

2022 Proceedings of the National Association of Insurance Commissioners

**2022 Summer National Meeting
August 9 – 13, 2022**

**Held at the
Hyatt Regency Portland, Doubletree Portland, &
Portland Convention Center
Portland, Oregon**

The NAIC is the authoritative source for insurance industry information. Our expert solutions support the efforts of regulators, insurers and researchers by providing detailed and comprehensive insurance information. The NAIC offers a wide range of publications in the following categories:

Accounting & Reporting

Information about statutory accounting principles and the procedures necessary for filing financial annual statements and conducting risk-based capital calculations.

Consumer Information

Important answers to common questions about auto, home, health and life insurance — as well as buyer's guides on annuities, long-term care insurance and Medicare supplement plans.

Financial Regulation

Useful handbooks, compliance guides and reports on financial analysis, company licensing, state audit requirements and receiverships.

Legal

Comprehensive collection of NAIC model laws, regulations and guidelines; state laws on insurance topics; and other regulatory guidance on antifraud and consumer privacy.

Market Regulation

Regulatory and industry guidance on market-related issues, including antifraud, product filing requirements, producer licensing and market analysis.

NAIC Activities

NAIC member directories, in-depth reporting of state regulatory activities and official historical records of NAIC national meetings and other activities.

Special Studies

Studies, reports, handbooks and regulatory research conducted by NAIC members on a variety of insurance related topics.

Statistical Reports

Valuable and in-demand insurance industry-wide statistical data for various lines of business, including auto, home, health and life insurance.

Supplementary Products

Guidance manuals, handbooks, surveys and research on a wide variety of issues.

Capital Markets & Investment Analysis

Information regarding portfolio values and procedures for complying with NAIC reporting requirements.

White Papers

Relevant studies, guidance and NAIC policy positions on a variety of insurance topics.

**CERTIFICATE OF INCORPORATION OF
NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS
a Nonstock Corporation**

I. Name

The name of the Corporation is: **National Association of Insurance Commissioners (NAIC)**.

II. Duration

The period of duration of the NAIC is perpetual.

III. Registered Office and Agent

The NAIC's Registered Office in the State of Delaware is to be located at: 1209 Orange St., in the City of Wilmington, Zip Code 19801. The registered agent in charge thereof is The Corporation Trust Company.

IV. Authority to Issue Stock

The NAIC shall have no authority to issue capital stock.

V. Incorporators

The name and address of the incorporator are as follows:

Catherine J. Weatherford
National Association of Insurance Commissioners
120 W. 12th St., Suite 1100
Kansas City, MO 64106

VI. Purpose

The NAIC is organized exclusively for charitable and educational purposes within the meaning of Section 501(c)(3) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law), including without limitation, to assist state insurance regulators, individually and collectively, in serving the public interest and achieving the following fundamental insurance regulatory goals in a responsive, efficient and cost-effective manner, consistent with the wishes of its members:

- (a) Protect the public interest, promote competitive markets and facilitate the fair and equitable treatment of insurance consumers.
- (b) Promote, in the public interest, the reliability, solvency and financial solidity of insurance institutions.
- (c) Support and improve state regulation of insurance.

VII. Restrictions

- A. No substantial part of the activities of the Corporation shall be the carrying of propaganda, or otherwise attempting to influence legislation except as otherwise permitted by Section 501(h) of the Code and in any corresponding laws of the State of Delaware, and the Corporation shall not participate in or intervene

in including the publishing or distribution of statements concerning any political campaign on behalf of or in opposition to any candidate for public office.

- B. For any period for which the Corporation may be considered a private foundation, as defined in Section 509(a), the Corporation shall be subject to the following restrictions and prohibitions:
1. The Corporation shall not engage in any act of self-dealing as defined in section 4941(d) of the Code.
 2. The Corporations shall make distributions for each taxable year at such time and in such manner so as not to become subject to the tax on undistributed income imposed by section 4942 of the Code.
 3. The Corporation shall not retain any excess business holdings as defined in section 4943(c) of the Code.
 4. The Corporation shall not make any investments in such manner as to subject it to tax under section 4944 of the Code.
 5. The Corporation shall not make any taxable expenditures as defined in section 4945(d) of the Code.

VIII. Membership

The NAIC shall have one class of members consisting of the Commissioners, Directors, Superintendents, or other officials who by law are charged with the principal responsibility of supervising the business of insurance within each State, territory, or insular possession of the United States. Members only shall be eligible to hold office in and serve on the Executive Committee, Committees and Subcommittees of the NAIC. However, a member may be represented on a Committee or Subcommittee by the member's duly authorized representative as defined in the Bylaws. Only one official from each State, territory or insular possession shall be a member and each member shall be limited to one vote. Any insurance supervisory official of a foreign government or any subdivision thereof, which has been diplomatically recognized by the United States government, may attend and participate in all meetings of this Congress but shall not be a member and shall not have the power to vote.

IX. Activities

The NAIC is a nonprofit charitable and educational organization and no part of the net earnings or property for the corporation will inure to the benefit of, or be distributable to its members, directors, officers or other private individuals, except that the NAIC shall be authorized and empowered to pay reasonable compensation for services rendered by employees and contractors, and to make payments and distributions in furtherance of the purposes set forth in Article VI hereof.

X. Powers

The NAIC shall have all of the powers conferred by the Delaware General Corporation Law for non-profit corporations, except that, any other provision of the Certificate to the contrary notwithstanding, the NAIC shall neither have nor exercise any power, nor carry on any other activities not permitted: (a) by a corporation exempt from federal income tax under Section 501(c)(3) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law); or (b) by a corporation contributions to which are deductible under Section 170(c)(2) of the Internal Revenue Code of 1986, as amended, (or the corresponding provision of any future United States Internal Revenue law).

XI. Immunity

All officers and members of the Executive Committee shall be immune from personal liability for any civil damages arising from acts performed in their official capacity, and shall not be compensated for their services as an officer or member of the Executive Committee on a salary or a prorated equivalent basis. The immunity shall extend to such actions for which the member of the Executive Committee or officer would not otherwise be liable, but for the Executive Committee member's or officer's affiliation with the NAIC. This immunity shall not apply to intentional conduct, wanton or willful conduct or gross negligence. Nothing herein shall be construed to create or abolish an immunity in favor of the NAIC itself. Nothing herein shall be construed to abolish any immunities held by the state officials pursuant to their individual state's law.

XII. Exculpation and Indemnification

A member of the Executive Committee shall not be liable to the NAIC or its members for monetary damages for breach of fiduciary duty as a member of the Executive Committee, provided that this provision shall not eliminate or limit the liability of a member of the Executive Committee for any breach of the duty of loyalty to the NAIC or its members, for acts or omissions not in good faith, or which involve intentional misconduct or a knowing violation of law, or for any transaction from which the member of the Executive Committee involved derived an improper personal benefit. Any amendment, modification or repeal of the foregoing sentence shall not adversely affect any right or protection of a member of the Executive Committee of the Corporation hereunder in respect of any act or omission occurring prior to the time of such amendment, modification, or repeal. If the Delaware General Corporation Law hereafter is amended to authorize the further elimination or limitation of the liability of the members of the Executive Committee, then the liability of a member of the Executive Committee, in addition to the limitation provided herein, shall be limited to the fullest extent permitted by the amended Delaware General Corporation Law.

The NAIC shall indemnify to the full extent authorized or permitted by the laws of the State of Delaware, as now in effect or as hereafter amended, any person made or threatened to be made a party to any threatened, pending or completed action, suit or proceeding (whether civil, criminal, administrative or investigative, including an action by or in the right of the NAIC) by reason of the fact that the person is or was a member of the Executive Committee, officer, member, committee member, employee or agent of the NAIC or serves any other enterprise as such at the request of the NAIC.

The foregoing right of indemnification shall not be deemed exclusive of any other rights to which such person may be entitled apart from this Article XII. The foregoing right of indemnification shall continue as to a person who has ceased to be a member of the Executive Committee, officer, member, committee member, employee or agent and shall inure to the benefit of the heirs, the executors and administrators of such a person.

XIII. Dissolution

In the event of the dissolution of the NAIC, the Executive Committee shall, after paying or making provision for the payment of all of the liabilities of the NAIC, dispose of all the assets of the NAIC equitably to any state government which is represented as a member of the NAIC at the time of dissolution, provided that the assets are distributed upon the condition that they be used primarily and effectively to implement the public purpose of the NAIC, or to one or more such organizations organized and operated exclusively for religious, charitable, education, scientific, or literary purposes or similar purposes as shall at the time qualify: (a) as an exempt organization under Section 501(c)(3) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law); and (b) as an organization contributions to which are deductible under Section 170(c) of the Internal Revenue Code of 1986, as amended (or the corresponding provision of any future United States Internal Revenue law), as the Executive Committee shall determine.

XIV. Bylaws

The Bylaws of the NAIC may prescribe the powers and duties of the several officers, members of the Executive Committee and members and such rules as may be necessary for the work of the NAIC provided they are in conformity with the Certificate of Incorporation.

XV. Amendments

This Certificate of Incorporation may be altered or amended at any meeting of the full membership (Plenary Session) of the NAIC by an affirmative vote of two-thirds of the members qualified to vote, or their authorized representatives, provided that previous notice of the proposed amendment has been mailed to all members by direction of the Executive Committee at least thirty (30) days prior to the meeting.

IN WITNESS WHEREOF, this Certificate of Incorporation has been signed this 4th day of October 1999.

/signature/

Catherine J. Weatherford, Incorporator

ADOPTED 1999, Proc. Third Quarter

Adopted October 1999
Amended November 2002
Amended June 2003
Amended March 2004
Amended December 2004
Amended March 2009
Amended September 2009
Amended October 2011
Amended December 2015
Amended December 2021

Bylaws of the NAIC, a Delaware Non-Profit Corporation

**BYLAWS OF THE
 NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS**

ARTICLE I

Name, Organization and Location

The name of this corporation is **NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS** (NAIC). The NAIC is organized under the General Corporation Law of the State of Delaware. The NAIC may have one (1) or more office locations within or without the State of Delaware as the Executive Committee may from time to time determine.

ARTICLE II

Membership

The Membership of the NAIC shall be comprised of those persons designated as members in the Certificate of Incorporation. Each member of the NAIC shall have the power to vote and otherwise participate in the affairs of the NAIC as set forth herein or as required by applicable law. This power may be exercised through a duly authorized representative who shall be a person officially affiliated with the member's department and who is wholly or principally employed by said department.

The organization may charge members an annual assessment, the amount of which shall be determined by the Executive Committee. Members failing to pay all NAIC assessments on a timely basis shall be placed in an inactive status. Members in an inactive status shall not have any voting rights and shall be denied membership on NAIC committees and task forces, access to mailings and services of the NAIC Offices, as well as access to zone examination processes and other benefits of membership in the NAIC.

The NAIC's receipt of full payment from the inactive member of all current and past due assessments shall serve to immediately remove them from inactive status.

The Membership of the NAIC shall be subject to a conflict of interest policy and disclosure form as adopted by the members.

The Executive Committee is empowered to reinstate, in part or in whole, an inactive member's participation on the committees and task forces, access to mailings and services of the NAIC Offices and satellite offices, as well as access to zone examination processes, and other benefits of membership in the NAIC upon good cause shown as determined by the Executive Committee.

ARTICLE III

Officers

The officers of the NAIC shall be a President, a President-Elect, a Vice President, and a Secretary-Treasurer. Annual officer elections shall be held at the last regular National Meeting of each calendar year or at such other plenary session as agreed to by the members. The voting membership, by secret ballot, shall elect officers as provided in these Bylaws. Officers' terms shall be for one year, beginning on January 1 following their election. The officers shall hold office until their death, resignation, removal or the election and qualification of their successors, whichever occurs first. Any Officer may resign at any time by giving notice thereof in writing to the President of the NAIC. Any such resignation will take effect upon delivery if no date is specified, or as of its date, unless some other date is specified therein, in which event it will be effective as of that date. The acceptance of that resignation will not be necessary to make it effective.

If an interim vacancy occurs in the office of President, the President-Elect shall cease to hold his or her office effective immediately and shall assume the office of President. If an interim vacancy occurs in any one or more of the other officer positions, an interim election shall be held to fill the vacancy. No member may hold any office for more than two consecutive years. Notwithstanding the foregoing, at no time shall more than two officer positions be filled by members of the same Zone during the same term. Any officer may be removed from office by the affirmative vote of two-thirds (2/3) of the members, but only after a resolution for removal is adopted by two-thirds (2/3) of the Executive Committee whenever, in their judgment, the best interests of the NAIC would be served thereby.

The President shall serve as Chairman of the Executive Committee and shall preside at all special and regular meetings of the members. The President shall serve as the leader of the organization and its principal spokesperson. The President shall work closely with the Executive Committee to establish and achieve the strategic, business and operational goals of the organization; ensure appropriate policies and procedures for the organization are implemented and followed; and protect the integrity as well as the resources of the organization. After a member completes his or her term or terms as President, he or she shall not be able to hold another officer position for a period of twelve (12) months from the date such member completes his or her term or terms as President, which shall be referred to as a "waiting period"; provided however, the Executive Committee may waive the twelve month waiting period if warranted by exigent circumstances.

The President-Elect shall serve as Vice-Chairman of the Executive Committee. In the absence of the President at a duly convened meeting of the Executive Committee or at a regular or special meeting of the members, the President-Elect shall preside over such meeting to the extent of the President's absence. The President-Elect shall perform such other duties and tasks as may be assigned by the President. Where the President does not run for re-election, the President-Elect shall become President at the conclusion of the President's term of office.

The Vice President, in the absence of the President and President-Elect at a duly convened meeting of the Executive Committee or at a regular or special meeting of the members, shall preside over such meeting to the extent of the President's and the President-Elect's absence; and shall perform such other duties as may be assigned by the President or President-Elect, or in the absence thereof, by the Executive Committee.

The Secretary-Treasurer shall assist the President and, as applicable, the President-Elect or the Vice President in the conduct of meetings of the Executive Committee and members. For member meetings, the Secretary-Treasurer shall call the roll of the membership and certify the presence of a quorum and shall receive, validate and maintain all proxies for elections held at member meetings. The Secretary-Treasurer shall also recommend to the Executive Committee such policies and procedures to maintain the history and continuity of the NAIC. The

Secretary-Treasurer shall also assist the President and President-Elect in all matters relating to the budget, accounting, expenditure and revenue practices of the NAIC; including, but not limited to reviewing the financial information of the organization and consulting with NAIC management, independent auditors, and other necessary parties regarding the financial operations and condition of the organization.

ARTICLE IV

Executive Committee

The business and affairs of the NAIC shall be managed by and under the direction of the Executive Committee. The Executive Committee shall be made up entirely of members of the NAIC. The Executive Committee shall consist of the following members: the officers of the NAIC; the most recent past president; the twelve (12) members of the zones as provided for in Article V of these Bylaws. The members of the Executive Committee shall be subject to a conflict of interest policy as adopted by the members. Any Executive Committee member may resign at any time by giving notice thereof in writing to the members of the NAIC. Resignation as an Executive Committee member also operates as resignation as a Zone officer. Any such resignation will take effect upon delivery if no date is specified, or as of its date, unless some other date is specified therein, in which event it will be effective as of that date. The acceptance of that resignation will not be necessary to make it effective.

1. The Executive Committee shall have the authority and responsibility to:
 - (a) manage the affairs of the NAIC in a manner consistent with the Certificate of Incorporation and Bylaws.
 - (b) make recommendations to achieve the goals of the NAIC based upon either its own initiative or the recommendations of the Standing Committees or Subcommittees reporting to it, for consideration and action by the members at any NAIC Plenary Session.
 - (c) create and terminate one or more Task Forces reporting to it to the extent needed and appropriate.
 - (d) establish and allocate, from time to time, functions and responsibilities to be performed by each Zone.
 - (e) to the extent needed and appropriate, oversee NAIC Offices to assist the NAIC and the individual members in achieving the goals of the NAIC.
 - (f) submit to the NAIC at each National Meeting, during which a Plenary Session is held, its report and recommendations concerning the reports of the Standing Committees. All Standing Committee reports shall be included as part of the Executive Committee report.
 - (g) plan, implement and coordinate communications and activities with other state, federal and local government organizations in order to advance the goals of the NAIC and promote understanding of state insurance regulation.
2. Duties and Operations of the Executive Committee.
 - (a) The Executive Committee shall hold at least two (2) regular meetings annually at a designated time and place. Special meetings may be held when called by the President, or by at least three (3) members of the Executive Committee in writing. In any case, the Executive Committee shall meet at least once per calendar month. At least five (5) days notice shall be given of all regular and special meetings. Meetings

may be held in person or by means of conference telephone or other communication equipment by means of which all persons participating in the meeting can hear each other, and such participation in a meeting shall constitute presence in person at such meeting in accordance with applicable laws. The presiding member of the Executive Committee shall only cast his or her vote in order to break a tie vote. In addition, the Executive Committee may act by written consent as provided by law.

- (b) The Executive Committee may, with the concurrence of two-thirds of the members of the Executive Committee, establish rules for its conduct that shall not conflict with the Certificate of Incorporation and Bylaws. Such rules may be changed only by a concurrence of two-thirds of the members of the Executive Committee after twenty-four (24) hours notice to all members of the Executive Committee.
- (c) Any action required or permitted to be taken at any meeting of the Executive Committee or any committee thereof may be taken without a meeting if all members of the Executive Committee or such committee, as the case may be, consent thereto in writing in accordance with applicable law.
- (d) The Executive Committee shall cause to be kept minutes of its meeting and have information of any action of a general character taken by it published to members qualified to vote.

(e) NAIC OFFICES

- (i) The Executive Committee shall oversee an Executive Office and a Central Office with management and staff personnel and appropriate resources for performance of duties and assigned responsibilities. Additional satellite offices may be established as needed. The Executive Committee shall have the authority to select, employ and terminate a Chief Executive Officer who shall not be a member of the NAIC and who shall have the primary responsibility for the internal management and functioning of the NAIC Offices within the direction of the Executive Committee, as well as other duties assigned by the Executive Committee through execution of an Employment Agreement or other authorization. The Chief Executive Officer appointed by the Executive Committee pursuant to this section shall not be considered an officer for purposes of Article III hereof and shall not be a member of the Executive Committee. The Executive Committee, through the Internal Administration (EX1) Subcommittee, shall provide oversight and direction to the Chief Executive Officer regarding Office operations.
- (ii) Consistent with the purposes of the NAIC, the role of the NAIC Offices is to: (1) provide services to the NAIC through support to the NAIC Committees, Subcommittees, Task Forces or otherwise; (2) provide services to individual State insurance departments; and (3) develop recommendations for consideration as to NAIC policy and administrative decisions of the NAIC.
- (iii) In performing its role, subject to the oversight and direction specified in (paragraph i) the NAIC Offices may engage in a variety of functions including but not limited to the following: research; analysis; information gathering and dissemination; library services; data collection; data base building and maintenance; report generation and dissemination; government liaison; non-regulatory liaison; securities valuation; administration; litigation; legislative and regulatory drafting; and educational development.
- (iv) The Chief Executive Officer shall prepare an annual budget, related to the priorities of the NAIC, for the NAIC Offices to be submitted through the EX1 Subcommittee to the Executive Committee, which shall make its recommendations to the members of the NAIC for action at the next Plenary Session of the NAIC.

3. Internal Administration (EX1) Subcommittee

The Internal Administration (EX1) Subcommittee shall be a Subcommittee reporting to the Executive Committee. Appointments of the Chair and Vice Chair of the Executive Subcommittee and members other than those specifically designated herein shall be made by the President and President-Elect.

This Subcommittee shall be comprised of the President, President-Elect, Vice President, the Secretary-Treasurer, the most recent past President, and three (3) other members of the Executive Committee. The presiding member of the Subcommittee shall only cast his or her vote in order to break a tie vote.

The Internal Administration (EX1) Subcommittee shall:

- (a) Exercise such powers and authority as may be delegated to it by the Executive Committee.
- (b) Generally oversee the NAIC Offices including, without limitation: (i) periodically monitor operations of the NAIC Offices, (ii) review and revise the budget of the NAIC, hold an annual hearing to receive public comments on the budget of the NAIC, and submit the revised budget to the Executive Committee, (iii) approve emergency expenditures which vary from the adopted budget and promptly certify its action in writing to the Executive Committee, (iv) evaluate the Chief Executive Officer and make appropriate recommendations to the Executive Committee, (v) assist the Chief Executive Officer in resolving competing demands for NAIC resources, (vi) review compensation of all senior management and (vii) quarterly prepare a report containing the current budget and expenditures which the Secretary-Treasurer shall present to the Executive Committee.

4. Audit Committee

The Executive Committee shall appoint an Audit Committee made up of at least four (4) members of the NAIC, including at least one member from each zone, in addition to the NAIC Secretary-Treasurer. The NAIC Secretary-Treasurer shall chair the Audit Committee. The Audit Committee shall report to the Executive Committee without any NAIC employees being present. The Audit Committee shall be directly responsible for the appointment, compensation, and oversight of the independent certified public accountant employed to conduct the audit. The Audit Committee shall also have the power, to the extent permitted by law, to: (i) initiate or review the results of an audit or investigation into the business affairs of the NAIC; (ii) review the NAIC's financial accounts and reports; (iii) conduct pre-audit and post-audit reviews with NAIC staff, members and independent auditors; and (iv) exercise such other powers and authority as delegated to it by the Executive Committee.

ARTICLE V

Zones

To accomplish the purposes of the NAIC in a timely and efficient manner, the United States, its territories and insular possessions shall be divided into four Zones. Each Zone shall consist of a group of at least eight States, located in the same geographical area, with each State being contiguous to at least one other State in the group so far as practicable, plus any territory or insular possession that may be deemed expedient, all as determined by majority of the Executive Committee. Members of each Zone shall annually elect a Chairman, a Vice Chairman and a Secretary from among themselves prior to or during the last regular National Meeting of each calendar year or at such time as agreed to by the Zone members. The Chairman, Vice Chairman and Secretary of each Zone shall be members of the Executive Committee with terms of office corresponding to that of the officers. Each Zone shall perform such functions as are designated by the Executive Committee of the

NAIC or by the members of the NAIC as a whole or by the members of the Zone. Each Zone may hold Zone Meetings for such purposes as may be deemed appropriate by members of the Zone.

ARTICLE VI

Standing Committees and Task Forces

1. General

The Standing Committees shall not be subcommittees of the Executive Committee and shall have no power or authority for the management of the business and affairs of the NAIC. Each Standing Committee shall be composed of not more than 15 members, including a Chair and one or more Vice Chairs, appointed by the President and President-Elect, and such appointments shall remain effective until the succeeding President and President-Elect appoint members for the following year. Standing Committees shall meet at least twice a year at National Meetings and may meet more often at the call of the Chair as required to complete its assignments from the Executive Committee in a timely manner.

The Executive Committee shall make all assignments of subject matter to the Standing Committees and shall require coordination between Committees and Task Forces of the subject matter if more than one Committee or Task Force is affected. The format of the Committee reports shall be prescribed by the Executive Committee. All appointments or elections of members of the NAIC to any office or Committee of the NAIC shall be deemed the appointment or election of a particular member and shall not automatically pass to a successor in office.

2. Specific Duties

The Standing Committees of the NAIC, their duties and responsibilities shall be as follows:

- (a) Life Insurance and Annuities (A) Committee: This Standing Committee shall consider issues relating to life insurance and annuities.
- (b) Health Insurance and Managed Care (B) Committee: This Standing Committee shall consider issues relating to health and accident insurance and managed care.
- (c) Property and Casualty Insurance (C) Committee: This Standing Committee shall consider issues relating to personal and commercial lines of property and casualty insurance, worker's compensation insurance, statistical information, surplus lines, and casualty actuarial matters.
- (d) Market Regulation and Consumer Affairs (D) Committee: This Standing Committee shall consider issues involving market conduct in the insurance industry; competition in insurance markets; the qualifications and conduct of agents and brokers; market conduct examination practices; the control and management of insurance institutions; consumer services of State insurance departments; and consumer participation in NAIC activities.
- (e) Financial Condition (E) Committee: This Standing Committee shall consider both administrative and substantive issues as they relate to accounting practices and procedures; blanks; valuation of securities; the Insurance Regulatory Information System (IRIS), as it relates to solvency and profitability; the call, monitoring and concluding report of Zone Examinations; and financial examinations and examiner training.
- (f) Financial Regulation Standards and Accreditation (F) Committee: This Standing Committee shall consider

both administrative and substantive issues as they relate to administration and enforcement of the NAIC Accreditation Program, including without limitation, consideration of standards and revisions of standards for accreditation, interpretation of standards, evaluation and interpretation of states' laws and regulations, and departments' practices, procedures and organizations as they relate to compliance with standards, examination of members for compliance with standards, development and oversight of procedures for examination of members for compliance with standards, qualification and selection of individuals to perform the examination of members for compliance with standards, and decisions regarding whether to accredit members.

- (g) International Insurance Relations (G) Committee. This Standing Committee shall have the responsibility for issues relating to international insurance.
- (h) Innovation, Cybersecurity and Technology (H) Committee. This Standing Committee shall consider issues related to cybersecurity, innovation, data security and privacy, and emerging technology issues.

3. Task Forces

The Executive Committee, its Subcommittee and the Standing Committees may establish one or more Task Forces, subject to approval of the Executive Committee. The parent Committee or Subcommittee, subject to approval of the Executive Committee, may vote to discontinue a Task Force once its charge has been completed.

Vacancies in the positions of Chair or Vice Chair of any Task Force shall be filled by the parent Committee or Subcommittee from within or outside the present Task Force membership; provided, however, that the chief insurance regulatory official of the state of the former Chair or Vice Chair shall become a member of the Task Force. A vacancy in the position of member shall be filled by the chief insurance regulatory official of the vacating member's state.

If an existing Task Force is dealing with insurance issues that require continuing study, the Executive Committee may adopt the recommendation of the parent Committee or Subcommittee that the Task Force be designated a Standing Task Force. A Standing Task Force shall continue in effect until terminated by the Executive Committee.

ARTICLE VII

Meetings of the Membership

1. Regular Meetings

The NAIC shall hold at least two (2) regular meetings of the members ("National Meetings") each calendar year. Notice, stating the place, day and hour and any special purposes of the National Meeting, shall be delivered by the Executive Committee not less than ten (10) calendar days nor more than sixty (60) calendar days before the date on which the National Meeting is to be held, either personally, by mail or by other lawful means, to each member entitled to be present and vote at such meeting.

2. Special Meetings

Special meetings of the members may be called by any five (5) members of the Executive Committee by giving all members notice of such meeting at least ten (10) but not more than sixty (60) days prior thereto, or by any twenty (20) members of the NAIC by giving all members notice of such meeting at least thirty (30) but not more than sixty (60) days prior thereto. Notice of the special meeting shall state the place, day and hour of the

special meeting and the purpose or purposes for which the special meeting is called, and shall be delivered by the persons calling the meeting within the applicable time period set forth herein, either personally, by mail or by other lawful means, to each member entitled to be present and vote at such meeting.

3. Waiver of Notice; Postponement

Member meetings may be held without notice if all members entitled to notice are present (except when members entitled to notice attend the meeting for the express purpose of objecting, at the beginning of the meeting, because the meeting is allegedly not lawfully called or convened), or if notice is waived by those not present. Any previously scheduled meeting of the members may be postponed by the Executive Committee (or members calling a special meeting, as the case may be) upon notice to members, in person or writing, given at least two (2) days prior to the date previously scheduled for such meeting.

4. Quorum

Except as otherwise provided by law or by the Certificate of Incorporation, the presence, by person or proxy, of a majority of the members shall constitute a quorum at a member meeting, a meeting of a Standing Committee, Task Force or a working group. The chairman of the meeting may adjourn the meeting from time to time, whether or not there is such a quorum. The members present at a duly called member meeting at which a quorum is present may continue to transact business until adjournment, notwithstanding the withdrawal of enough members to leave less than a quorum.

5. Any meeting of the NAIC may be held in executive session as defined in the NAIC policy on open meetings. Any member may attend and participate in any meeting of the NAIC or any meeting of a Standing Committee or Task Force whether or not such member has the right to vote. All National Meetings shall provide for a Plenary Session of the NAIC as a whole in order to consider and take action upon the matters submitted to the NAIC.

ARTICLE VIII

Elections

1. The election of officers of the NAIC shall be scheduled for the plenary session of the last National Meeting of the calendar year or at such other plenary session as agreed to by the members.
2. At the beginning of such Plenary Session, the Secretary-Treasurer shall ascertain and announce the presence of a quorum.
3. Upon the determination of a quorum, the chair shall briefly review the provisions of the Certificate of Incorporation and Bylaws in regard to voting.
4. The President shall ask for and announce all proxies. Proxies shall be held by the Secretary-Treasurer or a designee throughout the election session. Proxies shall be valid, subject to their term, until superseded by the member and shall be governed by ARTICLE IX of the Bylaws.
5. Every individual voting by proxy must meet the requirements of Article II of the Bylaws of the NAIC which requires that such a person be "...officially affiliated with the member's (the member delegating authority to vote) department, and is wholly or principally employed by said department."
6. Prior to opening the nominations for office, the Chair shall appoint three (3) members of the NAIC to act as

voting inspectors. The voting inspectors shall distribute, collect, count and/or verify ballots, and report their findings to the Secretary-Treasurer. If a voting inspector is nominated for an office and does not withdraw as a candidate, he or she shall not be a voting inspector for the election of the office to which he or she is nominated and the chair shall appoint another voting inspector in his or her place.

7. The Chair shall announce the opening of nominations for offices in the following order:
 - (a) President. Provided, however, where the President does not run for re-election, the President-Elect shall become President at the conclusion of the President's term of office. In those cases where the President runs for re-election or where a vacancy exists because the President-Elect fails or is otherwise unable to assume the Presidency, this office will be subject to an election.
 - (b) President-Elect.
 - (c) Vice President.
 - (d) Secretary-Treasurer.
8. Only members or duly authorized proxyholders may make nominations.
9. One nominating speech, not to exceed three (3) minutes in duration, shall be allowed for each nominee.
10. After nominations are closed for each office, each nominee must indicate whether he or she accepts the nomination and, if he or she accepts, shall be permitted to address the membership for a period of up to seven (7) minutes. Such addresses shall be given in the order by which the nominations were made.
11. The votes of members, in person or by proxy, constituting a majority of the quorum present at the meeting shall be necessary for election to such office. If no candidate receives a majority, the two candidates with the most votes will participate in a run-off election. The candidate with the most votes in the run-off election shall win such election.
12. Voting need not be by written ballot, unless otherwise required by these Bylaws, the Certificate of Incorporation, or applicable law.

ARTICLE IX

Proxies; Waiver of Notice

Where the delegation of power to vote or participate in the membership of the NAIC is required by ARTICLE II of these Bylaws to be in writing, such delegation must be effected by proxy. All proxies must be dated, give specific authority to a named individual who meets the requirements of ARTICLE II for duly authorized representatives, and meet any other applicable legal requirement. Documents such as electronic transmission, telegrams, mailgrams, etc. are acceptable as proxies if they otherwise meet the requirements contained herein and applicable law. Proxies should be maintained by NAIC Central Office staff. Notwithstanding the foregoing, a member may not vote by proxy in a meeting of the Executive Committee, Financial Regulation Standards and Accreditation (F) Committee in a vote concerning a state-specific item, Government Relations Leadership Council, or International Insurance Relations Leadership Group, or any respective subcommittees.

Whenever any notice is required to be given to any member (for a meeting of members or the Executive Committee) under the provisions of the Certificate of Incorporation, these Bylaws or applicable law, a written

waiver, signed by the person entitled to notice, or a waiver by electronic transmission by person entitled to notice, whether before or after the time stated therein, shall be deemed equivalent to the giving of such notice. Neither the business to be transacted at, nor the purpose of, any annual or special meeting of the members or any committee, subcommittee or task force need be specified in any waiver of notice of such meeting.

