk-Based Capital (E) Working Group has requested comments on two options for draft instructions. Although we strongly advocate for no changes until the implications of changes are better understood, we are providing the following edits which allow for more equitable treatment across product lines. We have provided original text as well as recommended changes to the instructions in Appendix A. These recommendations are applicable for both options exposed.

The recommended changes are intended to address the following:

1. Define Pricing Flexibility more broadly to be aligned with capital generation either through strong capital generation through underlying profit characteristics (ie. material statutory reserve margin releases and premium levels); or the ability to generate capital through changes in premium rates or other non-guaranteed elements.
2. Remove references to specific products, as the above definition of Pricing Flexibility is applicable to all product types whether written on participating or non-participating policy forms.

We look forward to continued industry dialogue on this topic.

Regards,

Mr. Philip Barlow
Chair, NAIC Life Risk-Based Capital (E) Working Group (Life RBC)

Re: C-2 Mortality Instructions and Factors

Dear Mr. Barlow:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on the June 3rd exposure of the proposed C-2 mortality instructions and updated factors.

In our assessment of the current exposure, we believe we have identified some potentially unintended outcomes related to non-guaranteed YRT reinsurance and other economically similar reinsurance structures. The accompanying spreadsheet illustrates several areas of concern:

- Under the original exposed language (Case 3), industry level capital could decline materially if the reinsurer assumes pricing flexibility (which may be the case under YRT reinsurance arrangements). This current exposure attempts to address this situation.
- However, the current exposure (Case 4) triggers a dramatic shift in capital from the reinsurer to the ceding company when compared to current requirements (Case 1) or requirements using the Academy proposed factors and consistent product groupings based on the characteristics of the directly written business (Case 2). This result is counterintuitive and does not seem representative of the risk given that mortality risk has significantly transferred to the assuming company. Under the situation illustrated (Case 4), a company that reinsures most of its net amount at risk would be required to retain most of the C-2 mortality charges. This could also have the unintended consequence of discouraging the use of reinsurance.

In addition to the above, several other last-minute changes were made to the exposure that have not been fully vetted or assessed. We recommend they not be adopted until such an assessment could occur. We have also identified additional areas for discussion and clarification in the instructions (Appendix A). We believe additional work will be necessary to get the instructions in an appropriate place and suggest whatever is adopted for YE 2022 will require additional revisions for 2023 reporting.

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

acli.com

In light of these concerns, we propose delaying implementation of the updated factors and revised set of instructions. We propose retaining 2021 factors with the Academy instructions and applying these factors across the new buckets. The Academy instructions are the best “starting point” for the additional work. Alternatively, as a stopgap, the reinsurance wording could be amended to have the reinsurance requirements follow the underlying policy. Additional analysis should be initiated during the upcoming year to determine the best way to distribute the capital charge between ceding and assuming companies.

A delay would allow for an impact analysis using YE 2022 data, provides Life RBC additional time to discuss and analyze the instructions and corresponding factors and address any remaining concerns, and avoids potential volatility from partial or incomplete implementation.

We appreciate the consideration of our comments and look forward to discussing on a future call. Thank you.

Sincerely,

A handwritten signature in cursive script, appearing to read "B. Banerji".

cc: Dave Fleming, NAIC

Appendix A: Additional Areas for Discussion or Clarification:

- Since the proposed “pricing flexibility” factors were derived based on a direct writer’s ability to reprice policyholder charges, it is unclear if they appropriately capture the ability of a reinsurer to raise rates on a ceding company.
- The new language for ceded business compounds the level of complexity in an already challenging new requirement and may be overly granular to meet the RBC objective of identifying “weakly capitalized companies.” For example, while gross face amounts are available from policy administrative systems, data to identify reinsurance coverage and reinsurance coverage by type (i.e., YRT, Coinsurance, etc.) will require treaty level assessments, data outside of administrative systems, and a consistent approach for assessing reinsurance pricing flexibility within and across entities.
- We would like clarification on how the mechanics of tiering will work, including situations with negative amounts (reinsurance) in the RBC calculation. For example, if a company has no “gross” face amount in the “with pricing flexibility” category, but under the new structure there will be reinsured face amount in that category – resulting in negative amounts. It is unclear if this was intended, or if the formulas will allow for negative amounts and charges.
- It seems like separate lines in the RBC blank for reinsured NAR (structural change) might be needed to make the risks reported in the RBC blank interpretable and address the issue above.
- The impact of the factors proposed by regulators on the prior call have not been assessed on an industry level, and additional time should be spent to discuss the appropriateness of the adjustments.

Draft: 7/22/22

Life Risk-Based Capital (E) Working Group
Virtual Meeting
June 3, 2022

The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met June 3, 2022. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); William Watson (FL); Kevin Clark (IA); Vincent Tsang (IL); Ben Slutsker (MN); William Leung (MO); Derek Wallman (NE); Kevin Clarkson (NJ); Michael Cebula (NY); Andrew Schallhorn (OK); Amy Garcia (TX); and Tomasz Serbinowski (UT).

1. Discussed Comments Received on the Academy's C2 Mortality Risk Work Group Recommendation

Paul Graham (American Council of Life Insurers—ACLI) presented the ACLI's comment letter (Attachment Four-B1). Mr. Graham said many companies did not build their administrative systems in such a way to get the level of detail that is described in the instructions. He suggested adding some language that indicates that best efforts should be used to allocate products among the buckets; where necessary, a higher factor category can be set as a default. Mr. Barlow said at least in the short run, some guidance is to be provided outside of the instructions, and this could be part of that guidance. He also mentioned that additional work is to be done after the implementation, which may involve some adjustments for better clarity and differentiation. Chris Trost (American Academy of Actuaries—Academy), chair of the Academy's C2 Mortality Risk Work Group, said he believes the default Mr. Graham suggested is reasonable, and the Academy agrees with Mr. Barlow's comments on developing guidance.

Mr. Slutsker asked why a company would not use a pro rata method. Mr. Graham said there are 280 member companies, and the level of detail for each policy record in these administrative systems is unknown. He said he believes the pro rata method would likely be used in the absence of restrictions on some of the older policies. Mr. Slutsker agreed and suggested having a disclosure whenever a pro rata method is not used.

Tom Kalmbach (Globe Life) presented Globe Life's comments (Attachment Four-B2). He noted that Globe Life does not believe splitting products between participating and non-participating is the best approach. He said Globe Life believes the split should be based on a principle-based approach involving an assessment of an entity's ability to replenish capital quickly either through revenue increases or the sufficient release of statutory reserve margins as well as consideration for potential capital needs, such as supporting new business strain. He said Globe Life proposes some type of asset adequacy analysis over a short time period, which would provide a more principle-based approach to determine whether lower factors could be used on part of its business. Mr. Barlow asked for comments from the Academy, the ACLI, and working group members regarding this new approach.

Mr. Trost said he believes this is like suggesting that a total asset requirement would be a better approach, and he believes it is generally agreed that that approach does a better job of producing a more tailored risk analysis for a company. He said this must be weighed within the risk-based capital (RBC) structure, which is largely factor-based, especially with respect to the C2 risk. He said the Academy's recommendation is to almost introduce a principle-based element where a company's ability to adjust is part of the evaluation, and that ability directly affects earnings and the ability to replenish surplus. So, while not perfect, he said this gets closer to reflecting a company's distinct characteristics. Mr. Kalmbach said the concern is with the specificity of participating and non-participating products, as well as the Academy's test that is used to determine factors. Mr. Trost said the test is to evaluate the ability to adjust non-guaranteed elements, such as raising cost of insurance charges. Mr. Kalmbach said Globe Life viewed shareholder dividends as non-guaranteed. Mr. Trost noted that it is hard to reflect the dynamics of shareholder dividends because they are beyond the product itself, and the Academy has worked

within the confines of what can be done within the contract and the product design itself. Mr. Kalmbach said shareholder dividends are like policyholder dividends to the point that they are generated from the product itself. Mr. Barlow said this aspect could be included in the additional work to be done for future periods if a specific suggestion for modification is provided.

2. Discussed the Academy's Updated Instructions

Ryan Fleming (Academy) presented the updated instructions, which reflect the feedback received. The first update relates to the suggestion by the ACLI to tier the size bands based on the aggregate exposure for both individual and group life businesses to better reflect the volatility a company faces for mortality risk relative to its size. Tiers would be allocated proportionately to each of the subcategories. The second update was to expand instructions to better define and quantify pricing flexibility. The instructions provide flexibility factors in a table, which differ by having or not having pricing flexibility. If a company is unable to set the pricing flexibility of the remaining rate terms, the default can be set to a higher factor category. Instructions were also expanded regarding the treatment of reinsurance to avoid arbitrage situations where using reinsurance could result in a lower C2 amount. Lastly, based on the additional work done by the Work Group, the Academy decided that a more optimal solution would be to make a future structural update that would keep group permanent life business with all the other group businesses as opposed to grouping it with other individual life business. The Academy Work Group will look at potential future enhancements to this C2 process in future years.

Mr. Slutsker expressed his support for the updates. In addition, he suggested a language change in the instructions regarding how to determine grouping for pricing flexibility, and he asked for a consideration of having this change exposed for comment. Mr. Graham and Mr. Trost said they agree with this change. Mr. Graham requested an additional short exposure to consider the reinsurance language in the updated instructions provided by the Academy.

In addition, Mr. Slutsker recommended an alternative exposure. For the pricing flexibility, based on a prior sensitivity run performed by the Academy, he proposed increasing factors by 0.2 per thousand net amount at risk (NAR) for all the bands capped at the level that the term life without pricing flexibility is at. In addition, considering the ongoing pandemic, he proposed adding 0.1 per thousand NAR to all factors to reflect doubling the probability and severity of a pandemic in the future. The Working Group agreed to expose the updated instructions with Mr. Slutsker's proposed wording change and a second version with the alternative factors proposed by Mr. Slutsker for a 10-day public comment period.

3. Adopted the Residual Tranche Instructional Change

Dave Fleming (NAIC) said this is to facilitate the changes that were made this year in Schedule BA and the asset valuation reserve (AVR) to show residual tranches separately. Mr. Leung made a motion, seconded by Mr. Chou to adopt the Tranche Instructional Change (Attachment Four-B3). The motion passed unanimously.

4. Exposed the Affiliated Investments Proposal for Comment

Mr. Barlow said this work (Attachment Four-B4) shows collective efforts by an ad hoc group of state insurance regulators and interested parties to make the affiliated and subsidiary sections of the instructions for Life, Health, and Property/Casualty (P/C) consistent, except where there is a particular need not to be consistent. The Working Group agreed to expose the affiliated investments proposal for a 45-day public comment period.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.

Brian Bayerle
Senior Actuary

Re: C-2 Mortality Instructions

Dear Mr. Barlow:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on the proposed C-2 mortality instructions.

Tiering: Our understanding is that the American Academy of Actuaries will be developing additional language around the tiering for a pro-rata allocation. We conceptually support this language and look forward to seeing this in the next exposure for comment.

Product splits: For some companies, reporting systems may not support the stratification of group and credit life split based on a certain number of “months to rate expiration.” This may result in this being a more manual task than perhaps anticipated, so we’d welcome some allowance for best efforts around this split.

Reinsurance: For some companies, reinsurance on older inforce blocks or on older administrative systems may be challenging to appropriately categorize net amount at risk. Such business tends to be on one bill and may take substantial amount of research to break out correctly. We therefore request allocation be treated as a “best effort.”

Categorization of products between buckets: We would like to seek clarification around how products should be categorized under the bucketing methodology and what is acceptable under this bucketing methodology.

- Assuming a company has the ability to allocate exposure into different buckets by duration, should the policy’s classification be based on duration? For example, a level term product with guaranteed rates for 10 years followed by non-guaranteed YRT rates potentially could be bucketed two ways:
 1. When the policy is in the level (guaranteed) period, it would be categorized as Term without pricing flexibility. Then, in the (non-guaranteed) post-level-term period, shift the policy into Life with pricing flexibility. In this case, the policy would start in one bucket then be recategorized in later durations. This approach may be operationally

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 94 percent of industry assets in the United States.

acli.com

challenging for some companies to do such an allocation, so if this is the intended approach guidance should be provided to treat the allocation as a best effort.

2. Alternatively, this policy could be viewed as Term without pricing flexibility in all durations since the product has the initial guaranteed period.
- If the intended approach is the first option, is there any concern for a company to bucket the product into the Perm without Pricing Flexibility bucket which should produce a greater RBC requirement?
 - Similarly, how should the Group Life buckets be treated: if a company cannot easily classify between the Less Than 36 Month vs Greater Than 36 Month buckets, can the company bucket into the Greater Than 36 Month bucket?

We appreciate the consideration of our comments and look forward to discussing on a future call. Thank you.

Sincerely,

Chair, NAIC Life Risk-Based Capital (E) Working Group

Re: C-2 Mortality Factor Proposal

Dear Mr. Barlow:

Globe Life appreciates the opportunity to comment on the proposed changes to the mortality factors and draft instructions in the C-2 component of the NAIC RBC calculation for life companies. We recommend and request a more complete analysis be conducted to determine the appropriate level of charges in order to avoid unintended consequences on both individual companies and consumers, in particular those with limited resources to purchase life insurance. We offer the following in support of this recommendation.

1. **No Apparent Need for Urgency** – We are unaware of any solvency issues with carriers which have been driven by inadequate target capital levels related to mortality risk, even with heightened COVID death claims in the past few years. That said, lowering mortality capital charges in a pandemic for any group of companies or products should not be expedited without careful review and analysis. While the factors within the current RBC model are indeed dated, changes of the magnitude contained in the proposal are best founded on a complete analysis using a total asset requirement.
2. **Analysis Based Complete Total Asset Requirement** – It is not clear that a total asset adequacy analysis has been conducted. Such an analysis has important benefits:
 - a. Both assets backing statutory reserves and capital requirements are considered to ensure that the resulting capital requirement reflects the degree of adequacy in minimum reserve requirements
 - b. The expected profitability profile generated by different product groups is not fully reflected in the development of the capital requirements. The working group’s own summary acknowledged modeling limitations for important product groups. In our view, that includes combining all non-participating and participating into separate categories regardless of the variation in profitability profiles (participating policies with low to no dividends, non-participating policies with conservative reserves and strong profits). There should be no rush to benefit one type of insurer. It appears that this limitation was not fully considered.

A principle-based approach, that is product based, should reflect *both* the ability to increase revenue sufficiently and the underlying profit characteristics before dividends over a relatively short period of time (12 to 24 months) to generate capital. Only stronger profit profiles would qualify for lower factors. This should be based on a supporting asset adequacy analysis. Given the lack of urgency for change, we recommend these important limitations be considered to ensure that proper factors are generated that do not cause unintended consequences.

3. **High Level Product Differences** – The differentiation with the new factors focuses on a concept referred to as “pricing flexibility”. This could be greatly improved by using a more tangible feature of “revenue

flexibility.” Specifically, increasing non-guaranteed cost of insurance charges on a universal life contract exhibits *both* pricing and revenue flexibility. Reducing illustrated dividends on a participating whole life product does not exhibit revenue flexibility; to the extent participating policies pay dividends, the underlying profitability profile before dividends may be sufficient to warrant lower capital requirements. In addition, non-participating policies may also exhibit a profitability profile before shareholder dividends which are sufficient to warrant a lower capital requirement. A complete total asset requirement analysis covers the full profitability profile, which would provide better support of the need for tiered factors by product type. Again, we believe that the process is moving too fast given that much judgment has been made regarding product differentiation and the lack of a complete total asset requirement analysis.

We look forward to continued industry dialogue about producing changes that can minimize the unintended consequences noted above.

Regards,

A handwritten signature in blue ink, appearing to read "Tom Kalmbach".

Tom Kalmbach
Executive Vice President and Chief Actuary
Globe Life Inc.

OTHER LONG-TERM ASSETS

LR008

Basis of Factors

Recognizing the diverse nature of Schedule BA assets, the RBC is calculated by assigning different risk factors according to the different type of assets. Assets with underlying characteristics of bonds and preferred stocks designated by the NAIC Capital Markets and Investment Analysis Office have different factors according to the NAIC assigned classification. Unrated fixed-income securities will be treated the same as Other Schedule BA Assets and assessed a 30 percent pre-tax charge. Rated surplus and capital notes have the same factors applied as Schedule BA assets with the characteristics of preferred stock. Where it is not possible to determine the RBC classification of an asset, a 30 percent pre-tax factor is applied.

Specific Instructions for Application of the Formula

Line (49.1)

Schedule BA affiliated common stock – all other should be included in C-1cs. Specifically this means that all subs with an affiliate code 13 in the current life-based framework and “holding company in excess of indirect subsidiaries” or subsidiaries with affiliate code 7 are to be included in C-1cs.

Line (49.2)

New lines were added to Schedule BA and the AVR Equity Component to capture amounts related to residual tranches or interests. For life RBC reporting, AVR Equity Component, Column 1, Line 93 is included in Line (49.2).

Line (57)

Total Schedule BA assets [LR008 Other Long-Term Assets Column (1) Line (57) plus LR007 Real Estate Column (1) Line (14) plus Lines (17) through Line (21) plus LR009 Schedule BA Mortgages Column (1) Line (20)] should equal the total Schedule BA assets reported in the Annual Statement Page 2, Column 3, Line 8.

AFFILIATED/SUBSIDIARY STOCKS
LR042 – LR044

There are ten categories of affiliated/subsidiary investments that are subject to Risk-Based Capital requirements for common stock and preferred stock holdings. Those ten categories are:

1. Directly Owned U.S. Insurance Affiliates/Subsidiaries Subject to a Risk-Based Capital (RBC)-Look-Through Calculation
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
2. Indirectly Owned U.S. Insurance Affiliates/Subsidiaries Subject to RBC-Look-Through Calculation
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
3. Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries
4. Investment Subsidiaries
5. Directly Owned Alien Insurance Affiliates/Subsidiaries
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
6. Indirectly Owned Alien Insurance Affiliates/Subsidiaries
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
7. Investments in Upstream Affiliate (Parent)
8. Directly Owned U.S. Insurance Affiliates/Subsidiaries Not Subject to RBC
 - a. Health Insurance Companies and Health Entities Not Subject to RBC
 - b. Property and Casualty Insurance Companies Not Subject to RBC
 - c. Life Insurance Companies Not Subject to RBC
9. Non-Insurance Affiliates/Subsidiaries Not Subject to RBC
 - a. Entities with a capital requirement imposed by a regulatory body
 - b. Other Financial Entities without regulatory capital requirements
 - c. Non-financial entities
10. Publicly Traded Insurance Affiliates/Subsidiaries Held at Market Value

Enter applicable items for each affiliate/subsidiary in the Details for Affiliated/Subsidiary Stocks worksheet. The program will automatically calculate the risk-based capital charge for each affiliate/subsidiary. When the data is uploaded to the NAIC database, it will be cross-checked and the company will be required to correct any discrepancies and refile a corrected version with the NAIC and/or any state that requires the company to file RBC with its department. The RBC report will display the number of affiliates/subsidiaries. These numbers should be reviewed to ensure that all affiliates/subsidiaries are appropriately reported.

The total of all reported affiliate/subsidiary stock should equal the amounts reported on Schedule D, Part 2, Section 1, Line 4409999999 plus Schedule D, Part 2, Section 2, Line 5979999999 and should also equal Schedule D, Part 6, Section 1, Line 09999999 plus Line 18999999.

Affiliated/Subsidiary investments fall into two broad categories: (A) Insurance Affiliates/Subsidiaries that are Subject to risk-based capital; and (B) Affiliates/Subsidiaries that are Not Subject to risk-based capital. The risk-based capital for these two broad groups differs. Investment subsidiaries are a subset of category A in that they are subject to a risk-based capital charge that includes the life RBC risk factors applied only to the investments held by the investment subsidiary for its parent insurer. Publicly traded insurance affiliates/subsidiaries held at market value have characteristics of both broader categories. As a result, there is a two-part RBC calculation. The general treatment for each is explained below.

Directly owned insurance and health entity affiliates/subsidiaries are affiliates/subsidiaries in which the reporting company owns the stock of the affiliate/subsidiary. Indirectly owned insurance affiliates/subsidiaries and health entities are those where the reporting company owns stock in a holding company, which in turn owns the stock of the insurance affiliate/subsidiary or health entity. Note that there could be multiple holding companies that control the downstream insurance company.

Enter the book/adjusted carrying value of: the common stock in Column (5), the preferred stock in Column (7), the total outstanding common stock in Column (6) and the total outstanding preferred stock of that affiliate/subsidiary in Column (10) of the appropriate worksheet. The percentage of ownership is calculated by summing the book/adjusted carrying values of the owned preferred stock and common stock and dividing that amount by the sum of all outstanding preferred and common stock.

Insurance Affiliate/Subsidiaries that are Subject to RBC

1. Directly Owned U.S. Affiliates/Subsidiaries:

The risk-based capital requirement for the reporting company for those insurance affiliates/subsidiaries that are subject to a risk-based capital requirement is based on the Total Risk-Based Capital After Covariance of the affiliate/subsidiary, prorated for the percent of ownership of that affiliate/subsidiary.

For purposes of Subsidiary Risk all references to Total Risk-Based Capital After Covariance of the affiliate/subsidiary means:

- a. For a Health affiliate/subsidiary RBC filing, Total Risk-Based Capital After Covariance before Basic Operational Risk (XR024, Line (37));
- b. For a P/C affiliate/subsidiary RBC filing, Total Risk-Based Capital After Covariance before Basic Operational Risk (PR032, Line (68)); and
- c. For a Life affiliate/subsidiary RBC filing, the sum of
 - (a) Total Risk-Based Capital After Covariance before Basic Operational Risk (LR031, Line (67)); and
 - (b) Primary Security shortfall for all sessions covered by Actuarial Guideline XLVIII (AG 48) multiplied by two (LR031, Line (71)).

For RBC purposes, the reporting insurer must determine the carrying value and the RBC requirement of directly owned RBC filing affiliate/subsidiary company, even if the RBC filing affiliate/subsidiary is non-admitted. The value reported in annual statement Schedule D, Part 6, Section 1 should be used for RBC purposes. In addition to RBC, the carrying value of the RBC filer must be reported in total adjusted carrying value for RBC purposes, in order to appropriately balance the numerator with the addition of the denominator value. Enter the carrying value of the insurer on **Line XXX** of the Calculation of Total Adjusted Capital page to satisfy these instructions.

Equity method Insurance Affiliates/Subsidiaries: Equity method is defined in SSAP No. 97, Paragraph 8b. as the underlying audited statutory equity of the respective entity's financial statements, adjusted for any unamortized goodwill as provided for in SSAP No. 68—Business Combinations and Goodwill. For those Insurance Affiliates/Subsidiaries of the reporting company that are reported under the equity method, the Co charge of the ownership of the common and preferred stock in these Affiliates/Subsidiaries is limited to the lesser of:

- (a) the Total RBC After Covariance of the affiliate/subsidiary times the percentage of ownership, which is the total of common stock and preferred stock; or
- (b) the common and preferred stock book/adjusted carrying value at which the affiliate/subsidiary is carried.

Market Value (including discounted market value) Insurance Affiliates/Subsidiaries (See SSAP No. 97, Paragraph 8a.): See 10 below.

2. Indirectly Owned U.S. Insurance Affiliates/Subsidiaries

For Indirectly Owned U.S. Insurance Affiliates/Subsidiaries, the carrying value and RBC is calculated in the same manner as for directly owned U.S. Insurance Affiliates/Subsidiaries. The RBC for the indirect affiliates/subsidiaries must be calculated prior to completing this RBC report.

SSAP No. 97 provides guidance for the reporting and admittance requirements of SCAs. Accordingly, there may be cases where an indirectly owned RBC filer may not be separately reported in the statutory financial statements (e.g., they are captured within the carrying value of an intermediate holding company). The SSAP No. 97 guidance permits reporting SCAs at the directly owned holding company level or via look-through to the downstream entity (including where the downstream entity is an RBC filer), but an audit of the entity is required for admittance (i.e. if reporting is at the directly owned holding company level, the holding company must be audited, if the reporting is on a look-through basis then the downstream entity must be audited). Regardless of whether there is a look-through applied pursuant to Statutory Accounting Principles (SAP) for annual financial statement reporting, for RBC purposes the reporting insurer must “look-through” all intermediate holding and subsidiary companies to determine the carrying value and the RBC requirement of indirectly owned RBC filing affiliate/subsidiary company. This involves drilling down to the first RBC filing insurance affiliate/subsidiary and adjusting for percentage ownership of the intermediate entity directly owning the RBC filing affiliate/subsidiary. Both RBC and carrying value of the RBC filer must be reported for RBC purposes, in order to appropriately balance the numerator with the addition to the denominator value. Enter the carrying value of the insurer on Line XXX of the Calculation of Total Adjusted Capital page to satisfy these instructions.

The carrying value for each indirect insurance affiliate/subsidiary is established based on company records using the statutory value of the insurer as reported in the NAIC annual financial statement blank submitted by the affiliate/subsidiary or market value when applicable, and the RBC requirement as determined in its RBC Report adjusted for the ownership percentages (both the percentage of the indirectly owned RBC filing affiliate/subsidiary that is owned by the directly held downstream holding company and the reporting insurer's ownership percentage in that downstream entity). The value reported by the downstream holding company for the U.S. RBC filing insurer is the same as the statutory value established for the insurer on a look-through basis.

3. Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries:

The carrying value of a U.S. Insurance Affiliate/Subsidiary that is subject to RBC is deducted from the value of the directly held holding company or other entity that in turn directly owns the U.S. Insurance Affiliate/Subsidiary that is subject to RBC, based on the value reported for each insurance affiliate/subsidiary on the downstream immediate holding company or non-insurance owner's balance sheet. That value is prescribed by the NAIC Accounting Practices and Procedures Manual (SSAP No. 97, paragraph 22.a.). A similar exercise is required for each RBC filing insurer and each non-U.S. insurer in order to determine the remaining excess value of the holding company.

The remaining value of the directly held holding company is then subject to a charge that is calculated in accordance with the instructions for Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries as specified in the RBC formula. If the holding company is not admitted, report the excess carrying value as zero and the

corresponding RBC charge will also be zero. If a negative excess value for the downstream holding company results from removing the value of U.S. RBC filing insurers from the downstream holding company's reported value, then the value of that holding company will be floored at zero and the corresponding RBC charge will also be zero.

The following hypothetical Balance Sheet indicates the view of a Holding Company - Holder, Inc. which is 100% owned by MEGA Life Insurance Company (it assumes that the value reported by the downstream holding company for the U.S. RBC filing insurer is the same as the statutory value established for the insurer on a look-through basis):

		Balance Sheet	
		Holder, Inc.	
		12/31/XXXX	
Cm Stk:	ABC Life Company	10,000,000	Long Term Debt
	XYZ Casualty Company	15,000,000	Other Liabilities
	ANH Health Company	3,000,000	
	Other Common Stock	17,000,000	Total Liabilities
	Cash	7,000,000	
	Other Assets	5,000,000	Equity
			50,000,000
	Total Assets	57,000,000	Total Liabilities & Equity
			57,000,000

The RBC calculation for Holder, Inc.'s value in excess of the indirectly owned insurance affiliates is as follows:

Company	Stat. Book	
	value	Source:
Holder, Inc.	50,000,000	MEGA Life Sch D - Part 6, Section 1
Holder, Inc. aff/subs subject to RBC		
ABC Life Company	10,000,000	Holder, Inc. Stat. balance sheet
XYZ Casualty Company	15,000,000	Holder, Inc. Stat. balance sheet
ANH Health Company	<u>3,000,000</u>	Holder, Inc. Stat. balance sheet
Subtotal	28,000,000	
Holder, Inc. excl. RBC aff/subs	22,000,000	
		<i>(amount subject to the 30.0% factor for Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries)</i>

The following table shows the LR044 entries that MEGA Life Insurance Company (which owns 100% owns of Holder, Inc.) would report for the indirectly owned insurance subsidiaries under Holder, Inc. This table assumes that Holder, Inc. owns 40%, 50% and 25% of ABC Life, XYZ Casualty, and ANH Health, respectively. The table also assumes that the RBC values shown for these subsidiaries at the 100% level are the correct RBC After Covariance but Before Operational Risk.

LR044 Column						
Affiliates/Subsidiaries	Affiliates/Subsidiaries Type	4 100% RBC	5 Book Adjusted Carrying Value	6 Total Value of Affiliates/Subsidiaries	9 % Owned	10 RBC Required
ABC Life Company	Indirect U.S. Life Aff/Sub	5,000,000	10,000,000	25,000,000	40%	2,000,000
XYZ Casualty Company	Indirect U.S. P&C Aff/Sub	12,000,000	15,000,000	30,000,000	50%	6,000,000
ANH Health Company	Indirect U.S. Health Aff/Sub	6,000,000	3,000,000	12,000,000	25%	1,500,000

The risk-based capital charge for the parent insurer preparing the calculation is a 30.0 percent charge against the holding company value in excess of the indirectly owned insurance affiliates/subsidiaries as calculated in the prior example. Enter information in the appropriate columns of the worksheet, omitting those columns that do not apply (Column (3) – NAIC Company Code or Alien ID Number and Column (4) Affiliate’s RBC After Covariance).

4. Investment Subsidiaries

An investment subsidiary is a subsidiary that exists only to invest the funds of the parent company. The term “investment subsidiary” is defined in the NAIC’s *Annual Statement Instructions* as any subsidiary, other than a holding company, engaged or organized primarily to engage in the ownership and management of investments for the insurer. An investment subsidiary shall not include any broker-dealer or a money management fund managing funds other than those of the parent company. The risk-based capital charge for the ownership of an investment subsidiary is based on the risk-based capital of the underlying assets, pro-rated for the degree of ownership. The basis for this calculation is the assumption that the charge should be the same as it would be if the life insurer held the assets directly.

Report information regarding any investment subsidiaries. Subsidiaries reported in this section will be assigned an affiliate code of “4” for investment subsidiaries. The amount of reported common stock should be the same as Schedule D, Part 6, Section 1, Line 1699999. Preferred stock information should be the same as Schedule D, Part 6, Section 1, Line 0799999.

Affiliates/Subsidiaries that are Not Subject to RBC

5. Directly Owned Alien Insurance Affiliates/Subsidiaries

For purposes of this formula, the risk-based capital of each alien insurance affiliate/subsidiary is zero. Report information for any non-U.S. insurance affiliate/subsidiary, both life and property and casualty.

For each affiliate/subsidiary, report the name and alien insurer identification number. For purposes of this formula, the statement value of common and preferred stock and the total outstanding value of common and preferred stock for alien insurance affiliates/subsidiaries should be entered as zero. Companies reported in this section will be assigned an affiliate/subsidiary code of “5” for alien insurers.

For each affiliate/subsidiary, enter the following information:

- Company Name,
- Alien Insurer Identification Number,

- Book Adjusted carrying value of common and preferred stock,
 - Total Outstanding value of common and preferred stock,
 - Book/adjusted carrying value of the common and preferred stock from Schedule D, Part 6, Section 1, Line 1499999. If no value is reported in the Total Value of Affiliate's/Subsidiary's common and preferred stock columns (6) and (8), the program will assume 100 percent ownership.
6. Indirectly Owned Alien Insurance Affiliates/Subsidiaries
Consistent with the treatment of Directly Owned Alien Insurance Subsidiaries / Affiliates, for purposes of this formula, the carrying value and risk-based capital charge of each alien insurance affiliate is zero.
- For each affiliate/Subsidiary enter the following information:
- Company Name,
 - Alien Insurer Identification Number,
 - Book Adjusted carrying value of common and preferred stock,
 - Total Outstanding value of common and preferred stock,
 - Book/adjusted carrying value of the common and preferred stock from Schedule D, Part 6, Section 1, Lines 1499999 and 0599999. If no value is reported in the Total Value of Affiliate's/Subsidiary's Common and preferred stock columns (6) and (8), the program will assume 100 percent ownership.

7. Investment in Upstream Affiliate (Parent)

The pre-tax Risk-Based Capital (RBC) for an investment in an upstream parent is 30.0 percent of the book/adjusted carrying value of the common and preferred stock, regardless of whether that upstream parent is subject to RBC. Report the appropriate information from Schedule D, Part 6, Section 1, Lines 0199999 and 1099999 in Columns (1) through (6).

For each affiliate, enter the following information:

- Company Name,
- Affiliate Type,
- NAIC Company Code,
- Book Adjusted carrying value of common and preferred stock,
- Total Outstanding value of common and preferred stock.

8. Directly Owned U.S. Insurance Affiliates/Subsidiaries Not Subject to RBC

- a. Health Insurance Companies and Health Entities Not Subject to RBC
- b. Property and Casualty Insurance Companies Not Subject to RBC, such as title insurers, monoline financial guaranty insurers, and monoline mortgage guarantee insurers
- c. Life Insurance Companies Not Subject to RBC, such as life insurance affiliate/subsidiary exempted from RBC

The risk-based capital for insurers not subject to RBC is based on the underlying statute, regulation, or rule governing capital requirements for such entities. If not otherwise specified by statute, regulation or rule, the risk-based capital for an investment in a U.S. insurer that is not required to file an RBC formula investment is 0.300 times the book/adjusted carrying value of the common and preferred stock.

- 9. Non-Insurance Affiliates/Subsidiaries Not Subject to RBC
 - a. Financial entities with a capital requirement imposed by a regulatory body (e.g. a bank)
 - b. Other financial entities without regulatory capital requirements
 - c. Other Non-financial entities
- The risk-based capital for entity types a, b, and c. is 0.300 times the book/adjusted carrying value of the common and preferred stock. The affiliate/subsidiary code for Non-Insurance Affiliates/Subsidiaries Not Subject to RBC is "9." Reported amounts use Schedule D, part 6, Schedule 1, Line 0899999, and Line 1799999 as the basis of reporting.

10. Publicly Traded Insurance Affiliates/Subsidiaries Held at Market Value

The risk-based capital for a publicly traded insurance affiliate/subsidiary held at market value after any "discount," is calculated in two parts. First, calculate and report the risk-based capital of the affiliate/subsidiary according to the relevant instructions above for Insurance Affiliates/Subsidiaries that are Subject to a RBC-look-through Calculation. Second, calculate the additional risk-based capital charge as 34.6 percent pre-tax of any excess of the market (statement) value over the book value of the affiliate/subsidiary. The result of the second calculation will be added to the C-10 component.

Report information regarding any publicly traded insurance affiliate/subsidiary held at market value. The reported market value of common stock should be the same as shown in Schedule D, Part 2, Section 2, Column 8, Line 5919999999 plus Line 5929999999. The market value of preferred stock should be the same as shown in Schedule D, Part 2, Section 1, Column 10, line 4319999999 plus 4329999999. The reported book value of common stock should be the same as shown in Schedule D, Part 2, Section 2, Column 6, Line 5919999999 plus Line 5929999999. The reported book value of preferred stock should be the same as Schedule D, Part 2, Section 1, Column 8, Line 4319999999 plus 4329999999.

APPENDIX 3 – EXAMPLE USED FOR AFFILIATED/SUBSIDIARY STOCKS

To determine the value of total outstanding common stock or total outstanding preferred stock, divide the book/adjusted carrying value of the investment (found in Schedule D - Part 6 Section 1, Column 9) by the percentage of ownership (found in Schedule D – Part 6 – Section 1, Column 12). For example:

Subsidiary Insurance Company	Owner's Book / Adjusted Carrying Value	Percentage Ownership	Total Stock Outstanding
Subsidiary #1	\$1,000,000	100%	\$1,000,000
Subsidiary #2	\$1,000,000	75%	\$1,333,333
Subsidiary #3	\$1,000,000	50%	\$2,000,000
Subsidiary #4	\$1,000,000	25%	\$4,000,000
Subsidiary #5	\$1,000,000	10%	\$10,000,000

Life Risk-Based Capital (E) Working Group
Virtual Meeting
April 22, 2022

The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met April 22, 2022. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); William Watson (FL); Carrie Mears (IA); Vincent Tsang (IL); Ben Slutsker (MN); William Leung (MO); Derek Wallman (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Adopted the Academy C2 Mortality Risk Work Group Recommendation for Structural Changes

Mr. Barlow said the Working Group is considering the adoption of structural changes, which must be done by the end of April, and exposing the corresponding instructional changes, which would need to be adopted by the end of June. Chris Trost (American Academy of Actuaries—Academy), chair of the Academy C2 Mortality Risk Work Group, said the two options for the structural changes are to allow for the expanded categories. He reminded the Working Group that option one is more closely aligned with current annual statement information, while option two is more principle-based. Option two would require more input from company records, although that input could be facilitated by pursuing possible changes to the annual statement whichever option is chosen. While possibly handling the aggregation, whether overall or at the category level, differently to address concerns Working Group members have expressed with respect to certain product classification has been discussed, he said both structural options will work with any changes needed as part of the instructional changes. Mr. Slutsker said he does not have a strong preference for one option or the other but said both may be benefited by additional instruction changes. Mr. Barlow said his preference is to have information that can be pulled directly from the annual statement, so he would like to follow adoption of either option with the additional work needed to make it more easily determined from the annual statement.

Mr. Carmello made a motion, seconded by Mr. Reedy, to adopt the structural changes presented in option two (Attachment Four-C1). The motion passed, with Nebraska and Oklahoma opposing.

2. Exposed the Academy's Instructions and Factors for Public Comment

Mr. Trost said two questions that arose as part of the Working Group's April 7 meeting had to do with mortality improvement and how COVID-19 fits into the pandemic distribution for the catastrophe component of the Academy's proposed factors. Ryan Fleming (Academy) presented the Academy's responses to those questions (Attachment Four-C2).

Mr. Trost said two modifications the Work Group would work on during the exposure period of the option two instructions would be to put group permanent in with individual life as was previously discussed and a wording change to the description of the aggregation where it would not be done by category but over all of the mortality risk.

Mr. Slutsker suggested including in the exposure a wording change to the pricing flexibility section of the instructions to include reference to an annual basis where scheduled premiums may be changed. Mr. Carmello suggested including "from the date of issue" as part of Mr. Slutsker's suggested change.

The Working Group agreed to expose the option two instructions for a 30-day public comment period with the wording changes suggested by Mr. Slutsker and Mr. Carmello.

3. Exposed the Instructional Change for Residual Tranches

Dave Fleming (NAIC) said an instruction change is needed to accommodate the changes in Schedule BA and the asset valuation reserve that are being made for year-end 2022.

The Working Group agreed to expose the instructional change for residual tranches for a 30-day public comment period.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.

Re: Structural Updates to Life RBC C-2 Mortality

Dear Philip,

On behalf of the C-2 Mortality Work Group of the American Academy of Actuaries¹, we are providing two options for structural updates to the Life RBC C-2 Mortality factors for consideration to be exposed by 1/31/2022. Also included are draft instructions for informational purposes which are subject to a different exposure deadline of 4/30/2022.

Sincerely,

Chris Trost, MAAA, FSA
Chairperson, C-2 Mortality Work Group
Ryan Fleming, MAAA, FSA
Vice Chairperson, C-2 Mortality Work Group
American Academy of Actuaries

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

LIFE INSURANCE - OPTION 1 - DRAFT
LR025

Basis of Factors

The factors chosen developed represent surplus needed to provide for excess claims over life insurance mortality risk, which is defined as adverse variance in life insurance deaths (i.e., insureds dying sooner than expected, both from random fluctuations and from inaccurate pricing for future levels) over the remaining lifetime of claims. For a large number block of trials, each insured either lives or dies based on a roll of the die business while appropriately reflecting the probability of death from both normal and excess claims pricing flexibility to adjust current mortality rates for emerging experience. The present value of mortality risks included in the claims generated by this process, less expected claims, will be the amount of surplus needed under that trial development of the factors, were volatility, level, trend, and catastrophe. The factors chosen were developed by stochastically simulating the formula produce a level of surplus at least as high as that of in force life insurance blocks typical of U.S. life insurers.

The capital need, expressed as needed in 95 percent of a dollar amount, is determined as the trials, greatest present value of accumulated deficiencies at the 95th percentile of the stochastic distribution of scenarios over the remaining lifetime of a block of business while appropriately reflecting the pricing flexibility to adjust current mortality rates. Statutory losses are defined as the after-tax quantification of gross death benefits minus reserves released minus mortality margin present in reserves. The after-tax statutory losses are discounted to the present by using 20-year averages for U.S. swap rates. By selecting the largest present value accumulated loss across all projection years, the solved for capital ensures non-negative capital at all projection periods. Earlier period losses are not allowed to be offset by later period gains to reduce capital. The 95th percentile is the commonly accepted statistical safety level used for Life RBC C-2 mortality risk to identify weakly capitalized companies. The after-tax capital needs are translated to a factor expressed as a percentage of the net amount at risk (NAR). The pre-tax factor is determined by taking the after-tax factor divided by (1 minus the tax rate).

The model was developed for portfolios of 10,000, 100,000 and one million lives, and it was found that the surplus needs decreased with larger portfolios, consistent with the law of large numbers.

Net amount at risk was chosen as a base because expected claims are difficult to calculate on a consistent basis from company to company. The factors are differentiated between individual & industrial life and group & credit life, and by in force block size. Within individual & industrial life, the factors are differentiated into categories for universal life with secondary guarantees (ULSG), term life, and all other life. Within group & credit life, the factors are differentiated into categories by the remaining length of the premium rate term by group contract. There are distinct factors for contracts that have remaining premium rate terms 36 months and under and for contracts that have remaining premium rate terms over 36 months. The Federal Employees' Group Life Insurance (FEGLI) and Servicemembers' Group Life Insurance (SGLI) receive a separate factor applied to the amounts in force.

Specific Instructions for Application of the Formula

Lines 3, 4, 5 and 9-21-41 are not applicable to Fraternal Benefit Societies.

Annual statement reference is for the total net amount at risk for the category (e.g., Individual & Industrial is one category). The net amount at risk is then further broken down by size as in a table to reflect the decrease in risk for larger blocks of life insurance. This breakdown will not appear on the RBC filing software or on the printed copy, as the application of factors to amounts in force is completed automatically. The calculation is as follows:

The NAR is derived for each of the factor categories using annual statement sources and company records. In Force and Reserves amounts are net of reinsurance throughout.

Line (11) ULSG In Force is derived from company records. The amount classified as ULSG needs to be consistent with the Exhibit of Life Insurance and the same block of policies as the ULSG reserves recorded in Line (12) which is sourced to the Analysis of Increase in Reserves During the Year - Individual Life Insurance Column 7 Line 15. The table below illustrates the RBC requirement calculation embedded in Line (13) for ULSG.

Total Group & Credit Term Life Net Amount at Risk (less FEGIL & SGLI in force)			
Lines (17) and (18) All Other Life In Force and Reserves are derived from the aggregate amounts derived in lines (1) to (10) minus the ULSG amounts in lines (11) to (12) and term life amounts in lines (14) to (15). In force business not classified as ULSG or term life is assigned to all other life. The table below illustrates the RBC requirement calculation embedded in Line (19) for All Other Life.			
Line (19)	All Other Life First 500 Million Next 24,500 Million Over 25,000 Million	(1) Statement Value X 0.00190 = X 0.00075 = X 0.00050 =	(2) RBC Requirement RBC Requirement RBC Requirement
Total All Other Life Net Amount at Risk			
Lines (35) and (36) Group & Credit Life In Force and Reserves with Remaining Rate Terms 36 Months and Under are derived from company records. This category includes group contracts where the premium terms have 36 months or fewer until expiration or renewal. The in force amount classified in this category needs to be consistent with the Exhibit of Life Insurance. The reserves amount classified in this category needs to be consistent with Exhibit 5 used for Lines (28) and (29). Separate Accounts Exhibit used for Line (30), and Schedule 5 used for Lines (31) and (32). Federal Employees' Group Life Insurance (FEGIL) and Servicemembers' Group Life Insurance (SGLI) contracts are			

excluded. The table below illustrates the RBC requirement calculation embedded in Line (37) for Group & Credit Life Net Amount at Risk with Remaining Rate Terms 36 Months and Under.

Line (37)	(1) Statement Value	Factor	(2) RBC Requirement
Group & Credit Life with Remaining Rate Terms 36 Months and Under			
First 500 Million		X 0.00130 =	
Next 24,500 Million		X 0.00045 =	
Over 25,000 Million		X 0.00030 =	
Total Group & Credit Life Net Amount at Risk with Remaining Rate Terms 36 Months and Under			

Lines (38) and (39) Group & Credit Life In Force and Reserves with Remaining Rate Terms Over 36 Months are derived from the aggregate amounts derived in lines (21) to (34) minus the Group & Credit Life In Force and Reserves with Remaining Rate Terms 36 Months and Under in lines (35) and (36). FEGLI and SGLI contracts are excluded. The table below illustrates the RBC requirement calculation embedded in Line (40) for Group & Credit Life Net Amount at Risk with Remaining Rate Terms Over 36 Months.

Line (40)	(1) Statement Value	Factor	(2) RBC Requirement
Group & Credit Life with Remaining Rate Terms Over 36 Months			
First 500 Million		X 0.00180 =	
Next 24,500 Million		X 0.00070 =	
Over 25,000 Million		X 0.00045 =	
Total Group & Credit Life Net Amount at Risk with Remaining Rate Terms Over 36 Months			

Line (41) FEGLI/SGLI In Force amounts are retrieved from the Exhibit of Life Insurance. The capital factor assigned is the same as the largest size band for group & credit life contracts with remaining rate terms 36 months and under.

Line (41)	(1) Statement Value	Factor	(2) RBC Requirement
FEGLI/SGLI In Force		X 0.00030 =	

All amounts should be entered as required. The risk-based capital software will calculate the RBC requirement for individual and industrial and for group and credit.

LIFE INSURANCE - OPTION 2 - DRAFT

LR025

Basis of Factors

The factors chosen developed represent surplus needed to provide for excess claims over life insurance mortality risk which is defined as adverse variance in life insurance deaths (i.e., insureds dying sooner than expected, both from random fluctuations and from inaccurate pricing for future levels) over the remaining lifetime of claims. For a large number block of trials, each insured either lives or dies based on a roll of the dice business while appropriately reflecting the probability of death from both normal and excess claims pricing flexibility to adjust current mortality rates for emerging experience. The present value of mortality risks included in the claims generated by this process, less expected claims, will be the amount of surplus needed under that trial. Development of the factors were volatility, level, trend, and catastrophe. The factors chosen were developed by stochastically simulating the formula produce a level of surplus at least as high as in force life insurance blocks typical of U.S. life insurers.

The capital need, expressed as needed in 95 percent of a dollar amount, is determined as the trials' greatest present value of accumulated deficiencies at the 95th percentile of the stochastic distribution of scenarios over the remaining lifetime of a block of business while appropriately reflecting the pricing flexibility to adjust current mortality rates. Statutory losses are defined as the after-tax quantification of gross death benefits minus reserves released minus mortality margin present in reserves. The after-tax statutory losses are discounted to the present by using 20-year averages for U.S. swap rates. By selecting the largest present value accumulated loss across all projection years, the solved for capital ensures non-negative capital at all projection periods. Earlier period losses are not allowed to be offset by later period gains to reduce capital. The 95th percentile is the commonly accepted statistical safety level used for Life RBC C-2 mortality risk to identify weakly capitalized companies. The after-tax capital needs are translated to a factor expressed as a percentage of the net amount at risk (NAR). The pre-tax factor is determined by taking the after-tax factor divided by (1 minus the tax rate).

The model was developed for portfolios of 10,000, 100,000 and one million lives, and it was found that the surplus needs decreased with larger portfolios, consistent with the law of large numbers.

Net amount at risk was chosen as a base because expected claims are difficult to calculate on a consistent basis from company to company. The factors are differentiated between individual & industrial life and group & credit life, and by in force block size. Within individual & industrial life, the factors are differentiated into categories by contract type depending on the degree of pricing flexibility. Within group & credit life, the factors are differentiated into categories by the remaining length of the premium rate term by group contract. There are distinct factors for contracts that have remaining premium rate terms 36 months and under and for contracts that have remaining premium rate terms over 36 months. The Federal Employees' Group Life Insurance (FELI) and Servicemembers' Group Life Insurance (SGLI) receive a separate factor applied to the amounts in force.

Specific Instructions for Application of the Formula

Lines 3, 42, 5 and 9-21-41 are not applicable to Fraternal Benefit Societies.

Annual statement reference is for the total net amount at risk for the category (e.g., Individual & Industrial is one category). The net amount at risk is then further broken down by size as in a table to reflect the decrease in risk for larger blocks of life insurance. This breakdown will not appear on the RBC filing software or on the printed copy, as the application of factors to amounts in force is completed automatically. The calculation is as follows:

The NAR is derived for each of the factor categories using annual statement sources and company records. In Force and Reserves amounts are net of reinsurance throughout. The In Force amounts throughout derived from company records need to be consistent with the Exhibit of Life Insurance. The Reserves amounts throughout derived from company records need to be consistent with Exhibit 5, Separate Accounts Exhibit, and Schedule S.

Pricing Flexibility for Individual Life Insurance is defined as the ability to materially adjust rates on in force contracts through changing premiums and/or non-guaranteed elements as of the valuation date and within the next 5 policy years. A material rate adjustment is defined as the ability to recover on a present value basis, the difference in mortality provided for in the factors below for contracts with and without pricing flexibility.

Lines (11) and (12) Life Policies with Pricing Flexibility In Force and Reserves are derived from company records. Examples of products intended for this category include, but aren't limited to, participating whole life insurance, universal life insurance, without secondary guarantees, and yearly renewable term insurance where scheduled premiums may be changed. The table below illustrates the RBC requirement calculation embedded in Line (13) for Life Policies with Pricing Flexibility.

Line (8.13)	Individual & Industrial Life Policies with Pricing Flexibility	(1) Statement Value	(2) Factor	(2) RBC Requirement
	First 500 Million		X 0.0022300190	
	Next 2,450 Million		X 0.0014600075	
	Next 20,000 Million		X 0.00116	
	Over 25,000 Million		X 0.0008700050

Formatted: Centered
Formatted: Font: Not Bold, Not Italic, Underline

Lines (14) and (15) Term Life Policies without Pricing Flexibility In Force and Reserves are derived from company records. Examples of products intended for this category include, but aren't limited to, level term insurance with guaranteed level premiums and yearly renewable term insurance where scheduled premiums may not be changed. The table below illustrates the RBC requirement calculation embedded in Line (16) for Term Life Policies without Pricing Flexibility.

Line (16)	Term Life Policies without Pricing Flexibility	(1) Statement Value	(2) Factor	(2) RBC Requirement
	First 500 Million		X 0.00270	
	Next 24,500 Million		X 0.00110	
	Over 25,000 Million		X 0.00075	
	Total Group & Credit Term Life Policies without Pricing Flexibility Net Amount at Risk (less PCH & SGH force)			

Lines (17) and (18) Permanent Life Policies without Pricing Flexibility In Force and Reserves are derived from the aggregate amounts derived in lines (1) to (10) minus the amounts recorded in the other individual life categories. Examples of products intended for this category include, but aren't limited to, universal life with secondary guarantees and non-participating whole life insurance. Policies that aren't recorded in the other individual life categories default to this category which has the highest factors. The table below illustrates the RBC requirement calculation embedded in Line (19) for Permanent Life Policies without Pricing Flexibility.

Line (19)	Permanent Life Policies without Pricing Flexibility	(1) Statement Value	(2) Factor	(2) RBC Requirement
	First 500 Million		X 0.00390	

Next 24,500 Million	X 0.00165 =	
Over 25,000 Million	X 0.00110 =	
Total Permanent Life Policies without Pricing Flexibility Net Amount at Risk		

Lines (35) and (36) Group & Credit Life In Force and Reserves with Remaining Rate Terms 36 Months and Under are derived from company records. This category includes group contracts where the premium terms have 36 months or fewer until expiration or renewal. The in force amount classified in this category needs to be consistent with the Exhibit of Life Insurance. The reserves amount classified in this category needs to be consistent with Exhibit 5 used for Lines (28) and (29). Separate Accounts Exhibit used for Line (30), and Schedule S used for Lines (31) and (32). Federal Employees' Group Life Insurance (FEGLI) and Servicemembers' Group Life Insurance (SGLI) contracts are excluded. The table below illustrates the RBC requirement calculation embedded in Line (37) for Group & Credit Life Net Amount at Risk with Remaining Rate Terms 36 Months and Under.

<u>Line (37)</u>	<u>(1)</u> <u>Statement Value</u>	<u>Factor</u>	<u>(2)</u> <u>RBC Requirement</u>
Group & Credit Life with Remaining Rate Terms 36 Months and Under			
First 500 Million		X 0.00130 =

Re: Follow Up Items from the April 7, 2022, Life LRBCWG Meeting

Dear Philip,

On behalf of the C-2 Mortality Work Group of the American Academy of Actuaries, we are providing follow up items from the April 7, 2022, Working Group meeting. This includes the following which is discussed in the attached report.

1. The likelihood of zero mortality improvement based on the trend risk distribution
2. The insured population pandemic risk distribution relative to U.S. general population COVID-19 mortality experience

Sincerely,

Chris Trost, MAAA, FSA
Chairperson, C-2 Mortality Work Group

Ryan Fleming, MAAA, FSA
Vice Chairperson, C-2 Mortality Work Group

American Academy of Actuaries

Life Risk-Based Capital (RBC) – C-2 Mortality Risk

Regarding follow up items from the April 7, 2022, Life RBC (E) Working Group (LRBCWG) Meeting

Trend Risk Distribution and Zero Mortality Improvement.....2

Pandemic Risk Distribution.....2

LIFE RISK-BASED CAPITAL (RBC) – C-2 MORTALITY RISK

Trend Risk Distribution and Zero Mortality Improvement

A question was asked at the April 7 meeting about where zero mortality improvement would fall within the trend risk distribution assumed in the C-2 modeling. The expected mortality improvement rates across ages 21-82 from the 2017 Society of Actuaries (SOA) mortality improvement scale are a gender-weighted overall 0.79% per year. The likelihood of experiencing zero mortality improvement varies by the length of the risk exposure period and are shown in the table below.

Length of Risk Exposure:	5 years	10 years	20 years
Likelihood of zero or lower average mortality improvement over the length of the risk exposure period	12%	5%	1%

The results indicate that based on expected mortality improvement and the trend risk distribution calibrated to historical U.S. Social Security data, there is low likelihood of extended periods of zero improvement.

The C-2 Mortality Work Group has noted that the trend risk component is driven more by the volatility around the expected mortality improvement than the expected mortality improvement level. The capital factors are more insensitive to the expected mortality improvement level as highlighted in the sensitivity below which was shared in the report for the April 7 meeting.

Pandemic Risk Distribution

There was discussion at the April 7 meeting on the severity of the COVID-19 pandemic based on general population statistics relative to the pandemic catastrophe probability distribution developed by the Academy’s C-2 Mortality Work Group. Generally, the comparisons made were using general population rather than insured mortality.

The C-2 Mortality Work Group believes that applying general population mortality experience to assumptions for insured population mortality experience is not appropriate for the following reasons.

- The age distribution of COVID-19 deaths is a critical variable in explaining why the general population mortality rate is much higher than what has been experience in the insured population.

LIFE RISK-BASED CAPITAL (RBC) – C-2 MORTALITY RISK

Based on U.S. Centers for Disease Control and Prevention (CDC) data by age, 75% of reported COVID-19 deaths are attributable to ages 65 and older. The life insurance industry has low net amount of risk exposure at these ages due to term life and employer group policies expiring before these older ages, and permanent life policies building higher reserves relative to face amounts at older ages.

- Insured population mortality rates are a small fraction of general population mortality rates due to the impacts of socioeconomic factors and underwriting. The overall mortality rate of the U.S. population for 2019 (pre-pandemic) was 8.7 deaths per thousand based on U.S. CDC data. This overall death rate can serve as a reference point for comparing the cumulative COVID-19 death rate of about 3.0 deaths per thousand (982,809 total deaths reported by the U.S. CDC as of April 10, 2022 relative to the U.S. population of about 330 million). On this basis, the excess deaths are 34% on a percentage basis. The insured population pandemic distribution developed for the RBC C-2 modeling provides for pandemics with excess mortality greater than 34%. At the most severe level, the insured population modeled pandemic distribution provides for excess deaths ranging from approximately 60%-110%.

The C-2 Mortality Work Group would like to clarify that the statistics used from the SOA individual and group life studies on experience during the COVID-19 pandemic include mortality from all causes including both COVID-19 and non-COVID-19 deaths. For individual life, based on modeled mortality rates, this translates to estimated excess deaths of 0.5-0.7 per thousand from the COVID-19 pandemic. For group life, based on modeled mortality rates, this translates to estimated excess deaths of 0.8-1.2 per thousand from the COVID-19 pandemic. This demonstrates that the insured population has experienced significantly lower excess deaths from all causes during the COVID -19 pandemic than the CDC data shows for the U.S population. Both of these estimated outcomes, which include COVID-19 and non-COVID-19 deaths, are within the 1.5 deaths per thousand assumed at the most severe level.

The C-2 Mortality Work Group believes that the pandemic modeling includes a distribution of potential outcomes providing for excess mortality for the insured population at least as severe as the COVID-19 pandemic. In addition, the pandemic risk component is one of three catastrophe risks included in the development of C-2 factors along with the terrorism and unknown risk components.

Draft: 7/20/22

Life Risk-Based Capital (E) Working Group
Virtual Meeting
April 7, 2022

The Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met April 7, 2022. The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Ben Bock (CA); Manny Hidalgo (CT); Sean Collins (FL); Vincent Tsang (IL); Ben Slutsker (MN); William Leung (MO); Derek Wallman (NE); Seong-min Eom (NJ); Bill Carmello and Michael Cebula (NY); Andrew Schallhorn (OK); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Discussed the Academy C2 Mortality Risk Work Group Recommendation

Chris Trost (American Academy of Actuaries—Academy), chair of the Academy C2 Mortality Risk Work Group, said the Work Group prepared responses to the additional information requested during the Life Risk-Based Capital (E) Working Group's Jan. 20 meeting and comments made during its March 10 meeting. Ryan Fleming (Academy) presented the Academy's responses (Attachment Four-D1). He provided a summary of the assumptions underlying the Academy's November 2021 recommendation and the sensitivity tests that were performed.

Mr. Fleming discussed the impact on C-2 factors of assuming zero expected mortality improvement. The Work Group continues with its suggestions, which include expected mortality improvement based on the Society of Actuaries (SOA) 2017 mortality improvement scale and the evaluation of trend risk versus this expectation. Given the ongoing COVID-19 pandemic, Mr. Carmello suggested including no mortality improvement for the first 10 to 15 years of that component of the calculation. Mr. Cebula added that there is a lot of research that seems to indicate that even in asymptomatic people, COVID-19 is creating lung damage, so the thought that mortality would be improving in the near term seems unduly optimistic. When looking at risk-based capital (RBC), Mr. Barlow said it is usually something that is going to be in place for quite some time, so he tends to not look at it from a short-term perspective. He said it is not clear to him that this is a short-term consideration, and while it may be a while before information is available on insured mortality, he asked if there was other information available. Mr. Trost said that for insured mortality, there is still some improvement, although it has been slowing. He said one thing the sensitivity showed is that if capital is meant to address experience around volatility from what is expected, it did not have a big impact on the capital requirement itself. Mr. Slutsker asked if that impact is muted by the shorter projection periods. Mr. Fleming said that is likely the case looking from more of a newly issued business perspective with longer horizons, but the Work Group is looking more broadly at in-force blocks. The Working Group requested more information on this assumption.

Mr. Fleming presented the sensitivities on the catastrophic component of the C-2 factors, the unknown sustained risk likelihood and severity, and the COVID-19 pandemic risk likelihood and severity. With respect to pandemic risk, Mr. Slutsker made the point that there is still uncertainty and a lack of data, and it might be prudent to potentially increase the factors for this aspect.

Mr. Fleming discussed the support for the five-year risk exposure period for products with pricing flexibility and said the Work Group feels confident in the five-year period. He said, if anything, it could be viewed as slightly conservative as adjusting mortality on a regular five-year rolling average results in lower capital factors because companies are able to respond sooner than five years.

Mr. Fleming said the Work Group is supportive of the tiering of charges at the aggregate level for individual and group life. He said there are a couple of approaches that work, either a pro rata approach or something similar to

what is done for disability income. He also said the Work Group has presented a couple of options for modifying the annual statement presentation to assist in the decision between option one and option two of the structural changes to RBC.

Mr. Barlow suggested an additional meeting be scheduled before the end of the month to allow further discussion on adoption of one of the two structural options and exposure of the related instructions.

Having no further business, the Life Risk-Based Capital (E) Working Group adjourned.

Re: Analyses Requested at the January 20, 2022, Life RBC Meeting and Response to ACLI Comment Letter and Regulator Comments Discussed at the March 10, 2022, Life RBC Meeting

Dear Philip,

On behalf of the C-2 Mortality Work Group of the American Academy of Actuaries,¹ we are providing the analysis requested at the January 20, 2022, Life Risk-Based Capital (E) Working Group meeting. This includes the following and is discussed in the attached report.

1. Impact on C-2 factors of assuming zero expected mortality improvement
2. Sensitivities on the catastrophe component of the C-2 factors
 - a. Unknown sustained risk likelihood and severity
 - b. Pandemic risk likelihood and severity
3. Support for the five-year risk exposure period for products with pricing flexibility

Overall, the additional analysis related to C-2 factors reinforces the factors and structure recommended by the work group. The C-2 Mortality Work Group maintains its recommended factors made in November 2021 and its structural change options recommended in January 2022.

The report also includes commentary on the ACLI comment letter and regulator comments discussed at the March 10, 2022, Life RBC Working Group meeting. The response addresses the following topics.

1. Tiered charges
2. Clarification of definitions
3. Improved annual statement tie-out
4. Non-participating whole life and default category
5. Group permanent life

Sincerely,

Chris Trost, MAAA, FSA
Chairperson, C-2 Mortality Work Group

1850 M Street NW Suite 300 Washington, DC 20036 Telephone 202 223 8196 Facsimile 202 872 1948 www.actuary.org

Zero Expected Mortality Improvement	2
Unknown Sustained Risk Likelihood and Severity	2
Pandemic Risk Likelihood and Severity	4
Support for the Five-Year Risk Exposure Period for Products With Pricing Flexibility	5
Response to ACLI Comment Letter and Regulator Comments Discussed at the March 10, 2022, Meeting	8

LIFE RBC – C-2 MORTALITY RISK

Zero Expected Mortality Improvement

Assumptions From November 2021 Recommendation

Experience mortality improvement is set equal to the 2017 Society of Actuaries (SOA) mortality improvement scale for use with Actuarial Guideline (AG) 38 and VM-20. The rates vary by age and gender and are converted to lognormal rates for input in the model.

Trend risk is modeled to assess the risk that future mortality improvement is different than assumed. Historically, both mortality improvement (MI) and MI volatility have differed by historical period, gender, and age, among others. While average MI over long periods tends to stabilize, period-to-period MI can be quite different. An improvement distribution that captures these characteristics was developed while balancing the desire for simplicity. Deviation in mortality improvement is modeled across male/female and young/middle/old ages as correlated normally distributed random variables. An MI deviation is generated for each cohort in each year of each scenario. This allows for large differences year-to-year, consistent with historical data.

Sensitivity Test

An Academy C-2 Mortality Work Group sensitivity test was performed to assess the impact of assuming zero expected mortality improvement. The trend risk component remained included in the model and was assessed versus the zero expected mortality improvement. In the absence of the trend risk component, the recommended factors would be lower.

The results of this sensitivity test are shown below for the large size factors for individual life. Zeroing expected mortality improvement led to a slight increase in the factors for the longer projection periods due to the slightly higher risk associated with higher experience mortality rates. Group life factors would not be impacted consistent with the five-year individual life result.

The C-2 Mortality Work Group continues with its suggestions, which include expected mortality improvement based on the SOA 2017 mortality improvement scale and the evaluation of trend risk versus this expectation.

Sensitivity - Impact of Zero Expected Mortality Improvement						
Pre-Tax RBC C-2 Factors - Large Size Per \$1,000 of Inforce NAR	Individual & Industrial Life			Change vs Baseline		
	20 Year	10 Year	5 Year	20 Year	10 Year	5 Year
Baseline - 2017 Mortality Improvement Scale	1.10	0.75	0.50			
Zero Expected Mortality Improvement	1.20	0.80	0.50	0.10	0.05	0.00

Unknown Sustained Risk Likelihood and Severity

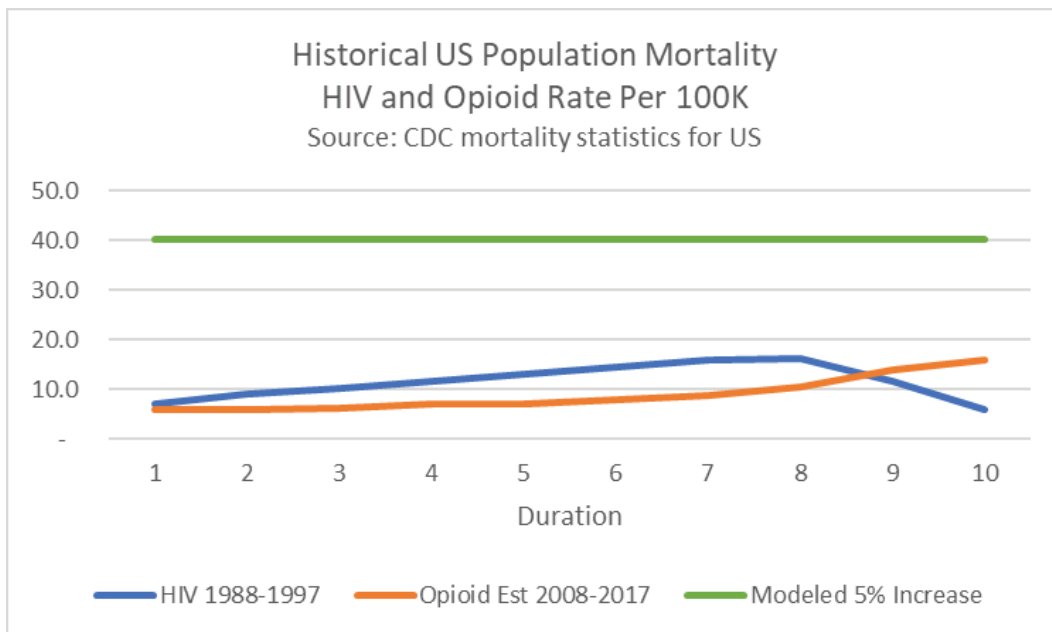

Assumptions From November 2021 Recommendation

The catastrophe risk component of the model assesses the risk of a short-term spike in mortality or a longer-term increase in mortality from a currently unknown health event. This risk includes three components: a pandemic risk distribution, a terrorism risk distribution, and an unknown sustained risk distribution.

LIFE RBC – C-2 MORTALITY RISK

The unknown sustained risk assumes a sustained increase in mortality from an unknown health event. The discrete distribution was calibrated from two historical health events impacting the U.S. population: HIV and opioid abuse. The mortality increase is defined as a 5% increase applied across all ages if triggered. The annual likelihood of the event occurring is 2.5%. If the event is triggered in the scenario, it continues for the lesser of the maximum duration assumption and remainder of the projection period. A 10-year period was selected for the maximum duration based on the historical events and to provide for an event lasting up to a decade. The maximum duration assumption is relevant only when modeling projection periods longer than this assumption. Given the sustained nature of the event, it can only occur once per scenario.

As highlighted in the chart below, the modeled catastrophe provides for deaths in excess of similar historical events due to assuming experience from the worst age band category. The worst age band category was selected to conservatively set the severity as life insurers could have exposure concentrated at certain ages impacted by this type of event.

Sensitivity Testing

Sensitivity tests were performed to assess the impact of increasing the likelihood and/or severity of an unknown sustained risk event.

The results of these sensitivity tests are shown below for the large size factors. The impact of increased likelihood and/or severity is more significant for the longer risk exposure periods. The impact to group life would be similar to the five-year individual life category. The impact to the small and medium size categories would be comparable on an absolute add-on basis. Increasing the impact of this component would provide for safety beyond the level to identify weakly capitalized companies, which may be misaligned with RBC objectives.

LIFE RBC – C-2 MORTALITY RISK

The C-2 Mortality Work Group maintains its recommendation, which includes conservatively setting both the likelihood and impact of an unknown sustained risk event.

Sensitivity - Impact of Alternative Unknown Sustained Risk Assumptions						
Pre-Tax RBC C-2 Factors - Large Size Per \$1,000 of Inforce NAR	Individual & Industrial Life			Change vs Baseline		
	20 Year	10 Year	5 Year	20 Year	10 Year	5 Year
Baseline - 2.5% Annual Probability, 5% Increase	1.10	0.75	0.50			
5% Annual Probability, 5% Increase	1.25	0.85	0.55	0.15	0.10	0.05
2.5% Annual Probability, 10% Increase	1.40	1.05	0.60	0.30	0.30	0.10
5% Annual Probability, 10% Increase	1.65	1.25	0.75	0.55	0.50	0.25

Pandemic Risk Likelihood and Severity

Assumptions From November 2021 Recommendation

The pandemic risk component assesses the risk of a one-year increase in mortality from a new pandemic, such a new flu strain. The distribution is discrete and was calibrated from historical observations and multiple sources: current RBC, Swiss Re’s model, Solvency II, U.S. Centers for Disease Control and Prevention (CDC)/Department of Health and Human Services Pandemic Severity Assessment Framework (PSAF). Rates are expressed as deaths per 1,000 lives and are applied as an add-on across all ages if triggered. Multiple pandemics may occur in a given scenario. The table of annual likelihood and severity is shown below. The excess mortality from a pandemic may occur over multiple years. For modeling pandemics, the cumulative excess mortality is assumed to occur in a one-year period, which is a more conservative assumption than assuming that the same cumulative excess mortality occurs over multiple years.

Annual Probability	Excess Deaths Per 1K
0.50%	1.5
0.50%	0.7
0.50%	0.55
0.50%	0.35
0.50%	0.2
0.50%	0.1
0.50%	0.05
96.50%	0

While the pandemic distribution was developed prior to the COVID-19 pandemic, the emerging experience from COVID-19 for group and individual life insurers has been assessed. **Early indications are that the COVID-19 experience for the life insurance industry falls within the distribution of pandemic severities above.** The SOA is conducting ongoing research for both individual and group life insurers. The links to the latest reports are shown below.

Individual Life: <https://www.soa.org/globalassets/assets/files/resources/research-report/2022/us-ind-life-covid-19-reported-claims.pdf>

LIFE RBC – C-2 MORTALITY RISK

Group Life: <https://www.soa.org/globalassets/assets/files/resources/research-report/2022/group-life-covid-19-mortality.pdf>

For individual life, the average reported excess mortality by amount (adjusted for trend) from the second quarter of 2020 through the third quarter of 2021 was 10% for the 1.5-year period. Assuming the pandemic lasts from two to three years at that average rate, the estimated cumulative excess mortality ranges from 20%-30%. Based on modeled mortality rates, this translates to estimated excess deaths of 0.5-0.7 per thousand.

For group life, the average reported excess mortality by amount from the second quarter of 2020 through the third quarter of 2021 was 29% for the 1.5-year period. Assuming the pandemic lasts from two to three years at that average rate, the estimated cumulative excess mortality ranges from 60% to 90%. Based on modeled mortality rates, this translates to estimated excess deaths of 0.8-1.2 per thousand.

Note, these are industry-wide estimates to assess reported COVID-19 experience versus the RBC pandemic distribution. Estimates could change based on the course of the COVID-19 pandemic and further research on mortality experience during this period. Insurer experience may vary greatly by company.

Sensitivity Testing

Sensitivity tests were performed to assess the impact of increasing the likelihood and/or severity of a pandemic.

The results of these sensitivity tests are shown below for the large size factors. The impact to group life and to the small and medium size categories would be similar. Increasing the impact of this component would provide for safety beyond the level to identify weakly capitalized companies, which may be misaligned with RBC objectives. The likelihood of future pandemics, given the COVID-19 pandemic, is uncertain, and there is the possibility of overreacting to current events. If future research provides new expert judgment on pandemic outcomes that are significantly different than the distribution assumed in the recommended factors, this would be justification for a new review of the C-2 factors.

The C-2 Mortality Work Group maintains its suggestions, which includes a distribution of potential outcomes providing for excess mortality at least as severe as the COVID-19 pandemic.

Sensitivity - Impact of Alternative Pandemic Assumptions						
Pre-Tax RBC C-2 Factors - Large Size Per \$1,000 of Inforce NAR	Individual & Industrial Life			Change vs Baseline		
	20 Year	10 Year	5 Year	20 Year	10 Year	5 Year
Baseline - 3.5% Aggregate Annual Probability, 0.05 - 1.50 Deaths / 1000	1.10	0.75	0.50			
Double Probability	1.30	1.00	0.75	0.20	0.25	0.25
Double Impact	1.50	1.10	0.90	0.40	0.35	0.40
Double Probability, Double Impact	2.00	1.75	1.55	0.90	1.00	1.05

Support for the Five-Year Risk Exposure Period for Products With Pricing Flexibility

Assumptions From November 2021 Recommendation

The five-year risk exposure period in the modeling is intended to represent inforce blocks where pricing may be adjusted following adverse mortality experience due to the presence of non-guaranteed elements,

LIFE RBC – C-2 MORTALITY RISK

which are not yet being charged at maximum levels. The five-year period represents a conservatively appropriate period where experience emerges, is subsequently studied, and implemented into inforce pricing through adjusting non-guaranteed elements. Examples of products with this flexibility are universal life products without secondary guarantees and participating whole life products.

Additional Support for the Five-Year Risk Exposure Period

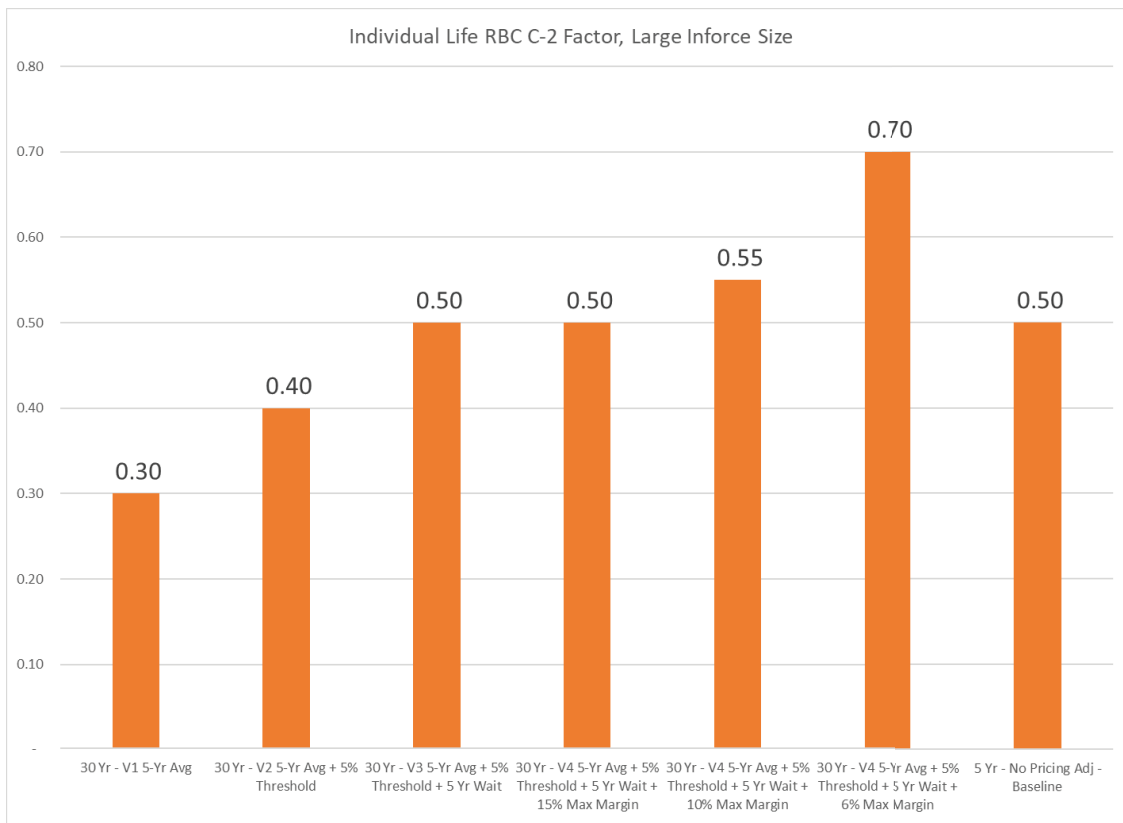

The C-2 Mortality Work Group developed alternative versions of the model to directly simulate pricing flexibility to respond to emerging mortality experience. These versions of the model were run for 30 years, over which nearly 100% of the inforce business has run-off. Four versions of the model were developed as described below.

1. An actual-to-expected ratio is calculated for each projection year on a statutory loss/net amount at risk basis (death benefits minus reserves released). Pricing is adjusted on a five-year rolling average basis with a one-year lag for both positive and negative experience. Years prior to the projection start date have an actual-to-expected ratio of 100%.
2. Same as version 1 plus pricing adjustments don't occur unless outside of +/- 5% deviations on a rolling average basis. The 5% deviation aligns with the margin assumed in reserves to cover moderately adverse experience of 1 standard deviation.
3. Same as version 2 plus there are no pricing adjustments for the first five projection years.
4. Same as version 3 plus a 15% limit for the maximum margin available consistent with typical mortality loads applied in the loaded 2017 CSO table. Sensitivities with lower margins of 10% and 6% were also tested.

The results for a large inforce size are shown in the chart below. Versions 1 and 2 result in a capital factor lower than the recommendation for the five-year category. This is because pricing adjustments occur sooner than after five years. Versions 3 and 4 result in a capital factor consistent with the recommendation as the exposure periods are aligned at five years. These versions assume that there is sufficient margin available to offset changes in mortality experience beyond the five-year risk exposure period. With version 4 of the model, sensitivities performed at lower margins of 10% and 6% demonstrate that the capital factor increases to the extent margins are more limited.

The C-2 Mortality Work Group maintains its suggestions to assign products with inforce pricing flexibility to the five-year risk exposure period category.

LIFE RBC – C-2 MORTALITY RISK

LIFE RBC – C-2 MORTALITY RISK

Response to ACLI Comment Letter and Regulator Comments Discussed at the March 10, 2022, Meeting

Tiered Charges

The C-2 Mortality Work Group is supportive of tiering the factors applied to the net amount at risk based on the aggregate amounts for individual life and for group life. Either of the approaches suggested by the ACLI are acceptable solutions. The pro rata approach to the work group appears to be the logical approach because it spreads the tiering proportionately among the categories. The larger factors associated with smaller sizes are due to the volatility and level risk components. It makes sense that the aggregate volatility and level risks for a company are spread proportionately among the categories. The approach similar to the disability income factors would result in slightly more conservative capital amounts because the highest factor products are assigned first.

Clarification of Definitions

The categories in the recommended C-2 factors were developed broadly. The length of the risk exposure period was the distinguishing variable to differentiate risk through the factors. The practical implementation of the factors was to select product categories based on the existing annual statement reporting structure. Universal life with secondary guarantee products have the longest mortality guarantees on average. Term products fall in the middle on average. The all other life category represents products that have the ability to adjust current mortality rates for emerging experience. The C-2 Mortality Work Group recognizes that the categorization is not perfect in all instances but is intended to recognize differences in risk broadly based on the existing annual statement reporting structure. The categories are also intended to apply to all inforce business regardless of whether the reserving is pre- or post-principles-based reserving.

Improved Annual Statement Tie-Out

The C-2 Mortality Work Group is supportive of efforts to report net amounts at risk directly in the annual statement. This practice would simplify the necessary/required data sources to be retrieved for the RBC C-2 Life calculation. Reporting the net amount at risk for each company and by product line may also provide meaningful information to financial statement users.

Option 1—Annual Statement Updates

The information needed to calculate the net amount at risk by product would fit well in the Analysis of Increase in Reserves During the Year pages. The following lines could be added as a new section called Net Amount at Risk. All amounts would be as of December 31 of the current year and on a net of reinsurance basis.

- Line 18: *Amount of Insurance In Force*. This line should be equivalent to amounts reported on Line 23 of the Exhibit of Life Insurance.
- Line 19: *Aggregate Reserves*. This would simply be set equal to Line 15.
- Line 20: *Separate Accounts Reserves*. These amounts would be on the same basis as the Separate Accounts Exhibit 3.

LIFE RBC – C-2 MORTALITY RISK

- Line 21: *Modified Coinsurance Reserves*. These amounts would be on the same basis as Schedule S.
- Line 22: *Net Amount at Risk*. This would be calculated as Line 18 – Line 19 – Line 20 – Line 21

Furthermore, the Whole Life column 3 could be expanded into two lines of business to distinguish between participating and non-participating contracts.

Option 2—Annual Statement Updates

The information needed to calculate the net amount at risk for the three categories (Life Policies with Pricing Flexibility, Term Life Policies without Pricing Flexibility, and Permanent Life Policies without Pricing Flexibility) could be addressed through a table in a new note, line, or item within Notes to Financial Statements. The following lines would be included in the table with four columns for the three RBC categories and a total column. All amounts would be as of December 31 of the current year and on a net of reinsurance basis.

- Line 1: *Amount of Insurance In Force*. This line should be equivalent to amounts reported on Line 23 of the Exhibit of Life Insurance.
- Line 2: *Aggregate Reserves*. This would set equal to Line 15 of the Analysis of Increase in Reserves During the Year.
- Line 3: *Separate Accounts Reserves*. These amounts would be on the same basis as the Separate Accounts Exhibit 3.
- Line 4: *Modified Coinsurance Reserves*. These amounts would be on the same basis as Schedule S.
- Line 5: *Net Amount at Risk*. This would be calculated as Line 1 – Line 2 – Line 3 – Line 4

In order to populate the RBC categories, a principle-based assessment would need to be completed by each company. Pricing flexibility for life insurance is determined as the ability to materially adjust rates on in force contracts through changing premiums and/or non-guaranteed elements as of the valuation date and within the next 5 policy years. A material rate adjustment is defined as the ability to recover, on a present value basis, the difference in mortality provided for in the factors for contracts with and without pricing flexibility.

Group Life Annual Statement Updates Under Option 1 or Option 2

The information needed to calculate the net amount at risk for the two categories (Group & Credit Life with Remaining Rate Terms 36 Months and Under, Group & Credit Life with Remaining Rate Terms Over 36 Months) could be addressed through a table in a new note, line or item within Notes to Financial Statements. The following lines would be included in the table with three columns for the two RBC categories and a total column. All amounts would be as of December 31 of the current year and on a net of reinsurance basis.

- Line 1: *Amount of Insurance In Force*. This line should be equivalent to amounts reported on Line 23 of the Exhibit of Life Insurance.

LIFE RBC – C-2 MORTALITY RISK

- Line 2: *Aggregate Reserves*. This would set equal to Line 15 of the Analysis of Increase in Reserves During the Year.
- Line 3: *Separate Accounts Reserves*. These amounts would be on the same basis as the Separate Accounts Exhibit 3.
- Line 4: *Modified Coinsurance Reserves*. These amounts would be on the same basis as Schedule S.
- Line 5: *Net Amount at Risk*. This would be calculated as Line 1 – Line 2 – Line 3 – Line 4

Non-Participating Whole Life and Default Category

New York (NY) and Minnesota (MN) regulators have expressed a determination to prefer to classify non-participating (or fully guaranteed) whole life with the highest individual life factor category along with universal life with secondary guarantees. There is also a preference under Option 1 of the structural updates that any products not assigned to one of the categories should conservatively default to the highest factor category. The C-2 Mortality Work Group is supportive of these updates to refine the product classifications as long as products that have pricing flexibility continue to be assigned to the lowest factor category.

Group Permanent Life

A regulator comment was made at the March 10, 2022, meeting suggesting that group permanent life should be categorized with the individual life factors. The C-2 Mortality Work Group is supportive of this update, as the individual life factors would be more appropriate for these types of products. The group factors were developed assuming a term life product, as the vast majority of industry exposure is group term life. Furthermore, the C-2 Mortality Work Group suggests assigning group credit life to the group category, and individual credit life to the individual life category. If this update is made, then the category names will need to be updated to make it clear that group permanent life business is being categorized along with individual life products.

Newsletter Items for Adoption for 2022 for Life and Fraternal RBC:

Date: July 2022

Volume: 28

Page 1: Intro Section:

What RBC Pages Should Be Submitted?

For year-end 2022 life and fraternal risk-based capital (RBC), submit hard copies of pages LR001 through LR049 to any state that requests a hard copy in addition to the electronic filing. Starting with year-end 2007 RBC, a hard copy was not required to be submitted to the NAIC. However, a portable document format (PDF) file representing the hard copy filing is part of the electronic filing.

If any actuarial certifications are required per the RBC instructions, those should be included as part of the hard copy filing. Starting with year-end 2008 RBC, the actuarial certifications were also part of the electronic RBC filing as PDF files, similar to the financial annual statement actuarial opinion.

Other pages, such as the mortgage and real estate worksheets, do not need to be submitted. However, they still need to be retained by the company as documentation.

Page 1+: Items Adopted for 2022:

Instructions for Residual Tranches

The Capital Adequacy (E) Task Force adopted proposal 2022-05-L Instruction for Residuals to address changes made to Schedule BA and the asset valuation reserve (AVR) to isolate the reporting of residual tranches during its June 30 meeting. This made an instructional change for line 49.2 on LR008, Other Long-Term Assets.

Structure and Instruction Changes to Update the Treatment of C-2 Mortality Risk

The Capital Adequacy (E) Task Force adopted proposal 2022-03-L C-2 Mortality Risk

Structure during its April 28 meeting. This proposal made structural changes to LR025, Life Insurance, to expand the categorization of policies along with reference changes to LR030, Calculation of Tax Effect and LR031, Calculation of Authorized Control Level Risk-Based Capital. The Capital Adequacy (E) Task Force adopted proposal 2022-06-L during its June 30 meeting. This proposal provides the instructions for the updated structure including factors for the expanded categories.

Page 2+: Editorial Changes:

1. Annual statement references on the blank schedule to investment schedules were updated on LR002, Bonds, for lines (8) and (16) and LR012, Miscellaneous Assets, for lines (2.2), (2.3), (3.2), (8) and (9).
2. Annual statement references on the blank schedule to the AVR were updated on LR008, Other Long-Term Assets, for lines (51.1), (51.2) and (52.1).
3. Annual statement references in the instructions to Schedule H were updated for LR020, Underwriting Risk-Experience Fluctuation Risk, for line (6) and LR022, Underwriting Risk-Managed Care Credit, for line (9).

Last Page: RBC Forecasting & Warning:

RBC Forecasting and Instructions

The Life and Fraternal RBC forecasting spreadsheet calculates RBC using the same formula presented in the 2022 Life and Fraternal Risk-Based Capital Forecasting & Instructions for Companies, and it is available to download from the NAIC Account Manager. The 2022 Life and Fraternal Risk-Based Capital Forecasting & Instructions for Companies publication is available for purchase in electronic format through the NAIC Publications Department. This publication is available on or about November 1 each year. The User Guide is no longer included in the Forecasting & Instructions.

WARNING: The RBC Forecasting Spreadsheet CANNOT be used to meet the year-end RBC electronic filing requirement. RBC filing software from an annual statement software vendor should be used to create the electronic filing. If the forecasting worksheet is sent instead of an electronic filing, it will not be accepted and the RBC will not have been filed.

Mr. Philip Barlow
Chair, NAIC Life Risk-Based Capital (E) Working Group (Life RBC)

Re: Life Risk-Based Capital (E) Working Group Exposure on Affiliated Investments
Instructions and Structure

Dear Mr. Barlow:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on the Life Risk-Based Capital (E) Working Group (Life RBC) Exposure on Affiliated Investments Instruction and Structure.

After reviewing the proposal, we have no fundamental objections. We do observe that the exposed guidance requires reporting insurers to include the carrying value and RBC requirements for all directly owned [RBC filing] subs, “even if the RBC filing affiliate/subsidiary is non-admitted.” If such entities are to be included in RBC, there would seem to be little reason to classify them as non-admitted. Therefore, we suggest consideration of a referral to SAPWG to create alignment between statutory accounting and RBC.

We are appreciative of the multiyear effort by the NAIC to bring better alignment between the various lines of business and we are looking forward to continued discussions in the future as we move towards implementation.

Thank you.

Sincerely,

A handwritten signature in black ink that reads 'B Bayerle'.

A handwritten signature in black ink that reads 'Colin Masterson'.

cc: Dave Fleming, NAIC
American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

Property and Casualty Risk-Based Capital (E) Working Group
and the Catastrophe Risk (E) Subgroup
Portland, Oregon
August 9, 2022

The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met in Portland, OR, Aug. 9, 2022, in joint session with the Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force. The following Working Group members participated: Tom Botsko, Chair (OH); Wanchin Chou, Vice Chair (CT); Robert Ridenour (FL); Judy Mottar (IL); Anna Krylova (NM); Miriam Fisk (TX); and Amy Malm (WI). The following Subgroup members participated: Wanchin Chou, Chair (CT); Robert Ridenour, Vice Chair (FL); Laura Clements (CA); Judy Mottar (IL); Anna Krylova (NM); Tom Botsko (OH); Andrew Schallhorn (OK); and Miriam Fisk (TX). Also participating were: Travis Grassel (IA); and John Rehagen (MO).

1. Adopted the Subgroup's June 14 and April 19 Minutes

Mr. Chou said the Subgroup met June 14 and April 19. During these meetings, the Subgroup took the following action: 1) adopted its Spring National Meeting minutes; 2) exposed proposal 2022-04-CR, which is the U.S. and non-U.S. lists of wildfire events for a 30-day public comment period ending July 13; 3) adopted proposal 2021-17-CR MOD, which provides an exemption to those companies where the modeling requirements would impose a cost and compliance burden that represent an outsized cost relative to the incremental benefit of providing the modeled data during the for informational purposes period; 4) discussed the independent model review instructions in the Rcat; 5) evaluated other catastrophe risk for possible inclusion in the Rcat component; and 6) heard a presentation from the International Society of Catastrophe Managers (ISCM) regarding different programs to elevate the catastrophe risk profession that the ISCM offers.

Mr. Ridenour made a motion, seconded by Ms. Clements, to adopt the Subgroup's June 14 (Attachment Five-A) and April 19 (Attachment Five-B) minutes. The motion passed unanimously.

2. Adopted the Working Group's June 24, June 7, and April 26 Minutes

Mr. Botsko said the Working Group met June 24, June 7, and April 26. During these meetings, the Working Group took the following action: 1) adopted its Spring National Meeting minutes; 2) adopted proposal 2021-17-CR MOD, which provides an exemption to those companies where the modeling requirements would impose a cost and compliance burden that represent an outsized cost relative to the incremental benefit of providing the modeled data during the for informational purposes period; 3) adopted proposal 2022-01-P, which removes the trend test for information-only wordings in the PR033 footnote; 4) adopted proposal 2022-02-P, which provides a routine annual update to the Line 1 premium and reserve industry underwriting factors in the property/casualty (P/C) risk-based capital (RBC) formula; 5) exposed affiliated investments instructions and structures for a 60-day public comment period ending June 25; 6) forwarded the referral regarding the reinsurer designation equivalent rating factors to the Blanks (E) Working Group; and 7) heard updates on current P/C RBC projects from the American Academy of Actuaries (Academy).

Ms. Mottar made a motion, seconded by Mr. Ridenour, to adopt the Working Group's June 24 (Attachment Five-C), June 7 (Attachment Five-D), and April 26 (Attachment Five-E) minutes. The motion passed unanimously.

3. Adopted Proposal 2022-04-CR (2013–2021 Wildfire Event Lists)

Mr. Chou said the U.S. and non-U.S. lists of wildfire events were exposed for a 30-day public comment period ending July 13. He stated that the Subgroup received one comment letter from the Swiss Re America Holding Corporation (Swiss Re) during the exposure period. He said Swiss Re believed that the insurance direct incurred losses for the Southern California Woolsey Wildfires in 2018 should be \$2.9 billion based on the reports from the California Department of Insurance (DOI). Without objection from the Subgroup, Mr. Chou said the incurred losses amount for this event is updated to \$2.9 billion.

Mr. Schallhorn made a motion, seconded by Ms. Clements, to adopt proposal 2022-04-CR (*see NAIC Proceedings – Summer 2022, Capital Adequacy (E) Task Force, Attachment Seven*). The motion passed unanimously.

4. Adopted the 2022 P/C RBC Newsletter

Mr. Botsko said the 2022 P/C RBC newsletter reflects the adopted proposals and editorial changes for year-end 2022. He said the newsletter appears different from past years; the purpose of the adoption is to consider the content of the newsletter, as the format will later be revised. He said when the formatting of the newsletter is complete, it will be posted to the Working Group's web page.

Mr. Ridenour made a motion, seconded by Ms. Krylova, to adopt the 2022 P/C RBC newsletter (Attachment Five-F). The motion passed unanimously.

5. Referred the Affiliated Investment Instructions and the RBC Structure to the Capital Adequacy (E) Task Force

Mr. Botsko said during its April 26 meeting, the Working Group exposed the affiliated investment instructions and blanks changes for a 60-day public comment period. There were no comments received. He also commented that the Life Risk-Based Capital (E) Working Group received one comment letter from American Council of Life Insurers (ACLI) regarding the issue of non-admission. He said this issue will be discussed at the Capital Adequacy (E) Task Force meeting.

Mr. Chou made a motion, seconded by Mr. Ridenour, to refer the P/C affiliated instructions and blanks to the Capital Adequacy (E) Task Force for discussion. The motion passed unanimously.

6. Exposed Proposal 2022-07-P (PR035 Line of Business)

Mr. Botsko said proposal 2022-07-P provides consistency of the lines of business categories used in the Annual Statement, Underwriting and Investment Exhibit, Part 1B and RBC Report, PR035.

The Working Group and the Subgroup agreed to expose proposal 2022-07-P for a 30-day public comment period ending Sept. 8.

7. Exposed Proposal 2022-08-CR (Independent Model Review Instructions)

Mr. Chou said during the April 19 meeting, the Subgroup determined that a further clarification to the instructions is necessary, as better instructions will not only lighten the burdens but also provide a more consistent modeling review process among the states. He also stated that the instructions were revised with assistance from the Independent Model Review Ad Hoc Group, which was established by the Subgroup earlier. He also indicated that the proposed revised instructions are to capture the spirit of the own model permission review and clarify the requirements expected from the company who submits its own model for permission.

The Working Group and the Subgroup agreed to expose proposal 2022-08-CR for a 30-day public comment period ending Sept. 8.

8. Heard Updates on Current P/C RBC Projects from the Academy

David Traugott (Academy) said this presentation (Attachment Five-G) provides a brief update on the Academy report, which expects to be released in September. He also stated that this update describes the methodology and presents sample results that will be finalized in the report. He said this report focuses on: 1) the Investment Income Adjustment (IIA) factor; 2) updated adjustment of indicated premium risk factors for catastrophes; 3) alternative safety margins for consideration by the Working Group; and 4) the combined impact of these changes, including updated risk factors provided in the Academy April 2021 report.

9. Discussed 2021 RBC Statistics

Mr. Botsko said the 2021 P/C RBC statistics were run on July 1. He said there were 2,511 P/C RBC filings loaded onto the NAIC database, up from 2,477 in 2020. He stated that there were 35 companies that triggered an action level in 2021: 1) eight were in a company action level; 2) three were in a regulatory action level; 3) six were in an authorized control level (ACL); and 4) 18 were in a mandatory control level. Also, there were 17 companies that triggered the trend test, and the ACL and total adjusted capital (TAC) amounts increased from 2020 to 2021. Mr. Botsko indicated that there were a few categories that were highlighted in boldface, representing new categories in the statistical report (Attachment Five-H) to create consistency across life, P/C, and health statistical reports.

10. Discussed the Working Group and Subgroup's Working Agenda

Mr. Chou summarized the changes of the Subgroup's 2022 working agenda, which included the following substantial changes: 1) changing the expected completion date to the item of "evaluate other catastrophe risks for possible inclusion in the charge" to 2023 or later; and 2) eliminating the following items: a) "implement wildfire peril in the Rcat component"; and b) "evaluate the possibility of modifying exemption criteria for different cat perils in the PR027 interrogatories." Mr. Botsko said the Working Group: 1) added a new item of "changing the RBC PR035 Line of Business categories"; and 2) eliminated the "remove the trend test footnote in PR033" item from the 2022 working agenda.

11. Evaluated Other Catastrophe Risks for Possible Inclusion in the Rcat Component

Mr. Chou said as was recalled in the last Subgroup meeting, the flood peril may not be warranted due to the materiality aspect based on the industry inputs. The Subgroup agreed that it is worth it to review the possibility of including the severe convective storms as the next peril for the Rcat component. Mr. Chou also anticipated that the Subgroup would follow a development approach like the wildfire peril. Lastly, he said he expects that the new peril will be implemented in the Rcat component for informational purposes only in 2024 RBC reporting. He also encouraged all the subject matter experts (SMEs) and volunteers to join the new ad hoc group so this project will be completed in time.

12. Heard a Presentation from the NOAA Regarding Forecasting and Resilience: Severe Thunderstorms 25'

Harold E. Brooks (National Oceanic and Atmospheric Administration—NOAA) provided a brief overview on Forecasting and Resilience: Severe Thunderstorms (Attachment Five-I). He said the severe thunderstorms in the U.S. include: 1) tornados; 2) hails greater than one inch; and 3) winds greater than 50 mph. He also stated that it could happen anywhere but particularly between the Rockies and Appalachians. In addition, he presented some useful information on tornado resilience and hail protection.

13. Discussed Other Matters

Mr. Chou said the Subgroup will schedule several closed calls between the Subgroup members and the individual modeling vendors in the future to discuss the wildfire impact analysis that the vendors performed last year. He stated that a summary of the calls will be provided in the Subgroup meeting afterwards.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group and the Catastrophe Risk (E) Subgroup adjourned.

Catastrophe Risk (E) Subgroup
Virtual Meeting
June 14, 2022

The Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met June 14, 2022. The following Subgroup members participated: Wanchin Chou, Co-Chair, Qing He, and Amy Waldhauer (CT); Halina Smosna, Co-Chair (NY); Giovanni Muzzarelli and Laura Clements (CA); Jane Nelson (FL); Judy Mottar (IL); Gordon Hay (NE); Anna Krylova (NM); Tom Botsko (OH); Andrew Schallhorn (OK); Will Davis (SC); and Miriam Fisk, Monica Avila, and Rebecca Armon (TX). Also participating were: Mitchell Bronson (CO); Travis Grassel (IA); Brock Bubar and Sandy Darby (ME); Julie Lederer (MO); Jesse Kolodin (NJ); Liz Ammerman (RI); Johanna Nickelson (SD); and Isabelle Turpin Keiser (VT).

1. Heard a Presentation from the ISCM on its Programs

Shari S. Zola (International Society of Catastrophe Managers—ISCM) provided a presentation regarding different programs to elevate the catastrophe risk profession that the ISCM offers (Attachment Five-A1). She said if anyone wants to become a member, they can visit the ISCM website. Jeff Czajkowski (Center for Insurance Policy and Research—CIPR) said the NAIC Catastrophe Model Center of Excellence (COE) is working closely with the ISCM to develop technical education and training materials on the mechanics of commercial models and the treatment of perils and risk exposures that are tailored to the needs of state insurance regulators. Mr. Chou encouraged all interested parties to review the presentation materials and contact the ISCM if interested.

2. Discussed the Independent Model Review Instructions in the Rcat Component

Mr. Chou said the Independent Model Review Ad Hoc Group held two meetings to discuss the instructions since the last Subgroup meeting. The Ad Hoc Group decided that this issue should be brought back to the Subgroup for further discussion. Mr. Chou also encouraged all interested parties to submit their comments to NAIC staff. The Subgroup will continue discussing this issue at the Summer National Meeting.

3. Evaluated Other Catastrophe Risks for Possible Inclusion in the Rcat Component

Ms. Smosna said the Subgroup may want to consider expanding the focus to include man-made catastrophes in the future, as it is currently only focusing on natural catastrophes. She also stated that based on industry input, the flood peril may not be warranted due to the materiality aspect. She recommended that the Subgroup consider reviewing the possibility of including the convective storms as the next peril for the Rcat component. She said inviting different vendors and modelers to share their views at future meetings is worth consideration.

4. Exposed Proposal 2022-04-CR (2013-2021 Wildfire Event Lists)

Mr. Chou said the wildfire peril has been adopted for informational purposes only in the 2022 risk-based capital (RBC) formula. He stated that NAIC staff developed the U.S. and non-U.S. lists of wildfire events based on the variable sources of information. He asked all interested parties to review the lists and provide comments during the exposure period.

The Subgroup agreed to expose proposal 2022-04-CR for a 30-day public comment period ending July 13.

5. Discussed Other Matters

Mr. Chou said several closed calls between the Subgroup and the individual modeling vendors will be scheduled in the future to discuss the wildfire impact analysis that the vendors performed last year. He stated that a summary for the calls will be provided in the Subgroup meeting afterwards.

Lastly, Mr. Chou said the Subgroup will continue discussing all outstanding issues at the Summer National Meeting.

Having no further business, the Catastrophe Risk (E) Subgroup adjourned.

ELEVATING OUR PROFESSION

Credentialization

Networking

Continuing Education

Information Sharing (through ISCM website)

Credentialization – Proven Experience

Certified Specialist in Catastrophe Risk (CSCR)

Best Practice Experts

Gain and demonstrate knowledge of practical applications in catastrophe modeling

- Property / Cat Insurance Market Standards
- Understanding Best Use of Catastrophe Models
- Proven knowledge & support of Property Cat (re)insurance value chain

How:

- 4 courses & exams + Ethics Course (waivers for exam 1)
- Experienced Industry Professional Pathway available by nomination with 5+ years experience

Certified Catastrophe Risk Management Professional (CCRMP)

Recognized Subject Matter Experts

Demonstrate advanced applications and methodologies of catastrophe risk management or development/delivery of models

- Customized / Advanced Applications
- Tailoring Own View of CAT Risk
- Capable of Critical Assessments
- Trusted Advisor to Senior Stakeholders

How:

- Experienced Industry Professional Pathway available by nomination
- **New Technical pathway available**
- No exams yet – targeting 2024 for Risk Managers

Joint endeavor between ISCM & ICAS

Over 180 credentialed professionals

Proof & recognition of expertise

Industry defined competencies

Catastrophe Risk (E) Subgroup
Virtual Meeting
April 19, 2022

The Catastrophe Risk (E) Subgroup of the Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met April 19, 2022. The following Subgroup members participated: Wanchin Chou, Co-Chair, and Qing He (CT); Halina Smosna, Co-Chair, Gloria Huberman, and HauMichael Ying (NY); Giovanni Muzzarelli (CA); Jane Nelson (FL); Judy Mottar (IL); Anna Krylova (NM); Tom Botsko (OH); Andrew Schallhorn (OK); Will Davis (SC); and Miriam Fisk, Andy Liao, Monica Avila, and Rebecca Armon (TX). Also participating were: Mitchell Bronson (CO); Adrienne Lupo (DE); Brock Bubar and Sandy Darby (ME); Julie Lederer (MO); Steve Matthews (MT); Jack Broccoli (RI); Isabelle Turpin Keiser (VT); and Steve Drutz (WA).

1. Adopted its Spring National Meeting Minutes

Mr. Chou said the Subgroup met March 22. During this meeting, the Subgroup took the following action: 1) adopted its Feb. 22, 2022; Jan. 25, 2022, and Dec. 16, 2021, minutes; 2) discussed its working agenda; 3) discussed the insured loss threshold for wildfire peril; 4) exposed proposal 2021-17-CR MOD (Wildfire Information-Only Reporting Exemption); 5) discussed the independent model review instruction in the Rcat component; 6) discussed the issue of double counting in the R5 component; and 7) discussed minor edits in the Rcat instructions.

Mr. Botsko made a motion, seconded by Ms. Krylova, to adopt the Subgroup's March 22 minutes (*see NAIC Proceedings – Spring 2022, Capital Adequacy (E) Task Force, Attachment Five-A*). The motion passed unanimously.

2. Adopted Proposal 2021-17-CR MOD (Wildfire Information-Only Reporting Exemption)

Scott Williamson (Reinsurance Association of America—RAA) said a modification of proposal 2021-17-CR was created for those smaller companies, where the modeling requirements would impose a cost and compliance burden that represents an outsized cost relative to the incremental benefit of providing the modeled data for information-only purposes at the virtual spring meeting. He also stated that this modification would no longer be valid when the wildfire peril is added to the Rcat component unless the companies qualify under the exemptions listed in PR027 Interrogatory items C(7), C(8), or C(9). Mr. Chou said this modification was exposed for a 14-day public comment period ending April 5. One comment letter from the Missouri Department of Commerce and Insurance (DCI) regarding minor updates in the instructions that were received during this period. He indicated that the Subgroup agreed with the comments and made the editorial changes in the proposal based on the DCI suggestions.

Mr. Botsko made a motion, seconded by Mr. Davis, to adopt proposal 2021-17-CR MOD (*see NAIC Proceedings – Summer 2022, Capital Adequacy (E) Task Force, Attachment Two-A*). The motion passed unanimously.

3. Discussed the Independent Model Review Instructions in Rcat

Mr. Chou said during the previous discussion, the Subgroup identified three different kinds of catastrophe models that deviate from the vendor models: 1) internal catastrophe models; 2) vendor catastrophe models with adjustments or different weight; and 3) derivative models based on the vendor models. During the Spring National Meeting, Ms. Lederer asked the Subgroup to determine whether further clarification to the instructions is necessary, as better instructions will not only lighten the burdens but also provide a more consistent modeling review process among the states. Mr. Chou stated that the main purpose of this meeting is to discuss items 1

through 7 of the Rcat instructions. Ralph Blanchard (Travelers) and Mr. Williamson believe items 2 through 6 require further clarification. Mr. Chou believes creating a short-term ad hoc group to focus on modifying the instructions will be an effective approach to address this item. He encouraged all interested parties to contact NAIC staff if they wish to join the group.

4. Evaluated Other Catastrophe Risks for Possible Inclusion in the Rcat Component

Ms. Smosna said the wildfire peril has been adopted for informational purposes only in the 2022 risk-based capital (RBC) formula. She said it is time to evaluate the next possible peril to be included in the Rcat component. She asked all interested parties to brainstorm this issue and provide feedback at the next meeting. Mr. Chou commented that given the exposure of the industry, the flood peril may not be warranted due to the materiality issue. He suggested that inviting different vendors or modelers to share their views will be a good starting point. Ms. Smosna said since the Climate and Resiliency (EX) Task Force recommended that the Subgroup consider expanding to consider including convective storms in the Rcat component, inviting speakers to present at the future meetings is worth consideration.

5. Discussed Other Matters

Mr. Chou said NAIC staff will develop the 10-year wildfire event lists based on the same threshold of 25 million or greater estimated insurer losses for wildfire peril as the earthquake and hurricane perils. The list will be shared with the Subgroup for discussion at the upcoming virtual meeting.

Lastly, Mr. Chou said the Subgroup will continue discussing all outstanding issues in May.

Having no further business, the Catastrophe Risk (E) Subgroup adjourned.

Property and Casualty Risk-Based Capital (E) Working Group
E-Vote
June 24, 2022

The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force conducted an e-vote that concluded June 24, 2022. The following Working Group members participated: Tom Botsko, Chair (OH); Wanchin Chou, Vice Chair (CT); Robert Ridenour (FL); Judy Mottar (IL); Anna Krylova (NM); Halina Smosna (NY); and Will Davis (SC).

1. Adopted Proposal 2022-02-P (Underwriting Risk Line 1 Factors)

The Working Group conducted an e-vote to consider adoption of proposal 2022-02-P (Underwriting Risk Line 1 Factors).

Mr. Chou made a motion, seconded by Mr. Davis, to adopt proposal 2022-02-P (*see NAIC Proceedings – Summer 2022, Capital Adequacy (E) Task Force, Attachment One-A*). The motion passed unanimously.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group adjourned.

Property and Casualty Risk-Based Capital (E) Working Group
Virtual Meeting
June 7, 2022

The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met June 7, 2022. The following Working Group members participated: Tom Botsko, Chair (OH); Wanchin Chou, Vice Chair, (CT); Charles Hale (AL); Robert Ridenour (FL); Judy Mottar (IL); Anna Krylova (NM); Halina Smosna and HauMichael Ying (NY); Will Davis (SC); Miriam Fisk, Monica Avila, and Rebecca Armon (TX); and Adrian Jaramillo and Michael Erdman (WI). Also participating were: Chris Erwin (AR); Rolf Kaumann and Mitchell Bronson (CO); Adrienne Lupo (DE); Kevin Clark (IA); Julie Lederer (MO); Gordon Hay, Lindsay Crawford, and Justin Schrader (NE); and Steve Drutz (WA).

1. Re-Exposed Proposal 2022-02-P (Underwriting Risk Line 1 Factors)

Mr. Botsko said that proposal 2022-02-P, which provides a routine annual update to the Line 1 premium and reserve industry underwriting factors in the property/casualty (P/C) risk-based capital (RBC) formula, was exposed for a 30-day public comment period ending May 26. He stated that the Working Group received a comment letter from the State of Connecticut during the exposure period.

Mr. Chou indicated that some lines of business with smaller populations, such as the international and financial/mortgage lines, are volatile. He asked the Working Group to consider: 1) the credibility of the lines in the future; 2) how the international line statistics should be reported; 3) a referral to Blanks (E) Working Group for the possibility of modifying the definition of international line based on the Working Group's further discussion as the American Academy of Actuaries (Academy) is reviewing the possibility of changing the methodology to address this concern in the future; and 4) using the factor of 1.14 for PR017 Line 1 Reserves and 1.072 for PR018 Line 1 Premiums for 2022 reporting.

Ralph Blanchard (Travelers Companies) commented that the lower the industry factor, the higher the charge for the individual companies. He also stated that the formula included a 50% weight for the company experience adjustment and a diversification credit across all the lines. He recommended the state insurance regulators look at the RBC charge in the total for all the lines—not just focus on one single line.

Mr. Botsko urged the Working Group to consider one of the two options: 1) adopt the proposal with the original calculated factors; 2) adopt the recommended factors from the State of Connecticut; and 3) re-expose both sets of factors for another 10-day public comment period ending June 16.

After further discussion, the Working Group agreed to re-expose proposal 2022-02-P for a 10-day public comment period ending June 16.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group adjourned.

Draft: 5/3/22

Property and Casualty Risk-Based Capital (E) Working Group
Virtual Meeting
April 26, 2022

The Property and Casualty Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force met April 26, 2022. The following Working Group members participated: Tom Botsko, Chair (OH); Wanchin Chou, Vice Chair, Qing He, and Amy Waldhauer (CT); Charles Hale (AL); Nicole Crockett (FL); Judy Mottar (IL); Anna Krylova (NM); Halina Smosna and HauMichael Ying (NY); Will Davis (SC); Miriam Fisk, Monica Avila, and Rebecca Armon (TX); and Adrian Jaramillo (WI). Also participating were: Adrienne Lupo (DE); Julie Lederer (MO); Gordon Hay (NE); Jack Broccoli (RI); Trey Hancock (TN); and Steve Drutz (WA).

1. Adopted its Spring National Meeting Minutes

Mr. Botsko said the Working Group met March 23.

Mr. Chou made a motion, seconded by Mr. Davis, to adopt the Working Group's March 23 minutes (*see NAIC Proceedings – Spring 2022, Capital Adequacy (E) Task Force, Attachment Five*). The motion passed unanimously.

2. Adopted Proposal 2021-17-CR MOD (Wildfire Information-Only Reporting Exemption)

Scott Williamson (Reinsurance Association of America—RAA) said a modification of proposal 2021-17-CR was created for those smaller companies, where the modeling requirements would impose a cost and compliance burden that represents an outsized cost relative to the incremental benefit of providing the modeled data for information-only purposes at the Spring National Meeting. He also stated that this modification would no longer be valid when the wildfire peril is added to the Rcat component unless the companies qualify under the exemptions listed in PR027 Interrogatory items C(7), C(8), or C(9). In addition, he indicated that the revision was made during the exposure period based on one comment letter from the Missouri Department of Commerce and Insurance (DCI) regarding some non-substantive editorial updates in the instructions.

Mr. Chou made a motion, seconded by Ms. Mottar, to adopt proposal 2021-17-CR MOD (*see NAIC Proceedings – Summer 2022, Capital Adequacy (E) Task Force, Attachment Two-A*). The motion passed unanimously.

3. Adopted Proposal 2022-01-P (Remove Trend Test Footnote)

Mr. Botsko said the intent of this proposal is to remove the trend test for information-only wordings in the PR033 footnote, as it has been adopted by every state. He also stated that the Working Group did not receive any comments during the exposure period.

Mr. Chou made a motion, seconded by Ms. Krylova, to adopt proposal 2022-01-P (*see NAIC Proceedings – Summer 2022, Capital Adequacy (E) Task Force, Attachment Two-B*). The motion passed unanimously.

4. Exposed Proposal 2022-02-P (Underwriting Risk Line 1 Factors)

Mr. Botsko said proposal 2022-02-P provided a routine annual update to the Line 1 premium and reserve industry underwriting factors in the property/casualty (P/C) risk-based capital (RBC) formula. He indicated that for some lines of business with smaller populations, such as the international line of business, both reserve and premium factors are driven by three companies and could be fluctuated or biased by different factors. He also stated that

the American Academy of Actuaries (Academy) is in the process of reviewing the Line 1 calculation methodology; recommendations will be provided soon. Mr. Chou recommended that the Working Group consider removing those three companies, as this fluctuation may affect statistical reporting. Mr. Williamson agreed with Mr. Chou's comments. David Traugott (Academy) said the new soon to be proposed Line 1 methodology may not completely fix this issue. However, the Academy is reviewing the possibility of using just the Line 1 factor on those volatile lines to address this concern.

The Working Group agreed to expose proposal 2022-02-P for a 30-day public comment period ending May 26.

5. Exposed Affiliated Investments Instructions and Structures

Mr. Botsko said the Affiliated Investments Ad Hoc Group was established six years ago to review whether: 1) the RBC instructions and formulas should be consistent across all lines; 2) the formulas and the instructions can be modified so state insurance regulators can more easily identify and explain discrepancies; and 3) the affiliate risk charges can be modified to align with the Group Capital Calculation (GCC) more closely. He urged the interested parties to review the drafted instructions and structures and provide comments at the upcoming meetings.

The Working Group agreed to expose the affiliated investment instructions and structures for a 60-day public comment period ending June 25.

6. Forwarded the Referral Regarding the Reinsurer Designation Equivalent Rating Factors to the Blanks (E) Working Group

Mr. Botsko said proposal 2021-14-P, which intends to eliminate the double counting effect of the operational risk charge on the component, was adopted during the Spring National Meeting. He said the adopted factors should also be made to the Annual Statement, Schedule F, Part 3, as the R3 charge is derived from the Schedule F, Part 3, Column 35 and 36, Line 9999999. He said the Working Group drafted a referral on requesting the change in the Annual Statement to the Blanks (E) Working Group earlier. Mr. Williamson commented that the "500 index" in "Standard & Poor's 500 index" under the description column should be removed.

After reviewing the referral, the Working Group agreed to forward proposal 2021-14-P with the minor editorial changes to the Blanks (E) Working Group to request the Annual Statement revision.

7. Heard Updates on Current P/C RBC Projects from the Academy

Mr. Traugott said the status of the current P/C RBC projects that the Academy P/C RBC Committee is undertaking has essentially not changed since the updates in the last Spring National Meeting. He stated that the first project provided a report on underwriting risk Lines 4, 7, and 8 factors, which are anticipated to be shared with the Working Group for discussion this quarter. He also said the Academy expects to provide another report for the underwriting risk Line 14 for reserves and premiums factors to the Working Group by the end of 2022. He said the last report, which is the development of a revised approach of the Line 1 factor, will be presented to the Working Group by the end of 2022 or early 2023. Lastly, Mr. Botsko said the Working Group will continue discussing all the outstanding issues in June.

Having no further business, the Property and Casualty Risk-Based Capital (E) Working Group adjourned.

Newsletter Items for Adoption for 2022 for Property and Casualty RBC:

Date: July 2022

Volume: 26.1

Page 1: Intro Section:

What RBC Pages Should Be Submitted?

For year-end 2022 property/casualty (P/C) risk-based capital (RBC), hard copies of pages PR001–PR035, as well as pages PR038 and PR039, should be submitted to any state that requests a hard copy. Beginning with the year-end 2011 RBC, a hard copy was not required to be submitted to the NAIC, but a portable document format (PDF) file representing the hard copy filing is part of the electronic filing with the NAIC.

Page 1+: Items Adopted for 2022:

Credit Risk

R3 Factor Adjustment

The Capital Adequacy (E) Task Force adopted proposal 2021-14-P to remove the embedded 2% operational risk contained in the R3 credit risk component during its March 28, 2022, meeting.

Trend Test

Remove Trend Test for Information-Only Footnote

The Capital Adequacy (E) Task Force adopted proposal 2022-01-P to remove the trend test for the information-only footnote in PR033 during its April 28, 2022, meeting.

Washington, DC 444 North Capitol Street NW, Suite 700, Washington, DC 20001-1509 p | 202 471 3990 f | 816 460 7493

Catastrophe RiskAdding KCC Model

As a result of the adoption of proposal 2021-15-CR by the Capital Adequacy (E) Task Force during its March 28, 2022, meeting, the Karen Clark & Company (KCC) catastrophe model was included as one of the approved third-party commercial vendor catastrophe models.

Adding Wildfire Peril for Informational Purposes Only

As a result of the adoption of proposal 2021-17-CR by the Capital Adequacy (E) Task Force during its March 28, 2022, meeting, the wildfire peril was added as one of the catastrophe risk perils for informational purposes only in the Rcat component.

After further discussion, the Working Group agreed that the modeling requirements would impose a cost and compliance burden to the smaller companies during the for informational purposes only reporting years. Therefore, the Capital Adequacy (E) Task Force adopted the modification of this proposal to allow an exemption option during the informational purposes period only.

New Industry Average Risk Factors - Annual Update

During its June 30, 2022, meeting, the Capital Adequacy (E) Task Force adopted the annual update of industry average development factors:

PR017 Underwriting Risk - Reserves

Page 2+: Editorial Changes:**Underwriting and Investment Exhibit - Premiums Written (PR035)**

As a result of the adoption of the Annual Statement proposal 2020-33BWG, the annual statement lines were modified to provide consistency in the granularity of reporting of annual statement lines in different pages. The amounts reported in PR035 Column (1) should agree with the amounts reported for the identical line in Column 1 of the Annual Statement Underwriting and Investment Exhibit, Part 1B, with the following exceptions:

PR035, Line 2 should equal Annual Statement Underwriting and Investment Exhibit, Part 1B, Column 6, the sum of Lines 2.1 through 2.5.

PR035, Line 5 should equal Annual Statement Underwriting and Investment Exhibit, Part 1B, Column 6, the sum of Lines 5.1 and 5.2.

PR035, Line 13 should equal Annual Statement Underwriting and Investment Exhibit, Part 1B, Column 6, the sum of Lines 13.1 and 13.2.

PR035, Line 15 should equal Annual Statement Underwriting and Investment Exhibit, Part 1B, Column 6, the sum of Lines 15.1 through 15.9.

PR035, Line 19.1 and 19.2 should equal Annual Statement Underwriting and Investment Exhibit, Part 1B, Column 6, the sum of Lines 19.1 and 19.2.

PR035, Line 19.3 and 19.4 should equal Annual Statement Underwriting and Investment Exhibit, Part 1B, Column 6, the sum of Lines 19.3 and 19.4.

PR035, Line 21.1 and 21.2 should equal Annual Statement Underwriting and Investment Exhibit, Part 1B, Column 6, the sum of Lines 21.1 and 21.2.

Last Page: RBC Forecasting & Warning:

RBC Forecasting and Instructions

The P/C RBC forecasting spreadsheet calculates RBC using the same formula presented in the 2022 NAIC *Property & Casualty Risk-Based Capital Report Including Overview & Instructions for Companies*. The entire RBC publication, including the forecasting spreadsheet, is available to download from [NAIC Account Manager](#) through the NAIC Publications Department. The User Guide is no longer included in the RBC publications.

WARNING: The RBC forecasting spreadsheet CANNOT be used to meet the year-end RBC electronic filing requirement. RBC filing software from an annual financial statement software vendor should be used to create the electronic filing. If the forecasting worksheet is sent instead of an electronic filing, it will not be accepted, and the RBC will not have been filed.

Presentation to NAIC Property and Casualty Risk-Based Capital (E) Working Group

David Traugott, MAAA, FCAS
Chairperson, Academy Property and Casualty Risk-Based Capital
Committee

Methodology and Sample Results – For Discussion Only

AMERICAN ACADEMY of ACTUARIES
Objective. Independent. Effective.™

National Association of Insurance Commissioners (NAIC) – August 9

© 2021 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

Preliminaries

- This update describes the methodology and presents sample results that will be finalized in our soon to be released report to the working group.
- Our April 2021 report shows indicated reserve and premium risk factors based on updated experience.
- This report focuses on
 - Method to credit premium and reserve risk risk-based capital (RBC) amounts for anticipated investment income prior to payout (IIA).
 - Updated adjustment of proposed premium risk factors (line 4) for catastrophes.
 - Alternative safety margins for Working Group consideration.
 - Combined impacts of these changes, including updated risk factors provided in the April 2021 report.

Definitions

- Premium Risk charge means the discounted 87.5th percentile loss ratio plus 2017 expenses minus 100%.
- Reserve Risk Charge means the discounted 87.5th percentile reserve risk ratio plus 100%, minus 100% after discount.
 - The (undiscounted) reserve risk ratio is generally the movement in incurred losses from year 1 to year 10 divided by the loss reserve at year 1.
 - For example, if the 87.5th percentile reserve risk ratio is 25% and discount factor is 0.88, the reserve risk charge is $10\% = 1.25 \times 0.88 - 1$.
- “Committee” = American Academy of Actuaries Property and Casualty Risk-Based Capital Committee.
- “Working Group” = National Association of Insurance Commissioners (NAIC) Property and Casualty (P&C) Risk-Based Capital (E) Working Group

Payment Patterns

- Payment patterns were last calibrated in 2010 using data through 2008. These patterns used a methodology similar to the 1986 Federal Income Tax Law (FITL) method, allowing for up to 15 years of runoff.
- The Committee proposes longer payment patterns that allow for up to 40 years of runoff. Our analysis showed that 15 years of runoff was not long enough for some lines.

Payment Patterns – Premium Risk - Sample Results -

**Table 4.2A – Premium
Effect on Risk charges in Payment Pattern Methods and Changes in Interest Rates**

Row	(1) Payment Pattern Method	(2) Interest Rate	(3) Risk Chg	(4)		(5)

					% Change vs 5% 40 Yr		
4	40--Year Pattern	3.0%	0.899	23.3%	47.0%	7.5%	
5	40--Year Pattern	1.5%	0.946	29.9%	88.5%	14.1%	

Risk charges using Line 4 Factors from 2021 RBC Formula

- Risk Chg (Risk Charge), includes reserve risk factor and IIA.

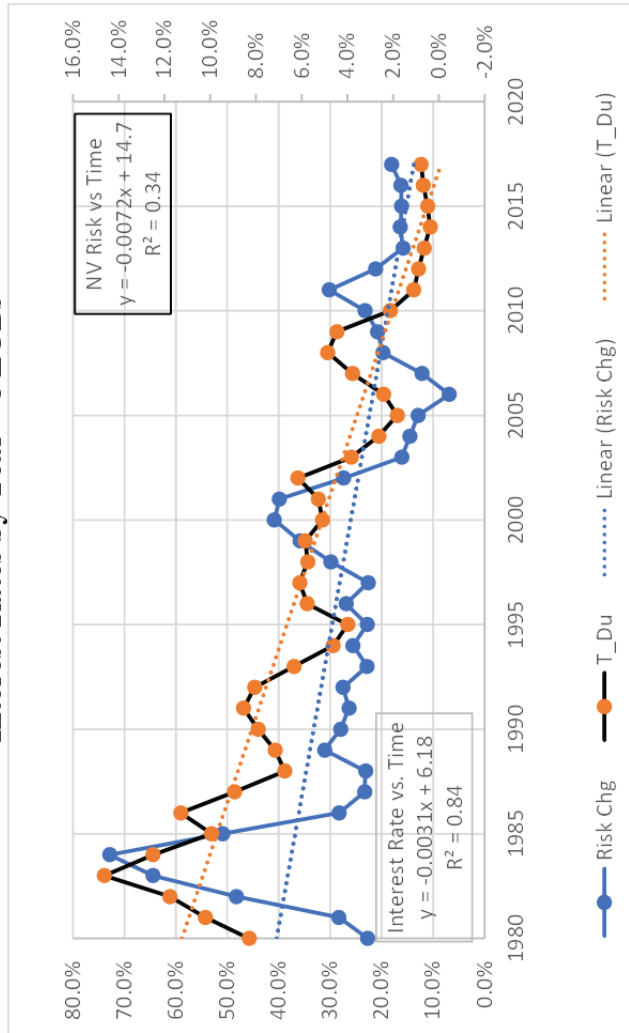

Connection Between Interest Rates and Premium/Reserve Risk

- Premium and reserve experience has historically varied with interest rates.
- Target underwriting results may vary with the investment income available. During periods with higher interest rates, loss ratios are higher and risk factors are generally higher.
- Adverse reserve development may vary with investment income, as reduced underwriting profitability may correlate with lower reserves and/or intentional or unintentional reserve discount, especially in the 1980s and early 1990s.
- High (low) interest rates may imply actual or anticipated high (low) inflation rates that might affect loss ratios or reserve development.
- In this analysis, the Committee uses treasury rates. US Treasury securities and other low-risk assets are a core P&C insurance industry asset. The lowest risk securities can be viewed as relating to the reserves and to the portion of capital equal to the RBC value.
- The Committee proposes a combined calibration that discounts each historical year according to appropriate interest rate at the time and then determines a risk factor from the discounted historical data.

Premium Risk versus Interest Rates

Table 5.2A – Premium Risk Average Indicated Nominal Risk Charge vs. US Treasury Interest Rates by Year – 8 LOBs

Adjusting Premium Risk Charges for Catastrophes

- Experience used to calibrate premium risk charges includes catastrophe losses.
- The Committee proposes an adjustment factor to remove impact of catastrophes for catastrophe-affected lines of business.
- Through partners at NAIC, the Committee used blinded RBC filing data to calculate premium risk factor including and excluding catastrophes.
- The proposed adjustment factor is based on the difference between the risk factor including catastrophes and the risk factor excluding catastrophes.

Safety Margin Options

- The indicated risk factors are based on an 87.5th percent safety margin implicit in the original RBC Formula risk charge calibration.
- The paper will provide indicated risk charges at higher safety levels and will outline arguments supporting a decision to either retain or increase the safety level.
- The decision on target safety levels is a policy matter for the NAIC Working Group to determine.

Safety Margin Options – Risk Charges

Forecasting and Resilience: Severe Thunderstorms

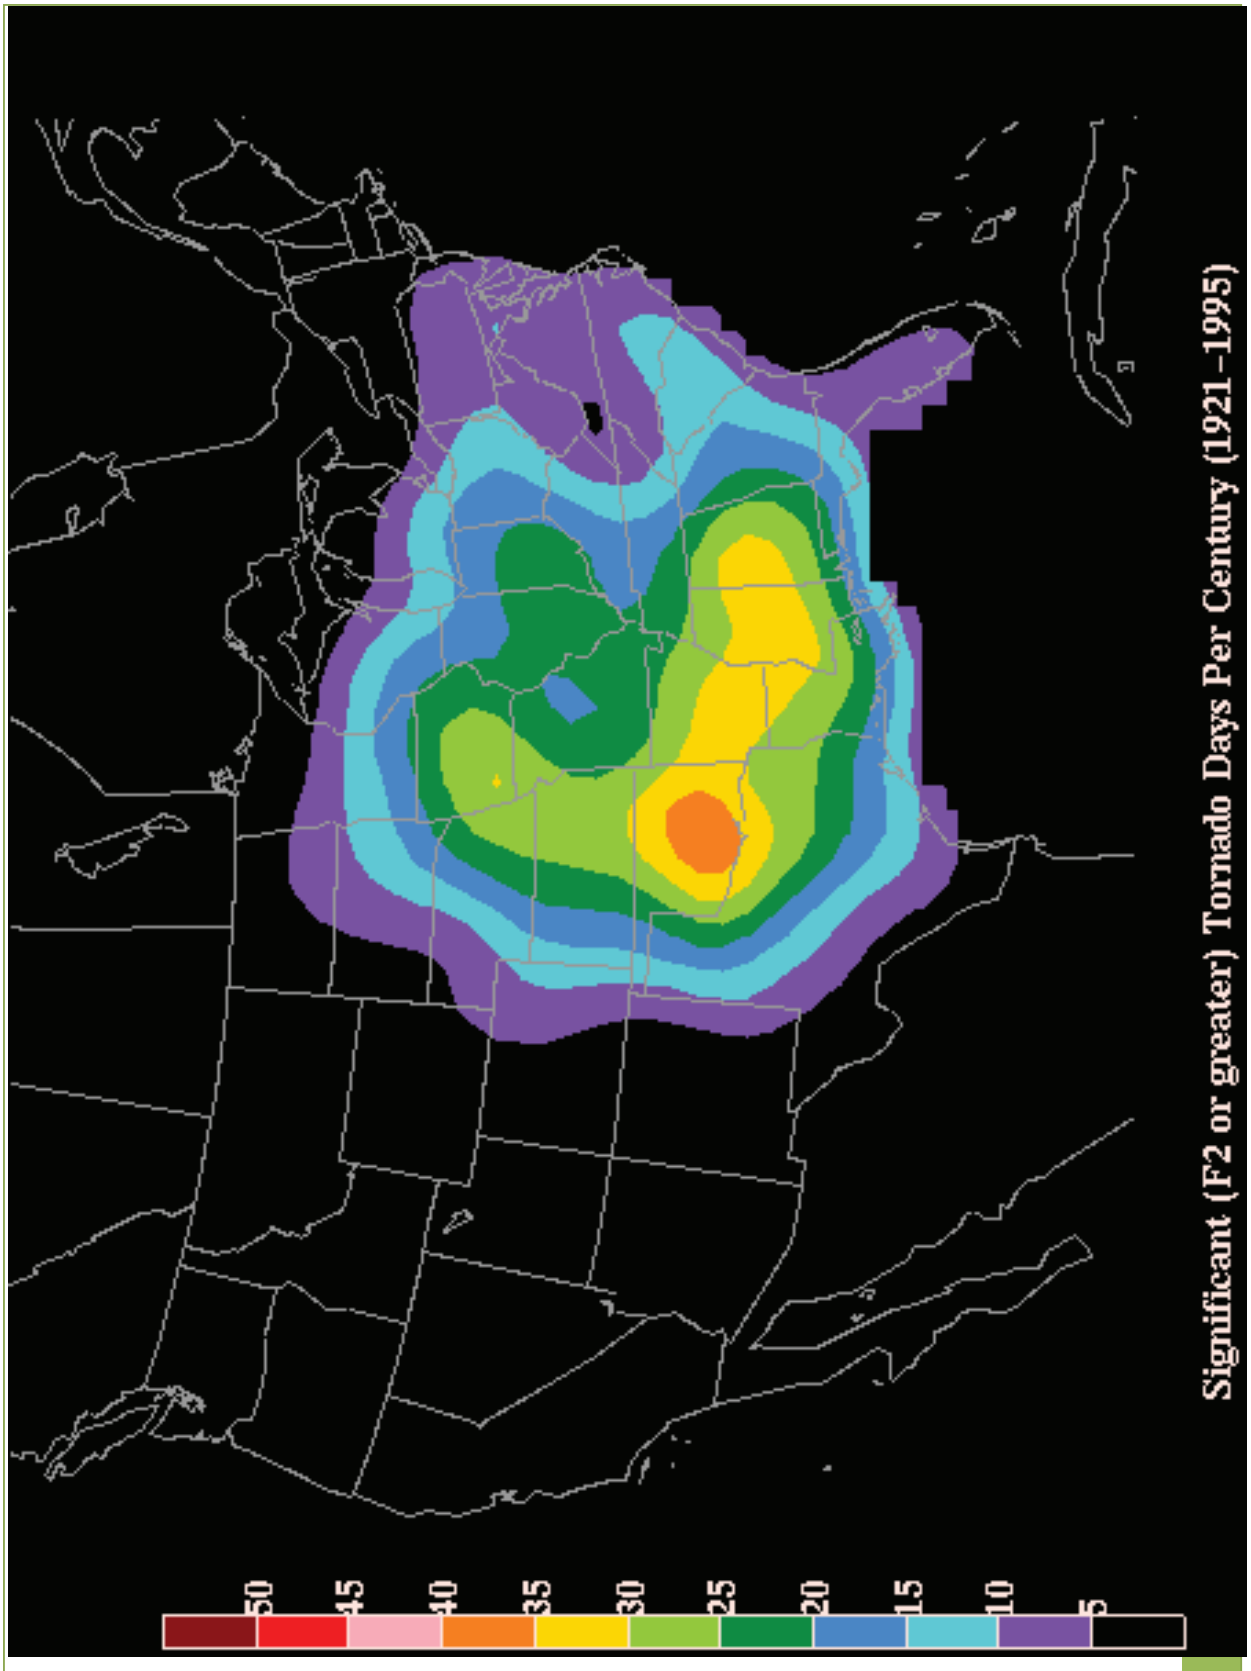

HAROLD E. BROOKS
NOAA/NATIONAL SEVERE STORMS LABORATORY

HAROLD.BROOKS@NOAA.GOV
@HEBROOKS87

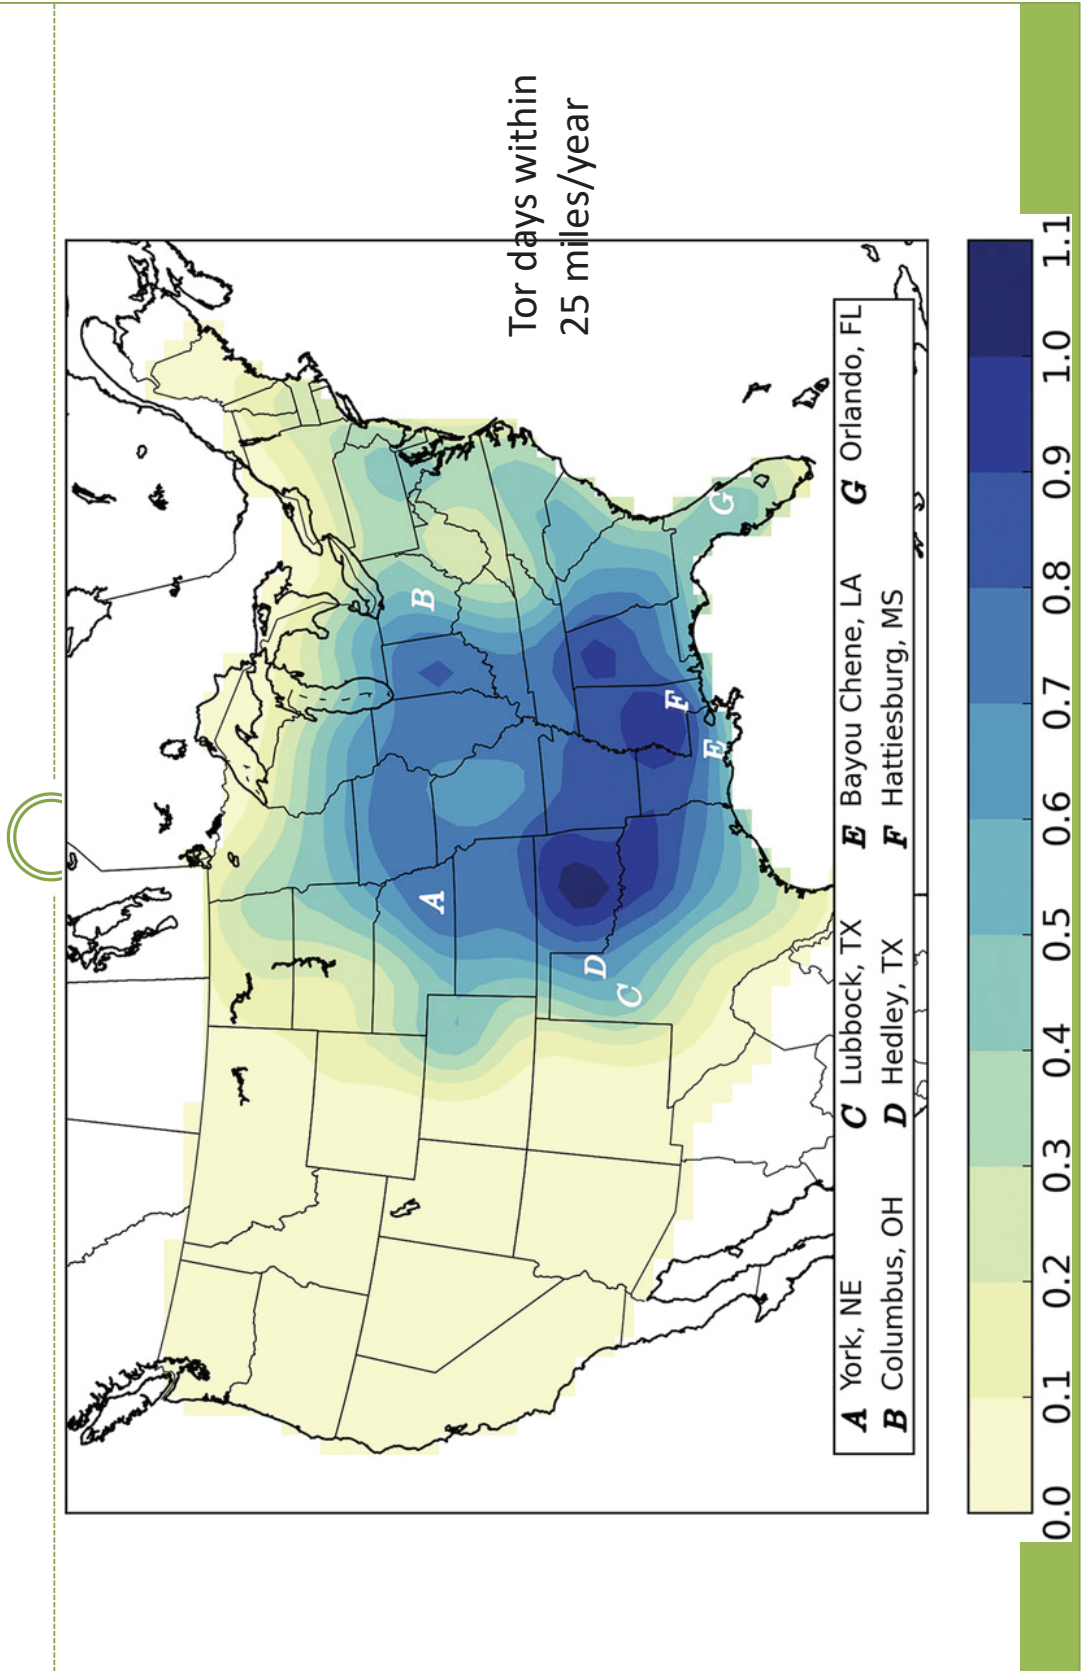

Background (Climatology)

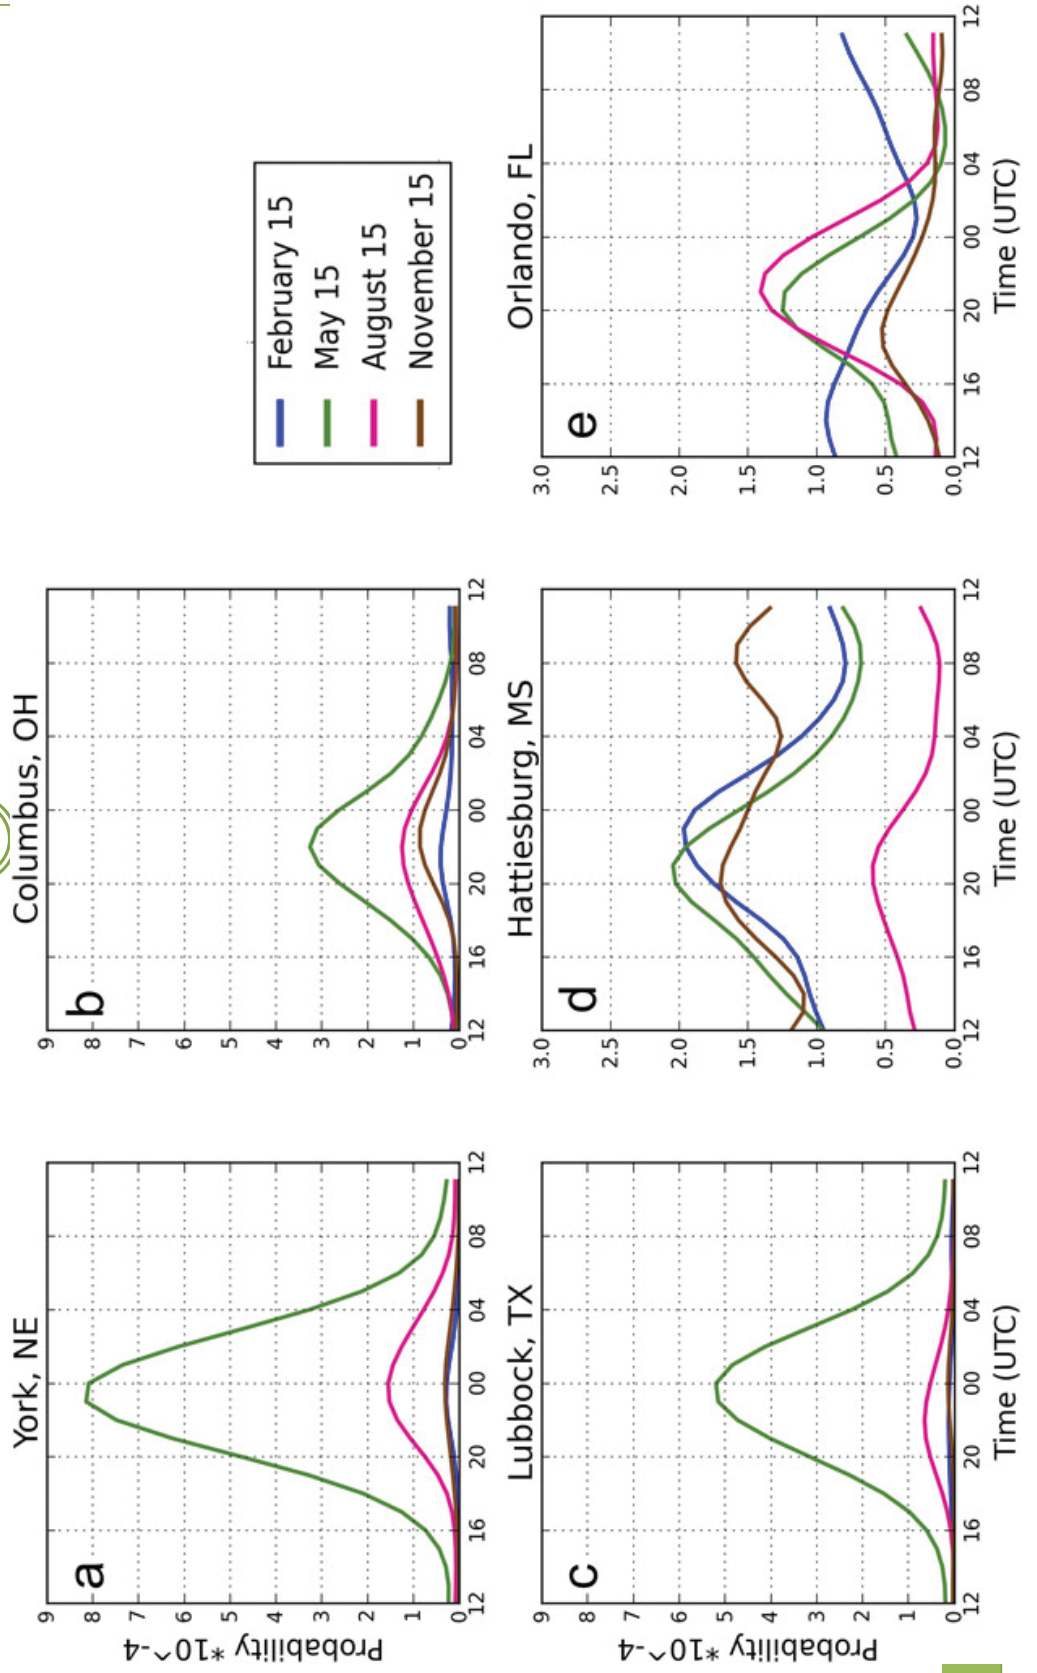

- Severe thunderstorms in US-any tornado, hail \geq 1 inch, winds \geq 58 mph (50 kts) (SPC)
- Severe thunderstorms anywhere, but particularly between the Rockies and Appalachians

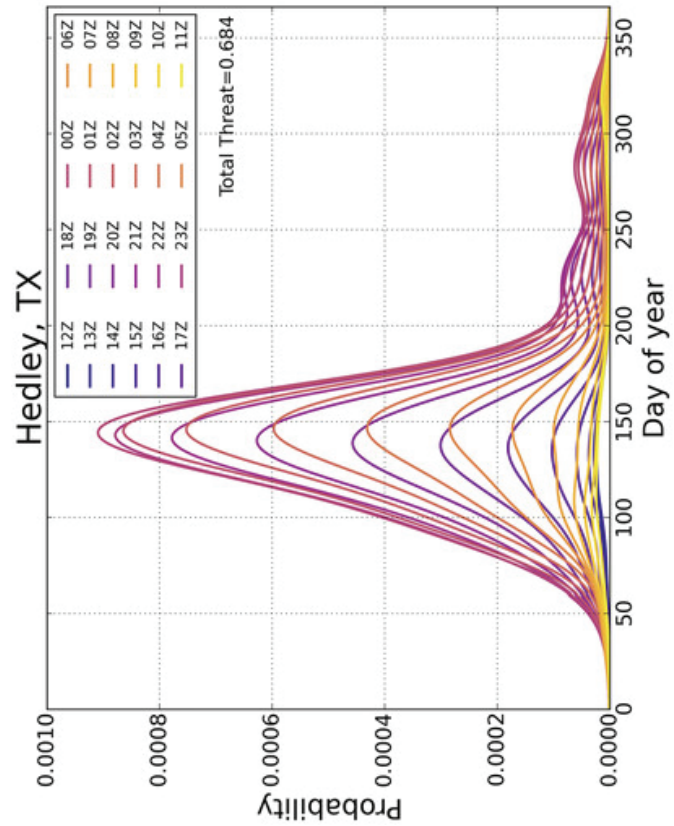

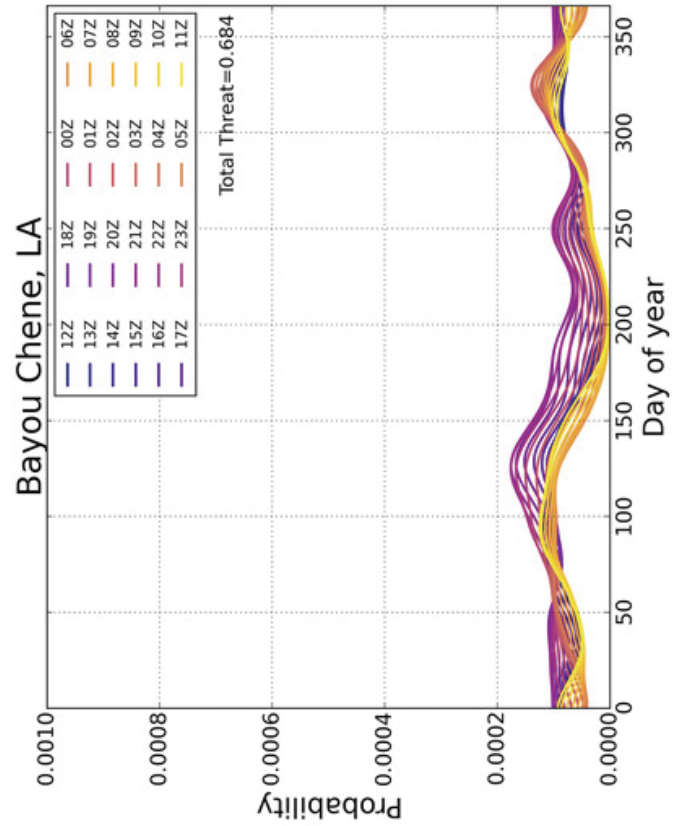

Tornado Occurrence (Krocak and Brooks 2020)

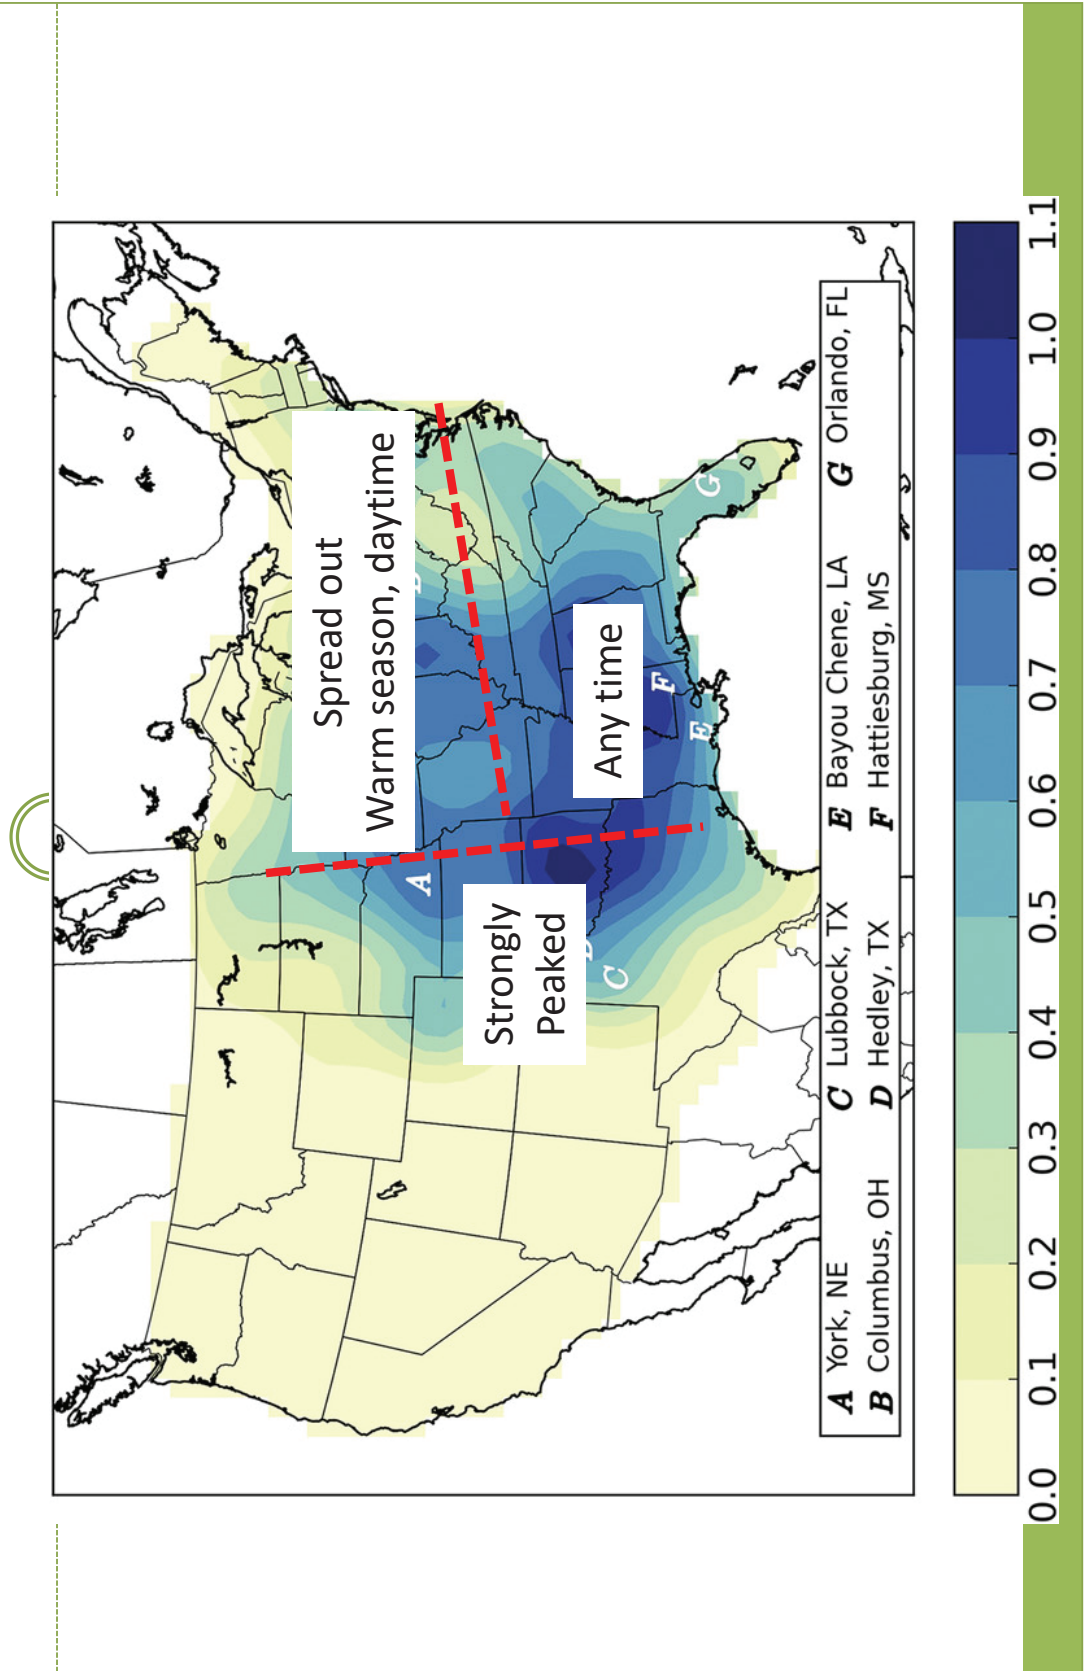

Diurnal Cycle At Different Times of Year

Annual Cycle by Every Hour of the Day

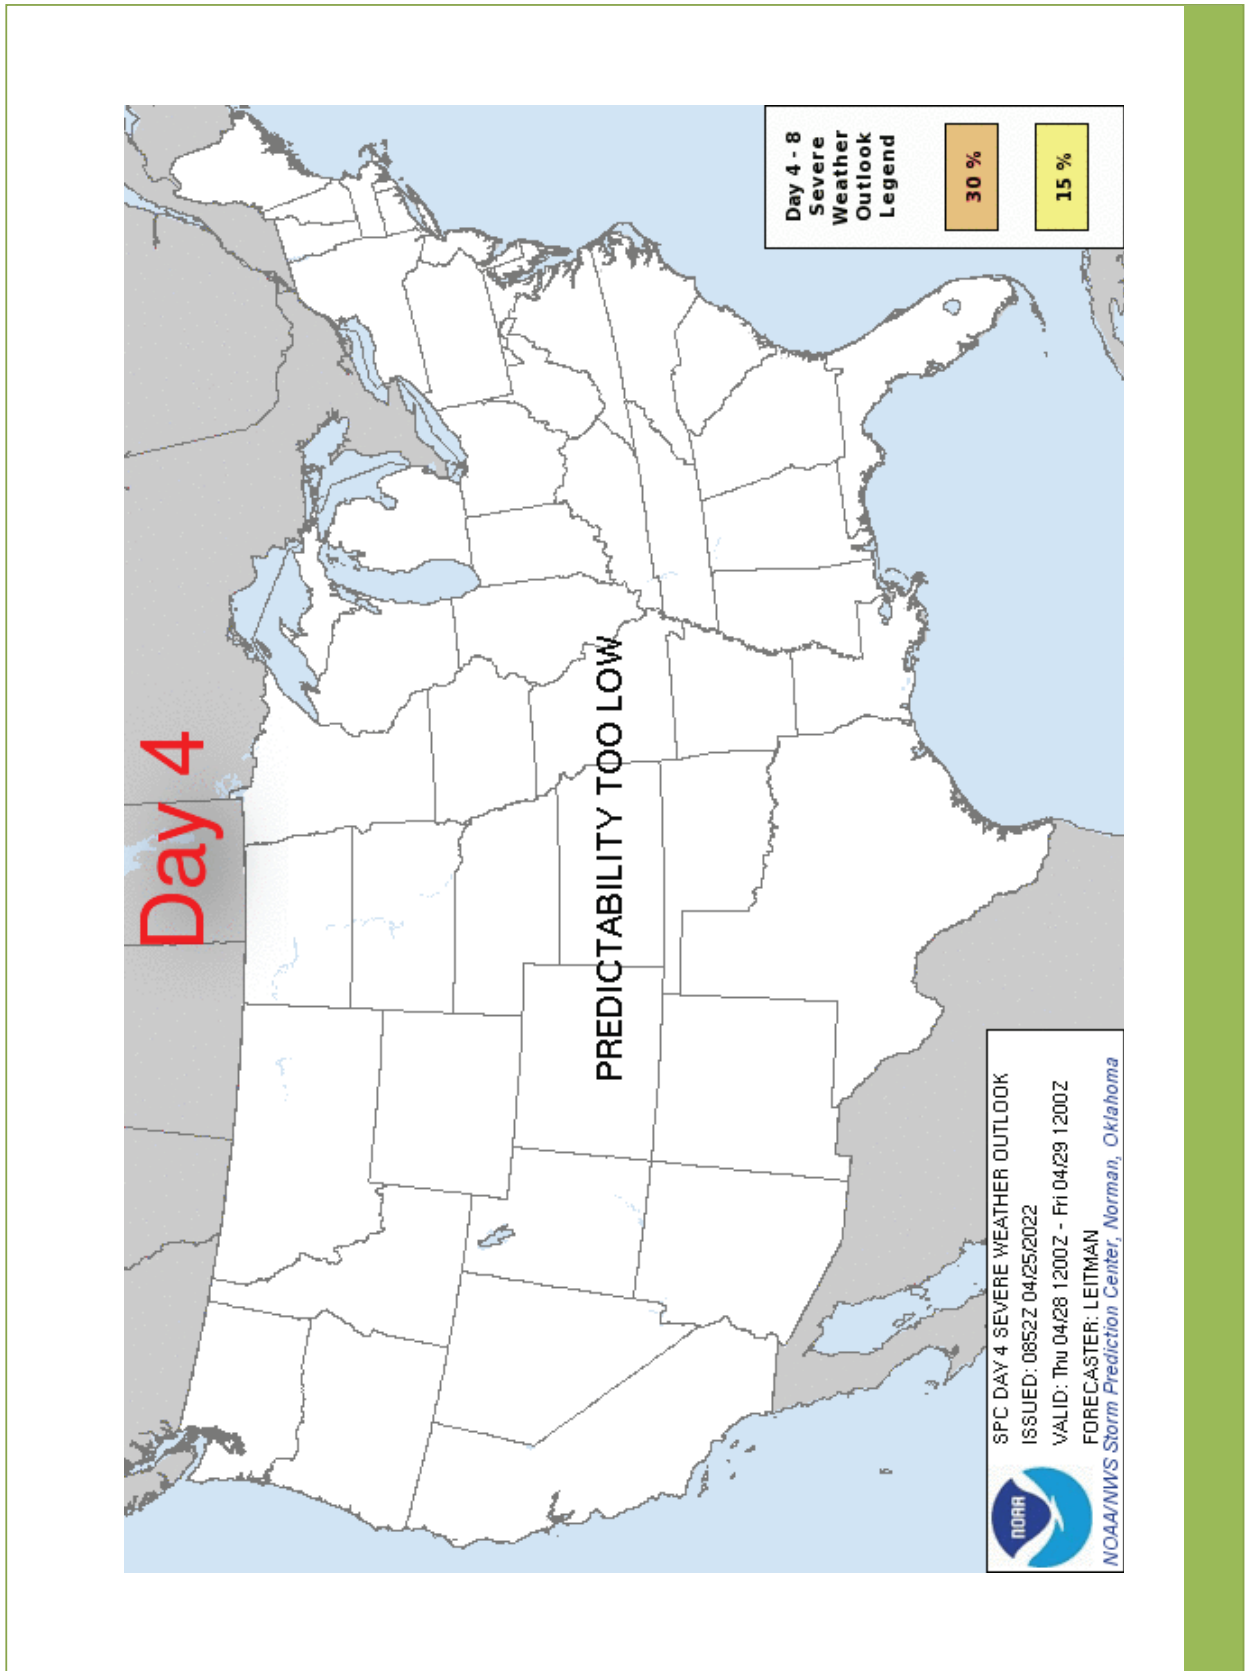

Tornado Occurrence (Krocak and Brooks 2020)