Unless otherwise restricted by the Certificate of Incorporation or these Bylaws, Members may participate in a meeting by means of conference telephone or by any means by which all persons participating in the meeting are able to communicate with one another, and such participation shall constitute presence in person at the meeting.

Any notice required under these Bylaws may be provided by mail, facsimile, or electronic transmission.

ARTICLE X

Procedures: Books and Records

The Executive Committee shall adopt policies and procedures for the conduct of meetings. In the event such policies and procedures conflict with the NAIC's Certificate of Incorporation or Bylaws, the Certificate of Incorporation and Bylaws shall govern.

The books and records of the NAIC may be kept outside the State of Delaware at such place or places as may from time to time be designated by the Internal Administration Subcommittee (EX1) of the Executive Committee.

ARTICLE XI

Amendments

These Bylaws may be altered or repealed and new Bylaws may be adopted at any regular or special meeting of the members by an affirmative vote, in person or by proxy, of a majority of the members entitled to vote at such meeting; provided, however, that any proposed alteration (except to correct typographical or grammatical errors or article, section or paragraph cross- references caused by other alterations, repeals, or adoptions) or repeal of, or the adoption of any Bylaw inconsistent with, Article II [Membership], Article VII, Paragraph 2 [Special Meetings of Members] and Paragraph 4 [Quorum], Article VIII [Elections], or this Article XI [Amendments] of these Bylaws (the "Supermajority Bylaws") by the members shall require the affirmative vote, in person or by proxy, of at least two-thirds (2/3) of the members entitled to vote at such meeting and provided, further, that in the case of any such member action at a special meeting of members, notice of the proposed alteration, repeal or adoption of the new Bylaw or Bylaws must be contained in the notice of such special meeting. Corrections for typographical or grammatical errors or to article, section or paragraph cross- references caused by other alterations, repeals or adoption, shall only be made if approved by the affirmative vote of at least two-thirds (2/3) of the Executive Committee.

NAIC Policy Statement on Open Meetings
Revised: April 1, 2014

The NAIC is the U.S. standard-setting and regulatory support organization created and governed by the chief insurance regulators of the 50 states, the District of Columbia and five U.S. territories. NAIC members are the elected and appointed state government officials who, along with their departments and staff, regulate the conduct of insurance companies and agents in their respective state or territory. The NAIC is committed to conducting its business openly. This policy statement applies to meetings of NAIC committees, subcommittees, task forces and working groups. It does not apply to Roundtable discussions, zone meetings, commissioners' conferences, and other like meetings of the members. Applicable meetings will be open unless the discussion or action contemplated will include:

1. Potential or pending litigation or administrative proceedings which may involve the NAIC, any NAIC member, or their staffs, in any capacity involving their official or prescribed duties, requests for briefs of amicus curiae, or legal advice.
2. Pending investigations which may involve either the NAIC or any member in any capacity.
3. Specific companies, entities or individuals, including, but not limited to, collaborative financial and market conduct examinations and analysis.
4. Internal or administrative matters of the NAIC or any NAIC member, including budget, personnel and contractual matters, and including consideration of internal administration of the NAIC, including, but not limited to, by the Internal Administration (EX1) Subcommittee or any subgroup appointed thereunder.
5. Voting on the election of officers of the NAIC.
6. Consultations with NAIC staff members related to NAIC technical guidance, including, but not limited to, Annual and Quarterly Statement Blanks and Instructions, the Accounting Practices and Procedures Manual, and similar materials.
7. Consideration of individual state insurance department's compliance with NAIC financial regulation standards by the Financial Regulation Standards and Accreditation (F) Committee or any subgroup appointed thereunder.
8. Consideration of strategic planning issues relating to federal legislative and regulatory matters or international regulatory matters.
9. Any other subject required to be kept confidential under any Memorandum of Understanding or other agreement, state or federal law or under any judicial or administrative order.

Because not all situations requiring a regulator to regulator discussion can be anticipated at the time a meeting is scheduled, a meeting convened in open session can move into regulator to regulator session on motion by the chair or other member approved by a majority of the members present. Public notice will be provided of all applicable meetings. The reason for holding a meeting in regulator only session will be announced when the meeting notice is published, at the beginning of any regulator only session, and when an open meeting goes into regulator only session.

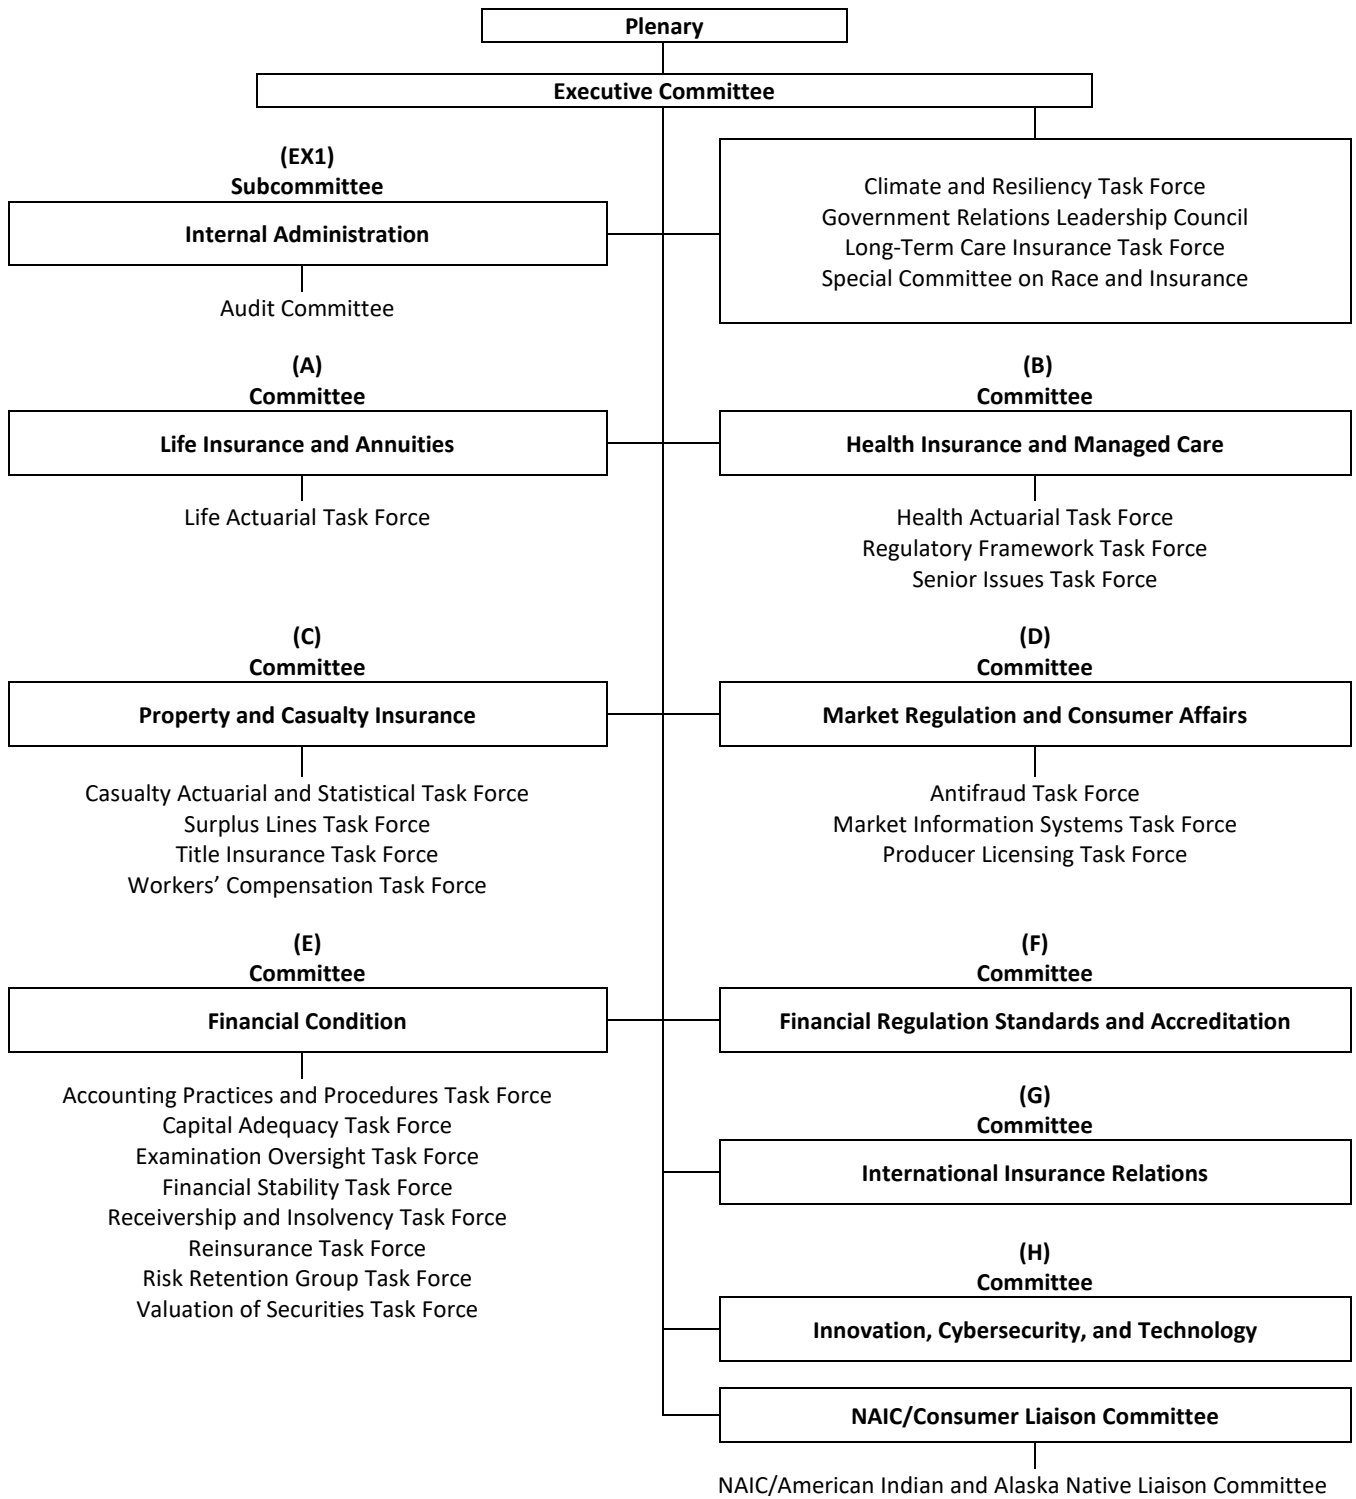

This revised policy statement shall take effect upon adoption by the membership.

[NOTE: (Effective Jan. 1, 1996, conference call meetings are included in the application of the policy statement, by action of the NAIC on June 4, 1995). This policy statement was originally adopted by the NAIC membership during the 1994 Fall National Meeting in Minneapolis, Minnesota, Sept. 18–20, 1994.]

Revisions Adopted by the NAIC Membership, April 1, 2014

3. Sept. 18, 1895: William M. Hahn (OH) was elected President for the 1896 Convention and James R. Waddill (MO) was elected Vice-President; however, Superintendent Hahn was out of office effective June 3, 1886. Sept. 22, 1896: Superintendent Waddill was elected President for the 1896 Convention and Stephen W. Carr (ME) was chosen to act as Vice-President.
4. Sept. 23, 1896: James R. Waddill (MO) was elected President for the 1897 Convention and Stephen W. Carr (ME) was elected Vice-President; however, Mr. Waddill was out of office effective March 1, 1897. Sept. 7, 1897: Commissioner Carr was elected President for the 1897 Convention. It is unknown who acted as Vice-President.
5. Sept. 23, 1896: Frederick L. 'Fred' Cutting (MA) was elected Secretary for the 1897 Convention; however, he was out of office at the date of the Convention. Sept. 7, 1897: John J. Brinkerhoff (Illinois actuary) was elected Secretary for the 1897 Convention.
6. Sept. 7, 1897: Frederick L. 'Fred' Cutting (MA) was elected Secretary for the 1898 Convention; however, he declined the offer. Sept. 13, 1898: John J. Brinkerhoff (Illinois actuary) was elected Secretary for the 1898 Convention.
7. Sept. 15, 1898: Elmer H. Dearth (MN) was elected President for the 1899 Convention; however, he was out of office at the date of the Convention. Sept. 5, 1899: Edward T. Orear (MO) was elected President for the 1899 Convention.
8. Sept. 20, 1900: John A. O'Shaughnessy (MN) was elected President for the 1901 Convention; however, he was out of office at the date of the Convention. September 1901: William H. Hart (IN) was elected President for the 1901 Convention.
9. Sept. 29, 1910: Theodore H. Macdonald (CT) was elected Vice-President for the 1911 Convention; however, he was out of office at the date of the Convention. It is unknown who acted as Vice-President.
10. Aug. 25, 1911: Harry R. Cunningham (MT) was elected Secretary for the 1912 Convention; however, he resigned before the Convention assembled. March 1912: Fitz Hugh McMaster (SC) was elected Secretary for the 1912 Convention.
11. Aug. 1, 1913: Willard Done (UT) was elected First Vice-President for the 1914 Convention; however, he resigned before the Convention assembled. It is unknown who acted as First Vice-President.
12. Aug. 31, 1917: Emory H. English (IA) was elected President for the 1918 Convention; Robert J. Merrill (NH) was elected First Vice-President; and Michael J. Cleary (WI) was elected Second Vice-President. November 1917: Mr. Merrill resigned as First Vice-President. Dec. 6, 1917: Mr. Cleary was elected First Vice-President for the 1918 Convention and Walter K. Chorn (MO) was elected Second Vice-President. Jan. 1, 1918: Mr. English resigned as President and Mr. Cleary was elected President for the 1918 Convention by the Executive (EX) Committee. It is unknown who acted as First Vice-President.
13. Aug. 31, 1917: Fitz Hugh McMaster (SC) was elected Secretary for the 1918 Convention; however, he resigned before the Convention assembled. Dec. 6, 1917: Joseph L. Button (VA) was elected Secretary for the 1918 Convention.
14. Sept. 12, 1919: John B. Sanborn (MN) was elected Second Vice-President for the 1920 Convention; however, he resigned before the Convention assembled. June 1920: Alfred L. Harty (MO) was chosen to act as Second Vice-President for the 1920 Convention.
15. Sept. 3, 1920: Frank H. Ellsworth (MI) was elected President for the 1921 Convention; Alfred L. Harty (MO) was elected First Vice-President; and Thomas B. Donaldson (PA) was elected Second Vice-President. Commissioner Ellsworth resigned effective April 30, 1921, as NAIC President and Michigan Insurance Commissioner. June 27, 1921: Superintendent Harty was elected President for the 1921 Convention by the Executive (EX) Committee; Commissioner Donaldson was elected First Vice-President; and Platt Whitman (WI) was elected Second Vice-President.
16. Sept. 8, 1922: Platt Whitman (WI) was elected President for the 1923 Convention; Herbert O. Fishback (WA) was elected First Vice-President; and John C. Luning (FL) was elected Second Vice-President. July 1, 1923: Commissioner Whitman resigned as President; Commissioner Fishback was elected President for the 1923 Convention by the Executive (EX) Committee; and Mr. Luning was elected First Vice-President by the Executive (EX) Committee. It is unknown who acted as Second Vice-President.
17. Sept. 18, 1925: William R. C. Kendrick (IA) was elected President for the 1926 Convention. January 1926: Commissioner Kendrick resigned as NAIC President and Harry L. Conn (OH) was elected President for the 1926 Convention. Commissioner Kendrick remained as Iowa Insurance Commissioner until March 1, 1926.

18. Nov. 19, 1926: Harry L. Conn (OH) was elected President for the 1927 Convention and Albert S. Caldwell (TN) was elected First Vice-President. April 15, 1927: Superintendent Conn resigned as NAIC President and Ohio Insurance Superintendent. May 3, 1927: Commissioner Caldwell was elected President for the 1927 Convention and James A. Beha (NY) was elected First Vice-President.
19. Sept. 26, 1928: Charles R. Detrick (CA) was elected President for the 1929 Convention; James A. Beha (NY) was elected First Vice-President; and Howard P. Dunham (CT) was elected Second Vice-President. Jan. 1, 1929: Superintendent Beha resigned as NAIC First Vice-President and New York Insurance Superintendent. Commissioner Dunham was elected First Vice-President for the 1929 Convention. April 24, 1929: Commissioner Detrick resigned as NAIC President and California Insurance Commissioner. Commissioner Dunham was elected President for the 1929 Convention; Clarence C. Wysong (IN) was elected First Vice-President; and Jess G. Read (OK) was elected Second Vice-President.
20. Sept. 19, 1929: Joseph L. Button (VA) was elected Secretary for the 1930 Convention; however, he resigned effective Oct. 15, 1929, as NAIC Secretary and Virginia Commissioner of Insurance and Banking. Dec. 10, 1929: Albert S. Caldwell (TN) was elected Secretary for the 1930 Convention.
21. Sept. 9, 1930: Clarence C. Wysong (IN) was elected President for the 1931 Convention; Jess G. Read (OK) was elected First Vice-President; and Clare A. Lee (OR) was elected Second Vice-President. January 1931: Commissioner Wysong resigned effective Jan. 1, 1931, as NAIC President and Indiana Insurance Commissioner; Commissioner Lee was no longer serving as Second Vice-President; and Commissioner Read was elected President by the Executive (EX) Committee for the 1931 Convention. June 17, 1931: Charles D. Livingston (MI) was elected First Vice-President by the Executive (EX) Committee for the 1931 Convention and William A. Tarver (TX) was elected Second Vice-President by the Executive (EX) Committee.
22. Oct. 20, 1932: William A. Tarver (TX) was elected President for the 1933 Convention; Garfield W. Brown (MN) was elected First Vice-President; and Daniel C. 'Dan' Boney (NC) was elected Second Vice-President. Commissioner Tarver resigned effective Feb. 10, 1933, as NAIC President and Texas Life Insurance Commissioner. Commissioner Brown was elected President for the 1933 Convention; Commissioner Boney was chosen to act as First Vice-President and George S. Van Schaick (NY) was chosen to act as Second Vice-President.
23. July 1935: It is unclear why no one acted as First Vice-President or Second Vice-President for the 1935 Convention.
24. June 23, 1939: J. Balch Moor (DC) was elected Vice-President; however, he died July 22, 1939, before the 1940 Convention assembled. John C. Blackall (CT) was elected Vice-President by the Executive (EX) Committee to fill the unexpired term.
25. June 6, 1945: Edward L. Scheufler (MO) was elected Vice-President for the 1946 Convention; however, he resigned effective Oct. 15, 1945, as NAIC Vice-President and Missouri Insurance Superintendent. Dec. 3, 1945: Robert E. Dineen (NY) was elected Vice-President by the Executive (EX) Committee for the 1946 Convention.
26. June 11, 1946: Jess G. Read (OK) was elected Secretary for the 1947 Convention; however, he died July 20, 1946. Sept. 4, 1946: Nellis P. Parkinson (IL) was elected Secretary by the Executive (EX) Committee to fill the unexpired term.
27. June 1953: George B. Butler (TX) was elected Vice-President; however, he died Sept. 28, 1953. It is unknown who acted as Vice-President for the November 1953 Convention. Nov. 30, 1953: Donald Knowlton (NH) was elected Vice-President by the Executive (EX) Committee to fill the unexpired term.
28. May 1956: George A. Bowles (VA) was elected Secretary; however, he died June 1, 1956. Paul A. Hammel (NV) was elected Secretary to fill the unexpired term.
29. June 1958: Arch E. Northington (TN) was elected President; however, he resigned effective Dec. 23, 1958, as NAIC President and Tennessee Insurance Commissioner. January 1959: Paul A. Hammel (NV) was elected President and Sam N. Beery (CO) was elected Vice-President by the Executive (EX) Committee to fill the unexpired term.
30. June 1962: Joseph S. Gerber (IL) was elected Vice-President; however, he resigned effective Jan. 29, 1963, as NAIC Vice-President and Illinois Insurance Director. The office of Vice-President was vacant for the June 1963 Convention.
31. June 1968: Charles R. Howell (NJ) was elected President; however, he resigned effective Feb. 28, 1969, as NAIC President and New Jersey Commissioner of Banking and Insurance. Ned Price (TX) was elected by the Executive (EX) Committee to fill the unexpired term.

32. June 1970: Richard E. ‘Dick’ Stewart (NY) was elected President; however, he resigned as NAIC President effective Dec. 17, 1970, and as New York Insurance Superintendent effective Dec. 31, 1970. Dec. 17, 1970: Lorne R. Worthington (IA) was elected by Plenary to fill the unexpired term.
33. A constitutional amendment moved NAIC officer elections from June to December (commencing December 1974), President Johnnie L. Caldwell (GA) served a six-month term.
34. Kenneth E. ‘Ken’ DeShetler (OH) was elected President; however, he resigned effective Jan. 13, 1975, as NAIC President and Ohio Insurance Director. William H. Huff, III (IA) was elected by the Executive (EX) Committee to fill the unexpired term.
35. H. Peter ‘Pete’ Hudson (IN) was elected President; however, he resigned as NAIC President and Indiana Insurance Commissioner effective Nov. 15, 1979. It is unknown who presided over the December 1979 Convention.
36. John W. Lindsay resigned effective Sept. 3, 1981, as NAIC Vice-President and South Carolina Insurance Commissioner. Johnnie L. Caldwell (GA) was elected by the Executive (EX) Committee to fill the unexpired term.
37. David J. Lyons resigned effective June 17, 1994, as NAIC Vice President but remained as Iowa Insurance Commissioner until July 31, 1994. A special interim Plenary election was held June 12, 1994: Arkansas Insurance Commissioner Lee Douglass was elected Vice President to serve June 17, 1994, to Dec. 31, 1994.
38. September 2001: NAIC members unanimously agreed that the 2001 Fall National Meeting should be canceled in the wake of the tragic events that occurred Sept. 11, 2001. The meeting had been scheduled for Sept. 22–25, 2001, at the Marriott and Westin Copley Place hotels in Boston, Massachusetts.
39. Ernst N. ‘Ernie’ Csiszar resigned effective Aug. 18, 2004, as NAIC President and South Carolina Director of Insurance. Approximately two weeks later, James A. ‘Jim’ Poolman resigned as NAIC Vice President but remained as North Dakota Insurance Commissioner. A special interim Plenary election was held Sept. 13, 2004, during the Fall National Meeting in Anchorage, Alaska: Pennsylvania Insurance Commissioner M. Diane Koken was elected President; Oregon Insurance Administrator Joel S. Ario was elected Vice President; and Maine Insurance Superintendent Alessandro A. ‘Al’ Iuppa was elected Secretary-Treasurer to serve from Sept. 13, 2004, to Dec. 31, 2004.
40. December 2004: NAIC members voted at its 2004 Winter National Meeting to adopt amendments to the NAIC Bylaws, which included the creation of a President-Elect position as an NAIC officer.
41. September 2005: NAIC members agreed to cancel the 2005 Fall National Meeting due to the devastation caused by Hurricane Katrina on Aug. 29, 2005. The meeting had been scheduled for Sept. 10–13, 2005, at the Sheraton hotel in New Orleans, Louisiana.
42. Eric P. Serna resigned effective June 14, 2006, as NAIC Secretary-Treasurer and New Mexico Superintendent of Insurance. A special Plenary interim election was held during the 2006 Summer National Meeting: New Hampshire Insurance Commissioner Roger A. Seigny was elected Secretary-Treasurer to serve from June 14, 2006, to Dec. 31, 2006.
43. Michael T. McRaith resigned effective May 31, 2011, as NAIC Secretary-Treasurer and Illinois Director of Insurance. A special Plenary interim election was held via conference call May 16, 2011: North Dakota Insurance Commissioner Adam Hamm was elected Secretary-Treasurer to serve from May 31, 2011, to Dec. 31, 2011.
44. Aug. 25, 2011: NAIC members agreed to cancel its 2011 Summer National Meeting so members could assist consumers in disaster situations caused by Hurricane Irene. The meeting had been scheduled for Aug. 29–Sept. 1, 2011, at the Marriott Philadelphia Downtown in Philadelphia, Pennsylvania.
45. Michael F. ‘Mike’ Consedine resigned effective Jan. 20, 2015, as NAIC President-Elect and Pennsylvania Insurance Commissioner. A special Plenary interim election was held via conference call Feb. 8, 2015: Missouri Insurance Director John M. Huff was elected President-Elect to serve from Feb. 8, 2015, to Dec. 31, 2015.
46. Sharon P. Clark resigned effective Jan. 11, 2016, as NAIC President-Elect and Kentucky Insurance Commissioner. A special Plenary interim election was held in Bonita Springs, Florida, on Feb. 7, 2016: Wisconsin Insurance Commissioner Theodore K. ‘Ted’ Nickel was elected President-Elect; Tennessee Insurance Commissioner Julie Mix McPeak was elected Vice President; and Maine Insurance Superintendent Eric A. Cioppa was elected Secretary-Treasurer to serve from Feb. 7, 2016, to Dec. 31, 2017.

47. David C. Mattax, NAIC Secretary-Treasurer and Texas Insurance Commissioner, died in office April 13, 2017. A special Plenary interim election was held via conference call on May 12, 2017: South Carolina Insurance Director Raymond G. Farmer was elected Secretary-Treasurer to serve from May 12, 2017, to Dec. 31, 2017.
48. Gordon I. Ito resigned effective Dec. 31, 2018, as NAIC Vice President and Hawaii Insurance Commissioner. A special Plenary interim election was held in La Quinta, California, on Feb. 4, 2019: Florida Insurance Commissioner David Altmaier was elected Vice President to serve from Feb. 4, 2019, to Dec. 31, 2019.
49. March 11, 2020: Due to concerns about the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership— decided to hold the 2020 Spring National Meeting in a virtual format. However, on March 23, 2020, the NAIC officers decided to suspend holding any further sessions of the virtual Spring National Meeting to allow NAIC members and staff more time to focus on the health emergency. The meeting had been scheduled for March 21–24, 2020, at the Phoenix Convention Center and the Sheraton Grand and Hyatt Regency hotels in Phoenix, Arizona.
50. June 10, 2020: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2020 Summer National Meeting in a virtual format. The meeting had been scheduled for Aug. 8–11, 2020, at the Minneapolis Convention Center and the Hilton and Hyatt Regency hotels in Minneapolis, Minnesota.
51. Sept. 21, 2020: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2020 Fall National Meeting in a virtual format. The meeting had been scheduled for Nov. 14–17, 2020, at the JW Marriott hotel in Indianapolis, Indiana.
52. Feb. 24, 2021: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2021 Spring National Meeting in a virtual format. The meeting had been scheduled for April 10–13, 2021, at the Gaylord Texan Hotel and Convention Center in Grapevine, Texas.
53. June 1, 2021: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2021 Summer National Meeting in a hybrid format. In-person meetings took place for NAIC members and interested parties as capacity allowed. Meetings were live-streamed for participants who attended virtually.
54. Oct. 27, 2021: Given the ongoing health challenges associated with holding large in-person meetings in the midst of the COVID-19 pandemic, the NAIC officers—in consultation with the NAIC membership—decided to hold the 2021 Fall National Meeting in a hybrid format. In-person meetings took place for NAIC members and interested parties as capacity allowed. Meetings were live-streamed for participants who attended virtually.

*NAIC 2022 Summer National Meeting
Portland, OR*

OPENING SESSION

August 9, 2022

CALL TO ORDER

Dean L. Cameron, NAIC President

The 235th session of the National Association of Insurance Commissioners (NAIC) will now come to order. Good morning, my name is Dean Cameron. I am Idaho's Insurance Commissioner and President of the NAIC. I am pleased to be here with you today and would like to welcome you to the 2022 NAIC Summer National Meeting.

INTRODUCTION OF HEAD TABLE

Dean L. Cameron, NAIC President

I am honored to introduce the members of our head table.

Honorable Andrew R. Stolfi, Meeting Host and Oregon Insurance Commissioner
Honorable James J. Donelon, NAIC Past President and Louisiana Insurance Commissioner
Honorable Raymond G. Farmer, NAIC Past President and South Carolina Insurance Director
Honorable David Altmaier, NAIC Most Recent Past President and Florida Insurance Commissioner
Honorable Chlora Lindley-Myers, NAIC President-Elect, Missouri Insurance Director, and Meeting Host
Honorable Andrew N. Mais, NAIC Vice President and Connecticut Insurance Commissioner
Honorable Jon Godfread, NAIC Secretary-Treasurer and North Dakota Insurance Commissioner
Andrew J. Beal, NAIC Chief Operating Officer (COO) and Chief Legal Officer (CLO)
Michael F. Consedine, NAIC Chief Executive Officer (CEO)

Please welcome the members of our NAIC Summer National Meeting head table.

Oregon Commissioner of Insurance Speech

Thank you, Mr. President.

Good afternoon everyone, and welcome to the beautiful Pacific Northwest. It is our pleasure to host this Summer National Meeting and my pleasure to share a few thoughts and attempts at humor with you as our meetings get into full swing.

I must start with a small but important lesson in how to pronounce the great state you are now in. It is not Ore - a - gone but Oh - re - guhn, as you can see on the screen. If I could finally say Nevada right for Commissioner Barbara D. Richardson, I am hoping you can all get this right for me. In fact, Oregon is not even the hardest or most mispronounced word you will hear around town this week.

Portland is surrounded by two rivers; i.e., the Columbia to our north and another right over there that cuts through the city and shares a name with the large valley on this side of the state. It is pronounced Will - am - it (rhymes with dammit), not Will - A - Met. The most entertaining mispronunciation, however, is that second word on the screen, which is a stunning river in Central Oregon, as well as a great beer. It is not De - shoot - ees or Des - cuts, but Duh - shoots.

Moving on, I realize most of you flew to Portland for these meetings, an option not quite available for those adventurous enough to travel here in the 1800s on one of our most famous bits of history, the Oregon Trail. The trail stretched for more than 2,000 miles from Independence, MO, through what we now call Kansas, Nebraska,

Wyoming, and Idaho before ending in Oregon City, which is just outside Portland. About 400,000 people used the trail to come West until it started to go out of use after the first intercontinental railroad was completed in 1869. You can still see wagon wheel grooves left in parts of the trail, which of course was not without many dangers, as history books and old video games taught us very well.

Oregon's cultural relevance is of course greater than just a classic computer game. We even have a long and illustrious history with the big screen. Some blockbuster movies filmed here include "Kindergarten Cop," which featured Commissioner Ricardo Lara's former governor. "Twilight" also had scenes filmed here; although, it is more popularly known for its location in Commissioner Mike Kreidler's state of Washington. Two of my personal favorite movies were filmed in Oregon as well, both in Astoria, which is on the coast—"Short Circuit" and, of course, "Goonies."

Oregon plays a prominent role on the small screen as well, with many TV shows based here. Many of you probably know the comedy "Portlandia," but the most famous show based on Oregon is most certainly "The Simpsons." That is right, while there may be more than 30 Springfields across the U.S., and the one in Director Chlora Lindley-Meyers' state of Missouri likely being more populous, none are more famous than Springfield, OR. Matt Gray grew up right here in Portland, and many characters are named after Portland streets, like Flanders, Burnside, Lovejoy, and Quimby.

Keep an eye out as you walk around and you are sure to notice. As you walk around Portland, you may also notice signs reading "Keep Portland Weird," which is our unofficial motto. There is another city with the same saying—Austin, TX—and I can admit we copied Austin, but sorry, Commissioner Cassie Brown, I think we are a little better at being weird.

One way we are a little weird, like our friends from New Jersey, is that you cannot pump your own gas in Oregon. I am sure Commissioner Marlene Caride would agree that it is awfully nice not having to get out of your car in bad weather to fill your tank; although, it has led to me sitting in my car in Washington wondering where the heck the attendant is.

I will end by sharing a few more things that make Oregon, Oregon. First, with all due respect to Commissioner Nathan Houdek and his fellow cheese heads, I am not sure you can find better cheese than here in Oregon. From large dairies like Tillamook made out on the coast to small shops like Rogue Creamery, which was the first and only U.S. cheese to win the top prize at the World Cheese Awards, you will not be disappointed.

Cheese is not our only industry. We are proud to be the home of many well-known companies including Nike, Columbia Sportswear, Hydro Flask, Gerber Gear, and Dutch Bros Coffee.

We also have a lot of words and phrases unique to Oregon. Stumptown is not just a great coffee you may have seen around town, it is also a nickname for Portland, which in the mid-19th century was dotted with the stumps of all the trees they left while busily clearing out the land.

Thanks to Phil Knight and his little shoe company, Eugene, OR, is the home of the best track and field facility in the world, where they just hosted the 2022 World Track Championships.

Marionberries are a unique, sweet, and slightly tangy berry developed at Oregon State University that is definitely worth a try. If there are any filbert fans out there, you are in the right place. Oregon grows 99% of the filberts, or hazelnuts as you non-nut aficionados may call them, in the country.

We may be better-known, however, as the Christmas tree capitol of the U.S. We have over 1,000 farms that sell more than 5 million trees a year, with more than 90% being sent out of the region.

Finally, I will end with an interesting little story about how Portland got its name. In 1845, two New Englanders—Asa Lovejoy, who hailed from Boston, MA, and Francis Pettygrove, who came from Portland, ME—flipped a coin to decide the name of this town. Pettygrove won two out of the three coin flips, giving Portland its name and preventing Commissioner Gary D. Anderson from flying to and from the same city for this meeting.

In closing, let me thank you again for coming to Oregon and the beautiful Willamette Valley and wish us all a great week of meetings. As Gov. Kate Brown (D-OR) mentioned, we believe so strongly in collaboration and finding a common path forward that we call the Oregon Way. I have always seen these same principles embodied in the NAIC, where we have proven time and again that we can overcome disagreements through our shared commitment to public interest and public service, and I look forward to seeing more of that this week. Thank you.

PRESIDENTIAL ADDRESS

Dean L. Cameron, NAIC President

Before I begin, I want to take a moment to recognize several of our colleagues who have faced severe natural disasters over the past few months. Sharon P. Clark from Kentucky, Russell Toal from New Mexico, Troy Downing from Montana, and certainly Chlora Lindley-Meyers from Missouri and Ricardo Lara from California have all faced difficult situations as they try to protect and work with consumers and be there for them. Handling natural disasters is an important part of the work that we do in protecting consumers. Thank you for your efforts, for helping your constituents, and for the fellow state insurance regulators who have stepped up to help you.

It feels like yesterday that I took office as president. Honestly, my head can hardly comprehend how fast the first eight months have gone. What I can digest is three things: 1) how much we have accomplished; 2) how grateful I am to each of you for your contributions; and 3) how much more we need to accomplish in four short months.

Speaking of what has been accomplished, I would like to call out a few efforts. I will tell you that every time I go through the list, I think of other efforts, so there are some that I will add as we go. We have made great strides in our *State Connected* strategic plan. One of our main goals was a strategic and successful launch of the Innovation, Cybersecurity, and Technology (H) Committee. We have been successful in that, thanks to the efforts of many of you, but particularly Maryland Commissioner Kathleen A. Birrane. We just held our first-ever Collaboration Forum, and it focused on artificial intelligence (AI) and algorithmic bias.

We have stronger relationships with our legislators; although, improvement is still needed. Improvement of our relationships with stakeholders is also needed. We have advanced discussion, as Commissioner Andrew R. Stolfi mentioned, in a non-partisan way, difficult and complicated issues. Issues like climate and resiliency; diversity, equity, and inclusion (DE&I); long-term care (LTC); and private equity (PE).

We have successfully defended the state-based system and have provided leadership on a host of issues, either by writing thoughtful, insightful letters to members of the U.S. Congress (Congress) and our federal partners or by advocating in person on issues such as:

- Curtailing rating agency overreach.
- Promoting the elimination of the family glitch.
- Advocating for reasonable approaches to the end of the public health emergency (PHE), which has been extended, and federal subsidies.
- Opining on PE and our appropriate role.
- Reminding the Federal Insurance Office (FIO) of our continued work on climate and resiliency.

We held our successful, in-person International Forum, where we delivered a firm message to our international friends that then yielded improved communication and needed concessions. We did a media tour with 24 news

outlets, which culminated in over 18 million views. We have submitted the request for our NAIC Foundation to the Internal Revenue Service (IRS) to be approved.

I am incredibly grateful for each of you. Your support and kindness to this not-so-talented potato head has been really remarkable. Thank you for your support, even when you did not get everything that you asked for; your leadership in difficult times, despite criticisms and obstacles; your professionalism as you navigated sometimes conflicting perspectives but looked for understanding; and your inspirational defense of our state-based system and the benefit of allowing states to protect their citizens in the way that best fits them. I am truly humbled to serve with you and honored to collaborate with you.

Now, we have plenty to do, and our citizens need our perseverance. We have barriers to discuss and either eliminate or mitigate. We can still streamline and eliminate antiquated systems and regulations, and we have improved oversight and accountability. But we are not done yet. We have lots of work to do around items like financial education and literacy.

We are going to do another media tour to warn against inappropriate marketing practices related to open enrollment and Medicare. Four months, three weeks, and five days—who is counting—seems too short. Maybe Chlora is counting; I do not know. I know some of the efforts we have started will continue under her excellent leadership. However, my hope is to encourage you that we continue with our best efforts through the end of the year.

As I contemplated the inspiration to complete our goals, I thought of several great men and women who have seemingly accomplished the impossible. There are no shortages of inspirational stories. In fact, it was more difficult to narrow the stories down than it was to find them or think about them. I am sure you can and will think of other stories, but I have chosen three I want to share with you today. You have heard them; you will identify with them. Each of them defied obstacles. Each of them changed lives. Each of them accomplished great things despite criticism, doubt, and barriers, each of which we can learn from.

In 1946, there were 16 teams with 400 players in Major League Baseball, all of them white. Branch Rickey, owner of the Brooklyn Dodgers, decided to help break that barrier, while helping his own team. After scouring the Negro League, Mr. Rickey found his player.

In 1947, there was one African American professional baseball player, an American hero. Jackie Robinson busted racial bias as he became the first African American to play in Major League Baseball in the modern era. That one player and that owner had to stand against scorn and ridicule to break that barrier. Jackie Robinson's number, 42, is the only number retired by all of baseball.

So, what do we learn from Jackie? What do we learn from Jackie and Mr. Rickey? We learn perseverance. We learn following our dreams. We learn turning the other cheek. We learn self-control and rising above some of the obstacles. We learn that greatness is a matter of internal character and not a matter of appearance.

In September 1849, Harriet Tubman, another American hero, escaped a Maryland plantation. With the help of God, she navigated the treacherous 90-mile trip to freedom. She could have stopped there. Harriet Tubman decided to return for her family, after having a dream to do so. For over 10 years, she stood against all odds to free her family and other slaves.

It is believed that she assisted in freeing 70 men and women from slavery via the underground railroad, but she went beyond that. She broke barriers one slave at a time. Even her supporters urged her to stop. They told her it could not be done. They pleaded with her not to go back. They feared she would be captured. She feared God.

She later led 150 soldiers in the Combahee Ferry Raid, which freed 750 slaves. Harriet remains one of the few women in U.S. history to lead an armed expedition.

Later, Harriet dedicated her life to helping those freed slaves, helping the elderly, and aiding the Women's Suffrage movement. She passed away at the age of 91 surrounded by her loved ones on March 10, 1913. Her last words were, and I quote, "I go to prepare a place for you."

Harriet not only faced bias and other criticisms, but she faced barriers and difficulty from within her own race and perhaps because she was a woman. We learn from Harriet courage, determination, reliance on prayer, selfless service, willingness to put herself in danger, and risking being recaptured to save another. There is no greater love than that of serving another.

Another hero that I chose to mention today is David from the Old Testament; yes, David that slew Goliath. Many of you know the story, but, just in case you have forgotten, or like Commissioner Gary D. Anderson, it has been a while since you have been to Sunday School. Let me recount a bit. Sorry, Gary. Israel was under attack from the Philistines. Leading their army was Goliath, who was 9 feet tall—i.e., two feet taller than Commissioner Jon Godfread—and David was probably shorter than Commissioner David Altmaier. I am not drawing too many parallels.

David had brothers who were supposed to be fighting in the battle. So, David's parents sent him to the front line to bring his brothers food. David found his brothers and all of the army hiding while Goliath was challenging someone to fight him. Goliath was insulting not only their country, their family, and their heritage, but also their relationship with their God. Troubled by this, David saw an issue that needed addressing. David went to the king. He spoke to the king, and he volunteered to go fight Goliath. I am sure the king had to question how this 14-year-old boy—I do not remember if he was 14 but in that age range—could do this.

The king was obviously trying to figure out what to do, but David was certain of his abilities, having slayed a lion and a bear before. He shared that with the king, and the king then agreed. They loaded him up with armor—I am told 150 pounds of armor—which David removed, realizing it would slow him down. Instead, he carefully selected stones from a stream.

As David came forth to fight Goliath, Goliath laughed and again mocked Israel and his opponent. Of course, we know David was deadly with his aim, as he sank a stone into the forehead of Goliath and then beheaded Goliath and displayed it for all the Philistines to see.

What can we learn from David? Of course, we learn courage; i.e., the willingness to stand when needed and to recognize a cause for which we need to fight for. We can learn confidence in our own abilities, for which we have been trained and practiced. We can learn to trust in the Lord. We can learn the importance of the right tools, carefully choosing our stones, and not being weighed down with unnecessary armor.

As we tackle the challenges of the next four months, may we have the courage of David and Harriet; the perseverance of Jackie and Branch; the confidence and faith of David; the self-control of Jackie; the serving heart and strength of Harriet; the valor of David as we defend our honor and our role and our responsibility to regulate the industry; and the foresight and vision of Harriet, Branch, Jackie, and David, who saw a cause and took action for a better future.

My fellow colleagues, our cause is clear. We have the privilege to regulate an industry that provides hope, security, and opportunity. Let us create a better future for all of us by building on our successes. I look forward to working with you over the next four months to protect that privilege that we have to regulate. Thank you.

ADJOURNMENT*Dean L. Cameron, NAIC President*

Thank you. I look forward to meeting with state insurance regulators, industry leaders, and interested parties as we discuss the work being done at the NAIC. With that, I officially conclude this opening session of the 235th meeting of the NAIC.

Draft: 1/11/2023

**Synopsis of the NAIC Committee, Subcommittee, and Task Force Meetings
2022 Summer National Meeting
August 9–13, 2022**

TO: Members of the NAIC and Interested Parties

FROM: The Staff of the NAIC

Committee Action

NAIC staff have reviewed the committee, subcommittee, and task force reports and highlighted the actions taken by the committee groups during the 2022 Summer National Meeting. The purpose of this report is to provide NAIC members, state insurance regulators, and interested parties with a summary of these meeting reports.

EXECUTIVE (EX) COMMITTEE AND PLENARY (Joint Session)

Aug. 13, 2022

1. Received the Aug. 11 report of the Executive (EX) Committee. See the Committee listing for details.
2. Adopted by consent the committee, subcommittee, and task force minutes of the Spring National Meeting.
3. Received the report of the Life Insurance and Annuities (A) Committee. See the Committee listing for details.
4. Received the report of the Health Insurance and Managed Care (B) Committee. See the Committee listing for details.
5. Received the report of the Property and Casualty Insurance (C) Committee. See the Committee listing for details.
6. Received the report of the Market Regulation and Consumer Affairs (D) Committee. See the Committee listing for details.
7. Received the report of the Financial Condition (E) Committee. See the Committee listing for details.
8. Received the report of the Financial Regulation Standards and Accreditation (F) Committee. See the Committee listing for details.
9. Received the report of the International Insurance Relations (G) Committee. See the Committee listing for details.
10. Received the report of the Innovation, Cybersecurity, and Technology (H) Committee. See the Committee listing for details.
11. Adopted the amendments to the *Valuation Manual*.
12. Adopted *Actuarial Guideline LIII—Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves* (AG 53).
13. Adopted the Pet Insurance Model Act.
14. Adopted several Market Conduct Annual Statement (MCAS) items: 1) the “other health” MCAS data call and definitions; 2) revised Homeowners MCAS Addition of Digital Claims Interrogatories and revised lawsuit definition; 3) revised Private Passenger Auto (PPA) MCAS Addition of Digital Claims Interrogatories and revised lawsuit definition; and 4) Life MCAS Addition of Accelerated Underwriting (AU) Data, Definitions, and Interrogatories.
15. Adopted the *Regulatory Considerations Applicable to (But Not Exclusive to) Private Equity (PE) Insurers*.
16. Adopted the *NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation*.
17. Received a status report on the state implementation of NAIC-adopted model laws and regulations.

EXECUTIVE (EX) COMMITTEE

Aug. 11, 2022

1. Adopted the report of the joint meeting of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee, which met Aug. 10 and took the following action:
 - A. Adopted its June 21 and Spring National Meeting minutes.

- B. Received a May year-to-date (YTD) financial update and overview of the preliminary 2023 budget.
 - C. Discussed the use of NAIC designations by foreign jurisdictions.
 - D. Approved the Catastrophe Modeling Center of Excellence (COE) fiscal.
 - E. Approved the Variable Annuity (VA) Model Office fiscal.
 - F. Approved moving forward with the Robert Wood Johnson Foundation (RWJF) discovery phase request.
 - G. Heard an update on the enterprise resource planning (ERP) project.
 - H. Adopted the Committee's April 13 minutes.
 - I. Adopted the report of the Audit Committee, including its Aug. 3 and May 16 minutes. During these meetings, the Committee took the following action:
 - i. Discussed potential revenue changes for the 2023 budget.
 - ii. Received the June 30 financial update.
 - iii. Selected a new financial audit firm.
 - iv. Discussed grant and zone financials, including potential changes for 2023 member grant and zone funding.
 - v. Heard an update on the ERP project.
 - vi. Affirmed the 2023 Audit Committee charter.
 - vii. Heard an update on the 2023 budget calendar.
 - viii. Received the 2021/2022 Service Organization Control (SOC) 1 and SOC 2 Audit reports.
 - ix. Approved the Target Reserve Policy.
 - J. Adopted the report of the Internal Administration (EX1) Subcommittee, including its July 7 minutes. During this meeting, the Subcommittee took the following action:
 - i. Received the March 31 Long-Term Investment Portfolio report.
 - ii. Received the March 31 Defined Benefit Portfolio report.
 - K. Approved the Member Services Staffing fiscal.
 - L. Approved the ERP fiscal.
 - M. Heard the Chief Executive Officer/Chief Operating Officer (CEO/COO) report.
 - N. Heard an update on the *State Connected* strategic plan.
 - O. Received an update on the proposed 2023 NAIC budget.
 - P. Heard an update on the use of NAIC designations by foreign jurisdictions.
 - Q. Heard a cybersecurity report.
 - R. Heard a diversity, equity, and inclusion (DE&I) report.
2. Adopted the report of the Executive (EX) Committee, which met June 21 and took the following action:
 - A. Received an update on the NAIC's 2022 financials and an overview of preliminary work on the 2023 budget.
 - B. Approved the Catastrophe Modeling COE fiscal.
 - C. Approved the VA Model Office fiscal.
 - D. Received an update on the ERP project.
 3. Adopted the report of the Climate and Resiliency (EX) Task Force. See the Task Force listing for details.
 4. Adopted the report of the Government Relations (EX) Leadership Council. See the Task Force listing for details.
 5. Adopted the report of the Long-Term Care Insurance (EX) Task Force. See the Task Force listing for details.
 6. Adopted the report of the Special (EX) Committee on Race and Insurance. See the Committee listing for details.
 7. Adopted a Request for NAIC Model Law Development to amend the *Property and Casualty Insurance Guaranty Association Model Act* (#540).
 8. Adopted a Request for NAIC Model Law Development to draft the new Insurance Consumer Privacy Protection Model Law.
 9. Adopted the revisions to the NAIC Consumer Participation Plan of Operation.
 10. Received a status report on the NAIC *State Ahead* strategic plan implementation.

11. Received a status report on model law development efforts for amendments to: 1) the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171); 2) the *Mortgage Guaranty Insurance Model Act* (#630); 3) the *Nonadmitted Insurance Model Act* (#870); and 4) the new Pet Insurance Model Act.
12. Heard reports from the National Insurance Producer Registry (NIPR) and the Interstate Insurance Product Regulation Commission (Compact).

Climate and Resiliency (EX) Task Force

Aug. 11, 2022

1. Adopted its Spring National Meeting minutes.
2. Received reports from its workstreams: Climate Risk Disclosure; Solvency; Innovation; Technology; and Pre-Disaster Mitigation.
3. Heard a presentation on wildfire mitigation from the California Department of Insurance (CDI), United Policyholders (UP), the Insurance Institute for Business and Home Safety (IBHS), and the American Property Casualty Insurance Association (APCIA).
4. Heard a presentation from Ceres on its work to assist insurers required to report a Financial Stability Board (FSB) Task Force on Climate-Related Financial Disclosures (TCFD)-aligned climate risk disclosure in 2022.
5. Heard a federal update.

Government Relations (EX) Leadership Council

The Government Relations (EX) Leadership Council did not meet at the Summer National Meeting.

Long-Term Care Insurance (EX) Task Force

Aug. 12, 2022

1. Adopted its Spring National Meeting minutes.
2. Received a report on the implementation plans for the Long-Term Care Insurance Multistate Rate Review Framework (LTCI MSA Framework). The LTCI MSA Framework is on track to be implemented as anticipated. An NAIC web page with instructions and contacts will be available in September.
3. Received an update on industry trends that could have an impact on the solvency of long-term care insurance (LTCI) companies and reserves. The Task Force will continue to monitor the impacts of cost-of-care inflation and other factors.
4. Received an update on the development of the Multistate Actuarial (MSA) Associate Program. The program has several state insurance department regulator volunteers who have discussed analyzing reserves and risks. Future meetings will be scheduled. State insurance actuaries or other staff who are interested in joining may contact NAIC support staff.
5. Heard a presentation on a Center for Insurance Policy and Research (CIPR) project on LTCI reduced benefit options (RBO). The project involved collecting feedback from financial planners on consumers' experiences with notices of rate increases and RBOs. The Task Force encourages states to use the adopted guidance and checklists in their RBO and consumer notice reviews. The Task Force discussed additional related research that the CIPR may consider in the future.

Special (EX) Committee on Race and Insurance

Aug. 11, 2022

1. Adopted its Spring National Meeting minutes.
2. Received a status report from the following workstreams:
 - A. Workstream One: Research/analyze the level of diversity and inclusion within the insurance industry.
 - B. Workstream Two: Research/analyze the level of diversity and inclusion within the NAIC and state insurance regulator community.

- C. Workstream Three: Examine and determine which practices or barriers exist in the insurance sector that potentially disadvantage people of color and/or historically underrepresented groups in the property/casualty (P/C) line of business.
 - D. Workstream Four: Examine and determine which practices or barriers exist in the insurance sector that potentially disadvantage people of color and/or historically underrepresented groups in the life insurance and annuities line of business.
 - E. Workstream Five: Examine and determine which practices or barriers exist in the insurance sector that potentially disadvantage people of color and/or historically underrepresented groups in the health insurance line of business.
3. Heard an update on the State Diversity Leaders Forum.
 4. Heard a presentation on diversity initiatives from the District of Columbia Department of Insurance, Securities, and Banking (DISB).

INTERNAL ADMINISTRATION (EX1) SUBCOMMITTEE

See the Executive (EX) Committee listing for details.

LIFE INSURANCE AND ANNUITIES (A) COMMITTEE

Aug. 11, 2022

1. Adopted its July 20 minutes, which included the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Adopted nine *Valuation Manual* amendments.
 - C. Adopted *Actuarial Guideline LIII—Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves* (AG 53).
 - D. Heard a presentation on life insurance updates to the NAIC website.
 - E. Received an update on the survey into the use of artificial intelligence (AI) and machine learning (ML) in life insurance that the Big Data and Artificial Intelligence (H) Working Group is developing.
2. Received an update from the Accelerated Underwriting (A) Working Group. The Working Group continues to collaborate with other NAIC groups as it works on developing regulatory guidance for state insurance regulators related to accelerated underwriting (AU) in life insurance, and it plans to meet in October to continue work on its goals.
3. Adopted the report of the Annuity Suitability (A) Working Group, including its July 25 minutes. During this meeting, the Working Group took the following action:
 - A. Adopted its May 26 minutes, which included the following action:
 - i. Discussed comments received on the draft frequently asked questions (FAQ) on the safe harbor/comparable standards provision in the revised *Suitability in Annuity Transactions Model Regulation* (#275), which added a best interest standard of conduct for insurers and producers.
 - B. Adopted its May 3 minutes, which included the following action:
 - i. Agreed to draft new FAQ on the safe harbor/comparable standards provision in the revised Model #275.
 - C. Discussed the draft FAQ on the safe harbor/comparable standards provision in the revised Model #275.
4. Adopted the report of the Life Actuarial (A) Task Force. See the Task Force listing for details.
5. Discussed and agreed to have the Life Insurance Online Guide (A) Working Group focus on updating life insurance information on the NAIC website. State insurance regulators interested in participating in the Working Group should contact Jennifer Cook (NAIC).
6. Received an update from Workstream Four of the Special (EX) Committee on Race and Insurance. The Workstream plans to schedule future presentations to hear about marketing and distribution in underserved communities from the agent perspective.

Life Actuarial (A) Task ForceAug. 9, 2022

1. Adopted its July 21, July 7, June 30, June 23, June 16, June 9, June 2, May 26, May 19, May 12, May 5, and April 14 minutes. During these meetings, the Task Force took the following action:
 - A. Exposed economic scenario generator (ESG) files for field testing.
 - B. Exposed an NAIC staff recommendation for transitioning from the London Interbank Offered Rate (LIBOR) to the Secured Overnight Financing Rate (SOFR) for the remainder of 2022.
 - C. Exposed the joint American Academy of Actuaries (Academy) Life Experience Committee and Society of Actuaries (SOA) Preferred Mortality Project Oversight Group (POG) recommendation for historical mortality improvement (HMI) and future mortality improvement (FMI).
 - D. Adopted its Spring National Meeting minutes.
 - E. Adopted amendment proposal 2020-12.
 - F. Adopted amendment proposal 2022-04.
 - G. Adopted amendment proposal 2022-05.
 - H. Adopted *Actuarial Guideline LIII—Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves* (AG 53).
2. Adopted the report of the Experience Reporting (A) Subgroup, which has not met since the Spring National Meeting.
3. Adopted the report of the Index-Linked Variable Annuity (A) Subgroup, including its July 13, May 18, and May 17 minutes. During these meetings, the Subgroup took the following action:
 - A. Discussed comments on the proposed index-linked variable annuity (ILVA) actuarial guideline.
 - B. Heard a presentation on interim nonforfeiture values.
4. Adopted the report of the Indexed Universal Life (IUL) Illustration (A) Subgroup, including its July 18 minutes. During this meeting, the Subgroup took the following action:
 - A. Exposed options for revising *Actuarial Guideline XLIX-A—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest to Policies Sold on or After December 14, 2020* (AG 49-A) for an eight-day public comment period ending July 26.
5. Adopted the report of the Valuation Manual (VM)-22 (A) Subgroup, including its July 19, July 13, June 29, June 14, June 1, May 11, April 27, and April 13 minutes. During these meetings, the Subgroup took the following action:
 - A. Reviewed the VM-22 project timeline. The target effective date is January 2025.
 - B. Discussed tier three comments on the proposed VM-22 framework.
 - C. Reviewed the updated VM-22 documents.
 - D. Discussed the allocation of excess reserves.
 - E. Discussed working reserve for contracts with no cash surrender value.
 - F. Discussed reserve categorization upon depletion of fund value.
 - G. Exposed the Longevity Reinsurance Proposal for a 60-day public comment period ending Aug. 14.
 - H. Discussed the stochastic exclusion ratio test.
 - I. Discussed tier two comments on the proposed VM-22 framework.
 - J. Discussed tier one comments on the proposed VM-22 framework.
 - K. Heard an update on revisions to VM-22.
6. Adopted the report of the Variable Annuities Capital and Reserve (E/A) Subgroup, which has not met since the Spring National Meeting.
7. Discussed AG 53 asset adequacy testing (AAT) templates that were previously exposed for a public comment period ending Aug. 19.
8. Discussed the Academy framework for developing, evaluating, and implementing ESGs.
9. Discussed the status of the current ESG field test initiated in June.
10. Exposed the Generally Recognized Expense Tables (GRETs) for a 21-day public comment period ending Aug. 29.
11. Heard an update from the SOA on research and education.

12. Heard an update from the joint Academy and SOA POG on the recommendation for HMI and FMI.
13. Heard an update on the SOA and Life Insurance Marketing and Research Association (LIMRA) experience studies partnership.
14. Heard an update on the activities of the Academy Life Practice Council.
15. Heard from the Academy on ESG stylized facts for the equity model.
16. Heard an update from the Academy Council on Professionalism and Education.

HEALTH INSURANCE AND MANAGED CARE (B) COMMITTEE

Aug. 11, 2022

1. Adopted its Spring National Meeting minutes.
2. Adopted the report of the Consumer Information (B) Subgroup, which has not met as a group since March 22. However, the Subgroup chair and a few Subgroup members:
 - A. In June, decided to conduct focus groups with a small number of states to gather information on consumer engagement strategies they have used and which ones they find effective. The first focus group completed its work June 13, and the second focus group completed its work July 8.
 - B. Are working to prepare summaries of the focus groups. They expect to identify themes from the focus groups and share them with the full Subgroup and interested parties within the next few months.
3. Adopted the report of the Health Innovations (B) Working Group, which met Aug. 10 and took the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Heard a presentation on the Colorado Option Section 1332 waiver.
 - C. Heard presentations from health plans on programs to improve access for historically underserved communities as part of its charge from the Special (EX) Committee on Race and Insurance to evaluate mechanisms to resolve disparities through improving access to care.
 - D. Heard a presentation from the federal Centers for Medicare & Medicaid Services (CMS) on programs to improve access.
 - E. Discussed a draft memorandum to the Special (EX) Committee on Race and Insurance related to the work the Working Group has completed to date for two of the charges received from the Special Committee.
4. Adopted the report of the Health Actuarial (B) Task Force. See the Task Force listing for details.
5. Adopted the report of the Regulatory Framework (B) Task Force. See the Task Force listing for details.
6. Adopted the report of the Senior Issues (B) Task Force. See the Task Force listing for details.
7. Heard a panel presentation on efforts to create state-based health insurance exchanges and why states should establish them.
8. Heard a discussion on Medicaid redeterminations following the end of the COVID-19 public health emergency (PHE). The presentation provided an overview of the PHE, including the authorities at play in the COVID-19 pandemic at the federal and state level. The presentation also highlighted important dates state insurance regulators need to keep in mind related to the end of the PHE. The presentation discussed 10 fundamental actions for states to prepare for the unwinding at the end of the PHE, including creating a comprehensive state unwinding operational plan and coordinating with partners, including state, tribal, and state and federal government partners.
9. Heard an update from the federal Center for Consumer Information and Insurance Oversight (CCIIO) on recent activities of interest to the Committee. The update focused on what the CCIIO is doing to prepare for the eventual end of the COVID-19 PHE and the Medicaid redetermination process.
10. Heard a federal legislative and regulatory update, including an update on federal No Surprises Act (NSA) implementation.
11. Received an update on the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup's work.
12. Received an update on the work of Special (EX) Committee on Race and Insurance Workstream Five.

Health Actuarial (B) Task ForceAug. 1, 2022 (in lieu of the Summer National Meeting)

1. Adopted its June 30 and May 16 minutes, which included the following action:
 - A. Heard a Society of Actuaries (SOA) Research Institute 2022 Individual Life Waiver of Premium (ILWOP) Experience Study presentation.
 - B. Heard an update on the American Academy of Actuaries (Academy) and SOA Research Institute Group Life Waiver of Premium Valuation Table (GLWPVT) Work Group efforts towards developing valuation tables to replace the 2005 Group Term Life Waiver Mortality and Recovery Tables in *Actuarial Guideline XLIV—Group Term Life Waiver of Premium Disabled Life Reserves* (AG 44).
2. Adopted the report of the Long-Term Care Actuarial (B) Working Group, including its June 24 minutes. During this meeting, the Working Group took the following action:
 - A. Discussed the Academy and SOA Research Institute’s final *Long-Term Care Insurance Mortality and Lapse Study*.
3. Heard an update on the SOA Research Institute/Life Insurance Marketing and Research Association (LIMRA) experience studies partnership.
4. Heard an update from the Academy Health Practice Council.
5. Heard an Academy update on professionalism.
6. Discussed an Academy and SOA Research Institute GLWPVT Work Group Valuation Tables proposal that is exposed for a public comment period ending Aug. 11.

Regulatory Framework (B) Task ForceAug. 10, 2022

1. Adopted its Spring National Meeting minutes.
2. Adopted the report of the Accident and Sickness Insurance Minimum Standards (B) Subgroup, including its July 11, June 13, June 6, May 9, and April 18 minutes. During these meetings, the Subgroup took the following action:
 - A. Discussed the comments received on Section 8B—Hospital Indemnity or Other Fixed Indemnity Coverage of the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171) and its drafting note to clarify what is and is not “fixed indemnity coverage.”
 - B. Developed a chair draft of proposed revisions to Section 8B based on the comments received and discussion.
 - C. Discussed the chair draft of proposed revisions to Section 8B and agreed on preliminary revisions to Section 8B for inclusion in the draft of revisions to Model #171.
 - D. Discussed the comments received on the NAIC consumer representatives’ initial comments on Section 8C—Disability Income Protection Coverage and agreed on preliminary revisions to Section 8C for inclusion in the draft of revisions to Model #171.
3. Adopted the report of the Employee Retirement Income Security Act (ERISA) (B) Working Group, which met Aug. 10 and took the following action:
 - A. Adopted its May 24 minutes, which included the following action:
 - i. Adopted a summary of the *Rutledge v. Pharmaceutical Care Management Association (PCMA)* case for inclusion in the *Health and Welfare Plans Under the Employee Retirement Income Security Act: Guidelines for State and Federal Regulation* (ERISA Handbook).
 - B. Heard an update from the U.S. Department of Labor (DOL).
 - C. Discussed updating the NAIC Chart on Multiple Employer Welfare Arrangement (MEWA)/Multiple Employer Trust (MET) and Association Plans.
 - D. Discussed whether the ERISA Handbook needs to be reviewed for outdated information.
 - E. Adjourned into regulator-to-regulator session, pursuant to paragraph 2 (pending investigations), paragraph 3 (specific companies, entities, or individuals) and paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings.