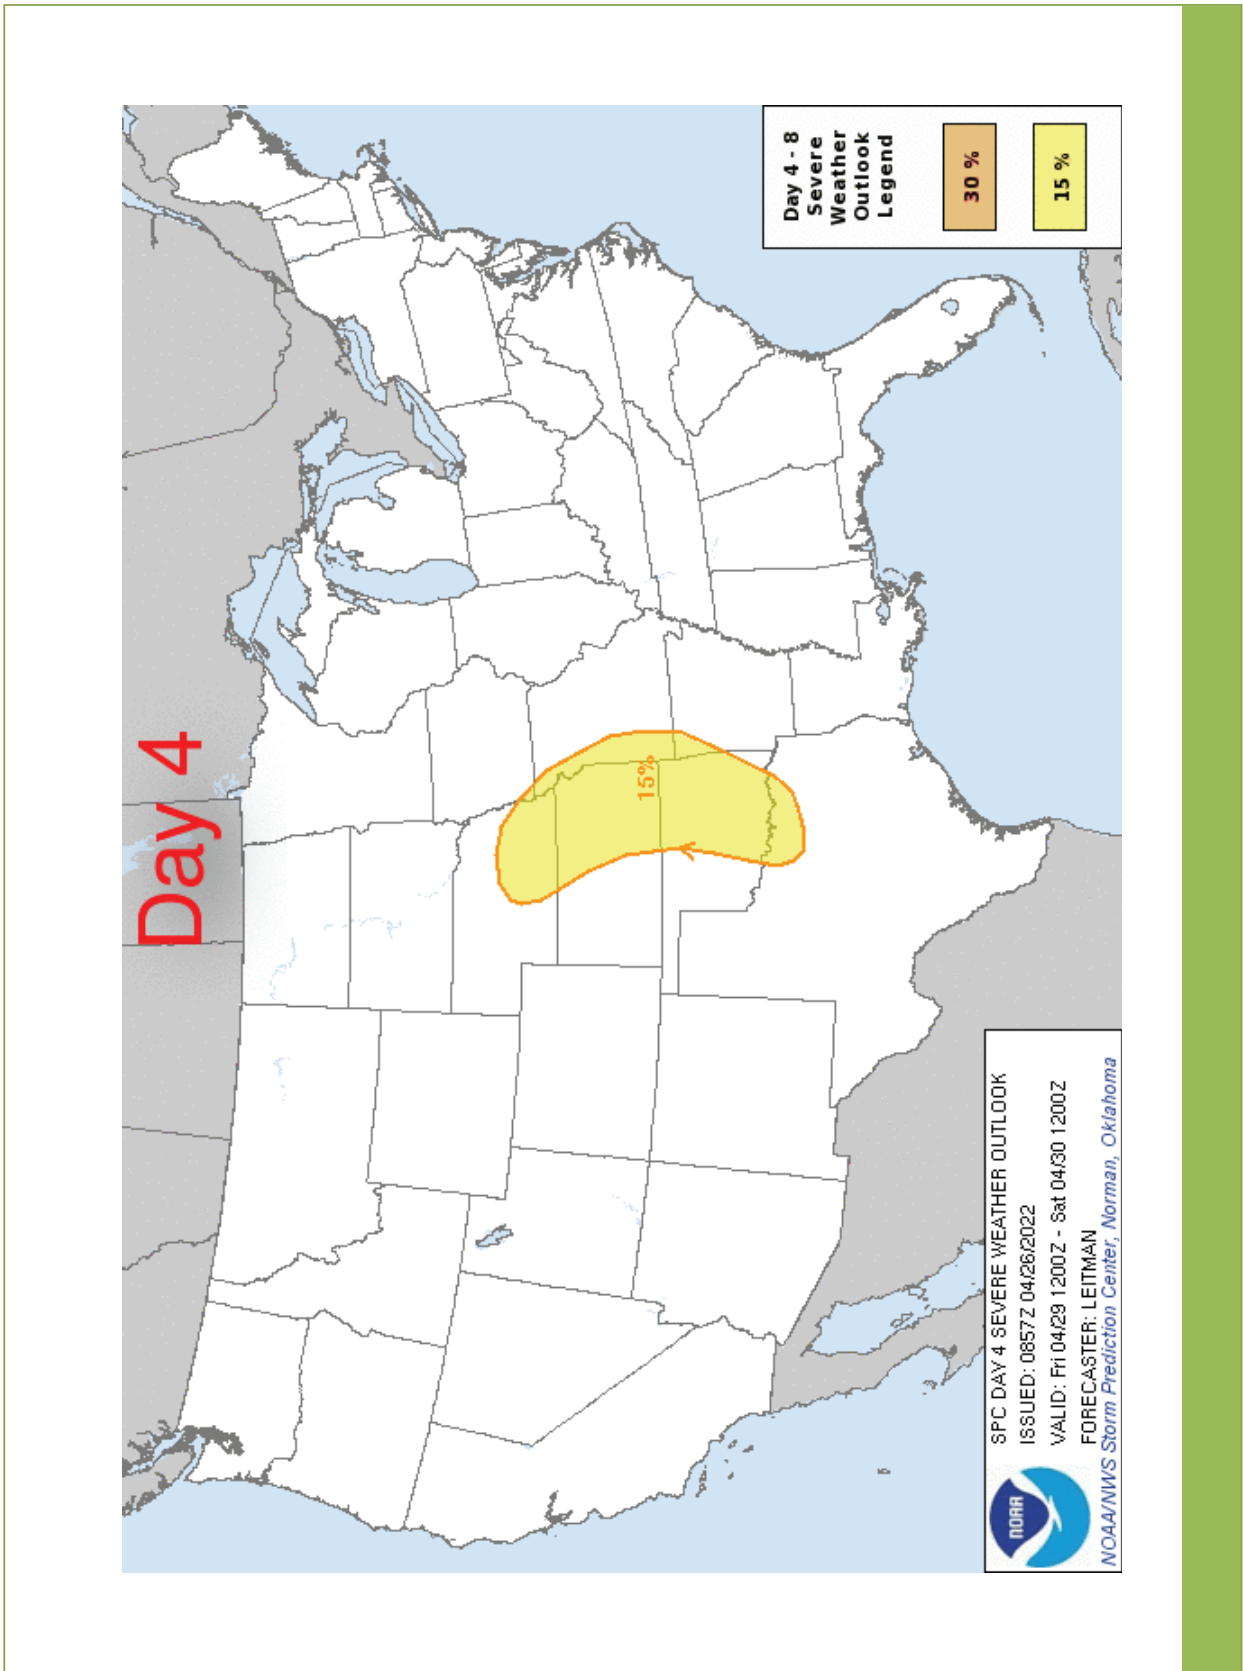

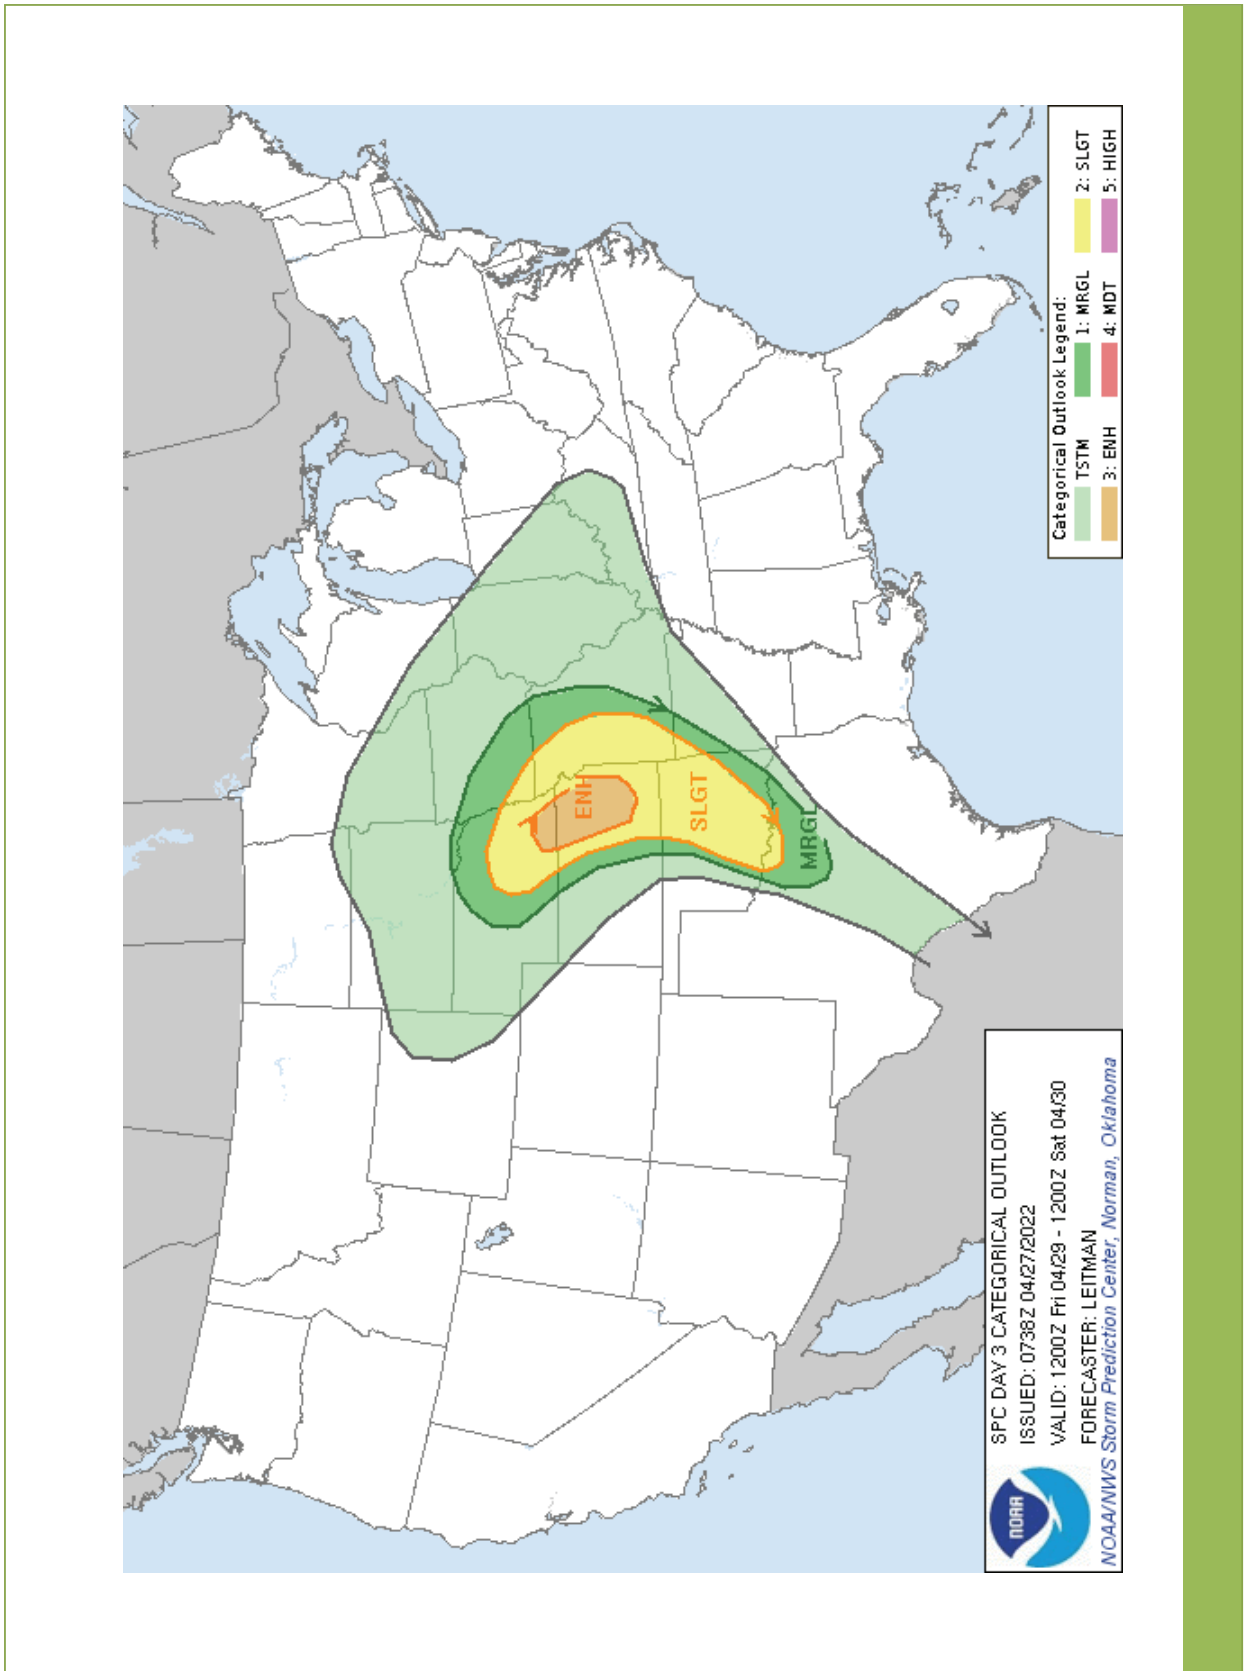

Forecasting Across Time and Space

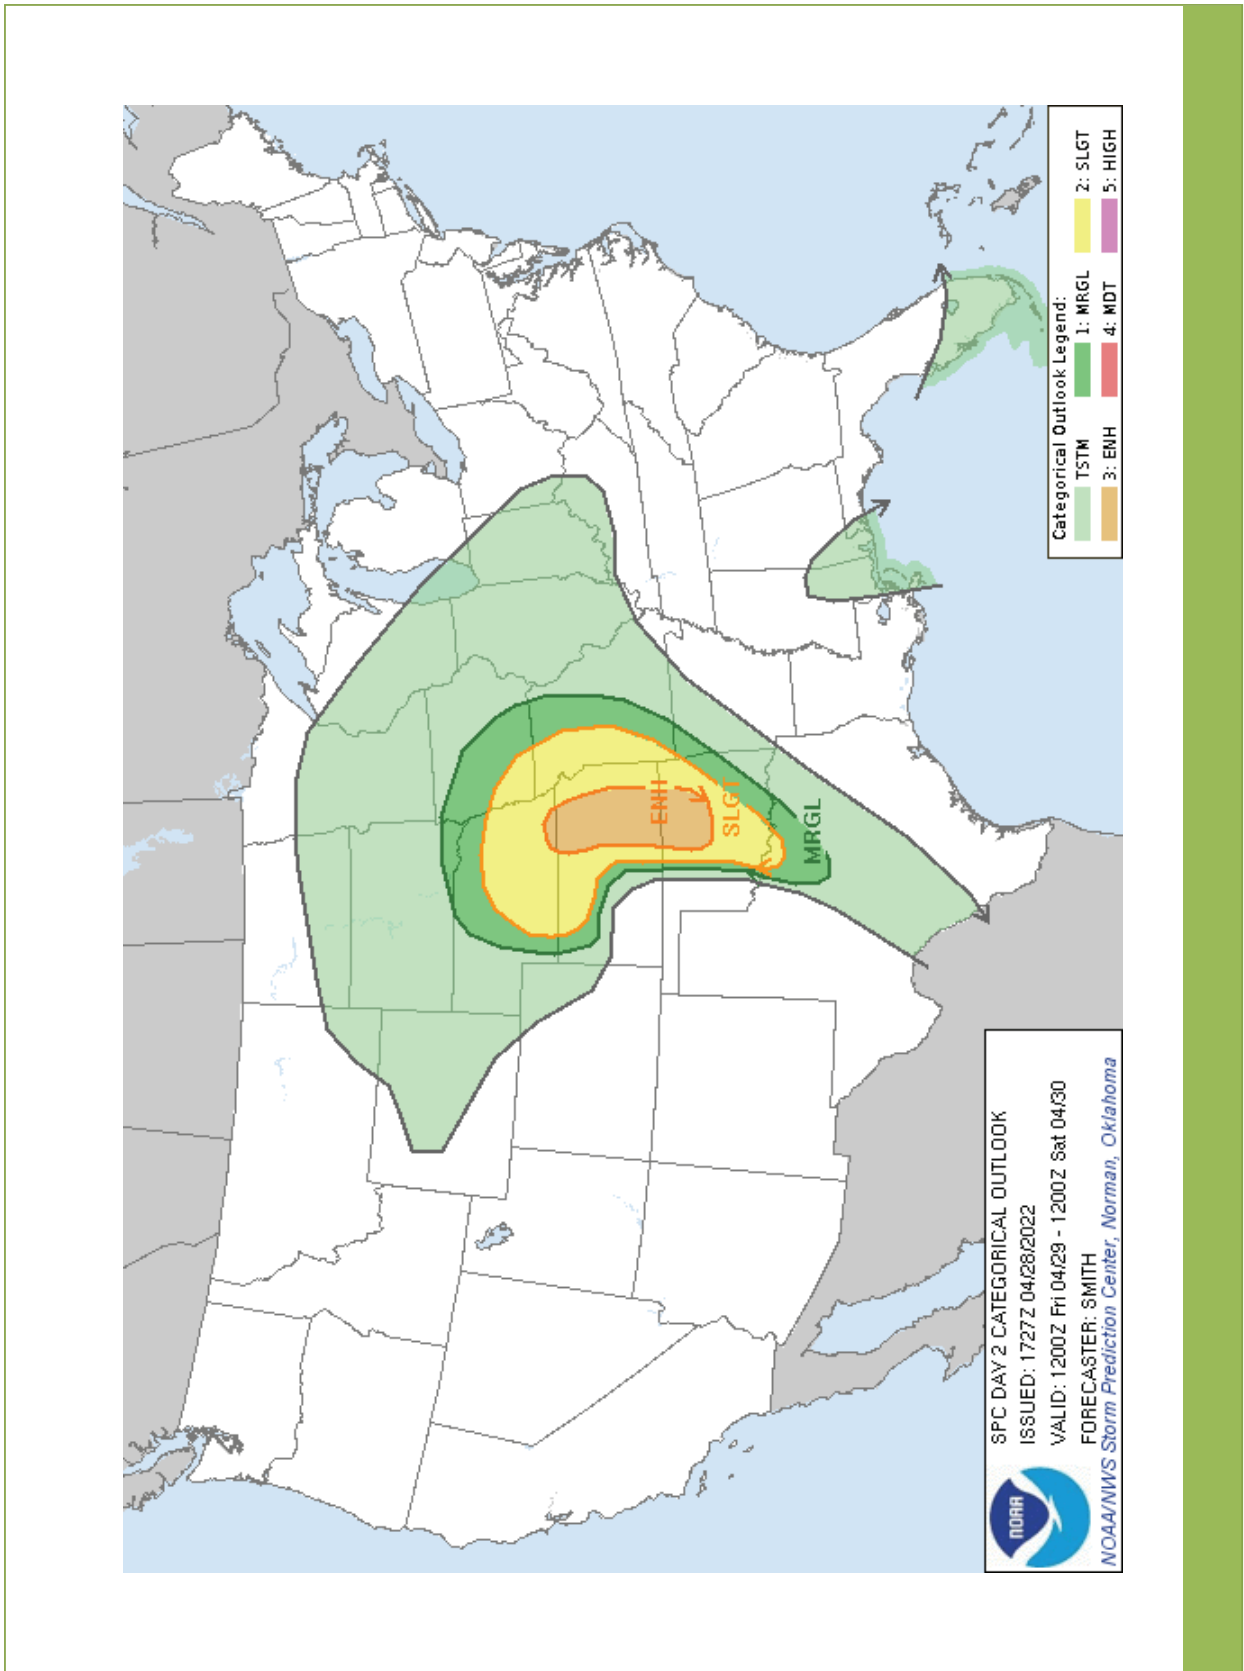

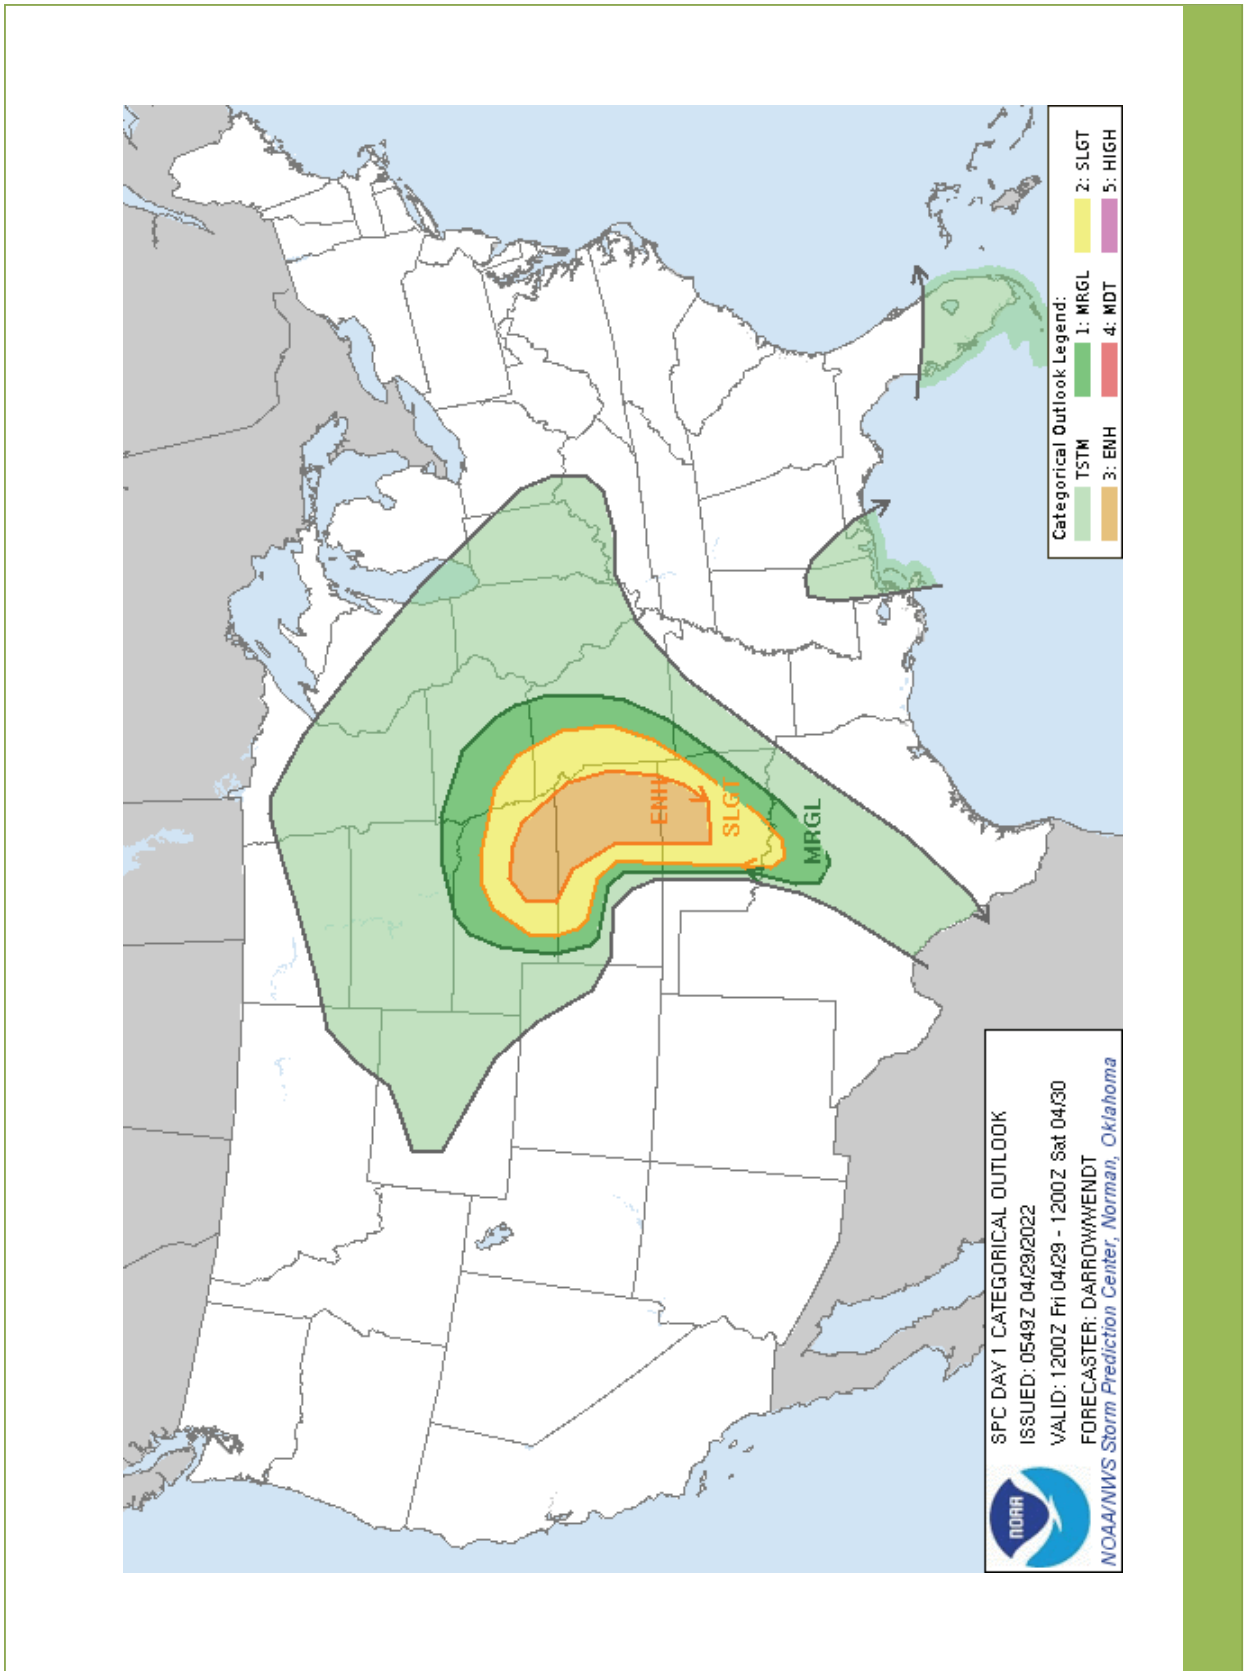

- **Currently, forecasts begin “Day 8” (SPC)**
 - ≥ 1 day are for coverage within 25 miles of a point on the day
- **Watches (SPC)**
 - Conditions are favorable for storms within area
 - ~State-size, 6 hours
- **Warnings (Local Forecast Office)**
 - This storm is severe or will be
 - 300 sq mi., 45 minutes

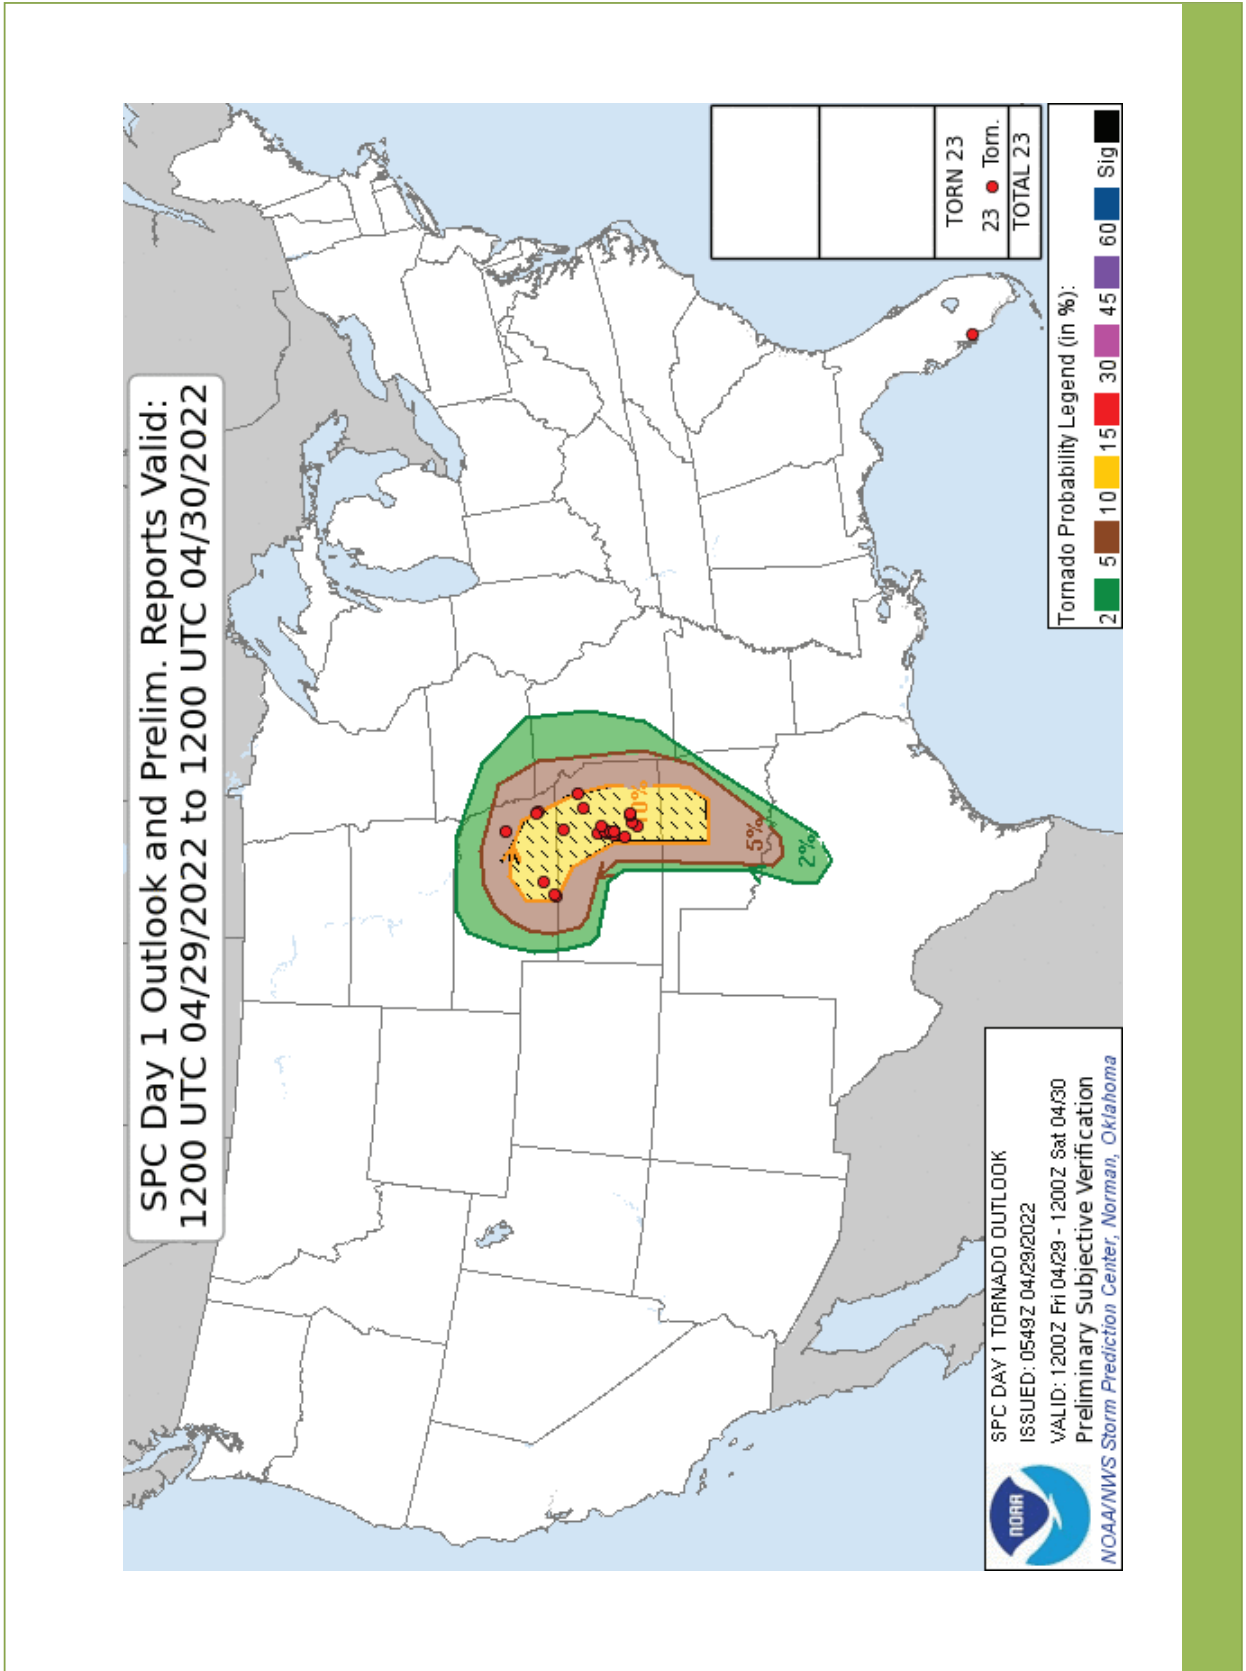

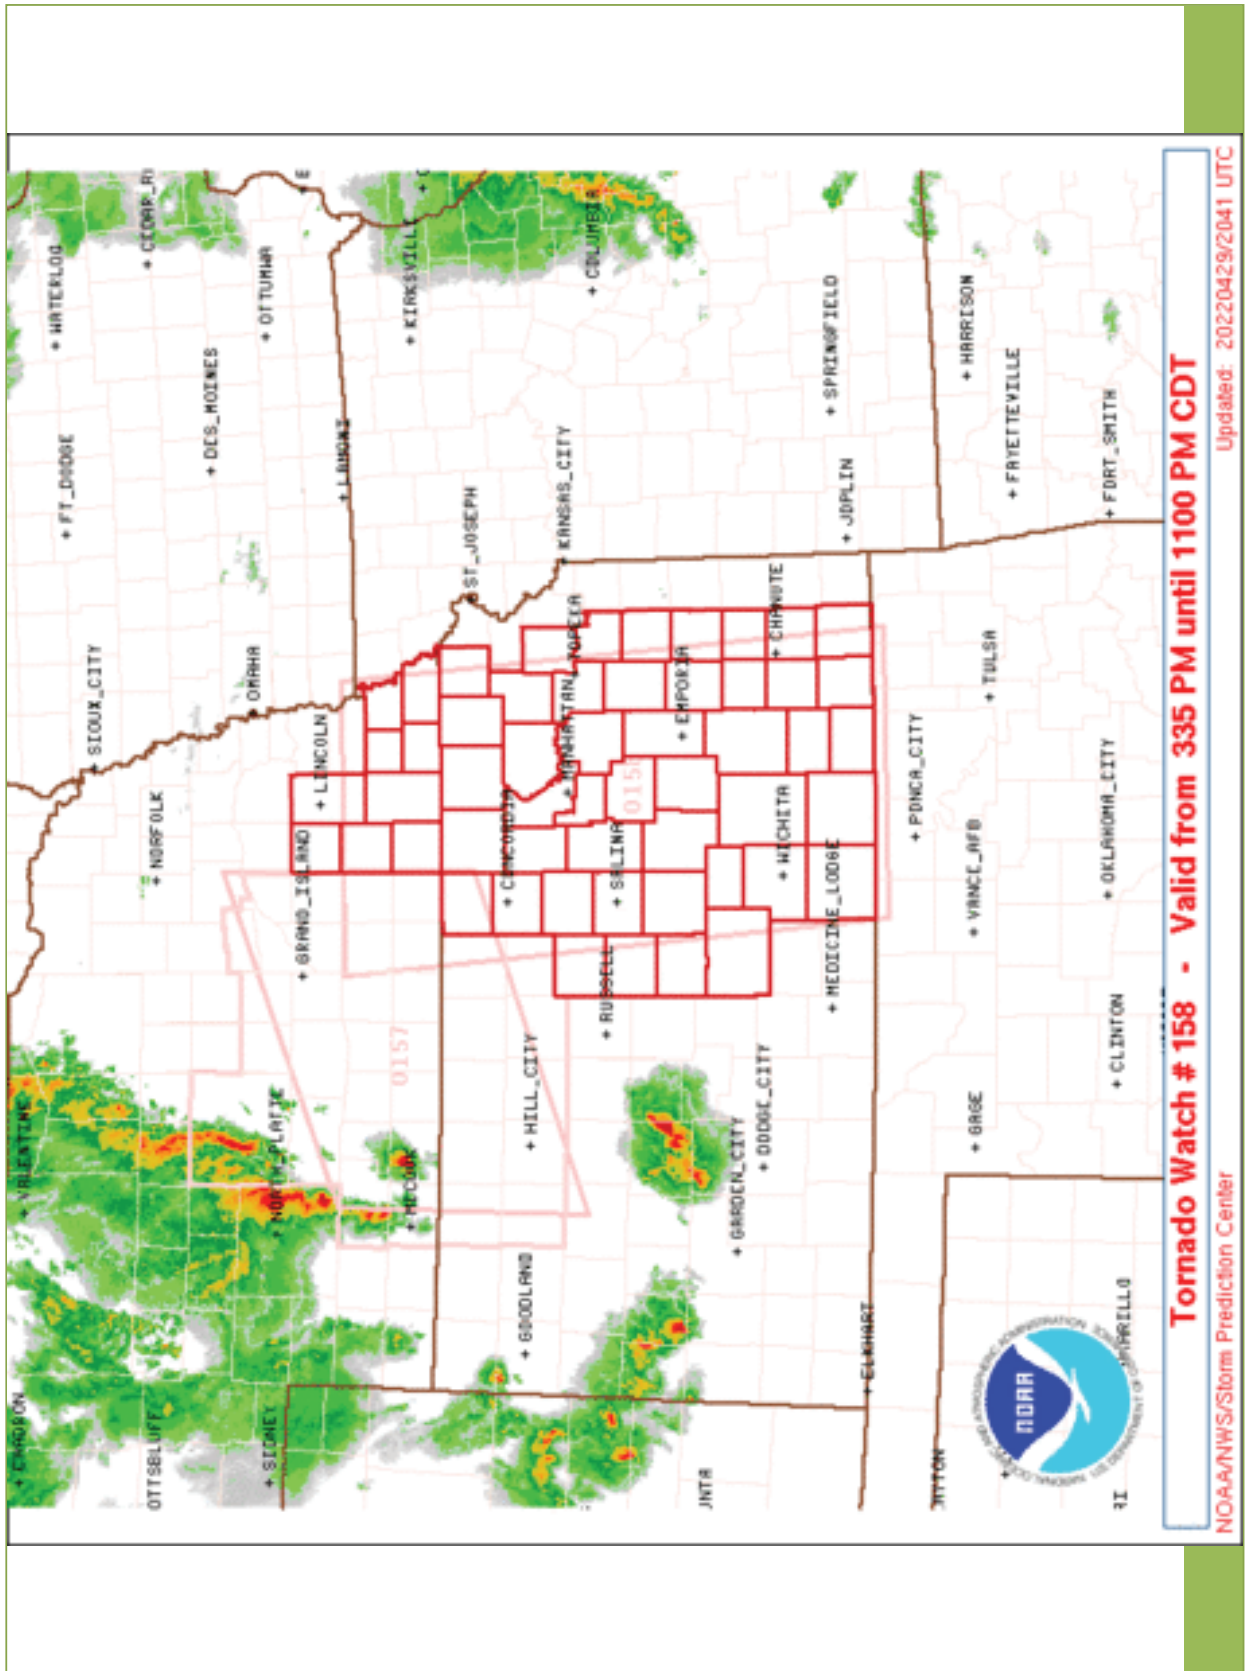

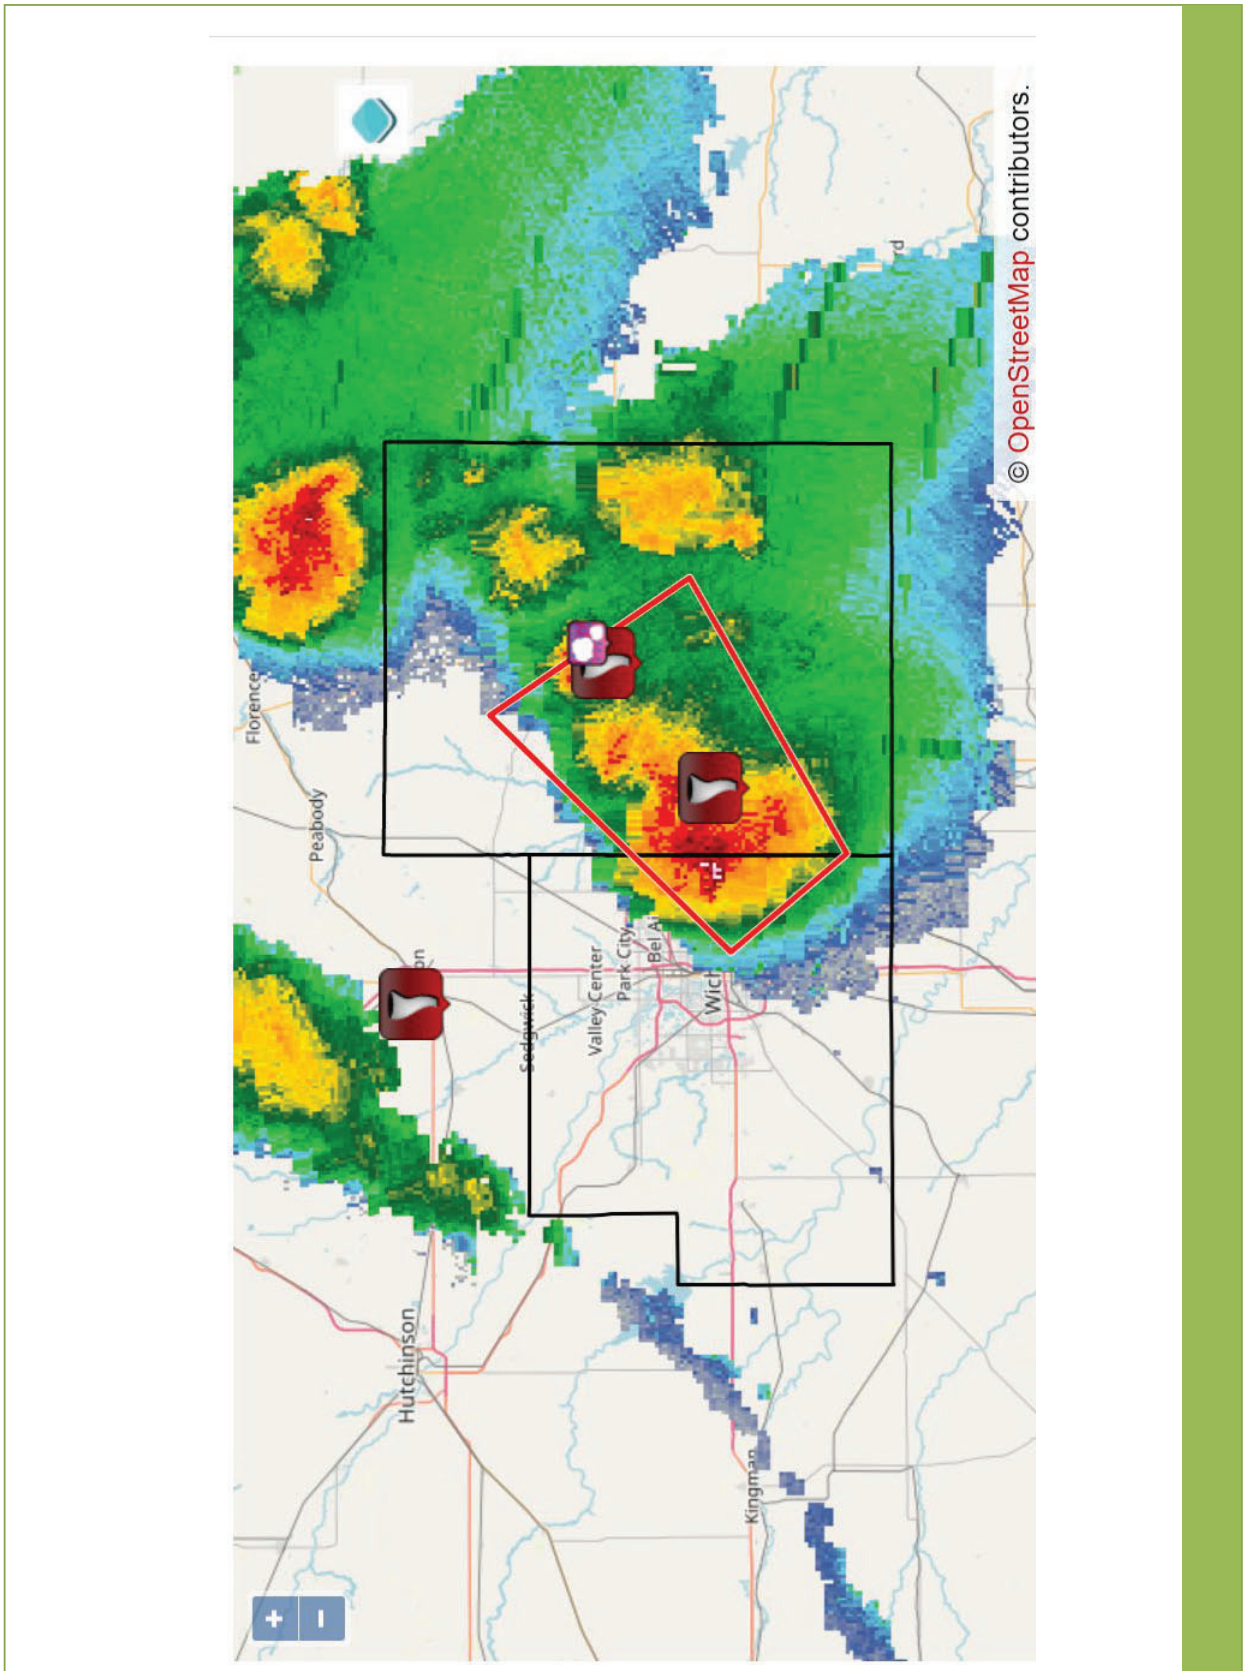

Research towards future

- 1-3 months
 - Currently hope for ~February-March in some conditions
- 2-4 weeks “Target of Opportunity skill”
- Probabilistic warnings
- “Useful” forecasts
 - Test products with users (EMs, broadcast, public)
 - Revise

Resilience with forecasts

- Primarily life protection from tornadoes
- Some kinds of property protection from non-tornadic

Tornado resilience

- Life protection comes from knowing safety guidance and getting information to use it
- Better building
 - Can we incentivize better construction (hurricane clips, straps to foundation, in-residence shelters)?
 - Adding ~2% to cost of building dramatically improves life protection and reduces property damage
 - The manufactured house problem
 - ✦ Old mobile homes are very dangerous
 - ✦ When new manufactured homes fail, tend to fail from ground up

Hail protection

- Mostly property
- Roofing?
 - Better shingles protect to ~golf balls
- Glass (buildings and auto)

How to be resilient

- Understanding of threat occurrence
 - “Peaked” regions probably are easier to get response
 - SPC has tools and we can make those more usable
- Using forecasts
 - Fixed property is hard to protect, obviously
 - Removing vulnerable things from threat
 - Saving lives-protection and building better

Draft: 8/21/22

Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group
Portland, Oregon
August 11, 2022

The RBC Investment Risk and Evaluation (E) Working Group of the Capital Adequacy (E) Task Force met Aug. 11, 2022. The following Working Group members participated: Philip Barlow, Chair (DC); Thomas Reedy (CA); Wanchin Chou (CT); Virginia Christy (FL); Carrie Mears and Kevin Clark (IA); Vincent Tsang and Bruce Sartain (IL); Fred Andersen (MN); Nolan Beal (NE); Bob Kasinow and Bill Carmello (NY); Dale Bruggeman and Tom Botsko (OH); Rachel Hemphill (TX); Steve Drutz (WA); and Adrian Jaramillo (WI).

1. Adopted its Spring National Meeting Minutes

Mr. Bruggeman made a motion, seconded by Mr. Chou, to adopt the Working Group's March 22 minutes (see *NAIC Proceedings – Spring 2022, Capital Adequacy (E) Task Force, Attachment Six*). The motion passed unanimously.

2. Adopted its Working Agenda

Mr. Barlow noted the number of items included in the working agenda and said the Working Group is going to prioritize those items directed to the Working Group by the Financial Condition (E) Committee, particularly the work on collateralized loan obligations (CLOs).

Ms. Mears made a motion, seconded by Mr. Bruggeman to adopt the working agenda (see *NAIC Proceedings – Summer 2022, Capital Adequacy (E) Task Force, Attachment Nine*). The motion passed unanimously.

3. Received Updates from the Valuation of Securities (E) Task Force and the Statutory Accounting Principles (E) Working Group

Mr. Barlow said it is important to have the chairs of these two groups as members of this Working Group because it is clear to him that there needs to be collaboration from the beginning in determining appropriate RBC charges. He said it is also important to have the chairs of the Capital Adequacy (E) Task Force and the other RBC working groups as members because, while most of the interest may be for life insurers, consistency in the RBC formulas is a goal where appropriate so it is good to have all parties involved as early in the process as possible.

Ms. Mears said the Valuation of Securities (E) Task Force is working to potentially give direction to NAIC staff to begin modeling CLOs. She said this work will be to remove CLOs from the filing exempt (FE) process and instead utilize a modeling process with the intent being to effectively normalize treatment across CLOs by making them subject to the same modeling process and results. At this point, she said the details of this process have not been fully defined but the Task Force exposed their intent to pursue this for comment with some of those comments suggesting aspects to be considered in more detail. She said the Task Force will be discussing these in what is planned to be a very transparent process involving all stakeholders. She said a referral to this working group to look at the risk-based capital (RBC) factors with some recommendations to be considered will likely be part of this process. She emphasized the point that, with or without any changes to the RBC framework, the modeling, and the resulting normalization of the treatment of CLOs will be incredibly valuable.

Mr. Bruggeman provided an update from the Statutory Accounting Principles (E) Working Group. He highlighted the work of regulators and key industry representatives on the principles-based bond project to better define

what is permitted to be reported as a bond on Schedule D, Part 1, to improve accounting and reporting, and ensure regulators have transparency to the investment risks held by insurers. As a result of this collaborative effort, he said the Working Group has been successful in developing and recently exposing several documents for comment. This included an updated bond definition, issue paper and proposed revisions to SSAP 26R—Bonds and SSAP No. 43R—Asset Backed Securities to incorporate the bond definition concepts into authoritative statutory accounting guidance. Mr. Bruggeman said these revisions, once adopted and in effect, will improve the designation of investments as bonds, requiring that the investments qualify as bonds in substance, not just legal form. He said the revisions should also significantly improve consistency with the allocation of bond investments between SSAP No. 26R and SSAP No. 43R, and the application of accounting provisions specific to each SSAP, such as the assessment of cash flows or impairment, for similar types of securities.

While these exposures are significant, Mr. Bruggeman said the exposures that occurred during an interim call on July 18 may be of more interest to this group. Those exposures reflect significant reporting revisions to Schedule D, Part 1 to capture valuable information on actual investments held by insurers. This includes a proposed expansion of Schedule D, Part 1 from one to two separate schedules. Schedule D-1-1 will include issuer obligations and schedule D-1-2 will include asset backed securities (ABS). The sum of the two schedules will still roll up to the Bonds line on the Assets page. With the separation of the schedules, different data columns can be designed based on the broad investment classification. A review of the reporting instructions has been completed and several revisions are proposed to streamline reporting, eliminate elements not applicable to certain securities, and propose new columns to capture desired information. Mr. Bruggeman said the revisions should result in providing improved information to regulators as well as eliminating inconsistency or uncertainty for industry in compliance. Lastly, he said a key change for more granular reporting, rather than classifying all bonds into one of four generic reporting groups, new reporting groups have been proposed to separate investments based on underlying characteristics. An example of this is instead of classifying all ABS as either residential mortgage-backed, commercial mortgage backed or other ABS, reporting lines are proposed to separate ABS based on whether they are financial asset-backed-self-liquidating, financial asset-backed-non-self-liquidating, non-financial asset-backed, etc. Although these categories provide valuable information, specific reporting lines within these categories have been proposed to be even more granular. Mr. Bruggeman noted the concern with being able to identify CLOs accurately in the financial statements and the use of the collateral codes in determining underlying investments. He said the proposed reporting revisions would separately capture CLOs as a type of financial asset backed security. Whether these granular reporting lines are utilized immediately for RBC, by having this structure in place, he said future assessments, along with ease of understanding the magnitude of certain types of investments, will be easier. He noted questions pertaining to the effective date and transition and said the earliest the guidance could be effective, with both accounting and reporting revisions in place, would be January 1, 2024, but it is likely the revisions will be effective January 1, 2025. With respect to transition, Mr. Bruggeman said there is no grandfathering planned for investments to continue to be reported as bonds that do not comply in order to ensure consistency with reporting across entities. Although grandfathering guidance is not expected, he said some practical transition assessments will be considered and reasonable accommodations are anticipated to prevent undue hardship for reporting entities in complying with the guidance.

4. Discussed the Working Group's Next Steps

As the Working Group addresses the items on its working agenda, Mr. Barlow said he has goals he would like for the Working Group to achieve in order to accomplish that work. He said the first of these is to have information, to the extent possible, easily identifiable from the annual statement through to the RBC charge with a minimum of reliance on company records so that the RBC charge for a particular asset is clear and that two companies having the same asset will end up with the same RBC charge. He said a second goal is to make sure it is clearly understood what risks are being analyzed in the process of assigning ratings to assets as well as those risks that may not be part of the analysis so that it is evident whether some adjustment is needed for the purpose of

developing an RBC charge. He said a third goal is to have a structure for RBC that facilitates new types of assets as they appear with the ability to identify them as new items that have not been evaluated yet and assign them an interim or introductory RBC treatment until any needed analysis can be done as opposed to trying to fit them into existing categories. He said he would like the Working Group to keep these goals in mind as it works through the individual projects before it.

Mr. Barlow said the Working Group has received direction from the Financial Condition (E) Committee to focus its attention on two items which the Working Group will look at simultaneously. He said the first is to develop an approach for determining RBC charges for CLOs and the second is to look at a potential interim approach to address concern about potential arbitrage in the structuring of assets through CLOs and similar kinds of assets. Whether it involves assets or other items in RBC, Mr. Barlow said he believes it is important that the opportunity to reconfigure risks and end up with a different RBC charge is eliminated. To that end, he said the Working Group will consider whether there is something that should be done in the shorter term to address that aspect. If there is an interim step that the Working Group pursues, he said it should be intended to stay in place only until a new more fully developed methodology is determined so it may not have the same degree of rigor but it should have sufficient analysis done so that there are no unintended consequences. He said there may be ways other than specific RBC charges to address an interim approach and said the Working Group is welcome to input from all parties. For clarification, Mr. Bruggeman asked if the work being considered for CLOs includes all of the tranches, those that would be on the bond schedule and residual tranches. Mr. Barlow said he meant all of the tranches. While the Valuation of Securities (E) Task Force is looking at CLOs currently, Ms. Mears said she believes it is important for this working group to be cognizant of the broader universe of structured assets.

Mr. Barlow said he has asked the American Academy of Actuaries (Academy) if this is a project they would be willing to assist with. Steve Smith (Academy) said the Academy is willing to help with the CLO project. He said the Academy's view is that it is important to have actuarial review of any model that has downstream impact on RBC and that includes a consideration of the broader statutory framework and broader solvency framework within RBC. Mr. Barlow agreed and said the Academy in general, and actuaries in particular, have contributed a lot of expertise to many if not all aspects of RBC and he would like to make sure that continues. He said he believes it is important to try to coordinate with the work that the Valuation of Securities (E) Task Force is doing on modeling CLOs and a good first step would be, as that work develops, to have it shared with the Academy. If some adjustment is needed for the purpose of RBC, he said as long as all parties are involved in the process from the beginning it will put the Working Group in a good position to consider if that can be done and have it work for the purposes of those involved.

5. Received a Referral from the Macroprudential (E) Working Group

Mr. Barlow said a referral from the Macroprudential (E) Working Group has been received and will be added to the working agenda.

Having no further business, the RBC Investment Risk and Evaluation (E) Working Group adjourned.

DESCRIPTION OF CHANGE(S)

2013-2021 U.S. and non-U.S. Catastrophe Event Lists

REASON OR JUSTIFICATION FOR CHANGE **

Adding 2013 through 2021 Wildfire events for 2022 RBC reporting

Additional Staff Comments:

The Cat Risk SG exposed this proposal for a 30-day public comment period ending July 13.
 The Cat Risk SG and PCRBC WG adopted this proposal at the 2022 summer national meeting.

** This section must be completed on all forms.

Revised 11-2013

U.S. List of Catastrophes for Use in Reporting catastrophe Data in PR036 and PR100+

Type of Event	Year	Name	Date	Location	Overall losses when occurred
Wildfire	2013	Black Forest	6/11/13-6/20/13	Colorado Springs	~420.5 million
Wildfire	2013	Rim	8/17/13-9/20/13	Sierra Nevada, California	> 100 million
Wildfire	2014	Texas	5/11/14-5/20/14	Texas, California	> 25 million
Wildfire	2015	Butte Fire	9/9/15-10/1/15	Amador County, California	~300 million
Wildfire	2015	Valley Fire	9/12/15-10/15/15	Lake, Napa and Sonoma County, California	~700 million
Wildfire	2016	Erskine Fire	6/23/16-7/11/16	Lake Isabella, Kern County, California	~26 million
Wildfire	2016	Soberanes Fire	7/22/16-9/30/16	Soberanes Creek, Garrapata State Park, Santa Lucia Preserve, Monterey County, California	> 200 million
Wildfire	2016	Chimney Fire	8/13/16-9/6/16	Santa Lucia Range, San Luis Obispo County, California	> 25 million
Wildfire	2016	Clayton Fire	8/13/16-8/26/16	Lake County, California	> 25 million
Wildfire	2016	Gatlinburg Wildfire	11/29/16-12/5/16	Sevier County, Gatlinburg, Pigeon Forge, Tennessee	~637 million
Wildfire	2017	Northern California Wildfires	10/8/17-10/31/17	Northern California	~ 11 billion
Wildfire	2017	Southern California Wildfires	12/4/17-12/23/17	Southern California	~ 2.2 billion
Wildfire	2018	Spring Creek Fire	6/27/18-7/17/18	Spring Creek, Colorado	< 100 million
Wildfire	2018	Carr, Mendocino California Wildfires	7/23/18-8/15/18	Northern California	> 1,000 million
Wildfire	2018	Northern California Camp Wildfire	11/8/18-11/25/18	Butte County, California	> 7.5 billion
Wildfire	2018	Southern California Woolsey Wildfires	11/8/18-11/21/18	Los Angeles and Ventura County, California	2.9 billion
Wildfire	2019	Australian Bushfires	9/2019-3/2020	New South Wales, Queensland, Victoria, South Australia, Western Australia, Tasmania and Northern Territory	~910 million
Wildfire	2019	Saddleidge Wildfire	10/10/19-10/23/19	Sylmar, Los Angeles, Calimesa, Riverside County, California	< 1,000 million
Wildfire	2019	Kincaid Wildfire	10/23/19-11/6/19	Northeast of Geyserville, Sonoma County, California	< 1,000 million
Wildfire	2020	Cameron Peak	08/13/20-12/02/20	Roosevelt National Forest, Larimer County, Colorado	~71 million
Wildfire	2020	SCU Lightning Complex Wildfire	8/16/20-9/16/20	San Francisco Bay Area, Central Valley, Santa Clara, Alameda, Contra Costa, San Joaquin, Merced, Stanislaus	< 1,000 million
Wildfire	2020	Beachie Creek Wildfire	8/16/20-10/10/20	Approx. 2 miles south of Jaw Bones flats in rugged terrain deep in the Opal Creek Wilderness.	> 1,000 million
Wildfire	2020	CZU Lightning Complex Wildfire	8/16/20-9/22/20	San Mateo and Santa Cruz Counties, California	> 1,000 million
Wildfire	2020	LNU Lightning Complex Wildfire	8/17/20-10/2/20	Lake, Napa, Sonoma, Solano, and Yolo Counties, California	> 1,000 million
Wildfire	2020	Carmel Fire	8/18/20-9/4/20	Carmel Valley, California	< 1,000 million
Wildfire	2020	North Complex Fire	8/18/20-10/12/20	Plumas and Butte Counties, California	< 1,000 million
Wildfire	2020	Creek Fire	9/4/20-10/12/20	Fresno and Madera Counties, California	< 1,000 million
Wildfire	2020	Bobcat Fire	9/6/20-10/23/20	Central San Gabriel Mountains, in and around the Angeles National Forest California	< 1,000 million
Wildfire	2020	Babb Road Fire	9/7/20-9/18/20	Malden and Pine City, Palouse County of Eastern Washington	< 1,000 million
Wildfire	2020	Alameda Fire	9/7/20-9/16/20	Jackson County, Oregon	< 1,000 million
Wildfire	2020	Holiday Farm Fire	9/7/20-10/3/20	Willamette National Forest	< 1,000 million
Wildfire	2020	Echo Mountain Complex Fire	9/7/20-9/23/20	north of Lincoln City, Oregon	< 100 million
Wildfire	2020	Riverside Fire	9/8/20-10/3/20	Valley Drive between Misty Ridge Drive and Mitchell Avenue, Oregon	< 100 million
Wildfire	2020	Slater Fire	9/8/20-10-9/20	Northern California and Southern Oregon	< 100 million
Wildfire	2020	Glass Fire	9/27/20-10/19/20	Napa and Sonoma Counties, California	> 1,000 million
Wildfire	2020	East Troublesome Fire	10/14/20-11/9/20	Grand County, Colorado	~543 million
Wildfire	2021	Booleg Wildfire	7/17/21-8/6/21	Northwest of Beauty, Oregon	< 1,000 million
Wildfire	2021	Dixie Wildfire	7/14/21-10/5/21	Butte, Plumas, Tehama, Lassen and Shasta Counties, California	> 1,000 million
Wildfire	2021	Caldor Fire	8/14/21-10/5/21	El Dorado National Forest and other areas of the Sierra Nevada in El Dorado, Amador, and Alpine County, California	< 1,000 million
Wildfire	2021	Corkscrew Fire	8/15/21-8/30/21	Fort, WA; Tum Tum, Springdale, City of Deer Park, Loon Lake, Clayton, H395, Scoop Mt	< 100 million
Wildfire	2021	Marshall Fire	12/30/21-1/1/22	Boulder County, Colorado	~ 2 billion

 Health RBC Instructions Property/Casualty RBC Instructions Life and Fraternal RBC Blanks
 OTHER _____

DESCRIPTION OF CHANGE(S)

The proposed change would revise the instructions and structure for the Affiliated Investments for all lines.

REASON OR JUSTIFICATION FOR CHANGE **

The proposed revisions will improve the risk-based capital formulas and provide consistency to the treatment of affiliates for all lines of business.

Additional Staff Comments:

8/11/22 - The Task Force exposed this proposal for a 60-day public comment period ending Oct, 10.

** This section must be completed on all forms.

AFFILIATED/SUBSIDIARY STOCKS
XR002 – XR004

There are nine categories of affiliated/subsidiary investments that are subject to Risk-Based Capital requirements for common stock and preferred stock holdings. Those nine categories are:

1. Directly Owned U.S. Insurance Affiliates/Subsidiaries Subject to a Risk-Based Capital (RBC)-Look-Through Calculation
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
2. Indirectly Owned U.S. Insurance Affiliates/Subsidiaries Subject to RBC-Look-Through Calculation
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
3. Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries
4. Investment Subsidiaries
5. Directly Owned Alien Insurance Affiliates/Subsidiaries
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
6. Indirectly Owned Alien Insurance Affiliates/Subsidiaries
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
7. Investments in Upstream Affiliate (Parent)
8. Directly Owned U.S. Insurance Affiliates/Subsidiaries Not Subject to RBC
 - a. Health Insurance Companies and Health Entities Not Subject to RBC
 - b. Property and Casualty Insurance Companies Not Subject to RBC
 - c. Life Insurance Companies Not Subject to RBC
9. Non-Insurance Affiliates/Subsidiaries Not Subject to RBC
 - a. Entities with a capital requirement imposed by a regulatory body
 - b. Other Financial Entities without regulatory capital requirements
 - c. Other Non-financial entities

Enter applicable items for each affiliate/subsidiary in the Details for Affiliated/Subsidiary Stocks worksheet. The program will automatically calculate the risk-based capital charge for each affiliate/subsidiary. When the data is uploaded to the NAIC database, it will be crosschecked, and the company will be required to correct any discrepancies and refile a corrected version with the NAIC and/or any state that requires the company to file RBC with its department. The RBC report will display the number of affiliates/subsidiaries. These numbers should be reviewed to ensure that all affiliates/subsidiaries are appropriately reported.

Line 10 of XR003 – Fair Value Excess Subsidiary Common Stock equals the total of type codes 1.a. through 2.c., Column 13 of the Subsidiary Companies Risk – Details Page. The program will automatically calculate this figure.

The total of all reported affiliate/subsidiary stock should equal the amounts reported on Schedule D, Part 2, Section 1, Line 4409999999 plus Schedule D, Part 2, Section 2, Line 5979999999 and 93999999 and should also equal Schedule D, Part 6, Section 1, Line 09999999 plus Line 18999999.

Affiliated/Subsidiary investments fall primarily into two broad categories: (a) Insurance Affiliates/Subsidiaries that are Subject to risk-based capital; and (b) Affiliates/Subsidiaries that are Not Subject to risk-based capital. The risk-based capital for these two broad groups differs. A third category of Affiliates/Subsidiaries, publicly traded insurance affiliates/subsidiaries held at market value, has characteristics of both broader categories. As a result, it has a two-part RBC calculation. The general treatment for each is explained below.

Directly owned insurance and health entity affiliates/subsidiaries are affiliates/subsidiaries in which the reporting company owns the stock of the affiliate/subsidiary. Indirectly owned insurance affiliate/subsidiaries and health entities are those where the reporting company owns stock in a holding company, which in turn owns the stock of the insurance affiliate/subsidiary or health entity. Note that there could be multiple holding companies that control the downstream insurance company.

Enter the book/adjusted carrying value of: the common stock in Column (5), the preferred stock in Column (9), the total outstanding common stock in Column (7) and the total outstanding preferred stock of that affiliate/subsidiary in Column (10) of the appropriate worksheet. The percentage of ownership is calculated by summing the book/adjusted carrying values of the owned preferred and common stock and dividing that amount by the sum of all outstanding preferred and common stock.

Insurance Affiliates/Subsidiaries that are Subject to RBC

1. Directly Owned U.S. Affiliates/Subsidiaries:

The risk-based capital requirement for the reporting company for those insurance affiliates/subsidiaries that are subject to a risk-based capital requirement is based on the Total Risk-Based Capital After Covariance of the subsidiary, prorated for the percent of ownership of that affiliate/subsidiary.

For purposes of Affiliate/Subsidiary Risk all references to Total Risk-Based Capital After Covariance of the affiliate/subsidiary means:

- a. For a Health affiliate/subsidiary RBC filing, Total Risk-Based Capital After Covariance before Basic Operational Risk (XR025, Line (37)).
- b. For a P/C affiliate/subsidiary RBC filing, Total Risk-Based Capital After Covariance before Basic Operational Risk (PR032, Line (68)).
- c. For a Life affiliate/subsidiary RBC filing, the sum of
 - i. Total Risk-Based Capital After Covariance before Basic Operational Risk (LR031, Line (67)); and
 - ii. Primary Security shortfalls for all cessions covered by Actuarial Guideline XLVIII (AG 48) multiplied by two (LR031, Line (71)).

For RBC purposes, the reporting insurer must determine the carrying value and the RBC requirement of a directly owned RBC filing affiliate/subsidiary company, even if the RBC filing affiliate/subsidiary is non-admitted for financial reporting purposes. The value reported in annual statement Schedule D, Part 6, Section 1 will be used for RBC purposes. In addition to RBC, the carrying value of the RBC filer must be reported in total adjusted capital for RBC purposes, in order to appropriately balance the numerator with the addition to the denominator value. Enter the carrying value of the insurer on **Line XXXX** of the Calculation of Total Adjusted Capital page to satisfy these instructions.

Equity method Insurance Affiliates/Subsidiaries: Equity method is defined in SSAP 97, Paragraph 8b, as the underlying audited statutory equity of the respective entity's financial statements, adjusted for any unamortized goodwill as provided for in SSAP No. 68—Business Combinations and Goodwill. For those insurance Affiliates/Subsidiaries of the reporting company that are reported under the equity method, the H_0 charge of the ownership of the common and preferred stock in these Affiliates/Subsidiaries is limited to the lesser of:

- (a) the Total RBC After Covariance of the affiliate/subsidiary times the percentage of ownership, which is the total of common stock and preferred stock; or
- (b) the common and preferred stock book/adjusted carrying value at which the affiliate/subsidiary is carried

Market Value (including discounted market value) Insurance Affiliates/Subsidiaries (See SSAP No. 97, Paragraph 8a.): If the affiliate/subsidiary's common stock is publicly traded and the reporting company carries the affiliate/subsidiary at market value, after any "discount," there are generally two components to the reporting company's RBC generated by the affiliate/subsidiary. The prorated portion is the percentage of ownership of total common and preferred stock. The smaller of the prorated portion of the affiliate/subsidiary's own statutory surplus or the prorated portion of its RBC after covariance is added to the H_0 component of the reporting company. In the normal case, the common and preferred stock book/adjusted carrying value of the affiliate/subsidiary exceeds the prorated portion of the larger of its statutory surplus and its RBC after covariance. In this case, the addition to the H_1 component is the larger of a) 22.5 percent of the affiliate/subsidiary's common and preferred stock book/adjusted carrying value in excess of the prorated portion of the affiliate's/subsidiary's statutory surplus or b) the prorated portion of the affiliate's/subsidiary's RBC after covariance in excess of the prorated portion of its statutory surplus. If the affiliate/subsidiary's common and preferred stock book/adjusted carrying value is less than the prorated portion of its RBC after covariance, but greater than the prorated portion of its statutory surplus, 100 percent of the common and preferred stock book/adjusted carrying value in excess of the prorated portion of the affiliate/subsidiary's statutory surplus is added to the reporting company's H_1 component. If the affiliate/subsidiary's common and preferred stock book/adjusted carrying value is less than the prorated portion of the affiliate/subsidiary statutory surplus, there is no addition to the H_1 component.

2. Indirectly Owned U.S. Insurance Affiliates/Subsidiaries

For Indirectly Owned U.S. Insurance Affiliates/Subsidiaries, the carrying value and RBC is calculated in the same manner as for directly owned U.S. Insurance Affiliates/Subsidiaries. The RBC for the indirect affiliates/subsidiaries must be calculated prior to completing this RBC report.

SSAP No. 97 provides guidance for the reporting and admittance requirements of SCAs. Accordingly, there may be cases where an indirectly owned RBC filer may not be separately reported in the statutory financial statements (e.g., they are captured within the carrying value of an intermediate holding company). The SSAP No. 97 guidance permits reporting SCAs at the directly owned holding company level or via look-through to the downstream entity (including where the downstream entity is an RBC filer), but an audit of the entity is required for admittance (i.e. if reporting is at the directly owned holding company level, the holding company must be audited, if the reporting is on a look-through basis then the downstream entity must be audited). Regardless of whether there is a look-through applied pursuant to Statutory Accounting Principles (SAP) for annual financial statement reporting, for RBC purposes the reporting insurer must "look-through" all intermediate holding and subsidiary companies to determine the carrying value and the RBC requirement of indirectly owned RBC filing affiliate/subsidiary companies. This involves drilling down to the first RBC filing insurance subsidiary and adjusting for percentage ownership of the intermediate entity directly owning the RBC filing affiliate/subsidiary. Both RBC and carrying value of the RBC filer must be reported for RBC purposes, in order to appropriately balance the numerator with the addition to the denominator value. Enter the carrying value of the insurer on **Line XXXX** of the Calculation of Total Adjusted Capital page to satisfy these instructions.

The carrying value for each indirect insurance affiliate/subsidiary is established based on company records using the statutory value of the insurer as reported in the NAIC annual financial statement blank submitted by the affiliate/subsidiary or market value when applicable, and the RBC requirement as determined in its

RBC Report adjusted for the ownership percentages (both the percentage of the indirectly owned RBC filing affiliate/subsidiary that is owned by the directly held downstream holding company and the reporting insurer's ownership percentage in that downstream entity). The value reported by the downstream holding company for the U.S. RBC filing insurer is the same as the statutory value established for the insurer on a look-through basis.

3. Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries

The carrying value of a U.S. Insurance Affiliate/Subsidiary that is subject to RBC is deducted from the value of the directly held holding company or other entity that in turn directly owns the U.S. Insurance Affiliate/Subsidiary that is subject to RBC, based on the value reported for each insurance subsidiary on the downstream immediate holding company or non-insurance owner's balance sheet. That value is prescribed by the NAIC Accounting Practices and Procedures Manual (SSAP No. 97, paragraph 22.a.). A similar exercise is required for each RBC filing insurer and each non-U.S. insurer in order to determine the remaining excess value of the holding company.

The remaining value of the directly held holding company is then subject to a charge that is calculated in accordance with the instructions for Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries as specified in the RBC formula. If the holding company is not admitted, report the excess carrying value as zero and the corresponding RBC charge will also be zero. If a negative excess value for the downstream holding company results from removing the value of U.S. RBC filing insurers from the downstream holding company's reported value, then the value of that holding company will be floored at zero and the corresponding RBC charge will also be zero.

The following hypothetical Balance Sheet indicates the view of a Holding Company - Holder, Inc. which is 100% owned by MEGA Health Insurance Company (it assumes that the value reported by the downstream holding company for the U.S. RBC filing insurer is the same as the statutory value established for the insurer on a look-through basis):

	Balance Sheet Holder, Inc. 12/31/XXXX			
Cm Stk:	ABC Life Company	10,000,000	Long Term Debt	5,000,000
	XYZ Casualty Company	15,000,000	Other Liabilities	2,000,000
	ANH Health Company	3,000,000		
	Other Common Stock	17,000,000	Total Liabilities	7,000,000
	Cash	7,000,000		
	Other Assets	5,000,000	Equity	50,000,000
	Total Assets	57,000,000	Total Liabilities & Equity	57,000,000

The RBC calculation for Holder, Inc.'s value in excess of the indirectly owned insurance affiliates/subsidiaries is as follows:

<u>Company</u>	<u>Stat. Book value</u>	<u>Source:</u>
Holder, Inc.	50,000,000	MEGA Health Sch D - Part 6, Section 1
<i>Holder, Inc. aff/subs subject to RBC</i>		
ABC Life Company	10,000,000	Holder, Inc. Stat. balance sheet
XYZ Casualty Company	15,000,000	Holder, Inc. Stat. balance sheet
ANH Health Company	3,000,000	Holder, Inc. Stat. balance sheet
Subtotal	28,000,000	
Holder, Inc. excl. RBC aff/subs	22,000,000	<i>(amount subject to the 30.0% factor for Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries)</i>

The following table shows the XR002 entries that MEGA Health Insurance Company (which owns 100% owns of Holder, Inc.) would report for the indirectly owned insurance affiliates/subsidiaries under Holder, Inc. This table assumes that Holder, Inc. owns 40%, 50% and 25% of ABC Life, XYZ Casualty, and ANH Health, respectively. The table also assumes that the RBC values shown for these affiliates/subsidiaries at the 100% level are the correct RBC After Covariance but Before Operational Risk.

Affiliates/Subsidiaries	Affiliates/Subsidiaries Type	XR002 Column					
		4 100% RBC	5 Book Adjusted Carrying Value	7 Total Value of Affiliates/Subsidiaries	8 Statutory Surplus of Affiliates/Subsidiaries	11 % Owned	12 RBC Required
ABC Life Company	Indirect U.S. Life Aff/Sub	5,000,000	10,000,000	25,000,000	25,000,000	40%	2,000,000
XYZ Casualty Company	Indirect U.S. P&C Aff/Sub	12,000,000	15,000,000	30,000,000	30,000,000	50%	6,000,000
ANH Health Company	Indirect U.S. Health Aff/Sub	6,000,000	3,000,000	12,000,000	12,000,000	25%	1,500,000

The risk-based capital charge for the parent insurer preparing the calculation is a 30 percent charge against the holding company value in excess of the indirectly owned insurance affiliates/subsidiaries as calculated in the prior example. Enter information in the appropriate columns of the worksheet, omitting those columns that do not apply (Column (3) – NAIC Company Code or Alien ID Number and Column (4) Affiliate's RBC After Covariance).

Affiliates/Subsidiaries that are Not Subject to RBC

4. Investment Subsidiaries

An investment subsidiary is a subsidiary that exists only to invest the funds of the parent company. The term investment subsidiary is defined in the annual statement instructions as any subsidiary, other than a holding company, engaged or organized primarily to engage in the ownership and management of investments for the insurer. An investment subsidiary shall not include any broker-dealer or a money management fund managing funds other than those of the parent company. The risk-based capital for an investment in an investment subsidiary is 30 percent of the carrying value of the common and preferred stock.

5. Directly Owned Alien Insurance Affiliates/Subsidiaries

For purposes of this formula, the Risk-Based Capital (RBC) of each directly owned alien insurance affiliate/subsidiary is the annual statement book adjusted carrying value of the reporting company's interest in the affiliate multiplied by 1.000. Enter information for any non-U.S. insurance affiliate/subsidiary: life, property and casualty, and health insurers.

For each affiliate/subsidiary, enter the following information:

- Company Name,
- Alien Insurer Identification Number,
- Book Adjusted carrying value of common and preferred stock,
- Total Outstanding value of common and preferred stock,
- Book/adjusted carrying value of the common and preferred stock from Schedule D, Part 6, Section 1, Line 1499999. If no value is reported in the Total Value of Affiliate's common and preferred stock columns (7) and (10), the program will assume 100 percent ownership.

6. Indirectly Owned Alien Insurance Affiliates/Subsidiaries

For Indirectly Owned Alien Insurance Affiliates/Subsidiaries, the carrying value and RBC charge is calculated in a similar manner as for directly owned Alien Insurance Affiliates/Subsidiaries.

SSAP No. 97 provides guidance for the reporting and admittance requirements of SCAs. Accordingly, there may be cases where an indirectly owned Alien insurer may not be separately reported in the statutory financial statements (e.g., they are captured within the carrying value of an intermediate holding company). The SSAP No. 97 guidance permits reporting SCAs at the directly owned holding company level or via look-through to the downstream entity (including where the downstream entity is an Alien insurer), but an audit of the entity is required for admittance (i.e. if reporting is at the directly owned holding company level, the holding company must be audited, if the reporting is on a look-through basis then the downstream entity must be audited). Regardless of whether there is a look-through applied pursuant to Statutory Accounting Principles (SAP) for annual financial statement reporting, for RBC purposes the reporting insurer must "look-through" all intermediate holding and subsidiary companies to determine the carrying value and the RBC charge that would be imposed had the Alien insurance affiliate/subsidiary companies been directly held by the reporting insurer. This involves looking down to the first alien insurer affiliate/subsidiary, unless there is an RBC filer in between, and adjusting for percentage ownership of the intermediate entity directly owning the RBC filing affiliate/subsidiary. Both the RBC charge and carrying value of the alien insurer must be reported for RBC purposes, in order to appropriately balance the numerator with the addition to the denominator value. Enter the carrying value of the insurer on Line XXXX of the Calculation of Total Adjusted Capital page to satisfy these instructions.

The carrying value of an alien insurance affiliate/subsidiary is deducted from the value of the directly held holding company or other entity that in turn directly owns the U.S. Insurance Affiliate/Subsidiary that is subject to RBC, based on the value reported for each insurance subsidiary on the downstream immediate holding company or non-insurance owner's balance sheet. That value is prescribed by the NAIC Accounting Practices and Procedures Manual (SSAP No. 97, paragraph 22.a.). A similar exercise is required for each RBC filing insurer and each non-U.S. insurer in order to determine the remaining excess value of the holding company.

The RBC charge to be applied to each indirectly owned alien insurance affiliate/subsidiary is the annual statement book adjusted carrying value of the reporting company's interest in the affiliate/subsidiary multiplied by 1.0 and adjusted to reflect the reporting company's ownership on the holding company. For example, assume NEWBIE Insurance Company acquired 100 percent shares of Holder (a holding company), and Holder owns an Alien Insurance Company, which represents 50 percent of the book adjusted carrying value of Holder. If Holder has a book adjusted carrying value of \$20,000,000, NEWBIE Insurance Company would enter \$10,000,000 (1/2 of \$20,000,000) as the carrying value of the Alien Insurance Company and the RBC charge for the indirect ownership of the alien insurance affiliate/subsidiary would be \$5,000,000 (0.500 times \$10,000,000). The risk-based capital charge for the parent insurer preparing the calculation is a 30 percent charge against the holding company value in excess of the indirectly owned insurance affiliates/subsidiaries.

If NEWBIE Insurance Company only acquired 50 percent shares of Holder, NEWBIE Insurance Company would enter \$5,000,000 (50 percent of 1/2 of \$20,000,000) as the carrying value of the Alien Insurance Company and the RBC charge for the indirect ownership of the Alien insurance affiliate/subsidiary would be \$5,000,000 (1.0 times \$5,000,000). Enter information for any indirectly owned alien insurance subsidiaries.

		XR002 Column				
Affiliate/Subsidiary	Affiliate/Subsidiary Type	4 100% RBC	5 Book Adjusted Carrying Value	7 Total Value of Affiliate/Subsidiary	11 % Owned	12 RBC Required
Alien Insurance Company	Indirect Alien Life Affiliate/Subsidiary	5,000,000	10,000,000	20,000,000	50%	5,000,000

For each affiliate/subsidiary enter the following information:

- Company Name,
- Alien Insurer Identification Number,
- Book Adjusted carrying value of common and preferred stock,
- Total Outstanding value of common and preferred stock,
- Book/adjusted carrying value of the common and preferred stock from Schedule D, Part 6, Section 1, Line 1499999. If no value is reported in the Total Value of Affiliate's Common and preferred stock column.

7. Investment in Upstream Affiliate (Parent)

The risk-based capital (RBC) for an investment in an upstream parent is 30.0 percent of the book/adjusted carrying value of the common and preferred stock, regardless of whether that upstream parent is subject to RBC. Report the appropriate information from Schedule D, Part 6, Section 1, Lines 0199999 and 1099999 in Columns (1) through (10).

For each affiliate, enter the following information:

- Company Name,
- Affiliate Type Code,
- NAIC Company Code,
- Book Adjusted carrying value of common stock
- Book Adjusted carrying value of preferred stock,
- Total Outstanding value of common and preferred stock.

8. Directly Owned U.S. Insurance Affiliates/Subsidiaries Not Subject to RBC

- a. Health Insurance Companies and Health Entities Not Subject to RBC
- b. Property and Casualty Insurance Companies Not Subject to RBC, such as title insurers, monoline financial guaranty insurers, and monoline mortgage guaratee insurers
- c. Life Insurance Companies Not Subject to RBC, such as life insurance subsidiary exempted from RBC

The risk-based capital for insurers not subject to RBC is based on the underlying statute, regulation, or rule governing capital requirements for such entities. If not otherwise specified by statute regulation or rule, the risk-based capital for an investment in a U.S. insurer that is not required to file an RBC formula is 30 percent of the book/adjusted carrying value of the common and preferred stock.

9. Non-Insurance Affiliates/Subsidiaries Not Subject to RBC

- a. Financial entities with a capital requirement imposed by a regulatory body (e.g., a bank)
- b. Other financial entities without regulatory capital requirements
- c. Other non-financial entities

The risk-based capital for entity types a, b, and c is 30 percent of the book/adjusted carrying value of the common and preferred stock. The affiliate/subsidiary code for Non-Insurer Affiliates/Subsidiaries Not Subject to RBC is "9". Reported amounts use Schedule D, Part 6, Section 1, Line 0899999, and Line 1799999 as the basis of reporting.

APPENDIX 3 – EXAMPLE USED FOR AFFILIATED/SUBSIDIARY STOCKS

To determine the value of total outstanding common stock or total outstanding preferred stock, divide the book/adjusted carrying value of the investment (found in Schedule D - Part 6 Section 1, Column 9) by the percentage of ownership (found in Schedule D – Part 6 – Section 1, Column 12). For example:

<u>Subsidiary Insurance Company</u>	<u>Owner's Book / Adjusted Carrying Value</u>	<u>Percentage Ownership</u>	<u>Total Stock Outstanding</u>
Subsidiary #1	\$1,000,000	100%	\$1,000,000
Subsidiary #2	\$1,000,000	75%	\$1,333,333
Subsidiary #3	\$1,000,000	50%	\$2,000,000
Subsidiary #4	\$1,000,000	25%	\$4,000,000
Subsidiary #5	\$1,000,000	10%	\$10,000,000

AFFILIATED/SUBSIDIARY STOCKS
LR042 – LR044

There are ten categories of affiliated/subsidiary investments that are subject to Risk-Based Capital requirements for common stock and preferred stock holdings. Those ten categories are:

1. Directly Owned U.S. Insurance Affiliates/Subsidiaries Subject to a Risk-Based Capital (RBC)-Look-Through Calculation
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
2. Indirectly Owned U.S. Insurance Affiliates/Subsidiaries Subject to RBC-Look-Through Calculation
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
3. Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries
4. Investment Subsidiaries
5. Directly Owned Alien Insurance Affiliates/Subsidiaries
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
6. Indirectly Owned Alien Insurance Affiliates/Subsidiaries
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
7. Investments in Upstream Affiliate (Parent)
8. Directly Owned U.S. Insurance Affiliates/Subsidiaries Not Subject to RBC
 - a. Health Insurance Companies and Health Entities Not Subject to RBC
 - b. Property and Casualty Insurance Companies Not Subject to RBC
 - c. Life Insurance Companies Not Subject to RBC
9. Non-Insurance Affiliates/Subsidiaries Not Subject to RBC
 - a. Entities with a capital requirement imposed by a regulatory body
 - b. Other Financial Entities without regulatory capital requirements
 - c. Non-financial entities
10. Publicly Traded Insurance Affiliates/Subsidiaries Held at Market Value

Enter applicable items for each affiliate/subsidiary in the Details for Affiliated/Subsidiary Stocks worksheet. The program will automatically calculate the risk-based capital charge for each affiliate/subsidiary. When the data is uploaded to the NAIC database, it will be cross-checked and the company will be required to correct any discrepancies and refile a corrected version with the NAIC and/or any state that requires the company to file RBC with its department. The RBC report will display the number of affiliates/subsidiaries. These numbers should be reviewed to ensure that all affiliates/subsidiaries are appropriately reported.

The total of all reported affiliate/subsidiary stock should equal the amounts reported on Schedule D, Part 2, Section 1, Line 4409999999 plus Schedule D, Part 2, Section 2, Line 5979999999 and should also equal Schedule D, Part 6, Section 1, Line 09999999 plus Line 18999999.

Affiliated/Subsidiary investments fall into two broad categories: (A) Insurance Affiliates/Subsidiaries that are Subject to risk-based capital; and (B) Affiliates/Subsidiaries that are Not Subject to risk-based capital. The risk-based capital for these two broad groups differs. Investment subsidiaries are a subset of category A in that they are subject to a risk-based capital charge that includes the life RBC risk factors applied only to the investments held by the investment subsidiary for its parent insurer. Publicly traded insurance affiliates/subsidiaries held at market value have characteristics of both broader categories. As a result, there is a two-part RBC calculation. The general treatment for each is explained below.

Directly owned insurance and health entity affiliates/subsidiaries are affiliates/subsidiaries in which the reporting company owns the stock of the affiliate/subsidiary. Indirectly owned insurance affiliates/subsidiaries and health entities are those where the reporting company owns stock in a holding company, which in turn owns the stock of the insurance affiliate/subsidiary or health entity. Note that there could be multiple holding companies that control the downstream insurance company.

Enter the book/adjusted carrying value of: the common stock in Column (5), the preferred stock in Column (7), the total outstanding common stock in Column (6) and the total outstanding preferred stock of that affiliate/subsidiary in Column (10) of the appropriate worksheet. The percentage of ownership is calculated by summing the book/adjusted carrying values of the owned preferred stock and common stock and dividing that amount by the sum of all outstanding preferred and common stock.

Insurance Affiliate/Subsidiaries that are Subject to RBC

1. Directly Owned U.S. Affiliates/Subsidiaries:

The risk-based capital requirement for the reporting company for those insurance affiliates/subsidiaries that are subject to a risk-based capital requirement is based on the Total Risk-Based Capital After Covariance of the affiliate/subsidiary, prorated for the percent of ownership of that affiliate/subsidiary.

For purposes of Subsidiary Risk all references to Total Risk-Based Capital After Covariance of the affiliate/subsidiary means:

- a. For a Health affiliate/subsidiary RBC filing, Total Risk-Based Capital After Covariance before Basic Operational Risk (XR024, Line (37));
- b. For a P/C affiliate/subsidiary RBC filing, Total Risk-Based Capital After Covariance before Basic Operational Risk (PR032, Line (68)); and
- c. For a Life affiliate/subsidiary RBC filing, the sum of
 - (a) Total Risk-Based Capital After Covariance before Basic Operational Risk (LR031, Line (67)); and
 - (b) Primary Security shortfalls for all cessions covered by Actuarial Guideline XLVIII (AG 48) multiplied by two (LR031, Line (71)).

For RBC purposes, the reporting insurer must determine the carrying value and the RBC requirement of directly owned RBC filing affiliate/subsidiary company, even if the RBC filing affiliate/subsidiary is non-admitted. The value reported in annual statement Schedule D, Part 6, Section 1 should be used for RBC purposes. In addition to RBC, the carrying value of the RBC filer must be reported in total adjusted carrying value for RBC purposes, in order to appropriately balance the numerator with the addition of the denominator value. Enter the carrying value of the insurer on **Line XXX** of the Calculation of Total Adjusted Capital page to satisfy these instructions.

Equity method Insurance Affiliates/Subsidiaries: Equity method is defined in SSAP No. 97, Paragraph 8b. as the underlying audited statutory equity of the respective entity's financial statements, adjusted for any unamortized goodwill as provided for in SSAP No. 68—Business Combinations and Goodwill. For those Insurance Affiliates/Subsidiaries of the reporting company that are reported under the equity method, the C₀ charge of the ownership of the common and preferred stock in these Affiliates/Subsidiaries is limited to the lesser of:

- (a) the Total RBC After Covariance of the affiliate/subsidiary times the percentage of ownership, which is the total of common stock and preferred stock; or
- (b) the common and preferred stock book/adjusted carrying value at which the affiliate/subsidiary is carried.

Market Value (including discounted market value) Insurance Affiliates/Subsidiaries (See SSAP No. 97, Paragraph 8a.): See 10 below.

2. Indirectly Owned U.S. Insurance Affiliates/Subsidiaries

For Indirectly Owned U.S. Insurance Affiliates/Subsidiaries, the carrying value and RBC is calculated in the same manner as for directly owned U.S. Insurance Affiliates/Subsidiaries. The RBC for the indirect affiliates/subsidiaries must be calculated prior to completing this RBC report.

SSAP No. 97 provides guidance for the reporting and admittance requirements of SCAs. Accordingly, there may be cases where an indirectly owned RBC filer may not be separately reported in the statutory financial statements (e.g., they are captured within the carrying value of an intermediate holding company). The SSAP No. 97 guidance permits reporting SCAs at the directly owned holding company level or via look-through to the downstream entity (including where the downstream entity is an RBC filer), but an audit of the entity is required for admittance (i.e. if reporting is at the directly owned holding company level, the holding company must be audited, if the reporting is on a look-through basis then the downstream entity must be audited). Regardless of whether there is a look-through applied pursuant to Statutory Accounting Principles (SAP) for annual financial statement reporting, for RBC purposes the reporting insurer must “look-through” all intermediate holding and subsidiary companies to determine the carrying value and the RBC requirement of indirectly owned RBC filing affiliate/subsidiary company. This involves drilling down to the first RBC filing insurance affiliate/subsidiary and adjusting for percentage ownership of the intermediate entity directly owning the RBC filing affiliate/subsidiary. Both RBC and carrying value of the RBC filer must be reported for RBC purposes, in order to appropriately balance the numerator with the addition to the denominator value. Enter the carrying value of the insurer on Line XXX of the Calculation of Total Adjusted Capital page to satisfy these instructions.

The carrying value for each indirect insurance affiliate/subsidiary is established based on company records using the statutory value of the insurer as reported in the NAIC annual financial statement blank submitted by the affiliate/subsidiary or market value when applicable, and the RBC requirement as determined in its RBC Report adjusted for the ownership percentages (both the percentage of the indirectly owned RBC filing affiliate/subsidiary that is owned by the directly held downstream holding company and the reporting insurer's ownership percentage in that downstream entity). The value reported by the downstream holding company for the U.S. RBC filing insurer is the same as the statutory value established for the insurer on a look-through basis.

3. Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries:

The carrying value of a U.S. Insurance Affiliate/Subsidiary that is subject to RBC is deducted from the value of the directly held holding company or other entity that in turn directly owns the U.S. Insurance Affiliate/Subsidiary that is subject to RBC, based on the value reported for each insurance affiliate/subsidiary on the downstream immediate holding company or non-insurance owner's balance sheet. That value is prescribed by the NAIC Accounting Practices and Procedures Manual (SSAP No. 97, paragraph 22.a.). A similar exercise is required for each RBC filing insurer and each non-U.S. insurer in order to determine the remaining excess value of the holding company.

The remaining value of the directly held holding company is then subject to a charge that is calculated in accordance with the instructions for Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries as specified in the RBC formula. If the holding company is not admitted, report the excess carrying value as zero and the

corresponding RBC charge will also be zero. If a negative excess value for the downstream holding company results from removing the value of U.S. RBC filing insurers from the downstream holding company's reported value, then the value of that holding company will be floored at zero and the corresponding RBC charge will also be zero.

The following hypothetical Balance Sheet indicates the view of a Holding Company - Holder, Inc. which is 100% owned by MEGA Life Insurance Company (it assumes that the value reported by the downstream holding company for the U.S. RBC filing insurer is the same as the statutory value established for the insurer on a look-through basis):

Balance Sheet	
Holder, Inc.	
12/31/XXXX	
Cm Stk:	
ABC Life Company	10,000,000
XYZ Casualty Company	15,000,000
ANH Health Company	3,000,000
Other Common Stock	17,000,000
Cash	7,000,000
Other Assets	5,000,000
Total Assets	57,000,000
	Long Term Debt
	Other Liabilities
	Total Liabilities
	Equity
	Total Liabilities & Equity
	57,000,000

The RBC calculation for Holder, Inc.'s value in excess of the indirectly owned insurance affiliates is as follows:

Company	Stat. Book value	Source:
Holder, Inc.	50,000,000	MEGA Life Sch D - Part 6, Section 1
Holder, Inc. aff/subs subject to RBC		
ABC Life Company	10,000,000	Holder, Inc. Stat. balance sheet
XYZ Casualty Company	15,000,000	Holder, Inc. Stat. balance sheet
ANH Health Company	<u>3,000,000</u>	Holder, Inc. Stat. balance sheet
Subtotal	28,000,000	
Holder, Inc. excl. RBC aff/subs	22,000,000	(amount subject to the 30.0% factor for Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries)

The following table shows the LR044 entries that MEGA Life Insurance Company (which owns 100% owns of Holder, Inc.) would report for the indirectly owned insurance subsidiaries under Holder, Inc. This table assumes that Holder, Inc. owns 40%, 50% and 25% of ABC Life, XYZ Casualty, and ANH Health, respectively. The table also assumes that the RBC values shown for these subsidiaries at the 100% level are the correct RBC After Covariance but Before Operational Risk.

Affiliates/Subsidiaries	Affiliates/Subsidiaries Type	LR044 Column				
		4 100% RBC	5 Book Adjusted Carrying Value	6 Total Value of Affiliates/Subsidiaries	9 % Owned	10 RBC Required
ABC Life Company	Indirect U.S. Life Aff/Sub	5,000,000	10,000,000	25,000,000	40%	2,000,000
XYZ Casualty Company	Indirect U.S. P&C Aff/Sub	12,000,000	15,000,000	30,000,000	50%	6,000,000
ANH Health Company	Indirect U.S. Health Aff/Sub	6,000,000	3,000,000	12,000,000	25%	1,500,000

The risk-based capital charge for the parent insurer preparing the calculation is a 30.0 percent charge against the holding company value in excess of the indirectly owned insurance affiliates/subsidiaries as calculated in the prior example. Enter information in the appropriate columns of the worksheet, omitting those columns that do not apply (Column (3) – NAIC Company Code or Alien ID Number and Column (4) Affiliate’s RBC After Covariance).

4. Investment Subsidiaries

An investment subsidiary is a subsidiary that exists only to invest the funds of the parent company. The term “investment subsidiary” is defined in the NAIC’s *Annual Statement Instructions* as any subsidiary, other than a holding company, engaged or organized primarily to engage in the ownership and management of investments for the insurer. An investment subsidiary shall not include any broker-dealer or a money management fund managing funds other than those of the parent company. The risk-based capital charge for the ownership of an investment subsidiary is based on the risk-based capital of the underlying assets, pro-rated for the degree of ownership. The basis for this calculation is the assumption that the charge should be the same as it would be if the life insurer held the assets directly.

Report information regarding any investment subsidiaries. Subsidiaries reported in this section will be assigned an affiliate code of “4” for investment subsidiaries. The amount of reported common stock should be the same as Schedule D, Part 6, Section 1, Line 1699999. Preferred stock information should be the same as Schedule D, Part 6, Section 1, Line 0799999.

Affiliates/Subsidiaries that are Not Subject to RBC

5. Directly Owned Alien Insurance Affiliates/Subsidiaries

For purposes of this formula, the risk-based capital of each alien insurance affiliate/subsidiary is zero. Report information for any non-U.S. insurance affiliate/subsidiary, both life and property and casualty.

For each affiliate/subsidiary, report the name and alien insurer identification number. For purposes of this formula, the statement value of common and preferred stock and the total outstanding value of common and preferred stock for alien insurance affiliates/subsidiaries should be entered as zero. Companies reported in this section will be assigned an affiliate/subsidiary code of “5” for alien insurers.

For each affiliate/subsidiary, enter the following information:

- Company Name,
- Alien Insurer Identification Number,

- Book Adjusted carrying value of common and preferred stock,
- Total Outstanding value of common and preferred stock,
- Book/adjusted carrying value of the common and preferred stock from Schedule D, Part 6, Section 1, Line 1499999. If no value is reported in the Total Value of Affiliate's/Subsidiary's common and preferred stock columns (6) and (8), the program will assume 100 percent ownership.

6. Indirectly Owned Alien Insurance Affiliates/Subsidiaries

Consistent with the treatment of Directly Owned Alien Insurance Subsidiaries / Affiliates, for purposes of this formula, the carrying value and risk-based capital charge of each alien insurance affiliate is zero.

For each affiliate/Subsidiary enter the following information:

- Company Name,
- Alien Insurer Identification Number,
- Book Adjusted carrying value of common and preferred stock,
- Total Outstanding value of common and preferred stock,
- Book/adjusted carrying value of the common and preferred stock from Schedule D, Part 6, Section 1, Lines 1499999 and 0599999. If no value is reported in the Total Value of Affiliate's/Subsidiary's Common and preferred stock columns (6) and (8), the program will assume 100 percent ownership.

7. Investment in Upstream Affiliate (Parent)

The pre-tax Risk-Based Capital (RBC) for an investment in an upstream parent is 30.0 percent of the book/adjusted carrying value of the common and preferred stock, regardless of whether that upstream parent is subject to RBC. Report the appropriate information from Schedule D, Part 6, Section 1, Lines 0199999 and 1099999 in Columns (1) through (6).

For each affiliate, enter the following information:

- Company Name,
- Affiliate Type,
- NAIC Company Code,
- Book Adjusted carrying value of common and preferred stock,
- Total Outstanding value of common and preferred stock.

8. Directly Owned U.S. Insurance Affiliates/Subsidiaries Not Subject to RBC

- a. Health Insurance Companies and Health Entities Not Subject to RBC
- b. Property and Casualty Insurance Companies Not Subject to RBC, such as title insurers, monoline financial guaranty insurers, and monoline mortgage guarantee insurers
- c. Life Insurance Companies Not Subject to RBC, such as life insurance affiliate/subsidiary exempted from RBC

The risk-based capital for insurers not subject to RBC is based on the underlying statute, regulation, or rule governing capital requirements for such entities. If not otherwise specified by statute, regulation or rule, the risk-based capital for an investment in a U.S. insurer that is not required to file an RBC formula investment is 0.300 times the book/adjusted carrying value of the common and preferred stock.

9. Non-Insurance Affiliates/Subsidiaries Not Subject to RBC

- a. Financial entities with a capital requirement imposed by a regulatory body (e.g. a bank)
- b. Other financial entities without regulatory capital requirements
- c. Other Non-financial entities

The risk-based capital for entity types a, b, and c. is 0.300 times the book/adjusted carrying value of the common and preferred stock. The affiliate/subsidiary code for Non-Insurance Affiliates/Subsidiaries Not Subject to RBC is "9." Reported amounts use Schedule D, part 6, Schedule 1, Line 08999999, and Line 17999999 as the basis of reporting.

10. Publicly Traded Insurance Affiliates/Subsidiaries Held at Market Value

The risk-based capital for a publicly traded insurance affiliate/subsidiary held at market value after any "discount," is calculated in two parts. First, calculate and report the risk-based capital of the affiliate/subsidiary according to the relevant instructions above for Insurance Affiliates/Subsidiaries that are Subject to a RBC-look-through Calculation. Second, calculate the additional risk-based capital charge as 34.6 percent pre-tax of any excess of the market (statement) value over the book value of the affiliate/subsidiary. The result of the second calculation will be added to the C-10 component.

Report information regarding any publicly traded insurance affiliate/subsidiary held at market value. The reported market value of common stock should be the same as shown Schedule D, Part 2, Section 2, Column 8, Line 5919999999 plus Line 5929999999. The market value of preferred stock should be the same as shown in Schedule D, Part 2, Section 1, Column 10, line 4319999999 plus 4329999999. The reported book value of common stock should be the same as shown in Schedule D, Part 2, Section 2, Column 6, Line 5919999999 plus Line 5929999999. The reported book value of preferred stock should be the same as Schedule D, Part 2, Section 1, Column 8, Line 4319999999 plus 4329999999.

APPENDIX 3 – EXAMPLE USED FOR AFFILIATED/SUBSIDIARY STOCKS

To determine the value of total outstanding common stock or total outstanding preferred stock, divide the book/adjusted carrying value of the investment (found in Schedule D - Part 6 Section 1, Column 9) by the percentage of ownership (found in Schedule D – Part 6 – Section 1, Column 12). For example:

<u>Subsidiary Insurance Company</u>	<u>Owner's Book / Adjusted Carrying Value</u>	<u>Percentage Ownership</u>	<u>Total Stock Outstanding</u>
Subsidiary #1	\$1,000,000	100%	\$1,000,000
Subsidiary #2	\$1,000,000	75%	\$1,333,333
Subsidiary #3	\$1,000,000	50%	\$2,000,000
Subsidiary #4	\$1,000,000	25%	\$4,000,000
Subsidiary #5	\$1,000,000	10%	\$10,000,000

LR044

AFFILIATED/SUBSIDIARY STOCKS
PR003 – PR005

There are nine categories of affiliated/subsidiary investments that are subject to Risk-Based Capital requirement for common stock and preferred stock holdings. Those nine categories are:

1. Directly Owned U.S. Insurance Affiliates/Subsidiaries Subject to a Risk-Based Capital (RBC)-Look-Through Calculation
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
2. Indirectly Owned U.S. Insurance Affiliates/Subsidiaries Subject to RBC-Look-Through Calculation
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
3. Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries
4. Investment Subsidiaries
5. Directly Owned Alien Insurance Affiliates/Subsidiaries
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
6. Indirectly Owned Alien Insurance Affiliates/Subsidiaries
 - a. Health Insurance Company or Health Entity
 - b. Property and Casualty Insurance Company
 - c. Life Insurance Company
7. Investments in Upstream Affiliate (Parent)
8. Directly Owned U.S. Insurance Affiliates/Subsidiaries Not Subject to RBC
 - a. Health Insurance Companies or Health Entities Not Subject to RBC
 - b. Property and Casualty Insurance Companies Not Subject to RBC
 - c. Life Insurance Companies Not Subject to RBC
9. Non-Insurance Affiliates/Subsidiaries Not Subject to RBC
 - a. Entities with a capital requirement imposed by a regulatory body
 - b. Other Financial Entities without regulatory capital requirements
 - c. Other Non-financial entities

Enter applicable items for each affiliate/subsidiary in the Details for Affiliated/Subsidiary Stocks worksheet. The program will automatically calculate the risk-based capital charge for each affiliate/subsidiary. When the data is uploaded to the NAIC database, it will be cross-checked and the company will be required to correct any discrepancies and refile a corrected version with the NAIC and/or any state that requires the company to file RBC with its department. The RBC report will display the number of affiliates/subsidiaries. These numbers should be reviewed to ensure that all affiliates/subsidiaries are appropriately reported.

The total of all reported affiliate/subsidiary stock should equal the amounts reported on Schedule D, Part 2, Section 1, Line 4409999999 plus Schedule D, Part 2, Section 2, Line 5979999999 and should also equal Schedule D, Part 6, Section 1, Line 09999999 plus Line 18999999.

Affiliate/Subsidiary investments fall primarily into two broad categories: (a) Insurance Affiliates/Subsidiaries that are Subject to risk-based capital; and (b) Affiliates/Subsidiaries that are Not Subject to risk-based capital. The risk-based capital for these two broad groups differs. A third category of Affiliates/Subsidiaries, publicly traded insurance affiliates/subsidiaries held at market value, has characteristics of both broader categories. As a result, it has a two-part RBC calculation. The general treatment for each is explained below.

Directly owned insurance and health entity affiliates/subsidiaries are affiliates/subsidiaries in which the reporting company owns the stock of the affiliate/subsidiary. Indirectly owned insurance affiliates/subsidiaries and health entities are those where the reporting company owns stock in a holding company, which in turn owns the stock of the insurance affiliate/subsidiary or health entity. Note that there could be multiple holding companies that control the downstream insurance company.

Enter the book/adjusted carrying value of: the common stock in Column (5), the preferred stock in Column (9), the total outstanding common stock in Column (7) and the total outstanding preferred stock of that affiliate/subsidiary in Column (10) of the appropriate worksheet. The percentage of ownership is calculated by summing the book/adjusted carrying values of the owned preferred and common stock and dividing that amount by the sum of all outstanding preferred and common stock.

Insurance Affiliates/Subsidiaries that are Subject to RBC

1. Directly Owned U.S. Affiliates/Subsidiaries:

The risk-based capital requirement for the reporting company for those insurance affiliates/subsidiaries that are subject to a risk-based capital requirement is based on the Total Risk-Based Capital After Covariance of the subsidiary, prorated for the percent of ownership of that affiliate/subsidiary.

For purposes of Affiliate/Subsidiary Risk all references to Total Risk-Based Capital After Covariance of the affiliate/subsidiary means:

- a. For a Health affiliate/subsidiary RBC filing, Total Risk-Based Capital After Covariance before Basic Operational Risk (XR025, Line (37).
- b. For a P/C affiliate/subsidiary RBC filing, Total Risk-Based Capital After Covariance before Basic Operational Risk (PR032, Line (68).
- c. For a Life affiliate/subsidiary RBC filing, the sum of
 - i. Total Risk-Based Capital After Covariance before Basic Operational Risk (LR031, Line (67)); and
 - ii. Primary Security shortfalls for all cessions covered by Actuarial Guideline XLVIII (AG 48) multiplied by two (LR031, Line (71)).

For RBC purposes, the reporting insurer must determine the carrying value and the RBC requirement of a directly owned RBC filing affiliate/subsidiary company, even if the RBC filing affiliate/subsidiary is non-admitted for financial reporting purposes. The value reported in annual statement Schedule D, Part 6, Section 1 will be used for RBC purposes. In addition to RBC, the carrying value of the RBC filer must be reported in total adjusted capital for RBC purposes, in order to appropriately balance the numerator with the addition to the denominator value. Enter the carrying value of the insurer on **Line XXXX** of the Calculation of Total Adjusted Capital page to satisfy these instructions.

Equity method Insurance Affiliates/Subsidiaries: Equity method is defined in SSAP 97, Paragraph 8b, as the underlying audited statutory equity of the respective entity's financial statements, adjusted for any unamortized goodwill as provided for in SSAP No. 68—Business Combinations and Goodwill. For those insurance

Affiliates/Subsidiaries of the reporting company that are reported under the equity method, the R_0 charge of the ownership of the common and preferred stock in these Affiliates/Subsidiaries is limited to the lesser of:

- (a) the Total RBC After Covariance of the affiliate/subsidiary times the percentage of ownership, which is the total of common stock and preferred stock; or
- (b) the common and preferred stock book/adjusted carrying value at which the affiliate/subsidiary is carried

Market Value (including discounted market value) Insurance Affiliates/Subsidiaries (See SSAP No. 97, Paragraph 8a.): If the affiliate/subsidiary’s common stock is publicly traded and the reporting company carries the affiliate/subsidiary at market value, after any “discount,” there are generally two components to the reporting company’s RBC generated by the affiliate/subsidiary. The prorated portion is the percentage of ownership of the total common and preferred stock. The smaller of the prorated portion of the affiliate/subsidiary’s own statutory surplus or the prorated portion of its RBC after covariance is added to the R_0 component of the reporting company. In the normal case, the common and preferred stock book/adjusted carrying value of the affiliate/subsidiary exceeds the prorated portion of the larger of its statutory surplus and its RBC after covariance. In this case, the addition to the R_2 component is the larger of a) 22.5 percent of the affiliate/subsidiary’s common and preferred stock book/adjusted carrying value in excess of the prorated portion of the affiliate/subsidiary’s statutory surplus or b) the prorated portion of the affiliate/subsidiary’s RBC after covariance in excess of the prorated portion of its statutory surplus. If the affiliate/subsidiary’s common and preferred stock book/adjusted carrying value is less than the prorated portion of the affiliate/subsidiaries’ s statutory surplus, there is no addition to the R_2 component.

2. Indirectly Owned U.S. Insurance Affiliates/Subsidiaries

For Indirectly Owned U.S. Insurance Affiliates/Subsidiaries, the carrying value and RBC is calculated in the same manner as for directly owned U.S. Insurance Affiliates/Subsidiaries. The RBC for the indirect affiliates/subsidiaries must be calculated prior to completing this RBC report.

SSAP No. 97 provides guidance for the reporting and admittance requirements of SCAs. Accordingly, there may be cases where an indirectly owned RBC filer may not be separately reported in the statutory financial statements (e.g., they are captured within the carrying value of an intermediate holding company). The SSAP No. 97 guidance permits reporting SCAs at the directly owned holding company level or via look-through to the downstream entity (including where the downstream entity is an RBC filer), but an audit of the entity is required for admittance (i.e. if reporting is at the directly owned holding company level, the holding company must be audited, if the reporting is on a look-through basis then the downstream entity must be audited). Regardless of whether there is a look-through applied pursuant to Statutory Accounting Principles (SAP) for annual financial statement reporting, for RBC purposes the reporting insurer must “look-through” all intermediate holding and subsidiary companies to determine the carrying value and the RBC requirement of indirectly owned RBC filing affiliate/subsidiary companies. This involves drilling down to the first RBC filing insurance affiliate/subsidiary and adjusting for percentage ownership of the intermediate entity directly owning the RBC filing affiliate/subsidiary. Both RBC and carrying value of the RBC filer must be reported for RBC purposes, in order to appropriately balance the numerator with the addition to the denominator value. Enter the carrying value of the insurer on Line **XXX** of the Calculation of Total Adjusted Capital page to satisfy these instructions.

The carrying value for each indirect insurance affiliate/subsidiary is established based on company records using the statutory value of the insurer as reported in the NAIC annual financial statement blank submitted by the affiliate/subsidiary or market value when applicable, and the RBC requirement as determined in its RBC Report adjusted for the ownership percentages (both the percentage of the indirectly owned RBC filing affiliate/subsidiary that is owned by the directly held

downstream holding company and the reporting insurer's ownership percentage in that downstream entity). The value reported by the downstream holding company for the U.S. RBC filing insurer is the same as the statutory value established for the insurer on a look-through basis.

3. Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries

The carrying value of a U.S. Insurance Affiliate/Subsidiary that is subject to RBC is deducted from the value of the directly held holding company or other entity that in turn directly owns the U.S. Insurance Affiliate/Subsidiary that is subject to RBC, based on the value reported for each insurance subsidiary on the downstream immediate holding company or non-insurance owner's balance sheet. That value is prescribed by the NAIC Accounting Practices and Procedures Manual (SSAP No. 97, paragraph 22.a.). A similar exercise is required for each RBC filing insurer and each non-U.S. insurer in order to determine the remaining excess value of the holding company.

The remaining value of the directly held holding company is then subject to a charge that is calculated in accordance with the instructions for Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries as specified in the RBC formula. If the holding company is not admitted, report the excess carrying value as zero and the corresponding RBC charge will also be zero. If a negative excess value for the downstream holding company results from removing the value of U.S. RBC filing insurers from the downstream holding company's reported value, then the value of that holding company will be floored at zero and the corresponding RBC charge will also be zero.

The following hypothetical Balance Sheet indicates the view of a Holding Company - Holder, Inc. which is 100% owned by MEGA P&C Insurance Company (it assumes that the value reported by the downstream holding company for the U.S. RBC filing insurer is the same as the statutory value established for the insurer on a look-through basis):

	Balance Sheet Holder, Inc. 12/31/XXXX	
Cm Stk:	ABC Life Company	10,000,000
	XYZ Casualty Company	15,000,000
	ANH Health Company	3,000,000
	Other Common Stock	17,000,000
	Cash	7,000,000
	Other Assets	5,000,000
	Total Assets	57,000,000
	Long Term Debt	5,000,000
	Other Liabilities	2,000,000
	Total Liabilities	7,000,000
	Equity	50,000,000
	Total Liabilities & Equity	57,000,000

The RBC calculation for Holder, Inc.'s value in excess of the indirectly owned insurance affiliates/subsidiaries is as follows:

<u>Company</u>	<u>Stat. Book value</u>	<u>Source:</u>
Holder, Inc.	50,000,000	MEGA P&C Sch D - Part 6, Section 1
<i>Holder, Inc. Aff/subs subject to RBC</i>		
ABC Life Company	10,000,000	Holder, Inc. Stat. balance sheet
XYZ Casualty Company	15,000,000	Holder, Inc. Stat. balance sheet
ANH Health Company	<u>3,000,000</u>	Holder, Inc. Stat. balance sheet
subtotal	28,000,000	
Holder, Inc. excl. RBC aff/subs	22,000,000	<i>(amount subject to the 22.5% factor for Holding Company Value in Excess of Indirectly Owned Insurance Affiliates/Subsidiaries)</i>

The following table shows the PR003 entries that MEGA P&C Insurance Company (which owns 100% owns of Holder, Inc.) would report for the indirectly owned insurance Affiliates/subsidiaries under Holder, Inc. This table assumes that Holder, Inc. owns 40%, 50% and 25% of ABC Life, XYZ Casualty, and ANH Health, respectively. The table also assumes that the RBC values shown for these affiliates/subsidiaries at the 100% level are the correct RBC After Covariance but Before Operational Risk.

Affiliates/Subsidiaries	Affiliates/Subsidiaries Type	PR003 Column					
		4	5	7	8	9	13
	100% RBC	Book Adjusted Carrying Value	Total Value of Affiliates/Subsidiaries	Statutory Surplus of Affiliates/Subsidiaries	% Owned	RBC Required	
ABC Life Company	Indirect U.S. Life Aff/Sub	10,000,000	25,000,000	25,000,000	40%	2,000,000	
XYZ Casualty Company	Indirect U.S. P&C Aff/Sub	15,000,000	30,000,000	30,000,000	50%	6,000,000	
ANH Health Company	Indirect U.S. Health Aff/Sub	3,000,000	12,000,000	12,000,000	25%	1,500,000	

The risk-based capital charge for the parent insurer preparing the calculation is a 22.5 percent charge against the holding company value in excess of the indirectly owned insurance affiliates/subsidiaries as calculated in the prior example. Enter information in the appropriate columns of the worksheet, omitting those columns that do not apply (Column (3) – NAIC Company Code or Alien ID Number and Column (4) Affiliate's RBC After Covariance).

Affiliates/Subsidiaries that are Not Subject to RBC4. Investment Subsidiaries

An investment subsidiary is a subsidiary that exists only to invest the funds of the parent company. The term investment subsidiary is defined in the annual statement instructions as any subsidiary, other than a holding company, engaged or organized primarily to engage in the ownership and management of investments for the insurer. An investment subsidiary shall not include any broker-dealer or a money management fund managing funds other than those of the parent company. The risk-based capital for an investment in an investment subsidiary is 22.5 percent of the carrying value of the common and preferred stock.

5. Directly Owned Alien Insurance Affiliates/Subsidiaries

For purposes of this formula, the Risk-Based Capital (RBC) of each directly owned alien insurance affiliate/subsidiary is the annual statement book adjusted carrying value of the reporting company's interest in the affiliate multiplied by 0.500. Enter information for any non-U.S. insurance affiliate/subsidiary: life, property and casualty, and health insurers.

For each affiliate/subsidiary, enter the following information:

- Company Name,
- Alien Insurer Identification Number,
- Book Adjusted carrying value of common and preferred stock,
- Total Outstanding value of common and preferred stock,
- Book/adjusted carrying value of the common and preferred stock from Schedule D, Part 6, Section 1, Line 1499999. If no value is reported in the Total Value of Affiliate's common and preferred stock columns (7) and (11), the program will assume 100 percent ownership.

6. Indirectly Owned Alien Insurance Affiliates/Subsidiaries

For Indirectly Owned Alien Insurance Affiliates/Subsidiaries, the carrying value and RBC charge is calculated in a similar manner as for directly owned Alien Insurance Affiliates/Subsidiaries.

SSAP No. 97 provides guidance for the reporting and admittance requirements of SCAs. Accordingly, there may be cases where an indirectly owned Alien insurers may not be separately reported in the statutory financial statements (e.g., they are captured within the carrying value of an intermediate holding company). The SSAP No. 97 guidance permits reporting SCAs at the directly owned holding company level or via look-through to the downstream entity (including where the downstream entity is an Alien insurer), but an audit of the entity is required for admittance (i.e. if reporting is at the directly owned holding company level, the holding company must be audited, if the reporting is on a look-through basis then the downstream entity must be audited). Regardless of whether there is a look-through applied pursuant to Statutory Accounting Principles (SAP) for annual financial statement reporting, for RBC purposes the reporting insurer must "look-through" all intermediate holding and subsidiary companies to determine the carrying value and the RBC charge that would be imposed had the alien insurance affiliate/subsidiary companies been directly held by the reporting insurer. This involves looking down to the first alien insurer affiliate/subsidiary, unless there is an RBC filer in between and adjusting for percentage ownership of the intermediate entity directly owning the RBC filing affiliate/subsidiary. Both the RBC charge and carrying value of the alien insurer must be reported for RBC purposes, in order to appropriately balance the numerator with the addition to the denominator value. Enter the carrying value of the insurer on Line XXXX of the Calculation of Total Adjusted Capital page to satisfy these instructions.

The carrying value of an alien insurance Affiliate/Subsidiary is deducted from the value of the directly held holding company or other entity that in turn directly owns the U.S. Insurance Affiliate/Subsidiary that is subject to RBC, based on the value reported for each insurance subsidiary on the downstream immediate holding company or non-insurance owner's balance sheet. That value is prescribed by the NAIC Accounting Practices and Procedures Manual (SSAP No. 97, paragraph 22.a.). A similar exercise is required for each non-U.S. insurer in order to determine the remaining excess value of the holding company.

The RBC charge to be applied to each indirectly owned alien insurance affiliate/subsidiary is the annual statement book adjusted carrying value of the reporting company's interest in the affiliate/subsidiary multiplied by 0.500 and adjusted to reflect the reporting company's ownership on the holding company. For example, assume NEWBIE Insurance Company acquired 100 percent shares of Holder (a holding company), and Holder owns an Alien Insurance Company, which represents 50 percent of the book adjusted carrying value of Holder. If Holder has a book adjusted carrying value of \$20,000,000, NEWBIE Insurance Company would enter \$10,000,000 (1/2 of \$20,000,000) as the carrying value of the Alien Insurance Company and the RBC charge for the indirect ownership of the Alien insurance affiliate/subsidiary would be \$5,000,000 (0.500 times \$10,000,000). The risk-based capital charge for the parent insurer preparing the calculation is a 22.5 percent charge against the holding company value in excess of the indirectly owned insurance affiliates/subsidiaries.

If NEWBIE Insurance Company only acquired 50 percent shares of Holder, NEWBIE Insurance Company would enter \$5,000,000 (50 percent of 1/2 of \$20,000,000) as the carrying value of the Alien Insurance Company and the RBC charge for the indirect ownership of the Alien insurance affiliate/subsidiary would be \$2,500,000 (0.500 times \$5,000,000). Enter information for any indirectly owned alien insurance subsidiaries.

		PR003 Column				
		4	5	7	9	13
Affiliates/Subsidiaries	Affiliates/Subsidiaries Type	100% RBC	Book Adjusted Carrying Value	Total Value of Affiliates/Subsidiaries	% Owned	RBC Required
Alien Insurance Company	Indirect Alien Life Aff/Sub	5,000,000	10,000,000	20,000,000	50%	2,500,000

For each affiliate/subsidiary enter the following information:

- Company Name,
- Alien Insurer Identification Number,
- Book Adjusted carrying value of common and preferred stock,
- Total Outstanding value of common and preferred stock,
- Book/adjusted carrying value of the common and preferred stock from Schedule D, Part 6, Section 1, Line 1499999. If no value is reported in the Total Value of Affiliate's Common and preferred stock column.

7. Investment in Upstream Affiliate (Parent)

The Risk-Based Capital (RBC) for an investment in an upstream parent is 22.5 percent of the book/adjusted carrying value of the common and preferred stock, regardless of whether that upstream parent is subject to RBC. Report the appropriate information from Schedule D, Part 6, Section 1, Lines 0199999 and 1099999 in Columns (1) through (10).

For each affiliate, enter the following information:

- Company Name,
- Affiliate Type Code,
- NAIC Company Code,
- Book Adjusted carrying value of common stock
- Book Adjusted carrying value of preferred stock,
- Total Outstanding value of common and preferred stock.

8. Directly Owned U.S. Insurance Affiliates/Subsidiaries Not Subject to RBC

- a. Health Insurance Companies and Health Entities Not Subject to RBC
- b. Property and Casualty Insurance Companies Not Subject to RBC, such as title insurers, monoline financial guaranty insurers, and monoline mortgage guaratee insurers
- c. Life Insurance Companies Not Subject to RBC, such as life insurance subsidiary exempted from RBC

The risk-based capital for insurers not subject to RBC is based on the underlying statute, regulation, or rule governing capital requirements for such entities. If not otherwise specified by statute regulation or rule, the risk-based capital for an investment in a U.S. insurer that is not required to file an RBC formula is 22.5 percent of the book/adjusted carrying value of the common and preferred stock.

9. Non-Insurance Affiliates/Subsidiaries Not Subject to RBC

- a. Financial entities with a capital requirement imposed by a regulatory body (e.g., a bank)
- b. Other financial entities without regulatory capital requirements
- c. Other Non-financial entities

The risk-based capital for entity types a, b, and c is 22.5 percent of the book/adjusted carrying value of the common and preferred stock. The affiliate/subsidiary code for Non-Insurance Affiliates/Subsidiaries Not Subject to RBC is "9". Reported amounts use Schedule D, part 6, Schedule 1, Line 08999999, and Line 17999999 as the basis of reporting.

APPENDIX 3 – EXAMPLE USED FOR AFFILIATED/SUBSIDIARY STOCKS

To determine the value of total outstanding common stock or total outstanding preferred stock, divide the book/adjusted carrying value of the investment (found in Schedule D - Part 6 Section 1, Column 9) by the percentage of ownership (found in Schedule D – Part 6 – Section 1, Column 12). For example:

<u>Subsidiary Insurance Company</u>	<u>Owner's Book / Adjusted Carrying Value</u>	<u>Percentage Ownership</u>	<u>Total Stock Outstanding</u>
Subsidiary #1	\$1,000,000	100%	\$1,000,000
Subsidiary #2	\$1,000,000	75%	\$1,333,333
Subsidiary #3	\$1,000,000	50%	\$2,000,000
Subsidiary #4	\$1,000,000	25%	\$4,000,000
Subsidiary #5	\$1,000,000	10%	\$10,000,000

**CAPITAL ADEQUACY (E) TASK FORCE
WORKING AGENDA ITEMS FOR CALENDAR YEAR 2022**

Capital Adequacy (E) Task Force

2022 #	Owner	2022 Priority	Expected Completion Date	Working Agenda Item	Source	Comments	Date Added to Agenda
Ongoing Items – Life RBC							
1	Life RBC WG	Ongoing	Ongoing	Make technical corrections to Life RBC instructions, blank and /or methods to provide for consistent treatment among asset types and among the various components of the RBC calculations for a single asset type.			
2	Life RBC WG	1	2022 or later	1. Monitor the impact of the changes to the variable annuities reserve framework and risk-based capital (RBC) calculation and determine if additional revisions need to be made. 2. Develop and recommend appropriate changes including those to improve accuracy and clarity of variable annuity (VA) capital and reserve requirements. Provide recommendations for the appropriate treatment of longevity risk transfers by the new longevity factors.	CATF	Being addressed by the Variable Annuities Capital and Reserve (E/A) Subgroup	
3	Life RBC WG	1	2022 or later	Provide recommendations for the appropriate treatment of longevity risk transfers by the new longevity factors.	New Jersey	Being addressed by the Longevity (E/A) Subgroup	
Carry-Over Items Currently being Addressed – Life RBC							
4	Life RBC WG	1	2022 or later	Update the current C-3 Phase 1 or C-3 Phase II methodology to include indexed annuities with consideration of contingent deferred annuities as well	AAA		
5	Life RBC WG	1	2022 or later	Work with the Life Actuarial (A) Task Force and Conning to develop the economic scenario generator for implementation.			
6	Life RBC WG	1	2022	Review companies at action levels, including previous years, to determine what drivers of the events are and consider whether changes to the RBC statistics are warranted.			
7	Life RBC WG	1	2022	Update the C-2 mortality treatment based on the Academy's recommendation. Work with the Academy on creating guidance for the adopted C-2 mortality treatment for 2022 and next steps for 2023.			

Carryover Items – RBC IR & E							
Supplementary Investment Risks Interrogatories (SIRI)							
8	RBC IRE	2	2022 or Later		Referred from CADTF Referral from Blackrock and IL DOI	The Task Force received the referral on Oct. 27. This referral will be tabled until the bond factors have been adopted and the TF will conduct a holistic review all investment referrals.	1/12/2022 11/19/2020
9	RBC IRE	2	2022 or Later	NAIC Designation for Schedule D, Part 2 Section 2 - Common Stocks Equity investments that have an underlying bond characteristic should have a lower RBC charge? Similar to existing guidance for SVO-identified ETFs reported on Schedule D-1, are treated as bonds.	Referred from CADTF Referral from SAPWG 8/13/2018	10/8/19 - Exposed for a 30-day Comment period ending 11/8/2019 3-22-20 - Tabled discussion pending adoption of the bond structure and factors.	1/12/2022 10/11/2018
10	RBC IRE	2	2022 or Later	Structured Notes - defined as an investment that is structured to resemble a debt instrument, where the contractual amount of the instrument to be paid at maturity is at risk for other than the failure of the borrower to pay the contractual amount due. Structured notes reflect derivative instruments (i.e. put option or forward contract) that are wrapped by a debt structure.	Referred from CADTF Referral from SAPWG April 16, 2019	10/8/19 - Exposed for a 30-day Comment period ending 11/8/2019 3-22-20 - Tabled discussion pending adoption of the bond structure and factors.	1/12/2022 8/4/2019
11	RBC IRE	2	2022 or Later	Comprehensive Fund Review for investments reported on Schedule D Pt 2 Sn2	Referred from CADTF Referral from VOSTF 9/21/2018	Discussed during Spring Mtg. NAIC staff to do analysis. 10/8/19 - Exposed for a 30-day comment period ending 11/8/19 3-22-20 - Tabled discussion pending adoption of the bond structure and factors.	1/12/2022 11/16/2018

Capital Adequacy (E) Task Force

2022 #	Owner	2022 Priority	Expected Completion Date	Working Agenda Item	Source	Comments	Date Added to Agenda
12			2023 or later	New Items - RBC IR &E Evaluate the appropriate RBC treatment of Asset-Backed Securities (ABS), including Collateralized Loan Obligations (CLO), collateralized fund obligations (CFOs), or other similar securities carrying similar types of tail risk (Complex Assets).	Request from E Committee, SAPWG, VOSTF	Per the request of E Committee comments were solicited asking if these types of assets should be considered a part of the RBC framework.	1/12/2022
13			2023 or later	Evaluate the appropriate RBC treatment of Residual Tranches.	Request from E Committee, SAPWG, VOSTF	Per the request of E Committee comments were solicited asking if these types of assets should be considered a part of the RBC framework.	1/12/2022
14			2025 or later	Phase 2 Bond analysis - evaluate and develop an approach to map other ABS to current bond factors following the established principles from Phase 1 where the collateral has an assigned RBC. This project will likely require an outside consultant and the timeline could exceed 2-3 years.	Request from E Committee	Per the request of E Committee comment were solicited requesting the need for outside review.	1/12/2022

Carry-Over Items Currently being Addressed – P&C RBC							
15	Cat Risk SG	1	Year-end 2023 or later	Continue development of RBC formula revisions to include a risk charge based on catastrophic model output. a) Evaluate other catastrophe risks for possible inclusion in the change - determine whether to recommend developing charges for any additional perils, and which perils or perils those should be.	Referral from the Climate and Resiliency Task Force, March 2021	4/26/21 - The SG exposed the referral for a 30-day period. 6/1/21 - The SG forwarded the response to the Climate and Resiliency Task Force. 2/22/22 - The SG adopted proposal 2021-17-CR (adding the wildfire peril for informational purposes only). The SG continues reviewing other perils for possible inclusion in the Reat.	4/26/2021
16	P&C RBC WG	1	Year-end 2020 or later	Evaluate a) the current growth risk methodology whether it is adequately reflects both operational risk and underwriting risk; b) the premium and reserve based growth risk factors either as a stand-alone task or in conjunction with the ongoing underwriting risk factor review with consideration of the operational risk component of excessive growth; c) whether the application of the growth factors to NET proxies adequately accounts for growth risk that is ceded to reinsurers that do not trigger growth risk in their own right.	Refer from Operational Risk Subgroup	1) Sent a referral to the Academy on 6/14/18 conference call.	1/25/2018

Examination Oversight (E) Task Force
Portland, Oregon
August 11, 2022

The Examination Oversight (E) Task Force met in Portland, OR, Aug. 11, 2022. The following Task Force members participated: Amy L. Beard, Chair, represented by Roy Eft (IN); Karima M. Woods, Vice Chair, represented by Rebecca Davis (DC); Mark Fowler represented by Sheila Travis (AL); Lori K. Wing-Heier represented by David Pfifer (AK); Alan McClain represented by Leo Liu (AR); Ricardo Lara represented by Susan Bernard (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by William Arfanis (CT); Trinidad Navarro represented by Rylynn Brown (DE); Doug Ommen represented by Daniel Mathis (IA); Dean L. Cameron represented by Jessie Adamson (ID); Gary D. Anderson represented by John Turchi (MA); Anita G. Fox represented by Judy Weaver (MI); Chlora Lindley-Myers represented by Debbie Doggett (MO); Troy Downing represented by Kari Leonard (MT); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Lindsay Crawford (NE); Marlene Caride represented by John Sirovetz (NJ); Judith L. French represented by Dwight Radel (OH); Glen Mulready represented by Diane Carter (OK); Larry D. Deiter represented by Johanna Nickelson (SD); Carter Lawrence represented by Joy Little (TN); Cassie Brown represented by Jamie Walker (TX); Scott A. White represented by Greg Chew and David Smith (VA); Nathan Houdek represented by Amy Malm (WI); and Jeff Rude represented by Doug Melvin (WY).

1. Adopted its 2021 Fall National Meeting Minutes

Ms. Bernard made a motion, seconded by Mr. Radel, to adopt the Task Force's Dec. 1, 2021, minutes (*see NAIC Proceedings – Fall 2021, Examination Oversight (E) Task Force*). The motion passed unanimously.

2. Adopted the Reports of its Working Groups

A. Financial Examiners Coordination (E) Working Group

Mr. Eft provided the report of the Financial Examiners Coordination (E) Working Group. He stated that the Working Group met April 14 in regulator-to-regulator session, pursuant to paragraph 3 of the NAIC Policy Statement on Open Meetings, to continue work on its goals.

B. Financial Analysis Solvency Tools (E) Working Group

Mr. Eft provided the report of the Financial Analysis Solvency Tools (E) Working Group. He stated that the Working Group met Aug. 1 and June 13, in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings, to continue work on its goals.

C. Electronic Workpaper (E) Working Group

Ms. Bernard provided the report of the Electronic Workpaper (E) Working Group. She stated that the Working Group met July 20, May 23, April 18, Feb. 24, and Jan. 24 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings. She said that the Working Group continues its work on the TeamMate+ Transition project.

Ms. Bernard provided an overview of the status of the TeamMate+ Transition project. She stated that state insurance regulators have completed sandbox testing and that pilot testing is underway. Results of this testing

will be discussed with the vendor, and configuration updates will be made, as appropriate. She stated that legal representatives from the NAIC and the vendor are negotiating special terms for software licensing and cloud hosting, with an expectation that the contract will be finalized by the end of September. Ms. Bernard stated that training content is being developed, and she expects that specific training will begin rolling out later this early and early next year to help state insurance regulators prepare for the transition. Finally, Ms. Bernard stated that state-specific databases are expected to be available by January 2023 and that those databases may be installed in TeamCloud as states sign and execute the NAIC rider incorporating the finalized vendor contract.

D. Financial Examiners Handbook (E) Technical Group

Ms. Bernard provided the report of the Financial Examiners Handbook (E) Technical Group. She stated that the Technical Group met April 18 discuss its 2022 project list, which includes possible updates to: 1) Exhibit G – Fraud Considerations; and 2) the Capital and Surplus Examination Repository.

Ms. Bernard gave an overview of work being led by other NAIC groups that are expected to eventually be referred to the Technical Group to consider. These include: 1) a referral from the Financial Analysis (E) Working Group requesting the Technical Group to consider additional guidance related to terrorism insurance, uncollected premiums and agent balances, and monitoring startup insurers; 2) a future referral from the Group Solvency Issues (E) Working Group related to its work to incorporate guidance for examining internationally active insurance groups (IAIGs); 3) a future referral from the Climate and Resiliency (EX) Task Force to incorporate guidance to ensure climate-related risks are considered as part of a financial condition exam; and 4) a future referral from the Risk-Focused Surveillance (E) Working Group to incorporate guidance to assist examiners in evaluating affiliated service agreements.

E. Information Technology (IT) Examination (E) Working Group

Mr. Ehlers provided the report of the IT Examination (E) Working Group. He stated that the Working Group met May 2 to discuss its 2022 project list, which includes the following topics: 1) possible guidance for monitoring small to mid-size companies that heavily outsource IT functions; and 2) possible guidance for addressing prospective IT risks. Mr. Ehlers stated that a drafting group has been formed to develop guidance related to these topics and that proposed revisions will be brought before the Working Group for consideration later this year.

Ms. Bernard made a motion, seconded by Mr. Kaumann, to adopt reports of the Electronic Workpaper (E) Working Group, the Financial Analysis Solvency Tools (E) Working Group, the Financial Examiners Coordination (E) Working Group, the Financial Examiners Handbook (E) Technical Group (Attachment One), and the IT Examination (E) Working Group (Attachment Two). The motion passed unanimously.

Having no further business, the Examination Oversight (E) Task Force adjourned.

Draft: 4/22/22

Financial Examiners Handbook (E) Technical Group
Virtual Meeting
April 18, 2022

The Financial Examiners Handbook (E) Technical Group of the Examination Oversight (E) Task Force met April 18, 2022. The following Technical Group members participated: Susan Bernard, Chair (CA); John Litweiler, Vice Chair (WI); Blasé Abreo (AL); Michael Estabrook (CT); N. Kevin Brown (DC); Cindy Andersen (IL); Shannon Schmoeger (MO); Justin Schrader (NE); Doug Bartlett (NH); Nancy Lee Chice (NJ); Tracy Snow (OH); Eli Snowbarger (OK); Matt Milford (PA); and John Jacobson (WA). Also participating were: Levi Nwasoria (KS); Monique Smith (NC); and Joy Little (TN).

1. Discussed its 2022 Project Listing

a. Exhibit G

Ms. Bernard introduced the Technical Group's 2022 project listing, and she said the first project to consider is enhancements to Exhibit G and the consideration of fraud during an examination. She noted that Exhibit G is structured in a way that is more conducive to the former exam approach when it was designed like a financial statement audit, and modifications to Exhibit G help to align the fraud review with the current risk-focused exam approach. While NAIC staff have made a few minor revisions to clean up and organize Exhibit G, no substantive changes have been made yet. Ms. Bernard said a drafting group would be beneficial to consider further revisions to Exhibit G, and she instructed anyone who is interested in volunteering for the drafting group to contact Bailey Henning (NAIC) or Elise Klebba (NAIC).

b. Capital and Surplus Repository Updates

Ms. Bernard said the next item on the project list to discuss is updates to the capital and surplus repository, which would help to align the recently added Own Risk and Solvency Assessment (ORSA) procedures to the work conducted in evaluating risks related to an insurer's capital and surplus. She stated that NAIC staff are working with a group of state insurance regulators who are familiar with the new ORSA review procedures and have used the procedures during recent exams to draft revisions to the capital and surplus exam repository. Once the proposed revisions are finished, they will be brought to the Technical Group for consideration.

c. Projects Led by Other NAIC Groups

Ms. Bernard stated that the next few items on the Technical Group's project listing are related to the *Financial Condition Examiners Handbook* but are currently being led by other NAIC groups. Since the projects will eventually be referred to the Technical Group to consider for adoption, it is important to keep the Technical Group aware of these projects.

Ms. Bernard mentioned that the first project related to the *Financial Condition Examiners Handbook* is Affiliated Service Agreements, which is currently being led by the Risk-Focused Surveillance (E) Working Group. This project considers additional procedures to assess the appropriateness of using a market-based expense allocation within affiliated agreements. Ms. Bernard said the Working Group started to develop guidance surrounding this topic in 2021, and it has formed a joint industry/state insurance regulator drafting group to revise the proposed revisions considering the comments received at the end of last year.

Ms. Bernard said the next project to discuss is related to the Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame), which is a global supervisory framework developed by the International Association of Insurance Supervisors (IAIS). ComFrame is aimed at facilitating effective group-wide supervision of internationally active insurance groups (IAIGs). This work is being led by the Group Solvency Issues (E) Working Group, which formed three distinct drafting groups to review and consider if additional guidance is deemed necessary within the *Financial Analysis Handbook*, the *Financial Condition Examiners Handbook*, and the *NAIC Own Risk and Solvency Assessment (ORSA) Guidance Manual* (ORSA Guidance Manual). Ms. Bernard noted that NAIC staff have been working diligently alongside the examination drafting group to incorporate relevant ComFrame revisions into the Examination process. It is anticipated that this project will be completed within the next few months.

Ms. Bernard indicated that the last project related to the *Financial Condition Examiners Handbook* to discuss is Climate-Related Risks. The Climate Risk and Resiliency (EX) Task Force is leading this work, which is focused on considering updates to enhance the integration of climate change risks into the financial examination process. Ms. Bernard noted that there is a referral out for exposure that outlines specific examination areas in which the Task Force believes guidance should be added. When the referral is finalized, it will be sent to the Technical Group to discuss and develop revisions.

d. Premium Tax Considerations

Ms. Bernard mentioned that the last item to discuss related to the 2022 project listing is premium tax considerations, and she asked the Technical Group to consider if the existing guidance is sufficient or if enhancements should be developed. Mr. Litweiler noted that Wisconsin is a premium tax coordinator and does extensive reviews of incoming files, so he believes this project would be beneficial to clarify how much work is necessary.

Ms. Smith said because the North Carolina Department of Revenue (NCDOR) only ties the premium tax return to the Schedule T, it is important to validate all information reported on Schedule T. She mentioned that policy fees have recently been recorded incorrectly, and North Carolina has noticed issues with its insurers underpaying premium taxes; therefore, she believes it is important that states work to validate Schedule T.

Bruce Jenson (NAIC) asked members if there is an expectation that all states are validating premium information on Schedule T for their domestic insurers that are licensed in other states. Ms. Smith and Mr. Litweiler agreed that their states would be relying on the other states to ensure Schedule T information is validated. Mr. Nwasoria added that he agrees with Ms. Smith, and he wants to understand how the Technical Group is going to consider this issue and where it would be addressed.

Ms. Bernard explained that the Technical Group wants to clarify what the expectation is with respect to premium tax considerations in an exam. Mr. Smith added that he has used the procedures included within the *Financial Condition Examiners Handbook* to assure the Virginia Department of the Treasury, which is responsible for the collection of premium taxes, that other states are looking at premium taxes. Furthermore, he expressed concern that if the procedures in the *Financial Condition Examiners Handbook* get changed or reduced, various state treasury departments may start to require audits if they believe premium taxes are not being appropriately reviewed during financial exams.

Mr. Bartlett noted that New Hampshire wants to make sure the Schedule T is accurate but struggles knowing what the retaliatory taxes are in a state tax return and can only note that the premium being reported is accurate. Ms. Little agreed that some work should be done on Schedule T, and she noted that while a lot has changed under the risk-focused approach, some things, such as premium taxes, are a requirement by law. Ms. Bernard concluded

that a reminder in a state insurance regulator newsletter regarding premium tax is the best path forward, and multiple Technical Group members agreed.

Having no further business, the Financial Examiners Handbook (E) Technical Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/E CMTE/EOTF

Draft: 5/2/22

Information Technology (IT) Examination (E) Working Group
Virtual Meeting
May 2, 2022

The IT Examination (E) Working Group of the Examination Oversight (E) Task Force met May 2, 2022. The following Working Group members participated: Jerry Ehlers, Chair (IN); Ber Vang, Vice Chair (CA); Blasé Abreo (AL); Mel Anderson (AR); William Arfanis and Ken Roulier (CT); Ginny Godek (IL); Dmitriy Valekha (MD); Kim Dobbs and Cynthia Amann (MO); Eileen Fox (NY); Metty Nyangoro (OH); Eli Snowbarger (OK); Melissa Greiner and Matt Milford (PA).

1. Discussed its 2022 Project List

Mr. Ehlers called the meeting to order and said that the purpose of the meeting was to discuss the 2022 Project List. Mr. Ehlers said that prior to the meeting, preliminary feedback regarding possible projects was collected from the Working Group members via an email survey. The results of that survey are captured in the 2022 Project List. Mr. Ehlers then gave a summary of the Working Group's Project List which included: 1) consideration of guidance updates within the Financial Condition Examiners Handbook (Handbook) pertaining to cloud storage environments and insurers that outsource portions of their IT activities; 2) consideration of possible guidance updates within the Handbook to add the concept of prospective risks to the IT Review; and, 3) development of general best practices for supplemental parts of an IT Review, like coordination activities across states or communication with state insurance analysts and/or contract resources (e.g., examiners, specialists, etc.).

Mr. Ehlers proposed the formation of a drafting group to address the projects and bring guidance suggestions back to the Working Group for consideration. There were no objections. Mr. Ehlers asked that individuals interested participating in the drafting group reach out to Jacob Steilen (NAIC) by May 9.

Jenny Jeffers (Jennan Enterprises, LLC) asked if contractors could be on the drafting group. Mr. Steilen said the drafting group would allow contractors due to the specialized knowledge required to accomplish these projects.

Tom Finnell (America's Health Insurance Plans—AHIP) asked how the projects would be brought back to the full working group for review. Specifically, if the full working group would review the projects individually or as a package. Mr. Steilen stated that the changes would be presented to the Working Group as a package and would be exposed for a public comment period prior to the Working Group considering any changes for adoption into the Handbook.

Bruce Jenson (NAIC) asked if the second project related to IT prospective risks is intended to help clarify whether the investigation of prospective risks related to IT systems should be documented on Exhibit V as part of the financial examination or within Exhibit C as part of the IT Review. Mr. Steilen affirmed that is the intention of the project.

Having no further business, the IT Examination (E) Working Group adjourned.

Financial Stability (E) Task Force
and Macroprudential (E) Working Group
Portland, OR
August 12, 2022

The Financial Stability (E) Task Force met in Portland, OR, Aug. 12, 2022, in joint session with the Macroprudential (E) Working Group. The following Task Force members participated: Marlene Caride, Chair (NJ); Elizabeth Kelleher Dwyer, Vice Chair (RI); Evan G. Daniels represented by David Lee (AZ); Ricardo Lara represented by Susan Bernard (CA); Andrew N. Mais represented by Jack Broccoli (CT); Karima M. Woods represented by Philip Barlow (DC); Trinidad Navarro represented by Charles Santana (DE); Doug Ommen represented by Carrie Mears (IA); Amy L. Beard represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Kathleen A. Birrane represented by Lynn Beckner (MD); Timothy N. Schott (ME); Chlora Lindley-Myers represented by John Rehagen (MO); Eric Dunning represented by Justin Schrader (NE); Adrienne A. Harris represented by Bob Kasinow (NY); Mike Causey represented by Monique Smith (NC); Judith L. French represented by Dale Bruggeman (OH); Andrew R. Stolfi represented by Doug Hartz (OR); Michael Humphreys represented by Melissa Greiner (PA); Michael Wise represented by Michael Shull (SC); Carter Lawrence represented by Trey Hancock (TN); Cassie Brown represented by Jamie Walker (TX); Scott A. White (VA); and Nathan Houdek represented by Amy Malm (WI). The following Working Group members participated: Justin Schrader, Chair (NE); Carrie Mears, Vice Chair (IA); Susan Bernard (CA); Kenneth Cotrone (CT); Philip Barlow (DC); Lynn Beckner (MD); Vanessa Sullivan (ME); Steve Mayhew (MI); Fred Andersen (MN); John Rehagen (MO); Marlene Caride (NJ); Bob Kasinow (NY); Melissa Greiner (PA); Ted Hurley (RI); Jamie Walker (TX); and Doug Stolte (VA). Also participating was: Stephanie McGee (NV).

1. Heard Opening Remarks

Commissioner Caride said materials for consideration and discussion for this meeting are available on the NAIC website in the Committees section under the Financial Condition (E) Committee.

2. Adopted the Task Force's June 27 and Spring National Meeting Minutes

Superintendent Dwyer made a motion, seconded by Mr. Schrader, to adopt the Task Force's June 27 (Attachment One) and April 5 (*see NAIC Proceedings – Spring 2022, Financial Stability (E) Task Force*) minutes. The motion passed unanimously.

3. Heard an Update on FSOC Developments

Superintendent Dwyer reported on a few Financial Stability Oversight Council (FSOC) discussions; issues identified publicly that are most directly related to the NAIC's work or could be of interest down the road include:

- The FSOC's report issued late last year called on member agencies to take action to address climate risk, which was identified as an increasing threat to financial stability. The president's executive order on climate accelerated the FSOC's focus.
- The NAIC is participating in several groups formed under the FSOC to enhance monitoring and information sharing on climate risk and resiliency. The NAIC's focus is on identifying data needs to assess climate-related risks, creating a mechanism for FSOC members to share relevant data and information, providing a forum to collaborate on agency priorities, and building capacity for climate risk assessment and monitoring through scenario analysis.
- FSOC member agencies have made considerable progress to address capacity building, enhance disclosure, and identify data needed to assess and mitigate risks. FSOC members share progress through the climate risk and resilience groups, including a recently established staff-level interagency committee

to serve as a coordinating body to share information, facilitate standard-setting, and foster communication across FSOC members.

Superintendent Dwyer stressed that the work the NAIC has done and will continue to do through the Climate and Resiliency (EX) Task Force and other groups like the Task Force has enhanced the NAIC's position in the context of FSOC discussions. She reported that with respect to digital assets, the FSOC is focused on various types of monetary digital assets, such as forms of cryptocurrency and other types of related investments, which could propagate the impact of shocks on the financial system or broader economy. She added that June and July have been extremely hard on such companies with the demise of many such assets, including Terra and Luna. She said the FSOC is focused on understanding and documenting the various risks and uncertainties of such digital assets in the context of financial stability and determining appropriate action to mitigate such risks. She concluded that actions may include different recommendations for agency members and market participants as well as monitoring and contributing to these discussions to better understand whether or how they would affect insurers or state regulation.

4. Received a Working Group Update

Mr. Schrader said on June 27, the Task Force adopted a document detailing:

- 1) A list of the Working Group's considerations, private equity (PE)-related and other.
- 2) Summaries of state insurance regulator discussions and interested party comments.
- 3) A recommended disposition for each consideration.

He added that NAIC staff converted that document of proposals into a final document of regulatory intent titled the "Plan for the List of MWG Considerations – PE Related and Other" because there were only editorial changes and no substantive edits to the 13 considerations. He said the Financial Condition (E) Committee adopted the "Plan for the List of MWG Considerations – PE Related and Other" during its July 21 meeting. He said the "Plan for the List of MWG Considerations – PE Related and Other" included referrals to other NAIC committee groups as new work items as well as in recognition of existing work at other NAIC committee groups, while a few items were held for further discussion at the Working Group. He said the Working Group will monitor activities at other NAIC committee groups and provide periodic status updates.

Mr. Schrader summarized the status of the 13 Working Group considerations as follows:

1. Holding Company Structures

- Sent a referral for new work to the Group Solvency Issues (E) Working Group.

2. Ownership and Control

- Sent a referral for new work to the Group Solvency Issues (E) Working Group.

3. Investment Management Agreements (IMAs)

- Sent a referral to the Risk-Focused Surveillance (E) Working Group to add this consideration to existing work involving affiliated agreements and Form D filings.
- Sent a referral to the Valuation of Securities (E) Task Force to highlight the regulatory discussion involving topics it administers.

4. Owners of Insurers with a Short-Term Focus and/or Are Unwilling to Support a Troubled Insurer

- Sent a referral to the Risk-Focused Surveillance (E) Working Group to add this consideration to existing work involving affiliated agreements and fees.
- Sent a referral to the Life Actuarial (A) Task Force recognizing its existing work to ensure the long-term life liabilities (reserves) and future fees are paid out of the insurer and supported by appropriately modeled assets.

5. Operational, Governance, and Market Conduct Practices

- The Working Group will keep developing more specific suggestions before likely referring this consideration to the Risk-Focused Surveillance (E) Working Group.

6. Definition of PE

- No action was deemed necessary for this consideration.

7. Identifying Related Party-Originated Investments, Including Structured Securities

- Sent a referral to the Statutory Accounting Principles (E) Working Group recognizing its existing work regarding disclosures for related party issuance/acquisition.
- The Working Group may consider further regulatory guidance as needed once state insurance regulators work with these Statutory Accounting Principles (E) Working Group disclosures and regulatory enhancements from referrals to other groups.

8. Identifying Underlying Affiliated/Related Party Investments and/or Collateral in Structured Securities

- Sent a referral to the Statutory Accounting Principles (E) Working Group in recognition of existing work to develop disclosures to identify the role of the related party in the investment and codes for relationships in securitizations or similar investment.
- Sent a referral for new work to the Examination Oversight (E) Task Force for the collateralized loan obligation (CLO)/structured security considerations.

9. Asset Manager Affiliates and Disclaimers of Affiliation

- The Working Group is comfortable waiting to realize the benefits of the recently implemented Schedule Y, Part 3, along with the changes other NAIC committee groups will make for several of the previously listed referrals, before determining if additional work is needed.
- Sent a referral to the Statutory Accounting Principles (E) Working Group recognizing its existing work to revamp Schedule D reporting, along with the previously mentioned code disclosures.

10. Privately Structured Securities

- Sent a referral to the Life Actuarial (A) Task Force recognizing its existing work on an actuarial guideline, including disclosure requirements for the risks of privately structured securities and how the insurer is modeling the risks.
- Sent a referral to the Valuation of Securities (E) Task Force highlighting the Working Group's support for the blanks proposal to add market data fields for private securities.
- The Working Group will wait on any further work or referrals until there is an opportunity to work with the results of the Valuation of Securities (E) Task Force proposal and the Statutory Accounting Principles (E) Working Group Schedule D revamp project.

- Sent a referral for new work to the Risk-Based Capital (RBC) Investment Risk and Evaluation (E) Working Group to address the tail risk concerns not captured by reserves.

11. Reliance on Rating Agencies

- Sent a referral to the Valuation of Securities (E) Task Force indicating the Working Group's agreement to monitor the work of its ad hoc group addressing various rating agency considerations.

12. Pension Risk Transfer (PRT) Business Supported by Complex Investments

- Life Actuarial (A) Task Force's Actuarial Guideline
 - Sent a referral to the Life Actuarial (A) Task Force recognizing its work on an actuarial guideline, which should address the reserve considerations of PRT business.
 - Sent a referral to the Statutory Accounting Principles (E) Working Group to address the related disclosure considerations, as the goal was to have them in the Notes to Financial Statements.
- U.S. Department of Labor (DOL) Protections
 - NAIC staff have engaged the DOL to begin discussions.
- State Guaranty Funds Compared to Pension Benefit Guaranty Corporation (PBGC) Protection – National Organization of Life and Health Insurance Guaranty Associations (NOLHGA) 2016 Study
 - No further action was deemed necessary.
- RBC Treatment of PRT Business
 - Sent a referral to the Longevity Risk (E/A) Subgroup recognizing that its work will also address PRT business and indicating that the Working Group will monitor this work.

13. Offshore/Complex Reinsurance

- The Working Group is scheduling and has already held some confidential discussions with industry participants regarding the use of offshore reinsurers and complex affiliated reinsurance vehicles, as well as other activities included in this list. These meetings are held pursuant to paragraph 3 (specific companies, entities or individuals) and paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement of Open Meetings. The Working Group will consider further work and/or referrals once it has gained more insights.

Mr. Schrader concluded that the Working Group will still be addressing these considerations for some time to come, as some of these projects will be ongoing for several years. He added that NAIC staff will be posting a tracking document for the 13 Working Group considerations and copies of the referral letters sent to the committee groups to the Documents tab of the Working Group web page.

Mr. Schrader reported that NAIC staff received and performed initial reviews on a total of 21 groups' 2021 Liquidity Stress Test (LST) filings. He added that the 2021 LST filings were due on June 30 and were based on year-end 2021 annual statement amounts, which were projected over the specified time frames of one month, three months and one year for five stress scenarios:

- Baseline.
- Adverse, Adverse What-If.
- Interest Rate Spike.
- Worst-Case.

He said the in-depth reviews are still ongoing, but he shared some preliminary high-level observations:

- Most of the assumptions for all five scenarios remain consistent with the 2020 LST assumptions; although, some additional updates were made to the market assumptions to reflect the current economic environment.
- After aggregating the results for each stress scenario and comparing them to the 2020 LST aggregated results, the total assets sold increased for the Baseline and Adverse scenarios, while decreasing for the other three scenarios. These changes appear reasonable based on the initial review.
- The 2021 LST filing results continue to show that the amount of asset sales from the U.S. life insurance industry during these stress events would not be significant to the broader financial markets, satisfying the primary macroprudential objective of the LST.
- Consistent with last year's results, a few groups reported no cash deficit for the worst-case scenario, which will require further study to address the question of whether these groups' assumption models were stressful enough.
- For the modeled asset sales, the majority are from Treasury and Agency Bonds, along with Investment-Grade Public Corporate Bonds.

He added that the Working Group plans to publish a public summary of the 2021 LST results in September. He reported the formation of the LST Separate Account Study Group, another informal group, that includes volunteer state insurance regulators and companies from the larger LST Study Group, along with an American Council of Life Insurers (ACLI) representative, and it is led by Ms. Mears. He added that the LST Separate Account Study Group is charged with considering how to include non-insulated separate accounts into the LST filings, discuss liquidity risk in the insulated separate accounts, and consider which insulated separate account products are subject to existing U.S. Securities and Exchange Commission (SEC) stress testing requirements compared to those that are not, and if warranted, the design of an appropriate LST for macroprudential purposes. He reported that the LST Separate Account Study Group held its first meeting on July 29 and is in the process of scheduling its next meeting sometime in September. He said the LST Study Group will consider the results of the 2021 LST filings and the LST Separate Account Study Group's work to construct the 2022 Liquidity Stress Testing Framework (LST Framework).

Mr. Schrader reported that at the Spring National Meeting, the Working Group adopted a Macroprudential Risk Assessment process document that describes what the NAIC's system of macroprudential risk assessment entails at a high level. He added that the Working Group has been executing the process outlined in the document, which included frequent meetings with state insurance regulators on each risk category to agree on the key risk indicators to use to assess the trend of the risk and the risk assessment level as Low, Mod-Low, Mod-High, and High. He announced a plan to have a detailed confidential report for state insurance regulators to review in late September and have a public high level summary dashboard report to be published later this year. He added that the Working Group will consider whether it would be appropriate to take any actions based on the contents of that report, such as sending referrals to other NAIC working groups.

5. Heard an International Update

Mr. Nauheimer reported that the International Association of Insurance Supervisors (IAIS) completed numerous data calls and analysis as part of the annual Global Monitoring Exercise (GME), which includes individual insurer monitoring (IIM) and sector-wide monitoring (SWM). He added that the GME is part of the IAIS Holistic Framework

for Systemic Risk monitoring, which takes a broader approach to financial stability and macroprudential surveillance. He noted that the IAIS has completed the following:

- The IIM quantitative data analysis from its annual exercise in June.
- The quantitative and qualitative SWM data collection due June 30, which now includes separate data collections for climate and cyber data.
- The reinsurance SWM data collection due July 31.

Mr. Nauheimer added that after all the data call submissions and analysis thereof, the IAIS will complete the Global Insurance Market Report (GIMAR). He added that for the annual GIMAR, the IAIS Climate Risk Steering Group (CRSG), along with the Macroprudential Monitoring Working Group (MMWG), will draft a new chapter on climate related risks. He said the NAIC will continue to monitor and contribute to the development of these reports.

Mr. Nauheimer reported that IIM and SWM help determine the scope for an annual collective discussion by the IAIS on potential systemic risk issues. He clarified that the collective discussion is generally among supervisors regarding views on and responses to overall risk themes and individual insurers who have been scoped in based on long running established criteria. He noted that the IAIS asked for the following due Aug. 12:

- A detailed SWM questionnaire regarding the nature and extent of the risk themes and the supervisory measures in place to address those risks.
- An IIM questionnaire with a focus on firms identified by a quantitative scoring, as well as overarching themes related to financial stability identified through expert judgment.

He added that the collective discussions will take place at the Macroprudential Committee and Executive Committee meetings from Sept. 14 to Sept. 16.

Mr. Nauheimer reported that the MMWG continues to review the IIM Assessment Methodology, which the IAIS updates every three years. He added that the IAIS is also finalizing the reports on the targeted jurisdictional assessment of the implementation of the Holistic Framework Supervisory materials, which includes a report to the Financial Stability Board (FSB) on a review of the Holistic Framework for Systemic Risk in the Insurance Sector, which will inform the FSB's decision to re-establish or end the identification of global systemically important insurers (G-SIIs).

Mr. Nauheimer said the IAIS Liquidity Workstream will meet at the end of August to analyze data received as part of the GME to develop a liquidity metric, which utilizes a company's cash flow projections and aligns more with the NAIC's adopted domestic approach to assessing liquidity risk. He added that after incorporating comments from two public consultations, the IAIS intends to complete a publication titled "Liquidity Metrics as an Ancillary Indicator" this year, which will serve as a guidance document for liquidity monitoring within the GME.

Mr. Nauheimer reported that the IAIS also formed a Private Equity Workstream within the Macroprudential Supervision Working Group (MSWG) to produce an internal briefing memo to the Macroprudential Committee that provides an update on the involvement of PE in members' jurisdictions. He added that the MSWG will continue to monitor PE ownership in the global insurance industry.

Having no further business, the Financial Stability (E) Task Force and Macroprudential (E) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/2022 Summer National Meeting/

Draft: 7/26/22

Financial Stability (E) Task Force
and Macroprudential (E) Working Group
Virtual Meeting
June 27, 2022

The Financial Stability (E) Task Force met June 27, 2022, in joint session with the Macroprudential (E) Working Group. The following Task Force members participated: Marlene Caride, Chair (NJ); Elizabeth Kelleher Dwyer, Vice Chair (RI); Ricardo Lara represented by Susan Bernard (CA); Andrew N. Mais represented by Kathy Belfi (CT); Trinidad Navarro represented by Tom Hudson (DE); David Altmaier represented by Ray Spudeck (FL); Doug Ommen (IA); Amy L. Beard represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); Gary D. Anderson represented by John Turchi (MA); Kathleen A. Birrane represented by Lynn Beckner (MD); Timothy N. Schott represented by Vanessa Sullivan (ME); Chlora Lindley-Myers represented by John Rehagen (MO); Mike Causey represented by Jackie Obusek (NC); Eric Dunning represented by Justin Schrader (NE); Adrienne A. Harris represented by Bob Kasinow (NY); Judith L. French represented by Dale Bruggeman (OH); Michael Humphreys and Melissa Greiner (PA); Michael Wise represented by Daniel Morris (SC); Carter Lawrence represented by Trey Hancock (TN); Cassie Brown represented by Jamie Walker (TX); Scott A. White represented by Doug Stolte (VA); and Nathan Houdek represented by Amy Malm (WI). The following Working Group members participated: Justin Schrader, Chair (NE); Carrie Mears, Vice Chair (IA); Susan Bernard (CA); Kathy Belfi (CT); Carolyn Morgan (FL); Vanessa Sullivan (ME); Steve Mayhew (MI); Fred Andersen (MN); John Rehagen (MO); Bob Kasinow (NY); Melissa Greiner (PA); Ted Hurley (RI); Jamie Walker (TX); and David Smith (VA). Also participating was: Susan Berry (IL).

1. Heard Opening Remarks

Commissioner Caride said materials for consideration and discussion for this meeting are available on the NAIC website in the Committees section under the Financial Condition (E) Committee. She said to simplify the process, the Task Force and Working Group will consider reception of five comment letters and adoption of the Proposed Regulator Responses to the List of the Working Group's Considerations together.

2. Received comments on the Proposed Regulator Responses to the List of the Working Group's Considerations

Mr. Schrader said the Macroprudential (E) Working Group met April 22 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) and paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings, to finalize the "Proposed Regulator Responses to the List of the Working Group's Considerations." The Working Group exposed the document on April 27 for a public comment period ending June 13. Mr. Schrader expressed the Working Group's appreciation for five comment letters received from: 1) Risk & Regulatory Consulting (RRC); 2) American Council of Life Insurers (ACLI); 3) American Investment Council (AIC); 4) UNITE HERE; and 5) Northwestern Mutual.

With respect to the UNITE HERE comment letter, Mr. Schrader said that none of the comments were included in the comment letters because they were not actionable or practical. He added that state insurance regulators must have laws allowing them confidential access to such documents so arguments for the public to get access to such documents are beyond the scope of current considerations. He reported that confidential regulatory tools are not to be presented for the public to assess if they are effective, but instead, the Working Group will focus on presenting the actions regulators propose to take within the NAIC committee structure, recognizing that the specifics of those confidential regulatory processes and their results will continue to remain confidential. Mr. Schrader summarized that insurance companies provide significant transparency and offered to set up a separate meeting with NAIC staff to explain specifics of the regulatory process in detail including:

- Publicly traded companies in the U.S. must file generally accepted accounting principles (GAAP) financial statements.
- Non-publicly traded companies are not required to provide public GAAP financial statements.
- Statutory financial statements are publicly available for all non-captive life insurers.
- Statutory financial statements provide significantly more detail than GAAP financial statements.
- Statutory financial statements provide information on the legal entity level compared to GAAP, which does so at the group level.
- Statutory financial statements include an annual listing of investments acquired, disposed of, and owned, so actual investment issuers can be assessed by anyone reviewing the filings rather than group-level GAAP financial statements.
- For publicly traded insurers, the public may access the group’s GAAP financial statements, as well as the statutory financial statements for each legal entity in the group.