4. Adopted the report of the Mental Health Parity and Addiction Equity Act (MHPAEA) (B) Working Group. The Working Group met Aug. 11 and took the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Heard an expert presentation on parity issues.
 - C. Heard presentations from providers on parity issues.
 - D. Adjourned into regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings.
5. Adopted the report of the Pharmacy Benefit Manager Regulatory Issues (B) Subgroup, which met Aug. 9 and took the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Adopted its July 29, June 15, and April 25 minutes. During these meetings, the Subgroup took the following action:
 - i. Heard presentations from various stakeholders on issues from their perspective on the Subgroup’s 2022 charge to develop a white paper to: 1) analyze and assess the role pharmacy benefit managers (PBMs), pharmacy services administrative organizations (PSAOs), and other supply chain entities play in the provision of prescription drug benefits; 2) identify, examine, and describe current and emerging state regulatory approaches to PBM business practices, such as price transparency and reporting requirements; rebating; and spread pricing, including the implications of the *Rutledge vs. PCMA* decision on such business practices; and 3) discuss any challenges, if any, the states have encountered in implementing such laws and/or regulations.
 - C. Heard a presentation from the PCMA.
 - D. Heard a presentation from the Pharmaceutical Research and Manufacturers of America (PhRMA).
 - E. Heard a presentation from the Oregon Primary Care Association (OPCA).
6. Heard an update from the Center on Health Insurance Reforms (CHIR) on its work on various projects of interest to the Task Force. The CHIR is researching public option plans and recently published an in-depth analysis of Colorado’s federal Affordable Care Act (ACA) Section 1332 waiver for a public option-style plan. The CHIR recently published a brief on the efforts California’s state-based insurance marketplace is trying to reduce the number of uninsured and underinsured. The CHIR also recently published a brief on actions state insurance regulators can take to prepare for the post-public health emergency (PHE) Medicaid unwinding. Another issue the CHIR is analyzing is abortion and contraceptive coverage after the recent U.S. Supreme Court ruling in *Dobbs v. Jackson Women’s Health Organization*. The CHIR is continuing to monitor and analyze state action related to health equity. It recently published a report titled, “Improving Race and Ethnicity Data Collection: A First Step to Furthering Health Equity Through SBMs.” The CHIR is also continuing its work related to the implementation of the federal No Surprises Act (NSA). The CHIR plans to release a study on state laws related to surprise billing enacted since the enactment of the NSA. The CHIR recently completed a study comparing the federal and state network adequacy standards governing Medicaid and ACA marketplace plans in six states. The CHIR’s future work includes: 1) publishing an issue brief on state efforts to enforce the MHPAEA; and 2) a 50-state research project on medical debt consumer protections.
7. Heard a presentation from the Association for Accessible Medicines (AAM) on the usage of the term “interchangeable biosimilar product” in the *Health Carrier Prescription Drug Benefit Management Model Act* (#22) and its effect on prescription drug substitutions. The Task Force decided to form an ad hoc group consisting of a few Task Force members to study this issue and report back to the Task Force at or prior to the Fall National Meeting regarding next steps.
8. Heard an update on the implementation of the federal network adequacy standards for qualified health plans (QHPs) in the federally facilitated health insurance exchanges.

Senior Issues (B) Task Force

Aug. 10, 2022

1. Adopted its Spring National Meeting minutes.

2. Adopted its June 7 and May 11 minutes. During these meetings, the Task Force took the following action:
 - A. Adopted a letter asking the federal Centers for Medicare & Medicaid Services (CMS) to: 1) ensure there will be coordination between the CMS and the U.S. Social Security Administration (SSA) should the proposed rule to simplify Medicare enrollment and expand access be made final and implemented; and 2) work with state insurance regulators to minimize any possible gaps in coverage for beneficiaries.
 - B. Discussed the CMS' proposed rule on Medicare enrollment.
3. Discussed Medicare Part D beneficiaries being "crosswalked" from one Medicare Prescription Drug Plan (PDP) to another. The Task Force agreed to reach out to the CMS.
4. Discussed a conflict between Medicare and the federal Consolidated Omnibus Budget Reconciliation Act of 1985 (COBRA) rules that has led to some confusion about which set of rules governs eligibility for coverage, and how the responsibility for payment of health care benefits for eligible individuals is determined. The Task Force agreed to hold a meeting solely on this issue with invited stakeholders.
5. Discussed the status and future of the Long-Term Care Insurance Model Update (B) Subgroup, and the Task Force agreed to disband the Subgroup.
6. Heard an update from the Task Force chair that she had received a response the previous night from the CMS to the Task Force regarding a letter sent on March 17 regarding durable medical equipment (DME) suppliers. She informed the Task Force that the CMS response has been posted on the Task Force web page and sent to Task Force members, interested state insurance regulators, and interested parties.

PROPERTY AND CASUALTY INSURANCE (C) COMMITTEE

Aug. 12, 2022

1. Adopted its Spring National Meeting minutes.
2. Adopted its Aug. 1 minutes. During this meeting, the Committee took the following action:
 - A. Adopted the Pet Insurance Model Act.
3. Adopted the report of the Casualty Actuarial and Statistical (C) Task Force. See the Task Force listing for details.
4. Adopted the report of the Surplus Lines (C) Task Force. See the Task Force listing for details.
5. Adopted the report of the Title Insurance (C) Task Force. See the Task Force listing for details.
6. Adopted the report of the Workers' Compensation (C) Task Force. See the Task Force listing for details.
7. Adopted the report of the Cannabis Insurance (C) Working Group, including its July 12 minutes. During this meeting, the Working Group took the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Received a status report on the drafting of the *Understanding the Market for Cannabis Insurance 2.0* white paper.
 - C. Heard a presentation on how insurers are dealing with state legalization of minor cannabinoids.
8. Adopted the report of the Catastrophe Insurance (C) Working Group, which met Aug. 9 in joint session with the NAIC/Federal Emergency Management Agency (FEMA) (C) Advisory Group and took the following action:
 - A. Adopted the Working Group's and Advisory Group's Spring National Meeting Minutes.
 - B. Heard an update on federal legislation.
 - C. Discussed updates to the *Catastrophe Computer Modeling Handbook*. The drafting group decided to make the *Catastrophe Computer Modeling Handbook* into a primer, which will focus on providing departments of insurance (DOIs) with the information needed to address the basics of catastrophe modeling and serve as a resource available to inform new and non-expert staff about the basics of catastrophe modeling. The Center for Insurance Policy and Research (CIPR) Catastrophe Modeling Center of Excellence (COE) has been approved by the NAIC membership, and the primer will serve as a transition to the COE, which will provide more technical training beyond the scope of this primer.
 - D. Heard an update from the Alabama Department of Insurance regarding its private flood insurance initiatives.
 - E. Heard an update from NAIC staff on private flood insurance data.
 - F. Heard an update from the New Mexico Office of the Superintendent of Insurance on recent wildfires.
 - G. Heard an update from the Northeast Zone on its catastrophe team.

- H. Heard an update from the Washington Office of the Commissioner of Insurance on the Cascadia Subduction Zone Earthquake Exercise (Cascadia Rising 2022).
 - I. Heard an update on the NAIC/FEMA Region 6 event. Five states from FEMA Region 6 met with FEMA headquarters and FEMA Region 6 colleagues in a hybrid event that the Oklahoma Insurance Department hosted. In addition to hearing an overview of recent catastrophic events in the region, the following items were discussed: 1) information regarding FEMA Region 6 stakeholder roundtables; 2) how states are organized and plan for disaster; 3) NAIC capabilities to assist states; 4) FEMA headquarters operations, including the flood response playbook; 5) claims information; 6) communication and messaging; and 7) how states interact with FEMA at disaster recovery centers (DRCs).
9. Adopted the report of the Pet Insurance (C) Working Group, including its Aug. 4 minutes. During this meeting, the Working Group took the following action:
 - A. Adopted its July 21 minutes. During this meeting the Working Group took the following action:
 - i. Adopted its June 7 minutes. During this meeting the Working Group took the following action:
 - a. Discussed proposed changes to the Pet Insurance Model Act.
 - ii. Adopted the Pet Insurance Model Act.
 10. Adopted the report of the Terrorism Insurance Implementation (C) Working Group, which has not met since the Spring National Meeting.
 11. Adopted the report of the Transparency and Readability of Consumer Information (C) Working Group, including its Aug. 2 minutes. During this meeting, the Working Group took the following action:
 - A. Adopted its June 9 minutes. During this meeting, the Working Group took the following action:
 - i. Discussed and exposed its draft *Best Practices for Insurance Rate Disclosures* for a 14-day public comment period ending June 24.
 12. Heard a report on cyber insurance data contained within the Cybersecurity and Identity Theft Supplement. The Committee will release a written report that contains alien surplus lines data later this year.
 13. Heard a federal update.
 14. Received an update on the NAIC Collaboration Forum on algorithmic bias.
 15. Heard an overview of the member visit to the Insurance Institute for Business and Home Safety (IBHS). IBHS research and messaging materials are available for use by state insurance regulators.
 16. Discussed its charge related to parametric insurance. The Committee will hear future presentations and begin to gather research to create an outline for a white paper.

Casualty Actuarial and Statistical (C) Task Force

Aug. 10, 2022

1. Adopted its Spring National Meeting minutes.
2. Adopted its July 12 and June 14 minutes. During these meetings, the Task Force took the following action:
 - A. Adopted the report of the Statistical Data (C) Working Group.
 - B. Discussed the NAIC's loss cost multiplier (LCM) form. The drafting group will produce an instructions document to be considered for adoption as a package with the proposed LCM form.
 - C. Exposed draft guidance on the regulatory review of tree-based models for a 25-day public comment period ending Aug. 5.
 - D. Adopted the report of the Actuarial Opinion (C) Working Group, which met in regulator-to-regulator session to discuss individual Statements of Actuarial Opinion (SAOs). It also received a referral from the Financial Analysis (E) Working Group.
 - E. Heard comments on the draft LCM form, which had been exposed for a 40-day public comment period ending June 7.
 - F. Discussed the creation of a *Rate Review Support Services Handbook*.

3. Adopted the report of the Actuarial Opinion (C) Working Group, including its Aug. 2 minutes. During this meeting, the Working Group took the following action:
 - A. Reported that it met June 3 and May 26 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss the individual companies' SAOs.
 - B. Discussed a Financial Analysis (E) Working Group referral on predictive analytics in a reserve setting.
 - C. Discussed potential changes to the qualification documentation requirements and disclosures.
 - D. Discussed potential changes to the Regulatory Guidance and Annual Statement Instructions.
4. Adopted the report of the Statistical Data (C) Working Group, including its Aug. 4 minutes. During this meeting, the Working Group took the following action:
 - A. Adopted its July 20 minutes. During this meeting, the Working Group took the following action:
 - i. Adopted its June 15 minutes. During this meeting, the Working Group took the following action:
 - a. Adopted its May 18 minutes. During this meeting, the Working Group took the following action:
 1. Adopted its April 14 minutes. During this meeting, the Working Group took the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Discussed the timeline of data collection for the *Auto Insurance Database Report* (Auto Report).
 - C. Discussed updating the *Statistical Handbook of Data Available to Insurance Regulators*.
 2. Heard a presentation from the Center for Economic Justice (CEJ) on statistical data collection—specifically, modernizing statistical data reporting for personal lines insurance.
 - b. Adopted an accelerated timeline for auto premium and exposure data collection. The Working Group agreed to move up the reporting timeline for auto premium and exposure data to Dec. 1 following the end of the data year.
 - c. Discussed proposed changes to the *Competition Database Report* (Competition Report) and the *Dwelling Fire, Homeowners Owner-Occupied, and Homeowners Tenant and Condominium/Cooperative United Owners Insurance* (Homeowners Report).
 - ii. Discussed proposed changes to the Auto Report and the *Report on Profitability by Line by State* (Profitability Report).
5. Exposed the draft LCM form and associated memorandum for a 45-day public comment period ending Sept. 23.
6. Adopted guidance on the regulatory review of all tree-based models to replace previous guidance applicable to only random forest models.
7. Heard a presentation on the openIDL initiative.
8. Heard presentations from professional actuarial associations.

Surplus Lines (C) Task Force

The Surplus Lines (C) Task Force did not meet at the Summer National Meeting

Title Insurance (C) Task Force

Aug. 11, 2022

1. Held an educational roundtable discussion on the various approaches states use to regulate rates. Ohio and Louisiana require prior approval of title insurers' rates and forms and use statistical agents. The Ohio Title Insurance Rating Bureau (OTIRB) is the statistical agent for Ohio. The Louisiana Title Statistical Services Organization is the statistical agent for Louisiana. Texas employs an extensive body of rules, forms, and a promulgated rate that is set at a hearing approximately every five years. Title insurance rates in Texas include costs associated with the title search and transaction, but not the escrow fees. Kansas uses a file-and-approve system. While the Kansas Insurance Department reviews filings for compliance, it does not regulate title insurance rates.

2. Heard a presentation on new title insurance-like alternatives that use attorney opinion letters backed by an errors and omissions policy through the surplus lines market. These products protect the lender, but there are limited closing protections for the consumer.

Workers' Compensation (C) Task Force

Aug. 2, 2022 (in lieu of the Summer National Meeting)

1. Discussed presumptions and whether they are creating inequity in the workers' compensation system. Most states have let their COVID-19 presumptions expire. There are, however, a handful of states that have extended the presumptions. There has been activity for presumptions regarding post-traumatic stress disorder, as well as in the areas of hazardous waste exposure.
2. Discussed the future of work and how the hybrid work force is affecting claims frequency. Items affecting the future workforce include remote work arrangements, job shifting, gig work, and automation. Twenty-five percent of the workforce works remotely on a full- or part-time basis. Thirty-one percent of gig workers hold gig work as their main job.
3. Discussed how the states are recruiting and training with the departments of insurance (DOIs). Several DOIs allow remote work, which has helped them to hire and retain employees. The DOIs are also having good results with recruiting new employees from local colleges and universities.

MARKET REGULATION AND CONSUMER AFFAIRS (D) COMMITTEE

Aug. 12, 2022

1. Adopted its July 15 minutes. During this meeting, the Committee took the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Adopted a revised charge to delete a reference to the System for Electronic Rates & Forms Filing (SERFF) Advisory Board (SAB) since the SAB was disbanded at the Spring National Meeting.
 - C. Adopted a revised charge of the Producer Licensing (D) Task Force to appoint a new Adjuster Licensing (D) Working Group to review adjuster licensing reciprocity and uniformity issues rather than the Producer Licensing (D) Task Force.
 - D. Adopted a new "other health" Market Conduct Annual Statement (MCAS) data call and definitions.
 - E. Adopted revisions to the homeowners MCAS to add digital claim interrogatories and lawsuit data elements and definitions.
 - F. Adopted revisions to the auto MCAS to add digital claim interrogatories and lawsuit data elements and definitions.
 - G. Adopted revisions to the life MCAS to add accelerated underwriting (AU) data elements, interrogatories, and definitions.
2. Adopted revisions to the *Market Regulation Handbook*. These edits included: 1) revisions to Chapter 1 to encourage market regulators to coordinate with a company's domestic financial regulator to obtain information related to the company's group capital calculations (GCCs), liquidity stress test (LST) results, corporate governance, and Own Risk and Solvency Assessment (ORSA); 2) revisions to Exam Standard 1 of marketing and sales in Chapter 20 to add the *Insurance Holding Company System Regulatory Act (#440)* to the list of NAIC models to reference for guidance; and 3) revisions to Chapter 21 to include references to the *Real Property Lender-Placed Insurance Model Act (#631)*.
3. Adopted a new Mental Health Parity chapter to the *Market Regulation Handbook*. This chapter will provide updated examination guidelines in response to the federal Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 (MHPAEA) compliance analysis requirements for non-quantitative treatment limitations (NQTLs), which were amended at the federal level in 2021.
4. Adopted the "Recommendations for the Incorporation of Artificial Intelligence in the NAIC Market Information Systems." The report recommends that artificial intelligence (AI) should be contemplated in the context of a long-range plan, beginning with repairing known issues with existing data and employing more rigorous traditional statistical techniques to assess predictive accuracy of analytical tools. Subsequently, state insurance regulators can consider the potential collection of data appropriate to AI.

5. Adopted the “Guidelines for Amending the NAIC Uniform Applications.” These guidelines will be used for the review and adoption of substantive changes to the NAIC’s uniform licensing applications in support of the NAIC and National Insurance Producer Registry (NIPR) mission of maintaining stable and consistent NAIC uniform applications for producer licensing.
6. Adopted the Antifraud Plan Repository Workflow. This workflow will serve as the template for the creation of a centralized filing system for insurers to report their antifraud plans to state insurance departments and eliminate the need for multiple state filings of the same plan.
7. Adopted the report of the Antifraud (D) Task Force. See the Task Force listing for details.
8. Adopted the report of the Market Information Systems (D) Task Force. See the Task Force listing for details.
9. Adopted the report of the Producer Licensing (D) Task Force. See the Task Force listing for details.
10. Adopted the report of the Market Analysis Procedures (D) Working Group, including its July 13 minutes. During this meeting, the Working Group took the following action:
 - A. Adopted its June 8 minutes. During this meeting, the Working Group took the following action:
 - i. Adopted its Spring National Meeting minutes.
 - ii. Adopted standard ratios for the travel and short-term, limited-duration (STLD) MCAS lines of business.
 - iii. Discussed the addition of outstanding MCAS lines of business in the Market Analysis Review System (MARS). Comments were requested by July 11.
 - iv. Discussed adding new lines of business to the MCAS. Comments were requested by July 11.
 - B. Discussed adding new lines of business to the MCAS—specifically, pet insurance, title insurance, and business owners’ insurance. Comments were requested by Aug. 12.
 - C. Discussed the addition of outstanding MCAS lines of business in the MARS. The Working Group agreed to revise its Uniform System Enhancement Request (USER) form to forward to the Market Information Systems Research and Development (D) Working Group requesting an expansion of the lines of business options in the MARS and adding the outstanding MCAS data lines.
 - D. Discussed adding the travel insurance loss ratio to the standard MCAS ratios for travel insurance. Comments were requested by Aug. 12.
11. Adopted the report of the Market Conduct Annual Statement Blanks (D) Working Group, including its July 21 minutes. During this meeting, the Working Group took the following action:
 - A. Adopted its May 26 minutes. During this meeting, the Working Group took the following action:
 - i. Adopted its April 28 minutes. During this meeting, the Working Group took the following action:
 - a. Adopted its Spring National Meeting minutes.
 - b. Received an update on the life MCAS draft edits for AU.
 - c. Received an update on the Other Health Drafting Group.
 - d. Discussed possible edits to the lawsuit definition for all MCAS lines of business that contain lawsuit reporting.
 - e. Adopted the proposed lawsuit definition and placement of the lawsuit data elements for the homeowners and auto MCAS.
 - ii. Adopted the life MCAS edits for AU.
 - iii. Adopted the “other health” MCAS data call and definitions.
 - iv. Adopted edits to the lawsuit definition for the homeowners and auto MCAS.
 - v. Reviewed its charges and process for submitting requests for edits to the MCAS data call and definitions.
 - B. Heard a presentation from America’s Health Insurance Plans (AHIP) and the Blue Cross Blue Shield Association (BCBSA) on a filing deadline proposal for the health MCAS. The organizations requested an extended deadline of June 30 to submit health MCAS filings. The proposal was exposed for a public comment period ending Aug. 19.
 - C. Reviewed the travel data element addition proposed by the Market Analysis Procedures (D) Working Group. Specifically, the Working Group requested to have the “policies in force during the reporting period” added to the travel underwriting activity section of reporting within the travel MCAS blank. The proposal was exposed for a public comment period ending Aug. 19.

- D. Reviewed the STLD data element addition that the Market Analysis Procedures (D) Working Group proposed. Specifically, the Working Group requested the addition of a data element for “dollar amount of claims paid during the reporting period” within the claims section of the STLD MCAS blank. The proposal was exposed for a public comment period ending Aug. 19.
12. Adopted the report of the Market Conduct Examination Guidelines (D) Working Group, including its July 14 minutes. During this meeting, the Working Group took the following action:
- A. Adopted its June 9 minutes. During this meeting, the Working Group took the following action:
- i. Adopted its April 21 minutes. During this meeting, the Working Group took the following action:
 - a. Adopted revisions to the April 19 draft Chapter 21—Conducting the Property and Casualty Examination of the *Market Regulation Handbook* (Handbook).
 - b. Discussed proposed revisions to Chapter 24B—Conducting the Mental Health Parity and Addiction Equity Act (MHPAEA)-Related Examination of the Handbook to update the chapter to align more closely with federal guidance on compliance analysis requirements for NQTLs.
 - c. Discussed proposed revisions to Chapter 23—Conducting the Life and Annuity Examination of the Handbook, which correspond with the February 2020 revisions to the *Suitability in Annuity Transactions Model Regulation* (#275) that the NAIC adopted.
 - d. Discussed proposed revisions to Chapter 20—General Examination Standards of the Handbook regarding Model #440.
 - ii. Discussed proposed new Chapter 24B of the Handbook. The Working Group received numerous comments from state insurance regulators and interested parties.
 - iii. Discussed proposed revisions to Chapter 23 of the Handbook. The Working Group received numerous comments from state insurance regulators and interested parties.
 - iv. Discussed proposed revisions to Chapter 20 of the Handbook.
- B. Adopted revisions to the July 6 draft Chapter 20 of the Handbook.
- C. Adopted revisions to the July 6 draft Chapter 1 of the Handbook.
- D. Adopted an updated Chapter 24B, July 11 draft, of the Handbook.
13. Adopted the report of the Market Regulation Certification (D) Working Group, including its July 13 minutes. During this meeting, the Working Group took the following action:
- A. Adopted its June 1 minutes. During this meeting, the Working Group took the following action:
- i. Adopted its Spring National Meeting minutes.
 - ii. Adopted the Voluntary Market Regulation Certification Program scoring matrix.
 - iii. Reviewed the certification program implementation plan. Comments were requested by June 30.
 - iv. Reviewed the pilot state suggestions to the certification program. Comments were requested by June 30.
- B. Reviewed the certification program implementation plan. Comments were requested by July 29.
- C. Reviewed the pilot state suggestions to the certification program. An ad hoc group was formed to review the recommendations on each requirement and report back to the Working Group.
14. Adopted the report of the Speed to Market (D) Working Group, including its July 12 minutes. During this meeting, the Working Group took the following action:
- A. Adopted its April 20 minutes. During this meeting, the Working Group took the following action:
- i. Adopted its 2021 Fall National Meeting minutes.
 - ii. Received an update on the SERFF Modernization Project by NAIC staff. Attendees on the call were invited to join and attend SERFF Product Steering Committee (PSC) meetings if interested.
 - iii. Received an update on edits to the *Product Filing Review Handbook*. The nonsubstantive edits—such as formatting edits, corrections to the names of working groups or task forces, eliminating outdated or obsolete information or references, incorporating a plain writing approach, and updating current uniform resource locators (URLs)—will not be brought before the Working Group, but any substantive changes will be brought to the Working Group for review and consideration.

- iv. Discussed the annual review of the product coding matrix (PCM) and uniform transmittal document (UTD). Suggestions were requested by May 31 to be able to discuss during the next Working Group meeting and allow time for adopted changes to be implemented in January 2023.
 - B. Discussed and considered all suggestions received on the PCM and UTD. No changes to the PCM were adopted. One suggestion to the UTD was adopted; i.e., to amend the life and health UTD to include an option for “withdrawn” as a status option. This change will be effective Jan. 1, 2023.
15. Heard a presentation on dark patterns on websites, which are website designs that are designed to intentionally mislead consumers into making unintended choices.

Antifraud (D) Task Force

June 30, 2022 (in lieu of the Summer National Meeting)

1. Adopted the Antifraud Plan Repository Workflow.

Market Information Systems (D) Task Force

June 16, 2022 (in lieu of the Summer National Meeting)

1. Adopted its 2021 Fall National Meeting minutes.
2. Adopted its Dec. 3, 2021, minutes, which included the following action:
 - A. Revised its 2022 proposed charges to continue work on developing recommendations for the incorporation of artificial intelligence (AI) abilities in the NAIC Market Information Systems (MIS).
3. Considered the Market Information Systems Research and Development (D) Working Group recommendations regarding the incorporation of AI in the NAIC MIS.
4. Adopted the report of the Market Information Systems Research and Development (D) Working Group, which met March 16 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) and paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings, and took the following action:
 - A. Accepted a request to create or enhance a Market Conduct Annual Statement (MCAS) Personalized Information Capture System (PICS) event to notify subscribers on a recurring basis of outstanding waiver and extension requests.
 - B. Accepted a request to add a new Complaints Database System (CDS) coverage type code for telehealth.
 - C. Completed its review of the 2020 MIS data analysis metrics results.
5. Heard a report on outstanding Uniform System Enhancement Request (USER) forms.
6. Adopted the Market Information Systems Research and Development (D) Working Group’s MIS data analysis metrics and recommendations. Detailed reports were sent to each jurisdiction’s market analysis chief (MAC).

Producer Licensing (D) Task Force

May 5, 2022 (in lieu of the Summer National Meeting)

1. Adopted its 2021 Fall National Meeting minutes.
2. Appointed the Adjuster Licensing (D) Working Group.
3. Adopted the *Guidelines for Amending the Uniform Licensing Applications*.
4. Received a report from the NIPR Board of Directors.
5. Discussed the status of the draft Pet Insurance Model Act.
6. Discussed the industry’s request and potential next steps regarding simplification of the 1033 waiver process.

FINANCIAL CONDITION (E) COMMITTEE

Aug. 12, 2022

1. Adopted its Spring National Meeting minutes.
2. Adopted its July 21 and May 20 minutes. During these meetings, the Committee took the following action:
 - A. Adopted a Request for NAIC Model Law Development to amend the *Property and Casualty Insurance Guaranty Association Model Act* (#540).

- B. Adopted the *Regulatory Considerations Applicable (But Not Exclusive) to Private Equity (PE) Owned Insurers*.
 - C. Adopted the *NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation*.
 - D. Received an update on related party disclosures. The Statutory Accounting Principles (E) Working Group and the Blanks (E) Working Group recently unanimously adopted new disclosures for related party reporting on the detail investment schedules.
 - E. Received an update on the bond proposal project. State insurance regulators and key industry representatives have been working on this project as a top priority to improve accounting and reporting and ensure that regulators have transparency to the investment risks held by insurers.
 - F. Adopted a memorandum of support for certain work performed related to various workstreams created because of the low interest rate environment and ongoing pressure from certain assets.
3. Adopted the report of the Accounting Practices and Procedures (E) Task Force. See the Task Force listing for details.
 4. Adopted the report of the Capital Adequacy (E) Task Force. See the Task Force listing for details.
 5. Adopted the report of the Examination Oversight (E) Task Force. See the Task Force listing for details.
 6. Adopted the report of the Financial Stability (E) Task Force. See the Task Force listing for details.
 7. Adopted the report of the Receivership and Insolvency (E) Task Force. See the Task Force listing for details.
 8. Adopted the report of the Reinsurance (E) Task Force. See the Task Force listing for details.
 9. Adopted the report of the Risk Retention Group (E) Task Force. See the Task Force listing for details.
 10. Adopted the report of the Valuation of Securities (E) Task Force. See the Task Force listing for details.
 11. Adopted the report of the Group Capital Calculation (E) Working Group, including its May 2 minutes. During this meeting, the Working Group took the following action:
 - A. Adopted the 2022 group capital calculation (GCC) template and instructions.
 12. Adopted the report of the Group Solvency Issues (E) Working Group, including its Aug. 11 minutes. During this meeting, the Working Group took the following action:
 - A. Adopted its June 6 minutes. During this meeting, the Working Group took the following action:
 - i. Discussed proposed revisions to the *Financial Condition Examiners Handbook*.
 - ii. Discussed proposed revisions to the *NAIC Own Risk and Solvency Assessment (ORSA) Guidance Manual* (ORSA Guidance Manual). The proposed revisions were exposed for a 30-day public comment period ending July 8.
 - iii. Received an update on International Association of Insurance Supervisors (IAIS) activities.
 - B. Adopted proposed revisions to the ORSA Guidance Manual.
 - C. Discussed comments received on proposed revisions to the *Financial Condition Examiners Handbook*. The proposed revisions, including a friendly amendment proposed by Ohio, were referred to the Financial Examiners Handbook (E) Technical Group for consideration of adoption.
 - D. Discussed comments received on proposed revisions to the *Financial Analysis Handbook*. The proposed revisions were referred to the Financial Analysis Solvency Tools (E) Working Group for consideration of adoption.
 - E. Discussed a referral from the from the Macroprudential (E) Working Group on private equity (PE) issues. The Working Group plans to schedule meetings as needed in the coming months to address the issues raised in the referral.
 13. Adopted the report of the Mutual Recognition of Jurisdictions (E) Working Group, including its June 29 minutes. During this meeting, the Working Group took the following action:
 - A. Reported that the Working Group met May 19 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members) and paragraph 8 (considerations of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to discuss the draft *NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation*. The draft document was exposed for a 30-day public comment period, and no comments were received.
 - B. Adopted the *NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation*.

14. Adopted the report of the National Treatment and Coordination (E) Working Group, including its June 13 minutes. During this meeting, the Working Group took the following action:
 - A. Adopted proposal 2022-1 (Biographical Affidavit Addendum Pages).
 - B. Adopted a motion to request that the Form A Ad Hoc Group incorporate the requests of a referral from the Chief Financial Regulator Forum.
 - C. Adopted a motion to keep a referral from the Financial Analysis (E) Working Group at the National Treatment and Coordination (E) Working Group level for further development.
 - D. Exposed proposal 2022-02 (Primary and Redomestication Form Revisions) for a 45-day public comment period ending July 29.
 - E. Discussed letters of good standing.
15. Adopted agenda item 2021-21: Related Party Reporting, with an effective date of Dec. 31. This agenda item incorporates new reporting requirements for investment transactions with related parties and includes clarifications to *Statement of Statutory Accounting Principles (SSAP) No. 25—Affiliates and Other Related Parties* and *SSAP No. 43R—Loan-Backed and Structured Securities* to make clear that the existing affiliate definition applies to all types of entities, including securitizations.
16. Adopted agenda item 2021-22BWG with an effective date of Dec. 31. These revisions add a new reporting requirement in the investment schedules for investment transactions with related parties. For all investments, except those on Schedule A—Real Estate, reporting entities will report a code to identify the type of related party involvement. Investments that do not have any related party involvement will also be identified with a specific code.
17. Heard a presentation from the Federal Reserve Board (FRB) on its supervisory framework

Accounting Practices and Procedures (E) Task Force

Aug. 11, 2022

1. Adopted its Spring National Meeting minutes.
2. Adopted its 2023 proposed charges, which are unchanged from the prior year.
3. Adopted the report of the Statutory Accounting Principles (E) Working Group, which met Aug. 10 and took the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Adopted its July 18 and May 24 minutes. During these meetings, the Working Group took the following action:
 - i. During its July 18 meeting, the Working Group exposed agenda item 2019-21: Bond Proposal Reporting Revisions, which included proposed reporting changes to Schedule D, Part 1; a proposal for a new schedule to separate issuer obligations and asset-backed securities (ABS); and revised reporting lines and instructions for investment classification for a public comment period ending Oct. 7.
 - ii. During its May 24 meeting, the Working Group adopted the following statutory accounting principles (SAP) clarifications to statutory accounting guidance:
 - a. Blanks Proposal: Adoption expressed support for a blanks proposal (2022-10BWG) that included instructional changes to Schedule T, the State Page, and the Accident and Health Policy Experience Exhibit (AHPEE) to clarify guidance for premium adjustments. The instructions clarify that all premium adjustments shall be allocated as premium in the respective jurisdiction. This agenda item did not result in statutory revisions. (Ref #2022-03)
 - b. *Interpretation (INT) 22-01: Freddie Mac When-Issued K-Deal (WI Trust) Certificates*: The interpretation clarified that an investment in a Freddie Mac “When Issued K-Deal” (WI) Program is in scope of *Statement of Statutory Accounting Principles (SSAP) No. 43R—Loan-Backed and Structured Securities* from acquisition. (Ref #2022-08)

- C. Adopted the following new SAP concepts for statutory accounting guidance:
- i. *SSAP No. 86—Derivatives*: Revisions adopt elements from Financial Accounting Standards Board (FASB) *Accounting Standards Update (ASU) 2017-12, Derivatives and Hedging: Targeted Improvements to Accounting for Hedging Activities* for determining hedge effectiveness. The revisions also incorporate statutory-specific measurement methods for excluded components in hedging instruments with a Jan. 1, 2023, effective date and early adoption permitted. A blanks proposal will incorporate new electronic-only reporting fields for Schedule DB and note disclosures. (Ref #2021-20)
- D. Adopted the following clarifications to statutory accounting guidance:
- i. Revisions incorporate chapter references to the Preamble of the *Accounting Practices and Procedures Manual* (AP&P Manual) and updates from FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 7, Presentation* and FASB Concepts Statement No. 8, *Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements*. Adopted *Issue Paper No. 166 – Definition of Assets* to document the SAP clarifications to the definition of an asset in *SSAP No. 4—Assets and Nonadmitted Assets*. (Ref #2022-01)
 - ii. Revisions rejecting:
 - a. *ASU 2021-09, Leases (Topic 842), Discount Rate for Lessees That Are Not Public Business Entities* for statutory accounting. (Ref #2022-05)
 - b. *ASU 2021-08, Business Combinations, Accounting for Contract Assets and Contract Liabilities from Contracts with Customers* for statutory accounting. (Ref #2022-07)
 - iii. Revisions incorporate disclosures from *ASU 2021-10, Government Assistance, Disclosures by Business Entities about Government Assistance* into *SSAP No. 24—Discontinued Operations and Unusual or Infrequent Items*. (Ref #2022-04)
 - iv. Revisions clarify that the U.S. tax basis equity audit permitted in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies* shall occur at the investee level. (Ref #2022-02)
 - v. Revisions add a practical expedient in *SSAP No. 104R—Share-Based Payments* for the current price from *ASU 2021-07, Compensation – Stock Compensation (Topic 718), Determining the Current Price of an Underlying Share for Equity-Classified Share-Based Awards*. (Ref #2022-06)
- E. Exposed the following new SAP concepts to statutory accounting guidance:
- i. Revisions incorporate concepts to principally define what is eligible for reporting as a bond on Schedule D, Part 1: Long-Term Bonds. Proposed revisions to *SSAP No. 26R—Bonds* and *SSAP No. 43R*, with an updated bond definition and issue paper. (Ref #2019-21)
- F. Exposed the following SAP clarifications to statutory accounting guidance until Oct. 7:
- i. Revisions incorporate *FASB Concepts Statement No. 8, Conceptual Framework for Financial Reporting—Chapter 4, Elements of Financial Statements* to revise the definition of a liability in *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets* and expose a related draft issue paper to detail these SAP clarifications. (Ref #2022-01)
 - ii. Revisions clarify that leasehold improvements shall be immediately expensed upon lease termination unless limited exclusions in *SSAP No. 73—Health Care Delivery Assets and Leasehold Improvements in Health Care Facilities* are met. (Ref #2021-25)
 - iii. Revisions clarify that an asset pledged as collateral must qualify as an admitted invested asset before the collateral loan is admitted. (Ref #2022-11)
 - iv. Revisions identify foreign open-end investment funds as a fund in which ownership percentage is not deemed to reflect control unless the entity actually controls with the power to direct the underlying company. (Ref #2022-13)
 - v. Revisions propose to reject *ASU 2022-02, Troubled Debt Restructurings and Vintage Disclosures* for statutory accounting. (Ref #2022-10)
 - vi. Revisions incorporate derivative guidance from *ASU 2017-12* and *ASU 2022-01, Fair Value Hedging – Portfolio Layer* to include guidance for the portfolio layer method and partial-term hedges. (Ref #2022-09)

- vii. Exposure proposes to nullify *INT 03-02: Modification to an Existing Intercompany Pooling Arrangement*, as it is inconsistent with *SSAP No. 25—Affiliates and Other Related Parties*. (Ref #2022-12)
- G. Received an update on the following items:
 - i. Received an update on U.S. generally accepted accounted principles (GAAP) exposures, noting that pending items will be addressed during the normal maintenance process. In addition, NAIC staff are monitoring developments regarding the federal Inflation Reduction Act of 2022 for any items that may affect insurers.
 - ii. Received an update regarding amendments made to the *Valuation Manual* by the Life Actuarial (A) Task Force since the 2021 Summer National Meeting.
 - iii. Received a referral from the Macprudential (E) Working Group.
- 4. Adopted the report of the Blanks (E) Working Group, including an e-vote that concluded June 8 to adopt proposal 2022-13BWG, which modifies life blank five-year historical data question 68 and question 69 to reference group comprehensive and question 70 and question 71 to reflect the inclusion of all health lines of business other than group comprehensive. The crosschecks for these questions are being modified accordingly. Interested parties requested an annual 2022 effective date. The Working Group also met May 25. During this meeting, the Working Group took the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Adopted its editorial listing and the following proposals:
 - i. 2022-01BWG – Add new questions to General Interrogatories Part 1 asking if the reporting entity accepts cryptocurrency for payment of premiums, which cryptocurrencies are accepted, and whether they are held for investment or immediately converted to U.S. dollars (2021-24 SAPWG).
 - ii. 2022-02BWG – Add four new electronic-only columns to Schedule D, Part 6, Section 1, for Prior Year Book/Adjusted Carrying Value (BACV) (Column 16), Prior Year Nonadmitted Amount (Column 17), Prior Year Sub-2 Verified Value (Column 18), and Prior Year VISION Filing Number (Column 19) (2021-22 SAPWG).
 - iii. 2022-03BWG – Split Line 5 of the Quarterly Part 1 – Loss Experience and Part 2 – Direct Premiums Written into Line 5.1 – Commercial multiple peril (non-liability portion) and Line 5.2 – Commercial multiple peril (liability portion).
 - iv. 2022-04BWG – Add a new supplement to capture premium and loss data for Annual Statement Line 17.1, 17.2, and 17.3 of the Exhibit of Premiums and Losses (State Page) – Other Liability by more granular lines of business.
 - v. 2022-05BWG – Add line numbers to the status data points in the Life/Fraternal, Health, and Property/Casualty Schedule T footnote.
 - vi. 2022-06BWG – Revise the Health Annual Statement Test language in the annual statement instructions.
 - vii. 2022-07BWG – Modify the Health Actuarial Opinion Instructions. Add definitions of “actuarial asset” and “actuarial liability.” Modify Section 4—Identification, Section 5—Scope, and Section 7—Opinion to clarify that the actuary’s opinion covers actuarial assets, as well as actuarial liabilities. Modify Section 9 to clarify that the guidance related to the type of opinion rendered by an appointed actuary covers both actuarial assets and actuarial liabilities.
 - viii. 2022-08BWG – Modify the instructions in Section 1, Section 3, and Section 8 of the Property/Casualty Actuarial Opinion Instructions to reflect the changes adopted by the Actuarial Opinion (C) Working Group.
 - ix. 2022-09BWG – Changes to the Life/Fraternal VM-20, Requirements for Principle-Based Reserves for Life Products, Reserves Supplement blank.
 - x. 2022-10BWG – Add instructions to Schedule T, the State pages, and the AHPEE to clarify guidance for reporting premium adjustments by jurisdiction.

- xi. 2022-11BWG Modified – Update the life/fraternal blank asset valuation reserve (AVR) factors to correspond with the adopted risk-based capital (RBC) factors for the expanded bond designation categories.
- C. Deferred proposal 2021-18BWG – Modify the Life Insurance (State Page) to include the line of business detail reported on the Analysis of Operations by Lines of Business pages.
- D. Exposed two new proposals for a public comment period ending Oct. 25.
- E. Received a memorandum from the Property and Casualty Risk-Based Capital (E) Working Group regarding reinsurer designation equivalent rating factors.
- 5. Adopted the following accounting and reporting revisions from the working group reports regarding related parties by separate votes:
 - A. SSAP No. 25 and SSAP No. 43R: Revisions clarify application guidance for the existing affiliate definition and incorporate reporting codes within the investment schedules to identify investments that involve related parties. (Ref #2021-21) The Statutory Accounting Principles (E) Working Group adopted this item during its May 24 meeting.
 - B. 2021-22BWG – Add a new reporting requirement in the investment schedules for investment transactions with related parties. In addition to capturing direct loans in related parties, it will also capture information involving securitizations, or other similar investments, where the related party is a sponsor/originator, along with whether the underlying investment is in a related party. The Blanks (E) Working Group adopted this item during its May 25 meeting.

Capital Adequacy (E) Task Force

Aug. 11, 2022

1. Adopted its Spring National Meeting minutes.
2. Adopted its June 30 and April 28 minutes. During these meetings, the Task Force took the following action:
 - A. Adopted the following proposals: 1) 2022-02-P; 2) 2022-05-L; 3) 2022-06-L; 4) 2021-17-CR MOD; 5) 2022-01-P; 6) 2022-03-L; 7) 2021-18-H-MOD; 8) 2021-15-CR; and 9) 2021-14-P.
 - B. Discussed affiliated investments blanks and instructions.
3. Adopted the report of the Health Risk-Based Capital (E) Working Group, including its July 21 minutes. During this meeting, the Working Group took the following action:
 - A. Adopted its May 11, May 4, and April 20 minutes. During these meetings, the Working Group took the following action:
 - i. Adopted its Spring National Meeting minutes.
 - ii. Heard presentations from the American Academy of Actuaries (Academy) on the methodologies considered in the H2 – Underwriting Risk component and AM Best on Best’s Capital Adequacy Ratio (BCAR).
 - iii. Exposed the health affiliated investment instructions and blank for a 61-day public comment period ending July 5.
 - iv. Received an update on the Health Test Ad Hoc Group and the Excessive Growth Charge Ad Hoc Group.
 - B. Adopted its working agenda.
 - C. Adopted its 2022 newsletter.
 - D. Adopted its 2021 risk-based capital (RBC) statistics.
 - E. Referred the health affiliated investment instructions and blanks to the Task Force for discussion.
 - F. Exposed the Academy’s response letter on its recommendation and timeline for the H2 – Underwriting Risk review for a 31-day public comment period ending Aug. 22.
4. Adopted the report of the Life Risk-Based Capital (E) Working Group, including its July 27 minutes. During this meeting, the Working Group took the following action:
 - A. Adopted its Spring National Meeting minutes.

- B. Adopted its June 17, June 3, April 22, and April 7 minutes. During these meetings, the Working Group took the following action:
 - i. Adopted the structure and instructions for the Academy C2 Work Group recommendation on mortality.
 - ii. Adopted the instructional change for residual tranches.
- C. Adopted its 2022 newsletter.
- D. Discussed the life affiliated investments.
- E. Adopted its working agenda.
- 5. Adopted the report of the Property and Casualty Risk-Based Capital (E) Working Group, which met Aug. 9 and took the following action:
 - A. Adopted the Catastrophe Risk (E) Subgroup’s June 14 and April 19 minutes. During these meetings, the Subgroup took the following action:
 - i. Adopted its Spring National Meeting minutes.
 - ii. Exposed proposal 2022-04-CR for a 30-day public comment period ending July 13.
 - iii. Adopted proposal 2021-17-CR MOD.
 - iv. Discussed the independent model review instructions in the Rcat component.
 - v. Evaluated other catastrophe risk for possible inclusion in the Rcat component.
 - vi. Heard a presentation from the International Society of Catastrophe Managers (ISCM) on different programs to elevate the catastrophe risk profession that the ISCM offers.
 - B. Adopted its June 24, June 7, and April 26 minutes. During these meetings, the Working Group took the following action:
 - i. Adopted its Spring National Meeting minutes.
 - ii. Adopted the following proposals: 1) 2021-17-CR MOD; 2) 2022-01-P; and 3) 2022-02-P.
 - iii. Exposed the property/casualty (P/C) affiliated investment instructions and blank for a 60-day public comment period ending June 25.
 - iv. Forwarded the referral regarding the reinsurer designation equivalent rating factors to the Blanks (E) Working Group.
 - v. Heard updates on current P/C RBC projects from the Academy.
 - C. Referred the P/C affiliated investment instructions and blanks to the Task Force for discussion.
 - D. Adopted proposal 2022-04-CR, which includes the U.S. and non-U.S. lists of wildfire events between 2013 and 2021.
 - E. Adopted its 2022 newsletter for adopted proposals and editorial changes to the 2022 P/C RBC formula.
 - F. Exposed proposal 2022-07-P, which modified the PR035 lines of business categories to be consistent with the Annual Statement, Underwriting and Investment Exhibit, Part 1B categories for a 30-day public comment period ending Sept. 8.
 - G. Exposed proposal 2022-08-CR, which provides further clarification on the independent model review instructions for a 30-day public comment period ending Sept. 8.
 - H. Heard updates from the Academy regarding current P/C RBC projects.
 - I. Adopted the 2021 P/C RBC statistics.
 - J. Adopted its working agenda.
 - K. Discussed other catastrophe risks for possible inclusion in the Rcat component.
 - L. Heard a presentation from the National Oceanic and Atmospheric Administration (NOAA) on the forecasting and resilience of severe thunderstorms.
- 6. Adopted the report of the Risk-Based Capital Investment Risk and Evaluation (E) Working Group, which met Aug. 11 and took the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Adopted its working agenda.
 - C. Received updates from the Valuation of Securities (E) Task Force and the Statutory Accounting Principles (E) Working Group.
 - D. Discussed its next steps.

- E. Received a referral from the Macroprudential (E) Working Group.
- 6. Adopted proposal 2022-04-CR.
- 7. Discussed the affiliated investment instructions and blanks.
- 8. Adopted its working agenda.

Examination Oversight (E) Task Force

Aug. 11, 2022

- 1. Adopted its 2021 Fall National Meeting minutes.
- 2. Adopted the report of the Financial Examiners Coordination (E) Working Group, which met April 14 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities or individuals) of the NAIC Policy Statement on Open Meetings.
- 3. Adopted the report of the Financial Analysis Solvency Tools (E) Working Group, which met Aug. 1 and June 13 in regulator-to-regulator session, pursuant to paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings.
- 4. Adopted the report of the Electronic Workpaper (E) Working Group, which met July 20, May 23, April 18, Feb. 24, and Jan. 24 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings.
- 5. Received an update on the status of the Solvency Workpaper Software Modernization project that the Electronic Workpaper (E) Working Group is leading.
- 6. Adopted the report of the Financial Examiners Handbook (E) Technical Group, including its April 18 minutes. During this meeting, the Working Group took the following action:
 - A. Discussed its 2022 project listing.
 - B. Received an update on related NAIC working group activities that will affect examination guidance.
- 7. Adopted the report of the Information Technology (IT) Examination (E) Working Group, including its May 2 minutes. During this meeting, the Working Group took the following action:
 - A. Discussed its 2022 project listing.

Financial Stability (E) Task Force

Aug. 12, 2022 (joint session with the Macroprudential (E) Working Group)

- 1. Adopted its Summer National Meeting minutes.
- 2. Adopted its June 27 minutes. During this meeting, the Task Force took the following action:
 - A. Received comments on the proposed state insurance regulator responses to the list of the Working Group's considerations.
 - B. Adopted the proposed state insurance regulator responses to the list of the Working Group's considerations.
 - C. Received an update on key initiatives.
- 3. Heard an update on Financial Stability Oversight Council (FSOC) developments.
- 4. Received an update from the Working Group. On June 27, the Task Force adopted a document detailing:
 - 1) a list of the Working Group's considerations, private equity (PE)-related and other;
 - 2) summaries of state insurance regulator discussions and interested party comments; and
 - 3) a recommended disposition for each consideration.
- 5. Heard an international update, which included an update on the International Association of Insurance Supervisors' (IAIS') global monitoring exercise.

Receivership and Insolvency (E) Task Force

Aug. 11, 2022

- 1. Adopted its June 2 minutes. During this meeting, the Task Force took the following action:
 - A. Adopted its Spring National Meeting minutes.

- B. Adopted a Request for NAIC Model Law Development to amend the *Property and Casualty Insurance Guaranty Association Model Act* (#540).
- 2. Adopted the report of the Receiver’s Handbook (E) Subgroup, including its July 19 minutes. During this meeting, the Subgroup took the following action:
 - A. Adopted its Nov. 18, 2021, minutes.
 - B. Adopted revisions to Chapter 1 and Chapter 2 of the *Receiver’s Handbook for Insurance Company Insolvencies* (Receiver’s Handbook).
 - C. Exposed Chapter 3, Chapter 4, and Chapter 5 of the Receiver’s Handbook for a 30-day public comment period ending Aug. 19. The Subgroup’s drafting groups continue to make progress on the remaining chapters of the Receiver’s Handbook.
- 3. Adopted the report of the Receivership Law (E) Working Group, including its July 18 minutes. During this meeting, the Working Group took the following action:
 - A. Adopted its June 10 and May 12 minutes. During these meetings, the Working Group took the following action:
 - i. Discussed a draft memorandum of understanding between state insurance departments, receivers, and guaranty funds the states could consider using in the event of an unexpected liquidation to enhance preliquidation coordination and communication.
 - ii. Discussed proposals and options for enhancing preliquidation coordination and communication from the National Conference of Insurance Guaranty Funds (NCIGF)
 - B. Discussed options for improving pre-receivership communication and information sharing between receivers and guaranty funds, including possible amendments to NAIC model laws, a draft memorandum of understanding, and improved guidance for receivers. The Working Group agreed to pursue the memorandum and improved guidance.
 - C. Exposed a draft memorandum for a 45-day public comment period ending Sept. 1.
- 4. Adopted the report of the Receivership Financial Analysis (E) Working Group, which met Aug. 11 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings, to discuss companies in receivership and related topics.
- 5. Adopted 2023 proposed charges for the Task Force and its working groups and subgroup.
- 6. Heard an update on international resolution activities. The International Association of Insurance Supervisors (IAIS) is developing an application paper on policyholder protection schemes. The U.S. recently completed its IAIS-targeted jurisdictional assessments regarding the holistic framework, which included an assessment of insurance resolution.

Reinsurance (E) Task Force

July 25, 2022 (in lieu of the Summer National Meeting)

- 1. Adopted its Spring National Meeting minutes.
- 2. Adopted its May 16 minutes. During this meeting, the Task Force took the following action:
 - A. Adopted revisions to the *Uniform Checklist for Reciprocal Jurisdiction Reinsurers*.
- 3. Adopted its 2023 proposed charges.
- 4. Adopted the report of the Reinsurance Financial Analysis (E) Working Group, which met May 18 in regulator-to-regulator session, pursuant to paragraph 3 (specific companies, entities, or individuals) of the NAIC Policy Statement on Open Meetings. During this meeting, the Working Group completed the reviews of certified reinsurers and reciprocal jurisdiction reinsurers.
- 5. Received a status report on the reinsurance activities of the Mutual Recognition of Jurisdictions (E) Working Group.
- 6. Received a status report on the states’ implementation of the 2019 revisions to the *Credit for Reinsurance Model Law* (#785), the *Credit for Reinsurance Model Regulation* (#786), and the implementation of the *Term and Universal Life Insurance Reserve Financing Model Regulation* (#787).

Risk Retention Group (E) Task Force

The Risk Retention Group (E) Task Force did not meet at the Summer National Meeting.

Valuation of Securities (E) Task Force

Aug. 11, 2022

1. Adopted its Spring National Meeting minutes.
2. Adopted its June 9 minutes. During this meeting, the Task Force took the following action:
 - A. Received and discussed a memorandum of support from the Financial Condition (E) Committee for several interrelated initiatives focused on asset risk that the Task Force, as well as other NAIC groups, are working on.
 - B. Received and discussed comments on a proposed referral to the Blanks (E) Working Group to add fixed income analytical risk measures to investments reported on Schedule D, Part One. The proposal referral was exposed for a 45-day public comment period ending May 20.
 - C. Received a proposed amendment to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) to update the role of the Securities Valuation Office (SVO) regarding interpreting accounting and reporting. The proposed amendment was exposed for 30-day public comment period ending July 9.
 - D. Received a proposed amendment to the P&P Manual to update Part Four for NAIC designation category and additional price points. The proposed amendment was exposed for 30-day public comment period ending July 9.
 - E. Exposed an Investment Analysis Office (IAO) issue paper on the risk assessment of structured securities – collateralized loan obligations (CLOs) for a 36-day public comment period ending July 15.
 - F. Received a report from the Structured Securities Group (SSG) on modeling and scenarios for residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS).
 - G. Received an update from the credit rating provider (CRP) ad hoc group.
3. Adopted an amendment to the P&P Manual clarifying the role of the SVO regarding interpreting accounting and reporting. The amendment was exposed for a 30-day public comment period ending July 9.
4. Adopted an amendment to the P&P Manual updating Part Four for NAIC designation categories and additional price points. The amendment was exposed for a 30-day public comment period ending July 9.
5. Adopted an amendment to the P&P Manual to update the definition of principal protected securities (PPS). The amendment was exposed for a 30-day public comment period ending July 28.
6. Received and discussed a referral from the Statutory Accounting Principles (E) Working Group on the adoption of its related party reporting agenda item.
7. Received and discussed a referral from the Macroprudential (E) Working Group on its plan for the list of Macroprudential (E) Working Group considerations affecting the Task Force and supported by the Financial Condition (E) Committee.
8. Exposed its 2023 proposed charges for a 30-day public comment period ending Sept. 12.
9. Exposed an SVO memorandum on alternatives to add fixed income analytical risk measures to investments reported on Schedule D, Part One, for a 30-day public comment period ending Sept. 12.
10. Exposed a revised proposed amendment to the P&P Manual to update the definition of other non-payment risk assigned a subscript “S” for a 30-day public comment period ending Sept. 12.
11. Received comments and heard an SSG report on the IAO issue paper on the risk assessment of structured securities (i.e., CLOs) that was exposed for a 36-day public comment period ending July 15. Exposed a staff presentation answering questions received on comments for a 30-day public comments period ending Sept. 12.
12. Received staff reports on projects of the Statutory Accounting Principles (E) Working Group, an update on the Ad Hoc CRP Study Group, and an update from the SSG on modeling scenarios.

FINANCIAL REGULATION STANDARDS AND ACCREDITATION (F) COMMITTEEAug. 10, 2022

1. Adopted its Spring National Meeting minutes.
2. Adopted an update to the examination coordination guidelines that the Financial Examiners Handbook (E) Technical Group recommended. The update ensures consistency between the *Financial Condition Examiners Handbook* and the accreditation guidelines, which clarifies coordination for examinations that are part of a holding company group with insurers domiciled in multiple states.
3. Adopted the recommendation that the 2021 revisions to the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450) are acceptable for accreditation but not required. The revisions address the continuation of essential services through affiliated intercompany agreements with an insurer that is placed into receivership.
4. Adopted updates to the Preamble of the *Accreditation Program Manual* to reference VM-21, Requirements for Principle-Based Reserves for Variable Annuities. The revisions serve as a reference to how captives that reinsure variable annuity (VA) business are addressed in the accreditation standards.
5. Reported that it met Aug. 9 in regulator-to-regulator session, pursuant to paragraph 7 (consideration of individual state insurance department's compliance with NAIC financial regulation standards) of the NAIC Policy Statement on Open Meetings, to: 1) discuss state-specific accreditation issues; and 2) vote to award continued accreditation to the insurance departments of Alaska, Iowa, Minnesota, and Ohio.

INTERNATIONAL INSURANCE RELATIONS (G) COMMITTEEAug. 10, 2022

1. Adopted its Spring National Meeting minutes.
2. Adopted its July 21 minutes. During this meeting, the Committee took the following action:
 - i. Discussed the International Association of Insurance Supervisors' (IAIS') public consultation on the draft criteria that will be used to assess whether the aggregation method (AM) provides comparable outcomes to the insurance capital standard (ICS).
3. Heard a presentation on the Federal Reserve Board (FRB) Insurance Policy Advisory Committee (IPAC) paper on the ICS. The presentation described the analysis undertaken by the IPAC, the potential impact of the ICS and the IPAC's recommended revisions to the ICS, and its conclusions.
4. Heard an update on recent activities and priorities of the IAIS, including: 1) a review of recent committee meetings and the annual Global Seminar; 2) an update on the targeted jurisdictional assessments (TJAs) as part of the implementation of the holistic framework; 3) the comparability assessment process for the AM; and 4) upcoming activities underway related to climate; diversity, equity, and inclusion (DE&I); operational resilience; cyber; and liquidity metrics.
5. Heard an update on international activities, including: 1) recent and upcoming meetings, events, and speaking engagements with international regulators; 2) the upcoming Fall 2022 International Fellows Program; 3) upcoming meetings and participation in workstreams at the Organisation for Economic Co-operation and Development (OECD) Insurance and Private Pensions Committee; and 4) a review of recent working group meetings of the Sustainable Insurance Forum (SIF).

INNOVATION, CYBERSECURITY, AND TECHNOLOGY (H) COMMITTEEAug. 10, 2022

1. Adopted its Spring National Meeting minutes.
2. Adopted a Request for NAIC Model Law Development from the Privacy Protections (H) Working Group to replace the *NAIC Insurance Information and Privacy Protection Model Act* (#670) and the *Privacy of Consumer Financial and Health Information Regulation* (#672) into a new model.

3. Adopted the report of the Big Data and Artificial Intelligence (H) Working Group, which met Aug. 10 and took the following action:
 - A. Adopted its July 14 minutes. During this meeting, the Working Group took the following action:
 - i. Adopted its Spring National Meeting minutes.
 - ii. Received a report from Workstream One, which is focusing on artificial intelligence (AI)/machine learning (ML) surveys.
 - iii. Received a report from Workstream Two, which is focusing on determining the appropriate regulatory evaluation of third-party data and model vendors.
 - iv. Received a report from Workstream Three, which is focusing on evaluating the tools and resources for monitoring the insurance industry's use of data and AI.
 - v. Received a report from Workstream Four, which is focusing on the regulatory framework and how best to implement the expectations outlined in the *NAIC Principles on Artificial Intelligence*, which include regulatory guidance such as model governance.
 - B. Heard a presentation from Faegre Drinker Biddle & Reath LLP on different perspectives on AI risk management and governance.
 - C. Heard a presentation Milliman on bias detection methods and tools.
 - D. Received a report from Workstream One.
 - E. Received a report from Workstream Two.
4. Adopted the report of the Cybersecurity (H) Working Group, including its July 14 minutes. During this meeting, the Working Group took the following action:
 - A. Received an update on its revised work plan, which includes: 1) developing a state insurance regulator cybersecurity survey; 2) considering the development of a cybersecurity response plan to aid state insurance regulators in situations where cybersecurity events take place within the insurance industry; 3) determining training that would be beneficial to state insurance regulators; and 4) monitoring state, federal, and international cybersecurity efforts.
 - B. Received an update on the implementation of the *Insurance Data Security Model Law* (#668). Model #668 has now been adopted by 21 states, representing more than 80% of the market by gross written premiums.
 - C. Received an update on federal activity related to cybersecurity.
 - D. Received an update on the NAIC's cybersecurity tabletop exercises.
 - E. Received an update on state insurance regulator cybersecurity tools. NAIC staff prepared a memorandum summarizing cybersecurity tools available to state insurance regulators as a resource for regulators.
5. Adopted the report of the E-Commerce (H) Working Group, which met May 26 and May 5 in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings.
6. Adopted the report of the Innovation in Technology and Regulation (H) Working Group, including its May 25 minutes. During this meeting, the Working Group took the following action:
 - A. Reviewed and discussed its charges.
 - B. Discussed different approaches insurance departments are taking related to encouraging innovation through technology in their states. It plans to hold another meeting on industry perspectives related to those approaches after the Summer National Meeting.
7. Adopted the report of the Privacy Protections (H) Working Group, which met Aug. 9 and took the following action:
 - A. Adopted its Aug. 2 minutes. During this meeting, the Working Group took the following action:
 - i. Adopted its June 15 minutes. During this meeting, the Working Group took the following action:
 - a. Adopted its Spring National Meeting minutes.
 - b. Heard updates on state and federal privacy legislation.
 - c. Discussed comments received on the exposure draft of its revisions to Section 1 through Section 3 of Model #670.

- ii. Adopted a Request for NAIC Model Law Development to replace Model #670 and Model #672 with one new model.
 - iii. Discussed its revised work plan.
 - B. Heard updates on state and federal privacy legislation.
 - C. Discussed next steps on the *Consumer Data Ownership and Use* white paper.
 - D. Discussed next steps for the drafting of the new privacy model and the Working Group’s final work plan.
8. Received an update on its projects, including the proposed ICT-Hub and the NAIC Collaboration Forum on algorithmic bias.
 9. Heard presentations on the following topic: “Approaches Companies Are or Can Implement to Manage and Mitigate the Risk of Unintended Bias and Illegal Discrimination When Developing and Using AI/ML.”

NAIC/CONSUMER LIAISON COMMITTEE

Aug. 12, 2022

1. Adopted its Spring National Meeting minutes.
2. Discussed recommendations for the enhancement of Liaison Committee and consumer liaison engagement in NAIC activities.
3. Heard an update on Section 1557 to help state insurance regulators prepare for helping companies comply with the new updates from the Disability Rights Education and Defense Fund (DREDF), the Whitman-Walker Institute, and Georgians for a Healthy Future (GHF).
4. Heard a presentation on the impact of recent federal court decisions on consumers from the National Women’s Law Center (NWLC), Out2Enroll, and Dialysis Patient Citizens (DPC).
5. Heard a presentation on social inflation from the California Western School of Law.
6. Heard a short update on the new rules for disaster claims in California, Colorado, and Oklahoma from United Policyholders (UP). The new rules are helping consumers cope with the increase in disasters.

NAIC/AMERICAN INDIAN AND ALASKA NATIVE LIAISON COMMITTEE

Aug. 11, 2022

1. Adopted its June 28 minutes, which included the following action:
 - A. Adopted its Spring National Meeting minutes.
 - B. Heard a presentation on consumer outreach and education regarding fraud. This is valuable to industry, state insurance regulators, and consumers as fraud is increasing. Therefore, outreach and educational opportunities to each of these groups is invaluable.
 - C. Heard a presentation on “Maximizing Collaboration Between Health Insurers and Tribal Communities – What Blue Cross and Blue Shield of New Mexico and Blue Cross and Blue Shield of Oklahoma are Doing to Build Partnerships.” This is important because it allows industry success stories to be shared and used by state insurance regulators and consumers.
 - D. Heard a presentation on “New Mexico’s Health Insurance Exchange – American Indian Program.” This is an important presentation because it helps consumers, state insurance regulators, and industry to understand best practices found to be useful by this exchange.
2. Heard a presentation on the Sovereign Nations Health Consortium (SNHC) and Sovereign Nations Insurance (SNI). The SNHC is a consortium of three federally recognized Utah-based tribes: the Kanosh Band of Paiutes; the Confederated Tribes of the Goshute Reservation; and the Shivwits Band of Paiutes. The SNI operates under tribal code; is regulated under the SNHC tribal regulatory authority; is about one-year old; and is currently offering insurance products to both Indian and non-Indian members.
3. Discussed survey results of growing insurance markets by tribal nations and the SNI and its business model, which is important so state insurance regulators can think of ways they might be able to work with such entities going forward. The survey inquired on whether tribal insurance programs were operating in state jurisdictions as admitted carriers and whether there was knowledge of state-licensed agents selling tribal insurance products.

4. Received an update from its ad hoc drafting groups. Ad Hoc Group 1 will focus on cultural awareness and communication between tribal and non-tribal members. Ad Hoc Group 2 will produce a report on access to the federal Affordable Care Act (ACA), ACA navigation, and non-Individual Health Coverage (IHC) insurance products. This group will also report on “lessons learned” in Indian Country through the COVID-19 pandemic. There was also a solicitation for additional volunteers to join the ad hoc groups.