Mr. Schrader concluded that the nature of the UNITE HERE comments and concerns seemed more focused on actual solutions that will be developed for the Working Group’s considerations rather than the exposed document listing how the Working Group plans to assign the work. He suggested the Working Group redirect some of those comments to specific work to address those Working Group considerations once they have been referred to the appropriate group and work begins.

For the Working Group, Ms. Mears made a motion, seconded by Ms. Bernard, to receive the five comments letters on the “Proposed Regulator Responses to the List of the Working Group’s Considerations” (Attachment One-A). The motion passed unanimously.

For the Task Force, Ms. Malm made a motion, seconded by Ms. Bernard, to receive the five comments letters on the “Proposed Regulator Responses to the List of the Working Group’s Considerations” (Attachment One-A). The motion passed unanimously.

3. Adopted the Proposed Regulator Responses to the List of the Working Group’s Considerations

Mr. Schrader summarized how to incorporate the comments received to the “Proposed Regulator Responses to the List of the Working Group’s Considerations” with no further changes discussed to the redlined document.

For the Working Group, Mr. Spudeck made a motion, seconded by Ms. Bernard, to adopt the “Proposed Regulator Responses to the List of the Working Group’s Considerations” (Attachment One-B). The motion passed unanimously.

For the Task Force, Mr. Schrader made a motion, seconded by Mr. Kasinow, to adopt the “Proposed Regulator Responses to the List of the Working Group’s Considerations” (Attachment One-B). The motion passed unanimously.

Commissioner Caride said that with the adoption, the word “Proposed” will be removed from the title of the final version of the document.

4. Received an Update on Key Initiatives

Mr. Schrader said that the Liquidity Stress Test (LST) Study Group has met to discuss several questions for potential modifications to the 2022 LST framework. He added that these questions included concepts such as providing more consistency in certain stress test assumptions. Mr. Schrader reported that an LST Separate Accounts Study Group is going to be formed to tackle the questions of how to address non-insulated separate account sales, as

well as whether, and if so how, to address insulated separate accounts in terms of macroprudential impacts to broader financial markets. He said that the LST Study Group will also be reviewing the results of running the most recent 2021 year-end data through the 2021 LST scope criteria and assessing the list of LST participants, as well as whether changes need to be made to the 2022 LST scope criteria. Mr. Schrader summarized that state insurance regulators are anticipating receipt of the 2021 LST filing on June 30, at which point results will be reviewed, assessed, and then provided to the Working Group and Task Force.

Mr. Schrader said that at the Spring National Meeting, the Working Group received comments on and later adopted a Macroprudential Risk Assessment Process document, which essentially describes what the system of Macroprudential Risk Assessment entails at a high level. He added that state insurance regulators had several volunteer group meetings to complete the 2020 Macroprudential Risk Assessment. Mr. Schrader said that after completing several further scheduled meetings, NAIC staff and state insurance regulators will turn to the report writing phase, which will summarize the results of the risk assessment and may offer ideas for additional areas of research or regulator action. He added that the report will likely represent the next opportunity for extended discussion on the Macroprudential Risk Assessment Process reflecting regulator views of industry risks and allow discussion of those views, as well as potential responses in a public setting. Mr. Schrader said that he expects a first edition of the Risk Assessment Process report later this year. He clarified that the analysis underlying the Macroprudential Risk Assessment Process is not new as regulators have long monitored industry developments with assistance from the NAIC. What is new is the publication of a summary risk dashboard report. As a result of the Risk Assessment Process further analysis of specific risks may be warranted. If further study is deemed necessary, the Working Group may seek input from the public prior to a consideration for a referral or further study of specific matters. He noted that even after a referral, there will be an opportunity for public input.

Having no further business, the Financial Stability (E) Task Force and Macroprudential (E) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/2022 Summer National Meeting/

Memo

To: Justin Schrader, Chair, Macroprudential (E) Working Group

From: Tricia Matson, Partner and Edward Toy, Director

Date: May 20, 2022

Subject: RRC comments regarding Regulatory Considerations Applicable (But Not Exclusive) to PE Owned Insurers

Background

The Macroprudential (E) Working Group (MWG) exposed a document on April 27 for further comment on Regulatory Considerations Applicable (But Not Exclusive) to Private Equity (PE) Owned Insurers (Considerations). RRC appreciates the opportunity to offer our comments. Should you have any questions, we would be glad to discuss our comments with you and the MWG members.

RRC Comments

- We have the following general comments on the Considerations:
 - We applaud these efforts. Overall, we agree with the considerations listed, and have encountered nearly all of them in our work with regulators reviewing insurer complex investments, PE acquisitions, captive formations, ownership changes, and use of offshore reinsurance.
 - We also agree with and encourage considerations that are as much as possible activities based and not specific to PE owned insurers or specific types of transactions or investments.
- We have the following specific comments on the continuing discussions:
 - In a Form A transaction, whether the owner of the insurer is a PE fund or another type of investor, expectations and structures behind insurer ownership may have changed. Because of that, RRC believes that the stipulations, either limited time or continuing, should protect against adverse policyholder outcomes resulting from that change in dynamic.
 - The regulatory expectation is that owners of insurers should have a long, if not indefinite, time horizon. It is not uncommon for PE funds in general and other similar investment vehicles to have a limited time frame because they are specifically structured investment vehicles such as limited partnerships. For example, requiring that limited partnerships should not have a specific end date would bring that ownership vehicle into line with regulatory expectations.
 - While there are typically no guarantees of additional funding in any ownership situation, having a structure that allows for backstop capital in the event that a need arises should be considered. This could be achieved through a parental guarantee or a capital maintenance agreement.
 - With regards to dividends, even if dividends are permitted, it may be advisable to

- structure a claw back period. This could be effectuated with allowing dividends to the limited partnership structure but requiring that the funds not be paid out to the partners for some period of time to ensure that the availability is not short-lived.
- In a limited partnership structure, the limited partners may be considered passive investors and arguably should not be subject to the typical expectations of owners. However, additional understanding and restrictions on the interest of the general partner would be appropriate.
 - In the event that the Form A includes transfer of business to offshore entities, requiring continued maintenance of capital levels similar to those in place prior to the transaction, and ongoing reporting to the U.S. regulator that is in line with the Statutory reporting framework, to ensure that there are no adverse implications to policyholders.
 - Ensuring that corporate governance appropriately balances the desire for strong returns with the need to protect policyholders. For example, the Board and senior management should include members with appropriate background and knowledge of insurance laws and operations. In addition, risk and compliance functions should have appropriate reporting and communication lines to the Board.
 - Policyholder non-guaranteed elements, such as credited rates and dividends, should not be inappropriately reduced from existing levels.
- With respect to an Investment Management Agreement (IMA), RRC encourages an approach that includes a thorough review of the IMA to ensure that it is fair and reasonable to the insurer. In addition to the specific items noted for consideration,
 - Are there detailed and reasonable investment guidelines?
 - Is there sufficient expertise at the insurer and on the insurer's Board to properly assess the performance and compliance of the investment manager?
 - Is the investment manager registered as such under the Investment Advisers Act of 1940, and recognizes the standard of care as a fiduciary?
 - The exposure cites collateralized loan obligations (CLOs) several times as a source of concern and therefore a focus for additional disclosure. While there has been a continuing level of concern about CLOs in general, RRC encourages the working group to take a broader view as well. As a general matter, investments in CLOs are at least subject to disclosure and conflicts of interest standards under various securities laws and regulations. On the other hand, there are other potentially problematic investments that do not benefit from that regulatory oversight.
 - Private funds – Some of the issues noted with respect to concerns about overlapping interests in CLOs may also be prevalent in various kinds of funds, especially privately placed funds that are reported on Schedule BA. Such investment vehicles may have significant areas that have the potential for a conflict of interest that would not be captured by securities laws. Such investment vehicles may also include substantial management fees for management of the fund.
 - Collateral Loans – The U.S. insurance industry's reported exposure to Collateral Loans that are reported on Schedule BA has grown substantially in the last ten years. In addition to the same potential conflicts, it may be appropriate to revisit valuation and reporting guidance.

- The exposure also cites “privately structured securities which introduce other sources of risk or increase traditional credit risk, such as complexity risk and illiquidity risk, and involve a lack of transparency”.
 - While the lack of available public data does present a significant issue and does mean there is in theory a lower degree of liquidity, we caution at being overly concerned about the private nature of such transactions.
 - Any highly structured transaction is going to lack liquidity.
 - The NAIC had at one time a disclosure for Structured Notes. This allowed regulators to see when that represented an excessive risk. We encourage the reinstatement of that disclosure.
 - A potential consideration related to complex asset structures would be to incorporate this risk factor into the criteria for additional liquidity risk analysis outlined in the NAIC 2021 Liquidity Stress Test Framework (Framework). Considering the amount of effort spent on developing the Framework, it may be helpful to leverage its requirements for situations in which significant complex securities are used to back insurer liabilities.

The exposure references the work by the Life Actuarial Task Force (LATF) on requirements for modeling complex assets within asset adequacy testing, as a mechanism to address the increased risk associated with complex assets. We agree that this work will support improved capture of the risk; however, we also recognize that reserving is not intended to capture tail risk. Some of the complex assets in question may not present significant risk in a reserving analysis (which is focused on moderately adverse conditions). We also suggest referencing regulatory review of capital requirements for such complex assets so their tail risks are captured in RBC, since new owners may rely on shifting investments into complex asset structures with relatively low RBC charges as a way to increase RBC ratios and remove “excess” capital at deal inception. The NAIC’s RBC Investment Risk and Evaluation Working Group has recently begun a holistic review of this, and their work could be referenced in the document.

Thank you for the opportunity to provide comments on this important initiative. We can be reached at tricia.matson@riskreg.com/(860) 305-0701 and edward.toy@riskreg.com/(917) 561-5605 if you or other MWG members have any questions.

Tim Nauheimer Sr. Financial Markets Advisor – Macroprudential Surveillance

June 9, 2022

Re: Comments Regarding NAIC Macroprudential (E) Working Group exposed “Regulatory Considerations Applicable (but not exclusive to) Private Equity Owned Insurers”

Thank you for the opportunity to provide additional comments regarding the NAIC Financial Stability Task Force (FSTF) and Macroprudential (E) Working Group (MWG) exposure, “Regulatory Considerations Applicable (But Not Exclusive) to Private Equity (PE) Owned Insurers” (hereafter, “Regulatory Considerations”). The MWG exposed the document to allow stakeholders to comment on the addition of the regulatory process summaries, as well as the results of regulator discussions on how to move forward with respect to each Consideration.

As noted in our January 18, 2022, comment letter, ACLI supports efforts to ensure that the insurance regulatory framework continues to provide robust consumer protection and safeguards. The U.S. state regulatory system fosters the life insurance industry’s ability to provide financial protection and promote financial security to the 90 million Americans who count on us to plan for tomorrow, so they can live confidently today. We appreciate and support the decision to appoint the MWG as a coordinator for the Regulatory Considerations and new workstreams. Coordination and collaboration between different NAIC working groups and FSTF is key to maintaining a coherent process that provides maximum relevance and transparency to regulators.

We are appreciative of regulators’ thoughtful and deliberative approach to each Consideration. In general, ACLI supports the MWG’s proposed referrals and agrees with the MWG’s determination to take an activities-based approach to the Regulatory Considerations rather than focusing on a particular type of ownership structure. ACLI also supports the regulators’ efforts to leverage existing

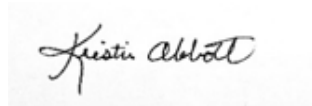

NAIC workstreams and promote the enhancement of existing tools to protect consumers and preserve financial stability.

The Regulatory Considerations document, dated April 27, 2022, made several referrals that are intended to improve transparency into insurer operations and investments. It also recommended providing additional training opportunities for state regulators. ACLI is generally supportive of these efforts, which will better enable regulators to identify and address potential risks and/or potential conflicts of interest. ACLI looks forward to working with the NAIC and regulators as these efforts progress and is willing to provide additional support and assistance with the development of the training resources.

The Regulatory Considerations document also reflects several issues that regulators would like to better understand, like the applicability of Department of Labor protections for pension beneficiaries in a Pension Risk Transfer (PRT)¹ transaction, as well as certain reinsurance transactions. With respect to the latter, regulators deferred specifying action on this item and noted a desire to gather additional information from industry representatives and non-U.S. regulators. This appears to be a reasonable approach – and ACLI welcomes the opportunity to assist with this engagement, upon request.

Thank you for the opportunity to provide these comments. ACLI looks forward to continuing to work with regulators and other interested parties on these issues. ACLI welcomes the opportunity to provide additional assistance as needed.

Sincerely,

Kristin Abbott
Counsel

Mariana Gomez
Senior Vice President, Policy & Development

¹ In No. 12(b), regulators discussed directing NAIC legal staff to review the applicability of DOL protections for pension beneficiaries in a PRT transaction. The 2016 American Academy of Actuaries Issue Brief, “Pension Risk Transfer” may provide a useful starting point for this research. <https://www.actuary.org/content/pension-risk-transfer-0#:~:text=KEY%20POINTS%3A,unique%20perspectives%20on%20these%20transactions.>

Date: June 13, 2022

Re: UNITE HERE Comments on First Six Regulatory Considerations Applicable (But Not Exclusive) to PE Owned Insurers

Thank you for this opportunity to comment on the first six of the Regulatory Considerations Applicable (But Not Exclusive) to Private Equity (PE) Owned Insurers. We applaud the NAIC officers and staff as well as members of the Macroprudential (E) Working Group and the Financial Stability (E) Task Force for their thoughtful consideration of this complex and controversial topic.

For the most part, as regulators on both task forces have noted, the Considerations reflect concerns that are neither new nor emergent. Large private equity firms have been involved in the life and annuity business for well over a decade.

Nor is this the first time the NAIC or individual state regulators have raised concerns about how private equity firms have altered the life insurance landscape. For example, in 2013, New York Department of Financial Services Superintendent Benjamin Lawsky issued a report that raised concerns about the quality of the investments backing annuity reserves at PE-affiliated insurers and called for reforms to prevent insurers from using offshore reinsurance affiliates to “artificially inflate” their reported levels of risk-based-capital.¹

That same year, when the Iowa Insurance Division held hearings in conjunction with Apollo’s application to purchase Aviva’s US operations, UNITE HERE provided testimony raising concerns about Apollo’s use of a Bermuda-based reinsurance affiliate and how that arrangement might affect reported RBC ratios for its US affiliates; the level and complexity of asset management fees Apollo charged its regulated insurance affiliates; and the relatively large percentage of related-party investments on those insurers’ books. We urged then-Commissioner Nick Gerhardt to require Athene to enter into a capital maintenance agreement, limit Athene’s ability to invest in Apollo-managed products and limited partnerships, and conduct on-going targeted examinations of Apollo’s investment strategies.²

One of our concerns (regarding Athene’s ability to continue Aviva’s “permitted practice” with respect to reserving methodologies for deferred annuities with embedded guarantees) was addressed as one of four “conditions” imposed by Commissioner Gerhart in his subsequent Order approving the acquisition.³ The remaining three of these conditions were substantially similar to “stipulations” included in the 2013 guidance cited by the Task Force in its response to Consideration 1 (see below.) But even with these conditions/stipulations, the potential risks to annuity policyholders posed by Apollo’s “spread investing” model have, in our view, only grown larger.

Athene has become Apollo’s fastest engine of growth, essentially quadrupling its assets under management since the Aviva acquisition.⁴ At yearend 2021, Athene claimed the number one market share in US fixed indexed annuities.⁵ Athene has also become the largest player in the Pension Risk Transfer (PRT) market,⁶ assuming responsibility for paying the monthly benefits and managing retirement assets for more than 300,000⁷ workers and retirees who were beneficiaries of pension plans

UNITE HERE Comments to Joint Macprudential and Financial Stability Task Forces
June 13, 2022

sponsored by companies including J.C. Penney, Lockheed, Alcoa, and Lumen Technologies. Following these “buyout” PRT transactions, workers and retirees lose the ERISA rights and PBGC protections they previously held as pension beneficiaries.

Additionally, Apollo and or Athene has over the past decade acquired or created at least ten non-bank lender affiliates, most of which operate outside the purview of prudential regulation.⁸ According to an October 2021 presentation, Apollo estimated that these “origination platforms” will generate \$25 billion annually in origination volume.⁹ This includes leveraged loans and commercial leases to private equity firms, small and medium sized businesses, airlines, and homebuyers around the world. Those loans and leases are then packaged into Collateralized Loan Obligations (CLOs) or other Asset Backed Securities (ABS) and sold to Apollo’s state-regulated insurance units, as well as to Apollo’s institutional clients, managed funds and third parties. At yearend 2021, approximately \$34.9 billion or 14.8% of Athene’s total assets were invested in these and other related party investments.¹⁰ Apollo has referred to this arrangement as a “virtuous feedback loop,” whereby CLOs and ABS backed by loans and leases originated by Apollo affiliates increase the firm’s fee-generating opportunities and allow Apollo’s insurance companies as well as its clients to “manufacture spread”, i.e., garner investment spreads that Apollo says have been 100 to 200 basis points higher than those available from the broadly syndicated market.¹¹

Apollo’s much-touted success in fashioning Athene as a “permanent capital vehicle” for fee-generating asset management has spawned a bevy of private equity-affiliated imitators,¹² transforming what we and others once viewed as a potential retirement security concern affecting a few thousand annuity owners into a much broader macroprudential challenge. Managing the systemic risks posed by this new breed of global life insurance asset manager in our view will depend upon the coordinated efforts of state, federal and international regulators.

What follows are our specific comments on the Task Force’s responses to the first six Considerations.

Consideration 1: Regulators may not be obtaining clear pictures of risk due to holding companies structuring contractual agreements in a manner to avoid regulatory disclosures and requirements. Additionally, affiliated/related party agreements impacting the insurer’s risks may be structured to avoid disclosure (for example, by not including the insurer as a party to the agreement).

The Task Force’s response to this consideration was to cite guidance that was added to the NAIC Financial Analysis Handbook in 2013 to assist regulatory reviews of merger and acquisition proposals (aka Form A Applications.) The 2013 guidance provided “examples of stipulations, both limited time and continuing, regulators could use when approving the acquisition to address solvency concerns, as well as for use in ongoing solvency monitoring.”

UNITE HERE supports the notion of regulators having more rather than fewer tools to monitor solvency, and we can imagine scenarios in which all of the stipulations listed by the Task Force in their response to Consideration 1 could be useful tools in the context of proposed mergers and acquisitions. We note, however, that the Financial Analysis Handbook contains voluntary guidance, not regulations with the force of law.

UNITE HERE Comments to Joint Macroprudential and Financial Stability Task Forces
June 13, 2022

Moreover, it is difficult for the public to assess how effective such stipulations may be given the opacity of regulatory merger review. Since the stipulations cited by the Task Force were added to the Handbook nine years ago, it would be helpful to know the extent to which they have been used, and whether regulators believe they have proven to be useful tools for monitoring solvency and protecting policyholders. For example:

- In how many instances since 2013 were stipulations attached to merger approvals?
- Which stipulations were most commonly used?
- How often have regulators imposed stipulations that require on-going monitoring and/or reporting? Has such monitoring and reporting helped regulators detect potential problems?
- When stipulations required periodic reports from an insurer or its parent, were those reports made available to other state regulators? Were they made available to the public?

The NAIC maintains a Form A database so presumably answering these questions would not be overly time consuming. In any event, without such answers, it is difficult to evaluate whether the 2013 stipulations could be useful tools in uncovering the types of hidden risks or undisclosed related party agreements referenced in Consideration 1.

Consideration 2: Control is presumed to exist where ownership is $\geq 10\%$, but control and conflict of interest considerations may exist with less than 10% ownership. For example, a party may exercise a controlling influence over an insurer through Board and management representation or contractual arrangements, including non-customary minority shareholder rights or covenants, investment management agreement (IMA) provisions such as onerous or costly IMA termination provisions, or excessive control or discretion given over the investment strategy and its implementation. Asset-management services may need to be distinguished from ownership when assessing and considering controls and conflicts.

The Task Force decided to refer this item to the NAIC Group Solvency Issues (E) Working Group, and suggested that the Working Group “consider if Form B (Insurance Holding Company System Annual Registration Statement) disclosure requirements should be modified to address these considerations.”

We do not have an opinion about this recommendation, other than to note that in many states Form B Annual Statements are held to be confidential documents exempt from state open records laws and procedures, making it difficult for the public to form an opinion as to whether they could be, or ever have been, effective regulatory tools.¹³

Consideration 3: The material terms of the IMA [Investment Management Agreements] and whether they are arm’s length or include conflicts of interest — including the amount and types of investment management fees paid by the insurer, the termination provisions (how difficult or costly it would be for the insurer to terminate the IMA) and the degree of discretion or control of the investment manager over investment guidelines, allocation, and decisions.

The Task Force decided to refer this item to the NAIC Risk-Focused Surveillance (E) Working Group, and suggested that the Working Group “consider training and examples, such as unique termination clauses and use of sub-advisors with the potential for additive fees, and strategies to address these.” They

UNITE HERE Comments to Joint Macroprudential and Financial Stability Task Forces
June 13, 2022

further suggested “addressing pushback on obtaining sub-advisor agreements as Form D disclosures and some optional disclosures for the Form A.”

UNITE HERE has no opinion on this recommendation, other than to observe that merger applications offer a limited window during which to make inquiries and procure information about asset management arrangements entered into by life insurers. Such arrangement and agreements can and presumably do change over time. Aside from Form A reviews and routine Form D disclosures, what tools do regulators have at their disposal to monitor on an on-going basis asset management agreements, including fee arrangements and sub-advisor agreements?

Intra-company agreements within an insurance holding company or group can be particularly opaque to regulators, policyholders and the public-at-large. For example, the securities lending program that contributed to AIG’s insolvency and the subsequent Federal Reserve Board bailout of AIG’s life insurance units in the wake of the 2008 financial crisis was run not by personnel employed by AIG’s state-regulated life insurers, but by senior executives at the parent company level.¹⁴ Similarly, substantially all of Athene’s investing activities are conducted not by employees of Athene’s state-regulated insurance units in Iowa, New York or Delaware, but by El Segundo, CA-based Athene Insurance Solutions, a non-insurance subsidiary of Apollo Global Management.¹⁵

To the extent regulators do have access to investment management contracts, parental guarantees or other intra-company documents, we believe those documents should be made available to the public as well as to rating agencies so annuity consumers can better understand the incentive structures and/or potential conflicts that may arise pursuant to such agreements.

Consideration 4: Owners of insurers, regardless of type and structure, may be focused on short-term results which may not be in alignment with the long-term nature of liabilities in life products. For example, investment management fees, when not fair and reasonable, paid to an affiliate of the owner of an insurer may effectively act as a form of unauthorized dividend in addition to reducing the insurer’s overall investment returns. Similarly, owners of insurers may not be willing to transfer capital to a troubled insurer.

The Task Force noted that this topic is already under the purview of the Life Actuarial (A) Task Force (LATF) insofar as the work of that group is to help “ensure the long-term life liabilities (reserves) and future fees to be paid out of the insurer are supported by appropriately modeled assets.” Regulators also recommended referring this consideration to the NAIC Risk-Focused Surveillance (E) Working Group, “as it is already looking at some of this work related to affiliated agreements and fees.” The regulators suggested this Working Group should consider: what are the appropriate entities to provide capital maintenance agreements and how can such agreements be made stronger?

UNITE HERE considers the Task Force response to this consideration to be non-responsive. Consideration 4 in our view requires a historical analysis that answers the questions embedded within it. Have some insurers been focused more on short-term results which may not be in alignment with the long-term nature of liabilities in life products? Are there specific examples of investment management fees paid to an insurer’s affiliate that regulators consider to be not fair or reasonable or that “effectively act as a form of unauthorized dividend”? Have there been instances when upstream owners have been unwilling to transfer capital to a troubled regulated affiliate? Without answers to these questions, it is

UNITE HERE Comments to Joint Macroprudential and Financial Stability Task Forces
June 13, 2022

difficult for the public to understand whether or to what extent regulators are concerned about these issues or are interested in devising more effective tools for managing these potential risks.

Consideration 5: Operational, governance and market conduct practices being impacted by the different priorities and level of insurance experience possessed by entrants into the insurance market without prior insurance experience, including, but not limited to, PE owners. For example, a reliance on TPAs [third party administrators] due to the acquiring firm’s lack of expertise may not be sufficient to administer the business. Such practices could lead to lapse, early surrender, and/or exchanges of contracts with in-the-money guarantees and other important policyholder coverage and benefits.

In response to this consideration, the Task Force noted that “the NAIC Financial Analysis Handbook includes guidance specific to Form A consideration and post approval analysis processes regarding PE owners of insurers (developed previously by the Private Equity Issues (E) Working Group).” The task Force also made various other suggestions including that regulators consider optional Form A disclosures and guidance for less experienced states.

UNITE HERE has no opinion about these recommendations except to note again that the Financial Analysis Handbook provides guidance that states can choose to follow or not, and that Form A application process provides a limited time period for monitoring TPAs or tracking actual performance of operational competencies and customer service.

Consideration 6: No uniform or widely accepted definition of PE and challenges in maintaining a complete list of insurers’ material relationships with PE firms. (UCAA (National Treatment WG) dealt with some items related to PE.) This definition may not be required as the considerations included in this document are applicable across insurance ownership types.

The Task Force response to this consideration was that “regulators do not believe a PE definition is needed, as the considerations are activity based and apply beyond PE owners.”

UNITE HERE agrees in principle that regulations and procedures should be activity based, but notes that the spread investment model perfected by Apollo and its private equity peers involves a discreet set of activities that, especially in combination, are markedly distinct from the more traditional investment practices of large life insurance groups founded prior to 2010. Private equity affiliated life insurers have engaged in four main activities that, especially in combination, set them apart from their non-private equity competitors: 1) acquiring large blocks of annuities from other life insurers; 2) replacing a portion of the acquired government and corporate bonds with less liquid asset-backed securities and alternative investments; and 3) entering into investment management agreements and/or sub-advisor agreements with noninsurance PE affiliates; and 4) reinsuring most of their acquired liabilities with Bermuda affiliates, thereby freeing up “excess capital.”¹⁶

Managing growing macroprudential risks will require a coordinated approach

Thank you for this opportunity to provide comments on the first six of the Task Force’s 13 Considerations. We look forward to your response to the remaining seven Considerations. We applaud the Task Force’s attention to these important questions. Although we understand the NAIC is a deliberative body that seeks to build consensus among state regulators, industry representatives and

UNITE HERE Comments to Joint Macroprudential and Financial Stability Task Forces
June 13, 2022

other interested parties when developing its model laws and procedures, we are concerned that with respect to this set of issues the process is ill-suited to the urgent task of protecting policyholders (especially group annuity beneficiaries) and the public from the growing macroprudential risks associated with private equity stewardship of life insurance companies.

These are not new risks. Regulators, lawmakers, legal scholars and other academic researchers have been drawing attention to these issues for at least a decade. Many have pointed out that the activities most contributing to that risk – particularly the regulatory and capital arbitrage,¹⁷ and the pursuit of the “illiquidity premium”¹⁸ - frequently take place outside the purview of state insurance regulators or indeed any prudential regulators.

For this reason, we believe that it will ultimately require state, federal and international regulators working together to protect the public from the risks of large life insurer insolvencies and/or contagion to the larger financial system to which they are interconnected.

UNITE HERE would be happy to discuss these concerns with the combined Task Force or staff. Please contact Marty Leary at 703-608-9428 if you have any questions about these comments.

¹¹ Apollo Investor Day Presentation 2021, October 2021, p.106-108.

¹² Blackstone bought FGL in 2017 and Allstate’s Life and Annuity businesses in 2020; KKR bought Global Financial Group in July 2020; Ares bought Pavonia Life in 2019 (and renamed it Aspida), and F&G Reinsurance in September 2020; Brookfield bought a 19.9% stake and entered into a strategic partnership with American Equity Investment Life in October 2020; and Sixth Street Partners (formerly an arm of TPG) bought Talcott Resolution in January 2021; see also Alwyn Scott and David French, “U.S. insurance asset sales attract new private equity players, strategies,” Reuters, 2/8/2021.

<https://www.reuters.com/article/us-insurance-m-a/u-s-insurance-asset-sales-attract-new-private-equity-players-strategies-idUSKBN2A811G>

Additionally, in July 2021, Blackstone entered into a long-term agreement with AIG to manage the assets backing AIG’s life and annuity policies. Pursuant to that transaction, Apollo paid \$2.2 billion for a 9.9% stake in AIG and initially assumed asset management over \$50 billion in AIG’s assets. See Gottfried, Miriam and Scism, Leslie, “Blackstone Enters Deal to Manage AIG Life and Retirement Assets,” *Wall Street Journal*, July 14, 2021.

<https://www.wsj.com/articles/blackstone-near-deal-to-manage-aig-life-and-retirement-assets-11626294156>

In March 2022, AIG made an S-1 filing with the SEC to begin the process of an initial public offering of its life and retirement business, to be renamed Corebridge Financial. At the same time, AIG announced that AIG’s more liquid portfolio comprised primarily of fixed income and private placement securities would be managed by BlackRock. See Masters, Brooke, Fontanella-Kahn, James, Megaw, Nicholas, and Smith, Ian, “AIG files to float its life insurance and asset management business,” *Financial Times*, March 28, 2022. <https://www.ft.com/content/56b547e5-82d4-4f8a-b341-39eda8bf9bd5> In its S-1 filing, Corebridge affirmed its “strategic partnership” with Blackrock, pursuant to which Corebridge expected BlackRock to have invested more than \$92 billion of the insurer’s assets by 2027, “primarily in Blackstone-originated investments across a range of asset classes, including private and structured credit.” See Corebridge S-1, filed 3/28/2022, p.5.

¹⁵ Athene Holding 2021 10-K, filed 2/25/2022, p.13.

¹⁶ Through the use of modified co-insurance reinsurance contracts, Athene can lower its required capitalization and thus free-up capital for reinvestment or other purposes. Here is how an Athene subsidiary describes the process: “*Due to these various reinsurance relationships, the amount of capital and surplus that AAILA [Athene’s state-regulated Iowa life insurance affiliate] is required to maintain is less than what would be required if the insurance liabilities were not ceded to its affiliates. Therefore, AAILA may have fewer permitted assets available to make payments under its insurance liabilities in the event that the applicable account is insufficient to satisfy amounts due thereunder as the result of a default by the respective counterparty under the reinsurance arrangements.*” See also: Kirti, Divya and Sarin, Natasha, “What Private Equity Does Differently: Evidence from Life Insurance,” (February 14, 2020). ¹⁸ Upon acquiring closed annuity blocks or pension liabilities, Apollo replaces some of the lower-yielding assets that back those obligations with riskier and/or less liquid financial products, then reinsures most of the annuity obligations via affiliates incorporated and regulated in Bermuda. Unlike traditional reinsurance with third-party reinsurers, these inter-company reinsurance transactions do not actually transfer risk. But they allow Athene to lower its overall level of capital and reserves without corresponding declines in its state-regulated affiliates’ reported risk-based capital (RBC) ratios. See: Foley-Fisher, Nathan, and Verani, Stepane, “Capturing the Illiquidity Premium,” Authors work in the Research and Statistics Division of the Federal Reserve Board, February 2020.

Mr. Justin Schrader
Chair, NAIC Macroprudential Working GroupMr. Todd Sells
Director, Financial Regulatory Policy & Data

Re: Regulator Responses to List of MWG Considerations - April 27, 2022

Dear Messrs. Schrader and Sells:

Northwestern Mutual appreciates the opportunity to submit comments on the Regulator Responses to List of MWG Considerations, also referred to as the Regulatory Considerations Applicable (But Not Exclusive) to Private Equity (PE) Owned Insurers (MWG Considerations). Northwestern Mutual, headquartered in Milwaukee, Wisconsin, was founded in 1857 and today is the country's largest direct provider of individual life insurance. Our company continues to earn the highest financial strength ratings awarded to any U.S. life insurer from Moody's, A.M. Best Company, Fitch Ratings, and Standard & Poor's. We engage in solvency-related regulatory issues, such as those listed in the MWG Considerations, with the goal of maintaining the stability and vibrancy of the life insurance marketplace in the United States.

We agree with the Macroprudential Working Group (Working Group) that the critical issue presented by the MWG Considerations is not the nature of a company's ownership structure. Rather, it is the potential for gaps in the existing solvency regulatory system to be exploited to the potential detriment of consumers, the life insurers that compete in our national marketplace and, ultimately, the integrity and stability of the state insurance regulatory system itself. Therefore, we strongly support the work of the Working Group to develop and address the MWG Considerations. We recognize and commend the progress made and referrals proposed for many of the 13 items listed in the MWG Considerations.

As the Working Group holds further discussions on each of the MWG Considerations, Northwestern Mutual would like to offer three core concepts of insurance regulation that should form the basis for future NAIC activity: uniformity; transparency; and strong reserving and capital standards.

- **Uniformity.** Solvency regulation should be uniform across the states to maintain the protection of policyholders in the United States. Companies should not have to establish complex and costly structures and rely on disparate solvency standards across jurisdictions to compete on a level playing field.
- **Transparency.** Transparency should allow both regulators and interested parties, without excessive effort, to be able to understand the impact of key transactions on the reported financial condition and solvency of the ceding company. Without transparency, market discipline fails and consumer confidence dwindles, increasing risks to policyholders, the industry, and the state-based regulatory and guaranty systems.
- **Strong Reserving and Capital Standards.** Life insurance should have strong, appropriately conservative reserve and capital requirements for the long-term promises made to policyholders. Industry and regulatory credibility could be questioned if a transaction involving a block of business could meaningfully reduce the total reserve and capital requirements while the risks associated with that business remain substantively the same.

Notably, regulator discussion has not yet led to substantial progress on item #13 which pertains to insurers' use of offshore reinsurance structures. Reinsurance transactions can and often do serve a valuable function by reallocating risk. However, offshore reinsurance can also result in lower total reserves and capital, reduced state regulatory oversight, and diminished stakeholder transparency from what would be required by the statutory accounting and risk-based capital requirements the NAIC has established to protect policyholders in the United States.

Without progress and action on the item pertaining to offshore reinsurance, the Working Group's progress on other MWG Considerations could further incentivize even more utilization of offshore reinsurance transactions and undercut the NAIC's efforts to close other solvency regulatory gaps domestically. In the long run, a system that encourages companies to transfer business to a related offshore entity in order to alter their reserves and capital from uniform standards diminishes the strength of reserve and capital regulation in the United States. If capital standards are deemed to be too conservative in the US, they should be addressed transparently and uniformly through the NAIC and not through the alternate means of offshore reinsurance.

As the Working Group advances in addressing each of the MWG Considerations, we encourage efforts to refine and to strengthen state insurance regulatory levers and to overcome any perceived obstacles on this issue, so that offshore reinsurance does not undermine the outcomes on the other MWG Considerations.

We appreciate the efforts of the Working Group thus far to coordinate NAIC activities related to the MWG Considerations.

Sincerely,

Andrew T. Vedder
Vice President – Enterprise Risk Management

**Re: Comments Regarding NAIC Macroprudential (E) Working Group Exposed
“Regulatory Considerations Applicable (but not exclusive to) Private Equity Owned
Insurers”**

The American Investment Council (“AIC”)¹ is pleased to have the opportunity to provide additional comments regarding the National Association of Insurance Commissioners (“NAIC”) Financial Stability (E) Task Force (“FSTF”) and Macroprudential (E) Working Group (“MWG”) exposure, “*Regulatory Considerations Applicable (But Not Exclusive) to Private Equity (PE) Owned Insurers*” (“Exposure Document”). As the advocacy, communications, and research organization for the world’s leading private equity and private credit firms, which have substantial experience assisting insurers with their investment needs, we believe we are well-positioned to share an important perspective with the NAIC.

As noted in our January 18, 2022 comment letter, the AIC commends the FSTF and MWG for seeking to further understand the longstanding and mutually beneficial

¹ The American Investment Council, based in Washington, D.C., is an advocacy, communications, and research organization established to advance access to capital, job creation, retirement security, innovation, and economic growth by promoting responsible long-term investment. In this effort, the AIC develops, analyzes, and distributes information about private equity and private credit industries and their contributions to the U.S. and global economy. Established in 2007 and formerly known as the Private Equity Growth Capital Council, the AIC’s members include the world’s leading private equity and private credit firms which have experience with the investment needs of insurance companies. As such, our members are committed to growing and strengthening the companies in which, or on whose behalf, they invest, to helping secure the retirement of millions of pension holders and to helping ensure the protection of insurance policyholders by investing insurance company general accounts in appropriate, risk-adjusted investment strategies. For further information about the AIC and its members, please visit our website at <http://www.investmentcouncil.org>.

AMERICAN INVESTMENT COUNCIL

relationship between private equity firms, asset managers, the insurance industry and the policyholders they serve. In particular, we applaud the NAIC for taking a deliberative and transparent approach to determining what additional work, if any, should be undertaken to address state insurance regulators' concerns pertaining to the ongoing shift in insurer investment strategies in a persistent low interest rate environment. We also appreciate the recognition by the NAIC in its May 31, 2022, letter to Senate Banking Chairman Sherrod Brown that: (i) many of the Exposure Document's considerations are not unique to one particular category of investors or insurers; (ii) a number of related considerations are currently, or were recently, the subject of deliberation of other NAIC working groups unrelated to private equity, and (iii) notwithstanding the recent attention on the subject, a wide range of insurers have been utilizing alternative investment strategies under the supervision of state insurance regulators for some time. We agree, as you note in the letter, that state insurance regulators are fully capable of assessing and supervising any insurance activity, regardless of ownership structure.²

We welcome the opportunity to discuss any questions or comments that FSTF or MWG members may have regarding the Exposure Document or the role of private equity and alternative asset managers in insurance generally, and we would like to call particular attention to the following four Exposure Document Considerations.

Consideration 1 (Disclosure)³

We appreciate the recognition by FSTF/MWG that there is no “one size fits all” approach to regulatory disclosures and that this issue is not limited to one category of investors or one sub-set of insurers. To that end, we encourage the FSTF and MWG to extend these fundamental considerations to the entirety of the Exposure Document workstream and to continue to focus on specific *activities*, rather than a particular type of investor or insurer.

As a general matter, we understand that a regulator may need to request that affiliated/related party agreements be submitted as part of certain insurance holding company act review processes, but would request that those materials receive customary confidential treatment. In addition, if and when the Group Solvency Issues (E) Working Group (“GSWG”) takes this Consideration up for discussion, we believe it would be

² Like insurers, private fund advisers are also subject to significant oversight and regulation. For example, private fund advisers are registered as investment advisers under the Investment Advisers Act of 1940 with the U.S. Securities and Exchange Commission (“SEC”). The SEC seeks to administer and enforce legal obligations on alternative asset managers through an active examination and oversight program, including with an announced focus on conflicts. Insurance companies advised by private fund advisers also receive the benefits of this oversight.

³ Consideration 1 states: “Regulators may not be obtaining clear pictures of risk due to holding companies structuring contractual agreements in a manner to avoid regulatory disclosures and requirements. Additionally, affiliated/related party agreements impacting the insurer’s risks may be structured to avoid disclosure (for example, by not including the insurer as a party to the agreement).”

AMERICAN INVESTMENT COUNCIL

helpful for the GSWG to assess, among other items: (i) the need to provide regulatory certainty *vis a vis* when and on what basis additional disclosures could be required; and (ii) whether the additional disclosures would extend approval timelines. We believe such items are critical to insurers being able to access the capital markets effectively and efficiently.

We also note that there are legitimate business reasons why investors enter into agreements with insurer parent companies or other affiliates that are unrelated to regulator disclosure considerations. Investors enter into these arrangements with insurer affiliates to ensure that those parties support and otherwise refrain from undermining the commitments made at the insurer legal entity level in connection with engaging an alternative manager for services, particularly where the investment manager has made an equity investment in the parent company. These mutually beneficial arrangements ensure that long-term equity investments made in an insurer by an investment manager support the insurer’s operations, validate the potential growth of the insurer to other potential investors, and provide alignment between the investment manager and the insurer as a means to ensure the investment manager acts in the interest of the insurer and its policyholders.

Consideration 2 (“Control”)⁴

The NAIC *Insurance Holding Company System Regulatory Act* (#440) (“Model Act”) defines “control” and provides that control is presumed to exist “if any person, directly or indirectly, owns, controls, holds with the power to vote, or holds proxies representing, ten percent (10%) or more of the voting securities of any other person.”⁵ To be sure, the Model Act also provides state insurance regulators with the discretionary authority to determine “that control exists notwithstanding the absence of a presumption [of control].”⁶

An established standard as to the facts and circumstances under which control is presumed – and the well-established practices and conventions so associated – is an essential component to providing insurers and investors with regulatory certainty. The need for a clear and predictable presumption to remain in place is critical in order for insurers to effectively and efficiently access capital with predictability, while balancing

⁴ Consideration 2 states: “Control is presumed to exist where ownership is $\geq 10\%$, but control and conflict of interest considerations may exist with less than 10% ownership. For example, a party may exercise a controlling influence over an insurer through Board and management representation or contractual arrangements, including non-customary minority shareholder rights or covenants, investment management agreement (IMA) provisions such as onerous or costly IMA termination provisions, or excessive control or discretion given over the investment strategy and its implementation.”

⁵ See Model Act Section 1(C).

⁶ Per the Model Act, such a determination is subject “furnishing all persons in interest notice and opportunity to be heard and making specific findings of fact to support the determination [of control].”

AMERICAN INVESTMENT COUNCIL

the need for state insurance regulators to have the necessary discretionary authority to effectively supervise insurer transactions.

Moreover, we believe that the Model Act’s current definition of “control” continues to be the proper determinant for actual control. Absent traditional indicia of control, contractual arrangements relating to service agreements – including investment management agreements – should not be viewed as providing an indicia of control. Stated differently, contractual terms contained in service agreements that are negotiated on an arm’s length basis are not sufficient to convey the power to direct or cause the direction of an insurer, so long as they are subject to the ultimate supervision and control by the insurer through general oversight of the service provider and other customary contractual provisions. To conclude otherwise would impose undue uncertainty on contractual arrangements between insurers and their counterparties, and would likely have a chilling effect on the ability of insurers to enter into agreements that are in the best interest of their policyholders.

Consideration 3 (Investment Management Agreements)⁷

Conflict of Interest

As a general matter, the terms of a contractual agreement should not be viewed as giving rise to a conflict of interest when the agreement is negotiated on an arm’s length basis. Notwithstanding the foregoing, current law provides an established process to address potential conflicts (for example, requirements to appoint independent directors and traditional corporate law processes to ensure fairness and, under certain circumstances, review of transactions by regulators pursuant to Form D filings). Accordingly, investments sourced and allocated by alternative asset managers on behalf of insurance company clients should not, absent other factors, be viewed as presenting a potential conflict of interest, particularly where insurers retain full control over asset allocation (for example, insurers retain control over the asset classes in which they invest, as well as the amounts and periods of time over which such asset exposure is achieved).

Fees

Importantly, as an initial consideration, any fees paid to investment managers cannot be considered in isolation, rather they should be considered on a “net” basis – i.e., on the basis of total return (after fees are taken into account). Sophisticated institutional investors (including insurers) have a successful history of investing in a range of

⁷ Consideration 3 states: “The material terms of the IMA and whether they are arm’s length or include conflicts of interest—including the amount and types of investment management fees paid by the insurer, the termination provisions (how difficult or costly it would be for the insurer to terminate the IMA) and the degree of discretion or control of the investment manager over investment guidelines, allocation, and decisions.”

AMERICAN INVESTMENT COUNCIL

strategies despite certain investment products generally having higher fees than other available investment opportunities. On a net basis, private equity has consistently outperformed more traditional asset classes such as publicly traded stocks and public mutual funds⁸ Net-of-fees private debt funds have also consistently outperformed bond and equity market benchmarks.⁹ Insurers continue to recognize the value of investment opportunities that outperform when considered on a net basis.¹⁰ This approach has enabled the consistent delivery of industry leading investment results, which ultimately leads to a high level of financial strength.

Termination

Asset managers often dedicate extensive resources at the outset of a new arrangement in support of managing an insurer's general account assets (e.g., dedicating or reassigning existing personnel, hiring new employees, investing in information technology systems, expanding office space, further enhancing compliance and regulatory processes). As such, and because, in our experience, insurers have the right to terminate their investment management agreements (e.g., upon 30 days' notice), the desire for external asset managers to seek contractual protections (subject to arms' length negotiations) should an insurer decide to terminate the arrangement earlier than was originally anticipated by the parties is entirely appropriate.

⁸ See e.g., Hamilton Lane data (February 2021) available at: <https://www.investmentcouncil.org/wp-content/uploads/deck-pe-outperformance-aic-2022.02.02.pdf>.

⁹ Private debt funds outperformed versus investment grade, high yield, and S&P 500 benchmarks by 8 percentage points, 6 percentage points and 6 percentage points, respectively. See Private Debt Fund Returns, Persistence, and Market Conditions (Böni and Manigart, April 2022), available at: https://papers.ssrn.com/sol3/papers.cfm?abstract_id=3932484. Additionally, this report observed the average (median) private debt fund provided an internal rate of return of 9.2 (8.5) percent net of fees to limited partners. Moreover, there was a relatively equal outperformance for distressed debt, mezzanine and special situations funds of 8 to 10 percentage points, while direct lending funds outperformed the market by 4 percentage points.

¹⁰ For example, insurers currently comprise approximately 12% of the invested capital in private equity funds. See e.g., Global Private Equity & Venture Capital Report (Preqin, 2021) available at: <https://www.preqin.com/insights/global-reports/2021-preqin-global-private-equity-and-venture-capital-report>. The attractiveness of the net returns offered by private equity investments is also evidenced by the extent to which institutional investors will be increasing or maintaining their allocation to such investments in the next year. See LP Perspectives 2021 (Private Equity International, December 2020) available at: <https://www.investmentcouncil.org/wp-content/uploads/deck-pe-outperformance-aic-2022.02.02.pdf>.

AMERICAN INVESTMENT COUNCIL

Consideration 10 (Privately Structured Securities)¹¹

As you are aware, insurance company asset managers are tasked with producing enough yield from their investments to keep pace with benefits and obligations embedded in policies that often stretch years into the future, while not running afoul of state insurance investment laws. These obligations have been challenging as of late due to the persistent low interest rate environment, leaving insurers with two essential choices: (i) take more risk along the yield curve in search of higher rates of return; or (ii) seek other types of debt instruments that provide for more attractive returns without incremental credit risk. This set of circumstances is increasingly driving insurers to seek the services of alternative asset managers with significant asset origination capabilities and private credit expertise to manage a portion of their assets, which provide a number of benefits to the insurer and their policyholders. Those benefits include:

- A natural alignment between the long-dated insurance liabilities and the long-term investment approach taken by alternative asset managers, including in the private credit space;
- Alternative asset managers have the ability to source, underwrite and execute private credit transactions that require skill sets, experience, and scale that many insurance companies do not possess in-house;
- Private equity and private credit firms also provide an opportunity for smaller and midsized insurers to access these asset classes, which historically have been the primary purview of large insurers that have the scale to afford in-house asset management functions that can originate these assets, making the industry more competitive to the ultimate benefit of policyholders;
- Engaging asset managers with differentiated capabilities can be more cost efficient than making significant investments in an internal asset management function. By availing themselves of these advantages, insurers can benefit from cost-effective sourcing and origination capabilities in attractive asset classes, resulting in enhanced long-term adequacy margins for policyholders, increased

¹¹ Consideration 10 states: “The material increases in privately structured securities (both by affiliated and non-affiliated asset managers), which introduce other sources of risk or increase traditional credit risk, such as complexity risk and illiquidity risk, and involve a lack of transparency. (The NAIC Capital Markets Bureau continues to monitor this and issue regular reports, but much of the work is complex and time-intensive with a lot of manual research required. The NAIC Securities Valuation Office will begin receiving private rating rationale reports in 2022; these will offer some transparency into these private securities.)”

AMERICAN INVESTMENT COUNCIL

spread/earnings, and more competitive product pricing that inures to the benefit of policyholders;

- Asset-backed security default rates are substantially similar to corporate investment grade debt default rates while CLO default rates are substantially lower than corporate default rates¹²;
- The focus on private investments is belied by the fact that institutions with higher allocations to private investments have outperformed (with less volatility) those with less.¹³

We welcome the opportunity to serve as a resource to the NAIC as it continues to address this important matter.

Respectfully submitted,

Rebekah Goshorn Jurata
General Counsel
American Investment Council

Regulatory Considerations Applicable (But Not Exclusive) to Private Equity (PE) Owned Insurers**-Plan adopted by FSTF/MWG on June 27, 2022**

A summary of currently identified regulatory considerations follows with no consideration of priority or importance (green underlined font indicates current or completed work by another NAIC committee group). Most of these considerations are not limited to PE owned insurers and are applicable to any insurers demonstrating the respective activities. A summary of the regulatory process has been added to this document since it is being used by individuals less familiar with the state insurance regulatory system, and the results of regulator discussions on how to move forward have been added to specific considerations in blue font. Interested party comments are included in purple font and are followed by the regulators' decision on how to address the comments.

State insurance regulators monitor the solvency of each legal entity insurer, including assessing risks from the broader holding company when an insurer is part of a group, making use of routinely required disclosures, both public, such as the statutory financial statements, and confidential, such as the Risk-Based Capital (RBC) supplemental filing and Holding Company form filings. Regulators also use many analysis and examination tools and procedures for each insurer and/or insurance group. Regulatory responses to the analysis and examination work depend upon the results of those reviews. One specific area of solvency monitoring work focuses on potential acquisitions of a US legal entity insurer, involving a Form A filing. In 2013, guidance was added to the NAIC Financial Analysis Handbook for Form A reviews when a private equity owner was involved, although these considerations are not limited to PE acquisitions. The guidance provides examples of stipulations, both limited time and continuing, regulators could use when approving the acquisition to address solvency concerns, as well as for use in ongoing solvency monitoring. Examples follow:

Limited Time Stipulations:

- Requiring RBC to be maintained at a specified amount above company action level/trend test level. Because capital serves as a buffer that insurers use to absorb unexpected losses and financial shocks, this would better protect policyholders.
- Requiring quarterly RBC reports rather than annual reports as otherwise required by state law.
- Prohibiting any dividends, even ordinary.
- Requiring a capital maintenance agreement or prefunded trust account.
- Enhancing the scrutiny of operations, dividends, investments, and reinsurance by requiring material changes in plans of operation to be filed with the commissioner (including revised projections), which, at a minimum, would include affiliated/related party investments, dividends, or reinsurance transactions to be approved prior to such change.
- Requiring a plan to be submitted by the group that allows all affiliated agreements and affiliated investments to be reviewed, despite being below any materiality thresholds otherwise required by state law. A review of agreements between the insurer and affiliated entities may be particularly helpful to verify there are no cost-sharing agreements that are abusive to policyholder funds assessment.

Continuing Stipulations:

- Requiring prior commissioner approval of material arms-length, non-affiliated reinsurance treaties or risk-sharing agreements.
- Requiring notification within 30 days of any change in directors, executive officers or managers, or individuals in similar capacities of controlling entities, and biographical affidavits and such other information as shall reasonably be required by the commissioner.

- Requiring filing of additional information regarding the corporate structure, controlling individuals, and other operations of the company.
- Requiring the filing of any offering memoranda, private placement memoranda, any investor disclosure statements or any other investor solicitation materials that were used related to the acquisition of control or the funding of such acquisition.
- Requiring disclosure of equity holders (both economic and voting) in all intermediate holding companies from the insurance company up to the ultimate controlling person or individual but considering the burden on the acquiring party against the benefit to be received by the disclosure.
- Requiring the filing of audit reports/financial statements of each equity holder of all intermediate holding companies but considering the burden on the acquiring party against the benefit to be received by the disclosure.
- Requiring the filing of personal financial statements for each controlling person or entity of the insurance company and the intermediate holding companies up to the ultimate controlling person or company. Controlling person could include for example, a person who has a management agreement with an intermediate holding company.

Among many other concepts, regulators are considering the need for any additional stipulations, if there are some stipulations that should be required instead of used subjectively, and use of some stipulations beyond the Form A acquisition process (e.g., for insurers acquired in the past).

RRC Comments “In a Form A transaction” (7 bullet points) – These bullet points will be included in the referrals to the NAIC Group Solvency Issues (E) Working Group and the NAIC Risk-Focused Surveillance (E) Working Group for consideration when addressing Consideration numbers 1, 2, 4 and 5.

1. Regulators may not be obtaining clear pictures of risk due to holding companies structuring contractual agreements in a manner to avoid regulatory disclosures and requirements. Additionally, affiliated/related party agreements impacting the insurer’s risks may be structured to avoid disclosure (for example, by not including the insurer as a party to the agreement).

Regulator discussion results:

- Refer this item to the NAIC Group Solvency Issues (E) Working Group. Items discussed:
 - Instead of requiring for all Form A acquisitions to provide additional disclosures, structure an optional disclosure requirement that can be used when unresolved regulatory concerns exist with the acquisition. For example:
 - Disclosures to allow regulators to assess the goal of the potential owner in acquiring the insurer, how the potential owner will be paid and in what amounts, and the ability of the potential owner to provide capital support as needed.
 - Copies of disclosures provided to the potential owner’s investors.
 - Provide training as needed to states with less experience reviewing complex Form A transactions and refer those states to more experienced states for live help.
 - These options include highlighting the need to use external expertise for complex transactions, especially to understand non-U.S. affiliations and when assessing multiple complex Form A applications, and at the expense of the Form A applicant.

AIC Comment (recommended 2 items) – These two items will be included in the referral to the NAIC Group Solvency Issues (E) Working Group for its work on Consideration #1.

- Recommendation: The Working Group should assess, among other items: (i) the need to provide regulatory certainty *vis a vis* when and on what basis additional disclosures could be required; and (ii) whether the additional disclosures would extend approval timelines. We believe such items are critical to insurers being able to access the capital markets effectively and efficiently.
2. Control is presumed to exist where ownership is $\geq 10\%$, but control and conflict of interest considerations may exist with less than 10% ownership. For example, a party may exercise a controlling influence over an insurer through Board and management representation or contractual arrangements, including non-customary minority shareholder rights or covenants, investment management agreement (IMA) provisions such as onerous or costly IMA termination provisions, or excessive control or discretion given over the investment strategy and its implementation. Asset-management services may need to be distinguished from ownership when assessing and considering controls and conflicts.

Regulator discussion results:

- Refer this item to the NAIC Group Solvency Issues (E) Working Group. Regulators recognized the integral connection of the first two considerations. Items discussed:
 - o An emphasis on training and providing detailed examples to address the complexity and creativity involved in some of these Form A agreements and holding company structures.
 - o It is not practical to get copies of operating agreements from every entity in a group to assess control impacts to the insurers. Consider ways of better targeting the pertinent agreements to assess, including a potential list of questions about less than 10% owners for use when considering Form A applications and/or ongoing analysis.
 - o Consider if Form B (Insurance Holding Company System Annual Registration Statement) disclosure requirements should be modified to address these considerations.

AIC Comment (2 primary concerns) – Regulators asked the AIC to follow the work of the NAIC Group Solvency Issues (E) Working Group on Consideration #2 and make comments on specific recommendations if needed.

- Concerns: The 10% presumption of control needs to remain; and contractual terms contained in service agreements that are negotiated on an arm's length basis are not sufficient to convey the power to direct or cause the direction of an insurer, so long as they are subject to the ultimate supervision and control by the insurer.
3. The material terms of the IMA and whether they are arm's length or include conflicts of interest—including the amount and types of investment management fees paid by the insurer, the termination provisions (how difficult or costly it would be for the insurer to terminate the IMA) and the degree of discretion or control of the investment manager over investment guidelines, allocation, and decisions.

Regulator discussion results:

- Refer this item to the NAIC Risk-Focused Surveillance (E) Working Group. Regulators recognized similar dynamics to the first two considerations, but this Working Group was selected because it

is already currently focused on a project involving affiliated agreements and Form D filings. Items discussed:

- Consider training and examples, such as unique termination clauses and use of sub-advisors with the potential for additive fees, and strategies to address these.
 - This included addressing pushback on obtaining sub-advisor agreements as Form D disclosures and some optional disclosures for the Form A.
- Given the increasing prevalence of bespoke agreements, does it make sense to tie this work in to the work of the NAIC Valuation of Securities (E) Task Force and/or the NAIC Securities Valuation Office? If yes, how best to do so?
- Surplus Notes and appropriate interest rates given their special regulatory treatment, including whether floating rates are appropriate; follow any Statutory Accounting Principles (E) Working Group projects related to this topic and provide comments needed.

RRC Comments “With respect to an Investment Management Agreement (IMA)” (3 bullet points) – These bullet points will be included in the referral to the NAIC Risk-Focused Surveillance (E) Working Group for Consideration #3.

AIC Comments on “Conflict of Interest, Fees, Termination” (3 individual comments) – These comments will be included in the referral to the NAIC Risk-Focused Surveillance (E) Working Group for its work on Consideration #3.

4. Owners of insurers, regardless of type and structure, may be focused on short-term results which may not be in alignment with the long-term nature of liabilities in life products. For example, investment management fees, when not fair and reasonable, paid to an affiliate of the owner of an insurer may effectively act as a form of unauthorized dividend in addition to reducing the insurer’s overall investment returns. Similarly, owners of insurers may not be willing to transfer capital to a troubled insurer.
 - a. Life Actuarial (A) Task Force (LATF) work addresses this – helping to ensure the long-term life liabilities (reserves) and future fees to be paid out of the insurer are supported by appropriately modeled assets.

Regulator discussion results:

- In addition to LATF’s work, refer this item to the NAIC Risk-Focused Surveillance (E) Working Group, as it is already looking at some of this work related to affiliated agreements and fees. Items discussed:
 - Capital maintenance agreements, suggesting guidance for the appropriate entities to provide them and considering ways to make them stronger.

5. Operational, governance and market conduct practices being impacted by the different priorities and level of insurance experience possessed by entrants into the insurance market without prior insurance experience, including, but not limited to, PE owners. For example, a reliance on TPAs due to the acquiring firm’s lack of expertise may not be sufficient to administer the business. Such practices could lead to lapse, early surrender, and/or exchanges of contracts with in-the-money guarantees and other important policyholder coverage and benefits.
 - a. The NAIC Financial Analysis Handbook includes guidance specific to Form A consideration and post approval analysis processes regarding PE owners of insurers (developed previously by the Private Equity Issues (E) Working Group).

Regulator discussion results:

- Regulators considered referring this consideration to the NAIC Risk-Focused Surveillance (E) Working Group but opted to keep developing more specific suggestions for now. Items discussed:
 - o Consider optional Form A disclosures and guidance for less experienced states; review EU conduct of business language and consider if similar concepts would help target the optional use.
 - o Consider more detailed guidance for financial examinations.
 - o Besides just inexperience, the consideration also includes intentional actions that ignore known concerns to achieve owner's results; might need to consider Market Conduct group(s).
6. No uniform or widely accepted definition of PE and challenges in maintaining a complete list of insurers' material relationships with PE firms. (UCAA (National Treatment WG) dealt with some items related to PE.) This definition may not be required as the considerations included in this document are applicable across insurance ownership types.

Regulator discussion results:

- Regulators do not believe a PE definition is needed, as the considerations are activity based and apply beyond PE owners.
7. The lack of identification of related party-originated investments (including structured securities). This may create potential conflicts of interests and excessive and/or hidden fees in the portfolio structure, as assets created and managed by affiliates may include fees at different levels of the value chain. For example, a CLO which is managed or structured by a related party.
- a. An agenda item and blanks proposal are being re-exposed by SAPWG. Desire for 2022 year-end reporting to include disclosures identifying related-party issuance/acquisition.

Regulator discussion results:

- Regulators are comfortable the SAPWG's work is sufficient as a first step since it involves code disclosures to identify various related party issues. They also recognize that existing and/or referred work at the Risk-Focused Surveillance (E) Working Group may address some items in this consideration. Once regulators work with these SAPWG disclosures and other regulatory enhancement, further regulatory guidance may be considered as needed.
8. Though the blanks include affiliated investment disclosures, it is not easy to identify underlying affiliated investments and/or collateral within structured security investments. Additionally, transactions may be excluded from affiliated reporting due to nuanced technicalities. Regulatory disclosures may be required to identify underlying related party investments and/or collateral within structured security investments. This would include, for example, loans in a CLO issued by a corporation owned by a related party.
- a. An agenda item and blanks proposal are being re-exposed by SAPWG. The concept being used for investment schedule disclosures is the use of code indicators to identify the role of the related party in the investment, e.g., a code to identify direct credit exposure as well as codes for relationships in securitizations or similar investments.

Regulator discussion results:

- Like the previous consideration, regulators are looking forward to using these code disclosures to help target areas for further review. However, specific to CLO/structured security considerations, regulators support a referral to the Examination Oversight (E) Task Force. Specific items discussed include:
 - o Since investors in CLOs obtain monthly collateral reports, regulators should consider asking for such reports when concerns exist regarding a company’s potential exposure to affiliated entities within their CLO holdings.
 - o Regulators would like to have more information regarding the underlying portfolio companies affiliated with a CLO manager to help quantify potential exposure between affiliates and related parties.
 - o Regulators request NAIC staff to consider their ability to provide tools and/or reports to help regulators target CLOs/structured securities to consider more closely.

RRC Comments on “collateralized loan obligations (CLOs)” (2 bullet points) – These bullet points will be included in the referrals to the NAIC Examination Oversight (E) Task Force and the NAIC Risk-Focused Surveillance (E) Working Group for Consideration numbers 7, 8 and 9, but also sent to the NAIC Statutory Accounting Principles (E) Working Group for its existing work related to these Considerations.

9. Broader considerations exist around asset manager affiliates (not just PE owners) and disclaimers of affiliation avoiding current affiliate investment disclosures. A new Schedule Y, Pt 3, has been adopted and is in effect for year-end 2021. This schedule will identify all entities with greater than 10% ownership – regardless of any disclaimer of affiliation - and whether there is a disclaimer of control/disclaimer of affiliation. It will also identify the ultimate controlling party.
 - a. Additionally, SAPWG is developing a proposal to revamp Schedule D reporting, with primary concepts to use principles to determine what reflects a qualifying bond and to identify different types of investments more clearly. For example, D1 may include issuer credits and traditional ABS, while a sub-schedule of D1 could be used for additional disclosures for equity-based issues, balloon payment issues, etc. This is a much longer-term project, 2024 or beyond.

Regulator discussion results:

- Regulators recognize the new Schedule Y, Part 3, will give them more insights for owners of greater than 10%, but it does not provide insights for owners of less than 10%. However, regulators also recognize that existing and/or referral work of the Risk-Focused Surveillance (E) Working Group may help with some of this dynamic. Additionally, since the SAPWG 2022 code project and its longer-term Schedule D revamp project will help provide further disclosures that will assist with this consideration, regulators are comfortable waiting to see if further regulatory guidance is needed after using the resulting disclosures and other enhancements from these projects.
 - o Specific to owners of less than 10%, regulators discussed the April 19, 2022, Insurance Circular Letter No. 5 (2022) sent by the New York Department of Financial Services to all New York domiciled insurers and other interested parties. This letter highlights that avoiding the levels deemed presumption of control, e.g., greater than 10% ownership, does not create a safe harbor from a control determination and the related regulatory requirements. The circular letter was distributed to all MWG members and interested regulators.

10. The material increases in privately structured securities (both by affiliated and non-affiliated asset managers), which introduce other sources of risk or increase traditional credit risk, such as complexity risk and illiquidity risk, and involve a lack of transparency. (The NAIC Capital Markets Bureau continues to monitor this and issue regular reports, but much of the work is complex and time-intensive with a lot of manual research required. The NAIC Securities Valuation Office will begin receiving private rating rationale reports in 2022; these will offer some transparency into these private securities.)
- a. LATF's exposed AG includes disclosure requirements for these risks as well as how the insurer is modeling the risks.
 - b. SVO staff have proposed to VOSTF a blanks proposal to add market data fields (e.g., market yields) for private securities. If VOSTF approves, a referral will be made to the Blanks WG.

Regulator discussion results:

- Regulators focused on the need to assess whether the risks of these investments are adequately included in insurers' results and whether the insurer has the appropriate governance and controls for these investments. Regulators discussed the potential need for analysis and examination guidance on these qualifications.
- To assist regulators in identifying concerns in these investments, regulators expressed support for the VOSTF proposal to obtain market yields to allow a comparison with the NAIC Designation. Once such data is available, regulators ask NAIC staff to develop a tool or report to automate this type of initial screening. Also, regulators again recognized the SAPWG Schedule D revamp work will help in identifying other items for initial screening.
- The regulators discussed LATF's exposed AG, noting the Actuarial Memorandum disclosures that would be required for these privately structured securities along with the actuarial review work, and recognizing how those would be useful for analysts and examiners when reviewing these investments. Additionally, the Valuation and Analysis (E) Working Group would be able to serve as a resource for some of these insights for states without in house actuaries.
- As a result of the above discussions, regulators agreed to a referral to the Examination Oversight (E) Task Force to address the disclosures that will be available from LATF's exposed AG. They agreed to wait for any further work or referral until they have an opportunity to work with the results of the VOSTF proposal and the SAPWG Schedule D revamp project.
- Since reserves are not intended to capture tail risk, refer this item to the NAIC RBC Investment Risk and Evaluation (E) Working Group and monitor the Working Group's progress. (Regulators adopted this recommendation from the RRC comment letter.)

RRC Comments on "privately structured securities" (2 bullet points, 1 with 2 sub-bullets) – These bullet and sub-bullet points will be included in the referral to the NAIC Examination Oversight (E) Task Force for Consideration #10 but also sent to the NAIC Valuation of Securities (E) Task Force for its existing work related to this Consideration.

AIC Comment on "Privately Structured Securities" (6 bullets) – Regulators asked the AIC to follow the work of the NAIC Examination Oversight (E) Task Force and the NAIC Valuation of Securities (E) Task Force and provide comments on specific recommendations if needed.

11. The level of reliance on rating agency ratings and their appropriateness for regulatory purposes (e.g., accuracy, consistency, comparability, applicability, interchangeability, and transparency).
- a. VOSTF has previously addressed and will continue to address this issue. A small ad hoc group is forming (key representatives from NAIC staff, regulators, and industry) to develop a framework for assessing rating agency reviews. This will be a multi-year project, will include

discussions with rating agencies, and will include the inconsistent meanings of ratings and terms.

Regulator discussion results:

- Regulators agreed to monitor the work of the ad hoc group in lieu of any specific recommendations at this time. Recognizing this will likely be a multi-year project, regulators reserve the right to raise specific concerns that may arise as the various NAIC committee groups work to address this list of considerations.

12. The trend of life insurers in pension risk transfer (PRT) business and supporting such business with the more complex investments outlined above. ([Enhanced reporting in 2021 Separate Accounts blank](#) will specifically identify assets backing PRT liabilities.) Considerations have also been raised regarding the RBC treatment of PRT business.

- a. [LATF has exposed an Actuarial Guideline](#) to achieve a primary goal of ensuring claims-paying ability even if the complex assets (often private equity-related) did not perform as the company expects, and a secondary goal to require stress testing and best practices related to valuation of non-publicly traded assets (note – LATF’s considerations are not limited to PRT). [Comment period for the 2nd exposure draft ends on May 2.](#)

Regulator discussion results:

- Regulators focused on the need to have disclosures on the risks to the General Account from the Separate Account PRT business – for guarantees but also reporting/tracking when the Separate Account is not able to support its own liabilities. Regulators noted the need to address the differences between buy in PRT transactions and buy out.
- Regulators are comfortable LATF is addressing the reserve considerations. To address the disclosure considerations, regulators support sending a referral to the Statutory Accounting Principles (E) Working Group since regulators suggested it be an item in the Notes to Financial Statements. (Regulators noted it might help to discuss such disclosure concepts with LATF’s Valuation Manual 22 (A) Working Group.)
 - While the exposed AG is not limited to PRT, and general disclosures may be helpful, regulators recognized additional and/or more specific disclosures may be needed for PRT business.
- b. Review applicability of Department of Labor protections resulting for pension beneficiaries in a PRT transaction.

Regulator discussion results:

- Regulators discussed concerns regarding potential differences between the pension benefit and the group annuity benefit in the PRT transaction.
- Regulators directed NAIC staff to further research this item for the MWG to address in the near future, including potential discussions with Department of Labor representatives.
- c. Review state guaranty associations’ coverage for group annuity certificate holders (pension beneficiaries) in receivership compared to Pension Benefit Guaranty Corporation (PBGC) protection.
 - i. NOLHGA provided 2016 study of state guaranty fund system vs. PBGC.

Regulator discussion results:

- Regulators recognized the difficulty in comparing the state guaranty system to the Pension Benefit Guarantee Corporation, as detailed in the NOLHGA study. However, they agreed policyholders should appreciate the benefit of having solvency regulators actively monitoring and working with the insurance companies in an attempt to prevent the need for any guaranty fund usage, as standard corporations holding pension liabilities have significantly less regulatory oversight.
- Regulators found the NOLHGA study responsive to this consideration, thus they suggested no further action.

d. “Considerations have also been raised regarding the RBC treatment of PRT business.”

Regulator discussion results:

- Regulators recognized the work of the Longevity Risk Transfer (LRT) Subgroup of the Life Risk-Based Capital (E) Working Group covers PRT business. A new LRT charge was included in the 2021 Life Risk-Based Capital (LRBC) formula. Regulators agreed the results of this new charge should be monitored.
- While regulators agreed to follow the work of the LRT Subgroup, they suggested no further action at this time.

13. Insurers’ use of offshore reinsurers (including captives) and complex affiliated sidecar vehicles to maximize capital efficiency, reduce reserves, increase investment risk, and introduce complexities into the group structure.

- a. LATF’s exposed AG was modified to require the company to provide commentary on reinsurance collectability and counterparty risk in the asset adequacy analysis memorandum. The original concept of requiring life insurers to model the business itself even if it uses these mechanisms to share/transfer risk was deferred to allow time to consider and address concerns over potential violations with EU/UK covered agreements and the 2019 revisions to NAIC Models 785 and 786.

Regulator discussion results:

- Regulators held candid conversations about the need to understand why insurers are using these types of offshore reinsurers. If there are problems in the U.S. regulatory system that are driving insurers to utilize offshore reinsurers (e.g., “excess” reserves), we should know of those problems so we can consider if there are appropriate changes to make.
- If there are other drivers, per the common theme in the regulators’ review of this list of considerations, there isn’t a presumption that the use of these transactions is categorically bad. Rather, there is a need to understand the economic realities of the transactions so the regulators can effectively perform their solvency monitoring responsibilities.
 - o Regulators discussed the potential concept of additional Holding Company Act requirements if these are affiliated reinsurers, disclosing the insurer benefits (reserves, capital, etc.).
- Regulators deferred specifying action on this item at this time, instead noting the desire to have meetings with industry representatives using these transactions and regulators from some of the offshore jurisdictions to gain more insights.

Northwestern Mutual Comment (2 cautions) – These cautions will be included as part of the MWG’s future discussions and work for this Consideration.

- Caution: Reinsurance transactions can and often do serve a valuable function by reallocating risk. However, offshore reinsurance can also result in lower total reserves and capital, reduced state regulatory oversight, and diminished stakeholder transparency from what would be required by the statutory accounting and risk-based capital requirements the NAIC has established to protect policyholders in the United States.
- Caution: Without progress and action on the item pertaining to offshore reinsurance, the Working Group's progress on other MWG Considerations could further incentivize even more utilization of offshore reinsurance transactions and undercut the NAIC's efforts to close other solvency regulatory gaps domestically. In the long run, a system that encourages companies to transfer business to a related offshore entity in order to alter their reserves and capital from uniform standards diminishes the strength of reserve and capital regulation in the United States. If capital standards are deemed to be too conservative in the US, they should be addressed transparently and uniformly through the NAIC and not through the alternate means of offshore reinsurance.
- **Additional regulator discussion result:**
 - Similar to the result of discussions for the 13th consideration, regulators expressed a desire to meet with various industry representatives to discuss the incentives behind private equity ownership of insurers and conversely the concerns other industry members may have with such ownership. Regulators believe the insights from these conversations will benefit their ability to monitor and, when necessary, contribute to the work occurring in the various NAIC committee groups regarding these considerations.

Receivership and Insolvency (E) Task Force
Portland, OR
August 11, 2022

The Receivership and Insolvency (E) Task Force met in Portland, OR, Aug. 11, 2022. The following Task Force members participated: James J. Donelon, Chair (LA); Cassie Brown, Vice Chair, represented by Brian Riewe (TX); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Jared Kosky (CT); Trinidad Navarro represented by Charles Santana (DE); David Altmaier represented by Anoush Brangaccio (FL); Colin M. Hayashida represented by Sherri Sakamoto (HI); Doug Ommen represented by Kim Cross (IA); Dana Popish Severinghaus represented by Kevin Baldwin (IL); Vicki Schmidt represented by Justin McFarland (KS); Sharon P. Clark represented by Jeff Gaither (KY); Gary D. Anderson represented by Christopher Joyce (MA); Timothy N. Schott represented by Robert Wake (ME); Chlora Lindley-Myers represented by John Rehagen (MO); Edward M. Deleon Guerrero (MP); Troy Downing represented by Erin Snyder (MT); Mike Causey represented by Angela Hatchell (NC); Eric Dunning represented by Justin Schrader (NE); Marlene Caride represented by David Wolf (NJ); Glen Mulready represented by Donna Willson (OK); Michael Humphreys represented by Crystal McDonald (PA); Alexander S. Adams Vega (PR); Elizabeth Kelleher Dwyer (RI); Carter Lawrence represented by Trey Hancock (TN); Jon Pike represented by Reed Stringham (UT); and Mike Kreidler represented by Charles Malone (WA).

1. Adopted its June 2 Meeting Minutes

The Task Force met June 2 and took the following action: 1) adopted its Spring National Meeting minutes; and 2) adopted a Request for NAIC Model Law Development to amend the *Property and Casualty Insurance Guaranty Association Model Act* (#540).

Ms. Cross made a motion, seconded by Mr. Kaumann, to adopt the Task Force's June 2 minutes (Attachment One). The motion passed unanimously.

2. Adopted the Report of the Receiver's Handbook (E) Subgroup

Mr. Baldwin said the Receiver's Handbook (E) Subgroup met July 19 and took the following action: 1) adopted its Nov. 18 minutes (*see NAIC Proceedings – Fall 2021, Receivership and Insolvency (E) Task Force, Attachment Five*); 2) adopted the re-drafted version of Chapter 1 and Chapter 2 of the *Receiver's Handbook for Insurance Company Insolvencies* (Receiver's Handbook); and 3) exposed revisions to Chapter 3, Chapter 4, and Chapter 5 of the Receiver's Handbook for a 30-day public comment period ending Aug. 19. Mr. Baldwin said the drafting groups are continuing their work on Chapter 6 and Chapter 7. The drafting groups have worked diligently on this project, and based on the progress to date and the extensive nature of the revisions, the Subgroup would agree to extend the deadline of the Receiver's Handbook re-drafting project until the fall of 2023, which is reflected in the 2023 proposed charges for the Subgroup.

Ms. McDonald made a motion, seconded by Mr. Kaumann, to adopt the report of the Receiver's Handbook (E) Subgroup (Attachment Two). The motion passed unanimously.

3. Adopted the Report of the Receivership Law (E) Working Group

Mr. Baldwin said the Receivership Law (E) Working Group met July 18, June 10, and May 12 to address a referral from this Task Force to consider proposals presented by the National Conference of Insurance Guaranty Funds (NCIGF) related to pre-liquidation coordination and information sharing. The NCIGF had proposed several options for improving pre-liquidation information sharing between receivers and guaranty funds. The first option was

model law amendments to Model #540, the *Insurance Holding Company System Regulatory Act* (#440), and the *Model Law on Examinations* (#390). Mr. Baldwin said that while some states may need to consider statutory language to enable information sharing, the Working Group agreed this option may not be necessary in all states. Mr. Baldwin said the NCIGF's second option was a memorandum of understanding that could be entered into by receivers and guaranty funds during the process of planning for a liquidation to provide a legal ability to share information in advance of liquidation. The memorandum is an optional tool that can be customized to the unique circumstances of a receivership. The Working Group agreed to pursue this option. Mr. Baldwin said the final recommendation was to draft additional guidance and best practices on pre-receivership coordination, which will be considered as part of the Receiver's Handbook revisions.

Mr. Baldwin said the Working Group reviewed the memorandum by section and proposed edits. During its July 18 meeting, the Working Group exposed the draft memorandum for a 45-day public comment period ending Sept. 1. He encouraged all states and interested parties to review the memorandum and submit any comments or proposed edits.

Mr. Stringham made a motion, seconded by Mr. Joyce, to adopt the report of the Receivership Law (E) Working Group (Attachment Three). The motion passed unanimously.

4. Adopted the Report of the Receivership Financial Analysis (E) Working Group

Ms. Wilson said the Receivership Financial Analysis (E) Working Group met Aug. 11 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss companies in receivership and related topics.

Ms. Wilson made a motion, seconded by Mr. Schrader, to adopt the report of the Receivership Financial Analysis (E) Working Group. The motion passed unanimously.

5. Adopted its 2023 Proposed Charges

Commissioner Donelon discussed the 2023 proposed charges of the Task Force and its working groups and subgroup. The proposed charges would remain the same, with one exception. The charges of the Receiver's Handbook (E) Subgroup would be extended through the fall of 2023. While the Subgroup has made progress on the Receiver's Handbook revisions so far and expects to make even more progress through the remainder of the year, it is anticipated that some of the work may not be finalized before this year-end.

Mr. Rehagen made a motion, seconded by Mr. Wake, to adopt the Task Force's 2023 proposed charges (Attachment Four). The motion passed unanimously.

6. Heard an Update on International Activities

Mr. Wake said the Resolution Working Group of the International Association of Insurance Supervisors (IAIS) plans to meet in September in person to work on the application paper on policyholder protection schemes. Commissioner Donelon asked if the IAIS is looking at a guaranty system like Lloyd's of London's system for its syndicates or a system like the U.S. guaranty fund system. Mr. Wake said the IAIS is more focused on systems like the U.S. system and continental guaranty fund systems, rather than one like Lloyd's of London's. Mr. Wake said the U.S. recently completed the IAIS-targeted jurisdictional assessment to evaluate the implementation of the holistic framework, which included an assessment of insurance receivership, and recovery and resolution planning. The reports are currently being finalized.

7. Discussed Other Matters

Ms. Wilson announced the International Association of Insurance Receivers (IAIR) is holding its Technical Development Series (TDS), which is focused on various claims issues, in Oklahoma City, OK, Oct. 26–28. She said registration is open on the IAIR website for in-person or virtual attendance.

Having no further business, the Receivership and Insolvency (E) Task Force adjourned.

Draft: 6/15/22

Receivership and Insolvency (E) Task Force
Virtual Meeting
June 2, 2022

The Receivership and Insolvency (E) Task Force met June 2, 2022. The following Task Force members participated: James J. Donelon, Chair (LA); Cassie Brown, Vice Chair, represented by Brian Riewe (TX); Lori K. Wing-Heier represented by Jeffery Bethel (AK); Jim L. Ridling represented by William Rodgers (AL); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Jared Kosky (CT); Colin M. Hayashida represented by Martha Im (HI); Doug Ommen represented by Kim Cross (IA); Dana Popish Severinghaus represented by Kevin Baldwin (IL); Vicki Schmidt represented by Tish Becker (KS); Sharon P. Clark represented by Jeff Gaither (KY); Gary D. Anderson represented by Christopher Joyce (MA); Timothy N. Schott represented by Robert Wake (ME); Chlora Lindley-Myers represented by Shelley Forrest and John Rehagen (MO); Edward M. Deleon Guerrero represented by Charlette C. Borja (MP); Mike Causey represented by Jackie Obusek (NC); Eric Dunning represented by Lindsay Crawford (NE); Glen Mulready represented by Donna Wilson (OK); Michael Humphreys represented by Crystal McDonald (PA); Elizabeth Kelleher Dwyer represented by Matt Gendron (RI); Carter Lawrence represented by Hui Wattanaskolpant (TN); Jon Pike represented by Reed Stringham (UT); and Mike Kreidler represented by Charles Malone (WA).

1. Adopted its Spring National Meeting Minutes

Ms. Wilson made a motion, seconded by Mr. Kaumann, to adopt the Task Force's April 6 minutes (*see NAIC Proceedings – Spring 2022, Receivership and Insolvency (E) Task Force*). The motion passed unanimously.

2. Adopted a Request for NAIC Model Law Development to Amend Model #540

Commissioner Donelon said the Restructuring Mechanisms (E) Working Group was charged to look at state laws regarding insurance business transfers (IBTs) and corporate divisions (CDs). The Working Group is in the process of developing a white paper on the topic. One area the Working Group identified where model laws may need to be amended is regarding how policyholders retain guaranty fund coverage after such transactions. The Working Group received input from the National Organization of Life and Health Insurance Guaranty Associations (NOLHGA) and the National Conference of Insurance Guaranty Funds (NCIGF). The NCIGF suggested that possible technical gaps may exist in states that have adopted the *Property and Casualty Insurance Guaranty Association Model Act* (#540) within certain definitions.

Commissioner Donelon said the Restructuring Mechanisms (E) Working Group referred a draft Request for NAIC Model Law Development to amend Model #540, which was discussed at the Task Force's April 6 meeting and exposed for a 30-day public comment ending May 6. Comments were received from Maine, Missouri, and the NOLHGA. The comment letters do not indicate any objection to the Request for NAIC Model Law Development. The primary question outlined in the comments is whether there is a need to also consider amendments to the *Life and Health Insurance Guaranty Association Model Act* (#520).

Mr. Wake summarized Maine's comment letter (Attachment One-A). He said the Task Force should look at Model #520 and determine if changes are in order. He said Model #520 has an orphan clause that provides coverage by the domiciliary guaranty fund. He said the NOLHGA suggested not relying heavily on the domiciliary guaranty fund and instead focusing on the goal of the same guaranty fund providing coverage that would have provided coverage before the transfer.

Ms. Forrest summarized Missouri's comment letter (Attachment One-B). She said Missouri commented on the review of Model #520 similar to Mr. Wake's comments. She said Missouri's second comment is on the timing of making model amendments regarding the timing of the Restructuring Mechanisms (E) Working Group's work on its white paper. She said she recognizes the urgency since some of these transactions are already occurring. The concern is that if the Task Force adopts amendments to Model #540 now, then issues, such as the licensing for successor entities, are addressed by the Working Group; those issues may change the direction of the necessary amendments to Model #540. Therefore, it might be premature to open Model #540 if the Working Group has unresolved issues.

Mr. Rehagen asked if there is a need to open Model #540 if the issue is licensing. If the entity is licensed, it would be a member of the guaranty fund.

Barbara F. Cox (NCIGF) said the NCIGF studied this issue over a year with legal experts and an NCIGF subcommittee. She said most current laws are written such that they call for the product to be issued by the now insolvent insurer. This creates a technical difficulty that needs to be fixed in Model #540 to ensure policyholder protection. This is especially true since these new CD and IBT laws extend to personal lines and workers' compensation claimants. There was no objection at the Restructuring Mechanisms (E) Working Group to opening Model #540. Ms. Cox said to address Ms. Forrest's concern, the Task Force can work to amend Model #540 in tandem with the work of the Restructuring Mechanisms (E) Working Group so states can begin updating their laws.

Peter Gallanis (NOLHGA) summarized the NOLHGA's comment letter (Attachment One-C). He said the NOLHGA does not take a position on endorsing or opposing IBT or CD transactions. The NOLHGA believes there has been good regulatory discussion that they follow and participate in. Mr. Gallanis said the NOLHGA has no concerns about the current proposal to amend Model #540. He said the NOLHGA's comment letter addresses whether Model #520 should consider IBT and CD transactions. This is fundamentally different for life and health. Property/casualty (P/C) guaranty association coverage is retrospective; i.e., coverage of claims that occurred prior to insolvency. By contrast, life and health guaranty associations' coverage expenditures has been for prospective coverage on contracts; i.e., the continuation of coverage under life and annuity contracts and non-cancellable health insurance, like long-term care (LTC) or disability. A view of industry and state insurance regulators reflected in Model #520 is that a high level of regulatory oversight of companies is important for contracts that are consumer-oriented and cannot be easily, or even at all, replaced in the marketplace 10 or more years after issuance. A cardinal principle built into Model #520 is the member company requirement. For a state's guaranty association to provide coverage, the insolvent company is obliged to have been a member company in that guaranty association's state. Oversight of the company is not only provided by the domiciliary state but also licensed states. Mr. Gallanis said a fundamental principle in reviewing IBT and CD transactions is that policyholders and other stakeholders are not left worse off. Continued significant regulatory oversight of companies that have emerged from restructuring mechanisms is why the NOLHGA has moved forward with the existing member company requirement.

Mr. Wake made a motion, seconded by Mr. Stringham, to adopt the Request for NAIC Model Law Development with the edits proposed by Maine (Attachment One-D). The motion passed unanimously.

Having no further business, the Receivership and Insolvency (E) Task Force adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/E CMTE/RITF/2022 Summer NM/RITF_Minutes060222.docx

The Maine Bureau of Insurance has the following comments on the Request for Model Law Development:

As we commented in Kansas City, the Request as currently worded might be too narrow in scope, for two reasons. One is that the need to clarify Model # 540 isn't limited to insurance business transfers. The real issue here is that any time a covered policy is novated to a new insurer, the new insurer's needs to be deemed to be a guaranty association member by operation of law, relating back to the date the old insurer issued the covered policy. We don't see any new issues arising from IBTs that aren't already relevant to assumption reinsurance, similar regulatory processes such as bulk reinsurance, or novation by contractual agreement.

The other issue is that we should consider whether to look at Model # 520 as well as Model # 540. Under Model # 520, if a foreign insurer becomes insolvent, This State's guaranty association only covers resident policyholders and their beneficiaries (*e.g.*, covered household members) if the insolvent insurer is a Member Insurer. This is a fairly broad protection, because on the life and health side, membership under the Model isn't based on licensure at any specific time – as the term “member insurer” is defined, it “includes an insurer or health maintenance organization whose license or certificate of authority in this State may have been suspended, revoked, not renewed or voluntarily withdrawn.” And even if the insurer was never licensed in This State, coverage is still available as long as the failed insurer's domiciliary state has an “Orphan Clause,” substantially similar to Subparagraph 3(A)(2)(b) of Model 520. However, as the NOLHGA comment explained (*emphasis added*), “policyholders [should] maintain eligibility for guaranty association coverage from the **same** guaranty association that would have provided coverage immediately prior to a restructuring transaction,” so as to minimize the domiciliary guaranty association's exposure under the Orphan Clause.

What all this means is that if I understand the situation correctly, we don't need to revisit Model 520 if all we care about is whether protection is still available from **some** guaranty association, but if we want to ensure that protection is still available from the guaranty association in the consumer's state of residence in most or all cases, I think 520 does raise the same general issue as 540 – whether we need to add some mechanism to specify that the resulting insurer inherits the membership obligations of the original insurer. Relating back to policy issuance isn't a 520 issue because it doesn't matter when they were licensed or deemed to have been licensed, but the issue of novations in general (as opposed to IBTs/CDs) is still relevant on the life and health side.

NOLHGA has proposed an alternative approach, but it doesn't seem realistic: “the resulting insurer must be licensed in all states where the transferring insurer was licensed or had ever been licensed with respect to the policies being transferred.” This gives a veto to every state where the transferring insurer has ever been licensed to issue one or more transferred policies, and legislatures seem unlikely to be willing to do this if they have any inclination to allow transfers at all.

I agree that we should review the guaranty association model laws to ensure that policyholders impacted by IBTs or CDs retain guaranty fund coverage, and while I believe it is appropriate for the Receivership Law (E) Working Group to complete the drafting for any changes to the model law, I am wondering about the timing. The Restructuring Mechanisms (E) Working Group is still in the process of revising a White Paper on the various issues related to IBT and CD transactions. Before we start making changes to model laws, we may want to be sure that there is a clear consensus among parties regarding these transactions. As the NAIC continues working through the issues, it is possible that additional changes to the model acts will become necessary.

To the extent that the NAIC moves forward at this time with revising the *Property & Casualty Insurance Guaranty Association Model Act* (#540), we may also want to consider reviewing the *Life and Health Insurance Guaranty Association Model Act* (#520) to see if any changes need to be made.

Best regards,

Re: Request for NAIC Model Law Development for the P&C Insurance Guaranty Association Model Act

Dear Ms. Koenigsman:

This letter is submitted with respect to the Receivership and Insolvency Task Force's recent exposure of a "Request for NAIC Model Law Development" ("MLD") relating to the Property & Casualty Insurance Guaranty Association Model Act (the "P&C Model Act"). We understand that the MLD's sole purpose is to propose changes to the P&C Model Act tailored to ensure that P&C guaranty fund coverage is not lost, expanded, or otherwise affected by corporate division ("CD") or insurance business transfer ("IBT") transactions (collectively, "Restructuring Transactions"). Given that the MLD is solely focused on P&C GA coverage, NOLHGA has no position on the MLD but rather will defer to the views of those with expertise in P&C guaranty funds (e.g., the NCIGF and its members).¹

NOLHGA, however, would like to address comments submitted in response to the MLD that suggested consideration also should be given to amending the Life and Health Insurance Guaranty Association Model Act ("L&H GA Model Act"). In particular, one of the comments suggested that the L&H GA Model Act should be amended to deem successor entities in Restructuring Transactions, irrespective of their licensing status, to be member insurers of the life and health guaranty associations (L&H GA).

For the reasons that will be discussed further below, NOLHGA would reiterate its view that successor entities in Restructuring Transactions involving life and health policies should be licensed in all states where the predecessor entity was ever licensed with respect to the policies being transferred. This not only will ensure that the successor entity's inherited life and health policies will remain eligible for coverage by the L&H GAs in those states, but it also will ensure that the successor entity is subject to regulatory oversight in each of those states for the benefit of each state's insurance consumers. As reflected in the draft Restructuring Mechanisms White Paper², requiring licensing of a successor entity where it inherits business could be important to ensuring ongoing regulatory control over the entity and avoiding potential harm to insurance consumers.

¹ As previously noted, NOLHGA also does not have a position on whether states should adopt laws authorizing Restructuring Transactions. That is, NOLHGA neither supports nor opposes such laws but rather is focused on the potential implications of Restructuring Transactions to its member life and health insurance guaranty associations, and the protection its members provide to insurance consumers when their insurance company is placed in liquidation.

² The above reference, and similar references to "White Paper" in this letter, refer to the draft Restructuring Mechanisms White Paper, dated March 28, 2022, that was created by the Restructuring Mechanisms (E) Working Group of Financial Condition (E) Committee.

Most Life and Health Products Evidence Long-Term Policyholder Obligations

Virtually all life and annuity products, and many health products, represent long-term obligations by an insurer to provide essential financial security protection to its policyholders.³ Consumers who buy these products have an expectation that their insurer will provide this protection for decades into the future, or even for a lifetime (or longer, in the case of some annuities). This long-term commitment of life and health insurers is extremely important to policyholders since, as they age and/or experience health problems, they will find it increasingly difficult, if not impossible, to obtain similar coverage on comparable terms.

The nature of life and health products is quite different from most property and casualty products. Property and casualty products typically provide coverage on an annually renewable basis. This permits property and casualty policyholders to go back into the marketplace to seek replacement coverage if they become dissatisfied with their insurer's performance or the terms of their policy, or if their insurance company fails. In addition, property and casualty coverage typically does not become prohibitively expensive or completely unavailable to consumers because of advancing age or developing health conditions. As a result, property and casualty policyholders should have the ability to non-renew their coverage and obtain comparable replacement coverage if they became dissatisfied with the insurer that takes over their policy in a Restructuring Transaction. Importantly, many life and health insurance policyholders would not have that option, for the reasons stated above.

L&H GAs have Long-Term Obligations to Continue Coverage for Policyholders

Given the long-term nature of many life, annuity, and health insurance policy obligations, and the difficulty consumers may experience in replacing this coverage, L&H GAs have explicit statutory obligations to continue coverage for policyholders of insolvent insurers. This statutory duty to continue coverage often results in L&H GAs having obligations that continue for many years into the future. As an example, L&H GAs affected by the Penn Treaty/ANIC insolvencies have obligations for covering long term care policies that are projected to continue for the next 30 years or more.

There are Important Policy Reasons Member Insurers of L&H GAs Should be Licensed

Given the long-term nature of L&H GA Coverage obligations, and concerns about the risks to L&H GAs of backstopping the obligations of insurers that are not subject to regulation, the L&H Model Act has provided from its inception that insurers must be licensed to be members of a state's L&H GA.⁴ In effect, the licensing requirement ensures a level, regulatory playing field among insurers that will be eligible to have their products covered by the L&H GA. In this way, the L&H GA Model Act is designed

³ Certain forms of health insurance, which are renewed on an annual basis, are exceptions to this statement (e.g., most forms of conventional medical insurance issued today). However, other forms of health insurance (e.g., individual long term care insurance and disability income insurance) are guaranteed renewable for the life of the policyholder and therefore do represent long-term obligations to policyholders.

⁴ "Member Insurer" was defined in § 5(7) of the 1970 Model to include any person authorized to transact in this state any kind of insurance to which this Act applies under Section 3. **1971-4 NAIC Proc. 157, 162 (Dec. 14, 1970)**. "Authorized" was changed to "licensed" in this definition as part of the 1975 revisions. **1976-4 NAIC Proc. 296, 300 (Dec. 9, 1975)**. The commentary notes that this change was intended to ensure that all unauthorized insurers are excluded from the Act. **1976-4 NAIC Proc. 296, 299 (Dec. 9, 1975)**. The 1975 version of the Model also included a comment at the end of section entitled Scope, which included the following language: "Furthermore, it [this Model Act] applies only to direct insurance issued by persons licensed to transact insurance in this state at any time. Coverage issued by insurers which have not submitted to the application of a state's regulatory safeguards is excluded from protection by this act".

to protect L&H GAs (and their member insurers) from being generally responsible for the insurance obligations of entities that are not subject to state licensing and regulatory requirements.

In 1985, the L&H Model Act was amended to provide that the definition of “member insurer” includes insurers whose license or certificate of authority in this State may have been suspended, revoked, not renewed, or voluntarily withdrawn. This language was not intended to create a general exception to the requirement that insurers should be licensed to be members of the L&H GA, but rather was intended to avoid having policyholders become ineligible for GA coverage due to a state regulatory action.⁵ In many cases, financially troubled insurers will have their licenses suspended or revoked even before they are placed in receivership. The 1985 revision to the definition of member insurer was intended to avoid policyholders losing eligibility for GA coverage in those kinds of circumstances.

Concerns with Deeming Non-Licensed Successor Entities to be Member Insurers

As noted in the draft Restructuring Mechanisms White Paper, there is a fundamental regulatory interest in ensuring the licensing status of successor entities in Restructuring Transactions. If a successor entity to a Restructuring Transaction operates without a license in a state, it could result in a lack of regulatory knowledge and control regarding the company’s ongoing operations in that state, which in turn could make harm to consumers more likely. This harm potentially could encompass all aspects of state insurance regulation.

These potential harms also could expose L&H GAs to increased risks if successor entities in Restructuring Transactions are deemed member insurers of the GAs without being licensed and subject to regulation in the GAs’ home states. These risks could increase, based on the structure and the nature of the business that is the subject of the Restructuring Transaction. As an example, if the successor company is a newly formed or limited purpose entity running off risky forms of business (e.g., long term care policies), there could be substantial increased risk to a GA from such an entity not being licensed and regulated in the GA’s home state. This is exactly the type of situation that the drafters of the L&H Model Act sought to prevent by generally requiring member insurers to be licensed entities.

There is an additional concern with unlicensed, successor companies being deemed member insurers of the L&H GAs. This concern relates to Section 11.B of the L&H GA Model Act, which empowers the Commissioner to suspend or revoke the license of a member insurer that fails to timely pay its guaranty association assessments. This provision is commonly viewed as a practical and effective way to ensure that member insurers timely pay their L&H GA assessments. In the event successor companies are deemed to be member insurers without being licensed, the power of a commissioner to enforce the payment of assessments by those insurers by revoking their licenses would not be available.

In addition to the above concerns, NOLHGA believes that obtaining amendments to all 51 L&H GA Acts to include unlicensed entities as member insurers may not be a practical or realistic solution. While the Life and Health GA System has been quite successful over the years working with regulators and legislators to update state GA Acts to be consistent with the Model Act, those results have only been

⁵ As reflected in the NAIC Proceedings, the industry proponents of the 1985 amendments to the definition of “member insurer” provided the following explanation for those changes: “To emphasize the importance of what should be the clear dependence of coverage under the act on adequate regulation for solvency and competitive equality, the term “member insurer” has been modified and used to link more clearly the sections of the act relating to purpose, coverage, powers and duties, and assessments. Thus, the definition of member insurer has been expanded to include entities whose license may have been suspended or revoked. Insureds should not lose guaranty association coverage because of enforcement actions against an insurer under the laws and regulations designed to assure solvency, proper market conduct and competitive equality that all member insurers must adhere to. Equally, insurers should not be expected to extend coverage to entities that are not required to adhere to the same laws and regulations.” **1984-2 NAIC Proc. 440, 462 (June 3, 1984).**

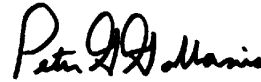

possible because of the widespread support of state regulators and industry members for various Model Act improvements. Given the fundamental change and potential increased risks of deeming unlicensed insurers to be L&H GA members, amendments to achieve that purpose could be considered controversial and difficult to accomplish in many states.

The Draft White Paper’s Recommendation for a Possible Solution to Licensing Issues

NOLHGA sees some promise in the draft White Paper’s recommendation for a possible solution to addressing licensing issues in Restructuring Transactions. That recommendation, which appears on the last page of the draft White Paper, is to have the appropriate NAIC working group consider whether changes should be made to the licensing process for companies resulting from Restructuring Transactions of runoff blocks. In that regard, the draft White Paper notes, “A streamlined process that still ensures appropriate regulatory oversight (and any licensure necessary to preserve guaranty association coverage) may be appropriate in limited circumstances.”

As noted above, the draft White Paper recognizes that the failure of a successor entity to be licensed in relevant states could result not only in the loss of L&H GA coverage, but also in a lack of regulatory knowledge and control regarding the company’s ongoing operations, which in turn could result in harm to insurance consumers. This risk to consumers, by itself, would seem to be of sufficient concern to justify the NAIC’s consideration of an alternative licensing process for successor entities in Restructuring Transactions.

Very truly yours,

Peter G. Gallanis
President

Adopted by the Receivership and Insolvency (E) Task Force, 06/02/22

REQUEST FOR NAIC MODEL LAW DEVELOPMENT

This form is intended to gather information to support the development of a new model law or amendment to an existing model law. Prior to development of a new or amended model law, approval of the respective Parent Committee and the NAIC's Executive Committee is required. The NAIC's Executive Committee will consider whether the request fits the criteria for model law development. Please complete all questions and provide as much detail as necessary to help in this determination.

Please check whether this is: New Model Law or Amendment to Existing Model

1. Name of group to be responsible for drafting the model:

Receivership Law (E) Working Group of the Receivership and Insolvency (E) Task Force to complete the drafting. Referred by the Restructuring Mechanisms (E) Working Group.

2. NAIC staff support contact information:

Jane Koenigsman
jkoenigsman@naic.org
816-783-8145

Dan Daveline
ddaveline@naic.org
816-783-8134

3. Please provide a brief description of the proposed new model or the amendment(s) to the existing model. If you are proposing a new model, please also provide a proposed title. If an existing model law, please provide the title, attach a current version to this form and reference the section(s) proposed to be amended.

- *Property and Casualty Insurance Guaranty Association Model Act (#540)*

In 2019, the Financial Condition (E) Committee formed the Restructuring Mechanisms (E) Working Group who was charged with the following:

1. Evaluate and prepare a white paper that:
 - a. Addresses the perceived need for restructuring statutes and the issues those statutes are designed to remedy. Also, consider alternatives that insurers are currently employing to achieve similar results.
 - b. Summarizes the existing state restructuring statutes.
 - c. Addresses the legal issues posed by an order of a court (or approval by an insurance department) in one state affecting the policyholders of other states.
 - d. Considers the impact that a restructuring might have on guaranty associations and policyholders that had guaranty fund protection prior to the restructuring.
 - e. Identifies and addresses the legal issues associated with restructuring using a protected cell.

Background for Proposed Change

This proposed change is being precipitated by discussions within the NAIC's Restructuring Mechanisms (E) Working Group initiative, which is focused on documenting in the form of a White Paper, the various issues related to insurance business transfers (IBT) and corporate division (CD) transactions. The number of states adopting laws that permit either of these transactions is still relatively low; however, one of the most significant issues that has been discussed during the meetings of the Working Group is the need for policyholders subject to such transactions to retain guaranty fund coverage. Representatives of the National Conference of Insurance Guaranty Funds (NCIGF) have suggested that an amendment to a state's guaranty fund act, or other related law, is necessary to address this issue. They have specifically suggested that the NAIC update the Property and Casualty Insurance Guaranty Association Model Act, and they have developed specific language to address this issue. An amendment will better enable those states that have incorporated #540 into their laws to update their laws for this important issue, to ensure policyholders in all states retain their coverage. Because guaranty association coverage follows the state of licensure rather than the state of

domicile, adequately addressing these concerns is necessary regardless of the type of transfer and regardless of how few states adopt changes to their laws to allow IBT and CD transactions.

Scope of the Proposed Revisions to Model 540

The scope of the request is limited to addressing the issue of continuity of guaranty fund coverage when a policy is transferred from one insurer to another. The request is therefore to the specific proposal to revise the definition of “Covered Claim” within #540, or other language determined to be appropriate to address the need for continuity of protection. The following is the additional language (underlined language) that has been proposed to be added to Section 5, Definitions, within #540.

H. “Covered claim” means the following:

- (a) The claimant or insured is a resident of this State at the time of the insured event, provided that for entities other than an individual, the residence of a claimant, insured or policyholder is the State in which its principal place of business is located at the time of the insured event; or
- (b) The claim is a first party claim for damage to property with a permanent location in this State.
- (c) Notwithstanding any other provision in this Act, an insurance policy issued by a member insurer and later allocated, transferred, assumed by or otherwise made the sole responsibility of another insurer, pursuant to a state statute providing for the division of an insurance company or the statutory assumption or transfer of designated policies and under which there is no remaining obligation to the transferring entity (commonly known as “Division” or “Insurance Business Transfer” statutes), shall be considered to have been issued by a member insurer which is an Insolvent Insurer for the purposes of this Act in the event that the insurer to which the policy has been allocated, transferred, assumed or otherwise made the sole responsibility of is placed in liquidation.
- (d) An insurance policy that was issued by a non-member insurer and later allocated, transferred, assumed by or otherwise made the sole responsibility of a member insurer under a state statute described in subsection (a) shall not be considered to have been issued by a member insurer for the purposes of this Act.

4. Does the model law meet the Model Law Criteria? Yes or No (Check one)

(If answering no to any of these questions, please reevaluate charge and proceed accordingly to address issues).

a. Does the subject of the model law necessitate a national standard and require uniformity amongst all states? Yes or No (Check one)

If yes, please explain why:

This proposed change is needed to ensure policyholders in all states retain their guaranty fund coverage, which is necessary regardless of how few states adopted changes to their laws to allow IBT and CD transactions.

It should be noted that with respect to guaranty fund coverage for life and health insurance, the National Organization of Life and Health Insurance Guaranty Associations (NOLHGA) is suggesting a different approach to address the same issue in the life and health context. NOLHGA’s proposal centers around the need for such transaction to require the assuming or resulting insurer to be licensed in all states where the issuing insurer was licensed or ever was licensed to retain the needed coverage for policyholders.

b. Does Committee believe NAIC members should devote significant regulator and Association resources to educate, communicate and support this model law?
 Yes or No (Check one)

5. What is the likelihood that your Committee will be able to draft and adopt the model law within one year from the date of Executive Committee approval?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary:

6. **What is the likelihood that a minimum two-thirds majority of NAIC members would ultimately vote to adopt the proposed model law?**

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary: See previous discussion.

7. **What is the likelihood that state legislatures will adopt the model law in a uniform manner within three years of adoption by the NAIC?**

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary:

At this juncture, the changes in concepts being considered are simple and because they have the potential to reduce expenses incurred by receivership estates, we believe such changes will be widely supported by all parties.

8. **Is this model law referenced in the NAIC Accreditation Standards? If so, does the standard require the model law to be adopted in a substantially similar manner?**

Not referenced in Accreditation Standards.

9. **Is this model law in response to or impacted by federal laws or regulations? If yes, please explain.**

No.

Draft: 7/22/22

Receiver's Handbook (E) Subgroup
Virtual Meeting
July 19, 2022

The Receiver's Handbook (E) Subgroup of the Receivership and Insolvency (E) Task Force met July 19, 2022. The following Subgroup members participated: Kevin Baldwin, Chair (IL); Miriam Victorian, Vice Chair (FL); Joe Holloway (CA); James Gerber (MI); Leatrice Geckler (NM); Donna Wilson and Jamin Dawes (OK); Laura Lyon Slaymaker and Crystal McDonald (PA); and Brian Riewe (TX).

1. Adopted its Nov. 18, 2021, Minutes.

The Subgroup met Nov. 18, 2021, and took the following action: 1) adopted its June 14, 2021, minutes; 2) and exposed Chapter 1 and Chapter 2 of the *Receiver's Handbook for Insurance Company Insolvencies* (Receiver's Handbook).

Ms. Slaymaker made a motion, seconded by Mr. Holloway, to adopt the Subgroup's Nov. 18, 2021, minutes (Attachment Two-A). The motion passed unanimously.

2. Adopted Revised Chapter 1 and Chapter 2 of the Receiver's Handbook

Mr. Baldwin thanked the volunteers who had participated in the drafting groups for the chapters of the Receiver's Handbook. Sherry Flippo (NAIC) summarized the changes to Chapters 1 and Chapter 2 based on the exposure period.

Ms. Victorian made a motion, seconded by Ms. Slaymaker, to adopt Chapter 1 and Chapter 2 of the Receiver's Handbook with the revisions from the exposure period (Attachment Two-B, Attachment Two-C, and Attachment Two-D). The motion passed unanimously.

3. Exposed Revised Chapter 3, Chapter 4, and Chapter 5 of the Receiver's Handbook

Chapter 3, Chapter 4, and Chapter 5 had extensive revisions and were presented in the meeting materials as a clean copy. To view the original Receiver's Handbook, the current Receiver's Handbook version is posted on the Subgroup's website under the documents tab.

Ms. Victorian made a motion, seconded by Ms. Geckler, to expose Chapter 3, Chapter 4, and Chapter 5 of the Receiver's Handbook (Attachment Two-E) for a 30-day public comment period ending Aug. 19. The motion passed unanimously.

Having no further business, the Receiver's Handbook (E) Subgroup adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/E CMTE/RITF/2022 Summer NM/RHS 071922Minutes.docx

OVERVIEW

Each state and territory have a statute that provides for the appointment of the state's insurance regulator as the receiver of an insurer that is placed in a delinquency proceeding. This Handbook is intended as a guide for insurance regulators and others who assist with carrying out the Receiver's duties.

The Handbook is organized by subject matter. Each chapter contains an introduction to the subject, followed by an in-depth discussion. In some chapters, checklists are included as an aid to implementing the actions described in the chapter.

References are provided to the applicable provisions of the NAIC model receivership laws and relevant case law in each chapter. As the legal references reflect the NAIC models and case law existing at the time the Handbook was drafted, a practitioner should always review the current state of the law.

While receiverships typically share essential principles and elements, there are important variances:

- Each state's receivership statute may contain unique provisions that are not derived from an NAIC model act or shared with other states.
- Case law interpreting the statutes governing receiverships can vary between states.
- A receivership is a court proceeding, and the judicial process is governed by the state's court system and rules of procedure.
- Each state insurance department is structured to meet the circumstances of the particular state, and the administrative process for handling receiverships may differ between the states.
- As receiverships vary in size and complexity, a range of approaches may be appropriate.

A practitioner should be aware of the process for handling a receivership in the relevant state, and how it may differ from the examples provided in this Handbook. As described above in the Disclaimer, this Handbook is not an instructional manual for handling a receivership but should be viewed as guidance.

CHAPTER 1 – COMMENCEMENT OF THE PROCEEDING

I. INTRODUCTION

Insurer receiverships are governed by state law rather than federal bankruptcy law. Although the proceeding is governed principally by the law of the state in which the insurer is domiciled, the laws of the various states and other jurisdictions in which an insurer conducted business, has assets, or has creditors, may also be implicated. Consequently, during the commencement and administration of proceeding involving a troubled or insolvent insurer, it is important for the receiver to consider the laws of those states and jurisdictions.

Most states have enacted statutes that govern the conservation, rehabilitation and liquidation of insurance companies that are patterned at least in part after one of three model acts that have been adopted by the NAIC over the years: the Uniform Insurers Liquidation Act (“Uniform Act”); the Insurers Rehabilitation and Liquidation Model Act (“IRLMA”); and the Insurer Receivership Model Act (“IRMA”).¹ In this handbook, the model acts will be referred to collectively as the “NAIC Model Acts.”² Because of their widespread influence, the NAIC Model Acts are basis for discussion of issues involved in the commencement and administration of troubled or insolvent insurers. Even so, the laws of the individual states may deviate from the models, in whole or part. In some jurisdictions, affiliated service providers (e.g., agencies, premium finance companies, administrative service providers) whose purpose is to provide services solely to the insolvent insurer may be subject to the laws that apply to impaired or insolvent insurers.³

Receivership proceedings⁴ are usually commenced against an insolvent, financially impaired or otherwise troubled insurer in the insurer’s domiciliary state (the state in which the insurer is incorporated) and in specific courts within that state, generally either the court in the judicial district encompassing the state’s capital or the judicial district of the insurer’s principal office. The NAIC Model Acts require that the chief insurance regulator of the insurer’s domiciliary state be appointed receiver of the insurer to administer the receivership under court supervision. The chief insurance regulator in the individual state may be referred to as commissioner, treasurer, superintendent, or director. For purposes of this handbook, the term “regulator” is used to encompass all such officials. If the insurer is an “alien” insurer admitted to the U.S. market through a “port of entry,” the state through which the insurer was admitted will administer the receivership.

See Chapter 9 – Legal Considerations for each type of proceeding.

II. FORMS OF PROCEEDINGS

A. ADMINISTRATIVE SUPERVISION

Most states authorize the regulator to issue short-term administrative supervision orders against insurers operating in a manner that poses a hazard to policyholders, creditors, or the public. Under such orders, the regulator or their special deputies serves as administrative supervisor of the insurer. In states

¹ Refer to Appendix XXX for a chart outlining key differences between the Uniform Act, the Liquidation Model Act and IRMA.

² Refer to NAIC website for state charts that provide state law citations to determine which version of IRMA a state has adopted. <https://content.naic.org/model-laws>. Note that some states that have not adopted IRMA in full; but may have adopted specific provisions from IRMA.

³ In 2021, the NAIC adopted revisions to the *Insurance Holding Company System Regulatory Act* (#440) and *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) that bring affiliate service providers deemed “integral” or “essential” to an insurer’s operations under the jurisdiction of a rehabilitator, conservator, or liquidator for purposes of interpreting, enforcing, and overseeing the affiliate’s obligations under the service agreement.

⁴ The NAIC Global Receivership Information Database provides publicly available information about insolvent insurers including receivership orders (conservation, rehabilitation, and liquidation). <https://isiteplus.naic.org/grid/gridDisc.jsp>

where administrative supervision orders may be issued without formal court proceedings, the orders are subject to administrative review and are often confidential. Administrative supervision can enhance regulatory oversight while the insurer overcomes what is envisioned as a temporary challenge, such as a crisis in the broader economy. It is also useful in temporarily stabilizing a deteriorating situation prior to the entry of an order of rehabilitation or liquidation. Where administrative supervision is authorized, statutes typically empower the regulator to prohibit the insurer from doing any of the following during the period of supervision, without the prior approval of the regulator:

- Dispose of, convey, or encumber any of its assets or its business in force;
- Spend over specified spending limitations;
- Close any of its bank accounts;
- Lend any of its funds;
- Invest any of its funds;
- Transfer any of its property;
- Incur any debt, obligation, or liability;
- Merge or consolidate with another insurer;
- Enter into any new reinsurance contract or treaty;
- Terminate or cancel reinsurance;
- Terminate, surrender, forfeit, convert, or lapse any policy or contract of insurance (except for nonpayment of premiums due) or to release, pay or refund premium deposits, accrued cash or loan values, unearned premiums, or other reserves on any insurance policy or contract;
- Make changes in the senior management team; and
- Make extraordinary changes in staff.

In addition, supervision orders frequently impose heightened regulatory reporting requirements, such as monthly financial reporting, increased market conduct reporting, and specified special reporting such as changes in reinsurance or performance of invested assets. Supervision is often also a vehicle for more intense analysis of an insurer's affairs and condition. If the insurer fails to comply with the order of administrative supervision, other grounds exist under the applicable statute, or the company is found to be insolvent, the regulator may petition for a receivership order.

B. SEIZURE ORDERS

In many cases, the proceeding begins with a seizure order (see IRMA §201). Some statutes enacted prior to IRMA may use different terms for this order, such as a conservation or receivership order. In IRMA, this order is referred to as a seizure order; the term conservation order refers to an order entered under IRMA §301.

In the majority of states, the regulator may obtain a seizure order from a court of competent jurisdiction. Generally, a petition for a seizure order must allege: 1) the existence of one or more statutory grounds justifying a formal delinquency proceeding, and 2) that the interests of policyholders, creditors or the public is endangered by a delay in entering such an order. Specific requirements for obtaining a seizure order vary. The thrust of a seizure order is preservation of the insurer pending further analysis and proceedings. Such orders are not intended to be the final stage in regulatory action for a troubled insurer.

In the rare case in which further analysis reveals the absence of grounds for additional proceedings, or that the problems have been corrected, the regulator will move for dissolution of the seizure order and return control of the insurer to management. More frequently, analysis leads the regulator to seek commencement of formal receivership proceedings.

A seizure order may be issued by the court *ex parte*—without notice—and without a hearing upon allegations of statutory grounds. However, in such cases, a hearing is typically set shortly thereafter to permit the insurer to demonstrate that seizure is not appropriate.

Following issuance of a seizure order, if the regulator determines that further court orders are necessary to protect policyholders, creditors, the insurer or the public, the court may hold hearings to extend or modify the terms of the order. However, the court must vacate the seizure order as soon as practicable or where the regulator, after having had a reasonable opportunity to do so, has failed to institute rehabilitation or liquidation proceedings.

Most state statutory schemes allow the regulator to apply to the court *ex parte* for an order of seizure. In these circumstances, the proceedings are often sequestered and remain confidential until the court orders otherwise. The *ex parte* application allows the regulator to take over the insurer without giving notice, thereby preventing the potential diversion of funds and dissipation of assets, while the continued confidentiality of the proceedings allows the receiver to assess the insurer's current status. Confidentiality allows the receiver to discharge the seizure and, if appropriate, return to normal business operations without public knowledge and the resultant harm to the insurer's business. A seizure order gives the regulator the power to make an immediate hands-on determination of an insurer's condition as well as preserve and protect its assets. The order is designed to maintain the status quo of an insurer while the regulator decides whether to release the insurer or initiate formal receivership proceedings, whether conservation, rehabilitation, or liquidation. State statutes may require that all records and papers relating to a judicial review of a seizure be confidential (IRMA, §206(A)).

If the regulator determines that formal receivership proceedings are not needed, or if the regulator is successful in resolving the insurer's difficulties, he or she can release control and return the insurer to its previous management without seriously damaging the insurer's business. If, however, creditors and the public become aware of an insurer's potential problems, the insurer could suffer irreparable harm even though the condition requiring seizure has been removed.

C. RECEIVERSHIP PROCEEDINGS GENERALLY

IRMA incorporates three distinct receivership actions—conservation, rehabilitation, and liquidation. In many states, the statutes only contemplate receivership proceedings for rehabilitation or liquidation.

A receivership order authorizes the receiver to conserve, rehabilitate or liquidate the insurer, with various statutory and judicially imposed restrictions that may vary from state to state and case to case. Subject to these restrictions and to the supervision of the court, the receiver controls all aspects of the insurer's operations, from the initial order until the receiver is discharged. The receiver's responsibilities extend to policyholders, creditors, regulators, and other interested parties. The receiver should communicate with these parties and keep them informed of the progress of the receivership.

IRMA §207 lists 22 independent grounds, any one of which suffices for the issuance of a receivership order. Many of the same grounds support such orders in most states. A troubled company does not move systematically from one form of receivership to another, but rather, the regulator may choose to petition for the form of receivership appropriate to the circumstances at any given time.

Receivership proceedings are commenced at the behest of the regulator. In some states, creditors and other interested persons may also request that the commissioner be appointed receiver. Such proceedings may seek rehabilitation or liquidation of the insurer or may initially seek conservation, deferring election of one of these other paths until a later day.

1) Control of the Insurer

Per IRMA §104.X the Receiver in a receivership proceeding means liquidator, rehabilitator, conservator, or ancillary receiver, as the context requires. IRMA §209.C states a receiver may appoint special deputies that have all the powers and responsibilities of the receiver.

A seizure, conservation, or other receivership order that vests in the receiver control of the insurer also has the effect of making the receiver responsible for the company. Even while conducting further analysis to ascertain the company's financial condition and prepare for any hearing, the receiver must implement measures to safeguard the insurer's property and affairs. Such measures include:

- Providing for physical security for the insurer's facilities, including proper controls and limits on staff access;
- Establishing security for information systems and obtaining a forensic backup of company information;
- Familiarization with company staff responsibilities, capabilities, and potential to interfere with receivership proceedings;
- Identification of cash flow pressures;
- Control of company investment, financial institution accounts, and other assets;
- Notification of policyholders, claimants and other interested parties as ordered by court or allowed by statute;
- Communication with landlords and other providers of essential services;
- Court filings necessary to impart notice to the public, and
- Other measures identified as necessary for the preservation of the *status quo*.

2) Preparation for the Hearing

Apart from relying on documents in the insurance department's control (such as filed financials and examination reports) and those available from third parties, much of the case in support of receivership may consist of the insurer's own documents. It is important that receivership or supervision staff consult with counsel about the manner of gathering and preserving such documents so that they will be admissible evidence. At the same time the key problems should be identified, and steps taken to assure that they don't worsen pending resolution of the challenge to the receivership.

3) Contents of the Order

Generally, the receivership order directs the regulator to take possession and control of the property, books, accounts, documents and other records and assets of the insurer. Further, the order usually gives control of the insurer's physical premises to the regulator. The order is usually accompanied by an injunction prohibiting the insurer, its officers, directors, managers, agents, and employees from disposing of property or transacting business, except upon the regulator's permission or further court order. The order may enjoin anyone having notice of its provisions from interfering with the receiver or the proceedings, may suspend pending litigation involving the insurer, and may require that all claims and proceedings against the insurer be brought exclusively in the receivership court. In addition, the order may include special provisions like moratoria on cash surrenders, authority for disavowal of executory contracts, and prohibition of creditor self-help.

4) Duration

The duration of a seizure order can vary. In rare cases, the order will specifically prescribe the time period that it is to remain in effect. Typically, however, the order prescribes that it will remain in effect pending the court's further orders or for such time as the receivership court may deem necessary for the regulator to ascertain the insurer's condition, and to request authority to rehabilitate or liquidate the company.

5) Review

If the proceeding commenced with a temporary seizure order and the insurer wishes to contest the proceeding, it may petition the court for a hearing and review of the order. IRMA, §201(F), provides that the court shall hold such a hearing within 15 days of the request.

6) Conservation of Property of Foreign or Alien Insurers

Most states also authorize the regulator to apply to the court for an ancillary order to conserve the property of an alien or foreign insurer (IRMA, §10015). The grounds and terms of such an order generally include those necessary to obtain a similar order against a domiciliary insurer, but there may be some differences. Usually, if the foreign or alien insurer has had property sequestered by official action in its domiciliary state or a foreign country, or if its certificate of authority in the state has been revoked or had never been issued, the regulator may seek an order of seizure or conservation.

Commencement of the proceedings may be by agreement with company owners and management (uncontested) or may be contested vigorously when the insurer maintains that there are insufficient grounds for receivership under applicable law. Most frequently, such contested cases focus on disagreements over the insurer's financial condition and prospects. When the proceedings are contested much of the work done before the hearing will be in preparation to establish the adequacy of grounds for receivership. That work can also commence during the insurer's supervision.

D. CONSERVATION

In some states, a court of competent jurisdiction may enter an order of conservation upon the petition of a regulator (IRMA, §301). An order of conservation is designed to give the regulator an opportunity to determine the course of action that should be taken with respect to the troubled insurer. Within 180 days (or up to 360 days if allowed by the court) of the issuance of the order, the regulator/conservator must file a motion to release the insurer from conservation or petition the court for an order of rehabilitation or liquidation (IRMA, §302). Unlike a seizure order, a conservation, rehabilitation, or liquidation order constitutes the commencement of formal receivership proceedings, which is not an *ex parte* proceeding.

E. REHABILITATION

A rehabilitation proceeding is a formal proceeding, commencing with a complaint filed by the regulator (IRMA, §401). Rehabilitation can be used as a mechanism to remedy an insurer's problems, to run off its liabilities to avoid liquidation, or to prepare the insurer for liquidation. The regulator will allege the specific statutory grounds in a complaint for placing the insurer in rehabilitation based on the grounds cited in the state's receivership act. The insurer is served with a complaint and summons. The insurer may respond and must be afforded an opportunity to be heard. When judgment is entered, the losing party may appeal. Note that in some states, the time for filing notice of an appeal may be much shorter than in other causes of action—perhaps just a matter of days.

Refer to Chapter 9 of this Handbook for further description and guidance regarding rehabilitation.

1) Coordination with Guaranty Associations

Early coordination with the life and health insurance guaranty associations and the property and

⁵ Under IRMA, the proceeding is referred to as an ancillary conservation and the commissioner is appointed as conservator.

casualty guaranty funds (collectively the “guaranty associations”) is essential for maximizing protections and achieving optimal outcomes for policyholders and claimants whenever guaranty association covered business is involved. The importance of early coordination with the guaranty associations is reflected in IRMA and was also the subject of a 2004 NAIC Whitepaper.⁶ Ideally, such coordination should begin as soon as it appears that there is a significant possibility of liquidation. As noted in the NAIC Whitepaper, the need for coordination among regulators, receivers and guaranty associations may occur even before the insurer is placed under administrative supervision or in conservation or rehabilitation.

At a minimum, IRMA §208 requires notice to all potentially affected guaranty associations upon issuance of any order for conservation, rehabilitation, or liquidation. IRMA also specifically contemplates and requires consultation and coordination with potentially affected guaranty associations upon entry of an order of conservation or rehabilitation *to determine the extent to which guaranty associations will be impacted by or may assist in the efforts to conserve/rehabilitate the insurer, and to provide appropriate information to the guaranty associations to allow them to evaluate and discharge their statutory responsibilities.* See IRMA §303, §404-405. Confidentiality agreements, addressed both in IRMA and in the NAIC Whitepaper, are commonly used to protect the information disclosed.

This early coordination is essential for several reasons:

- On the life and health side, advanced planning and coordination provides opportunities for guaranty associations to obtain necessary policy data and related information to evaluate, develop and implement strategies for maximizing consumer protections and avoiding disruption to the provision of policy benefits. These strategies could involve negotiated assumption reinsurance transfers of covered blocks of business, which may be timed to coincide with the liquidation order or having in place the infrastructure (including third party administrators, where applicable) needed for seamless policy and claims administration by guaranty associations immediately upon being triggered. In the case of covered health business, policy administration could involve the retention or replacement of providers, such as hospitals, health care providers and pharmacy benefit networks as well as pre-certification and other related service providers. In certain circumstances, the life and health insurance guaranty associations have created captive insurers to administer large blocks of covered business. While guaranty associations have in some cases had to respond to a liquidation with short notice, the best outcome for policyholders occurs when guaranty associations have the lead time necessary to identify, develop and prepare to implement strategies that will maximize value for policyholders and avoid any disruption in benefits. Whatever solution or approach is used, it will require time to coordinate, plan and execute the necessary steps to provide coverage to policyholders on a timely basis.
- On the P&C side, successful, secure data transition is essential for policy and claims administration. Data is typically voluminous in modern insolvencies and may reside on unique or legacy data processing systems which may be under the control of one or more third parties and in different locations. Working together, the receiver and guaranty funds can effectively transition data and work out any third party contractual or practical issues that may arise. However, this must be done well in advance of liquidation in order to avoid disruption in benefits and claims payments. The property and casualty guaranty funds and NCIGF utilize the Uniform Data Standards (UDS) and have developed processes to facilitate UDS data transition that may be helpful and result in cost savings for the transition process.

⁶ The NAIC’s Receivership and Insolvency Task Force (RITF) published a Whitepaper dated August 12, 2004, and titled “Communication and Coordination Among Regulators, Receivers, and Guaranty Associations: An Approach to a National State Based System.”

- Modern insurance policies and coverage programs can be complex – for example, there may be blocks of cyber liability business, large deductible policies, variable annuity policies with guaranteed living benefits or long-term care policies that have unique policy terms or servicing obligations. There may also be related, ceded reinsurance treaties in place that would have to be evaluated and considered for purposes of life and health insurance guaranty association election rights to assume such reinsurance. Identifying and understanding these complex policies and programs to assure uninterrupted policy and claims handling can require extensive advance planning, coordination, and due diligence.
- The amount of lead time needed for guaranty associations to prepare for a liquidation varies based on the facts and circumstances presented in each case, including the type of insurance business written by the insolvent company. The property and casualty guaranty funds need to analyze the data to adequately protect policyholders - more in complex situations or very large cases. For complex life, health and annuity companies, the lead time needed may be substantially longer.
- In addition to the benefits of early coordination to prepare for liquidation, NOLHGA and the life and health insurance guaranty associations can provide valuable technical expertise and assistance to receivers and regulators considering possible non-liquidation solutions. This includes analyzing financial issues, evaluating reserves, and identifying potential acquiring entities for blocks of business.

See Section F(4) below for a discussion of guaranty association triggering and Chapter 6 on the guaranty associations' role and specifics of coordination and information sharing.

The threshold criteria that a proposed plan of rehabilitation must meet is that claimants against an insolvent estate will fare at least as well under the proposed rehabilitation plan as they would if the insurer were placed into liquidation. *See Neblett v. Carpenter*, 305 U.S. 297, 304, 59 S. Ct. 170, 173–74, 83 L. Ed. 182 (1938) (“The order of the Superior Court recites that the [rehabilitation] plan makes adequate provision for each class of policy holders, for the creditors, and for the stockholders; that the plan is fair and equitable; that it does not discriminate unfairly or illegally in favor of any class of policy holders; that the intangible assets conserved by the plan are worth several million dollars and that if the old company were dissolved and its assets sold their value would be substantially less than the amount which will be realized from them under the plan.”) The so-called Carpenter rule, named after the aforementioned United States Supreme decision, provides that a rehabilitation plan must be fair and equitable, and that it does not discriminate unfairly or illegally in favor of any class of policyholders; *see also, Foster v. Mut. Fire, Marine & Inland Ins. Co.*, 531 Pa. 598, 613, 614 A.2d 1086, 1093–94 (1992) (“Under *Neblett*, creditors must fare at least as well under a rehabilitation plan as they would under a liquidation,...”); and *In re Frontier Ins. Co.*, 36 Misc. 3d 529, 532, 945 N.Y.S.2d 866, 869 (Sup. Ct. 2012) (*Neblett* “requires a plan of rehabilitation to provide claimants with no less favorable treatment than they would receive in liquidation.”).

F. CONSIDERATIONS COMMON TO BOTH CONSERVATION AND REHABILITATION

1) Issues to be Addressed

The receiver’s review of the insurer’s operations should be made at least in part with a view toward identifying and developing a plan to remedy its weaknesses. Areas to be considered include:

- Undercapitalization;
- Mismanagement by directors and officers;
- Uncollectible assets;
- Assets of minimal value;

- Dishonest or incompetent agents;
- Insolvent or weak reinsurers;
- Reinsurance disputes;
- Intercompany, affiliate or subsidiary indebtedness;
- Unprofitable business;
- Long-tail or long-term liabilities;
- Rate increases needed on business and insurer's ability to secure those increases from regulatory authorities;
- Marketing;
- Deceptive or misleading practices;
- Insurance management experience;
- Claim adjustment experience for lines of business being written;
- Risky investments;
- Non-admitted assets;
- Software and hardware problems;
- Inadequate reserves;
- Reserving practices;
- Excessive operating expenses;
- Staffing problems;
- Backlog of mail and filing problems;
- Market conduct studies;
- Unfunded agents' balances or finance notes;
- Management of the insurer's assets and investments;
- Numerous/recent changes in Information Technology or software applications, particularly accounting, claims or policy management systems;
- Failure to collect all outstanding reinsurance receivables;
- Failure to collect all balances due from agents; and
- Failure to collect outstanding judgments in favor of the insurer.

In addition, the receiver may bring causes of action on behalf of the estate, including to prevent or reverse preferences; voidable transfers; fraudulent transfers; other improper conveyances; fraud; misrepresentation by directors, officers, management, and auditors; and negligence, gross negligence and mismanagement by directors, officers, management, and auditors. (*See Chapter 4—*

Investigation and Asset Recovery). The receiver also may diversify the insurer's investment portfolio, coordinate with guaranty associations, and prepare the insurer for future business operations for sale or liquidation

In cases of limited liquidity, the receiver should evaluate which assets can be marshaled and which liabilities compromised in order to provide sufficient cash flow to administer the insurer's day-to-day operations. Generally, the receivership prevents the insurer from incurring further liabilities and increasing the impairment or insolvency. Conversely, it is essential that the insurer's profitable lines of business be identified and maximized for underwriting profit, cash flow and possible sale to investors. A determination should be made whether there is an opportunity for a contribution by the owner, an outside investor or purchaser to stabilize the insurer's cash flow problems pending a comprehensive corrective action plan to conserve or rehabilitate the insurer. Once the insurer's cash flow is stabilized, the receiver should continue efforts to marshal the insurer's assets and reduce outstanding liabilities.

2) Operational Issues

The receiver may need to make periodic budget projections and cash flow studies to establish whether the insurer has sufficient cash flow for its operational needs and to determine the amount of money that would be required from an investor to fund the insurer's future operations and meet statutory surplus requirements. The rehabilitation of the insurer might depend upon the valuation of certain assets or the future profitability of the insurer's book of business. It may be necessary to value those assets in accordance with Generally Accepted Accounting Principles ("GAAP") and Statutory Accounting Principles ("SAP") to determine their value in a rehabilitation, acquisition, merger, or asset sale. It may be prudent to prepare a balance sheet based on current market values. (*See Chapter 3—Accounting & Financial Analysis and the exhibits thereto.*) A determination may need to be made as to the diversification of the receivership's investment portfolio as of the date of the receivership.

The receiver should assess the marketability of the insurer or its assets, including its subsidiaries and investments in affiliates. There should be some focus on the value of the insurer's book of business and its agency network. A decision needs to be made as to whether the insurer will write or limit new or existing business. The strengths and weaknesses of the business need to be determined. Actuaries may need to be retained to perform rate studies and other evaluations, including an evaluation of whether new or pending changes in the law will affect the profitability of the insurer's products (e.g., no fault laws).

In order to preserve the value of the books of business, the payment of claims and cash surrender requests (if applicable) need to be carefully analyzed by the receiver. In some situations, claim handling may be continued in the normal course of business. In life and health insolvencies, the receiver should also consider whether a moratorium on cash surrenders, policy loans and dividends should be imposed.

3) Possible Sale of Insurer

During conservation/rehabilitation, the sale of the insurer to outsiders may be considered, if allowed by state law. A plan for the sale of the insurer should identify the areas that a receiver or investor should cover in any bid or proposal to acquire or invest in the insurer. Among those subjects that should be addressed in a proposed acquisition are the following:

- The purchaser/investor's financial stability and ability to fund the transaction from existing or readily available funds;
- The source of the funds for the acquisition;
- The identity and background of the acquiring party;
- The ability of the purchaser to comply with statutory and regulatory requirements;

- The expected impact of the transaction on the insurer’s policyholders and creditors;
- The likelihood of success in completing the transaction;
- Whether the transaction presents other regulatory or public policy concerns; and
- Whether the proposed transaction would adversely impact guaranty association/guaranty fund coverage available to policyholders in the event of a future liquidation.

G. LIQUIDATION

The regulator may petition the court for an order of liquidation when any of the grounds set forth in the applicable statute exists (see IRMA §207), or, if the company is in rehabilitation or conservation, the regulator believes that further attempts to rehabilitate or conserve the insurer would substantially increase the risk of loss to policyholders or the public or would be futile. In liquidation, the liquidator must identify creditors and marshal and distribute assets in accordance with statutory priorities and dissolve the insurer.

1) Order of Liquidation

Once a petition for liquidation is filed, the company will have an opportunity to defend itself, which can result in a trial or an evidentiary hearing. If the court determines that the regulator has sufficiently established any of the statutory grounds for liquidation, it shall enter an order of liquidation, appointing the regulator as the liquidator of the insurer and vesting the liquidator with title to all of the insurer’s assets and records. The order enables the liquidator to control all aspects of the insurer’s operations under the general supervision of the court. Orders of liquidation may be appealed by management and/or shareholders of the insurer.

Statutes in most states provide that upon issuance of the order, all of the rights and liabilities of the insurer, its creditors and policyholders are fixed as of the date of entry of the order of liquidation. State statutes may describe the effect of the order of liquidation upon contracts of the insolvent insurer.

Upon entry of the order of liquidation, the receiver is charged with the duty to secure, marshal, and distribute the assets of the estate. The power to perform these duties is provided by the order of liquidation and the state receivership statute. It is important for the order of liquidation to include certain other items, which should be determined by applicable provisions of the law in the state of domicile of the insurer. These items typically include provisions for: the appointment of the liquidator; delineation of the powers of the liquidator as provided by state statute; the immediate delivery of all books, records, and assets of the insurer to the liquidator; and enjoinder of other parties from proceeding with actions against the liquidator, the insurer, or policyholders. In addition, it may provide for notice to policyholders and cancellation of policies.

2) Effect on Policies

The cancellation of policy obligations raises several legal issues with respect to the obligations of property/casualty insurers and the cancelable obligations of life insurers. In general, the courts enforce the statutes that provide for the cancellation of insurance policies upon liquidation. Several cases have considered the question of whether a policyholder’s claim would be accepted if filed after the bar date established in the order. Courts have held that the order of liquidation effectively cancels outstanding policies and fixes the date for ascertaining debts and claims against the insolvent insurer. However, the insolvency of a life insurer presents a unique situation. The NAIC Model Acts provide for the continuation of life, health, and annuity policies. Typically, life and annuity contracts (and, to a lesser extent, health contracts) are transferred to solvent third-party insurers.

3) Powers and Duties of the Liquidator

The liquidator is granted certain powers by statute and/or court order, which include the following:

- Vesting the receiver with title to all assets;

- Authorizing the receiver to marshal assets;
- Authorizing the receiver to sue and defend in the receiver's name or in the name of the insurer;
- Enjoining lawsuits in other courts, whether in the same jurisdiction or elsewhere;
- Enjoining interference with the receivership;
- Enjoining creditor self-help;
- Appointing one or more special deputies;
- Authorizing the retention of attorneys, consultants, accountants, and other specialists as necessary;
- Authorizing the sale, abandonment, or other disposition of the insurer's assets;
- Borrowing on the security of the insurer's assets;
- Coordinating with guaranty associations;
- Coordinating with NCIGF and/or NOLHGA, as necessary; and
- Entering into and canceling contracts.

Most jurisdictions hold that the liquidator generally steps into the shoes of the insolvent insurer and possesses the rights and obligations of the insurer. There is also authority for the proposition that the standing of the receiver is broader than that of the insurer to the extent he or she also represents the interest of policyholders and creditors. Several cases have focused on the liquidator's specific duties. These cases allow liquidators to compound or sell any uncollectible or doubtful claims owed to the insolvent insurer, to disaffirm fraudulent conveyances, to disavow leases and other executory contracts, to act as statutory receiver of the insolvent insurer's property, to sell the insurer's property, to conduct business using the insurer's assets, and to control bonds and mortgages held as collateral security.

4) Triggering of Guaranty Associations

As a general rule, the guaranty association laws provide for the mandatory triggering of coverage by guaranty associations upon the entry of an order of liquidation with a finding of insolvency against a member insurer. Advanced coordination with affected guaranty associations and/or NOLHGA (in life and health cases) or NCIGF (in property and casualty cases) with respect to the liquidation petition and proposed liquidation order will help to ensure consistency in triggering in multi-state insolvencies.

On the life and health side, there are a small number of states where mandatory triggering may also occur, under certain circumstances, during rehabilitation if the member insurer is not timely paying claims. In property and casualty cases, guaranty fund triggering normally occurs upon an order of liquidation with a finding of insolvency. There are a minority of states that can be triggered with a finding of insolvency only.

Most of the state life and health insurance guaranty association laws also provide a mechanism for permissive triggering, at the discretion of the association, where a member insurer has been placed under an order of rehabilitation or conservation. (Generally, no such permissive triggering exists in the property and casualty state laws.) These provisions are based on the NAIC Life and Health Insurance Guaranty Association Model Act, Section 8(B), which provides the guaranty association discretion to provide coverage if a member insurer is an impaired insurer (i.e., placed under an order of conservation or rehabilitation). This authority is subject to any conditions imposed by the

guaranty association that do not impair the contractual obligations of the impaired insurer and that are approved by the Commissioner in the guaranty association's state. Some state statutes also provide life and health guaranty associations limited discretion to act in cases where the impaired insurer has been deemed by the Commissioner to be potentially unable to fulfill its contractual obligations. This language dates back to the original definition of “impaired insurer” in the 1970 version of the NAIC Model Act. This language was later removed from the model act as part of the 1997 amendments but still remains in a small minority of state statutes.

Given the possibility of subtle variations in triggering provisions in place from state to state, it is important to coordinate with affected guaranty associations and NOLHGA or NCIGF for purposes of confirming guaranty association triggering. Refer to Exhibits 1-1 and 1-2 for recommended liquidation order language to ensure consistent guaranty association triggering.

5) Notice

Most state statutes set forth the minimum requirements for notice to creditors and all persons known, or reasonably expected, to have claims against the insurer. The receiver must give notice to the regulator of each jurisdiction in which the insurer does business, affected guaranty associations, the agents of the insurer, and policyholders at their last known address. The liquidator may also be required to give notice by publication, usually in a newspaper of general circulation in the county in which the insurer has its principal place of business. Potential claimants are required to file their claims on or before the bar date specified in the notice.

Disputes may arise when the claimant alleges that he or she did not receive notice of the liquidation. The cases addressing this issue turn on the specific facts. Courts have allowed late claims where the receiver should have known of the claimant’s existence and should have provided notice.

See Chapter 5 – Claims for additional discussion.

6) Deadline for Filing Claims

Unless established by statute, the court establishes a deadline for the filing of claims against the assets of the insolvent insurer. In IRMA, the date is not later than 18 months after the entry of the liquidation order, unless extended by the receivership court (IRMA, §701(A)). The liquidator may be required to permit a claimant to file a late claim under certain circumstances (IRMA, §701(B)). If a claimant does satisfy the criteria for filing a late claim, the claim will be subordinated to a lower distribution priority (IRMA, §801(I)). Some statutes enacted prior to IRMA may provide that such a claim is barred from participating in a distribution. Policyholders covered by guaranty associations typically are not required to file claims with the liquidator.

See Chapter 5 – Claims for additional discussion.

7) Ancillary Proceedings

Liquidation of an insurer is conducted by the liquidator in the insurer’s state of domicile. When an insurer is licensed to do business in another state, that state may have authority to establish an ancillary receivership. Receivership statutes typically permit the commissioner of a state where an insurer is licensed to commence an ancillary proceeding if the insurer is placed in liquidation in the domiciliary state. Some statutes also require the commissioner to commence an ancillary proceeding upon the request of certain residents of the state who have claims against the insurer. If the court grants the petition for an ancillary proceeding, the commissioner of that state is appointed as the ancillary liquidator.

The ancillary liquidator is generally entitled to recover the insurer’s assets in the ancillary state and pay claims of residents in the state with such assets. Some statutes permit a claimant who resides in an ancillary state to file a claim in either the domiciliary or ancillary proceeding.

Owners of secured claims can be affected when there are one or more ancillary proceedings. The owner of the secured claim is entitled to surrender his security and file his claim as an unsecured

creditor. Any deficiency in the claim is treated as a claim against the insurer's general assets on the same basis as claims of unsecured creditors.

IRMA clarified the procedures for ancillary proceedings and the handling of deposits. Under §1001 of IRMA, the need for an ancillary receivership has been curtailed. IRMA allows the appointment of an ancillary conservator under limited circumstances. A domiciliary receiver is automatically vested with title to property in any state adopting IRMA, and the test of whether a state is a "reciprocal state" has been eliminated. IRMA also clarifies the procedures for handling deposits; however, most states have not adopted §1001.

While an ancillary proceeding is required in limited circumstances, the regulator often has discretion to initiate it. When deciding whether to commence an ancillary proceeding, several issues should be considered, particularly if it involves a pre-IRMA statute. As an ancillary proceeding requires the separate administration of the insurer's assets and claims, it generally will increase costs. It can also complicate the processing and payment of claims, and potentially confuse claimants. Separate distributions to claimants from ancillary and domiciliary receiverships may differ, which can result in disparate payments to creditors in the same class. Finally, the insurer's debtors may be reluctant to pay amounts owed to the insurer due to the potential for competing claims by domiciliary and ancillary liquidators. To address these potential problems, the domiciliary and ancillary liquidator can enter into an agreement to facilitate the coordination between the proceedings. An agreement could cover matters such as bar dates, claims procedures, the liquidation and disposition of deposits, and the collection of other assets.

See Section E(9) of Chapter 9 – Legal Considerations for additional discussion.

III. INTERESTED PERSONS

A. GUARANTY ASSOCIATIONS

Guaranty associations have been established in each state, as well as the District of Columbia and Puerto Rico, to provide a measure of protection to policyholders in the event of the impairment or insolvency of an insurer. When guaranty association covered business is involved, it is beneficial to begin coordination as soon as it appears there is a significant possibility of liquidation or that guaranty associations will be triggered.

See II(D)(2) in this chapter and Chapter 6 for additional discussion.

B. PARENT COMPANY AND AFFILIATES

An insurer may have a parent company and/or affiliates that may or may not be insurance companies. The interaction of these companies should be reviewed and analyzed carefully including any service agreements, management agreements, pooling agreements, tax sharing agreements and reinsurance agreements. Under certain circumstances, the receiver may want to obtain control of these other entities thru substantive consolidation.

See Chapter 4 – Investigation and Asset Recovery and Chapter 9 – Legal for further discussion.

C. GOVERNMENT AGENCIES

Federal, state, and local government regulations may require notice of the proceeding and are potentially creditors.

The Federal Priority Act (31 U.S.C 3713) imposes personal liability on the representative of persons or estates to the extent that other debts are paid (or otherwise compensated) prior to claims of the federal government. A 3713 Release from the United States of America through the Department of Justice may be requested. As much of the information required for the release is historical, the Receiver should start collecting the information at the inception of the liquidation.

See Chapter 5 – Claims, Chapter 9 - Legal and Chapter 10 – Closing Estates for additional

discussion of federal government involvement.

IV. RECEIVERSHIP ADMINISTRATION

A. PLANNING

The regulator who expects to successfully administer a receivership action must become familiar with the insurer's operations and business as soon as possible. The checklists included in the exhibits at the end of this chapter include a list of documents that should be reviewed.

1) Identify Problems

It is critically important to meet with the regulator's staff before the receivership order is entered, to discuss the perceived causes of the insurer's difficulties and the potential for a successful rehabilitation or liquidation. While state statutes may prevent regulator's staff from sharing documents not available to the general public with non-regulators, insight from financial examiners, financial analysts, market conduct examiners and licensing agents might assist in determining the causes of the insolvency.

It is also important to meet with the insurer's officers and/or directors, when possible. These meetings are usually clear indicators of how cooperative or hostile the insurer's management will be after appointment. Hostile environments require additional personnel and security measures at the company location to secure the assets and records. In some circumstances, it may be important to maintain confidentiality about an intended action, in which case a meeting with management may not be possible.

2) Identify Key Transitional Elements

As previously discussed, coordination with guaranty associations is essential. When liquidation is reasonably foreseeable and guaranty association covered business is involved, that coordination becomes critical to maximizing protections and achieving optimal outcomes for policyholders and claimants. With proper confidentiality arrangements, this can and should occur even while liquidation is a possibility but there are still other alternatives that might salvage the company. Particular attention should be given to definitions of "covered claim" or "covered policy" for each guaranty association.

The insurer's officers, directors and employees may be willing and able to advise about the existence of service providers and outside consultants employed by the insurer, including legal counsel, accountants, and actuaries. Access to the insurer's records and contracts with all consultants and service providers should be secured and determination made which, if any, of the various service providers to retain. It should also be determined if the insurer is a member of a FHL Bank and, if so, identify key individuals at the insurer and at the FHL Bank.

It is also beneficial to obtain employee agreements and other documents regarding personnel arrangements. The receiver will have to develop a plan to maintain required positions and retain key staff. *See X. Personnel in this chapter for additional discussion.*

Additional steps to consider during the planning phase are in the checklists included in the exhibits at the end of this chapter.

3) Working Business Plan

During the planning phase of a receivership, it may be helpful for the receiver to develop an internal working business plan with reasonable timeline and objectives that consider multiple paths, taking into consideration claimants, policyholders, taxpayers, and stakeholders (e.g., lenders, shareholder, affiliates, etc.) The development of a multi-option plan (e.g., option A, B or C) in order of most beneficial may help in planning for and supporting each phase of the receivership process and in ultimately developing the Rehabilitation Plan required by the Rehabilitation Order.

4) Monitoring and Progress Report

Once the receivership proceeding commences, the receiver should consider maintaining weekly or monthly progress reports that serve as high level report cards of the key issues and the progress made in servicing policyholders and the effectiveness of the working business plan. The progress reports include a view of the whole insurance company—financial and operational, highlights key data about company activities of each division and also identifies critical compliance areas for financial, operational, legal, and statutory guidelines. Included in this monitoring process may be specific accomplishments and updates that should be made available to policyholders and claimants and the courts. Depending on complexity of the receivership a weekly meeting of managers/staff is recommended to exchange information between the receiver and the managers/staff.

B. RECEIVERSHIP ORDER

A receivership order may be issued because the insurer is impaired (generally, a conservation or rehabilitation) or insolvent (liquidation or, in special circumstances, a rehabilitation). The order may also be issued to protect an insurer operating under severe financial impairment, as evidenced by a variety of factors, such as investments in an undiversified portfolio of stocks or bonds, writings to surplus in excess of the allowable amount, issuance of total insurance business by one MGA or TPA or entering into non-risk bearing surplus relief contracts. A receivership may also be instituted if current management is found to be detrimental to the management and/or financial stability of the insurer.

Some common issues addressed in receivership orders are:

- Writing of new or renewal business;
- Handling of reinsurance;
- Dividends or transfer of assets without the receiver’s approval;
- Payments to affiliates;
- Limitations on new investments;
- Seizure of physical and liquid assets;
- Liquidation of certain investments;
- Change or dismissal of officers and/or directors;
- Ownership of records and data of the insurer or related entities;
- Cancellation of certain MGA, TPA or general agency agreements;
- Limitations on funding by premium finance companies;
- Injunctions;
- Payment of loss and loss adjustment expense, etc.;
- Triggering of the guaranty associations, if intended;
- Provisions to pre-pay ongoing claims benefits such as workers compensation indemnity benefits while claims data is being transitioned to the guaranty associations;
- Moratoria on claims, cash surrenders, withdrawals, policy loans, etc.;
- WARN (Worker Adjustment and Retraining Notifications) State and Federal - if layoffs of existing staff are anticipated; and

- Hardship provisions (refer to state statutes, state guaranty associations or to www.ncigf.org and www.nolhga.com).

Once the receivership order is entered, the receiver is empowered to operate the insurer. Officers may be retained or terminated, and directors may be relieved of duties, though these actions must be carefully evaluated because of possible adverse effects on litigation involving directors and officers. In fact, a careful evaluation prior to termination of any employee is recommended. An immediate determination may be made as to the need for outside consultants or professionals, such as accountants, actuaries, computer specialists, attorneys, investment counselors, etc.

The insurer may remain in receivership for a fixed period of time or until the occurrence of specified events, e.g., the rehabilitation of the insurer or the liquidation of the estate and the discharge of the receiver.

C. NOTICES

Notice of the insurer's status should be in accordance with the receivership court's direction. The court may direct the notice to be issued by mail and/or by publication in a newspaper of general circulation. In the case of a conservation (under IMRA) or rehabilitation, the notices may be issued to assist the receiver in informing the policyholders and sustaining the business of the insurer. Notice may be sent to the following persons, among others, when the court requires, as their rights or interests are affected:

- Policyholders and beneficiaries;
- Agents;
- Guaranty associations;
- State insurance departments;
- Third-party claimants;
- NAIC;
- Internal Revenue Service;
- U.S. Department of the Treasury;
- U.S. Department of Justice;
- State and local offices;
- Banks;
- Brokerage or investment banking firms;
- Managing general agents, general agents, and all agents of record;
- Reinsurers;
- Intermediaries;
- Creditors, including secured creditors; (including the Federal Home Loan Bank, if applicable)
- Claim adjusters;
- Third-party administrators;
- Premium financiers;

- Vendors;
- Accountants, actuaries, lawyers and other professionals;
- Landlords and tenants;
- Officers and directors;
- Stockholders and other equity holders; and
- Other necessary parties.

Notice may vary depending upon whether the insurer is in rehabilitation or liquidation. Under IRMA, conservation is similar to rehabilitation, and the notice requirement is the same. If the notice is pre-approved by the court, it will avoid potential claims of non-disclosure or omission of material facts.

D. IMPLEMENTATION OF THE ORDER

The order typically includes provisions that enable the receiver to prevent additional financial drain. Throughout this period, the receiver should pay particular attention to preventing illegal preferences, unauthorized set-offs, fraudulent transfers and improper conveyances or distributions.

It is vital that the order be served immediately on the insurer. The receiver should take steps to maintain the integrity of the insurer's assets, books, and records as of the date of the order and to control the insurer's operations so that the assets, books, and records are not removed, dissipated, or destroyed. The checklists at the end of this chapter include some of the initial steps that may be taken to ensure the receiver's control.

E. ASSETS

1) Initial Asset Control

A principal objective in the initial phase is to identify and secure the assets and determine the liabilities of the insurer. The insurer's annual and quarterly statements, along with the current general ledger and chart of account listings, should help in locating some of the assets.

Once the assets have been identified and secured, the short-term emphasis shifts to the cash and invested assets, those being the most liquid. These assets should be tightly controlled to prevent any theft or misappropriation. Examples of the various types and forms of assets, as well as immediate actions that can be taken, are provided in the checklists at the end of this chapter. However, as stated, the primary emphasis at this stage should be assets easily converted to cash, such as petty cash, operating bank accounts and investments. Usually, the remaining illiquid assets will be addressed in the ongoing management and administration of the estate. These types of assets will be the focus of various accounting, collection, and legal efforts in the endeavor to marshal all assets of the estate.

It is important to immediately institute appropriate controls and procedures for the processing of cash and cash receipts. The objective of controlling all cash receipts and subsequent processing is to ensure that cash, the most liquid asset, does not disappear. This requires more stringent controls, including immediate deposit of all cash and an accurate daily accounting. Therefore, the receiver should immediately institute procedures for routing of daily cash receipts (create receipt log). With respect to life and health insolvencies (including HMOs if covered by the triggered guaranty association), consideration should be given to coordination with the guaranty associations and/or NOLHGA regarding the treatment of premium billings, reinsurance payments and any other matters necessary to keep the policies in force, pending the sale of the business or assumption of the business by the guaranty association(s). In the case of an HMO insolvency, direct coordination with the entities providing health care protection to the members is crucial. The receiver may find it necessary to open bank accounts in the name of the receivership in order to have complete control of the cash. In a health insurance related insolvency, the receiver should check on the status of

coordination of benefits (cob) receivables, hospital credit balances and check the state's treasury department to see if any providers have escheated funds on behalf of the health insurer. In order to ensure no misappropriation of funds, the receiver must also institute effective controls over disbursements. This includes instituting new check issuance procedures, including the establishment of new check signing and wire transfer authority, and the issuance of new passwords for electronic banking.

The valuation and control of the remaining assets in the estate will necessarily fall into the continuing management and administration stages. Those assets are less liquid in nature and are, therefore, more difficult to value, marshal and misappropriate.

2) Administration and Ongoing Asset Management

Once the initial phase has been accomplished and control has been instituted over the liquid cash and other invested assets, attention should be directed toward the remaining assets and potential assets of the estate. Immediate identification of some of the remaining assets may be accomplished by reviewing the balance sheet, general ledger, and chart of accounts. The identification of these assets has been accomplished to a degree in the initial phase. The receiver should take a physical inventory including laptops and mobile devices, office equipment, computer hardware and office furniture. The various checklists at the end of this chapter provide details of types of assets to look for and steps to take with those assets.

Aside from the traditional or listed assets on the balance sheet, insurer operations need to be reviewed to identify any potential non-traditional assets. Simply stated, the receiver is responsible for identifying value in the operations and evaluating the potential for the recovery or collection and conversion of this value. This concept will become clearer as the various categories of assets are revealed. Some of the issues to be considered include the following:

- Reinsurance

With respect to life insolvencies, it is critical that the receiver immediately analyze whether to continue or cancel ceded reinsurance contracts. The Life and Health Insurance Guaranty Association Model Act, the life and health guaranty association statutes in most states and IRMA give the life and health guaranty associations the authority to continue ceded reinsurance contracts that relate to covered obligations of the associations in order to facilitate a sale of the business or to minimize the association's exposure. The affected guaranty association must make the election to allow a particular treaty to expire or continue within a statutorily established time. If the treaty is continued, the guaranty association becomes liable for the payment of the ongoing premiums. The guaranty association may transfer the reinsurance agreement to a solvent insurer that assumes the underlying policies. (See IRMA §612 and NAIC Life and Health Insurance Guaranty Association Model Act §8N.)

- Audit premiums

Certain property/casualty premiums are based on loss experience, sales volumes, or payroll amounts. This criteria will differ depending on the type of policy being issued. For example, a "minimum" or "deposit premium" is paid upon issuance of the policy. Final premiums are billed after audit on the basis of loss experience. The additional premium generated is known as audit premium or retro-rated premium and may represent a significant asset of the estate.

Life insurance premiums may be affected by the amounts of dividends paid or by the difference between current billed premiums and maximum billed premiums allowed by the contractual guarantees in the policies. In life insurance insolvencies, the receiver should consider the possibility of Phase III tax liability. (See Chapter 3—Accounting and Financial Analysis, Section VIII.)

- Taxes

Value to the estate may be generated through the sale of the corporate charter or shell. An analysis of any net operating loss situation and qualification under IRS rules should be made with the advice of tax experts, both in the accounting and legal fields.

Also review the validity and correctness of other state and local taxes paid. A review of prior returns and state tax authority records may uncover overpayments and possible recoverable amounts.

Tax sharing agreements with affiliates and any prior consolidated tax returns should be secured, if possible, and reviewed to determine if any refunds paid to the parent should be remitted to the estate.

- Property/casualty salvage and subrogation

With respect to property/casualty insurers, a determination should be made as to how the insurer identified and recovered salvage and subrogation. This amount will not be readily identifiable from the statutory statements, as statutory principles prohibit the recognition of salvage and subrogation until it is collected. However, many insurers maintain salvage/subrogation logs, which are a good source for identification of such receipts or potential recoverables. Salvage and subrogation on claims where reinsurance has been received may be held in a segregated account. Because these aggregated funds may be subject to setoff, a portion of the funds may be due the reinsurer.

- Indemnity

A surety, prior to issuing a bond, will usually require indemnity agreements from the principal and other indemnitors in order to secure the surety from any claims that may be made against the bonds. The agreement is a contractual obligation that provides security for the surety. The indemnity agreement sets forth and expands upon the separate common law obligations between the principal and the surety. A separate indemnity agreement may be issued for each bond. However, more frequently, the parties enter into a general indemnity agreement covering any bonds that the surety may issue to that principal.

Accordingly, all indemnity agreements should be secured and reviewed to identify potential recoverables.

- Deductibles

Many property and casualty insurance policies contain deductibles that are to be paid by the insured. If the insurer (or a guaranty association) pays the full amount of the loss to an injured third party, the amount of the deductible becomes a claim against the insured. The receiver should evaluate the likelihood and cost of collection, and if appropriate, attempt to recover the amount paid within the deductible. It is important that the collection process be resumed as quickly as possible. Most often the receiver is best situated to continue the collection process as he or she is in possession of the related records. In some cases, the insured will have posted some form of collateral to secure its obligations under the deductible. Pursuant to statute in some states, or agreement between the receiver and the applicable guaranty associations, the amount collected is delivered to the associations that paid the claim. For a fuller discussion of large deductibles, see Chapter 6—Guaranty Associations.

- Excess expense payments, especially over-billed loss adjustment expenses

A complete review of historical expense payments should be made, paying close attention to the rates charged, hours worked, necessity of work performed and supporting documentation for expenses itemized in defense attorney bills. Reimbursement should be sought, as appropriate.

- Voidable preferences/fraudulent transfers

Early in the administration of an estate, the receiver should review the insurer's recent pre-receivership transactions for purposes of determining whether potential voidable preferences or

fraudulent transfers of assets were made. See Chapter 9—Legal Considerations, Section VIII, C and D for a discussion of voidable preferences and fraudulent transfers.

F. TAKE CONTROL OF BOOKS AND RECORDS

One of the receiver's first steps should be to locate, control and organize certain files. Securing and organizing the records of an insurer in receivership is of paramount importance to successfully completing the receivership.

A plan to deal with records, including all electronic records, should be developed. The plan should provide for the creation of a records inventory. The plan should identify the data to be captured from the insurer's records, i.e., the names and locations of insureds, reinsurers, etc., and should deal with both the location and maintenance of the files.

It is best to have experienced personnel and legal counsel with an insurance operations background develop this plan. In crafting the plan, the receiver should consider:

- Establishing a central clearing house for all records or having the receiver's staff review records in each department to identify and secure key records. In this manner, the receiver will be able to ensure that all records are recovered, reviewed, and appropriately maintained for further use.
- Determining the location of various records, such as those of MGAs, TPAs, agents, independent adjusting firms, attorneys, branch offices and subsidiaries.
- Determining the various categories of documents—such as policies, claims, data processing, banking, accounting, corporate, state, and federal tax, marketing, personnel files, reinsurance files, and administrative files—and how they should be maintained.

Checklists found at the end of this chapter identify items that should be secured and organized under each area.

It is important to limit access to the premises or other facilities to preserve the integrity of the books and records and to prevent the dissipation of receivership assets. It is also essential to provide notice to consultants used by the insurer—such as accountants, actuaries, and lawyers—of the receivership order, demanding that all records of the insurer in their possession be turned over to the receiver. Failure to turn over the insurer's records to the receiver is a violation of most state statutes (IRMA §118A). In the event a consultant is unwilling to turn over records of the insurer, the receiver should consult with legal counsel.

G. INVENTORY

The receiver should inventory the assets, books, and records as soon as possible. This inventory may not only be required by state law, but it may also be useful in determining whether items have been misplaced or were later removed from either the insurer's premises or the receiver's offices and facilities. The inventory should be conducted at the insurer's offices. The items listed in the checklists included in the exhibits at the end of this chapter should be itemized and secured.

While conducting the inventory of books and records, the receiver should begin identifying documents relative to the cause of the insurer's insolvency. Statute of limitations vary by state. The receiver may have a limited amount of time to file actions against other parties. The NAIC and FBI have developed a questionnaire to be used by a receiver in reporting fraud and other white-collar crimes to the United States Department of Justice for the purposes of initiating a criminal investigation (See Exhibit 1-3). Among the typical causes of insurer insolvency are:

- Undercapitalization;
- Uncollectible, illiquid, or inflated assets;
- Insufficient loss reserves for risks assumed;

- Misappropriation or conversion of insurer funds by management, affiliates, agents, TPAs, or others;
- Commitment to unprofitable business by uninformed or undisciplined agents;
- Collectability of reinsurance;
- Negative cash flows due to unprofitable lines of business;
- Poor underwriting;
- Unnecessarily risky investments;
- Fraudulent transactions; and
- Other forms of mismanagement.

Any indication of fidelity bonds, directors and officer's policies, error and omission policies or other indemnification coverage should be identified, segregated, and made accessible to the receiver and receivership counsel. The documents should be reviewed immediately, and carriers placed on notice to preserve the rights of the estate.

H. MOVE TO CONSOLIDATE

Consolidation of the receivership's offices and storage facilities could result in increased productivity and reduction of labor and storage costs. For that reason, an assessment of the value of maintaining the insurer's offices and storage sites should be made in the early days of the receivership. Consolidation of the books and records should take place only after: 1) an inventory is completed; 2) the receiver has considered the impact upon the insurer's ability to handle claims in an orderly and efficient manner; and 3) the receiver has considered the potential impact upon the insurer's relations with any existing agency network. If the insurer is in conservation or rehabilitation, the receiver should weigh the effect a consolidation might have upon the insurer's marketing program.

I. COORDINATION WITH ANCILLARY RECEIVERS

Any assets of an insurer in liquidation that are held by a non-domiciliary state should be returned to the domiciliary receiver of the insurer. Under §1001 of IRMA, the need for an ancillary receivership has been curtailed. IRMA allows the appointment of an ancillary conservator under limited circumstances. A domiciliary receiver is automatically vested with title to property in any state adopting IRMA, and the test of whether a state is reciprocal has been eliminated. IRMA also clarifies the procedures for handling deposits.

The NAIC models prior to IRMA permit reciprocal states to establish receiverships ancillary to the domestic state's receivership. Typically, an ancillary receivership would be established to distribute assets in the ancillary state (i.e., statutory deposits) to claimants residing in that state. However, an ancillary receivership may be established for purposes unrelated to claims handling. In certain instances, the domiciliary receiver may request that an ancillary receivership be established for a variety of reasons, e.g., to assist the domiciliary receiver in selling real property located in the ancillary state or to assist the domiciliary receiver in handling litigation pending in the ancillary state.

State statutes based upon NAIC models prior to IRMA allow or may require ancillary receiverships under certain circumstances. If an ancillary receivership is not required by statute, it should be opened only after carefully evaluating the additional administrative costs that would be incurred by the insolvent insurer. The activities of the domiciliary and ancillary receivers should be coordinated to minimize the cost of the ancillary proceedings.

Domiciliary receivers must consider the following issues, which commonly occur between the domestic and ancillary receivers:

- The security of the insurer’s assets and records;
- The security of the insurer’s out-of-state offices or storage facilities;
- Consistency and reciprocity of authority;
- Coordination of the transfer of policy/claim files to guaranty associations;
- The need for a receivers’ agreement (see discussion below regarding receivers’ agreement);
- The need for local counsel in other jurisdictions;
- The status of litigation by the ancillary receiver; and
- The method of funding and payment of approved ancillary claims.

To facilitate coordination, the ancillary receiver should request copies (certified, if available) of all domiciliary pleadings and orders, together with the names, addresses (including e-mail addresses), and phone and fax numbers of personnel in the domiciliary state.

Legal counsel for the domiciliary receiver should review the proposed ancillary petition and order as soon as they are received to assure that: 1) under the order, the rights of the ancillary receiver are subordinate to the rights of the domiciliary receiver; and 2) the ancillary receiver’s bar date is no later than the bar date established by the domiciliary receiver. Some state statutes permit ancillary receivers to establish shorter claim filing periods but prohibit claims deadlines that exceed those established by the domiciliary receiver.

In the event that the proposed ancillary order is not acceptable to the domiciliary receiver, the domiciliary receiver should request a revision. If the ancillary receiver refuses, the domiciliary receiver may be required to file an objection in the ancillary proceeding, asserting that the ancillary order violates the law of either or both states.

1) Receivers’ Agreement

In some situations, it may be possible to negotiate a receivers’ agreement, with the goal to consolidate functions and to clarify the authority and obligations of the domestic receiver and the ancillary receiver concerning:

- Coordinating the preparation of a jointly acceptable proof of claim form;
- Filing and processing proofs of claims;
- Funding and maintaining an account for payment of approved claims;
- Identifying and locating TPAs and MGAs licensed by the insurer in each state;
- Identifying and locating all bank and financial accounts;
- Locating outstanding claims files and arranging for shipment of files between states;
- Coordinating policy cancellation and impairment order dates;
- Collecting agents’ balances;
- Controlling director and officer litigation by the domiciliary state;
- Administering and closing out-of-state offices;
- Marshaling assets located in the ancillary receiver’s jurisdiction;

- Determining the disposition of assets collected by the ancillary receiver;
- Controlling and securing information (e.g., claim files, policy files, premium volume in the ancillary state, etc.) that is essential for the orderly administration of the estate; and
- Coordinating the oversight of the insurer’s out-of-state litigation.

2) Claims Handling

When there is no ancillary receivership, citizens of non-reciprocal states should file their claims in the domiciliary state. Some pre-IRMA state statutes provide that a resident of an ancillary state has the right to file a claim in either the domiciliary or the ancillary proceeding. Other states leave the decision to establish a claims procedure in the ancillary state to the discretion of the ancillary receiver.

3) Ancillary Proceedings Without a Domiciliary Receiver

Ancillary receiverships are usually established only after a domiciliary receiver has been appointed. However, some states do not have the limitations imposed by IRMA and, even when no domestic receiver has been appointed, do permit the establishment of an ancillary conservatorship or liquidation, provided that the non-domestic regulator can prove one or more of the grounds required to establish a domestic receivership. Nonetheless, the ancillary receivership order operates only upon the assets found in the ancillary jurisdiction.

V. ACCOUNTING

Please refer to Chapter 3—Accounting and Financial Analysis and Chapter 4—Investigation and Asset Recovery when reviewing this section.

Upon taking control, one of the receiver’s primary responsibilities is to secure the insurer’s assets—particularly the most liquid assets, such as cash and securities. This responsibility includes identifying lines of credit, limiting, or removing access to company credit cards and preparing an inventory of all accounting records and documentation as soon as possible. The accounting area will also be responsible for financial statement analyses to determine the true status of the insurer and the continued reporting of financial information for internal decision-making processes.

A. SECURE ASSETS

Because cash and securities are liquid, the receiver must quickly identify, locate, and secure assets. The receiver should immediately notify all depositories and custodians of the receivership order, provide the new authorized signatories, and establish the procedures to be implemented for all financial transactions. Letters of credit should be identified and secured by the receiver. Once the assets are secure, the receiver will evaluate and value them.

B. INVENTORY ACCOUNTING RECORDS

As soon as practical, the receiver should identify and secure the on-site and off-site books, records, systems, and documents necessary to maintain and review the accounting functions of the insurer and to determine the actual financial condition of the insurer. These should include most recent insurance department examination workpapers if allowed under state law and CPA audit workpapers.

C. INVESTIGATION OF INSURER’S FINANCIAL STATEMENTS

The receiver should develop an understanding of the accounting organization, including evaluation of the staff. Flowcharts and narratives of the accounting procedures should be obtained or completed with particular attention to the areas of cash receipts and cash disbursements focusing on decision points and internal controls. To the extent procedures need to be modified to protect the assets, new procedures should be put in place as quickly as possible. From the information developed here, the receiver should begin to investigate the make-up of the balance sheet line items, validate the existence of the assets, and value them.

D. FINANCIAL REPORTS

Accounting and financial reporting by the insurer will continue to be necessary and important. Financial reports will be required by the receivership court, and cash flow and budget information will be essential for the day-to-day operations of the receivership. Continued filing of the various types of tax forms is mandatory (although some may be eliminated) during the existence of the estate. Additionally, the continued reporting of paid claim information for reinsurance billing and actuarial reserving will also be crucial.

At the beginning of the receivership, the appropriate parties should determine the type of information to be reported to various entities, the frequency of the reporting and the formats the information should take.

VI. INFORMATION SYSTEMS AND TECHNOLOGY

Please refer to Chapter 2—Information Systems when reviewing this section.

This section highlights the activities that should take place for a receiver to understand and take control of the insurer's systems. To the extent possible, the receiver should not allow anyone access to the insurer's computer system until a complete backup of the system is complete. It is not uncommon for the insurer's computer systems to be intertwined with that of its affiliates; therefore, legal consultation is advised prior to taking any action that may impact the affiliates' operations.

Detailed tasks are listed in the checklist included in the exhibits at the end of this chapter.

A. EVALUATING HARDWARE/SOFTWARE

For any hardware/software owned by the insurer, the receiver should determine whether to maintain it or sell it. Prior to the sale of any equipment, the receiver should determine if that equipment is required to support any ongoing or contemplated litigation. A sale may require court approval.

B. SYSTEM SHUT DOWN

The receiver should arrange for the orderly shutdown of the computer system. Prior to shut down, the receiver should ensure that all records have been updated and all final reports have been run. It is suggested that a data processing checklist of all reports and programs to be run be completed prior to the shutdown period.

With all data updated, the receiver should make certain the information systems department performs a full system backup prior to the clearing of all files on the system. Once completed, the system may be powered down.

VII. CLAIM OPERATIONS**A. TAKE CONTROL OF CLAIM PROCESSING AND PAYMENT**

A receiver should plan to put in place appropriate controls over claim processing and payment authority of the insurer's claim department and establish the capability to control and review the insurer's claim records. Claim records may be contained in hard copy files, electronic records, or a combination of both, and may be under the control of the insurer's claim department at its main office, branch offices, or by a TPA.

Some of the initial goals in establishing control may include a review of claim policy and procedure manuals, the coverage confirmation process, claim reserving methodology, settlement practices, and applicable electronic claim processing systems. If written documentation of the insurer's claim policies and procedures does not exist, a receiver may wish to interview key claim personnel to develop and document claim processing procedures.

For Health receiverships additional considerations include prior authorization requirements, capitated arrangements and referrals, and outside claims handling by PBM mental health and or durable

medical equipment]

B. DEVELOP AN UNDERSTANDING OF CLAIM OPERATIONS

A receiver needs to understand the operations of the claim department, including its organization and workflow, processing systems and data, type, and nature of claims, and gather key information on the number of pending claims and outstanding reserves by category of business.

C. REVIEW OF CLAIM HANDLING

A receiver may wish to review the claim handling process by obtaining or preparing an overview of the typical workflow for processing a claim. This workflow might include a summary of all key interactions between claim personnel and other departments. If workflows vary by claim type and product line, the preparation of a separate workflow summary for each product line may be necessary.

The receiver should determine whether the insurer uses an active diary system for claims. Such a system monitors the claim handling process and records the dates of each step in the process. As part of the claim diary system investigation, obtain an overview of the diary functions, including the relationship between the manual and the electronic elements of the processing system.

With a basic understanding of claim handling policy and procedures, a receiver may wish to determine whether there are any constrictions in the claim resolution process such as:

- Setup of new claims;
- Correspondence files;
- Claim diaries;
- Indemnity payments;
- Loss adjustment expense payments;
- The handling of insurance department complaints;
- Reinsurer claim inquiry;
- Reporting to reinsurers;
- Subrogation and salvage recovery; or
- Inventory of unprocessed claims including those claims not yet entered on the claims system.

D. REVIEW OUTSIDE INVOLVEMENT IN CLAIM HANDLING

In addition to TPAs, several other types of outside parties may participate in claim handling, e.g., legal counsel, independent adjusters, appraisers, investigators, etc. A receiver should review these roles and determine whether to confirm or reject contracts with such vendors.

E. CLAIMS HANDLING IN CONSERVATION/REHABILITATION

Depending upon the insurer's financial position and liquidity, circumstances may require a receiver to impose a moratorium on the continued ordinary payment of claims, defense of insureds, cash surrenders, policy loans or dividends. In such circumstances, consideration may be given to hardship exceptions for claims that meet certain established criteria for continued payment or partial payment, such as claim category or payment percentage. Hardship exceptions to a claim payment moratorium should be approved by the supervising court and based on exigent circumstances such as disability of an employee or policyholder, the impoundment of an automobile undergoing repairs, or the future availability of guaranty association coverage.

For detailed information on how to handle claims in a liquidation, see Chapter 5—Claims.

F. UNIFORM DATA STANDARDS

In December 1993, the NAIC adopted the Uniform Data Standards (UDS) for use in reporting policy and claim information between property and casualty guaranty associations and receivers for property and casualty receivership estates. UDS is a defined series of electronic data file formats that facilitate data exchange between receivers and guaranty associations related to the insurer's unearned premium, claims, and loss adjustment expense. The UDS Operations Manual provides an explanation of the current reporting format. A copy of the Uniform Data Standards Operations Manual P&C ("Claims Manual") can be downloaded from the National Conference of Insurance Guaranty Funds website (ncigf.org) for free.

Refer to Chapter 2—Information Systems and Chapter 6—Guaranty Funds for further information on UDS.

VIII. REINSURANCE

Please refer to Chapter 7 - Reinsurance when reviewing this section.

Understanding reinsurance is critical to the receiver's ability to marshal this asset. With respect to property/casualty insurers, reinsurance receivables usually represent the largest asset of the estate. With respect to life insurers, reinsurance may be critical to the rehabilitation or liquidation proceeding, and generally all ceded reinsurance agreements should be continued. See §612 of IRMA and Section 8(N) of the Life and Health Insurance Guaranty Association Model Act. This asset may require immediate attention upon commencement of the receivership.

A. LOCATION OF REINSURANCE DOCUMENTS

Before the receiver can begin to marshal reinsurance receivables, it is necessary to understand the reinsurance relationships of the insurer. To accomplish this, the receiver must first locate and categorize the various documents reflecting the reinsurance arrangements of the insurer. The receiver should take control of original reinsurance contract documents. These records should be secured, copied, or scanned and then inventoried. The receiver may create working copies for use during the receivership. The integrity of the original records should be maintained in the event they are needed in the future.

B. LETTERS OF CREDIT AND TRUST AGREEMENTS

Letters of credit (LOC) and trust agreements must be located and placed in a secure area. These documents should be reviewed as soon as possible to determine whether any immediate action is necessary to ensure the continuation of the LOC or trust agreement. Under certain forms of letters of credit, the LOC may expire by its own terms, although it is more common that they renew automatically. In some instances, the original LOC must be presented to the issuing financial institution to draw against the letter of credit.

C. ROLE OF INTERMEDIARIES

It may be in the best interests of the receivership to continue working with intermediaries. The intermediary has at its disposal detailed information that the receiver may not have. The intermediary should be notified of the insolvency proceedings immediately and instructed as soon as possible on duties and responsibilities it should continue to perform for the receiver.

The duties of the intermediary need to be clarified. The receiver may decide to instruct the intermediary to take one or more of the following actions:

- Advise all reinsurers or cedents of the status of the insolvent insurer;
- Turn over all funds in their possession due the insurer;
- Turn over original LOCs;

- Continue to render accounts to receivers and reinsurers;
- Assist in the collection of funds from reinsurers;
- Transmit claims and other notices to the receiver and the reinsurers;
- Establish procedures for the handling of reinsurance inquiries; and
- Cease netting of accounts among insurers.

Under certain circumstances, the receiver may find it preferable to discontinue the use of the intermediary. In this event, the receiver should deal directly with the reinsurers, with appropriate notice to the intermediary.

D. IDENTIFICATION OF FUNDS HELD

The receiver should prepare a list of insurers that are holding funds of the insolvent insurer, as well as a list of insurers for which the insolvent insurer is holding funds.

E. PAYMENTS TO REINSURERS

One of the key issues facing the receiver in the short term is whether to continue to pay reinsurers on a current basis and/or cure prior defaults. This may be necessary to continue the reinsurance in effect, particularly if there have been pre-receivership defaults. This is a legally intensive problem, and the receiver needs to engage legal counsel on these matters as soon as possible. The decision will depend on an array of factors, including the terms of the reinsurance agreements, applicable state law, and the payment status of the contract.

IX. HUMAN RESOURCES

A. OPEN LINES OF COMMUNICATION

The commencement of a receivership can be difficult for an insurer's employees. Many employees are not aware of the circumstances that have led to the receivership. Productivity and employee morale often decline. Meetings with employees at the commencement to explain the receivership process as well as the receiver's current objectives can be very important. Establishing an open dialogue and clear lines of communication will minimize the spread of misinformation and can mitigate untimely staff departures.

B. PERSONNEL, PAYROLL AND BENEFITS

It is important that a receiver assume oversight of an insurer's direct employees, payroll, and employee benefits with minimal disruption to existing processes. A receiver may also need to assume oversight of pension or 401(k) plans, over time, establish new benefit programs for direct employees, and consider whether to continue, replace, and wind-down existing employee benefit programs. A summary of the critical human resource tasks is contained in the checklists included in the exhibits at the end of this chapter.

Employees may be employed by an affiliate or holding company, rather than as direct employees of the insurer. In such cases, a receiver will need to review existing cost-sharing arrangements or contracts for reimbursement with the affiliate. In such instances, a receiver typically would not have direct responsibility for the employee benefit programs pertaining such employees.

C. STAFFING PLAN

One of the receiver's responsibilities will be to develop a staffing plan for the receivership that identifies both short- and long-term personnel requirements. A receiver may wish to develop an organizational chart, comprehensive job descriptions, and personnel files for receivership staff. As responsibilities and job functions may change during the receivership process, including transitions from conservation, rehabilitation, and liquidation, a receiver may be required to periodically assess and update the receivership staffing plan.

D. LEGACY STAFF RETENTION

Legacy staff can be well positioned to provide a receiver with institutional and operational knowledge that will benefit the future operations of a receivership estate. A receiver may accordingly wish to look to legacy staff to augment the short- and long-term receivership staffing plan. Staff resignations and reductions in force are typical during a receivership as certain operations begin to wind-down and the insurer is no longer perceived to be a going concern. A receiver's staffing plan may also include the retention of certain legacy employees until their requisite knowledge and expertise are no longer necessary for the operation of the receivership estate. In such instances, retention incentives may be required to achieve the receiver's staffing objectives. Retention incentives may include one or more of the following:

- Maintenance or adjustment of existing benefits, including severance;
- Performance and salary review process;
- Retention bonuses;
- Educational or tuition reimbursement; and
- Providing outplacement services.

E. OTHER PERSONNEL ISSUES

The receiver should identify any personnel related litigation and other disputes to include equal employment opportunity complaints, workers' compensation claims and wage and hour complaints, etc. These matters should be managed by the receiver's personnel consultants and/or legal counsel.

X. CLOSURE OF THE ESTATE

Please refer to Chapter 10 – Closing Estates when reviewing this section.

The best time to start planning for closure is at the start of the receivership. Since the receivership process may take several years, the receiver may wish to prepare a closure task list or checklist. A partial list can usually be developed through a review of the receivership statute of the domiciliary state. The following are some of the general tasks that should be accomplished before a liquidation estate can be closed:

- All assets have been marshaled;
- Litigation has been resolved;
- Ancillary proceedings have been closed or resolved to a point that will not impede closure of the domiciliary receivership;
- Guaranty association claims against the estate are finalized to the extent that a final distribution can be made to the associations;
- All claims have been allowed or disallowed by the supervising court;
- Appropriate distributions have been made to creditors;
- Where appropriate, the dissolution of the corporate entity has been resolved; and
- Final tax returns have been prepared and filed with the federal government and financial settlements prepared as required.

A. GUARANTY ASSOCIATIONS

The claims of guaranty associations may not be completely certain at the time non-guaranty-association-covered claims (including contested claims) are adjudicated by the liquidator. The covered

claims that the guaranty associations handle are subject to a number of variables. Prior to making a final distribution, the liquidator may, where appropriate, consider policy reserve calculations as a basis for valuing guaranty association policy level claims (e.g., through the use of present value method). If early access payments were excessive, overages will have to be returned prior to processing the final distribution.

For a discussion of guaranty associations, see Chapter 6—Guaranty Associations.

B. ANCILLARY RECEIVERSHIPS

Closure of an ancillary receivership is generally less complicated than closing a domiciliary proceeding. Ancillary receiverships should be closed before the domiciliary receivership begins closure proceedings. Some state statutes provide that special deposits are established for the benefit of the policyholders in that state, who will either be paid in full or will share *pro rata* in the special deposit. If excess special deposit assets exist, the excess should be returned to the domiciliary receiver for distribution to the creditors.

Distributions to ancillary special deposit claimants are subject to the rule that all claims at that priority level share at the same percentage to the extent possible. If distributions in the ancillary proceeding will be made beyond the policyholder claimant level, the domiciliary liquidator should arrange for the excess unpaid portion of the ancillary special deposit funds to be returned to the domiciliary estate.

C. TAX RETURNS

When the receivership is required to file tax returns, scheduling the filing of the final return may be difficult. The filing of the final return will follow the application and order for closure. Counsel and tax advisors should be consulted to determine the best method for handling the filing of a final return for a particular receivership. The timing of the dissolution of the entity should be carefully considered because valuable tax attributes may be lost.

See Chapter 3, Section VIII for further discussion.

D. FINAL ACCOUNTING MATTERS

1) Adjusting and Closing Entries

Timing adjusting and closing entries with regard to the final report can be difficult. Generally, the liquidator will want to have the accounting books closed prior to the issuance of the final report and the filing of an application for closure with the supervising court. But there usually will be some accounting activity that must take place after either the final report or closure order.

During the early phases of the receivership, efforts are centered on determining what the assets and liabilities of the insurer were on the liquidation date. After the liquidator has written off any uncollectible assets, marshaled all the available assets, and distributed all the monies that can be paid, there may remain assets to be written off and unpaid claims as unsatisfied liabilities. Provision should be made for dealing with outstanding checks, escheat funds and post-closure recoveries that do not justify reopening the estate.

2) Reserving Final Expenses

Expenses may be incurred after the closure order has been issued; therefore, funds may need to be reserved for administrative expenses. These expenses may include final lease payments; employee withholding and taxes; storage charges; transportation charges; final tax preparation; bank charges; legal, accounting and data processing consulting expenses; postage; court costs; and salaries. In preparation for closure, it is necessary to have all administrative expenses current.

E. ABANDONED ASSETS AND CAUSES OF ACTION

There may be both assets and causes of action that may not be cost-beneficial for the liquidator to pursue. Since the duties of the liquidator include marshaling the assets and liquidating them for the benefit of the creditors of the insolvent insurer, it is advisable for the liquidator to obtain court approval of any decisions regarding abandonment. The liquidator may also wish to consider negotiating with guaranty

associations for the transfer of assets and causes of action to the guaranty associations as distributions in kind, potentially reducing their claims against the state.

F. FINAL REPORTS AND APPLICATIONS OR MOTIONS

A final report on the liquidation must be made to the supervising court. This final report may be filed before, after or with the application or motion for closure of the estate. (*See Chapter 9—Legal Considerations.*) Prior to closure, there may be a need to have the supervising court approve, to the extent it has not already done so, the following actions:

- Expenditures;
- Reserves set for final and post-closure expenses;
- Amounts to be paid in final distribution to creditors;
- Arrangements for destruction or storage of records;
- Valuation of any distributions of assets-in-kind to any claimants; or
- Any other significant transactions or procedures.

G. FINAL CLAIMS MATTERS

1) Final Distribution

The final distribution percentage is calculated by dividing the assets available for distribution by the amounts allowed for claims filed and approved by the supervising court. The receiver must reserve sufficiently for administrative expenses that may be incurred after the distribution has been made.

There may have been interim distributions from the estate that will need to be considered when calculating the distribution percentage applicable to the final distribution. Also, early access payments made to guaranty associations should, by order of the supervising court, be treated as distributions and taken into account when the final distribution is made. If there is a need to have guaranty associations return any portion of the early access payments, it must be identified when the receiver starts calculating the final distribution percentages.

2) Former Insureds with Unsettled Litigation

Ongoing litigation of non-guaranty-association-covered claims may impede closure of an estate. Some states provide that the insured's claims can only be paid based on the lower of: (1) the recommended and allowed amount assigned to the claim; or (2) the amount established in the underlying claim against the insured. This may require that the receiver waits for all claims against former insureds be settled or barred before making final distributions and moving the estate to closure.

3) Reducing Reserves or Recorded Allowances on Claims

After a distribution has been made, the record of allowed claims may need to be adjusted for tax purposes or to enable additional distributions to be made.

4) Unclaimed Dividends and Escheated Funds

The receiver may not be able to locate all claimants. Also, there are claimants who will refuse to accept their liquidation distribution because they are involved in litigation and believe that accepting payment would prejudice their case. State statutes may require special treatment of funds related to unclaimed distributions. Further, after a certain time period, funds held for unclaimed distributions will escheat to the treasury of the domiciliary state. (*See Chapter 9—Legal Considerations, Section III.*)

H. CLOSING THE OFFICE

After all the records have been either destroyed or sent to the appropriate archives, any separate office maintained for the liquidation will need to be closed. One of the items related to closing the office may be cancellation of any remaining lease term and insurance coverage on staff, equipment, and the office space itself. In many cases during a liquidation, the office will have been closed early in the receivership process to reduce expenses.

I. POST CLOSURE MATTERS

There may be inquiries for records and information made by former agents, insureds, and other interested parties after the closure of the estate. Usually, these will be referred to the domiciliary insurance department, and basic insurer information may be posted on the domiciliary insurance department's website. If the request is for pre-insolvency financial data, the request will probably be handled by the department. Arrangements should be made to brief someone on the permanent receivership staff or in another division within the department of insurance so that post-closure questions can be answered.

J. POTENTIAL REOPENING OF ESTATE

Some statutes provide for the reopening of an estate upon the occurrence of certain events. For example, assets not previously discovered or written off may become available, making an additional distribution possible. However, a careful analysis should be made to determine whether an additional distribution would be cost-effective.

*Chapter 2 – Information Systems***I. INTRODUCTION****A. Information Systems – Requirements and Considerations**

The management of an insurance company in receivership is, to a great extent, the management of information. To successfully perform receivership functions and fulfill all obligations and responsibilities, the receiver must effectively utilize system resources.

The nature of the receivership, conservation, rehabilitation or liquidation will affect systems requirements. The type of business written by the insurer, whether Life, Annuity, Accident & Health, Property, Casualty, Liability, Surety, Title, Workers' Compensation or other lines, will also affect systems requirements for the receiver. Systems needs, and the timing of those needs, will be different in a conservation or rehabilitation process than in a liquidation process.

Because of the importance of securing the data of any company subject to a receivership, immediate attention must be given to obtaining a backup of the data, and consideration given to obtaining a complete backup of the systems.

In all conservation and rehabilitation efforts, the immediate focus is ongoing insurance company operations and the changes necessary to help ensure the viability of the company. A priority focus will be on analysis and management of information to support decision-makers. Realizing potential opportunities such as mergers, divestitures and loss portfolio transfers will require considerable information on all aspects of the business. Throughout the conservation or rehabilitation process, it is necessary to continually consider potential future requirements, such as release of the company to existing management, transferal to new owners (of the insurance business or the entire company) or transition to liquidation. In doing this, the receiver will need to look ahead to what systems requirements may be needed for other contingencies and make arrangements so they are in place when needed.

Liquidation processes will require a focus on timely conclusion of normal operations and an accurate final statement of assets and liabilities. Systems support will be required for estate liquidation processes, including interfaces with guaranty associations, management of claims against the estate, recovery of all receivables, pursuit of causes of action to benefit the estate, and disposition of physical assets. Compliance with all legally required processes and documentation to support compliance are crucial.

B. Overview

The chapter has been divided into the following parts:

- Taking Control
- System Management and Control
- Information System Deliverables
- Implementation

These sections are in the order that anticipated issues may arise during the receivership process. Insurers will vary in size and degree of system sophistication. Each insurer will present varied problems and issues dependent on the situation. In general, companies going into receivership have often neglected internal controls which may have resulted in many control issues related to the company, its systems, and completeness and accuracy of its data. The guidelines, considerations and checklists provided herein are very broad in nature. Management judgment will best determine the appropriate degree of applicability or whether alternate processes are required.

Receiver's Handbook for Insurance Company Insolvencies

Generally, though, the receiver will first have to gain full control over the systems. Then the receiver can develop a more in-depth knowledge of processes to determine the best manner to meet the needs of the receivership.

This chapter provides suggestions and guidelines as to management of systems, issues resolution and problem avoidance in support of receiverships. While this chapter is intended to be as comprehensive as possible, it is not all-inclusive. Other methodologies may be employed to achieve the same goals in a satisfactory manner, and issues not addressed here may arise. In every receivership, no matter the size or characteristics, the receiver must exercise judgment beyond that which can be given by texts and checklists. Still, the materials provided here should assist in the exercise of that judgment.

This chapter focuses on issues primarily related to automated information systems. When considering the scope of information systems, however, it is important to apply a holistic perspective that considers systems as being made up of processes and procedures—both automated and manual, including human judgment—in performing tasks.

Other chapters of this handbook, specifically the accounting, claims and reinsurance chapters, address many issues related to information and manual processes. Information systems are an integral part of the operations of an insurance company and any receivership. However, not every system need must be met with a fully automated solution. Costs and benefits must be carefully analyzed.

There are detailed information systems checklists in Chapter 1 that should be consulted in advance if possible and then throughout the receivership process.

II. TAKING CONTROL

This section covers the activities necessary for a receiver to take control of an insurer's information systems in an effective manner. Generally, the checklists provided address a worst-case scenario: an information systems department that lacked control, where many key people have departed, and where documentation is incomplete, inaccurate or non-existent. The checklists should be completed for documentation purposes, noting those areas of the checklist that do not require action.

A. Assurance of Data Maintenance and Availability

The insurer's data will be in records and files stored within the computing infrastructure. It is important for the receiver to determine location, purpose, structure and content of data files related to all business applications. Given the complex and detailed nature of this information within the context of a contemporary liquidation as well as the security concerns that have increased significantly, it is desirable that the receiver have relevant background information prior to the signing of a liquidation order if possible. Ideally, this information would be shared with the affected guaranty funds in advance of liquidation. These steps will greatly enhance efficiency once liquidation is underway and result in even more dependable and timely protection of policyholders. A good starting point to gather pre-takeover information is the systems summary grid and any IT related workpapers from the company's most recent financial examination. Reviewing this information in advance of takeover will give the receiver a head-start for what to expect. It is essential that the receiver's information systems personnel work with the other departments within the insurer to assure that all the available information has been captured and can be retrieved and reviewed at a later date. All system storage devices, including database servers, Web servers, file servers, application servers and related storage media should be reviewed as sources of company information. End-user computing (EUC), such as spreadsheets, databases, etc., that are maintained by business departments should also be considered. EUC applications can easily fall through the cracks if there is no central repository of the EUC applications and there is turnover of personnel who maintain the EUC.

Regardless of system ownership issues, it should be the practice to immediately back up all available data on all systems. Where possible, employee workstations, including laptops, should be backed up as well.

Chapter 2 – Information Systems

At a minimum, key employee workstations and laptops as determined by receivership management should be backed up.

For each major application, the receiver should obtain the following information:

- Name of application program;
- Vendor contact information, if applicable;
- Vendor contracts
- Sources of data (automated or manual);
- References to and storage of source data;
- Complete tables of all codes used (database schema and data dictionary, when available);
- Type and frequency of processing cycles;
- Narrative descriptions, in non-technical language, of capabilities and use;
- Administration procedures, including responsibilities of staff;
- Administrative user names and passwords for the application (also, if administration is restricted to a particular workstation or terminal);
- Systems error messages and appropriate actions;
- Distribution of output reports and samples if possible;
- Usage and control of reports;
- Links to other system modules; and
- Backup procedures including storage and retention schedules

B. Security and Data Privacy

One of the highest priorities of the takeover phase of systems operation should be the review or initiation of system and data security procedures. The existing data may be the most reliable or only record of the assets and liabilities of an estate, and the need for securing this information is vital. In general, when the receiver takes control of the insurer's IT systems, access should be restricted until the receiver is confident that data cannot be altered by unauthorized parties. The receiver should identify the levels of access given to employees and any third parties for all applications and limit access as necessary. Remote access should be restricted to authorized users and only to users with encrypted laptops from trusted networks, such as corporate offices, virtual private networks (VPNs), etc.

In conducting a security review, the receiver is cautioned that relevant and important data records may reside on mainframe computers, servers, PCs, tablets, cellular phones on the systems of contractors or any combination of all of these. Historical information systems records in the form of backup tapes, which may be stored off-site, may be of equal or greater importance and should not be overlooked. The insurer may also maintain a website (see section G—Internet/Intranet/Website), which should also be included in the security review.

Receiver's Handbook for Insurance Company Insolvencies

One of the primary purposes of the security program is to obtain and safeguard all required data records, which entails the identification and securing of this data. Such a program should include the creation and implementation of a plan to limit access to the systems and data to those with a proven need. The program should enable the receiver to identify changes made to the system and the individual responsible for these changes. The ability to track changes to systems may be limited by the existing company software applications. The information systems checklist in Chapter 1—Takeover will provide the receiver with an overview of the most important aspects of a proper system security program.

In addition to securing the data of the company for conservation, rehabilitation or liquidation information, it is essential to ensure the secure handling of non-public personal information. Insurance companies and other financial institutions are subject to a variety of state and federal statutes and regulations regarding the protection and non-disclosure of non-public personal financial and health information. Some specific requirements are imposed by federal statutes such as the Gramm-Leach-Bliley Act and the Health Insurance Portability and Accountability Act, among others. Additional requirements may be found in state statutes, data security breach laws and in state insurance regulations, including those based upon the NAIC Privacy of Financial Information Regulation 2000. Ongoing compliance with applicable data privacy and security laws and regulations is essential to help further the primary goal of all insurance receiverships—the protection of insurance consumers.

Accordingly, the receiver should take steps to ensure the security and confidentiality of customer records and information; protect against any anticipated threats or hazards to the security and integrity of such records; and protect against unauthorized access to or use of such records, any of which could result in substantial harm or inconvenience to insureds or claimants.

The company may have included cyber security self-assessment or audits/ review as an integral part of its enterprise risk management program. If so, the receiver can obtain recent IT audits/ reviews such as: e-commerce areas, self-assessment and IT related reviews of significant third-party vendors. These reports could be in the form of audits/reviews (e.g. internal audit, external audit, SOC type I and II reports, or other contractor affiliate audit reviews). In the absence of a company policy that meets these criteria, it is essential that the receiver implement a data security policy and procedures suitable to the particular receivership. The procedures should be appropriate for the size, complexity and structure of the company and its data. There is guidance contained in the NAIC Receivership Data Privacy and Security Procedures for Property and Casualty Insurers in Liquidation, should address potential security threats in three areas: administrative, technical and physical.

See https://content.naic.org/cmte_e_receivership.htm for this document and other helpful receivership tools, such as the NAIC receivership Data Privacy and Security Procedures policy. Since staffing is often not available to write a new data security policy specific to each receivership, the NAIC's security policy and procedures document referenced above may serve as a guideline which could be edited for purposes of individual receiverships.

Administrative Safeguards

- Designate an individual who is responsible for oversight and compliance with security procedures.
- Publish a written policy statement setting forth the company's (receiver's) intention to protect the confidentiality of sensitive customer data from anticipated threats or hazards. The receivers' policy should include two important components, namely incident handling and communications protocols should an incident occur. Incident handling – General and specific procedures and other requirements to ensure effective handling of incidents, including prioritization, and reported vulnerabilities. Determine if there are procedures related to handling cyber-security incidents. 2) Communications – Requirements detailing the implementation and operation of emergency and routine communications channels amongst key members of management.

Chapter 2 – Information Systems

- Prepare and distribute written procedures to appropriate personnel and service providers outlining specific steps that must be followed in storage, transmission, retrieval or disposal of sensitive customer information.
- Require all employees and other users to sign an agreement to follow the data privacy and security standards.
- Evaluate potential security threats from existing staff, e.g., disgruntled employees.
- Evaluate service providers regarding the handling of sensitive customer information.
- Train and instruct employees as to their individual responsibilities regarding data privacy and security.
- Train staff to recognize potential security threats, including intentional or inadvertent downloading of malware.
- Check references and an appropriate background screening prior to retaining new staff.
- Periodically test and monitor the effectiveness of the security procedures.
- Evaluate and adjust the security procedures in light of changing circumstances.
- Use appropriate oversight or audit procedures to detect improper disclosure or theft of customer information.
- Implement procedures for notifying appropriate authorities and affected individuals if non-public personal information was subject to unauthorized access.
- Impose disciplinary measures for breaches of privacy and security rules.
- For laptops that are used outside of the office require secure network connection
- Establish a remote work policy for remote workers which includes policies for where work is to be performed with a secured network connection only and safeguards that must be in place associated with their computer and other data (paper files, etc.) used outside of the office.
- Add multi-factor authentication where possible, including email, application servers and company networks.
- Consider disabling USB ports on all company laptops and computers. if appropriate.

Technical Safeguards

- Use password-activated screensavers.
- Use strong passwords unique and independent of any personal passwords.
- Change passwords periodically.
- Prohibit posting of passwords anywhere except for a secure password manager.
- Sensitive information must be encrypted both in transit and at rest.

Receiver's Handbook for Insurance Company Insolvencies

- Limit or do not allow storage of sensitive information on portable devices such as laptop computers or removable drives or other storage media; if sensitive information is stored on mobile devices, it must be encrypted.
- Limit access to customer information to employees who have a business reason for seeing it.
- Store electronic customer information on a secure server that is accessible only with a password.
- Avoid storage of sensitive information on a machine with an Internet connection.
- Transmit data electronically only through secure, encrypted connections.
- Implement procedures for the prevention, detection and response to attacks, intrusions or other system failures.
- Regularly check with software or systems vendors to update security patches.
- Maintain up-to-date firewalls.
- Back up all customer information regularly.
- Ensure that former employees do not have access to any information systems.
- Ensure that remote access to all information systems is limited to authorized users.

Physical Safeguards

- Lock rooms and cabinets where sensitive data or data storage equipment is kept.
- Ensure the area where data storage equipment is kept is well ventilated, is capable of maintaining an appropriate temperature for the equipment is free from water hazards and is not visible through a window to the outside the office.
- Allow access to information storage areas only to those individuals with a need for access.
- Require employees to secure sensitive information in their work areas whenever they are not present.
- Dispose of sensitive information in a secure manner.
 - Hire or designate a records retention manager to supervise the disposal of records containing non-public personal information.
 - Shred sensitive information recorded on paper.
 - Destroy or effectively erase all data when disposing of computers, diskettes, magnetic tapes, hard drives, copy machines, fax machines, flash drives, or other storage media containing sensitive information.
- Ensure that storage areas are protected against physical hazards such as fire, flood or physical intrusion.
- Maintain a current inventory of all computer equipment.

Chapter 2 – Information Systems

- Collect keys, computer equipment and other storage devices from employees and disable employee access to company systems prior to termination.
- Develop a computer disposal policy/procedure which includes a strategy for the maintenance and tracking of hard drives.

C. Systems Processes for Conservation, Rehabilitation and Liquidation

Systems emphasis for a conservation or rehabilitation effort typically focuses on timely and accurate processing, resolution of issues and providing information for management. The additional considerations regarding liquidations outlined below may apply in some conservations or rehabilitations.

In a liquidation action, beyond timely processing and termination of operations, there are additional considerations related to accurate identification and valuation of all assets and liabilities of the insurer:

- Liquidation notices and proof of claim processes;
- Policy cancellation and/or non-renewal notices;
- Unearned or return premium calculation;
- Agents' balances calculation and collection;
- Unearned commission calculation and collection;
- Policyholder contract assessment calculations, where applicable;
- Reinsurance recoverable tracking and collection;
- Transmission of claims data between guaranty associations and receivers See Section IV. M. in this chapter for unique standards such as UDS and others that apply to the different types of insurers.
- Salvage and subrogation accounting and collections;
- Inventory and liquidation of physical assets; and
- Transmission of policyholder records and data to assuming insurer for life and health insurer receiverships.

Some systems will have built-in capabilities for creation of the above items, others may not and an extract from the system may need to be taken and manipulated to achieve desired results. Also, when using Company data to create reports, it is important to discuss the completeness and accuracy of the data with company staff since often companies in receivership may have issues where systems are not working properly or other reasons why it is known that the data on the system may not be complete and accurate.

D. Staff

Assuming control of the insurer's information systems is critical to a successful receivership. Gaining control of the information systems usually will be most cost-effectively accomplished through use of the existing staff. Since it is important to gain control of these areas at the onset of the takeover process, it is best to assess the staff at the inception of the receivership to determine how they can assist in the receivership process. In some cases, a plan may need to be devised to provide information systems personnel with incentives to continue their employment as the receiver requires. Even so, it is often

Receiver's Handbook for Insurance Company Insolvencies

difficult to retain IT personnel, so it is important to perform as much knowledge transfer as possible at the onset of a receivership.

After assessing the experience, potential contribution, commitment and cost of the staff in the context of the goals of the receivership, the receiver may choose to reduce staff. The allegiance of the systems staff, as with other functional areas, may be questionable, and the possibility of sabotage exists. Sabotage of information systems is hard to detect and may be extremely expensive to repair. Because of the potential exposure to loss of critical data, the systems staffing decisions should be made quickly and decisively. Where possible, restrict full access to any systems, equipment or work areas until staffing decisions have been made and implemented.

E. Hardware

In taking control of systems operations, frequently the first concern of the receiver is to inventory and secure the hardware. The hardware may be owned, leased or shared, and arrangements should be made for continued use to the extent the receiver finds necessary to maintain continuity, especially at the onset of the receivership. The receiver will also want to identify collateral equipment located at branch operations, the homes of employees, related entities, storage facilities, other insurers and agencies. All equipment should be inventoried, including all types of portable computers, tablets, cellular phones, and communication equipment.

Contingency plans may need to be developed in case the receiver must cease use of the systems in order to liquidate components.

Maintenance of the hardware should be done on schedule, and the environment should be maintained to prevent loss of data or system outage.

The configuration of the hardware should be specifically identified and cataloged. The computing hardware environment may be made up of a combination of mainframes, mid-size computers, client servers and PC-networked equipment.

For mainframe or mid-size computers, the most important components of their configuration will be:

- CPUs (central processing units);
- Data storage devices;
- Printer(s);
- Tape drives;
- Terminals;
- Data communications equipment; and
- Any other peripheral devices.

Similarly, all PC-network configurations should be identified and may include:

- Network servers, firewalls, intrusion detection devices, routers, switches, etc.;
- Mail servers;
- Web servers;

Chapter 2 – Information Systems

- Imaging servers;
- PCs and laptops;
 - Make and model
 - Internal storage devices
 - RAM
 - Clock speed
- External storage devices;
- Printer(s);
- Keyboards and other input devices, e.g., scanners, microphones and pointing devices such as a mouse, track ball, touch pad or other sensor;
- Monitor(s);
- Any LAN-connected devices (high-performance cables, terminals, file servers, printers, modems, etc.);
- Data communication equipment such as cell phones, tablets, and any other internet connected devices; and
- UPS (Uninterruptible Power Sources) and generators.

F. Systems Software and Application Software

Systems software includes broad and varied types of software such as operating systems, utility systems, database management, virus protection, e-mail systems, and any other software that is not classified as business application software. These systems are typically commercially available systems that are closely related to hardware components.

Application software directly supports business functions and may be licensed, commercially available software or may be custom-developed including legacy applications developed in-house.

Taking control of the software requires a different approach than that applied to most of the other assets of the insurer. This is especially true for custom-developed software. Control of the software initially means knowledge of the software in place and its intended purpose to the insurer. For licensed software, it is necessary to have an accurate inventory of the software, to have proof of licenses and status of maintenance contracts to ensure authorized legal use, and to obtain updates from the software vendor. In the case of custom-developed software, it is necessary to identify the developer(s), whether contract or in-house, and any relationship with the insurer. It may be necessary to retain an intellectual property attorney to determine the company's rights to the software. The program source code must be physically located; whether on the company's servers or elsewhere, and rights to the source code must be determined. Succession planning information should be obtained for software developed by a sole proprietor contractor.

It will be necessary for the receiver to identify the applications that address the following functional requirements:

- Marketing and sales management;

Receiver's Handbook for Insurance Company Insolvencies

- Agency interface;
- Customer service;
- Claims management;
- Policy issuance and endorsement processing;
- Premium billing and accounting;
- Reinsurance;
- Policy receivables and payables;
- Cash receipts and disbursements;
- General financial management and reporting;
- Investment management;
- Data warehouse
- Word processing and publishing;
- Company Web site; and
- External interfaces and data sources.

G. Internet/Intranet/Website

Increasingly, insurers are utilizing the Web as a tool for their business and have Web-based technologies implemented. The receiver should review the company's Internet content and application processes. The receiver should also ascertain what Web services are being provided by the insurer and to the insurer by external vendors. Internet service providers should be documented and service contracts obtained and reviewed. The receiver should assume the role of Web-master or make arrangements with a third-party vendor. This may require that external Internet service providers be notified of the change and new passwords issued. Firewalls, Web servers and proxy servers, routers, and other Web- and network-related items should be reviewed for legal, data, ownership, confidentiality and security issues. Integration with the receiver's own Web usage and applications should be reviewed and considered.

If premiums are being collected over the internet the receiver should ascertain the Company is PCI compliant. PCI compliant organizations will have an annual PCI assessment. If the Company is not PCI compliant it is recommended that areas of non-compliance be mitigated or the ability to take electronic payments removed. The receiver should also understand the process for collecting electronic payments and what if any action needs to be taken by company or receiver personnel to collect and record such payments.

H. Newer Technologies

As emerging technologies become more common in the field of insurance, the receiver should be aware of newer technologies that may have been implemented by the insurer.

Imaging systems and distributed processing of underwriting, claims, collections and other operations all have special requirements that the receiver will need to address. An analysis will be needed to determine system ownership, hardware and network components used to support these implemented technologies,

Chapter 2 – Information Systems

and vendor involvement in the support and maintenance of these systems. These should all be reviewed by the receiver to determine risk, cost benefit of continuation, conversion and receivership issues.

I. New Business Strategies

The receiver should ascertain system ownership and system usage issues such as leased systems, outsourced contractors or vendors performing work or services for the insurer, system availability, and security. The receiver should verify that there will be sufficient access to data and functions necessary to perform the receivership processing. The receiver should identify all the involved parties, what services, hardware and software have previously been provided, what is currently being provided and at what cost.

J. Remote Work

In 2020, the COVID-19 pandemic not only created new challenges for the administration of receiverships where activities were carried out remotely from the insurer's corporate offices, but also brought about changes in how insurance companies operate. Specifically, more insurers have allowed staff to move to remote work or hybrid (partially remote) work environments, as well as to rely more on paperless electronic records and less on (or even eliminate) hardcopy documents. This has led to the need for use of platforms that allow for secure remote access by authorized staff and enhanced data security.

A few IT considerations for the receiver, if the insurer has staff who work remotely, or if the receiver's access to on-site IT systems is limited due to a disaster, include but not limited to:

- Review the insurer's Disaster Recovery and Business Continuity Plan for remote access and maintenance of systems
- Identify and understand the critical automated systems that need to continue operating to support business functions, the persons responsible for critical systems, location and back-up systems (i.e., colocation data center).
- Review the insurer's Work-From-Home Policy to gain an understanding of the roles and responsibilities of staff working remotely
- Understand which employees have remote access to systems and/or may have company owned equipment at home (i.e. laptops, monitor, printers and office furniture)
- Understand what business systems, programs, technology, (e.g., virtual private network (VPN), phone/communication systems) that have been established for employees to work remotely and the internal controls over those systems
- Understand the insurer's cybersecurity controls and data security protocols that are in place to facilitate secure remote access to the requisite systems and data by off-site staff

III. SYSTEM MANAGEMENT AND CONTROL

The preceding section of this chapter dealt with the first task facing the receiver when taking over a distressed insurer—establishing control. This section will guide the receiver through a more detailed continuation of that process by identifying the areas of management and control.

A. Systems Operations

Receiver's Handbook for Insurance Company Insolvencies

The hardware, software and personnel who keep systems running make up the systems operations. In many mainframe computer operations, the users of the application software may never have seen the actual data center and its various related equipment. Systems operations are typically supported by an internal or external help desk support and network administration.

B. Input/Output Controls

Many application systems both receive and send data to and from other application systems, which can be internal, external or both. This data may be in the form of removable tapes or disks that are visible, or may be in the form of files/databases that reside on non-removable disks and are created by one application system, then later input or electronically transmitted to another application system or cloud storage. The input, output and transmission of all data should be subject to controls, which may range in form from a simple notation indicating the application name/date/time to a more complex procedure (manual or automated) that balances or validates record counts and control totals. Controls may also be part of the application program and be unseen until an error or notification prompt occurs.

The receiver should verify that these internal and external controls are in place and fully documented. After the urgent control matters have been addressed, areas where these controls might be improved will be noted through the operation of the receivership.

C. Maintenance/Updates

Some licensed software is automatically maintained and upgraded by its vendor. In many instances, the end user or owner identifies the availability of, and acquires, updates. The receiver should be aware of the availability of updates to software used by the insurer. For some mainframe and mini-computer configurations, current maintenance costs may exceed the cost of converting to a PC-based system. The inventory made of the software and its licensing is important to ensure proper maintenance and may impact business decisions regarding continued utilization of the existing system.

D. Networks

Network systems in which an on-premises file server, cloud server or central processing unit forms the hub of a network of interrelated PCs are now common. The age and adequacy of the networks should be ascertained and the availability of maintenance and updates determined. Networks may include not only the insurer, but other affiliates or holding company of the insurance company; thus, the ability to separate the network into independent components may be problematic. See also Section III.G. below regarding segregating commingled records and data.

E. System Location

The physical location and management of the computer system is also an important issue. Many computer systems are completely internal to the insurer. That is, all of the hardware and software components of the system are within the insurer's premises and control. The benefit of this is that the information systems operation is entirely dedicated to, and focused upon, the objectives of the insurer. However, this also requires that all aspects of the systems operation be managed and controlled by the receiver. To maintain and control an entirely in-house operation, it is vital that the receiver have sufficient systems staff in place. In instances where the receiver has determined that the responsibility and expense of an in-house information systems operation are not desirable, he or she may look to alternative arrangements, such as out-sourced operations.

1. Outsourced Operations / Hosted Systems

A service provider may have performed some or all of the data processing functions. The arrangements for this service may vary from hosted systems to a service provider maintaining the company's internal systems. The receiver's staff should perform an evaluation of the facilities and

Chapter 2 – Information Systems

competency of the service provider. The receiver should verify that existing contracts will provide sufficient flexibility and accessibility to meet the receiver's needs; new contracts may need to be executed.

2. Shared System

The insurer may share data processing systems with affiliates or other companies, or have its data is hosted and handled by a third party. The receiver should ascertain to what extent the system will be available and whether confidentiality will be compromised. The legal issues arising with shared systems should be carefully considered. In the event that the receiver determines that a shared system is not adequate for the receivership's needs, a plan will need to be developed to migrate the insurance company data to another system or dedicated cloud under the control of the receiver or a host company that is independently contracted with the receiver. The receiver may wish to retain an independent consultant to assist with the migration. See also Section III.G. below regarding segregating commingled records and data. See Chapter 9, Section VII for discussion of legal issues relating to information systems and data processing.

3. Affiliate Functions

Some information systems functions may be performed internally, while others are performed by affiliates. Again, the receiver should verify that there will be sufficient access to data and functions necessary to the receivership proceeding. The receiver should also review the cost of any services provided by affiliates. See also Section III.G. below regarding segregating commingled records and data.

F. System Ownership

Systems may be owned outright by the insurer, leased from a third party, leased from an affiliate or provided by a vendor on a fee-for-service basis. Further, various combinations of these possessory interests can exist. However, regardless of the ownership of the systems, the records and data of the insurer held by an affiliate are and remain the property of the insurer and are subject to control of the insurer.

In most straightforward ownership situations, the insurer owns the hardware and software, and the insurer's employees maintain the systems. Possibly the most difficult situations to unravel are where: 1) a related party owns the hardware and leased it to the insurer; 2) another party developed the software and leased it to the insurer; and 3) the staff who operated the systems are on another entity's payroll.

The insurer may own, lease or have borrowed its software from a third party. The ownership of the software should be determined, as ownership affects the receiver's rights to use the software. A contractor may be able to provide services using certain software, but the receiver may not directly use the same software. That is, software licenses may not be assignable to the receiver. Where this is the case, the receiver may have to purchase its own license or use an information systems contractor.

The receiver should identify the service providers, the services performed, hardware and software provided, and all of the applicable costs. The receiver should also arrange for temporary continuation of the information systems services that are critical to the continued operation of the insurer (in a conservation or rehabilitation) or to protect the estate. Whatever the system ownership situation, it should be a practice to immediately back up all available data on all systems, including all active PCs.

G. Conversion

It may be desirable or necessary to relocate the insurer's systems operations or physical servers to a new facility; therefore, the ability to relocate the existing servers or systems should be ascertained. If determined necessary but are unable to relocate, recreation, cloning or converting data to a new system

Receiver's Handbook for Insurance Company Insolvencies

into the receiver's environment may be a possibility. The receiver should determine the cost of and ability to create a clone prior to implementing a plan to relocate an office. Sufficient planning and testing by the receiver should be undertaken prior to any decision to move, migrate, clone and/or convert company data.

H. Common Systems Applications

The insurer or estate can put information systems to many uses. The most common are listed below. In each instance, the receiver should ascertain the adequacy of the system and the need to update or enhance it for the tasks that will be unique to the receivership.

1. General Ledger and Accounting Books

The accounting and reporting functions of the insurer or receivership are frequently handled through the information systems. The books of the insurer may not be books at all but rather entries recorded in the information systems. Chapter 3—Accounting and Financial Analysis specifically notes the types of records that may be kept electronically. The subledgers, cash receipts and disbursements records, registers, journals, claims, reinsurance, and Tax records may all be computerized. The related software system may be designed so that all of these records are integrated. Common source documentation for related records may be stored once and linked to each of the related records, cutting down on unnecessary duplication. That is, data is only entered once, and each subsystem can access that data without manual intervention. The receiver should be aware of how the system is integrated and where manual intervention can occur and be cognizant of linked data if attempting to bifurcate or move only a subset of the existing data.

2. Claims

The claims records will likely be kept in an information system to accommodate reporting, statistics and control of the claims process. (See Chapter 5—Claims.) In a conservation or rehabilitation, control in this area is critical and systems support is vital.

In a liquidation, the claims information system is usually a key component to the notice process and may be critical to the adjudication of claims. Where the insurer has an automated claims system, data will most likely need to be extracted and imported into the receiver's claims administration system to facilitate the proof of claims process, communication with the guaranty associations and reinsurance recoveries. Where the receiver elects to use the company's existing system to process estate claims, it will need to be modified to accommodate several new data elements, including, but not limited to, proof of claim numbers, priority classifications, types of claims (third party, guaranty fund, etc.) and Uniform Data Standard (UDS) conversion when transmitting claims data to property and casualty guaranty associations. (See Chapter 2, Section IV. M. -- Liquidation Considerations.)

3. Accounts Current

Some insurers will have systematic tracking of their agents' accounts. In a conservation or rehabilitation, prompt and efficient accounting to agents can improve cash flow. The receiver may need to evaluate blocks of business for retention or disposal. The information from the accounts current can be used to help make this determination.

Detailed electronic records of agents' balances for premium, commissions, collections, endorsements, cancellations and remittances can be extremely useful in a liquidation to determine the fixed rights and liabilities of the managing and producing agents. Collecting monies due the estate from agents is dependent on the availability of sound data supporting the amounts due.

Chapter 2 – Information Systems

4. Premium Financing

The receiver should examine this area for the same reasons as Accounts Current. The receiver should look for affiliate companies that use or share the insurer's information systems for premium financing. For reconciliation and UDS purposes.

5. Marketing

Marketing functions may be important in a conservation or rehabilitation, but in liquidation, there generally is no ongoing marketing function. This is not to say that the marketing database and records should be discarded. These records can be useful in determining what caused the insurer's financial distress. Further, the files and reports related to the marketing function usually are closely related to the agents' files and reports and the account current systems.

6. Investments

Information regarding the insurers' investments most likely will be found on a PC or internal drive in the accounting or executive offices. The receiver's staff should check to determine if backups or subsidiary systems exist and whether subscriptions to specific services need to be continued.

7. Reinsurance

Usually, reinsurance receivables will be the largest asset of the receivership, and collection is highly dependent on reliable premium and loss information. Use of information systems in recording and tracking this information is fairly common. Depending on the level of integration of the systems, this may be part of, or at least closely connected with, the claims system or accounting system of the insurer.

Increasingly, a third-party hosted web application or system is utilized to track reinsurance receivables. Continued use of the application or system by maintaining or modifying existing contractual relationships with third-party vendors may be utilized. Alternatively, an attempt to clone or recreate the system within the receiver's environment may be viable options.

8. Email

Virtually every insurer uses an industry standard email system. Emails are important company records that must be preserved. In addition to performing a backup of the email server at the start of the receivership, it is also good practice to extract individual email boxes of key employees at that time as well. Consideration should be given to periodically backing-up these files throughout the receivership to insure preservation of communications. Email backup restoration often requires the use of outsource computer forensic experts. Extracting email boxes in readable format at the outset of a receivership will save costs down the road should email records be required for litigation purposes.

If the insurer is part of an affiliate insurance group or pool which includes employee e-mail correspondence pertaining to other insurance companies that are not entering into receivership, the receiver may need to execute a confidentiality agreement with the surviving entity(s) in order to obtain the troubled insurance company's electronic correspondence.

9. Large Deductibles

Large deductible recoverables can be a large asset of the receivership, and, like reinsurance, collection is highly dependent on reliable policy and loss information. Use of information systems in recording and tracking this information is fairly common. As with reinsurance, this system may be a part of, or at least closely connected with, the accounting or claims systems, or information may be tracked in a separate application or system.¹⁰ Other

Receiver's Handbook for Insurance Company Insolvencies

There may be other information systems, including PC-based calendar and tickler systems, time tracking and personnel systems, salvage and subrogation systems, imaging systems and litigation support systems on either PCs or larger computers. Further, through Web sites and online services, computers now serve as important common communication devices. The company's Web site can be used to provide and gather useful information about the company in receivership.

The receiver may need to acquire utility programs to perform such functions as restoring deleted data or backing up data in a compressed format. The administration of some receiverships can be litigation-intensive. Case management or other information systems in support of legal activities should be considered for those receiverships.

Another use of information systems that is important to note is project management. Application programs for project management are widely available and understandable to the average user. This software can be put to excellent use in identifying what needs to be done to administer the receivership in the most cost-effective manner.

Finally, the use of electronic data for all documents is becoming more common. Documents may have been scanned and the originals destroyed or kept in a manner that makes them difficult to use. In the event of liquidation, the receiver may be compelled to export these electronic documents to the receiver's systems or external hard drive for safekeeping, as they serve as the only official company records.

11. End User Computer (EUC) Applications

End user computing (EUCs) "applications" (spreadsheets, databases, etc.) are often used as part of reserving, reinsurance, investments, modeling, forecasting, and other areas. Critical "applications" may get overlooked because they often do not fall under the IT department's management and/or control structure. Rather they are managed and updated by the business unit. Companies with good internal controls will have a centralized repository of EUC or User Developed Applications, but often troubled companies do not have this information. If an "application" is critical in producing the information needed by the receiver or guaranty association, the receiver should identify the "application," ensure that change management is in place and guard against loss of institutional knowledge loss if the business unit employees are terminated (i.e., that the receiver has staff able to run the program.) The receiver will need to inquire with personnel in the Company's various business units to identify these "applications" and should create a list of the various applications. If these applications are password protected, the receiver should also obtain the password. Before using these "applications" to make receivership decisions, the receiver should review the application to determine its accuracy, for example, checking formulas in an Excel spreadsheet.

IV. INFORMATION SYSTEMS DELIVERABLES

The purpose of this section is to assist the receiver in determining what deliverables and services will be needed from the information systems. There will be generic requirements that are applicable to all receiverships. However, to a larger extent, the receiver's information systems requirements will reflect the characteristics of the subject insurer. The receiver will need to look at the full scope of historical operations, as well as the new requirements that are specific to the receivership proceeding, to determine the data processing tools that are essential to carry out the receiver's obligations, keeping in mind what the receiver has inherited from the insurer in terms of disposal and acquisition costs.

It may be necessary to perform a detailed study of a receiver's data processing requirements and compare this to the level of systems functionality and security provided by existing systems. If this level of functionality or security is deemed to be unacceptable, the receiver will need to modify the existing systems or replace them.

Chapter 2 – Information Systems

This section provides a checklist of the functions associated with insurance, reinsurance and receivership that should be considered when evaluating system requirements, including software, hardware and security considerations. Software considerations will include any accounting, claims, imaging or policy applications, the management of email and/or instant messaging platforms, along with any other tools that provide data capture, processing and reporting capabilities. Hardware requirements will include computing power of application servers and data storage devices, including both on premises and cloud hosted, as well as peripheral equipment and related items, such as network capabilities. Security considerations will include data protection, endpoint protection, user access controls, network security and physical security.

By definition, any list of standard requirements may fail to address requirements unique to an individual estate. This checklist will serve as the basic outline of a systems requirements study that should be supplemented by the receiver and information systems staff.

A. Considerations Regarding the Insurer’s Historical Business Practices

It is important for the receiver to quickly develop an understanding of the business practices of the subject insurer. This understanding will affect decisions regarding the receiver’s ongoing information systems requirements and will provide the parameters for future information systems needs of the receivership.

B. Volume and Geography of Business

A preliminary task is to determine how many policies were written per year and for how many years, and in most cases, the geographic breakdown of the policies. The number of transactions (accounting, claims, reinsurance, etc.) associated with each policy should be considered along with the corresponding costs. This information is commonly requested by the receiver’s staff immediately after the commencement of a receivership. The following items should be considered in determining the volume of the insurer’s business:

- Policies;
- Claims;
- Claim transactions;
- Claimants;
- Premium volume;
- Reinsurance agreements;
- Reinsurance participants;
- Brokers/intermediaries/agents;
- Face value of the policies (Life);
- Cash surrender value (Life);
- Policy limits (P&C); and
- Geographic distribution:
 - by state, whether one or many;
 - territory, county or zip code breakdowns within a state;

Receiver's Handbook for Insurance Company Insolvencies

- by guaranty fund; and
- worldwide (with foreign exchange requirements).

C. Types of Business Written

Initially, it will be necessary to identify general characteristics of the insurer's business practices and the insurance/reinsurance. If the insurer wrote only direct or primary insurance, the ability to process assumed reinsurance may not be of immediate concern to the receiver. However, if the insurer ceded reinsurance, the ability to track and control ceded placements may need to be considered in the systems requirements. Also, if brokers or intermediaries processed reinsurance (assumed, ceded and/or retroceded), the receiver may need to determine if these arrangements are to be continued, or if this function needs to be brought under the direct control of the receivership. If it is not brought under direct control of the receiver, the receiver should carefully monitor this function and work closely with the intermediary.

This analysis of insurer's business practices and the insurance/reinsurance written will provide a general idea of systems sizing and related requirements and should include an analysis of:

- Lines of business – The lines of business underwritten and the characteristics of this business may have a substantial impact on information systems requirements. If it is a business in which claims will develop quickly, the requirement may be quite different from long-tail business in which claims will take a long time to develop. If the business includes large-deductible or loss-sensitive features such as retrospectively rated premiums, there will be additional system demands. This also will impact the amount of historical information that must be maintained in the systems.

D. Corporate Structure

The type of corporate structure of the insurer (single stand-alone company or one of several affiliates) and how many offices it has are factors to be considered when evaluating the information systems.

E. Sources of Production

The manner in which a company acquired its business (e.g., was it a direct writer, did it use MGAs, brokers or both) will have an impact on the location and source of critical data.

F. Claims Handling

The way a company handled claims will affect information systems requirements as well. Claims can be handled exclusively in or in a combination of the following:

- In-house;
- External adjusters;
- TPAs;
- Agent/MGA; and
- Other subsidiaries, related operations.

G. Affiliated Companies

Different companies with a common parent often use a single, centralized system, which can result in data security and privacy concerns. Certain data of the insurer and the affiliate may be comingled within the same systems. The receiver or the affiliate, should segregate the data of the company in receivership from the affiliates' data.

Chapter 2 – Information Systems

On Aug. 17, 2021, the NAIC adopted revisions to the *Insurance Holding Company System Model Act* (#440) and *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) addressing data and records of the insurer that are held by an affiliate¹. Specifically, the Model Act #440 revisions clarify the following:

- All records and data of the insurer held by an affiliate are and remain the property of the insurer, are subject to control of the insurer, are identifiable, and are segregated or readily capable of segregation², at no additional cost to the insurer, from all other persons' records and data. The affiliate may charge a fair and reasonable cost associated with transferring the records and data to the insurer; however, the insurer should not pay a cost to segregate commingled records and data. Therefore, if records and data belonging to the insurer is held by an affiliate (e.g., on the affiliate's systems), upon request, the affiliate shall provide that the receiver can:
 - obtain a complete set of all records of any type that pertain to the insurer's business
 - obtain access to the operating systems on which the data is maintained
 - obtain the software that runs those systems either through assumption of licensing agreements or otherwise
 - restrict the use of the data by the affiliate if it is not operating the insurer's business
- The affiliate shall provide a waiver of any landlord lien or other encumbrance to give the insurer access to all records and data in the event of the affiliate's default under a lease or other agreement.
- The Model #440 and #450 revisions also describes that records and data that are otherwise the property of the insurer, in whatever form maintained, include, but are not limited to, claims and claim files, policyholder lists, application files, litigation files, premium records, rate books, underwriting manuals, personnel records, financial records or similar records within the possession, custody or control of the affiliate.
- Model Regulation #450, Section 19 revisions update and expand on provisions that should be included in agreements for cost sharing services and management services between the insurer and an affiliate.
 - Revisions specific to records and data clarify, similarly to that of the revisions to Model Act #440, that records are data of the insurer are the property of the insurer, are subject to the control of the insurer, are identifiable, and are segregated from all other person's records and data or are readily capable of segregation at no additional cost to the insurer.

¹ Although in 2021 the NAIC adopted revisions to the *Insurance Holding Company System Regulatory Act* (#440) and *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) related to receivership matters including records and data, these revisions may not yet be adopted in every state; therefore, receivers should refer to the applicable state's law.

² . Model 440/450 addresses the insurance groups' responsibility to ensure that data is segregated or readily capable of segregation. Receiver should ensure that the process for segregating data does not interfere with ongoing operations.

Receiver's Handbook for Insurance Company Insolvencies

- If the insurer is placed into receivership, a complete set of records and data of the insurer will immediately be made available to the receiver or the commissioner, shall be made available in a usable format and shall be turned over to the receiver or commissioner immediately upon the receiver or the commissioner's request, and the cost to transfer data to the receiver or the commissioner shall be fair and reasonable.

H. Foreign Exchange Considerations

If a significant amount of the subject insurer's business is international, it may be necessary to include foreign currency exchange considerations in a systems requirements study.

I. Existing Systems

The receiver's staff (or an independent consultant) needs to determine if the existing systems adequately process the business or if those systems must be supplemented with additional processing. If it is the latter, the receiver should then determine whether the level of supplemental processing required is acceptable, in terms of accuracy and the cost of processing. This will establish whether the existing system(s) are adequate to provide the receiver with the amount and types of information required.

The receiver may require various types of information in the administration of an estate. Especially with systems that do not permit online inquiry, it is imperative that reports which are adequate for the receiver's purposes be produced. At a minimum, the existing systems should have the capability of generating a wide variety of reports. The receiver's staff should carefully examine the available reports to determine whether they are adequate or if custom reports need to be developed, assuming the data stored in the systems can support custom reports. Reports are normally required for the following types of information:

- Policies and contracts;
- Accounting;
- Claims;
- Accounts receivable/payable;
- Cash;
- Reinsurance;
- Guaranty fund claims counts and reserves by state; and
- Earned and unearned premium.
- Large Deductible Collections and Collateral

The following types of documentation should exist for all of the company's systems:

1. Systems Documentation

Systems documentation shows how the system operates from a technical perspective. Documentation should include file structures, record layouts, data model and related data dictionary and systems administration information pertinent to running the system and producing reports.

Chapter 2 – Information Systems

2. Process Documentation

Process documentation consists of narratives and diagrams of the processes involved in the major functions of the systems—imaging, policy administration, claims administration, reinsurance reporting, accounting and billing, etc. Documentation should include the interaction of various systems and feeds to and from outside entities.

3. User Documentation

User documentation shows users how to operate the system to perform their jobs. Documentation should include sections that are specific to particular functions, e.g., claims, accounting, etc. Note that in many off-the-shelf systems, the only user documentation that exists is the online help.

J. Data Validation

The systems should perform basic data verification functions, such as ensuring that the date of loss falls within the coverage period. The system should also provide some form of validation to ensure that data entered conforms to predetermined values and formats (e.g., all dates or dollar values are numeric, etc.). This helps ensure the accuracy of the data and allows the receiver to predetermine acceptable data standards.

K. System Requirements

The performance characteristics of the information systems as they relate to the processing requirements of the receivership need to be analyzed. If the system does not have sufficient resources to process the volume of data required, it may be necessary to enhance or replace the related computer hardware with higher capacity hardware. Conversely, if the computer system exceeds requirements, the receiver may wish to consider the cost benefit of system sharing or, provided company data is appropriately segregated, downsizing.

1. Application Servers

Company systems run on local or cloud-based application servers, which must be analyzed to ensure sufficient computing performance. Further, because servers are prime targets for malware, technical staff should analyze company servers to make certain patching is current, malware protection is implemented, the local firewall only permits the minimum necessary services and that all servers are being backed up out-of-band³. On premises servers should be physically secured with least privilege⁴ access applied.

2. Networks

Company switches, routers and firewalls will need to be analyzed to ensure sufficient performance when systems and users access web-related services, such as a cloud-based hosted email service. Network tools are an essential layer of defense for the security of company systems. Technical staff should review network protocols to verify that entries onto the company network is properly authenticated (two-factor authentication strongly preferred) and that data is being backed up out-of-band.

³ Communication between parties utilizing a means or method that differs from the current method of communication (e.g., one party uses U.S. Postal Service mail to communicate with another party where current communication is occurring online). Sources: NIST SP 800-32 under Out-of-Band.

⁴ The principle that a security architecture should be designed so that each entity is granted the minimum system resources and authorizations that the entity needs to perform its function. Source: NIST SP 800-12 Rev. 1 under Least Privilege.

Receiver's Handbook for Insurance Company Insolvencies

3. Data Storage Requirements and Sizing

Modern storage devices can be managed on premises or in public/private cloud-hosted environments. Technical staff needs to consider the volume of historical, current and anticipated future records that will need to be stored on the computer system. Note that imaged records like PDFs and JPEGs are significantly larger than other document types, which can increase storage requirements as a company reduces its reliance on paper processes. Technical staff must ensure company data repositories are secure, encrypted, and that access is administered on a least privilege basis. Backups of company data should follow similar protocols and should be tested by technical staff to ensure viability in the event of a data loss.

L. Additional Considerations

Other systems considerations to address in assessing systems requirements include:

1. PCs, Laptops and Terminals

To operate the system, an adequate number of PCs, laptops or terminals need to be available. The determination of that number will be affected by the type of system as well as the number and functions of staff members required to process the volume of business. Technical staff should determine whether endpoints are encrypted, properly patched, limited by the company firewall and malware protection is applied.

2. Environmental Considerations (Climate Control)

Computers, whether mainframe, mini, or PC-based servers, generally require a stable temperature and humidity-controlled environment in which to operate. Failure to provide adequate air conditioning and/or heating can cause catastrophic systems failure. Incorrect humidity can cause excessive static, which is especially dangerous due to static discharge. It is therefore necessary to balance the computers' thermal output with a temperature control system capable of maintaining the operating temperatures and humidity specified by the computer manufacturer(s). A water alarm is also a good investment, especially if raised floors are used. Physical access to the computer room should also be restricted and carefully monitored.

3. Environmental Considerations (Power Consumption)

Data processing and networking equipment is sensitive to the quality of the electrical power supplied to it. Surges, spikes and brownouts of any kind can damage equipment, cause systems to crash or, in some cases, corrupt data. Most data centers and their attendant equipment are equipped with power conditioning of some type. (PCs usually have surge suppressors for this reason.) Power conditioning can take various forms, but data centers usually have as a minimum an Uninterruptible Power Source (UPS) that filters the power before distributing it to the equipment. A UPS may also have a backup battery that will power the equipment for a short interval while waiting for power to stabilize or allow a graceful shutdown. Emergency lighting should be provided with enough battery time to allow a safe shutdown and evacuation of the area, if necessary. Emergency shutdown procedures should be available to personnel. Finally, a UPS may be coupled with an auxiliary generator which will supply electricity during a power outage.

In addition to special power and heating, ventilation and air conditioning, many dedicated data centers have fire suppression systems. These systems may be stand alone or tied into a building fire detection panel. The receiver should become familiar with how the fire suppression system operates and how it should be tested. Failure to keep these systems in good working order and to follow procedures could be deadly. It is important that testing and training be carried out regularly and that procedures be posted and read by data center personnel. Additionally, the fire suppression system must, at a minimum, comply with local fire and safety codes.

*Chapter 2 – Information Systems***M. Liquidation Considerations**

In liquidation, there are several special considerations as a result of the fixing of rights and liabilities and the involvement of guaranty associations. In nearly all liquidations, guaranty associations are the initial direct handlers and payers of most policyholder claims or other policyholder contractual obligations. In certain instances, guaranty associations are required to provide some level of continuing policyholder coverage. The receiver should consider the ability of the information systems to supply information required by guaranty associations. Most of the data should already be in the company records, but the information systems will need to accommodate the unique needs of the insolvent insurer and the guaranty associations.

1. Property and Casualty Guaranty Funds

For property and casualty insolvencies, this information must be in compliance with the Uniform Data Standards (UDS) in order to allow the guaranty associations to meet their statutory obligations. Therefore, UDS expertise is needed to determine whether the systems meet all of the applicable UDS record requirements. The receiver may elect to have an analysis of the system data elements performed by a representative of one or more of the guaranty associations or outside consultants.

2. Compliance with UDS

The UDS is a precisely defined series of data file formats and codes used by receivers and property/casualty guaranty associations to exchange loss and unearned/return premium data electronically. These formats were developed by a group of personnel representing both receivers and guaranty associations and submitted to the NAIC. The NAIC originally endorsed the use of UDS effective March 31, 1995. The formats were revised and updated during 2003/2004 with an implementation date of January 1, 2005. Since this time, several additional updates have occurred. UDS and the UDS Manuals are managed by the UDS Technical Support Group (UDS-TSG).

The National Conference of Insurance Guaranty Funds (NCIGF) developed a secure process for transferring UDS data from the property and casualty insurance guaranty associations to insurance receivers. The concept proposed by the California Liquidation Office in 2005 and the process advanced by the NCIGF in 2007 is known as Secure Uniform Data Standards (SUDS) utilizes Secure File Transfer Protocol (SFTP). SUDS provides cost savings by creating greater uniformity and efficiency in how UDS data is transferred from guaranty associations to insurance receivers. SUDS also provides privacy protection through the use of a secure server. In 2012, the NCIGF developed a web-based application that allows receivers to quickly and easily create UDS records for distribution to the guaranty associations through SUDS. The application is known as the UDS Data Mapper⁵. The NCIGF, through its subsidiary, Guaranty Support, Inc. (GSI), maintains both SUDS and the Data Mapper and makes them available to insurance receivers or the guaranty associations at no charge.

The NCIGF maintains and provides updated copies of the UDS Manuals. For further details about UDS as it applies to claim records or the implementation of UDS, please refer to the UDS Operations Manual⁶. Information and formats relating to UDS financial reports from the guaranty associations

⁵ The UDS Data Mapper is available at <https://udsdatamapper.com>

⁶ <https://www.ncigf.org/resources/uds/uds-claims-manual/>

Receiver's Handbook for Insurance Company Insolvencies

are contained in the UDS Financial Manual⁷. The site also includes a helpdesk request form, which emails questions to members of the UDS-TSG⁸.

B. Insolvency Data Transfers

Guaranty associations become statutorily obligated to pay covered claims when the court enters an order of liquidation with a finding of insolvency. The goal of every insolvency is to transmit relevant company claims and policy data to the guaranty associations on the date of liquidation. The guaranty associations and their coordinating body, the NCIGF, have established experts and tools to assist receivers with the transmission of insolvent company data.

(i)Evaluation

Company data will be spread across multiple information systems (claims, policy, accounting, imaging, etc.) oftentimes managed by third party administrators. Each information system is a unique source of data requiring independent attention to extract, process and convert to UDS. On average, each source takes roughly two weeks to process. Getting access to company data managed by third parties can be complicated when it is commingled with noncompany data. Working with information system administrators to segregate company data pre-insolvency can save precious time when an insolvency is imminent. In the event policy and claims data cannot be transmitted to the guaranty associations on the day of liquidation, providing remote access to those systems can help them address hardship claims and other urgent matters.

(ii)Extraction

Beyond the generation of reports, most information systems are not designed to export significant portions of data. This is especially true of imaging applications, which are used in “paperless” offices. Extracting the relevant data from these systems requires specific technical training and oftentimes server access. Data extraction by competent IT professionals can take days or even weeks to complete though various factors can increase the extraction time. If the system is administered by a third party, several factors can add additional delay, such as the administrator not having been paid, company data being commingled with third party data, or the administrator has insufficient staff to extract company data in a timely manner. Obtaining regular backups of all company data from the administrator can help ameliorate some of these concerns. Technical staff should examine the backup data to determine if it is sufficient to create usable UDS records upon liquidation. Further, if company data is segregated pre-insolvency, technical staff or third-party vendors can extract the relevant data without inadvertently accessing or disclosing non-company data.

(iii)Processing

Once extracts of company claims and policy data are obtained, technical staff will need to process the files before they can be loaded into the UDS Data Mapper. Data must be formatted into comma-separated values (CSV). Date and currency values must be normalized to a single format per file. The CSV files must use latin1 encoding and have characters outside the scope of this encoding removed or replaced. The receiver will then create a map that coordinates fields from the source data with their corresponding field in the UDS standard. The UDS Data Mapper will report errors encountered while ingesting data to guide other necessary cleaning steps.

(iv)UDS Production

⁷ <https://www.ncigf.org/resources/uds/uds-financial-menu/>

⁸ <https://www.ncigf.org/resources/uds/>

Chapter 2 – Information Systems

After the data is ingested by the UDS Data Mapper it may then be reviewed and edited within the application, then sent to the relevant guaranty associations. This process creates the UDS files and notifies the guaranty associations that they may pick up their files, which are provided via SUDS. For the receiver's own purposes, CSV files of the produced UDS records are also provided via SUDS.

CPriority of UDS Records

All UDS records serve a valuable purpose and are important. However, the timing of some of the UDS records is more critical than others because guaranty associations need them to perform their statutory responsibilities of covered claims. Below is a general guide regarding the level of criticality of the various UDS records.

Highest Priority

A Record (Claim File) - confirms the existence of policy with insolvent insurer; necessary to confirm coverage.

F Record (File Notes) - adjuster's claims notes; needed to quickly grasp essential nature of claim and current issues.

G Record (Transactions) - necessary to understand what has already been paid to timely continue any future payments owed and avoid duplication.

I Record (Images) - contains the contents of the insurer's claim file including report of incident, claim history, investigation notes, treatment history, photos, medical records, and other essential information.

Very High Priority

C Records (Guaranty Fund Loss Claims) - guaranty association monthly reporting; typically commences within 30 days of the association's receipt of critical claim information.

High Priority

B Records (Unearned Premium) - the importance of unearned premium reimbursement may vary depending upon the nature of the insolvency; in a liquidation with substandard auto insurer, timely refund of unearned premiums is often critical because many insureds cannot afford to purchase replacement coverage. In such instances, the production of the B Record should be assigned a higher priority.

Medium Priority

D Records (Guaranty Fund Expenses) - important for the reimbursement of the guaranty association's administrative expense claims but secondary to the records that are essential to the timely payment of covered claims.

Low Priority

E Records (Closed Claims) - important to enable guaranty associations to re-open claims; can be managed on a case-by-case basis until higher priority records are delivered.

M Records (Medicare Secondary Payer Reporting) - allows parties to verify that pre-liquidation MSP reporting was made by company; assists guaranty associations in identifying open or re-opened files where guaranty associations will become responsible for future MSP reporting.

Receiver's Handbook for Insurance Company Insolvencies

1. Life and Health Insurance Guaranty Associations

The life and health insurance guaranty associations do not utilize the UDS reporting system because the data needs of the life and health GAs are much different than those of the property and casualty funds, both in terms of timing and the types of data needed. This is due both to the types of contracts covered and the particular nature of the statutory obligations of the life and health GAs. Because the life and health GAs continue coverage, they need the data and the lead time necessary for putting in place the agreements and infrastructure required to either *transfer* or *continue administration* of the insolvent company's business. In either event, NOLHGA and its member GAs need data files at the earliest possible opportunity, and well in advance of liquidation, in order to evaluate options and develop a plan for meeting GA statutory obligations while minimizing disruption to policyholders. Policyholders are best served if the GAs can be ready to implement a plan for assumption transfer or for seamless administration of the business immediately upon entry of a liquidation order.

If preliminary data suggests that an assumption transfer may be feasible, a NOLHGA task force will develop a Request for Proposals ("RFP"), which will be sent to prospective carriers, subject to their execution of a Confidentiality Agreement. The RFP will include a description of the business to be assumed, along with summary policy, claims, and financial information. Policy-level detail is not typically required at this stage.

If assumption transfer is not feasible, the GAs must prepare for runoff administration. This typically requires contracting with a TPA and, in the case of health business, retention of the company's health care provider networks, pharmacy benefits providers, and all related service providers. Policy-level data is essential for policy and claims administration for all lines (life, health, annuity, disability, LTC).

Getting this information can be particularly challenging if the insolvent company has been using one or more outside TPAs. Data may reside on different platforms and systems and can take longer to gather. Other challenges arise when a company has been using one or more legacy systems with outdated software or hardware, making data extraction and transfer more difficult. In those cases, some consideration may need to be given to keeping the legacy systems in place, if short term data conversion is impractical. It may be necessary to contract for access to the existing administration platform, at least on an interim basis, which in many cases will involve the receiver as successor to the insolvent company's operations but may also include affiliates of the insolvent company or the company's outside TPAs.

A. Specific Data Needs

Specific data needs will depend on the facts and circumstances of each case, as well as the types of business involved. Initial, critical data needs typically include all relevant summary policy and reserve information. Typically, if the policy master /eligibility records can be provided, that file may contain sufficient information for preliminary coverage determinations and to consider the potential feasibility of an assumption transfer.

Other data needed for runoff administration, depending on the lines of business involved, typically includes the following:

Chapter 2 – Information Systems

- o In-force files/counts (by state and by line of business)
- o Policy values (face amounts, cash surrender values, policy loans, interest crediting rates, rate crediting history, etc.)
- o Policy forms
- o Claim files/claims history (including plan of care and related information for LTC lines)
- o Premium files (and status indicators such as Reduced paid up, or Waiver status for LTC)
- o Rate files/history
- o Reserves, by line
- o Provider/vendor agreements

B. Timing Considerations

Initial data files (Policy Master records) are needed at the earliest possible opportunity, but preferably at least 6 months in advance of liquidation, so that the GAs can evaluate the business and any coverage issues, assess the feasibility of one or more assumption deals, initiate an RFP process for assumption of the business, and negotiate and prepare to implement related agreements.

The lead time needed for policy level data will vary depending on the size and complexity of the business, as well as the lines of business involved. Typically, 4-6 months minimum lead time is needed in order to evaluate the business, negotiate TPA agreements, and get claims reporting and funding arrangements made for runoff administration. In the case of health lines, additional time is needed to evaluate, retain or replicate healthcare provider networks and related services. If an RFP process is needed to find a replacement TPA, additional lead time may be required for that as well.

C. Secure Data Transfer

To ensure secure data transfer, receivers or insurance department personnel typically establish a secure website portal or FTP site to provide NOLHGA and its member associations secure access to the data needed. Otherwise, NOLHGA (or a designated TPA or consultant) will establish a secure file portal where designated users can securely upload records.

V. IMPLEMENTATION

This section describes various courses of action to meet the receiver's needs once it has taken control of the insurer's information systems. The course of action selected will vary according to many factors, including the size and needs of the insurer and whether the insurer has its own information systems staff.

The receiver will be faced with several options as to how to meet the needs of the receivership. These may include: extraction or bifurcation of comingled system data; retaining the present system; enhancing the present system; replacing the system with either a new system or the receiver's system; or relying on a third-party vendor. The receiver must be prepared to justify a cost-benefit basis expending limited estate assets in pursuing any option other than retaining the present system. The following should be of assistance to the receiver in the formulation of a plan to select and implement the most effective option.

*Receiver's Handbook for Insurance Company Insolvencies***A. Retention**

The current system's ability to meet the receiver's needs should be carefully evaluated prior to making a decision to retain it. If the system hardware is to be sold, a plan should be developed and executed to move the necessary data to a system that can be accessed by the receiver. The plan to sell existing system hardware should also include safeguards to ensure that any data on the system is erased before the sale. No sale of system hardware should take place without first determining ownership and consulting with the receiver's legal counsel. The retention policy and decisions should be consistent with the Liquidation Order.

1. Verify Capabilities

Through examination of available reports and interviews with systems staff, management and operational staff or other sources, the current capabilities of the system should be identified, listed and documented. The system's capabilities, thus identified, should be compared to the previously identified needs of the receiver. Identified needs will be considered from the Information Systems checklist. This will identify information needs that cannot be met by the existing systems and steps that should be taken to satisfy those needs. If system capabilities exceed the receiver's needs, consideration should be given to whether the configuration and size of the system should be altered to increase efficiency and control costs.

2. Verify Condition of Hardware and Adequacy/Integrity of Software

The condition of the hardware should be carefully examined to determine both its reliability and its capacity to handle anticipated growth. Suspect components should be repaired or replaced. In like manner, the existing software should be carefully reviewed to confirm adequacy, appropriate licensing and integrity. Software that is inadequate, outdated, corrupted or no longer supported by the vendor should undergo review to determine the best strategy for replacement.

3. Assure Adequate Security and Disaster Recovery

Given the likelihood of litigation and other legal proceedings that will depend upon data gathered and processed by the system, as well as the threat of a cyber-attack, immediate steps should be taken to ensure its continued security. Access should be limited to those with an absolute need and in whom the receiver has utmost confidence. Consideration should be given to purchasing cyber insurance for the liquidation estate, if the company does not already have an applicable policy. A review should also be made of the current system as it pertains to the documentation and quality of data, and as to a disaster recovery plan. Many data processing centers do not have a disaster recovery plan other than having the system back up information in an off-site location. A true disaster recovery plan provides for installation of system backup information in an off-site location so that, in the event of a disaster, the system can be running within a specified time frame. That time frame may vary from a few hours to a few days.

4. Devise Assessment Methodology

Methodology should be devised for assessing the adequacy of the staff, the system, the software, security procedures and disaster recovery procedures. Weaknesses identified through this assessment should be remedied. If necessary, a third-party contractor may be brought in to make this assessment.

B. Enhancement

If the receiver has control over the system, and it is determined that the existing system can be retained but should be enhanced in order to meet the receiver's needs, a plan should be devised for the implementation of those enhancements. After careful consideration, a list should be made of the hardware, software and applications that require enhancement. These may consist merely of the addition

Chapter 2 – Information Systems

of hardware components or may require restructuring of the operating system or supplementation of available software. In like manner, available staff may be inadequate for the anticipated needs.

Once the required enhancements are identified, availability should also be ascertained, and the availability of qualified personnel should be similarly confirmed. Once the needed enhancements have been identified and their availability confirmed, a schedule should be prepared for implementation in a manner that will not interfere with other aspects of the receivership proceeding and which will be consistent with the anticipated needs of the receiver. This may require the operation of shadow systems on a parallel track with the implementation of the enhancements. Testing methodology should be implemented to confirm that the enhancements were successful and sufficient

C. System Replacement

If the receiver determines that the existing system, even if enhanced, is inadequate and decides to replace it, a plan should be devised for system implementation. The first step is to select the replacement system, considering the future needs of the receiver, including how long the estate may have to remain open, and the available assets of the estate. A plan for migration from the existing system to the replacement system should be implemented. In many circumstances, the replacement or enhancement is handled by a third-party vendor.

To make use of a third-party vendor as a replacement for in-house systems, it is essential to prepare a comprehensive list of the receiver's anticipated needs. Because the receiver will have relatively little control of the actual operation of the system and therefore little flexibility in adjusting the ability of the system to meet its needs, it is essential that the initial list of needs provided to the third-party vendor be as comprehensive as possible.

Once the needs have been identified, a list of potential vendors should be compiled for evaluation. Each eligible vendor should be carefully evaluated with full consideration being given to at least the following factors:

- Cyber security expertise and data safety requirements;
- Short-term and long-term availability;
- Expertise and demonstrated ability;
- Price and method of charging;
- Support and maintenance resources;
- Available warranties;
- Capability to respond to emergencies;
- Ability to preserve confidentiality and comply with security procedures;
- Existence of potential conflicts of interest;
- Ability to respond to changing needs; and
- Familiarity with the type of business involved.

1. Contract with Vendor

Once the appropriate vendor has been selected, a contract that will meet the anticipated needs of the receiver should be negotiated in accordance with the receiver's contracting policy. It should be clear

Receiver's Handbook for Insurance Company Insolvencies

that liability under the contract will be limited to estate assets and will not involve personal liability on the part of the receiver or the state. Once an agreement in principle has been reached with the vendor, protocols should be established for the operational relationship. A plan should be devised for assessing whether a third-party vendor satisfies the requirements of the contract.

2. Document and Back Up Old System

As a result of the decision to use a third-party vendor, the existing system will become unnecessary. Before it is shut down and disposed of, however, it should be fully backed up, including both the software and data, and documented for future reference.

3. Shut Down and Disposal of Old System

Once the old system has been completely backed up and documented, it should be taken out of operation and prepared for disposition. Disposal of any system, data or information related to the liquidation must meet the requirements set I the Liquidation Order and be pre-approved by the court before any action is taken. Before the system is shut down, any data must be erased. Once the existing system is shut down, it should be disposed of at maximum gain to the estate. Proprietary software developed solely by the insurer may also be marketable.

D. General Concerns

Be careful not to dispose of the system too soon. If the information is to be migrated either to the receiver's computer system or to a third-party vendor's system, steps should be taken to ensure that the integrity of the data from the insurer's old system is preserved and accessible. Controls should be in place to ensure that the same number of records leaving one system is received by the other system. This should be confirmed by the comparison of record counts and the cross-checking of financial data.

If any enhancements have been planned, then consideration should be given to whether the enhancements should be done by in-house staff or an outside consultant. Once again, it is usually best to get competitive bids as required by the receiver's purchasing policy.

E. Implementation of UDS

A plan to secure the information required for UDS should be developed as early as possible in the receivership proceedings when there is an indication that liquidation is a possibility. Data availability from company to company varies significantly. In some cases, all data for UDS is located on the system; in other situations, manual coding is necessary to capture the required data. The goal is to make the information available to the guaranty associations as soon after entry of the liquidation order as possible.

The guaranty associations must be notified as soon as possible when liquidation preparations have begun. The notice should include a copy of the company's Schedule T from its annual statement and the receiver's plans to supply UDS data. Data transfer preparations should begin immediately after the notice, to be put in place immediately following receipt of the Liquidation Order. This step is important, as it places the guaranty associations in a better position to respond to the inquiries that typically occur soon after the company is placed in liquidation.

It is likely that the initial UDS plan will be modified as the receiver completes its review of the company's systems. (See Section IV. M. above, which expounds on UDS production and record priority.)

December 20, 2021

Kevin Baldwin, Chair
Receivers' Handbook Subgroup
National Association of Insurance Commissioners
2301 McGee Street, Suite 800
Kansas City, MO 64108

RE: Receivers' Handbook

Chairman Baldwin:

The American Council of Life Insurers (ACLI) would like to thank you for this opportunity to comment on the Subgroup's proposed revisions to the Receivers' Handbook. We are very supportive of its efforts to update and revise the Handbook to reflect recent model updates, changing expectations around technology, and our mutual commitments to the continuation of essential services.

As we reviewed the revisions to Chapter 2 (Information Systems), we noticed several process and technology provisions that could have an unfortunate side effect of limiting regulator and insurer flexibility and utilization of future technologies, most of which are detailed below. We would strongly recommend additional vetting by information and technology specialists as the Subgroup updates the Handbook in order to ensure that it is future-proofed and requires minimal updates to address changing technologies.

As to specific edits, we would recommend the following for Chapter 2:

Page 129 of the Handbook contains the following added sentence:

- *"In doing this, the receiver will need to look ahead to what systems requirements may be needed in the future and make arrangements so they are in place when needed."*

While we support being forward looking, this language could be limiting. We believe it would be better focused on the receiver preparing for contingencies, as the future is hard to predict.

Page 133 contains the following additional language:

- *"Check references and criminal backgrounds prior to retaining new staff."*

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 95 percent of industry assets in the United States.

acli.com

We would suggest that “*and appropriate background screening*”, or something similar, be used instead of “*and criminal backgrounds*” as local laws may prevent a blanket “criminal” screening and/or allow for 1033 waivers for insurance producers and agents. We want to ensure that the Handbook aligns with these local requirements and does not needlessly disqualify people from employment opportunities.

- “For laptops that are used outside of the office require encryption and the use of a VPN to connect.”

The specific denomination of a VPN may be too narrow a defined requirement insofar as a general call for 'secure connection' - including options that may yet be invented. It may be more appropriate to refer to a “secured network connection” instead.

- “Disable USB ports on all company laptops and computers”.

This could disrupt legitimate hardware uses and should be reconsidered.

Page 137 contains the following existing sentence:

- “*These systems will be commercially available systems that are closely related to hardware components.*”

Large insurers may have legacy applications developed in-house that are not necessarily 'commercially available'. We would request additional flexibility within this language.

Pages 147-148 (Section IV.G.):

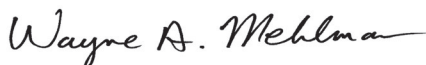

- With regard to the segregation of data requirements in Models #440 and #450, the ability to segregate affiliates' data may be very challenging. The architecture of a “Data Lake” or other multi-business data store (e.g., a comprehensive customer profile database for servicing or marketing) should note the provenance of data inflows, but true segregation of data within that data store in the event of a receivership could have practical impacts on the operation of such a system and may be problematic and interfere with ongoing operations. NAIC should consider adding a footnote(s) or clarification(s) that reminds regulators and insurers to ensure that the pulling of segregated data from related affiliate businesses from a comingled data pool does not harm other operations.

Page 149 (Section IV.K.1):

- This subsection should not be limited to computer servers – the “cloud” should be covered as well.

Thanks again for this opportunity to provide comments. If you have any questions, feel free to contact me at waynemehlman@acli.com or 202-624-2135.

Sincerely,

Wayne Mehlman

*Chapter 3 – Accounting and Financial Analysis***I. INTRODUCTION: OBJECTIVES OF THE ACCOUNTING FUNCTION**

The purpose of this chapter is to identify and explain the various objectives of the accounting function for an insurer in receivership and provide guidelines for the preparation of reports summarizing the financial position of the receivership.

It is important to highlight the context or perspective from which this chapter was prepared. Any accountant serving a receiver is, by necessity, an integral part of a team of regulatory, legal, actuarial, and other professionals working together to achieve common goals. The nature of these goals is described at length in Chapter 1—Takeover & Administration. In most receivership situations, the duties of the receiver's accountants, investigators and attorneys will overlap when information about a common topic such as a reinsurance treaty is needed by staff members. While these other individuals have a legitimate interest in accounting and financial information, this chapter has been prepared from the perspective of the accountant serving the receiver.

This chapter will deal with the following issues:

- The objectives of the receiver and how they may vary from the traditional accounting objectives of a going concern.
- The need to gain an understanding and control of the impaired or insolvent company's bank accounts and assets.
- The importance of evaluating the impaired or insolvent company's accounting staffing and consulting needs early on in the receivership, as well as the need for assistance from CPA or actuarial firms to do projections, forensic accounting and tax reporting.
- The need to inventory and safeguard documents, ledgers, contracts and other financial items that will shed light on the financial position of the insolvent insurer and provide support to the receiver in collecting assets, settlement of balances, litigation and other matters.
- The need to focus on the corporate structure of the enterprise, the importance of analyzing related-party transactions and intercompany accounts, and consideration of restructuring certain transactions.
- The need to identify and scrutinize tax issues, including necessary informational filings with the IRS (such as 1099s), various areas of tax exposure, premium and payroll tax consequences and other taxes.
- Considerations related to the nature of the insolvent insurer's investments and safeguarding and valuing the investment portfolio.
- Considerations relating to direct and assumed reinsurance premium receivables, including the need to identify and control treaties, to determine if in-force treaties should be maintained or cancelled, and to quantify setoffs and other issues. Consideration should also be given to ceded reinsurance receivables and the identity of the various lines of business and policies ceded to other insurers. Insurers often have excess of loss or stop-loss reinsurance where recoveries of amounts due the HMO should be investigated.
- The need to prepare financial statements and related information in a format that will support the receiver directly in managing the affairs of the estate and in responding to the needs of various third parties, such as state insurance departments, the courts, guaranty funds, policyholders and other creditors, attorneys, and other parties.
- The need to review and understand the various cost centers and associated expenses and contracted services.

Receiver's Handbook for Insurance Company Insolvencies

The overall objective of the accounting function in receivership can be expressed as follows:

To assist the receiver in securing control of the insurer's assets and to provide timely, relevant, and accurate financial information as to the assets, liabilities, surplus (deficit) and cash flow of the insolvent insurer to support the duties of the receiver, and to assist in making economic decisions.

The sections that follow will discuss the points above in more detail as they relate to the overall objective of the accounting function in a receivership.

II. OBJECTIVES DIFFERENT THAN GOING CONCERN

In many respects, the overall accounting function objective discussed above is equally fitting for the accounting function of a going concern. However, the important phrase that distinguishes this objective for receivership is “to support the duties of the receiver.”

For solvent insurers, the accounting function is generally designed to support management and to fulfill the insurer's responsibility to report information to shareholders, creditors, taxing authorities such as the IRS, regulatory authorities such as state insurance departments, and others. The purpose of this information is to allow these parties to monitor the insurer's financial operations and protect their interests, e.g., investment, loan or tax obligations. The accounting system may be designed to support reporting on the basis of both U.S. generally accepted accounting principles (GAAP) and statutory accounting principles (SAP) prescribed or permitted by the insurer's state of domicile.

For an insurer in receivership, the situation is different. The regulator has already determined that the insurer is in an impaired or insolvent financial position. A receiver has been appointed. For an insurer in rehabilitation, the objective may be to identify the causes of the impairment, eliminate them and work to return the insurer to a solvent position. Alternatively, it may be determined that a successful rehabilitation is not achievable, in which case an order of liquidation will be sought. For the insurer in liquidation, the objective is to identify and marshal the assets of the insurer, identify, and evaluate liabilities and determine the appropriate class of each creditor in accordance with the domiciliary state's priority of distribution statute, and to liquidate the insurer in a manner that minimizes the cost to policyholders, state guaranty funds and other creditors.

Thus, the new and important user of the financial information is the receiver. In rehabilitation, *pro forma* reporting is often used to help the receiver assess the feasibility of potential transactions that have been proposed to mitigate the surplus deficit. Additionally, liquidation-basis accounting becomes an important form of reporting to help the receiver assess the realizable value of the assets of the insurer and the extent such assets will be available and sufficient to cover approved claims of policyholders and other creditors.

It is important to understand the difference between the responsibilities of the receiver and those of former management. In a going concern, management has the responsibility to develop internal controls and procedures covering a variety of items such as payroll, transfers to affiliates, reinsurance balances, etc. However, the receiver will review and perhaps revise these internal control procedures. The receiver will approve disbursements, revise wage and salary schedules (especially for excessive amounts payable to officers), streamline the organizational structure if needed and place a moratorium on payments to reinsurers, related parties such as the insurer's affiliates and others, pending a complete analysis of the insurer's financial position.

In some instances, the duties of the receiver and that of management will differ in subtle ways. For example, consider an insurer that has been placed in rehabilitation: The insurer is a wholly owned subsidiary of a publicly held insurance holding corporation. The receiver, by statute and court order, has responsibility and authority only for the affairs of the insolvent insurer/company subsidiary. Thus, the accountant working with the receiver may assist in or direct the preparation of financial information relating to the insurer/subsidiary that may ultimately be provided to and used by management of the holding company/parent to prepare its filings with the Securities and Exchange Commission (SEC), or consolidated tax returns for the IRS. However, it is generally not the responsibility of the receiver or his or her accountant to prepare or file such documents that relate to the holding company.

Chapter 3 – Accounting and Financial Analysis

It is not uncommon for the receiver to maintain certain of the insurer's key management personnel on staff because of their knowledge of the insurer and their familiarity with its business, reinsurance treaties, data processing systems and various other matters. The receiver should ensure that such staff be sensitive to the new responsibilities created by the order of rehabilitation or liquidation. It is unlikely that these individuals have ever been through a receivership before and may unknowingly perform their duties as if it were business as usual, not realizing that the receiver now must be informed of, and approve, procedures and disbursements. Additionally, the receiver should identify those individuals that may conceivably have an interest in concealing or altering information because of their concern about their role in the events that may have precipitated or contributed to the insolvency.

The principal responsibility of the accountant is to the receiver. However, the accountant should be aware of responsibilities that the receiver must provide certain financial information to other parties, including (in no particular order of importance):

- Domiciliary state insurance department.
- Other insurance departments in states where the insurer is licensed.
- The receivership court, other state courts or federal courts.
- Creditors, including banks, premium finance companies, providers of health care (if HMO) and reinsurers.
- Shareholders.
- Federal, state, and local taxing authorities.
- State guaranty funds, The National Organization of Life and Health Insurance Guaranty Associations (NOLHGA) or National Conference of Insurance Guaranty Funds (NCIGF)
- Policyholders.
- Prospective investors.
- Other regulatory agencies, such as the SEC.
- Legislatures (state and federal).
- State and federal agencies responsible for Medicaid/Medicare (if HMO).
- Reinsurers
- Agents

Financial information for a receivership is similar to that of an ongoing enterprise with some important differences. These include the following:

- The need to identify and provide for various classes of creditors pursuant to the domiciliary state's receivership priority statute. The receiver's accounting system should be capable of capturing information provided by creditors on proofs of claim in order to review and adjust those claims and to aggregate them by creditor class.
- Reinsurance recoverables must be viewed from a different perspective particularly ceded unearned premium for property and liability companies. In a going concern, a ceding insurer would not expect to receive ceded unearned premium. However, when reinsurance is not renewed, the ceded unearned

Receiver's Handbook for Insurance Company Insolvencies

premium recoverable can be quite substantial if the termination clause of the contract is written on a cut-off basis. In a runoff situation, the insurer would have reinsurance until the ceded premium ran off.

- Setoffs are another reinsurance issue that should be identified and reviewed to determine if they are acceptable under the applicable state receivership statutes. Setoffs (often referred to as “net accounting” in going-concern accounting) frequently occur in reinsurance transactions and may involve setoff of amounts within a contract. These may include premiums due to the reinsurer from the ceding insurer set off against recoverables for paid losses owed by the reinsurer to the insurer, setoff of balances under two or more contracts with the same two entities, or setoff of amounts owed to or from different ceding insurers and/or reinsurers that have been set off by a reinsurance intermediary or broker, usually on a monthly or quarterly net reporting basis to the insurer. If necessary, setoff transactions will need to be recast or set aside. (Note: Identification of setoffs is an accounting function. The receiver’s counsel should address the legality of identified transactions. See Chapter 9—Legal Considerations for discussion of setoffs).
- The need to separate any commingled assets and liabilities of the insurer from entities affiliated with the insurer, such as the parent corporation, other subsidiaries or affiliates and employee benefit plans.
- The need to identify transactions that are significant to the receiver because of the potential for recovery from third parties, as well as the possible institution of criminal proceedings. Generally, these may include transactions with affiliates or officers and directors, for example, and preferential payments made within statutorily prescribed periods. (See Chapter 9—Legal Considerations.)
- The need for a clear cutoff date in the accounting records to establish a beginning balance sheet that represents the point at which the receiver has become accountable for the financial affairs of the insurer.
- Payments for pre-receivership transactions may be suspended pending review by the receiver. It is also important to immediately change company procedures and implement controls to assure that the insurer’s assets are not disbursed unless approved by the receiver or his representative. The receiver may wish to consider placing a stop order on outstanding checks, both claims-related and administrative.
- The need to recognize differences between liquidation accounting and statutory accounting practices followed by the insurer as a going concern. For example, certain assets of the insurer, such as furniture, equipment, and overdue agent balances, may not be admitted for statutory accounting. An HMO’s membership may also have potential value that is not admitted for statutory accounting purposes. Nonetheless, in a receivership, they should be considered for possible collection or sale, even if they are not considered in evaluating the solvency of the insurer.
- The need for preliminary assessment of the causes of the impairment or insolvency, with an analysis of whether any parties have potential civil or criminal liability for their role in causing the insolvency. (See Chapter 4—Investigation and Asset Recovery.)
- The need to challenge, with an appropriate degree of professional skepticism, the adequacy of the insurer’s personnel who may be retained by the receiver, and assess skills, loyalties, and potential conflicts of interest that they may have because of their roles in, or knowledge of, events that precipitated or contributed to the receivership.

*Chapter 3 – Accounting and Financial Analysis***III CASH AND LIQUID INVESTMENTS****A. Cash**

The receiver must determine the existence, location and amount of all cash, cash equivalents and short-term investments through direct confirmation with financial institutions, investment managers and other parties thought to be holding cash, cash equivalent or short-term investments. The insolvent company's financial management should be able to provide a listing of financial institutions and contacts.

The receiver should immediately determine who has access to the cash and investments and should consider changing or restricting this access. In this era of electronic banking, Internet banking access should be closely scrutinized. Administrative controls of Internet banking should be evaluated by the receiver as soon as possible and modified as necessary. If the company holds cryptocurrencies, access to the cryptocurrency wallet and any associated hardware should be restricted. Large amounts of cash can be removed from an estate via wire transfer. Procedures should be established with the financial institutions to curtail or limit access regarding wire transfers. Wire transfer capabilities must be limited to receivership staff immediately upon receipt of a receivership order. Operations of the insurer may be affected temporarily, but that situation pales in comparison to allowing large amounts of money to be wired out of an estate.

All financial institutions should be notified immediately of the receivership order. A receivership order should be faxed or e-mailed to the contact person at each financial institution, and a proof of service should be signed by an appropriate financial institution representative as corroboration that the financial institution received the order. Some receivers, especially in liquidation, advocate immediately closing all existing bank accounts to ensure complete control of cash. The receiver should also consider whether to continue relationships with the banks used by the insurer or to establish new accounts with only the receiver or his designated representatives having signatory authority to disburse funds. The receiver must decide whether to allow certain checks to clear, as a disruption in payments to claimants may cause hardship, lead to complaints and would be viewed negatively by regulators. Another consideration associated with account closure is the magnitude of penalties and interest that would accompany any substantial delay in payments.

A letter should be sent, giving the bank or other financial institution instructions with regard to allowing or not allowing checks to clear the account. As soon as possible, signatories on bank accounts should be changed to the receiver's designated personnel.

All check stock should be inventoried, and bank accounts reviewed to determine which accounts are related to the insurer's business and which accounts, if any, are still needed. If bank accounts are closed, the related check stock should be voided and destroyed. If the accounts are required, an appropriate protocol needs to be established between the banking institution and the receiver. The normal practice would be to freeze all accounts, or at a minimum, the signatories should be changed to individuals on the receiver's staff.

The receiver may consider moving out-of-state assets into the domiciliary state to improve control and lessen the chance they may be subject to attachment by creditors. This step should be completed as soon as possible after the liquidation order is filed with the court. If an ancillary receivership is established, the receiver should work in conjunction with the ancillary receiver when moving assets out of the ancillary state.

Special care should be applied to the identification of accounts not held in the insurer's name but to its benefit. Bank statements, investment statements, cash ledgers and cash flow statements should be reviewed. This process should also include any funds held as collateral, letters of credit or other restricted cash.

Credit or debit cards in the company name should be gathered and secured in the same manner as cash. Determine if there are recurring charges on the card and if those recurring charges need to be continued or can be canceled. If the cards are no longer needed, consider canceling the cards. Credit or debit cards are often kept in the accounting or human resources department but could exist in other areas of the Company.

Receiver's Handbook for Insurance Company Insolvencies

A Company may also have recurring charges set up as ACH transactions. Review all accounts for recurring charges so they can be canceled as appropriate.

Some Companies will have gift cards or pre-paid debit cards (for example Visa or American Express branded pre-paid cards) that have been purchased for agent/broker incentives, employee incentives, or wellness incentives. These cards may not be accounted for in the Company's general ledger and could potentially be kept by many different departments of the Company. They should be gathered and treated in the same manner as cash.

B. Liquid Investments

Determine the existence, location, amount, and type of liquid securities (bonds, stocks, mortgage loans, etc.) through direct confirmation with financial institutions, investment managers and other parties thought to be holding securities. Investment statements from financial institutions, portfolio statements from investment managers and other similar reports should be secured and used to establish a balance as of the receivership date.

As with cash, company personnel should provide a list of brokerage houses, financial institutions that have custody of investments, and related contact names. All institutions having custody of the insurer's investments should be sent a copy of the receivership order. The brokerage house or financial institution should be given instructions by cover letter that only receivership staff is authorized to buy or sell investments. The receiver should be aware of who has access to the investments and who had the authority to direct the investment managers/brokers. Once again, the investment managers/brokers should only take direction from the receiver.

The receiver should determine whether any of the liquid investments are hedged, who the counterparties are and get a description of the entity's hedging program.

Sometimes it is easier for the receiver to transfer securities to a financial institution with which they are familiar. Doing so facilitates transactions, as sales can be efficiently executed to maximize the value to the estate, after obtaining the appropriate advice about the most advantageous time to liquidate a security.

IV. INITIAL REVIEW OF FINANCIAL STATEMENTS AND PROJECTIONS

It is imperative that the receiver's accountants perform an initial review of the financial statements that had been produced by the company as soon as possible. Obviously, these financial statements should be viewed with a heavy dose of professional skepticism. However, the receiver's accountants can usually garner a lot of information from company accounting personnel. The receiver's accountants must use professional judgment in determining the accuracy of the information provided by the company or whether further investigation/confirmation is required. In either case, it is critical that the receiver's accounting staff perform an evaluation of the company's surplus and cash position in the first few months (or sometimes weeks) of a receivership. The receiver's accountants must provide this information to the receiver so that objective decisions regarding the company's rehabilitation or liquidation may be made.

The receiver's accountants should obtain the last published statutory quarterly or annual statement that the company filed. If the company is an unauthorized entity, or it did not file financial statements, internal financial statements will have to suffice (preferably financial statements that were audited or reviewed by an outside CPA firm). The receiver's accounting staff can use these statements as a starting point for surplus and cash projections. Another source for financial statements is those prepared by insurance department examiners. If the entity is publicly traded get copies of the latest 10-K and 10-Q. at <https://www.sec.gov/edgar.shtml>.

Admittedly, the analysis of a company's cash or surplus position in the early stages of a receivership is not an exact science. In addition to calculating anticipated receiver administrative expenses, the following measures should be incorporated to make projections and analysis more meaningful:

Chapter 3 – Accounting and Financial Analysis

- Confirm that bank reconciliations are brought up to date.
- Review anticipated premium income. Look at recent premium written reports and review the timing of any anticipated policy cancellations or non-renewals.
- Review any capitation arrangements, contracts with hospitals and doctors, and the Centers for Medicare and Medicaid Services (CMS) for all approved plans.
- Review recent claims and loss adjustment expense payment history to use as an estimate for the future claims liability of insurers in receivership
- Claims payments should begin to decrease after policies are cancelled (if applicable).
- Review all active reinsurance treaties, especially for the current treaty year. Ceded reinsurance is especially important for property and liability companies.
- Review recent large expense payments such as rent, commissions, legal expenses, etc.
- Review potential voidable preferences.
- Review monthly investment income and sources generating the income.

V. INVENTORY AND DESCRIPTION OF ACCOUNTING RECORDS**A. Inventory of Accounting Records**

As soon after the takeover of an insurer as is practicable, the receiver should identify and secure the books, records, systems, and documents that are necessary to maintain and review the accounting functions of the insurer. Familiarity with the pre-existing accounting processes and related accounting records and their location will help the receiver prepare for the many other tasks that will follow. The receiver may find that accounting processes should be consolidated, streamlined, or simplified, particularly for insurers in liquidation. A thorough knowledge of the pre-existing accounting systems is an integral step in identifying those systems that can be eliminated or simplified. Furthermore, such knowledge will greatly assist in the investigation and asset recovery processes, which are discussed in the next chapter.

This section summarizes and describes the pre-existing accounting records that are typically maintained at various locations of the insurer and/or at affiliated and non-affiliated entities. This chapter should be read in conjunction with Chapter 1—Takeover and Administration, Chapter 2—Information Systems and Chapter 4—Investigation and Asset Recovery, which may identify additional records and functions that may be useful to the receiver.

Types of documentation vary, but one thing is certain: The records of an insurer that has been placed into receivership will be, or at least may seem to be, incomplete, confusing and, in many cases, inaccurate. To the extent systems and account balances are undocumented, some documentation may have to be recreated. Work papers of state insurance examiners, outside auditors and actuaries may be useful in reconstructing records. In addition, existing personnel may be retained by the receiver to assist in this process because of their knowledge of the insurer's operations and systems.

B. Records at the Administrative Office of the Insurer

The administrative or “home” office of the company will, most likely, be the location from which the domiciliary receiver will direct the receivership. The bulk of the insurer's financial and accounting records usually are located and maintained at the home office. However, the domiciliary receiver should be aware

Receiver's Handbook for Insurance Company Insolvencies

that the company records may also be located at third-party administrator, managing general agent and branch offices.

The following is an overview and brief description of accounting records that the receiver should attempt to locate and secure. If documentation of this nature does not exist or cannot be located, special effort may be required to understand how the financial data was compiled.

1. Organizational Chart of the Accounting Department, Flow Chart of Accounting Process, Procedure Manuals and Chart of Accounts

An organizational chart may give the receiver an overview of the organization, including the accounting department. It may identify the various functions (e.g., cash accounting, underwriting accounting, reinsurance accounting, etc.) of the accounting department and the individuals responsible for those functions. It can also indicate the reporting hierarchy and help assess the adequacy of segregation of duties consistent with sound internal control practices.

A flow chart of the accounting process might describe what action is taken for the significant functions or accounting processes. The flow chart may summarize the route of the original accounting documentation. Most importantly, the flow chart may well identify the key records relied upon to record financial information; when, how and by whom it is entered into the accounting records; and how and by whom the resulting balance is verified by reconciliation or other procedures. The flow chart may also identify the responsibilities of each significant function in the accounting department. The flowchart may identify controls. The public CPA firm will normally have a process flowchart for the accounting function of the insurer and the controls within that process if not available directly from the insurer. If a flow chart is not available, the receiver may wish to request that one be created to assist in assessing the adequacy of internal controls over the significant accounting processes.

Procedure manuals may exist that describe the duties and functions to be performed by the accounting department. If the accounting system is computerized, the procedure manual of the computer system may describe the process and controls for specific job functions. Procedure manuals may be detailed by job function or by department function. If available, these manuals will assist the receiver in understanding the accounting process. Care should be taken by the receiver, however, because procedure manuals possibly will be incomplete or out-of-date, and may be unintentionally misleading as to the actual processes currently in place. A walk-through documentation from CPAs/ exams/ internal audit of the key systems and/or inquiry of the insurer's personnel will help to confirm the accuracy of such documentation. The degree of the walk-through depends on judgment and internal controls of the insurer.

The chart of accounts should detail the description and purpose of all general ledger accounts. The chart (a manual) of accounts may be a useful tool, especially to an external auditor. Again, care should be taken because account titles and descriptions may not reflect their true nature or use in practice by management. Typically, accounts are numbered in sequential order using the following convention:

- Assets
- Liabilities
- Surplus Accounts
- Income Accounts
- Expense Accounts

Chapter 3 – Accounting and Financial Analysis

2. Accounting records including the general ledgers and supporting schedules.

The receiver should find a complete set of records at the home office. The general ledger provides a listing of the dollar amounts in each of the accounts in the chart of accounts. The amounts in the general ledger may be posted on a monthly or quarterly basis. Automated and interfaced systems may post to the general ledger on a daily basis.

Depending on the size of the company and the type of reporting system, the general ledger listing may include:

- A transactional listing that reflects, by account, the items posted to that account by period entered. The period entered and supporting schedule may allow the receiver to locate the “support” or underlying documentation for the entry. This information will be valuable in the audit procedures; and
- A journal entry listing that specifies, by period, the accounts and amounts affected by the entry. When a transaction from one particular account has been identified for investigation, this listing will allow the receiver to determine the other accounts affected and the amount.

The accounting records will provide details of balances that are summarized and posted in the general ledger. Some of specific detailed schedules that may be found at the insurer are:

- Investments
- Agents and/or insured balances
- Funds held
- Premiums written
- Reinsurance recoverables
- Fixed assets (e.g., furniture and equipment)
- Claims paid
- Claims outstanding (case reserves)
- Contingent commissions
- Amounts retained for accounts of others

Accounting records detail the daily accounting activity of the company. The daily cash activity of the insurer is maintained in the accounting records. . .

3. Accounting Files

Generally, accounting files are maintained by an insurer based on the various accounting functions. Accounting files usually contain original accounting source documentation (check remittance advices, invoices, and purchase orders) or images files of the documentation. The records are all important. The more crucial accounting records are:

- Certificate of deposit files and investment
- Cash

Receiver's Handbook for Insurance Company Insolvencies

- Agents' and producers'
- Contingent commission
- Claim
- Reinsurance
- Federal, state, and local tax
- Accounts payable

The insurer may have several years of accounting files on the premises and keep the older accounting files/backups at a warehouse location. A records retention policy for the insurer may be available from the chief accounting officer. It is important to suspend any document destruction.

The investment accounting should support the investment transactions of the insurer. Included in the files should be broker slips, bank advices and custodian statements. If the investment accounting is held by a custodian or asset management firm, the receiver should notify them of the receiver and request records. Monthly reconciliations of the custodian statements/files to the related general ledger account balances may also be found here. For more information on investment files, see section on Investments (Section IX) in this chapter.

Cash contains records often from bank lock boxes of cash receipt and disbursement that support the cash entries made on a daily basis. Deposit records, check or checks images, wire transfer information, and records of disbursements may also be found in these files. In addition, banking records, such as authorized signatory lists, wire transfer instructions, sweep account information (bank orders to transfer daily receipts from depository accounts to investment accountings), and agreements with banks regarding custodial and other matters may also be found here.

Agents' and producers' records should contain copies/images of the statements and billings to those entities for premiums written. Statements may be gross or net of commissions. Advance commissions statements and copies of agreements with the agents or producers that detail the rate of commission, and the authority of the agent may also be found in these files.

Contingent commission records should contain the computations for any contingent commission or profit-sharing commission paid to agents and producers and the associated agent/producer agreements.

The accounting records for reinsurance ceded by the insolvent insurer prior to receivership should contain the details for any of the insurer's reinsurance transactions. The supporting schedules should contain summaries of reinsurance premiums and loss calculations for each treaty or reinsurer. The records should include: account statements, the reinsurance treaty and endorsements thereto, including the interest and liability (the percentage participation) endorsement that each reinsurer has signed or a digest or summary thereof.

The documentation that an insurer maintains with respect to reinsurance assumed by the insolvent insurer prior to receivership depends on whether it was acquired directly from the cedent or through a reinsurance intermediary.

The direct method of acquiring assumed reinsurance may generate more documentation on the insolvent's end because the direct method generally requires an internal function to solicit or accept business from cedents. On the other hand, the broker market method may not require maintenance of an in-house reinsurance underwriting function because this role is assumed by the intermediaries. Therefore, only bordereaux or other summary information may be found at the reinsurer's offices.

Chapter 3 – Accounting and Financial Analysis

Nonetheless, the receiver may want to determine that the documentary information maintained by the ceding company or intermediary supports the bordereau.

Tax records (federal, state, local and payroll) should contain the tax returns that have been filed with each jurisdiction. The records may contain reference to the original source information. The Tax Issues section of this chapter (Section VIII) has more information on taxes. Copies of filed returns may also be found in the general corporate records, with independent accountants or legal counsel, or can be obtained from the IRS.

Accounts payable records should contain vendor invoices, identification, invoice date, date approved, and date paid.

4. Contracts and Agreements

The accounting, underwriting or corporate legal department may be the custodian of agreements or copies of contracts into which the insurer has entered for insurance and general business operations. The agreements frequently may be referred to by the accounting department to assure that related transactions are authorized, recorded correctly, reported between the parties and reconciled.

The contracts and agreements may include: real estate leases, furniture and equipment leases and maintenance agreements, information technology (IT) equipment leases, software licensing agreements, bank custodial agreements, hedging agreements, real estate management agreements, mortgage loan servicing agreements trust funds, investment service, payroll service, management service, and allocation of federal income tax and expenses with affiliates. Other contracts related more to the insurance business may include agency contracts (general or managing), claims administration services, producer contracts, reinsurance contracts, interest and liability endorsements and letter of credit agreements. For health maintenance organizations, it is important that the receiver have a complete inventory of all provider agreements as well as a listing of all commercial groups with renewal dates and coverages.

Chapter 1—Takeover and Administration has more information on contracts, and Chapter 7—Reinsurance has more information on reinsurance treaties and letters of credit.

5. Financial Reports, Filings and Other Records

The accounting department is the originating department and custodian of financial reports, both for internal use and external compliance. The department may also be the originating department for many analytical reports that are used by management, although such reports may also originate from other departments, such as claims or underwriting. Filings for compliance with governing jurisdictions may also be the responsibility of the accounting department.

A list of reports that are produced periodically and a schedule of required filings may be available from the controller. Otherwise, the receiver should discuss what reports and filings are produced and available with the chief financial officer.

The financial reports that the insurer should have readily available include: NAIC annual statements, NAIC quarterly statements (if required), and all supplemental exhibits that are part of these documents. The last page of the annual statement under “Supplemental Exhibits and Schedules Interrogatories,” if properly completed, reports the exhibits that should be filed. In addition to the reports, the accounting department maintains records and the supporting schedules which identify sources of data and reconcile the reports to the source.

Other external financial reports that may be found in the accounting department include: insurance department financial examination reports, actuarial reports and opinions, and certified public accountants’ audit reports. Along with these reports, the receiver should request related correspondence

Receiver's Handbook for Insurance Company Insolvencies

files (CPA management letters and management responses to the reports). If the insurer's stock is publicly traded on a stock exchange, the insurer is required to file an annual report and various interim documents with the Securities and Exchange Commission (SEC) i.e., 10K and 10Q for US markets which are available at: <https://www.sec.gov/edgar.shtml>. These are complex filings that may require involvement of outside counsel and/or external auditors.

The accounting department may also be involved in periodic rate filings made with insurance departments. Folders may be available that support the rate change requested. Responsibility for rate filings and approvals may rest with the legal or underwriting department.

Some insolvent or financially troubled insurers have internal audit departments. The receiver should request a listing of all internal audit reports issued and any internal control procedure documents.

C. Accounting Records at Other Locations**1. Branch Offices**

Branch offices of an insurer may operate independently of the home or main administrative office. However, the branch offices usually use the same computer system, or daily upload data to the main office. Branch authority, method of operation and procedure manuals should be in place both at the home office and with the branch manager.

The branch may have limited authority to carry out only certain insurance functions (i.e., either underwriting, claims adjusting or both). In such instances, the accounting records at the branch will be limited. The branch office may have claims folders and underwriting folders with original documents.

2. Claims Offices

The claims offices facilitate the adjustment and settlement of claims. As such, each claims office should maintain open claim files for losses in its respective region. Receiver should collect any check books that the claims office has on-site. Closed claim files may have been returned to the administrative office.

3. Off-Site Storage

Many insurance departments, and/or insurers themselves, require that copies or duplicates of essential records be maintained at an off-site location for the purpose of reconstruction in the event the records are lost or destroyed at the primary location. If this procedure is followed by the insurer, duplicates of records that cannot be located at the primary location might be found at the off-site storage. The off-site storage may also be the location of periodically stored computer backups for the same purpose. Old files (e.g., accounting, claims, underwriting, etc.) and other records may also be in storage. The off-site storage may be a branch office of the insurer or a contracted warehouse. An inventory list of records at the off-site storage location may be available from the controller or chief financial officer. Review the inventory and compare with any retention policies.

D. Records at Offices of Other Parties**1. Managing General Agent (MGA)**

The types of records to be found at the offices of the MGA will depend on the authority of the MGA. If the MGA has the full powers of the insurer, including accounting, underwriting, rate filings and reinsurance, all related accounting records, as previously described, may be at the office of the MGA. If the MGA has limited authority, then only records that pertain to the specific function will be in the office of the MGA. The insurer may have duplicate copies of some of the records at its main administrative office, although these frequently include only summarized reports or bordereaux.

Chapter 3 – Accounting and Financial Analysis

2. Third-Party Administrators (TPA)

TPAs should maintain sufficient records to perform their assigned function. Authority from the insurer may be necessary before any action is taken by the TPA. Alternatively, certain limited discretionary authority may be granted in the agreement with the TPA. Copies of written authority granted should be available from the insurer and/or the TPA.

3. Reinsurance Intermediaries

The intermediary should have in its office copies of reinsurance treaties, interest and liability agreements, endorsements, lists of reinsurer participations, files on letters of credit, and historical records on premiums paid to and losses collected from the reinsurers. Reinsurance intermediaries should also have details to support the balances due, including details of amounts set off.

4. Agents and Brokers

Both agents and brokers will have files for policies that have been issued to insureds. Agents and brokers periodically (monthly) submit to the insurer a list of policies that have been issued. The agents and brokers may be responsible for the collection of premiums. In such instances, the insurer will bill them for the premiums due. Otherwise, the insurer bills the insured directly.

Producers are compensated by a commission on the premiums written. If the insurer uses the direct billing method, the agent or broker may have been paid an advance commission until the premium is collected from the insured. Otherwise, the insurer may bill the agent or broker on a basis net of the commission due. The insurer may also require the producers to pay the full amount of the premium. In turn, the insurer will pay the commission. Producers will have records of all business placed with the insurer.

5. Department of Insurance

Insurers are required to file numerous documents with the insurance department of the state of domicile and/or other states where the insurer is authorized to transact business. The receiver may consult legal counsel, state statutes or the department's staff for specific state requirements. In addition to the annual, and possibly quarterly, statements and financial and market conduct examination reports, the following documents may be on file with the insurance department: contracts (reinsurance, agents, management, investments, etc.), dividends payment approvals, holding company and related party transaction approvals, rate filings, minutes of meetings, and biographical affidavits of officers and directors.

The insurance department examiners, as part of the documentation for support of their findings, may have photocopied certain documents, flow-charts, procedure manuals, or other materials that may be of interest to the receiver. The copies would be found in the examination workpapers that are kept by the insurance department.

6. Certified Public Accounting (CPA) and Actuarial Firms

The CPA firm that performed the last financial audit may be a valuable source for copies of many of the insurer's documents. As part of their workpapers, the auditors may have copied pertinent documentation from the various accounting files. The auditors may also have documented and flow-charted the various significant functions of the accounting department and their related controls. Similarly, independent actuarial firms may have copies of insurer documents and/or working papers that document the calculation or evaluation of the carried reserves or pricing of business.

Receiver's Handbook for Insurance Company Insolvencies

7. Banks

Banks may be able to furnish images of canceled checks, check number sequence issued, bank statements, loan files, collateral files, safe deposit box records and correspondence (signatories and requirements).

8. Internal Revenue Service (IRS)

The IRS may be a source for the insurer's income tax returns and filed payroll tax forms.

9. Securities and Exchange Commission (SEC)

If the insurer is regulated by the SEC (publicly traded company or public debt offering), then copies of any documents (10K, 10Q, etc.) filed with that agency may be obtained at [SEC.gov | Filings & Forms](https://www.sec.gov/filings)

E. Internal Controls

In an increasingly complex business, receivers manage insolvent insurers' investments, accounting systems and other operations, all of which require close scrutiny and professional care in the safekeeping of the company's resources. If the company under receivership had an internal audit/control department the receiver should request and review any internal control procedure documents and reports available.

There is currently no requirement that receivers of insolvent insurers prepare a report acknowledging responsibility for establishing and maintaining an adequate internal control structure. Even so, efforts should be made to ensure and promote effective controls. Further, the receiver should determine if, and to what extent, internal controls and other requirements of Sarbanes-Oxley-type documentation were created and maintained. All such documentation should be reviewed and matched to the processes and procedures observed and analyzed for identification of obvious control weaknesses.¹

The receiver should consider establishing internal control policies and procedures and then periodically audit to determine compliance with established directives. Documentation of the receiver's accounting staff's evaluation or internal audit will be useful in identifying controls that should be maintained or strengthened, in providing a baseline for ongoing evaluations, and in demonstrating to other interested parties the rationale used in making the assessment.

This section addresses internal controls by identifying the broad functions typically found in a failed insurer.

The evaluation of controls over particular applications depends on the sources of information that flow into the applications and the nature of the processes to which the data are subject. These processes can be viewed as:

Accounting Estimation Processes: Processes that reflect the numerous judgments, decisions and choices made in preparing financial statements. Examples of this include the actuarial reserve estimates, or tax projections.

Routine Data Processes: Accounting applications/systems that process routine financial data (the detailed information about transactions) recorded in the records (e.g., the processing of receipts and disbursement transactions, other transaction processing and payroll).

¹ The Sarbanes-Oxley Act of 2002 was in many respects a response to high-profile corporate scandals, but the Act contains corporate governance and accounting regulation concepts that had been proposed even before these scandals became public. Although, in most respects, the Act is directly applicable only to publicly held companies, many Sarbanes-Oxley concepts may eventually be brought to bear on mutual or privately held insurance companies through state regulation, changes in delivery of accounting and auditing services, adaptation of bank lending covenants, insurance and/or reinsurance requirements and court decisions in state law fiduciary duty litigation.

Chapter 3 – Accounting and Financial Analysis

Non-Routine Data Processes: Other less-frequently applied processes used in conjunction with the preparation of financial statements (e.g., financial statement consolidation procedures, gathering of financial information for special reports, actuarial estimates of reserves, etc.).

In evaluating controls over an application/system, it is important to note that routine data processes generally are subject to a more formalized system of controls because of the objectivity of data and volume of information processed. Conversely, because accounting estimation processes and non-routine data processes typically are more subjective (involving estimates), or because they are performed less often, these processes typically do not have controls at the same level of formality. Consequently, the risk of errors occurring may be greater, and therefore additional scrutiny of the controls may be required.

It is suggested that the approach for evaluating internal controls consider five broad control objectives that affect the reliability of information in the accounts, records and financial statements of the insolvent insurer:

Segregation of Duties: Are procedures in place to ensure that employees with the responsibility for recording or reporting transactions do not have custody of the assets on which they are reporting?

Authorization: Are controls in place to ensure that transactions are executed in accordance with the receiver's general or specific authorization?

Access to Assets: Are controls in place to ensure that access to assets (including data) is permitted only in accordance with the receiver's authorization?

Asset Accountability: Are controls in place to ensure that amounts recorded for assets are compared with the existing assets at reasonable intervals, and that appropriate action is taken regarding any differences?

Recording: Are controls in place to ensure that all transactions are recorded and that all recorded transactions are real, properly valued, recorded on a timely basis, properly classified, and correctly summarized and posted?

VI. AUDIT/INVESTIGATION OF FINANCIAL STATEMENTS

The first step in performing an audit/investigation of an insurer's financial statements is to secure the insurer's cash and investment assets (as discussed above), and then obtain the most recently published financial statement. This may be the most recent annual, quarterly, or monthly financial statement submitted to the domiciliary state insurance department. As discussed later in this chapter, control should be obtained over all automated and manual records of the company, including financial, underwriting and claims records.

Computer systems should be secured at date of takeover, which includes creating a backup to preserve data at the time of takeover, limiting physical access, changing locks and passwords, and obtaining and taking inventory of all computer disks and related backups. (See Chapter 2—Information Systems).

All manual records of the insurer, including those at off-site locations, should be inventoried. A central location for all records should be established, and all records transported to this location. An electronic inventory system should be created to track the location of records/files.

A review of internal controls should identify the nature and extent of significant problems within the insurer and the segregation of duties. This review should ideally be performed by independent auditors at the beginning of the receivership and on a periodic basis thereafter.

An examination of all accounts as of takeover date and a balance sheet as of the date of receivership may be required for reporting purposes or to support litigation. The balance sheet can be prepared using GAAP-basis, statutory-basis or cash-basis accounting. The accounting department, insurance department personnel or independent accountants

Receiver's Handbook for Insurance Company Insolvencies

may perform this function. The balance sheet should be prepared using the accounts and the general ledger, as well as current bank statements, investment statements, cash reports and other supporting documents.

The receiver's accountants should obtain workpapers from the last completed audit and/or from the preliminary audit done by an independent accounting firm. These workpapers and any documents or correspondence related to the audit should be reviewed, focusing on restricted assets, related-party transactions, commitments and contingencies, disclosure items, and any other support documentation or unusual items noted. The accountant may be asked to comment on the adequacy of the financial statements opined upon by the insurer's former accountants.

The accountants should also obtain the most recent audited annual statements, SEC reports, 10Ks, 10Qs, filed statutory blanks and internal audit files and reports, again focusing on restricted asset documentation, related-party transactions, unusual items noted and internal control studies.

The principal types of assets and liabilities that an insurer could have and the recommended procedures for establishing the balance sheet at the date of receivership and for securing assets on a prospective basis are discussed below.

A. Cash

As addressed in Section III, the existence, location and amount of all cash, cash equivalent, short-term investments and cryptocurrencies should be verified through direct confirmation with financial institutions, investment managers and other parties thought to be holding cash or investments. Special care should be applied to the identification of accounts not held in the insurer's name but to its benefit. Bank statements, investment statements, cash ledgers and cash flow statements should be reviewed. This process should also include any funds held as collateral, letters of credit or other restricted cash. The initial procedures established with the financial institutions regarding wire transfers, and the identity of all who have access to the cash and investments, should be reevaluated and further consideration given to changing, restricting, or curtailing this access.

B. Investments

As with cash, the existence, location, amount, and type of liquid securities (bonds, stocks, mortgage loans, etc.) should be confirmed directly with financial institutions, any joint venture managing partners, investment and real estate managers and other third parties thought to be holding securities. Investment statements from financial institutions, portfolio statements from investment managers and other similar reports should be secured and used to establish a balance at the receivership date. Purchases, sales and transfers of any kind, especially recent transactions, should be reviewed, with special attention to related gains/losses. A focus on related-party or affiliate transactions is important, as it could be helpful to the receiver and attorneys. The receiver should be aware of who has access to the investments and the authority to direct the investment managers/brokers. The receiver should consider changing and restricting this authority.

A review of the investment policies should be made and guidelines and procedures established regarding the future investing of securities. State law(s) should be researched to determine if there are any applicable restrictions. Receivers should take into account they act in a fiduciary capacity and any investment decisions and guidelines should reflect that. If an investment management firm is controlling allocations according to the investment policy, the receiver should inform them of any difference in the allocations. Allocation of this function between in-house personnel and independent investment services should take into consideration the current dollar amount of investments, projection of future investments, capability of the company personnel and the complexity of transactions. The receiver should investigate company ownership of derivative and options instruments (see Schedule DB of the annual statement) and obtain a description of the company's hedging strategy.

The market value of investments as of the date of receivership should be ascertained to determine the realizable value of the assets.

Chapter 3 – Accounting and Financial Analysis

Examples of the various types of investments that may be recorded on the insurer's books include:

- Stock
- Bonds
- Mortgage or asset-backed securities
- Short-term investments (e.g., money markets, overnight deposits) (see cash above)
- Government securities
- High-yield, high-risk bonds
- Mortgage loans
- Joint ventures
- Partnerships
- Investments in subsidiary, controlled or affiliated entities
- Real estate
- Company owned automobiles
- Other Assets including healthcare related receivables (for health-related receiverships)

The receiver should also be aware of the risks associated with the various investments recorded on the books of the insurer and should consider liquidating high-risk investments in favor of more conservative investments. Certain risks can be defined as:

- Credit risk
 - The risk that default may occur on an obligation.
- Market risk
 - The risk that values are affected adversely by changes in interest rates or similar type price changes.
- Liquidity risk
 - The risk that the ability to sell investments readily has diminished, resulting in an inability to generate cash to pay off obligations
- Off-balance-sheet risk
 - The risk that a potential loss may occur in excess of the amount recorded on the financial statements. This loss may be related to guarantees or commitments entered into by the insurer with respect to a particular investment.

The insurer may have entered into hedge transactions or other sophisticated investment contracts; the receiver should have an understanding of these arrangements before undertaking any transactions relating to them.

*Receiver's Handbook for Insurance Company Insolvencies***C. Real Estate**

Determine the existence, location, and the amount of related mortgage/debt and/or income from properties. Obtain any real estate related management contracts. Consider obtaining current valuation of the properties through an appraiser or based on current market conditions. Transactions should be identified and quantified with related parties or affiliates on recent transactions within the voidable preference period. Management of existing properties should be reviewed by the receiver. The bank/lender holding related mortgage/debt should be notified of the receivership. If any of the real estate is held in a joint venture/partnership obtain and review the joint venture/partnership agreements.

D. Reinsurance Recoverables

A present-day evaluation of the collectibility of reinsurance recoverables should be performed by the receiver based on current balances, aging of recoverables and valuation of allowance for doubtful accounts by reinsurer. The processing of claims by the guaranty funds and the reporting of paid losses should be monitored by the receiver for adherence to protocols regarding completeness and timeliness and the effect of delays on its ability to collect reinsurance recoverables. (See Chapter 2—Information Systems and Chapter 6—Guaranty Funds.) Further, consideration should be given to whether ceded reinsurance premiums should be paid and the legal effect of refusal to pay. In the context of a life and health receivership, the Receiver should be mindful of the guaranty associations' right to elect to continue reinsurance in accordance with IRMA section 612 and section 8(N) of the NAIC Life and Health Insurance Guaranty Association Model Act, as adopted in the states.

A receiver should, as part of his evaluation of all reinsurance contracts, determine if there is a contingent commission component and if so, find out whether the estate qualified and received any present or future contingent commission.

Most reinsurance contracts reward contingent commission by way of the ceding commission, *i.e.*, if the loss ratios are within the contract terms that trigger the contingent commission, it typically would be reflected in an increase in the percentage on the ceding commission.

E. Prepaids

Identify prepaid assets, which could include insurance coverage, taxes, pension benefits, etc. If a prepaid asset relates to property insurance coverage, cross reference the insured property to the real estate section, making sure that the property has been identified and recorded under the real estate section. Focus on any prepaids for services from related parties and affiliates.

F. Agents' Balances

Review agents' balances, focusing on additional information that should be recorded on the books of the insurer versus the agents' books. Examine agreements and commissions, and check for unlawful setoffs, evidence of broker funding and other netting activities. Investigate any advance commissions, or bonus or delayed payment arrangements with agents. Consideration should be given to lags in the reporting of premium (and thus exposures), particularly when MGAs, TPAs or multiple agents/brokers are involved. Particular attention should be paid to determine if there are any unearned commissions due to the cancellation of policies caused by the liquidation. Often the agency agreement makes the agent responsible for collection of premium. Under those agreements, if the agent is carrying an account receivable for uncollected premium and the amount of the uncollected premium has not already been paid to the insurance company, the receiver can demand that the agent make payment for the premium even though it has not been collected by the agent. Agent agreements also vary as to the terms for collection of audit premium. Some make the agent responsible for collection of audit premium, while some leave audit premium collection to the insurer. If the audit or audit collection responsibility lies with the agent, the receiver will want to enforce that, at least to the extent that the agent actually collects audit premium. Whether premiums

Chapter 3 – Accounting and Financial Analysis

are to be remitted to the receiver in gross or net of commissions is an issue of state law that should be resolved by the receiver in consultation with counsel.

G. Loans or Advances to Affiliates or Agents

Determine whether any receivables have been written off without an effort to collect.

H. Personal Property

Obtain a complete inventory of all personal property, such as furniture, fixtures and equipment, including any depreciation schedule. Care should be taken to verify that the insurer is the owner of these assets as opposed to an affiliate or another entity. For example, some assets may be leased as a form of financing. If the company is a staff model HMO, the receiver should also obtain an inventory of medical equipment and a pharmacy or medical supplies inventory.

I. Other Assets

Review other assets, determining existence, location and amount. Verify expiration dates and adequacy of trust accounts and letters of credit posted as collateral by reinsurers, policyholders and others. Ascertain whether any assets have been sold or transferred for less-than-adequate consideration. Review sales contracts and independent appraisals, and focus on any transactions with related parties and affiliates.

For healthcare related receiverships healthcare receivables can include items like provider risk sharing receivables, coordination of benefits, provider overpayments and/or subrogation recoverables among other items.

J. Accounts Payable and Accrued Expenses; Debt

Identify and quantify liabilities outstanding for all general and secured creditors and employee-related expenses. Employee-related expenses include payroll and bonus, severance, vacation and personal time. Obtain pension and deferred compensation program documentation where applicable. These items can be determined by using the payroll register, personnel policies and procedures, and personnel records. Confirm that all personnel receiving monies are currently employed by the insurer, and review all related-party transactions.

Notify any bank/lender of the receivership and confirm outstanding balances as of the date of receivership. Review debt agreements, loan files and collateral files to determine that liabilities are properly recorded on the financial statements as to type of debt and classification, i.e., short-term versus long-term.

K. CLAIM Reserves and Incurred but Not Reported (IBNR) CLAIMS

Obtain an understanding of the insurer's policy on booking reserves, and determine whether the policy has been consistently followed. Make any necessary adjustments to the financial statements. Continue to monitor claims for ongoing evaluations and reporting of case reserves.

The receiver must consider the use of in-house actuaries or independent actuaries to determine the adequacy of reserves. Consider commissioning a new actuarial study, as of the liquidation date, to establish ultimate losses in a property and casualty receivership or to evaluate blocks of business in life, accident and health carriers. The additional cost of the study may be justified by the receiver's enhanced ability to finally commute reinsurance or to adjust account balances that involve retrospectively rated policies. (See Chapter 5—Claims.)

Determining the adequacy of claims reserves and IBNR is especially critical for HMOs. It is also important to identify the inventory and associated liability for claims that are in-house but have not been processed through the HMO's claims system. The receiver may consider hiring a third-party administrator or other

Receiver's Handbook for Insurance Company Insolvencies

outside claims processing service to process the claims and determine the ultimate liability. The receiver may also consider hiring an actuary to establish the medical loss ratio for each of the HMO's product lines in order to determine whether a line of business is profitable.

L. Income and Expense

Examine any unusual income and expense items, including sales to or purchases from related parties or affiliates, significant gains/losses, and unusually high expenses in relation to the size of the insurer and type of business.

M. Equity

Review surplus accounts and investigate any unusual changes in surplus, statutory to GAAP adjustments, recent capital contributions, recent capital issues and other activity that appears unusual.

VII. RELATED PARTY TRANSACTIONS

Insurers often enter into many different types of transactions with various related-party entities. Each of these transactions should be scrutinized carefully because of the potential that they were not the result of arms-length bargaining. Further, even fairly negotiated transactions may not have been carried out according to the terms of the agreement. Finally, the transaction may not be exactly as it appears. For example, a sale of an asset at a huge loss may in fact amount to a fraudulent transfer. Related parties may include a parent company, affiliates or subsidiaries, shareholders, directors, officers, and employees. Transactions with affiliates are required to be disclosed in Schedule Y, Part 2 of the annual statement. Related parties may also include entities or individuals that are not as easily identified, as they may be owned by individuals associated with the insurer (such as directors, shareholders, officers or employees), or they may be entities that have entered into significant transactions with the insurer. These transactions may be significant as to the number of transactions or as to the amount of money involved. Alternatively, the transactions may be immaterial from the standpoint of assets changing hands, but significant because of the nature of the transaction (guarantees, debt forgiveness, etc.).

It is important to identify related parties and transactions between the insurer and any related party as quickly as possible for many reasons, including to preserve the assets. Often, related-party transactions are not appropriately reflected on the insurer's books, and sometimes the transactions may not be reflected at all, therefore misstating the insurer's assets or liabilities. The transactions may be accounted for (if at all) on the incorrect entity's books, and funds or entries may be commingled by management, thinking that all the companies are part of a consolidated group or owned by the same parent. However, the legal corporate entities are very important, especially when one or more of them become insolvent. Insurers are subject to the jurisdiction of the insurance commissioner; other entities are governed by bankruptcy law and are generally not subject to the jurisdiction of the commissioner; however, may be subject to the jurisdiction of the receivership court in certain circumstances. On Aug. 17, 2021, the NAIC adopted a new provision, Section 5A(6), of the *Insurance Holding Company System Model Act* (#440) which provides that the affiliated entity whose sole business purpose is to provide services to the insurance company is subject to the jurisdiction of the receivership court This applies to affiliates performing services for the insurers that are integral part of the insurers operations or are essential to the insurers ability to fulfil its obligations².

Further, with regard to commingled data and records, the 2021 revisions to Model #440 and *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) specify that records and data of the insurer held by an affiliate are identifiable and are segregated or readily capable of segregation at no additional cost to the insurer. The Models' reference to "at no additional cost to the insurer" is not intended to prohibit recovery

² The full text of Section 5A(6) of the *Insurance Holding Company System Model Act* (#440) is available at https://content.naic.org/sites/default/files/MO440_0.pdf. The 2021 NAIC adopted revisions to the *Insurance Holding Company System Regulatory Act* (#440) and *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) may not yet be adopted in every state; therefore, receivers should refer to the applicable state's law.

Chapter 3 – Accounting and Financial Analysis

of the fair and reasonable cost associated with transferring records and data to the insurer. Since records and data of the insurer are the property of the insurer, the insurer should not pay a cost to segregate commingled records and data from other data of the affiliate

Related-party transactions may give rise to culpability on the part of the interested entities or individuals. Preferential transfers, fraudulent transfers and other bases for liability are discussed further in this chapter and in Chapter 9—Legal Considerations.

Organization charts showing a parent, affiliates or subsidiaries may be obtained from a schedule within the annual statement (Schedule Y, Part 1), board minutes or SEC filings. Additionally, relationships with insurance groups and entities that share common ownership can be found on Schedule Y, Part 3. It is more difficult to identify individuals who might have been involved with related-party transactions, and often that list of individuals is much longer. However, the receiver should start with the list of officers and directors of the insolvent insurer; its parent, subsidiaries or affiliates, again listed in the annual statement or SEC documents; and board minutes. Stockholders' names should be listed in shareholder records maintained, possibly, by legal counsel or trustees. Lists of employees may be obtained from payroll registers. When these transactions are reviewed, it may be determined that a significant number or dollar volume of transactions have occurred with one individual or entity. This may indicate that the involved entity or individual is also a related party.

Once an initial list of related parties is established, the types of transactions that may have occurred between these entities can be determined. The types of transactions that may be identified relate to various types of business transactions. An understanding of the related entities and how they are affiliated will help the receiver to identify and formulate the types of transactions that may have occurred between them. Many insurer company groups have established affiliates to act as investment vehicles or managers, brokers, reinsurers, MGAs, TPAs, premium finance companies, computer service companies, or to accept select types of risks. A parent holding company may have been established. It is important to ascertain the related parties and their affiliation because the insolvent insurer may have claims against affiliates.

The receiver should review the notes to financial statements in the annual statement, the independent auditor's report and the state insurance examiner's report. These reports typically identify and summarize some of the significant related-party transactions. Also, board minutes will frequently contain discussions or resolutions pertaining to specific significant transactions involving related parties.

Brokerage, agency or management agreements may exist between the insurer and its affiliates. There may also be reinsurance (both assumed and ceded) or pooling arrangements among affiliates. Expense-sharing arrangements may exist. An affiliate may provide data processing services (the receiver needs to determine immediately if he or she can continue to obtain these services and how to secure the data). Leasing arrangements for offices, data processing equipment and furniture and fixtures may also exist. With respect to all agreements with affiliates, the receiver should be alert to possible differences between the apparent transaction and its real substance.

Holding companies may also provide management expertise for which there is a management agreement and/or expense allocation agreements. Tax-sharing agreements may also exist between all the affiliates and parent.

Insurers may have management agreements with unaffiliated parties, or control may be maintained through interlocking directors of the management company and the insurer. For example, an HMO may be controlled by a provider group such as hospitals. Therefore, these agreements or contracts need to be reviewed to determine if they are arms-length transactions.

It is important to identify these transactions as quickly as possible, not only for the identification of assets and liabilities that may be recovered by the insurer, but to determine if alternative data processing, management, facilities, etc., should be obtained, as these services may no longer be available from the affiliate. Alternatively, such services may be available on more favorable terms from non-affiliated providers.

The types of transactions that may have occurred between the insurer and its directors, officers, employees and stockholders may be the same as some of the above, but may also include items such as travel and expense advances,

Receiver's Handbook for Insurance Company Insolvencies

unsecured loans or loans secured by personal or real property. Companies owned by any of these individuals may also be responsible for providing services discussed above, including leases, data processing, brokerage, reinsurance, etc.

To determine the existence of these types of transactions, their validity and the appropriate accounting for the transactions (both in the books and records of the insurer and in cash flow), the tasks described below should be performed.

A. Identify Related Parties

The receiver should obtain or develop organizational charts to identify any and all affiliates and related parties. These affiliates should be identified as 1) parent companies, 2) subsidiaries, or 3) affiliates (which would be organizations owned or controlled by the same parent company, but not owned by the insolvent insurer). Schedule Y, Part 1 of the annual statements provides an organization chart of the insurance holding company system, Schedule Y, Part 2 includes transactions with affiliates, and Schedule Y, Part 3 includes further information on insurance groups and entities that share common control.

After preliminary identification of these related entities, the receiver should determine the status of these related entities:

- If the related parties are financially troubled, are the parties under the jurisdiction of the insurance regulator of their state of domicile, or are the parties under the jurisdiction of corporate bankruptcy laws?
- Does the insolvent insurer need to file a proof of claim against the related entity to preserve its claim? (The receiver should consult with counsel about the risks of submitting to a foreign court's jurisdiction on issues other than those set forth in the proof of claim.)
- Are the entities affiliated, in which case the insolvent insurer may have access to the assets of the related entities?
- Is cash commingled among the companies?
- Are the entities operating as alter egos?

The receiver should also obtain lists of individuals, as well as their related entities who might also be related parties, beginning with the directors and officers of the insurer listed in its annual statement and the officers and directors of the insurer's subsidiaries and affiliates. The receiver should also obtain a list of all shareholders and employees of the insolvent entity. Each of these individuals may be categorized in a manner similar to that described above for companies that are related entities. Each can be evaluated for the types of transactions that may have occurred between them and the insurer. It should be kept in mind that these individuals may have been involved with other entities that appear not to be related but, in fact, may have had sufficient transactions with the insolvent entity that they, too, become related entities.

B. Find Supporting Legal Documents for Transactions

The receiver should obtain all key documents and agreements entered into between the insurer and its various related entities. As discussed above, these agreements may have been collected through the inventory of documents in the takeover period. If these documents have not been located, a search may be made to locate any agreement or documents that indicate arrangements between the insolvent insurer and the various related entities.

As the receiver completes the procedures described below and in Chapter 4—Investigation and Asset Recovery, identified transactions may indicate the advisability of searching for additional documents.

*Chapter 3 – Accounting and Financial Analysis***C. Identify Amounts Associated with the Related Party Transactions**

Next, the receiver should review the various accounting records of the insurer, including the chart of accounts, general ledger, journal entry listing and transaction listings. It must be noted that when dealing with related-party transactions, the receiver should attempt to obtain the corresponding records of related entities to cross reference transactions and amounts as described in the procedures below.

The chart of accounts may be obtained and reviewed for any accounts that appear to be intercompany receivables, intercompany payables or loans to affiliates, related parties, directors, officers, shareholders, employees, etc. This may be an easier task for some companies than others. Often separate accounts will be established for all related-party transactions. On the other hand, the transactions may be difficult to identify if they were charged to accounts with innocuous titles such as “other assets” or “miscellaneous expense,” or if they were netted with other transactions. Some transactions, particularly insurance-related transactions, may be buried in the normal transactions of the insurer. However, if the receiver reviews the chart of accounts to identify preliminarily the accounts that may be with related entities and individuals, subsequent procedures will help identify buried transactions.

After particular accounts have been identified as possibly containing related-party transactions, the general ledger should be reviewed to ascertain the dollar amount in the identified accounts. The receiver may want to prioritize the items reviewed by the dollar magnitude of the balances. However, caution should be taken at this point, as the dollar magnitude alone may not be indicative of the significance of the transaction. Understanding the types of transactions recorded in the particular account is helpful, especially if there is a high volume of transactions that have been netted. A small balance in an account with a significant volume of transactions may have other implications. No cash may have changed hands in the case of guarantees or debt forgiveness.

The next step is to obtain the transaction register by month to see the actual transactions that have been posted to the account. This will be the beginning of the investigation, or audit phase of the review. As mentioned above, depending on the size and type of systems the insurer used, it is possible that the general ledger listing also will provide the listing of transactions posted to the various accounts, meaning that a separate transaction listing is not necessary or available.

It may be beneficial to obtain a listing of disbursements sorted by payee. This can help identify related-party transactions that, as mentioned above, may not appear significant standing alone and that may be buried in other transactions of the insurer.

The above steps are easily accomplished if the insurer had an efficient, effective accounting system. Unfortunately, this is often not the case with many insurers that become insolvent. Frequently the accounting system may not have been operational as originally designed due to budgetary concerns, cutbacks of manpower and other problems during the period immediately preceding the insolvency, or there may have been intentional distortion of the system to hide improper transactions. In any case, it may be necessary to reconstruct information.

D. Cross-Reference to Affiliates’ Books

If the receiver has access to the related entities’ books, they should be obtained from those entities. A receiver who does not have ready access should attempt to obtain access promptly. The reciprocal accounts for those entities may then be reviewed and cross-referenced to see that the amounts recorded on the related entities’ books are in fact the reciprocal of the amounts on the insolvent insurer’s books. Differences should be investigated. In addition to the cross-referencing, the receiver may also perform all the analytical procedures discussed above for the related entities’ identified accounts. Through this process, the receiver may find other transactions that need to be evaluated and analyzed. In the absence of a court order, the receiver will usually be unsuccessful in his/her attempt to obtain the books and records of related entities.

*Receiver's Handbook for Insurance Company Insolvencies***E. Analyze All Transactions**

Once related-party transactions have been identified, detailed analyses of most of the transactions can be completed to determine whether they were business transactions entered into at arm's length and for valid business reasons with appropriate support. The arm's-length aspect of some transactions may be difficult to determine (or refute); however, all such transactions should be reviewed with an appropriate degree of skepticism. The analysis of the identified transactions may be completed by the accounting department or by the audit/investigation team.

The receiver may attempt to segregate transactions into types for analysis. Otherwise, the task may seem too large to accomplish. The transaction types may be determined by the accounts that have been identified as including related-party transactions and the relationships of the related parties. For example, if the related-party accounts include advances to or from, or accounts receivable or payable, then one of the transaction types might be cash advances or loans to related parties. The following are some of the transaction types that may be identified for analysis:

- Advances/loans to related parties
- Reinsurance receivable/payable
- Premiums due to/from
- Commissions due to/from
- Operating expenses receivable/payable (leases, management, computer services, etc.)
- Payment of dividends
- Purchase or sale of assets from or to related parties

The receiver should then systematically review the transaction types in each of the identified accounts. This would include noting the description of the transaction in the transaction listing.

It may be necessary for the receiver to search for the underlying documentation for all entries. The journal entry listing and other documents obtained in the document search may be helpful in this effort. Also, the various schedules in the annual statement should be reviewed. In any event, the receiver will have to seek any underlying information that may indicate the substance of the recorded transaction. The receiver may also have access to current or former employees who can shed light on the nature and intent of these transactions, locate documentation, and otherwise interpret such documents. Once the transaction entry has been obtained and the underlying documentation has been obtained and reviewed, the receiver can determine whether the information was recorded appropriately on the insurer's books. At that time, the receiver should add the correct dollar amount of this item to the schedule of items for ultimate determination of action. This schedule should be prepared on a gross basis, without netting of balances, to enable the receiver to see the full impact of the transactions.

The receiver should systematically analyze all significant transactions in all identified accounts, as demonstrated above, until all transactions have been reviewed and scheduled for ultimate disposition.

As each of these transactions is being reviewed and scheduled, it is always necessary to cross-reference to other related parties' books and records, if available.

F. Evaluate All Identified and Analyzed Transactions

After all transactions have been reviewed, analyzed and scheduled, the receiver will have to evaluate the propriety of the transactions and any action necessary. Some of the transactions might not stand depending

Chapter 3 – Accounting and Financial Analysis

on the type of transaction and when it occurred relative to the date the insurer was declared insolvent. If the related-party transactions result in receivables to the insolvent entity, it may be necessary for the receiver to file a proof of claim in another proceeding if the other party is in some form of receivership. If the related-party transaction resulted in payables from the insurer, the receiver may have creditors that need to be notified of the insolvency.

G. Potential Reconstruction of Records

If the insurer does not have the types of records listed above, it may be necessary to use available records to reconstruct the needed information. In such cases, the receiver should begin with the insurer's annual statement. From this, the receiver may find supporting documents for the numbers entered and filed in this statement. If the underlying information does not agree with the annual statement, the discrepancies should be identified and the reason for the discrepancies determined. The receiver may be able to obtain information from the insurance department or outside auditors, which can be of great benefit when reconstructing records.

If a total reconstruction is required, the receiver should start with all the bank statements for the past year (at a minimum). The receiver should review the receipts and disbursements from the most recent year to determine if there are additional types of transactions that were not previously disclosed in the last filed annual statement. This detailed analysis should include a schedule which categorizes disbursements by type and which segregates those related to the payment of claims or reinsurance and other underwriting expenses from those that were pure operating expenses. Disbursements that may have been to related entities should also be segregated and identified. The same type of schedule should also be prepared for all cash receipts.

If available, any financial information regarding affiliates, subsidiaries or the parent company would be useful in this reconstruction.

H. Data and Records of the Insurer Held by an Affiliate

The *Insurance Holding Company System Model Act* (#440) and *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) contain provisions that address data and records of the insurer that are held by an affiliate. While the Models have contained provisions since 2010, on Aug. 17, 2021, the NAIC adopted revisions to further clarify owner of data and records³.

Specifically, the Model Act #440 specifies the following:

- The books, accounts and records of each party to all such transactions shall be so maintained as to clearly and accurately disclose the nature and details of the transactions including such accounting information as is necessary to support the reasonableness of the charges or fees to the respective parties; and
- All records and data of the insurer held by an affiliate are and remain the property of the insurer, are subject to control of the insurer, are identifiable, and are segregated or readily capable of segregation, at no additional cost to the insurer, from all other persons' records and data. The affiliate may charge a fair and reasonable cost associated with transferring the records and data to the insurer; however, the insurer should not pay a cost to segregate commingled records and data.

³ Although in 2021 the NAIC adopted revisions to the *Insurance Holding Company System Regulatory Act* (#440) and *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) related to receivership matters including records and data, these revisions may not yet be adopted in every state; therefore, receivers should refer to the applicable state's law.

Receiver's Handbook for Insurance Company Insolvencies

Therefore, if records and data belonging to the insurer is held by an affiliate (e.g., on the affiliate's systems), upon request, the affiliate shall provide that the receiver can:

- obtain a complete set of all records of any type that pertain to the insurer's business
- obtain access to the operating systems on which the data is maintained
- obtain the software that runs those systems either through assumption of licensing agreements or otherwise
- restrict the use of the data by the affiliate if it is not operating the insurer's business
- The affiliate shall provide a waiver of any landlord lien or other encumbrance to give the insurer access to all records and data in the event of the affiliate's default under a lease or other agreement.
- The Model #440 and #450 revisions also describes that records and data that are otherwise the property of the insurer, in whatever form maintained, include, but are not limited to, claims and claim files, policyholder lists, application files, litigation files, premium records, rate books, underwriting manuals, personnel records, financial records or similar records within the possession, custody or control of the affiliate.
- Model Regulation #450, Section 19 lists provisions that should be included in agreements for cost sharing services and management services between the insurer and an affiliate, which includes certain provisions specific to the insurer being placed in supervision, seizure, conservatorship, or receivership.
 - All of the rights of the insurer under the agreement extend to the receiver or commissioner to the extent permitted by state law.
 - Records and data of the insurer are the property of the insurer, are subject to the control of the insurer, are identifiable, and are segregated from all other person's records and data or are readily capable of segregation at no additional cost to the insurer.
 - If the insurer is placed into receivership, a complete set of records and data of the insurer will immediately be made available to the receiver or the commissioner, shall be made available in a usable format and shall be turned over to the receiver or commissioner immediately upon the receiver or the commissioner's request, and the cost to transfer data to the receiver or the commissioner shall be fair and reasonable.
 - Specify that the affiliate has no automatic right to terminate the agreement if the insurer is placed into supervision, seizure, conservatorship or receivership.
 - Specify that the affiliate will provide the essential services for a minimum period of time [specified in the agreement] after termination of the agreement, if the insurer is placed into supervision, seizure, conservatorship or receivership.
 - Specify that the affiliate will continue to maintain any systems, programs or other infrastructure, notwithstanding supervision, seizure, conservatorship or receivership.
 - Specify that if the insurer is placed into supervision, seizure, conservatorship or receivership, and portions of the insurer's policies or contracts are eligible for coverage by

Chapter 3 – Accounting and Financial Analysis

one or more guaranty associations, the affiliate's commitments under certain provisions of Section 19 of Model 450 will extend to such guaranty association(s)⁴.

VIII. TAX ISSUES

In virtually every receivership federal tax issues must be considered. The insurer cannot be discharged or liquidated without the filing of federal income tax returns. In addition, consideration should be given to the payment of federal corporate income and other taxes. The receiver can be held personally liable for the payment of certain unpaid taxes if specific procedures are not followed.

Because of the complexity of federal income taxation issues, the potential personal liability of the Receiver and the additional complexities associated with receiverships, and the significant impact on the estate from items such as forgiveness of debt, consolidation rules and other matters, the receiver should hire individuals with expertise in these areas. Such experts could include independent CPAs or counsel with experience in such matters. Furthermore, because of the continuously evolving nature of federal income taxation issues, many of the issues addressed in this chapter may have changed. This is a reason that the receiver should hire individuals that will be as up-to-date as possible in these areas, and why receivers should seek updated guidance on tax matters (both federal income and state premium tax issues) in reference to the issues addressed in this Handbook.

The receiver should ascertain the insurer's tax status as part of the takeover procedure, in addition to securing copies of tax returns and company tax payment records. Foremost, the receiver should learn whether all tax returns due have been filed and any amounts owing have been paid. In addition, the receiver should learn whether the insurer was part of a consolidated group filing or party to any tax sharing or similar contractual agreements. The receiver should also obtain and carefully review and understand the provisions of any tax sharing agreements between the insurer and any related parties. In almost all receiverships, the receiver takes over the insurer, but not necessarily its holding company or other affiliated group with which the insurer may be consolidated for tax purposes. In addition, the insurer may own non-regulated subsidiaries that are taxed differently from the insurer.

Prior years' returns and any correspondence with the IRS also should be reviewed. Discussion may be held with any outside CPAs or counsel who may have been involved in filing the returns or in handling any disputes with the IRS. The receiver should be alert to any contingencies that may exist for payment of taxes, penalties and interest resulting from failure to file on time, failure to pay tax due on the return, inappropriate treatment of income or deductions on the return, etc. Contingency reserves recorded on the balance sheet of the insurer or its parent should be reviewed and analyzed for purposes of determining tax positions taken by the company which are not "more likely than not." The receiver should consider these contingencies when allocating distributable assets of the estate in light of the priority generally alleged by the federal government and accorded by the applicable priority statute (see Chapter 9—Legal Considerations).

The receiver may request an "Account Transcript" from the IRS for the receivership entity. The transcript, available by type of tax (Form 1120, Form 941, etc.) and year, may be obtained by filing form 4506-T, Request for Transcript of Tax Return. An account transcript typically contains information on tax payments (amounts and dates) and filing of returns (dates).

Income taxation of insurers is somewhat different from conventional corporations, with additional provisions that are applicable to life insurers contained in Part I of Subchapter L of the Internal Revenue Code ("IRC") and specific provisions applicable to other insurance companies contained in Part II of Subchapter L of the IRC.