EXECUTIVE (EX) COMMITTEE AND PLENARY

Executive (EX) Committee and Plenary Aug. 13, 2022, Minutes..... 3-2

 Adopted Amendments to the *Valuation Manual* (Attachment One)..... 3-12

 Adopted *Actuarial Guideline LIII—Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves* (AG 53) (Attachment Two)..... 3-13

 Adopted the Pet Insurance Model Act (Attachment Three)..... 3-22

 Adopted Revisions to the “Other Health” Market Conduct Annual Statement (MCAS) Data Call and Definitions (Attachment Four) 3-32

 Adopted the Homeowners MCAS Digital Claim Interrogatories and Lawsuit Data Elements and Definitions (Attachment Five) 3-42

 Adopted the Private Passenger Auto (PPA) MCAS Digital Claim Interrogatories and Lawsuit Data Elements and Definitions (Attachment Six) 3-58

 Adopted the Addition of Accelerated Underwriting (AU) Data Elements, Interrogatories, and Definitions into the Life MCAS (Attachment Seven) 3-75

 Adopted the *Regulatory Considerations Applicable to (But Not Exclusive to) Private Equity (PE) Insurers* (Attachment Eight) 3-89

 Adopted the *NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation (GCC)* (Attachment Nine)..... 3-99

 Report on States’ Implementation of NAIC-Adopted Model Laws and Regulations (Attachment Ten) 3-103

Draft: 8/25/22

Executive (EX) Committee and Plenary
Portland, Oregon
August 13, 2022

The Executive (EX) Committee and Plenary met in Portland, OR, Aug. 13, 2022. The following Committee and Plenary members participated: Dean L. Cameron, Chair (ID); Chlora Lindley-Myers, Vice Chair (MO); Andrew N. Mais, Vice President (CT); Jon Godfread, Secretary-Treasurer (ND); David Altmaier, Most Recent Past President (FL); Lori K. Wing-Heier (AK); Mark Fowler (AL); Alan McClain represented by Russ Galbraith (AR); Evan G. Daniels (AZ); Ricardo Lara (CA); Michael Conway (CO); Trinidad Navarro (DE); John F. King (GA); Colin M. Hayashida (HI); Doug Ommen (IA); Dana Popish Severinghaus (IL); Amy L. Beard represented by Victoria Hastings (IN); Vicki Schmidt (KS); Sharon P. Clark (KY); James J. Donelon (LA); Gary D. Anderson (MA); Kathleen A. Birrane (MD); Timothy N. Schott (ME); Anita G. Fox represented by Karin Gyger (MI); Grace Arnold (MN); Mike Chaney represented by David Browning (MS); Troy Downing (MT); Mike Causey represented by Jackie Obusek (NC); Eric Dunning (NE); Marlene Caride (NJ); Barbara D. Richardson (NV); Adrienne A. Harris represented by Sumit Sud (NY); Judith L. French (OH); Glen Mulready (OK); Andrew R. Stolfi (OR); Michael Humphreys (PA); Elizabeth Kelleher Dwyer (RI); Michael Wise represented by Diane Cooper (SC); Larry D. Deiter (SD); Cassie Brown represented by Jamie Walker (TX); Jon Pike (UT); Scott A. White (VA); Kevin Gaffney (VT); Mike Kreidler represented by Molly Nollette (WA); Nathan Houdek (WI); Allan L. McVey represented by Erin K. Hunter (WV); and Jeff Rude (WY).

1. Received the Report of the Executive (EX) Committee

Director Cameron reported that the Executive (EX) Committee met Aug. 11 and adopted the Aug. 10 report of the joint meeting of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee.

The Committee adopted its June 21 report, which included the following action: 1) received an update on the NAIC's 2022 financials and an overview of preliminary work on the 2023 budget; 2) approved the Catastrophe Modeling Center of Excellence (COE) Fiscal Impact Statement; 3) approved the Variable Annuity Model Office Fiscal Impact Statement; and 4) received an update on the Enterprise Resource Planning (ERP) project.

The Committee adopted the reports of its task forces: 1) the Climate and Resiliency (EX) Task Force; 2) the Government Relations (EX) Leadership Council; 3) the Long-Term Care Insurance (EX) Task Force; and 4) the Special (EX) Committee on Race and Insurance.

The Committee approved the Request for NAIC Model Law Development to amend the *Property and Casualty Insurance Guaranty Association Model Act* (#540).

The Committee also approved the Request for NAIC Model Law Development to draft the new Insurance Consumer Privacy Protection Model Law.

The Committee adopted the revisions to the NAIC Consumer Participation Plan of Operation.

The Committee received a status report on the NAIC *State Ahead* strategic plan implementation.

The Committee received a status report on model law development efforts for amendments to: 1) the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act* (#171); 2) the *Mortgage Guaranty Insurance Model Act* (#630); 3) the *Nonadmitted Insurance Model Act* (#870); and 4) the new Pet Insurance Model Act.

The Committee heard reports from the National Insurance Producer Registry (NIPR) and the Interstate Insurance Product Regulation Commission (Compact).

2. Adopted by Consent the Committee, Subcommittee, and Task Force Minutes of the Spring National Meeting

Director Lindley-Myers made a motion, seconded by Commissioner Donelon, to adopt by consent the committee, subcommittee, and task force minutes of the Spring National Meeting. The motion passed unanimously.

3. Received the Report of the Life Insurance and Annuities (A) Committee

Director French reported that the Life Insurance and Annuities (A) Committee met Aug. 11. During this meeting, the Committee adopted its July 20 minutes, which included the following action: 1) adopted nine *Valuation Manual* amendments; and 2) adopted *Actuarial Guideline LIII—Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves* (AG 53).

The Committee received an update from the Accelerated Underwriting (A) Working Group. The Working Group continues to collaborate with other NAIC groups as it works on developing regulatory guidance for state insurance regulators related to accelerated underwriting (AU) in life insurance, and it plans to meet in October to continue work on its goals.

The Committee adopted the report of the Annuity Suitability (A) Working Group, including its July 25 minutes. The Working Group continues to work on a frequently asked questions (FAQ) document about the safe harbor/comparable standards provision in the revised *Suitability in Annuity Transactions Model Regulation* (#275), which added a best interest standard of conduct for insurers and producers.

The Committee adopted the report of the Life Actuarial (A) Task Force. In particular, the Task Force is considering limited, targeted revisions to the *Life Insurance Illustrations Model Regulation* (#582) to address the need for the Task Force to make continual changes to the indexed universal life (IUL) illustration actuarial guideline to address product features causing aggressive illustrations.

The Committee also agreed to have the Life Insurance Online Guide (A) Working Group focus on updating life insurance information on the NAIC website. State insurance regulators interested in participating in the Working Group can contact Jennifer Cook (NAIC).

The Committee received an update from Workstream Four of the Special (EX) Committee on Race and Insurance that it plans to schedule future presentations on marketing in underserved communities from the agent perspective.

4. Adopted the Amendments to the *Valuation Manual*

Director French reported on nine *Valuation Manual* amendments for consideration. The package of amendments was adopted by the Life Insurance and Annuities (A) Committee on July 20. The *Valuation Manual* amendments provide technical clarifications and guidance to existing requirements in the *Valuation Manual*.

Director French noted that amendment 2022-04 names the Secured Overnight Financing Rate (SOFR) as the official replacement to the London Interbank Offered Rate (LIBOR) for the calculation of swap spreads, and it establishes a methodology for the NAIC to set short-term and long-term swap spreads. LIBOR will cease to be published by mid-2023.

Director French made a motion, seconded by Commissioner Mulready, to adopt the amendments to the *Valuation Manual* (Attachment One). The motion was adopted by 46 jurisdictions, representing 93.84% of the applicable premiums written. Director Cameron confirmed that the vote satisfied the requirements to amend the *Valuation Manual*. The motion passed.

5. Adopted Actuarial Guideline LIII—Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves (AG 53)

Director French reported that the new AG 53 is part of an NAIC effort regarding the oversight of the increase in private equity (PE) and complex assets in the life insurance industry.

AG 53 was adopted by the Life Actuarial (A) Task Force on June 16 and the Life Insurance and Annuities (A) Committee on July 20. Beginning April 2023, state insurance regulators will receive additional documentation and analysis related to PE and complex assets supporting life insurance business.

Director French made a motion, seconded by Commissioner Donelon, to adopt AG 53 (Attachment Two). The motion passed unanimously.

6. Received the Report of the Health Insurance and Managed Care (B) Committee

Commissioner Mulready reported that the Health Insurance and Managed Care (B) Committee met Aug. 11 and adopted its Spring National Meeting minutes.

The Committee adopted the report of the Consumer Information (B) Subgroup, which has not met since March 22. However, in June, the Subgroup chair and a few Subgroup members conducted focus groups with a small number of states to gather information on consumer engagement strategies they find effective. The first focus group completed its work June 13, and the second focus group completed its work July 8. They are preparing summaries of the focus groups and expect to share them with the full Subgroup and interested parties within the next few months.

The Committee adopted its subgroup, working group, and task force reports and their interim minutes.

The Committee heard a panel presentation on efforts to create state-based health insurance exchanges and why states should establish them.

The Committee heard discussion on Medicaid redeterminations following the end of the COVID-19 public health emergency (PHE). The presentation provided an overview of the PHE, including the authorities at play in the COVID-19 pandemic at the federal and state level. The presentation also highlighted important dates state insurance regulators need to keep in mind related to the end of the PHE. The presentation discussed 10 fundamental actions for states to prepare for the unwinding at the end of the PHE, including creating a comprehensive state unwinding operational plan and coordinating with state, tribal, and federal government partners.

The Committee heard an update from the federal Center for Consumer Information and Insurance Oversight (CCIIO) on recent activities of interest to the Committee, including the steps the CCIIO is taking to prepare for the eventual end of the COVID-19 PHE and the Medicaid redetermination process.

The Committee also: 1) heard a federal legislative and regulatory update, including an update on the implementation of the federal No Surprises Act (NSA); 2) received an update on the Pharmacy Benefit Manager

Regulatory Issues (B) Subgroup’s work; and 3) received an update on the Special (EX) Committee on Race and Insurance Workstream Five’s work.

7. Received the Report of the Property and Casualty Insurance (C) Committee

Mr. Galbraith reported that the Property and Casualty Insurance (C) Committee met Aug. 12. During this meeting, the Committee adopted its Aug. 1 and Spring National Meeting minutes, which included adoption of the Pet Insurance Model Act.

The Committee adopted the reports of its task forces and working groups: the Casualty Actuarial and Statistical (C) Task Force, the Surplus Lines (C) Task Force, the Title Insurance (C) Task Force, the Workers’ Compensation (C) Task Force, the Cannabis Insurance (C) Working Group, the Catastrophe Insurance (C) Working Group, the Terrorism Insurance Implementation (C) Working Group, and the Transparency and Readability of Consumer Information (C) Working Group.

The Committee also: 1) heard a report on cyber insurance data contained within the Cybersecurity and Identity Theft Supplement. The Committee will release a written report that contains alien surplus lines data later this year; 2) heard a federal update; 3) heard an update on the Collaboration Forum on Algorithmic Bias; 4) heard an overview of the member visit to the Insurance Institute for Business and Home Safety (IBHS). IBHS research and messaging materials are available for use by state insurance regulators; and 5) discussed its charge related to parametric insurance. The Committee will hear future presentations and begin to gather research to create an outline for a white paper.

8. Adopted the Pet Insurance Model Act

Mr. Galbraith reported that the Property and Casualty Insurance (C) Committee released the white paper, *A Regulator’s Guide to Pet Insurance* in April 2019. After its release, the Committee asked the Pet Insurance (C) Working Group to discuss the potential development of a model law that would address regulatory concerns in the pet insurance industry described in the white paper.

The Working Group was officially tasked with drafting a model in August 2019, and the Working Group has held 26 meetings since then with active participation from industry, consumer representatives, producers, and veterinarian groups.

The Pet Insurance Model Act covers required definitions and disclosures, as well as regulations for policy conditions, sales practices for wellness programs, and producer training.

The Working Group held comment periods and had extensive discussion on all the major issues. Of note, the Pet Insurance Model Act includes several consumer protections related to policy renewals, required disclosures of waiting periods, policy limits, conditions, and benefit schedules. The Pet Insurance Model Act requires disclosure language when a preexisting condition exists. The pet insurer has the burden of proving that the preexisting condition exclusion applies to the condition for which the claim is being made. The Pet Insurance Model Act discusses wellness programs and prohibits a pet insurer from marketing a wellness program as pet insurance or requiring the purchase of a wellness program. Finally, while the Working Group decided that the Pet Insurance Model Act was not the appropriate place to decide the type of license required to sell pet insurance, state insurance regulators wanted to ensure producers are trained on the specific features of pet insurance products before selling those products.

The Pet Insurance Model Act was adopted by the Working Group and the Committee ahead of the 2021 Fall National Meeting, but there were concerns about language in the producer training section that could cause

unintended consequences to producer licensing and reciprocity, so it was sent back to the Working Group for revision. After discussions about those concerns, the Working Group adopted the Pet Insurance Model Act with revisions to the Producer Training section, including required training topics for pet insurance producers and language that allows training requirements to be satisfied by substantially similar requirements in another state.

Mr. Galbraith made a motion, seconded by Commissioner Schmidt, to adopt the Pet Insurance Model Act (Attachment Three). The motion passed with New York abstaining.

9. Received the Report of the Market Regulation and Consumer Affairs (D) Committee

Commissioner Pike reported that the Market Regulation and Consumer Affairs (D) Committee met Aug. 12. During this meeting, the Committee adopted its July 15 minutes, which included the following action: 1) adopted a revised charge to delete a reference to the System for Electronic Rates & Forms Filing (SERFF) Advisory Board (SAB) because it was disbanded at the Spring National Meeting; 2) adopted a revised charge of the Producer Licensing (D) Task Force to appoint a new Adjuster Licensing (D) Working Group to review adjuster licensing reciprocity and uniformity issues rather than the Task Force; 3) adopted a new “Other Health” Market Conduct Annual Statement (MCAS) Data Call and Definitions; 4) adopted revisions to the Homeowners MCAS to add digital claim interrogatories and lawsuit data elements and definitions; 5) adopted revisions to the Private Passenger Auto (PPA) MCAS to add digital claim interrogatories and lawsuit data elements and definitions; and 6) adopted revisions to the Life MCAS to add AU data elements, interrogatories, and definitions.

The Committee adopted revisions to the *Market Regulation Handbook*. These edits included: 1) revisions to Chapter 1 to encourage market regulators to coordinate with a company’s domestic financial regulator to obtain information related to the company’s group capital calculations (GCCs), liquidity stress test (LST) results, corporate governance, and Own Risk and Solvency Assessment (ORSA); 2) revisions to Exam Standard 1 of marketing and sales in Chapter 20 to add the *Insurance Holding Company System Regulatory Act (#440)* to the list of NAIC models to reference for guidance; and 3) revisions to Chapter 21 to include references to the *Real Property Lender-Placed Insurance Model Act (#631)*.

The Committee also adopted a new Mental Health Parity chapter to the *Market Regulation Handbook*. This chapter will provide updated examination guidelines in response to the federal Paul Wellstone and Pete Domenici Mental Health Parity and Addiction Equity Act of 2008 (MHPAEA) compliance analysis requirements for non-quantitative treatment limitations (NQTLs), which were amended at the federal level in 2021.

The Committee adopted the “Recommendations for the Incorporation of Artificial Intelligence in the NAIC Market Information Systems.” The report recommends that artificial intelligence (AI) should be contemplated in the context of a long-range plan, beginning with repairing known issues with existing data and employing more rigorous traditional statistical techniques to assess the predictive accuracy of analytical tools. Subsequently, state insurance regulators can consider the potential collection of data appropriate to AI.

The Committee adopted the “Guidelines for Amending the NAIC Uniform Applications.” These guidelines will be used for the review and adoption of substantive changes to the NAIC’s Uniform Licensing Applications in support of the NAIC and NIPR mission of maintaining stable and consistent NAIC Uniform Applications for producer licensing.

The Committee adopted the Antifraud Plan Repository Workflow. This workflow will serve as the template for the creation of a centralized filing system for insurers to report their antifraud plans to state insurance departments and eliminate the need for multiple state filings of the same plan.

The Committee adopted the reports of its task forces and working groups: the Antifraud (D) Task Force, the Market Information Systems (D) Task Force, the Producer Licensing (D) Task Force, the Advisory Organization Examination

Oversight (D) Working Group, the Market Analysis Procedures (D) Working Group, the Market Conduct Annual Statement Blanks (D) Working Group, the Market Conduct Examination Guidelines (D) Working Group, the Market Regulation Certification (D) Working Group, and the Speed to Market (D) Working Group.

The Committee heard a presentation on dark patterns on websites, which are website designs created to intentionally mislead consumers into making unintended choices.

10. Adopted the Market Conduct Annual Statement (MCAS) Items

Commissioner Pike reported that on July 15, the Market Regulation and Consumer Affairs (D) Committee adopted a new MCAS blank and changes to three current MCAS blanks.

- “Other Health” MCAS Data Call and Definitions

First are revisions to the “Other Health” MCAS Data Call and Definitions. With the adoption of this blank, the MCAS now collects underwriting, claims, complaint, and marketing information on health plans not subject to the federal Affordable Care Act (ACA). Those health plans include: 1) accident only; 2) accidental death and dismemberment; 3) specified disease and critical illness; 4) hospital and other indemnity; and 5) hospital/surgical and other expense.

The data on these plans is divided into those sold directly to individuals, sold through associations, and sold through employer groups. Much like previous MCAS blanks, this blank is divided into five sections; i.e., Interrogatories, Underwriting, Claims, Consumer Complaints and Lawsuits, and Marketing. In combination with the Health MCAS blank, which collects data on plans subject to the ACA, and the Short-Term Limited-Duration (STLD) MCAS blank, most of the health insurance marketplace will now be subject to MCAS reporting.

- Revised HO and PPA MCAS Blanks

Commissioner Pike noted that that there was a typo in the PPA Data Call and Definitions that has been corrected. In the lawsuit definition, it referenced Homeowners instead of PPA.

The changes to the Homeowners Data Call and Definitions and the PPA Data Call and Definitions are identical.

Last year, the Market Regulation and Consumer Affairs (D) Committee adopted data elements to collect information on digital claims. This year, it added two interrogatories about digital claim handling, including asking companies to identify all the vendors that provide third-party data and algorithms used in digital claim handling.

Additionally, the Committee adopted changes for reporting lawsuits in the Homeowners and PPA Data Call and Definitions. Historically, only claims-related lawsuits were reported. An additional reporting category was created to capture non-claims-related lawsuits. This change required edits to the lawsuit definition.

- Revised Life MCAS Blank

The Life MCAS Data Call and Definitions was edited to include the reporting of AU data. A new section was added to the interrogatories to capture basic information related to the products subject to AU, as well as the types of data the company uses in its AU.

Schedule 1C includes data elements for which a company must provide both AU information and non-AU information. This reporting is required on individual life cash value products and individual life non-cash value products.

The addition of AU to the Life Insurance MCAS blank was completed after the Accelerated Underwriting (A) Working Group finished its work on its educational paper. However, the definition developed by the Working Group did not work for MCAS filing purposes. For this reason, the MCAS definition references the definition adopted by the Working Group and notes that the MCAS definition is a subset of the definition contained in the Working Group’s 2022 NAIC educational paper on the topic.

Commissioner Pike made a motion, seconded by Commissioner Clark, to adopt the revisions to the “Other Health” MCAS Data Call and Definitions (Attachment Four); the Homeowners MCAS digital claim interrogatories and lawsuit data elements and definitions (Attachment Five); the PPA MCAS digital claim interrogatories and lawsuit data elements and definitions (Attachment Six); and the addition of AU data elements, interrogatories, and definitions into the Life MCAS (Attachment Seven). The motion passed with New York abstaining.

11. Received the Report of the Financial Condition (E) Committee

Commissioner White reported that the Financial Condition (E) Committee met Aug. 12. During this meeting, the Committee: 1) adopted its July 21, May 23, and Spring National Meeting minutes, which included the following action: a) approved a Request for NAIC Model Law Development to amend Model #540; b) adopted the “Regulatory Considerations Applicable (But Not Exclusive) to PE Owned Insurers”; c) adopted the “List of Jurisdictions that Recognize and Accept the GCC”; and d) adopted a memorandum of support for work performed because of the low interest rate environment and ongoing pressure from certain assets.

The Committee adopted agenda item 2021-21: Related Party Reporting, with an effective date of Dec. 31. This item incorporates new reporting requirements for investment transactions with related parties and includes clarifications to *Statement of Statutory Accounting Principles (SSAP) No. 25—Affiliates and Other Related Parties* and *SSAP No. 43R—Loan-Backed and Structured Securities* to make it clear that the existing affiliate definition applies to all types of entities, including securitizations.

The Committee adopted agenda item 2021-22BWG with an effective date of Dec. 31. These revisions add a new reporting requirement in the investment schedules for investment transactions with related parties. For all investments, except those on Schedule A—Real Estate, reporting entities will report a code to identify the type of related party involvement. Investments that do not have any related party involvement will also be identified with a specific code.

The Committee adopted the reports of the following task forces and working groups: the Accounting Practices and Procedures (E) Task Force, the Capital Adequacy (E) Task Force, the Examination Oversight (E) Task Force, the Financial Stability (E) Task Force, the Group Capital Calculation (E) Working Group, the Group Solvency Issues (E) Working Group, the Mutual Recognition of Jurisdictions (E) Working Group, the National Treatment and Coordination (E) Working Group, the Receivership and Insolvency (E) Task Force, the Reinsurance (E) Task Force, and the Valuation of Securities (E) Task Force.

The Committee heard a presentation from the Federal Reserve on its Supervisory Framework.

Note: Items adopted within the Financial Condition (E) Committee’s task force and working group reports that are considered technical, noncontroversial, and not significant by NAIC standards—i.e., they do not include model laws, model regulations, model guidelines, or items considered to be controversial—will be considered for adoption by the Executive (EX) Committee and Plenary through the Financial Condition (E) Committee’s technical changes report process. Pursuant to this process, which was adopted by the NAIC in 2009, a listing of the various technical changes will be sent to NAIC members shortly after completion of the National Meeting, and the members will have 10 days to comment with respect to those items. If no objections are received with respect to a particular item, the technical changes will be considered adopted by the NAIC membership and effective immediately.

12. Adopted the “Regulatory Considerations Applicable to (But Not Exclusive to) PE Owned Insurers”

Commissioner White reported that the Financial Stability (E) Task Force of the Financial Condition (E) Committee, charged the Macroprudential (E) Working Group with coordinating all NAIC efforts related to PE ownership of insurers.

The Working Group developed a list of 13 considerations that may result in changes to existing regulatory requirements. These 13 considerations relate to activities frequently, but not exclusively, attributed to PE firms. The list was adopted by the Task Force, and since then, the Working Group has proposed ways to address the 13 considerations. This includes specific referrals to various NAIC committee groups. This plan was adopted by the Task Force on June 27 and by the Committee on July 21.

Commissioner White made a motion, seconded by Commissioner Donelon, to adopt the “Regulatory Considerations Applicable to (But Not Exclusive to) PE Insurers” (Attachment Eight). The motion passed unanimously.

13. Adopted the “List of Jurisdictions that Recognize and Accept the GCC”

Commissioner White reported that on Dec. 9, 2020, the Executive (EX) Committee and Plenary adopted revisions to the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450), which established the GCC framework.

The revisions specifically provide that the requirements to file the NAIC’s GCC apply to U.S.-based groups, while a group headquartered outside of the U.S. is exempt from the GCC (subject to limited exceptions) if its groupwide supervisor “recognizes and accepts” the GCC for U.S. groups doing business in that jurisdiction.

The “Bilateral Agreement Between the United States of America and the European Union on Prudential Measures Regarding Insurance and Reinsurance” (EU Covered Agreement) and the “Bilateral Agreement Between the United States of America and the United Kingdom on Prudential Measures Regarding Insurance and Reinsurance” (UK Covered Agreement) establish this mutual recognition process for European Union (EU) and United Kingdom (UK) groups, and the *Process for Evaluating Qualified and Reciprocal Jurisdictions* does this for groups in a handful of other jurisdictions.

After the GCC framework was adopted, the Mutual Recognition Jurisdictions (E) Working Group developed the “List of Jurisdictions that Recognize and Accept the GCC” to exempt groups within those jurisdictions from the GCC.

The list has been through public exposure, and there were no comments. It will be updated at least annually.

Commissioner White made a motion, seconded by Commissioner Altmaier, to adopt the “List of Jurisdictions that Recognize and Accept the GCC” (Attachment Nine). The motion passed unanimously.

14. Received the Report of the Financial Regulation Standards and Accreditation (F) Committee

Director Wing-Heier reported that the Financial Regulation Standards and Accreditation (F) Committee met Aug. 9 in regulator-to-regulator session, pursuant to paragraph 7 (consideration of individual state insurance department’s compliance with NAIC financial regulation standards) of the NAIC Policy Statement on Open Meetings, to: 1) discuss state-specific accreditation issues; and 2) vote to award continued accreditation to the insurance departments of Alaska, Iowa, Minnesota, and Ohio.

The Committee also met Aug. 10 in open session to adopt its Spring National Meeting minutes.

The Committee adopted an update to the examination coordination guidelines recommended by the Financial Examiners Handbook (E) Technical Group. The update ensures consistency between the *Financial Condition Examiners Handbook* and the accreditation guidelines and clarifies coordination for examinations that are part of a holding company group with insurers domiciled in multiple states.

The Committee adopted the recommendation that the 2021 revisions to Model #440 and Model #450 are acceptable for accreditation but not required. The revisions address the continuation of essential services through affiliated intercompany agreements with an insurer that is placed into receivership.

The Committee adopted updates to the Preamble of the *Accreditation Program Manual* to reference VM-21, Requirements for Principle-Based Reserves for Variable Annuities. The revisions reference how captives that reinsure variable annuity (VA) business are addressed in the accreditation standards.

15. Received the Report of the International Insurance Relations (G) Committee

Commissioner Anderson reported that the International Insurance Relations (G) Committee met Aug. 10 and adopted its July 21 and Spring National Meeting minutes.

The Committee heard a presentation on the Federal Reserve Board's (FRB's) Insurance Policy Advisory Committee (IPAC) paper on the insurance capital standard (ICS). The presentation described the analysis undertaken by the IPAC, the potential impact of the ICS and the IPAC's recommended revisions to the ICS, and its conclusions.

The Committee heard an update on recent activities and priorities of the International Association of Insurance Supervisors (IAIS), including: 1) a review of recent committee meetings and the annual Global Seminar; 2) an update on the targeted jurisdictional assessments (TJAs) as part of the implementation of the holistic framework; 3) the comparability assessment process for the aggregation method (AM); and 4) upcoming activities related to climate; diversity, equity, and inclusion (DE&I); operational resilience; cyber; and liquidity metrics.

The Committee heard an update on international activities, including: 1) recent and upcoming meetings, events, and speaking engagements with international regulators; 2) the upcoming Fall 2022 International Fellows Program; 3) upcoming meetings and participation in workstreams at the Organisation for Economic Co-operation and Development (OECD) Insurance and Private Pensions Committee; and 4) a review of recent working group meetings of the Sustainable Insurance Forum (SIF).

16. Received the Report of the Innovation, Cybersecurity, and Technology (H) Committee

Commissioner Birrane reported that the Innovation, Cybersecurity, and Technology (H) Committee met Aug. 10. During this meeting, the Committee adopted its Spring National Meeting minutes, which included the following action: 1) adopted structural and charge revisions; 2) adopted its working group reports; 3) received a report on the Casualty Actuarial and Statistical (C) Task Force predictive model review process; 4) discussed various committee-level projects, including: a) the creation of a new Collaboration Forum that will serve as a platform for multiple NAIC committees to work together to identify and address foundational issues and develop a common framework; b) the development of a portal or library of resources related to innovation, cybersecurity, data and consumer privacy, and technology; and c) the creation of a forum to facilitate the training and education of state insurance regulators on innovation and technology topics, SupTech issues, and potential ways data and technology might affect the insurance sector in the future; and 5) received an update on the implementation of the *Insurance Data Security Model Law* (#668) and *Unfair Trade Practices Act* (#880) revised language specific to rebating.

The Committee approved the Request for NAIC Model Law Development from the Privacy Protections (H) Working Group to draft a new model law with the proposed title, the Insurance Consumer Privacy Protection Model Law, to replace the *NAIC Insurance Information and Privacy Protection Model Act* (#670) and the *Privacy of Consumer Financial and Health Information Regulation* (#672).

The Committee adopted the reports of its task forces and working groups: the Big Data and Artificial Intelligence (H) Working Group, the Cybersecurity (H) Working Group, the E-Commerce (H) Working Group, the Innovation in Technology and Regulation (H) Working Group, and the Privacy Protections (H) Working Group.

The Committee received an update on its projects, including the proposed Innovations, Cybersecurity, and Technology (ICT)-Hub and Collaboration Forum on Algorithmic Bias Fly-In.

At the conclusion of the Committee meeting and as a part of the Collaboration Forum on Algorithmic Bias panel, the Committee members heard presentations entitled, “Approaches Companies Are or Can Implement to Manage and Mitigate the Risk of Unintended Bias and Illegal Discrimination When Developing and Using AI/ML” from Dale Hall, Managing Director of Research for the Society of Actuaries (SOA); Tulsee Doshi, Head of Product for Responsible AI & Human Centered Technology at Google and an Advisor of Lemonade; and Daniel Schwarcz, a professor at the University of Minnesota.

17. Received a Report on the States’ Implementation of NAIC-Adopted Model Laws and Regulations

Director Cameron referred attendees to the written report for updates on the states’ implementation of NAIC-adopted model laws and regulations (Attachment Ten).

Having no further business, the Executive (EX) Committee and Plenary adjourned.

2022-03	VM-20, VM-21, VM-31	General cleanup, including updating cross-references, better consistency between VM-20 and VM-21, where reasonable, and making clarifying edits.	3/31/22	49
2022-04	VM-20 Section 9.F.8, App 2.F, App 2.G	LIBOR transition to the Secured Overnight Financing Rate (SOFR) - Updated VM-20 prescribed swap spreads guidance to facilitate the LIBOR transition to SOFR.	6/30/22	55
2022-05	VM-51 App 1, App 4	Add dividend plan code & Covid-19 indicator; change field identifier; correct Appendix 1 reference.	5/12/22	61

SharePoint/NAIC Support Staff Hub/Member Meetings/2022 Summer National Meeting/Att 1 Valuation Manual Chart.pdf

Actuarial Guideline LIII**APPLICATION OF THE VALUATION MANUAL FOR TESTING THE ADEQUACY OF LIFE INSURER RESERVES****Background**

The *NAIC Valuation Manual (VM-30)* contains actuarial opinion and supporting actuarial memorandum requirements, including requirements for asset adequacy analysis. Regulators have observed a lack of uniform practice in the implementation of asset adequacy analysis. The variety of practice in incorporating the risk of complex assets into testing does not provide regulators comfort as to reserve adequacy. Examples of complex assets are structured securities, including asset-backed securities and collateralized loan obligations, as well as assets originated by the company or affiliated or contracted entity. An initial increase of this activity has been noted in support of general account annuity blocks; however, recent activity was noted in other life insurer blocks.

This Guideline is intended to provide uniform guidance and clarification of requirements for the appropriate support of certain assumptions for asset adequacy analysis performed by life insurers. In particular, this Guideline:

- (1) Helps identify reserve adequacy and claims-paying ability in moderately adverse conditions, including conditions negatively impacting cash flows from complex assets;
- (2) Clarifies elements to consider in establishing margins on asset-related assumptions;
- (3) Ensures recognition that higher expected gross returns from assets are, to some extent, associated with higher risk, and that assumptions fit reasonably within the risk-return spectrum;
- (4) Requires sensitivity testing regarding complex assets supporting life insurer business;
- (5) Identifies expectations in practice regarding the valuation of complex assets within asset adequacy analysis;
- (6) Reflects that while complex assets tend to have higher uncertainty regarding timing and amount of cash flows than more traditional investments, because complex assets are difficult to classify, and the regulatory concern is regarding the projected net yields and cash flows from those assets, the focus of the analysis requirements will be on assets categorized as high-yielding; and
- (7) Requires additional documentation of investment fee income relationships with affiliated entities or entities close to the company.