Even though an insurer may have substantial statutory losses, it is possible that based on its taxable income, federal income taxes may be due. See discussion in this chapter of deferred income that may be taxed when a company loses its status as a life insurance company for federal tax purposes. There also exists the possibility that the insurer

⁴ The full text of Section 19 of the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) is available on the NAIC website at: https://content.naic.org/sites/default/files/MO450_0.pdf

Receiver's Handbook for Insurance Company Insolvencies

is entitled to recover prior years' taxes because of the existence of capital losses, operating losses or tax credits. Operating losses, can be carried back two years and forward 20 years by property and casualty insurers. Prior to 2018, life insurers were allowed to carry back ordinary losses for 3 years and carry forward losses for 15 years. No carryback is allowed for operating losses of insurers other than property and casualty insurers for taxable years after December 31, 2017, but these insurers are allowed indefinite carryforwards which are limited to 80% of taxable income in each year to which the operating loss is carried. All insurers are allowed to carry back capital losses 3 years and forward up to 5 years to offset capital gains and tax credit carrybacks vary depending upon the type of credit, so you should always check with a tax advisor. The insurer may also have made estimated tax payments that can be recovered. An insurer may also be entitled to a tax recovery because of its inclusion in a consolidated tax filing where its losses were used to set off taxable income from affiliated entities. Tax recovery due to tax sharing agreements will not be recoverable from the IRS but must be recovered from affiliated entities. Therefore, income tax recoverable may not be collectible and, as such, should not be booked. In addition, under Section 848 of the Internal Revenue Code, an insurer must capitalize its estimated acquisition expenses, which are then amortizable (deductible) over the ensuing 10-year period for amounts capitalized prior to through Dec. 31, 2017 and over a 15-year period for amounts capitalized after December 31, 2017 (five years for smaller companies).

The receiver should be aware that IRC Section 6511(a) places a deadline by which claims for credit or refund of taxes must be made. In many instances, this deadline will be three years from the due date of the return for which the claim for refund is being made. However, if the claim for refund results from the carryback of losses to preceding tax years, the deadline will be three years from the due date of the return which generated the loss. Due to the critical nature of properly determining these deadlines, the receiver should consider consulting independent CPAs or counsel with experience with these matters.

In addition to federal corporate income taxes, the receiver also has to be concerned about foreign taxes, state corporate income taxes, federal and state payroll taxes, premium taxes, real estate taxes, federal excise taxes, state franchise and excise taxes, sales taxes, and personal property taxes, along with myriad reporting and filing requirements. The receiver will also need to file final tax returns upon the closing of the receivership estate.

A. Notice

Within 10 days from the date a receiver is appointed, Form 56 (Notice Concerning Fiduciary Relationship) must be filed with the IRS. A certified copy of the court appointment should be attached. This form should be filed for all forms of receivership. The receiver should specify that he is to receive notice concerning income, excise, sales and property, and payroll tax matters. The list of tax forms should include Form 1120L (for life companies) or Form 1120PC (for property and casualty companies), Form 941 (quarterly payroll tax returns), Form 940 (Federal Unemployment Compensation Tax), and Form 720 (Federal Quarterly Excise Tax Return). If the insurer owns subsidiaries, the receiver should also file a Form 56 notice for each subsidiary.

In addition to the federal filing, many states have similar notice requirements. Even without a specific requirement, sending similar notice to the taxing authorities of those states and foreign countries where the insurer did business or had employees should be considered.

Form 56 is not to be used to update the last known address of the receivership entity. The receiver should file form 8822, Change of Address, with the IRS.

B. Income Taxes

Under Section 1.6012-3(b)(4) of the Federal Income Tax Regulations, a receiver or trustee who, by order of a court of competent jurisdiction, by operation of law or otherwise, has possession of or holds title to all, or substantially all, the property or business of a corporation, must file a return in the same manner and form as the corporation.

The due date for filing federal corporate income tax returns for insurance companies is the 15th day of the fourth month (generally April 15) of the year following the year end of the company. [For years beginning

Chapter 3 – Accounting and Financial Analysis

prior to 2016, the due date was the 15th day of the third month (generally March 15) of the year following the year end of the company.] A six-month extension to October 15 can be obtained for the filing of the return, if the extension form is sent to the IRS prior to the April 15 deadline. This extension, however, is only for the filing of the return and not for the payment of tax liabilities. The April 15 deadline is applicable to calendar-year companies only. There may be certain non-insurance companies under the receiver’s authority that have fiscal year-ends.

Once an affiliated group of corporations files a consolidated return, it must continue to do so as long as the group remains in existence. Therefore, consolidated returns must continue to be filed with the insurer’s subsidiaries. In addition, the IRS has ruled under PLR 9246031 that an insurer in liquidation under state law generally is required to be included in its common parent’s consolidated federal income tax return. The receiver may request approval from the IRS to file separate returns. This permission may be granted on a case-by-case basis for good cause shown. Pursuant to the consolidated return regulations (1.1502-75), the parent of the affiliated group must request deconsolidation for good cause. A deconsolidation may weaken the IRS’s position; as such, the granting of a deconsolidation is not guaranteed.

Following is a list of various insurance or insurance-related entities and the Federal Income Tax Form that should be filed:

Type of Insurer (Based on Business Written)	Federal Income Tax Form
Property/Casualty	1120-PC
Life	1120-L
HMO	1120-PC
Staff Model HMO	1120
501(c)(15)(A) - tax exempt	990
Title	1120-PC
Blue Cross/Blue Shield	1120-PC
Health	1120-PC
Health w/ noncancellable and/or Guaranteed renewable contracts	1120-L

For a company to be considered an “insurance company,” at least half of its business during the taxable year must be the issuing of insurance or annuity contracts or the reinsuring of risks underwritten by insurance companies.

For a company to be considered a “life insurance company,” it must be engaged in the business of issuing life insurance and annuity contracts (either separately or combined with accident and health insurance), or noncancellable and/or guaranteed renewable contracts of health and accident insurance. Also, its life insurance reserves plus unearned premiums—and unpaid premiums on unpaid losses and on noncancellable life, accident, or health policies not included in life reserves—must make up 50 percent or more of its total reserves.

In certain special situations, managed care organizations may qualify for tax exempt status; if so, they would file Form 990.

1. Life Insurance Companies

Life insurers (whether stock, mutual or mutual benefit) that meet certain reserve requirements file Form 1120-L. If a life insurer does not meet the reserve requirements, then it must file Form 1120-PC. If a stock life insurer loses its life insurance tax status because its life insurance reserves fall below the minimum requirement, then taxes that were deferred in earlier years may now become due. In Revenue Procedure 2018-31, Section 26.03 provides for an automatic accounting method change when there’s

Receiver's Handbook for Insurance Company Insolvencies

a change in qualification as a life insurance company as defined in Internal Revenue Code (“IRC”) Section 816(a).

For taxable years ending before January 1, 2018, life insurers with less than \$500 million in assets are entitled to a small life insurer deduction of 60 percent of their “life insurance company taxable income.” This deduction is available for income up to \$3 million and then is gradually phased out on income from \$3 million to \$15 million. For taxable years after December 31, 2017, the small life insurer company deduction is repealed, and the alternative minimum tax for corporations is repealed as well.

2. Non-Life Insurance Companies

Non-life insurers (stock and mutual) file Form 1120-PC. Non-life companies generally are taxed on their statutory income with certain modifications, including the discounting of loss reserves and the non-deductibility of 20% of the increase of the unearned premium reserves. The non-deductible 20% of the unearned premium reserve (UPR) gives the taxpayer a tax benefit when the UPR is reduced but the effect of the reversal of the 80% deductible portion has a greater impact and may create taxable income. As previously stated, the receiver should consult their tax consultant regarding the ramifications of these issues.

Non-life insurers whose written premiums for the year do not exceed \$2.2 million (an amount which is inflation-adjusted for each taxable year beginning after 2015) may elect to be taxed only on investment income under Code Section 831(b). The premium limits are based upon the premiums of a “controlled group” of corporations as defined by Code Section 1563(a), with the exception that more than 50% is the definition of control. The fact that an insurer is in receivership does not remove it from a “controlled group.” The company also must meet certain diversification requirements with regard to premiums and owners as prescribed in IRC Section (831(b)(2)(B)). Taxation on investment income may not be advantageous to companies that are currently generating or utilizing net operating losses, as the company may lose the benefit of those losses. IRC Section 831(b)(3) prescribes limitations on the use of net operating losses for insurance companies taxed only on investment income.

Prior to January 1, 2005, small non-life insurers with less than \$350,000 of premium income could qualify to be exempt from income tax under Code Section 501(c)(15). Many receivers took advantage of this provision to exempt liquidation estates from federal income taxation. In 2004, IRC Section 501(c)(15) was amended to provide tax exempt status only to those non-life insurers with gross receipts less than \$600,000, and then only if more than 50% of the gross receipts were from premiums. Since most companies in liquidation have virtually zero premium income after the first couple of years of the liquidation, and since most have annual income exceeding the \$600,000 cap, this amendment to Code Section 501(c)(15) generally eliminated its applicability to insurance receiverships.

The impact upon insurance companies in receivership was considered as Code Section 501(c)(15) was being amended in 2004, and the applicability of the exemption to insurance companies in receivership was specifically extended through calendar year 2007. However, as of January 1, 2008, any insurers in liquidation that may have previously been qualified for exemption under the pre-2005 provisions of Code Section 501(c)(15) became ineligible for such exemption and are subject to federal income tax from that time forward unless they met the new requirements.

3. Special Relief

Under Revenue Procedure 84-59, the receiver may apply to the District Director of Internal Revenue for relief from the filing requirements under limited circumstances. In order to request this relief, the insurer has to have ceased operations and no longer have assets or income.

Chapter 3 – Accounting and Financial Analysis

4. Prompt Audit

The receiver may request that a prompt determination be made under Revenue Procedure 2006-24 whether the income tax return is being selected for examination by the IRS or is accepted as filed. The receiver will be discharged from any liability upon payment of the tax shown on the return if the IRS does not notify the receiver within 60 days after the request that the return has been selected for examination, or if the IRS does not complete the examination and notify the receiver of any tax due within 180 days after the request. This procedure enables the receiver to proceed with the receivership, or enhances the possible sale of the insurer, by resolving contingencies relating to taxes due for prior periods. The prompt audit provisions specifically apply to bankruptcy proceedings, not state liquidations. Certain IRS offices have approved applying the provisions to state liquidations; however, the approval is not automatic. When this is the case, a request for prompt assessment should be made under I.R.C. §6501(d). This will reduce the statute of limitations for assessment to 18 months. The request contemplates a corporate dissolution in 18 months and requires the submission of Form 4810 to the IRS.

5. Carrybacks

An insurer often becomes financially troubled because it incurred operating and/or other losses. Such losses may be deductible for income tax purposes. A review may be made of the deductibility of such losses to determine if the losses were deducted in the correct fiscal year and may be carried back to recover previously paid income taxes. If the losses were not deducted in the correct years, prior years' income tax returns may have to be amended. Under the Tax Cuts and Jobs Act of 2017 (TCJA) net operating losses of non-life insurance companies can still be carried back two years and carried forward 20 years (Internal Revenue Code Section 172(b)(1)(C)). However, there is no carryback for life insurance company net operating losses arising in 2018 and later years and an unlimited carry forward period (Internal Revenue Code Section 172(b)(1)(A)). Operational losses of life insurers arising in 2017 and earlier are carried back three years and forward fifteen years. A non-life insurance company can use the full amount of its net operating losses to offset taxable income (Internal Revenue Code Section 172(f)). A life insurance company is limited to an 80% net operating loss deduction against taxable income (Internal Revenue Code Section 172(a)(2)).

An example of a restructuring technique used in the liquidation of Reliance Insurance Company to address significant net operating loss carryovers is available in Exhibit 3-4.

6. Carryovers

To the extent that there is a discharge of indebtedness, any net operating loss carryover may be reduced by the amount of the discharge. If guaranty funds or other creditors are entitled to future funds, there may not have been a complete discharge.

Net operating losses are allowed an indefinite carryover period in taxable years beginning after December 31, 2017. The net operating loss deduction is limited to 80 percent of taxable income (without regard to the deduction) for losses arising in taxable years beginning after December 31, 2017. Therefore, even when there are net operating loss carryovers available, discharge of indebtedness could still result in income tax liabilities due because of the carryover taxable income limitations.

7. Deferred taxes

The deferred taxes for both deferred tax assets and liabilities should be reassessed. For example, the deferred tax assets which rely on further taxes payable to be realized may no longer be realizable.

*Receiver's Handbook for Insurance Company Insolvencies***C. Premium Taxes**

If the insurer is in rehabilitation, the receiver may be required to continue paying state and municipal premium taxes. Insurers are usually required to pay premium taxes that are calculated as a percent of direct premiums written. Many state and local tax authorities require insurers to pay estimated premium taxes. In many cases, a financially troubled insurer may experience a decrease in premium volume, or policies in force may be canceled. This may result in a reduction in premiums written and the related premium taxes. A review may be made to determine whether the insurer is entitled to premium tax refunds. It may then be necessary to refile the most recent returns to reflect the reduction in premium income. In addition, the receiver may attempt recovery of any prepaid or estimated premium taxes. If premium taxes are owed in a liquidation many states may relegate premium tax claims to a lower or general creditor status.

D. Payroll Taxes

Insurers are required to withhold federal income tax and social security tax (as well as state and local income taxes) from the wages and salaries of their employees. All of these taxes are considered “trust fund taxes” and must be remitted periodically to the various taxing authorities. The receiver should promptly ascertain that all payroll tax payments have been remitted by the insurer. If the receiver finds that taxes have not been paid, the Special Procedures Office of the IRS should be notified. In this way, the taxes or 100% penalty can be assessed against the former officers or persons with the responsibility for paying the taxes. The receiver may be asked to complete Form 4180 or Form 4181, which are questionnaires relating to the payment of “trust fund taxes.”

If the receiver fails to follow these procedures and funds that could have been used to pay “trust fund liabilities” are used for other purposes, the receiver may be held personally liable. The receiver should make certain that any plan filed with the court for the distribution of assets provides for the payment of these outstanding federal tax liabilities.

Many states have similar laws relating to withheld payroll taxes, and the receiver should be aware of the responsibilities imposed by these laws. The receiver should continue to file W-2s, as well as Forms 940 and 941, for employees of the insolvent insurer.

E. Other Taxes and Assessments**1. Real Estate and Corporate Personal Property Taxes**

The receiver should ascertain whether all real estate tax payments have been made, including those that the insurer has been collecting on mortgages it holds or services. The tax collector should be notified of the receivership proceeding and instructed to send any notices to the receiver.

2. Guaranty Fund Assessments

State guaranty funds assess insurers to cover their administrative and claim costs. If the insurer is operating under supervision or rehabilitation, it remains liable for guaranty fund assessments, though a guaranty fund may defer or abate an assessment, in whole or in part, under certain circumstances. In liquidation, guaranty fund assessments are paid in accordance with the domiciliary state’s liquidation priority statute.

3. Excise Taxes

Some insurers are required to remit excise taxes to the IRS because of foreign reinsurance premiums. These taxes are also considered “trust fund taxes,” and the same care should be afforded these taxes as is given to withheld payroll taxes.

Chapter 3 – Accounting and Financial Analysis

4. Commissions and Other Payments

At year-end, insurers are required to file Forms W-2 and/or 1099 for all commissions and other payments to an individual or partnership in excess of \$600 during the year. In addition, the receiver is required to prepare Forms 1099 and send the forms to policyholders of life companies while business is still being serviced by the insolvent insurer. In addition, if the insurer has received interest from mortgages, the receiver is required to prepare and provide Form 1098 to the payer. If more than 250 1099 forms are to be issued, the filing is required to be done electronically. However, relief from this electronic filing may be secured upon request to the IRS. The receiver should be able to demonstrate that an electronic filing would place an undue hardship on the insolvent insurer. The IRS can assess penalties for both the failure to issue the forms to agents and the failure to file the forms with the IRS. If the receiver has not already sought relief and the estate is assessed, the IRS may waive the assessment upon request. Additionally, most states and some localities have filing requirements.

5. Franchise Taxes

Several states have franchise taxes. The tax basis can be the net worth of the insurer, the assets of the insurer, the number of shares of authorized stock or the amount of paid-in capital. The failure to file and pay these taxes may result in the cancellation of the insurer's corporate certificate of authority.

6. Other State Taxes and Licenses

Insurers are subject to numerous state taxes and assessments, including: workers' compensation; second injury funds; firemen's and policemen's pension funds; medical disaster funds; major medical insurance funds; arson, fire and fraud prevention funds; fire marshal tax; insurance department administrative assessments; "Fair Plan" assessments; and motor vehicle insurance funds. In addition, many localities have licenses and taxes unique to insurers. Comprehensive summaries are published by several insurers groups, including the Property Casualty Insurers Association of America (PCI), the American Insurance Association (AIA) and the American Council of Life Insurers (ACLI). The receiver should also ascertain if the insurer has any responsibility for filing informational returns and/or paying other state or local taxes such as sales and use taxes, water and sewer taxes, business and occupational privilege licenses, and taxes for employment training funds. Before paying these taxes, consideration should be given to the importance or lack of importance of maintaining state corporate certificates of authority and/or licenses.

All taxes should be reviewed to determine how any liability should be included in the priority scheme. The receiver should consider whether the certificate of authority or licenses have value before they are allowed to expire or be cancelled.

IX. INVESTMENTS

Investments may represent the largest group of assets on the balance sheet of an insurer. The purpose of the investments is to provide the company with resources and a steady flow of investment income to meet obligations as the obligations become due. A priority of the receiver is to take over full responsibility for all investments. This section will attempt to guide the receiver and identify any hidden elements in the following steps: seizure and control, inventory/identification, balancing, valuation and other considerations.

The investment management function may be delegated to a bank or other professional manager. Depending on the receiver's evaluation of the company's investment manager, that person or entity may be retained with or without additional restrictions on their discretionary authority. Further, the receiver should consider that prior company investment objectives of high yield equity related gains, and acceptance of reasonable risk may no longer be appropriate. Concerns of safety and liquidity may be foremost.

*Receiver's Handbook for Insurance Company Insolvencies***A. Seizure and Control of Investments**

To seize investments, the receiver should identify the various custodian institutions, investment brokers or managers, and the pertinent account numbers for the insurer. Most of the essential information may be obtained by review of the annual statement and the workpapers of the last full statutory examination or CPA audit. The examination workpapers will most likely include year-end statements and confirmations from the various institutions that are holding the investments. A review of the last filed annual statement will disclose the brokers that are most frequently used for the purchase and sale of investments.

The receiver may also corroborate all the pertinent information with the chief investment officer of the insurer.

If the investment managing function has been contracted to an outside institution, the receiver should promptly notify the institution of the receivership action. The external manager may be allowed to continue with his duties at the direction of the receiver, but transfers to other non-managed accounts should be restricted. The manager's discretionary authority should be reviewed to determine if additional restrictions should be placed on the manager to maintain investment balances in safe, liquid and/or insured securities. The receiver should consider the difference between investment goals related to a rehabilitation vs. Liquidation

The receiver should notify all banks, custodians, depositories, brokers and managers of the takeover as soon as possible and by the most expeditious method practicable under the circumstances. Time may be of the essence in preventing insiders from absconding with company funds. The notification should be specific as to account numbers, but not limited to those account numbers (include any other accounts that bear the name of the insurer). The notification should be accompanied by a copy of the court order of receivership. The institutions should be instructed as to their continuing duties and what is expected of them.

As part of the notification, the receiver should instruct the institutions to add the receiver's name as a signatory, deleting all others.

A matter that may need priority attention is the immediate suspension of wire transfers. Today, many insurers are electronically connected to financial institutions. Funds can be transferred by use of a personal computer or by telephone instructions (wire transfers) in a matter of minutes. Until the receiver has had an opportunity to review the process and change access codes and requirements, wire transfers should be suspended.

To avoid the exchange of good quality investments for lower quality investments, the receiver should review the authority for purchases, sales and reinvestment of securities. The receiver might choose to impose a temporary restriction that only maturing securities may be liquidated to issuing institutions. This will provide the receiver an opportunity to review the quality of the investment portfolio. The receiver may desire the opinion of an outside service company in the evaluation of the portfolio. If the investment function is internally managed, the receiver may want to consider the economies and expertise of an outside investment management company. The receiver may also consider moving out-of-state assets into the domiciliary state to improve control and lessen the chance the assets may be attached by creditors.

B. Identification and Inventory of Investments

An inventory will help establish control of the investments. A good initial control list may be the investment schedules of the last annual statement, including Schedule A—Real Estate; Schedule B—Mortgage Loans; Schedule BA—Other Long-Term Invested Assets; Schedule C—Collateral Loans; Schedule D—Long-Term Bonds and Securities (which includes bonds, common & preferred stock, SCA's, etc.); Schedule DA—Short-term Investments; Schedule DB—Financial Options and Futures; Schedule E—Cash and Cash Equivalents. Also, the General and Special Deposit Schedules found in the annual statement will identify investments on deposit with various regulatory jurisdictions.

Chapter 3 – Accounting and Financial Analysis

The receiver should confirm investment holdings with the appropriate institutions. The insurer should have detailed listings of investments held, transaction statements, bank notices and advices, and broker slips and statements. These documents will assist the receiver in the identification and inventory of investments.

The insurer's financial statements may not disclose all investments in which the insurer has an interest. Subsidiaries of the insurer accounted for on the equity method will have separate listings of investments owned. The equity method (as opposed to the consolidation method) permits the parent company to report the net value of (or the equity in) the subsidiary as an investment. Therefore, the assets and liabilities of the subsidiary are not evident in the books of the parent company. In the case of a pension plan, the assets are owned by the pension plan and will not be listed on the insurer's statutory annual statement. Even though pension funds may come under the receiver's control, these funds should be maintained in a separate account. The receiver should also be aware of significant restrictions that may exist on the investment and use of the funds. Generally, pension funds are subject to the federal Employee Retirement Income Security Act (ERISA), which imposes severe penalties for mishandling funds and governs the dissolution of the pension plan.

Many states require that purchases and sales of investments be approved by the insurer's board of directors. The board minutes may reflect all purchases and sales. A review of the minutes may assist in the identification of investments.

Insurers from time to time may purchase debt obligations directly from the issuing company, without the assistance or the evaluation of a broker. Private placements indicate that the underwriting of the investment was solely the responsibility of the insurer. The insurer should have an underwriting file containing documentation of matters taken into consideration and copies of correspondence regarding the decision to purchase the instrument. The document of indebtedness may be located on the premises of the insurer, rather than with a financial depository or custodian. If securities that are not publicly traded are to be listed in the annual statement as admitted assets, all insurers must submit to the Securities Valuation Office of the NAIC documentation to support the market value of the securities. The Securities Valuation Office will evaluate the documentation and assign a market value and a quality grade to the securities. The receiver should check with that agency to determine if management sought such valuations, possibly indicating the existence of additional assets not otherwise apparent from the accounting records.

An insurer should identify those securities with a high risk as to the potential of a loss of principal. While derivative instruments are reported in Schedule DB, the receiver should also be aware of other securities, such as structured securities, included in Schedule D that maintain significant risk. See the section on Audit/Investigation of Financial Statements in this chapter for a listing of risks inherent to certain investments. The receiver should determine whether such securities are consistent with the current investment strategy of the insolvent insurer and conclude whether the insolvent insurer should hold or sell the security and the timing of such action. Very often, derivative instruments are used by insurers as a hedge to reduce exposure to other risks incurred by the insurer. With respect to hedge transactions, the receiver should consider whether the hedge transaction effectively reduces the insolvent insurer's exposure to losses arising from other aspects of the insurer's operations or investment portfolio. A common hedge used by insurers is an interest rate swap. The NAIC *Accounting Practices and Procedures Manual* describes an interest rate swap as "a contractual arrangement between two parties to exchange interest rate payments (usually fixed for variable) based on a specific amount of underlying assets or liabilities (known as the notional amount) for a specified period." Insurers have used swaps for various reasons including matching returns on assets to contractual obligations. The *Accounting Practices and Procedures Manual* provides additional examples, for both life and property/casualty companies, of complex investment arrangements entered into by insurers. The receiver should consider engaging an investment/derivative expert to review the insurer's hedging program and make recommendations.

State insurance laws differentiate between real estate owned and occupied, and real estate owned for investment purposes. Some state laws require that real estate owned for investment purposes be income producing. If no income is generated within a set period of time, the property must be timely and properly

Receiver's Handbook for Insurance Company Insolvencies

disposed of (sold). Non-income-producing real estate should be investigated for possible alternative, non-investment objectives or accommodations. The receiver should review the pertinent statutes and consult with legal counsel regarding possible improprieties.

The insurer may own property in varied capacities. The insurer should have in its possession documentation for each property owned, including the deed (registered with county clerk), appraisal, survey, title policy, lease agreement (if rented), mortgage agreement (if any), schedule of future payments, hazard insurance policy, evidence of real estate tax payments, correspondence, related real estate management agreements and other pertinent information.

The insurer may own a share of an investment property, or may be part sponsor of a capital venture through a limited partnership, and should have adequate documentation to support the investment. The documentation should include the partnership agreement, contracts with project managers, projections of cost and time to complete, projections of future income, expert evaluations and opinions, plans of operation and financing, description of any guarantees or financing commitments, and current status reports from project managers.

The insurer should have an individual file for each mortgage loan that contains the signed mortgage note, trust deed, recorded lien, appraisal report, amortization schedule, documentation of hazard insurance and evidence of real estate tax payments. The insurer may have mortgage servicing agreements and the receiver should obtain those servicing agreement documents.

Collateral loans are investments that are covered by other assets of the borrower. For each collateral loan the insurer should have an instrument securitizing the insurer, a description of the borrower (possibly financial statements of the borrower), description and value of property pledged as collateral, and the repayment schedule.

C. Balancing and Reconciliation

The control list of investments that the receiver has developed can be reconciled to certified listings of brokers, custodians and other depositories. The insurer should have in its investment files the supporting broker slips and bank advices for all investment transactions. A detailed statement of account activity can be obtained from brokers and custodians. The control list should also be reconciled to the general ledger and investment subledger. All discrepancies should be noted and resolved.

Investment transactions should be audited for possible unauthorized transfers. Reference is made to the Investigation and Asset Recovery Chapter of this handbook.

D. Location of Investments

Usually, the bulk of an insurer's investments will be on deposit for safekeeping with a custodian (a financial institution) to facilitate the transfer of securities for purchases and sales. The safekeeping also minimizes and transfers the risk of theft or misplacement to the custodian. Securities in the custodian's possession may include bonds and publicly traded stocks, option and future contracts, and, on occasion, stocks of subsidiaries.

Many states require securities to be deposited with the insurance department or the state treasurer's office as a prerequisite for the insurer to write business in that state. Alien insurers may be required to place various assets in a trust for the protection of U.S. policyholders. Deposits may be held by non-U.S. jurisdictions. The receiver should notify all jurisdictions and, where possible, obtain the return of all deposits to avoid costly jurisdictional battles with creditors.

Investment brokers may also be holding securities that the insurer has purchased and not yet settled or that have been pledged as collateral for options.

Chapter 3 – Accounting and Financial Analysis

Other investments, such as real estate, mortgage loans, collateral loans, private placements, common shares of subsidiaries, etc., may be held in an in-house safe or vault for safekeeping. The receiver should make a complete detailed list of documents in the in-house safe. If any items are marketable, the receiver should take appropriate steps for the safekeeping of the items. Since the receiver may not be able to ascertain who has access to keys or codes for such safes, consideration should be given to changing locks or setting up a new safe deposit box under sole control of the receiver.

The insurer may have rented a safe deposit box at a financial institution. An inventory of the box will be necessary and appropriate safeguards taken against access by others. The receiver should obtain the access log for the safe deposit boxes. If the boxes have been accessed just prior to the receivership order, the receiver should investigate the reasons for entry.

E. Valuation of Investments

The determination of value for securities that are publicly and actively traded should not be a problem because prices are published on a daily basis through various data feeds. The receiver should consider the published market value rather than the NAIC value in the evaluation of the liquidation value of assets. Often, a receiver is compelled to sell investments prior to maturity to generate cash flow. The NAIC value which generally shows stocks and preferred stock at fair value while bonds are usually at amortized cost will not necessarily reflect the amount the receiver will receive from the sale of investments.

The market value should approximate the amount of cash that may be generated from the sale of investments. The market valuation reflects an adjustment for current market rates as compared to the fixed interest rate on the investment, and for the credit-worthiness of the debtor.

Private placements will be the most difficult to value, and the opinion of outside experts may be necessary. The receiver may wish to employ an investment specialist to determine the values and liquidity of below-investment-grade private placements or non-publicly traded stocks. The financial statements of the borrower may be sought. A review of the financial statements may tell whether the company is in sound financial condition and whether it is able to repay the obligation. Prepayment at a discount may be an alternative for both parties.

Several values may be placed on real estate that is occupied by the insurer. The value may be the cost paid less depreciation, construction cost less depreciation, appraisal value or market value. The receiver may consider the latest appraisal of the property and determine the possible market value. Economies may warrant the sale of the property and rental of other quarters.

Real estate that is held for investment ordinarily should be income producing. A large negative cash flow may warrant disposal of the property. An appraisal may be necessary to assess the marketability, which will disclose the sale price of similar properties in the area. If comparable sales are not available to estimate market value, the receiver may consider using a discounted cash flow approach to valuing the real estate. The receiver may wish to obtain outside professional support in determining proper values, and methods of valuing, investments in real estate, mortgage loans and real estate joint ventures or limited partnerships.

The book value of mortgage and collateral loans is usually the unpaid principal balance. The receiver may also assess the value of the property that has been pledged as collateral. Many states' insurance laws require that mortgage loans be first-lien mortgages. A second-lien mortgage is of greater risk and subordinate to the first-lien mortgage. Insurance laws require the amount of the mortgage, at inception, not to exceed a specified percentage of the appraised value of the property. The receiver should research compliance with the statutes. Possible accommodations given to affiliated parties should be investigated.

F. Other Considerations

The insurer may be the owner of various tangible and intangible assets that may not be apparent on its statutory balance sheet. The receiver should try to identify and value all possible assets of the insurer,

Receiver's Handbook for Insurance Company Insolvencies

including insurance licenses, the value of the shell of the company, assets that have been previously written off, and any assets that are listed in Schedule X of the annual statement.

1. Pension and Deferred Compensation Plans

The insurer's employee benefits may include participation in either a defined-benefit or defined-contribution pension plan. The plan may require or allow that a percentage of the assets of the plan be invested in shares of the insurer. It is not uncommon for the trustees of the plan to be officers of the insurer. Also, the plan administrator may be the insurer itself or an outside financial institution. The regulatory action will create several uncertainties in relation to the plan. The receiver should be familiar with the provisions of the plan and whether a complete liquidation and distribution is required. The provisions of the pension plan agreement and the Employee Retirement Income Security Act of 1974 (ERISA) may clarify some of these issues. It is recommended that the receiver retain the services of a consultant CPA firm to audit and provide independent opinion regarding compliance with IRS and ERISA requisites.

If the insurer is insolvent and the plan is heavily invested in shares of the insurer, then the plan may be insolvent also. The administrator, therefore, may need to liquidate the plan. If the pension plan is solvent, the administrator must continue with its duties. If the insurer is the plan administrator, the receiver may become the plan administrator by succession. If the plan administrator is a third party, the receiver may wish to evaluate the propriety of changing administrators.

The insurer may have hidden equity in other employee benefit plans. A saving plan that requires the insurer to partially match amounts contributed by the employees may be such a plan. The plan agreement will detail the operation of the plan and when the insurer's contributions vest to the employees. The plan should have provisions for possible employee termination on a voluntary or involuntary basis. Depending upon the terms of the plan, the receiver may recover contributions that have not vested to the employees, or amend terms, for example, to eliminate employer matching of contributions.

Pension considerations may be further complicated if an employee benefit plan is established to cover the employees of a parent holding company and its many subsidiaries, of which the receiver has authority only for one or more insurer subsidiaries. The desire of the receiver to terminate the plan and attach excess assets (or reduce additional exposure to underfunding) may be mitigated by excise tax issues on termination, ERISA and other considerations.

It should be noted that under some state liquidation priority statutes, amounts and priorities due employees may be limited. Compensation and benefits due officers and directors may also be excluded in their entirety.

2. International Considerations

As insurers become part of a global economy, the receiver may be confronted with the issues of investments and other assets held in other countries. The receiver should try to gain control of the investments or assets and bring their value back to the estate. An ancillary receiver may be appointed by a foreign country, which may make that difficult, since the ancillary receiver may need the assets to settle claims in the ancillary jurisdiction. The ancillary receivers will need to cooperate with the domiciliary receiver. The value of the foreign assets will fluctuate with the exchange rate of the foreign currency, and the receiver should try to match in foreign denomination the assets and liabilities (claims) by the foreign country. This should indicate whether any excess assets are held in the foreign country. The receiver should ascertain if the company's Schedule DB contains derivative instruments covering foreign currency exchange risks. Since foreign countries may have currency restrictions for repatriation of assets, the receiver should consult with legal counsel.

Chapter 3 – Accounting and Financial Analysis

Special deposits and general deposits with insurance regulators in other jurisdictions in the United States and outside the United States may also present problems to the receiver. Many United States courts have ruled that the state of domicile has the duty to liquidate the insurer and, therefore, all deposits should be returned to the domiciliary receiver. In the case of a non-U.S. jurisdiction, the foreign receiver may claim the right to the deposits for purpose of distribution in his jurisdiction. In this situation, the receiver should consult legal counsel. The receiver should consider whether he can divest himself of the responsibility for foreign claims.

3. Structured Settlements

In the insolvency of an annuity insurer, special consideration should be given to any single premium immediate annuities that were issued to form the basis of funding periodic or lump sum payments in personal injury settlements, commonly known as “structured settlement annuities.”

These annuities are normally issued to qualified assignment (QA) companies in order to comport with numerous IRS Tax Codes (primarily 104 (a)(2)) and various Revenue Ruling in order to preserve the tax benefit to the beneficiary or payee. However, some older annuities (prior to 1986), although not issued to a QA company, may nonetheless enjoy the same tax benefits. Generally, periodic payments are excludable from the recipient’s gross income only if the payee is not the legal or constructive owner of the annuity and does not have the current economic benefit of the sum required to purchase the periodic payments.

When these blocks of business are resolved in the insolvency context (typically through assumption reinsurance), extreme care must be taken to ensure that the resolution does not compromise the tax benefits to the payees. It is strongly recommended that competent and experienced tax counsel be retained to guide the receiver through this potentially complicated process.

X. RECEIVABLES

A. Uncollected Premiums

The amount of uncollected premiums may vary from company to company, but may be a significant asset.

1. Methods of Billing

The billing and recording of insurance premiums differs, depending upon the insurer (e.g., direct billing of policyholders vs. billing of agents) and type of insurance (e.g., primary vs. reinsurance). Following are four of the more common types of billing methods:

a. Direct Billing

Some insurers bill the policyholder directly for the full amount of the premium. A separate liability is established for any commissions allowed to brokers or producers.

b. Agency Billing

Insurers that utilize agency billing send monthly statements to their agents, listing premiums written during the month, including any adjustments and endorsements of previously issued policies. Commissions allowed to the agent are deducted on the statement to arrive at the net amount due to the insurer.

c. Account Current Billing

This method is used when the agent submits a statement to the insurer. The account current sets forth premiums written by the producer during the month, less the commissions. This method

Receiver's Handbook for Insurance Company Insolvencies

requires the insurer to maintain a Premium Difference Register to account for differences between the premiums reported by the agent and insurer's records. Differences are usually resolved by communicating with the agent (use of the agency billing method will transfer the premium difference reconciliation to the agent).

d. Item Basis

The item basis of billing is generally used when each item is remitted when collected by the producer, as is the case when business is submitted by many independent brokers. The amount of the bill is usually net of the broker's commission.

2. Different Types of Premiums

a. Property and Casualty Insurance Premiums

Most property and liability policies provide for the payment of a single premium for the entire term of the policy (usually one year). Different types of property and liability premiums include:

- **Installment Premiums** - Some insurers issue policies that are payable on an installment basis. Even though the premiums may be payable on an installment basis, the insurer must record the full annual premium when the policy is issued, except for those policies that are recorded or billed monthly because of changing exposures. Premiums that are due currently are billed using any of the foregoing methods. The billing of future installments is deferred until the due date of the installments.
- **Retrospectively Rated Premiums** - Retrospectively rated policies are used when the ultimate premium is based on the individual policyholder's claim experience. The ultimate claim experience may not be known until several years after the policy has expired. Usually a deposit (estimated) premium is billed using any one of the above methods when the policy is issued. However, the ultimate premium will be developed by applying the retrospective factor set forth in the policy to the policyholder's claim experience. The ultimate premium will not be less than the minimum nor more than the maximum premium set forth in the policy.
- **Audit Premiums** - Some premiums are based on the amount of the policyholder's payroll or sales (reporting values). For these policies, the insurer will bill an estimated or deposit premium at the inception of the policy and, upon determining the reporting values, the final premium will be billed. Sometimes insurers send auditors to determine and/or verify the reported values. These premium adjustments are called audit premiums. The billing of the deposit and audit premiums may be done by using any combination of the aforementioned methods.
- An insurer should maintain an inventory of policies with adjustable premium features such as retrospectively rated premiums and audit premiums. Typically, retrospectively rated premiums are popular features of workers' compensation policies and reinsurance treaties. The receiver should be aware of adjustable features included in contracts of the insolvent insurer and ensure that all contracts with such provisions are summarized. In the preparation of financial statements, appropriate accruals should be recognized for these contractual features based on the related claim experience and premiums paid under the agreement as of the date of the financial statements. The receiver should further ensure that appropriate action is taken to collect monies owed the insolvent insurer under these contractual provisions and that proper recognition of liabilities arising from these contractual provisions is provided in the financial statements. If the accrual is significant, a receiver may consider performing a systematic review of the related accounting support,

Chapter 3 – Accounting and Financial Analysis

focusing the review on policies with premiums that are substantial to the overall population.

b. Life and Accident & Health Premiums

Unlike property and liability insurance policies, life and accident and health insurance policies can be guaranteed renewable contracts and are generally accounted for as long-term contracts. Premium payment plans for life, annuities, and accident and health insurance vary. Some policies may be payable monthly, as is frequently the case with group insurance. Others may be payable quarterly, semi-annually and/or annually. Some may be fully paid up when issued. For HMOs and health insurers it is important that for employer groups and government plans like Medicaid that premiums are reconciled monthly to enrollment tapes to ensure that additions and deletion of members are updated promptly.

c. Assumed Reinsurance Premiums

Assumed reinsurance premium billing, recording and collection methods and procedures primarily depend on the reinsurance treaties, which specify the relationship between the parties.

- Facultative Premiums - Facultative reinsurance may be billed and recorded using any combination of the methods described above for direct insurance. It is usually billed and recorded on a direct basis or account current basis.
- Treaty Premiums - Premiums due on assumed treaty business are usually reported to the reinsurer either directly by the cedent or by the reinsurance intermediary.

3. Policy Control

An insurer normally prenumbers its policies when printed. A control procedure should be in place routinely to identify and follow up on skipped and missing policy numbers. The receiver should ascertain the insurer's policy control procedures and ensure that missing and skipped policy numbers are properly accounted for, since a skipped or missing policy number may represent an unbilled, in-force policy. In the case of multiple offices and multiple agents with policy-issuing authority, there may be several sets of policy numbers.

4. Setoff Against Uncollected Premiums

State insolvency statutes may restrict setoffs that previously were allowed against uncollected premiums due the insurer when it was solvent. In many cases, no setoffs may be allowed, even if:

- a. Agents were previously permitted to (i) deduct commissions from premium remittances and (ii) return premium owed to one policyholder from an amount owed to the insurer on another unrelated policy; or
- b. Cedents were permitted to (i) set off ceding commissions and loss payments from premium remittances and (ii) settle balances for a variety of assumed and ceded contracts on a net basis.

The propriety of recognizing setoffs should always be reviewed with the receiver's legal counsel.

5. Commission Recoverable on Cancellation of Policies in Force

Agents and brokers are usually prepaid their full commission when the premiums are collected, even though the premiums are earned over the life of the policy. They frequently deduct their commissions from their remittances to the insurer.

Receiver's Handbook for Insurance Company Insolvencies

Upon cancellation of the policies in force by the receiver, the policyholders are entitled to a return of the premiums applicable to the unexpired term of the policy (unearned premium). Such return may be fully or partially paid by a state guaranty fund. The policyholder may file a proof of claim with the receiver for any amounts not paid by the guaranty funds. In any event, the receiver should look to the agents and brokers for the return of prepaid commissions applicable to the refundable unearned premiums.

6. Summary

A variety of methods and procedures are used by insurers to bill, record and collect premiums. A combination of methods may be used. Since uncollected premiums are usually a significant asset, it is important that the receiver become familiar with the insurer's premium billing and recording procedures in order to most effectively marshal these assets. If necessary, new systems and procedures may be required to collect these assets subsequent to liquidation.

Finally, the applicability of federal and state debt collection statutes should be considered by counsel. Receiverships may be entitled to governmental exemption from certain statutes.

B. Bills Receivable Taken for Premium

Insurers sometimes accept a promissory note from the policyholder for a portion of the premium due. The promissory note includes a payment schedule and is subject to interest on the unpaid balance. Some companies record the principal amount of the note, plus the total interest to scheduled maturity, as a receivable and set up a contra account for the unearned portion of the interest. Others record only the principal amount of the note as an asset and separately accrue the interest as it is earned. Statutory accounting treats bills receivable differently than agents' balances and notes receivable. (See SSAP 6.) The realizable value of these receivables should be ascertained.

C. Life Insurance Policy Loans

Policy loans usually are a significant asset to a life insurer that writes permanent plan life insurance. Unlike term insurance, permanent plan life policies build cash surrender values that may be borrowed by the policyholder either as a:

- Conventional loan where the policyholder makes an application to borrow all or part of the policy's available cash surrender value; or
- Automatic premium loan (APL) where the policy provides, or the insured has elected in the application for insurance, that the policy shall not terminate (lapse) because of the non-payment of premiums as long as there is adequate cash value to cover the unpaid premiums and any other amounts owed under the policy.

If the policyholder dies before the policy loan is repaid or the policy is surrendered, the proceeds payable by the insurer should be reduced by any outstanding policy loan.

D. Salvage and Subrogation (Property/Casualty and Health)

1. Salvage

Salvage is an amount received by an insurer from the sale of damaged property or recovered stolen property for which the insured was indemnified by the insurer. In the claim settlement process, the insurer will obtain title to the property and sell it for its remaining value. This asset needs to be addressed quickly because property often is stored, and storage fees are being incurred. Salvage on surety bonds (e.g., construction performance bonds) may be of considerable amount. Due to the

Chapter 3 – Accounting and Financial Analysis

intricacies of the surety line of business, consideration should be given to the hiring of external experts to manage the salvage of uncompleted projects.

2. Subrogation

Subrogation is the legal right of an insurer to recover from a third party who was wholly or partially responsible for a loss paid by the insurer under the terms of the policy. In the case of a property accident, where there is a dispute between the parties, an insurer will often pay its policyholder's claim and assume the policyholder's right to pursue the negligent third party.

3. Accounting Practices

Until 1992, under statutory accounting practices, an insurer was not allowed to recognize salvage and subrogation recoverables until they were collected. In 1992, the NAIC *Accounting Practices and Procedures Manual* began allowing accrual of salvage and subrogation recoverables. However, certain states may still disallow the asset. GAAP requires that an insurer recognize an asset or reduce its liability for unpaid claims for the amount of salvage recoverable on paid and unpaid claims. Therefore, an insurer should have records, systems and procedures to identify and follow up salvage and subrogation recoverables on both paid and unpaid claims.

4. Summary

A receiver should ascertain how an insurer identifies and follows up on its salvage and subrogation recoverables. This becomes more difficult when claim files are turned over to a guaranty fund. Salvage and subrogation practices may vary among the guaranty funds. Salvage and subrogation collected by a receiver or guaranty funds may have to be held in trust for certain beneficiaries (e.g., where the policyholder's claim is subject to a deductible or the loss is a reinsured loss and the reinsurer previously reimbursed the insurer for the full amount of the claim). The right to the salvage and subrogation proceeds should be discussed with legal counsel.

5. Salvage and Subrogation (Property/Casualty- Deductible Recoveries - Only)

a. Deductible Recoveries

Large deductible recoveries are amounts received by an insurer from an insured covered under a policy having an endorsement providing that the insured is responsible to indemnify the insurer for losses and certain LAE incurred which are for amounts below the high deductible. The high deductible definition varies, but it often for deductibles up to \$100,000. While these policies share some characteristics with retrospectively rated policies, the accounting treatment of recoveries under the two types of policies is different. If the policy form requires the reporting entity to fund all claims including those under the deductible limit, the reporting entity is subject to credit risk, not underwriting risk.

b. Accounting Practices

Under statutory accounting practices reserves for claims arising under high deductible plans are established net of the deductible, however, no reserve credit shall be permitted for any claim where any amount due from the insured has been determined to be uncollectible. Reimbursement of the deductible is accrued and recorded as a reduction of paid losses simultaneously with the recording of the paid loss by the reporting entity, therefore these amounts are not easily identified on the balance sheet. It is important that the receiver examine the records, systems and procedures to identify and follow up large deductible recoveries on both paid and unpaid claims. It is also important to understand the insurer's process for obtaining collateral to mitigate credit risk on high deductible policies. The receiver should

Receiver's Handbook for Insurance Company Insolvencies

examine the scope of the large deductible business written, and the collection and collateral procedures employed by the company. The High Deductible Disclosures, Note 31 in the Annual Statement Disclosure and the related guidance in *SSAP No. 65—Property and Casualty Contracts* should aid the regulator in this review.

E. Reinsurance

For additional information on reinsurance, see Chapter 7—Reinsurance.

1. Reinsurance Recoverables

For property/casualty insurers, reinsurance recoverables on unpaid losses are not reported in the cedent's financial statement as receivables, but are accounted for as a reduction of its gross liabilities for unpaid losses and loss adjustment expenses. Reinsurance recoverables on loss payments and loss adjustment expenses are, however, recorded as an asset in an insurer's financial statement. However, GAAP reporting now requires reporting reinsurance recoverables on paid as well as unpaid losses as an asset (FASB No. 113). All insurers—both property/casualty and life—use a variety of internal accounting procedures to bill and record paid loss reinsurance recoverables. Unfortunately, financially troubled insurers do not always have adequate internal controls and procedures in place to properly quantify and identify their recoverables by individual reinsurer. Consequently, a substantial amount of record reconstruction may be necessary by the receiver's staff, not only to identify all present recoverables, but also to install appropriate systems and procedures to bill and monitor future paid recoverables.

2. Funds Held By or Deposited with Reinsured Companies

The reinsurance treaty between the reinsurer and its cedent may require the cedent to withhold a portion of the premiums owed to the reinsurer, and/or the reinsurer to deposit funds with the cedent. The purpose of such an arrangement is to collateralize the reinsurer's obligations for unpaid losses owed to the cedent. Care should be taken by the receiver to ensure that proper credit is taken against invoices submitted by the cedent for any such deposits.

F. Healthcare Related Receivables

Insurers and HMOs may have receivables for provider claims overpayments, pharmacy rebates, provider risk sharing recoveries, capitation arrangements and loans/advances to providers.

XI. ACCOUNTING AND FINANCIAL REPORTS TO THE RECEIVERSHIP COURT AND THE NAIC

Accounting and financial reports will be required by the receivership court at the date of the receivership and subsequently to monitor the progress and status of the receivership. To prepare these reports, the receiver will need to continue processing and recording transactions and producing related reports. The results of the accounting transactions described in the preceding sections of this chapter should be incorporated into the company's financial information and subsequently produced financial reports. Exhibit 3-1 is a representative summary of the format required to be input into the NAIC's GRID (Global Receivership Information Database) system.

Additional information is often critical to the daily management of the receivership. Perhaps the most needed additional reports are: 1) daily cash reports (Exhibit 3-2), and 2) a budget to monitor costs (Exhibit 3-3).

A. Timing of Preparation

Within 180 days after the entry of an order of receivership by the receivership court, and at least quarterly or annually thereafter, the receiver shall comply with all requirements for receivership financial reporting

Chapter 3 – Accounting and Financial Analysis

as specified by existing state receivership laws. The financial reports should include, a statement of the assets and liabilities of the insurer, the changes in those assets and liabilities, and all funds received or disbursed by the receiver during that reporting period (see Exhibit 3-1). These reports are also to be filed with the receivership court. Receivers in those states without IRMA may be required to file some or all of these reports with the receivership court. The receiver may qualify any financial report or provide notes to the financial statement for further explanation. The receivership court may order the receiver to provide such additional information as it deems appropriate. The reports should include claims and expenses submitted from each affected guaranty association.

For good cause shown, the receivership court may grant relief for an extension or modification of time to file the financial reports by the receiver.

In the early stages of a receivership, especially one involving an insurer with limited liquid assets, daily cash reports are critical to determine whether the insurer should be in conservation, rehabilitation or liquidation. A budget is very useful to manage the costs of the receivership, and should be produced in the first year after the initial receivership court order.

B. Necessary Sources and Records

The following is a listing of information that may be used to prepare the financial reports:

1. Trial Balance and Detail Subledgers

The trial balance normally is produced on a monthly basis and details all assets and liabilities on a cumulative basis, plus income and expenses for the period. The line items on the trial balance can tie directly to the general ledger or can consist of a grouping of several general ledger accounts. The detail subledgers exist for accounts payable and contain more detailed information about an account, such as individual account information, vendor name and due date of payment. The totals of these subledgers either tie directly to the general ledger account balances or they are reconciled and differences are identified. If the corporate structure consists of more than one company, then a consolidated trial balance should be produced that consolidates all individual companies.

2. General Ledger

The general ledger details the account information, showing the activity in an individual account during the period. Totals tie to the trial balance on an individual basis, and sometimes accounts and subaccounts are detailed and grouped into one line item that ties to the trial balance. The general ledger typically gives more detailed information on the transactions that were recorded during the period. An individual general ledger usually exists for each company/legal entity.

3. Bank Reconciliations

Bank reconciliations are useful in reporting on and projecting available cash for the operations of the receivership.

4. Investment Ledger

The investment ledger contains investment activity, investment income, types of securities, and realized and unrealized gains and losses. Totals should tie to the general ledger.

5. Accounts Receivable and Reinsurance Recoverable Aging

The accounts receivable and/or paid recoverable aging contain detail of accounts receivable and paid recoverable balances by account and ages the receivable based on number of days it has been

Receiver's Handbook for Insurance Company Insolvencies

outstanding. Reinsurance recoverable ledgers will also be kept here. Reinsurance recoverables will be included in the aging. The aging will be used in establishing allowances for uncollectible items.

6. Reserves

With respect to property/casualty insolvencies only, loss and loss adjustment expense reserves (case, IBNR and LAE reserves) tend to be the most significant amounts on the balance sheet, as well as the most subjective. If an outside actuary is used to evaluate the existing reserves and to project the ultimate losses, the resulting actuarial studies may be utilized when preparing the financial statements, and any adjustments should be reflected in the statements. With respect to life insurance insolvencies, there are substantial non-loss reserves for expected future benefit payments on various policies or contracts.

7. Paid Loss Information

Losses paid by the guaranty funds on behalf of the insurer should be recorded as liabilities in the insurer's records.

8. Cash Disbursements and Cash Receipts

A check register of all amounts paid during a given month including payee and amount. Cash receipts are actual cash items received monthly and deposited into the estate's bank accounts.

9. Budget Versus Actual Report

A receivership budget for expenses and income by department should be established within 12 months of the date of receivership. On an ongoing basis, a report should be generated detailing budgeted versus actual expenditures for the reporting period. All significant variances should be investigated by the receiver.

C. Responsibility

The responsibility of preparing the financial and accounting reports can be assigned to the insurer's accounting and finance departments, the receiver's personnel or independent CPAs. The use of independent CPAs should be considered if the receiver questions whether the remaining insurer's personnel are capable of completing the report, or the receiver does not have sufficient staff.

A specific individual should be designated as the party responsible for the distribution of the reports to the receiver, attorneys, personnel, applicable state agencies and other predetermined parties.

The filing of the completed reports with the courts should be assigned to the attorneys handling the receivership.

*Receiver's Handbook for Insurance Company Insolvencies***I. INTRODUCTION**

Insurance receivers generally have two principal duties: 1) marshalling assets; and 2) paying or otherwise disposing of claims. Typically, the marshalling of assets involves selling real and personal property, collecting reinsurance recoverables and/or commuting treaties, collecting earned premium, filing preference and fraudulent conveyance actions, and bringing lawsuits against former owners and management.

In any receivership, the receiver is responsible for maximizing and safekeeping the assets of the insolvent insurer. One of the receiver's early priorities is to examine the insurer's records to identify the insurer's assets, marshal them as necessary or appropriate, and then determine whether litigation should be pursued against any persons or entities liable for causing or contributing to the insurer's financial difficulty.

It is important for the receiver to keep in mind that the receiver's investigation and asset recovery activities may be subject to approval by the receivership court, with notice to guaranty associations and other interested parties. Furthermore, the receiver should take special care to review any applicable state or federal laws.

As a general rule, most state statutes require receivers to seek court approval before they may sell, assign, transfer or abandon assets having an individual or aggregate value above a threshold dollar amount. Therefore, a receiver seeking to sell an asset or settle a claim of the type described below may need court approval before closing the transaction.

II. DISPOSITION OF ASSETS ALREADY IN THE ESTATE**A. Title to Assets – Legal vs. Equitable Title**

The first issue to address before a receiver may dispose of an insurer's assets is whether the receiver is vested with title to those assets. The NAIC Insurer Receivership Model Act (#555), also known as IRMA, gives possession of all assets of the insurer to all receivers. Title to an asset may be legal or equitable or both. Legal title is ownership of the asset; equitable title is the right to the benefits or possession of the asset. Normally, both titles are held together, but in some cases, they can be divided. In a trust situation, the trustee is the legal owner of the asset, but the beneficiaries receive the benefits of the trust and so are the equitable owners of the asset. A receiver can only transfer the interest the insurer held. If an insurer had both legal and equitable title, the liquidator has the full power to dispose of the asset. If the title was bifurcated, the holders of the legal and equitable titles must join in the transfer in order to pass full ownership of the asset to the purchaser. Counsel should be consulted to assure that all equitable interests are identified prior to attempting to sell any assets.

B. Payment Terms

The principal reason for entering into a sale transaction is to generate income for the insolvent insurer, with a view to maximizing the distribution of assets to its policyholders and creditors. If creditor distributions will not occur until a later date, the receiver can entertain installment terms; possibly attracting purchasers or an increased purchase price not attainable in an immediate lump-sum sale.

C. Tax Consequences of a Disposition

All disposition of assets will result in tax implications, that will need to be reported on the company's tax returns. Appropriate professional advice should be sought.

D. Other Terms
Most assets are sold on an "as is" basis with limited representations and warranties to prevent the receiver from being exposed to liability for matters for which it has limited knowledge. If the buyer is unwilling to purchase the asset "as is," the receiver may consider giving limited representations and warranties, but only subject to the receiver's "knowledge" and restricted to facts concerning the asset to be sold that the receiver has learned during the conduct of the receivership proceedings.

Chapter 4 – Investigation and Asset Recovery

An asset sale agreement may also contain provisions designed to maintain confidentiality of its terms. Confidentiality is particularly desirable if the receiver subsequently may enter into similar transactions with other third parties on more or less favorable terms. Venue over all disputes should remain in the receivership court. Finally, the breadth of release given by and to the receiver should be carefully considered in light of the transaction being documented and the receivership proceedings as a whole.

E. Supervising Court Approval

Court approval may be required prior to disposition of an asset. F. Identification and Collection of Statutory/General and Special Deposits

The receiver should make every effort to identify and collect all estate assets held by other states or entities as statutory/general or special deposits. The receiver should have specific policies and procedures regarding the identification and collection of these assets. These should address:

- Location and current status/value of the deposit.
- Determination of creditors within state holding deposit
- Discussion with the state insurance department holding the deposit their intentions regarding:
 - Possible full ancillary receivership
 - Holding the deposit due to open claims within their state
 - Release the deposit to the receiver
 - Release or assign the deposit to the guaranty funds
- Review and execution of release agreement
-

G. Disposal of Assets

Once the receiver has identified and inventoried all assets, the focus should turn to the process of sale and disposal of assets. Assets should be sold at the most opportune time to recover their maximum value by approved sales and disposal methods that are transparent and avoid any appearance of a conflict of interest.

III. INVESTIGATION AND PURSUIT OF CLAIMS AGAINST THIRD PARTIES**A. Objectives of Investigation and Asset Recovery**

The goal and the scope of the investigative examination should be tailored to fit the specific situation. In all cases, the examination is crucial to analyzing the insurer's financial difficulty. The examination also may reveal corrective actions that the receiver should implement for successful rehabilitation. In all cases, the thrust of the investigative examination is to disclose what went wrong, determine what corrective action is necessary, reconstruct critical data/programs to support asset collection, and identify those legally responsible for the demise of the insurer. In appropriate cases, Life and Health guaranty associations may be able to provide support and assistance in connection with asset recovery efforts. In Life and Health joint and common interest agreements are commonly used by regulators, receivers, and guaranty associations to preserve protections for privileged communications and work product. Quite

Receiver's Handbook for Insurance Company Insolvencies

often property and casualty guaranty funds enter into confidentiality agreements with receivers to exchange information and work towards preparing a company for liquidation if that is the ultimate outcome.

The receiver may retain the services of accountants or examiners who have expertise in determining whether the insurer's financial condition gives rise to any causes of action, as well as marshalling assets and quantifying liabilities. The job of such an examiner goes beyond the role of an auditor. Here, in addition to probing for the cause of the financial difficulty, the examiner must identify for the receiver all transactions or business dealings that may produce assets for the insurer's policyholders and creditors, either by avoidance or rescission of certain transactions or by other legal action. Some state insurance departments may have experts in-house whose services are available to the receiver; otherwise, the receiver should consider retaining appropriate outside consultants.

B. General Conduct of an Investigation or Post-Receivership Examination

The receiver and the examiners should make themselves aware of the state statutes governing insurer receiverships. These statutes frequently detail the elements of causes of action that the receiver and examiners should investigate. For example, certain transactions are deemed preferential and may be voidable. Other transactions may be classified as fraudulent and may be set aside as such. The receiver and the examiners should seek advice of legal counsel on such statutes and, in particular, the applicable statutes of limitation. (See Chapter 9—Legal Considerations). (Counsel also may be helpful by providing guidelines for examiners to follow in conducting the investigation.) It is crucial that the receiver take the requisite legal action in timely fashion to avoid the bar of such statutes.

The investigative examination of an insurer can start with records maintained by the insurance department. These records may include transcripts and exhibits from administrative proceedings against the insurer, holding company registration statements, market conduct reports rate filings, recent Form A filings, work papers related to the last statutory examination including the report thereon, annual and quarterly financial statements, and correspondence files. The receiver should also procure a complete set of the audit work papers of the insurer's certified public accounting firm, including the firm's permanent and correspondence files, as well as a complete set of the work papers from the insurer's consulting actuaries. The receiver should also thoroughly review the minutes of meetings of the board(s) of directors and any board or executive committees of the insurer and its subsidiaries. If possible, the minutes of any related holding company should be reviewed.

These records may provide the receiver with specific areas of concentration for the investigative examination. The examination will be broad in scope with a special emphasis on large or unusual transactions. The insurer's files on any suspect transactions must be reviewed completely; the receiver may need to engage a forensic accountant to assist the receiver's counsel in this review.

Once the examination reveals potential causes of action to pursue, a cost-benefit analysis should be conducted. If the potential benefit does not warrant the anticipated cost of the legal action, administrative remedies may be available. In order to conduct such an analysis, the receiver needs a full understanding of the potential claims, including the legal requirements that must be met in order to prevail on them.

C. Reference to Special issues Regarding Claims involving: FHLB, Life/Health, and Large Deductible

In chapter 5 there is a section that discusses special issues regarding particular claims, namely: (a) claims of the Federal Home Loan Bank (FHLB), (b) life and health claims, and (c) claims under large deductible programs. As large deductible programs involve both policy claims and the collection of amounts due under those policies, both subjects are covered in that subchapter.

*Chapter 4 – Investigation and Asset Recovery***IV. VOIDABLE PREFERENCES**

The receiver of an insolvent insurer faced with the need to gather the assets of the insurer’s estate should bear in mind that many state liquidation statutes authorize the receiver to retrieve property transferred by the insolvent insurer to another party if the transaction constituted a “voidable preference” as defined by statute. In general, these statutes permit the receiver to recover assets that the insurer transferred to a creditor to satisfy prior debts and resulted in the creditor receiving a greater percentage of its claims against the insurer than other creditors in the same class. The statutes in various states differ significantly in substance, scope and form. Some states may not have voidable preference provisions in their insurance receivership statutes. However, provisions regarding voidable preferences may exist in a state's general laws, and there may be applicable case law on the subject. The receiver should consult the statutes and case law in the insurer's state of domicile to ascertain which voidable preference laws may be applicable and to learn the requirements of those statutes.

The concept and general elements of voidable preferences are discussed in detail in Chapter 9—Legal Considerations of this Handbook. In general, a voidable preference may be found if:

- There was a transfer of the insurer’s property;
- The transfer was made during a statutorily specified time period;
- The transfer was made to satisfy an “antecedent debt”; and
- The transfer results in a “preference.”

It may be necessary for the receiver to establish that there was intent to create a preference or that the creditor had reason to believe the insurer was insolvent in order for the transfer to be voidable. It may also be possible for the receiver to recover a voidable preference from persons other than the party to whom the insurer’s property was transferred, such as “insiders” of the insurer who were involved in the preferential transaction and, in some cases, subsequent holders of the property. In some instances, however, the receiver’s right to pursue such remedies may conflict with the rights of other creditors to pursue the same.

Preferences are dealt with in Section 604 of IRMA. This provision delineates the conditions under which a receiver can avoid a preference and attempt to recover the assets that were given to the antecedent creditor. The preference period under IRMA is two years. Not all preferences can be avoided by the receiver. Subsection 604B provides that preferences can be avoided if:

- The insurer was insolvent at the time of the transfer;
- The transfer was made within 120 days before the filing of the petition commencing delinquency proceedings;
- The creditor receiving it or being benefited thereby had, at the time when the transfer was made, reasonable cause to believe that the insurer was insolvent or was about to become insolvent; or
- The creditor receiving it was:
 - An officer or director of the insurer;
 - An employee, attorney or other person who was, in fact, in a position to effect a level of control or influence over the actions of the insurer comparable to that of an officer or director, whether or not the person held that position; or
 - An affiliate.

Receiver's Handbook for Insurance Company Insolvencies

Subsection 604C states which preferences may not be avoided even if they would otherwise be avoidable under Subsection 604B. Basically, preferences may not be avoided if they were made in exchange for an item of value to the insurer, if they were made in the ordinary course of business in accordance with ordinary business terms, or if they were in the form of an appeal bond.

V. FRAUDULENT TRANSFERS

Receivers typically have the authority to recover assets conveyed by the insurer in transactions that constitute fraudulent transfers. The receiver's authority to recover fraudulent transfers may stem from any of the following sources: a specific state statute; the Uniform Fraudulent Conveyance Act to the extent adopted in the particular state; and/or the common law of fraud. Fraudulent transfers are covered by Section 605 of IRMA. The receiver should consult counsel to ascertain which theories are available to recover fraudulently transferred assets.

Like voidable preference statutes, rules against fraudulent transfers authorize the receiver to rescind certain transactions and bring previously transferred assets back into the insolvent insurer's estate. Fraudulent transfer laws vary from state to state, but most permit the receiver to avoid transfers for inadequate consideration or transfers aimed at obstructing or defrauding other creditors.

Receivers may be able to recover fraudulent transfers from the person who received the transfer, "insiders" at the insurer who were involved in the transfer and, in some cases, subsequent holders of the property transferred. Certain additional requirements may be applicable, and special rules may apply to certain reinsurance transactions, such as commutations. The receiver should consult Chapter 9—Legal Considerations for further details.

VI. OTHER SIGNIFICANT TRANSACTIONS

In addition to considering fraudulent transfer laws and voidable preference statutes, a receiver reviewing the reasons for an insurer's financial problems and attempting to marshal its assets should determine whether there have been any suspect transactions. Suspect transactions are unusual transactions that would not normally occur in the ordinary course of business. Some of these transactions may at first glance appear to be ordinary, but upon closer examination are found to have not been entered into for the benefit of the insurer. These are transactions that may have deceptively portrayed the insurer's financial condition, delayed discovery of its insolvency, or resulted in actual losses for the insurer. Included in the category of suspect transactions are transactions that did not comply with applicable legal requirements, were not commercially sound or lacked financial viability.

A receiver may advance various theories to recover funds for the estate regarding losses or damages caused by suspect transactions. For example, causes of action for recovery may be based upon common law fraud, violations of the federal Racketeer Influenced Corrupt Organizations Act (RICO), fraudulent transfers or breach of fiduciary duty. These and other causes of action are addressed fully in other sections of this Handbook and are not repeated here.

This section focuses on identifying potentially suspect transactions that are not discussed elsewhere in this Handbook. The transactions identified do not frame an exhaustive list of all suspect transactions, nor are the identified transactions necessarily fraudulent. In fact, if properly negotiated and administered, the transactions may be perfectly legitimate. However, the receiver should review the following types of transactions for due diligence. Suspect transactions may be difficult to detect and may consist of combinations or variations of one or more of the transactions described.

A. Reinsurance

Reinsurance balances often represent significant assets and liabilities of insolvent companies, whether from assumed or ceded business. It is commonly the case in a property and casualty insurer insolvency that these balances will represent the largest asset to be marshaled. Because reinsurance transactions are

Chapter 4 – Investigation and Asset Recovery

complex and involve large sums that may have a material effect on the balance sheet, these transactions present numerous opportunities for fraud, misappropriation or mismanagement by or upon the insolvent company. The receiver’s investigation should, therefore, include a review of the company’s reinsurance structure, and especially any extraordinary transactions in the years immediately preceding the company’s demise.

1. General Considerations

Delegation of the collection of reinsurance recoverables, without proper accounting and management controls, to managing general agents (MGAs) and other third parties has been a common source of large accruing balances. Therefore, the more common asset recovery activity in this area is in record construction and documentation of the accrual of balances due (see Chapter 7—Reinsurance). Aside from the instances covered below, the larger amount of the receiver’s reinsurance recovery work usually should focus on the concepts that: 1) reinsurers respond and pay based on a proper accounting and documentation of the balances due; and 2) because of the frequent mismanagement of these transactions by insurers that have become insolvent, reinsurers are skeptical of information from an insolvent insurer. The receiver must dispel this skepticism.

It is often necessary to conduct a full review or reconstruct reinsurance transactions accruing pre-receivership as well as documenting post-receivership reinsurance balances. Post-receivership balances include reinsurance balances resulting from claims covered by the guaranty funds and adjudication of non-fund covered claims. See Chapter 2—Information Systems (especially the UDS section), Chapter 5—Claims and Chapter 6—Guaranty Funds for more on the relationship between post-insolvency accruing liability and reinsurance recoverable balances.

In the context of life and health company insolvencies, state laws generally provide the Life and Health Insurance Guaranty Associations the right to elect to continue reinsurance and to succeed to the rights and obligations of the insolvent ceding insurer with respect to contracts and policies covered, in whole or in part, by the guaranty association. The election must be made within 180 days of the liquidation date and is subject to certain statutory requirements. This right to continue reinsurance is reflected in the section 8(N) of the NAIC’s Life and Health Insurance Guaranty Association Model Act, which has been adopted in most states.

Footnote suggestion – The NAIC’s Insurer Receivership Model Act, Section 612, similarly reflects the rights of life and health guaranty associations to elect continue reinsurance and to succeed to the rights and obligations of the insolvent insurer under reinsurance agreements, subject to the requirements of state receivership and guaranty association laws.

2. Secured Reinsurance Balances

Reinsurance balances frequently will be secured to ensure collectability and preserve the insurer’s statutory accounting credit. The receiver should identify and closely review these security arrangements early in the receivership. The security often includes letters of credit and trust accounts. Notices to financial institutions or others involved in security arrangements are critical to preserve the security by ensuring compliance with terms of the security arrangements and the exercise of any related rights or obligations.

It may be necessary to establish procedures to monitor the security during the receivership. Some letters of credit will require renewal, while others will have an “evergreen clause” providing for automatic renewal. Also, some security arrangements may require that the amounts held be increased by the reinsurer. Pre-receivership transactions regarding these security arrangements should be reviewed to ensure compliance with the related reinsurance agreements, security agreements and statutes.

Receiver's Handbook for Insurance Company Insolvencies

3. Commutations

A commutation is a mutual release of all obligations between the parties for consideration. Commutations terminate the rights and liabilities between parties, including premiums due, paid losses, outstanding losses and incurred but not reported (IBNR) losses, loss adjustment expenses (LAE) where applicable, and present or projected profit. There are many valid reasons for commutations. They may provide immediate cash for the receivership estate, avoid future uncertainties, resolve disputes between insurers and reinsurers, and provide some protection or limitation of exposure from the insolvency of the reinsurer.

Commutations, however, may also give rise to abuses. A commutation may unfairly benefit the reinsurer by relieving the reinsurer of considerable exposure for less than fair consideration. Further, in a rehabilitation proceeding, if the cash payment received from a commutation is less than the loss reserves that must then be recognized by the insurer, the surplus of the insurer will be reduced.

Statutory accounting principles allow an insurer's reserves to be reduced by authorized reinsurance. If an insurer's net reserves have been carried at nominal value due to a substantial credit for reinsurance recoverable, the elimination of the reinsurance setoff credit as a result of a commutation could have had an adverse impact on the insurer. For example, a related reduction in surplus could have an adverse impact on the insurer's solvency ratios and could exacerbate capacity problems. Under such circumstances, a receiver should carefully review the commutation to determine whether the benefit to the insurer outweighed the disadvantages.

In measuring the surplus impact of a commutation, and comparing the assets and liabilities assumed, it should be kept in mind that the assets received are usually easily quantifiable, whereas the reserves are not. Thus, what may appear to be a break-even transaction on the surface may, in fact, result in a large loss to one party because of the way the reserves were determined. It usually is helpful to know if a qualified actuary has reviewed the assumed block of reserves, supplementing case reserve estimates with projections of IBNR development, related loss adjustment expenses and use of industry data where necessary. Also, because of the inability of insurers to discount their reserves for statutory purposes, a commutation may appear on the surface to produce a loss to the insurer; however, the long-term economics of the transaction may be sound when consideration is given to the future investment income to be earned from the commutation process. The receiver should also assess the potential adverse consequences of any commutation. In sum, commutations should be reviewed to determine if they were negotiated at arm's length and were fair and reasonable to the insurer; the receiver may need to engage an independent actuary to assist in this review.

IRMA Section 605 addresses the avoidance of reinsurance transactions incurred on or within two (2) years before the date of the initial filing of a petition commencing delinquency proceedings under certain conditions. IRMA 612 relates to the continuation of life, disability income and long-term care reinsurance in liquidation and the right of the GA to elect within 180 days of the liquidation to continue that reinsurance subject to IRMA 612 requirements. Some states' voidable preference and fraudulent transfer statutes include specific sections dealing with commutations that occur within a short period before the filing of a petition for the appointment of a receiver. The receiver should be aware of these special rules, which may allow the rescission of a commutation for the benefit of the insurer and its creditors.

4. Stop-Loss Treaties

A stop-loss treaty, or aggregate excess reinsurance contract, indemnifies an insurer if in any year the losses on retained accounts exceed a specified amount. The determination of whether the specified amount has been exceeded is usually made after the application of all other reinsurance, and the benefits or recoveries under surplus, quota share and catastrophic excess of loss treaties. The premium for a stop-loss treaty can be based on a fixed dollar amount, or it may be a ratio of annual retained

Chapter 4 – Investigation and Asset Recovery

premium (calculated by reducing gross premium income by premiums for other reinsurance, such as surplus treaties, quota share treaties and catastrophic excess of loss contracts). The purpose of a stop-loss treaty is to protect against an aggregation of losses during a particular period of time.

Stop-loss treaties are also subject to abuse and, consequently, should be carefully evaluated. The amount of loss protected against may be unreasonable in light of the loss experience of the insurer. As a result, there may have been an improper motive in paying a premium for a stop-loss treaty for which the insurer was not likely to receive any real benefit. The premium may have been excessive when compared to similar coverage generally available.

5. Unauthorized Reinsurance

Unauthorized reinsurance is reinsurance placed with non-admitted or unauthorized reinsurers that are not authorized to transact insurance business in the cedent's domiciliary state. Under statutory accounting principles, an insurer's liability for loss reserves is carried net of reinsurance. Generally, unauthorized reinsurance may not be used to reduce loss reserves, unless the reinsurer's liability is secured by trust funds, funds held by the cedent or letters of credit. Care should be taken to ensure that these potential estate assets are identified and secured.

Unauthorized reinsurance may be appropriate when placed with a financially sound reinsurer. The placement of reinsurance with unauthorized reinsurers, however, is subject to abuse. For example, it may be a means of diverting funds to an affiliate. The placement of reinsurance with financially weak non-admitted reinsurers may indicate an improper motive for obtaining such reinsurance.

6. Portfolio Transfers/Loss Assumption Reinsurance

Generally, a portfolio is one of the following: 1) an entire book of business; 2) a book of business in force at a certain time; or 3) outstanding losses unpaid at a certain time. Typically, in a portfolio transfer, the reinsurer assumes the reinsureds' obligations to pay losses on the assumed portfolio in return for the payment of a premium and the transfer of related loss reserves and security, as applicable.

Portfolio transfers should be reviewed to ensure that the transfer was entered into for legitimate business reasons and inured to the insolvent insurer's benefit. The receiver should consider whether the business transferred was an integral part of the insolvent insurer's business. Did it represent a highly profitable segment of the business, or was it marginal or even a contributor to operating losses? What were the long-term prospects for the portfolio transferred? How did it fit with the balance of the business retained by the insurer? Did the transfer effect a novation of the underlying insurance policies or reinsurance contracts? Did the transferor's policyholders or reinsureds' consent to the novation? Answers to these questions should indicate whether a particular portfolio transfer might be a suspect transaction.

Transfers of a profitable portfolio could temporarily prolong the insurer's life while undermining the long-term financial viability. Transfers between affiliated parties should be carefully reviewed. Since certain bulk transfers require insurance regulatory approval, it should be determined if there was compliance with applicable requirements.

7. Surplus Relief Treaties

Comparing premium income to surplus is a common test of whether an insurer is taking on too much risk. Typically, the desired ratio is 3:1. In other words, annual premium income greater than three times surplus may be a warning signal that the insurer is assuming too much risk. Regardless of the test applied, if an insurer reaches the maximum amount of premium income supportable by its surplus, it either must cease writing new business or shed some of its premium income or liability to maintain its financial health.

Receiver's Handbook for Insurance Company Insolvencies

One method of reducing premium income is to enter into a reinsurance treaty whereby the insurer cedes premium in exchange for a *pro rata* reduction in its liabilities. This practice allows the insurer to continue to write business. A surplus relief treaty is generally considered to be proper if the liabilities ceded are not set off by commission paid to the reinsurer and if the reinsurer does not protect itself against an adverse loss experience by having the insurer ultimately pay the liabilities. In other words, if the insurer has ceded the premium for the business and has transferred the underlying liabilities, the treaty likely will not be a suspect transaction. (See Chapter 9—Legal Considerations).

If scrutiny of the surplus relief treaty reveals that the insurer superficially ceded premium and the business, but in reality provided a stop-loss to the reinsurer or otherwise protected the reinsurer from liabilities, then the transaction may have been improper. It may be difficult to trace such a transaction, because it can be accomplished in separate documents. This type of arrangement would give a false picture of the insurer's solvency, as it would mask its true premium-to-surplus ratio by understating premium and, at the same time, not relieve the cedent of the risk of loss associated with the underlying business.

8. Finite Reinsurance

Another way that an insurer occasionally attempts to improve its balance sheet is by entering into financial reinsurance transactions. There are many forms of these, but the potential concern behind these types of transactions is to examine whether they were performed simply to shift liabilities off the books of the insurer onto the books of the reinsurer without any real transfer of risk for those liabilities. Any reinsurance contracts that do not appear to have effectuated a real transfer of risk of loss to a reinsurer should be examined closely by the receiver. These contracts may not only be voidable, but there may be additional recourse against the reinsurer for participating in the financial reinsurance transactions. (See Chapter 7—Reinsurance and Chapter 9—Legal Considerations.)

9. Affiliated Reinsurance

In some cases, the insurer cedes its risks to an affiliated reinsurer. The reinsurer then dividends funds to common ownership. There are also affiliated pooling transactions that may be used to inappropriately transfer funds among the pool participants.

B. Large Deductible Policies

1. NAIC has adopted a Guideline to Administration of Large Deductible Policies in Receivership and the guideline or similar policy has been adopted in several states. Large deductible recoveries can represent a significant source of recoveries for insolvent companies, especially those property and casualty companies that wrote workers' compensation insurance. These recoverables may be a significant amount and the receiver should examine the scope of the large deductible business written, and the collection and collateral procedures employed by the company. General Considerations
 - a. The receiver's recovery of large deductible recoverables is dependent on the claims handling and reporting of both claims covered and those not covered by guaranty funds.
 - b. The key to effective collection and collateral administration is ensuring that the historical records for paid losses under the deductible policies and the program design are maintained and available. Another key is retaining the personnel that have knowledge and history of the insurer's deductible business operations.
 - c. Collateral for Large Deductible Balances.
 - The importance of collateral cannot be overstated. But adequate collateral must be established prior to liquidation and maintained throughout the receivership.
 - Large Deductible balances frequently will be secured to ensure collectability and preserve the insurer's statutory accounting credit. The receiver should identify

Chapter 4 – Investigation and Asset Recovery

and closely review these security arrangements early in the receivership. Particular attention should be paid to security arrangements where the insured's collateral is held by third parties, especially affiliates of the insurer.

- Notices to financial institutions or others involved in security arrangements are critical to preserve the security by ensuring compliance with terms of the security arrangements and the exercise of any related rights or obligations

2. Communication

Deductible collection, in addition to requiring collateral, is dependent on communication of all parties (i.e., between receiver and insured, receiver and guaranty associations, guaranty association and insured). It must be quickly established with insured as to procedure for ongoing claim processing, continuation of their responsibility to reimburse the deductible payments and responsibility to maintain appropriate collateral. Guaranty associations must also recognize that they will be required at times to communicate with insureds regarding claims handling. All parties should be mindful of security concerns related to communication of sensitive claims data. The SUDS server hosted by NCIGF is a useful tool for communication between receivers and guaranty associations. The collection process should proceed with minimal delay as the passage of time will impact success of collection efforts. In these efforts it is imperative that the guaranty associations and the receiver work together and offer consistent messages to the insured regarding any collection issues. It should also be noted that the release of collateral from a receiver to a guaranty association may not fully satisfy the policyholder's obligation for costs related to the claim under a state's guaranty association law.

3. Deductible Collection Procedure

- a. A working process must also be established quickly between the receiver and the guaranty associations to provide claim handling, payment information and all other required claim financials to allow the receiver to bill and collect loss payments.
- b. The information would include the receiver providing the guaranty associations all pertinent information to establish the policies that are deductibles along with effective dates, deductible limits, treatment of ALAE and deductible aggregates where available.
- c. Copies of deductible policies should be made available if required.
- d. Guaranty Association's will provide, through the establishment of UDS data feed, all financial information regarding deductible claims that they are handling.
- e. Receiver will collate data from guaranty associations and review historical billing information to invoice the insureds on a monthly or quarterly basis.
- f. Receiver will calculate and track the payment history pre-liquidation and post Liquidation within the deductible and within a deductible aggregate for the policy if applicable. This ensures that the insured is only billed for amounts that remain within their deductible.
- g. To assist in the collection process receiver and guaranty association should work to provide sufficient information and explanation to allow the insured to recognize its obligation. In the event where the insured refuses to pay, the receiver will either begin litigation or draw on collateral or both. This should be coordinated with the guaranty associations.

4. Professional Employer Organizations ("PEOs")

- a. Policies issued to PEOs often have large deductible endorsements.
- b. Because of the prevalence of abuse in the underwriting of PEOs, post-liquidation collection of deductible payments may be challenging.
- c. Clients may have been added without notice (or payment) to the insurer; Client class of business may have been misrepresented or expanded to include riskier classes of business – all of which may lead to inadequate or exhausted collateral.

Receiver's Handbook for Insurance Company Insolvencies

- d. Client companies of PEO may not have received notice of cancelation, leading to coverage disputes. If collateral is inadequate and the PEO does not have assets to pay the deductible reimbursement in full, the policy terms might make the client companies liable for the shortfall, either for their own exposure or on a joint-and-several basis. However, this might not be a meaningful source of recovery, because it could be impractical, inappropriate, or impossible to collect significant amounts from the clients.
5. Commutations
 - a. Generally, commutations are negotiated terminations of the rights and liabilities between insurers and large deductible insureds. A commutation is a settlement of all obligations, both current and future, between the parties for a lump sum payment.
 - b. There are many valid reasons for commutations of large deductibles. They may provide immediate cash for the receivership estate, avoid future uncertainties, resolve disputes between insurer and insured, and provide some protection or limitation of exposure from the insolvency of the insured. Commutations of long tail business (i.e., workers' compensation) may be essential for the early termination of the receivership.
 - c. Commutations, however, may be a detriment to the receivership if the commutation is consummated for less than fair consideration. A receiver should carefully review the commutation to determine whether the benefit to the insurer outweighs the disadvantages.

C. Inappropriate Investments

Inappropriate investments may have the effect of overstating the insurer's assets on its annual statements and, at the same time, result in an actual loss if the investments are poor. In some instances, earnings from investments are less than they should have been. Investments may be inappropriate for four general reasons: 1) the investments are prohibited and not allowed as admitted assets by insurance laws or regulations; 2) while allowed as admitted assets, the investments are too speculative at the time of investment, given their materiality to the insurer's financial condition; 3) the investments did not meet the insurer's need for liquidity or 4) the assets do not match the corresponding policy liabilities.

While some states' insurance codes prohibit the acquisition of certain assets, many view such acquisitions as non-admitted assets. However, regulators retain the right to order disposal of assets acquired in violation of law. A receiver should determine whether such acquisitions have occurred and whether the assets still are held by the insurer. If so, the receiver must identify the losses that have occurred on previously acquired assets and losses likely to occur on assets currently held by the insurer. Additionally, a separate inquiry should be made to determine whether the insurer was damaged. If such investments were booked as admitted assets, the result may be an inaccurate financial statement.

It is difficult to evaluate the culpability for making investments in admitted assets that are highly speculative or illiquid. While code provisions require all investments to be sound, an analysis of what are sound investments involves the application of the business judgment rule. This rule protects management, who made informed decisions in good faith without self-dealing, from being judged in hindsight. Insurance codes have prohibitions and limitations on the types and amounts of investments both on an individual and aggregate basis. Insurance codes generally enumerate the types of assets permitted, but that is beyond the scope of this discussion. In general, an insurer first must invest its minimum paid-in capital and surplus in certain defined investments, which generally are thought to be safer than other types of investments. Generally, these types of investments are government obligations. Once the insurer has invested its minimum paid-in capital and surplus in these allowed investments, there are other limitations on investment of an insurer's assets (excess funds investments). The codes are quite detailed with numerous descriptions and limitations, including limitations on the amounts that may be invested in real estate (if any), affiliates (although generally admissible, such assets usually are illiquid if not publicly traded; if they make up a significant portion of surplus, then an investigation should be made into their acquisition and value) and common stock, as well as the relative percentages of certain investments. Other

Chapter 4 – Investigation and Asset Recovery

inappropriate investments may include those that, although admitted, are either high-risk, or are not matched properly to the insurer's cash flow needs.

Investments that violate the applicable insurance code or regulations will not qualify as admitted assets on the annual statement. If such investments have been identified, the receiver should determine:

- When the investment occurred.
- Who authorized the investment?
- For what purposes the investment was made.
- The details of the transaction, including cost.
- Whether corporate formalities were followed.
- The broker and other persons involved.
- Whether the investment is with a related party.

It also is important to review how the questionable investments were reflected on the insurer's annual statement. The booking of non-admissible assets as admitted assets may identify a problem affecting the true financial condition of the insurer and may necessitate further investigation of corporate officers and directors. If the investments have already been disposed of, it is important to determine whether this resulted in a gain or loss. If disposed of at a reasonable gain, then a judgment must be made as to whether it is worth proceeding further with the analysis. If losses were incurred or will be incurred, there may be substantial questions of legal responsibility.

A review of recent transactions should reveal realized losses, and an evaluation of investments still held should reveal where unrealized losses exist. In the event that realized or unrealized losses are identified, a case-by-case evaluation should be made as to whether there is any culpability surrounding the acquisition or disposition of these types of investments. Once again, all the details surrounding the acquisitions should be thoroughly reviewed, particularly focusing on any close or suspicious relationships between the insurer's management, officers or directors and the management, officers or directors of the acquired investment or with any brokers or agents involved in the sales transaction.

To identify investments that violate insurance laws and, consequently, are not admitted assets, a receiver should begin with a review of examination reports and work papers. Examiners tend to be thorough with respect to identifying assets or investments that are not admitted assets. If no examination report has been prepared, accountants or auditors should review the most current annual statements and supporting schedules to identify and list all investments that are not admitted assets. The following exhibits and schedules should be reviewed:

- Exhibit of Net Investment Income
- Exhibit of Capital Gains (Losses)
- Exhibit of Non-Admitted Assets
- Schedule A – Real Estate
- Schedule B – Mortgage Loans
- Schedule BA – Long-Term Invested Assets

Receiver's Handbook for Insurance Company Insolvencies

- Schedule D – Bonds and Stocks (including valuations of subsidiary, controlled and affiliated companies).
- Schedule DA – Short-Term Investments
- Schedule DB – Derivatives
- Schedule E – Cash, Cash Equivalents and Special Deposits

General Interrogatories (which could contain information concerning crypto-currency and other assets) Other sources include internal and external audits, SEC periodic reports (such as annual and quarterly reports on Forms 10-K and 10-Q) and investment committee minutes.

D. Dividends and Intercompany Transactions

State insurance codes have strict limitations on how much money can be paid out as dividends from insurance companies. Some insurance codes provide for the recovery of dividends paid within a certain time period prior to the insurer's insolvency. Accordingly, all dividends should be reviewed to determine compliance with these statutory limitations. The receiver also should determine whether the financial statements were manipulated to make otherwise impermissible dividends possible. Regulators who had responsibility for reviewing the dividends may be contacted to determine what representations were made by company personnel when the dividends were approved.

As part of this process, intercompany transactions should be reviewed to look for disguised dividends. Many companies will have been part of a holding company structure. Oftentimes, a company will have entered into cost-sharing agreements, tax-sharing agreements, investment management agreements marketing agreements and other such transactions with affiliates. These transactions should be reviewed closely. When a company is precluded from paying dividends, it may try to disguise what in fact are dividends under transactions pursuant to these agreements.

Illegal dividends may be recovered in fraud actions or breach-of-fiduciary-duty actions. The failure of the company's outside accountants or auditors to detect illegal dividends also may form the basis of an action in negligence against the accountants and/or auditors.

E. Management by Others

Another area of suspect transactions is the management of insurers by other entities, including managing general agents (MGAs) or third-party administrators (TPAs) acting pursuant to management contracts, as well as corporate or individual attorneys-in-fact. A close examination of the overall relationship, including all contracts, should be made since there is a potential for abuse of these relationships. In some instances, the management contract may be arranged so that, in essence, the insurer fronts for the MGA or the attorney-in-fact, who retain all the profits, and the insurer retains all the liabilities. It may raise a difficult question as to whether there was proper compensation for services or if the MGA or attorney-in-fact misappropriated corporate opportunities. Another abusive practice is causing the insurer to pay the MGA, TPA or attorney-in-fact for services that it did not provide but were provided by the insurer's employees at the insurer's expense. This, in effect, results in double payment. Detection requires a thorough review of the contracts and an analysis of which entity pays for which function, which may be especially difficult when the operations are all in one facility.

VII. RECEIVERSHIP INVOLVING QUALIFIED FINANCIAL CONTRACTS

Insurer Receivership Model Act (#555, commonly known as IRMA) Section 711 – Qualified Financial Contracts (or Similar Provision) addresses stays termination or transfers of netting agreements or qualified financial contracts (QFCs).

Chapter 4 – Investigation and Asset Recovery

When financial markets are uncertain, it causes heightened scrutiny in the capital markets and among financial institutions about identifying, managing and limiting risk, as well as the need for adequate capitalization and for understanding the interdependency of the different financial sectors. One source of risk to financial market participants that rises due to the lack of certainty in the financial markets is the treatment of qualified financial contracts (QFC) and netting agreements in the event of the insolvency of state regulated insurers.

A. Definition of Qualified Financial Contract

IRMA defines a QFC as “any commodity contract, forward contract, repurchase agreement, securities contract, swap agreement and any similar agreement that the commissioner determines by regulation, resolution or order, to be a qualified financial contract for purposes of this Act.”

- Commodity contract is defined by reference to the Commodity Exchange Act (7 U.S.C. § 1) (Commodity Act) and is a contract for the purchase or sale of a commodity for future delivery on or subject to the rules of a board of trade or contract market subject to the Commodity Act; an agreement that is subject to regulation under Section 19 of the Commodity Act commonly known as a margin account, margin contract, leverage account or leverage contract; an agreement or transaction subject to regulation under Section 4(b) of the Commodity Act that is commonly known as a commodity option; any combination of these agreements or transactions and any option to enter into these agreements or transactions.
- Forward Contract, Repurchase Agreement, Securities Contract and Swap Agreement shall have the meanings set forth in the Federal Deposit Insurance Act, 12 U.S.C. § 1281(e)(8)(D), as amended from time to time.

It should be noted that an insurance contract is not a derivative or a qualified financial contract because an insurance contract includes the indemnification against loss. Therefore, reinsurance agreements would not be considered a swap agreement.

*Receiver's Handbook for Insurance Company Insolvencies***B. Insolvency Treatment of QFCs under the IRMA Section 711 Provision¹**

IRMA Section 711 provides a safe harbor for QFC counterparties of a domestic insurer. The provision largely tracks similar provisions in the Federal Bankruptcy Code and the Federal Deposit Insurance Act (FDIA), as well as laws of other foreign jurisdictions. These safe harbor provisions for QFCs were adopted to avoid disruptions resulting from judicial intervention that can cause unintended chain reactions and significant systemic impact. Section 711 applies in both Rehabilitation and Liquidation proceedings.

Section 711 states that a right to terminate or liquidate or accelerate a closeout under a netting agreement or a QFC with an insurer either due to the insolvency, financial condition or default of the insurer or the commencement of a formal delinquency proceeding is not prevented by any other provision of IRMA. Section 711 allows a counterparty to net different contracts and realize on collateral without a stay.

Section 711 addresses transfer of a netting agreement or QFC of an insurer to another party. In a transfer, the receiver has to transfer all of the netting agreement or QFC and all of the property and credit enhancements securing claims under the agreement or QFC. This prevents “cherry picking” and requires the transfer of everything, i.e., all of both the “in-the-money” and “out-of-the-money” positions.

¹ ¹ Except where the state has adopted *Guideline for Stay on Termination of Netting Agreements and Qualified Financial Contracts* (#1556).

Guideline #1556 Drafting Note: State receivership and insolvency laws may permit a contractual right to cause the termination, liquidation, acceleration or close-out obligations with respect to any netting agreement or qualified financial contract (QFC) with an insurer because of the insolvency, financial condition or default of the insurer, or the commencement of a formal delinquency proceeding. These laws are based upon similar provisions contained in the federal bankruptcy code and the Federal Deposit Insurance Act (FDIA). The FDIA also provides for a twenty-four-hour stay to allow for the transfer of QFCs by the receiver to another entity rather than permitting the immediate termination and netting of the QFC. 12 U.S.C. § 1821(e)(9)-(12). States that permit the termination and netting of QFCs may want to consider adopting a similar stay provision following the appointment of a receiver for certain insurers – generally larger entities that may be significant in size but outside of being subject to a potential Dodd-Frank receivership.

States that consider the enactment of a stay should take into account the relevant federal rules. In 2017 the Board of Governors of the Federal Reserve System (the Federal Reserve), the Federal Deposit Insurance Corporation (the FDIC) and the Office of the Comptroller of the Currency (the OCC) each adopted final rules and accompanying interpretive guidance (Final Rules) setting forth limitations to be placed on parties to certain financial contracts exercising insolvency-related default rights against their counterparties that have been designated as a global systemically important banking organization (GSIB). The Final Rules include the definition of master netting agreement that allows netting even though termination of the transaction in the event of an insolvency may be subject to a “stay” under several defined resolution regimes including Title II of Dodd Frank, the FDIA, as well as comparable foreign resolution regimes. Notwithstanding NAIC’s request for inclusion, stays under the state insurance receivership regime (State Receivership Stays) were not included as an exemption within the definition. Therefore, unless the Final Rules are amended to recognize State Receivership Stays, if a state implements a stay as contemplated by the Guideline, insurers would find themselves disadvantaged, potentially resulting in additional costs and/or collateral requirements given the regulatory treatment for contracts that do not meet requirements for QFCs. Therefore, if a state is considering implementation of this Guideline, consideration should be given to whether the rules of the Federal Reserve, FDIC and OCC have been amended to recognize State Receivership Stays. For example, a state could adopt a stay that would be effective if and when the Final Rules recognize State Receivership Stays.

*Chapter 4 – Investigation and Asset Recovery***C. Considerations of QFCs held by an Insurer Receivership:**

- Although the Investments of Insurers Model Act (either Defined Limits or Defined Standards) (#280) does not include limits on the amount of collateral an insurer is allowed to post, some states have restrictions on derivatives use, including quantitative limits, and limits on the pledging of collateral, based on type and credit quality. The receiver may also need to determine if a derivative use plan, if required, is in effect and if it dictates any collateral requirements.
- If the ability to net exists and there is no stay requirement, it is important that the regulator understand the QFC portfolio before the insurer's failure, either through a recent or ongoing financial examination or through an assessment made during regulatory supervision that precedes a receivership order, while recognizing that the market value of the derivatives positions can vary substantially over relatively short periods of time. The receiver also needs to have a good understanding of the relationship of the QFC contracts to the rest of the insurer's balance sheet. Because most derivatives transactions are used for hedging purposes, if those contracts are terminated as a result of netting, the assets and liabilities will no longer be hedged. It is important to quantify the effect of the loss of the contracts if possible. The receiver may wish to engage outside resources to assist in evaluating QFC portfolio.
- The receiver should be aware that there may be areas of contention and disagreement by parties in the netting, termination and closeout of QFC agreements—for example, disagreement over the valuation or in the resolution of transactions where the parties wait too long to terminate the contract.
- Some counterparties may have been accepting less liquid assets such as private placements based on the relative financial strength of the insurance company; typically, collateral for a QFC will be cash and U.S. Treasury bonds. The moving of over the counter (OTC) derivatives to centralized clearinghouses will gradually eliminate less liquid assets as well as assets with more volatile market values being used as collateral. It is also worth noting that it is possible to have non-admitted assets eligible as collateral. Where assets exceed concentration limits, the excess can be collateral without being an admitted asset.
- The impact of central clearinghouses (CCH) will be to standardize documentation and collateral requirements. The standard rules for collateral will be more restrictive and be applicable to all parties. These rules will generally allow for only high-quality assets that are more liquid and are expected to have less market value volatility. In addition, all parties will be subject to the same rules for both Initial Margin and Variation Margin. In the past, it was not uncommon for counterparties to not require Initial Margin from their higher quality clients. This will not be the case going forward.

D. Recommended Procedures for State Insurance Regulators/Receivers:

To the extent possible, in a pre-receivership situation:

- To the extent a company has a small number of large QFC contracts that are important to the overall investment portfolio and operations of the insurer, in pre-receivership and in rehabilitation, the state regulator or receiver should reach out to the counterparty to determine if the counterparty is agreeable to continuing the contract and performing on the contract when the insurer enters receivership.
- Consider practical strategies for successfully managing the netting agreements and QFCs, not only at the inception of the receivership but ongoing during the receivership process.

Receiver's Handbook for Insurance Company Insolvencies

- Evaluate if the insurer is engaged in netting agreements and QFCs through a market facing affiliate or non-affiliate, whereby the insurer's contract is with that market facing entity and the market facing entity has the contracts with the counterparties.
- Consider the applicability of any federal master netting agreement rules and regulations to the insurer's netting agreements and QFCs. (see the references to applicable federal rules in the preceding footnote in this Chapter ²).
- Evaluate the need to consider the use of a bridge financial institution to transfer and manage the netting agreements and QFCs in a pre-receivership proceeding (i.e. administrative supervision). See Chapter 11–State Implementation of Dodd-Frank Receivership of this Handbook for guidance on the use of bridge financial institutions for a Dodd-Frank receivership.
- Carefully review the most recent financial statement filings and interim company records to identify the netting agreements and QFCs active at the time of receivership; understand the terms of the agreements and the valuation of the QFCs; and identify the securities held as collateral and counterparties to the contract. See Appendix for a Summary of Statutory Annual Statement Reporting of QFCs or the most current Statutory Annual Financial Statement and Instructions.
- Consider how ongoing hedging of obligations and assets can be accomplished during and following a receivership.

Once a rehabilitation or liquidation order has been entered:

- Provide notice of the receivership to counterparties, as appropriate under state law.
- Consider implementing a 24-hour stay on termination of netting agreements and QFCs, if allowed under state law. (See *Guideline for Stay on Termination of Netting Agreements and Qualified Financial Contracts* [#1556] and accompanying drafting note in the preceding footnote in this Chapter³).
- It is important for the receiver to keep track of which transactions have been terminated validly and which have not so that appropriate action can be taken when the validity of the termination is contested.
- Once the set off has occurred, if the receiver disagrees with the counterparties' valuation of either the collateral or the QFC transaction, the receiver would take the next steps to try to negotiate the correct amount and if unsuccessful pursue legal action.
- Consider engaging an investment expert to assist in the auditing, investigating and management of the netting agreements and QFCs within the investment portfolio. Refer to Chapter 3.VI of this Handbook for more guidance on auditing and investigating the investments of the receivership estate

E. Exhibit – Qualified Financial Contract Annual Statement Reporting (As of 2021)

The subsequent information provides a general description of how and where qualified financial contracts (QFCs) are reported within the *Accounting Practices and Procedures Manual* and the statutory financial statements.

² See footnote 1 of this Chapter.

³ See footnote 1 of this Chapter.

*Chapter 4 – Investigation and Asset Recovery*Derivative Instruments—AP&P Disclosure

- Statement of Statutory Accounting Principles (SSAP) No. 27—*Off Balance Sheet and Credit Risk Disclosures*
- SSAP No. 86—*Derivatives*
- SSAP No. 108—*Derivatives Hedging Variable Annuity Guarantees*

Derivative Instruments—Annual Statement Disclosure

- Schedule DB – Part A, Section 1 – *Open Options, Caps, Floors, Collars, Swaps, and Forwards*
- Schedule DB – Part B, Section 1 – *Open Future Contracts*
 - Within Part A and Part B, section 1 identifies the contracts open as of the accounting date, and section 2 identifies contracts terminated during the year.
- Schedule DB – Part C – *Replication (Synthetic Asset) Transactions*
 - Section 1 contains the underlying detail of replicated assets open at the end of the year. Section 2 is reconciliation between years of replicated assets.
- Schedule DB – Part D, Section 1 – *Counterparty Exposure for Derivative Instruments Open*
- Schedule DB – Part D, Section 2 – *Collateral for Derivative Instruments Open*
- Schedule DB – Part E – *Derivative Hedging Variable Annuity Guarantees*
 - Specific to derivatives and hedging programs under SSAP No. 108)
- Schedule DL – Part 1 & 2 – *Securities Lending Collateral Assets*
- Notes to Financial Statement – *Investments*
- Notes to Financial Statement – *Derivative Instruments*
- Notes to Financial Statement – *Debt (FHLB Funding Agreements)*
- Notes to Financial Statement – *Information about Financial Instruments with Off-Balance Sheet Risk and Financial Instruments with Concentrations of Credit Risk*
- Notes to Financial Statement – *Fair Value Measurements*

On a quarterly basis, the insurer only reports derivative instruments that are open as of the current statement date. Schedule DB – Part A – Section 1 lists the insurer’s open options, caps, floors, collars, swaps and forwards. Open futures are reported in Schedule DB – Part B – Section 1, replications are reported in Schedule DB – Part C – Section 1, and counterparty exposure for derivatives instruments are reported in Schedule DB – Part D.

Repurchase Agreements—AP&P Disclosure

- SSAP No. 103R—*Transfers and Servicing of Financial Assets and Extinguishments of Liabilities*

Repurchase Agreements—Annual Statement Disclosure

- Notes to Financial Statement— *Investments*
- Notes to Financial Statement – *Debt*
- Repurchase agreements are disclosed in various investment schedules within the Annual Financial Statement depending on the type of investment. (Schedule D, DA, E, Supplemental Investment Risk Interrogatories) The Investment Schedule General Instructions provides the following list of codes to use in the appropriate investment schedule code column regarding investments that are not under the exclusive control of the reporting entity, and also including assets loaned to others. For example, a bond subject to a repurchase agreement would be detailed in Schedule D Part 1 – *Long-Term Bonds Owned* and use a code of RA in Code Column.

Codes

LS – Loaned or leased to others
 RA – Subject to repurchase agreement
 RR – Subject to reverse repurchase agreement
 DR – Subject to dollar repurchase agreement
 DRR – Subject to dollar reverse repurchase agreement
 C – Pledged as collateral – excluding collateral pledged to FHLB
 CF – Pledged as collateral to FHLB (including assets backing funding agreements)
 DB – Pledged under an option agreement
 DBP – Pledged under an option agreement involving “asset transfers with put options”

Receiver's Handbook for Insurance Company Insolvencies

R – Letter stock or otherwise restricted as to sale – excluding FHLB capital stock (Note: Private placements are not to be included unless specific restrictions as to sale are included as part of the security agreement.)

RF – FHLB capital stock

SD – Pledged on deposit with state or other regulatory body

M – Not under the exclusive control of the reporting entity for multiple reasons

SS – Short sale of a security

O – Other

VIII. POTENTIAL RECOVERY FROM THIRD PARTIES

As noted above, a number of persons inside and outside of the insolvent insurer may have caused or contributed to the reasons for the insurer's insolvency. Such acts or omissions may be unintentional but the result is harm to the insurer, and thus its policyholders, claimants, and creditors. This section and the next identify by category the acts and omissions of such persons, the causes of action that may be brought and the foundation that the receiver must establish to prevail in such causes of action.

Not all actions listed here may have contributed directly in the insurer's problems and inclusion of an action in the following list does not necessarily indicate that a receiver will find a basis for seeking legal remedies from identified persons. Each situation must be evaluated on its own merits and circumstances. For example, the facts may clearly indicate that an agent wrongfully withheld funds due the insurer, but an investigation of the agent's financial condition might show that there would be little hope of collecting any judgment resulting from successful civil litigation. Therefore, the cost to the estate of pursuing this particular agent may outweigh the ultimate benefit, if any, to the estate.

A. Breach of Fiduciary Duties

Any person empowered to collect and hold funds on behalf of another has a fiduciary duty with respect to any funds collected. MGAs, TPAs, reinsurance intermediaries, brokers and others may have violated this obligation by:

- Failing to maintain a premium trust account where required by law;
- Skimming premiums;
- Withholding funds without authorization;
- Failing to collect and remit premiums;
- Paying affiliates more than market rate for services,
- Deducting excess commissions and/or fees;
- Taking improper set-offs; or
- Improperly using funds to make loss payments.

The investigative examination initiated by the Receiver may indicate the presence of these problems. The Receiver may need to conduct a more intensive investigation of transactions arising from the suspect MGA or TPA agreement, reinsurance treaty, etc., to determine whether a violation has occurred and the extent of injury to the insurer. Some examples of the information that may suggest a need for further investigation are:

- A significant decline in reported premium volume from one period to the next;
- Gaps in policy number sequence;

Chapter 4 – Investigation and Asset Recovery

- Sharp increases in agents' balances receivable; or
- Inordinate delays in collecting reinsurance balances receivable;
- Increase in consumer complaints.

B. Abuses Related to Risk Selection

An insurer may have delegated the authority to bind risks to an MGA or TPA, or may have given a reinsurance intermediary the power to cede or assume reinsurance on behalf of the insurer. Delegation of authority carries with it the duty to perform on the underlying agreement that binds the agent or intermediary to adhere to the insurer's articulated underwriting guidelines and limitations. To the extent any agent exceeded these limits, and caused the insurer to suffer financially, the receiver may be entitled to appropriate remedies.

Some of the ways in which underwriting authority may have been abused are:

- Accepting excluded classes of business;
- Violating territorial limits;
- Exceeding premium and/or product mix limits;
- Using binders improperly;
- Misrepresenting risks;
- Placing reinsurance with insolvent reinsurers;
- Improperly placing reinsurance with affiliated or unauthorized reinsurers;
- Failing to obtain adequate security for balances due the cedent; or
- Misrepresenting reinsurance coverage.

As noted above, the takeover investigation may indicate that these problems exist and that a more intensive examination of performance under specific agreements may be in order.

Some examples of information that may suggest a need for deeper investigation in this area are:

- Unusual line codes or state codes in statistical reports or state pages of reports;
- Variances from sales plans and volume projections;
- Schedule F or S problems, mismatches and unexplained differences; and
- Reinsurers' resistance to or questions regarding claims presented.

C. Loss Settlements

As with risk selection, the insurer may have delegated claims settlement authority to a third party, be it an MGA, TPA or loss adjuster. The third party has the duty to adhere to any guidelines and limitations stipulated in the delegation agreement, as well as to comply with fair claims settlement practices.

Receiver's Handbook for Insurance Company Insolvencies

Typically, these agreements will stipulate the third party's settlement authority, reporting practices, reserving practices and use of outside experts.

Potential abuses include exceeding the claims settlement authority and establishing inadequate loss reserves in order to maintain a relationship with the insurer. Other indicators of problems are:

- Fluctuations in reported incurred losses;
- Unusually high loss-adjustment expenses;
- Unexpectedly high losses;
- Late development of reported losses;
- Policyholder complaints;
- Low salvage recoveries and/or high ratio of salvage costs to amount recovered;
- Low subrogation recoveries and/or high ratio of subrogation cost to recovered amount; and
- Negative market conduct examination report comments.
- Claims payments exceeding clean claim guidelines in health insurance.

To the extent that an agent's actions caused the insurer's financial suffering, the receiver may wish to pursue litigation or other available remedies.

D. Abuses Relating to Premium Computations

This area is closely related to risk selection in that the parties to whom underwriting authority has been delegated may also have the authority to compute the premium for the risks, and compute, collect and remit premium adjustments.

The compensation of the party in question, especially an MGA, is generally a commission based on premiums written. Consequently, the agent may deliberately underprice the premium or fail to compute additional premiums in order to write the risk and generate a commission.

Similarly, the insurance broker, the policyholder and intermediary (if reinsurance is involved) might deliberately suppress information relating to compensation. The receiver should look for:

- Change in pattern of premiums audit activity.
- Unusual lag in reporting losses.
- Unexpectedly high incurred loss ratios.
- Uncollectible adjustment premiums.
- Captive cell arrangements

E. Professional Malpractice

Insurers frequently retain outside professionals, including attorneys, auditors, CPAs, investment advisors, actuaries and loss reserve specialists. The receiver should retain an expert from the same profession to

Chapter 4 – Investigation and Asset Recovery

review the activities of the insurer’s professionals and to determine if their actions met the minimum standards of the profession.

Types of actions that may result in litigation or other proceedings against such persons include:

- Incompetence or failure to meet professional standards;
- Failure to divulge conflicts of interests;
- Billing abuses; and
- Failure to timely discover or disclose insolvency or other deficiencies of the insurer that prolonged the insurer’s operations and increased its debts.

Many professional organizations promulgate a code of ethics and technical performance standards that the receiver may wish to obtain as a source of professional standards against which a breach may be measured. This is an area of considerable complexity, however, so the receiver should consider retaining the services of knowledgeable legal counsel.

It is particularly important for the receiver to review whether certain professionals that were responsible for reporting on the financial condition of the insurer, such as auditors and actuaries, performed their duties in accordance with their applicable standards. Even in cases where the actual cause of insolvency was due to misfeasance or malfeasance by the directors and officers, other professionals may be liable for not discovering and disclosing the problems. If an auditor breached and/or failed to meet its duties of care, such breach and/or failure may be the proximate cause of damages to the insurer and its policyholders, creditors and shareholders by reducing the value of the insurer and deepening the insurer’s insolvency. For instance, if an auditor gives a clean opinion on an annual statement, reporting an insurer to be solvent when it should have detected and reported the insurer’s insolvency if it had properly performed its duties, the insurer’s financial condition may continue to deteriorate, causing an even greater loss of surplus, or increase in insolvency.

Some jurisdictions have awarded damages against auditors for what is referred to as the “deepening of the insolvency.” This theory of damages was initially used in bankruptcy cases but has been applied to the insurance insolvency settings. Some courts have found “deepening of the insolvency” to be a separate cause of action, even though it would still primarily be based upon some kind of professional negligence action. However, this theory is not universally accepted. In most states, auditors are required, as a condition of providing annual audit services to insurers, to provide a letter of qualification to the commissioner of insurance, stating that they understand that the annual audited financial statements of the insurer and the auditor’s own report with respect thereto will be filed and that the insurance commissioner intends to rely on this information in the monitoring and regulation of the financial position of the insurer. Such reliance may form the basis of a claim. Examples of professional malpractice of an auditor may include the failure to detect and disclose:

- Risks and accounting errors associated with an insurer’s insurance program.
- Dissipation and misspending of funds by the insurer’s officers and directors or controlling companies.
- Inadequacy of an insurer’s reserves.
- Diversion of audit premiums or other assets.
- Existence of retroactive reinsurance or other reinsurance that could not be counted as an asset.
- Any significant deficiencies in the insurer’s internal controls.

Receiver's Handbook for Insurance Company Insolvencies

If such failures mask the true financial condition of the insurer so that the insurer continued to operate and slide further into insolvency, the auditor could be liable for the increase in insolvency from the date of that failure (i.e., the failure to report the insurer's deficiencies or insolvency), and the date when the insurer was actually placed into an insolvency proceeding.

Similarly, other professionals, such as actuaries, may be liable for the deepening of the insolvency if they breach their standards of performance and understate the insurer's reserves to the extent that, had they properly stated the reserves, the insurer would likely have been put into an insolvency proceeding sooner.

F. Income Tax

Insurance companies placed into liquidation often have net losses for federal income tax purposes. They are required to file federal income tax returns. (See Chapter 3—Accounting and Financial Analysis.) In addition, they may carry back the net operating losses and capital losses for a three-year period and recover prior years' federal income taxes. If the company is included in a consolidated return, the losses may be used to offset income from other companies in the consolidated group.

As part of the receiver's investigation, it should be as certain whether the company has entered into a tax-sharing agreement. A tax-sharing agreement provides for the allocation of tax among members of a consolidated group may enforce the insurer's rights to tax recoveries. The receiver should determine whether any tax obligations or refunds due the insurance company have been paid and should be aware that intercompany tax allocations are frequently not recorded.

See *Exhibit 4-1* for a chart of potential recoveries from third parties.

IX. POTENTIAL ACTIONS AGAINST MANAGEMENT (DIRECTORS AND OFFICERS), SHAREHOLDERS AND POLICYHOLDERS/OWNERS**A. Directors and Officers**

The receiver may seek to recover damages from an insurer's directors and officers under one or more of the following theories:

1. General Mismanagement

In most states, case law requires that corporate officers and directors exercise ordinary or reasonable care and diligence in discharging their duties. The standard varies by jurisdiction. In most states, officers and directors are protected by the "business judgment rule" for their good faith actions. (See Chapter 9—Legal Considerations.)

The receiver should focus on what the directors and officers did or did not do. Accordingly, the receiver should begin the investigation by identifying the directors and officers and examining their qualifications to serve in their respective capacities. Such persons are held to minimum requirements of background, experience and skill for each position. These prerequisites may be defined by statute or contained in the company's bylaws. The receiver should ascertain that the minimum requirements were met. The statutory remedy for an officer or director failing to meet qualifications is removal. However, willful failure of other officers and directors to enforce timely action may lead to their liability if it contributed to the insurer's insolvency.

The receiver should pay attention to the directors' and officers' actions during the time leading up to the commencement of the receivership. If, prior to initiation of receivership, the directors and officers knew or should have known that the company was hopelessly insolvent, their failure to take remedial actions may be considered mismanagement. That is, continuing operations of the company may result in a larger dollar amount of the insolvency than would have occurred had management taken remedial

Chapter 4 – Investigation and Asset Recovery

actions, such as ceasing to write new business, going into run-off, or voluntarily consenting to receivership. In some jurisdictions, this “deepening of the insolvency” is considered an element of damages in an action against the directors and officers.

An officer or director is accountable for the results of the operations of the insure. Whether accountability translates into liability in directors’ and officers’ litigation would appear to be dependent on answers to the following questions:

- Did the officer exercise reasonable and ordinary care in monitoring the behavior of subordinates?
- Did the officer act promptly to take appropriate corrective action?
- Did the officer attempt to conceal the failings or wrongdoing?
- Was the officer an active co-conspirator?
- Did the officer obtain adequate information before making a judgment?

The receiver should review all minutes of the board, and board committee meetings and related activity. Records of attendance at board meetings should be scrutinized. Particular attention should be given to officers’ compensation and directors’ fees, and to excessive travel or preferential use of company property. The receiver also should examine investment transactions for improper or self-dealing in ventures in which officers and/or directors had an interest. An absentee or empty-headed/pure-hearted director is not absolved and may incur additional liability because of continuous absences or non-feasance.

2. Racketeer Influenced Corrupt Organizations (RICO)

The availability of the federal Racketeer Influenced Corrupt Organizations (RICO) Act to receivers is discussed in depth in Chapter 9—Legal Considerations.

At least some causes of action under RICO require demonstration of fraud. In such cases, the concern expressed below regarding collectability of reinsurance and errors and omissions (E&O) liability coverage would apply to these RICO actions as well.

3. Fraud

Civil liability is not the only remedy available to a receiver. In appropriate cases, consideration should be given to referring the matter to local, state or federal law enforcement authorities for criminal enforcement. Alleged fraudulent or criminal activity may involve only one or two persons, and it is not necessary to prove a pattern of activity and should include a comprehensive evaluation on impact to the estate. Fraud is often used as a defense or basis to deny coverage by liability insurers covering Officers and Directors of the insurer and may be used as a defense by reinsurers. 4. Voidable Preferences and Fraudulent Transfers

As discussed earlier, statutes prohibiting voidable preferences and fraudulent transfers often allow the receiver to pursue insiders who knowingly participated in the prohibited transactions. A forensic analysis will help identify potential voidable preferences or fraudulent transfers.

Receiver's Handbook for Insurance Company Insolvencies

5. Activities that Give Rise to Potential Recoveries

Recoveries from the directors and/or officers may be founded on a variety of acts or failures to act that may be difficult to uncover. Major things to consider are outlined in the following paragraphs. Refer to Chapter 9—Legal Considerations for more detail.

a. Self-Dealing

All transactions between the insurer and vendors owned or controlled by officers and directors and/or their immediate family members should be examined for propriety. Leases of office space, data processing equipment, and furniture and equipment can be used to skim funds from insurers for the improper benefit of owners/officers. Similarly, there have been instances in which the insurer paid excessive management fees to organizations controlled by related parties. Other possible areas for abuse are claim service organizations, software vendors, auto repair shops, attorneys, consultants, and shared office space.

b. Executive Compensation

Travel and expense reimbursements to officers and directors should be examined for abuses, such as travel with no clear business connection, travel to resort areas accompanied by family members, etc. Special facilities, such as leased or company-owned luxury cars, boats or residences maintained for executives may also be suspect.

Some scandals have identified artworks, antiques, oriental rugs or other high end items purchased with company funds for the primary benefit of its officers.

c. Investment Transactions

Real estate owned by an officer or director may have been sold to the insurer at an inflated value or exchanged for other property of greater value. Mortgage loans may have been granted to family members based on overstated appraisals or in violation of company investment policies.

Other areas of potential abuse include secured loans in which the collateral may be improperly secured or below investment quality.

d. Underwriting Transactions

Poor underwriting results may have been the result of actionable misconduct, such as:

- Accepting risks in violation of the insurer's published underwriting guidelines.
- Failing to prevent or correct over-lining (writing prohibited classes of business).
- Failing to obtain motor vehicle records on automobile risks and safety, and engineering reports on commercial property risks or workers' compensation risks.
- Taking on additional risk when the premium is insufficient to cover the risk.
- Placing reinsurance with unacceptable reinsurers and/or failing to obtain adequate security (letters of credit or trust funds or funds withheld) to cover unauthorized reinsurance.
- Failing to keep new business writings within prescribed limits.
- Failing to monitor the activities of MGAs and TPAs.

Chapter 4 – Investigation and Asset Recovery

e. Claim Operations

Claim operations are vulnerable to liability for unlawful conversion of funds, which usually requires active participation by an employee or agent of the insurer. Persons in senior management positions may be culpable and subject to litigation to the extent that they were aware of activities, such as:

- Improper payments to claimants;
- Payments made to non-existent claimants;
- Payments to non-existent providers or service vendors;
- Inflated invoices for loss adjustment expenses linked to a kickback scheme;
- Deliberate and material under-reporting of incurred losses;

The degree of culpability will be determined by answers to at least the following questions:

- Did the officer exercise reasonable and ordinary care?
- Did the officer take prompt corrective action?
- Did the officer attempt to conceal the failings or misconduct?
- Was the officer an active co-conspirator?

f. Actuarial and Financial

An officer may have negligently or intentionally misstated actuarial data, either through improper valuation of policy reserves or case reserves for property and casualty losses, or by negligent or intentional failure to maintain sufficient data on which to base a reasonable estimate of loss reserves. The degree of culpability would appear to hinge first on intent and then on the qualifications of the officer. Alternatively, a group of officers and/or directors acting in concert may have intentionally tampered with reserve data or deliberately filed false financial statements.

g. Failure to Act in the Best Interests of the Company

A corporation's officers and directors have a common law duty of loyalty to that corporation that precludes, among other things, seeking private profit or advantage from their office. In most cases, the standards of conduct are clearly defined. The officer or director must not place his or her private gain above the best interests of the company and its survivability as a going concern. The receiver should carefully scrutinize insider stock trading, employment contracts, "golden parachutes," "poison pills," bylaws, etc., to verify that key personnel did not breach this duty.

6. D&O Indemnification

Consideration should be given to the existence and effect under applicable law of indemnification provisions in the company's bylaws and in state corporate laws.

7. E&O and D&O Insurance

Many companies purchase E&O and D&O insurance that may provide coverage for certain types of conduct described above. As part of the receiver's investigative examination, all such policies should be identified and examined. These policies will almost certainly be claims-made policies that should

Receiver's Handbook for Insurance Company Insolvencies

be reviewed to determine the deadline for notifying the carrier concerning possible claims. Additionally, the policies may provide for the purchase of “tail coverage,” which could extend the time in which to file a claim. In most cases, the receiver should purchase the tail coverage if his/her investigations have not been completed. The presence of insurance may be a factor in the cost/benefit analysis with respect to assessing causes of action against officers and directors. If insurance does exist, consideration should be given as to whether causes of action are covered by the insurance. Certain causes of action may be excluded by the policy, and it is important for counsel to review the policies before any suits are filed. One common exclusion that should be considered is the “regulatory exclusion” clause, which will likely be present in the policy under review. Another common exclusion is the “insured versus insured” clause which may be in the policy under review.

B. Shareholders and Policyholders/Owners

Some jurisdictions permit alter-ego actions against shareholders, usually in closely held corporations, under common law or by statute. It may not be necessary to establish that management was negligent or guilty of fraud to recover from the shareholders. Where permitted, such recoveries may be limited, as in Arizona, to the par value of the outstanding shares.

In certain situations, it may be possible to assess policyholders or shareholders. Reciprocal inter-insurance exchanges and some old-line mutual insurers may have issued assessable policies that required policyholders to pay amounts over and above their premiums. Impairment to surplus usually is sufficient to trigger assessment.

Recoveries from shareholders and policyholders are special situations not likely to be encountered in most receiverships, and the amounts to be recovered and the procedures for recovery are specific. Thus, the receiver's attention is directed to the statutes and other authorities.

C. Significant Developments in Insurer Receivership Model Act (#555, known as IRMA)

In litigation between the receiver and affiliates of the insolvent insurer, Section 113 of IRMA prohibits the affiliate from using any evidence that was not included in the records of the insurer at the time of the transaction. As an example, it is not unknown for inter-affiliate loans from the insurer to have side agreements excusing repayment under various circumstances. Under Section 113, if the side agreement is not fully documented at the time of the loan in the records of the insurer, the borrowing affiliate may not present that agreement as a defense to the receiver's collection efforts.

Chapter 5 – Claims

This page intentionally left blank.

*Receiver's Handbook for Insurance Company Insolvencies***I. INTRODUCTION**

Claims processing is the most visible, tangible part of a receivership proceeding. Because policyholder protection is the basic goal of any insurance receivership, the adjustment and adjudication of claims is closely monitored by interested parties. Accordingly, the claims process should be carefully developed and administered.

A receiver should consider the different circumstances under which claims are adjudicated. There are several variables that may affect the way the claims process is handled, each of which, as well as state law, will have an impact on the type of claims procedure that must be established:

- Whether the insurer has any assets;
- Whether the insurer is a primary carrier, an excess carrier, a professional reinsurer or a primary carrier that assumed reinsurance obligations;
- Whether the insurer underwrote property/casualty (property and casualty); fidelity/surety; a health maintenance or preferred provider organization; or life, accident and health risks;
- Whether guaranty associations are involved;
- Whether the proceeding is judicial or administrative;
- Whether the proceeding is a conservation, rehabilitation or liquidation;
- Whether the claim arises under an insurance policy or other contract; and
- Whether the insolvency crosses state or international borders.
- Whether the insurer handles claims adjudication internally or outsources this function to third parties.

For a discussion of the legal aspects of claims processing and payment, see Chapter 9—Legal Considerations.

THE FOLLOWING DISCUSSION IS ORDERED CHRONOLOGICALLY AND, UNLESS INDICATED OTHERWISE, ASSUMES THAT THE INSURER IS INSOLVENT AND THAT THE RECEIVERSHIP PROCEEDING IS A LIQUIDATION. ONE OF THE FIRST TASKS FOR ANY RECEIVER IS TO ESTABLISH A CLAIMS PROCEDURE AND PUBLISH THE PROCEDURE TO POTENTIAL CLAIMANTS. ONCE ESTABLISHED AND PUBLISHED, THE CLAIMS PROCEDURE IS IMPLEMENTED. IT MAY BE PRUDENT TO FILE THE CLAIMS PROCEDURES WITH THE RECEIVERSHIP COURT AND SEEK THE COURT'S APPROVAL OF THE PROCEDURES PRIOR TO IMPLEMENTATION OF THE PROCEDURES. THE RECEIVERSHIP COURT ULTIMATELY APPROVES THE CLAIMS THAT THE RECEIVER HAS ADJUSTED AND RECOMMENDED FOR PAYMENT OR DENIAL. ESTABLISHING APPROPRIATE RESERVES IS AN INTEGRAL PART OF THE PROCESS. THE FINAL STEP IS PAYMENT.

This section addresses the timetable for the filing of claims, the different types of creditors and their claims, and provision of notice to claimants. The receivership court's order defines the required notice to potential creditors and establishes deadlines for the filing of claims.

A. The Fixing Date

Chapter 5 – Claims

One of the first steps in any insurance insolvency proceeding is to establish the exact date upon which the rights, obligations and liabilities of the insurer and its creditors are determined or “fixed.” Most states use the date of entry of the liquidation order, or, in some cases, rehabilitation order, for this purpose. (See IRMA, Section 501 B.) However, as to some policyholder claims, the fixing date is often required to be the date when the statute or court order terminates the insurer’s policies. The effect of the “fixing date” is significant: It provides a reference date upon which the insurer’s liability and creditors’ rights are determined. The most common legal distinction made is that between contingent and absolute claims. In essence, a claim is contingent if a liability-imposing event has occurred, but it is uncertain that the claim will be made or coverage and liability established. An absolute or non-contingent claim is one of certain liability. Although there may be a question as to the ultimate amount of the liability or when it may be due, there is no doubt that some debt will be due. An example outside the liquidation context helps to illustrate these distinctions. Assume that A negligently drives his car into the rear of B’s automobile. As a result of the incident, B has a contingent claim against A. If B sues A and B is awarded a final judgement, B as an absolute claim against A; In short, a claim remains contingent until liability is certain.

Identification of the fixing date may be subject to statutes applicable to both life/health and property and casualty insolvencies in several states that require continuation of coverage for a specified period after liquidation, usually 30 days. Most state statutes require that a life insurer’s policies continue in full force and effect, at least until the receiver reinsures or transfers the policy liabilities to another insurer.

B. Claim Filing Deadlines

1. What is a claims filing deadline?

A claim filing deadline is the deadline for filing proofs of claim against the estate. (See IRMA Section 701 A.) The purpose of the claim filing deadline is to enable the receiver to: identify existing or potential claims against the estate; adjust and adjudicate claims; make distributions; and eventually close the estate. A claim received after the filing deadline should be classified as a late claim. Timely filed claims may be amended or supplemented subject to certain limitations provided notice of the loss or occurrence giving rise to the claim was provided on or before the claim filing deadline. Late-filed claims may be accepted but may not be paid until all timely filed claims of the same priority have been paid in full or it will be moved to a lower priority of distribution within the estate. Under IRMA late-filed claims are assigned to Class 9, provided that the claim was late due to certain specified criteria (IRMA Sections 701 and 801(I)). Other claims filing dates may apply.

In some circumstances, claimants need not file a claim to preserve their rights—e.g., policyholders of a life insurance company. Unearned premium claims may be treated similarly in property/casualty liquidations. It is recommended that the receiver discuss with the guaranty association which claimants are required to file a proof of claim. It is the receiver’s responsibility in such circumstances to develop a list of claimants who are deemed to have filed claims prior to the claim filing deadline. As always, it is imperative to check local statutes for the appropriate procedure and rule of law.

a. Effectiveness as Against Federal Claims

Whether claim filing deadlines cut off untimely claims of the federal government pursuant to federal super priority statute 31 U.S.C.A. § 3713 remains unsettled. For a more extensive discussion of this and other claims issues, see Chapter 9—Legal Considerations.

b. Applicability in Rehabilitations

Whether a claims deadline date will be established in a rehabilitation proceeding depends upon the specific circumstances and applicable law. In rehabilitations of a limited or set duration, a

Receiver's Handbook for Insurance Company Insolvencies

claim filing deadline may enable the rehabilitator to ascertain the amount of outstanding claims and implement a plan to return the insurer to solvency. A deadline may also allow the rehabilitator to conserve liquid assets to pay current obligations while a rehabilitation plan is being developed or the amount of outstanding claims is being assessed. In other rehabilitations, it may be appropriate to set no claim filing deadline until a final dissolution plan has been settled.

2. How is a Claim Filing Deadline Established?

A court order is required pursuant to the applicable statutory requirements to establish the claim filing deadline for a particular receivership. (See IRMA Section 701, also Chapter 6—Guaranty Associations for claim deadlines applicable to guaranty associations or ancillary receiverships.) The claim filing deadline established for claims against the receivership estate will also apply to the claims against a guaranty association.

Some state statutes specify the maximum period of the period of time for the claim filing deadline bar date. If there is flexibility within the statute, the length of this period often will depend upon the complexity and size of the receivership and the type of business written. The assumption of blocks of business by a solvent insurer may eliminate the need for many claims to be filed at all. There can be a general correlation between the length of the claim filing deadline and the amount of the estate's administrative expenses.

3. 6. Deemed Filed Claims

In circumstances where the insurer has better information about claims than the policyholders have, the receiver may be able to avoid the administrative expense of handling some or all proofs of claim by establishing a "deemed filed" procedure. Under such a procedure, the receiver may establish a list of policyholders and claimants based on the insurer's books and records, which shall provisionally state the amounts claimed. Each person whose name appears on such a list shall be deemed to have filed a proof of claim in a timely manner. Claimants are given notice and provided an opportunity to correct errors and prove their claims before final allowance. This procedure works well for unearned premium claims and claims for investment values in life insurer insolvencies. Most state statutes do not require holders of life or annuity contracts to file claims.

D. Developing the List of Creditors

The first step in this process is to develop a master mailing list of creditors from the insurer's books and records and other interested parties.¹ Most state statutes or receivership courts require notice by first class mail to the last known address of the known claimants as well as by publication. In some states, notice shall be given in a manner determined by the receivership court.

The following persons usually will be included in the insurer's mailing list:

- Guaranty Associations
- Policyholders
- Third-Party Claimants
- Secured Creditors

¹ See *Elmco Properties, Inc. v. Second National Federal Savings Ass'n*, 94 F.3d 914 (4th Cir. 1996) for a receivership involving a savings association.

- Equity (Stock or Share) Holders

E. Proof of Claim Forms

Once the list of claimants is developed, the receiver typically sends a proof of claim form to each person identified. The proof of claim form, which is the basic prerequisite to the allowance of a creditor's claim, serves a number of useful purposes. First and foremost, it identifies the claimant and the nature and extent of the claim. The receiver also may use the form to calculate the extent of the insolvency, to identify any obligations the claimant may owe the insurer (e.g., through the identification of any setoffs), to set reserves and to determine the estate's right to collect reinsurance. In some cases, health claims may not have to file a proof of claim an example is where the health insurer uses a TPA and is covered by the guaranty fund, there should be no need for the TPA to adjudicate the same claims twice.

Many proof of claim forms have been developed over the years. Claim forms to be used in any particular proceeding should be tailored to the circumstances presented. For example, the receiver should consider whether claims forms must be filed by all claimants. Most state statutes permit the receiver to dispense with the issuance of claim forms in a life receivership. The receivership simply draws a list of creditors from the insurers' books and records. In some states, filing with a guaranty association may constitute filing with the receiver for purposes of satisfying a claim filing deadline, but the receiver may need additional information from the claimant that the guaranty association did not elicit. Guaranty associations and receivers should coordinate their respective claim filing procedures to the extent possible. With receivership court approval, receivers may deem open claims as reflected on the books and records of the delinquent insurer as timely filed. In such circumstances, proofs of claim need not be filed by insureds or third-party claimants for such claims.

Before a proof of claim form is created, the receiver may wish to determine the number and types of claim forms that will be needed. The first task is to identify in broad categories the various classes and types of claimants. Then the receiver can determine what information is required for each type of claim. With this information, specific proof of claim forms can be developed for each category of claimant based on the type of business written. Some receivers use only one claim form but use control numbers (such as an alpha-numeric system) to designate the type of claim presented in the form. This saves the cost of developing separate forms. Receiverships involving surety business may necessitate the use of a separate

Receiver's Handbook for Insurance Company Insolvencies

proof of claim form for each type of surety bond. The objective is to facilitate the exchange of information between the claimant and the receiver in order to adjust and later adjudicate a claim.

The more specific the information that can be elicited in the initial proof of claim form, the less follow-up will be required. Receivers should be encouraged to request submissions from creditors which the company in receivership has reinsured in accordance with the format of reporting under the reinsurance contracts in question. This should just be complemented by a comprehensive overview and breakdown of the total claimed by such reinsured creditor. The receiver, however, may require the claimant to present supplementary information or evidence, may take testimony under oath, may require production of affidavits or depositions, or may otherwise obtain additional information or evidence (IRMA Section 702 C). The class determinations should be subject to a right of appeal by the claimant. The prompt determination of creditor class permits a faster wind down, and also facilitates more prompt calculations and distributions for creditor claims. It may be unnecessary to determine the amount of receivership claims for a creditor class if receivership assets are unavailable for that creditor class.

Most statutes require claimants to provide certain basic information. (See IRMA Section 702.) The following information typically is required:

- The nature and particulars (e.g., the who, what, when, where and amount) of the claim asserted;
- The consideration for the claim;
- The identity and amount of any security held on the claim;
- Any payments made or received on the claim;
- A copy of each written instrument upon which the claim is founded or a statement of the reasons a copy of the instrument(s) cannot be provided;
- The amount and a description of the source of any salvage or subrogation collected or which may be collected;
- An affirmation (notarized) that the insurer justly owes the sum sought and that there is no setoff, counterclaim or defense to the claim (IRMA Section 702 A); and,
- The name and address of the claimant and any attorney representing the claimant.

Additionally, IRMA requires that the claimant provide: 1) its Social Security number (SSN) or federal employer identification number; and 2) any right of priority of payment or other specific right asserted by the claimant (IRMA Section 702 A).

The receiver may decide to use the same claims and policyholder service forms that the insolvent company previously employed, because the information required is fairly uniform, and the use of different forms could be confusing to the service providers and policyholders. Additionally, many estates make proof of claim forms available for easy access via the receiver's office website.

The receiver decides what additional supporting documentation will be required to prove a claim and in what form it should be submitted. (See IRMA Section 702 C.) Different documentation will be needed for different types of claims. For example, death benefit claims require the furnishing of a death certificate. Accident and health claims may require a physician's certification and copies of medical bills. Return premium claims may be established simply by submitting a bordereau of all cancelled policies and return premium amounts attributable thereto, while computer summaries may be required to prove cumbersome or complicated claims. When policyholders claim return premium, the receiver may require additional documentation, such as copies of cancelled checks. Reinsurance claims may require yet another form of

Chapter 5 – Claims

documentation. Life insurance claims usually require the policyholder to furnish the original policy. If the original cannot be provided, a copy thereof may suffice. If neither the original nor a copy of the policy can be furnished, a lost policy form should be executed and submitted to the receiver.

The level of detail required in the proof should conform to industry standards and statutory guidelines, as well as make it convenient for the receiver to communicate with the claimant and add the information to its database for claims management. Some estates may not process a claim that does not include all the requested information. One of the most critical needs of general creditors involves financial information on an insolvent ceding company. Providing regular financial statements of the company would be beneficial to interested parties, such as guaranty associations, reinsurers and other receivers or regulators. It should be noted, that whenever a reinsurer of the company in receivership has claims against the estate or where a reinsured creditor at the same time is a reinsurer of the estate, receivers should utilize the guidance provided in sub-section F. Coordination and Communication with Reinsurers.

The receiver must determine who may submit a proof of claim on behalf of an entity and what form of verification is required. Because corporations can act only through their designated agents, it is best to determine and inform corporate claimants who may sign on their behalf (e.g., officers, directors, managing general agents or attorneys). Generally, a director does not have authority to act for a corporation because directors must act as a body unless otherwise authorized by the company's by-laws. In most instances, the notarized signature of an individual who attests to his authority to do so will suffice. The signature of a trustee should be received when dealing with trust claims, and the trust document should be provided to the receiver to verify the identity of the trustee. If in doubt as to the capacity or authority of an individual who submits a claim on behalf of a corporation, partnership or trust, the receiver may require that the claimant provide a certificate of incumbency, signed by another authorized officer or representative, as to the signer's authority to bind the entity. In the case of a corporation, partnership, trust or individual, the receiver may also require a signature guarantee if in doubt as to the identity of the individual executing the claim. Careful drafting of the attestation will ensure that such authorization has been given to the signatory. Note that the availability of notarizations may depend upon the residence of the claimant. Although most foreign countries maintain their own systems for verification, notaries may be found at most American embassies. Consideration should be given to electronic signatures and proof of claims submission

When developing proof of claim forms, it is helpful to have in mind the volume, type and class of claims that creditors may submit. Claimants, including guaranty associations and reinsured creditors, may have hundreds of outstanding claims against the insured. Some claimants may be permitted to file a single omnibus proof of claim for all claims against the receivership estate. IRMA Section 702 D allows a single omnibus claim to be filed by guaranty associations, which may be periodically updated without regard to the claim filing deadline, and the guaranty association may be required to submit a reasonable amount of documentation in support of the claim. Also, for reinsured creditors, the receiver will want to decide whether these claims need to be submitted individually or on a bordereaux basis. There are certain advantages to bordereaux submissions, which are dictated by the sheer volume of claims, the requirements of the treaty and the receiver's need to efficiently process reinsurance recoveries. Ceding treaty retrocessionaires may only be able to file claims on bordereaux. There are other claims submission methods that might be used for reinsurance recoveries, depending upon the complexities of the situation. In the final analysis, the preferred submission approach ordinarily is the one which permits an orderly and efficient administration of claims on a computer system, and often closely follows the procedures formerly in effect when the company was in operation.

In some states, if applicable, claims must be submitted on the Liquidator's proof of claim form unless the Liquidator grants an exception. Therefore, one approach to the claims filing process for reinsurers would be to allow for claims to be submitted in any format acceptable to the receiver; if the receiver (or the court) agrees, a claim would not have to be submitted on a proof of claim form.

Receiver's Handbook for Insurance Company Insolvencies

To the extent omnibus proof of claims by reinsurers/intermediaries are allowed under your state's law, another consideration to expedite the filing of certain types of claims would be to allow reinsurers/intermediaries to file "place holder" claims, like those of guaranty associations, whereby the reinsurers/intermediaries timely file claims but are permitted to supplement their claims as additional information becomes available later in the receivership process. When appropriate, deem filing practices would be allowed for certain claims in receiverships. Generally, such orders are only sought in situations involving claims for which adequate claims documentation/proof exists within the records of the insolvent insurer.

III. NOTICE

Once a receivership order has been entered, whether it is for rehabilitation or liquidation, one of the first actions taken is to mail notices of the receivership to the company's agents, policyholders/members, reinsurers, and other parties related to the receivership. These notices should contain information regarding the claims processing filing process and references to the receiver's office website. The website should be kept updated with receivership information relevant to interested parties. The receivership website should not only provide information for consumers, but also provide an overview of the current status of the receivership including past and upcoming deadlines as well as provide access to court orders relevant to the receivership. To simplify the administration of the website, such information can be provided in the format of a simple table as some receivers' websites already do. Similar receivership notices are also provided to insurance departments of other states where the company is licensed.

Once a claims procedure has been established, the next step is communicating the procedure to all creditors. The receiver should check the domiciliary statute for any applicable time constraints in sending notice.

Ideally, in the case of surety bonds, insureds, their agents and obligees should be advised of the status of their policies and of the procedures to be followed to make a valid claim. Among other things, the notice typically will inform them of the insurer's insolvency, whether policies have been or will be cancelled, and the procedures for presenting claims. The notice also may be used to describe, in general terms, the anticipated course of the liquidation. Some states require the notice to describe the guaranty association's involvement, if applicable. If a guaranty association is or may be involved, the receiver may want to jointly draft the notice with the association. The receiver should be cognizant of the effect of the receivership on guaranteed renewable and non-cancellable business.

The form of notice should be adapted to the circumstances. The notice may consist of the actual proof of claim form, with appropriate instructions for its use. The notice should identify the rights fixing date and claim filing deadline and its significance. Highlighting the penalty for failing to file by the claim filing deadline may help to avoid problems later. Posting notices, proof of claim forms, and claim filing deadlines on the receiver or estate's website is a best practice.

In multistate receiverships, notices to life insurance policyholders and annuity or investment contract holders should be coordinated with affected guaranty associations through the National Organization of Life & Health Insurance Guaranty Associations (NOLHGA). The receiver also may consider coordinating with the National Conference of Insurance Guaranty Funds (NCIGF) in multistate receiverships on the issuance of notices sent to property and casualty policyholders. Guaranty associations may request that the receiver to include appropriate guaranty association information in the receiver's notice.

A. Contents: Plain Language

Most people will be receiving a receivership notice and proof of claim form for the first time. It is important that all forms be written as simply and clearly as possible. When appropriate, bilingual or multilingual notices can be issued.

*Chapter 5 – Claims***B. Service**

For the initial mailing of proofs of claim, receivers may send notices and proofs of claim as claimants are identified or initiate the mailing process once all potential claimants are identified. For ease of reference and tracking, proofs may be numbered either before issuance or upon receipt, and a procedure may be implemented for recording the mailing, undelivered return, receipt and processing of all proofs. Notice commonly is given by mail and occasionally by publication. The receiver should be aware that there are constitutional issues with respect to the deprivation of property rights. Specifically, identifiable creditors of the estate, who have a known or reasonably ascertainable address, may be entitled to mailed notice of the proceedings affecting their claim. *Elmco Properties Inc. v. Second National Federal Savings Association*, 94 F. 3d 914 (4th Cir. 1996). (See Chapter 9—Legal Considerations.) Mailing should be done in the manner and form prescribed by the domiciliary receivership statute (e.g., certified, first class, bulk), with appropriate documentation and records to demonstrate issuance, in case a challenge arises later. Publication may be required by law and is advisable for unknown claims. In most cases, the court order establishing a claim filing deadline will also require published notice of the receivership. Refer to applicable statutes or the court order to determine the timing, media, and frequency of published notice.

PROOFS OF CLAIM THEMSELVES MAY BE ISSUED BY MAIL OR THROUGH THE RECEIVER'S WEBSITE A COPY OF THE ENTIRE PROOF OF CLAIM DISTRIBUTION LIST SHOULD BE MAINTAINED, SUPPORTED BY VERIFICATION BY THE INDIVIDUAL(S) HANDLING THE DISTRIBUTION. IV. CLAIMS PROCESSING

The receiver should make decisions at the commencement of the liquidation about proof of claim filing requirements and the claim evaluation process. Making these decisions up front affords timely notice to claimants prior to the expiration of any claim filing deadlines and permits the development of claim forms and procedures consistent with such decisions. Each of these topics are discussed below:

A. Filing Methods

State law typically permit the presentation of claims by a variety of delivery methods, including U.S. mail, personal delivery or private delivery service. The receiver may also allow claimants to present their claims by facsimile or electronic (i.e., computer) transmission. The receiver should determine in advance whether to require original or electronic signatures, verification under oath, acceptable forms of supporting documentation. whether actual receipt, postmark, or receipt of delivery to a courier by the claim filing deadline are required.

State law may provide the receiver with discretion to exempt pre-existing claims from the proof of claim requirement. In exercising such discretion, a receiver would notify claimants with pending claims reported prior to the entry of the receivership order that their claims are deemed on file. Upon finalizing such decisions the receiver should develop clear and timely communication protocols that address the requirements for presenting claims against the estate.

In developing claim filing protocols, the receiver should be cognizant of information sharing requirements with other stakeholders such as state regulators, guaranty associations, and reinsurers.

1. Documenting Receipt of Proofs of Claim

As noted, the receiver should determine at the outset what constitutes “receipt” of a claim, i.e., whether proofs of claim are considered received on the date they are mailed or on the date they are actually received at the designated address. This determination will impact whether claims are timely-filed or late. Documenting the date of receipt of proofs of claim is a critical receivership function that should follow established business protocols.

Receiver's Handbook for Insurance Company Insolvencies

2. Guaranty Association Claims

The receiver should establish effective communication with the affected guaranty associations at the earliest possible date in the insolvency. (See IRMA Sections 303 and 405.) This is the essential first step to efficient referral of claims to the appropriate associations. After claims have been referred to the guaranty associations, claimant inquiries can be directed to the appropriate guaranty association or claim handler. The receiver may also need to monitor claims where more than one guaranty association is involved. If guaranty associations are unable to commence claim payments shortly after the liquidation date of the insolvent insurer, the receiver may want to establish a transitional pre-payment plan for hardship categories such as workers compensation claims, pharmacy benefits, or impounded automobiles. Such payments may be appropriate for subsequent treatment as early access distributions to or direct reimbursement by affected guaranty associations. See IRMA Section 802 D. [Note: IRMA Section 802(D) relates specifically to Workers' compensation payments in P&C cases]. In the case of a life and health multi-state insolvency, such payments may be used to provide funding to support assumption transfers of business or to provide initial funding for covered claims. In either event, the funding would be considered early access in accordance with IRMA Section 803. The referral of a claim to a guaranty association does not terminate the receiver's involvement with the claim. The receivership estate may have responsibility for claims that are excluded from guaranty association coverage or for portions of claims that exceed the applicable guaranty association coverage limit. A collaborative approach to the resolution of such claims between the receiver and guaranty association should be considered. Where guaranty associations administer covered claims, it is also critical for the receiver and guaranty association to coordinate information sharing so that the receiver is able to notify, cede and recover losses from reinsurers. Many state laws exempt guaranty associations from proof of claim requirements and claim filing deadlines. IRMA permits guaranty associations to file a single omnibus proof of claim for all claims of the association, See IRMA Section 702 D, which may be updated periodically without regard to the claim filing deadline.

B. Proof of Claim Evaluation

This section outlines the general steps a receiver usually takes when reviewing claims filed against an insurer. It also identifies policy or administrative questions the receiver should consider at the beginning of the claims evaluation process. IRMA provides that the liquidator may adopt, with the approval of the receivership court, procedures for the review, determination and appeal of claims that will be preliminary to review by the receivership court (IRMA Section 707 A).

Prompt and efficient resolution of claims should be management priorities for the receiver. IRMA provides that the liquidator shall review all duly filed claims and shall further investigate as the liquidator considers necessary, *except* a liquidator is not required to process claims for any class until it appears reasonably likely that assets will be available for a distribution to that class (IRMA Section 703 A). However, if there are insufficient assets to justify processing all claims for any class, the liquidator shall report the facts to the receivership court and make appropriate recommendations for handling the remainder of the claims (IRMA Section 703 K). The liquidator may allow, disallow or compromise claims that will be recommended to the receivership court unless the liquidator is required by law to accept the claims as settled (IRMA Section 703 A).

The receiver should manage the claim staff to achieve these goals. To the extent that the ultimate claim resolution is dependent upon the outcome of a guaranty association's claim administration, the receiver should consider coordinating with the applicable guaranty association on ultimate claim resolution when closure of the receivership estate is in view.

Completion of the claims evaluation process will enable the receiver to effectuate distributions to policyholders and creditors, generate reinsurance recoverables, and resolve subrogation and salvage, coordination of benefits and loss sensitive underwriting recoveries. The receiver in a health insurance insolvency should evaluate coordination of benefits owed from other parties as well as subrogation

Chapter 5 – Claims

recoverables. Inquiries to be made include whether collateral is being held by the creditor in connection with the claim and whether there are other third parties who may be pursued, such as indemnitors. Proof of claim forms can be a source of such information.

Receivers and guaranty associations may need to coordinate on entitlement to collect and retain salvage and subrogation recoveries. The decision in *Cal. Ins. Guarantee Ass'n v. Superior Court*, 64 Cal. App. 4th 219, 220-21 (Ct. App. 1998), resolved whether the receiver or California Insurance Guarantee Association (CIGA) was entitled to the sums CIGA recovered through subrogation actions after it had paid covered claims. The Court held that to the extent CIGA pays covered claims it was entitled to retain the amounts it recovers through subrogation actions. Conversely, to the extent CIGA pays covered claims with “early access distributions” or other assets from the insolvent insurer’s estate, the estate is entitled to proceeds of any subrogation action. *Id.* at 229. In instances where pre-receivership payments were made by the insurer prior to guaranty association assumption of a claim, those payments typically constitute subrogation of the receivership estate under state law. In the case of surety claims, the receiver will need to review the underwriting file to determine subrogation or salvage potential and the identity of any third-party indemnitors. The estate should notify third-party indemnitors and solicit their involvement and support in settling the claims. Failure to properly and timely notify third-party indemnitors can result in the loss of indemnification through failure to give the indemnitor reasonable opportunity to minimize loss.

1. Review of Timely-Filed Claims

Timely filing of a proof of claim may determine whether a claimant receives priority payment and, if so, at what level of priority. The receiver accordingly must determine whether each claim is timely-filed.

Determinations of timeliness are made with reference to the claim filing deadline and the receipt or postmark rule. Claims received thereafter are categorized as “late” and subordinated in priority under state law. State law may provide a limited exception to the claim filing deadline for late claims. The receiver should review the applicable state law to determine whether a claim qualifies under the limited exception. See IRMA Section 801. For example, in some states, a late-filed claim may be deemed timely filed claim, if the claimant can show that he/she was entitled by virtue of an open claim on the books and records of the company to receive actual notice of the receivership and claim filing procedures but was not sent such notice. In one jurisdiction, a court held that the claims filing deadline should not be extended as a remedy for a receiver’s failure to give notice of the appointment of a receiver. (See *In re Liquidation of American Mutual Liability Insurance Company*, 802 N.E.2d 555, (Mass. 2004).)

Although the law on this point is fact-intensive, a receiver may not be able to rely on constructive or published notice, in circumstances where the existence of a claim was contained in the insurer’s books and records. (

Other examples of deeming late claims timely may include creditors who received transfers that were subsequently voided by the receiver or surrendered assets transferred to them, secured creditors whose security was valued below the amount of their claims (See IRMA Section 701 B), reinsurers whose reinsurance contract is terminated by the liquidation giving rise to a termination claim under IRMA Section 701 C.

- Post-Deadline Maturity of Timely Filed Claims

Certain timely-filed claims may not be absolute for a variety of reasons. The receiver may request the Court to set an absolute, or final, or contingent claim deadline, by which timely filed claims must be made absolute or fixed. Claims not made absolute, liquidated or mature by that deadline are date would be denied.

Receiver's Handbook for Insurance Company Insolvencies

2. Review as to Form

- Policyholder Protection Claims

Some jurisdictions permit policyholder protection claims by first party insureds for claims that are incurred but unreported or not known at the time of the claim filing deadline. Such claims may be allowed if they are amended or supplemented consistent with statutory or judicial rules and procedures. The receiver should consult applicable law to determine whether to allow such claims. Other states expressly prohibit policyholder protection claims. (See Chapter 9—Legal Considerations.) Statutes in some states either provide expressly, or courts have decided, that such claims may be allowed. Absent such guidance, some receivers require that the initial proof of claim be specific and may not be amended in any material respect after the claim deadline expires. Other receivers allow proof of claim amendments of all types until assets are distributed. Receivers should consult their local statutes and applicable court decisions on this issue.

- Contingent Claims

Most states provide for the filing of contingent claims by first party insureds, subject to an additional deadline for liquidating such claims. Contingent claims may be allowed if the claim is liquidated and the insured presents evidence of payment of the claim on or before the contingent claim filing deadline established by the Court. A contingent claim is a known loss or occurrence that is presented by an insured prior to the entry of a judgment or a determination of the insured's liability. Contingent claims do not include, and should be distinguished from, claims presented by third parties where liability or damages had not been established prior to the filing of the claim. See IRMA 705. IRMA and most state laws provide third-party claimants with a direct right to file claims with the liquidator prior to the expiration of the claim filing deadline. See (IRMA Section 706). In such instances, an insured may also file a contingent claim for the same occurrence raised by the third party.. IRMA Section 706 provides that the liquidator may make recommendations to the receivership court for the amount allowable on insured/third-party claims, basing this recommendation on the probable outcome of third-party claims against the insured. But distributions will be withheld and reserved pending the outcome of such a dispute or litigation between the insured and the third party. When the third-party claim is resolved, the reserved distribution will be paid to the insured or third-party claimant, as appropriate, and any excess amount reserved will be redistributed pro rata to other claimants in the receivership. IRMA Section 706 provides a procedure for resolving multiple claims filed by different parties against an insured that may exceed policy limits. In the case of multiple claims and irrespective of the IRMA provisions, it is imperative to apportion the varying claims without preference to the policy proceeds, and it is important to file for claim approvals with the receivership court before any claims are paid under the insurance policy. The receivership court claim approvals should be filed with due and proper notice to all parties that may be affected by such claim payments. It is recommended that defense costs be paid pro rata, even before all claims have been resolved and settled against a policy, provided that proper notice is sent to all affected and interested parties.

IRMA Section 706 provides that the third-party claimant waives certain rights against the insured by filing a claim against the liquidator for the insured's insurance policy benefits, but the waiver will be ineffective if the claimant withdraws the claim or the liquidator avoids insurance coverage.

Chapter 5 – Claims

- Amendment and Supplement of Claim Information

Amendment and supplement of information supporting a previously asserted timely-filed claim can assist the receiver in the disposition of a claim that was contingent, unliquidated or immature at the time of its filing. Consistent with the applicable statutory requirements, the receiver may determine the types of amendment or supplement that will be allowed. Amendments may include, but are not limited to, correcting or updating the amount, correcting technical defects, and providing sufficient documentation supporting payments or damages. Some states may allow insureds to file contingent claims that include reasonable attorneys' fees for services rendered after the date of receivership in defense of approved claims, provided the insured has actually paid the fees and evidence of payment is presented prior to applicable deadlines established by the Court or before assets are distributed.

- Assumed Reinsurance Claims

As for the policies of a property and casualty insurer, the liability for claims that a property and casualty reinsurer has assumed generally are limited to those arising out of reinsured events that occurred on or before the liquidation date (unless the court or statute directs otherwise). A receiver should decide at the beginning of the receivership how to evaluate the claims of ceding companies under reinsurance contracts. This decision will dictate the form of notice to ceding companies and the form of the proof or documentation cedents must use to file claims against the insurer. The receiver may opt to let the insurer's assumed reinsurance business run off and have cedents file their current claims against the insurer, allowing the cedents to amend their claims from time to time.

Another option that receivers have proposed is to require all ceding companies to file a proof of claim against the insurer as of the date of the receivership order (or a reasonably close date) for all reported and unreported losses. Under this alternative, the receiver takes a snapshot at the fixing date. Paid losses are recognized as reported if covered under the reinsurance contract. Outstanding claim reserves and incurred but not reported (IBNR) claims reserves are actuarially calculated and discounted to present value. This method allows the receiver to evaluate cedents' claims at an earlier stage in the receivership. Because the receiver will want to employ consistent evaluation methods for all claims that include IBNR, the proof of claim form may require that the claimant report the basis for the IBNR calculation. It is important for the receiver to determine the existence and extent of retrocessional reinsurance that might be available to cover assumed claims. This reinsurance can represent a significant asset of the estate. (See section 3(b) below.)

- Claims under Occurrence Policies under IRMA

IRMA provides insureds the right to file a claim for the protection afforded under the insured's policy, irrespective of whether a claim is then known, or if the policy is an occurrence policy. Further, any obligee shall have the right to file a claim for the protection afforded under a surety bond or a surety undertaking issued by the insurer as to which the obligee is the beneficiary, irrespective of whether a claim is then known. When a specific claim is made by or against the insured or by the obligee, the insured or the obligee shall supplement the claim, and the receiver shall treat the claim as a contingent or unliquidated claim (IRMA Section 704).

Having concluded that a proof of claim was timely filed (or properly amended), the receiver should next review the claim to determine whether all required information has been provided and the form has been completed in accordance with the applicable instructions. IRMA provides that the liquidator need not review or adjudicate any claims that do not contain all applicable information and may deny or disallow any such claims (subject to notice) (IRMA Section 703 I).

Receiver's Handbook for Insurance Company Insolvencies

If additional information is required, the receiver should specify a deadline for its submission, advising that the claim will be denied if the information is not submitted by that date. Review of applicable statutes for guidance on this point is suggested.

3. Review of Claims Based on Contract Provisions

The next step in the review process often consists of a substantive review of the claim. Here the receiver determines whether the claim may be allowed on its merits. This section presumes that the receiver has claim files to review (i.e., that the files are not in the possession of a guaranty association). The initial issue is the review of coverage: Is the claimed loss covered under the terms and conditions of the insurer's policy or contract, or is it excluded from coverage? The issue is resolved by referring to the policy or contract, the insurer's claims manuals and underwriting files.

- Policyholder Claims

The starting point in the review of any policy claim filed against an insurer is the insurance policy or contract. The receiver treats the claim as if the insurer were reviewing it in the normal course of business prior to receivership. The receivership process and the procedures required by the receivership statutes and court are not a substitute for the sort of policy examination and initial claim review that the insurer followed before receivership.

The receiver first determines whether the policy was in force at the time of the loss. If not, the receiver will ascertain why the policy was not in force. Did the policy expire because of the insured's failure to pay premium? Did the term of the policy expire prior to the loss? If the insurer or insured cancelled the policy before receivership, the receiver must decide whether the applicable statutory or contractual procedures for cancellation were satisfied. The receiver also must determine whether the loss occurred before any cancellation of the policy by court order or by operation of law as a result of entry of the order of receivership. In the case of surety bonds, the receiver needs to determine that the bond was in force at the time of the occurrence upon which the claim is predicated. The receiver should be aware that some bond forms cover events that may have occurred prior to issuance of the bond as well as during the term of the bond. In addition, the receiver will need to determine whether the obligee (claimant) has adequately discharged its obligations under the contract to both principal and surety in such a fashion as not to have prejudiced the surety's position.

Next, the receiver reviews the terms of the policy to ascertain whether the claim is within the scope and limits of coverage of the policy and not otherwise excluded. IRMA provides that no claim shall be allowed in excess of the applicable policy limits or otherwise, beyond or contrary to the coverage provided (IRMA Section 703 A).

In the case of a policy with aggregate limits, the receiver should determine how many claims have been filed against the policy and whether the aggregate limit has been exhausted (IRMA Section 706 D). If guaranty associations are paying claims under the policies, they should be notified of the extent to which the aggregate limit has been eroded. The receiver also will want to determine if the policy's terms provide procedural defenses to the claim, such as late notice, lack of cooperation, coinsurance or coordination of benefit provisions (e.g., in a health insurance policy).

The insurance policies under which the claims arise must be read in conjunction with the insolvent insurer's reinsurance agreements. A reinsurer's obligation to pay may only be triggered if the claims under a policy exceed a specified retention point. In some instances, the retention point may only be met if claims under a policy can be characterized as a "single incident" under the terms of the reinsurance agreement. The receiver must determine when claims under a policy constitute a single incident for reinsurance recovery purposes. As the reinsurer may argue that the claims at issue involve multiple incidents, the receiver should carefully review case law from the applicable jurisdiction when making this determination.

Chapter 5 – Claims

In the case of claims under policies of life insurance, the receiver should be sensitive to contestability issues. For example, some claims may be contestable because of misrepresentations contained in the policy application. Suicide claims may not be payable if the death occurred within the policy's contestable period, typically two years. In the case of accident and health claims, the receiver should be alert to pre-existing conditions that might render a policy claim void. Other areas to watch for are work-related claims that could be covered under a workers' compensation policy or claims resulting from automobile accidents that could be covered by the insured's auto policy.

IRMA provides that a judgment or order against an insured or insurer entered after the date of the initial filing of a successful petition for receivership, or within 120 days before the initial filing of the petition, and a judgment or order against an insured or the insurer entered at any time by default or by collusion need not be considered as evidence of liability of the amount of damages (IRMA Section 703 E).

- Assumed Reinsurance Claims

Most states accord cedent claims the same priority as claims of general creditors (Chapter 9—Legal Considerations). In cases where there are insufficient assets to satisfy all policyholders' claims, the receiver should determine whether a review of general creditor claims is necessary. If it appears that the insurer's assets will cover only a portion of policyholder priority claims, there may be no need to evaluate general creditor claims unless the insolvent company has retroceded a portion of its reinsurance business. In such case, the receiver will need to evaluate and fix the amount of all or at least certain ceding company claims in order to pursue available reinsurance recoverables.

Assuming reinsurance recoverables are available or that assets are available to distribute to general creditors, the receiver will review all such claims. Review of the individual reinsurance contract ensures that the reinsurance contract covers the claim being asserted. The receiver should verify that the contract was in force at the time of the receivership, because the cedent and the insurer may have entered into a commutation agreement terminating the reinsurance agreement or some other agreement that establishes the rights of the parties (such as a novation, loss portfolio transfer, assumption, assignment or settlement). If so, then the receiver should determine whether the commutation should be honored or whether there is some basis for setting it aside (such as the creation of a voidable preference). If the commutation is determined to be valid, no other claims should be allowed against the insurer under that reinsurance agreement.

As with a direct policy claim, the receiver should determine whether reinsurance claims are covered, proper notice of the claim was provided, and premium and other amounts due under the reinsurance contract have been paid. The receiver should also offset claims due from the cedent (e.g., for unpaid premium, salvage, etc.).

- Certain Other Types of Contracts

The receiver may need to review the terms of the employment contracts with directors, officers or other individuals. IRMA provides that claims under employment contracts should be limited to payment for services rendered prior to the receivership order unless explicitly approved in writing by the commissioner prior to receivership or by the receiver post-receivership (IRMA Section 703 F). The receiver also should carefully review the terms of all leases. IRMA provides that the claim of a lessor for termination of a lease shall be disallowed to the extent the claim exceeds the rent reserved by the lease (without acceleration) for the greater of one year, or 15% (not to exceed three years) of the remaining term of the lease following either the date of the filing of the petition or the date of repossession or surrender of the leased property (whichever comes first), plus any unpaid rent due (IRMA Section 703 L).

Receiver's Handbook for Insurance Company Insolvencies

The receiver also should carefully review the terms of all netting agreements or qualified financial contracts. IRMA provides suggestions for the receiver as to how to deal with these types of contracts. (See IRMA Section 711.)

4. Review of Guaranty Association Claims

When a receivership triggers guaranty association coverage, the receiver should coordinate the approval and disapproval of claims with the guaranty association(s). Consulting the applicable statutes may enable the receiver to determine whether guaranty association payments bind the receiver. Coordination affects, among other things, the amount recovered under the insurer's reinsurance treaties or reinsurance agreements.

The receiver should establish appropriate procedures at the beginning of the receivership in order to accommodate guaranty association claims. For example, receivers often allow guaranty associations to file an omnibus proof of claim form that can be amended from time to time. Typically, the receiver's forms for guaranty associations will include sections asking the guaranty association to segregate its claim by administrative expenses, allocated and unallocated loss adjustment expenses, unearned premium payments, and policy loss payments. The receiver should review the guaranty association's claim for validity of liability and reasonableness of amount claimed. The receiver should be cognizant of the operational differences between life/health guaranty associations and property/casualty guaranty associations. Property and casualty guaranty association claims are typically related to terminated policies whereas, life/health guaranty associations obligations can also include claims related to the continuation of benefits under the insolvent insurer's contracts.

Life/health guaranty associations may satisfy coverage obligations by transferring those obligations to a different insurer through an assumption reinsurance agreement negotiated by the NOLHGA, or through ongoing administration of policies and claims in run-off where assumption reinsurance is not available. Consequently, the nature of the claims and expenses incurred by life/health guaranty associations can differ from the claims and expenses of property and casualty guaranty associations. In addition, life/health guaranty associations have statutory and subrogation claims to assets of the insolvent insurer to assist the association in satisfying its obligations. Early access agreements frequently permit the receiver to audit the guaranty association's records concerning the association's handling of claims.

The level of scrutiny given to a guaranty association claim depends on the circumstances. When the guaranty association provides complete coverage for affected policyholders, the receiver in cooperation with guaranty associations may wish to so notify policyholders (or have the associations do so) and thereafter deal only with the omnibus proof of claim filed by the association. Most state guaranty association statutes provide that a guaranty association's adjustment of covered claims usually binds the receiver, up to the amount the guaranty association has allowed, subject to statutory limitations. Although IRMA Section 703 A obligates the liquidator to accept claims as settled by a guaranty association when required by law, it prohibits the allowance of any claim in excess of the policy limits or contrary to the coverage provided under the terms of the insurance policy.

In other situations, limitations on guaranty association coverage, including caps, crediting rate limits, co-payments, deductibles and net worth, may make it necessary for the receiver to undertake a separate review of claims. The receiver should keep accurate records for, and coordinate with, all affected guaranty associations concerning the tracking of per-occurrence and aggregate limits of coverage under policies where there are multiple claims and claimants. Coordination with guaranty associations is essential.

Claims covered by guaranty associations may be reinsured. It is important for the guaranty associations to report development on these claims so that reinsurance notice requirements can be met. Lack of reporting can hinder the collection of reinsurance recoverables. Since guaranty

Chapter 5 – Claims

associations ultimately benefit from reinsurance collection, the receiver and the guaranty associations have a common interest in collaboration.

5. Review Claimant Standing

A claimant's standing to file a particular claim against a receivership estate should also be reviewed by the receiver. IRMA provides that, with respect to claims of co-debtors, if a creditor does not timely file a proof of the creditor's claim, then an entity that is liable to the creditor together with the insurer (or that has secured the creditor) may file a proof of the claim (IRMA Section 709).

C. Claims Valuation

All claims should be assigned a value for allowance. In general, the determination of a claim's value is subject to the contractual agreement under which it arose and any statutory limitations. However, the receiver may be inhibited by statute from valuing claims in the same manner as the insurer did before receivership. In a typical surety insolvency, for example, the receiver and the receiver's legal counsel may face myriad issues as to what must have occurred prior to the fixing date for the bond claimant to pursue a claim in the receivership (e.g., how the bond claim is to be valued when the receivership order has interrupted the normal surety repair/completion of a bond principal's default, etc.). IRMA permits the liquidator to apply to the receivership court for approval to disallow *de minimis* claims. A *de minimis* amount shall be any amount equal to or less than a maximum *de minimis* amount approved by the receivership court as being reasonable and necessary for administrative convenience (IRMA Section 703 H).

1. Secured Claims

Generally, the value of security held by secured creditors can be determined by converting the security into money according to the terms of the security agreement, by agreement with the receiver or by the supervising court. IRMA allows the value of security to alternatively be determined by agreement or litigation between the creditor and the liquidator (IRMA Section 710 A). The value of the security is then credited against the claim. Valuation of secured claims may affect the overall recovery and distribution of assets to the other creditors of the estate. IRMA provides that the claimant may file a proof of claim for any deficiency, which shall be treated as an unsecured claim. If the claimant surrenders the security to the liquidator, the entire claim must be treated as unsecured. The liquidator may recover from property securing an allowed secured claim, the reasonable, necessary costs and expenses of preserving, or disposing of, the property to the extent of any benefit to the holder of such claim (IRMA Section 710 C, D).

A receiver should proceed with caution when valuing secured claims. The value of the security may be overstated on the books and records of the insolvent insurer.

2. Claims Estimation

The long-tail nature of certain claims such as workers' compensation or mass tort in a property/casualty receivership can present special issues for receivers. Under some rehabilitation plans, claims may be permitted to develop in a normal fashion. In other rehabilitation proceedings and almost all liquidation proceedings, however, the receiver may be ready to distribute assets before all claims are fully developed. In addition to the typical issues of coverage, liability and damages, the receiver should have a plan for valuing long-tail claims that complies with applicable state law.

Before a claim may be allowed, the receiver needs timely and accurate evidence:

- That the policyholder has, in fact, sustained a loss within the coverage of a valid policy and in a specific or determinable amount. The receiver evaluates the merits of the

Receiver's Handbook for Insurance Company Insolvencies

underlying claim. Under many states' statutes, a judgment against the policyholder entered after (and, in some states, even before) the date of liquidation may not be binding evidence of either liability or the amount of the loss. Nor does an insured's settlement bind the receiver, unless the insured can demonstrate that it is both bona fide and fair to the insurer as well as the insured. Collusive or side agreements between the insured and one or more of the claimants, consent judgments and covenants not to execute should be reviewed to determine whether the judgment or settlement is reasonable.

- That a third party has asserted and proven a claim against the policyholder on a timely basis, in an amount that can be reasonably determined. Again, judgments should be evaluated by the receiver for reasonableness. Each claim must be evaluated on its merits.

Some claims will fail to meet the requirements for proof and liquidation set out above, even though, were it not for the receivership's requirements, the claims would eventually have matured into enforceable claims. Late-maturing and even "contingent" claims are nevertheless an important component of the company's liabilities, both because of the significance of the claims themselves and because, when allowed, late claims may generate reinsurance recoverables for the estate.

- The receiver's flexibility in dealing with late-maturing claims may be limited by statute. Nevertheless, a procedure to deal with late-maturing claims should be developed in any estate involving long-tail exposures or where reinsurance recoveries are a consideration. The methodology used by the receiver will depend upon the individual estate, applicable state law, and the nature of the claims and the records available. A number of alternative approaches are available to the receiver:
 - The receiver might deny all claims that have not matured within a specific period after entry of the liquidation order. This "cut-off" approach may be appropriate where the insolvent insurer wrote simple, short-tail business or where the estate has few assets and recoverables. However, if the insolvent insurer wrote more complex business with a longer tail, the cut-off approach may defeat policyholder expectations and limit the receiver's right to collect from reinsurers.
 - Extensions of a claim filing deadline may ameliorate, but not eliminate, the risk that a policyholder with a legitimate claim will be left without a remedy. It sometimes helps and may be statutorily required to establish a second claim filing deadline, prior to any distribution to stockholders, in order to afford late claims an opportunity for recovery. Where permitted by state law some receivers have obtained approval for plans under which a claim deadline is extended and policyholder claims are allowed for distribution as they mature. This "run-off" approach may delay the distribution of assets and/or closure of the estate.
 - IRMA provides that a claim that is not mature as of the coverage termination date may be allowed as if it were mature, except it shall be discounted to present value (IRMA Section 703 D).
 - The receiver should determine whether the law in the domiciliary state would allow a plan to estimate and pay claims pro rata. While some states' receivership statutes (e.g., Illinois, Missouri and Utah) expressly permit the estimation of policyholder claims, receivers in other jurisdictions, might seek receivership court approval for a claims estimation plan with proper notice to interested parties. Case law that allows for claims estimation when a state statute permits estimation for the payment of claims or recovery of reinsurance proceeds includes: *Angoff v. Holland-America Ins. Co.*, 937 S.W.2d 213 (1996), providing that "the Missouri insolvency statutes grant

Chapter 5 – Claims

the receiver considerable discretion in evaluating the determining claims by estimation using actuarial evaluation or other accepted methods of valuing claims with reasonable certainty, including determinations for IBNR losses to the extent that those types of claims can be determined with reasonable certainty.” State law may provide that estimated contingent claims may be allowed, but at a lower priority level than non-estimated claims (e.g., Illinois). Case law in another state provides that the receiver should not pay receivership distributions based on actuarial estimates of claims. See *In re Liquidation of Integrity Ins. Co.*, 2006 WL 2795343 (N.J. Super. A.D.) (the court rejected the holding in the *Holland-America Insurance Company* case that permitted claims estimation because it was based on MO statute, whereas NJ had no such provision.)

Assuming that a claim estimation plan is in accord with state law, the receiver should be aware of the following:

- Some state statutes have been amended to address the handling of contingent and unliquidated claims by providing an opportunity for estimation of contingent claims without lowering the priority of distribution of the claim. These few state statutes specifically allow for the estimation of claims, but some (e.g., Illinois) provide a separate priority of distribution level for holders of such allowed claims.
- Another approach to estimation assumes that each policyholder is assigned a case reserve established in the policyholder’s name and a proportionate share of the total projected IBNR. Although largely untested in this country, this technique has worked well in other countries in the liquidation of reinsurers.
- Even if IBNR estimations are acceptable for purposes of distribution from the estate, estimation may not be a valid basis for recovering reinsurance (IRMA Section 611 D).
- . . . Claims in a Life/Health Insolvency

Few receivership statutes directly address the issue of valuing life and annuity claims, but there is a well-developed body of case law on the subject. In any event, it often will be necessary to assess the type of policyholder claims at issue to evaluate whether groups of policyholders are being fairly treated in any rehabilitation, liquidation or assumption reinsurance transaction.

- Mature Claims

Life insurance claims have the advantage that, in most cases, the condition precedent to claim liability is fairly clear: The policyholder is either alive on the relevant date, or not. If the events triggering the insurer’s obligation to pay on a life policy have occurred on or before the fixing date, then the receiver’s claims process is substantially similar to that of a going concern, centering around proof of death, premium and cash value accounting, and beneficiary designation. Immediate annuities present slightly different problems, but essentially the claim of the owner of such an annuity ought to be the present value of the future stream of payments.

- Immature Claims

Challenges can arise in connection with policies for which the principal liability-creating event has not yet occurred at liquidation. Few such claims would be considered contingent, since the policyholder usually has significant rights at the liquidation date, including surrender rights or rights to unearned premium. Court decisions, going back to the early 1800s and ending in the 1940s as the assumption/guaranty system developed, support the

Receiver's Handbook for Insurance Company Insolvencies

allowance of claims based on these immature policies in the amount of a fairly adjusted reserve, or alternatively in the amount of the difference between premiums expected to be paid in the future and claims expected to be recovered by the policyholder, all discounted to present value.

In evaluating policyholder claims against life insurers, the receiver should look at the company's own reserves, after suitable investigation, to quantify individual policy claims. These reserves will typically equal or exceed cash or surrender value on the policies. Cash or surrender value, being the sum that the policyholder could obtain at any given moment from a solvent insurer, is usually the largest component of such a reserve and establishes a minimum number for the receiver's valuation. Other policy features are usually captured in the company reserves as well, including special premium considerations, renewal commitments, advantageous mortality charges, and above-market crediting rates. Annuity contracts may have features that affect the actual value of the contract. There may be a cash value, an account value, a surrender value, or other valuations used by the company to represent the amount payable to a claimant at a given point. Also, tax consequences may be incurred by a contract holder if his or her tax-qualified retirement contract is paid out and not rolled over into a qualifying contract within the time allowed by the IRS.

On the other hand, statutory reserves usually do not reflect the likelihood that some policyholders, had the insurer continued in business, would have permitted their policies to lapse. One approach to lapse issues would be to consider that, since lapse is an election completely within the control of the policyholder, it would not be appropriate to reduce the claim in respect of an election which, at the date of liquidation, the policyholder had not made. Other analyses, however, are also possible.

In a life/health receivership, the receiver will frequently conclude that traditional proofs of claim are either unnecessary or irrelevant. The company's records often form a better base for a claim valuation than anything the policyholder could construct. The actuarial techniques that ought to be employed in the valuation are outside the competence of most policyholders. Finally, application of a single actuarial method to all claims will permit them to be evaluated on a consistent basis. Part or all of the policyholder claims arising from life insurance policies and annuity contracts will be covered by guaranty associations. State guaranty association statutes typically require a pro rata distribution of receivership assets to guaranty associations based upon the reserves that should have been established for the covered policies. In addition, guaranty associations may have other creditor rights. Accordingly, the receiver should coordinate with the affected guaranty associations as to valuation issues.

D. Notice of Claims Determinations

Once the receiver has completed the review of proofs of claim, the claimants should be advised of their claim determinations. In some states, the receiver will not send a determination letter if the claim has been resolved by a guaranty association. Some receivers merely file with the supervising court a report or recommendations as to the allowance or disallowance of each claim, and require claimants to file any objections with the court. Other receivers give claimants notice and an opportunity to object before reporting to the court. As discussed below, IRMA Section 703 B follows this procedure. If the latter procedure is used, notice of the full or partial allowance of a claim should inform the claimant of the amount that the receiver will recommend to the supervising court for adjudication and the class of the claim for priority of distribution purposes.

In the case of the partial or total disallowance of a claim, the notice should state the reason for the disallowance and inform the claimant of the amount of time (specified by statute or court order) that the claimant has to object to the determination. Many states provide that claimants be given 60 days from the date the notice was mailed to submit written objections to the receiver. IRMA provides 45 days (IRMA

Chapter 5 – Claims

Section 703 C). IRMA allows the liquidator to accelerate the allowance of claims by obtaining waivers of objections (IRMA Section 703 C). IRMA also provides that preliminary notice of the amount of the claim determination may be given to any reinsurer that is or may be liable with respect to the claim at least 45 days before the notice is given to the claimant. If the reinsurer does not object to the claim determination, it is bound by the determination (IRMA Section 703 B). Advance notice to reinsurers may not be practical under some circumstances, such as where the case is settled at mediation on the eve of trial, or where the reinsurer has expressed disinterest in the claim determination because it intends to dispute liability. Notice to a reinsurer can help establish proper documentation when a reinsurer denies having been notified of the loss.

Once an objection is received, the receiver should consider whether the determination should be altered before proceeding to a court hearing on the objection. IRMA provides that whenever objections to the liquidator's proposed treatment of a claim are filed, and the liquidator does not alter the determination of the claim as a result of the objections, the liquidator shall ask the receivership court for a hearing (IRMA Section 707 B). However, there is case law supporting the proposition that the commissioner may not have a statutory obligation to provide claimants a formal hearing when determining a claim (*Garamendi v. Golden Eagle Insurance Company*, 128 Cal. App. 4th 452, 27 Cal. Rptr. 3d 239 (Cal. Ct. App. Dist. 1. Div. 1. 2005)). Because it may be cost-prohibitive to have hearings on every claim objection, the receiver may settle or otherwise resolve an objection without the need for a hearing. The procedures for hearings on claim objections are discussed further below.

Prior to the court's approval, the receiver may revise the determination. This enables the receiver to correct any errors that were made and to amend the determination in light of any subsequently provided information or negotiations. The receiver should remind the claimant to advise the receiver of any change of address or the information provided in the proof of claim. Naturally, if the receiver changes an initial denial of a claim to an allowance or partial allowance determination, the receiver should notify the claimant of the amended determination.

In addition to policy claimants, the receiver should give notice of claim determinations to other directly affected persons, such as reinsurers (the reinsurance contract contemplates the reinsurer receiving notice and an opportunity to participate prior to the court approving the claim). The receiver should pay particular attention to the requirements contained in the insolvency clauses of applicable reinsurance agreements. Similarly, if the insurer underwrote surety bonds (such as contract performance or payment bonds), then the receiver will want to provide notice of the determination to indemnitors of the bonds, any collateral depositors and the bond principal. Notice will enable the receiver to obtain any information those persons have with respect to the claim, and will put them on notice that the receiver may be looking to their collateral or indemnification agreements for reimbursement of the insurer's liability under the bond. If not established by statute, the receiver should set a deadline for the claimant to respond to the claim determination. If a timely response is not received, the claim determination should become final, subject to court adjudication.

E. Judicial Review of the Receiver's Claims Determinations

Depending upon the degree of oversight exercised by the supervising court, the receiver may be expected to account to the court for all claims processed. IRMA provides that the liquidator shall present reports of claims settled or determined by the liquidator to the receivership court for approval. The reports will be presented from time to time as determined by the liquidator and shall include information identifying the claim and the amount and priority of the claim (IRMA Section 708). After the receiver makes the claims determinations, those decisions may be presented to the supervising court in the form of a recommendation for allowance or disallowance, in whole or part. This next section outlines the procedural steps that may be taken in making, filing and presenting recommendations for final court approval.

1. Documenting the Recommendation

Receiver's Handbook for Insurance Company Insolvencies

The first step is to make sure that claims determinations have been properly documented. The receiver may want to have a separate file for each claim filed in the receivership, containing the proof of claim and other relevant information. Files may be organized numerically either on a date of loss or policy basis. A status sheet or checklist may be attached at the front of each file detailing the status of the claim, including the recommendation to allow or disallow the claim, the priority of the claim, status of reinsurance, and other notes. Information in the status sheet should be entered into an electronic claims system. After the recommendation has been documented, the receiver then presents the claim (depending upon its status) to the court for approval or for a contested hearing, if the claimant filed a timely objection to the receiver's determination.

2. Presenting Recommended Approvals to the Supervising Court

The receiver may obtain court approval of recommended claim allowances, or the receiver may obtain advance approval for the payment of claims within a specified claims priority. In the event of advance approval, the receiver may report back to the receivership court if there is uncertainty as to whether claims fall within the approved claims priority class.

If the receiver does not seek advance approval for payment of claims within a creditor class, claims may be presented to the court by listing the claims and amounts approved or, if required, by a full financial accounting. The court usually will enter an order confirming the allowed claims. When the court approves a claim and all possible appeals have been exhausted, the receiver's staff should be notified that the legal action has concluded so that the allowed claims may be placed in line for eventual distribution.

3. Review of Recommended Rejections

This section outlines a general procedure for the denial of claims in a receivership. IRMA provides that disputed claim procedures are not applicable to disputes with respect to coverage determinations by guaranty associations as part of their statutory obligations (IRMA Section 707 C). Some states follow the practice of conducting individual hearings on denied or disallowed claims. The receiver's goal is to complete the process as quickly and smoothly as possible. The receiver may use in-house counsel or retain outside counsel to handle hearings, depending upon the complexity of the receivership and the disputed claims. The receiver should consider the potential expense involved in contested claims proceedings in deciding whether to force a hearing or pursue settlement or arbitration.

The claims hearing process begins when the receiver files a notice with the supervising court and notifies the claimant and other directly affected persons. Various courts require different notices, and legal counsel should be consulted to assure that the receiver is following the correct procedure. Usually, the notice sets forth (i) the time and date of the hearing, (ii) the procedure to be followed at the hearing, (iii) the amount claimed, (iv) the relevant priority status of the disputed claim(s), (v) the reason for the denial or priority status assigned, and (vi) whether an objection was filed. In some instances, due to the volume of claims, a special master may be appointed to hear the disputed claims rather than the judge of the supervising court. If a special master is appointed, the parties should meet as soon as practicable to establish the exact procedure to be followed. The receiver's staff should work closely with the legal counsel conducting the proceeding.

Assuming all notice requirements have been satisfied and any special procedures have been implemented, claims hearings typically follow a routine procedure. If permitted, multiple hearings should be scheduled at the same time to conserve estate assets and resources. Depending upon the complexity of the hearing involved, the receiver's staff and other resources may be needed. The receiver's counsel generally will need testimony from members of the claims staff or the receiver, along with production of relevant records. Expert witnesses also may be required. Receivers should take care to discuss the need for expert witnesses with legal counsel due to the costs involved.

Chapter 5 – Claims

At the close of a claims hearing, the court typically issues a report or decision. Assuming the receiver's recommendation is upheld, the receiver should note the deadline for appeal of the order. If there is an appeal, it is best to complete the appeal process as soon as possible. If the decision is not appealed (or an appeal is concluded), the final order of the court can be entered into the receiver's records, along with any change in claim status. The final disposition by the receivership court of a disputed claim is deemed a final judgment for purposes of appeal (IRMA Section 707 D).

4. Arbitration

Judicial review of the receiver's determinations is not always mandatory. Depending upon the nature of the legal right or claim involved and the applicable law, arbitration may be required. Although the arbitration provision contained in a policy or reinsurance agreement may be unenforceable against a receiver (review of applicable law on this point is essential), careful review of these contracts is necessary to determine whether arbitration may benefit the receiver or the estate, and if not, whether arbitration can be avoided. Legal counsel may assist the receiver make this determination. If arbitration is an attractive option or cannot be avoided under applicable law, then the receiver should become familiar with the specifics of the arbitration clause in each contract.

Arbitration is a contract-based proceeding, subject to statutory and case law in the particular jurisdiction whose law may govern the proceeding. Careful review of the agreement with legal counsel is essential. Numerous legal questions arise in the context of arbitration proceedings, and no receiver should enter into arbitration without the assistance of competent counsel. For example, the choice of arbiters can be critical. The receiver may wish to consult with other receivers to identify arbitrators for recommendation. If one party refuses to name an arbiter, however, the other may seek court intervention to facilitate the process.

IRMA Section 105 E recognizes the propriety of arbitration to resolve reinsurance disputes. (See Chapter 7 VII.)

F. Establishing Claim Reserves

Establishing appropriate claim reserves may be just as important to an insurer in receivership as to a solvent company.

1. Why Reserve?

The nature of the receivership will dictate if, how and when reserves should be established. A rehabilitator is particularly concerned with the company's reserves in assessing the company's prospects for a successful rehabilitation. It may appear that a liquidator should not be concerned with reserves because the insurer usually has been adjudged insolvent and the liquidator's charge is to adjudicate the claims and close the estate. However, the liquidator will be concerned about reserving from the standpoint of reinsurance claims. Reinsurers need data from which to establish IBNR loss reserves as well as reserves for existing claims. The receiver's failure to furnish this information on a timely basis may lead reinsurers to attempt to avoid their obligations. Accordingly, the receiver should determine the reporting requirements established in the insurer's reinsurance contracts and other reserve requirements imposed by the court or by law. Accurate reserve information is equally important for determining the prospects for attracting a potential purchaser or investor and for calculating the availability of assets for early access distributions to guaranty associations. It is frequently possible to bring significant assets into the estate of a property/casualty company by negotiating commutations with reinsurers, but such an effort is difficult without reliable, credible and current reserves. The receiver also should determine when reserve information must be presented to the court, if at all. And there also may be deadlines imposed as to when reserve information must be submitted. This often is the case where receiver reports must be submitted to the court, guaranty associations or regulators within a specified period. In other words, it is important for the receiver's

Receiver's Handbook for Insurance Company Insolvencies

staff to know the needs of the different users of reserve information. Further, it may not be useful to obtain an actuary's estimate of IBNR claims and applicable reserves more than once per calendar year, as there may not be enough new data or developments to change the earlier reserve estimate for IBNR. This also means that to the extent that the receivership's claims payment rate is affected by estimates of IBNR claims, the claims payout rate may not be adjusted more than once per calendar year.

Whether or not a receiver can use actuarial estimates of IBNR for the purpose of collecting reinsurance proceeds from reinsurers depends upon the applicable statutes and case law. (See *Angoff v. Holland-America Ins. Co.*, 937 S.W.2d 213 (1996); *Quackenbush v. Mission Ins. Co.*, 62 Cal. App. 4th 797 (1998)). In *Holland-America*, claims estimation for reinsurance recoveries was permitted on the basis of a state statute which authorized claims estimation for that purpose. In the *Integrity* and *Quackenbush* cases, claims estimation of future IBNR losses would not be permitted for collection of reinsurance proceeds because, in those cases, the applicable state statutes required that unliquidated or undetermined claims could not share in the assets of the insolvent insurer.

IBNR claims will arise in two contexts, namely: 1) IBNR losses from policyholder protection proof of claims in which the actual claim is unknown and has not been submitted to the receiver; or 2) further IBNR loss development from known claims, but the amount or extent of the future IBNR loss development is unknown. A final bar date by which all claims must be presented should be established so that the estate can determine the universe of claims and wind down its affairs over time, thereby saving the costs of keeping a receivership estate open indefinitely. Although the final claims deadline may resolve whether IBNR claims may be presented for policyholder or protection claims, the final claims deadline is likely to allow, as timely filed and proper claims, known claims for which there may be continued IBNR loss development.

How IBNR loss development on known claims may affect reinsurance recoveries, recoveries by insureds and third parties from guaranty associations or recoveries by guaranty associations from receivership estate assets are important issues. For example, at the closure of the receivership, there may be many known claims for which the future stream of benefit payments could be calculated by the receiver, guaranty association, and/or claimant, such as the value of future benefit payments for workers' compensation claims. If the receiver or guaranty association purchased an annuity in settlement of all future benefit payments due a claimant (including an IBNR component), would the *Integrity* and *Quackenbush* courts reject the settlement because it included IBNR loss development? Or would a claim settled in this way be considered liquidated and non-contingent? The settlement payment should satisfy the court's concerns about having a liquidated and determined claim, but this would be a case of first impression.

Without any accommodations being made for future loss development, guaranty associations may still have obligations to the aforementioned claimant after the receivership is closed but will not receive any distributions from the receiver for these losses. Similarly, claimants will receive no payments for their post-receivership loss development if such development is not allowed by the receivership court or guaranty associations.

Receivers should address IBNR claims before making final receivership distributions and closing the receivership estate, bearing in mind: 1) whether the applicable state statute permits IBNR claims; and 2) whether IBNR loss development can be made liquidated and certain under different alternatives (e.g., an annuity in settlement of all known and unknown losses as described above). Receivers should also evaluate the extent of reinsurance recoverables available for IBNR losses, and the reinsurers of the insolvent insurer should be given notice and an opportunity to participate in the settlement of claims involving IBNR.

In the case of a life insurer, an actuarial evaluation may be necessary both to value the business (within a positive or negative range) and to estimate total liabilities so that the guaranty association or

Chapter 5 – Claims

the receiver can effectuate assumption of the in-force blocks of business by a solvent insurer. The evaluation should be done for each line of business. Life, annuity, and accident and health blocks should be considered separately. Proper liability reserving is necessary in any receivership to project ultimate distribution amounts to various creditor classes. Caution must be exercised in establishing loss reserves however, as reserve reductions that do not reflect actual liabilities can trigger negative tax consequences.

2. Reserve Adjustment

It may be appropriate to adjust outstanding case or claim reserves. In some cases, case or claim reserves will be adjusted continually as additional information becomes available. Reserve adjustments may be required if, for example, amendments to proofs of claim are permitted after the claim filing deadline, or the supervising court extends the claim filing deadline. Such adjustments typically affect the amount of a letter of credit that a reinsurer must post, early access distributions, tax liabilities, and the future payout rate for other claims. The receiver should also estimate the future administrative costs to pay all claims and to wind up the receivership, including the cost of concluding litigation to recover assets.

Notice of reserve adjustments should be disseminated as necessary. The receiver may be required to report the adjustments to reinsurers and the supervising court, among others. The timing of these reports will depend upon the court's requirements and applicable law. The receiver's staff should identify the needs of the different users of information and determine when information should be provided.

G. Assignment of Claims Issues Considerations and Guidelines

There has been an increase in the number of assignments of claim that are presented to receivers. The development of best practices for administering the assignment of claims was undertaken by the NAIC's Receivership Technology and Administration (E) Working GROUP, WHICH drew upon the experience of receivers, state regulators, and interested parties to develop best-practice guidance. [RTAWG GUIDANCE attached as reference. Note to publishing link to guidance on NAIC web-site in electronic version.]

V. PAYMENT OF APPROVED CLAIMS

Theoretically, distribution of the insurer's assets to claimants in a liquidation proceeding is different from normal business practice. While claims against an insurer in rehabilitation may be paid either in the normal course of business as they become due or pursuant to a rehabilitation plan, in a liquidation proceeding, the insurer's assets must be distributed to creditors in the order set forth in the priority of distribution statute. This section addresses some of the many issues the receiver must address once the claims evaluation and approval process has been completed and the asset distribution process begins. See generally IRMA Article VIII.

A. Priority of Distribution in Receiverships

All state receivership statutes and IRMA Section 801 provide a priority of distribution scheme. The liquidator must become familiar with the priority of distribution scheme of the domiciliary state's receivership statute at the outset of the receivership process. Typically, statutory priority schemes require that claims in a higher priority class must be paid in full or funds reserved to pay them in full before any payment may be made to lower priority claims. Also, the statutes typically require that all claims in a class must receive substantially the same *pro rata* distribution.

The receiver must keep in mind that the same claimant may hold several claims, not all of which have the same priority. There also may be different types of claims within a particular class of creditors; for

Receiver's Handbook for Insurance Company Insolvencies

example, landlord claims, vendor claims and assumed reinsurance claims are different types of general creditor claims. A receiver must avoid creating subclasses within a priority class. (See *In re Conservation of Alpine Insurance Company*, 741 N.E. 2d 663 (Ill. Ct. App. Dist. 1. Div.4. 2000).) The following discussion is based on the scheme of priorities established by IRMA Section 801. Secured creditors and special deposit claimants are outside the scheme of priorities established by Section 801. Secured creditors are covered by IRMA Section 710, and special deposit claimants are covered by IRMA Section 1002C.

1. Secured Creditors

Secured creditors include anyone holding a perfected security interest in or lien against the property of the insurer, e.g., mortgages, trust deeds, pledges and security interests perfected under applicable law (excluding special deposit beneficiaries). Once determined, the value of the security is applied against the creditor's claim, with the deficiency, if any, treated as an unsecured claim. The priority of the deficiency claim depends upon applicable state law. IRMA also provides guidance to the receiver for the disposition of specific types of secured claims, i.e., claims involving surety bonds or undertaking, and obligees or completion contractors. (See IRMA Section 710 B.)

2. Special Deposit Claimants

Some states require deposit or trust accounts for the benefit of policyholders as a condition to authorization of the insurer to transact business in that state. Although owners of special deposit claims often are loosely referred to as secured, they do not, strictly speaking, have a "security interest." Some special deposits are made for the benefit of all policyholders, while others specially protect residents, property or lines of business in the state where the deposit is established.

States differ in their treatment of special deposit beneficiaries' claims in the domiciliary receivership. Some apply the rules applicable to holders of partially secured claims (i.e., treating the deficiency as an ordinary policyholder claim). Another method gives effect to the special deposit arrangements, but applies the "hotchpot" principle to payment of any deficiency. Under this method, special deposit beneficiaries receive no additional payment on their claim until all other claimants in the same class have received assets sufficient to make their percentage distribution equal to that of the special deposit claimants. The treatment to be accorded special deposit claimants may be articulated in the receivership statute.

There has been litigation in various state jurisdictions regarding the handling of special deposits for insurance company liquidations. A Massachusetts case provides that an insurance commissioner, acting as ancillary receiver of a foreign insurance company, cannot take any action to remove special deposit funds until all special deposit claims have been satisfied. (See generally, *Commissioner of Ins. v. Equity Gen. Ins. Co.*, 191 N.E.2d 139 [Mass. Sup. Jud. Ct. 1963].)

In North Carolina, a "special deposit claim" has been defined as any claim secured by a deposit pursuant to statute for the security or benefit of a limited class or classes of persons (*State ex rel. Ingram v. Reserve Ins. Co.*, 281 S.E.2d 16, 20 [N.C. 1981]. N.C. GEN. STAT. § 58-30-10 [19]). Special deposits are expressly excluded from general assets. *Id.*

In most receiverships, it is difficult for receivers to collect special deposits posted in other state jurisdictions without a court order and provision having been made for the payment of all policyholders in such state jurisdictions. Thus, the receiver will need to develop a claims distribution plan that takes the special deposits into account and avoids unlawful preferences, being mindful that the state jurisdiction in which a deposit is posted may use the special deposit to satisfy unpaid policy claims in that state jurisdiction.

3. Class 1 – Receiver's Administrative Expenses

Chapter 5 – Claims

The expenses of the receiver in marshaling and distributing the insurer's assets are paid out of the unencumbered assets before any other claims are paid. Most statutes treat administrative expenses as claims having a first priority. Some statutes accord the same priority to a guaranty association's administrative expenses. However, some guaranty association expenses may be classified as policyholder benefits, which is an area of disagreement between guaranty associations and receivers. As will be discussed below, IRMA Section 801 provides two alternatives as to classification of the priority of guaranty association claims. Reinsurers may argue that if the receiver is making reinsurance recoveries under reinsurance treaties, then all premiums due under the treaties should be treated as an administrative expense. Under general contract law, ratification of a contract may be found under a variety of circumstances, such as intentionally accepting benefits under the contract after discovery of facts that would warrant rescission, remaining silent or acquiescing in the contract for a period of time after having the opportunity to avoid it, or recognizing the validity of the contract by acting upon it, performing under it, or affirmatively acknowledging it (17A C.J.S., Contracts § 138). Reinsurers' claims should be evaluated on a case-by-case basis, but there may be benefits to the estate from treating the reinsurers' claims as administrative expenses. The reinsurance contract obligations may be binding on the receiver as administrative expense obligations if the receiver has legally "ratified" the reinsurance contract. The assets available to pay all other creditors are those remaining in the estate, net of the cost of recovering and administering them. The process of estimating administrative expenses is a difficult one, as it will depend on many factors, some of which are beyond the control of the receiver. The receiver should establish a contingency reserve for administrative expenses before recommending any payments on claims of lower priority.

4. Class 2 – Guaranty Association Expenses

Guaranty associations may have several types of expense claims, not all of which may have the same priority. IRMA provides two alternative priority schemes depending on how a state wishes to classify certain expenses of guaranty associations. The first alternative places expenses of the guaranty associations, including defense and cost containment expenses of a property/casualty guaranty association, in Class 2 (i.e., after administrative expenses of the receiver). The second alternative places the defense and cost containment expenses of property/casualty guaranty associations in Class 3 with other policyholder-level claims, while the remaining expenses of the guaranty associations are placed in Class 2. No significance or deference should be given alternatives under IRMA based on whether an alternative is labeled as alternative one or two. Receivers should note case law providing that however a guaranty association's claims are classified, the claims of an out-of-state guaranty association should be of equal priority with the claims of the guaranty association in the receivership state (in *re Liquidation of American Mutual Liability Insurance Company*, 747 N.E.2d 1215 [Mass. 2001]).

5. Class 3 and 4 – Claims for Policy Benefits

Many state statutes accord priority status to claims for policy benefits behind only the administrative expenses of receivers and guaranty associations. This status applies not only to the claims of policyholders, but to those claiming through them, including guaranty associations and liability claimants whose claims were covered under one of the insurer's policies. Claims under life insurance or annuity policies include claims for investment values as well as death benefit and annuity payments. Premium refunds and unearned premium claims, however, are treated as general creditor claims under the former Model Act, and some state statutes, although guaranty associations often cover such claims, at least in part. Some states and IRMA accord the same priority rank to policy loss and premium refund claims. A review of the applicable receivership statute generally will inform the receiver as to how to treat such claims. As sub-classifications within a priority level should be avoided, case law provides that the receiver cannot divide policyholders into those who were insured only by the insolvent insurer and those who had additional insurance through other carriers (In *re Conservation of Alpine Insurance Company*, 741 N.E. 2d 663 [Ill. Ct. App. Dist. 1. Div. 4. 2000]).

Receiver's Handbook for Insurance Company Insolvencies

a. Deductible and Limits

The policyholder's claim is for the amount that the insurer should have paid. The insurer's liability attaches after the deductible has been paid by the insured ("Non-Advancement Policies"). However, for some policies (e.g., some workers' compensation policies), the insurer is required to pay the claim and seek the deductible from the insured (thereafter, known as "Large Deductible Policies"). It is common for insureds to post collateral with the insurer for deductible payments that may be made by the insurer, for which the insurer then seeks reimbursement from the insureds. There are three available Model alternatives that provide for the disposition of large deductible policy recoveries between receivers and guaranty associations: IRMA Section 712, the *Guideline for Administration of Large Deductible Policies in Receivership* (Guideline #1980) and, National Conference of Insurance Guaranty Funds (NCIGF) Model Large Deductible Act (NCIGF Model). Individual state statutes based on the NCIGF Model or Guideline #1980 may differ from IRMA Section 712 in certain respects. See Section ---- for more information on large deductible programs.

b. Previous Guaranty Association Payments

A guaranty association that pays all or part of a policyholder's claim acquires the policyholder's rights in the receivership estate (with occasional additional privileges, such as an exemption from certain filing deadlines). The policyholder's claim (or the claim of the liability claimant under the policy) is reduced proportionately, but usually not expunged. In some states, a guaranty association may make payment directly to the liability claimant if the claimant waives any further claim against the insured. The receiver should remember, however, that guaranty associations only process "covered" claims, and that insureds with claims that the guaranty association does not cover will be instructed to handle their own claims and then seek reimbursement from the estate.

c. Cut-Through

As an enhancement to security, insurance policies or reinsurance agreements sometimes obligate a reinsurer to pay the policyholder directly in the event a covered loss cannot be paid due to the insolvency of the direct insurer, pursuant to a "cut-through" clause or endorsement. A number of controversies have resulted from these provisions, including the issue of the validity of such agreements. Insofar as the arrangement purports to affect the obligation of the reinsurer to the cedent, or of the cedent to the insured, the receivership estate may be affected. The receiver should seek the guidance of legal counsel concerning rules applicable in the local jurisdiction. Some jurisdictions have allowed insureds direct access to reinsurers even in the absence of a cut-through clause or endorsement. In such cases, courts will look to the relationship among the parties. (See *Koken v. Legion Insurance Co.*, 831 A.2d 1196 (2003), where the court allowed a cut-through where the insolvent insurer had fronted the reinsurance arrangement.)

d. Assignments

Policyholders sometimes assign to a third person their rights to recover from the insurer. Although the general rule is that the assignee stands in the shoes of the assignor, the receiver should determine the validity of any assignment with reference to applicable law.

e. Separate Accounts for Life and Annuity Policyholders

A special form of assets is separate account assets. Separate accounts are accounts established by life and annuity insurers in association with specific types of policies or other business, such as pension plans. Generally, separate accounts are created and administered in accordance with specific regulatory or statutory guidelines. Typically, such statutes provide that assets properly maintained in separate accounts will not be chargeable with liabilities arising out of any other

Chapter 5 – Claims

business of the insurer. It has been held that the status of separate account assets is preserved in receivership.

6. Class 5 – Federal Government

In general, claims of the federal government may be paid after administrative and policyholder claims. However, the receiver is well-advised to obtain a release from the federal government prior to making any final distributions. This is because the federal government may not be bound by the receivership court's claim filing deadline or the estate's classification and payment of certain claims, and it could seek to hold the receiver personally liable if, for instance, it takes the position that it should have been paid in the place of other creditors.

For a discussion of the federal super priority statute and the 1993 U.S. Supreme Court decision in *U.S. v. Fabe*, see Chapter 9—Legal Considerations.

7. Class 6 – Employee Compensation

Most priority of distribution statutes assign a higher priority to certain claims for employee compensation earned pre-receivership. This priority generally applies to wages limited in amount and earned within a specified time, but may not apply to the wages of the insurer's officers and directors, including stockholders who are employed in such positions.

8. Class 7 – General Creditors

The populace of general creditors is often large and diverse. It frequently includes the persons described below.

a. Brokers, Agents and Intermediaries—Personal vs. Agency/Derivative Claims

These categories are considered together, since the primary problem arising in connection with broker balances and similar claims is a tendency of all concerned to lose track of the capacity in which the obligation is incurred and to attempt to lump together amounts that derive from quite different sources. A distinction should be made between the divergent and often conflicting interests of the intermediary (especially a broker) acting as the insurer's agent for the collection of premiums as the representative or subrogee of the insured, and acting on his own account, notably for commission. Identifying the capacity in which the broker served is essential for the receiver to determine the relative priority of the broker's claims, and the extent to which such claims may be combined (if at all) for purposes of setoff.

b. Cedents

In the relatively few cases where creditors of this class receive a distribution, the receiver may be able to set off interest deemed received by cedents on premature draw-downs of letters of credit against the distributions due them. Legal counsel should be consulted on the issue of setoff (see Chapter 9—Legal Considerations).

c. Certain Claims of Directors and Officers

IRMA provides that, except as expressly approved by a receiver, expenses arising from a duty to indemnify the directors, officers or employees of the insured should be excluded from the class of administrative expenses and, if allowed, are Class 6 claims (IRMA Section 801). (But see *Weingarten v. Gross*, 563 S.E.2d 771 (Va. 2002). Here, fees and costs incurred by directors in their defense of an action brought by a receiver were held to be entitled to payment as an administrative expense under applicable statutory law.)

Receiver's Handbook for Insurance Company Insolvencies

d. Reinsurers

Reinsurers may be creditors of insolvent ceding insurers for premiums or other contract-based financial obligations, such as salvage and subrogation recoveries. Receivers should be aware of the fact that such recoveries may be held in trust, and thus would be payable in full, not *pro rata*. Similarly, the cedent may hold as the reinsurer's trustee, funds withheld and the proceeds of drawn-down security until such time as the funds are applied to appropriate claims. Excess amounts then may have to be returned directly to the reinsurer instead of merged with the general assets of the estate, and the reinsurer's claim to such amounts may be considered the claim of a trust beneficiary, not a general creditor. Depending on the terms, express or implied, of the instrument creating the relationship, the reinsurer's claim for interest on these amounts may not be valid. Setoff is an issue when addressing reinsurers' claims and legal counsel should be sought. Before making payments of salvage, subrogation or other amounts due the reinsurers after the receivership commences, it is advisable to obtain written assurances from reinsurers that they will honor reinsured claims submitted by the receiver.

e. Other General Creditors

This category includes trade creditors, landlords and utilities (for pre-receivership debts), bondholders (excluding surplus noteholders), secured creditors with deficient security, and, in some jurisdictions, late-filing insurance creditors and claimants for unearned premium.

9. Class 8 – State and Local Government Claims and Some Legal Fees

State and local government claims that are not included in another class are placed in this class. Some examples of non-Class-8 governmental claims are policy benefit claims under policies issued to the government entity or current sewer or water bills on the insurer's office.

Class 8 also includes the legal expenses incurred by the management of the company in defending against the receivership proceeding. There are significant limitations on these claims.

10. Class 9 – Claims for Penalties, Punitive Damages or Forfeitures

If the policy issued by the insolvent insurer specifically covered punitive damages, penalties and forfeitures, these claims would be in the policy benefits class.

11. Class 10 – Unexcused Late-Filed Claims

Under IRMA, if the claimant can show that there was good cause for the delay, claims filed after the claim filing deadline (as discussed above in Section II B) are evaluated in the class they would have been in if timely filed. If there is no good cause, the claims are placed in Class 10. Most receivership statutes have standards for good cause (see IRMA Section 701 B and C). In some state receivership statutes, there may be some ambiguity on the treatment of late-filed claims.

12. Class 11 – Surplus Notes

IRMA provides that claims within this class will be subordinated to other claims in this class if there is a pre-receivership subordination agreement in existence.

13. Class 12 – Interest

Interest is not often allowed on claims in receivership after the date of entry of the receivership order, on the general theory that if interest were allowed, it would run equally in favor of all claimants and simply result in a proportionately greater deficiency. Special cases, however, do exist: Holders of secured interests may be allowed interest to the extent their security is sufficient, and creditors in

Chapter 5 – Claims

general sometimes may collect interest on their debts before any distribution to shareholders, on the theory that the receivership is to be conducted as if there were no insolvency. Many state laws are silent on this point, but others provide that interest on a given class of claims should be paid or provided for before such payment is made to any lower class. A review of the state's receivership statute may indicate whether interest should be paid as part of any claim. IRMA allows interest on claims in classes 1 through 11 if the liquidator proposes and the court approves a plan to pay interest (IRMA Section 801 K). Even if the contract upon which the claim is based allows for interest, legal precedent provides that interest shall not be allowed if statutorily prohibited (*Swiss Re v. Gross*, 479 S.E.2d 857 [Va. 1987]). Also, legal precedent provides that if claimants are entitled to post-allowance interest on claims, such interest should not be paid at the same priority level of the underlying claim (in re *Liquidation of Pine Top Insurance Company*, 749 N.E.2d 1011 [Ill. Ct. App. Dist. 1. Div. 4. 2001]).

14. Class 13 – Equity Interests

After all higher priority classes are paid; any remaining funds are paid to the owners of the insolvent insurer. Like surplus notes, any pre-liquidation subordination agreements among the owners will be honored. Before making a distribution to the owners, the liquidator should be sure to reserve adequate funds to pay any post-discharge expenses, such as the cost of responding to future inquiries from claimants and the costs associated with disposal of estate records.

B. Setoffs

In general terms, the claim of a creditor or debtor in a receivership is defined as the net amount due after the application of any permissible setoff. Section 609 of IRMA addresses setoff. As the subject of setoffs in an insurer receivership is complex and often the subject of litigation, the receiver should consult legal counsel. For a detailed analysis of this subject, see Chapter 9—Legal Considerations.

C. Currency Conversion

Variations in foreign exchange rates can become a problem in the distribution of the insurer's assets if the insurer has creditors in foreign countries. The receiver may need to evaluate foreign currency in three situations:

- An insured incurs a loss in a foreign country under a policy denominated in dollars. In issuing such a policy, the insured may be deemed to have assumed a certain degree of foreign exchange risk for foreign currency exposures. However, the insured did not assume the risk of exchange variation during the period when the insurer's insolvency delays payment of the claim.
- An insured incurs a foreign currency loss under a policy denominated in the foreign currency. In this case, the insured may have assumed the risk of currency variation either between loss and payment or pending the insurer's receivership.
- At the time of receivership, the insurer holds funds or other assets in foreign currency. Some can readily be converted to dollars while others (such as reinsurance assets and outstanding premium receivables) cannot.

Foreign exchange risk characteristically is quite random and runs both ways. Prudent financial management does not attempt to predict the direction of future currency variation, but only plans to match anticipated foreign debt with foreign assets. Unfortunately, this matching produces difficult problems that the receiver must sort out.

Receivers are forced, sooner or later, to restate the value of all assets and claims in a common currency; otherwise they cannot calculate a distribution. The only question is when they should do so. The English

Receiver's Handbook for Insurance Company Insolvencies

Insolvency Rules still automatically use the date of liquidation, which is certainly the most straightforward technique. American law does not generally contain direction on this point. Applying a differential standard is likely to seriously complicate the claims process without appreciably improving the fairness of the result. Where the foreign exchange balances are significant, the prudent course may be to accept claims denominated in foreign currency, converting them to dollars at a date shortly before distribution, and planning the conversion of assets to occur at or near the same date.

The actual process of conversion of claims valuation may not be as complicated as it sounds. For example, the receiver might announce a suitable benchmark standard, such as the average of bid and asked prices for the relevant currency as published in *The Wall Street Journal* or offered by major banks. The U.S. Department of Treasury (Treasury) also maintains a listing of values for the purpose of assessing *ad valorem* (value added) customs duties.

Expert assistance may be needed in cases where the currency in question is not readily transferable or has little or no market. Experts also may be helpful in the management of foreign currency assets between takeover and distribution, and the matching of assets to anticipated liabilities.

It is helpful to address currency issues at the outset of the receivership, particularly in the case of international insolvencies. Some statutes do not contemplate such issues. The receiver should have the supervising court approve the receiver's practices and procedures on this point when the court enters the order allowing claim payments.

VI. INTERIM AND FINAL DISTRIBUTIONS

With the approval of the receivership court, a receiver may declare and pay one or more partial distributions on claims (as those claims are allowed), as well as a final distribution. All claims allowed within a priority class are paid at substantially the same percentage (See for example IRMA Section 802 A). IRMA, , specifically permits the liquidator to pay benefits under workers' compensation policies after entry of the liquidation order if certain conditions are met and only until the appropriate guaranty association assumes responsibility for payment or determines that the claim is not a covered claim (IRMA Section 802 D). (See also Chapter 6—Guaranty Associations.) Procedures for continuation of pharmacy benefits should also be addressed. In some cases it will be preferable to continue the company plan for a period of time. In other cases the guaranty funds have ongoing vendor relationships and can make a transition expeditiously. IRMA and most state laws also require the liquidator to make early access payments to guaranty associations from distributable assets of the liquidation estate (See for example IRMA Section 803). (See Chapter 6—Guaranty Associations.) State law should be reviewed in all cases to determine specific requirements and authority regarding partial distributions, priority of claims, workers compensation pre-pay procedures, pharmacy benefit continuation and early access.

In determining the percentage to be paid on claims, the receiver may consider the estimated value of the insurer's assets (including estimated reinsurance recoverables) and the estimated value of the insurer's liabilities (see for example IRMA Section 802 B). But see for example the aforementioned *Integrity*, *Quackenbush* and *Holland-America* legal cases for additional information on how IBNR claim estimates and corresponding reinsurance recoveries were addressed in other receiverships.

An insurer's assets often consist of readily available (i.e., liquid) assets and those that may not be readily collected or liquidated. The latter category may include litigation recoveries, subrogation and salvage recoveries, reinsurance recoverables for claims that the receiver recently approved, the proceeds of difficult collection actions or the sale of real estate. If liquid assets are substantial, and the collectibility of other assets is uncertain, the receiver may be able to pay an interim distribution from available assets, with later payments coming from other assets, if and when liquidated.

Chapter 5 – Claims

Distribution of property in kind may be made at valuations set by agreement between the liquidator and the creditor and as approved by the receivership court (See for example IRMA Section 802 C – consult state law for specific requirements).

A receiver may find that estate closure can be expedited by entering into a settlement with the guaranty funds on long tail liabilities, such as workers' compensation, that may remain open after the estate is otherwise resolved. The settlement should be negotiated with the involved guaranty funds and include a distribution for claim payments as well as administrative expenses. NCIGF can assist with coordination with the appropriate guaranty funds.

A. Unclaimed Funds

Often, small sums of money remain at the end of the distribution process, usually unpaid distributions (i.e., misdelivered or unclaimed checks). The receiver should not treat these assets as “found money.” State law typically requires the receiver to retain unclaimed or unproved assets for a specified time, during which the assets should be deposited with an appropriate financial institution, and at the end of which the assets may escheat to the state. The receiver should consult the relevant receivership statute, escheat statutes and legal counsel, particularly in regard to circumstances in which a state may be entitled to interest on funds held for escheat. The retention of escheated funds may also present challenges for closing the receivership. The receiver should consider the use of a trust for escheated funds on approved claims if the receiver is ready to close the receivership estate, but the required time period has not passed for the payment of escheated funds to states. Under the trust approach, the escheated funds are paid to the trust, the receivership is closed, and then the trustee (the commissioner or former receiver) of the trust pays the escheated funds to states permitted under applicable state law.

IRMA provides that any funds that are unclaimed after the final distribution should be placed in a segregated unclaimed funds account to be held by the commissioner for two years, or in the alternative, that such funds should be handled in accordance with state unclaimed property laws (IRMA Section 804).

Receivers should also check the applicable state agency for escheated funds to see if there are unclaimed funds that are owed to the entity in receivership.

B. Surplus Assets

In rare cases, assets may remain after the principal amount of all non-equity claims have been paid “in full.” In some states, payment in full means principal plus interest on all timely filed claims. In a few states, where assets remain after such claims have been paid in full, a second claim filing deadline may be set and the foregoing process may begin anew, albeit on an abbreviated basis. The receiver should review the applicable law to determine how to proceed in such cases. It has been held that a receiver may request court approval for payment of statutory interest on allowed claims where receivership assets exceed the amount necessary to pay all claims in full (*Wenzel v. Holland-America Insurance Company*, 13 S.W.3d 643 [Mo. 2000]).

C. Equity Distributions

Finally, in the rarest of cases, shareholders, mutual insurer members and other owners of an insurer are paid. The receiver should take care to ensure that the administrative expenses of the estate are paid before the final distribution is made, and should retain an amount sufficient for common post-receivership expenses, e.g., record storage, etc.

*Receiver's Handbook for Insurance Company Insolvencies***VII. SPECIAL ISSUES REGARDING CLAIMS**

This section discusses special issues regarding particular claims, namely: (a) claims of the Federal Home Loan Bank (FHLB), (b) life and health claims, and (c) claims under large deductible programs. As large deductible programs involve both policy claims and the collection of amounts due under those policies, both subjects are covered in that subchapter

A. FEDERAL HOME LOAN BANK (FHLB) CLAIMS

1. Overview

Insurance companies are increasingly likely to be members of, and have a borrowing relationship with, one of the 12 Federal Home Loan Banks (each, an “FHLBank”). The FHLBanks are federally chartered cooperatives under the Federal Home Loan Bank Act (the “FHLBank Act”), regulated by the Federal Housing Finance Agency (the “FHFA”), and their business practices are subject to the terms and limitations of the FHLBank Act and FHFA regulations. Although each FHLBank is a separate legal entity with its own geographical territory and its own specific policies, the FHLBanks share a common mission and have similar business models.² An insurance company can only be a member of the FHLBank in the district where the insurer is domiciled or where it maintains its principal place of business as defined by FHFA Regulations

³ If a newly appointed receiver finds that the delinquent insurer has a relationship with an FHLBank, he or she should promptly determine from the insurer’s records:

- i) The amount owed to the FHLBank,
- ii) The interest charged on that debt,
- iii) The payment due dates,
- iv) The collateralization of this debt, and whether and how it is over-collateralized, and
- v) The amount of FHLBank stock held by the insurer.

Armed with this data, the receiver should establish goals for the program, including whether it is better to service the loan due to its low cost or to repay it, and whether reduction of overcollateralization or stock redemption would aid the receivership materially.

Once the goals are established an initial friendly dialogue should be undertaken with the bank. In general, the bank’s principal concern will be avoiding default. Overcollateralization will be important to the bank in service to this first goal. If the receiver can persuade the bank that some reduction in collateral will not unduly increase default risk for the bank, the bank may be more accommodating. While prepayment may create hedging issues for the bank, avoiding prepayment is generally a secondary goal and the bank may show greater flexibility in permitting it. Similarly, stock redemption may be permitted more freely if the bank is in sound financial condition. For the dialogue to be productive for the receiver, he or she should first become generally informed about the bank’s condition and management structure. It will be helpful for the receiver to remind the bank that (at least as of this writing) no FHLBank has ever lost a penny due to an insurer insolvency. The receiver should strive to induce the bank to treat resolution of

² For additional information regarding the mission and purpose of the FHLBanks, http://www.fhlbanks.com/overview_whyfhlb.htm

Chapter 5 – Claims

the insurer's financial problems as a common public policy goal in which the bank should be interested at least for the preservation of harmonious relations between the FHLB system and insurance regulators.

The Federal Home Loan Bank (FHLB) Claims Supplement that follows elaborate on these topics.

B. LIFE/HEALTH CLAIMS

Overview

The processes for handling claims in life/health and property/casualty receiverships differ substantially due to the nature of the policies and the coverage provided by the guaranty associations. In a life/health receivership, coverage will continue for policies covered by the guaranty association to the extent provided by the state guaranty act, and a primary focus is dealing with these continuing obligations. Role of Guaranty Associations and NOLHGA

In a multistate life/health insolvency where guaranty associations across the country are triggered, the guaranty associations will—to the extent of their statutory limits—guarantee, assume or reinsure policy obligations, and in turn will be subrogated to the policyholder claims against the estate. In these situations, the National Organization of Life and Health Guaranty Associations (NOLHGA) will play a key role in the coordination of policy and financial analysis, preparation of bid packages, analysis of bids, negotiation of assumption agreements and policyholder notification. For a description of how the NOLHGA operates, see Chapter 6—Guaranty Associations.

Other possible issues relevant to life insurance company insolvencies include notice for and court approval of assumption agreements, opt outs (by policyholders and guaranty associations), closings for transfers of obligations, early access distributions, and guaranty association coverage limits.

Annuities

In the insolvency of an annuity insurer, special consideration should be given to any single premium immediate annuities that were issued to form the basis of funding of periodic or lump sum payments in personal injury settlements, commonly known as “structured settlement annuities.”

These annuities are normally issued to qualified assignment (QA) companies in order to comport with numerous IRS Tax Codes (*primarily* 104 (a) (2)) and various Revenue Rulings in order to preserve the tax benefit to the beneficiary or payee. However, some older annuities (prior to 1986), although not issued to a QA company, may none the less enjoy the same tax benefits. Generally, periodic payments are excludable from the recipient's gross income only if the payee is not the legal or constructive owner of the annuity and does not have the current economic benefit of the sum required to purchase the periodic payments.

When these blocks of business are resolved in the insolvency context (typically through assumption reinsurance), extreme care must be taken to ensure that the resolution does not compromise the tax benefits to the payees. It is strongly recommended that competent and experienced tax counsel be retained to guide the receiver through this potentially complicated process.

Structured settlement annuities are typically issued to fund the settlement of underlying tort actions, and the amounts of these annuities tend to be fairly large, reflective of the seriousness of the injuries sustained by the beneficiaries. The nature of these policies should be taken into consideration when determining the appropriate notice to these beneficiaries.

Receiver's Handbook for Insurance Company Insolvencies

Non-covered claims

State life & health guaranty acts provide for the continuations of certain policies covered by the guaranty association. The Liquidator should determine how any portion of the policy that is not covered by the guaranty association and any non-COVERED CLAIMS should be handled under the state's receivership act and case law.

C. BEST PRACTICES FOR SUCCESSFUL BILLING AND COLLECTION OF LARGE DEDUCTIBLE PROGRAMS IN LIQUIDATION

1. Overview of Large Deductible Workers' Compensation

A large deductible workers' compensation policy or program is a method of insuring workers' compensation risk with the employer assuming some of that risk in a deductible of \$100,000, \$250,000, or even higher per claim and an insurer taking on the remaining risk. Large deductible programs for workers' compensation can be complex arrangements and depend on the employer's fulfillment of its obligation to reimburse all claims within the deductible. If the employer is unable to fulfill that obligation, the financial consequences to the employer could be catastrophic, and the employer's inability to pay could have a cascading impact on the financial health of the insurer. In order to manage this risk successfully, insurers and state insurance regulators must have a clear understanding of the nature and size of the insurer's exposure. Additionally, they must ensure that there are adequate measures in place to limit and mitigate the risk of the employer's failure to pay and ensure injured workers will receive benefits in compliance with state law.

Professional employer organizations (PEOs) often operate workers' compensation programs that are backed by large deductible policies. A PEO is an outsourcing firm which provides services to small and medium sized businesses under a contractual co-employment agreement with its clientele. Where permitted by state law, these services generally include workers' compensation coverage obtained by the PEO in its own name. If the PEO assumes most of the risk of that program by purchasing a large deductible policy, it recovers the estimated cost through the fees it charges its clients. If those fees are inadequate to cover the actual costs of the claims, or the PEO fails for any other reason to reimburse its share of the claims, the insurer incurs an unexpected liability. The failure of the claim reimbursement mechanism has been a significant factor in a number of insurer insolvencies. For further information and guidance on high-deductible workers' compensation insurance and PEOs, refer to the NAIC's *2016 Workers' Compensation Large Deductible Study*.

2. Administration of Large Deductible Plans

The administration of large deductible plans is impacted by entry of an order of liquidation. In such cases, there are three versions of applicable model legislation for states to consider. The most recent is Guideline #1980. The three Model alternatives are as follows:

- (a) *Insurer Receivership Model Act* (Model #555—IRMA) Section 712 Administration of Loss Reimbursement Policies;
- (b) *Guideline for Administration of Large Deductible Policies in Receivership* (Guideline #1980); or,
- (c) National Conference of Insurance Guaranty Funds (NCIGF) Model Large Deductible Act (NCIGF Model).

Each of these three alternatives provide statutory guidance that articulates the respective rights and responsibilities of the various parties, greatly enhancing the ability to manage complex large deductible programs

Chapter 5 – Claims

post-liquidation. Generally, all approaches provide for the collection of large deductible reimbursements from policyholders, clarify entitlement to reimbursement, and ensure that the claimants are paid. The most significant difference is the approach taken to address the ultimate ownership of and entitlement to the deductible recoveries paid by the employer or drawn from collateral as between the estate and the guaranty fund, and collateral as between the estate and the guaranty fund. IRMA § 712 generally treats these funds as general assets of the estate, while Guideline #1980 and the NCIGF Model apply them directly to the payment of claims. It should be noted that the NCIGF Model has evolved over time based on additional experiences from insolvencies and the NCIGF continues to modify its Model as warranted; as a result, states that have based their laws on the NCIGF Model have done so with varying language.

3. Communication and Reporting Between the Liquidator, Policyholders and Guaranty Associations, Including Administration of Self-Funded Policyholder Programs

I.i.Claim payment, reserve, and reimbursement reporting.

The administration of large deductible programs requires strong communication and reporting programs between the Liquidator, guaranty associations and policyholders. Under all three Model Alternatives, the Liquidator is required to administer large deductible programs, and related collateral securing large deductible obligations, consistent with the policyholder's policy provisions and large deductible agreement ("LDA") except where those provisions conflict with the statute. All three Model Alternatives make provision for two types of LDAs, those that permit direct payment by the policyholder, and those that require initial payment by the insurer or guaranty association with reimbursement by the policyholder. Both arrangements necessitate the reporting of claim payments and outstanding claim reserves to the Liquidator for billing, guaranty association reimbursement, and establishing collateral need requirements. The Liquidator's uniform data standard or UDS should be deployed as the reporting protocol for guaranty association claim payments and outstanding claim reserves. Policyholders that continue self-payment under their LDA will need to continue or establish a claim information reporting protocol with the Liquidator through the policyholder's third-party claim administrator or through a proprietary claim information aggregator. All three Model Alternatives require the Liquidator to form an independent opinion on outstanding claim reserves reported by policyholders and guaranty associations, including an allowance for adverse development and incurred but not reported liability to ensure that collateral remains adequate throughout the administration of the program.

I.iii. Agreements between Liquidator and guaranty associations.

An agreement between the Liquidator and the guaranty funds may be advisable, though it is less important in states that have enacted one of the three Model alternatives or other comprehensive statutory framework for the Liquidator's administration of large deductible programs. The Model alternatives can serve as an outline for the issues that should be addressed in such an agreement in states that have not enacted pertinent legislation. Among other things, an agreement should address: 1) whether large deductible recoveries are estate assets subject to the Liquidator's distribution regime or directly pass through to the guaranty association on account of its prior claim payments; 2) claim reporting protocols; 3) frequency of collateral review and reimbursement activity; and, 4) administration of collateral for under collateralized non-performing policyholder accounts.

I.iv. Converting policyholder accounts from an incurred to paid basis under the Model Act.

Generally, LDAs are on a paid basis with collateral for the reserves. However, liquidators may encounter contractual arrangements where an LDA is constructed such that policyholders pay periodic large up-front payments that were accounted as premium based on losses incurred, as opposed to paid basis. After a certain number of years, the LDA provides policyholders with an opportunity to elect paid basis rather than incurred basis; which converts the incurred payments to collateral. The liquidator may wish to negotiate a conversion at the outset of liquidation. Conversion of a policyholder's LDA at liquidation from an "incurred" to a "paid" basis is beneficial to policyholders in several ways. Most importantly, conversion at liquidation treats pre-liquidation incurred loss payments made by the policyholder to the insurer as collateral, and thus property of the policyholder pledged to the insurer and restricted to the satisfaction of that policyholder's claims, rather

Receiver's Handbook for Insurance Company Insolvencies

than as a general asset of the liquidation estate. Conversion also offers flexibility to a policyholder as to the type of security provided to an insurer in satisfaction of the collateral requirement. Conversion affords policyholders the ability to utilize a letter of credit to secure an insurer for the outstanding portion of their loss, rather than payment of cash, since the outstanding bill after conversion is reflected in the Liquidator's collateral need analysis, rather than an incurred loss billing.

The Liquidator should consider notifying large deductible policyholders of these important policyholder rights at the inception of a liquidation proceeding and offer policyholders the opportunity to elect to convert their large deductible programs from an incurred to paid basis memorializing any elections with an endorsement that otherwise follows and requires the policyholder to adhere to the provisions of applicable law.

iii. Large deductible billing by Liquidator.

The Liquidator should establish a large deductible billing and collection program that bills policyholders on a periodic basis, e.g., quarterly. The Liquidator's invoice to policyholders should communicate a claim payment summary that includes detail such as the insurer or guaranty association's check number, date of payment, payee, account year, and remaining large deductible limits. Large deductible programs that are paid directly by policyholders should also report their claim payments to the Liquidator on a similar periodic basis, so that the Liquidator can establish appropriate claim reserves, track the exhaustion of the policyholder's deductible limits, report to reinsurers and collect reinsurance. Consideration should be given to using one of many proprietary billing and collection software programs to automate the large deductible billing and collection process. Large deductible recoveries that are subject to guaranty association reimbursements should be aggregated and distributed on a quarterly or other periodic basis that balances the Liquidator's accounting requirements and the guaranty associations' reimbursement needs.

vi. Annual collateral review by Liquidator.

Guideline #1980 and the NCIGF Model, require the Liquidator to perform a periodic collateral review for each policyholder account. Consistent with the typical LDA, this review should be performed annually, to ensure that the Liquidator holds adequate collateral to support a policyholder's large deductible obligations and to release any excess collateral held back to the policyholder. This review should include a report to the policyholder on total incurred claims, claims paid, outstanding reserves including an appropriate allowance for adverse development and claims incurred but not reported, any additional safety factor and total collateral need. The Liquidator's collateral review should result in a report to the policyholder and an invoice for additional collateral need or a release and distribution of excess collateral. The Liquidator should consider whether any additional safety factor should be included for non-performing policyholder accounts. Guideline #1980 provides flexibility on the timing of the annual review, enabling the Liquidator to perform the annual review process throughout the calendar year so that all policyholder account reviews are not due at the same time.

2. Administration Fees

Section 712 (G) of IRMA provides:

The receiver is entitled to recover through billings to the insured or from large deductible policy collateral all reasonable expenses that the receiver or guaranty associations incur in fulfilling their responsibilities under this Section. All such deductions or charges shall be in addition to the insured's obligation to reimburse claims and related expenses and shall not diminish the rights of claimants.

Further, Section 712(F) provides, in part:

Chapter 5 – Claims

The expenses incurred by a guaranty association in pursuing reimbursement shall not be permitted as a claim in the delinquency proceeding at any priority; however, a guaranty association may net the expenses incurred in collecting any reimbursement against that reimbursement.

Several states have adopted statutory provisions similar to the IRMA provisions regarding handling of large deductibles in an insolvency and provide for the Receiver to retain reasonable actual expenses incurred from the reimbursement to the guaranty association(s). Similarly, statutes may provide for the guaranty association to net expenses incurred in collecting a reimbursement.

Guideline #1980 subsection (F) provides:

- (a) The receiver is entitled to recover through billings to the insured or from collateral all reasonable expenses that the receiver incurred in fulfilling its collection obligations under this section. All such deductions or charges shall be in addition to the insured's obligation to reimburse claims and related expenses and shall not diminish the rights of claimants or guaranty associations.
- (b) To the extent the receiver cannot collect such expenses pursuant to paragraph (1), the receiver is entitled to deduct from the collateral or from the deductible reimbursements reasonable and actual expenses incurred in connection with the collection of the collateral and deductible reimbursements.
- (c) To the extent such amounts are not available from reimbursements or collateral, the receiver, or guaranty associations if provided under an agreement with the receiver under subsection D(5), shall have a claim against the estate as provided pursuant to [insert state priority of claim statute].

When there is no statutory guidance, receivers should include a provision for reimbursement of reasonable actual expenses in an agreement with the guaranty associations regarding the collection and allocation of large deductibles.

3.3. Policy and Collateral Definitions

It is important that state laws define large deductible workers' compensation policies and large deductible collateral. Defining the treatment of such policies and associated collateral is imperative for developing policies and processes for administering the collection of assets. The following definition is taken from Guideline #1980. The definitions in the other Model Acts are similar; however, the term used in IRMA is "loss reimbursement policy".

"Large deductible policy" means any combination of one or more workers compensation policies and endorsements, and contracts or security agreements entered into between an insured and the insurer in which the insured has agreed with the insurer to:

- (a) Pay directly the initial portion of any claim covered under the policy up to a specified dollar amount, which the insurer would otherwise be obligated to pay, or the expenses related to any claim; or
- (b) Reimburse the insurer for its payment of any claim or related expenses under the policy up to the specified dollar amount of the deductible.

The term "large deductible policy" also includes policies which contain an aggregate limit on the insured's liability for all deductible claims, a per claim deductible limit or both. The primary purpose and distinguishing characteristic of a large deductible policy is the shifting of a portion of the ultimate financial responsibility under the large deductible policy to pay claims from the insurer to the insured, even though the obligation to initially pay claims may remain with the insurer, and the insurer remains liable to claimants in the event the insured fails to fulfill its payment or reimbursement obligations.

The dollar amount of "large" will vary by state law. While many states might associate a minimum financial threshold, it is more important to consider the administration of the policy compared to a traditional policy. Deductible amounts can include claim-related payments by the insurer for medical and indemnity benefits,

Receiver's Handbook for Insurance Company Insolvencies

allocated loss adjustment expenses, such as medical case management expenses, legal defense fees, and independent medical exam expenses. It is critical that the policy specify the claim-related payments that are the responsibility of the policyholder and not be inside agreements or other agreements outside of the policy.

Collateral held by the insurer should be defined as amounts held as security for the insured's obligations under the large deductible policy. The policy should specify acceptable financial instruments that can be held for the large deductible policy. Typical collateral requirements include: cash, letters of credit, surety bonds, or other liquid financial means held for the benefit of the insurer.

Guideline #1980 defines "large deductible collateral" to mean "any cash, letters of credit, surety bond, or any other form of security posted by the insured, or by a captive insurer or reinsurer, to secure the insured's obligation under the large deductible policy to pay deductible claims or to reimburse the insurer for deductible claim payments. Collateral may also secure an insured's obligation to reimburse or pay to the insurer as may be required for other secured obligations."

4. Responsible Party for Collection of Large Deductible Reimbursements

It is critical to immediately establish the party responsible for billing and collecting large deductible payments or reimbursements. While some states might have specific statutory language that specifies the entity responsible, some statutes might be silent. In the case where the statutes do not specify responsibility, it is recommended that the receivers and guaranty associations enter into an agreement that allows for the most efficient administration of the large deductible collections.

Specific consideration should be given to large deductible policies that provide coverage in multiple states and have claimants subject to the jurisdiction of multiple guaranty funds. If feasible, the most efficient approach for such policies would likely be for the receiver to administer the deductible billing and collection process. Throughout the life of the estate, claimants continue to incur benefit payments and expenses and deductible collection efforts may last beyond the life of the estate. The party responsible for collections needs the ability to compromise and settle the future obligations.

The receiver should make provisions in its discharge motion and Court order, to the extent possible, regarding the transition of ongoing deductible collections to the guaranty association as well as the disposition of any collateral being held by the receiver.

5. Treatment of Collateral in Receivership

When collateral has been posted by or on behalf of a large deductible policyholder, what does the receivership estate actually own? The answer is generally found in the documents pledging the collateral to the insurer.

IRMA defines "property of the estate" to include "all right, title and interest in property ... includ[ing] choses in action, contract rights, and any other interest recognized under the laws of this state."⁴ In states without an explicit statutory definition, the common-law definition is substantially similar.

This means that the insurer's right to draw on the collateral automatically becomes an asset of the receivership estate, but the collateral itself is not an estate asset unless and until it is drawn. In the first instance, the conditions and procedures for drawing the collateral should be spelled out in the relevant contract documents (which could include third-party instruments such as letters of credit or surety bonds), but state law could provide additional rights,⁵ and will specify what the receiver may do when the documents are silent, incomplete, or missing.

⁴ IRMA § 104(V)(1).

⁵ For example, IRMA § 712(D) specifically provides that the relevant provisions of the policy are not controlling "where the loss reimbursement policy conflicts with this section."

Chapter 5 – Claims

Possession and control over the collateral are distinct from ownership. The insurer could already be in possession of the collateral before the receivership, or the receiver might act to take possession by enforcing applicable contract rights or by negotiating an agreement. Nevertheless, this does not immediately give the receiver the right to use the collateral to pay claims. The defining characteristic of collateral is that it is intended to serve as a backstop in case the policyholder does not meet its obligations to pay all reimbursements promptly and in full. Commonly, the right to draw on collateral only attaches after the policyholder has defaulted or has consented to a draw, or, if the collateral is a letter of credit (LOC), after the issuer has given notice of nonrenewal (in which case the receiver must act promptly to call the LOC or obtain replacement collateral). There could also be the opportunity to negotiate an agreement under which the policyholder turns over the collateral and makes a lump-sum payment to commute any further reimbursement obligations, or the collateral might have been structured from the outset as a “working” loss fund from which the insurer was expected to pay claims in the ordinary course of business.

In any case, while it is essential for the receiver to preserve and exercise the right to access the collateral as needed, it is also essential to ensure that collateral is not dissipated to pay claims that the policyholder should be funding. Special consideration needs to be given in situations where the policyholder is at risk of being or becoming judgment-proof, or where rights to the collateral are shared with other creditors of the policyholder and prompt action is necessary to preserve the receiver’s priority.

When the guaranty association is paying the claims, it is generally entitled to receive the proceeds of any policyholder reimbursements, including draws on the collateral. Under laws substantially similar to IRMA, these payments are considered early access distributions (but without the necessity for court approval) which may be subject to subsequent clawback, while Guideline #1980 and the NCIGF Model treat them as the ultimate source of funding for the underlying claims, so that they belong unconditionally to the guaranty association.⁶ Either way, however, it is the receiver rather than the guaranty association that has the right and obligation to draw on the collateral,⁷ unless there is a formal written agreement assigning that right to the guaranty association.

Finally, there is always the hope that the policyholder’s reimbursement obligations will be oversecured or will become oversecured as claims are run off. In that case, any excess collateral will revert to the policyholder or the policyholder’s guarantor. State law might expressly provide a process for determining when excess collateral is being held by or on behalf of the receiver,⁸ or the ability to return collateral before the estate is closed might be part of the general powers of the receiver. However, because workers’ compensation is a long-tail exposure with significant risk of adverse reserve development, receivers must take great care not to make premature or excessive return distributions.

6. Issues Raised by Net Worth Exclusions and Deductible Exclusions

Unlike other lines of insurance, workers’ compensation insurance is generally exempt from the statutory caps on guaranty association coverage, so that the guaranty fund is usually obligated to pay workers’ compensation claims in full. However individual states may have adopted caps on guaranty association coverage.⁹ States have created this exception to honor their state’s promise that injured workers will be paid the full benefits to which they are entitled. The general purpose of these exclusions is to avoid any obligation for the guaranty association to pay losses that can and should be borne by the policyholder. Net worth exclusions make guaranty association protection unavailable to policyholders with net worth above a specified threshold, while deductible exclusions expressly prohibit guaranty association coverage for amounts within a policy deductible.

⁶ Compare IRMA § 712(C)(3) with Guideline #1980 § (C) and NCIGF Model § 712(C).

⁷ See Guideline #1980 § (E)(3) and NCIGF Model § 712(E)(3).

⁸ See, e.g., Guideline #1980 § (E)(4) and NCIGF Model § 712(E)(5).

⁹ See Property and Casualty Insurance Guaranty Association Model Act, (# 540), § 8(A)(1)(a)(i). Almost all states have some provision requiring payment in full of workers’ compensation claims, but some states might have caps or other limitations on coverage.

Receiver's Handbook for Insurance Company Insolvencies

Unless these exclusions are drafted and implemented carefully, there is a risk that they could result in delays in claims payments or even a complete loss of coverage. In some states, claimants might be protected by an uninsured employer fund, but that is not the purpose of those funds, so even if such a fund exists in your state, it should be a priority to ensure that however it is done, the estate, employer, or guaranty association will provide for payment in full of all benefits due under the state's workers' compensation laws. If this is not possible under current law, regulators should advocate for a change in the law. A variety of successful approaches are available; there is not a single one-size-fits-all solution that is best for every state.

iii. Net Worth Exclusions:

The *Property and Casualty Insurance Guaranty Association Model Act* (#540) contains an optional section, with a variety of alternative provisions states can select, excluding coverage for high-net-worth insureds, whether they are individuals or business entities.¹⁰ The base version sets the threshold at \$50 million, while one of the alternatives sets the threshold at \$25 million. Many states have enacted some version of this clause or some comparable net worth exclusion.

The impact on workers' compensation coverage depends on how the exclusion is structured. In states with provisions substantially similar to any of the three alternatives under the Model 540, coverage is excluded completely for first-party claims by high-net-worth insureds, but workers' compensation claims against high-net-worth policyholders are administered by the guaranty association on a "pay-and-recover" basis: that is, the guaranty association has the obligation to pay the claim in the first instance, and the right to be reimbursed by the policyholder.¹¹ Thus, claimants are fully protected, and for large deductible policies, this mirrors the structure of the policy for claims within the deductible. In states with guaranty association laws similar to Guideline #1980 or the NCIGF Model, this is the same reimbursement right the guaranty association would have as the insurer's successor in the absence of the exclusion.

If the policyholder is cooperative, the guaranty association has the option of negotiating an agreement where the policyholder advances funding for claims within the deductible. However, if the policyholder is not cooperative, guaranty associations have expressed concern that the pay-and-recover framework is burdensome and gives the policyholder too much leverage to avoid or delay paying its obligations in full. If Model 540's Alternative 2 is modified to treat workers' compensation claims the same as other third-party claims, then the guaranty association has no obligation unless the formerly high-net-worth policyholder has become insolvent.¹² Otherwise, the claimant's only recourse is against the policyholder or the insured's estate. As stated above, the injured worker should be protected by some means in these cases.

When a guaranty association net worth exclusion and a large deductible both come in to play on the same claim, it is imperative that the receiver and guaranty association stay in close communication in order to avoid any confusion regarding which entity is responsible for the collection. In IRMA 712, Guideline #1980 and the NCIGF Model, the guaranty fund is entitled to collect net worth reimbursements. Coordination of these collections with receiver efforts to collect on high deductible will do much to avoid duplication of billings and potential resulting collection delays.

iiii. Deductible Exclusions:

Model 540 does not contain any explicit deductible exclusion. Instead, it simply provides that "In no event shall the association be obligated to pay a claimant an amount in excess of the obligation of the insolvent insurer under

¹⁰ Model 540, § 13.

¹¹ Alternative 1 applies the pay-and-recover obligation to all third-party claims. Alternative 2 excludes most third-party claims as well as all first-party claims, but requires the guaranty association to pay workers' compensation claims, statutory automobile insurance claims, and other claims for ongoing medical payments. Alternative 3 excludes only first-party claims and claims by out-of-state claimants that are subject to a net worth exclusion in the claimant's home state; this alternative does not create any statutory right of recovery when the guaranty association is obligated to pay a third-party claim.

¹² Model 540, § 13(B)(2) Alternative 2.

Chapter 5 – Claims

the policy or coverage from which the claim arises.”¹³ However, some states have enacted explicit language further clarifying that there is no guaranty association coverage for amounts within a policy’s deductible or self-insured retention.¹⁴ For example, Minnesota law excludes “any claims under a policy written by an insolvent insurer with a deductible or self-insured retention of \$300,000 or more, nor that portion of a claim that is within an insured’s deductible or self-insured retention” from coverage by the property and casualty guaranty association.¹⁵ A Minnesota employer entered into an employee leasing arrangement with a PEO, which obtained a workers’ compensation policy with a \$1 million deductible. Both the PEO and the insurer became insolvent, and the Minnesota Court of Appeals held that there was no guaranty association coverage for workers’ compensation claims against the client employer because of the statutory deductible exclusion.¹⁶ The court observed that the Legislature deliberately chose to protect the guaranty association from unlimited exposure, without mentioning that the Legislature also deliberately created an exception making the cap on coverage inapplicable to workers’ compensation claims (which strongly suggests that the statute in question, which is tied to the statutory \$300,000 cap on coverage, was not written with workers’ compensation in mind).¹⁷ Likewise, the court took for granted that the statute’s undefined term “deductible” included the contract provision at issue in the case, even though the insurer had assumed the unconditional liability to pay all claims in full. The opinion did not consider the possibility that the Legislature’s intent was simply to clarify that the guaranty association has no obligation to drop down and pay claims from the first dollar if the insurer would have had no obligation to pay those claims.

Therefore, if states determine that there is a need to include express provisions addressing deductibles and self-insured retentions in their guaranty association laws, it is essential to avoid unintended consequences. In particular, the key terms should not be left undefined. For this reason, IRMA coined the term “loss reimbursement policy” in its section addressing these types of policies, to distinguish them from true deductibles, where the insurer has no obligation to pay anything except the portion of the loss that exceeds the deductible.¹⁸

This is the crucial difference between a “large deductible” workers’ compensation policy and an excess policy. Although “large deductible” policies transfer a significant amount of risk back to the policyholder, they do not extinguish the insurer’s liability. That is why “large deductible” policies, in states that allow them, are accepted as a mechanism for satisfying the policyholder’s compulsory coverage obligations, while excess policies generally are not. Usually, excess workers’ compensation policies may only be issued to self-insurers that have been approved by the state. It is the approved self-insurance program, not the excess policy, that satisfies the employer’s compulsory coverage obligation, and the insurer has no liability for any portion of a claim that falls within the employer’s self-insured retention.¹⁹ Thus, despite the terminology that is commonly used, it is the excess policy, not the large deductible policy, that functions as a “deductible” in the traditional sense of the term.

It is worth noting, however, that commercial self-insured retention and large deductible policies can vary widely in policy terms and sometimes “side agreements” supplement the policies. Arrangements can contain aggregate limits, can vary on the obligation for defense cost and expenses and, in some cases permit the insured to “self-

¹³ Model 540 § 8(A)(1)(b). *Compare Life and Health Insurance Guaranty Association Model Act (#520)*, § 3(B)(2)(a), expressly excluding from life and health guaranty association coverage “A portion of a policy or contract not guaranteed by the member insurer, or under which the risk is borne by the policy or contract owner.”

¹⁴ Currently, the only states with language specifically excluding claims within policy “deductibles” are Iowa, Louisiana, Minnesota, Missouri, and Nevada, Louisiana’s exclusion applies only to policies issued to group self-insurance funds, and Missouri’s does not apply to workers’ compensation claims.

¹⁵ Minn. Stat. § 60C.09(2)(4).

¹⁶ *Terminal Transport v. Minnesota Ins. Guar. Ass’n*, 862 N.W.2d 487 (Minn. App. 2015), *review denied* June 30, 2015.

¹⁷ Minn. Stat. § 60C.09(3).

¹⁸ For example, if a consumer has an auto policy with a collision deductible of \$1,000, and the repair costs \$5,000, the insurer’s liability is limited to \$4,000. “Self-insured retentions” (SIRs) in commercial excess policies are designed to function the same way on a larger scale. If a business is found liable (or a third-party claim is settled) for \$500,000, and its liability policy has an SIR of \$300,000, the insurer is never responsible for more than the remaining \$200,000, even if the policyholder is bankrupt.

¹⁹ In many states, a separate self-insurance guaranty fund protects claimants if a self-insured employer becomes insolvent. Those funds typically operate entirely under the state’s workers’ compensation laws, not the state’s insurance receivership or insurance guaranty fund laws.

Receiver's Handbook for Insurance Company Insolvencies

fund” its claims with an account in the possession of the TPA which is handling the claims. Because of these complexities, policy terms and any related endorsements and side agreements should be carefully reviewed. Whether such side agreements are legally enforceable requires a thorough case-by-case analysis in light of applicable state laws.

Chapter 5 – Claims

*Receiver's Handbook for Insurance Company Insolvencies***Federal Home Loan Bank (FHLB) Claims Supplement**

This supplement will provide additional details for receivers' involved in FHL Bank Transactions.

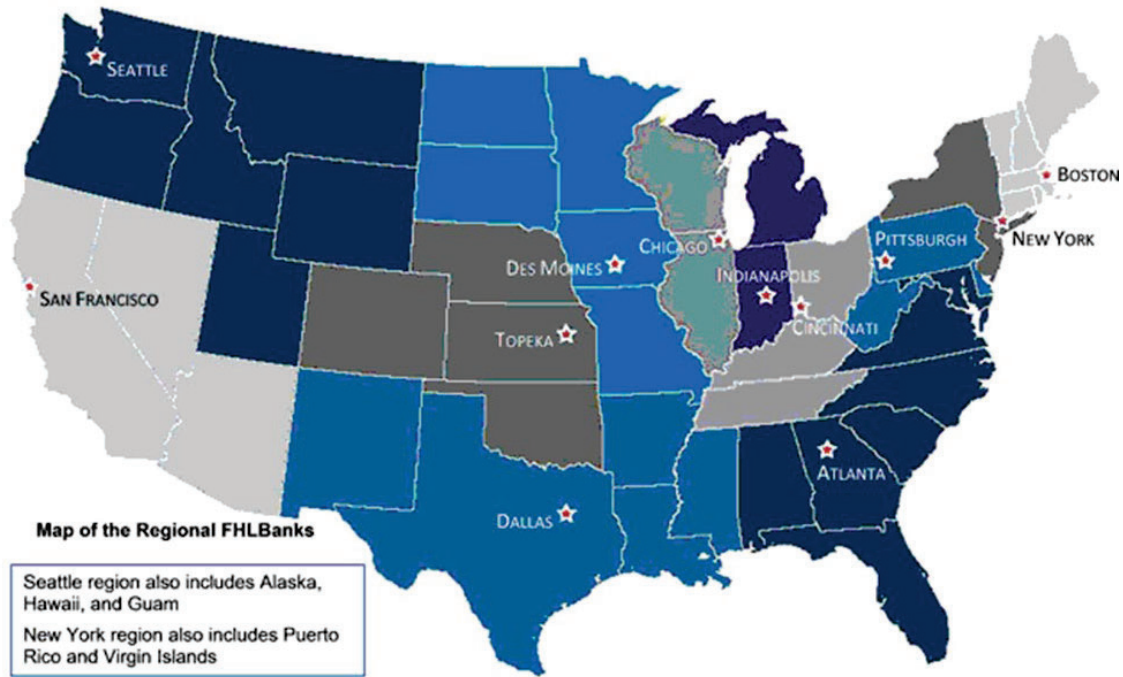

Definitions Specific to FHLBank Transactions

The following are common terms that a receiver is likely to encounter when dealing with an FHLBank, and may be more specifically defined in FHLBank documents:

- a. "Advance" means a secured loan from the FHLBank to its member in accordance with such terms and conditions as are applicable to such loan under an Advances Agreement, and includes without limitation a funding agreement executed under an Advances Agreement.
- b. "Advances Agreement" means one or more written agreements, including any written, document, policy, or procedure of the FHLBank and incorporated by reference into such written agreements between the FHLBank and its members pursuant to which the FHLBank makes or agrees to make advances and provide other extensions of credit or other benefits to the member and the member, among other things, grants to the FHLBank a security interest in certain collateral.
- c. "AHP" means the Affordable Housing Program of the FHLBank.
- d. "Assuming Insurer" means an Insurer that has entered into a purchase and assumption agreement with the Insurance Department by which the Assuming Insurer has agreed to assume some or all Obligations of a member.
- e. "Member" means an insurer that is a member of an FHLBank. Such member will own FHLBank capital stock and may from time to time have outstanding advances or other obligations to the FHLBank, which have not been satisfied in full, or have not expired or been terminated.
- f. "Capital Stock" means all capital stock of the FHLBank owned by a member. Each FHLBank has its own capital plan (which is published on the FHLBank's website), with its own specific capital stock requirements and policies, but generally, each FHLBank requires a member to purchase membership stock (calculated annually) and activity-based stock (required amount fluctuates with the amount of a member's advances or other obligations outstanding). By statute, Capital Stock is Collateral for a member's Obligations to the FHLBank.
- g. "Collateral" means all property, real, personal, and mixed, in which either a member, or an affiliate of the member, has granted a security interest to the FHLBank or the FHLBank has otherwise acquired a security interest. Each FHLBank has its own policies regarding collateral that the FHLBank will accept to secure advances and other obligations, the minimum amount of collateral required, and how the value of such collateral is calculated for purposes of pledging to the FHLBank.
- h. "Obligations" are any and all indebtedness, obligations and liabilities of the member to the FHLBank pursuant to the terms and conditions of the Advance Agreement or any other agreement between the member and the FHLBank, subject to applicable law.

FHLBank Topeka	Chief Credit Officer	785-438-6055

3. Coordination of Efforts with a FHLBank

When an insurer that is a member of the FHLBank system is placed in receivership, the Receiver must address a number of issues. There is no prescribed order of steps for managing the insurer’s obligations to an FHLBank. The following may facilitate the process:

1. Gain an Understanding of the History and the Current Status of the FHLBank Program²⁰

²⁰ The guidance in sections B.1, B.8, B.9, and B.10 are intended only to offer practical suggestions for managing the relationship between the receiver and the FHLBank based on the experience of the Shenandoah Life Insurance Company in receivership, related discussions and circumstances as existed generally at the time of this writing. It is important to note that

Receiver's Handbook for Insurance Company Insolvencies

It is imperative that the receiver understand fully the history and components of the program. Important aspects of this basic information include:

a. Contacts

Who are the individuals at the bank (including outside counsel and advisors) who manage the bank's role with the insurer and how can they be reached, especially if contact on short notice becomes necessary. Similarly, who will be "point" for the receiver in managing the ongoing relationship? Providing the bank a contact person upon inception of delinquency proceedings will temper the possibility that the bank will take summary protective action for lack of information.

b. Complete Documentation

The receiver should strive to obtain and review carefully all of the documents governing the relationship, including the initial documents establishing the relationship and those related to subsequent advances and repayments.

c. Inception Date and Terms

The terms on which the relationship was established are likely to govern all subsequent advances and repayments. Not only is the formal agreement important, but so are emails and other communications that may provide a more complete understanding of the parties' actual expectations and concerns. Whether or not legally sufficient to alter the formal agreement, course of conduct may be critical guidance on how transactions actually were to be conducted.

d. History of Advances and Repayments

The relationship may have been in place for years and involved a number of advances and repayments. It is important that the receiver gain a thorough understanding of this history to determine whether certain remedial steps (such as stock redemption or release of excess collateral) are indicated immediately.

e. History of Collateral

For similar and other reasons, the collateral requirements upon which the parties agreed when the relationship was established and with each subsequent Advance, and how the posting and release of that collateral has evolved over time, are very important factors in understanding what company assets are properly hypothecated or pledged to the FHLBank (and therefore unavailable to pay other claims or expenses), and which assets may be so identified on the company's records but may in fact be eligible for release from such FHLBank claims. Note that the agreement(s) with the FHLBank may require that the insurer post collateral of a stated value in excess of outstanding advances and may also prescribe a reduction in the value assigned to that collateral (the "haircut"), with the combined effect of leaving the bank over-collateralized. It may be possible to negotiate some relief from the over-collateralization of outstanding advances. Note also that the use of proceeds from Advances and posting of collateral **form other invested assets of the insurer** may create or exacerbate asset-liability mismatches. For example, using previously acquired longer duration high grade assets as collateral but using the Advance proceeds to acquire shorter duration and/or lower grade (higher potential yield) investments may result in an imbalance between the duration of existing liabilities and newly acquired investments intended to fund them.

every situation has its own characteristics and circumstances and that the relationship between one insurer and one FHLBank is likely to differ materially from any other such relationship. Further, no effort is made in this guidance to explore the legal or policy bases for the parties' rights and liabilities, nor to evaluate suggested legislative or regulatory improvements

Chapter 5 – Claims

f. History of Acquisition and Redemption or Disposition of Bank Stock

As a condition of becoming a member of the FHLBank system, and therefore eligible for advances, the insurer will likely have been required to purchase a certain amount of “membership” stock in the FHLBank. There is typically no independent market on which that stock can be sold and the only way in which the insurer can dispose of it is to sell it back to the FHLBank on redemption terms established by the parties’ agreement. Normally the agreement requires that the insurer retain the membership stock so long as the agreement remains in place and advances remain outstanding. But redemption by the bank of membership stock may be subject to its discretion informed by the bank’s own liquidity and financial condition. As a result, an insurer may be required to retain membership stock for which there is no market and which has no liquidity long after repaying all Advances in full.

Further, with each advance, the insurer may have been required to purchase additional bank stock as “activity stock”, typically in quantities constituting a small percentage of each advance. As with “membership” stock, there is no independent market on which activity stock can be sold, and the only way in which the insurer can dispose of it is to sell it back to the FHLBank on redemption terms established by the FHLBank’s capital plan and the parties’ agreement. The agreements or explicit terms and conditions of the stock may give the FHLBank discretion to postpone the redemption of membership and activity stock.

Because the stock is illiquid and therefore of little value to the receiver in managing the rehabilitation or liquidation, exploring prompt redemption of outstanding stock may be prudent.

g. Investment of Advances

It is important to determine whether the collateral obligations created by advances have resulted in the hypothecation of other assets of the insurer in a way that may have resulted in asset-liability mismatches and potential liquidity problems. It is not unusual to find a disproportionate share of the insurer’s high-grade, liquid, assets pledged as collateral for advances the proceeds of which were instead invested to potentially create beneficial leverage or interest rate arbitrage. Over time, and with deteriorating conditions in the capital market, this can create serious challenges for the receiver. The potential substitution of collateral should be explored with the FHLBank to ameliorate these challenges. However, an FHLBank is limited by regulation on the types of collateral it may accept.

h. Performance in Relation to Repayment Obligations

By design, the FHLBank program is structured so that the FHLBank does not take on much risk in connection with advances to members, including insurers. The pricing (interest rates charged) for the advances do not typically contemplate material risk of default, and collateral requirements are intended to all but eliminate such risk. The receiver should familiarize himself or herself with the history of the relationship to determine whether there are outstanding concerns for the bank that should be addressed promptly so that the bank does not feel compelled to exercise its rights to the collateral in a manner that might prove disruptive to the receivership. Outstanding defaults or near-defaults should be identified and remedied to preserve the collateral.

i. Current Balance of Advances

Obviously, the amount of outstanding advances and resulting repayment obligations must be understood well by the receiver, particularly in relation to collateral pledges. The records of troubled insurers may not be sufficiently complete or accurate to allow for proper monitoring of these outstanding balances and efforts should be made to reconcile the insurer’s records to those of the bank.

Receiver's Handbook for Insurance Company Insolvencies

j. Repayment Due Dates and Segregated Cash Account Balance

Advances are made with specific repayment obligations. These obligations will address both interest and principal payment obligations, with specific dates established for both. It is common for segregated-cash-account requirements to be imposed from which the bank can draw some or all of these payments. The receiver needs to identify how much cash the insurer is required to maintain in specified accounts by the agreement(s) and the dates and amounts of required interest and principal payments. Plans should be made to assure liquidity and the ability to comply with these requirements or to make other payment arrangements. If forbearance or accommodations become necessary or desirable, those should be negotiated promptly, if the bank has the ability to provide them.

k. Excess Cash

If the insurer finds itself with more cash than required in the specified account(s), discussions should be undertaken with the FHLBank. Ideally the receiver and the bank will agree that excess cash will automatically be redirected to the insurer's general account. However, if the bank is unwilling to permit the receiver to withdraw cash from the account to which the bank has no contractual claim, it may be necessary to resort to the receiver's right to seek a court order mandating the release of excess cash collateral.

l. Prepayment Fees

Typically, the agreements discourage early repayment of advances because such repayments may be inconsistent with hedges and other arrangements made by the bank in connection with the advances to the insurer. Prepayment may therefore trigger prepayment charges or fees owed by the insurer. However, the bank's need to charge those prepayment fees may be reduced or eliminated by changing circumstances affecting the hedges or other arrangements made by the bank. The receiver should therefore consider whether prepayment may be advantageous (for example because of associated collateral release or stock redemption). If prepayment would be helpful to the receiver's strategy, discussions with the bank should ensue to determine the most optimal prepayment timing that will result in the lowest applicable prepayment fees.

m. Cash Required

As noted, the agreements typically require the insurer to maintain specified liquidity, likely in segregated accounts at the bank, for the protection of the bank. The receiver will need to address these requirements.

2. Notice of Receivership to the FHLBank

a. Notify FHLBank of Receivership

Immediately following the establishment of the receivership, the receiver should contact the FHLBank (see initial FHLBank contact information above) to inform the FHLBank that the Insurer has been placed into receivership.

b. Identify Authorized Individuals

The receiver should forward electronically to the FHLBank all legal agreements, court orders, and/or notices that evidence the appointment of the receiver and a delegation of authority designating individuals authorized to transact business on behalf of the receiver in a mutually satisfactory form. To protect the receiver, the FHLBank may place the account of the member "on hold," prohibiting any additional member/receiver-initiated activity until the required agreements and authority delegations are received.

Chapter 5 – Claims

c. Schedule Initial Conference Call or Meeting

The receiver and the FHLBank should schedule a mutually convenient time to hold a conference call meeting following the establishment of receivership.

3. Considerations for the Initial conference Call or Meeting with the FHLBank

a. Identify Contact Person(s)

The FHLBank, the receiver, and the Assuming Insurer, if applicable, should each identify their primary contact person(s) and business activity coordinator(s). The receiver should also provide to the FHLBank a key point person(s) who will remain involved with the disposition of all residual issues pertaining to the receivership through completion.

b. Identify Outstanding Obligations, Pledged Collateral, and Capital Stock

During the initial conference call meeting, the receiver should request that the FHLBank identify all outstanding advances and any other outstanding obligations of the member, including AHP subsidy exposures, letters of credit, and correspondent services exposures. Furthermore, the receiver should request that the FHLBank provide information regarding the amount and nature of collateral pledged the balance of any member cash accounts or safekeeping accounts, and the member's capital stock.

c. Establish Receivership Timeline

During or prior to the initial conference call meeting, the receiver should inform the FHLBank of the planned receivership timeline; and the identity of any other parties involved in the receivership process.

d. Discuss Payment of Obligations and Collateral Releases

The FHLBank will need to know what the receiver's intentions are with respect to the obligations and if it desires to retain continued correspondent services activities during the receivership. Depending on the facts and circumstances, and subject to renegotiation with the receiver, FHLBank may allow the receiver to:

- Level the obligations outstanding in accordance with their existing terms and conditions, including scheduled interest and principal payment dates and collateral requirements;
- Prepay the obligations, subject to FHLBank policies and procedures regarding prepayments; or
- Transfer the obligations to an Assuming Insurer acceptable to all parties.

The receiver should request that the FHLBank discuss the process and timing for release of any collateral once all or any part of the outstanding obligations have been satisfied, assumed, or secured with other collateral. If a court ordered or statutory stay is in effect, the receiver and the FHLBank may need to execute an agreement detailing the agreed upon payment of obligations and treatment of collateral.

e. Prepayments

If the receiver wants to pay down advances prior to the scheduled maturity date, the receiver should contact the FHLBank and request that the FHLBank calculate an estimation of the final

Receiver's Handbook for Insurance Company Insolvencies

payment due as of that agreed upon prepayment date. The requested estimation should include outstanding principal, accrued interest up to the date of prepayment, and applicable prepayment/settlement fees.

f. Assuming Insurer

If the Obligations of the member are expected to be transferred to an Assuming Insurer, such transfer is subject to the approval of the receiver, the FHLBank and the receivership court. If approved, the FHLBank likely will require that the Assuming Insurer execute²¹ an assumption agreement, and such agreement will stipulate that the Assuming Insurer is responsible for the timely payment of assumed Obligations, direct or contingent, in accordance with the terms and conditions of the Advances Agreement and any other agreements in effect between the member and the FHLBank.

g. Summary of Call

Following the initial conference call, the receiver should request that the FHLBank provide a detailed closing statement for the receiver along with a summary of other matters discussed and agreed upon during the call. The summary of the call could provide the framework for the development of a Memorandum of Understanding between the parties.

4. Disposition of Obligations

The FHLBank will expect payment from the receiver in the event Obligations are outstanding unless the Obligations have been purchased by or assigned to an acceptable Assuming Insurer.

With the approval of the receiver, FHLBank, and the receivership court, the obligations may be transferred to an Assuming Insurer through the execution of an Assumption Agreement that will be provided by the FHLBank. Such Obligations will be required to be collateralized in a manner acceptable to the FHLBank prior to any release of collateral pledged by the failed member. Such collateral requirements may differ from the requirements the Assuming Insurer may be accustomed to if it is a member of another Federal Home Loan Bank.

Obligations that the receiver has decided not to resolve immediately will need to remain collateralized in accordance with the Advances Agreement.

5. Release of Collateral

(Assuming all member obligations have either been satisfied or assumed and fully collateralized by the assignee)

If mortgages have been listed and/or delivered to the FHLBank or to a third-party custodian, the FHLBank will initiate the delivery of those mortgages to the receiver or the receiver's designee in a timely manner and the FHLBank will file a UCC-3 termination statement²² upon request.

If cash or securities have been pledged by the member, the FHLBank's interest in those assets will be promptly released and the assets will be delivered to the receiver or receiver's designee based on instructions provided.

²¹ If the assumption is consummated during a receivership proceeding, then the receivership court would have to approve the transaction and if the assuming insurer is a US insurer, then the domiciliary insurance department would also have to approve the transaction.

²² When a secured lender obtains a lien on collateral pledged to it, the lender files a UCC -1 so that there is a public record putting other creditors on notice of the lien. A UCC-3 is a termination statement filed by a secured lender to update the UCC record to reflect the lien has been released.

Chapter 5 – Claims

Partial payment of obligations may allow for partial release of collateral in accordance with the FHLBank's collateral release practices.

6. Capital Stock

Typically, Capital Stock holdings of the member may be retained by the receiver or transferred to an Assuming Insurer, if such Assuming Insurer is a current member of the FHLBank. If the Assuming Insurer is not a member of the FHLBank, then the Capital Stock may be repurchased if permissible under applicable laws, regulations, regulatory obligations, and the FHLBank's capital plan and the proceeds of the Capital Stock transferred to the Assuming Insurer or receiver as long as the proceeds of the capital stock are not required to be retained by the FHLBank as collateral or as capital required against remaining outstanding business activity, in accordance with the FHLBank's policies, procedures, or practices.

Treatment of Capital Stock and any payment of dividends are subject to the provisions and restrictions set forth under applicable laws, regulations, regulatory obligations, and the FHLBank's capital plan.

7. Other Matters

If the member was a participant in other FHLBank programs such as AHP or letters of credit, collateral will be required to support all obligations that continue to exist past the life of the member. The receiver should request that the FHLBank provide a detailed account of all other programs in which the member participated and the term of exposure and the amount and type of collateral required.

The receiver and the FHLBank should determine an appropriate frequency of follow-up correspondence throughout the receivership process.

8. Areas of Possible Agreement

The receiver seeks to maximize the value of the estate and to protect policyholders, claimants and beneficiaries of the insurer. To this end, the receiver takes all appropriate steps to marshal and preserve assets for distribution in a liquidation or to facilitate rehabilitation or other resolution of the impaired or insolvent insurer. Apart from maximizing the value of the estate, liquidity is important to both the on-going operation of the estate and more timely distributions. While more formal means to accomplish the purposes of the receivership are always available and should be pursued if necessary, money and other resources ought not to be devoted to that pursuit unless good faith attempts to reach consensual resolution with the FHLBank have failed. In particular, receivers may seek agreement with the FHLBank in the following areas:

a. Release of Excess Cash

As noted, the history of the relationship may have resulted in the insurer porting more cash than required by the agreement in accounts accessible solely by the bank and unavailable to the receiver for other purposes. Release of this excess cash to the general assets of the receivership should be pursued promptly.

b. Release of excess Collateral

Over time the insurer may have caused more collateral to be pledged to the bank than is required by the agreements (for example because repayments may not have resulted in full release of the associated collateral or because of the appreciation of the collateral). In addition, because of the deteriorating condition of the insurer the bank may have had the right to require that the insurer post additional collateral (sometimes as much 25% over the amount of outstanding advances). If

Receiver's Handbook for Insurance Company Insolvencies

may be possible to convince the bank to release some of this excess collateral so that it can be used for other receivership purposes. This is particularly true if the bank can be assured that reducing collateral will not unduly endanger the probability for full repayment when due.

c. Reduction of Haircut and Excess Collateral Requirements

If the formula for determining excess collateral and haircuts applied to collateral values no longer reflect economic reality, the receiver should work with the FHLBank to recalculate these in the light of current conditions, again resulting in the release of some collateral.

d. Repurchase of Excess Stock

Over time, the insurer may have accumulated more bank stock, especially activity stock, than is required by outstanding advances (i.e. “excess stock”), for example because the bank may have been slow in repurchasing stock following repayment of advances. Although the bank cannot be required to redeem excess stock upon demand by the receiver, except after expiration of a redemption period (typically five years), if the bank’s financial condition is not an issue, and barring any statutory or regulatory prohibition, the receiver might seek waiver of the redemption period in order to negotiate the repurchase of excess stock, converting it into liquid assets available for receivership purposes.

9. Managing the Relationship²³

Apart from seeking accommodations, the receiver should manage the ongoing relationship.

a. Evaluate Pre-Payment

The receivership should consider when it would be optimal to repay outstanding advances and plan accordingly in cooperation with the bank.

b. Evaluate Need for Extensions

It may be necessary or appropriate to renegotiate the repayment schedule with the bank and to evaluate the cost of doing so.

c. Evaluate Substitution of Collateral

Due to asset liability matching considerations or for other reasons, it may be helpful to explore the possibility of substituting collateral posted against outstanding advances.

d. Determine Desirability of Maintaining the FHLBank Program

The FHLBank program typically provides the insurer a facility for financing or access to liquidity on desirable terms. The receiver should consider whether continuation of the program may play a useful role in rehabilitation or liquidation plans. If sale of the company is being considered, preservation of the program may add value to potential buyers, making the insurer that much more attractive.

e. Develop Exit Strategy if Desirable

Conversely, the receiver may conclude that terminating the FHLBank program is the best option. In that case a thoughtful program for concluding the relationship in cooperation with the bank should be developed and implemented.

²³ See Footnote 3

*Chapter 5 – Claims*10. Share Experience with the NAIC²⁴

In any case, because this is a relatively new development in the world of insurance receiverships, sharing the receiver's experience with the NAIC and other receivers is indicated provided that appropriate confidentiality can be maintained under applicable law. Developing a body of knowledge will facilitate the management of these programs by banks and receivers involved in subsequent cases.

²⁴ See Footnote 3

Assignment of Claims Issues Considerations and Guidelines

On a national level, there is an increase in the number of claim assignments that are presented to receivers. One of the many regulator consumer protection duties to be fulfilled on behalf of the policyholder is to make certain that claims assignments are being carried out. Some states have developed policies for managing the assignment of claims and the Receivership Technology and Administration Working Group provided a forum to draw upon the experience of those states as well as those of other state regulators and other interested parties to a receivership to develop guidance on how to address claims assignment issues. Keeping consumer protection in mind, each state should review its state statutes and regulations regarding the access to information that potential claim buyers have and whether there are any legal privacy issues at the state and federal levels.

1. Cost to Receivership of Claims Assignments

A. Explanation of the issue

Each state is going to have different issues addressing the specific cost of claims assignments contingent upon their specific state laws pertaining to claims assignments, and their own rules that apply to verify and process such assignments. Some specific costs are noted below.

B. Considerations

1. Developing and maintaining the proper infrastructure to record a claims assignment. The Liquidator must maintain the original claim, and record the claim assignee as the new proper claim beneficiary.
2. Processing the request. Some form of external notice must be generated to initiate a claim assignment. How is it received and recorded?
3. Due diligence. The liquidation must verify whether the assignor is the appropriate party to execute the assignment.
4. The disparity of knowledge between the claim seller and claim buyer regarding the claim assignment process can be significant. This results in increased communication demands from buyers on the Liquidator.

C. Recommendations

1. Provide additional court filings with required listings of all approved claims on a quarterly basis.
2. Establish a specified time frame to respond to a claims assignment request irrespective of the quality of information submitted in the request.
3. Revise the existing database to record whether the creditor was eligible to have the personal data of his claim published or not.

EXECUTIVE OFFICE • 444 North Capitol Street, NW, Suite 701 • Washington, DC 20001-1509	p 202 471 3990	f 816 460 7493
CENTRAL OFFICE • 1100 Walnut Street, Suite 1500 • Kansas City, MO 64106-2197	p 816 842 3600	f 816 783 8175
CAPITAL MARKETS & INVESTMENT ANALYSIS OFFICE • 48 Wall Street, 6th Floor • New York, NY 10005-2906	p 212 398 9000	f 212 382 4207

4. Research all open estates, provide listings of creditor information, and obtain consent from all creditors for the release of personal claims data.
5. Require the Liquidator to make a good faith effort to predict when distributions would occur and estimate pay-out percentages for the distribution.

2. Difficulty Associated With Verifying Claims

A. Explanation of the issue

1. Some companies placed in liquidation (hereinafter called “Estates”) have poor records (e.g., accounting, policy, claim and reinsurance records). Records have to be reconstructed by Estate staff before basic policy information can be verified (e.g., in-force coverage at time of loss, policy terms, deductibles and exclusionary endorsements). This information is necessary for the Estate and guaranty funds to verify coverage and appropriately handle asserted claims against the Estate.
2. Some Estates have switched to a paperless environment (i.e., system only records). If these record only systems are not maintained properly or kept current, the Estate is unable to transition complete and accurate records or to access pertinent supporting documents. See 2.A.1. above for reconstructing Estate records.
3. Claimants do not keep Estate informed of changed information (e.g., corporate name change, merger of company into another entity, change of address, name change due to divorce and death of claimant). Lack of updated claimant information slows down the verification process.

B. Considerations

1. The Estate and guaranty funds require accurate information to verify coverage and to appropriately handle asserted claims against the Estate.
2. The issue of the Estate utilizing resources in order to handle inquiries concerning the claims assignment process. Additional pressures exerted on Estate staff to finish verification process quickly by third party vendors.
3. Possibility that the Estate may have to retain legal counsel to assist the Estate in complex claim assignment issues.

C. Recommendations

1. Establish standards, as well as a submission package, for use by all Estates for processing of claim assignments with third party vendors.
2. Permit Estates to bill third party vendors for work performed in processing claim assignments (e.g., telephone inquiries, production of reports; verification of assignment from claimant; detailed claims history information and updating Estate records).

3. Cut-Off Dates

A. Explanation of the issue

1. Establishing a date prior to the issuance of any Estate distribution monies where incomplete and/or unverified claim assignments will no longer be processed by the Estate. Some Estates bulk or batch process its distribution documents (e.g., letters, envelopes and distribution checks). Time

is needed to close the Estate records from any future updates so the distribution documents can be bulk or batch processed.

2. Many third party vendors are either on the Estate’s service list or receive notification through other means of pending Estate distributions. The number of claim assignment requests increase significantly just prior to a pending Estate distribution.
3. Generally, once complete and verified claim assignments are received, Estate records can be updated quickly in 1 or 2 days.

B. Considerations

1. Sufficient time is needed to close the Estate records from any future updates so the distribution documents can be bulk or batch processed. Without establishing a cut-off date, last minute claim assignments could disrupt the Estate distribution process.
2. The concern that the third party vendor (“assignee”) may have more information than is known by the claimant (“assignor”). The need to ensure that the assignor has full knowledge of all relevant facts before making the decision to assign the claim to a third party vendor.
3. Time needed to verify the accuracy of the claim assignment with the assignor prior to the pending Estate distribution.

C. Recommendations

1. Establish a date (1 day to 1 week) prior to any Estate distribution where incomplete and/or unverified claim assignments will not be further processed by the Estate before the pending Estate distribution.

4. Interpretation of Financial Information

A. Explanation of the issue

Explore options to facilitate the interpretation of financial information by entities and claimants that are interested in buying/selling claims.

B. Considerations

1. Publish financial statements and court information (in GRID and/or on receivership websites) with no additional interpretation. (This is currently available in GRID)
2. Develop a consumer guide that would help claimants make an informed decision regarding the potential value of their claim.

Concerns

1. Interpretation of financial information varies based on the type of financial information made available, which varies from state to state.
2. Development of a consumer guide to encompass all types of receiverships.
3. Publish in GRID and/or receivership websites a number to call to receive information on if/when a distribution may be made and possible percentage.

4. Publish a good faith estimate or other type of predictive information regarding the timing and amounts of potential distribution with no additional interpretation.
5. Any combination of the above.

C. Recommendations

To close the gap on asymmetric information concerns, it is recommended that receivers publish a consumer guide with a “Frequently Asked Question” document. However, further discussion is needed to finalize a long term recommendation regarding other available options.

5. Consumer Protection (Fairness)

A. Explanation of the issue

Basic question: What duty, if any, does the Insurance Commissioner in his capacity of statutory liquidator have to claimants who may wish to sell their claim?

Claims Assignment Vendors (the entities who purchase creditor claims) who purchase creditor claims in an insurance insolvency proceeding are not regulated. They do not have generally accepted practices applicable to purchasing claims. There is no definition of the due diligence required for identifying the party with the proper legal authority to sell a claim. They have no specific statutory prohibition on what advice they may give the seller of a claim, nor is there any guideline on what they are required to pay for the purchase. There is no statutory requirement that the Claims Assignment Vendor must get a claim purchase approved by the Court overseeing the liquidation process.

Conversely, there is statutory authority which requires a Liquidator to accept assignments, but there are no regulations what the Liquidator may require before it accepts a claim assignment.

Many estates cover several years before a first distribution occurs for the non-Guaranty Association claimants, generally the “little guys” who would be the most likely to benefit from selling a claim for a percentage of its ultimate value and receiving payment for their claim now. The Claims Assignment Vendor then bears whatever risk that unforeseen circumstances may reduce the ability of an Estate to make distributions, but the vendor does receive the entirety of the amount which would have been received by the seller whenever distributions are made.

Consumer protection considerations for the Commissioner include the attempt to make sure that all the claimants are treated equitably. This duty appears to be at least twofold, i.e. the claimant harmed by the insurance insolvency should get the fair value of their claim at any given time, and the Liquidator should not be burdened with a set of rules and regulations that are onerous which causes the Estate to incur expenses which diminish the value of claims of other creditors.

Each state must be conversant with their own, as well as the Federal, consumer protection statutes in terms of what information can go into the public domain. For example, do name, address and amount approved for the creditor claim submitted for a court filing constitute any kind of issue for the Liquidator? Does it make a difference if the creditor is a corporation versus an individual? Does it make a difference if you add a tax payer ID or a Social Security number? How about if you post the same information on the Liquidator’s website instead of within a court filing?

B. Considerations

1. Should claim assignments require court approval whereby a Judge overseeing the liquidation specifically approves the assignment for “fairness”?

2. Should Claims Assignment Vendors be regulated to ensure scrupulous practices; or, should the Liquidator be allowed to create whatever rules deemed appropriate to control the assignment process?
3. What constitutes reasonable expense for the Liquidator to make the creditor information available for Claim Assignment Vendors whereby other creditors of the Estate are not harmed?
4. What mechanism allows creditors to find a Claims Assignment Vendor?
5. In general, individuals are perceived to have more acute needs for immediate money than corporate entities, but they also have more privacy protections afforded. Should the Claims Assignment process be limited to just businesses?
6. Should the liquidator allow all approved creditors the opportunity to opt-in, or to opt-out, of the publication of their name, address, approved claim amount, and Tax-ID or SS#?
7. Should the liquidator be responsible for having sufficiently simple financial data available on their website to allow relatively unsophisticated creditors to knowledgeably be able to discuss the value of their claim with a probably more sophisticated representative of the Claims Assignment Vendor?

C. Recommendations

Each state should review its current state statutes and requirements to make sure they are compliant.

6. Information Exchange

A. Explanation of the issue

Explore options to facilitate the exchange of information between entities and claimants that are interested in buying/selling claims.

B. Considerations

1. Provide information through a matchup of willing buyers and willing sellers.
 - a. Identify willing sellers through an “opt in” process and a forum for willing buyers and sellers to communicate.
 - b. Concerns:
 - i. Limiting the exchange of information to a subset of claimants willing to sell their claims may not pass public records scrutiny.
 - ii. Providing a forum for buyers and sellers to exchange information will add additional cost to the receivership.
 - iii. The creation of a receiver-sponsored forum will create potential issues regarding the implied endorsement/recommendation of a particular buyer and may influence the consumer’s ultimate decision to sell a claim.
2. Provide information by filing claim reports with the receivership court.
 - Address privacy concerns regarding protected personal information.
3. Provide non-protected information through claim report court filings.
4. Provide non-protected information through web postings.

5. Provide non-protected information in response to public records request.

C. Recommendations

To promote efficiency of receivership resources and transparency in providing non-protected information to the public, it is recommended that receiverships provide non-protected information through claims report filing with the receivership court and web posting of such information as it becomes available.

7. Availability of Receivership Information to the Public and Related Procedures

A. Explanation of the issue

Consumer privacy concerns (both legal and common sense) advocate identity protection for consumer claimants. However, certain state laws contain requirements regarding identifying information which must be included in receivership proceedings. To the extent permitted by state law, receivership pleadings should accordingly seek to protect specific identifying information of individual consumer claimants. For example, where permitted, receivership pleadings should not combine both names and addresses, or other specific identifying information, for individual consumer claimants.

B. Considerations

1. Privacy concerns aside the receiver has no fundamental objection to claim assignments.
 - a. Property right
 - b. A fair claim assignment can be a good result (time, uncertainty)
 - c. Receiver has sold claims it holds in other receiverships
2. Nonetheless, assignments have consumer protection issues that are Commissioner/ Receiver's legitimate concern
 - a. Fundamentally, consumer protection is a key aspect of insurance regulation
 - b. Obligation to have a process that is designed to yield best results for creditors (not a duty to achieve a particular result, but for good process)
3. Reasonable measures to protect creditor interest in claims trading are warranted. Areas of concern that these measures address should include:
 - a. Information symmetry/transparency
 - b. Preventing abuse
 - c. No undue administrative burden
 - d. Fraud detection

C. Recommendations

1. Receiver should develop practical methods for distinguishing individual consumer claims from commercial/corporate creditors in receivership pleadings.
2. Contested claim pleadings, where specific identifying information may need to be plead, may require special procedures where appropriate (e.g. filing under seal).
3. Receiver believes it has identified a number of protections that, in combination, can give the Director confidence that claims trading on receiver Estate claim takes place in a fair environment.
 - a. Convenient publication of better Estate information including publishing allowable corporate claim lists with identifiers.

- b. Good Faith Estimates (forward looking statements of intent, typically regarding amount and time of distribution)
 - c. Requiring acknowledgement of information.
 - d. Tracking of assignment percentage (price),
4. With these protections in place, the receiver is not, as an initial matter, opposed to a carefully constructed process by which buyers and sellers find each other (whether an information exchange or a publication of claimant identifying information that avoids legal and common sense privacy concerns). The construction and ultimate acceptance and implementation of any such process would involve consideration of many complex issues such as: liability, unintended implicit receiver approval, and use of resources.

8. Federal / State Privacy of Claimants' Personal Information

A. Explanation of the issue

Information regarding claims is typically reported in a receivership proceeding in accordance with the state receivership act. Receivership acts vary regarding the information that must be included in a report. Some laws require that each individual claimant must be named. Under certain circumstances, information may be submitted to the court under seal.

Federal privacy laws, such as the Gramm-Leach-Bliley Act (GLBA) and the Health Insurance Portability and Accountability Act (HIPAA), restrict the disclosure of personal information by insurance companies. In addition, states have adopted privacy statutes and regulations regarding the disclosure of information by insurance companies.

The disclosure requirements in these statutes are summarized in the attached **Addendum**. There are issues regarding the applicability of these laws in a receivership.

B. Considerations

GLBA

GLBA imposes restrictions on an insurer's disclosure of "non-public personal information" about a consumer. A list of names and addresses derived from personally identifiable financial information is non-public personal information. Subject to certain exceptions, an insurer is **prohibited** from disclosing to a nonaffiliated third party any non-public personal information, unless the consumer does not "opt out" after proper notice. This prohibition does not apply to disclosures to regulators, or to comply with laws, investigations, subpoenas or other judicial process. **GLBA's privacy requirements do not override state law**, except to the extent that a law is inconsistent with GLBA. A state law is not inconsistent with GLBA if the protection it affords is greater than the protection provided by GLBA.

HIPAA

HIPAA privacy standards apply to health plans, clearinghouses, and health care providers that transmit health information as defined in the act. HIPAA protects "individually identifiable health information", which includes names and geographic subdivisions smaller than a state. HIPAA restricts the disclosure of protected health information without the consent of the individual.

State Privacy Laws

GLBA requires insurance regulators to adopt privacy standards for insurers. The NAIC has adopted the Privacy of Consumer Financial and Health Information Regulation. The NAIC Model rule applies to licensed insurers, producers and others required to be licensed. It does not specify whether it

applies to an insurer in receivership. However, a drafting note to the Model suggests that a rule could provide an exception for insurers in receivership.

C. Recommendations

A Receiver should consider the following:

1. If a receivership act requires the disclosure of a claimant's name and/or address:
 - a. Is the information regarding the claimant considered publicly available under GLBA because disclosure is required by state law, or
 - b. Is the requirement to disclose information regarding the claimant pre-empted because it is inconsistent with GLBA?
2. If GLBA governs the content of a claim report:
 - a. What information may a claim report include if a claimant has opted out? What information may a claim report include if a claimant has not opted out?
 - b. To avoid the administrative costs involved in identifying those claims who have opted out, should all claimants be treated as if they opted out?
3. Under HIPAA, what information may a claim report include regarding a health insurance claim filed by an individual?
4. Is an insurer in receivership a “licensee” under the state privacy law? If there is a conflict between a state's receivership act and privacy act, which law prevails?
5. If the disclosure of information regarding individuals with insurance claims is prohibited, should a claim report identify other claimants (*e.g.*, corporations or general creditors)? If these claims are reported differently, will this impose an administrative burden on the receivership Estate?
6. Under what circumstances should a claim report be submitted to the court under seal for *in camera* inspection?
7. If a receivership act only requires that a claim report disclose the amount and class of each claim, what information should be provided to identify claims?

Addendum

Summary of Disclosure Provisions

Federal Privacy Laws

Gramm-Leach-Bliley Act (GLBA)

GLBA imposes requirements on financial institutions to protect the privacy of their customers. *See* 15 U.S.C. Subchapter I, §§ 6801-6809.

Applicability

GLBA applies to a “financial institution”, which is defined by 15 U.S.C. § **6809** (3) (A) to mean an institution engaging in financial activities as described in 12 USC § 1843 (k). Section 1843(k) provides that activities that are considered to be financial in nature include insuring, guaranteeing, or indemnifying against loss, harm, damage, illness, disability, or death, or providing and issuing annuities.

15 U.S.C. § 6809(4) defines “non-public personal information” to mean personally identifiable financial information resulting from any transaction with the consumer or any service performed for the consumer, or otherwise obtained by the financial institution. The term specifically includes “any list, description, or other grouping of consumers (and publicly available information pertaining to them) that is derived using any nonpublic personal information other than publicly available information”, but excludes “any list, description, or other grouping of consumers (and publicly available information pertaining to them) that is derived without using any nonpublic personal information.” Nonpublic personal information does not include “publicly available information”, as defined by regulations prescribed under 15 U.S.C. § 6804.

Non-public personal information is further described by regulations. 16 C.F.R. 313.3 (n) provides examples of nonpublic personal information, including "any list of individuals' names and street addresses that is derived in whole or in part using personally identifiable financial information (that is not publicly available), such as account numbers." Nonpublic personal information does not include “any list of individuals' names and addresses that contains only publicly available information, is not derived, in whole or in part, using personally identifiable financial information that is not publicly available, and is not disclosed in a manner that indicates that any of the individuals on the list is a consumer of a financial institution.”

16 C.F.R. 313.3 (o)(1) defines personally identifiable financial information to mean any information a consumer provides to a financial institution: (i) to obtain a financial product or service; (ii) about a consumer resulting from any transaction involving a financial product or service; or (iii) that a financial institution otherwise obtains about a consumer in connection with providing a financial product or service. Examples of such information include the fact that an individual is or has been a customer, or has obtained a financial product or service from a financial institution, and any information about a consumer that is disclosed in a manner that indicates that the individual is or has been a consumer of a financial institution.

16 C.F.R. 313.3 (p)(1) provides that “publicly available information” means any information that a financial institution has a reasonable basis to believe is lawfully made available to the general public from federal, State, or local government records; widely distributed media; or “disclosures to the general public that are required to be made by Federal, State, or local law.”

Restrictions on Disclosure

GLBA imposes restrictions on a financial institution’s disclosure of non-public personal information provided by a consumer. Subject to certain exceptions, 15 U.S.C. § **6802** prohibits a financial institution from disclosing to a nonaffiliated third party any nonpublic personal information, unless the financial institution provides the consumer with an “opt out” notice, gives the consumer a reasonable opportunity to opt out, and the consumer does not opt out. Section **6802** (e) (8) provides that this prohibition does not apply to “the disclosure of nonpublic personal information to comply with Federal, State, or local laws, rules, and other applicable legal requirements;

to comply with a properly authorized civil, criminal, or regulatory investigation or subpoena or summons by Federal, State, or local authorities; or to respond to judicial process or government regulatory authorities having jurisdiction over the financial institution for examination, compliance, or other purposes as authorized by law.”

Relation to State laws

15 U.S.C. § 6807 provides that GLBA’s privacy requirements “shall not be construed as superseding, altering, or affecting any statute, regulation, order, or interpretation in effect in any State, except to the extent that such statute, regulation, order, or interpretation is inconsistent with the provisions of this subchapter, and then only to the extent of the inconsistency.” A state statute, regulation, order, or interpretation is not inconsistent with GLBA if the protection it affords is greater than the protection provided by GLBA.

Health Insurance Portability and Accountability Act (HIPAA)

Applicability

The HIPAA Standards for Privacy of Individually Identifiable Health Information apply to health plans, health care clearinghouses, and to any health care provider that transmits health information in electronic form in connection with transactions for which the Secretary of HHS has adopted standards under HIPAA.

Restrictions on Disclosure

HIPAA protects all “individually identifiable health information” held or transmitted by a covered entity. Under 45 C.F.R. § 164.514 (b), a name and any geographic subdivision smaller than a state, including street address, city, county, precinct, zip code or geocode, is considered an “identifier” of an individual.

45 CFR 164.512 describes the conditions under which protected health information can be disclosed without the consent of the individual. 45 CFR 164.512 (a) provides that a covered entity may use or disclose protected health information to the extent that such use or disclosure is required by law and the use or disclosure complies with and is limited to the relevant requirements of such law. A covered entity must meet the requirements described in § 164.512 (c) [relating to disclosures about victims of abuse, neglect or domestic violence]; (e) [relating to disclosures for judicial and administrative proceedings]; or (f) [relating to disclosures for law enforcement purposes].

2. State Privacy Laws

Title V of GLBA requires state insurance regulators to adopt standards relating to the privacy and disclosure of nonpublic personal financial information applicable to the insurance industry. States have adopted statutes or regulations based on the NAIC Privacy of Consumer Financial and Health Information Regulation (the “NAIC Model”).

Applicability

The NAIC Model applies to “licensees”, which is defined as “all licensed insurers, producers and other persons licensed or required to be licensed, or authorized or required to be authorized, or registered or required to be registered pursuant to the Insurance Law of this state, [and health maintenance organizations].” It does not specify whether it applies to an insurer in receivership. However, a drafting note to the Model states: “Because the notice requirements of this regulation could be a financial burden on a company in liquidation or receivership and negatively impact the ability of the liquidator or receiver to pay claims, regulators may want to consider adding an additional exception providing that licensees in liquidation or receivership are not subject to the notice provisions of this regulation.”

Restrictions on Disclosure

The NAIC Model defines “nonpublic personal financial information” to include personally identifiable financial information, and any list, description or other grouping of consumers (and publicly available information

pertaining to them) derived using personally identifiable financial information that is not publicly available. “Personally identifiable financial information” as defined in the NAIC Model includes “[t]he fact that an individual is or has been one of the licensee's customers or has obtained an insurance product or service from the licensee”.

An example of nonpublic personal financial information given in the Model is a list of individuals' names and street addresses that is derived in whole or in part using personally identifiable financial information that is not publicly available, such as account numbers. In contrast, a list of individuals' names and addresses that contains only publicly available information, is not derived in whole or in part using personally identifiable financial information that is not publicly available, and is not disclosed in a manner that indicates that any of the individuals on the list is a consumer of a financial institution, is not considered to be nonpublic personal financial information.

The NAIC Model defines “publicly available information” to mean any information that a licensee has a reasonable basis to believe is lawfully made available to the general public from federal, state or local government records; widely distributed media; or disclosures to the general public that are required to be made by federal, state or local law.

3. State Receivership Laws

The contents of a claim report are typically described in the state receivership act. The act may also specify notice requirements for matters submitted to the court (*See* IRMA § 107). Under IRMA § 107 B (1), if the Receiver determines that any documents supporting the application are confidential, they may be submitted to the court under seal for *in camera* inspection.

Draft: 7/19/22

Receivership Law (E) Working Group
Virtual Meeting
July 18, 2022

The Receivership Law (E) Working Group of the Receivership and Insolvency (E) Task Force met July 18, 2022. The following Working Group members participated: Kevin Baldwin, Co-Chair (IL); Laura Lyon Slaymaker, Co-Chair (PA); Joe Holloway and Jack Hom (CA); Jared Kosky (CT); Miriam Victorian (FL); Tom Travis (LA); Robert Wake (ME); Thomas Mitchell (MI); Shelley Forrest (MO); Lindsay Crawford (NE); and Brian Riewe (TX).

1. Adopted its June 10 and May 12 Minutes

The Working Group met June 10 and May 12. During these meetings, the Working Group took the following action: 1) discussed a draft memorandum of understanding (MoU) between state insurance departments, receivers, and guaranty funds the states could consider using in the event of an unexpected liquidation to enhance pre-liquidation coordination and communication; and 2) discussed proposals and options for enhancing pre-liquidation coordination and communication proposed by the National Conference of Insurance Guaranty Funds (NCIGF).

Mr. Kosky made a motion, seconded by Mr. Holloway, to adopt the Working Group's June 10 (Attachment Three-A) and May 12 (Attachment Three-B) minutes. The motion passed unanimously.

2. Discussed a Proposal for Enhancing Pre-Liquidation Coordination and Communication

Mr. Baldwin said Rowe Snider (Locke Lord LLP) walked the Working Group through the draft MoU from its June 10 meeting. Edits were made based on comments from that meeting, including the addition of a cover page that provides background of the MoU. The Working Group agreed to expose the draft MoU (Attachment Three-C) for a 45-day public comment period ending Sept. 1.

Having no further business, the Receivership Law (E) Working Group adjourned.

Draft: 7/19/22

Receivership Law (E) Working Group
Virtual Meeting
June 10, 2022

The Receivership Law (E) Working Group of the Receivership and Insolvency (E) Task Force met June 10, 2022. The following Working Group members participated: Kevin Baldwin, Co-Chair (IL); Laura Lyon Slaymaker, Co-Chair (PA); Joe Holloway and Jack Hom (CA); Jared Kosky (CT); Kim Cross (IA); Tom Travis (LA); Christopher Joyce (MA); Robert Wake (ME); James Gerber (MI); Shelley Forrest (MO); Justin Schrader (NE); Shawn Martin (TX); and Charles Malone (WA). Also participating was: Matt Gendron (RI).

1. Discussed a Proposal for Enhancing Pre-Liquidation Coordination and Communication

Mr. Baldwin said the National Conference of Insurance Guaranty Funds (NCIGF) gave presentations on its proposals related to pre-liquidation coordination and information sharing to the Financial Analysis (E) Working Group at the 2021 Fall National Meeting and to the Receivership and Insolvency (E) Task Force at the Spring National Meeting (see *NAIC Proceedings – Summer 2022, Receivership and Insolvency (E) Task Force, Attachment Three-B1*).

Ms. Slaymaker said during the last call, the Working Group talked about the various proposals from the NCIGF related to pre-liquidation coordination and information sharing. On that call the Working Group decided to pursue the Memorandum of Understanding (MoU) option. The MoU would be entered into during the process of planning for a liquidation to provide legal ability to share information in advance of liquidation.

Rowe Snider (Locke Lord LLP) said the draft is very flexible. He said similar agreements have been used sporadically in certain rehabilitations, run-offs to liquidation and other insolvency situations. The intent is to make the process better. This document although drafted as a form could be affected by the legislative backdrop in a particular state where state laws affect the kinds of information that could be passed along under this agreement or that may have other constraints or authorizations that might need to be taken into consideration in the documents.

Mr. Snider explained each paragraph of the draft MoU as follows. Discussion or questions were addressed as shown below.

- Introduction and Parties to the Agreement

Mr. Snider said the first paragraph identifies the parties to the agreement and would be tailored to the specific circumstances. It would include the state department of insurance, the receiver, and the applicable guaranty funds. Mr. Kosky asked if the company would need to be a party to the agreement depending on the timing of the receivership, for example, at rehabilitation, or earlier stages such as conservation or supervision. Mr. Kosky said in Connecticut, supervision proceedings are confidential and would need to understand how this agreement would work with that proceeding. Mr. Snider said the intent is to use the document early in the process after a troubled company is identified so there is a long runway into liquidation; longer than has traditionally been in the past. Mr. Snider said there may be occasions where the company would be a party to the agreement if the regulators desired them to be. He said the obligations, duties, and responsibilities of the trouble company would be defined by the laws of the state that govern the obligation of the company to turn over information to the state insurance regulator. The state insurance regulator would then turn over information to the guaranty funds under the terms of the agreement. From a guaranty fund perspective, the preference would be that the troubled

company is not party to the agreement. There are enforcement provisions in the agreement that in some situations, the troubled company could cause problems if they were opposed to the next step in the process, such as moving from rehabilitation to liquidation. He said companies may need to be informed about the dissemination of information in pre-liquidation but that is separate from this agreement.

- I. Definitions
 - 1.1, 1.2, and 1.3

Mr. Snider said within the Definitions section, paragraphs 1.1, 1.2 and 1.3 define confidential information and evaluation materials. These definitions came from models that NCIGF had and are not unusual definitions. Mr. Holloway asked if “material risk of receivership” should be “material risk of liquidation” since guaranty funds are triggered at liquidation. Mr. Snider said if there is a long glide path to liquidation, he did not feel strongly about the phrase.

Mr. Baldwin said “evaluation materials” may be too vague and suggested the definition be more specific on the types of information, analysis, studies, etc., are needed. Barbara Cox (Barbara Cox LLC, representing NCIGF) said it would be broader than “data,” such as odd policy forms or unique lines of business. She said NCIGF can clarify this definition. Mr. Snider said the definition was intended to be broad in case there is material that gets shared so that regulators and receivers have comfort that anything turned over will be confidential. Mr. Baldwin suggested it still have the broad language for that reason but suggested adding a list that is “including but not limited to.” Ms. Cox said she would add a list.

Ms. Slaymaker said in paragraph 1.2.b, it includes information that is subject to “privilege.” She said she would be concerned about accidentally waiving the privilege by turning over this information. Mr. Snider said if there was a necessity to turn over privileged information, e.g., attorney client privileged information, there would have to be either a written common interest agreement to preserve the privilege or a state statute that allows and maintains the privilege for examination information that is turned over by the receiver. That is an individual situation. This agreement is intended to be flexible. The agreement does not create an obligation on the part of the regulator to turn over privileged information.

- 1.10

Mr. Snider said in paragraph 1.10 covered claims is defined by reference to the appropriate state statute.

- II. Recitals
 - 2.1, 2.2 and 2.3

Mr. Snider said recitals are articulations of the background. Recitals 2.1 and 2.2 explain the responsibility of the commissioner and regulatory background. “Material risk of receivership” can be changed to “material risk of liquidation.” Patrick Cantilo (Cantilo & Bennett LLP) suggested changing “Commissioner will” to “Commissioner may” in 2.2. For 2.3, Mr. Cantilo suggested adding “or if other statutory requirements are met” after “a finding of insolvency” as there may be other statutory triggers for liquidation. Mr. Snider agreed.

- 2.4

Mr. Snider said 2.4 is the premise of the agreement that preparation for liquidation and transition is essential. It doesn't create any obligations but puts the parties on the same page.

- 2.5

Mr. Snider said 2.5 articulates the process of sharing appropriate and necessary information. It states what is shared is subject to the commissioner's discretion. It does not create an obligation. The last sentence is a comfort sentence that is an emphatic confidentiality clause. The clause is an express ability for the commissioner, under appropriate circumstances to withhold the name of the company. The guaranty funds have enormous incentive to comply with these agreements, which is the motivation to add this clause.

- 2.6

Mr. Snider said 2.6 articulates that this memorandum is consistent, necessary, and proper with respect to the statutory roles of the guaranty funds, the state insurance regulator, and the receiver.

- III. Use and Treatment of Evaluation Materials

- 3.1

Mr. Snider said section three is critical to the agreement. He said 3.1 limits and articulates the legitimate purposes for which the guaranty funds can use the evaluation materials including copying them for their own purposes.

- 3.2

Mr. Snider said 3.2 is key to the confidentiality provisions. This language is the sort of confidentiality clause that appears in protective orders and common interest agreements. With respect to "privilege," even though privilege is mentioned here, there is no obligation to share any privilege, which is a protective aspect.

- 3.3

Mr. Snider said 3.3 is a clause that permits the guaranty funds and NCIGF to share evaluation materials with consultants, attorneys, and agents, as necessary. It requires those persons to agree to the terms of the agreement and subjects them to the injunctive remedies. It also creates a joint liability whereby if a guaranty fund or NCIGF turned over information to a consultant, attorney or agent and that agent breaches the agreement, both the turnover party and the breaching party would be liable and subject to an injunction.

Mr. Gendron said the examination statues have language that information is confidential and not subject to subpoena. Does this clause cover subpoenas? Mr. Snider said the privilege that is alluded to in this agreement is not limited to the conventional attorney client privilege that you might see in a common interest agreement or a protective order in the litigation context. That is a statutory privilege. The privilege language in this agreement is intended to preserve that. It's a question for each states' interpretation of how that works. If you interpret that as having authority to provide privileged information to third parties, this says the guaranty fund will work with the state to preserve that privilege. He said there is no intention that sharing information under the agreement waives any of the protections for that information. Guaranty funds do not want to be subpoenaed for information in their custody that they think is protected. Mr. Snider said it may need tailoring to your state or the citation to the state statute may need to be added. Mr. Gendron suggested using the language that is in *Model Law on Examinations* (Model #390) section 1.A.

- 3.4

Mr. Snider said this is a forbidden recipient clause that guaranty funds or NCIGF will not share information with a list of recipients but focuses on boards of directors who might be recipients only as necessary to discharge their official duty.

- 3.5

Mr. Snider said 3.5 is a promise to cooperate. It is common language in other agreements. It obligates the guaranty funds to take reasonable actions to prevent confidentiality.

- IV. Remedies

- 4.1

Mr. Snider said the intent of this section is to provide injunctive relief and is common language in other agreements.

- 4.2

Mr. Snider said 4.2 is an attorney's fee clause providing for reasonable fees and the source of the fees. There is a clause that forbids guaranty funds or NCIGF from filing a claim in the estate for reimbursement of attorney's fees.

- 4.3

Mr. Snider said 4.3 is a standard non-waiver clause.

- 4.4

Mr. Snider said 4.4 is a disclaimer of liability or assertion of liability by the recipients of the evaluation materials against the commissioner or receiver. This is related to paragraph 5.4.

- V. Warranties and Representations

- 5.1

Mr. Snider said 5.1 is a mutual good faith, cooperation and communication clause that is standard in these types of agreements.

- 5.2

Mr. Snider said 5.2 states that guaranty funds and NCIGF have authority to enter into this agreement.

- 5.3

Mr. Snider said 5.3 is a representation with respect to authorized signatures.

- 5.4

Mr. Snider said 5.4 is an express disclaimer of warranties about the accuracy or completeness of evaluation materials made by the recipients, guaranty funds and NCIGF. This is intended to provide comfort about the disclosures creating any kind of liability with respect to accuracy or completeness.

Mr. Cantilo suggested a new paragraph 5.5 to state that the guaranty funds understand and acknowledge that the evaluation information may include information furnished by consultants, access to which will require additional agreements with such consultants, for example, actuarial agreements. Mr. Snider and Ms. Cox agreed.

- VI. Termination

- 6.1

Mr. Snider said 6.1 permits termination of the agreement with 30-days' notice. The termination of the agreement, without further agreement, does not eliminate the confidentiality of the evaluation materials. The term receivership can be changed to liquidation.

- 6.2

Mr. Snider said 6.2 articulates what the guaranty funds can do with evaluation materials up to the date of termination. It also addresses that the agreement would terminate without obligation to destroy evaluation material or maintain it as confidential, in the event of a receivership order. The term receivership can be changed to liquidation.

Mr. Baldwin asked if the intent of 6.2 is to mean that the confidentiality is over? He asked that upon liquidation the receiver would enter into confidentiality agreements with the guaranty funds, so why would this confidentiality be terminated? Mr. Snider said yes, as drafted, it would terminate the confidentiality. He said the guaranty funds would prefer to eliminate the pre-planning agreement and replace it with another agreement upon entering liquidation. He said guaranty funds could be flexible on this or this paragraph could be stricken.

- 6.3

Mr. Snider said 6.3 addresses the duty of the guaranty funds to destroy evaluation materials and not retain anything if the agreement is terminated without an order of liquidation and to provide an affidavit attesting to the destruction. Another option that could be tailored to the situation is to return the materials; however, with digital copies it is easier to destroy than to return.

Ms. Slaymaker said that because the Pennsylvania insurance department's office of corporate and financial regulation is separate from the receivership office, the receivership office would not be able to agree to some of these terms without the other office. Mr. Snider said the parties to the agreement could be tailored, as necessary.

Ms. Cross asked how fees and expenses of the guaranty fund as a result of pre-planning would be handled and if fees would be assessed to the receivership estate. Ms. Cox said she feels these expenses will not be material since most files will be electronic. She said she has not yet fully vetted this topic with guaranty fund and NCIGF is open to discussion about this topic.

- VII. Miscellaneous Provisions

- 7.1

Mr. Snider said 7.1 states there is no attorney client relationship.

- 7.2

Mr. Snider said 7.2 is a choice of law provision that suggests the domiciliary state be the law chosen.

- 7.3

Mr. Snider said 7.3 is a counterparts provision that allows signature pages to be exchanged.

- 7.4

Mr. Snider said 7.4 allows the agreement to be retroactive for evaluation materials that were shared before the effective date of the agreement.

- 7.5

Mr. Snider said 7.5 is a notice provision that can be tailored to the specific situation.

- 7.6

Mr. Snider said 7.6 is a good faith cooperation clause that adds an agreement to meet periodically to discuss the implementation of the agreement.

Jane Koenigsman (NAIC) suggested adding a cover page to address some of the comments. Ms. Cox said NCIGF could draft edits based on the discussion. Mr. Baldwin said NAIC staff would circulate the notes from today's call to those that had comments and to NCIGF to draft edits. He asked for edits to be sent to NAIC staff by July 1.

Bill O'Sullivan (National Organization of Life and Health Insurance Guaranty Associations—NOLHGA) said life guaranty associations have not experienced challenges entering into these kinds of arrangements, when necessary to get access to information, in a variety of situations, even pre-receivership, which is rare. He said typically, the agreements are more complicated. The agreements are typically confidentiality, and joint and common interest agreements. For these reasons NOLHGA does not want to sidetrack this effort by pursuing a similar sort of effort on the life side. Mr. Baldwin suggested the cover memo indicate this MoU is applicable to property and casualty.

Having no further business, the Receivership Law (E) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/E CMTE/RITF/2022 Summer NM/061022_RLWGmin.docx

Draft: 7/19/22

Receivership Law (E) Working Group
Virtual Meeting
May 12, 2022

The Receivership Law (E) Working Group of the Receivership and Insolvency (E) Task Force met May 12, 2022. The following Working Group members participated: Kevin Baldwin, Co-Chair (IL); Laura Lyon Slaymaker, Co-Chair (PA); Joe Holloway (CA); Rolf Kaumann (CO); Jared Kosky (CT); Miriam Victorian (FL); Tom Travis (LA); Christopher Joyce (MA); Robert Wake (ME); James Gerber (MI); Shelley Forrest (MO); Brian Riewe (TX); and Darryl Colman (WA).

1. Discussed a Proposal for Enhancing Pre-Liquidation Coordination and Communication

Mr. Baldwin said the National Conference of Insurance Guaranty Funds (NCIGF) gave presentations on its proposals related to pre-liquidation coordination and information sharing to the Financial Analysis (E) Working Group at the 2021 Fall National Meeting and to the Receivership and Insolvency (E) Task Force at the Spring National Meeting (Attachment Three-B1).

Ms. Slaymaker summarized the NCIGF's proposals. She said the reasons the NCIGF gave for proposing changes to the pre-receivership coordination process are that companies that fail are more complex and have a high volume of electronic claims files, and multiple information technology (IT) systems and claims operations are delegated to third-party administrators (TPAs). The NCIGF's need is for a more consistent and timely transfer of usable claims data to guaranty funds and receivers at the time of insolvency. The NCIGF's proposed solution is to have a confidential exchange of fundamental information between state insurance regulators, receivers, and guaranty funds well before the liquidation order is signed. The type of information would be policy information, claims records, and information about TPA relationships. The NCIGF proposed that states implement statutory changes that would modify the *Property and Casualty Insurance Guaranty Association Model Act* (#540), the *Insurance Holding Company System Regulatory Act* (#440), and the *Model Law on Examinations* (#390). However, understanding that that may not be a solution for all states and states may not be willing to revise those models, the NCIGF has proposed the revisions as a model guideline. Another proposed alternative approach is a memorandum of understanding (MoU). The NCIGF stated in its presentation to the Task Force that to protect confidentiality, the information would not be shared with the NCIGF or state board members, which includes industry members. The NCIGF said it has a plan to work through that. A final part of the proposal is to make updates to NAIC handbooks, including the *Troubled Insurance Company Handbook*, which is confidential and maintained by the Financial Analysis (E) Working Group; the *Financial Analysis Handbook*; and the *Financial Condition Examiners Handbook*, to include guidance, references, and reminders for early coordination.

Barbara Cox (Barbara Cox LLC, representing NCIGF) said if information flow is not timely, it creates problems for receivers, guaranty funds, and hurts consumers. For example, with health care claims, the guaranty fund cannot authorize surgery for a consumer without policyholder information. Another example with auto insurance is that the guaranty fund cannot authorize payment for repairs for auto damage without policy and claim information, delaying the claimant's ability to get their car out of the shop.

Ms. Cox said the guaranty fund system is studying cybersecurity risk, which has a different time frame from that which guaranty funds are used to. The longer the situation remains without mitigation or repairing data, the longer the situation is on hold. This may be worse for small to medium size companies.

Mr. Travis said without taking a position, the Receivership Law (E) Working Group should look at options to speed up the transfer of data. In Louisiana, several property/casualty (P/C) insurers that went under due to hurricanes have resulted in problems for policyholders with the insurer and the guaranty fund largely due to the difficulties in the transition. Mr. Travis said there have been proposals in the Louisiana legislature to make the guaranty funds liable for penalties and attorney's fees under the bad faith laws, which are currently exempt.

Mr. Gerber said there seems to be a reluctance to use rehabilitation. It would give policyholders time to shop for replacement coverage and the state insurance regulator time to notify loss payees (e.g., mortgage companies and servicers). A short rehabilitation would give the state insurance regulator time to work with the guaranty fund to settle things in advance. Mr. Baldwin said there are a lot of examples of where rehabilitation has been used to achieve these kinds of goals. He asked if the fact that the rehabilitation could be used for consumer protection could be put into a guideline.

Ms. Cox said the NCIGF appreciates a long runway to liquidation and a rehabilitation where guaranty funds can do things in advance. She said a rehabilitation is normally a public proceeding, and if there is a concern that the company may be salvaged, the attention a company would get in a formal rehabilitation proceeding would not help matters. There may be reluctance on the part of the state insurance regulator to put the company into rehabilitation for this purpose. Ms. Slaymaker said in Pennsylvania, the state insurance regulator cannot use rehabilitation if they know there will be a liquidation. The court requires that they try to rehabilitate the company. Mr. Baldwin said those are good points and counterpoints, where rehabilitation may not be an available tool.

Mr. Gerber said seizure and conservation may be available, as they are confidential proceedings. Mr. Baldwin said there may be some merit to what the NCIGF is proposing; i.e., to have a clear statutory permission to share the existence of such confidential proceedings to prepare for a potential liquidation.

Ms. Cox said there may be some reluctance under current law and practice to share and coordinate with guaranty funds. Before a public proceeding, there are efforts being made to save the company. Sometimes states do not have resources to plan for liquidation while they work on saving the company. The recent changes to the IT examination guidelines might be able to ameliorate some of that, but this is still a concern. That is not to say conservation or a confidential proceeding will not work, but the culture around that type of situation needs to change.

Mr. Kaumann said an interim solution is to call a targeted examination to be able to have department staff at the company, identify key people, locate bank accounts and signatories, and identify claims systems and servers so the state can have all of the information ready when the receiver and guaranty fund arrive on day one. He said he believes this is something all states have the authority to do. This could be implemented immediately through best practices to address some of the issues. Ms. Cox said this suggestion aligns with new guidance for IT examinations where data can be reviewed on examination to determine information about data systems (e.g., if it is segregated, easily segregated, convertible to a Uniform Data Standards (UDS) format, as well as information about relationships between parties). She suggested that guaranty funds be involved in this process, as they have experience that may be helpful, or at least the information can be shared with guaranty funds at the earliest juncture. She suggested that the Receivership Law (E) Working Group hear from the IT Examination (E) Working Group about the new examination guidelines.

Mr. Riewe said the targeted examination is a logical approach because it is addressing the issue of gathering the information. He said it is often not because the state is not sharing the information with the guaranty fund; rather, the state insurance regulators cannot get to the information.

Mr. Baldwin said programming that is required to gather the information and distribute it in the format that guaranty funds need takes time.

Mr. Holloway said California uses administrative supervision as the early detection tool to get into a company and evaluate the situation. He said all goals are aligned in that claimants and consumers need to be protected and it must be ensured that there is not an interruption in the payment of claims. Where it is possible for state insurance regulators, receivers, and guaranty funds, they should coordinate their efforts in support of that goal. Mr. Holloway said California would like to work with the Working Group on the MoU. He said he believes there are enough tools available through examination to handle this issue. He does not believe changes are necessary to existing laws.

Mr. Baldwin said every state may be different, where some states may need to change their laws and others might find the MoU necessary. He asked Ms. Cox if either is acceptable. She said yes, and they would also favor handbook changes because statutory changes are hard to do. She said the NCIGF wants the opportunity to be able to share information and coordinate, however that is accomplished.

Ms. Slaymaker asked what the trigger would be to share information. Ms. Cox said it could be tied to a specific risk-based capital (RBC) level. She said in conversations with the IT Examination (E) Working Group, she was told by financial regulators that RBC may be too late. Another option is to trigger if there is “a material possibility of insolvency.” Mr. Baldwin said the Illinois Legislature recently addressed this by amending IL law to permit information disclosure to guaranty associations, based on an early RBC trigger, subject to the “Director’s discretion.”

Mr. Baldwin asked Ms. Cox to describe the type of information to be shared. Ms. Cox said the primary focus has been on data, including claim data, location of data, condition of data, segregated data, ability to make the data transition, volume of claims, states where claims are located, policy information, and any cyber components, to name a few key types of information. She said the NCIGF had a receivership that included cybersecurity polices, which is new to guaranty funds. Other information could be on large deductible coverage, collateral securing the large deductible, how the collateral is secured, what collection processes are in place, and what would need to happen to have a seamless liquidation process.

Bill O’Sullivan (National Organization of Life and Health Insurance Guaranty Associations—NOLHGA) said the experience on the life and health side is different than the P/C side. He said the life and health guaranty funds have generally had good success in getting access to information needed; although, it is not always perfect. NOLHGA has found ways to get around concerns regarding confidentiality and privilege. The guaranty funds typically enter into common interest and confidentiality agreements early in the process (e.g., pre-receivership).

Mr. O’Sullivan said NOLHGA has experienced similar sensitivities to early sharing of information as the NCIGF describes. To the extent that there are solutions that work on the P/C side, the relevance on the life and health side and any parallel treatment on the P/C side should be considered.

Mr. Kosky asked Mr. O’Sullivan if the insurers are a party to the common interest and confidentiality agreements. Mr. O’Sullivan said yes, in certain cases, the insurer would be party to the agreement. Mr. Kosky asked Ms. Cox what the enforceability of the draft MoU would be if, as drafted, the insurer is not a party to the agreement. Ms. Cox said the involvement of the insurer is not something the NCIGF has looked at, but she would like to talk about that further. She said there is some coverage within the draft statutory revisions where the state insurance regulator should have the comfort to share information in these situations, just as they have authority to share information with federal law enforcement and other parties. She said this can be made clearer within the MoU.

Mr. Baldwin said Illinois has had experience with the insurer opposing sharing confidential information with guaranty funds, which is part of why the Illinois legislative changes include the director's discretion, regardless of the insurer's opposition. He asked Ms. Cox to explain who the information is intended to be shared with. Ms. Cox said it would be limited to guaranty fund staff, counsel, and technicians. She said it would not be shared with any other company staff that are on guaranty fund boards and committees. Sharing with guaranty fund boards and committees would be limited until such time as there is a public order of liquidation or rehabilitation, boards have voted on an assessment, etc.

Ms. Slaymaker asked the Receivership Law (E) Working Group for its preference on pursuing drafting a model guideline or an MoU. Working Group members indicated their preference for an MoU. Connecticut, Massachusetts, and Michigan all agreed with pursuing the MoU. Ms. Slaymaker said a virtual meeting would be set up to walk through and consider revisions to the initial draft MoU that the NCIGF proposed. She said regarding best practices, the Receiver's Handbook (E) Subgroup can consider revising the takeover checklists and in other areas of the *Receiver's Handbook for Insurance Company Insolvencies*. Mr. Baldwin said as he is chair of the Subgroup, it will consider revisions. Ms. Slaymaker said any recommended changes to other handbooks previously mentioned are handled by other NAIC groups, so referrals can be sent, as determined necessary, after the Working Group completes the work on the MoU.

Having no further business, the Receivership Law (E) Working Group adjourned.

Guideline for Troubled Company Information Sharing and Coordination with Guaranty Associations

Drafting Note: Pre-liquidation information sharing and coordination with guaranty associations has become even more critical in the modern insurance environment. Ideally such sharing and coordination should take place early on when a company becomes a “troubled company.” Regulators should consider involving guaranty funds even before the company is put in a receivership status.¹ It is essential that guaranty funds have usable claims data in order to service claims once a company is found insolvent and ordered into liquidation. (This is when most property casualty funds are “triggered.”) Moreover, complex new products such as cyber security are being written by insurance companies. Older products such as large deductible workers compensation often use complex collateral arrangements and collection protocols. Advance study and information sharing in such cases is essential for a smooth transition into liquidation if a liquidation does occur.

Regulators may have concerns regarding whether there is adequate statutory authority to share information before a receivership. The guideline below offers statutory language that could be used to amend state law to clearly permit sharing and coordination in cases where regulators feel it is appropriate. Confidentiality concerns are paramount and are addressed in the text provided below. Note that amendments to the property casualty guaranty fund model act, the Model Holding Company Act and the Examinations Act may be necessary. Amendments to all of these Models is offered.

In some states, a regulator may determine that current state law and regulatory practice already permits pre-receivership coordination. If this is the case a regulator may want to consider memorializing the terms of information sharing and coordination with a Memorandum of Understanding (MOU). A template for such an MOU is also provided as a separate document.

PROPERTY AND CASUALTY INSURANCE GUARANTY ASSOCIATION MODEL ACT NCIGF Suggested Revisions to Section 10

Section 10. Duties and Powers of the Commissioner

- A. The commissioner shall:
- (1) Notify the association of the existence of an insolvent insurer not later than three (3) days after the commissioner receives notice of the

¹ The NAIC Troubled Company Handbook suggests that such coordination begin when a company’s RBC levels are --- or below. (Cite)

determination of the insolvency. The association shall be entitled to a copy of a complaint seeking an order of liquidation with a finding of insolvency against a member company at the same time that the complaint is filed with a court of competent jurisdiction;

- (2) Provide the association with a statement of the net direct written premiums of each member insurer upon request of the board of directors.

B. The commissioner may:

- (1) Suspend or revoke, after notice and hearing, the certificate of authority to transact insurance in this State of a member insurer that fails to pay an assessment when due or fails to comply with the plan of operation. As an alternative, the commissioner may levy a fine on a member insurer that fails to pay an assessment when due. The fine shall not exceed five percent (5%) of the unpaid assessment per month, except that a fine shall not be less than \$100 per month;
- (2) Revoke the designation of a servicing facility if the commissioner finds claims are being handled unsatisfactorily.
- (3) Examine, audit, or otherwise regulate the association.
- (4) If the Commissioner determines that any member insurer as defined in Section 5K above may be subject to a future delinquency proceeding under Article XIII of this Code (insert citation to the liquidation section of the Code), then in order to assist in the performance of the Commissioner's duties, the Commissioner may:
 - (i) share confidential and privileged documents, material, or information reported pursuant to an enterprise risk filing with the Association regarding that member insurer; and
 - (ii) share confidential and privileged documents, material, the contents of an examination report, a preliminary examination report or its results, or any matter relating there to, including working papers, recorded information, documents, and copies thereof produced by, obtained by, or disclosed to the Commissioner or to any other person in the course of any examination with the Association regarding that member insurer.

□

**PROPERTY AND CASUALTY INSURANCE GUARANTY ASSOCIATION MODEL
ACT**

(iii) The Commissioner may disclose the information described in this subsection to the Association so long as the Association agrees in writing to hold that information confidential, in a manner consistent with this Code, and uses that information to prepare for the possible liquidation of the member insurer. Access to the information disclosed by the Commissioner to the Association under this subsection shall be limited to the Association's staff and its counsel. The Board of Directors of the Association may have access to the information disclosed by the Commissioner to the Association once the member insurer is subject to a delinquency proceeding under this Code (insert citation to the liquidation section) subject to any terms and conditions established by the Commissioner.

(iv) The Commissioner may disclose the information described in this subsection with Associations in other states, and with any organization of one or more state Associations of similar purposes, so long as the recipient of such information agrees in writing to hold that information confidential, in a manner consistent with this Code, and uses that information to prepare for the possible liquidation of the member insurer. Access to the information disclosed by the Commissioner under this subsection shall be limited to the Association's staff and its counsel. The Board of Directors of the Association may have access to the information disclosed by the Commissioner to the Association once the member insurer is subject to a delinquency proceeding under this Code (insert citation to the liquidation section) subject to any terms and conditions established by the Commissioner.

(v) Should the Commissioner determine a liquidation is likely, he or she may cooperate with the Association and with any organization of one or more state Associations of similar purposes to provide for an orderly transition to liquidation in order to minimize any delay in the handling and payment of claims.

(3)

Drafting Note: This section does not require periodic examinations of the guaranty associations but allows the commissioner to conduct examinations as the commissioner deems necessary.

- C. A final action or order of the commissioner under this Act shall be subject to judicial review in a court of competent jurisdiction.

NCIGF Recommended Changes to the NAIC Model Holding Company Act

Section 8. Confidential Treatment

- A. Documents, materials or other information in the possession or control of the Department of Insurance that are obtained by or disclosed to the commissioner or any other person in the course of an examination or investigation made pursuant to Section 6 and all information reported or provided to the Department of Insurance pursuant to Section 3B(12) and (13), Section 4, Section 5 and Section 7.1 are recognized by this state as being proprietary and to contain trade secrets, and shall be confidential by law and privileged, shall not be subject to [insert open records, freedom of information, sunshine or other appropriate phrase], shall not be subject to subpoena, and shall not be subject to discovery or admissible in evidence in any private civil action. However, the commissioner is authorized to use the documents, materials or other information in the furtherance of any regulatory or legal action brought as a part of the commissioner's official duties. The commissioner shall not otherwise make the documents, materials or other information public without the prior written consent of the insurer to which it pertains unless the commissioner, after giving the insurer and its affiliates who would be affected thereby notice and opportunity to be heard, determines that the interest of policyholders, shareholders or the public will be served by the publication thereof, in which event the commissioner may publish all or any part in such manner as may be deemed appropriate.
- (1) For purposes of the information reported and provided to the Department of Insurance pursuant to Section 4L(2), the commissioner shall maintain the confidentiality of the group capital calculation and group capital ratio produced within the calculation and any NCIGF Recommended Changes to NAIC Model Holding Company Act group capital information received

from an insurance holding company supervised by the Federal Reserve Board or any U.S. group wide supervisor.

- (2) For purposes of the information reported and provided to the [Department of Insurance] pursuant to Section 4L(3), the commissioner shall maintain the confidentiality of the liquidity stress test results and supporting disclosures and any liquidity stress test information received from an insurance holding company supervised by the Federal Reserve Board and non-U.S. group wide supervisors.

Drafting Note: This group capital calculation and group capital ratio includes confidential information and filings received from insurance holding companies supervised by the Federal Reserve Board. Similarly, the liquidity stress test may include confidential information and filings received from insurance holding companies supervised by the Federal Reserve Board. The confidential treatment afforded to group capital calculation filings includes any Federal Reserve Board group capital filings and information.

- B. Neither the commissioner nor any person who received documents, materials or other information while acting under the authority of the commissioner or with whom such documents, materials or other information are shared pursuant to this Act shall be permitted or required to testify in any private civil action concerning any confidential documents, materials, or information subject to Subsection A.
- C. In order to assist in the performance of the commissioner's duties, the commissioner:
 - (1) May share documents, materials or other information, including the confidential and privileged documents, materials or information subject to Subsection A, including proprietary and trade secret documents and materials with other state, federal and international regulatory agencies, with the NAIC, and with any third-party consultants designated by the commissioner, with state, federal, and international law enforcement authorities, including members of any supervisory college described in Section 7, provided that the recipient agrees in writing to maintain the confidentiality and privileged status of the document, material or other information, and has verified in writing the legal authority to maintain confidentiality.
 - (2) Notwithstanding paragraph (1) above, the commissioner may only share confidential and privileged documents, material, or information reported pursuant to Section 4L(1) with commissioners of states having statutes or regulations substantially similar to Subsection A and who have agreed in writing not to disclose such information.

- (3) Notwithstanding paragraphs (1) and (2) above, the Commissioner may share confidential and privileged documents, material, or information reported pursuant to Section 4L(1) or otherwise described in paragraph A of this section with the [name of state property casualty insurance guaranty association] by any member insurer defined in [section in guaranty association act defining member insurer] if the Commissioner determines that the member insurer may be subject to a future delinquency proceeding under [provisions related to delinquency proceeding] of this Code. The Commissioner may disclose the information described in this subsection so long as the parties agree in writing to hold that information confidential, in a manner consistent with this Code, and use that information to prepare for a possible delinquency proceeding of the member insurer. Access to the information disclosed by the Commissioner to the [state guaranty fund] shall be limited to the [state guaranty fund's] staff and its counsel. The Board of Directors of the [state guaranty fund] may have access to the information disclosed by the Commissioner to the [state guaranty fund] once the member insurer is subject to a delinquency proceeding under [provisions relating to delinquency proceeding] of this Code subject to any terms and conditions established by the Commissioner.

The Commissioner may also, pursuant to this subsection, disclose the information described in this subsection with Associations in other states, and with any organization of one or more state Associations of similar purposes, so long as the recipient of such information agrees in writing to hold that information confidential, in a manner consistent with this Code, and uses that information to prepare for a possible delinquency proceeding of the member insurer. Access to the information disclosed by the Commissioner under this subsection shall be limited to the Association's staff and its counsel. The Board of Directors of the Association may have access to the information disclosed by the Commissioner to the Association once the member insurer is subject to a delinquency proceeding under this Code (insert citation to the liquidation section) subject to any terms and conditions established by the Commissioner.