Text

1. Effective Date

This Guideline shall be effective for asset adequacy analysis of the reserves reported in the December 31, 2022 Annual Statement and for the asset adequacy analysis of the reserves reported in all subsequent Annual Statements.

Guidance note: It is anticipated that the requirements contained in this Guideline will be incorporated into VM-30 at a future date, effective for a future valuation year. Requirements in the Guideline will cease to apply to annual statutory financial statements when the corresponding or replacement VM-30 requirements become effective.

2. Scope

This Guideline shall apply to all life insurers with:

- A. Over \$5 billion of general account actuarial reserves (from Exhibits 5, 6, 7, and 8 of the Annual Statement) and non-unitized separate account assets or
- B. Over \$100 million of general account actuarial reserves (from Exhibits 5, 6, 7, and 8 of the Annual Statement) and non-unitized separate account assets and over 5% of supporting assets (selected for asset adequacy analysis) in the category of Projected High Net Yield Assets, as defined in Section 3.F.

Actuarial reserve amounts are included in the amounts in A and B whether directly written or assumed through reinsurance and are determined before any reinsurance ceded credit.

The Guideline applies to assets supporting liabilities tested in the asset adequacy analysis except it does not apply to unitized separate account assets or policy/contract loans.

3. Definitions

- A. Equity-like Instruments. Assets that include the following:

- i. Any assets that, for purposes of risk-based capital C-1 reporting, are in the category of common stock, i.e., have a 30% or higher risk-based capital charge.
- ii. Any assets that are captured on Schedule A or Schedule BA of the Annual Statement.
- iii. Bond funds.

- B. Fair Value. The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date, consistent with methodology of fair value, as reported in the Annual Statement.

- C. Net Market Spread. For each asset grouping, shall mean the spread over comparable Treasury bonds that equates the fair value as of the valuation date with modeled cash flows, less the default assumption used in asset adequacy analysis.

Market conventions and other approximations are acceptable for the purposes of this definition.

- D. Investment Grade Net Spread Benchmark. The applicable spread found in Appendix I using the weighted average life (WAL) of the associated non-Equity-like Instrument.
- E. Guideline Excess Spread. The net spread derived by subtracting the Investment Grade Net Spread Benchmark from the Net Market Spread for non-Equity-like Instruments. Investment expenses shall be excluded from this calculation.
- F. Projected High Net Yield Assets. Currently held or reinvestment assets that are either:
- i. An Equity-like Instrument assumed to have higher value at projection year 10 or later than under an assumption of annual total returns, before the deduction of investment expenses, of 4% for the first 10 projection years after the valuation date followed by 5% for projection year 11 and after. Aggregation shall be done at a level of granularity that is consistent with or more granular than how the assets are grouped, i.e., compressed, in the asset adequacy analysis model, or
 - ii. Assets other than Equity-like Instruments where the assumed Guideline Excess Spread is higher than zero. In addition:
 - (a) Aggregation of the comparison between the assumed Net Market Spread from each asset and the Investment Grade Net Spread Benchmark shall be done at a level of granularity that is consistent with or more granular than how the assets are grouped, i.e., compressed, in the asset adequacy analysis model.
 - (b) For applicable assets that do not have an explicit WAL or term to maturity, the Appointed Actuary shall disclose the method used to determine the appropriate WAL used for comparing to the Investment Grade Net Spread Benchmark.
 - (c) For purposes of the comparison between the assumed Net Market Spread from each asset and the Investment Grade Net Spread Benchmark, investment expenses shall be excluded.
 - iii. The following asset types can be excluded from the scope of requirements in sections 4.A.ii through 5:
 - (a) Cash or cash equivalents,
 - (b) Treasuries and agency bonds, and
 - (c) Public non-convertible, fixed-rate corporate bonds with no or immaterial callability.

4. Asset Adequacy Considerations and Documentation Expectations

A. Net return and risk documentation.

- i. For all assets, either currently held or in assumed reinvestments, provide:
 - (a) Identification of the assumed gross asset yield and the key components (for example, default and investment expenses) deducted to arrive at the assumed net asset yield.
 - (b) Explanation of any future reinvestment strategy assumptions that materially differ from current practices.
- ii. For Projected High Net Yield Assets, either currently held or in assumed reinvestments, provide:
 - (a) A detailed explanation describing the relationship between the expected gross returns from these assets and the risk. It shall also include, for the aspect of any higher expected gross returns not assumed to be associated with higher risk, an explanation of how overperforming assets with expected returns lying outside the risk-return spectrum can be assumed to persist and be available for reinvestments throughout the projection period in moderately adverse conditions.
 - (b) Commentary on how assumptions on assets with risk factors leading to substantial volatility of returns, as identified through sensitivity testing or other means, contain an appropriate margin to reflect the uncertainty in the timing and amounts of asset cash flows.
 - (c) Identification of the extent to which Projected High Net Yield Assets are supporting major product categories, e.g., individual fixed annuities and pension risk transfers.
 - (d) Explanation of rationale for materially changing or not changing complex-asset-based assumptions from the prior year's analysis.

B. Model rigor. Where significant risks associated with complex, Projected High Net Yield Assets are not adequately captured with traditional modeling techniques, more rigorous modeling of those risks should occur.

- i. Where necessary to adequately reflect the risk:
 - (a) Multi-scenario testing of those risks specific to complex assets should be performed. For example, investments that may provide a higher expected return in part due to limited information, niche skill sets, or other factors may require

unique scenarios (for instance to adequately capture credit or liquidity risk) to fully encompass potential sources of loss.

- (b) Asset cash flows should be appropriately projected to reflect anticipated liquidity under adverse conditions. If such model aspects are not developed, sufficient additional conservatism to reflect this risk shall be applied.
 - (c) To the extent that the process for modeling or otherwise evaluating the risks is complex, and the potential for disconnect between reality and modeling increases, an additional margin to assumption(s) should be applied. Any such margin shall be applied in the direction of asset adequacy analysis results being less favorable.
 - (d) The full distribution of risk associated with complex assets should be considered.
- ii. An Appointed Actuary may use simplifications, approximations, and modeling efficiency techniques if the Appointed Actuary can demonstrate that the use of such techniques does not make asset adequacy analysis results more favorable. These techniques may be less appropriate if the amount of complex, high-yielding assets becomes a higher percentage of total assets.

Guidance note: Actuarial Standards of Practice (ASOPs), including ASOP No. 7 and No. 56 contain additional guidance on the use of models in the analysis of cash flows.

- C. **Fair Value determination.** In asset adequacy analysis, when an asset is projected to be available for sale, a Fair Value of that asset is established, based on the projected market conditions. Fair Value should only be determined internally (by the insurance or investment management company) when the market-based value of the asset or similar asset cannot be obtained or expected to be obtained in a projected scenario.
- i. When the Fair Value of a material portion of supporting assets is determined internally, the actuarial memorandum shall contain a step-by-step description of the approach used to calculate the Fair Value of such assets.
 - ii. Provide the total Fair Value of assets that have values determined internally.
 - iii. When the Fair Value of a material portion of assets is determined internally, a sensitivity test should be performed (and the impact on asset adequacy analysis results presented) assuming a haircut to internally derived Fair Values that the Appointed Actuary deems reasonable given the commensurate level of anticipated uncertainty.
- D. **Non-publicly traded assets.** For non-publicly traded assets originated by the company, within the company's group, or within an entity closely tied to a company's group (inclusive of the company's investment manager), provide the following:
- i. Documentation of practices to help ensure accurate valuation of those assets.

- ii. The total Fair Value of such assets.
- iii. To the extent the contractual agreement affects the investment income revenue streams included in the asset adequacy analysis, disclose in detail applicable contractual agreements and revenue sharing, e.g., performance fees, between the entity responsible for providing investment or other types of services and the insurer.

Also, assumed net cash flows from assets should be net of all explicit or implicit fees or expenses, such as origination fees, as well as reflective of other asset-related risks including credit risk, illiquidity risk, and other market risks.

- E. **Investments expenses (fees).** Assumed investment expenses, whether paid to an external asset manager or to internal investment management staff, as well as additional expenses that are directly attributable to the specific investments, should be commensurate with the expected expenses in light of the complexity of the assets.
- F. **Reinsurance modeling.** Related to reinsurance, relevant communications and disclosures, for instance commentary on collectability and counterparty risk, should be presented in the memorandum.

Guidance note: Section 4.F is consistent with the standard laid out in ASOP No. 11 – Reinsurance Involving Life Insurance, Annuities, or Health Benefit Plans in Financial Reports.

- G. **Borrowing.** Please identify if any borrowing is modeled besides to address very short-term liquidity needs. Also, verify borrowing and reinvestment rates to ensure that projections are not materially benefiting from arbitrage advantages.

5. Sensitivity Tests and Attribution Analysis related to Assumptions on Projected High Net Yield Assets

A. Sensitivity testing

- i. Perform and disclose, separately for (a) and (b), the asset adequacy analysis results from the following sensitivity tests:

- (a) For reinvestment assets other than Equity-like Instruments, assume the Net Market Spreads (before deduction of investment expenses) for Projected High Net Yield Assets do not exceed the Investment Grade Net Spread Benchmark and apply the test to a baseline of a level Treasury rate scenario.

For the purposes of limiting the Net Market Spreads at the Investment Grade Net Spread Benchmark, Projected High Net Yield Assets may be aggregated together but shall not include any assets that are not Projected High Net Yield Assets.

- (b) For reinvestment assets that are Equity-like Instruments, assume annual total returns, before the deduction of investment expenses, of 4% for the first 10 projection years after the valuation date followed by 5% for projection year 11 and after.

- ii. Strict technical compliance for each asset may not be practical for reasons such as model limitations. Professional judgment should be applied to produce sensitivity testing results that are consistent with the spirit of the test. A variety of alternative methods may be acceptable. Appropriate explanation and justification should be provided for the method that was employed.
 - iii. Sensitivity testing for the purpose of this Guideline does not reflect commentary on moderately adverse conditions, but the volatility and impact demonstrated from the testing should be contemplated in Section 4.A.ii.(b) considerations.
- B. For Projected High Net Yield Assets for non-Equity-like Instruments either currently held or in assumed reinvestments, perform and disclose the following attribution analysis steps at the asset type level associated with the templates in Section 6:
- i. State the assumed Guideline Excess Spread.
 - ii. Estimate the proportion of the Guideline Excess Spread attributable to the following factors:
 - (a) Credit risk
 - (b) Illiquidity risk
 - (c) Deviations of current spreads from long-term spreads defined in Appendix 1
 - (d) Volatility and other risks (identify and describe these risks in detail)
 - iii. Provide commentary on the results of Section 5.B.ii. Also, where judgment is applied, provide supporting rationale of how the expected return in excess of the Investment Grade Net Spread Benchmark is estimated.

Guidance note: a best-efforts approach is expected for the year-end 2022 attribution analysis

6. Reporting, Review, and Templates

Guidance note: The NAIC Valuation Analysis (E) Working Group (VAWG) shall serve as a resource in the targeted review of asset adequacy analysis related to modeling of business supported with Projected High Net Yield Assets. VAWG shall provide periodic reports identifying outliers and concerns regarding the analysis to help inform regulators on the effectiveness of the Guideline in meeting the seven objectives stated in the Background section.

- A. The documentation, sensitivity test results, and attribution analysis referenced above are to be incorporated as a separate, easily identifiable section of the actuarial memorandum required by VM-30 or as a standalone document, with a due date of April 1 following the applicable valuation date. The domiciliary commissioner may approve a later due date for companies seeking a hardship extension. The separate section or standalone document shall be available to other state insurance commissioners in

which the company is licensed upon request to the company. The confidentiality and information provisions in state adoptions of NAIC Model 820 regarding the actuarial memorandum are applicable to the separate section or standalone document required by this Guideline.

B. Sample templates (to be adopted by the Life Actuarial Task Force):

- i. Asset types – will be categorized when the templates are completed.
- ii. Template for the asset summary.
- iii. Template for components of net asset yield for various asset classes, with separate tables to be provided for initial assets and reinvestment assets.
- iv. Template for sensitivity test aspects for Projected High Net Yield Assets that are fixed-income.
- v. Template for sensitivity test results for Projected High Net Yield Assets.
- vi. Template for attribution analysis, with separate tables to be provided for initial assets and reinvestment assets for Projected High Net Yield Assets.

REQUEST FOR NAIC MODEL LAW DEVELOPMENT

This form is intended to gather information to support the development of a new model law or amendment to an existing model law. Prior to development of a new or amended model law, approval of the respective Parent Committee and the NAIC's Executive Committee is required. The NAIC's Executive Committee will consider whether the request fits the criteria for model law development. Please complete all questions and provide as much detail as necessary to help in this determination.

Please check whether this is: **New Model Law** or **Amendment to Existing Model**

1. Name of group to be responsible for drafting the model:

Pet Insurance (C) Working Group

2. NAIC staff support contact information:

Aaron Brandenburg
abrandenburg@naic.org
816 783 8271

3. Please provide a brief description of the proposed new model or the amendment(s) to the existing model. If you are proposing a new model, please also provide a proposed title. If an existing model law, please provide the title, attach a current version to this form and reference the section(s) proposed to be amended.

Pet Insurance Model Law. This model would define a regulatory structure related to pet insurance, including issues such as producer licensing, policy terms, coverages, claims handling, premium taxes, disclosures, arbitration, and preexisting conditions.

4. Does the model law meet the Model Law Criteria? Yes or No (Check one)

(If answering no to any of these questions, please reevaluate charge and proceed accordingly to address issues).

a. Does the subject of the model law necessitate a national standard and require uniformity amongst all states? Yes or No (Check one)

If yes, please explain why: Interested parties agree that there is ambiguity within regulation of the pet insurance market and having a more defined and consistent regulatory structure will improve the market and benefit consumers. The NAIC Paper, A Regulators' Guide to Pet Insurance, the Pet Insurance (C) Working Group and the Producer White Licensing (D) Task Force have previously discussed some of these ambiguities in the regulation of the market.

b. Does Committee believe NAIC members should devote significant regulator and Association resources to educate, communicate and support this model law?

Yes or No (Check one)

5. What is the likelihood that your Committee will be able to draft and adopt the model law within one year from the date of Executive Committee approval?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary: The NAIC White Paper, "A Regulator's Guide to Pet Insurance" has provided the background for the Working Group to understand the issues and begin to draft a model.

6. What is the likelihood that a minimum two-thirds majority of NAIC members would ultimately vote to adopt the proposed model law?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary:

7. What is the likelihood that state legislatures will adopt the model law in a uniform manner within three years of adoption by the NAIC?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary:

8. Is this model law referenced in the NAIC Accreditation Standards? If so, does the standard require the model law to be adopted in a substantially similar manner?

No

9. Is this model law in response to or impacted by federal laws or regulations? If yes, please explain.

No

PET INSURANCE MODEL LAW*New Model - Draft: 7/21/2022**Adopted by Pet Insurance (C) Working Group – 7/21/2022**Adopted by Property and Casualty Insurance (C) Committee – 8/1/2022***Table of Contents**

Section 1.	Short Title
Section 2.	Scope and Purpose
Section 3.	Definitions
Section 4.	Disclosures
Section 5.	Policy Conditions
Section 6.	Sales Practice for Wellness Programs
Section 7.	Insurance Producer Training
Section 8.	Regulations
Section 9.	Violations

Section 1. Short Title

This Act shall be known as the “Pet Insurance Act.”

Section 2. Scope and Purpose

- A. The purpose of this Act is to promote the public welfare by creating a comprehensive legal framework within which Pet Insurance may be sold in this state.
- B. The requirements of this Act shall apply to Pet Insurance policies that are issued to any resident of this state, and are sold, solicited, negotiated, or offered in this state, and policies or certificates that are delivered or issued for delivery in this state.
- C. All other applicable provisions of this state’s insurance laws shall continue to apply to Pet Insurance except that the specific provisions of this Act shall supersede any general provisions of law that would otherwise be applicable to Pet Insurance.

Section 3. Definitions

If a pet insurer uses any of the terms in this Act in a policy of pet insurance, the pet insurer shall use the definition of each of those terms as set forth herein and include the definition of the term(s) in the policy. The pet insurer shall also make the definition available through a clear and conspicuous link on the main page of the pet insurer or pet insurer’s program administrator’s website.

Nothing in this Act shall in any way prohibit or limit the types of exclusions pet insurers may use in their policies or require pet insurers to have any of the limitations or exclusions defined below.

As used in this Act:

- A. “Chronic condition” means a condition that can be treated or managed, but not cured.
- B. “Congenital anomaly or disorder” means a condition that is present from birth, whether inherited or caused by the environment, which may cause or contribute to illness or disease.
- C. “Hereditary disorder” means an abnormality that is genetically transmitted from parent to offspring and may cause illness or disease.

- D. “Orthopedic” refers to conditions affecting the bones, skeletal muscle, cartilage, tendons, ligaments, and joints. It includes, but is not limited to, elbow dysplasia, hip dysplasia, intervertebral disc degeneration, patellar luxation, and ruptured cranial cruciate ligaments. It does not include cancers or metabolic, hemopoietic, or autoimmune diseases.
- E. “Pet insurance” means a property insurance policy that provides coverage for accidents and illnesses of pets.
- F. “Preexisting condition” means any condition for which any of the following are true prior to the effective date of a pet insurance policy or during any waiting period:
- (1) A veterinarian provided medical advice;
 - (2) The pet received previous treatment; or
 - (3) Based on information from verifiable sources, the pet had signs or symptoms directly related to the condition for which a claim is being made.

A condition for which coverage is afforded on a policy cannot be considered a preexisting condition on any renewal of the policy.

- G. “Renewal” means to issue and deliver at the end of an insurance policy period a policy which supersedes a policy previously issued and delivered by the same pet insurer or affiliated pet insurer and which provides types and limits of coverage substantially similar to those contained in the policy being superseded.
- H. “Veterinarian” means an individual who holds a valid license to practice veterinary medicine from the appropriate licensing entity in the jurisdiction in which he or she practices.
- I. “Veterinary expenses” means the costs associated with medical advice, diagnosis, care, or treatment provided by a veterinarian, including, but not limited to, the cost of drugs prescribed by a veterinarian.
- J. “Waiting period” means the period of time specified in a pet insurance policy that is required to transpire before some or all of the coverage in the policy can begin. Waiting periods may not be applied to renewals of existing coverage.
- K. “Wellness program” means a subscription or reimbursement-based program that is separate from an insurance policy that provides goods and services to promote the general health, safety, or wellbeing of the pet. If any wellness program [insert language from state statute or regulation that defines the trigger for insurance contracts, which might include language such as: [undertakes to indemnify another], or [pays a specified amount upon determinable contingencies] or [provides coverage for a fortuitous event]], it is transacting in the business of insurance and is subject to the insurance code. This definition is not intended to classify a contract directly between a service provider and a pet owner that only involves the two parties as being “the business of insurance,” unless other indications of insurance also exist.

Section 4. Disclosures

- A. A pet insurer transacting pet insurance shall disclose the following to consumers:
- (1) If the policy excludes coverage due to any of the following:
 - (a) A preexisting condition;
 - (b) A hereditary disorder;
 - (c) A congenital anomaly or disorder; or
 - (d) A chronic condition.
 - (2) If the policy includes any other exclusions, the following statement: “Other exclusions may apply. Please refer to the exclusions section of the policy for more information.”

- (3) Any policy provision that limits coverage through a waiting or affiliation period, a deductible, coinsurance, or an annual or lifetime policy limit.
 - (4) Whether the pet insurer reduces coverage or increases premiums based on the insured's claim history, the age of the covered pet or a change in the geographic location of the insured.
 - (5) If the underwriting company differs from the brand name used to market and sell the product.
- B. Right to Examine and Return the Policy.
- (1) Unless the insured has filed a claim under the pet insurance policy, pet insurance applicants shall have the right to examine and return the policy, certificate or rider to the company or an agent/insurance producer of the company within fifteen (15) days of its receipt and to have the premium refunded if, after examination of the policy, certificate or rider, the applicant is not satisfied for any reason,
 - (2) Pet insurance policies, certificates and riders shall have a notice prominently printed on the first page or attached thereto including specific instructions to accomplish a return. The following free look statement or language substantially similar shall be included:

“You have 15 days from the day you receive this policy, certificate or rider to review it and return it to the company if you decide not to keep it. You do not have to tell the company why you are returning it. If you decide not to keep it, simply return it to the company at its administrative office or you may return it to the agent/insurance producer that you bought it from as long as you have not filed a claim. You must return it within 15 days of the day you first received it. The company will refund the full amount of any premium paid within 30 days after it receives the returned policy, certificate, or rider. The premium refund will be sent directly to the person who paid it. The policy, certificate or rider will be void as if it had never been issued.”
- C. A pet insurer shall clearly disclose a summary description of the basis or formula on which the pet insurer determines claim payments under a pet insurance policy within the policy, prior to policy issuance and through a clear and conspicuous link on the main page of the pet insurer or pet insurer's program administrator's website.
- D. A pet insurer that uses a benefit schedule to determine claim payment under a pet insurance policy shall do both of the following:
- (1) Clearly disclose the applicable benefit schedule in the policy.
 - (2) Disclose all benefit schedules used by the pet insurer under its pet insurance policies through a clear and conspicuous link on the main page of the pet insurer or pet insurer's program administrator's website.
- E. A pet insurer that determines claim payments under a pet insurance policy based on usual and customary fees, or any other reimbursement limitation based on prevailing veterinary service provider charges, shall do both of the following:
- (1) Include a usual and customary fee limitation provision in the policy that clearly describes the pet insurer's basis for determining usual and customary fees and how that basis is applied in calculating claim payments.
 - (2) Disclose the pet insurer's basis for determining usual and customary fees through a clear and conspicuous link on the main page of the pet insurer or pet insurer's program administrator's website.
- F. If any medical examination by a licensed veterinarian is required to effectuate coverage, the pet insurer shall clearly and conspicuously disclose the required aspects of the examination prior to purchase and disclose that examination documentation may result in a preexisting condition exclusion.

- G. Waiting periods and the requirements applicable to them, must be clearly and prominently disclosed to consumers prior to the policy purchase.
- H. The pet insurer shall include a summary of all policy provisions required in Subsections (A) through (G), inclusive, in a separate document titled “Insurer Disclosure of Important Policy Provisions.”
- I. The pet insurer shall post the “Insurer Disclosure of Important Policy Provisions” document required in Subsection (H) through a clear and conspicuous link on the main page of the pet insurer or pet insurer’s program administrator’s website.
- J. In connection with the issuance of a new pet insurance policy, the pet insurer shall provide the consumer with a copy of the “Insurer Disclosure of Important Policy Provisions” document required pursuant to Subsection (H) in at least 12-point type when it delivers the policy.
- K. At the time a pet insurance policy is issued or delivered to a policyholder, the pet insurer shall include a written disclosure with the following information, printed in 12-point boldface type:
 - (1) The [insert state insurance department]’s mailing address, toll-free telephone number and website address.
 - (2) The address and customer service telephone number of the pet insurer or the agent or broker of record.
 - (3) If the policy was issued or delivered by an agent or broker, a statement advising the policyholder to contact the broker or agent for assistance.
- L. The disclosures required in this section shall be in addition to any other disclosure requirements required by law or regulation.

Section 5. Policy Conditions

- A. A pet insurer may issue policies that exclude coverage on the basis of one or more preexisting conditions with appropriate disclosure to the consumer. The pet insurer has the burden of proving that the preexisting condition exclusion applies to the condition for which a claim is being made.
- B. A pet insurer may issue policies that impose waiting periods upon effectuation of the policy that do not exceed 30 days for illnesses or orthopedic conditions not resulting from an accident. Waiting periods for accidents are prohibited.
 - (1) A pet insurer utilizing a waiting period permitted in Subsection 5B shall include a provision in its contract that allows the waiting periods to be waived upon completion of a medical examination. Pet insurers may require the examination to be conducted by a licensed veterinarian after the purchase of the policy.
 - (2)
 - (a) A medical examination under Subsection 5B(1) shall be paid for by the policyholder, unless the policy specifies that the pet insurer will pay for the examination.
 - (b) A pet insurer can specify elements to be included as part of the examination and require documentation thereof, provided the specifications do not unreasonably restrict a consumer’s ability to waive the waiting periods in Subsection 5B.
 - (3) Waiting periods, and the requirements applicable to them, must be clearly and prominently disclosed to consumers prior to the policy purchase.
- C. A pet insurer must not require a veterinary examination of the covered pet for the insured to have their policy renewed.

- D. If a pet insurer includes any prescriptive, wellness, or non-insurance benefits in the policy form, then it is made part of the policy contract and must follow all applicable laws and regulations in the insurance code.
- C. An insured's eligibility to purchase a pet insurance policy must not be based on participation, or lack of participation, in a separate wellness program.

Section 6. Sales Practices for Wellness Programs

- A. A pet insurer and/or producer shall not do the following:
 - (1) Market a wellness program as pet insurance;
 - (2) Market a wellness program during the sale, solicitation, or negotiation of pet insurance.
- B. If a wellness program is sold by a pet insurer and/or producer:
 - (1) The purchase of the wellness program shall not be a requirement to the purchase of pet insurance.
 - (2) The costs of the wellness program shall be separate and identifiable from any pet insurance policy sold by a pet insurer and/or producer.
 - (3) The terms and conditions for the wellness program shall be separate from any pet insurance policy sold by a pet insurer and/or producer.
 - (4) The products or coverages available through the wellness program shall not duplicate products or coverages available through the pet insurance policy; and
 - (5) The advertising of the wellness program shall not be misleading and shall be in accordance with Subsection 6B of this Model.
 - (6) A pet insurer and/or producer shall clearly disclose the following to consumers, printed in 12-point boldface type:
 - (a) That wellness programs are not insurance.
 - (b) The address and customer service telephone number of the pet insurer or producer or broker of record.
 - (c) The [insert state insurance department]'s mailing address, toll-free telephone number, and website address.
- C. Coverages included in the pet insurance policy contract described as "wellness" benefits are insurance.

Section 7. Insurance Producer Training

- A. An insurance producer shall not sell, solicit, or negotiate a pet insurance product until after the producer is appropriately licensed and has completed the required training identified in Subsection C of this Section.
- B. Insurers shall ensure that its producers are trained under Subsection C of this Section and that its producers have been appropriately trained on the coverages and conditions of its pet insurance products.
- C. The training required under this subsection shall include information on the following topics:
 - (1) Preexisting conditions and waiting periods;
 - (2) The differences between pet insurance and noninsurance wellness programs;
 - (3) Hereditary disorders, congenital anomalies or disorders and chronic conditions and how pet insurance policies interact with those conditions or disorders; and

(4) Rating, underwriting, renewal and other related administrative topics.

D. The satisfaction of the training requirements of another state that are substantially similar to the provisions of Subsection C shall be deemed to satisfy the training requirements in this state.

Section 8. Regulations

The commissioner may promulgate rules and regulations to administer this Act.

Section 9. Violations

Violations of this Act shall be subject to penalties pursuant to [insert state administrative code].

PROJECT HISTORY - 2022**PET INSURANCE MODEL LAW (#633)****1. Description of the Project, Issues Addressed, etc.**

Development of the Pet Insurance Act. This model addresses required disclosures, definitions, policy conditions, sales practices for wellness programs, and producer training requirements.

2. Name of Group Responsible for Drafting the Model and States Participating

Pet Insurance (C) Working Group

Participating states: Virginia, Chair; California, Co-Chair; Alaska; Arkansas; Connecticut; District of Columbia; Louisiana; Maryland; Massachusetts; Missouri; Pennsylvania; Rhode Island; Utah; Vermont; and Washington.

3. Project Authorized by What Charge and Date First Given to the Group

Authorized by a charge from the Property and Casualty Insurance (C) Committee on March 28, 2019. The Working Group adopted the Request for NAIC Model Law Development on June 27, 2019, and the Property and Casualty Insurance (C) Committee adopted it on July 18, 2019. The Executive (EX) Committee and Plenary adopted the Request for NAIC Model Law Development on Aug. 6, 2019.

4. A General Description of the Drafting Process (e.g., drafted by a subgroup, interested parties, the full group, etc). Include any parties outside the members that participated

Drafted by the full membership of the Pet Insurance (C) Working Group. Also participating in the drafting process were: the American Property Casualty Insurance Association (APCIA); the American Veterinarian Medical Association (AVMA); the Center for Economic Justice (CEJ); the Center for Insurance Research (CIR); the Chubb Group, Companion Protect, Mars Veterinary Health; Nationwide Insurance Group; North American Pet Health Insurance Association (NAPHIA); Trupanion; and Unum Life Insurance Company.

5. A General Description of the Due Process (e.g., exposure periods, public hearings, or any other means by which widespread input from industry, consumers and legislators was solicited)

A draft model law was presented to the Working Group on Oct. 1, 2019. The Working Group exposed Sections 1–4 for a public comment period on Oct. 1, 2019. It met to discuss Sections 1–4 on Nov. 7, 2019; Dec. 19, 2019; Feb. 19, 2020; March 5, 2020; and July 16, 2020.

The Working Group exposed Sections 5–6 for a public comment period on July 16, 2020. It met to discuss Sections 5–6 on Sept. 30, 2020, and Oct. 21, 2020.

The Working Group exposed Sections 7–9 for a public comment period on Sept. 30, 2020. It met to discuss Sections 7–9 on Nov. 6, 2020; Nov. 24, 2020; and Feb. 18, 2021.

The Working Group met to discuss open issues in the model on March 4, 2021; March 26, 2021; April 29, 2021; May 19, 2021; June 10, 2021; June 24, 2021; July 8, 2021; July 22, 2021; and July 29, 2021. It adopted a draft model on Aug. 4, 2021. The Working Group held additional meetings to discuss issues in the model on Sept. 8, 2021, and Oct. 7, 2021. The Working Group adopted the revised draft model on Oct. 21, 2021. The Property and Casualty Insurance (C) Committee adopted the draft model on Nov. 10, 2021. Before its consideration at the Joint Meeting of Executive (C) Committee and Plenary during the Fall National Meeting, there were concerns about the producer training section. The model was sent back to the Working Group for review. The Working Group met June 7, 2022 and July 21, 2022 to revise the language in Section 7. The model was adopted by the Working Group on July 21, 2022. The model was adopted by the Property and Casualty Insurance (C) Committee on August 1, 2022.

6. A Discussion of the Significant Issues (items of some controversy raised during the due process and the group's response)

Free Look Period – There was discussion that a free look period would offer a better understanding for consumers with a newer product like pet insurance. Many state insurance regulators commented that the free look period was not necessary or actuarial sound. The inclusion of this free look period in the California pet insurance law was requested by industry and supported by many interested parties. State insurance regulators adopted language that insurers can implement a maximum 15-day free look period in which consumers can examine and return the policy for a full refund if no claim has been made on the policy.

Renewals – State insurance regulators wanted clear language added to the model that would not allow a condition that was covered under a policy to be considered a preexisting condition—and, therefore, excluded from coverage—on subsequent policy renewals. While industry did indicate that it would like the ability to issue one-year policies that do not offer a renewal and could then use a preexisting exclusion for a previously covered condition, state insurance regulators stated that these policies would not be considered a renewal and, therefore, the added language would not affect industry's ability to sell these types of policies.

Waiting Period – Some state insurance regulators took issue with the allowance of a waiting period for certain conditions as proposed by the industry. State insurance regulators adopted the allowance of a 30-day waiting period for illnesses or orthopedic conditions not resulting from an accident. Waiting periods for accidents are prohibited.

Wellness Plans – There was discussion about whether wellness plans should be considered insurance or if those plans should be allowed to cover services that could be covered in insurance plans. State insurance regulators adopted a new section of the model to outline sales practices for wellness plans that are sold by licensed insurance entities. Wellness plans that are not sold by licensed entities and do not provide insurance coverage are not regulated by insurance departments and are not addressed in this model.