Should the Commissioner determine that a delinquency proceeding is likely, he or she may cooperate with the Association and with any organization of one or more state Associations of similar purposes to provide for an orderly transition to liquidation in order to minimize any delay in the handling and payment of claims.

.....

MODEL LAW ON EXAMINATIONS

NCIGF Recommended Changes to Section in 5F

Section 5. Examination Reports

.....

F. Privilege for, and Confidentiality of Ancillary Information

(1) (a) Except as provided in Subsection E above and in this subsection, documents, materials or other information, including, but not limited to, all working papers, and copies thereof, created, produced or obtained by or disclosed to the commissioner or any other person in the course of an examination made under this Act, or in the course of analysis by the commissioner of the financial condition or market conduct of a company shall be confidential by law and privileged, shall not be subject to [insert open records, freedom of information, sunshine or other appropriate phrase], shall not be subject to subpoena, and shall not be subject to discovery or admissible in evidence in any private civil action. The commissioner is authorized to use the documents, materials or other information in the furtherance of any regulatory or legal action brought as part of the commissioner’s official duties.

(b) Documents, materials or other information, including, but not limited to, all working papers, and copies thereof, in the possession or control of the National Association of Insurance Commissioners and its affiliates and subsidiaries shall be confidential by law and privileged, shall not be subject to subpoena, and shall not be subject to discovery or admissible in evidence in any private civil action if they are:

- (i) Created, produced or obtained by or disclosed to the National Association of Insurance Commissioners and its affiliates and subsidiaries in the course of the National Association of Insurance Commissioners and its affiliates and subsidiaries assisting an examination made under this Act, or assisting a commissioner in the analysis of the financial condition or market conduct of a company; or
 - (ii) Disclosed to the National Association of Insurance Commissioners and its affiliates and subsidiaries under Paragraph (3) of this subsection by a commissioner.
- (c) For the purposes of Paragraph (1)(b), “Act” includes the law of another state or jurisdiction that is substantially similar to this Act.
- (2) Neither the commissioner nor any person who received the documents, material or other information while acting under the authority of the commissioner, including the National Association of Insurance Commissioners and its affiliates and subsidiaries, shall be permitted to testify in any private civil action concerning any confidential documents, materials or information subject to Paragraph (1).
- (3) In order to assist in the performance of the commissioner’s duties, the commissioner:
 - (a) May share documents, materials or other information, including the confidential and privileged documents, materials or information subject to Paragraph (1), with other state, federal and international regulatory agencies, with the National Association of Insurance Commissioners and its affiliates and subsidiaries, and with state, federal and international law enforcement authorities, provided that the recipient agrees to maintain the confidentiality and privileged status of the document, material, communication or other information;
 - (b) May receive documents, materials, communications or information, including otherwise confidential and privileged documents, materials or information, from the National Association of Insurance Commissioners and its affiliates and subsidiaries, and from regulatory and law enforcement officials of other foreign or domestic jurisdictions, and shall maintain as

confidential or privileged any document, material or information received with notice or the understanding that it is confidential or privileged under the laws of the jurisdiction that is the source of the document, material or information; ~~and~~

- (c) May share documents, materials or other information, including the confidential and privileged documents, materials or information subject to Paragraph (1), with the [name of state property casualty guaranty association] regarding any member insurer defined in [section in guaranty association act defining member insurer] if the commissioner determines that the member insurer may be subject to a future delinquency proceeding under [provisions related to delinquency proceeding] of this Code. The commissioner may disclose the information described in this subsection so long as the parties agree in writing to hold that information confidential, in a manner consistent with this Code, and use that information to prepare for a future delinquency proceeding of a member insurer. Access to the information disclosed by the commissioner to the [state guaranty fund] shall be limited to the [state guaranty fund's] staff and its counsel. The Board of Directors of the [state guaranty fund] may have access to the information disclosed by the Commissioner to the [state guaranty fund] once the member insurer is subject to a delinquency proceeding under [provisions relating to delinquency proceeding] of this Code subject to any terms and conditions established by the commissioner.

The commissioner may also, pursuant to this subsection (3)(c), disclose the information described in this subsection with Associations in other states, and with any organization of one or more state Associations of similar purposes, so long as the recipient of such information agrees in writing to hold that information confidential, in a manner consistent with this Code, and uses that information to prepare for -a possible delinquency proceeding of the member insurer. Access to the information disclosed by the commissioner under this subsection shall be limited to the Association's staff and its counsel. The Board of Directors of the Association may have access to the information disclosed by the commissioner to the Association once the member insurer is subject to a delinquency proceeding under this Code (insert citation to the liquidation section) subject to any terms and conditions established by the commissioner.

Should the commissioner determine that a delinquency proceeding is likely, he or she may cooperate with the Association and with any organization of one or more state Associations of similar purposes to provide for an orderly transition to liquidation in order to minimize any delay in the handling and payment of claims.

- (d) ~~[Optional provision]~~ And mMay enter into agreements governing sharing and use of information consistent with this subsection.

PC-390-5

DRAFT

DRAFT 3-18-22**MEMORANDUM OF UNDERSTANDING**

This Memorandum of Understanding (“MOU”) is among the [state] Department of Insurance (“DOI”), the [Receiver of the insolvent company – if appointed] and the [guaranty fund in the state of domicile of the troubled company, the other insurance guaranty funds which have executed this agreement (collectively “Guaranty Funds”) and the National Conference of Insurance Guaranty Funds.(NCIGF)

Definitions:

- 1.1 “Agreement” or “MOU” refers to this Memorandum of Understanding;
- 1.2 “Confidential Information” refers to any:
 - a) documents, data or other information relating to any domestic insurance company in the State of [state] where the Commissioner has determined that the financial condition of such company creates a material risk of Receivership that are not publicly available or public records, whether written or not, including but not limited to claims files and data; financial analyses, modeling and projections; trade secrets, technical processes and know-how; agency agreements, arrangements, accounts, proposals, lists, and other information; policyholder lists and information; costs and pricing information; internal procedures, strategies and plans; and computer programs;
 - b) work product or other information regarding any such Company that is confidential and/or privileged; and
 - c) communications between the Parties regarding any potential or pending legal actions involving any such company that is a threat to such companies’ solvency.
- 1.3 “Evaluation Material” refers to all information, oral or written, including but not limited to Confidential Information as defined herein, that is furnished to Guaranty Funds or NCIGF under the terms of this Agreement, and all analyses, compilations, studies, or other materials prepared by Guaranty Funds or NCIGF containing or based in whole or in part upon such information.
- 1.4 “Company or Companies” refers to any domestic property and casualty insurance company in the State of [state] where the Commissioner has determined the financial condition of such company creates a material risk of receivership.
- 1.5 “Commissioner” refers to the Commissioner of Insurance of the State of [state].
- 1.6 “Party” and “Parties” refer to the Commissioner, the Receiver, if appointed, the signatory Guaranty Funds and the NCIGF.
- 1.7 “Receivership Court” refers to the [court with jurisdiction over the receivership]
- 1.8 “Receivership” refers to the rehabilitation or liquidation of any domestic insurance

DRAFT 3-18-22

company in the State of [state].

- 1.9 “Receiver” refers to [name of deputy receiver if appointed] or any of his or her successors.
- 1.10 “Covered Claim” shall have the same meaning as contained in the applicable statutes of the Guaranty Funds.

II. Recitals

- 2.1 The Commissioner is responsible for the financial regulation of Companies. From time-to-time the financial condition of one or more of such Companies creates a material risk of Receivership.
- 2.2 Should a Receivership occur of a Company, the Commissioner will appoint a special deputy receiver who will be responsible for the handling of such Receivership.
- 2.3 If the Receivership of a Company includes an order of liquidation with a finding of insolvency, the Guaranty Funds will have the responsibility for the payment of “Covered Claims” arising from such Receivership.
- 2.4 The Parties agree that in order to properly prepare for any Receivership, to provide for a smooth transition to liquidation should it become required, and in order to avoid delay in the payment of “Covered Claims,” it is essential to share Confidential Information among them with respect to any Company the Commissioner determines is at material risk of Receivership.
- 2.5 It is agreed by the Parties that, subject to the Commissioner’s discretion, the Commissioner can freely consult with the Receiver (if appointed), the Guaranty Funds, and NCIGF, with respect to any Company, including but not limited to, the dissemination of Confidential Information and Evaluation Material as defined herein. It is understood that such consultations are to be held in strictest confidence and the Commissioner may, in his or her discretion, withhold the name of the Company being discussed from the Guaranty Funds and the NCIGF.
- 2.6 The Guaranty Funds have determined that in order to protect consumers and to better fulfill their mission (*see* cite to applicable Guaranty Funds’ statutes) it is necessary and proper for them to enter into this Agreement and likewise it is necessary and proper for the NCIGF, as a membership organization that supports the Guaranty Funds in their mission, to enter into this Agreement. The DOI and Receiver have determined that this Agreement enables them to better serve the insurance consumers in [involved states] and to better protect them from the adverse consequences of a Company liquidation.

III. Use and Treatment of Evaluation Material

- 3.1 Subject to the terms of this Agreement, the Commissioner and Receiver will grant the Guaranty Funds and NCIGF Evaluation Material as they determine is appropriate. The

DRAFT 3-18-22

Evaluation Material shall be used by the Guaranty Funds and NCIGF to determine potential obligations of the Guaranty Funds, prepare for the possible assumption of such obligations, and to perform such statutory obligations in the event they become obligated to pay “Covered Claims” under policies of insurance issued by a Company. The Guaranty Funds and NCIGF shall be allowed to copy such Evaluation Material for their own use consistent with the terms of this Agreement.

- 3.2 The Guaranty Funds and the NCIGF agree to maintain the confidentiality of all Evaluation Material provided to them, and of any privileges with respect to such information. The Guaranty Funds and the NCIGF agree not to disclose any Evaluation Material to any person or entity, except as expressly provided herein.
- 3.3 The Guaranty Funds and the NCIGF may share Evaluation Material with their respective counsel, consultants or agents as it deems necessary, provided that such persons agree to comply with terms of this Agreement, including but not limited to the remedies provided under Part IV. In the event of a breach of this Agreement by any person to whom Evaluation Material has been provided, the Party or Parties providing such information shall also remain liable for the breach.
- 3.4 The Guaranty Funds and the NCIGF agree that no Evaluation Material shall be provided to any insurance companies or the owners, directors, officers, employees, agents, representatives, or affiliates of any insurance companies, except as necessary to discharge statutory duties, for official action or consideration by the Board of Directors.
- 3.5 In the event that the Guaranty Funds or the NCIGF are served with process seeking the production of Evaluation Material, including but not limited to a subpoena or order of a court of competent jurisdiction, an investigation by a government entity, or discovery demand issued in connection with any action, the Guaranty Funds and NCIGF, as appropriate, shall notify the Commissioner and Receiver in writing as promptly as practicable. The Guaranty Funds and NCIGF, as appropriate, shall take reasonable actions to protect the confidentiality and, if applicable, the privileged status of such information, unless otherwise requested by the Commissioner or the Receiver. If a protective order or other remedy is not obtained prior to the date that compliance with the request is legally required, the Guaranty Funds and the NCIGF, as appropriate, will furnish only that portion of the Evaluation Material or take only such action as is legally required.

IV. Remedies

- 4.1 The Guaranty Funds and the NCIGF agree that money damages would not be a sufficient remedy for a breach of this Agreement, and that the Commissioner or Receiver shall be entitled to equitable relief, including injunctive relief, as a remedy for such breach. Such remedy shall be in addition to all other remedies available at law or in equity, and shall not be deemed the exclusive remedy for a breach of this Agreement. Any action to enforce this Agreement shall be brought in the [appropriate court for the proceeding].
- 4.2 In the event of an action alleging a breach of this Agreement, the prevailing party shall be

DRAFT 3-18-22

entitled to reimbursement for its reasonable attorney's fees. Any attorney's fees awarded to the Guaranty Funds or the NCIGF shall be handled as an administrative expense in the proceeding, subject to [cite to applicable law]. Any attorney's fees awarded to the Commissioner or Receiver shall be paid from the Guaranty funds and NCIGF's funds, and shall not be submitted as a claim in the proceeding.

- 4.3 No failure or delay by any Party in exercising any right, power or privilege shall operate as a waiver thereof. Any exercise of a right, power or privilege shall not be considered to preclude any other or further exercise thereof.
- 4.4 There shall be no liability on the part of the Commissioner or Receiver or the Company(ies) to the Guaranty Funds or NCIGF relating to or arising from the Evaluation Material or any other documents, material, information or communications provided under this Agreement.

V. Warranties and Representations

- 5.1 The Commissioner, the Guaranty Funds, and the NCIGF to the extent consistent with their statutory and other obligations, shall in good faith cooperate and communicate promptly with each other with respect to the performance of their duties under this Agreement.
- 5.2 The Guaranty Funds and the NCIGF represent that they have the authority to enter into this Agreement and fulfill their obligations under this Agreement.
- 5.3 Each undersigned person represents that he or she is authorized to sign this Agreement on behalf of the Party he or she represents.
- 5.4 The Guaranty Funds and the NCIGF understand and acknowledge that the Commissioner or Receiver makes no representations or warranties as to the accuracy or completeness of any Evaluation Material provided under this Agreement.

VI. Termination

- 6.1 This Agreement may be terminated at any time by agreement among the Parties or by any single Party in writing with 30 days' notice, provided that all Evaluation Material obtained prior to such termination shall remain confidential, unless otherwise agreed by the Parties, and except as otherwise provided by law. Further, this Agreement shall be terminated upon a determination in writing by the Commissioner or the Receiver that the Company no longer presents a material risk of Receivership.
- 6.2 The Guaranty Funds and the NCIGF are permitted to use Evaluation Material in the manner and for purposes described herein until delivery by the Receiver or Commissioner of a written notice specifying the date of termination of this Agreement. Upon a receivership order wherein one or more Guaranty Funds are triggered this Agreement shall terminate in all respects without the obligation to destroy Evaluation material or maintain it as confidential.

DRAFT 3-18-22

6.3 Except as provided in Paragraph 6.2, in the event of a termination of this Agreement, the Guaranty Funds and NCIGF shall immediately undertake to destroy all Evaluation Materials, and all copies, summaries, analyses and notes of the contents or parts thereof, and shall provide an affidavit attesting to the destruction of all such Evaluation Materials being provided to the Receiver, if appointed, and the Commissioner within 30 days after termination, and no part thereof shall be retained by the Guaranty Funds or NCIGF in any form without the prior written consent of the Commissioner or Receiver.

VII. Miscellaneous Provisions

7.1 Nothing in this Agreement shall be deemed to create an attorney-client relationship between any Party’s counsel and any other Party.

7.2 This Agreement shall be governed by and construed in accordance with the laws of the State of [state of domicile of the insolvency].

7.3 This Agreement may be executed in multiple counterparts, each of which shall be deemed an original for all purposes, and all of which together shall constitute one and the same instrument.

7.4 This Agreement shall be effective upon the date signed by each party and shall also apply to any and all Evaluation Material that has previously been shared between the Parties.

7.5 All communications under this Agreement shall be in writing and shall be sent by email to the addresses specified below. A copy of any such notice shall also be personally delivered or sent by either first class registered or certified U.S. Mail, return receipt requested, postage prepaid, or by a bonded mail delivery service, to the address set out below:

The Commissioner:
[name, address, phone, email address]

The Receiver:
[name, address, phone, email address]

Guaranty Funds:

[list of contact information for signatory funds]

7.6 The Parties agree to meet periodically, at least annually, to discuss issues arising under this Agreement and its implementation with respect to any specific Company.

The Short Runway Insolvency is an Outdated Biz Model for the Protection of Insurance Consumers

The few companies that fail are more complex than ever:

- Multi-state, multi-line carriers
- High volume of electronic claims files
- Claims operations delegated to TPAs/Multiple IT systems
- Limited specialized insolvency data management expertise due to fewer insolvencies

The Need

Consistent and timely transfer of usable claims data via UDS to guaranty funds and receivers at the time of insolvency

Achieved through enhanced PRE-LIQUIDATION coordination (Regulators/Receivers/Guaranty Funds)

- ✓ Smooth, seamless (as possible) transitions are important for the reputation of the U.S. state regulatory system
- ✓ Delay and appearance of chaos undermines stakeholder confidence

Public Policy & Technology Solutions Exist

Level Setting: UDS

- ✓ Specialized NAIC Communications Protocol developed for GFs and Receivers to read and process claims
- ✓ Not an industry standard, but regulator approved; data must be converted for receivers and guaranty funds to meet their statutory obligations to consumers—this can be tricky.
- ✓ NCIGF has developed and maintains Data Mapper and SUDS, the support software for UDS

UDS-Back to the Receiver: Monthly, Quarterly and Annual Reporting from GFs

<u>Urgency</u>	<u>Impediments</u>
<ul style="list-style-type: none"> ✓ Ongoing periodic benefits for workers compensation claimants ✓ In auto claims, essential transportation for work or medical needs ✓ Smooth, seamless as possible, transitions are important for the reputation of the US state regulatory system ✓ Delay and appearance of chaos is never good 	<ul style="list-style-type: none"> ✓ Files controlled by third parties using various data systems ✓ Third parties may not treat transition with the same urgency as receivers and Gas ✓ As liquidation is imminent, TPA may be laying off people due to loss of business ✓ High volume of data – imaged files – takes time to transition ✓ Antiquated Data systems

The Technology Solution

NCIGF MEMBERS HAVE INVESTED HEAVILY IN THESE COMPETENCIES AND ESTABLISHED A SUBSIDIARY (GSI) TO ASSIST RECEIVERS WITH THE EXTRACTION AND CONVERSION OF CLAIMS DATA TO UDS

NCIGF AND GSI CAN STEP IN AT THE EARLY, CHAOTIC, BUT CRUCIALLY IMPORTANT PARTS OF AN INSOLVENCY. WE MAKE SURE DATA GETS WHERE IT NEEDS TO GO, THEN STEP AWAY ONCE THE TRANSITION BECOMES MORE ORDERLY

ESSENTIAL TO MAKING THIS WORK FOR ALL PARTIES IS DELIVERY OF THESE SERVICES THROUGH A LEGALLY SEPARATE SUBSIDIARY TO MITIGATE CLAIMS-PAYING RESPONSIBILITIES TO NCIGF AND ITS MEMBER GUARANTY FUNDS

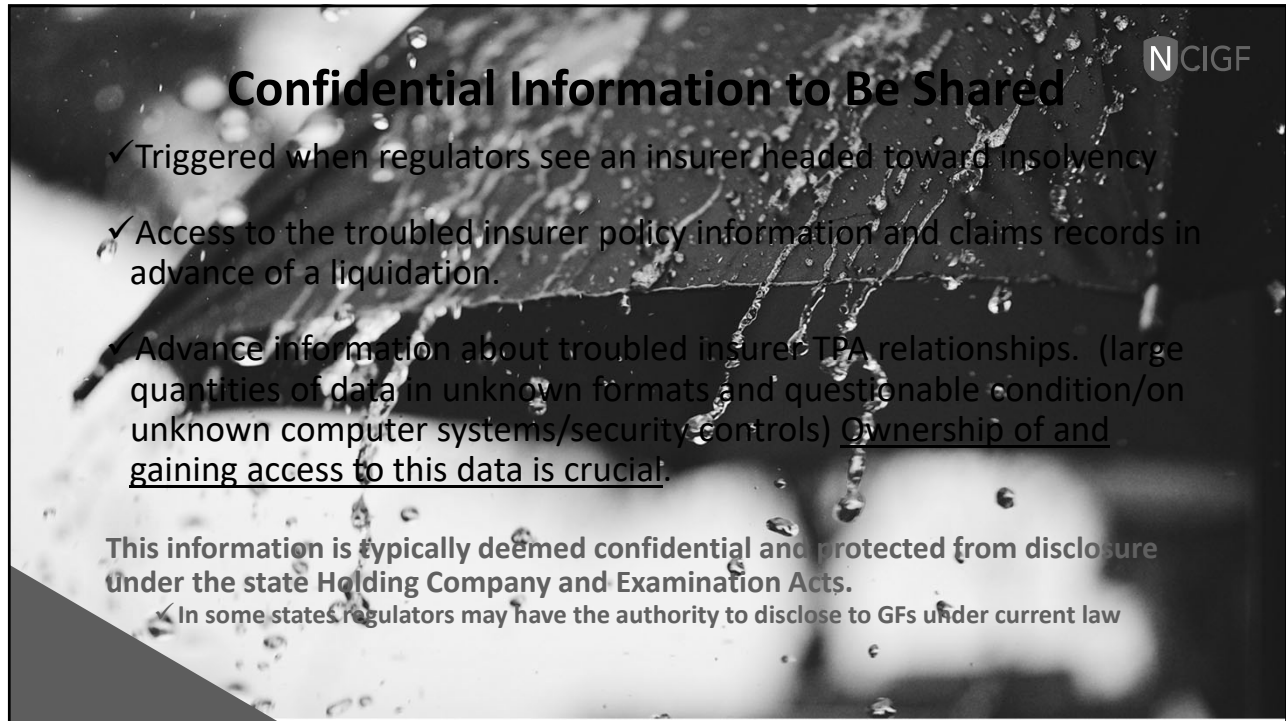

The Public Policy Solution

A Confidential Exchange of Fundamental Information

- Regulators, Receivers & GFs
- Well Before the Liquidation Order is Signed

Advantages

- ✓ Regulators can gain valuable insight into data transition readiness and complex product lines
- ✓ GFs involved can more fully prepare to pay claimants
- ✓ Receivers will have usable data sooner in order to track reinsurance recoveries and process POCs.

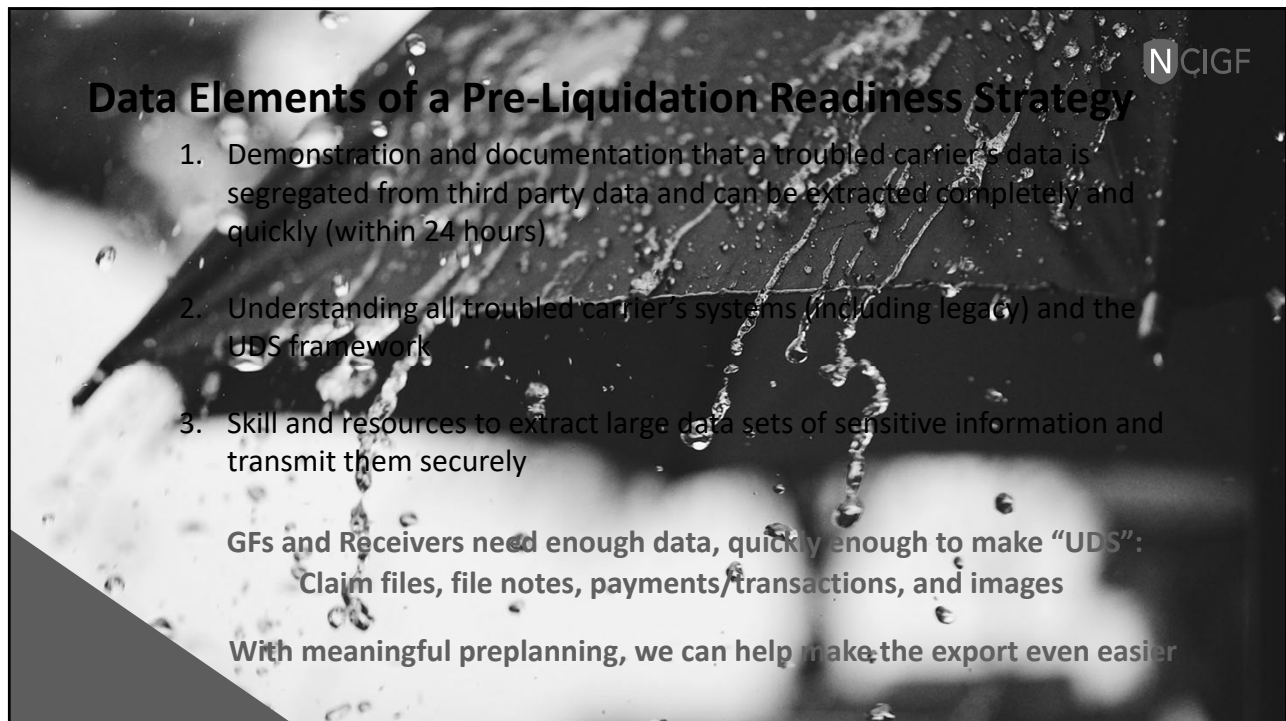

NCIGF

Confidential Information to Be Shared

- ✓ Triggered when regulators see an insurer headed toward insolvency
- ✓ Access to the troubled insurer policy information and claims records in advance of a liquidation.
- ✓ Advance information about troubled insurer TPA relationships. (large quantities of data in unknown formats and questionable condition/on unknown computer systems/security controls) Ownership of and gaining access to this data is crucial.

This information is typically deemed confidential and protected from disclosure under the state Holding Company and Examination Acts.

- ✓ In some states regulators may have the authority to disclose to GFs under current law

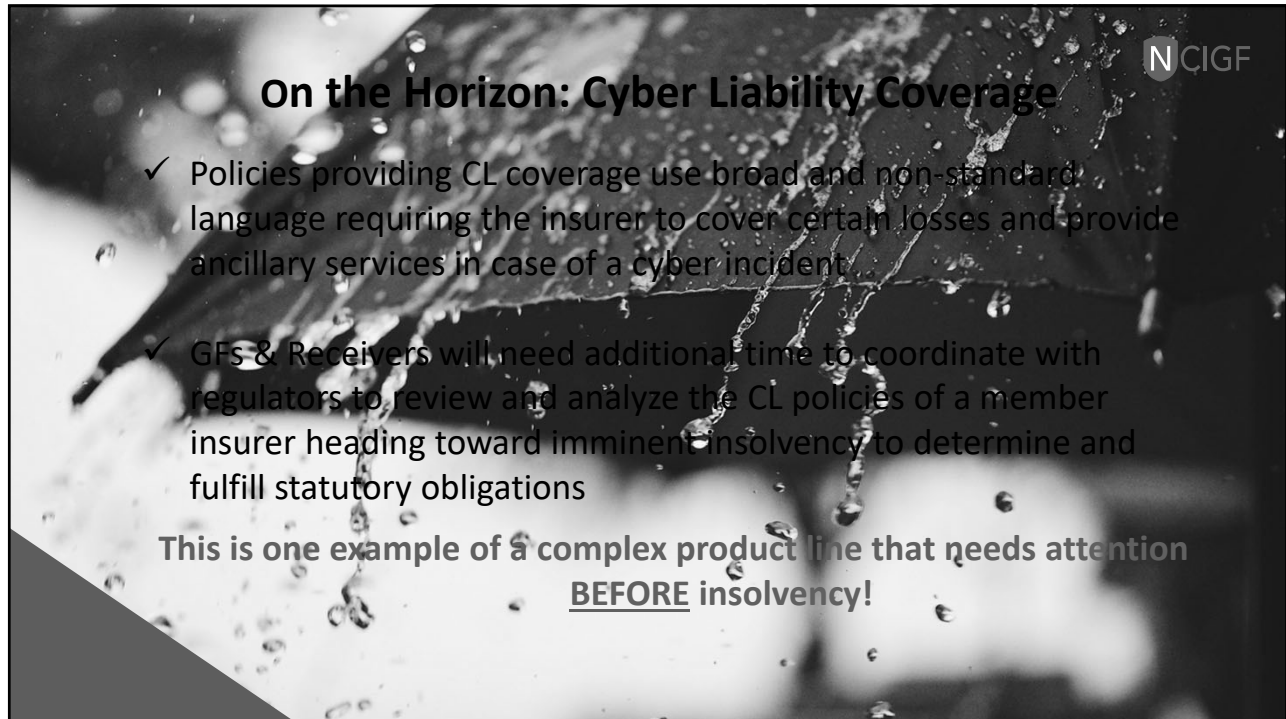

NCIGF

Data Elements of a Pre-Liquidation Readiness Strategy

1. Demonstration and documentation that a troubled carrier's data is segregated from third party data and can be extracted completely and quickly (within 24 hours)
2. Understanding all troubled carrier's systems (including legacy) and the UDS framework
3. Skill and resources to extract large data sets of sensitive information and transmit them securely

GFs and Receivers need enough data, quickly enough to make "UDS":
Claim files, file notes, payments/transactions, and images

With meaningful preplanning, we can help make the export even easier

On the Horizon: Cyber Liability Coverage

- ✓ Policies providing CL coverage use broad and non-standard language requiring the insurer to cover certain losses and provide ancillary services in case of a cyber incident.
- ✓ GFs & Receivers will need additional time to coordinate with regulators to review and analyze the CL policies of a member insurer heading toward imminent insolvency to determine and fulfill statutory obligations

This is one example of a complex product line that needs attention **BEFORE** insolvency!

Developments Moving the Needle

2021 Holding Company Act Changes Already Adopted by the NAIC As a Result of a Referral from RITF!

- ✓ More controls on affiliated companies holding claims data and other essential information.
- ✓ IT Examination Working Group has adopted additional steps for the examination structure to address new holding company law requirements.

Combined with new requirements for TPA UDS competency @ appropriate RBC level, these are critical readiness tactics already in place

We Have Proposed A Next Step NCIGF

NAIC model law amendments or guidance to facilitate pre-receivership cooperation and coordination

- ✓ Further revisions to state holding company laws and regulations, exam laws and guaranty fund acts in some states. Others could do this with a memorandum of understanding (MOU) providing for and preserving confidentiality.
- ✓ Information sharing would improve cooperation and coordination
- ✓ Addresses our mutual interest of protecting insurance consumers
- ✓ NCI GF has amendments and a draft MOU ready for consideration

Traction: 2022 Proposals in IL & CA based on the NCI GF amendments

How it Would Work NCIGF

Once a Regulator makes a finding of insolvency and subsequent liquidation in the next 3-12 months, we recommend the following:

- Step 1:** Regulator schedules initial meeting with GF manager (no documents necessary)
- Step 2:** First meeting covered by statute being proposed or an MOU (if delinquency proceeding is highly likely then detailed confidentiality agreement is required to move forward)
- Step 3:** GFs begin review of claim data, policy information and other documents to prepare for an orderly transfer
- Step 4:** Regulator and GF manager develops plan for transition to liquidation (other GFs may be involved)
- Step 5:** GFs can advise Regulator on condition and location of data which may be useful to Regulator in deciding when to sign liquidation order

Much of this could be done during a rehabilitation period if there is sufficient time and access

Protecting Communications, Part I

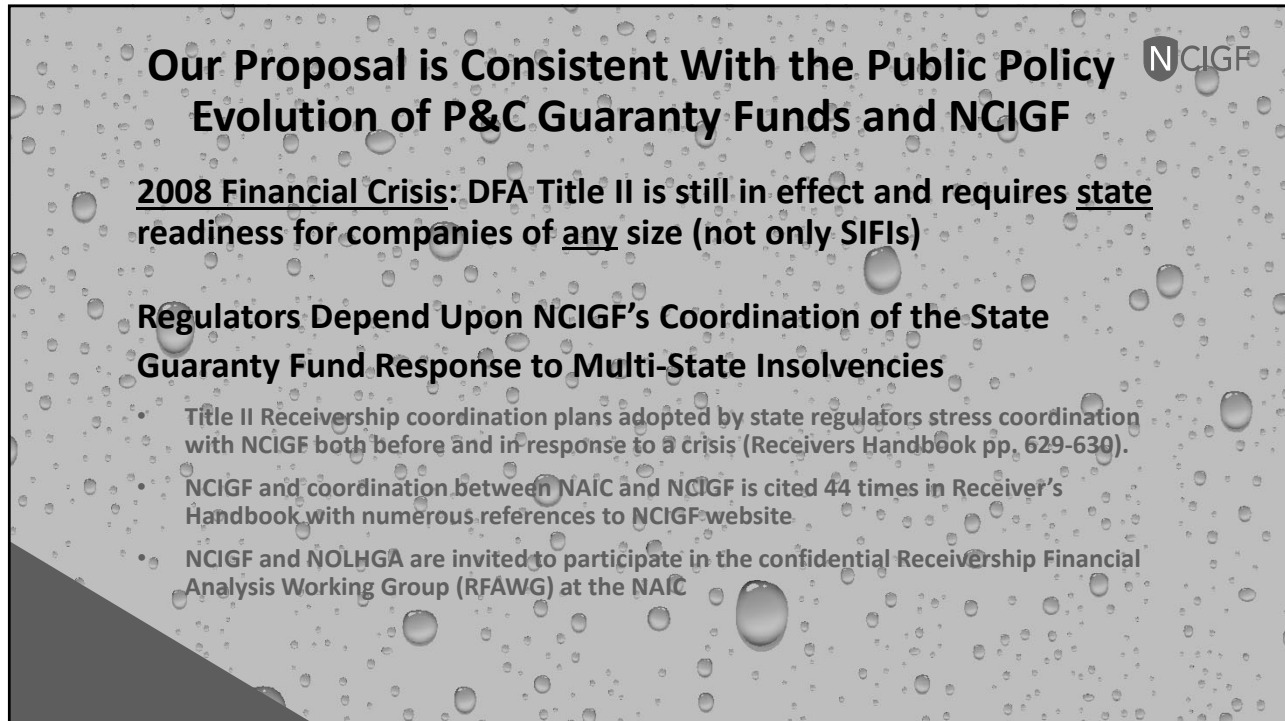

- ✓ Guaranty Funds have a huge incentive to maintain confidentiality.
- ✓ Guaranty Funds understand the sensitivity of this information and the need to keep it confidential
- ✓ Guaranty Funds have a proven track record with confidential agreements with Receivers that are standard for every rehabilitation/liquidation
- ✓ NOLHGA and the life funds have been collaborating closely at the troubled company level for several years.
- ✓ The role of the property casualty funds (and NCIGF) may differ, but this precedent matters and demonstrates feasibility.

Protecting Communications, Part II

- ✓ MOU extends the confidentiality required by the statute to any guaranty fund receiving the information
- ✓ MOU could be an alternative approach where states have this authority under current law
- ✓ Our model MOU can be tailored to address any specific confidentiality concerns
- ✓ Confidential information will NOT be shared with state Board members until such time there is a public court proceeding

NCIGF

Our Proposal is Consistent With the Public Policy Evolution of P&C Guaranty Funds and NCIGF

2008 Financial Crisis: DFA Title II is still in effect and requires state readiness for companies of any size (not only SIFIs)

Regulators Depend Upon NCIGF's Coordination of the State Guaranty Fund Response to Multi-State Insolvencies

- Title II Receivership coordination plans adopted by state regulators stress coordination with NCIGF both before and in response to a crisis (Receivers Handbook pp. 629-630).
- NCIGF and coordination between NAIC and NCIGF is cited 44 times in Receiver's Handbook with numerous references to NCIGF website
- NCIGF and NOLHGA are invited to participate in the confidential Receivership Financial Analysis Working Group (RFAWG) at the NAIC

NCIGF

Thank You For Your Time! This Conversation is Underway

- ✓ Constructive & collaborative
- ✓ Readiness in general, data transfer specifically
- ✓ Goal: A near seamless safety net for consumers
- ✓ Strengthen state insurance regulation

We Are on the Same Team!

Roger H. Schmelzer, President & CEO
NCIGF

EXPOSURE DRAFT 07/18/22

BACKGROUND OF THE
MEMORANDUM OF UNDERSTANDING

When a property & casualty insurer is liquidated, our regulatory system mitigates the adverse effects on policyholders and claimants through the state insurance resolution system. This system includes the coordinated management of the liquidation and wind down of the insurance company, in accordance with the state’s receivership laws, and the payment of statutorily defined “covered claims” by the state guaranty fund system. In today’s technological world, the insurance financial regulators, insurance receivers and the guaranty funds need advance planning for the transition from a troubled insurance company to liquidation.

This model Memorandum of Understanding (“MOU”) is flexible and can be tailored the individual state insurance department and the specific troubled property and casualty insurer situation.

The MOU is intended to be used to facilitate transitional planning and preparation, starting when a troubled property and casualty insurer faces a material risk of being liquidated as insolvent¹. Such a liquidation creates various obligations for the insurance receiver and triggers the guaranty funds’ statutory duties to pay “covered claims.” One goal of this transitional planning is to ensure that the guaranty funds are prepared and have the appropriate information necessary to assume their statutory duties to protect policy claimants promptly upon liquidation. Another important goal of this early estate planning process is to facilitate the receiver’s duties upon liquidation, which include transition of claims to the guaranty funds, marshalling the remaining company assets and resolving claims against the insurer.

This planning process necessarily involves the sharing of confidential information about the troubled company that is protected by statutory confidentiality and privilege provisions. The parties sharing such information intend that it stay confidential and privileged and that no such protection be waived. This MOU is intended to document an agreement to that effect. The parties are the (1) Commissioner, (2) the insurance receiver if appointed (and who may be added later) or a standing insurance receivership office, if applicable, (3) the potentially triggered guaranty funds, and (4) the National Conference of Insurance Guaranty Funds (“NCIGF”).² If separate from a state’s receivership office, the state’s insurance financial regulatory office could also be a party to the MOU, as the MOU can be tailored to the specific state.

The MOU provides that all non-public planning information provided to the guaranty funds under it shall be kept confidential, with the protective mechanism to maintain confidentiality spelled out. Specifically, confidential information initially may only to be shared with NCIGF and guaranty fund staff, agents, and counsel and, importantly, *may only be used for purposes of planning for liquidation of the troubled company*. Confidential information will not be shared with industry representatives who sit on or participate in a guaranty fund’s Board of Directors until such time as the information is necessary for the Board to discharge statutory duties or consider or take for official action. Confidential information received by the Insurance Commissioner pursuant to its examination authority, which based upon NAIC Model 390 typically is “confidential by law and privileged, shall not be subject to [insert open records, freedom of information, sunshine or other appropriate phrase], shall not be subject to subpoena, and shall not be subject to discovery or admissible in evidence in any private civil action,” is as shared agreed to retain such privileged status, particularly given the common interest of the parties in the MOU in facilitating the

¹ This model MOU is intended for use with only property and casualty receiverships. Life and health guaranty associations utilize confidentiality, and joint and common interest agreements, to gain access to information in the event of receivership, when necessary.

² See <https://www.ncigf.org/>. In general, the legal relationships between the troubled company and the regulatory authorities will be governed comprehensively by appropriate statutes and regulations in the state insurance code, thus generally there is no need for the troubled company be a party to the MOU. There may be, however, considerations in particular cases where it would be prudent to add the troubled company as a party, particularly if slow or incomplete compliance with disclosure and reporting requirements are an issue. For example, additional enforcement mechanisms could be added and troubled company cooperation with the prospective receiver and the guaranty funds could be spelled out in more detail.

EXPOSURE DRAFT 07/18/22

prospective liquidation proceedings and the insurance resolution mechanism. As further protection for the privileged status of such confidential information, the guaranty funds are obligated under the MOU to defend against any attempt to discover any confidential or privileged information shared with them and to notify the other parties to the MOU of discovery or disclosure request.

The proposed MOU is a template that contains the essential terms of a confidential information sharing agreement and can easily be customized to address specific issues that may arise in the course of addressing troubled company concerns and in planning for liquidation.

EXPOSURE DRAFT 07/18/22

MEMORANDUM OF UNDERSTANDING

This Memorandum of Understanding (“MOU”) is among the [state] Department of Insurance (“DOI”), the [Receiver of the insolvent company – if appointed] and the [guaranty fund in the state of domicile of the troubled company, the other insurance guaranty funds which have executed this agreement (collectively “Guaranty Funds”) and the National Conference of Insurance Guaranty Funds.(NCIGF)

Definitions:

- 1.1 “Agreement” or “MOU” refers to this Memorandum of Understanding;
- 1.2 “Confidential Information” refers to any:
 - a) documents, data or other information relating to any domestic insurance company in the State of [state] where the Commissioner has determined that the financial condition of such company creates a material risk of Liquidation that are not publicly available or public records, whether written or not, including but not limited to claims files and data; financial analyses, modeling and projections; trade secrets, technical processes and know-how; agency agreements, arrangements, accounts, proposals, lists, and other information; policyholder lists and information; costs and pricing information; internal procedures, strategies and plans; and computer programs;
 - b) work product or other information regarding any such Company that is confidential and/or privileged;
 - c) communications between the Parties regarding any potential or pending legal actions involving any such company that is a threat to such companies’ solvency; and
 - d) specifically contemplates information received by the Insurance Commissioner pursuant to its examination authority [insert state adoption of NAIC Model Law 390], which is “confidential by law confidential by law and privileged, shall not be subject to [insert open records, freedom of information, sunshine or other appropriate phrase], shall not be subject to subpoena, and shall not be subject to discovery or admissible in evidence in any private civil action.”
- 1.3 “Evaluation Material” refers to all information, oral or written, including but not limited to Confidential Information as defined herein, that is furnished to Guaranty Funds or NCIGF under the terms of this Agreement, and all analyses, compilations, studies, or other materials prepared by Guaranty Funds or NCIGF containing or based in whole or in part upon such information. “Evaluation Material” includes but is not limited to information on the financial condition of the company, information data systems utilized and condition of the data, location of data files, involved third party administrators, UDS test files that may be created, policy forms – especially those for unique or complex lines of business, company organization charts, claims counts and liability amounts by line and by state, and lists of cases in trial, attorney contacts and any other information appropriate to enable the Guaranty Funds to fulfill their statutory duties upon liquidation. This material shall be updated from time to time as appropriate.
- 1.4 “Company or Companies” refers to any domestic property and casualty insurance company in the State of [state] where the Commissioner has determined the financial condition of such company creates a material risk of Liquidation.
- 1.5 “Commissioner” refers to the Commissioner of Insurance of the State of [state].

EXPOSURE DRAFT 07/18/22

- 1.6 “Party” and “Parties” refer to the Commissioner, the Receiver, if appointed, the signatory Guaranty Funds and the NCIGF.
- 1.7 “Receivership Court” refers to the [court with jurisdiction over the receivership]
- 1.8 “Receivership” refers to the rehabilitation or liquidation of any domestic insurance company in the State of [state].
- 1.9 “Receiver” refers to [name of deputy receiver if appointed] or any of his or her successors.
- 1.10 “Covered Claim” shall have the same meaning as contained in the applicable statutes of the Guaranty Funds.

II. Recitals

- 2.1 The Commissioner is responsible for the financial regulation of Companies. From time-to-time the financial condition of one or more of such Companies creates a material risk of Liquidation.
- 2.2 Should a Receivership occur of a Company, the Commissioner may appoint a special deputy receiver who will be responsible for the handling of such Receivership.
- 2.3 If the Receivership of a Company includes an order of liquidation with a finding of insolvency or if other statutory requirements are met, the Guaranty Funds will have the responsibility for the payment of “Covered Claims” arising from such Receivership.
- 2.4 The Parties agree that in order to properly prepare for any Receivership, to provide for a smooth transition to liquidation should it become required, and in order to avoid delay in the payment of “Covered Claims,” it is essential to share Confidential Information among them with respect to any Company the Commissioner determines is at material risk of Liquidation.
- 2.5 It is agreed by the Parties that, subject to the Commissioner’s discretion, the Commissioner can freely consult with the Receiver (if appointed), the Guaranty Funds, and NCIGF, with respect to any Company, including but not limited to, the dissemination of Confidential Information and Evaluation Material as defined herein. It is understood that such consultations are to be held in strictest confidence and the Commissioner may, in his or her discretion, withhold the name of the Company being discussed from the Guaranty Funds and the NCIGF.
- 2.6 The Guaranty Funds have determined that in order to protect consumers and to better fulfill their mission (*see* cite to applicable Guaranty Funds’ statutes) it is necessary and proper for them to enter into this Agreement and likewise it is necessary and proper for the NCIGF, as a membership organization that supports the Guaranty Funds in their mission, to enter into this Agreement. The DOI and Receiver have determined that this Agreement enables them to better serve the insurance consumers in [involved states] and to better protect them from the adverse consequences of a Company liquidation.

III. Use and Treatment of Evaluation Material

- 3.1 Subject to the terms of this Agreement, the Commissioner and Receiver will grant the Guaranty Funds and NCIGF access to Evaluation Material as they determine is appropriate. The Evaluation Material shall be used by the Guaranty Funds and NCIGF to determine potential obligations of the Guaranty Funds, prepare for the possible assumption of such obligations, and to perform such

EXPOSURE DRAFT 07/18/22

- statutory obligations in the event they become obligated to pay “Covered Claims” under policies of insurance issued by a Company. The Guaranty Funds and NCIGF shall be allowed to copy such Evaluation Material for their own use consistent with the terms of this Agreement.
- 3.2 The Guaranty Funds and the NCIGF agree to maintain the confidentiality of all Evaluation Material provided to them, and of any privileges with respect to such information. The Guaranty Funds and the NCIGF agree not to disclose any Evaluation Material to any person or entity, except as expressly provided herein.
- 3.3 The Guaranty Funds and the NCIGF may share Evaluation Material with their respective counsel, consultants or agents as they deem necessary, provided that such persons agree to comply with terms of this Agreement, including but not limited to the remedies provided under Part IV. In the event of a breach of this Agreement by any person to whom Evaluation Material has been provided, the Party or Parties providing such information shall also remain liable for the breach.
- 3.4 The Guaranty Funds and the NCIGF agree that no Evaluation Material shall be provided to any insurance companies or the owners, directors, officers, employees, agents, representatives, or affiliates of any insurance companies, except as necessary to discharge statutory duties, for official action or consideration by the Board of Directors.
- 3.5 In the event that the Guaranty Funds or the NCIGF are served with process seeking the production of Evaluation Material, including but not limited to a subpoena or order of a court of competent jurisdiction, an investigation by a government entity, or discovery demand issued in connection with any action, the Guaranty Funds and NCIGF, as appropriate, shall notify the Commissioner and Receiver in writing as promptly as practicable. The Guaranty Funds and NCIGF, as appropriate, shall take reasonable actions to protect the confidentiality and, if applicable, the privileged status of such information, unless otherwise requested by the Commissioner or the Receiver. If a protective order or other remedy is not obtained prior to the date that compliance with the request is legally required, the Guaranty Funds and the NCIGF, as appropriate, will furnish only that portion of the Evaluation Material or take only such action as is legally required.

IV. Remedies

- 4.1 The Guaranty Funds and the NCIGF agree that money damages would not be a sufficient remedy for a breach of this Agreement, and that the Commissioner or Receiver shall be entitled to equitable relief, including injunctive relief, as a remedy for such breach. Such remedy shall be in addition to all other remedies available at law or in equity, and shall not be deemed the exclusive remedy for a breach of this Agreement. Any action to enforce this Agreement shall be brought in the [appropriate court for the proceeding].
- 4.2 In the event of an action alleging a breach of this Agreement, the prevailing party shall be entitled to reimbursement for its reasonable attorney’s fees. Any attorney’s fees awarded to the Guaranty Funds or the NCIGF shall be handled as an administrative expense in the proceeding, subject to [cite to applicable law]. Any attorney’s fees awarded to the Commissioner or Receiver shall be paid from the Guaranty funds and NCIGF’s funds, and shall not be submitted as a claim in the proceeding.
- 4.3 No failure or delay by any Party in exercising any right, power or privilege shall operate as a waiver thereof. Any exercise of a right, power or privilege shall not be considered to preclude any other or further exercise thereof.

EXPOSURE DRAFT 07/18/22

- 4.4 There shall be no liability on the part of the Commissioner or Receiver or the Company(ies) to the Guaranty Funds or NCIGF relating to or arising from the Evaluation Material or any other documents, material, information or communications provided under this Agreement.

V. Warranties and Representations

- 5.1 The Commissioner, the Guaranty Funds, and the NCIGF to the extent consistent with their statutory and other obligations, shall in good faith cooperate and communicate promptly with each other with respect to the performance of their duties under this Agreement.
- 5.2 The Guaranty Funds and the NCIGF represent that they have the authority to enter into this Agreement and fulfill their obligations under this Agreement.
- 5.3 Each undersigned person represents that he or she is authorized to sign this Agreement on behalf of the Party he or she represents.
- 5.4 The Guaranty Funds and the NCIGF understand and acknowledge that the Commissioner or Receiver makes no representations or warranties as to the accuracy or completeness of any Evaluation Material provided under this Agreement.
- 5.5 The Guaranty Funds and NCIGF understand and acknowledge that the Evaluation Material may include information furnished by consultants, access to which will require additional agreements with such consultants.

VI. Termination

- 6.1 This Agreement may be terminated at any time by agreement among the Parties or by any single Party in writing with 30 days' notice, provided that all Evaluation Material obtained prior to such termination shall remain confidential, unless otherwise agreed by the Parties, and except as otherwise provided by law. Further, this Agreement shall be terminated upon a determination in writing by the Commissioner or the Receiver that the Company no longer presents a material risk of Liquidation.
- 6.2 The Guaranty Funds and the NCIGF are permitted to use Evaluation Material in the manner and for purposes described herein until delivery by the Receiver or Commissioner of a written notice specifying the date of termination of this Agreement. Upon a liquidation order wherein one or more Guaranty Funds are triggered this Agreement shall terminate in all respects without the obligation to destroy Evaluation material or maintain it as confidential.
- 6.3 Except as provided in Paragraph 6.2, in the event of a termination of this Agreement, the Guaranty Funds and NCIGF shall immediately undertake to destroy all Evaluation Materials, and all copies, summaries, analyses and notes of the contents or parts thereof, and shall provide an affidavit attesting to the destruction of all such Evaluation Materials being provided to the Receiver, if appointed, and the Commissioner within 30 days after termination, and no part thereof shall be retained by the Guaranty Funds or NCIGF in any form without the prior written consent of the Commissioner or Receiver.

VII. Miscellaneous Provisions

EXPOSURE DRAFT 07/18/22

- 7.1 Nothing in this Agreement shall be deemed to create an attorney-client relationship between any Party’s counsel and any other Party.
- 7.2 This Agreement shall be governed by and construed in accordance with the laws of the State of [state of domicile of the insolvency].
- 7.3 This Agreement may be executed in multiple counterparts, each of which shall be deemed an original for all purposes, and all of which together shall constitute one and the same instrument.
- 7.4 This Agreement shall be effective upon the date signed by each party and shall also apply to any and all Evaluation Material that has previously been shared between the Parties.
- 7.5 All communications under this Agreement shall be in writing and shall be sent by email to the addresses specified below. A copy of any such notice shall also be personally delivered or sent by either first class registered or certified U.S. Mail, return receipt requested, postage prepaid, or by a bonded mail delivery service, to the address set out below:

The Commissioner:

[name, address, phone, email address]

The Receiver:

[name, address, phone, email address]

Guaranty Funds:

[list of contact information for signatory funds]

- 7.6 The Parties agree to meet periodically, at least annually, to discuss issues arising under this Agreement and its implementation with respect to any specific Company.

Adopted by the Executive (EX) Committee and Plenary, [REDACTED], [REDACTED], [REDACTED]

Adopted by the Financial Condition (E) Committee, [REDACTED], [REDACTED], [REDACTED]

Adopted by the Receivership and Insolvency (E) Task Force, Aug. 11, 2022

2023 Proposed Charges

RECEIVERSHIP AND INSOLVENCY (E) TASK FORCE

The mission of the Receivership and Insolvency (E) Task Force is to be administrative and substantive as it relates to issues concerning insurer insolvencies and insolvency guarantees. Such duties include, without limitation: 1) monitoring the effectiveness and performance of state administration of receiverships and the state guaranty fund system; 2) coordinating cooperation and communication among state insurance regulators, receivers, and guaranty funds; 3) monitoring ongoing receiverships and reporting on such receiverships to NAIC members; 4) developing and providing educational and training programs in the area of insurer insolvencies and insolvency guarantees to state insurance regulators, professionals, and consumers; 5) developing and monitoring relevant model laws, guidelines, and products; and 6) providing resources for state insurance regulators and professionals to promote efficient operations of receiverships and guaranty funds.

Ongoing Support of NAIC Programs, Products or Services

1. The **Receivership and Insolvency (E) Task Force** will:
 - A. Monitor and promote efficient operations of insurance receiverships and guaranty associations.
 - B. Monitor and promote state adoption of insurance receivership and guaranty association model acts and regulations, and monitor other legislation related to insurance receiverships and guaranty associations.
 - C. Provide input and comments to the International Association of Insurance Supervisors (IAIS), the Financial Stability Board (FSB), or other related groups on issues regarding international resolution authority.
 - D. Monitor, review, and provide input on federal rulemaking and studies related to insurance receiverships.
 - E. Provide ongoing review of the *Receiver's Handbook for Insurance Company Insolvencies* (Receiver's Handbook), other related NAIC publications, and the Global Receivership Information Database (GRID), and make any necessary updates.
 - F. Monitor the work of other NAIC committees, task forces, and working groups to identify and address any issues that affect receivership law and/or regulatory guidance.
 - G. Perform additional work as directed by the Financial Condition (E) Committee and/or received through referral by other groups.
2. The **Receivership Financial Analysis (E) Working Group** will:
 - A. Monitor receiverships involving nationally significant insurers/groups to support, encourage, promote, and coordinate multistate efforts in addressing problems.
 - B. Interact with the Financial Analysis (E) Working Group, domiciliary regulators, and lead states to assist and advise as to what might be the most appropriate regulatory strategies, methods, and/or action(s) regarding potential or pending receiverships.
3. The **Receivership Law (E) Working Group** will:
 - A. Review and provide recommendations on any issues identified that may affect states' receivership and guaranty association laws (e.g., any issues that arise because of market conditions; insurer insolvencies; federal rulemaking and studies; international resolution initiatives; or the work performed by or referred from other NAIC committees, task forces, and/or working groups).
 - B. Discuss significant cases that may affect the administration of receiverships.

4. The **Receiver's Handbook (E) Subgroup** ~~of the Receivership and Insolvency (E) Task Force~~ will:
- A. Complete the Review of the Receiver's Handbook to identify areas where information is outdated, updates are required, or additional guidance is needed. Based on this review, draft and propose recommended edits to the Receiver's Handbook. Complete by the 2023~~2~~ Fall National Meeting.

July 25, 2022

The Reinsurance (E) Task Force met July 25, 2022. The following Task Force members participated: Chlora Lindley-Myers, Chair, and John Rehagen (MO); Chris Nicolopoulos, Vice Chair, represented by Doug Bartlett and Pat Gosselin (NH); Lori K. Wing-Heier represented by David Phifer (AK); Mark Fowler represented by Linda Wilson (AL); Alan McClain represented by Mel Anderson and Leo Liu (AR); Ricardo Lara represented by Monica Macaluso (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Wanchin Chou (CT); Trinidad Navarro represented by Rylynn Brown (DE); David Altmaier represented by Robert Ridenour (FL); John F. King (GA); Doug Ommen represented by Daniel Mathis (IA); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Tom Travis (LA); Gary D. Anderson represented by Christopher Joyce (MA); Timothy N. Schott and Robert Wake (ME); Troy Downing represented by Steve Matthews (MT); Mike Causey represented by Lori Gorman (NC); Jon Godfread represented by Patrick Hendrickson (ND); Eric Dunning represented by Jill Gleason (NE); Marlene Caride represented by Diana Sherman (NJ); Russell Toal (NM); Adrienne A. Harris represented by Ahmed Saleh (NY); Judith L. French represented by Dale Bruggeman (OH); Elizabeth Kelleher Dwyer represented by Ted Hurley (RI); Michael Wise represented by Daniel Morris (SC); Cassie Brown represented by Jamie Walker (TX); Jon Pike represented by Jake Garn (UT); Scott A. White represented by David Smith and Doug Stolte (VA); Kevin Gaffney represented by Karen Ducharme (VT); and Nathan Houdek represented by Mark McNabb (WI).

1. Adopted its May 16 and Spring National Meeting Minutes

The Task Force met May 16 to adopt revisions to the *Uniform Checklist for Reciprocal Jurisdiction Reinsurers*. Superintendent Toal made a motion, seconded by Ms. Sherman, to adopt the Task Force's May 16 (Attachment One) and March 22 (*see NAIC Proceedings – Spring 2022, Reinsurance (E) Task Force*) minutes. The motion passed unanimously.

2. Adopted its 2023 Proposed Charges

Ms. Macaluso made a motion, seconded by Mr. Phifer, to adopt the 2023 proposed charges of the Task Force and the Reinsurance Financial Analysis (E) Working Group (Attachment Two). The motion passed unanimously.

3. Adopted the Report of the Reinsurance Financial Analysis (E) Working Group

Mr. Kaumann stated that the Working Group meets in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings. He stated that the Working Group met May 18 to approve one certified reinsurer and eight reciprocal jurisdiction reinsurers for passporting.

Mr. Kaumann stated that the Working Group has now approved 22 reciprocal jurisdiction reinsurers for passporting and plans to meet several more times in 2022 as more applications are received. He noted that the list of passported reinsurers can be found on the Certified and Reciprocal Jurisdiction Reinsurer web page. He stated that NAIC staff have revised the web page to better meet the needs of state insurance regulators, industry, and other interested parties. He stated that NAIC staff have created a point-of-contact list to be included on that web page, which includes the single best contact for each state for any issues regarding reciprocal jurisdiction reinsurers and certified reinsurers. He requested that each state provide its point of contact person to NAIC staff.

Mr. Kaumann made a motion, seconded by Mr. Wake, to adopt the Working Group's report. The motion passed unanimously.

4. Received a Status Report on the Reinsurance Activities of the Mutual Recognition of Jurisdictions (E) Working Group

Mr. Wake stated that the Working Group has met twice since the Spring National Meeting to work on group capital calculation (GCC) issues that are unrelated to the Task Force. He stated that the Working Group plans to meet later this year to reapprove the status of the seven existing qualified jurisdictions and the three reciprocal jurisdictions that are not subject to either the *Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance* (EU Covered Agreement) or *Bilateral Agreement Between the United States of America and the United Kingdom on Prudential Measures Regarding Insurance and Reinsurance* (UK Covered Agreement), collectively referred to as the Covered Agreements. He stated that NAIC staff established a due diligence review process in 2021 and provided a recommendation to the Working Group that the existing qualified jurisdictions and reciprocal jurisdictions not subject to a Covered Agreement should retain their status, and this recommendation was then adopted by the Working Group. He stated that the Working Group will perform this same review toward the end of 2022 and will report this to the Task Force at the Fall National Meeting. Mr. Wake stated that the Working Group would meet if there were any updates with the qualified jurisdiction review of the Republic of Korea.

5. Received a Status Report on the States' Implementation of the 2019 Revisions to Model #785 and Model #786

Dan Schelp (NAIC) stated that as of July 21, 54 NAIC jurisdictions have adopted the 2019 revisions to the *Credit for Reinsurance Model Law* (#785), while one jurisdiction has action under consideration. He noted that since the maps were last published, the U.S. Virgin Islands were able to adopt their legislation and that American Samoa is considering issuing an order that would bring it into compliance with the Covered Agreements. He stated that 49 jurisdictions have adopted the revisions to the *Credit for Reinsurance Model Regulation* (#786) and that three jurisdictions currently have action pending. He noted that the remaining three jurisdictions will issue their regulations soon. He stated that he is optimistic that all NAIC jurisdictions will have their laws, regulations, or orders in place by Sept. 1. He stated that the maps showing the adoption of the 2019 revisions to Model #785 and Model #786 were included in the meeting materials (Attachment Three).

Mr. Schelp stated that he has held discussions with the Federal Insurance Office (FIO) to talk about the status of the federal preemption reviews that were being conducted. He stated that the federal Dodd-Frank Wall Street Reform and Consumer Protection Act lays out a process that the FIO must go through before it can make any federal preemption determinations. He noted that the FIO has publicly praised the NAIC's efforts, stating that the NAIC has made tremendous progress, and that each state has made a sincere effort to adopt the spirit of the models. He stated that the FIO is focusing its review on technical details in the law and regulation, and that there might need to be some clean-up made by the states after the reviews are completed. He noted that these have been constructive conversations with the FIO, and that the NAIC does not have reason for concern that this will lead to any federal preemption determinations. Mr. Schelp asked that if any state is contacted directly by the FIO, it should reach out to NAIC staff.

Mr. Schelp stated that after the law and regulation have been passed by the legislatures, there are several additional steps that must be completed. He noted that each state needs to establish a web page that contains the list of reciprocal jurisdictions and list of reciprocal jurisdiction reinsurers operating in its state. He noted that the *NAIC List of Reciprocal Jurisdictions* and *NAIC List of Reciprocal Jurisdiction Reinsurers* are posted on the Certified and Reciprocal Jurisdiction web page and on the Task Force's web page. He added that NAIC staff have created a point of contact list of individual contacts in each state that reinsurers and consumers may contact if they have any questions on reciprocal jurisdiction reinsurers. He noted that NAIC staff will contact states that have

not created their web page to assist in the process. Mr. Schelp recommended that if a state approves a reciprocal jurisdiction reinsurer that is not intended to be passported, the information should still be sent to the Reinsurance Financial Analysis (E) Working Group, which will collect this information to maintain uniformity in the reviews of the reinsurers and to ensure compliance with the Covered Agreements.

6. Received a Status Report on the States' Implementation of Model #787

Jake Stultz (NAIC) stated that the *Term and Universal Life Insurance Reserve Financing Model Regulation (#787)* becomes an accreditation standard on Sept. 1, with enforcement beginning on Jan. 1, 2023. He noted that as of July 8, 20 jurisdictions have adopted Model #787, with another four jurisdictions with action under consideration. He stated that the map showing the current adoption status for Model #787 was included in the meeting materials (Attachment Four) and added that the adoption of Model #787 is unrelated to the Covered Agreements and is not potentially subject to federal preemption. Mr. Stultz noted that Model #787 mirrors *Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation (AG 48)*, and that under the accreditation standards, a state may meet the requirements through an administrative practice, such as an actuarial guideline. He added that if a state adopts Model #787, it also will need to adopt Section 5B(4) of Model #785.

Mr. Schelp stated that some states are using AG 48 and will issue an insurance bulletin to announce this practice. He added that the map will later be updated to reflect states that are adopting in this manner.

Having no further business, the Reinsurance (E) Task Force adjourned.

Draft: 5/26/22

Reinsurance (E) Task Force
Virtual Meeting
May 16, 2022

The Reinsurance (E) Task Force met May 16, 2022. The following Task Force members participated: Chlora Lindley-Myers, Chair, and John Rehagen (MO); Chris Nicolopoulos, Vice Chair, represented by Pat Gosselin (NH); Jim L. Ridling represented by Jennifer Haskell (AL); Alan McClain represented by Leo Liu (AR); Ricardo Lara represented by Monica Macaluso (CA); Michael Conway represented by Rolf Kaumann (CO); Andrew N. Mais represented by Joel Henry (CT); David Altmaier represented by Virginia Christy (FL); John F. King represented by Martin Sullivan (GA); Doug Ommen represented by Kim Cross (IA); Amy L. Beard represented by Roy Eft (IN); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by John Turchi (MA); Kathleen A. Birrane represented by Lynn Beckner (MD); Timothy N. Schott represented by Robert Wake (ME); Mike Causey represented by Jackie Obusek (NC); Jon Godfread represented by Matt Fischer (ND); Eric Dunning represented by Lindsay Crawford (NE); Marlene Caride represented by Diana Sherman and John Tirado (NJ); Adrienne A. Harris represented by Michael Campanelli (NY); Judith L. French represented by Dale Bruggeman (OH); Alexander S. Adams Vega represented by Brenda Perez (PR); Elizabeth Kelleher Dwyer represented by Ted Hurley (RI); Michael Wise represented by Daniel Morris (SC); Cassie Brown represented by Jamie Walker (TX); Jon Pike represented by Jake Garn (UT); Scott A. White represented by David Smith and Doug Stolte (VA); and Nathan Houdek represented by Mark McNabb (WI).

1. Exposed Revisions to the Uniform Checklist

Mr. Rehagen stated that the Reinsurance Financial Analysis (E) Working Group met March 3 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss the revisions to the *Uniform Checklist for Reciprocal Jurisdiction Reinsurers* (Uniform Checklist). The Working Group also met March 14 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings. Then, the Working Group conducted an e-vote to adopt the draft revisions to the Uniform Checklist. The Task Force met March 22 to expose the Uniform Checklist (Attachment One-A) for a 30-day public comment period.

Mr. Rehagen stated that one comment letter was received from the International Underwriting Association of London (IUA) (Attachment One-B). He stated that the comment letter did not propose revisions to the exposed document but included comments on the procedural usage of Schedule F and Schedule S data when analyzing potential reciprocal jurisdiction reinsurers. He noted that when performing a review, NAIC staff will complete a slow-pay analysis with respect to U.S. domiciled insurers by reviewing their Schedule F and Schedule S. For reinsurers that are domiciled outside the U.S., the reciprocal jurisdiction reinsurers are to file Form CR-F and Form CR-S, which are the same documents that are now required for certified reinsurers. Mr. Rehagen stated that this is consistent with the new *ReFAWG Review Process for Passporting Certified and Reciprocal Jurisdiction Reinsurers*. He stated that during the review of reciprocal jurisdiction reinsurers, Schedule F and Schedule S data will be used to review U.S. claims, and if there is an issue with slow payment of U.S. claims, the reviewers will request information directly from the reinsurer or its supervisor.

Mr. Kaumann made a motion, seconded by Ms. Crawford, to adopt the revisions to the Uniform Checklist. The motion passed unanimously.

Mr. Rehagen stated that NAIC staff have created a point-of-contact list that is included on the *Certified and Reciprocal Jurisdiction Reinsurers* web page, which includes a single best contact for each state for any issues

regarding reciprocal jurisdiction reinsurers and certified reinsurers. He requested that each state provide their point of contact person to Jake Stultz (NAIC).

Having no further business, the Reinsurance (E) Task Force adjourned.

Draft Revisions Approved by the Reinsurance Financial Analysis (E) Working Group on March 14, 2022

Uniform Checklist for Reciprocal Jurisdiction Reinsurers

Reciprocal Jurisdiction Reinsurer Information:
 Company Name:
 Address:
 Primary Contact:
 Domiciliary Jurisdiction / Supervisory Authority:
 Applicable Lines of Business:

I. Filing Requirements for “Lead State” of Reciprocal Jurisdiction Reinsurer

Check appropriate box:

- Initial Filing Annual Filing

The “Lead State” will uniformly require assuming insurers to provide the following documentation so that other states may rely upon the Lead State’s determination:

Citation to State Law / Regulation	Requirements	Y or N	Reference and Supporting Documents
Model #786 § 9A & B Model #785 §2F(1)(a)	<p>Status of Reciprocal Jurisdiction: The assuming insurer must be licensed to write reinsurance by, and has its head office or is domiciled in, a Reciprocal Jurisdiction that is listed on the <i>NAIC List of Reciprocal Jurisdictions</i>:</p> <ul style="list-style-type: none"> • A non-U.S. jurisdiction that is subject to an in-force Covered Agreement with the United States; • A U.S. jurisdiction that meets the requirements for accreditation under the NAIC Financial Standards and Accreditation Program; • A Qualified Jurisdiction that has been determined by the commissioner to meet all applicable requirements to be a Reciprocal Jurisdiction. 		The Reciprocal Jurisdiction Reinsurer should identify which type of jurisdiction it is domiciled in and provide any documentation to confirm this status if requested by the commissioner.
Model #786 § 9C(2)	<p>Minimum Capital and Surplus: The assuming insurer must have and maintain on an ongoing basis minimum</p>		

Uniform Checklist for Reciprocal Jurisdiction Reinsurers

~~Approved by the Reinsurance (E) Task for on June 9, 2020~~

Citation to State Law / Regulation	Requirements	Y or N	Reference and Supporting Documents
	the assuming insurer, and reinsurance recoverable on paid and unpaid losses by the assuming insurer. This is for purposes of evaluating Prompt Payment of Claims.		<u>(property/casualty) and/or Schedule S (life and health). Applicants domiciled outside the U.S. may provide this information using Form CR-F (property/casualty) and/or Form CR-S (life and health), which ReFAWG considers sufficient to meet this requirement.</u>
Model #786 § 9C(6) Model #785 §2F(1)(f)	<p>Prompt Payment of Claims: The assuming insurer must maintain a practice of prompt payment of claims under reinsurance agreements. The lack of prompt payment will be evidenced if any of the following criteria is met:</p> <ul style="list-style-type: none"> • More than fifteen percent (15%) of the reinsurance recoverables from the assuming insurer are overdue and in dispute as reported to the commissioner; • More than fifteen percent (15%) of the assuming insurer’s ceding insurers or reinsurers have overdue reinsurance recoverable on paid losses of 90 days or more which are not in dispute and which exceed for each ceding insurer \$100,000, or as otherwise specified in a Covered Agreement; or • The aggregate amount of reinsurance recoverable on paid losses which are not in dispute, but are overdue by 90 days or more, exceeds \$50,000,000, or as otherwise specified in a Covered Agreement. 		<u>The calculation for Prompt Payment of Claims is based upon the total global claims of the Reciprocal Jurisdiction Reinsurer, and not based solely on U.S. claims. NAIC staff will perform a slow-pay analysis based upon filings of Schedule F by U.S. domiciled ceding insurers with respect to property reinsurance. The level of detail required to perform a slow pay analysis does not exist in Schedule S with respect to life reinsurance. The Lead State should attempt to obtain this information directly from the Reciprocal Jurisdiction Reinsurer and/or its supervisor.</u>
	<p>Fee: [Insert \$ amount of the fee applicable in this state.]</p>		

Uniform Checklist for Reciprocal Jurisdiction Reinsurers
Approved by the Reinsurance (E) Task for on June 9, 2020

II. Filing Requirements for “Passporting State” of Reciprocal Jurisdiction Reinsurer

In order to facilitate multi-state recognition of assuming insurers and to encourage uniformity among the states, the NAIC has initiated a process called “passporting” under which the commissioner has the discretion to defer to another state’s determination with respect to compliance with this section. Passporting is based upon individual state regulatory authority, and states are encouraged to act in a uniform manner in order to facilitate the passporting process. States are also encouraged to utilize the passporting process to reduce the amount of documentation filed with the states and reduce duplicate filings.

If an NAIC accredited jurisdiction has determined that the conditions set forth under the *Filing Requirements for Lead States* have been met, the commissioner has the discretion to defer to that jurisdiction’s determination, and add such assuming insurer to the list of assuming insurers to which cessions shall be granted credit. The commissioner may accept financial documentation filed with the Lead State or with the NAIC. The following documentation must be filed with the Passporting State:

Citation to State Law / Regulation	Requirements	Y or N	Reference and Supporting Documents
Model #786 § 9E(2) Model #785 §2F(3)	Form RJ-1: An assuming insurer must submit a properly executed Form RJ-1 and additional information as the commissioner may require, except to the extent that they conflict with a Covered Agreement.		<u>Form RJ-1</u>
Model #786 § 9E(1)	Lead State: If an NAIC accredited jurisdiction has determined that the required conditions have been met, the commissioner has the discretion to defer to that jurisdiction’s determination. The commissioner may accept financial documentation filed with another NAIC accredited jurisdiction or with the NAIC in satisfaction of this requirement.		<u>The applicant must provide a copy of the approval letter or other documentation provided to the applicant by the NAIC accredited jurisdiction. The letter should include the state, effective date, and lines of business. The applicant also should have been reviewed and recommended for passporting by ReFAWG.</u>
	Fee: [Insert \$ amount of the fee applicable in this state.]		

Uniform Checklist for Reciprocal Jurisdiction Reinsurers

~~Approved by the Reinsurance (E) Task for on June 9, 2020~~

III. Interaction Between Certified Reinsurers and Reciprocal Jurisdiction Reinsurers

Under Section 8A(5) of the *Credit for Reinsurance Model Regulation* (#786), credit for reinsurance shall apply only to reinsurance contracts entered into or renewed on or after the effective date of the certification of the assuming insurer with respect to Certified Reinsurers. Under Section 2F(7) of the *Credit for Reinsurance Model Law* (#785), credit shall be taken with respect to Reciprocal Jurisdiction Reinsurers only for reinsurance agreements entered into, amended, or renewed on or after the effective date of the statute adding this subsection, and only with respect to losses incurred and reserves reported on or after the later of (i) the date on which the assuming insurer has met all eligibility requirements to be designated a Reciprocal Jurisdiction Reinsurer, and (ii) the effective date of the new reinsurance agreement, amendment, or renewal.

It is expected that certain assuming insurers may be considered to be Certified Reinsurers for purposes of in-force business and Reciprocal Jurisdiction Reinsurers with respect to reinsurance agreements entered into, amended, or renewed on or after the effective date. In addition, these same reinsurers may also have certain blocks of business that are fully collateralized under the prior provisions of Model #785 and Model #786. The NAIC blanks will be amended to reflect the status of these reinsurers with respect to each type of insurance assumed.

Subject: Reinsurance Task Force Exposure of revisions to the Uniform Checklist for Reciprocal Jurisdiction Reinsurers

Dear Messrs. Stultz and Schelp,

Many thanks for the opportunity to submit brief comments on the proposed revised Uniform Checklist for Reciprocal Jurisdiction Reinsurers (the “Revised Checklist”). We do so on behalf of the International Underwriting Association of London (IUA). In sum, the IUA believes that the last round of changes to the Revised Checklist should assist regulators in reviewing and analyzing new and renewal reciprocal reinsurer applications.

Having said this, IUA members hope that while reliance on the CR-F/CR-S reporting forms (which we believe have worked well in the certified reinsurer context) and NAIC Staff’s proposed reviews of U.S. reinsurers’ Schedules F and S will help to quickly surface any “disputed and overdue reinsurance claims [from U.S. cedents] outstanding for 90 days or more,” IUA members also hope that the CR-F/CR-S reports and Schedules F and S information are used primarily in a way that help establish that the non-U.S. reinsurer has or has not breached any of the prompt payment of claims metrics set forth in the Revised Checklist.

If instead the Schedules F and S data are used to try to reconcile to the penny ceding insurers’ books with reciprocal reinsurers’ books, without also applying a *de minimis* standard to eliminate inevitable minor differences that are always present for a variety of reasons, all parties concerned (and including reinsurance brokers as well) could experience considerable frustration, particularly given the increased complexity of Schedules F and S that must now capture a wider array of ceded reinsurance information than ever before (e.g. as to cessions with collateral in the form of funds withheld, single cedent trusts, LOCs or multi-beneficiary reinsurance trusts, reduced collateral for certified reinsurance and now zero collateral for reciprocal reinsurance).

We would be happy to further discuss or to answer any questions that you or colleagues may have. Again, the IUA much appreciates the opportunity to comment.

Yours sincerely,

Tom Dawson

REINSURANCE (E) TASK FORCE
2023 Proposed Charges

The mission of the Reinsurance (E) Task Force is to monitor and coordinate activities and areas of interest that overlap to some extent the charges of other NAIC groups—specifically, the International Insurance Relations (G) Committee.

1. The **Reinsurance (E) Task Force** will:

- A. Provide a forum for the consideration of reinsurance-related issues of public policy.
- B. Oversee the activities of the Reinsurance Financial Analysis (E) Working Group.
- C. Monitor the implementation of the 2011, 2016 and 2019 revisions to the *Credit for Reinsurance Model Law* (#785); and the 2011 and 2019 revisions to the *Credit for Reinsurance Model Regulation* (#786) and the *Term and Universal Life Insurance Reserve Financing Model Regulation* (#787).
- D. Communicate and coordinate with the Federal Insurance Office (FIO), other federal authorities, and international regulators and authorities on matters pertaining to reinsurance.
- E. Consider any other issues related to the revised Model #785, Model #786 and Model #787.
- F. Monitor the development of international principles, standards and guidance with respect to reinsurance. This includes, but is not limited to, monitoring the activities of various groups within the International Association of Insurance Supervisors (IAIS), including the Reinsurance and Other Forms of Risk Transfer Subcommittee, the Reinsurance Mutual Recognition Subgroup and the Reinsurance Transparency Group.
- G. Consider the impact of reinsurance-related federal legislation, including, but not limited to, the federal Nonadmitted and Reinsurance Reform Act (NRRRA) and the Federal Insurance Office Act, and coordinate any appropriate NAIC action.
- H. Continue to monitor the impact of reinsurance-related international agreements, including the “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (EU Covered Agreement) and the “Bilateral Agreement Between the United States of America and the United Kingdom on Prudential Measures Regarding Insurance and Reinsurance” (UK Covered Agreement).

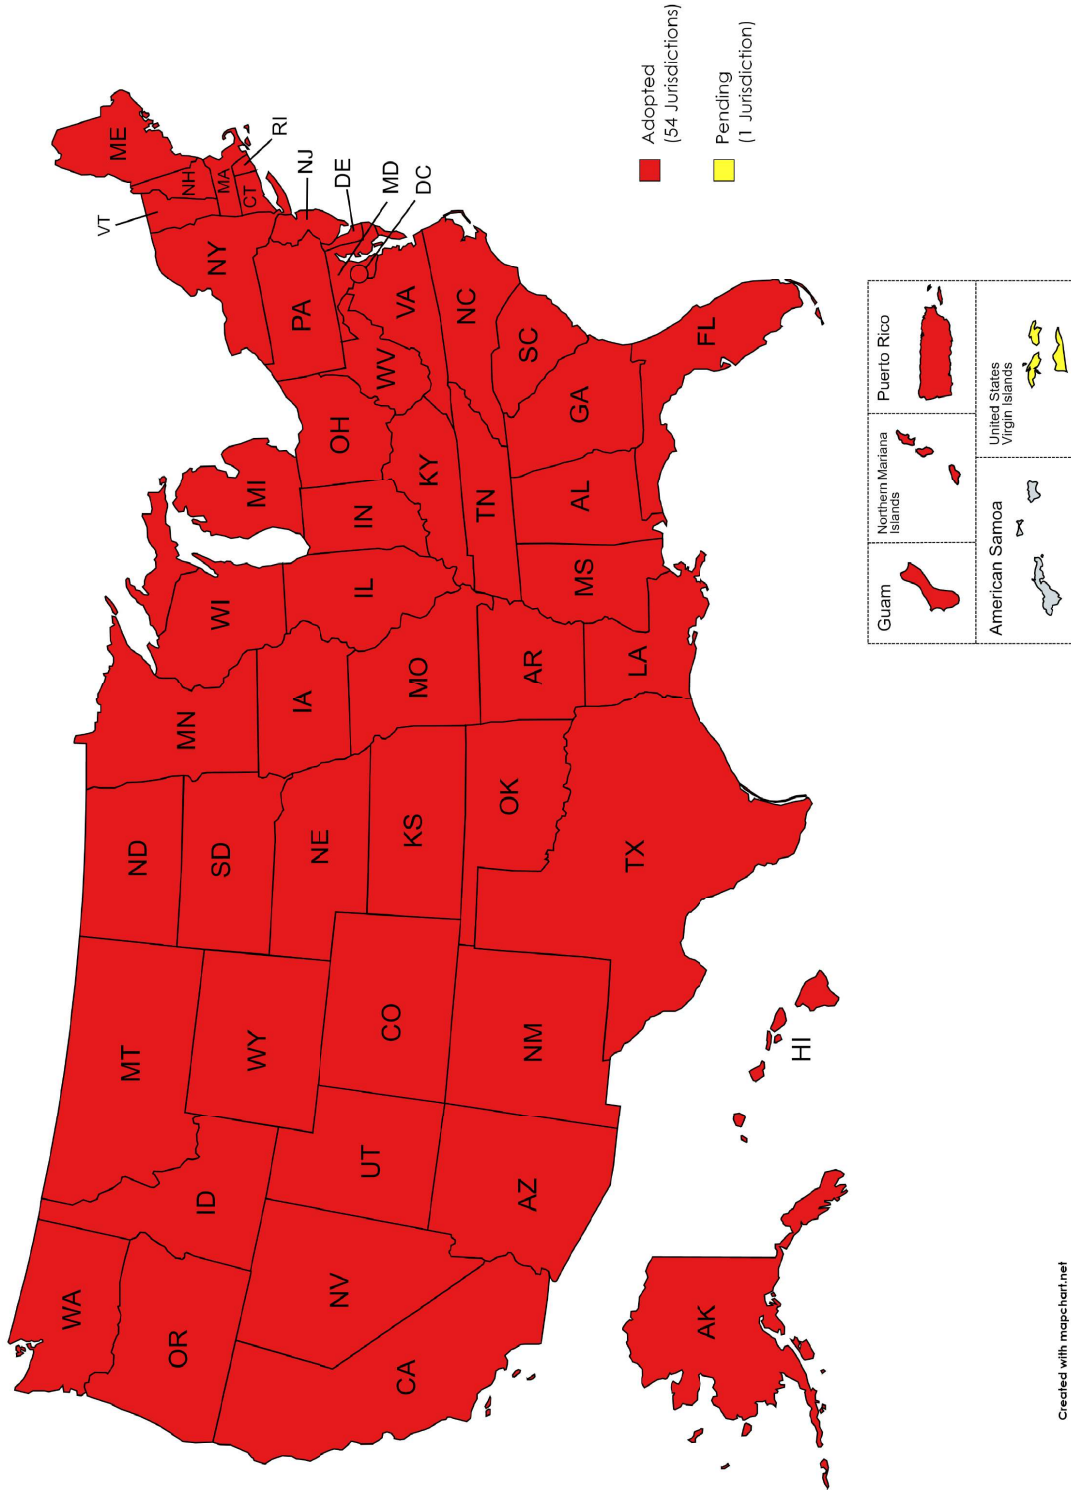

The **Reinsurance Financial Analysis (E) Working Group** will:

1. Operate in regulator-to-regulator session pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings and operate in open session when discussing certified reinsurance topics and policy issues, such as amendments to the Uniform Application for Certified Reinsurers.
2. Provide advisory support and assistance to states in the review of reinsurance collateral reduction applications. Such a process with respect to the review of applications for reinsurance collateral reduction and qualified jurisdictions should strengthen state regulation and prevent regulatory arbitrage.
3. Provide a forum for discussion among NAIC jurisdictions of reinsurance issues related to specific companies, entities or individuals.
4. Support, encourage, promote and coordinate multistate efforts in addressing issues related to certified reinsurers, including, but not limited to, multistate recognition of certified reinsurers.
5. Provide analytical expertise and support to the states with respect to certified reinsurers and applicants for certification.
6. Provide advisory support with respect to issues related to the determination of qualified jurisdictions.
7. Ensure the public passporting website remains current.

8. For reinsurers domiciled in Reciprocal Jurisdictions, determine the best and most effective approaches for the financial solvency surveillance to assist the states in their work to protect the interests of policyholders.

Valuation of Securities (E) Task Force
Portland, Oregon
August 11, 2022

The Valuation of Securities (E) Task Force met in Portland, OR, Aug. 11, 2022. The following Task Force members participated: Doug Ommen, Chair, represented by Carrie Mears (IA); Scott A. White, Vice Chair, represented by Greg Chew (VA); Lori K. Wing-Heier represented by David Phifer (AK); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kenneth Cotrone (CT); Trinidad Navarro represented by Rylynn Brown (DE); David Altmaier represented by Virginia Christy (FL); Dean L. Cameron represented by Eric Fletcher (ID); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Gary D. Anderson represented by John Turchi (MA); Kathleen A. Birrane represented by Matt Kozak (MD); Chlora Lindley-Myers represented by Debbie Doggett and John Rehagen (MO); Eric Dunning represented by Lindsay Crawford (NE); Marlene Caride represented by John Sirovetz (NJ); Adrienne A. Harris represented by Bob Kasinow and Jim Everett (NY); Cassie Brown represented by Amy Garcia (TX); Jon Pike represented by Jake Garn (UT); Mike Kreidler represented by Steve Drutz (WA).

1. Adopted its June 9 and Spring National Meeting Minutes

Ms. Mears said the first item is to consider adoption of the Task Force’s June 9 and Spring National Meeting minutes. Michael M. Monahan (American Council of Life Insurers—ACLI) provided one comment in advance on the Spring National Meeting minutes. He asked that one sentence be clarified on the topic of the use of designations by non-U.S. jurisdictions. It currently reads, “Mr. Monahan said to address two jurisdictions, Japan FSA and the BMA, US dollar private placements are currently a core asset class ... ,” which is not an easily readable sentence. The recommended update to the final minutes will be made and read, “Mr. Monahan said *this proposal is meant* to address two jurisdictions, Japan FSA and the BMA, *where* US dollar private placements are currently a core asset class”

Ms. Doggett made a motion, seconded by Ms. Clements, to adopt the Task Force’s June 9 (Attachment One) and April 5 (*see NAIC Proceedings – Spring 2022, Valuation of Securities (E) Task Force*) minutes. The motion passed unanimously.

2. Discussed Comments and Adopted a Proposed Amendment to the P&P Manual Clarifying the Role of the SVO Regarding Interpreting Accounting and Reporting

Ms. Mears said the next item is to discuss comments and consider adoption of a proposed amendment to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) to clarify the role of the Securities Valuation Office (SVO) regarding interpreting accounting and reporting.

Marc Perlman (NAIC) said the SVO has historically worked with statutory accounting colleagues to make accounting and reporting determinations, which guided whether the SVO could analyze and designate an insurer’s investment. However, the P&P Manual currently provides conflicting guidance on whether the SVO should have a role interpreting accounting and reporting guidance. Paragraphs 32, 33, and 34 of Part One of the P&P Manual state that: 1) the assessment of an investment’s credit risk is distinct from the determination of statutory accounting or reporting under the *Accounting Practices and Procedures Manual* (AP&P Manual); 2) accounting and reporting determinations for investments are the obligation of the insurance company, but state insurance regulators remain the final authority; and 3) the SVO may assign NAIC designations to any investment filed with it for which it has a methodology. However, it is also specified in Part One, paragraph 40 that the SVO is assigned to assess investments reported only on Schedules D and BA and shall communicate to insurers if an investment is

not eligible for those schedules and can therefore not be assigned an NAIC designation. The SVO recommends amending paragraph 40 to provide consistent instructions to the SVO regarding its accounting and reporting guidance authority. The proposal would clarify, in accordance with Part One, paragraph 34, that the SVO can assign NAIC designations to investments that it does not believe are eligible for Schedule D or BA reporting so long as it has the methodology to do so. However, the SVO would have the authority, at its discretion, to notify the appropriate state insurance regulators of any investments that, in its opinion, would not or might not be eligible for reporting on Schedules D or BA. The SVO would also maintain its authority to offer its accounting and reporting opinion, when requested to do so, as part of its Regulatory Treatment Analysis Service (RTAS), it being understood that such opinions would not be authoritative and might not reflect the opinion of the relevant state insurance regulator. Also, to be clear, the SVO would not be required to designate investments that deviate from specific guidelines in the P&P Manual for that investment type. For example, for the SVO to designate a working capital finance investment (WCFI), the investment will still need to meet the very specific WCFI guidelines currently in the P&P Manual.

The SVO recommends adoption of the amendment, as exposed. There was a proposed change submitted by the ACLI, the Private Placement Investors Association (PPIA), and the North American Securities Valuation Association (NASVA) in their joint comment letter that would require the SVO to also notify the filing company or the company on which the SVO is providing its opinion. The SVO strongly recommends that this additional change not be included. The mission of the SVO, as explained in the P&P Manual, is to “support the financial solvency objectives of state regulators.” The SVO’s role is to support state insurance regulators, who, pursuant to paragraph 33, are the ultimate arbiters of accounting and reporting. It is the state insurance regulators’ role to direct insurers on proper accounting and reporting. Additionally, requiring the SVO to inform companies of its regulatory opinion could interfere with the SVO’s ability to have confidential discussions with state insurance regulators on matters that can, and have, involved not only regulatory but, even, criminal action.

Ms. Mears said this is ultimately somewhat of a formality, as the Statutory Accounting Principles (E) Working Group has clearly continually stated that the existence of an NAIC designation does not define the accounting treatment of an investment, and thus formalizes that assumption in the P&P Manual as well. To Mr. Perlman’s point about not making the edit proposed in the ACLI joint comment letter (Attachment Two), the Task Force encourages transparent and collaborative discussion between the SVO and insurers, but there may be times where that is not appropriate, particularly when there is confidential action needed, which is why this requirement should not be put into the P&P manual.

Michael Reis (Northwestern Mutual), on behalf of the ACLI, the PPIA, and NASVA, said these groups understand the rationale for not including that language and support the proposal as suggested.

Chris Anderson (Anderson Insights LLC) said he hopes there would be symmetry between what the analyst at the SVO considers to be a bond and what will appear in the statutory accounting principles (Attachment Three). Designations and credit ratings are expressions of the probability of payment on a scale of 1 to 20. If there is a probability of payment on a scale of 1 to 20, that indicates that the asset is a bond. It does not mean state insurance regulators should not have additional information about what kind of bond it is, but it seems that the most important element of investing in fixed income is whether there will be repayment. When the SVO or another analyst has expressed a considered view, reviewing all the facts and circumstances in an individual asset, it would seem to be compelling evidence. Mr. Anderson also hopes there will be coordination between the Task Force, the Statutory Accounting Principles (E) Working Group, and Capital Adequacy (E) Task Force.

Mr. Phifer made a motion, seconded by Mr. Chew, to adopt the amendment to clarify the roles of the SVO regarding interpreting accounting and reporting (Attachment Four). The motion passed unanimously.

3. Discussed Comments and Adopted a Proposed Amendment to the P&P Manual to Update Part Four for NAIC Designation Categories and Additional Price Points

Ms. Mears said the next item is to discuss comments and consider adoption of a proposed amendment to the P&P Manual to update Part Four for NAIC Designation Categories and additional price points.

Charles A. Therriault (NAIC) said, as noted in the memo, this amendment reflects the adoption of new risk-based capital (RBC) factors for each NAIC Designation Category in 2021 by the Capital Adequacy (E) Task Force and the Financial Condition (E) Committee, and it proposes the technical updates needed in the P&P Manual to reflect a consistent reference to “NAIC Designation Category” and the additional price points needed to determine them. A joint comment letter was received from the ACLI, the PPIA, and NASVA supporting the proposed change (Attachment Five).

Mr. Reis, on behalf of the ACLI, the PPIA, and NASVA said these groups support the proposed changes.

Ms. Brown made a motion, seconded by Ms. Doggett, to adopt the amendment to update Part Four for NAIC Designation Categories and additional price points (Attachment Six). The motion passed unanimously.

4. Discussed Comments and Adopted a Proposed Amendment to the P&P Manual to Update the Definition of PPS

Ms. Mears said next item is to discuss comments and consider adoption of a proposed amendment to the P&P Manual to update the definition of principal protected securities (PPS).

Mr. Perlman said the SVO has proposed amending the P&P Manual definition of PPS because it is seeing transactions that pose similar risks to PPS transactions, as currently defined in the P&P Manual, but which are structured in a way that does not cleanly fit the current definition, which requires “underlying investments.”

These new securities could be described as “synthetic PPS” because they are not issued by a special purpose vehicle (SPV) holding an “underlying” principal protection bond and performance asset. Instead, the security is the direct obligation of a large financial institution, which is obligated to pay principal at maturity and a premium based on the performance of referenced assets, such as equity, fixed-income or futures indices (or a combination thereof), and other financial assets. Though the obligation is solely that of the issuing financial institution, meaning there are no underlying bonds or performance assets, the structure poses the same risk of exposure to a performance asset because the amount of the issuer’s payment obligation is directly dependent on the performance of the referenced indices or assets. Additionally, unlike a PPS transaction with an underlying bond and performance asset, the likelihood of payment of the performance asset premium, whatever the amount might be, is linked directly to the creditworthiness of the issuer.

Following the introduction of this topic at the 2021 Fall National Meeting, comments were received from interested parties that they agreed with the substance behind the proposed amendment but requested that the wording be thoroughly discussed, as was the case with the original P&P Manual definition. At the Spring National Meeting this amendment was re-exposed for an additional 30 days. The current proposed amendment, which reflects comments from industry, expands the PPS definition to capture the structures that did not meet the original definition, yet which posed the same risks.

Mr. Reis, on behalf of the ACLI, the PPIA, and NASVA, said they are very supportive of the proposed amendment and are optimistic that it is structured in a way, principle-based, not unlike the bond definition, which will help address the risk once and for all (Attachment Seven).

Mr. Fletcher made a motion, seconded by Ms. Clements, to adopt the P&P Manual amendment to update the definition of PPS (Attachment Eight). The motion passed unanimously.

5. Received and Discussed a Referral from the Statutory Accounting Principles (E) Working Group on the Adoption of Agenda Item 2021-21

Ms. Mears said the Task Force received a referral from the Statutory Accounting Principles (E) Working Group regarding the adoption of agenda item 2021-21: Related Party Reporting. The purpose of the referral was to notify the Task Force that the Working Group adopted agenda item 2021-21 and recommend that the Task Force assess whether edits to the P&P Manual are necessary resulting from comments raised regarding filing exemption (FE) for affiliated structured securities with unaffiliated credit exposure. The SVO is reviewing the referral to determine whether it needs to develop additional procedures or clarify that the instructions for affiliated investments that do not have underlying affiliated credit exposure qualify for FE. If so, a proposed amendment will be brought to the Task Force for potential exposure at an upcoming meeting. There is no action required from the Task Force at this time, and it will follow up later with any potential amendments.

Ms. Mears directed SVO staff to continue their review and, if needed, draft a proposed P&P Manual amendment to clarify the related party instructions.

6. Received and Discussed a Referral from the Macroprudential (E) Working Group on its Plan for the List of MWG Considerations

Ms. Mears said the Task Force received a referral from the Macroprudential (E) Working Group of the Financial Stability (E) Task Force. The Working Group was charged with coordinating the various NAIC activities related to private equity (PE)-owned insurers. As an initial step, the Working Group developed a list of 13 regulatory considerations, which is included in the materials. The list included three items specific to either the Valuation of Securities (E) Task Force or the work of the SVO.

First, the Risk-Focused Surveillance (E) Working Group is considering the material terms of the investment management agreements (IMAs) and whether they are arm's length or include conflicts of interest. In the state insurance regulator discussions, it was noted, "Given the increasing prevalence of bespoke agreements, does it make sense to tie this work in to the work of the NAIC Valuation of Securities (E) Task Force and/or the NAIC Securities Valuation Office? If yes, how best to do so?"

Second, the Working Group is considering the material increases in privately structured securities, both by affiliated and non-affiliated asset managers, which introduce other sources of risk or increase traditional credit risk, such as complexity risk and illiquidity risk. To assist state insurance regulators in identifying concerns with these investments, state insurance regulators expressed support for the Task Force proposal to obtain market yields to allow a comparison with the NAIC designation. Once such data is available, state insurance regulators ask NAIC staff to develop a tool or report to automate this type of initial screening. Also, state insurance regulators again recognized that the Statutory Accounting Practices (E) Working Group Schedule D revamp work will help in identifying other items for initial screening.

Third, the Risk-Focused Surveillance (E) Working Group is considering the level of reliance on rating agency ratings and their appropriateness for regulatory purposes (e.g., accuracy, consistency, comparability, applicability, interchangeability, and transparency). The Task Force has previously addressed and will continue to address this issue. A small ad hoc group was formed—i.e., key representatives from NAIC staff, state insurance regulators, and industry—to develop a framework for assessing rating agency reviews. This will be a multi-year project, will include discussions with rating agencies, and will include the inconsistent meanings of ratings and terms. State insurance regulators agreed to monitor the work of the ad hoc group in lieu of any specific recommendations at

this time. Recognizing that this will likely be a multi-year project, state insurance regulators reserve the right to raise specific concerns that may arise as the various NAIC committee groups work to address this list of considerations.

No specific action is required by the Task Force at this time other than receiving this referral and continuing its work on these initiatives.

It is important to highlight the Macroprudential (E) Working Group's, the Financial Stability (E) Task Force's, and Life Actuarial (A) Task Force's support for adding fixed income analytical risk measures to investments reported on Schedule D, Part One, a topic that will be discussed later.

7. Discussed, Received Comments, and Exposed the Proposed Task Force Charges for 2023

Ms. Mears said the next item is to discuss and consider for exposure the proposed Task Force charges for 2023. Most of the proposed charges for 2023 are unchanged from 2022. The two additional charges are as follows:

- J. Implement additional and alternative ways to measure and report investment risk.
- K. Establish criteria to permit staff's discretion over the assignment of NAIC designations for securities subject to the filing exempt process (the use of credit rating provider ratings to determine an NAIC designation) to ensure greater consistency, uniformity and appropriateness to achieve the NAIC's financial solvency objectives.

The first new charge is consistent with the fixed income analytical risk measures that will be discussed later. The second new charge is a continuation of the existing charge I that says the Task Force will "implement policies to oversee the NAIC's staff administration of rating agency ratings used in NAIC processes, including staff's discretion over the applicability of their use in its administration of filing exemption." This charge would begin establishing when staff's discretion is permitted.

The new charges will be reordered slightly since charge K is effectively a continuation of charge I and should follow it. Also, the existing charge G refers to the groups the Task Force will coordinate with; the new RBC Investment Risk and Evaluation (E) Working Group will be added.

Stephen Broadie (American Property Casualty Insurance Association—APCIA) said he appreciates the explanation that charge K is supposed to follow charge I. It seemed like it might possibly be a broad grant of authority to the staff, and he wanted to ensure how far that is intended.

Ms. Mears said the charge is to establish that the criteria and any criteria that would be proposed would go through the normal due process of exposure and comment by any interested parties.

Ms. Mears directed staff to re-order the new charges so that the text for charge J and charge K are switched, add the Working Group to charge G, and expose the Task Force's 2023 proposed charges for a 30-day public comment period ending Sept. 12.

8. Received and Discussed Comments and Next Steps on a Proposal to Add Fixed Income Analytical Measures for Investments Reported on Schedule D, Part One

Ms. Mears said the next item is to receive, discuss comments, and consider next steps on a proposal to add fixed income analytical measures for investments reported on Schedule D, Part One. This was first discussed at the Spring National Meeting and at the June 9 meeting. The proposed new fields will not only support the SVO's analytical processes, but they also align with the regulatory initiatives of the Capital Adequacy (E) Task Force, the

Life Actuarial (A) Task Force, and concerns expressed by the Financial Stability (E) Task Force and its Macroprudential (E) Working Group, which looks at industry-level and systemic risk, including their plans to build regulatory dashboards to reflect those risks. The commonly used bond analytical fields in this request are interconnected, one way or another, to the investment risk analysis being performed by these other regulatory groups and will ultimately benefit the NAIC by strengthening its overall regulatory framework. This request is not new and relates back to the 2010 recommendation from the Rating Agency (E) Working Group to look for an alternative way to measure risk, but its implementation is long overdue.

There were concerns raised in the comment letters related to the operational burden of collecting this data and explanations as to the reasons why some investments may have a higher yield spread versus a U.S. Treasury that may not be related to credit risk, such as liquidity or complexity risk. As discussed at the June meeting, while these other risks may exist and influence an investment's yield, the NAIC's current framework does not separately capture them and encapsulates essentially all investment risk into the NAIC designation.

There were also suggestions to use total return measures, such as the Sharpe and Sortino ratios and performance attribution analysis to assess risk. These ratios are better suited for evaluating relative value than they are for identifying market risk premiums related to credit risk. Additionally, the system changes, data, pricing, and other information that would be required for insurers to calculate total return on each security, produce statistically significant annual standard deviations of those returns, as well as the performance attribution of each security would be a substantially greater burden on insurers than the proposed analytical fields. The Task Force respects the feedback from industry that this would be operationally burdensome, and it wants to look at alternative ways to collect this information.

SVO staff prepared a memo to consider optional paths and the operational issues to implementing this proposal. The memo outlines several benefits and two possible paths to deliver this information along with pros and cons of both.

Mr. Therriault said the SVO proposed adding these additional market data fields for bond investments to the annual statement for several reasons. The recommendation was based on 2010 adopted recommendations of the Rating Agency (E) Working Group, the NAIC Investment Analysis Office (IAO) staff's findings regarding the discrepancies between ratings, presented in its Nov. 29, 2021, memo, as well as the work and discussions occurring within other regulatory groups that are also trying to assess insurers' investment risk.

The SVO and the Structured Securities Group (SSG) have raised concerns over the past several years about asset classes and specific securities where a rating agency rating does not adequately reflect the investment risk for NAIC purposes. The SVO will use this analytical information to help it identify investment risk assessment inaccuracies, and, coupled with some level of discretion over NAIC designations derived from ratings, take potential action on them. Without this information and authority to act, there will continue to be a large incentive for RBC arbitrage utilizing CRP ratings. Rating agencies are effectively a de-facto "super regulator" today in that any investment security assigned a rating by any rating agency will automatically be accepted by the NAIC without any regulatory discussion, analysis, oversight, or consideration as to how the rating agency's decisions align to the NAIC's financial solvency framework.

As a ratings consumer with regulatory objectives unique to those of the rating agencies, the SVO believes there are several regulatory benefits to the NAIC collecting this additional market data:

- Assisting in SVO identification of securities with CRP ratings, which may be inconsistent with a security's actual overall risk for NAIC purposes.
- Greater transparency for state insurance regulators into the risks and characteristics of insurer investments and portfolios.

- Incorporation of insurer investment portfolio analysis into the examination process.
- Allowing state insurance regulators to assess the capabilities of an insurer's investment management or risk management processes by reviewing the quality and accuracy of the market data fields.

The SVO believes there are two primary alternatives to providing this information to the NAIC. The first alternative is to assign the SVO the responsibility of producing the analytical data elements requested in the proposal. This would require significant enhancements to the SVO's existing systems—VISION, AVS+, and STS—additional vendor pricing data; investments in new systems to provide the analytical modeling; additional staff for the incremental and ongoing support of these systems, processes, and data, along with reporting capabilities to provide this information to state insurance regulators. Enhancements would also include the ability for insurers to electronically provide the SVO with the full security structure of any investment that the modeling software does not know about. Insurers may still need to report this information on the statutory statements.

The second alternative would be to have insurers calculate this information and provide it to the NAIC, as originally proposed. As noted in the memo, insurer's investment managers should already have the market data fields requested in the proposal. Insurers would need to get this security issue level information (e.g., the Committee on Uniform Securities Identification Procedures [CUSIP]) into their systems that produce their Schedule D filings. This option would require more work up front on the part of the insurers and less work by the NAIC. The ultimate usefulness of the data, whether by state insurance regulators, the SVO, or other interested NAIC groups, could be significantly more limited than in the first option, because of the likely data and modeling inconsistencies between insurers. This alternative would also preclude other analytical processes, such as portfolio cash flow modeling that could be performed by the SVO.

This is an important first step in finding alternative ways to measure insurers' investment risk and reducing the NAIC reliance on rating agency ratings. Both alternatives will involve a commitment of resources either by the NAIC or industry. The major question before the Task Force is whether it has a preferred source for these market data fields; i.e., the NAIC's SVO or insurer reporting. The SVO believes that the first option would provide the most standardization in data and utility to state insurance regulators, the SVO, and other interested NAIC groups, and it would be worth the slightly longer time and cost needed to develop the capabilities.

If, as the SVO recommends, the Task Force prefers the SVO as the source of this analysis, then the next step recommended is a referral to the Financial Condition (E) Committee to request its sponsorship for this initiative and, if provided, begin a fiscal request. If the Committee declines to sponsor the initiative or if insurer reporting is the preferred source, the recommendation is to revert to insurer reporting and direct SVO staff to prepare the Blanks referral.

The SVO believes that the benefits to be gained by state insurance regulators, the SVO, and other NAIC groups with interests in investment risk of bringing this modelling capability in-house greatly outweigh, in the long run, the initial costs and effort to make these capabilities. However, it would require a substantial commitment of NAIC resources.

Ms. Mears said no recommendation is expected from the Task Force today, but rather continued discussion and exposure of the memo just detailed and an opportunity to provide direction at an upcoming meeting. As this is put out for exposure, the Task Force welcomes comments, as these are clearly two options that the staff has really laid out. Any other insights or nuanced response from industry as to the best way to be able to gather this information is welcome, along with an open dialog to find the best solution.

Mr. Anderson said the objectives stated here are certainly laudable. The question is whether it is time now to decide which data needs to be assembled to accomplish those objectives. First, NAIC designations today are the same as nationally recognized statistical rating organization (NRSRO) ratings as they relate to credit risk, ability,

and willingness to pay on a scale of 1 to 20. What the staff memo talks about for the first time here is something that has been discussed as investment risk and now been renamed actual overall risk. Actual overall risk, which includes liquidity and any number of other elements, is interesting to state insurance regulators and important, but it is not part of today's structure. If there is a desire to broaden the notion of overall risk from today's structure, which is credit risk, or default risk, then tools need to be developed for state insurance regulators with them and their input in mind because it would be very unfortunate to develop a dashboard or something that is not useful at the examination level. Before a determination is made as to which data elements should be required, some work should be done on a workbench to see what kind of product can be developed using those inputs. It is not appropriate to use investment risk or actual overall risk to evaluate the performance of the rating agencies. The NRSROs are not looking at the overall investment risk; they are looking at what the NAIC looks at for C1 and R1, and that is default risk. RBC is presently structured to consider and measure default risk; then, within the structure, it deals with things like recovery, concentration, and other elements, but it would be inappropriate to use anything other than the present designation method, which is the same as rating agency metrics to judge a rating agency. There are other ways to judge a rating agency, and that is one of the things the Office of Credit Ratings (OCR) of the U.S. Securities and Exchange Commission (SEC) has offered up—the performance measurement data—which is published in a uniform standard for NRSROs. There are other methods, but the idea of using something other than credit default metrics to evaluate the performance of a rating agency is inappropriate.

Ms. Mears said the intent to the newer option, where the SVO would produce the metrics, would be to implement more of a risk analytic system that has some flexibility, where the data fields do not need to be defined in advance. That is a downside of the Scheduled D proposal with insurers doing the reporting; it limits the data fields. State insurance regulators may discover over time that other measures of analytical risk are more appropriate. That is something to consider as well as these options are reviewed.

Mr. Therriault clarified that NAIC designations are not the same as a rating agency rating. The SVO does not hold itself out as a rating agency, and there should be no comparability or equivalency between the two. NAIC designations reflect the NAIC's financial solvency framework. It is very explicit in Part One of the P&P Manual, which contains the policies of the Task Force, as to what an NAIC designation is and what it is not.

Ms. Mears directed staff to expose the memo on alternatives to add fixed income analytical risk measures to investments reported on Schedule D, Part One for a 30-day public comment period ending Sept. 12.

9. Discussed, Received Comments, and Exposed a Revised Proposed Amendment to the P&P Manual to Update the Definition of Other Non-Payment Risk Assigned a Subscript "S"

Ms. Mears said the next item is to discuss and consider exposing an amendment to the P&P Manual to update the definition of Other Non-Payment Risk assigned a Subscript "S."

Mr. Perlman said at the 2021 Fall National Meeting, the Task Force exposed a proposed amendment, which was intended to clarify the meaning of Other Non-Payment Risk warranting a Subscript "S," with the inclusion of additional illustrations, and add such investments to the ineligible for FE list. At the Spring National Meeting, the SVO was directed to work with industry on technical modifications to this proposed amendment. The SVO met with representatives of the ACLI, the PPIA, and NASVA on April 29, May 6, May 24, and June 17. The revised amendment reflects items discussed during those meetings. However, there was not consensus on three primary issues, each a proposed illustration of an Other Non-Payment Risk warranting a Subscript "S": 1) maturities equal to or exceeding 40 years; 2) certain deferred principal payment features; and 3) certain deferred interest payment features.

The SVO recommends exposing the definitional updates to Part Two of the P&P Manual, which include the new illustrations, and deferring the proposed Part Three instructions to remove securities with Other Non-Payment

Risks from FE. This deferral is intended to give industry sufficient time to provide examples of securities that are publicly rated by different CRPs, which have any of the three characteristics just listed for which there was not consensus, so the SVO can study them.

Ms. Mears said in prior conversations, there was a request from interested parties to just get some additional context on some of the reasoning behind why each of these were listed.

Ms. Mears directed staff to expose the revised proposed amendment to the P&P Manual to update the definition of Other Non-Payment Risk assigned a Subscript “S” for a 30-day public comment period ending Sept. 12.

10. Received Comments on IAO Issue Paper on the Risk Assessment of Structured Securities – CLOs

Ms. Mears said the next item is to receive comments on the IAO paper on the risk assessment of Structured Securities – Collateralized Loan Obligations (CLOs).

Jean-Baptiste Carelus (NAIC) said the SSG made two recommendations to the Task Force. The Task force should direct the modeling of CLOs by the NAIC and direct referrals to the Capital Adequacy (E) Task Force and the RBC Investment Risk and Evaluation (E) Working Group, requesting that those groups consider creating or breaking out the NAIC 6 Designation into three designation categories; i.e., 6.A, 6.B, and 6.C. The rationale for the recommendation is that the aggregate RBC factor for owning all the CLO tranches should be the same as required for owning all the underlying loan collateral. This would eliminate RBC arbitrage that currently exists. The modeling would be based on the current CLO stress tests. The methodology for the stress tests is available on the NAIC website under the Resource Center in the Capital Markets section. Currently, the scenarios and probabilities have not been set, and the SSG will come up with eight to 12 scenarios. The scenarios will probably be various combinations of default rates and recovery stresses.

The Task Force exposed the IAO’s memo with the recommendation from staff, and there were several comments received. Most of the comments were supportive but cautious, and others were concerned, especially about the implication of the recommendation. The SSG grouped the responses into four categories: timing, policy arguments, transparency, and methodology. Under the timing, respondents were concerned that the recommendation would be implemented immediately. To alleviate that concern, the SSG estimated a timeline. In that timeline, the exposure for comments on the proposed P&P Manual amendment would be late 2022. The development and refinement of methodology, excluding the scenarios, would be about late 2022 as well, but going most likely into mid-2023. Then there is the development of scenarios, probabilities, and the RBC tie out. SSG staff estimate that that would also be in 2023, and the process itself would most be the most collaborative and interactive step in the process. The final implementation, which at the earliest is estimated to be about year-end 2023, will possibly be pushed into year-end 2024.

The NAIC process in moving this proposal forward will be collaborative and provide many opportunities for comment from interested parties. The next category of comments is policy arguments. Respondents emphasized the importance of the CLOs to the U.S. capital markets and the historical performance of the asset class. State insurance regulators and staff appreciate and understand the role of insurers and their investments in the U.S. economy and the financial markets. The main priority of state insurance regulators is policyholders and ensuring their protection through prudent financial solvency policies.

As for performance, the historical performance of CLOs has been good; this is especially true for the top of the capital stack. The recommended action is designed to allow insurers to continue participating in the CLO market without the risk that aggressive structuring puts policyholders and the investments in jeopardy. Given the performance of CLOs, some respondents commented that staff have not justified RBC at the 75% and 100% level. The current system works well if the intrinsic price is 70 or above since the highest RBC is currently 30%. A good

example comes from the 2008 financial crisis, where a mezzanine residential mortgage-backed securities (RMBS) tranche was evaluated with an intrinsic price of 5. The resulting RBC was far below the risk evaluated. This may also occur in the residual tranches, such as CLO equity, if cash flows are interrupted to protect senior tranches. There will be plenty of opportunity for commenting about modeling, and there will be plenty of opportunities to discuss the comments related to modeling, transparency, and methodology.

As this process moves forward into modeling, the SSG will expose all proposals with sufficient time for comment and feedback. Staff recommends that the Task Force proceed with the proposal, specifically referring the RBC issue to the RBC Investment Risk and Evaluation (E) Working Group and directing staff to draft P&P Manual language for exposure and direct staff to work with interested parties to fine tune methodology and draw up scenarios and probabilities.

There are three main questions that have been encountered within interactions and comments about this. The first question is whether this is applicable to other structured assets if there are many structured assets. This proposal from staff is purely related to CLOs in terms of risk arbitrage. The recommendation in terms of internal modeling is solely for that purpose. The second question is whether there is sufficient staff and expertise because the work is overwhelming. The SSG has been doing this modeling since 2018 when the first CLO stress test was conducted. Given that this will now be formally put into policy, it will be much easier when the process is deliberately staffed and funded. The final question is how it will work and whether insurers will need to look up a table or database to recognize the arbitrage adjustment. It will work the same way it currently works for RMBS. The insurer would go to the website for the AVS+; download the designation or break points, as appropriate; and determine how to report their tranche.

Ms. Mears said while the modeling itself is a distinct effort from the SVO and the SSG under the Task Force and the creation of RBC would fall to the RBC groups, the Task Force recognizes that the efforts need to be coordinated, and it anticipates ongoing workstreams with constant touch points, as was hopefully reiterated several times. This is meant to be a very transparent process. This initial proposal or exposure was to give the “heads up” that the Task Force is looking at this and to get some initial feedback and start this process. There were some interested parties that thought this was it and that was everything they were going to see. That was certainly not the intent. This will be very deliberative and transparent as the Task Force moves through this process. There will be several points for discussion, exposure, and comment, including starting with the methodologies and moving on to scenarios and probabilities. The RBC groups will have their own timeline as well for looking at potential factors. The Task Force will be referring an issue to the RBC groups, which is the concept that perhaps additional granularity within the NAIC 6 category may be necessary to accurately capture the risk associated with residual tranches. In the Task Force’s recommendation, it suggests that charges higher than 30% are needed. That is something that clearly the RBC groups will look at and decide how to implement. This is expected to be a very interactive process, potentially with multiple iterations in some of these workstreams, and encourage the open dialog that has already occurred with interested parties that want to know what is going to happen and to continue that dialog with those parties.

Ms. Mears said comment letters were received from the American Investment Council (AIC), Athene, Egan-Jones Ratings Company, the Loan Syndications and Trading Association (LSTA), PineBridge Investments, the Structured Finance Association, the Teachers Insurance and Annuity Association of America (TIAA), and the ACLI.

Steven Clayburn (ACLI) said it struck him that there is an issue paper on the stress methodology. The ACLI asked if there will be time to allow for an exposure of that issue paper since it was unaware of that paper or any discussion when the stress testing was done. This would give time to see if the modeling has similarities to what was done for the C1 bond factors that went to the expansion of 20 pieces. The ACLI asked if there would also be an opportunity to have the SSG’s comment letter response exposed so further comments could be provided.

Mr. Carelus said the methodology paper for the CLO stress test was first published back in 2018 after the first time the stress was run. The SSG has run it every year since 2019 and 2020. The CLO stress test methodology paper is available on the NAIC website, under the Resource Center in the Capital Markets Bureau section. Ms. Mears said the CLO stress test methodology will be exposed with the materials on the Task Force web page.

Rebekah Goshorn Jurata (AIC) said the AIC is an advocacy and research organization that represents the leading PE and credit firms around the world. The AIC has a lot of experience with the investment needs of insurers, as well as the customers of the insurance companies. The AIC has a vested interest in the important work of the Task Force and welcomes the continued engagement and exposure of these materials.

Ms. Mears directed staff to expose the presentation along with the existing methodology paper for a 30-day public comment period ending Sept. 12 and prepare a proposed P&P Manual amendment that would assign the responsibility for assigning NAIC designation for CLOs to the SSG. This proposed amendment will be discussed at a future meeting and publicly exposed for comment. Ms. Mears directed staff to prepare papers for eventual exposure of the proposed CLO methodology, scenarios, and probabilities. As mentioned earlier, each of these will be exposed for public comment, and there will be an opportunity for informal dialog in between exposures to help inform what the initial exposure will look like. Ms. Mears also directed staff to prepare a referral to the Capital Adequacy (E) Task Force and the RBC Investment Risk and Evaluation (E) Working Group requesting them to contemporaneously consider the recommended additional NAIC Designation Categories and RBC factors for the residual tranche while this Task Force continues with its work on assessing the investment risk and assigning NAIC designations to CLOs.

11. Heard a Report on Projects Before the Statutory Accounting Principles (E) Working Group

Ms. Mears said the next item is to hear a report on projects before the Statutory Accounting Principles (E) Working Group.

Julie Gann (NAIC) said the principles bond project, the definition issue paper, and actual statutory revisions to *Statement of Statutory Accounting Principles (SSAP) No. 26R—Bonds* and *SSAP No. 43R—Loan-Backed and Structured Securities* is exposed on the Working Group web page.

12. Heard a Staff Update on the Ad Hoc CRP Study Group

Ms. Mears said the next item is to hear a staff update on the Ad Hoc Study Group. The ad hoc group continues to meet and does not have any deliverables at this point, but it does expect to move forward with conversations with CRPs later and will keep the Task Force informed once there is something to propose.

13. Received an Update from the SSG on Modeling Scenarios

Ms. Mears said the next item is to hear a staff update from the SSG on modeling scenarios.

Mr. Therriault said he would go through the macroeconomic scenarios and probability assignments that the SSG is planning. If there are any specific technical questions, he recommended emailing them to the SSG.

The commercial mortgage-backed securities (CMBS) and residential mortgage-backed securities (RMBS) scenarios were previously presented at the June 9 Task Force meeting. Additional macroeconomic scenarios are being added to better differentiate the risk across the 20 NAIC Designation Categories. This is an expansion from the current four scenarios to a total of eight for RMBS and CMBS. Probability weights have been assigned to each scenario, with a reallocation of probability weights with lower probabilities at the tail and increased aggregate probabilities at the belly of the distribution.

The new distribution now has a more typical bell shape of the range of macroeconomic scenarios for both RMBS and CMBS. The new scenarios are presented in bold for CMBS and RMBS in tabular and graphical form.

Having no further business, the Valuation of Securities (E) Task Force adjourned.

Draft: 7/13/22

Valuation of Securities (E) Task Force
Virtual Meeting
June 9, 2022

The Valuation of Securities (E) Task Force met June 9, 2022. The following Task Force members participated: Doug Ommen, Chair, represented by Carrie Mears (IA); Scott A. White, Vice Chair, represented by Doug Stolte (VA); Ricardo Lara represented by Laura Clements (CA); Andrew N. Mais represented by Kenneth Cotrone (CT); Trinidad Navarro represented by Rylynn Brown (DE); David Altmaier represented by Carolyn Morgan (FL); Dean L. Cameron represented by Eric Fletcher (ID); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Tish Becker (KS); James J. Donelon represented by Stewart Guerin (LA); Kathleen A. Birrane represented by Matt Kozak (MD); Chlora Lindley-Myers represented by Debbie Doggett (MO); Eric Dunning represented by Lindsay Crawford (NE); Marlene Caride represented by John Sirovetz (NJ); Adrienne A. Harris represented by Jim Everett (NY); Cassie Brown represented by Amy Garcia (TX); Mike Kreidler represented by Tim Hayes (WA).

1. Received and Discussed a Memorandum of Support from the Financial Condition (E) Committee to the Task Force

Ms. Mears said the first item on the agenda is to receive and discuss a memorandum of support from the Financial Condition (E) Committee to the Valuation of Securities (E) Task Force, the Capital Adequacy (E) Task Force, the Statutory Accounting Principles (E) Working Group, the Life Insurance and Annuities (A) Committee, and other regulatory groups and interested parties. The purpose of the memo was to express support for several interrelated initiatives focused on asset risk that are underway by the Valuation of Securities (E) Task Force as well as other committees, task forces, and working groups. The Financial Condition (E) Committee recognized that there is a range of risk management practices across the industry, but it highlighted the importance of "... establishing standards if necessary to address issues that could translate into material risk if not properly and timely considered within the NAIC solvency framework." The Committee highlighted the Task Force's work on the use of or reduction of reliance on rating agencies and the use of other risk identifiers such as market data, which are two agenda items today. This memo was received and supports the work of the Task Force.

2. Received and Discussed Comments on a Proposed Referral to the Blanks (E) Working Group to Add Fixed Income Analytical Risk Measures to Investments Reported on Schedule D, Part One

Ms. Mears said the next agenda item is to receive and discuss comments on a proposed referral to the Blanks (E) Working Group to add fixed income analytical risk measures to investments reported on Schedule D, Part One. As noted on the memo, it is important to establish standards necessary to address issues that could translate into material risks. This request is not necessarily new, and it relates back to a 2010 recommendation from the Rating Agency (E) Working Group that looked at alternative ways to measure risk. As per the comment letters, there are concerns from a few areas, one being the operational burden of collecting this data for reporting on Schedule D, which is something that can be discussed. There were a few other notes as well that there may be reasons those investments have outperforming spreads or yields that may not be related to credit risk. This is one that is important to note, because while this was brought up in relation to the review of credit ratings, there may be a sense that the credit rating itself should be looked at if there are spreads that are outsized compared to comparable assets. It is also something that helps note that there are other risks that can support those extra returns. It may not necessarily be reflected in the framework right now, such as liquidity or complexity. In that case, it may not be looking to the credit rating itself, but the ability to review the framework must still be available so it is encompassing all measures of both returns and risk in a holistic way. That is ultimately the information that

is to be gathered to continue the transparency into these portfolios. Most note that it is not a world of just buy and hold very traditional assets through maturity within the industry, but rather investments are actively traded and managed through times of stress or a recessionary environment. There are multiple reasons for this market value data, and it will be very valuable. It is important to be aware that it is not just for one particular purpose, but it is more broadly reflective of how to see portfolios being managed today.

Charles Therriault (NAIC) said the Securities Valuation Office (SVO) views this proposal as a vital step in achieving two of the primary and long outstanding goals of the Rating Agency (E) Working Group that were referenced in the paper: 1) developing additional or alternative ways to measure risk; and 2) using those risk measures to lessen the NAIC's reliance on rating agency ratings. These common bond analytical fields can be used for a variety of other regulatory purposes, such as identification of risk, valuation assessment, interest rate sensitivity, cash flow life, and NAIC designation validation. Any changes to assumptions or cash flow expectations after purchase will be picked up by these measures. The yield on an investment cannot be changed without also changing the market price of that security. These metrics are an easy way to identify where the insurer or market perceives the overall risk level for an investment of a given quality level. There may be several other sources of risk that are driving a yield spread; but it is still a very useful tool. SVO staff strongly support getting this information and looking at the different means by which to operationalize it.

Ms. Mears said three comments letters were received: 1) a joint comment letter from the American Council of Life Insurers (ACLI), the Private Placement Investors Association (PPIA), and the North American Securities Valuation Association (NASVA); 2) a letter from the Lease-Backed Securities Working Group; and 3) a comment letter from Anderson Insights.

Mike Reis (Northwestern Mutual), on behalf of the ACLI, the PPIA, and the NASVA, said industry wants to provide meaningful data to the state insurance regulators. The concern was that the effort to supply the data from each individual company would not be inconsequential. Industry wants to prevent adopting it as is and finding out later that that it did not hit the nail on the head with providing the proper data. Industry wants to work with the state insurance regulators and the SVO to think of the best way to achieve the ends that are important to state insurance regulators, whether that is centrally aggregating it, filing through the VISION system, or whatever other means that is most efficient to get the data to the state insurance regulators. For example, 75% of asset-backed securities (ABS) do not rely on rating agencies; if you add collateralized loan obligations (CLO), which is later on the agenda, to the commercial mortgage-backed securities (CMBS) and residential mortgage-backed securities (RMBS), that would all be modeled by the NAIC. Much of the public market data is either publicly available or available through the U.S. Department of the Treasury (Treasury Department) or other similar securities where such data is not relevant. The most efficient way to do it must be found so it is not a burdensome expense without the requisite bang for the buck.

John Garrison (Lease-Backed Securities Working Group) said the main point of the letter was to alert state insurance regulators that there could be a number of issues, particularly when it comes to applying public bond spreads or prices as an indicator for the credit rating when applied to private investments, for which there are many more factors that could influence pricing.

Chris Anderson (Anderson Insights) said it is now possible with some creativity, even on a personal computer, for an analyst to start working with the data that is available. Some may have to be calculated, some frameworks can be created and what exists can be operationalized. There is generally no substitute for getting your hands dirty starting on something, and it has the potential for avoiding false starts. It has a potential for assuring that the data that is sought for thousands of companies is the data that will be helpful. Another element is to distinguish between C-1, R-1, credit risk, and other investment risks. C-1 and R-1, credit risk, is something that is derived from credit analysis, which is what the SVO and credit agencies do. The NAIC relies substantially on the thousands of

credit analysts working at the nationally recognized statistical ratings organization (NRSRO) that it recognizes. There is every reason to evaluate those credit ratings and ensure they are of a quality that is sufficient to support the calculation of risk-based capital (RBC) because R-1 and C-1 are just credit risk. That is one objective to ensure there is reasonable quality of rating agency ratings in SVO designations. The other question is of not just credit risk, but investment risk; credit risk is a subset of investment risk. There are many other elements of risk that will affect spreads, and the difficult element here is to not just say that spreads are wide, but to do an assessment and evaluation and attribute the reason for the widespread. State insurance regulators need to know that. Just knowing that the spread is wide is interesting, but with hundreds of thousands of securities, it would be very helpful to understand if there is complexity, because an examiner might then want to go in and look at the companies' analytics; Or if it is liquidity, then an examiner might want to look at liquidity. What is addressed in the letter is doing an analysis of attribution and the work that is being done in attribution. The CFA Institute just offered a 12-hour program to do that. Getting back to the core point, assessing the reliability of rating agencies is one project that can be undertaken. The second is more complicated; i.e., not just looking at spreads but giving state insurance regulators the information they need as to why those spreads may be wide.

Ms. Mears encouraged everyone to follow all the committees and groups that were referenced in the Financial Condition (E) Committee letter, because it points to the interconnectivity between the outcomes and the data that would be utilized to review the overall regulatory framework. There was a conference call of the Life Actuarial (A) Task Force that spoke to some of the key elements that Mr. Anderson was referring to, including attribution of spread and some more higher yielding assets in comparison to other assets of similar credit rating. The regulatory framework is built very much around credit risk and using the inputs from the NAIC designations, whether they come from a credit rating provider (CRP) or other sources for NAIC designations, and it measures the overall risk of an investment. Historically, that really was enough. Other sources that contributed to that return were less material in relation to the credit risk component. As there is a gain in materiality, to the points that were made here, it really helps from a regulatory standpoint to have some transparency into what the components are and then review the regulatory framework accordingly.

There is absolutely the understanding that all of those will not necessarily be measured by credit risk, but currently, that is the input. These efforts are not only helpful to the Valuation of Securities (E) Task Force, but they can contribute to the analysis being done across the board from all these other initiatives as well. For example, looking from an industry-wide perspective, the NAIC is building out capabilities within the Macroprudential (E) Working Group to look at more industry-level risks and systemic risks and looking at dashboards to reflect those risks. That would be another forum where a lot of this data could be aggregated from a market basis and utilized for establishing perspective even from an industry-wide standpoint. From that perspective, the comments made are very much heard and understood, and they really help support looking at this on a more holistic basis. The operational difficulties of getting this reported on Schedule D are being heard along with some intriguing ways to do that outside of the statutory reporting process, including using other platforms like Bloomberg or Aladdin. This is a great opportunity from an SVO standpoint to take a step back and look at the capabilities and investment infrastructure at the SVO and how it can be pulled together to help achieve some of these initiatives across the board that were laid out in the Committee letter.

Mr. Everett said the project started with the discussion of the reduction of reliance on rating agencies. The Rating Agency (E) Working Group called not only for substituting items, but also looking to complementary sources of credit information. This was to stay within the credit gambit. These included multivariate accounting-based credit scoring that could be tied back into the Statutory Accounting Practices (E) Working Group since they are accounting based. Other methodologies like contingent claims valuation methodologies or imputed promises methodologies; certification and endorsement regimes like the European Securities and Markets Association (ESMA); central credit registers, which were closed at the time but are more accessible; and central financial statement databases, which are substantially more open than they had been. Regarding some of the proposals,

while a lot of the items being called for would cover small yield changes or over the short-run and parallel yield curve shifts, more might be needed to cover for stress situations where the curves do not move parallel. Without going into the attribution side, it might be possible to use something like the Sortino ratio as a screening device because it has been widely tested and verified across industries and market periods. It is elementary and easy to apply that, as departmental analysts and examiners could be able to use it. It can be used for even highly concentrated portfolios, such as commercial real estate holdings or CLOs and large portfolios. Subsequent testing has shown that it can be used for smaller ones. The Sortino ratio is a variation of the Sharpe ratio. That differentiates harmful volatility from total overall volatility by using the asset's standard deviation of negative portfolio returns. It is sort of a Sharpe ratio, but it came to mind since the concern seems to be with downside volatility, and it takes an asset or portfolio's return, subtracts the risk-free rate, and then divides the amount by the asset's downside deviation. This could be a screening device. There are other complementary sources of credit information that were considered, and while they were not mentioned expressly in the Rating Agency (E) Working Group's report, they were talked about in that the Bank for International Settlements (BIS) said it had given great credit to those.

Ms. Mears said as the Task Force takes a step back here to look at operationalizing this, it can continue to look at what type of data and metrics can be utilized as well. She recommended that this work continue and that the Task Force work with industry on their ideas, as well in a collaborative effort to obtain these types of information that are market value-based metrics, including ways that make sense both from the list from industry, but also from the SVO, that might result in some questioning and modernize some of the processes at the SVO to accommodate that.

3. Received a Proposed Amendment to the P&P Manual to Update the Role of the SVO Regarding Interpreting Accounting and Reporting

Marc Perlman (NAIC) said the SVO has historically worked with the NAIC's statutory accounting colleagues to make accounting and reporting determinations, which guided whether the SVO could analyze and designate an insurer's investment. However, the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) currently provides conflicting guidance on whether the SVO should have a role in interpreting accounting and reporting guidance. While many sections of the P&P Manual state that the SVO may assign NAIC designations to any investment filed with it for which it has a methodology, it also specifies in Part One, paragraph 40 that the SVO is assigned to assess investments reported on Schedules D and BA and shall communicate to insurers if an investment is not eligible for those schedules and can therefore not be assigned an NAIC designation. Part One, paragraph 32 of the P&P Manual explains that the assessment of an investment's credit risk is distinct from the determination of statutory accounting or reporting under the *Accounting Practices and Procedures Manual* (AP&P); i.e., obtaining an NAIC designation does not change an investment's applicable statement of statutory accounting principles (SSAP) annual or quarterly statement reporting schedule, nor does it override other SSAP guidance required for the investment to be an admitted asset.

Paragraph 33 of the P&P Manual explains that accounting and reporting determinations for investments are the obligation of the insurance company, but the state insurance regulators remain the final authority.

Paragraph 34 of the P&P Manual expressly states that the SVO can assess any investment filed with it, so long as it has the methodologies to do so. Because SVO analytical determinations of credit quality do not convey opinions, conclusions, or informational content relative to statutory accounting status, the SVO may assign an NAIC designation to any obligation or asset that is filed by an insurer, provided that its credit quality can be assessed consistently with the policies and methodologies specified in the P&P Manual.

However, Part One, paragraph 40 of the P&P Manual states that the SVO is only assigned to assess investments reported on Schedules D and BA, and it may need to communicate to insurers that the investment is not eligible for reporting on Schedules D or BA; therefore the investment cannot be assigned an NAIC designation.

The SVO is assigned to assess investment securities reported to state insurance regulators on Schedules D and BA. To fulfill its function, the SVO must be able to communicate to an insurer that has filed a financial instrument or security that the financial instrument or security is not an investment security eligible for reporting on Schedules D and BA. The SVO may be required to communicate to an insurer that it must refile a financial instrument or security to another schedule. The SVO may also have to communicate to an insurer that an instrument the insurer has filed does not meet the definition of an investment security in the P&P Manual and is therefore not eligible to be assessed.

The SVO recommends amending Part One, paragraph 40 of the P&P Manual to provide consistent instructions to the SVO regarding its accounting and reporting guidance authority. The proposal would clarify, in accordance with Part One, paragraph 34, that the SVO can assign NAIC designations to investments that it does not think are eligible for Schedules D or BA reporting, so long as it has the methodology to do so. However, the SVO would have the authority, at its discretion, to notify the appropriate state insurance regulators of any investments that, in its opinion, would not or might not be eligible for reporting on Schedules D or BA. The SVO would also maintain its authority to offer its accounting and reporting opinion, when requested to do so, as part of its Regulatory Treatment Analysis Service (RTAS), it being understood that such opinions would not be authoritative and might not reflect the opinion of the relevant state insurance regulator. Also, to be clear, the SVO would not be required to designate investments that deviate from specific guidelines in the P&P Manual for that investment type. For example, for the SVO to designate a working capital finance investment (WCFI), the investment will still need to meet the very specific WCFI guidelines currently in the P&P Manual.

Mr. Reis said the ACLI had a meeting today, discussed this proposal, and asked if this proposal will be exposed. Ms. Mears said it will be exposed.

Mr. Anderson said anytime there is clarification in the P&P Manual is a good thing. Something mentioned earlier is coordinating between groups. One interested group here is the Risk-Based Capital Investment Risk and Evaluation (E) Working Group. Mr. Anderson said there is a little bit of tension here in his mind because the NAIC says something is not a bond and does not qualify for the bond schedule. On the other hand, there is a proposal to assign RBC factors—i.e., credit risk factors—which are bond factors and based on bonds and credit. It would be appropriate sooner rather than later, but preferably before any changes are made to ensure there is coordination with the Working Group.

Ms. Mears directed staff to expose this proposed amendment for a 30-day public comment period.

4. Received a Proposed Amendment to the P&P Manual to Update Part Four for NAIC Designation Category and Additional Price Points

Ms. Mears said the next agenda item is to receive a proposed amendment to the P&P Manual to update Part Four for NAIC Designation Category and Additional Price Points. The Task Force and the Structured Securities Group (SSG) have discussed these anticipated changes several times over the past year, including at the 2021 Summer National Meeting, the subsequent interim meetings, and again at the 2022 Spring National Meeting.

Eric Kolchinsky (NAIC) said last year, the SSG did not fully implement all 20 new NAIC designation categories. It was known that it was going to take longer to do this for modeled RMBS and CMBS. Temporary language was added to the P&P Manual until new price ranges were developed to reflect the full range of RBC factors adopted

for each NAIC category. This has now essentially been completed, and Mr. Kolchinsky wants to reflect it in the P&P Manual. The changes are to the categories, as can be seen in the markup of the P&P Manual, to reflect shifting away from six to 19 breakpoints and changing the language in Part Four, paragraph 27 regarding some of the temporary language. The intention is to proceed with the procedure for deriving the midpoint, as has been done before; that is the midpoint for the two categories. The intention is, outside of the change in the risk-based factors, to maintain status quo procedurally. The SSG recommends the exposure and then adoption of these new breakpoint factors.

Ms. Mears directed staff to expose this proposed amendment for a 30-day comment period and will discuss it at the Summer National Meeting.

5. Received and Discussed an IAO Issue Paper on the Risk Assessment of Structured Securities – CLOs

Ms. Mears said the next item on the agenda is to receive and discuss and Investment Analysis Office issue paper on risk assessment of structured securities, specifically CLOs. The IAO has identified large RBC arbitrage opportunities and incentives with these structures.

Mr. Kolchinsky said CLOs have been a topic of a lot of conversations and one of the things that the SSG has found within the structure of CLOs is the great potential for risk arbitrage. If you take a pool of assets with effectively a single “B” rating, put it in a CLO and calculate the total RBC on every single tranche of the CLO when it is produced, there is a huge amount of regulatory arbitrage. The risk weighting is reduced by about two-thirds. This is an issue, and Mr. Kolchinsky is making two recommendations: 1) the Task Force should direct the NAIC to promote modeling CLOs; and 2) the Task Force should direct referrals to the Capital Adequacy (E) Task Force and the Risk-Based Capital Investment Risk and Evaluation (E) Working Group requesting that those groups consider creating or breaking out the NAIC 6 Designation into three designation categories; i.e., 6. A, 6.B, and 6.C. That would allow the SSG to capture some of the tail risk in these securities through weights in the middle. It is not expected that many securities will fall in there, but in case there are tail risks to equalize the RBC, it would be helpful to have 30%, 75%, and 100%. The modeling would be based off the current CLO stress test methodology. Currently, scenarios and probabilities have not been set, and the SSG will come up with eight to 12 scenarios. The scenarios would probably be various combinations of default rates and recovery stresses. The idea that they would arrive at probabilities by trying to balance the total risk on the assets within the risk of tranches. This would be a risk-based approach. The tranches can be a little convex within a set of thresholds. This process would be completely transparent and could do it periodically if something changes. It would be a de-arbitrage approach and do something like what the SSG does for RMBS and CMBS, provide this on an annual basis, and publish via AVS+ or a similar system.

Mr. Tsang said there are many structured assets. He asked if a system must be come up with to unionize this arbitration and how this will be accomplished. Mr. Kolchinsky said this would just be for CLOs in terms of the risk arbitrage; although, in the past, the Valuation of Securities (E) Task Force has been pretty responsive to changes like RMBS and CMBS. There are now concerns about CLOs, which is about three-quarters of the structure finance market or at least the credit sensitive part of the structure finance market. If the Task Force determines another issue or another part of the market where there is an issue, that is something the SSG can look at as well. The recommendation in terms of internal modeling is solely for CLOs, at this time.

Mr. Tsang said he supports the initiative, but the work is overwhelming. Mr. Kolchinsky said the SSG has been running stress scenarios for the CLO universe for three years. The SSG has a lot of ex-CLO people in the New York office. This will not be a huge endeavor. Other asset classes, such as auto floor plan loans, would require further research, but the SSG can certainly do CLOs.

Mr. Tsang asked if the insurer needs to look up a table or database to recognize this arbitration adjustment. Mr. Kolchinsky said the methodology approach would be done just like it is for RMBS and CMBS today. The insurer would go to the website for the AVS+; download the designations or break points, as appropriate; and determine how to report their tranche. The insurer would not have to do anything more than they do today for RMBS and CMBS.

Mr. Anderson said setting RBC factors is the domain of the Capital Adequacy (E) Task Force. He asked if this will be referred to the Risk-Based Capital Investment Risk and Evaluation (E) Working Group.

Ms. Mears said this will involve referrals to those groups. That will be a discussion of whether it currently calibrates to the existing bond factors like what is in place for CMBS/RMBS. There is discussion underway in the Working Group about whether a new set of factors is needed for structured securities. If that is decided within the Working Group, then this process should go forward and adjust accordingly to reflect that and calibrate to those factors. The overall modeling would not change. It would be the mapping process that would occur to the factors that are defined by the Working Group. All these initiatives are a multi-group process. It is important to get some preliminary feedback on the concept and suggest that staff expose this issue paper for a 30-day public comment period. Ms. Mears said she would recommend that staff move forward with drafting the amendment and work through what that process would look like. The comments may be more questions on specifics of how to move forward to keep that process moving. Ms. Mears said formal comments are welcome during the 30-day public comment period, but if there are any informal comments that want to be shared during that time as the amendment is drafted, staff can feel free to share those. That would include the referral, as well as to both the Capital Adequacy (E) Task Force and Risk-Based Capital Investment Risk and Evaluation (E) Working Group.

6. Heard a Presentation from the SSG on Modeling and Scenarios

Ms. Mears said the next item on the agenda is to receive a presentation from the SSG on modeling scenarios.

Mr. Kolchinsky said these are the macroeconomic scenarios for RMBS and CMBS. The SSG is proposing moving from the current four to eight scenarios. Now that there are 20 designation categories, the SSG wants more differentiation among the securities. The idea here is not to change the balance of a risk but to differentiate between the various tranches. These proposed scenarios are meant to be through-the-cycle. The probabilities have not been finalized for each but will be lowering the probabilities at the tail and increasing the probabilities in the belly of the distribution. For CMBS, there are three scenarios between the old scenarios and an added tale scenario. It is not too different from the shape in the past to differentiate. These are based on the simulation that was run and the numbers that were exposed in the past. For RMBS, three scenarios were added in between the older scenarios, and a tail scenario was added. RMBS probabilities are still being optimized. The goal is not to increase or decrease capital but to differentiate. The stress scenario does not need to be so large because it is covered by more extreme scenarios in the tail scenarios. These should be completed shortly once the fine tuning is done. These are the SSG's thoughts for the year-end scenarios and are meant to be through-the-cycle and will not be changing from year to year.

Mr. Tsang asked what NPI and HPI are. Mr. Kolchinsky said HPI is a home price index, Case Shiller, a national measure of home prices and the way the RMBS scenarios have been benchmarked. CMBS has a similar measure called the National Price Index for commercial real estate. The tables and charts are identical in terms of form to what is normally produced for the annual year-end scenario disclosure.

Francisco Paez (MetLife) asked if the SSG plans to do a sampling year for year-end 2022 so industry could do a little bit more comparison of how this change would affect capital versus 2021.

Mr. Kolchinsky said the SSG is working on it and hopes to provide it so people can compare and look at what the impact is around the mid-year September/October timeframe.

Mr. Tsang said there is speculation of a recession this year or next. He asked if Mr. Kolchinsky believes a tail would cover that. Mr. Kolchinsky said he believes the tail is much worse than the global financial crisis in terms of the change in price. The tail covers scenarios like the potential recession. While these scenarios are future looking, a lot of results are driven about the performance in the current portfolio. Loans will go delinquent or go special servicing, which will be reflected. This is just a question of what will happen in the future, starting from a time of running the scenarios so it does not completely take us out if there is underperforming or well-performing, which will be reflected in the current portfolio starting point. These are just forward-looking scenarios and economic scenarios.

Mr. Tsang said he is looking at the slides and tables for the HPI and the NPI. If a column could be added with the probability estimate that would give the reader a little bit more appreciation of probabilities that will run into this kind of thing. Otherwise, there is no way to know which one would be more likely than the others.

Mr. Kolchinsky said the SSG will get back with the probabilities assigned to each one, and they will be part of the public disclosure in a few weeks.

7. Discussed Other Matters

Ms. Mears asked Mr. Therriault to give a brief update on the Ad Hoc CRP Group's work.

Mr. Therriault said the Ad Hoc CRP Group has been meeting monthly to discuss several issues related to the use of ratings. At the last meeting, it discussed possible changes to the definition of an NAIC designation in Part Two to better align it to the definition in Part One. The definition in Part One includes whether there is an appropriateness and consistency of the RBC model factor for the designation assigned. Part Two does not mention that. The Ad Hoc CRP Group is also discussing the SVO Notching Guidelines in Part Two and the possibility of adding a definition of a default to clarify the notching process. There will be a meeting later this month where the Ad Hoc CRP Group plans to discuss possible qualitative factors for CRPs. Any output or recommendations from the Ad Hoc CRP Group, because it is informal, will come before the Task Force to be publicly exposed and fully discussed with all parties.

Ms. Mears said the Ad Hoc CRP Group continues to work through the high-level setting of some of the workstreams to move forward and where to prioritize. This framework will continue to be built out, so that is very repeatable and something that can be kept in place over time. As new providers enter the market, they would be subject to the same framework. It communicates what the Task Force's expectations are to CRPs but will ultimately be agnostic to the CRPs that exist. It is anticipated that all the existing CRPs would go through this process. What that process will look like is not yet known, but as the Ad Hoc CROP Group continues to work down that route, it will be fully transparent and discuss among itself and other stakeholders before anything is implemented. It is expected to be a fairly long process, and any continued questions are welcome, but Ms. Mears said she will report back when there is something firm to share.

Having no further business, the Valuation of Securities (E) Task Force adjourned.

Dear Ms. Mears,

Re: Amendment to the Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual) to Update the Role of the SVO Regarding Interpreting Accounting and Reporting.

The undersigned (ACLI, PPIA, NASVA) support the proposal in the exposure as it is important to be provide clarity to the P&P Manual whenever possible. The undersigned propose one slight modification (below in underline). Intended to clarify that the SVO would simultaneously notify the company when sharing the SVO's opinion on any particular security. This would serve as a courtesy to help ensure the company and its regulator have the same information in the likely event they need to reach a conclusion on the security in question.

40. The SVO is assigned to assess investment securities reported by insurers to state regulators on Schedule D and Schedule BA. For the avoidance of doubt, the SVO's opinion that an investment is ineligible for reporting on Schedule D or Schedule BA shall not prevent the SVO from assigning an NAIC Designation to that investment. The SVO may, but is not obligated to, notify appropriate state regulators of an insurer's investment which, in its opinion, would not or might not be eligible for reporting on Schedule D or Schedule BA, regardless of the investment's NAIC Designation status. If the SVO notifies a state regulator

Carrie Mears, Chair
Valuation of Securities Task Force
National Association of Insurance Commissioners 1100
Walnut Street, Suite 1500
Kansas City, MO 64106-2197

*Re: Staff Proposal to Update to the Purposes and Procedures Manual of the NAIC Investment Analysis Office
Clarifying the SVO's Role Regarding Accounting and Reporting*

Dear Ms. Mears and Task Force Members,

As an independent consultant and long-time observer of the work of the Valuation of Securities Task Force I appreciate the opportunity to comment on the captioned proposal.

Adoption of this proposal would empower the Securities Valuation Office to assign NAIC Designations to assets that do not meet the NAIC's own standards to qualify for reporting on Schedules D and BA. At the very least this is perplexing and it appears to be contradictory.

I recommend that the VOSTF not adopt this proposal at this time. More discussion and coordination is needed among relevant NAIC groups¹ as well as the supporting staff (notably the SVO and Structured Securities Group) to understand the intended and unintended consequences to assessing insurers' solvency and whether this change is truly necessary. Furthermore, the practical aspects of broadening the authority of the SVO need additional coordination and consideration.

Responsibility for Establishing Capital Requirements

It is clear from the extensive and detailed official record of the development of Risk-Based Capital² that it is the responsibility of the Capital Adequacy Task Force to determine the RBC factors for all assets. For bonds and preferred stock the basis for assigning an asset to a particular Class to determine its RBC factor is an estimation of the likelihood of its default. Thus it is the responsibility of the SVO to categorize individual issues of bonds and preferred stock into their appropriate Classes based on their credit quality, *i.e.* likelihood of loss given default. So the CATF fulfills the executive function of setting the factors and the SVO performs the administrative function involved in actually assigning the factors to individual assets based on their credit quality.

VOSTF & SVO Roles in Monitoring Investment Risks

An important element of solvency assessments and RBC in particular is monitoring new investment risks that insurers may be adding to their balance sheets. Historically, the SVO has been charged with being the “eyes and ears” of the VOSTF, and more broadly the NAIC and even insurance regulators, concerning all manner of investment risks that may affect insurer solvency. It then refers its observations to the appropriate NAIC decision-making entity or regulator, possibly along with recommendations.

The NAIC’s processes for assigning Designations to bonds provides insurers with uniform inputs for their RBC calculations as specified by the CATF. So while the principal function of the SVO is to determine some of these Designations it and the VOSTF can and should pursue more comprehensive examinations of insurer asset risks beyond the RBC context as they serve insurance regulators. While doing so it is imperative, however, that the SVO continue to determine Designations with at least the level of accuracy required to compute RBC with reasonable accuracy. It is beyond the authority of staff, however, to invent new or independent standards. That would be the responsibility of the CATF.

Practical Issues

There are some very practical problems with this proposal. Unlike the Nationally Recognized Statistical Rating Organizations the SVO tends to “borrow” from various NRSROs their detailed ratings methodologies. The Securities and Exchange Commission requires the publication of these methodologies by the rating organizations it regulates. NRSROs are all accountable to the SEC, their regulator, for basing their ratings strictly on their published methodologies. If a bond is of low quality its rating will reflect that. If the NRSRO cannot determine that there will be sufficient resources to meet obligations then it is not permitted to rate the asset and it becomes NR (Not Rated). The SEC publishes a detailed report of its examinations of NRSRO compliance annually.³

The SVO, in addition to lacking its own published methodologies, declines to even disclose which of the many methodologies it uses in determining individual Designations. This is problematic in itself for a number of reasons (e.g. lack of transparency). It also raises the serious question of how the SVO could use methodologies the NRSROs have developed to rate bonds and then apply them to assets that the NAIC has determined are not bonds when it does not even disclose its use of methodologies for the bonds it does Designate.

Paradox

Obviously it is not reasonable to take methodologies developed for bonds and then apply them to assets that are determined not to be bonds. One response to this would be to not grant the SVO the authority sought in this proposal.

Another possibility is to examine very carefully the standards being developed by the NAIC that, for insurance regulatory purposes, would disqualify from bond treatment certain assets that the NRSROs would rate as bonds based on their published methodologies. At the NAIC there has been much thought and discussion attempting to arrive at a definition of what is a bond. Things are simpler for the NRSROs. There is no need for an NRSRO to develop arbitrary one-size-fits all standards. They do not need to define “what is a bond” because they only assign bond ratings to

³ Securities and Exchange Commission, Office of Credit Ratings, *Staff Report on Nationally Recognized Rating Organizations*, January, 2022, <https://www.sec.gov/files/2022-ocr-staff-report.pdf>

Ms. Mears and the VOSTF

July 8, 2022

actual bonds that meet their published standards. The objectives of the NRSRO are to predict, as accurately as possible and with all available information, the likelihood that a given bond will have sufficient resources to pay as promised. In effect they use their methodologies to determine what is a ratable bond and they do this in each and every instance, not relying on generalized rules. Poorly supported issues receive poor ratings and very poorly backed issues are not rated at all (NR) whether they are “bonds” or not. Essentially “NR” means the NRSRO does not have an opinion of the credit quality of an asset and the ability of the issuer of that debt instrument to fulfill its obligations.

Admittedly the NRSROs are in a different position than the SVO. NRSROs are under no obligation to undertake the difficult and time-consuming process of developing methodologies for every type of asset. (The SEC regulation does require, however, that adopted methodologies must be reasonable and that they be adhered to). For that, as well as other reasons, the NRSROs can be selective concerning which assets they will and will not rate. If they cannot or will not accept an application they simply decline it. The SEC reviews and examines the work of the NRSROs and this imposes discipline on this process.

When it comes to the SVO, insurers can submit any asset to the SVO for a Designation and this can have the same result as with an NRSRO: a poor rating or a rejection. An important difference, however, is that the SVO is not required to and does not justify its Designations by specifically referring to the methodologies upon which it has relied as would be required if it were regulated by the SEC. Also, unlike the NRSROs, the SVO is not subject to examination concerning the methodologies it has used in arriving at its decisions.

Coordination Within the NAIC

Part of the impetus for this proposal for the SVO to assign Designations to assets deemed not to be bonds may be related to work underway by the Statutory Accounting Principles Working Group. It would be wise to coordinate efforts in this regard. A possible result of that project now underway may be to define “bonds” in such a way as to disqualify assets for inclusion on Schedules D and BA when their terms and conditions may appear to make it questionable that the issuer will have resources that are “sufficient” to make all promised payments.

If such debt instruments are placed in “limbo” based on standardized accounting definitions an expected consequence of that would be exactly what is being seen in this proposal: no logical way of determining reasonable RBC factors for the excluded assets. The proposal addresses this in a way but it essentially has the SVO applying Designations to assets that are not bonds. Clearly if this were even desirable the decision to do this would need to be made by the CATF because presently the SVO is only empowered to Designate bonds and preferred stock.

Coordinated efforts might well determine that it would be counterproductive to adopt accounting definitions that would remove debt instruments from the scrutiny of analysts who are using existing methodologies. Presently the determination of whether an issuer is likely to have “sufficient” resources is already being made on an individual basis for each and every bond reported by insurers. An analyst or a team of analysts, whether at the SVO or at an NRSRO, is responsible for determining the likelihood of repayment. These proposals are reviewed internally by committees before being finalized and for NRSROs the SEC requires that historic records be publicly disclosed to document performance. Since this work is already being done for each bond it is not clear what is achieved by adding levels of complexity to definitions. Coordination among NAIC entities should bring these facts to light so they can be adequately considered.

Analysts, whether they may be at the SVO or an NRSRO, could work within a very simple definition of what constitutes a debt instrument and use existing tools already developed to assess

Ms. Mears and the VOSTF

July 8, 2022

the likelihood of repayment, including “sufficiency” of resources. If this is not being done to levels of accuracy needed to reasonably calculate RBC than that is the matter that should be addressed directly. Adding levels of accounting complexity, however, does not contribute to this process even as it introduces needless complexity and, most likely, unnecessary confusion.

Coordinating the well-intentioned work of SAPWG with other efforts and initiatives, gaining a holistic picture of what is needed to compute RBC as well meeting other needs of insurance regulators, would be very desirable.

Summary

The purpose of NAIC Designations is to enable the computation of RBC to at least a degree of accuracy that will allow regulators to identify weakly capitalized insurers. The NAIC is to be commended for forming the Risk-Based Capital Investment Risk and Evaluation (E) Working Group to coordinate work to continue to make improvements. It is this new group that has the potential for coordinating the efforts of the three NAIC entities to which this proposal relates.⁴

Coordination may very well bring to light that low quality bonds already have low ratings/ Designations -- or none at all -- and this has the same effect as excluding them from definitions. Assuming that they are being done reasonably well the bond-by-bond analyses that are already being performed virtually obviate the necessity for complicated exclusionary definitions. Of course if it is found that sufficiently accurate ratings/Designations are not being generated under the existing structure then that is the issue that must be addressed.

Recommendation

As to this specific proposal it is clearly not desirable for the SVO to apply bond-based RBC factors to assets that the NAIC itself defines as not being bonds. Fortunately the existing rating and Designation procedures can accomplish exactly what the definitional changes are attempting to do but in a much more precise and straightforward way without adding needless complexity. This, in turn, means it should not be necessary for the SVO to Designate assets that have been disqualified definitionally as bonds. This is because poorly supported issues would remain within the existing structure and be judged on their merits using existing methodologies. Specifically, assets with “insufficient” support would be denied bond treatment on a case-by-case basis and not in accordance with generic rules. In fact the current Designation process is being examined by what is being called the *ad hoc* group of this task force so one expects that group will opine on the reliability of NRSRO ratings and NAIC Designations for determining RBC factors and recommend any needed action.

Hopefully the RBC IREWG will be able to coordinate the work of the three relevant NAIC groups to devise effective and efficient procedures that meet the needs of insurance regulators without adding needless complexity and confusion that would be the result of this proposal if it were adopted.

Sincerely,

RE: Update to the Purposes and Procedures Manual of the NAIC Investment Analysis Office
clarifying the SVO's role regarding accounting and reporting

DATE: May 23, 2022

Summary - Historically, the SVO has worked with our statutory accounting colleagues to make accounting and reporting determinations which guided whether the SVO could analyze and designate an insurer's investment. The Purposes and Procedures Manual of the Investment Analysis Office (the "P&P Manual"), however, currently provides conflicting guidance on whether the SVO should have a role interpreting accounting and reporting guidance. While many sections of the P&P Manual state that the SVO may assign NAIC Designations to any investment filed with it for which it has a methodology, it also specifies in Part One, Paragraph 40 that the SVO is assigned to assess investments reported on Schedules D and BA and shall communicate to insurers if an investment is not eligible for those schedules and can therefore not be assigned an NAIC Designation.

Part One, Paragraph 32 of the P&P Manual explains that the assessment of an investment's credit risk is distinct from the determination of statutory accounting or reporting under the Accounting Practices & Procedures Manual ("AP&P):

NAIC Designations Do Not Communicate Statutory Accounting or Reporting - The assessment of credit risk for an obligation or asset, as specified in the P&P Manual, is a separate and distinct process from the determination of statutory accounting or reporting under the AP&P Manual. The manner in which an NAIC Designation is used within statutory accounting guidance is limited to that, if any, specified in a Statement of Statutory Accounting Principles (SSAP) and cannot be derived or implied by language in the P&P Manual. Obtaining an NAIC Designation does not change an investment's applicable SSAP, annual or quarterly statement reporting schedule, or override other SSAP guidance required for the investment to be an admitted asset. There are limited instances in which a SSAP specifically identifies, within its scope, the inclusion of specific SVO-Identified investments. The SVO review required for an investment to be included on an SVO listing is a separate evaluation process that focuses on the structure of the investment. This process is distinct from the SVO's assessment of an investment's credit risk, which results in a NAIC Designation. As stated in the Statutory Hierarchy, Section V of the Preamble,

Executive Office | 444 North Capitol Street NW | Suite 700 | Washington, DC 20001 | (202) 471-3990

Central Office | 1100 Walnut Street | Suite 1500 | Kansas City, MO 64106-2197 | (816) 842-3600

Capital Markets & Investment Analysis Office | One New York Plaza | Suite 4210 | New York, NY 10004 | (212) 398-9000

www.naic.com

the AP&P Manual is the highest level of authoritative guidance.

Part One, Paragraph 33 of the P&P Manual explains that accounting and reporting determinations for investments are the obligation of the insurance company but that the state regulators remain the final authority:

Sources and Application of Statutory Accounting Guidance - The authority to determine and interpret existing statutory accounting guidance in, or to develop new statutory accounting guidance for, the AP&P Manual, is a charge assigned by the Financial Condition (E) Committee through its Accounting Practices and Procedures (E) Task Force to the Statutory Accounting Principles (E) Working Group. The application of statutory accounting guidance to any specific obligation or asset to determine its status under the AP&P Manual is the obligation of the insurance company and its management. The state of domicile is the final authority with respect to statutory accounting and reporting guidance. Deviations from the authoritative guidance in the Statutory Accounting Hierarchy are reflected as a permitted or prescribed practice.

Part One, Paragraph 34 of the P&P Manual expressly states that the SVO can assess any investment filed with it, so long as it has the methodologies to do so:

Impact on SVO Operations - Because SVO analytical determinations of credit quality do not convey opinions, conclusions or informational content relative to statutory accounting status, the SVO may assign an NAIC Designation to any obligation or asset that is filed by an insurer, provided that its credit quality can be assessed consistently with the policies and methodologies specified in the P&P Manual.

Part One, Paragraph 40 of the P&P Manual, however, states that the SVO is assigned to assess investments reported on Schedules D and BA and that it may need to communicate to insurers that the investment is not eligible for reporting on Schedules D or BA and, therefore, cannot be assigned an NAIC Designation:

Authority to Direct Insurers on Reporting - The SVO is assigned to assess investment securities reported to state regulators on Schedule D and Schedule BA. To fulfill its function SVO must be able to communicate to an insurer that has filed a financial instrument or security that the financial instruments or security is not an investment security eligible for reporting on Schedule D and Schedule BA. SVO may be required to communicate to an insurer that it must refile a financial instrument or security to another schedule. SVO may also have to communicate to an insurer that an instrument the insurer has filed does not meet the definition of an Investment Security in this Manual and is therefore not eligible to be assessed or that the financial transaction or security is a Regulatory Transaction that can only be assessed by the SVO but only in accordance with the procedures discussed in this Manual if requested by a state insurance department. When situations occur that require the SVO to communicate reporting or related statutory guidance to an insurer, SVO consults with Financial Regulatory Services Division staff to ensure the communication to the insurer is accurate.

Recommendation – The SVO recommends the below changes to P&P Manual Part One, Paragraph 40 to provide for consistent instruction to the SVO regarding its authority regarding accounting and reporting

guidance. The proposal would clarify, in accordance with Part One, Paragraph 34, that the SVO can assign NAIC Designations to investments which it does not think are eligible for Schedule D or BA reporting so long as it has the methodology to do so. The SVO, however, would have the authority, at its discretion, to notify the appropriate regulators of any investments which, in its opinion, would not or might not be eligible for reporting on Schedules D or BA. The SVO would also maintain its authority to offer its accounting and reporting opinion, when requested to do so, as part of its Regulatory Treatment Analysis Service, it being understood that such opinions would not be authoritative and might not reflect the opinion of the relevant state regulator.

Proposed Amendment - The proposed text changes to P&P Manual are shown below with additions in red underline, deletions in ~~red strikethrough~~ as it would appear in the 2022 P&P Manual format.

PART ONE

POLICIES OF THE NAIC VALUATION OF SECURITIES (E) TASK FORCE

POLICIES PERTAINING TO SVO AND SSG OPERATIONS

...

Authority to Direct Insurers on Reporting

40. The SVO is assigned to assess investment securities reported by insurers to state regulators on Schedule D and Schedule BA. For the avoidance of doubt, the SVO's opinion that an investment is ineligible for reporting on Schedule D or Schedule BA shall not prevent the SVO from assigning an NAIC Designation to that investment. The SVO may, but is not obligated to, notify appropriate state regulators of an insurer's investment which, in its opinion, would not or might not be eligible for reporting on Schedule D or Schedule BA, regardless of the investment's NAIC Designation status. The SVO shall give its statutory accounting and reporting opinion, if requested to do so, as part of its Regulatory Treatment Analysis Service, it being understood that such opinion is not authoritative and may not reflect the opinion of the relevant state regulator. To fulfill its function SVO must be able to communicate to an insurer that has filed a financial instrument or security that the financial instrument or security is not an investment security eligible for reporting on Schedule D and Schedule BA. SVO may be required to communicate to an insurer that it must refile a financial instrument or security to another schedule. SVO may also have to communicate to an insurer that an instrument the insurer has filed does not meet the definition of an Investment Security in this Manual and is therefore not eligible to be assessed or that the financial transaction or security is a Regulatory Transaction that can only be assessed by the SVO but only in accordance with the procedures discussed in this Manual if requested by a state insurance department. When situations occur that require the SVO to communicate reporting or related statutory guidance to an insurer, SVO consults with Financial Regulatory Services Division staff to ensure the communication to the insurer is accurate.

RE: Part Four Manual Updates

DATE: February 25, 2022

Summary: With the adoption of new Risk Based Capital factors for each NAIC Designation Category in 2021 by the Capital Adequacy (E) Task Force and its parent, the Financial Condition (E) Committee, technical updates are needed in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) to reflect a consistent reference to “NAIC Designation Category” and the additional price points needed to determine them.

Recommendation: The Securities Valuation Office (SVO) and Structured Securities Group (SSG) staff recommend adoption of these non-substantive technical updates to the P&P Manual that were discussed at the Task Force’s 2021 Summer National Meeting, Sep. 30, and Nov. 17, 2021 interim meetings, and 2022 Spring National Meeting.

ANALYTICAL ASSIGNMENTS

...

Use of Financial Modeling for Year-End Reporting for RMBS and CMBS

22. Beginning with year-end 2009 for RMBS and 2010 for CMBS, probability weighted net present values will be produced under NAIC staff supervision by an NAIC-selected vendor using its financial model with defined analytical inputs selected by the SSG. The vendor will provide the SSG with a Intrinsic Price and/or a range of net present values for each RMBS or CMBS corresponding to each NAIC Designation and Designation Category. The NAIC Designation and Designation Category for a specific Legacy Security RMBS or CMBS is determined by the insurance company, based on book/adjusted carrying value ranges, and the NAIC Designation and Designation Category for a specific non-Legacy Security RMBS or CMBS is determined by the NAIC Designation Intrinsic Price Mapping by SSG.

NOTE: Please refer to *SSAP No. 43R—Loan-Backed and Structured Securities* for guidance on all accounting and related reporting issues.

Use of Net Present Value and Carrying Value for Financially Modeled Legacy Security RMBS and CMBS

26. For each modeled Legacy Security RMBS and CMBS, the financial model determines the net present value at which the expected loss equals the midpoint between the RBC charges for each NAIC Designation **and Designation Category**; i.e., each price point, if exceeded, changes the NAIC Designation **and Designation Category**. Net present value is the net present value of principal losses, discounted using the security's coupon rate (adjusted in case of original issue discount securities to book yield at original issue and in case of floating rate securities, discounted using **LIBOR-curve benchmark rate** + Origination spread). Because of the difference in RBC charge, the deliverable is **five nineteen** values for each RMBS and CMBS security for companies required to maintain an asset valuation reserve (AVR) and **five nineteen** values for companies not required to maintain an AVR. This is illustrated in the chart below.

Washington, DC	444 North Capitol Street NW, Suite 700, Washington, DC 20001-1509	p 202 471 3990	f 816 460 7493

27. The NAIC Designation and NAIC Designation Category for a given modeled Legacy Security RMBS or CMBS CUSIP owned by a given insurance company depends on the insurer’s book/adjusted carrying value of each RMBS or CMBS, whether that carrying value, in accordance with *SSAP No. 43R—Loan-Backed and Structured Securities*, paragraphs 25 through 26a, is the amortized cost or fair value, and where the book/adjusted carrying value matches the price ranges provided in the model output for each NAIC Designation ~~and Designation Category and the mapped NAIC Designation Category, reflected in the table below, to be used for reporting an NAIC Designation Category until new prices ranges are developed to reflect the full range of new Risk Based Capital factors adopted for each NAIC Designation Category~~; except that a modeled Legacy Security RMBS or CMBS tranche that has no expected loss under any of the selected modeling scenarios would be assigned an **NAIC 1 Designation** and **NAIC 1.A Designation Category** regardless of the insurer’s book/adjusted carrying value.

NOTE: Please refer to the detailed instructions provided in SSAP No. 43R.

MORTGAGE REFERENCED SECURITIES

...

NAIC Risk Assessment

32. In determining the NAIC Designation **and Designation Category** of a Mortgage Referenced Security, the SSG may use the financial modeling methodology discussed in this Part, adjusted (if and as necessary) to the specific reporting and accounting requirements applicable to Mortgage Referenced Securities.

Quarterly Reporting for Mortgage Reference Securities

33. To determine the NAIC Designation **and Designation Category** to be used for quarterly financial statement reporting for a Mortgage Reference Security purchased subsequent to the annual surveillance described in this Part, the insurer uses the prior year-end modeling data for that CUSIP (which can be obtained from the NAIC) until the annual surveillance data is published for the current year. For a Mortgage Reference Security that is not in the prior year-end modeling data for that CUSIP, the insurer may follow the instructions in Part Two of this manual for the assignment of the SVO Administrative Symbol “Z” provided the insurer owned security meets the criteria for a security that is in transition in reporting or filing status.

GROUND LEASE FINANCING TRANSACTIONS

...

SSG Role and Process

35. On occasion, the SVO may refer a GLF transaction to the SVO for financial modeling of the GLF space leases or business operation, as applicable, in accordance with the process set forth in “Ground Lease Financing Transactions” in Part Three of this Manual. Following an SVO referral the SSG and SVO will maintain open communication related to requests for additional data, analytical questions and analytical conclusions. Any GLF transaction NAIC Designation **and Designation Category** will be assigned by the SVO.

...

THE RTAS – EMERGING INVESTMENT VEHICLE

Purpose

36. Price grids and/or NAIC Designation and Designation Categories are generated for the exclusive use of insurance companies and the NAIC regulatory community. Insurance companies use official Prices Grids and/or NAIC Designations and Designation Categories by following the instructions in *SSAP No. 43R—Loan-Backed and Structured Securities* to derive a final NAIC Designation **and Designation Category** for the RMBS or CMBS, which they use to derive the RBC applicable for the RMBS or CMBS.

Re: Amendment to the P&P Manual to update the definition of Principal Protected Securities (PPS)

Dear Ms. Mears,

The American Council of Life Insurers (“ACLI”), Private Placement Investors Association (“PPIA”), and North American Securities Valuation Association (“NASVA”) (“the undersigned”) appreciate the opportunity to engage with state regulators and the NAIC on the SVO’s proposed Amendment to the P&P Manual to update the definition of Principal Protected Securities (PPS).

The undersigned support the efforts to the SVO to continue to update the P&P Manual for new developments. The complete reorganization of the P&P Manual, several years ago, was a welcome development in making it more user friendly, and therefore we support continued diligence toward providing clarity as well as minimizing operational challenges for those that need to comply with the provisions of the manual.

While the undersigned agree with the substance behind the proposed amendment, in the spirit of the preceding paragraph, we propose rolling this proposed amendment into the proposed amendment entitled, “Amendment to the P&P Manual to update the definition of Other Non-Payment Risk assigned a Subscript “S” for the following two reasons:

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 94 percent of industry assets in the United States.

acli.com

PPIA is a business association of insurance companies, other institutional investors, and affiliates thereof, that are active investors in the primary market for privately placed debt instruments. The association exists to provide a discussion forum for private debt investors; to facilitate the development of industry best practices; to promote interest in the primary market for privately placed debt instruments; and to increase accessibility to capital for issuers of privately placed debt instruments. The PPIA serves 63 member companies and works with regulators, NASVA, the American College of Investors Counsel, and the investment banking community to efficiently implement changes within the private placement marketplace.

NASVA is an association of insurance company representatives who interact with the NAIC Securities Valuation Office (“SVO”) to provide important input, and to exchange information, in order to improve the interaction between the SVO and its users. In the past, NASVA committees have worked on issues such as improving filing procedures, suggesting enhancements to the NAIC’s ISIS electronic security filing system, and commenting on year-end processes.

- 1) PPS securities are a type of Subscript S security. Subscript S securities are already not eligible for filing exemption, and the Subscript S proposed amendment, recommends collectively adding Subscript S securities to the list of non-filing exempt securities (because they were inadvertently left off the list due to a historical oversight). Therefore, we recommend including PPS, as one the illustrations listed under Subscript S, and removing it as a stand-alone example on the list of non-filing exempt securities in a similar manner as with other Subscript S illustrations. Such consistency will improve the clarity and usability of the P&P Manual.
- 2) While the undersigned supported the SVO's effort to included PPS as a non-filing exempt security, it took several iterations and meetings with the SVO to arrive at a definition that proved workable. By trying to layer in this additional concern, to the PPS definition, we believe a similar effort and dialogue would be needed. Further, it appears some of the additional recommended illustrations in the Subscript S proposed amendment, appear to be attempting to address the same concern. Including that concern in one spot will improve the clarity and usability of the P&P Manual.

We discussed these concepts with Charles Therriault, and his team, and suggested we would like to work with the SVO to address this matter in the most efficient way possible. Our understanding is Charles and team are amenable to this suggestion. Please see our additional letter in response to the Proposed Amendment to the P&P Manual to update the definition of Other Non-Payment Risk assigned a Subscript "S".

We look forward to working with the SVO and regulators on this issue.

Sincerely,

Mike Monahan

RE: Update the Definition of Principal Protected Securities in the Purposes and Procedures Manual of the NAIC Investment Analysis Office (**Revised June 23, 2022**)

DATE: November 11, 2021

Update – At the Spring National Meeting held on Apr. 5, the SVO was directed work with industry on technical modifications to the original proposed language and expose a revised amendment. The SVO met with representatives of the American Council of Life Insurers (ACLI), Private Placements Investors Association (PPIA) and North American Securities Valuation Association (NASVA) on Apr. 29, May 6 and 24, and Jun. 17. The attached revised amendment reflects those discussions.

Summary – In May 2020 the Task Force adopted an amendment to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (the “P&P Manual”) to include Principal Protected Securities (“PPS”) as a new security type ineligible for the filing exempt process. At the time, the types of PPS which the SVO had seen were mixes of a traditional bond or bonds with additional assets that could possess any characteristic. These additional assets, which we called “performance assets,” were intended to generate excess return. They included, among other things, derivatives, common stock, commodities and equity indices. The performance assets generally included undisclosed assets and were typically not securities that would otherwise be permitted on Schedule D, Part 1 as a bond. In each case, the external credit rating provider (CRP) rating was based solely on the component dedicated to the repayment of principal and ignored the risks and statutory prohibitions of reporting the performance asset on Schedule D, Part 1

Recently, the SVO received a proposal for a security which posed many of the same risks as a PPS but was structured in a way that it did not cleanly fit the definition in the P&P Manual. In this example, the security was not issued by an SPV holding both the principal protection bond and the performance asset. Rather, the security was the direct obligation of a large financial institution whose obligation it was to pay principal at maturity and a premium based on the performance of a referenced equity index and an index comprised of equities, fixed-income instruments, futures and other financial assets. Though the obligation was solely that of the issuing financial institution, meaning there were no *underlying* bonds or performance assets, the structure posed the same risk of exposure to a performance asset because the amount of the issuer’s payment obligation was directly dependent on the performance of the referenced indices. Additionally, unlike a PPS transaction with an underlying bond and performance asset, the likelihood of payment of that performance asset premium, whatever the amount might be, was linked directly to the creditworthiness of the issuer.

www.naic.com

As such, the SVO proposes amending the P&P Manual definition of Principal Protected Securities to account for alternate structures which pose similar risks.

Proposed Amendment - The proposed text changes to the definition of Principal Protected Securities is shown below with additions in red underline and deletions in ~~red strikethrough~~, as it would appear in the 2021 P&P Manual format. Text changes in green underline reflect existing guidance that has been moved to improve clarity.

PART ONE**POLICIES APPLICABLE TO SPECIFIC ASSET CLASSES**

...

PRINCIPAL PROTECTED SECURITIES~~*Defined*~~

~~116. Principal Protected Securities (PPS) are a type of security that repackages one or more underlying investments and for which contractually promised payments according to a fixed schedule are satisfied by proceeds from an underlying bond(s) but for which the repackaged security generates potential additional returns as described in the detail criteria for PPSs, along with examples, in Part Three of this Manual.~~

Intent

117. Transactions meeting the criteria of a PPS as defined in Part Three of this Manual may possess Other Non-Payment Risks and must be submitted to the SVO for review under its Subscript S authority.

PRINCIPAL PROTECTED SECURITIES

~~(NOTE: This change is effective as of Jan. 1, 2021. PPS acquired prior to Jan. 1, 2021 must be filed with the SVO by Jul. 1, 2021.)~~

Definition

313. Principal Protected Securities (PPSs) typically have both a principal protected component and a performance component whose payments originate from, or are determined by, non-fixed income like sources and, therefore, pose the risk of non-fixed income like cashflows. PPS do not include the exclusions listed below in this section.
314. The following transaction examples are included for demonstrative purposes only, to highlight the intent behind the principle-based PPS definition and the core regulatory concern (that there are Other Non-payments Risks associated with PPSs beyond the contractually promised payments that may not be reflected in a CRP rating) but are not intended to encompass all possible PPS variants. Each of these examples meets the definition of a PPS. Any design that circumvents the definition, and related examples, through technical means but which in substance achieves the same ends or poses the same risk, shall be deemed a PPS.

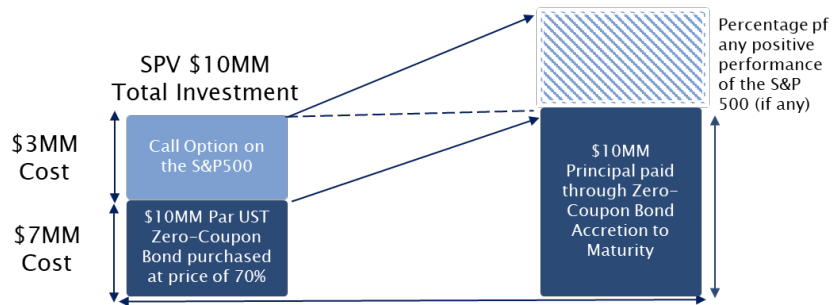

Example Transactions

315. Example 1 – PPSs are a type of includes any security that repackages one or more underlying investments and for which contractually promised payments according to a fixed schedule are satisfied by proceeds from an underlying bond(s) (including principal and, if applicable, interest, make whole payments and fees thereon) that if purchased by an insurance company on a stand-alone basis would be eligible for Filing Exemption, but for which:
- (i)
 - a. the repackaged security structure enables potential returns from the underlying investments in addition to the contractually promised cash flows paid to such repackaged security according to a fixed schedule;
- OR
- b. the contractual interest rate paid by the PPS is zero, below market or, in any case, equal to or below the comparable risk-free rate;

AND

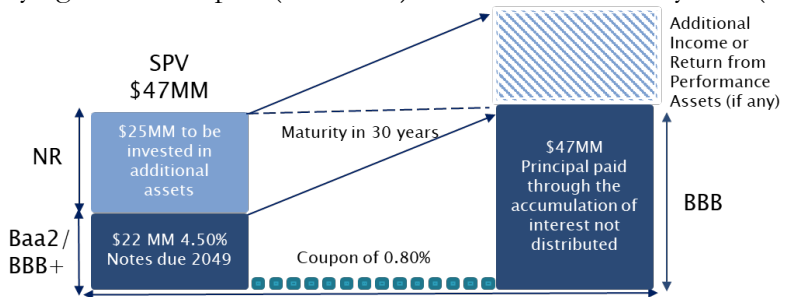

- (ii) the insurer would obtain a more favorable Risk Based Capital charge or regulatory treatment for the PPS through Filing Exemption than it would were it to separately file the underlying investments in accordance with the policies in this Manual.

316. Example 2 – In this initial example there are only two components: 1) a \$10 million par United States Treasury (UST) zero-coupon bond sold at discount (ex.

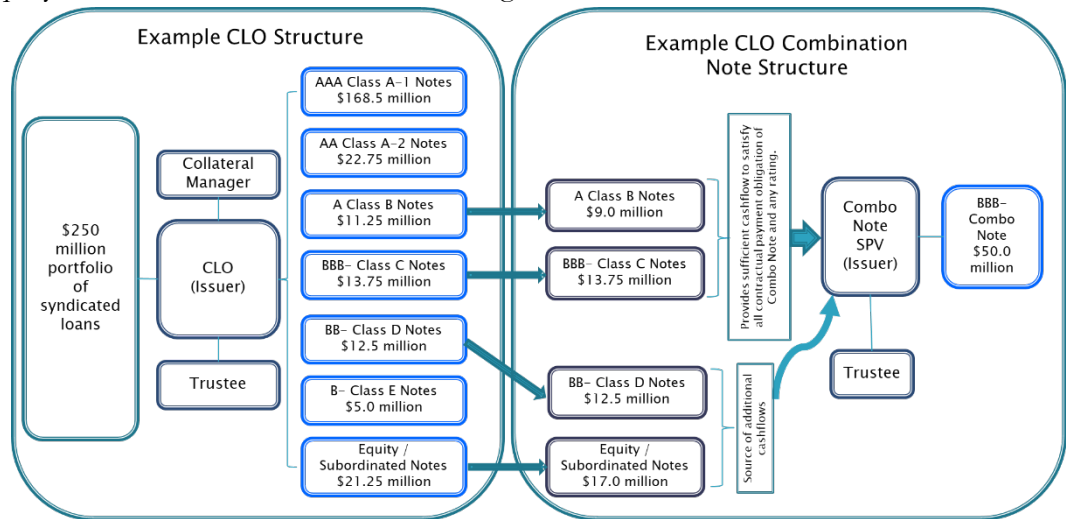

\$70) from par (\$100) that will pay par (\$100) at maturity and 2) a return linked to any positive performance of call options on the S&P 500 Index (if the S&P 500 Index has a negative performance, investors will only receive an amount equal to their initial investment). The CRP rating would be AAA/AA+ or an NAIC 1.A, based solely on the risk of the UST security; whereas, the Weighted Average Ratings Factors (WARF) applied by the SVO would result in an NAIC 4.B when it includes the exposure to the call options on the S&P 500 Index.

317. Example 3 – In ~~the second~~ this example there are multiple components: 1) a \$22 million corporate bond paying a fixed coupon (ex. 4.50%) with a stated maturity date (ex. 9/30/2049), 2) the corporate bond has two CRP ratings (Moody’s Baa2, S&P BBB+), 3) the Special Purpose Vehicle (SPV) also invests \$25 million in additional

undisclosed and unrated assets, 4) the SPV pays a below market semi-annual coupon of 0.80%, 5) the excess coupon difference (4.50% - 0.80% = 3.70%) is used to accumulate into the required principal to pay at maturity, and 6) a CRP rated the PPS a BBB or NAIC 2.B. , Again, the PPS rating is based solely on the corporate bonds that represent less than 50% of the total investment in this example, whereas, the WARF methodology would result in an NAIC 4.C when the exposure to all of the underlying investments are included.

318. *Example 4 – This The third* example is a repackaging of collateralized loan obligation (CLO) notes into a CLO Combination Note (Combo Note). The initial CLO holds \$250 million of syndicated loans and issues \$255 million of notes (the CRP rating for each tranche is listed before the Class, ranging from AAA to B-) and Equity / Subordinated Notes. The Combo Note is formed in this example by re-packaging the Class B, C, D, and Equity / Subordinated Note tranches together. The total notional amount of all the

tranches in the Combo Note is \$52.25 million. The Combo Note raises proceeds by issuing a single \$50 million notional tranche of debt through an SPV. The cashflows from the Class B and C notes are sufficient to repay the \$50 million Combo Note principal and interest, if any; which, may constitute a reclassification of the Class B and C tranche interest to repay principal on the Combo Note. Payments from the underlying investments in the Class D and Equity / Subordinated Note tranches provide returns to the repackaged security in addition to the contractually promised cash flows according to a fixed schedule that are based upon the payments from the Class B and Class C Notes. The Combo Note receives a BBB- rating or NAIC 2.C on the notional of \$50 million based upon payments from the Class B and C tranches even though \$29.5 million or 57% of the underlying investments are rated BB- or unrated, whereas, the WARF would result in an NAIC 4.B when the exposure to all of the underlying investments are included.

319. Example 5 – In this example, a financial institution issues notes pursuant to which it is obligated to make (i) fixed quarterly coupon payments which are less than the comparable risk-free rate, (ii) performance payments linked to the performance of referenced equity and futures indices and the net asset value of a basket of undisclosed securities, and (iii) a principal payment at maturity. This example differs from the others in that the issuer is an operating entity and not an SPV with underlying assets. Even though the payment of all amounts is the obligation of the issuing financial institution, the size of the performance payments, if any, is wholly dependent on the performance of non-fixed income like reference assets.

Exclusions

320. For the avoidance of doubt, PPSs shall not include defeased or pre-refunded securities which have separate instructions in this Manual; broadly syndicated securitizations, such as collateralized loan obligations (CLOs) (including middle market CLOs) and asset backed securities (ABS), except as described in the examples in this section; or CLO or ABS issuances held for purposes of risk retention as required by a governing law or regulation.

Filing Requirements

321. Investments in PPSs must be submitted to the SVO for review because they may possess Other Non-Payment Risks that the SVO must assess under its Subscript S authority. If the SVO determines in its judgement that there are not any Other Non-Payment Risks, the SVO will permit the security to benefit from Filing Exemption, if it is otherwise eligible.

322. In addition to *Filing Process and Required Documents* outlined in Part Two of this manual, the following additional information is required for PPSs:

- Disclosure of any Subsidiary, Controlled or Affiliated relationship between the PPS or any of the underlying investments and the insurer; including, how the underlying investments were acquired.
- Prior four quarterly financial statements, if produced, trustee or collateral agent reports from the entity issuing the PPS sufficient to identify: security specific details of each underlying investment (security identifier, descriptive information, all Eligible NAIC CRP Credit Ratings (if any), par value, market value, and explanation as to how the market value was determined).

Financial Regulation Standards and Accreditation (F) Committee
Portland, Oregon
August 10, 2022

The Financial Regulation Standards and Accreditation (F) Committee met Aug. 10, 2022. The following Committee members participated: Lori K. Wing-Heier, Chair (AK); Vicki Schmidt, Co-Vice Chair (KS); Sharon P. Clark, Co-Vice Chair (KY); Alan McClain (AR); Andrew N. Mais (CT); Timothy N. Schott (ME); Gary D. Anderson (MA); Eric Dunning (NE); Mike Causey represented by Jackie Obusek (NC); Andrew R. Stolfi represented by Doug Hartz (OR); Elizabeth Kelleher Dwyer represented by Matthew Gendron (RI); Michael Wise represented by Daniel Morris (SC); Larry D. Deiter (SD); Scott A. White (VA); and Jeff Rude (WY).

1. Adopted its Spring National Meeting Minutes

Commissioner Schmidt made a motion, seconded by Commissioner Clark, to adopt the Committee's April 5 minutes (see *NAIC Proceedings – Spring 2022, Financial Regulation Standards and Accreditation (F) Committee*). The motion passed unanimously.

Director Wing-Heier said the Committee met Aug. 9 in regulator-to-regulator session, pursuant to paragraph 7 (consideration of individual state insurance department's compliance with NAIC financial regulation standards) of the NAIC Policy Statement on Open Meetings. During this meeting, the Committee voted to award continued accreditation to Alaska, Iowa, Minnesota, and Ohio.

2. Adopted Revisions to the Examination Coordination Accreditation Guidelines

Director Wing-Heier stated that at the Spring National Meeting, the Financial Examiners Handbook (E) Technical Group provided a referral regarding updates to the exam coordination guidelines in the accreditation program. The Technical Group identified an inconsistency between guidance in the NAIC *Financial Condition Examiners Handbook* (Handbook) and the accreditation guideline regarding exam coordination. Specifically, the Handbook guidance requires coordination documentation for holding company groups with insurers domiciled in multiple states, whereas the accreditation guidance requires the same documentation for holding company groups with multiple insurers. Since the coordination guidance is intended to facilitate work between states, the recommendation is to align the accreditation guideline with the Handbook guidance. The referral was exposed for a 30-day public comment period, and no comments were received.

Commissioner White made a motion, seconded by Commissioner Mais, to adopt the recommendation to change the accreditation guidance to require coordination documentation for holding company groups with insurers domiciled in multiple states (Attachment One). The motion passed unanimously.

3. Adopted Receivership Updates to Model #440 and Model #450

Director Wing-Heier stated that at the 2021 Summer National Meeting, the Receivership and Insolvency (E) Task Force adopted revisions to the *Insurance Holding Company System Regulatory Act* (#440) and *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450). The revisions address the continuation of essential services through affiliated intercompany agreements with an insurer that is placed into receivership. Because both models are part of the accreditation standards, the Committee considers the impact of any changes. The Task Force provided a recommendation that the model revisions should be considered acceptable but not required for accreditation. The recommendation was exposed for a 30-day public comment period, and no comments were received.

Mr. Hartz made a motion, seconded by Commissioner Clark, to adopt the recommendation from the Receivership and Insolvency Task Force that the 2021 revisions to Model #440 and Model #450 be acceptable for accreditation but not required (Attachment Two). The motion passed unanimously.

4. Adopted a Recommendation Regarding VA Captives

Director Wing-Heier stated that captives are generally excluded from the accreditation standards with the exception of captive risk retention groups (RRGs), and captives that reinsure term and universal life with secondary guarantees, variable annuity (VA), or long-term care (LTC) business. Currently, VA and LTC have “to be determined” effective dates as work was ongoing in these areas. Last year, this Committee sent a request to the Financial Condition (E) Committee for more information on the extent VA and LTC captives are used, any relevant trends, and updates on related work. The focus of the exposure is the second paragraph, which discusses updates to the NAIC *Valuation Manual* to alleviate concerns regarding captives that reinsure VA business. The memorandum recommends replacing the “to be determined” effective date with a reference to VM-21, Requirements for Principle-Based Reserves for Variable Annuities. Since the *Valuation Manual* is already required for accreditation, the proposed revision does not represent a new requirement. Rather, it serves as a reference for how this item is addressed in the standards. This means there is no proposed requirement that would apply directly to captives. Rather, the issue is being addressed through the standards for traditional insurers. If future trends indicate a concern, the Committee may reconsider at that time.

Commissioner White made a motion, seconded by Commissioner Schmidt, to adopt the updates to the preamble to reference VM-21 regarding VA business (Attachment Three). The motion passed unanimously.

5. Received Updates on the Status of Model Laws for Accreditation

Director Wing-Heier stated that when model laws are adopted as requirements for accreditation, states are given a period of time to work within the legislative processes for their state to put the requirements in place. The NAIC provides support to the states and tracks adoption of the requirements. There are two new requirements that become effective Sept. 1, 2022. While this date is less than a month away, review of states’ laws and regulation for compliance with accreditation will not begin until Jan. 1, 2023.

Holly Weatherford (NAIC) provided an update on the adoption of the 2019 revisions to the *Credit for Reinsurance Model Law* (#785) and the *Credit for Reinsurance Model Regulation* (#786). She stated that jurisdictions have until Sept. 1, 2022, to adopt these revisions or face potential federal preemption by the Federal Insurance Office (FIO) pursuant to the “Bilateral Agreement Between the United States of America and the United Kingdom on Prudential Measures Regarding Insurance and Reinsurance” (Covered Agreement) with the European Union (EU) and United Kingdom (UK). She stated that just this morning, the U.S. Virgin Islands signed its legislation, as expected, bringing the count to all 56 NAIC jurisdictions having adopted the equivalent of Model #785. The three smaller territories, American Samoa, Guam and Northern Mariana Islands, were all able to adopt the models by an Order, with the approval of the FIO. With respect to the model regulation, 51 jurisdictions have adopted so far, another three jurisdictions currently have action pending, and it is expected that the other two jurisdictions will issue their regulations shortly. It is anticipated that all NAIC jurisdictions will have their laws, regulations, or orders in place by Sept. 1.

Ms. Weatherford provided an update on the status of the federal preemption reviews currently being conducted by the FIO. The federal Dodd-Frank Wall Street Reform and Consumer Protection Act (Dodd-Frank Act) lays out a process under which the FIO must go through before it can make any federal preemption determinations. The NAIC has been in frequent communication with the FIO regarding its reviews of state laws. Publicly, the FIO has praised the NAIC’s efforts, stating that the NAIC has made tremendous progress on this front and that each state has made a sincere effort to adopt the spirit of the models. The NAIC is aware that the FIO is focusing its review

on technical details in the law and regulation, and that there might need to be some clean-up made by the states after the reviews are completed. In summary, these have been constructive conversations with the FIO, and at this moment, the NAIC does not have reason for concern that this will lead to any federal preemption determinations. However, if any state is contacted directly by the FIO, please notify the NAIC.

Ms. Weatherford stated that the *Term and Universal Life Insurance Reserve Financing Model Regulation* (#787) becomes an accreditation standard on Sept. 1, 2022, with enforcement beginning on Jan. 1, 2023. As of July 8, when the last updates were received, 20 jurisdictions have adopted Model #787, with another four jurisdictions with action under consideration. Model #787 mirrors *Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued Under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation* (AG 48), and under the accreditation standards, a state may meet the requirements through an administrative practice, such as an actuarial guideline. Additionally, if a state adopts Model #787, it also will need to adopt Section 5B(4) of Model #785.

Commissioner Clark stated that the FIO reached out to Kentucky, and it appears it was primarily regarding drafting notes that are in place to abide by legislative procedures. Ms. Weatherford responded that the corrections from the FIO are typically highly technical and not related to the Covered Agreement. If there were concerns, states would hear from the NAIC and the FIO.

Having no further business, the Financial Regulation Standards and Accreditation (F) Committee adjourned.

MEMORANDUM

TO: Financial Regulation Standards and Accreditation (F) Committee

FROM: Susan Bernard (CA), Chair, Financial Examiners Handbook (E) Technical Group
John Litweiler (WI), Vice-Chair, Financial Examiners Handbook (E) Technical Group

DATE: Feb. 9, 2022

RE: Consideration for Financial Accreditation Standards
2022 Financial Condition Examiners Handbook

The *Accreditation Program Manual* (Manual) includes Review Team Guidelines to be used for financial examinations performed using the risk-focused surveillance approach that is found in the NAIC *Financial Condition Examiners Handbook* (Handbook). This memorandum is to update the Financial Regulation Standards and Accreditation (F) Committee on changes the Financial Examiners Handbook (E) Technical Group has made to the Handbook in 2021.

Modifications are made to the Handbook each year, and a new edition is printed annually. This process allows for an efficient way to update the Handbook and ensures that users have the latest version. The Technical Group made several changes to the Handbook in 2021, the majority of which it considers non-significant; i.e., having no impact on accreditation guidance.

The Technical Group noted an opportunity to better align the guidance in the Handbook and the Manual as it relates to exam coordination. This change should be considered “significant” for accreditation purposes, which the Technical Group defines as a change that may immediately warrant a change to at least one accreditation standard or the Review Team Guideline(s) for said standard. Although this change is categorized as “significant” by the Technical Group, this is not meant to suggest the modifications are synonymous with the term “significant” within the accreditation context.

During 2021, the Technical Group made the following changes:

Significant Changes to the Handbook Affecting Accreditation Standards and/or Review Team Guidelines:

- Revisions to the Coordination Framework to clarify the roles and responsibilities of each state that has a company in a holding company group.

When reviewing the guidance contained in the Coordination Framework, the Technical Group noted that Handbook guidance requires the use of Exhibit Z – Exam Coordination when documenting coordination efforts for

Washington, DC 444 North Capitol Street NW, Suite 700, Washington, DC 20001-1509

p | 202 471 3990

Kansas City 1100 Walnut Street, Suite 1500, Kansas City, MO 64106-2197

www.naic.org

examinations of holding company groups *with insurers domiciled in multiple states*. This is inconsistent with the guidance in the Manual, which requires the use of Exhibit Z for examinations of holding company groups *with multiple insurers*.

To ensure a consistent approach to documenting coordination efforts, the Technical Group advises the Committee to consider revising the guidance pertaining to Accreditation Standard B2(e): General Examination Procedures and Accreditation Standard B2(g): Scheduling of Examinations, as well as the related questions on the Accreditation SEG/IAR Form regarding the use of Exhibit Z. The Technical Group suggests incorporating the tracked revisions below to reflect this change in the Manual:

Accreditation Standard B2(e): Use of Appropriate Guidelines and Procedures, Results-Oriented Guideline 1:

The examiner should utilize a risk-focused approach and prepare examination documentation in sufficient detail to provide a clear understanding of the work performed. The content and organization of the documentation should support conclusions reached and effective execution of the risk-focused approach. When assessing compliance with this guideline, consideration should be given to the following:

- Utilization of a risk-focused approach in establishing priority of accounts or operational areas.
- The clarity and accuracy of the documentation used to support examination conclusions.
- Extent of involvement with contract examiners if utilized.
- Utilization of audit work when relied upon to support an identified risk.
- Fulfillment of coordination efforts as determined by the state in Exhibit Z – Examination Coordination, and consistent with their role as described in the Examiners Handbook, for companies that are part of a holding company group with insurers domiciled in multiple states ~~that includes more than one insurer~~.

Accreditation Standard B2(e): Use of Appropriate Guidelines and Procedures, Process-Oriented Guideline 3:

If the company being examined is part of a holding company group with ~~multiple~~ insurers domiciled in multiple states, the state should complete the appropriate section of Exhibit Z, Part Two (or similar document) as follows:

- If the state is the exam facilitator conducting a fully coordinated group examination, Exhibit Z, Part Two, Section B (or similar document) should be completed.
- If the state is a participating state in a fully coordinated group examination, the state should complete Exhibit Z, Part Two, Section C (or similar document).
- If the state did not participate in a coordinated group examination or utilized existing work outside of a fully coordinated group examination, the state should complete Exhibit Z, Part Two, Section D (or similar document).

Accreditation Standard B2(g): Use of Appropriate Guidelines and Procedures, Process-Oriented Guideline 3:

The department should document the attempt to coordinate examination efforts with departments of other states consistent with the coordinated exam approach prescribed in the Examiners Handbook. Each company that is part of a holding company group ~~that includes more than one insurer~~ with insurers domiciled in multiple states should include a copy of the coordination plan, documented in Section A of Exhibit Z, Part Two (or similar document), in its examination file.

Accreditation SEG/IAR Form, Standard B2(e), Question 5:

For examinations of companies that are part of a holding company group with insurers domiciled in multiple states that includes more than one insurer, does the department complete the applicable section of Exhibit Z – Examination Coordination based on its role in the examination?

Non-Significant Changes to the Handbook:

- Revisions to the Reserves Repositories (Life, Health and Property/Casualty [P/C]), as well as the Underwriting Repository, to provide additional possible completeness and accuracy procedures for examination teams to consider that align with the testing approach used by external auditors. Additionally, procedures were added to enhance collaboration with the actuary to determine significant lines of business/data elements to focus on for testing purposes.
- Revised guidance related to information technology (IT) in the following areas:
 - Additional guidance for evaluating the accessibility and transferability of policyholder data was incorporated into the following sections of the Handbook: 1) Section 1-3 narrative guidance; 2) Exhibit C, Part Two – IT Planning Questionnaire (ITPQ); and 3) Exhibit C, Part Two – IT Work Program and Instructional Notes.
 - Ransomware guidance was incorporated into the following sections of the Handbook: 1) Section 1-3 narrative guidance; and 2) Exhibit C, Part Two – IT Work Program.

If there are any questions regarding the proposed recommendations, please contact either me or NAIC staff (Bailey Henning at bhenning@naic.org) for clarification. Thank you for your consideration.

Date: November 30, 2021

To: Superintendent Elizabeth Kelleher Dwyer (RI), Chair of Financial Regulation Standards and Accreditation (F) Committee

From: Commissioner Cassie Brown (TX), Chair of Receivership and Insolvency (E) Task Force

Re: 2021 Amendments to the *Insurance Holding Company System Regulatory Act* (#440) and *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450)

On August 17, 2021, the NAIC Executive (EX) Committee and Plenary unanimously adopted revisions to the NAIC *Insurance Holding Company System Regulatory Act* (#440) and *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450). The revisions help ensure efficient coordination with affiliates and to enforce the continuation of essential services by an affiliate to an insurer in the event of insolvency.

These revisions were drafted by the Receivership Law (E) Working Group under charges assigned by the Receivership and Insolvency (E) Task Force. These revisions, referred to as the “receivership revisions” do not include recent revisions to Models #440 and #450 for group capital calculation or liquidity stress test. The receivership revisions address the continuation of essential services through affiliated intercompany agreements with an insurer that is placed into receivership by: 1) bringing affiliate service providers deemed “integral” or “essential” to an insurer’s operations under the jurisdiction of a rehabilitator, conservator, or liquidator for purposes of interpreting, enforcing, and overseeing the affiliate’s obligations under the service agreement and give the commissioner authority to require that “integral” or “essential” affiliate service providers consent to such jurisdiction; 2) further clarifying the ownership of data and records of the insurer that are held by the affiliate; and 3) clarifying that premiums of the insurer held by the affiliate are the property of the insurer and rights of offset are determined by receivership law. See attachment A for a copy of the amendments.

The recommendation for Part A Accreditation Standards is that these receivership revisions be considered acceptable, but not required to be adopted by states. However, the revisions are considered important and all states are encouraged to adopt them. States may consider adoption of the changes in conjunction with opening their holding company laws to consider adoption of the Group Capital Calculation and Liquidity Stress Test revisions.

The Task Force will continue to encourage states to adopt these revisions based on the benefits these revisions add to state regulation, and to the goal of improving efficiencies in receivership and reducing costs to a receivership estate.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

MEMORANDUM

TO: Superintendent Elizabeth Kelleher Dwyer, Chair of the Financial Regulation Standards and Accreditation (F) Committee

FROM: Commissioner Scott A. White, Chair of the Financial Condition (E) Committee

DATE: Nov. 19, 2021

RE: Use of Captives to Reinsure Variable Annuity and Long-Term Care Business

I received your April 14 memo requesting information on the extent the referenced captives are used, any trends on the use of the captives, reasons for such trends, and any relevant updates on work done in the areas of variable annuities and long-term care insurance (LTCl). Upon receiving your memo, I referred your request to the Financial Analysis (E) Working Group. Since the Working Group ultimately collected the information on the use of captives by surveying domestic states using the states' confidentiality standards, the Working Group's response memo will be submitted to the Financial Regulation Standards and Accreditation (F) Committee as a separate regulator-only document. However, for the purposes of this memo, I would note that one of the key takeaways from the Working Group is that the current impact to the risk-based capital (RBC) of the domestic insurers utilizing these captives is minimal.

I would also like to provide you with updates on work done on variable annuities and LTCl. In 2018, the Financial Condition (E) Committee adopted a revised framework for variable annuities, which became effective Jan. 1, 2020. The changes were specifically designed to remove the non-economic volatility within the previous framework, therefore removing the major reason for the use of captives for variable annuities. The Committee believes it is an appropriate time to remove the to be determined (TBD) effective date in the Accreditation Preamble and replace it with a reference to VM-21, Requirements for Principle-Based Reserves for Variable Annuities.

For LTCl, the Financial Condition (E) Committee has not developed any new standards that could be used to justify the removal of the TBD status. Although the impact of the use of captives for LTCl still appears to be minimal, the Committee recommends that this aspect of the Accreditation Preamble be retained and that the Financial Regulation Standards and Accreditation (F) Committee continue to monitor the use of captives for LTCl.

In summary, the Financial Condition (E) Committee recommends a replacement of the TBD in the Accreditation Preamble for variable annuities with VM-21 and retaining the TBD for LTCl.

Excerpt from Accreditation Manual – Part A PreambleCaptive Reinsurers

The following Part A standards apply to the regulation of a state's domestic insurers licensed and/or organized under its captive or special purpose vehicle statutes or any other similar statutory construct (captive insurer) that reinsure business covering risks residing in at least two states, but only with respect to the following lines of business:

- 1) Term and universal life with secondary guarantee policies that are applicable under Section 3 of the *Term and Universal Life Insurance Reserve Financing Model Regulation* (#787)(commonly referred to as XXX/AXXX policies). The application of this provision is intended to have a prospective-only effect, so that regulation of captive insurers, special purpose vehicles and any other entities that reinsure these types of policies will not be subject to the Part A standards if the policies assumed were both (1) issued prior to Jan. 1, 2015, and (2) ceded so that they were part of a reinsurance arrangement as of Dec. 31, 2014. [Drafting Note: This paragraph of the Preamble became effective Jan. 1, 2016]
- 2) Variable annuities valued under Actuarial Guideline XLIII—CARVM for Variable Annuities (AG 43) or VM-21: Requirements for Principle-Based Reserves for Variable Annuities. [Drafting Note: ~~This paragraph of the Preamble is not yet effective. Effective date for compliance to be determined.~~ This paragraph of the Preamble was addressed through revisions to VM-21 of the Valuation Manual.]
- 3) Long term care insurance valued under the *Health Insurance Reserves Model Regulation* (Model #10). [Drafting Note: This paragraph of the Preamble is not yet effective. Effective date for compliance to be determined.]

With regard to a captive insurer, special purpose vehicle, or any other entity assuming XXX/AXXX business, regulation of the entity is deemed to satisfy the Part A accreditation requirements if the applicable reinsurance transaction complies with Model #787.

[Drafting Note: The Part A standards with respect to entities assuming ~~variable annuities and~~ long term care reinsurance business are intended to be effective with respect to both currently in-force and future business. However, the effective dates for ~~variable annuities and~~ long term care insurance ~~are~~ is not yet determined, and ~~their~~ its application to in-force business need further discussion].

INTERNATIONAL INSURANCE RELATIONS (G) COMMITTEE

International Insurance Relations (G) Committee Aug. 10, 2022, Minutes 11-2
 International Insurance Relations (G) Committee July 21, 2022, Minutes (Attachment One) 11-5

Draft: 8/16/22

International Insurance Relations (G) Committee
Portland, Oregon
August 10, 2022

The International Insurance Relations (G) Committee met in Portland, OR, Aug. 10, 2022. The following Committee members participated: Gary D. Anderson, Chair (MA); Eric Dunning, Vice Chair (NE); Evan G. Daniels (AZ); Andrew N. Mais (CT); David Altmaier (FL); Doug Ommen (IA); Dana Popish Severinghaus (IL); James J. Donelon (LA); Kathleen A. Birrane (MD); Anita G. Fox (MI); Troy Downing (MT); Marlene Caride (NJ); Alexander S. Adams Vega (PR); and Michael Wise (SC).

1. Adopted its July 21 and Spring National Meeting Minutes

The Committee met July 21 to discuss and hear views and comments from interested parties on the International Association of Insurance Supervisors' (IAIS') public consultation on the draft criteria that will be used to assess whether the aggregation method (AM) provides comparable outcomes to the Insurance Capital Standard (ICS).

Additionally, Commissioner Anderson noted that the Committee met June 6 in regulator-only session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to hear a preview of and provide steering on main agenda items for the IAIS committee meetings and Global Seminar, which took place mid-June.

Commissioner Altmaier made a motion, seconded by Commissioner Caride, to adopt the Committee's July 21 (Attachment One) and April 7 (*see NAIC Proceedings – Spring 2022, International Insurance Relations (G) Committee*) minutes. The motion passed unanimously.

2. Discussed the FRB's IPAC Paper on the ICS

Commissioner Anderson explained that the purpose of this agenda item was to highlight ongoing developments both domestically and at the international level on the ICS, in particular a recent paper released by the Federal Reserve Board's (FRB's) Insurance Policy Advisory Committee (IPAC) on the ICS.

Pooja Rahman (IPAC/Protective Life) gave an overview of the IPAC's recent work, explaining that the objective of the study was to assess the potential impact of the IAIS' ICS on U.S. insurers, policyholders, and markets, with a focus on long-duration life insurance and retirement products. She noted that the paper considers the impact specifically of the reference version of the ICS being used during the monitoring period. She explained that the ICS stylized model used for the study leverages the work of the Chief Risk Officer Coalition and the IAIS' reference ICS. She said that the IPAC's analysis identified a number of issues but that a redesigned ICS has the potential to provide regulators with a globally comparable measure of group solvency that is consistently market-based and reflective of an expanded set of risk factors relative to the existing U.S. state-based capital regime.

Ms. Rahman explained three main observations that the IPAC identified: 1) the ICS fails to reflect several relevant asset classes and is overly reactive to credit spread movements; 2) the treatment of participating life insurance (par-life) in the ICS discounting methodology is misaligned with the actual risk-mitigating profile of that business, causing overstatement of risk charges in low interest rate environments; and 3) the ICS does not recognize dynamic hedging programs or the use of long-term alternative assets in liability management, introducing regulatory conflict between the ICS and U.S. statutory rules to which many businesses conform. The IPAC paper recommends certain changes to address or mitigate these observations and also proposes that such changes be considered for the version of the ICS that would be used in the forthcoming AM comparability assessment.

3. Heard an Update on 2022 Activities of the IAIS

Director Dunning reported on recent IAIS activities, starting with an update on the IAIS committee meetings and Global Seminar held in Dubrovnik, Croatia, in mid-June, where significant developments were made on a variety of workstreams.

Director Dunning said that on the holistic framework, work is progressing on the targeted jurisdictional assessment (TJA) draft individual reports for the 10 involved jurisdictions that are currently being reviewed by a TJA member review panel. Later this fall, the focus will shift to drafting reports that the IAIS will provide to the Financial Stability Board (FSB) to inform its decision on whether to continue the designation process of global systemically important insurers. As reported earlier, the U.S. on-site assessment took place in mid-January, which included Connecticut, New Jersey, and New York as state volunteers.

Director Dunning noted that in September, the IAIS will conduct its annual collective discussion as part of the global monitoring exercise. Through the individual insurer monitoring and sector-wide monitoring data collections, the IAIS has identified themes and insurers to discuss for potential financial stability issues and what supervisors are doing to mitigate such risks. These discussions will also help inform what is included in the IAIS' Global Insurance Market Report, which is published towards year-end.

Director Dunning reported that in June, the IAIS released a public consultation on draft comparability criteria to assess whether the AM provides comparable outcomes to the ICS. The Committee met July 21 to discuss these draft criteria, and stakeholders were encouraged to submit comments to the IAIS by the Aug. 15 deadline. Relatedly, he noted that templates were released in April for the AM and ICS data collections, which are part of the third year of the five-year monitoring period, and that this data is due at the end of August.

Director Dunning concluded by noting that a number of other IAIS activities are underway related to the several metrics, including: climate; diversity, equity, and inclusion (DE&I); operational resilience; cyber; and liquidity. The upcoming September committee meetings will include discussion and work on the IAIS' 2023–2024 road map.

4. Heard an Update on International Activities

a. Regional Supervisory Cooperation

Commissioner Anderson highlighted the three topics of focus in 2022 for the European Union (EU)-U.S. Insurance Dialogue Project: 1) climate risk financial oversight, including climate risk disclosures, supervisory reporting, and other financial surveillance; 2) climate risk and resilience, including innovative technology, pre-disaster mitigation, and adaptation efforts, and modelling; and 3) innovation and technology, which will include topics such as big data, artificial intelligence (AI), and supervisory technology as a regulatory tool. He noted that the project's working groups have met several times and will be producing a summary report of the discussions by the end of this year. Additionally, he said that a public Project Forum is expected to take place in 2023.

Commissioner Anderson reported that a number of bilateral discussions were held between NAIC representatives and international counterparts over the last few months. This included a biannual meeting with Bermuda, where climate risk, cyber risk, innovation, and the increasing role of private equity in insurance were topics of discussion. The NAIC used the in-person IAIS June committee meetings and Global Seminar as an opportunity to hold bilateral meetings with colleagues from Hong Kong, Japan, Singapore, and Taiwan to discuss a variety of topics of mutual interest. Notably, the NAIC and the Conférence Interafricaine des Marchés D'Assurance (CIMA) discussed respective priorities and took the opportunity to sign a memorandum of understanding that had been put on hold in early 2020 due to COVID-19.

Commissioner Anderson reported that NAIC members and staff joined more than 20 insurance regulators from around the globe for the Bank of England’s virtual 9th Workshop for Heads of Insurance Supervision to discuss recent regulatory updates in the United Kingdom (UK), as well as key challenges to the industry as a whole. He noted upcoming speaking engagements at the Eurofi Conference in Prague, Czech Republic, on Sept. 7 and at the Association of Bermuda Insurance and Reinsurance (ABIR) annual event in Brussels, Belgium, on Sept. 8–9.

Commissioner Anderson noted that the NAIC International Fellows Program will take place in person for the first time in three years this fall, beginning on Oct. 10. With the application period having just closed, he noted applications were received from many qualified regulators from various jurisdictions around the world. Seven states have agreed to serve as hosts, and there is a small window to take more states if they are interested in serving as hosts.

Lastly, Commissioner Anderson noted that the NAIC has been hosting Mimi Vinaiphat from the Office of Insurance Commission (OIC) in Thailand this summer at its Capital Markets and Investments Analysis Office in New York City as an intern as part of completing a master’s degree in data analytics from Carnegie Mellon University (Pittsburgh, PA). He thanked her for her work this summer, which has been extremely helpful and demonstrates the NAIC’s commitment to engagement with international counterparts.

b. OECD

Commissioner Anderson reported that in June, NAIC staff participated in the Organisation for Economic Co-operation and Development (OECD) Insurance and Private Pensions Committee (IPPC) and provided updates on topics from a U.S. perspective, including a summary of 2021 insurance industry statistics; an update on the effects on the U.S. insurance and financial markets of the Ukraine/Russia war; and the NAIC’s climate risk-related workstreams.

c. SIF

Commissioner Anderson reported that the Sustainable Insurance Forum (SIF) had an informal working group meeting in June to discuss net zero transmission plans and access and affordability in insurance. This included new products being offered, such as parametric insurance, and private-public partnerships to address climate risk protection gaps in member jurisdictions. The next meeting of the SIF is expected to be in the fall.

Having no further business, the International Insurance Relations (G) Committee adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/G CMTE/National Meetings/2022/Portland – Summer National Meeting/Minutes

Draft: 8/1/22

International Insurance Relations (G) Committee
Virtual Meeting
July 21, 2022

The International Insurance Relations (G) Committee met July 21, 2022. The following Committee members participated: Gary D. Anderson, Chair (MA); Eric Dunning, Vice Chair (NE); Andrew N. Mais (CT); Doug Ommen (IA); Dana Popish Severinghaus (IL); James J. Donelon (LA); Kathleen A. Birrane (MD); Anita G. Fox (MI); Troy Downing (MT); and Marlene Caride (NJ).

1. Discussed IAIS Public Consultation Draft Criteria on AM Comparability to the ICS

Commissioner Anderson explained the purpose of the meeting is to discuss the International Association of Insurance Supervisors (IAIS) public consultation on the draft criteria that will be used to assess whether the aggregation method (AM) provides comparable outcomes to the insurance capital standard (ICS). The IAIS approved release of this consultation at its meetings last month, and comments are due on Aug. 15.

Commissioner Anderson explained that detailed draft criteria were developed for each high-level principle (HLP), and the intention is to have criteria for a process that neither precludes the AM at the outset as an outcome equivalent approach to the ICS for measuring group capital, nor gives it a free pass. Accordingly, the IAIS is looking for stakeholder feedback on whether each individual criterion is clear or too restrictive, considering the HLP to which it relates.

Commissioner Anderson noted the consultation is looking for perspectives and technical input on various parameters included in the criteria. He explained the IAIS is seeking input to aid in the development of specific scenarios for the sensitivity analysis envisaged in the draft criteria for HLP 1.

The IAIS is also seeking feedback on representativeness of the non-life insurance sample as it relates to HLP 5. He said following consideration of consultation comments, the IAIS is expected to finalize the criteria towards the end of the year with the assessment scheduled to begin in the third quarter of 2023. He added that constructive feedback from stakeholders will be important as the IAIS undertakes work to finalize the draft criteria post-consultation.

Ryan Workman (NAIC) explained that questions were circulated in advance of the meeting to help structure the conversation on each HLP, as well as two specific questions on HLP 1 and HLP 5. Interested parties would be invited to provide any high level, general comments on the consultation and then comments on each HLP.

General comments on the criteria from interested parties included the following:

- Many views offered were preliminary as interested parties were still in the process of assessing the draft criteria and would later finalize their official comments on the consultation.
- A number of the criteria could preclude comparability given they are overly focused on quantitative data and based on an assumption that the ICS is always correct. Without significant revisions, it will be impossible for the criteria to create a process for comparability because the criteria are impractical, lack clarity, and are flawed by design.

- The AM could be deemed not comparable simply due to the inoperability of the criteria. A holistic implementation of the criteria will be necessary for the assessment and requires applying a necessary amount of judgement and taking into account quantitative and qualitative aspects.
- The criteria should be revised to recognize that the purpose is to look at approaches to group capital and not just a number.
- An evidence-based approach to the comparability assessment should include both qualitative and quantitative data. The criteria are narrowly focused on quantitative comparison and ignore the qualitative.
- The criteria disregard fundamental differences between the two approaches to group capital and set up a comparison that expects the AM to operate the same as the ICS. Comparing two incompatible frameworks is an impossible task.
- Doing the scenario analysis would require a large amount of work and ignores data that has already been provided during field testing and the monitoring period that shows correlation. There is no value in going through an exercise that would show the same outcomes as those already observed.
- The comparability exercise has become a U.S.-only exercise, which is unrealistic as it ignores the context of the U.S. supervisory regime and tools already available that surround the collected data.
- There are concerns that the process will be used to suggest weakness in the U.S. system of insurance supervision, not comparing approaches to group capital.
- If the overall goal for group capital is financial stability and protecting policyholders, the draft consultation lacks an assessment of how systems achieve such potential outcomes.
- The U.S. system includes tools beyond just capital, and there are also different jurisdictional approaches to insurance supervision. This must be factored into the analysis to make it compatible with the U.S. approach. The U.S. system is distinct and has stood the test of time.
- The criteria and high-level principles preclude the AM from achieving its goal. As the high-level principles preclude comparability, the criteria will too.
- The NAIC should continue to promote the broad selection of supervisory actions and regulatory tools at their disposal to address group solvency; requiring additional capital should not be the only option.
- There are other jurisdictions besides the U.S. taking an aggregation approach, so there is broader interest in this consultation.

In response to some of the comments made, Mr. Workman noted that there were jurisdictions besides the U.S. that had volunteers proving AM data and that how the IAIS will use data from different jurisdictions for the assessment process is something the IAIS will need to figure out. He added that it is important to remember that the ICS is a group capital component, which is more quantitative in nature, but is part of the Common Framework for the Supervision of Internationally Active Insurance Groups (ComFrame), which has qualitative components related to group solvency. Accordingly, interested parties may want to comment on how that will be taken into account as part of the assessment since the ICS does not operate in isolation from the rest of ComFrame.

Comments made on HLP 1 criteria included the following:

- The criteria for HLP 1 could not be operationalized and would preclude comparability. In particular, Criteria 1.1 and criteria 1.2 preclude comparability as drafted as they narrow the definition of comparability to mean significantly correlated.
- The IAIS would need a granular definition of the scenarios. Then it would need to determine the data that would be needed, followed by performing the analysis. However, the amount of data potentially needed as contemplated by the criteria would be too much to analyze in the time allotted.

- The sensitivity analysis described would take significant resources to tell us what we already know—that both approaches move similarly. Business cycle is undefined and will remain until the scenarios are undefined, which makes it difficult to understand how this will work.
- It is unclear how the differences in valuation treatment would not preclude comparability.
- Simplicity for the sensitivity analysis and scenarios is better.
- The most useful criteria is 1.3e and the type of scenario analysis it describes.

In response to some of the comments made, Ned Tyrrell (NAIC) noted that as part of this year's AM data collection, there are questions about what type of data could be used for scenarios and sensitivity analysis. He encouraged volunteers to provide input as it would help inform the comparability assessment process.

Comments made on HLP 2 criteria included the following:

- Depending on how the criteria are interpreted, if the criteria are applied literally, it would preclude comparability. The sub-criteria ignore the need to look at how a group capital requirement works with the broader solvency framework; one needs to be looking at the frameworks, not just the numbers.
- The narrow definition of comparability exhibits some anchoring bias; broadening the definition of comparability would create more constructive analysis.
- With respect to criteria 2.3 and HLP 2.4, the use of "similar" is effective for setting up expectations for comparability.
- The criteria in HLP 2 could work if applied flexibly and with proportionality.

Comments made on HLP 3 criteria included the following:

- The criteria seem to ignore conservatism that is part of some approaches which is included to avoid short-term market fluctuations.
- The ICS is not yet finalized, yet this criteria assumes ICS results are always correct whereas the recent Federal Reserve Board's (FRB's) Insurance Policy Advisory Committee paper showed one instance where ICS results would have incorrectly required supervisory action. The entire solvency framework needs to be considered when deciding what is or is not prudent.

On HLP 4 criteria, it was noted that the concept makes sense, but there may be times when certain entities are scoped out.

Mr. Workman commented that such an approach is in line with ComFrame.

Comments made on HLP 5 criteria included the following:

- Volunteers have satisfied this principle of representativeness over the last couple of years. There is a difference between how the ICS works with life versus non-life groups, and the non-life sample is sufficiently representative.
- HLP 5 could preclude comparability as it is overly focused on a level of participation rather than representative data to do the assessment.

There were no comments on HLP 6 criteria.

Commissioner Anderson thanked interested parties for their comments and questions and emphasized that stakeholder feedback and input will be important as the IAIS works to finalize the criteria. He said he hopes the discussion helped clarify some things and will help inform stakeholder thoughts on the consultation.

Having no further business, the International Insurance Relations (G) Committee adjourned.

Draft: 8/28/22

Innovation, Cybersecurity, and Technology (H) Committee
Portland, Oregon
August 10, 2022

The Innovation, Cybersecurity, and Technology (H) Committee met in Portland, OR, Aug. 10, 2022. The following Committee members participated: Kathleen A. Birrane, Chair (MD); Evan G. Daniels, Co-Vice Chair (AZ); Dana Popish Severinghaus, Co-Vice Chair (IL); Karima M. Woods (DC); John F. King (GA); Amy L. Beard (IN); Chlora Lindley-Myers (MO); Troy Downing (MT); Jon Godfread (ND); Adrienne A. Harris represented by Sumit Sud (NY); Judith L. French (OH); Elizabeth Kelleher Dwyer (RI); Carter Lawrence (TN); Kevin Gaffney (VT); and Mike Kreidler (WA). Also participating were: Cynthia Amann (MO); and Katie Johnson (VA).

1. Adopted its Spring National Meeting Minutes

Commissioner Birrane said the Committee met April 5.

Commissioner Downing made a motion, seconded by Director Popish Severinghaus, to adopt the Committee's April 5 minutes (*see NAIC Proceedings – Spring 2022, Innovation, Cybersecurity, and Technology (H) Committee*). The motion passed unanimously.

2. Adopted a Request for NAIC Model Law Development from the Privacy Protections (H) Working Group

Ms. Johnson, chair of the Privacy Protections (H) Working Group, presented the Working Group's Request for NAIC Model Law Development, noting that it will incorporate some aspects of the *NAIC Insurance Information and Privacy Protection Model Act* (#670) and the *Privacy of Consumer Financial and Health Information Regulation* (#672) into a new model. She said the concepts found in Model #670 and Model #672 need to be modernized considering changes to industry practices, and adopting this request will provide the appropriate next steps for discussing substantive issues regarding the appropriate privacy protections for the insurance marketplace.

Commissioner Godfread made a motion, seconded by Director Lindley-Myers, to adopt the proposed Request for NAIC Model Law Development (Attachment One). The motion passed unanimously.

3. Adopted the Reports of its Working Groups

A. Big Data and Artificial Intelligence (H) Working Group

Superintendent Dwyer said the Big Data and Artificial Intelligence (H) Working Group met July 14 and held a Collaboration Forum on Algorithmic Bias, which included a presentation from Scott Kosnoff (Faegre Drinker Biddle & Reath LLP) on different perspectives on artificial intelligence (AI) risk management and governance and a presentation from Eric Krafcheck (Milliman) on bias detection methods and tools. The Working Group also received reports from Workstreams One and Two. Workstream One is focusing on AI/machine learning (ML) surveys led by Commissioner Gaffney, and Workstream Two reported on its work focusing on determining the appropriate regulatory evaluation of third-party data and model vendors.

B. Cybersecurity (H) Working Group

Ms. Amann said the Cybersecurity (H) Working Group met July 14 and received an update on its work plan. She said the Working Group launched a volunteer group to draft a state insurance regulator survey, and the survey represents one of the Working Group's key deliverables to be completed. She said an initial survey has been

drafted and updated, and it is expected to be sent to state insurance regulators in August. She said the Working Group also received an update on the implementation of the *Insurance Data Security Model Law* (#668), noting that 21 states have now adopted it. She said the Working Group also received an update on federal activity related to cybersecurity, the NAIC’s cybersecurity tabletop exercises, and state insurance regulatory cybersecurity tools.

C. E-Commerce (H) Working Group

Commissioner Downing said the E-Commerce (H) Working Group met May 26 and May 5 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings to plan steps to accomplish its 2022 charges. He said the Working Group has also been working to clarify and analyze the various issues raised by the states and industry in response to the e-commerce surveys that were sent out in late 2021. The survey was sent to the states asking what exceptions to state laws or regulations were implemented during the pandemic to allow e-commerce, electronic transactions, and electronic communications to take place when in-person methods were not possible. Commissioner Downing said at the same time, the survey was sent to industry asking the companies to identify regulations or regulatory practices related to any specific technologies, communications, transactions, or any other forms and methods of e-commerce that may currently impede their ability to conduct business electronically. Based on the survey results, the Working Group prepared a working framework that categorized identified issues related to e-signatures, e-notices, claims, policy, and a general “other” category.

Commissioner Downing said since developing the framework, various members of the Working Group volunteered to dig deeper into each of these topics to explore what options were offered by the states and industry via the survey; identify what actions, if any, have been taken by the states in relation to these topics; and identify potential solutions to any outstanding or otherwise remaining issues. He said the Working Group plans to complete the updated framework to reflect the work done by the Working Group volunteers and expose that document for review and comment in the next few weeks. He said the Working Group also plans to meet to discuss the framework and get feedback on its overall plan.

D. Innovation in Technology and Regulation (H) Working Group

Director Daniels said the Innovation in Technology and Regulation (H) Working Group met May 25 to: 1) review its charges; and 2) outline its plan for the year, including quarterly meetings on various topics. He said the Working Group focused on various state approaches facilitating innovation across the country, including sandbox concepts and other strategies. He said presentations were provided by the District of Columbia, Illinois, and Wisconsin departments of insurance (DOIs); they were well received, and other approaches were discussed. He said the Working Group has plans to meet two more times in 2022 on topics related to innovation and technology in insurance.

E. Privacy Protections (H) Working Group

Ms. Johnson said the Privacy Protections (H) Working Group met three times in regulator-to-regulator session to review draft revisions to Sections 1–12 of Model #670, and it met twice in open meetings. She said during its June 15 meeting, the Working Group: 1) adopted its Spring National Meeting minutes; and 2) received comments on its draft revisions to Sections 1–2 of Model #670. She highlighted a few of the comments, noting that after considering these comments, the Working Group decided to clarify its direction and agreed to replace Model #670 and Model #672 with one new model. She said during its Aug. 9 meeting, the Working Group: 1) adopted its Aug. 2 minutes; 2) heard updates on state and federal privacy legislation; and 3) discussed next steps on the *Consumer Data Ownership and Use* white paper, the drafting of the new model, and the related work plan.

Commissioner Kreidler made a motion, seconded by Commissioner Godfreed, to adopt the reports of the Big Data and Artificial Intelligence (H) Working Group (Attachment Two), the Cybersecurity (H) Working Group (Attachment Three), the E-Commerce (H) Working Group, the Innovation in Technology and Regulation (H) Working Group, and the Privacy Protections (H) Working Group (Attachment Four). The motion passed unanimously.

4. Received an Update on its Projects

A. ICT-Hub Concepts and Progress

Commissioner Birrane asked Scott Morris (NAIC) to provide an update on the Innovations, Cybersecurity, and Technology (ICT) Hub project intended to assist in fulfilling the Committee's charge to coordinate the work of NAIC committees on issues related to innovation, technology, cybersecurity, and data privacy referred to as "Related Groups." She said it is intended to provide a link to committee work pages, a summary of their relevant work, and a library of resources. She said this is intended to enable users to easily identify various workstreams and work products developed or being developed by different committees and groups at the NAIC.

Mr. Morris said the NAIC is working on this project and has gathered information and outlined use cases to define what the ICT-Hub should provide. He said the NAIC Communications Department has built a demo of the platform that was shared with Committee members after the Collaboration Forum on Algorithmic Bias on July 19. He said as part of implementing a new website, a content management platform will be a foundational component and will allow a smarter and more streamlined approach. He said it will benefit all NAIC committees and the website generally by allowing content to be tagged so that it can be presented on different pages or different topics. He provided some examples of what that might be and what it would include. He said the NAIC will start by building a taxonomy to classify the content, beginning with topics related to the Committee and then expand it from there. He said feedback was received, and staff will now go back to the Communications team to help build out a project timeline and costs. He said the project will take a more technology driven approach, but it is believed to be the best approach for the long term. He said there are plans to get something out in the interim that will be based on the more traditional platform in existence today.

B. Collaboration Forum on Algorithmic Bias Program and Kansas City Fly-In

Commissioner Birrane said she wants to clarify that the Collaboration Forum is not an event but a methodology. She said it is intended to bring different groups together to collaborate, and holding educational events as a part of the methodology is part of the process of bringing those groups together regarding a common topic to coordinate through the Collaboration Forum. She said it is a collaboration effort that we are calling a forum.

Commissioner Birrane said the Committee is charged with collaborating and coordinating NAIC work on Committee topics, and most of that work can be done through communication with the Related Groups directly but recognizing that some topics are so big and substantial and cut across so many groups that it makes it important to collaborate to assure consistency and efficiency.

Commissioner Birrane said it became clear early on that there were many workstreams at the NAIC looking at the subject of unfair bias in algorithms and how AI/ML driven decisional systems can result in illegal discrimination, so this was the perfect subject for the first Collaboration Forum. She said it began in May, and as the Collaboration Forum evolved into regulator-to-regulator session, three areas of focus emerged:

1. The need to identify the Related Groups and ensure regular and ongoing communication about what each are doing and communicate regarding the ICT-Hub.

2. Providing foundational education to commissioners and other senior state insurance regulators to ensure a common foundation of understanding.
3. Work together to identify the common and foundational elements of regulatory oversight of AI use in insurance, including the development of a common vocabulary and the identification of regulatory tools.

Commissioner Birrane reviewed the progress made over the last few months, including hosting foundational education at the Commissioners' Mid-Year Roundtable, hosting a regulator-only Fly-In in Kansas City, holding Forum sessions during the Summer National Meeting at the Big Data and Artificial Intelligence (H) Working Group meeting, and continuing that with a session after the Committee meeting. She said there will be other public sessions held on particular "use cases" put on by the other workstreams in the future.

Having no further business, the Innovation, Cybersecurity, and Technology (H) Committee adjourned into the Collaboration Forum on Algorithmic Bias session.

5. Held the Collaboration Forum on Algorithmic Bias

Commissioner Birrane introduced the presenters for the Collaboration Forum on Algorithmic Bias session. She said the topic is, "Approaches Companies Are or Can Implement to Manage and Mitigate the Risk of Unintended Bias and Illegal Discrimination When Developing and Using AI/ML," and she introduced each of the presenters.

Dale Hall (Society of Actuaries—SOA) talked about the SOA's Ethical & Responsible Use of Data & Predictive Models Certificate Program. He said it is designed for state insurance regulators, actuaries, data scientists, and others who work in the insurance profession; the full program was released in 2021, and an executive version is being developed. He said the focus is on an ethical framework. It is based on a set of principles, which are then applied in practice; provides a way to organize data processes and analyze a given situation; facilitates the ability to have checkpoints and ask important questions; and suggests different approaches to frameworks that may have the same core intentions.

Mr. Hall said the three main points of the program are to promote: 1) fairness, ensuring it is equitable, avoids bias, gives thought to social considerations; 2) safety, ensuring the data is robust, useful, meets privacy standards, a technically sustainable model, and accurate; and 3) transparency and accountability, ensuring it is well documented, explained, communicated, and interpreted well, and there is accountability in terms of who owns it and will be answering questions regarding it and its use. He said highlighted in the process is gathering the data and developing the initial models, avoiding bias, and understanding how various modeling approaches relate to the framework. He talked about the need to ensure that models are fair and avoid disparate impact and treatment and unintended discrimination. He said potential approaches to doing this might include collecting protected data to ensure the model does not discriminate and require direct causal relationships.

Mr. Hall said the program also includes model safety and governance. He said this follows generally accepted enterprise risk management (ERM) principles that actuaries are already very involved in and work with auditors and others in the company to ensure it is well understood who owns and manages the processes. He said being able to explain the model is very important and should be a strong and simple explanation. He said there is an ongoing responsibility to ensure feedback and control after deployment.

Tulsee Doshi (Google and Lemonade) presented on today's approaches to algorithmic bias. She reviewed different ways AI is being used across the world, including helping the industry to determine risk, detect fraud, and many other things showing it has many benefits even if it also has risks. She said the question is, how to balance those benefits against the risks while still being intentional about the other effects. She said human biases affect the way products affect the world, and she provided examples.

Ms. Doshi said humans are at the center of creating bias, and that it is not unique to AI, but AI is likely to exacerbate the problem. She said it is not necessarily an issue of equality or providing everyone with the exact same thing but of equity; i.e., providing the same, yet reducing the risk of higher risk areas and communities. She said fairness is a little bit of both. She reviewed the components of developing the models, and she said it is important to have governance and responsibility built into each one. She said human bias can be introduced at each stage. She emphasized that it is important to be intentional in mitigating these biases and document each stage and that humans continue to be in the loop.

Ms. Doshi said because ML uses and users are so diverse, ML fairness concerns can take many different forms, and she provided examples. She said the problems do not look the same; therefore, you must understand the context, user, and use case to understand how bias may manifest itself, which dictates the metrics and what will need to be done to solve for it; therefore, the solutions will be different. She said the approach will need to include establishing the problem with a diverse set of users in mind, collecting data across the user base, defining fairness opportunities, testing, designing mitigation approaches, and monitoring. She said across all of this is developing and growing an inclusive workforce and bringing in diverse perspectives. She talked about the concept of a uniform loss ratio and talked about model cards as methods for detecting bias and providing transparency. She said face detection model cards are an example of something that is growing across the industry in terms of a standardized way to provide transparency around models.

Ms. Doshi identified three important challenges in solving for bias: 1) the need to have class attributes to test for them; 2) it is often hard to collect enough data, as is the case with claims; and 3) even once identified, it can take time to resolve bias issues. She said it is also important to ensure new bias is not created when trying to improve for the first identified bias issue.

Daniel Schwarcz (University of Minnesota) covered understanding the risk of biased AI in general and in insurance and how limiting it requires the initial step of testing for disparate impact. He said there is no effective understanding of potential bias unless testing the outcomes of the model. He said he would focus on the ML aspect of AI, which is based on massive amounts of historic training data and bias in statutorily protected groups.

Mr. Schwarcz provided several examples of bias against protected groups in AI models, including a Correctional Offender Management Profiling for Alternative Sanctions (COMPAS) algorithm that disproportionately over-predicted recidivism for blacks and underpredicted it for whites, Amazon's hiring algorithm that discriminated against women, and Optum's health algorithm that directed resources disproportionately to white individuals. He said one must not only look at the results but why those results are being presented.

Mr. Schwarcz said he did not believe a lot of insurers were using AI and ML in underwriting or rating, but he said it is in flux and they are on the precipice of doing this. He said the issue or proxy discrimination is when a protected attribute is predictive of risk but is illegal to be used. However, it is often predictive of claims, but whatever the reason, those attributes are not allowed to be used. The ML will develop proxies for those attributes because it is predictive of risk.

Mr. Schwarcz said the examples of models behaving with disparate impact have been identified by testing. He said there is no other way to determine if there is bias in algorithms other than to test them, and he said insurers should be explicitly allowed to collect this data to do this testing. He said he recognizes that disparate impact may not represent a legal or regulatory problem, but that is where the inquiry should begin even if it does not create liability or necessarily indicate a problem. He said this is the first step, but there are a lot of additional difficult steps to take and testing is critical to having an effective regulatory regime.

Commissioner Birrane thanked the presenters, and she said to send questions to NAIC staff if one is a state insurance regulator, and for interested parties, there will be a Committee meeting set up to provide an opportunity to speak on this topic.

Having no further business, the Innovation, Cybersecurity, and Technology (H) Committee adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/H CMTE/2022_Summer/H_Minutes/H Cmte Minutes 081022 Final.docx

Adopted by the Innovation, Cybersecurity, and Technology (H) Committee – 8/10/22

Adopted by the Privacy Protections (H) Working Group – 8/2/22

REQUEST FOR NAIC MODEL LAW DEVELOPMENT

This form is intended to gather information to support the development of a new model law or amendment to an existing model law. Prior to development of a new or amended model law, approval of the respective parent committee and the NAIC's Executive (EX) Committee is required. The NAIC's Executive (EX) Committee will consider whether the request fits the criteria for model law development. Please complete all questions and provide as much detail, as necessary, to help in this determination.

Please check whether this is: New Model Law or Amendment to Existing Model

1. Name of group to be responsible for drafting the model:

Privacy Protections (H) Working Group

2. NAIC staff support contact information:

Lois E. Alexander
Market Regulation Manager II lalexander@naic.org
816-783-8517

3. Please provide a brief description of the proposed new model or the amendment(s) to the existing model. If you are proposing a new model, please also provide a proposed title. If an existing model law, please provide the title, attach a current version to this form, and reference the section(s) proposed to be amended.

Proposed Title: *Insurance Consumer Privacy Protection Model Law*

The NAIC's models addressing data privacy—*NAIC Insurance Information and Privacy Protection Model Act* (#670) and *Privacy of Consumer Financial and Health Information Regulation* (#672)—were adopted several decades ago. After studying this issue over the past two years, the Privacy Protections (H) Working Group has determined that a new model law is necessary to enhance the consumer protections and the corresponding obligations of entities licensed by the insurance department to reflect the extensive innovations that have been made in communications and technology over these decades.

4. Does the model law meet the Model Law Criteria? Yes or No (Check one)

(If answering no to any of these questions, please reevaluate charge and proceed accordingly to address issues).

a. Does the subject of the model law necessitate a national standard and require uniformity amongst all states? Yes or No (Check one)

If yes, please explain why:

Access to consumer data by insurance companies, insurance producers, and their third-party vendors has multiplied exponentially via the internet, telematics, and other data tracking technology. This, in turn, has increased the use of complex algorithms, including machine learning (ML) and artificial intelligence (AI). State insurance regulators applying current model law and regulation requirements to consumer privacy notifications have encountered questions about the extent of consumer ownership and control of the use of such consumer data by the insurance industry. Consumers are faced with opt-in/opt-out decisions that leave questions as to whether they may have given away their rights to control their personal data, much of which insure do not even need to determine insurability and risk.

b. Does Committee believe NAIC members should devote significant regulator and Association resources to educate, communicate and support this model law?

Yes or No (Check one)

5. What is the likelihood that your Committee will be able to draft and adopt the model law within one year from the date of Executive (EX) Committee approval?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary: The Privacy Protections (H) Working Group has a work plan in place that is posted on the Working Group’s web page and drafting groups committed to drafting and adopting revisions to Models #670 and Model #672 by the 2023 Summer National Meeting.

6. What is the likelihood that a minimum two-thirds majority of NAIC members would ultimately vote to adopt the proposed model law?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary: NAIC members are aware of the need for a new model law to enhance consumer privacy protections via notifications and education to consumers regarding standards for licensees and their third-party vendors responsibilities regarding collection, use, and disclosure of consumers’ information.

7. What is the likelihood that state legislatures will adopt the model law in a uniform manner within three years of adoption by the NAIC?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary:

8. Is this model law referenced in the NAIC Accreditation Standards? If so, does the standard require the model law to be adopted in a substantially similar manner?

It is not.

9. Is this model law in response to or impacted by federal laws or regulations? If yes, please explain.

The federal Gramm-Leach-Bliley Act (GLBA), enacted in 1999, imposed privacy and security standards on financial institutions and directed state insurance commissioners to adopt certain data privacy and data security regulations. Model #672 is the regulation adopted in response to the GLBA. The new model will include GLBA data privacy standards and replace Model #672.

SharePoint/NAIC Support Staff Hub/Member Meetings/H CMTE/2022_Summer/H_Materials/MLR_670and672-Request.docx

Draft: 8/28/22

Big Data and Artificial Intelligence (H) Working Group
Portland, Oregon
August 10, 2022

The Big Data and Artificial Intelligence (H) Working Group of the Innovation, Cybersecurity, and Technology (H) Committee met in Portland, OR, Aug. 10, 2022. The following Working Group members participated: Elizabeth Keller Dwyer, Chair (RI); Amy L. Beard, Co-Vice Chair, represented by Victoria Hastings (IN); Doug Ommen, Co-Vice Chair (IA); Adrienne A. Harris, Co-Vice Chair, represented by Sumit Sud (NY); Kevin Gaffney, Co-Vice Chair (VT); Anna Latham (AK); Ken Allen (CA); Peg Brown (CO); George Bradner and Wanchin Chou (CT); John Reilly (FL); Weston Trexler and Randy Pipal (ID); Erica Weyhenmeyer (IL); Rob Roberts (KY); Tom Travis (LA); Rachel Davison (MA); Kathleen A. Birrane and Alexander Borkowski (MD); Sandra Darby (ME); Karen Dennis (MI); Phil Vigliaturo (MN); Cynthia Amann (MO); Tracy Biehn and Angela Hatchell (NC); Jon Godfread and Chris Aufenthie (ND); Christian Citarella (NH); Barbara D. Richardson (NV); Tom Botsko (OH); Alex Cheng (OR); Shannen Logue and Michael McKenney (PA); Michael Wise (SC); Travis Jordan (SD); Carter Lawrence (TN); Leah Gillum (TX); Jon Pike (UT); Katie Johnson (VA); Molly Nollette (WA); Rebecca Rebholz (WI); and Greg Elam (WV).

1. Adopted its July 14 Minutes

The Working Group met July 14 and took the following action: 1) adopted its April 5 minutes; and 2) received reports from its four workstreams.

Commissioner Ommen made a motion, seconded by Mr. Vigliaturo, to adopt the Working Group's July 14 minutes (Attachment Two-A). The motion passed unanimously.

2. Held the Collaboration Forum on Algorithmic Bias

Superintendent Dwyer said one of the highest priority charges to the Innovation, Cybersecurity, and Technology (H) Committee is to facilitate appropriate levels of coordination and collaboration among NAIC working groups with respect to topics that relate to innovation, technology, cybersecurity, and privacy. This is being accomplished through the Collaboration Forum, which has an initial focus on algorithmic bias. Superintendent Dwyer said the Big Data and Artificial Intelligence (H) Working Group is playing a role in providing a public forum for education and discussion.

Scott Kosnoff (Faegre Drinker Biddle & Reath) talked about how insurers that are using artificial intelligence (AI) or algorithmic decision making can protect themselves from regulatory litigation and reputational risk. Mr. Kosnoff said AI tools can assist in customer engagement, rating, underwriting, claims management, and fraud detection and that insurers invest in these tools for better decision making and to remain competitive. While there are many benefits to the use of these tools, Mr. Kosnoff said state insurance regulators have expressed concerns about fairness, unintended discrimination, and lack of transparency.

Mr. Kosnoff said concerns surrounding the use of AI are not unique to the insurance industry, and he then reviewed steps insurers could take to minimize their risks. He said insurers should have a risk management framework, which includes how to identify potential bias. Mr. Kosnoff said insurers have a difficult situation because there is no clear guidance regarding what level of correlation of a data variable with a protected class is acceptable and under what circumstances. He said an insurer should take reasonable steps to identify, manage, and mitigate the risk of negative outcomes. Mr. Kosnoff said the risk management framework should be an extension of an insurer's enterprise risk management (ERM) and include the following: 1) written policies and

procedures; 2) clear assignment of responsibility and accountability; 3) communication of policies; 4) training and supervision; 5) consistent use and application; 6) monitoring and corrective action, if needed; and 7) documentation.

Mr. Kosnoff said an insurer needs to inventory the organization's algorithms, understand each algorithm's objective and how it will be used, identify potential risks for each algorithm, assess the seriousness of potential harm that could occur, and the likeliness of harm occurring. After this, he said an insurer should implement appropriate safeguards, including humans having some level of oversight. Finally, Mr. Kosnoff said insurers should consider testing for bias and said he thinks this is the only part of the risk management framework that is controversial.

Mr. Kosnoff said an insurer should have a multidisciplinary team, diversity, clear assignment of roles, and board oversight for the development of AI and risk management framework. He said the risk management framework should be proportionate to the likelihood of harm and should cover every stage of the AI life cycle, which includes pre-design, design and development, testing and evaluation, deployment, and monitoring. In response to a question regarding how to monitor an algorithm that can learn over time, Mr. Kosnoff said it is important to recognize testing cannot occur only at initial deployment.

Eric Krafcheck (Milliman) said his comments today are through the lens of how to evaluate a rating plan but are applicable to other ways models are used. He said his comments focus on the testing for bias and said one needs to first identify the scope of analysis, define the fairness measure, and then collect the necessary data to test for bias, which includes protected class data. Mr. Krafcheck said detecting bias for insurance is complicated because insurance is centered on the concept of fair discrimination by treating different risks differently. Because of this, he said any methodology should use multivariate methods.

Mr. Krafcheck said the type of model used and how the model is used will dictate what methodology to use for testing of bias. For example, he said it is easy to tell if a facial recognition model is working as intended, whereas it is more difficult to tell if an insurance pricing model is working as intended. Mr. Krafcheck said the testing method may vary if one is testing for overall model prediction versus testing for disparate impact. He said the volume of data and granularity of protected class data available will also affect testing methodology. Mr. Krafcheck said it is important to establish the questions one is seeking to answer to determine the best testing methodology. He provided an overview of the following potential testing based on the question being asked.

- Is the model/variable a proxy? Mr. Krafcheck suggested the use of a control variable test, which involves adding a protected class variable as a predictor in the model to account for the predictive effect of the protected class. One can then compare the model output before and after the protected class variable is used in the model to see if there is a material difference. Mr. Krafcheck used the hypothetical example of vehicle color being correlated to risk of loss and vehicle color also being corrected to a protected class. The observable difference in how losses vary across vehicle color after accounting for the protective class would identify whether there is a proxy effect through the use of vehicle color.
- Is the predictive effect consistent across protected classes? Mr. Krafcheck suggested the use of an interaction test, which involves adding the protected class variable as an interaction in the model. The output of the model will produce separate estimates for each protected class for that variable. One can then compare the effect across different protective classes to see if there is consistency. Mr. Krafcheck said this test will help determine if the predictive effect is consistent across protected classes.

- Does the inclusion of a variable disproportionately affect otherwise similar risks? Mr. Krafcheck suggested the use of a nonparametric matching test. For every policyholder of a given protected class, this test involves matching a policyholder who is not of the same protected class but has similar risk characteristics for all variables except for the variable being evaluated. Mr. Krafcheck said one would then take two matched data sets and compare average model predictions by protection class by including the evaluated variable and then excluding the evaluated variable. He said one could then add loss experience to determine whether the actual loss experience supports the relationship seen for the variable being evaluated and is within the parameters of defined fairness.
- Does the variable improve predictions across protected classes? Mr. Krafcheck suggested the use of a double life chart test, which is a test that modelers use as they are developing models. This test involves including a variable of interest and then excluding that variable to compare which model lines up better with actual experience. Mr. Krafcheck said this allows one to assess whether the model is consistently improving across protected classes.

Mr. Krafcheck said there are other tools that could be used, and one needs to balance between statistical significance (whether the result of the analysis occurred randomly) and practical significance (whether the result of the analysis has real-world relevance). He said the statistical significance will depend on whether one is using a large or small data set. Mr. Krafcheck also said the results of any analysis may be limited by the available data and that some data may have some sort of selection bias. He said one might also want to consider the intersectionality of protected classes, such as looking at race by gender, and consider looking at groups of variables because there might not be any bias at an individual variable level. In response to a question regarding the importance of having data about loss experiences for protected classes, Mr. Krafcheck said this data is important to any analysis.

3. Received Reports from Workstream One and Workstream Two

a. Workstream One

Commissioner Gaffney said the subject matter experts (SMEs) of Workstream One have been collaborating with multiple states to conduct AI/machine learning (ML) surveys for private passenger automobile (PPA) insurance, homeowners insurance, and life insurance. The goals of these surveys are to: 1) identify the current level of risk and exposure from the use of AI and whether or how the industry is managing or mitigating that risk; 2) develop information for trending, such as how the risk is evolving over time, and the industry's responsive actions; and 3) inform a meaningful and useful regulatory approach, framework, and/or strategy for overseeing and monitoring this activity.

Commissioner Gaffney said the AI/ML PPA survey was conducted last year, and NAIC technical staff produced a confidential data analysis report for the AI/ML PPA survey on June 30. The SMEs been studying this report and plan to present their public PPA survey report to this Working Group at the Fall National Meeting.

Commissioner Gaffney said the homeowners survey was exposed for comment. He said no comments were received by the comment deadline of Aug. 1. However, pilot companies have provided feedback to improve the survey. Commissioner Gaffney said the survey will be completed soon, and the NAIC will then program the survey into its systems. Once programmed, the 10 states conducting the survey will formally issue their market conduct data call. Companies will likely be asked for responses within 30 days from the issuance of the formal data call.

Commissioner Gaffney said the AI/ML life insurance survey is being developed, and outreach to pilot companies has been completed. Similar to the other survey, the pilot companies have provided useful feedback to improve

the survey. The life insurance survey should be exposed by the end of August for a 30-day public comment period. Commissioner Gaffney said the life insurance survey will not be issued until the homeowners survey is completed.

b. Workstream Two

Commissioner Ommen said Workstream Two is leveraging the results of the PPA survey, and the discussions for this workstream have remained regulator-to-regulator since the SMEs have been discussing specific third-party vendors identified through the PPA survey. Commissioner Ommen said recent discussions of the Workstream members have included several potential initial steps for enhanced regulatory oversight of third-party vendors and models. One potential initial approach discussed was that state insurance regulators require contracting insurance companies to obtain verification from their third-party vendor that an actuary/other professional has reviewed a model prior to using the model certifying its compliance with AI standards. Another initial regulatory option discussed was the concept that state insurance regulators create a library of third-party vendors, classified by line of insurance and operational area. This Workstream has a deadline of the Fall National Meeting to report its findings to the Big Data and Artificial Intelligence (H) Working Group with suggestions for implementation of deliverables to be considered by the Innovation, Cybersecurity, and Technology (H) Committee.

David Snyder (American Property Casualty Insurance Association—APCIA) said he supports the approach of determining appropriate definitions for AI. Mr. Snyder said a fundamental issue is how this work fits within the risk-based pricing framework and the regulatory standard of insurance rates not being excessive, inadequate, or unfairly discriminatory.

Scott Harrison (American InsurTech) said he agrees with Mr. Kosnoff's comments and the need for risk management for the use of AI and technology. Mr. Harrison said companies need to understand what they are doing, state insurance regulators need to have confidence that companies understand what they are doing, and consumers need to have confidence in the use of AI and technology. Mr. Harrison said this requires state insurance regulators establishing uniform standards and the ability of state insurance regulators to assess compliance with these standards.

Birny Birnbaum (Center for Economic Justice—CEJ) suggested workstream two address antitrust issues. He said the use of big data and AI is different from past insurer practices and is a revolution in how companies operate. Mr. Birnbaum said he agrees a risk management framework is necessary but said this is not sufficient. He said testing of consumer outcomes is essential. Mr. Birnbaum said the insurance industry is not immune from the impact of structural racism and the data sources and algorithms that perpetuate structural racism. He said actuarial fairness is one standard but that state insurance regulators should also test for racial bias, proxy discrimination, and disparate impact. Mr. Birnbaum said there is a need for a uniform approach that can be measured across insurers and across lines of business.

Having no further business, the Big Data and Artificial Intelligence (H) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/H CMTE/2022_Summer/_BDAIWG/BDAI Minutes 8.10.22.docx

Draft: 8/28/22

Big Data and Artificial Intelligence (H) Working Group
Virtual Meeting
July 14, 2022

The Big Data and Artificial Intelligence (H) Working Group of the Innovation, Cybersecurity, and Technology (H) Committee met July 14, 2022. The following Working Group members participated: Elizabeth Keller Dwyer, Chair (RI); Amy L. Beard, Co-Vice Chair (IN); Doug Ommen, Co-Vice Chair (IA); Adrienne A. Harris, Co-Vice Chair, represented by Seema Shah (NY); Kevin Gaffney, Co-Vice Chair (VT); Sian Ng-Ashcraft (AK); Tom Zuppan (AZ); Ken Allen (CA); Peg Brown (CO); Kristin Fabian (CT); Frank Pyle (DE); Rebecca Smid (FL); Judy Mottar (IL); Tom Travis (LA); Caleb Huntington (MA); Kathleen A. Birrane (MD); Sandra Darby (ME); Karen Dennis (MI); Matthew Vatter and Phil Vigliaturo (MN); Cynthia Amann (MO); Kathy Shortt (NC); Chris Aufenthie (ND); Christian Citarella (NH); Gennady Stolyarov (NV); Lori Barron (OH); Teresa Green (OK); Shannen Logue (PA); Anamaria Burg and Andy Dvorine (SC); Carter Lawrence (TN); J'ne Byckoyski and Rachel Cloyd (TX); Tanji J. Northrup (UT); Katie Johnson (VA); Eric Slavich and John Haworth (WA); Nathan Houdek (WI); and Joylynn Fix and Juanita Wimmer (WV).

1. Adopted its Spring National Meeting Minutes

Commissioner Ommen made a motion, seconded by Commissioner Lawrence, to adopt the Working Group's April 5 minutes (*see NAIC Proceedings – Spring 2022, Innovation, Cybersecurity, and Technology (H) Committee, Attachment Two*). The motion passed unanimously.

2. Received Reports on its Workstreams

Superintendent Dwyer said the activity of the Working Group consists of four workstreams. He said the primary purpose today's meeting is to receive updates on the progress of the four workstreams and obtain feedback from state insurance regulators, industry, and consumer representatives to ensure all perspectives are considered as the workstreams develop initial proposals for public discussion and continue their efforts through 2022.

Superintendent Dwyer said the first workstream is focusing on artificial intelligence (AI)/machine learning (ML) surveys. The second workstream is focusing on third-party data and model vendors. This workstream is determining the appropriate regulatory evaluation of third-party data and model vendors, and it will provide recommendations on the appropriate regulatory framework for monitoring and overseeing industry's use of third-party data and model vendors. The third workstream is evaluating tools and resources for monitoring industry's use of data and AI/ML. Superintendent Dwyer said this workstream is gathering data and evaluating information on governance models and software tools, which could assist state insurance regulators in overseeing and monitoring industry's use of data and AI/ML and eliminating any bias in such use. The fourth workstream is focusing on the broader regulatory framework and governance. This workstream is evaluating how best to implement the expectations outlined in the NAIC AI Principles and will provide suggestions on next steps for developing a regulatory framework.

A. Workstream One

Commissioner Gaffney said NAIC staff have reviewed the data from the private passenger auto (PPA) survey conducted in 2021 and produced analysis needed by the state subject matter experts (SMEs) to draft a report identifying potential next steps. The SMEs will present their report to the Working Group at the Fall National Meeting.

Commissioner Gaffney said the draft homeowners (HO) survey and definitions were posted on the NAIC website and exposed for a public comment period ending Aug. 1. Insurance companies that were writing HO insurance in 2020 with HO premium of more than \$50 million will be asked to complete the survey. With this criteria, 190 companies will be asked to complete the survey compared to the 193 for PPA survey. Commissioner Gaffney said the definition of AI/ML was modified for the HO survey to provide companies more clarity. The definition of AI/ML for the PPA survey was intentionally written to exclude the types of models that state insurance regulators have been reviewing for a large portion of the industry for more than 20 years. While not changing the definition applicable to most of the HO survey, Commissioner Gaffney said the HO survey includes a couple of rows to provide an indication of the full scope of AI/ML models used, including the older types of models. The goal of this change is to help ensure consistent reporting by all insurers and collect information needed for other workstreams. Commissioner Gaffney said the HO survey also contains some questions about the types of models being used to help state insurance regulators better understand the impact on consumers and the expertise needed in states to properly regulate models. Commissioner Gaffney said the governance questions asked on the PPA survey are now asked for each operational area of an insurer.

Commissioner Gaffney said progress is being made on the life insurance survey, and outreach has been made to a handful of pilot companies for feedback. The SMEs working on the survey will consider the company feedback and then expose the draft survey for comment by all interested parties. Commissioner Gaffney said the SMEs are planning to expose the draft survey in August and that the life insurance survey will issued shortly after the HO survey is completed.

B. Workstream 2

Commissioner Ommen said the first objective of the workstream is to identify third-party vendors that provide nontraditional data and/or models to insurers. This includes models and data from rating, underwriting, marketing, fraud detection, claims, and loss prevention. The second objective is to identify whether and how states are currently licensing these third-party vendors. Commissioner Ommen said the SMEs for this workstream are reviewing state statutes and definitions for the licensing of advisory organizations, rating organizations, insurance service organizations, and statistical agents. The third objective is to better understand the operating practices of third-party vendors and then develop examination standards or questions that state insurance regulators can use to engage with the third-party vendors. Commissioner Ommen said the results of the PPA survey have been used for these discussions, and the meetings have remained regulator-to-regulator since the SMEs have been discussing third-party vendors identified through the PPA survey.

C. Workstream 3

Ms. Shah said the objective of this workstream is to evaluate the tools and resources for monitoring the insurance industry's use of data and AI. She said this workstream is gathering data and information from publicly available sources, including third-party vendors, academia, and international regulatory authorities. Ms. Shah said this review should help identify governance models and software tools state insurance regulators could use to monitor the insurance industry's use of data with a specific focus on how to detect and mitigate for bias AI/ML activity related to claims, underwriting, and rating. Ms. Shah said the workstream is establishing a foundational vocabulary and a common understanding of concepts to enable a productive dialogue. She said the workstream is seeking input from all parties on the following three questions: 1) What are the tools/metrics and/or resources currently being used by or available to the industry for managing AI/ML activity? 2) What governance frameworks is industry using or are available for managing its AI/ML activity? and 3) What are the strengths and weaknesses of these tools/metrics, resources, and governance frameworks?

D. Workstream 4

Commissioner Beard said this workstream is focusing on the regulatory framework and how best to implement the expectations outlined in the NAIC AI principles, which include regulatory guidance such as model governance. Commissioner Beard said the workstream has started to evaluate other regulatory structures and guidance for overseeing risk. This includes the prior Innovation and Technology (EX) Task Force’s presentation on components of a model governance framework, the Big Data and Artificial Intelligence (H) Working Group presentation on applying cybersecurity lessons learned for AI regulation, and the New York State Department of Financial Service’s (DFS’) climate change disclosure survey review framework. Commissioner Beard said the Information Systems Audit and Control Association (ISACA) framework, National Institute of Standards and Technology (NIST) framework, and European Insurance and Occupational Pensions Authority (EIOPA) approach to monitoring AI are being considered. Commissioner Beard said the workstream is also reviewing *Market Regulation Handbook* and the *Financial Condition Examiners Handbook* guidance related to data breaches, cybersecurity, and information technology (IT) security to identify a potential auditing framework. Commissioner Beard said the workstream will monitor and consider the work products from the other workstreams in the overall recommended regulatory framework.

Commissioner Beard said the workstream is seeking comments from all interested parties on published governance frameworks related to AI, including the ISACA Governance Framework, the NIST Draft Risk Management Framework, the EIOPA AI Governance Principles, or other internationally published guidance such as the Singapore’s AI Governance Framework. Commissioner Beard said the PPA survey results indicated few companies are using existing standards or guidance and is also seeking comments from interested parties to better understand industry’s reasons for not adopting a standard or a publicly available governance framework. Commissioner Beard said the workstream will use its review and feedback from interested parties to develop an outline of components for a potential regulatory framework.

Birny Birnbaum (Center for Economic Justice—CEJ) questioned how workstreams three and four interact with each other, the Special (EX) Committee on Race and Insurance, and the Collaboration Forum. Mr. Birnbaum also asked if the Working Group anticipates allowing interested parties to make presentations in addition to providing comments on the drafts for the workstreams. Superintendent Dwyer said the workstreams are being coordinated through the Working Group, and the use of workstreams is intended to break up the broad scope of work into smaller units. Superintendent Dwyer said some of the work across other areas of the NAIC are being coordinated through the Innovation, Cybersecurity, and Technology (H) Committee.

Mr. Birnbaum said he thinks the collection of more granular data and analysis of consumer outcomes are essential tools for state insurance regulators to use in monitoring the use of data and AI. Mr. Birnbaum said the monitoring of consumer outcomes is important to identify and eliminate unintended bias since algorithms do not always produce the intended results. Mr. Birnbaum said a governance framework does not guarantee fair treatment of consumers. Mr. Birnbaum said any model governance approach should include the collection of more granular data to test the actual outcomes of algorithms.

David Snyder (American Property Casualty Insurance Association—APCIA) said the development of common definitions and an understanding of the existing statutory standards that govern what insurance companies can or cannot do is important for further discussions and engagement. Mr. Snyder said it is important that the discussions do not divert from these standards and that all parties keep in the mind both the cost and effectiveness of potential regulatory frameworks.

Superintendent Dwyer emphasized the desire to have input from all interested parties as draft work products are developed and circulated. Superintendent Dwyer also encouraged all parties to follow individual state efforts, such as the efforts in Colorado and the District of Columbia.

Having no further business, the Big Data and Artificial Intelligence (H) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/H CMTE/2022_Summer/_BDAIWG/July 14 Call/BDAI Min 7.14.22.docx

Draft: 8/28/22

Cybersecurity (H) Working Group
Virtual Meeting
July 14, 2022

The Cybersecurity (H) Working Group of the Innovation, Cybersecurity, and Technology (H) Committee met July 14, 2022. The following Working Group members participated: Cynthia Amann, Co-Chair (MO); Wendy Erdly, Co-Chair (NY); C.J. Metcalf, Co-Vice Chair, represented by Erica Weyhenmeyer (IL); Michael Peterson, Co-Vice Chair (VA); Chris Erwin (AR); Damon Diederich (CA); Michael Shanahan (CT); Paula Shamburger (GA); Lance Hirano (HI); Shane Mead (KS); Van Dorsey (MD); Jake Martin (MI); Colton Schulz and Chris Aufenthie (ND); David Bettencourt (NH); Barbara D. Richardson (NV); Don Layson (OH); Rosemary Raszka (VT); John Haworth (WA); and Nathan Houdek (WI). Also participating was: Matt Gendron (RI).

1. Heard Opening Remarks and Updates

Ms. Erdly opened the meeting by acknowledging that the Working Group met May 3 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings, to talk through its updated work plan receiving guidance from the NAIC along the way.

2. Received an Update on its Work Plan

Ms. Erdly and Mr. Peterson then lead a discussion about the Working Group's updated work plan.

Mr. Peterson said the rise of ransomware attacks and the shift to remote work, which increased attack surfaces, has heightened the need to understand insurance industry posture in the future. However, Mr. Peterson indicated that the updated work plan first directs state insurance regulators to look inward, with a survey of regulator policies and procedures being the first substantive item the Working Group will take on. Performing a state insurance regulator survey first, will allow regulators to compare notes and later work with industry on a unified and predictable response to cybersecurity issues.

The plan to complete a state insurance regulator survey first represents a shift from the former plan, which previously included an industry-focused survey. A state insurance regulator survey will also allow the Working Group to prioritize its charges. For instance, the Working Group has a charge to develop a cybersecurity response plan that could benefit from the survey's insights. State insurance regulators have started work on this effort with a volunteer group meeting earlier this year to start the drafting process. The Working Group hopes to have the survey out in August, with responses back this year to allow the Working Group to advance on work based on the responses received.

Ms. Erdly noted that the rest of the work plan includes revisiting the cybersecurity response plan after the Working Group completes the state insurance regulator survey. This is a broad monitoring effort, where state insurance regulators will receive updates on cybersecurity as it is discussed within the NAIC, as well as at federal and international levels, as appropriate, and a training effort, which again will benefit from the completion of the regulator survey work. The NAIC is planning on three cybersecurity themed sessions at the NAIC Insurance Summit, but there is likely an opportunity for the Working Group to provide beneficial input to the NAIC on topics that may be relevant to be covered either at the Insurance Summit or in other settings (e.g., webinars).

3. Received an Update on Implementation of Model #668

The Working Group next received an update from Holly Weatherford (NAIC) on the state effort to adopt the *Insurance Data Security Model Law* (#668).

Ms. Weatherford said state insurance regulators are keenly aware of the potentially devastating effects of cyberattacks and therefore recognize the importance of cybersecurity risk management. Model #668 has now been adopted by 21 states, representing over 80% of the market by gross written premiums. Ms. Weatherford offered to support states considering adoption, as they have learned from the NAIC's experience in supporting other states in passing the law.

Simit Pandya (Medical Professional Liability Association—MPL Association) asked if Ms. Weatherford knows of further states that might be considering adoption of Model #668. Mr. Gendron noted that Rhode Island would be considering passage of the legislation at its next legislative session. Beyond that, Ms. Weatherford indicated that there are likely additional states but none that can be publicly disclosed at this time.

4. Receive an Update on Federal Activity Related to Cybersecurity

The Working Group next received an update from Brooke Stringer (NAIC) on the federal activity related to cybersecurity. Ms. Stringer said the Financial and Banking Information Infrastructure Committee (FBII) has been looking to improve communication and enhance resilience of the financial sector. The current focus has been led by a member, the U.S. Department of the Treasury (Treasury Department), to understand concentration risks. Specifically, the Treasury Department has been studying the risks provided by cloud service providers. The Treasury Department will be publishing a report that summarizes what its research has found focusing on the impact of cloud service providers to the operational resilience of the insurance industry. Legislation wise, the Cyber Incident Reporting for Critical Infrastructure Act of 2022 (CIRCA) was signed into law, requiring that owners and operators of critical infrastructure report cybersecurity incidents to the U.S. Department of Homeland Security (DHS) and the Cybersecurity and Infrastructure Security Agency (CISA). Lastly, Ms. Stringer also mentioned that the current instance of the National Defense Authorization Act (NDAA) includes language that would require insurers to report on cyber claims data, which is language that has caused concern among insurance trade associations. Miguel Romero (NAIC) asked Ms. Stringer if there was any discussion of federal preemption of state laws on cybersecurity, which Ms. Stringer said does not seem likely in the immediate future given the changes in administration since that topic was last discussed.

5. Receive an Update on the NAIC's Cybersecurity Tabletop Exercises

The Working Group next received an update from Frosty Mohn (NAIC) on the NAIC's Cybersecurity Tabletop project. Mr. Mohn noted that this project was born out of the Treasury Department's Hamilton series, which was a series of banking-focused tabletop exercises. Mr. Romero noted that at these exercises, insurers, state insurance regulators, and law enforcement agencies have a discussion on how each would react as a simulated cybersecurity event unfolds. In November, the NAIC will host a virtual session with Maryland regulators. Mr. Mohn noted that past exercises have led to the development of best practices for attendees to consider, such as a hard card generated from the last tabletop exercise offering guidance on how insurers and state insurance regulators could respond in the event of a cybersecurity event. Mr. Mohn noted that the NAIC will travel to Ohio for a cybersecurity session in May 2023; the NAIC has had discussions with North Dakota and South Dakota about a joint session as well.

6. Receive an Update on State Insurance Regulator Cybersecurity Tools

Mr. Romero discussed the attached Summary of Cybersecurity Tools drafted by NAIC staff as a resource for state insurance regulators. The memo describes the various tools that state insurance regulators have available, and it is intended to be a reference guide for future regulators that follow the Working Group's work. Given the varying backgrounds of state insurance regulators talking about cybersecurity, this memo can help regulators quickly understand the tools available across functions; i.e., financial and market. Ms. Erdly agreed to expose the document for a public comment period ending Aug. 16. The date was announced via e-mail after the call.

Having no further business, the Cybersecurity (H) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/H CMTE/2022_Summer/_Cybersecurity/CybersecurityWG Minutes 07.14.22.docx

Draft: 8/28/22

Privacy Protections (H) Working Group
Portland, Oregon
August 9, 2022

The Privacy Protections (H) Working Group of the Innovation, Cybersecurity, and Technology (H) Committee met in Portland, OR, Aug. 9, 2022. The following Working Group members participated: Katie Johnson, Chair, and Scott A. White (VA); Cynthia Amann, Co-Vice Chair (MO); Chris Aufenthie, Co-Vice Chair (ND); Damon Diederich (CA); George Bradner (CT); LeAnn Crow (KS); Ron Kreiter (KY); Kathleen A. Birrane and Van Dorsey (MD); Robert Wake (ME); T.J. Patton (MN); Troy Downing and Molly Plummer (MT); Martin Swanson (NE); Antonya Debose and Teresa Green (OK); Raven Collins, Brian Fordham, and Cassie Soucy (OR); Gary Jones (PA); Frank Marnell (SD); Mark Worman (TX); Todd Dixon (WA); and Rachel Cissne Carabell and Richard Wicka (WI).

1. Adopted its Aug. 2 Minutes

Ms. Johnson said the Working Group met Aug. 2. During this meeting, the Working Group took the following action: 1) adopted its June 15 minutes, which included updates on state and federal privacy legislation and a discussion of the Working Group's initial work plan for 2022; 2) adopted the Request for NAIC Model Law Development replacing the NAIC Insurance Information and Privacy Protection Model Act (#670) and the Privacy of Consumer Financial and Health Information Regulation (#672) with one new model; and 3) discussed the Working Group's revised work plan.

The Working Group also met three times in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to review draft revisions of sections 1–12 of Model #670. The drafting group of subject matter experts (SMEs) met several times to conduct the initial drafting of the *Consumer Data Ownership and Use* white paper and once on the consumer data privacy ownership and use survey.

Ms. Amann made a motion, seconded by Mr. Kreiter, to adopt the Working Group's Aug. 2 (Attachment Four-A) minutes. The motion passed unanimously.

2. Heard Updates on State and Federal Privacy Legislation

Jennifer McAdam (NAIC) said she reported during the Working Group's June 15 meeting that Connecticut had recently adopted An Act Concerning Personal Data Privacy and Online Monitoring (CTDPA). She said there are now five generally applicable state data privacy laws in: 1) California; 2) Colorado; 3) Connecticut; 4) Utah; and 5) Virginia. Ms. McAdam said there has not been much activity since June. However, she said some state legislatures are still in session, and there are privacy bills currently pending in six jurisdictions: 1) the District of Columbia; 2) Massachusetts; 3) Michigan; 4) New Jersey; 5) Ohio; and 6) Pennsylvania. Ms. McAdam said these bills are all still in their committees of origin, so there has not been much movement with them. She said the District of Columbia bill is based on the Uniform Law Commission's (ULC's) model privacy bill, the Uniform Personal Data Protection Act (UPDPA). Ms. McAdam said that Nebraska and Oklahoma had also introduced legislation based on the UPDPA earlier this year but that those bills died when their sessions ended. She said charts tracking state legislation are posted on the Privacy Protections (H) Working Group's web page for those wanting to read more about these bills. Ms. McAdam said the charts list the business obligations imposed, the consumer rights provided, the manner of enforcement (whether by the attorney general or a private right of action), and any federal Gramm-Leach-Bliley Act (GLBA) or federal Health Insurance Portability and Accountability Act of 1996 (HIPAA) exemptions. She said

her office would continue to follow state data privacy legislation and update the Working Group during its next meeting.

Brooke Stringer (NAIC) reminded the Working Group that the U.S. House Committee on Energy and Commerce approved the American Data Privacy and Protection Act (ADPPA) (H.R. 8152) on July 20 by a vote of 53-2. She said the bill was authored by: Frank Pallone Jr. (D-NJ), chair of the House Committee on Energy and Commerce; Cathy McMorris Rodgers (R-WA), ranking member of the House Committee on Energy and Commerce; and Roger Wicker (R-MS), ranking member of the U.S. Senate Committee on Commerce, Science, and Transportation. She said the bill is being viewed as a breakthrough compromise on two major sticking points for Congress—preemption and private right of action. Ms. Stringer said that the ADPPA would preempt most state privacy laws with some nuanced exceptions and that GLBA- and HIPAA-covered entities are not carved out specifically but are deemed to be in compliance if the entities comply with those laws. She said that even though the ADPPA includes a GLBA provision, the insurance trades are advocating for language that would clearly exempt insurers, agents, and brokers from the scope of the ADPPA. Ms. Stringer said that during the markup of the bill, Rep. Anna G. Eshoo (D-CA) offered an amendment that would have modified the bill's preemption provision to allow states to create stricter laws, but it did not pass. She said the bill provides consumers who believe their rights under the law were violated with the option of suing companies in federal court. However, the private right of action would not take effect until two years after the law is enacted. The bill also provides a small business exemption to the private right of action. Ms. Stringer said this is the first time a comprehensive federal privacy bill has advanced out of committee and that could be made available for a full chamber vote. However, she said time is short with the August recess and an upcoming focus shift to midterm elections. Ms. Stringer said the bill faces some headwinds in that Maria Cantwell (D-WA), chair of the Senate Committee on Commerce, Science, and Transportation, has not signed on to the bill. She said the House Committee on Energy and Commerce has made some changes to the bill in areas where she had some concerns, so it remains to be seen how the bill may fare in the Senate as no Senate Democrat has yet signed on to the bill. Ms. Stringer said she would keep the Working Group posted, and she encouraged the Working Group to keep up its important work.

3. Discussed its Next Steps on the *Consumer Data Ownership and Use White Paper*

Ms. Johnson said the Working Group is still getting responses to the survey and that even though the deadline was July 28, the Working Group will keep the survey tool open to encourage as many responses as possible from anyone who is interested. She said the Working Group is in the process of reviewing and compiling the responses already received. Ms. Johnson said the results will be summarized for use by the Working Group in helping to guide the discussion and drafting of the white paper on consumer data ownership and use assigned to the Working Group in its 2022 charges. She said the white paper will be exposed for public comment in December and discussed under normal NAIC transparency guidelines.

Mr. Aufenthie said the main points of the white paper will consist of a brief history; current personal data collected; use of consumer data for legal and economic purposes; recommendations regarding who owns the data; and what changes should be implemented. He thanked responders for their input through the survey and said the purpose of the survey was to start the conversation only. Mr. Aufenthie said there would be a two-month response period for submitting comments that would be the basis for discussion regarding the initial draft.

4. Discussed its Next Steps for the Drafting of the Model and the Working Group's Final Work Plan

Ms. Johnson said that the Request for NAIC Model Law Development that was adopted during the Working Group's Aug. 2 meeting was for the Working Group to formally request approval to move forward with the creation of one new model to replace the existing privacy Model #670 and Model #672 rather than update them.

She said this change was made in response to comments from Working Group members, interested state insurance regulators, interested parties from the insurance industry, and consumer representatives asking for one new model, as well as due to the extensive nature of revising models that were written several decades ago.

Ms. Johnson said adoption of the Request for NAIC Model Law Development by the Working Group was a part of the standard review process necessary to move forward with the Working Group's charges to review and change NAIC privacy models, such as Model #670 and Model #672 as needed. As noted during prior Working Group meetings, she said the work plan and its schedule have been revised to address the needs of the Working Group to meet its charges and timeline. The new work plan is in the meeting materials posted on the NAIC website.

Ms. Johnson said the drafting group for the model language has been working all summer and is on track to post the draft model for comment in December. She said a two-month comment period will be given for review of the initial exposure draft of the model. She said given the comments received from interested parties who are concerned about provisions that they believe could possibly be included in the draft, the drafting group wanted to provide the following information: 1) that the drafting group is not recommending a private right of action in the draft model; and 2) that the drafting group is considering language to provide a safe harbor for HIPAA entities/data in the model.

Ms. Johnson said that the Working Group is continuing to work closely with the Innovation, Cybersecurity, and Technology (H) Committee and its other working groups in this arena by meeting on a monthly basis—the Big Data and Artificial Intelligence (H) Working Group, the Cybersecurity (H) Working Group, and the E-Commerce (H) Working Group—as each Working Group has its unique set of issues that nevertheless require coordination, especially with regard to definitions.

5. Discussed Other Matters

Ms. Johnson reminded attendees about the upcoming Insurance Summit, which will be held in Kansas City, MO, Sept. 19–23.

Having no further business, the Privacy Protections (H) Working Group adjourned.

Draft: 8/28/22

Privacy Protections (H) Working Group
Virtual Meeting
August 2, 2022

The Privacy Protections (H) Working Group of the Innovation, Cybersecurity, and Technology (H) Committee met Aug. 2, 2022. The following Working Group members participated: Katie Johnson, Chair (VA); Cynthia Amann, Co-Vice Chair, represented by Jo LeDuc (MO); Chris Aufenthie, Co-Vice Chair (ND); Chelsy Maller (AK); Damon Diederich (CA); George Bradner and Kristin Fabian (CT); Erica Weyhenmeyer (IL); LeAnn Crow (KS); Ron Kreiter (KY); Benjamin Yardley (ME); T.J. Patton (MN); Martin Swanson (NE); Teresa Green (OK); Gary Jones (PA); Frank Marnell (SD); Todd Dixon represented by Michael Walker (WA); and Timothy Cornelius and Lauren Van Buren (WI). Also participating were Scott Woods (FL); Jeff Hayden (MI); Chlora Lindley-Myers (MO); Laura Arp (NE); Hermoliva Abejar (NV); George McNab (OH); Mary Block (VT); Shari Maier (WA); and Barbara Belling and Richard Wicka (WI).

1. Adopted its June 15 Minutes

Mr. Aufenthie made a motion, seconded by Mr. Kreiter, to adopt the Working Group's June 15 minutes (Attachment Four-A1). The motion passed unanimously.

2. Considered Adoption of a Request for NAIC Model Law Development Replacing Model #670 and Model #672 with One New Model

Ms. Johnson said the next item on the agenda is for the Working Group to consider adoption of the Request for NAIC Model Law Development replacing the *NAIC Insurance Information and Privacy Protection Model Act* (#670) and the *Privacy of Consumer Financial and Health Information Regulation* (#672) with one new model. She said the Request for NAIC Model Law Development was changed to reflect the creation of one new model to replace Model #670 and Model #672 rather than updating both existing models in response to comments from various industry and consumer representatives asking for one new model and due to the extensive nature of revising models that were written several decades ago. She said adoption of the Request for NAIC Model Law Development is part of the standard review process to move forward with the Working Group's charges to review and change NAIC privacy models, such as Model #670 and Model #672, as needed. She said she would also like to address additional comments that were received from interested parties after the revised Request for NAIC Model Law Development was distributed. She said changing the Request for NAIC Model Law Development does not change the newer work plan that will be posted following the meeting, and the drafting group's plan is still to have an exposure draft available for the 2023 Summer National Meeting. She said the work that was done on revisions to Model #670, which is nearly completed, will be incorporated into the one new model and be consistent with the work done previously on Model #672. She said in response to comments asking if the scope of the revisions would go beyond Model #670 and Model #672, it would because the whole point of the charges given to the Working Group was to move consumer privacy protections into the 21st century and address technical changes already made within the insurance industry. She said the suggestion to comments that companies do not collect data they do not need, the survey on consumer data ownership indicated that much of the data companies collect is not needed to provide consumers with insurance coverage, so the suggestion is declined.

Chris Petersen (Arbor Strategies LLC), representing the Healthcare Coalition, said the Working Group is overly optimistic about the number of states that will adopt or pass legislation based on the number of states that passed Model #670 and Model #672. He said the Request for NAIC Model Law Development was sending the wrong message to the Innovations, Cybersecurity, and Technology (H) Committee and the Executive (EX) Committee and

Plenary, and it will be defeated like the [State] Pharmacy Benefit Manager Licensure and Regulation Model Act. He said all existing privacy regulation does not distinguish from mail or internet notices, so he warned the Working Group against trying to regulate the methods of data collection, but rather the Working Group should stick to regulating the use and disclosure of data. Robert W. Woody (American Property Casualty Insurance Association—APCIA) said he agrees with Mr. Petersen that the survey responses to the question about companies collecting data that they did not need to write about insurance coverage were wrong. He also suggested that the word “much” in the Request for NAIC Model Law Development should be changed to the word “some.” Mr. Swanson said he agrees with Mr. Petersen about being cautious about the need for a private right of action and including a safe harbor for Health Insurance Portability and Accountability Act of 1996 (HIPAA) to ensure passage. Birny Birnbaum (Center for Economic Justice—CEJ) said insurers collect data for much more than insurability; i.e., profitability. He recommended that the current Request for NAIC Model Law Development wording be kept even though there would be changes to be considered going forward through the process, and he welcomes the opportunity to provide input from a consumer perspective.

Ms. Johnson said the focus right now is just on getting permission to move forward and open the models. She said everyone would have several months to comment on the exposure draft of the new model. Cate Paolino (National Association of Mutual Insurance Companies—NAMIC) said the Request for NAIC Model Law Development is not perfectly clear about revisions versus drafting a new model from scratch. She said a single new model appears best, but it is not so easy to implement legislation, and she suggested that the Working Group focus on Model #672 notices that were passed in most states. She said based on the topics being raised by the parent committee, such as artificial intelligence (AI), a single model may be premature with the lack of transparency and Model #672 not being an omnibus model. She asked for clarification about how future topics being discussed in other working groups could be incorporated into the new model before such topics are fully discussed. Mr. Diederich said two models mean different protections for consumers in different states. He said insurers have requested uniformity, which would seem to suggest that one model is needed.

As noted during prior Working Group calls, Ms. Johnson said the work plan schedule may be revised when necessary to address the needs of the Working Group to meet its charges and timeline. She said the Working Group is continuing to work very closely with the other Innovation, Cybersecurity, and Technology (H) Committee working groups in this area by participating in monthly Working Group calls and coordinating with other working groups—the Big Data and Artificial Intelligence (H) Working Group, the Accelerated Underwriting (A) Working Group, the Cybersecurity (H) Working Group, and the E-Commerce (H) Working Group—as each has its own unique set of issues that nevertheless require coordination, especially definitions.

Mr. Aufenthie made a motion, seconded by Mr. Diederich, to adopt the Working Group’s Request for NAIC Model Law Development replacing Model #670 and Model #672 with one new model (*see NAIC Proceedings – Summer 2022, Innovation, Cybersecurity, and Technology (H) Committee, Attachment One*). The motion passed with Nebraska opposed.

3. Discussed Other Matters

Ms. Johnson reminded attendees about the upcoming Working Group meeting, which will be held on Aug. 9 during the Summer National Meeting in Portland, OR.

Having no further business, the Privacy Protections (H) Working Group adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/H CMTE/_Privacy/Minutes/PPWG Minutes 08.02.22.docx

Draft: 8/28/22

Privacy Protections (H) Working Group
Virtual Meeting
June 15, 2022

The Privacy Protections (H) Working Group of the Innovation, Cybersecurity, and Technology (H) Committee met June 15, 2022. The following Working Group members participated: Katie Johnson, Chair (VA); Cynthia Amann, Co-Vice Chair, Jo LeDuc, and Marjorie Thompson (MO); Chris Aufenthie, Co-Vice Chair (ND); Sarah Bailey (AK); Shane Foster (AZ); Damon Diederich (CA); George Bradner, Kristin Fabian and Kurt Swan (CT); Erica Weyhenmeyer (IL); LeAnn Crow, Tate Flott, and Brenda Johnson (KS); Ron Kreiter (KY); Van Dorsey and Alexander Borkowski (MD); Robert Wake (ME); Rick Cruz (MN); Martin Swanson and Connie Van Slyke (NE); Teresa Green (OK); Gary Jones (PA); Carole Cearley and David Gonzalez (TX); Michael Walker, Shari Maier, and Michael Walker (WA); and Timothy Cornelius, Rachel Cissne Carabell, Lauren Van Buren, and Barbara Belling (WI). Also participating were Evan Daniels (AZ); Scott Woods and Rebecca Smid (FL); Kristen Finau (ID); George McNab (OH); Scott D. Martin (OR); Megan Mihara and Ray Santilli (RI); Shelli Isiminger (TN); Shelley Wiseman (UT); Don Beatty, Richard Tozer, and James Young (VA); and Mary Block and Karla Nuisl (VT).

1. Adopted its Spring National Meeting Minutes

Mr. Diederich, made a motion, seconded by Mr. Aufenthie, to adopt the Working Group's April 6 minutes (*see NAIC Proceedings – Spring 2022, Market Regulation and Consumer Affairs (D) Committee, Attachment Six*). The motion passed unanimously.

2. Heard Updates on State Privacy Legislation and on Federal Privacy

Jennifer McAdam (NAIC) said the Legal Division tracks comprehensive state privacy legislation in two charts that are located on the Working Group's web page and that Connecticut is the most recent state to adopt a comprehensive privacy law. She said the charts list the business obligations imposed and the consumer rights provided in each state. She said that the exemptions applicable to insurers are as follows: 1) California has a data-level exemption for the federal Gramm-Leach-Bliley Act (GLBA) and an entity-level exemption for the federal Health Insurance Portability and Accountability Act of 1996 (HIPAA); 2) Virginia has an entity-level exemption for the GLBA and HIPAA; 3) Colorado has a data-level exemption for the GLBA and HIPAA; 4) Utah has a data-level exemption for HIPAA and an entity-level exemption for the GLBA; and 5) Connecticut has an entity exemption and data-level exemptions for the GLBA and HIPAA.

Ms. McAdam said the reasons it is important to follow what states are doing with these more broadly applicable data privacy laws are to: 1) track the consumer rights and business obligations being established nationally; and 2) be aware of the carve-outs applicable to the insurance industry so that the Working Group can amend the NAIC privacy laws accordingly. She said the Legal Division will continue to follow state data privacy legislation and update the Working Group at upcoming meetings.

Brooke Stringer (NAIC) said in the past few weeks, there has been a breakthrough in congressional negotiations on a draft data privacy bill, the American Data Privacy and Protection Act. She said the draft legislation was unveiled by U.S. Rep. Frank Pallone, (D-NJ), chairman of the House Committee on Energy and Commerce; U.S. Rep. Cathy McMorris Rodgers, (R-WA), the panel's ranking member; and U.S. Sen. Roger Wicker (R-MS), ranking member of the Senate Committee on Commerce, Science, and Transportation. It reflects a compromise on two of the biggest sticking points in federal privacy negotiations: 1) preemption of state laws; and 2) private right of

action. Ms. Stringer said the bill adds individual rights that allow people to control their data, opt out of targeted advertising, and stop their data from being sold without their permission. She said it also requires the largest companies to conduct impact assessments on their algorithms, including whether they may harm protected classes. Ms. Stringer said it does not rely exclusively on the notice and consent regime generally employed by state privacy laws. She said covered entities may not collect, process, or transfer covered data beyond what is reasonably necessary, proportionate, and limited to provide specifically requested products and services or communicate with individuals in a manner they reasonably anticipate. She also said this duty applies irrespective of any consent from an individual. Moreover, she said covered data must be permanently disposed of or deleted once no longer necessary for the purpose for which it was collected, processed, or transferred. Ms. Stringer said covered entities are defined broadly. As defined in the draft, she said a covered entity is one that “collects, processes, or transfers covered data and is subject to the Federal Trade Commission Act,” plus nonprofits and common carriers. She said she does not think this includes insurers but that she needs to review it and that data brokers are covered subject to specific prescriptive rules.

Ms. Stringer said it preempts most state laws with various exemptions that are nuanced. She said there are several exemptions to the preemption of state law, including part of the California Consumer Privacy Act’s (CCPA’s) private right of action concerning data breaches, the Illinois Biometric Information Privacy Act (BIPA), and state unfair and deceptive acts and practices laws. Ms. Stringer said for data security, entities regulated by and in compliance with the data security requirements in GLBA and the HIPAA will be deemed in compliance with this section. She said the private right of action would take effect four years after enactment and provides consumers who believe their rights under the law were violated with the option of suing companies in federal court.

Ms. Stringer said while this is a significant step forward in data privacy legislation, U.S. Sen. Maria Cantwell (D-WA), chair of the Senate Committee on Commerce, Science, and Transportation, has not signed on to the American Data Privacy and Protection Act (ADPPA). Although the bill appears it may have some bipartisan support in the U.S. House of Representatives, she said the lack of an endorsement from Sen. Cantwell (or another Senate Democrat) means the bill does not yet have bipartisan support in the Senate. Ms. Stringer said she will keep the Working Group posted.

Mr. Diederich asked if the federal draft bill had state law preemptions. Ms. Stringer said the intent of the law is to preempt all state data and privacy laws unless there is some sort of specific exemption. Mr. Wake said if one is a literalist, this bill has neither a federal McLaren-Ferguson Act saving clause nor a federal McLaren-Ferguson Act override clause. So, he said one could at least say that the absence of an override would make it reverse preempted by the federal McClaren-Ferguson Act. Ms. Stringer said that was a good point and one that the NAIC Legal Division would be following closely. Mr. Diederich asked if there was any discussion about the safe harbors that are contained in the bill as it appears to allow companies to create their own compliance standards. He said this is concerning to state insurance regulators because it raises a specter of different, competing standards for compliance, making it very hard to enforce.

3. Discussed Comments Received on the Exposure Draft of its Revisions to Sections 1–3 of Model #670

Ms. Johnson said she wanted to thank all interested parties who provided comments on the Working Group’s revisions. She said the comments are helpful and that the Working Group appreciates those who took the time to look at the work that the Working Group has done. Ms. Johnson said in response to previous comments regarding the work plan, she is going to redo the schedule so the Working Group would finish the revisions to Section 1 and Section 13 of *NAIC Insurance Information and Privacy Protection Model Act (#670)*, exposing them by the end of August for a six-week public comment period. As the rest of the sections in Model #670 are civil proceedings, the review and comment process for will conclude with the public comments received by the end of August to be

discussed during a future meeting. Ms. Johnson said Working Group will be coordinating with other working groups under the Innovation, Cybersecurity, and Technology (H) Committee.

Mr. Wake said it is possible that only one model may be needed that would include new high-tech definitions like biotech, algorithms, etc., as placeholders for now that would be kept as needed for now and revisited as the working groups bring their separate areas of work together into a collaborative state insurance regulatory effort. Bob Ridgeway (America's Health Insurance Plans—AHIP) said it would be a good idea to fold in both models together. Ms. Johnson said there are two notices currently and only one is necessary. Mr. Ridgeway said while he applauds the Working Group finishing Model #670 first, he wondered why the policy changed from starting with the *Privacy of Consumer Financial and Health Information Regulation* (#672) first and shifting to Model #670. Ms. Johnson said this shift was made at the Spring National Meeting because many states require specific authority through laws as an act prior to doing a regulation interpreting that law. She said Model #670 is the authority for Model #672.

Kristin Abbott- (American Council of Life Insurers—ACLI) said the ACLI's members would like common definitions and framework in the form of one uniform model rather than the current patchwork of state insurance privacy laws, rules, and regulations. Lauren Pachman- (Professional Insurance Agents—PIA) said the adverse underwriting decision- (AUD) is a concern and asked if it would apply to all lines of business versus life and health versus non-specific lines. She said the AUD description and definition should vary with the agent's relationship with consumers rather than become an extra requirement on agents.

Ms. Johnson said the original language in the model as well as in Virginia law was not changed. Bob Woody (American Property Casualty Insurance Association—APCIA) said the Working Group is revising the Model #670 and Model #672 again. Randy Chapman- (Blue Cross Blue Shield Association—BCBSA) agreed and asked that the models align with HIPAA. Ms. Johnson said the Working Group is looking at it and will want industry's help on it every step of the way. She emphasized that late comments from the public, industry, state insurance regulators, and consumer representatives will always be accepted.

4. Discussed Other Matters

Ms. Johnson reminded attendees that responses to the Consumer Data Ownership survey questions for the white paper that were distributed and posted July 1 are due by July 28.

Having no further business, the Privacy Protections (H) Working Group adjourned.

NAIC/American Indian and Alaska Native Liaison Committee June 28, 2022, Minutes
(Attachment One-A) 13-12

Draft: 8/23/22

NAIC/Consumer Liaison Committee
Portland, Oregon
August 12, 2022

The NAIC/Consumer Liaison Committee met in Portland, OR, Aug. 12, 2022. The following Liaison Committee members participated: Andrew R. Stolfi, Chair (OR); Grace Arnold, Vice Chair (MN); Alan McClain (AR); Andrew N. Mais represented by George Kurt Swan (CT); Trinidad Navarro (DE); David Altmaier (FL); Colin M. Hayashida represented by Martha Im (HI); Dean L. Cameron represented by Randy Pipal (ID); Vicki Schmidt (KS); James J. Donelon represented by Ron Henderson (LA); Kathleen A. Birrane represented by Alexander Borkowski (MD); Anita G. Fox represented by Renee Campbell (MI); Chlora Lindley-Myers represented by Carrie Couch (MO); Mike Chaney represented by Andy Case (MS); Mike Causey represented by Angela Hatchell (NC); Jon Godfread represented by Janell Middlestead (ND); Chris Nicolopoulos represented by David Bettencourt (NH); Barbara D. Richardson represented by David Cassetty (NV); Adrienne A. Harris represented by Sumit Sud (NY); Michael Humphreys (PA); Cassie Brown (TX); Scott A. White represented by Don Beatty (VA); and Mike Kreidler (WA).

1. Heard Opening Remarks

Commissioner Stolfi said the NAIC Consumer Board of Trustees met Aug. 1, 2022 to: 1) discuss next steps for adopting proposed revisions to NAIC Consumer Participation Plan of Operation; 2) receive an update on the survey to NAIC Consumer Liaison Committee members and NAIC consumer representatives on how to enhance the level of dialogue at NAIC Consumer Liaison Committee meetings, and 3) hear an update on the criteria and procedures the NAIC consumer representatives use to determine what NAIC Member should receive the Excellence in Consumer Advocacy Award.

2. Adopted its Spring National Meeting Minutes

Commissioner Arnold made a motion, seconded by Commissioner Schmidt, to adopt the Committee's April 8 minutes (*see NAIC Proceedings – Spring 2022, NAIC/Consumer Liaison Committee*). The motion passed unanimously.

3. Discussed Recommendations for the Enhancement of the Consumer Liaison Committee Meetings and Consumer Liaison Engagement in NAIC Activities

Commissioner Stolfi said consumer protection is at the core of the mission for state insurance regulators and the input of the NAIC consumer representatives is very important to this mission. Because of this, Commissioner Stolfi said there was a survey of NAIC Consumer Liaison Committee members and NAIC consumer representatives on how to improve the Consumer Liaison Committee meetings and dialogue between the NAIC Member and NAIC consumer representatives.

Commissioner Stolfi said the survey results reflect three themes. There is a desire to broaden the perspectives shared at NAIC meetings and encourage more robust consumer representative participation, with some responses noting that participation sometimes feels repetitive or that not all consumer voices are heard. It is important that all commissioners, especially new commissioners, be well informed about the work of consumer representatives and have opportunities to collaborate with them. Many regulators would like to see more active and visible consumer representative participation in NAIC work outside the Consumer Liaison Committee.

Ken Klein (California Western School of Law) said it would be helpful if Commissioners would reach out to consumer representatives for input on topics that are of a sensitive nature and may not be appropriate for public

discussion in a large NAIC meeting. Birny Birnbaum (Center for Economic Justice) said NAIC consumer representatives do not attend NAIC meetings as individual consumers and attend NAIC meetings as experts representing consumers on insurance issues. Because of this, NAIC Members are going to hear from the same consumer representatives on certain issues. Mr. Birnbaum said the NAIC meetings are extremely important because consumer representatives do not have the same resources as industry representatives to engage with NAIC Members outside of NAIC national meetings. Mr. Birnbaum said he is concerned with the increasing number of regulator-to-regulator meetings and said there needs to be more open meetings for more stakeholder participation. Bonnie Burns (California Health Advocates) said she has specific expertise and NAIC Members are not likely to see her engage NAIC Committees addressing issues outside of her expertise. At the same time, Ms. Burns said she can call an insurance department to obtain assistance for a consumer or can assist an insurance department on an issue within her scope of expertise.

Amy Bach (United Policyholders) said it is important for consumer representatives to provide organized, specific presentations on issues for the Consumer Liaison Committee meeting. In addition, Ms. Bach said panel discussions, which include industry, academia, and consumer representatives may be beneficial at other NAIC committee meetings. Harry Ting (Consumer Advocate Volunteer) said it can be difficult for a new consumer representative to understand the best way to engage at NAIC meetings and additional assistance should be provided to help new consumer representatives understand the NAIC structure. Mr. Ting said consumer representatives may also be engaged with NAIC task forces and working groups.

Commissioner Stolfi said the survey feedback reflects three goals to guide changes. The first goal is to maximize the value of Consumer Liaison Committee meetings and presentations for members and consumer representatives. The second goal is to use diverse approaches to further encourage all consumer representatives, especially those not often heard from, to actively participate in all NAIC activities, not just Consumer Liaison Committee meetings. The third goal is to create more opportunities for meaningful interactions between regulators and consumer representatives, both at national meetings and elsewhere.

Commissioner Stolfi reviewed the following proposed changes for consideration:

- a. Distribute a one-page preview of consumer representative presentations at each national meeting, with links to presentation slides and supporting materials, one week in advance of each meeting to help regulators and their staffs prepare for a discussion.
- b. Distribute a summary of all presentations given at each national meeting, with links to presentation materials, after each national meeting.
- c. Give consumer representatives time at each Consumer Liaison meeting to briefly highlight presentations being given at that national meeting, other than those given at the Consumer Liaison meeting.
- d. Schedule the Consumer Liaison Committee meeting earlier in the national meeting week. Also begin the meeting later in the day to promote greater attendance.
- e. Increase the time of the Consumer Liaison meeting to 2 hours from 1.5 hours.
- f. Provide no less than 20 minutes (15-minute presentation, 5 min Q&A) for each presentation at national meetings (unless presenter requests less time, e.g., for an update).
- g. Ensure appropriate split of time between presentations on a range of topics, including health and non-health issues, without having pre-determined time allocations.
- h. Conduct post-meeting regulator surveys to provide consumer representative presentation feedback.
- i. Find a more intimate meeting room set up.
- j. Encourage consumer representatives to include local consumer organizations in presentations/discussions at national meetings when feasible.
- k. Hold interim hybrid meetings when needed to discuss issues of interest.
- l. Organize a themed consumer-focused symposium once a year, later in the day during a national meeting (comparable to CIPR events).

- m. Schedule a meeting at each national meeting where several (2-3) states can present to consumer representatives (over a meal) on what is happening in their states.
- n. At least once a year, poll regulators on the topics they would like to hear about from consumer representatives; share results with consumer representatives.
- o. Assign each consumer representative, at least during their initial term, a regulator mentor.

Mr. Birnbaum said the NAIC Consumer Liaison Committee will be hearing a lot about health insurance if the Committee wants to hear from more consumer representatives since many consumer representatives have expertise in health insurance. Mathew Smith (Coalition Against Insurance Fraud) said consumer representatives do not always know what is most important to insurance regulators and feedback from insurance regulators on what topics are most important would be beneficial. Eric Ellsworth (Consumers' Checkbook/Center of the Study of Services) said it would be helpful to have meetings with NAIC Committee staff support. Wayner Turner (National Health Law Program) suggested the NAIC post the many reports and presentations from NAIC consumer representatives on a more visible NAIC Weblink so regulators and others could use these materials as resources.

Commissioner Stolfi said there will not be a formal vote on these ideas but recognized there was general agreement among NAIC Consumer Liaison Committee members and NAIC consumer representatives on the ideas presented today.

4. Heard a Presentation on Updates to Section 1557 and the Role of State Insurance Regulators

Yosha Dotson (Georgians for a Health Future) said Section 1557 of the ACA prohibits discrimination against protect classes by health programs receiving federal funding. Ms. Dotson said the 2016 interpretation of Section 1557 provided nondiscrimination protections for gender identity, sex stereotypes, and pregnancy status but that a narrower interpretation in 2020 eliminated these protections. Ms. Dotson said the 2022 proposal seeks to reinstate the scope of Section 1557 to include all health and human services programs and activities. Ms. Dotson said the 2022 proposal goes further than the previous rule by requiring entities with fifteen or more employees to have a Section 1557 coordinator and prohibits discrimination in the use of algorithms to support decision making. Ms. Dotson said the 2022 proposed rule has explicitly recognized how individuals can experience compound discrimination and how network inadequacy can cause alienation from care and poor health outcomes.

Kellan Baker (Whitman-Walker Institute) said he wants to focus on one of the most substantial changes in the rule, which relates to the scope of sex nondiscrimination provisions. Mr. Baker said the ACA prohibits discrimination on the basis of sex, among other covered bases, and the 2016 rule indicated that gender identity sex stereotypes and pregnancy status were included under the definition of sex. The 2016 rule also included specific examples of gender identity nondiscrimination in coverage and care.

Mr. Baker said there are issues in coverage that affect the ability of transgender and other gender diverse people and populations to access appropriate care and services, including preventive screenings. This includes gender affirming care, such as hormone therapy or surgeries, as well as mental health counseling and any other type of healthcare that a transgender person might need. Mr. Baker said the 2016 rule was based on the concept of parity, meaning anything covered for a non-transgender person must be covered for a transgender person as well. The action in 2016 followed actions by more than twenty states to prohibit discrimination against transgender people, particularly in benefit design.

Mr. Baker said the 2020 rule eliminated gender identity, sex stereotyping and pregnancy nondiscrimination protections, and nondiscrimination protections in the marketing of qualified health plans, as well as in the essential health benefits. The 2022 rule is based on the 2020 Supreme Court decision of *Bostock v. Clayton County*, which re-establishes gender identity nondiscrimination protections under the basis of sex, adds sexual orientation, and re-establishes protections on the basis of sex stereotypes and pregnancy status. The rule clarifies that

religious/conscience exemptions will be considered on a case-by-case basis by the Office of Civil Rights under existing federal laws. The rule does not require providers to perform services outside of their scope of practice or area of specialty.

Mr. Baker said the rule requires the collection, analysis, and reporting of demographic data for various purposes, including civil rights enforcement, which is why the Office for Civil Rights includes a number of provisions and questions for commenters related to data collection and use. Several other provisions relate to data through research and clinical algorithms. Covered entities may not discriminate in federally supported research (e.g., in study enrollment). Clinical decision-making algorithms cannot incorporate bias that results in reduced access to health care or coverage benefits or services.

Mr. Baker said network adequacy is a major consideration in advancing health equity and ensuring high quality of coverage. This is a major consideration in advancing health equity and ensuring high quality of coverage. The Office of Civil Rights does not propose to establish a single network adequacy standard but notes that narrow networks may pose discrimination concerns.

Silvia Yee (Disability Rights Education and Defense Fund) said another key provision of the proposed rule is that it generally restores the breadth of application of the 2016 rule, including all the operations of entities that provide for or administer health insurance. This includes issuers of Medicare Advantage Plans. Ms. Yee said the proposed rule expands the scope of Section 1557 beyond the 2016 rule by including Medicare Part B providers, and this is often particularly important for people with disabilities, who need to see specialist who may not accept Medicare patients. The rule also provides for meaningful access and effective communication for persons with limited English proficiency. The proposed rule maintains the structural accessibility obligations of the 2020 rule and reaffirms that covered entities must provide reasonable modifications to people with disabilities unless doing so would be an undue burden or fundamentally alter the nature of the service. The proposed rule does not set an explicit requirement for accessible web content, but request comments on this issue. Ms. Yee said blind persons and people who have experienced vision loss have limited independence and choice when using Websites that other consumers use to make appointments, look up and compare insurance coverage, and find self-care information.

Ms. Yee said regulators should support health access during the comment period and have a broad perspective of what access means, including language accessibility, and diversity. Ms. Yee urged regulators to strengthen legal protections for consumers, including monitoring and enforcement against discrimination

5. Heard a Presentation Unpacking the Impact of Recent Federal Court Decisions on Consumers

Dorianne Mason (National Women's Law Center) said the decision in *Dobbs v. Jackson Women's Health Organization* is a devastating opinion that overturns *Roe v. Wade* and nearly 50 years of precedent. Ms. Mason said the Dobbs decision and subsequent state abortion bans dismantle patient care and force an uncertainty into the lives of all healthcare providers. This threatens the health and well-being of women. Ms. Mason said the Dobbs decision will disproportionately harm people who are already faced with unequal access to health care. Ms. Mason said patients may incur debt or lose income by taking leave from their jobs without pay because of the need to travel for care. Ms. Mason said others may be forced to carry pregnancies against their will and put their lives at stake.

Ms. Mason said insurance regulators should ensure compliance with existing laws and regulations, such as access to women's preventive services. Ms. Mason said insurance regulators should also reject regulations of reproductive care that inadvertently restrict access to reproductive healthcare. Ms. Mason said the National Women's Law Center has experts that can assist state insurance regulators in being innovative to address deficiencies to reproductive healthcare.

Jackson Williams (Dialysis Patient Citizens) said the United States Supreme Court decision in *Marietta Memorial Hospital v DaVita* involved the end stage renal disease provisions of the Medicare Secondary Payer Act, which allows enrollees to keep a group health plan for 30 months before Medicare becomes their primary payer. The language challenged in this case carved out dialysis treatment from the Preferred Provider Organization so there was no in network provider. Mr. Williams said the Supreme Court decision provided the need for maintenance dialysis was not the same as having end stage renal disease and permitted the carve out. Mr. Williams said insurance regulators should be concerned any time a change in insurance is triggered by an illness. Mr. Williams said there are two potential paths forward. The first path is to continue to pursuing population health strategies, such as health plans having prioritized detection and treatment of chronic kidney disease. The second path is to allow benefit consultants to aggressively sell dialysis carve outs to employers.

Katie Keith (Out2Enroll) said Section 2713 of the ACA requires health plans to cover a wide range of more than one hundred preventive services, such as cancer screenings, hypertension screening, tobacco cessation, immunization, contraception, and other preventive services for women. Ms. Keith said more than 150 million Americans benefited from this requirement in 2020 because it applies to all non-grandfathered plans, including both ERISA plans and fully insured plans. Ms. Keith said these requirements have led to a narrowing of health disparities.

Ms. Keith said there is a Federal court case in Texas, *Kelley v. Becerra (now known as Braidwood v. Becerra)*, in which the plaintiffs are arguing Section 2713 is unconstitutional. If this statutory provision is deemed unconstitutional, Ms. Keith said there would be no standard requirement for preventive services and consumers would see significant variations. Ms. Keith said this would lead to the widening of health disparities. Ms. Keith said insurers would not likely stop covering all one hundred preventive services but said she has concerns about ongoing coverage for contraceptives, screening colonoscopies, and HIV prevention medication. Ms. Keith said many states passed their own versions of Section 2713 in state law to protect the fully insurance market and encouraged all states to extend these protections.

Commissioner Stolfi said Oregon adopted a Reproductive Health Equity Act that went into effect in 2019, which had a list of required services to be covered at no cost. Commissioner Stolfi said Oregon found indications of non-compliance with both the state law and Section 2713 preventive service requirements, especially around cost sharing requirements. In response to Commissioner Arnold's question regarding what are the most important areas for a state insurance department to review, Mr. Baker suggested the following four items: 1) require plans to meet or exceed ACA requirements; 2) require plans to include a wider variety of provider types, such as community health workers and non-physician members of the healthcare workforce; 3) ensure the accuracy and accessibility of provider directories; and 4) explore the potential of standardized plans and related networks for specific conditions.

6. Heard a Presentation on Unpacking Social Inflation

Mr. Klein said there is a general assertion by industry that social inflation is causing insurance premiums and loss ratios to increase. Mr. Klein said social inflation is allegedly caused by plaintiff lawyers involved in insurance claims and Millennials having a sense of entitlement. Mr. Klein said insurers have claimed social inflation exists because incurred losses are rising faster than general inflation. The Casualty Actuarial Society recently issued a paper that identifies three lines of business that display characteristics of social inflation.

Mr. Klein said there is a misunderstanding of the litigation system that equates litigation with frivolous litigation. Mr. Klein said if a defendant loses a case this does not mean the verdict was wrong or the case was frivolous. Mr. Klein said litigation is only frivolous if it is unsupported by evidence and claims of social inflation often miss this point. Mr. Klein said there is no compelling data that shows there is an overall increase in insurance litigation nationally and there is no compelling data reflecting an increase in frivolous insurance litigation by plaintiffs.

Mr. Klein said the insurance industry is claiming the following items as problematic: 1) rollbacks of enacted tort reforms; 2) third-party litigation financing; and 3) a proliferation of class actions. Mr. Klein said there is no evidence rollbacks of enacted tort reforms are impacting premiums and loss ratios. For example, Mr. Klein said the Kansas City metropolitan area is in both Kansas and Missouri and there is no data reflecting lower premiums and loss ratios in Kansas, which rolled back tort reforms. Mr. Klein said there should be data reflecting lower premiums and loss ratios between Kansas and Missouri residents within the Kansas City metropolitan area. Mr. Klein said finance professors from Harvard and Stanford issued a report that concluded third-party litigation financing is not driving up the cost of litigation and found litigation financing does deter defendants from engaging in aggressive settlement strategies. Mr. Klein suggested any increase in litigation costs may be caused by the increased costs of defense attorneys. Mr. Klein said funding of litigation may be leveling what was previously an unlevel playing field. Mr. Klein said the court system is designed to punish those who cause injury to others and that larger verdicts do not equate to inaccurate verdicts. Regarding class action litigation, Mr. Klein said any proliferation of class actions suggests that defense attorneys are more aggressive in settling low value claims because class action litigation is a way for individuals to come together to seek appropriate remedies for low value claims.

Mr. Klein said the court system is designed to intentionally weed out frivolous claims. Mr. Klein said there is no evidence of social inflation, which is causing insurers to incur new, unusual, or higher expenses. Mr. Klein said insurance regulators should not permit premium increases or approve rate filings without confirming the assumptions about social inflation being presented.

Mike DeLong (Consumer Federation of America) said his organization completed a study in March of 2020, which concluded insurers' claims of increased costs were inaccurate. Mr. DeLong said insurers continued to earn profits throughout the pandemic. Mr. DeLong said the need for insurers to raise prices is questionable and any insurer, which is experiencing larger verdicts or more class action lawsuits, may be experiencing these things because of inappropriate behavior.

Mr. Smith said there is a crisis in the Florida insurance market with increased claim costs and litigation. Mr. Smith said one group should not be singled out as the cause and encouraged a review of the totality of issues to determine how all parties can better serve consumers.

Commissioner Schmidt said there is still more discussion occurring in Kansas regarding the Kansas Supreme Court case impacting tort reform and does not believe the Hilburn case is settled case law. Commissioner Schmidt also said there are many Kansas residents who do not live within the Kansas City metropolitan area. Because of this, Commissioner Schmidt said the comparison of Kansas and Missouri premiums within the Kansas City metropolitan area is not a fair comparison.

Commissioner Altmaier said he would strongly encourage the review of data from the regulatory community, which demonstrates a significant increase in litigation. Commissioner Altmaier said having additional costs within the claims settlement process is bad for consumers. Commissioner Altmaier said Florida is having a very challenged property insurance market and encouraged additional discussion on this issue using available, regulatory data.

7. Heard a Presentation on New Rules for Disaster Claims in California, Colorado, and Oklahoma

Ms. Bach said her organization has worked with industry, regulators, and legislators in California, Colorado, and Oklahoma to create new rules for disaster claims, primarily focusing on claims resulting from wildfires where there is not a causation question. Ms. Bach highlighted the following legislative reforms: 1) additional/temporary living expense and replacement cost benefits must be available for at least 24 months and 36 months if reasonably necessary; 2) an underinsured homeowner can use "Other Structures" benefits toward the cost of rebuilding their dwelling even though "Other Structures" benefits are normally available only for garages and outbuildings,

retaining walls, etc.; 3) a homeowner can opt to skip the challenges of rebuilding their home at its original location and instead access their dwelling, extended dwelling and building code and ordinance benefits toward the purchase of a replacement home; and 4) homeowners can avoid being underinsured by accessing their insurer's construction cost expertise and obtaining an estimate for insuring their home to its current replacement cost every other year or at inception.

NAIC/American Indian and Alaska Native Liaison Committee
Portland, Oregon
August 11, 2022

The NAIC/American Indian and Alaska Native Liaison Committee met in Portland, OR, Aug. 11, 2022. The following Liaison Committee members participated: Troy Downing, Chair (MT); Russell Toal, Vice Chair, Bob Biskupiak, and Jennifer A. Catechis (NM); Lori K. Wing-Heier and Anna Latham (AK); Dean L. Cameron represented by Shannon Hohl (ID); Grace Arnold represented by Peter Brickwedde (MN); Edward M. DeLeon Guerrero (MP); Mike Causey represented by Angela Hatchell (NC); Jon Godfread represented by John Arnold (ND); (NM); Glen Mulready represented by Brian Downs (OK); Andrew R. Stolfi represented by TK Keen (OR); Larry D. Deiter represented by Frank Marnell (SD); Mike Kreidler represented by Todd Dixon (WA); and Jeff Rude (WY). Also participating were Peg Brown (CO); Kathleen A. Birrane (MD); and Ryan Jabber, Tanji J. Northrup, and Reed Stringham (UT).

1. Adopted its June 28 Minutes

Commissioner Downing said the Liaison Committee met June 28. During this meeting, the Liaison Committee took the following action: 1) adopted its Spring National Meeting minutes; 2) heard a presentation on consumer outreach and education regarding fraud; 3) heard a presentation on “Maximizing Collaboration Between Health Insurers and Tribal Communities – What Blue Cross and Blue Shield of New Mexico and Blue Cross and Blue Shield of Oklahoma are Doing to Build Partnerships”; and 4) heard a presentation on “New Mexico’s Health Insurance Exchange – American Indian Program.”

Mr. Downs made a motion, seconded by Mr. Dixon, to adopt the Liaison Committee’s June 28 minutes (Attachment One-A). The motion passed unanimously.

2. Heard a Presentation on the SNHC and SNI

Commissioner Pike introduced the speaker for this presentation as they had been having conversations recently about today’s agenda topic. Mark A. Echo Hawk (Sovereign Nations Health Consortium— SNHC) welcomed the Liaison Committee to Aboriginal territory as they were meeting on tribal lands—the land of the forever people. He said that due to federal oversight, tribes have remained underserved and underinsured. Mr. Echo Hawk said the tribes needed help with insurance needs as there were more people dying than being born currently. He said the Indian Health Service (IHS) funding is not adequate to provide for all native peoples. Mr. Echo Hawk said a supplemental insurance policy is needed to cover costs for services that the IHS does not cover. He described a three-tier program with SNHC as the regulatory consortium; the Native American Restoration Association (NARA) as a charitable, tribal nonprofit membership organization that uses some of its premium income to support Indian charitable programs; and Sovereign Nations Insurance (SNI), the “tribal health and insurance company.”

Mr. Echo Hawk said the SNHC is a consortium of three federally recognized Utah based tribes: 1) the Kanosh Band of Paiutes; 2) the Confederated Tribes of the Goshute Reservation; and 3) the Shivwits Band of Paiutes. He said that SNI has operated for approximately one year under tribal code. Mr. Echo Hawk said the SNI is regulated under the SNHC tribal regulatory authority and is currently offering insurance products to both Indian and non-Indian members. He also said that the NARA is also a charitable organization that uses some of its premium income to support Indian charitable programs.

Commissioner Downing said this presentation is fascinating and that much of it resonates with him regarding collaboration opportunities. Director Wing-Heier said she has worked with Section 638 groups in Alaska and asked Mr. Echo Hawk if he was talking about health care insurance or property/casualty (P/C) insurance as she has concerns about the federal government in this area. Mr. Echo Hawk said it is just health care and that tribes bring whatever health care resources they have to the table. He said it may be a diabetes clinic or program that is not a Section 638 group. Director Wing-Heier said this would not be beneficial if it is not addressed in a 638 contract; however, it is covered, or it can be, if it is in their 638 contracts, so she recommended that the tribes not give up on pursuing a 638 contract. Commissioner Mulready asked how long the SNHC had been operating; if the tribes had any state contracts; and where the tribes' financial standards came from. Mr. Echo Hawk said the SNHC had been operating about a year; that it did not have any state contracts yet; and that the SNHC had surveyed all state solvency and claims funds using state insurance department web pages to add the standards found there in their own tribal codes and internal regulations. Mr. Brickwedde asked what type of distribution network the tribes used. Mr. Echo Hawk said the SNHC had an internet site with companies that help sell policies, as well as tribal call centers on reservations. Ms. Hohl asked what provider networks were used. Mr. Echo Hawk said tribal health care claims are provided by the insurance company policy with off reservation group providers. Director Wing-Heier suggested coordination with the federal Affordable Care Act (ACA) and said the Indian Coordination Act should be pursued.

Mr. Echo Hawk said tribes typically fight against states when they should be collaborating with them. He emphasized a desire to work with state insurance regulators, as well as explore compacts and collaborations. He noted that this program may ultimately pose challenges requiring congressional solutions. He also said this is an important step because the SNHC is reaching out from tribal-owned insurance companies to suggest partnering with state insurance regulators to understand compliance standards for tribal-owned insurance companies and ensure company solvency to maintain their claims-paying ability and consumer protection issues, such as fraud. Commissioner Pike said he and Commissioner Stolfi met with Mr. Echo Hawk's clients briefly but that they just scratched the surface and that a better level of understanding would be needed to find a way to work together. Commissioner Pike said he is intrigued by the idea of a compact and that the Liaison Committee is a good place to start. He said there are currently three tribes in Utah; that the policies are being sold elsewhere already; and that this is a dual insurance universe. Matthew Smith (Coalition Against Insurance Fraud—CAIF) said state insurance departments have a whole litany of laws and asked what fraud laws the tribes have in place. Mr. Echo Hawk said this information is in the agreements that are part of the consortium; there are ways to deal with complaints just as state insurance departments do. He said not all tribes will want to partner with states, but if a compact is built, the hope is that most tribes will decide to join it.

3. Discussed Survey Results of Growing Insurance Markets by Tribal Nations and SNI and its Business Model

Commissioner Downing said it is important for the Liaison Committee to discuss the survey results of growing insurance markets and insurance-related activities on and off reservations by tribal nations, as well as by SNI, and its business model so state insurance regulators can think of ways they might be able to work with such entities going forward. He said the survey inquired on whether tribal insurance programs were operating in state jurisdictions as admitted carriers and whether there was knowledge of state-licensed agents selling tribal insurance products. Liaison Committee members had no comments on the survey results.

4. Heard an Update on its Ad Hoc Drafting Groups

Commissioner Downing said the three ad hoc drafting groups have been consolidated into two groups. He said the ad hoc groups began working on their goals. He also solicited additional volunteers to join the ad hoc groups. Commissioner Downing said that Ad Hoc Group 1 has focused on cultural awareness and communication between

tribal and non-tribal members. He said Ad Hoc Group 2 will produce a report on tribal access to the ACA, ACA navigation, and non-IHS insurance products. Commissioner Downing said this group would also report on “lessons learned” in Indian Country through the COVID-19 pandemic. He said that Montana is doing a lot of financial outreaches to tribal entities.

5. Discussed Other Matters

Commissioner Downing reminded attendees about the upcoming Insurance Summit, which will be held in Kansas City, MO, Sept. 19–23.

Having no further business, the NAIC/American Indian and Alaska Native Liaison Committee adjourned.

NAIC/American Indian and Alaska Native Liaison Committee
Virtual Meeting
June 28, 2022

The NAIC/American Indian and Alaska Native Liaison Committee met June 28, 2022. The following Liaison Committee members participated: Troy Downing, Chair (MT); Russell Toal, Vice Chair (NM); Trinidad Navarro represented by Frank Pyle (DE); Dean L. Cameron (ID); Grace Arnold (MN); Mike Causey represented by Tracy Biehn (NC); Jon Godfread (ND); Glen Mulready (OK); Larry D. Deiter represented by Tony Dorschner (SD); Mike Kreidler represented by Todd Dixon (WA); and Jeff Rude (WY). Also participating were: Kate Harris (CO); Molly Plummer and Bob Biskupiak (MT); and Paige Duhamel (NM).

1. Adopted its Spring National Meeting Minutes

Commissioner Downing said the Liaison Committee met April 6.

Superintendent Toal made a motion, seconded by Commissioner Mulready, to adopt the Liaison Committee's April 6 minutes (see *NAIC Proceedings – Spring 2022, NAIC/Consumer Liaison Committee, Attachment One*). The motion passed unanimously.

2. Heard a Presentation on Consumer Outreach and Education Regarding Fraud

Commissioner Downing said the next item on the agenda is a presentation by Matthew J. Smith, Executive Director of the Coalition Against Insurance Fraud (CAIF) and an NAIC appointed consumer representative, on consumer outreach and education regarding fraud. He said Mr. Smith was meant to give this presentation during the Spring National Meeting, but the Liaison Committee was short on time; therefore, Mr. Smith graciously consented to postponing his presentation until this interim meeting could be arranged.

Mr. Smith said fraud is up by over 400%, with most of it motivated by financial crime causing a pandemic of insurance fraud. He said a study completed by consumer representatives in 2021 was done to determine if there was a system of discrimination and bias. He said the study showed a lack of state insurance regulator engagement, and people were not seeing the outreach to American Indians and Alaska Natives with these groups not receiving the insurance education that was needed. He said only 26% of those responding said they were receiving such information, and the awareness of state insurance departments came in at less than 24%. He said the CAIF wanted to partner with state departments of insurance (DOIs) by providing valuable information to public information officers that could be used for this much-needed outreach. He said the CAIF has 50 customizable videos that it will work with NAIC members to customize, or the CAIF will customize videos for each state by adding insurance department contact information at the end of the videos. He said the CAIF has new customized infographics coming out every six weeks that could be customized free of charge. He said the CAIF could also provide state DOIs with information that could be added to the states' websites, along with other tools and resources, such as multilingual educational information, training, a searchable database of fraud laws and regulations, and access to antifraud materials dealing with insurance fraud.

Commissioner Downing asked if the CAIF has done any specific outreach targeted to the American Indian and Alaska Native consumer. Mr. Smith said he is sad to say that the CAIF is not yet doing enough to reach this population. Commissioner Downing said more culturally appropriate material is needed. Superintendent Toal asked if any insurers are targeting vulnerable populations, and he would appreciate the additional materials. Mr. Smith said he has not seen any company or tracking patterns, but he would like to be more culturally engaged.

Commissioner Downing said while labeling materials is helpful, it would also be good to collaborate with the CAIF and other state insurance departments. He asked what type of licensing requirements the CAIF offer to state insurance regulators who want to take advantage of CAIF materials. Mr. Smith said there are no additional steps, and all materials are available free of charge with full access to use as much as the state wants. Commissioner Navarro said Delaware has partnered with the CAIF for a few years and has used its materials. He said Delaware put the materials on its own website and took full credit for it. He said the American Indian and Alaska Native community is close knit with not a lot of outside access. Tribal victims of insurance fraud do not come forward because they are ashamed and do not want their family to know about it.

3. Heard a Presentation on “Maximizing Collaboration Between Health Insurers and Tribal Communities – What Blue Cross and Blue Shield of New Mexico and Blue Cross and Blue Shield of Oklahoma are Doing to Build Partnerships”

Commissioner Downing said next on the agenda is a presentation by Bonnie Vallo, Community Outreach Specialist and Tribal Liaison of the Blue Cross and Blue Shield of New Mexico (BCBSNM), and Lucinda Myers, Tribal Relations Specialist of the Blue Cross and Blue Shield of Oklahoma (BCBSOK), on what the BCBSNM and the BCBSOK are doing to build partnerships that will maximize the collaboration between health insurers and tribal communities.

Ms. Vallo said this is the second Blue Cross Blue Shield Association (BCBSA) Tribal Markets Workgroup since 2018 focused on how to get more people involved, and the Health Care Service Corporation (HCSC) Tribal Relations Workgroup is focused on bridging communications across tribes, so it is important to be as local as possible through photos that provide a dual role in educating internally and externally. Ms. Myers said Native Americans in Progress is one of nine business resource groups (BRGs) with subject matter experts (SMEs) serving as resources for companies and helping natives progress in business and diversity in Oklahoma, Montana, and New Mexico. She said BRGs identify needs, host donations, and engage in local communities using volunteer time to help with local health issues and needs. She said BRGs also serve as brand ambassadors and engage in business activities with Native American employees. She said best practices for working with Native American populations include: 1) having a common goal; 2) improving the health of citizens; 3) investing in dedicated positions as a tribal liaison to accomplish strategies; 4) because the communities being served are the experts on their issues, listening and engaging them; doing research; and going to tribal websites and social media outlets, especially regarding health; 5) identifying challenges and how resources can help; 6) being open-minded; and 7) providing ongoing support and resources, including food and other personal necessities. Ms. Myers said mobile assistance centers (MACs) provide enrollment specialists and hold enrollment fairs because 60% of their outreach to tribal members in Oklahoma is rural, so Oklahoma has nine Caring Foundation vans under a 501(c) that provide free preventative health services, three of which are staffed by tribal nations, which enhances face-to-face meetings.

Ms. Vallo said it is important for outreach volunteers to be trustworthy, as they provided Medicaid assistance to 1,222 touchpoints in 2022. She said COVID-19 is still a serious concern, so they are still practicing safe distancing via virtual outreach, which has led to higher vaccination numbers. Superintendent Toal said New Mexico is the fifth largest state for tribal challenges. Ms. Vallo said preventative dental care screenings were provided by the BCBSA in vans to 139 kids due to the use of a mascot known as Blue Bear; \$40,000 was donated to the COVID-19 Relief Fund; \$50,000 was raised for schools; and the goal for Montana in 2022 is to donate \$25,000 to this cause. Commissioner Downing thanked Ms. Vallo and Ms. Myers for underlining the issues. He said he likes the phrase, “Remember those you serve are the experts,” and he said Montana does this. He also said later during this meeting, the Liaison Committee members would discuss action plans to create tools for effective communication with tribal nations. Superintendent Toal asked the speakers what they perceive to be the biggest challenge. Ms. Vallo said she prefers to call challenges opportunities, which are to make sure to get the education and information out to tribal communities in flexible ways. Ms. Myers said educational PCs with access to the Indian Health Service (IHS) have the perception that the IHS is health insurance; however, it is not. Ms. Duhamel asked if

federal Affordable Care Act (ACA) coverage is an opportunity to enroll in tribal community health care as well. Ms. Vallo said the ACA includes benefits of third-party and additional services. Ms. Duhamel asked if that works. Ms. Myers said tribal members unfortunately do not think about the ACA when the IHS is closed or when there is no access to services. Ms. Vallo said partnerships with the IHS and the ACA is the best way to do this.

4. Heard a Presentation on “New Mexico’s Health Insurance Exchange – American Indian Program”

Superintendent Toal said it is with great pleasure that he introduces the next agenda presentation, “New Mexico’s Health Insurance Exchange – American Indian Program,” by his friend and colleague, Teresa Gomez, MA, a beWellnm Board member and Board vice chair of the Native American Standing Committee. Ms. Gomez said she is speaking both as an advocate and a consumer as a two times ovarian cancer survivor, but not as an industry person. She said she had employee coverage through her employer and commercial insurance through the IHS to reduce costs for cancer. She said enabling legislation in the form of the New Mexico Health Insurance Exchange Act, which was enacted in 2013, gave Superintendent Toal powers and duties to implement and enforce the provisions in this act. She said the act included Native American specific provisions on diversity; an advisory committee to guide Native American provisions of the ACA; a designated Native American liaison; provisions regarding the consultation of all tribes; a Board of Directors with a Native American Standing Committee that is promoted in its Plan of Operations and in enabling legislation calls for cultural competency training to staff of the exchange; a Native American Service Center with a cabinet-level department and a Native American Advisory Committee. Superintendent Toal encouraged all Liaison Committee members to have a tribal advocate assigned to help their respective DOIs.

5. Discussed Other Matters

Commissioner Downing said his office noticed that sovereign nation programs are just starting to be formed in New Mexico and Oklahoma. He asked if any other Liaison Committee members had seen this type of activity in their states, and he said the Liaison Committee would continue to follow the issue.

Commissioner Downing announced the formation of three ad hoc drafting groups that were created with deliverables based on the results of the state insurance regulator and consumer representative surveys about the goals of the Liaison Committee for 2022. He said an ad hoc drafting group consists of no more than four to five members and meets for a limited time to address specific deliverables. He said Drafting Group 1 will create a tool at the NAIC to address cultural awareness and communication, as Montana has found that words matter within tribal communities, such as using the phrase “financial empowerment” rather than “financial literacy,” as well as not saying “Save for yourself” but rather, “Use funds to help tribal members in need.” He said volunteers for this group include himself, Mr. Dixon, and a representative for Superintendent Toal. He said Drafting Group 2 will produce a report identifying problems with access and outreach through the IHS and the ACA. He said Drafting Group 3 will review COVID-19 vaccination access accomplishments to prepare a simple report that is not COVID-19-specific about the lessons learned and what worked that could be used for the next emergency. Superintendent Toal suggested combining Drafting Groups 2 and 3 into one that will include Commissioner Downing, Mr. Dixon, and a person to be nominated by Superintendent Toal.

Having no further business, the NAIC/American Indian and Alaska Native Liaison Committee adjourned.