Licensing – Several state insurance regulators questioned the inclusion of licensing requirements in the model. After discussion with the Producer Licensing (D) Task Force, the licensing section was removed from the model. The Working Group adopted guidelines for producer training requirements.

Producer Training – Regulators in several states wanted to ensure that the language around producer training did not infringe on the work of the Producer Licensing (D) Task Force. They also wanted to make sure the model appropriately addressed reciprocity in states that had different but substantially similar training requirements.

7. Any Other Important Information (e.g., amending an accreditation standard).

None.

**Other Health Insurance Market Conduct Annual Statement
Data Call & Definitions**

(Adopted by the MCAS Blanks (D) Working Group 5/26/2022)

Line of Business: Other Health Insurance

Reporting Period: January 1, 2023 through December 31, 2023

Filing Deadline: June 30, 2024

Contact Information

MCAS Administrator	The person responsible for assigning who may view and input company data.
MCAS Contact	The person most knowledgeable about the submitted MCAS data. This person can be the same as the MCAS Administrator.
MCAS Attestor	The person who attests to the completeness and accuracy of the MCAS data.

Schedule 1 - Interrogatories

1-01	Are you currently marketing these products in this jurisdiction?	Yes/No
1-02	Do the products you are reporting on in response to this blank include closed or frozen blocks of business?	Yes/No
1-03	If yes, list the closed or frozen blocks of business?	Comment
1-04	Number of Other Health products offered to residents in this state	Number
1-05	For products reported to this MCAS jurisdiction, list the states where your Other Health products are filed (provide SERFF tracking number, if applicable). If a company issues the product in a state that does not require a filing, please identify the product, and describe the basis for not filing.	Comment
1-06	For products reported to this MCAS jurisdiction, does the company issue these Other Health products through associations/trusts?	Yes/No
1-07	If yes, list the associations/trusts	Comment
1-08	If yes, do you have a contractual relationship with any association/trust?	Comment
1-09	If yes, please identify which associations/trusts	Comment
1-10	If yes, does the contract allow any association/trust to market the product?	Yes/No
1-11	If yes, please identify which associations/trusts	
1-12	If yes, does the contract allow any association/trust to collect policy or contract premiums?	Yes/No
1-13	If yes, does the contract allow any association/trust to collect and pay commissions?	Yes/No
1-14	If yes, please identify which associations/trusts	Comment
1-15	If yes, does the contract allow any association/trust to adjudicate claims?	Yes/No
1-16	if yes, please identify which associations/trusts	Comment

Schedule 5 – Marketing and Sales

5-1	Number of individual applications/enrollments pending at the beginning of the period
5-2	Number of individual applications/enrollments denied during the period for any reason
5-3	Number of individual applications/enrollments denied during the period - health status or condition
5-4	Number of individual applications/enrollments approved during the period
5-5	Number of individual applications/enrollments pending at the end of the period
5-6	Number of applications/enrollments received via phone (audio only) (only answer for individual products)
5-7	Number of applications/enrollments received in person or via video application (e.g., Zoom, WebEx) (only answer for individual products)
5-8	Number of applications/enrollments received online (electronically) (only answer for individual products)
5-9	Number of applications/enrollments received by mail during the period (only answer for individual products)
5-10	Number of applications/enrollments received by any other method during the period (only answer for individual products)
5-11	Commissions paid during reporting period (dollar amount of commissions incurred during the period)
5-12	Unearned commissions returned to company on policies/certificates sold during the period

Participation Requirements: All companies licensed and reporting at least \$50,000 of other health insurance premium for all coverages reportable in MCAS within any of the participating MCAS jurisdictions. (This threshold is subject to individual jurisdiction requirements.)

Report by Residency: This MCAS blank is designed to collect data from the perspective of individual insureds in each state that the form is marketed in. When reporting for forms issued to discretionary groups, associations, or trusts – data should be provided on each state of residence of the insureds, rather than only where the discretionary group, association or trust is situated.

Other Health Insurance Market Conduct Annual Statement
Data Call & Definitions

(Adopted by the MCAS Blanks (D) Working Group 5/26/2022)

General Definitions:

Other Health - Health insurance forms that are not subject to the Affordable Care Act (ACA). For this MCAS blank, they are Health-Accident Only; Health - Accidental Death and Dismemberment; Health-Specified Disease-Limited Benefit/Critical Illness; Health - Hospital/Other Indemnity; and Health - Hospital/Surgical/Medical Expense

Health-Accident Only - An insurance contract that provides coverage, singly or in combination, for death, dismemberment, disability (not disability income), or hospital and medical care caused by or necessitated as a result of accident or specified kinds of accident

Health-Accidental Death and Dismemberment - An insurance contract that pays a stated benefit in the event of death and/or dismemberment caused by accident or specified kinds of accidents.

Health-Specified Disease-Limited Benefit/Critical Illness - An insurance contract that pays benefits for the diagnosis and/or treatment of a specifically named disease, diseases, or critical illness. Benefits can be paid as expense incurred, per diem, or a principle sum.

Health-Hospital/Other Indemnity - An insurance contract that pays a fixed dollar amount without regard to the actual expenses incurred.

Health-Hospital/Surgical/Medical Expense - An insurance contract that provides coverage to or reimburses the covered person for hospital, surgical, and/or medical expense incurred as a result of injury, sickness, and/or medical condition.

Association/Trust – For purposes of this MCAS blank, a non-employer group that offers benefits to its members (does not include banks or credit unions).

Individual Product - Policies marketed, sold, and issued to individual consumers, regardless of whether or not the policy forms have been filed with any State's department of insurance.

Group Product / Coverage - Policies issued to a trust, association, employer, or administrator for the purpose of marketing, selling, and issuing certificates to eligible members or employees, regardless of whether or not the policy forms have been filed with any State's department of insurance and regardless of where the association, trust, employer, or administrator is situated.

National Producer Number (NPN) - This is a specific number provided by National Insurance Producers Registry (NIPR) to individuals and most business entities that are listed in the NIPR's Producer Database (PDB).

Policies/Certificates - Refers to the coverage documents provided to individuals, families, or eligible members (i.e., state residents) who are enrolled in coverage (not the association/trust)

Other Health Insurance Market Conduct Annual Statement**Data Call & Definitions****(Adopted by the MCAS Blanks (D) Working Group 5/26/2022)**

Policyholder/Certificate holder – Refers to the individual or member who is afforded benefits of the coverage according to the laws of the state in which they reside (i.e., not the association/trust)

Policyholder Service - A company's activities relating to servicing its policyholders which includes, but is not limited to, notice/billing, disclosures, premium refunds and coverage questions.

Schedule 2 Definitions (Policy/Certificate Administration):

Rescission – A rescission is a cancellation or discontinuance of coverage based on a misrepresentation that is retroactive to the issue date. (Does not include cancellations for non-payment.)

Free Look – A set number of days provided in an insurance policy/certificate that allows time for the purchaser to review the contract provisions with the right to return the policy/certificate for a full refund of all premium paid. Report the number of policies/certificates that were returned by the insured under the free look provision during the period, regardless of the original issuance date.

Schedule 3 Definitions (Claims Administration):

Claim – Provide the total number of claims received during the reporting period for individual policyholders and/or group certificate holders residing in the state for which reporting is being completed.

Claim Clarifications:

- Claims received, paid and denied should be reported according to the data year of the receipt, payment or denial.
- Duplicate claims should not be reported.

For the purposes of this Market Conduct Annual Statement, a "Claim" includes any such request or demand, even those with incomplete or inadequate documentation and those made by an individual not eligible or covered under the policy against which the claim is made.

Communications with an insurer that are not explicit claims as per the definition above should not be reported on this MCAS. Such communications could include general queries regarding policy provisions, potential coverage, events reported for "information only", or other communications for which a clear request or demand for payment has not been made.

Other Health Insurance Market Conduct Annual Statement**Data Call & Definitions****(Adopted by the MCAS Blanks (D) Working Group 5/26/2022)**

If a claim is reopened, treat the reopened claim as a new and distinct claim apart from the original claim. For reopened claims, the claim determination time period is measured from the date the claim was re-opened to the date a benefit determination is made.

Claims Received - provide the total number of claims received during the reporting period for individual policyholders and/or group certificate holders residing in the state for which reporting is being completed

Claims Denied - provide the total number of claims denied during the reporting period for individual policyholders and/or group certificate holders residing in the state for which reporting is being completed; includes rejected and returned claims, whether in whole or in part

Claims Paid - provide the total number of claims paid during the reporting period for individual policyholders and/or group certificate holders residing in the state for which reporting is being completed

Waiting Period: Period of time a covered person who is entitled to receive benefits must wait before coverage is provided. This applies to waiting periods that are per policy or per condition.

Schedules 4 Definitions (Consumer Complaints and Lawsuits):

Complaint - any written communication that expresses dissatisfaction with a specific person or entity. An oral communication, which is subsequently converted to a written form in order to be analyzed and acted upon, will meet the definition of a complaint for this purpose. A complaint should be reported to the state where the policyholder resides.

Include:

- Any complaint regardless of the subject of the complaint (claims, underwriting, marketing, etc.).
- Complaints received from third parties.

Lawsuit—An action brought in a court of law in which one party, the plaintiff, claims to have incurred a loss as a result of the action of another party, the defendant.

For purposes of reporting lawsuits for Other Health Insurance products:

- Include only lawsuits brought by an applicant for insurance, a policyholder or a claimant/beneficiary as a plaintiff against the reporting insurer or its agent as a defendant;
- Include all lawsuits, whether or not a hearing or proceeding before the court occurred;
- Do not include arbitrations of any sort;

Other Health Insurance Market Conduct Annual Statement**Data Call & Definitions****(Adopted by the MCAS Blanks (D) Working Group 5/26/2022)**

- If one lawsuit seeks damages under two or more policies or contracts, count the number of policies or contracts involved as the number of lawsuits. For example, if one lawsuit seeks damages under three policies or contracts, count the action as three lawsuits;
- If one lawsuit has two or more complainants, report the number of complainants as the number of lawsuits. For example, if one lawsuit has two complainants, report two lawsuits. If the lawsuit is a class action, see instructions for treatment of class action lawsuits;
- Report a lawsuit in the jurisdiction in which the policy was issued with the exception of class action lawsuits;
- Treatment of class action lawsuits: Report the opening and closing of a class action lawsuit once in each state in which a potential class member resides. Include an explanatory note with your submission stating the number of class action lawsuits included in the data and the general cause of action.

Lawsuits Closed During the Period with Consideration for the Consumer—A lawsuit closed during the reporting period in which a court order, jury verdict, or settlement resulted in payment, benefits, or other thing of value, i.e., consideration, to the applicant, policyholder, or beneficiary in an amount greater than offered by the reporting insurer before the lawsuit was brought.

Schedule 5 Definitions (Marketing and Sales)

Commissions - The total amount of compensation paid to any individual or entity for their consideration in marketing, selling, and attracting potential insureds, by whatever means this compensation is provided. Do not include monetary valuables paid to any individual or entity that is generally not able to be converted into actual money. NOTE: For products *not* related to the actual sale of a contract, do not include any amounts paid for the specific purpose of marketing, encouraging or promoting. Do not include any fees or other compensation paid for outsourced services.

Line of Business: Homeowners

Reporting Period: January 1, 2023 through December 31, 2023

Filing Deadline: April 30, 2024

Contact Information

MCAS Administrator	The person responsible for assigning who may view and input company data.
MCAS Contact	The person most knowledgeable about the submitted MCAS data. This person can be the same as the MCAS Administrator.
MCAS Attestor	The person who attests to the completeness and accuracy of the MCAS data.

Schedule 1—Interrogatories

ID	Description	Comment
1-01	Were there policies in-force during the reporting period that provided Dwelling coverage?	Yes/No
1-02	Were there policies in-force during the reporting period that provided Personal Property coverage?	Yes/No
1-03	Were there policies in-force during the reporting period that provided Liability coverage?	Yes/No
1-04	Were there policies in-force during the reporting period that provided Medical Payments coverage?	Yes/No
1-05	Were there policies in-force during the reporting period that provided Loss of Use coverage?	Yes/No
1-06	Was the Company still actively writing policies in the state at year end?	Yes/No
1-07	Does the Company write in the non-standard market?	Yes/No
1-08	If yes, what percentage of your business is non-standard?	Comment
1-09	If yes, how is non-standard defined?	Comment
1-10	Has the company had a significant event/business strategy that would affect data for this reporting period? Yes/No	Yes/No
1-11	If yes, add additional comments	Comment
1-12	Has this block of business or part of this block of business been sold, closed or moved to another company during the reporting period?	Yes/No
1-13	If yes, add additional comments	Comment
1-14	How does company treat subsequent supplemental payments on previously closed claims (or additional payments on a previously reported claim)? Re-open original claim/open new claim	Comment
1-15	Does the company use Managing General Agents (MGAs)?	Yes/No

1-16	If yes, list the names of the MGAs.	Comment
1-17	Does the company use Third Party Administrators (TPAs)?	Yes/No
1-18	If yes, list the names of the TPAs.	Comment
1-19	Does the company use digital claim settlement?	Yes/No
1-20	If yes, list the names of the vendors providing third-party data and algorithms used in the digital claim settlement process.	Comment
1-21	Claims Comments	Comment
1-22	Underwriting Comments	Comment

Coverages	Reported also at the Digital Claim Handling Process Level of Detail*
Dwelling (includes – Other Structures)	X
Personal Property	X
Liability	
Medical Payments	
Loss of Use	

***Includes Digital Claims, Hybrid Claims and Non-Digital Claims (Applies only to claims related data elements)
Additionally, an "All" breakout will be included for the reporting of Median Days to Final Payment**

Schedule 2—Homeowners Claims Activity, Counts Reported by Claimant and by Coverage

Report the number of reserves/lines/features opened for each coverage part per claim. For example, if one claim results in a reserve/line/feature opened for two liability claimants, two medical payment claims, one dwelling claim for the insured, and one personal property claim for the insured, you would report as follows: Dwelling – 1; Personal Property – 1; Liability – 2; Medical Payments – 2. The number of days to final payment (if payment is made) would be calculated separately for each claimant.

ID	Description
2-23	Number of claims open at the beginning of the period
2-24	Number of claims opened during the period
2-25	Number of claims closed during the period, with payment
2-26	Number of claims closed during the period, without payment
2-27	Number of claims open at the end of the period
2-28	Median days to final payment

Proposed Additions in Blue Text/Proposed Deletions in Red Text*

2-29	Number of claims closed with payment within 0-30 days
2-30	Number of claims closed with payment within 31-60 days
2-31	Number of claims closed with payment within 61-90 days
2-32	Number of claims closed with payment within 91-180 days
2-33	Number of claims closed with payment within 181-365 days
2-34	Number of claims closed with payment beyond 365 days
2-35	Number of claims closed without payment within 0-30 days
2-36	Number of claims closed without payment within 31-60 days
2-37	Number of claims closed without payment within 61-90 days
2-38	Number of claims closed without payment within 91-180 days
2-39	Number of claims closed without payment within 181-365 days
2-40	Number of claims closed without payment beyond 365 days
2-39	Number of lawsuits open at beginning of the period
2-40	Number of lawsuits opened during the period
2-41	Number of lawsuits closed during the period
2-42	Number of lawsuits open at end of period
2-43	Number of lawsuits closed with consideration for the consumer.

Schedule 3—Homeowners Underwriting Activity

ID	Description
3-41	Number of dwellings which have policies in-force at the end of the period
3-42	Number of dwelling fire policies in force at the end of the period.
3-43	Number of homeowner policies in force at the end of the period.
3-44	Number of tenant/renter/condo policies in force at the end of the period.
3-45	Number of all other residential property policies in force at the end of the period.
3-46	Number of new business policies written during the period
3-47	Dollar amount of direct premium written during the period
3-48	Number of Company-Initiated non-renewals during the period
3-49	Number of cancellations for non-pay or non-sufficient funds
3-50	Number of cancellations at the insured's request
3-51	Number of Company-Initiated cancellations that occur in the first 59 days after effective date, excluding rewrites to an affiliated company
3-52	Number of Company-Initiated cancellations that occur 60 to 90 days after effective date, excluding rewrites to an affiliated company

Schedule 4– Lawsuit Activity

Reporting Breakdown

Dwelling (includes – Other Structures)	Claim related lawsuits
Personal Property	
Liability	
Medical Payments	
Loss of Use	
Non-claim Related Lawsuits	Non-claim related lawsuits

ID	Description
4-55	Number of lawsuits open at beginning of the period
4-56	Number of lawsuits opened during the period
4-57	Number of lawsuits closed during the period
4-58	Number of lawsuits open at end of period
4-59	Number of lawsuits closed with consideration for the consumer

Schedule 4– Homeowners Attestation

By completing the attestation information, those named understand, agree and certify on behalf of the named company that:

1. They are authorized to submit the Market Conduct Annual Statement on behalf of the named company and to bind the company to the statements in this attestation;
2. They are knowledgeable of the information required to be provided in the Market Conduct Annual Statement filed by this company and have reviewed this filing;
3. To the best of their knowledge and belief, this filing represents a full and accurate statement of the information required to be provided in the Market Conduct Annual Statement pursuant to the applicable instructions; and
4. They are aware that the state insurance department(s) receiving the data may initiate regulatory action as authorized by law in a specific jurisdiction if the data submitted in the MCAS is inaccurate, incomplete, or found to be materially false, misleading or omissive.
5. They affirm that the company is able to accurately trace the data as reported to its source within the company and if necessary, recreate the MCAS results as reported in this filing.

NOTE: The company must provide the name for at least two individuals who are able to attest that the criteria listed above have been met, and attest to the overall accuracy of the MCAS filing. Both attestors should have participated in the review and validation of the filing. We

recommend that one person be the individual with operational responsibility for the source data such as a responsible individual from claims, underwriting or compliance. We recommend that the second person should be a responsible IT person that participated in the creation of the data in the filing.

ID	Description
4-60	First Attestor Information (First Name, Middle Name, Last Name, Suffix, Title)
4-61	Second Attestor Information (First Name, Middle Name, Last Name, Suffix, Title)
4-62	Overall Comments for the Period

Definitions:

In determining what business to report for a particular state, unless otherwise indicated in these instructions, all companies should follow the same methodology/definitions used to file the Financial Annual Statement (FAS) and its corresponding state pages. Exclude lender-placed or creditor-placed policies.

Please note: In the Underwriting Section there are questions asking for policies in-force by type of policy. These are asking for a count of the policies in-force that meet the specifications to be included on the MCAS. Please use the following as a guide to determine which policy types should be reported for each question:

- (3-45) Number of dwelling fire policies in force at the end of the period.
Include dwelling policies that meet the definition of a dwelling policy as defined within this document. This would typically include policies written on forms DP-1, DP-2 and DP-3.
- (3-46) Number of homeowner policies in force at the end of the period.
Include homeowner policies that meet the definition of a homeowner policy as defined within this document. This would typically include policies written on forms HO-1, HO-2, HO-3, HO-5, HO-7 and HO-8.
- (3-47) Number of tenant/renter/condo policies in force at the end of the period.
Include tenant/renter/condo policies that meet the definition of a tenant/renter/condo policy as defined within this document. This would typically include policies written on forms HO-4 and HO-6.
- (3-48) Number of all other residential property policies in force at the end of the period.
Include other policies that meet the specifics of MCAS reporting, but that do not fall into one of the categories requested in questions 3-45, 3-46 and 3-47. If your company only write policies that fall into the forms specified for questions 3-45, 3-46 and 3-47, this number will be 0.

Cancellations – Includes all cancellations of the policies where the cancellation effective date is during the reporting year. The number of cancellations should be reported on a policy basis regardless of the number of dwellings insured under the policy.

Homeowner Data Call & Definitions

Digital Claims Edits other than Interrogatories Adopted by D Committee and MCAS Blanks WG in 2021
Lawsuit & Digital Claims Interrogatory Edits Adopted by MCAS Blanks (D) Working Group May 26, 2022
Lawsuit & Digital Claims Interrogatory Edits Adopted by Market Regulation and Consumer Affairs (D) Committee, July 15, 2022
Proposed Additions in Blue Text/Proposed Deletions in Red Text

Report cancellations separately for:

- Policies cancelled for non-payment of premium or non-sufficient funds.
 - These should be reported every time a policy cancels for the above reasons. (i.e., if a policy cancels for non-pay three times in a policy period, and is reinstated each time; each cancellation should be counted.)
- Policies cancelled at the insured's request.
- Policies cancelled for underwriting reasons.

Exclude:

- Policies cancelled for 're-write' purposes where there is no lapse in coverage.

Cancellations within the first 59 days – Company-initiated cancellations for new business where the notice of cancellation was issued within the first 59 days after the original effective date of the policy.

- The calculation of the number of days is from the original inception date of the policy, not the renewal date.
- This time frame should be used regardless of individual state requirements related to the 'underwriting' period for new business.
- The notice of cancellation is the date the cancellation notice was mailed to the insured.

Cancellations from 60 to 90 days – Company-initiated cancellations where the notice of cancellation was issued 60 to 90 days after the original effective date of the policy.

- The calculation of the number of days is from the original inception date of the policy, not the renewal date.
- This time frame should be used regardless of individual state requirements related to the 'underwriting' period for new business.
- The notice of cancellation is the date the cancellation notice was mailed to the insured.

Cancellations greater than 90 days – Company-initiated cancellations where the notice of cancellation was issued more than 90 days after the original effective date of the policy.

- The calculation of the number of days is from the original inception date of the policy, not the renewal date.
- This time frame should be used regardless of individual state requirements related to the 'underwriting' period for new business.
- The notice of cancellation is the date the cancellation notice was mailed to the insured.

Claim - A request or demand for payment of a loss that may be included within the terms of coverage of an insurance policy. Each claimant/insured reporting a loss is counted separately.

Include:

- Both first and third party claims.

Property & Casualty Market Conduct Annual Statement

Homeowner Data Call & Definitions

Digital Claims Edits other than Interrogatories Adopted by D Committee and MCAS Blanks WG in 2021
Lawsuit & Digital Claims Interrogatory Edits Adopted by MCAS Blanks (D) Working Group May 26, 2022
Lawsuit & Digital Claims Interrogatory Edits Adopted by Market Regulation and Consumer Affairs (D) Committee, July 15, 2022
Proposed Additions in Blue Text/Proposed Deletions in Red Text

Exclude:

- An event reported for “information only”.
- An inquiry of coverage if a claim has not actually been presented (opened) for payment.
- A potential claimant if that individual has not made a claim nor had a claim made on his or her behalf.

Claims Closed With Payment – Claims closed with payment where the claim was closed during the reporting period regardless of the date of loss or when the claim was received. The number of days to closure, however, should be measured as the difference between the date of the final payment and the date the claim was reported or between the date of the final payment and the date the request for supplemental payment was received. See also “Date of Final Payment”.

Exclude:

- Claims where payment was made for company loss adjustment expenses if no payment was made to an insured/claimant.
- Claims that are closed because the amount claimed is below the insured’s deductible.

Clarification:

- If a claim is reopened for the sole purpose of refunding the insured’s deductible, do not count it as a paid claim.
- For claims where the net payment is \$0 due to subrogation recoveries, report the number of claims in which any amount was paid to the insured; do not net the payment with subrogation recoveries when counting the number of paid claims

Calculation Clarification:

- For each coverage identifier, the sum of the claims closed with payment across each closing time interval should equal the total number of claims closed with payment during the reporting period.

Handling Additional Payment on Previously Reported Claim / Subsequent Supplemental Payment for claims closed with payment during the reporting period:

- If a claim is reopened for a subsequent supplemental payment, count the reopened claim as a new claim. Calculate a separate aging on that supplemental payment from the time the request for supplemental payment was received to the date of the final payment was made.

Claims Closed Without Payment – Claims closed with no payment made to an insured or third party. The number of days to closure is the difference between the date the claim was closed and the date the claim was reported and/or reopened. See also “Date of Final Payment”.

Include:

- All claims that were closed during the reporting period regardless of the date of loss or when the claim was received.

Property & Casualty Market Conduct Annual Statement

Homeowner Data Call & Definitions

Digital Claims Edits other than Interrogatories Adopted by D Committee and MCAS Blanks WG in 2021
Lawsuit & Digital Claims Interrogatory Edits Adopted by MCAS Blanks (D) Working Group May 26, 2022
Lawsuit & Digital Claims Interrogatory Edits Adopted by Market Regulation and Consumer Affairs (D) Committee, July 15, 2022
Proposed Additions in Blue Text/Proposed Deletions in Red Text

- Claims where no payment was made to an insured/claimant even though payment was made for company loss adjustment expenses.
- A demand for payment for which it was determined that no relevant policy was in-force at the time of the loss if a claim file was set up and the loss was investigated.
- Claims that are closed because the amount claimed is below the insured's deductible.

Calculation Clarification:

- For each coverage identifier, the sum of the claims closed without payment across each closing time interval should equal the total number of claims closed without payment during the reporting period.

Complaint – any written communication that expresses dissatisfaction with a specific person or entity subject to regulation under the state's insurance laws. An oral communication, which is subsequently converted to a written form in order to be analyzed and acted upon, will meet the definition of a complaint for this purpose.

Include:

- Any complaint regardless of the subject of the complaint (claims, underwriting, marketing, etc.)
- Complaints received from third parties.

Coverage - Dwelling (includes – Other Structures) – Coverage for dwellings under Homeowners Policies and Dwelling Fire and Dwelling Liability Policies. It includes coverage for Other Structures.

Coverage - Loss of Use – Loss of Use provided under Homeowners Policies.

Coverage - Personal Property – Personal Property provided under Homeowners Policies.

Coverage - Liability – Liability insurance provided under Homeowners Policies.

Coverage - Medical Payments – Medical Payments provided under Homeowners Policies.

Date of Final Payment – The date final payment was issued to the insured/claimant.

Calculation Clarification:

- If partial payments were made on the claim, the claim would be considered closed with payment if the final payment date was made during the reporting period regardless of the date of loss or when the claims was received.
- Report a claim as "closed with payment" or "closed without payment" if it is closed in the company's claims system during the reporting period (even if the final payment was issued in a prior reporting period).

Property & Casualty Market Conduct Annual Statement

Homeowner Data Call & Definitions

Digital Claims Edits other than Interrogatories Adopted by D Committee and MCAS Blanks WG in 2021
Lawsuit & Digital Claims Interrogatory Edits Adopted by MCAS Blanks (D) Working Group May 26, 2022
Lawsuit & Digital Claims Interrogatory Edits Adopted by Market Regulation and Consumer Affairs (D) Committee, July 15, 2022
Proposed Additions in Blue Text/Proposed Deletions in Red Text

- If a claim remains open at the end of the reporting period (even though a final payment has been issued) it should be reported as open. Only when the claim is closed in the company's claims system, would you report the days to final payment.

Example:

- A claim is open on 11/1/00 and final payment is made on 12/1/00. The claim is left open until 2/1/01 to allow time for supplemental requests.
 - The claim would be reported as open in the "00" MCAS submission and closed in the "01" MCAS submission.
 - The number of days to final payment would be calculated as 30 days and reported in the "01" MCAS submission.

Date the Claim was Reported – The date an insured or claimant first reported his or her loss to either the company or insurance agent.

Digital Claim Handling Process Level of Detail Breakdown:

Digital Claim – A claim involving a claim settlement determination which was accepted by the insured/claimant without adjustment whereby the entire claim was handled without human intervention on the part of the insurance company in the loss appraisal process, settlement determination, and/or in the production of the initial loss settlement offer. Digital claims utilize only digital information to establish the extent of damage and to produce a loss settlement determination through the application of one or more automated loss algorithms applied to digital information. No human inspection or appraisal of the damaged property is conducted by the insurance company, independent adjuster, or other person relied upon by the insurance company during the life cycle of the claim.

Examples of digital claim information include, but are not limited to, photos taken by a claimant or insured, photos taken by a plane or drone, and/or data provided by in-vehicle or in-property sensors.

Hybrid Claim – A claim whereby the initial loss settlement determination began as a digital claim, however, at some point in the claim life cycle required the use of human resources in the loss appraisal process, settlement determination, and/or in the production of the initial or subsequent loss settlement offer.

Non-Digital Claim – means any claim other than a Digital Claim or Hybrid Claim.

Direct Written Premium - The total amount of direct written premium for all policies covered by the market conduct annual statement (new and renewal) written during the reporting period.

Property & Casualty Market Conduct Annual Statement

Homeowner Data Call & Definitions

Digital Claims Edits other than Interrogatories Adopted by D Committee and MCAS Blanks WG in 2021
Lawsuit & Digital Claims Interrogatory Edits Adopted by MCAS Blanks (D) Working Group May 26, 2022
Lawsuit & Digital Claims Interrogatory Edits Adopted by Market Regulation and Consumer Affairs (D) Committee, July 15, 2022
Proposed Additions in Blue Text/Proposed Deletions in Red Text

Calculation Clarification:

- Premium amounts should be determined in the same manner as used for the financial annual statement.
- If premium is refunded or additional premium is written during the reporting period (regardless of the applicable policy effective date), the net effect should be reported.
- If there is a difference of 20% or more between the Direct Written Premium reported for market conduct annual statement and the Direct Written Premium reported on the financial annual statement, provide an explanation for the difference when filing the market conduct annual statement in order to avoid inquiries from the regulator receiving the market conduct annual statement filing.
- Reporting shall not include premiums received from or losses paid to other carriers on account of reinsurance assumed by the reporting carrier, nor, shall any deductions be made by the reporting carrier for premiums added to or for losses recovered from other carriers on account of reinsurance ceded.

Dwelling – A personally occupied residential dwelling.

Calculation Clarification:

- A 2 or 3 family home covered under one policy would be considered 1 dwelling.

Dwelling Fire Policies – Coverage for dwellings and their contents. It may also provide liability coverage and is usually written when a residential property does not qualify according to the minimum requirements of a homeowner's policy, or because of a requirement for the insured to select several different kinds of coverage and limits on this protection.

Include:

- Dwelling Fire and Dwelling Liability policies should be included ONLY IF the policies written under these programs are for personally occupied residential dwellings, not policies written under a commercial program and/or on a commercial lines policy form.

Homeowners Policies – Policies that combine liability insurance with one or more other types of insurance such as property damage, personal property damage, medical payments and additional living expenses.

Include:

- Mobile/Manufactured homes intended for use as a dwelling regardless of where [or what line] on the Statutory Annual Statement state page associated premium is reported.
- Renters insurance,-Policies covering log homes, land homes, and site built homes are included.
- Inland Marine or Personal Articles endorsements.
- Include policies written on the HO-1, HO-2, HO-3, HO-5, HO-7 and HO-8 policy forms.

Property & Casualty Market Conduct Annual Statement

Homeowner Data Call & Definitions

Digital Claims Edits other than Interrogatories Adopted by D Committee and MCAS Blanks WG in 2021
Lawsuit & Digital Claims Interrogatory Edits Adopted by MCAS Blanks (D) Working Group May 26, 2022
Lawsuit & Digital Claims Interrogatory Edits Adopted by Market Regulation and Consumer Affairs (D) Committee, July 15, 2022
Proposed Additions in Blue Text/Proposed Deletions in Red Text

Exclude:

- Farmowners is not included as it is considered to be Commercial Lines for purposes of this project.
- Umbrella policies.
- Lender-placed or creditor-placed policies.

Inland Marine or Personal Articles Endorsements – Provides coverage via endorsement to a homeowners policy for direct physical loss to personal property as described in the endorsement.

Exclude:

- Stand-alone Inland Marine Policies.

Lawsuit – ~~A court proceeding to recover a right to a claim, including lawsuits for arbitration cases.~~ An action brought in a court of law in which one party, the plaintiff, claims to have incurred a loss as a result of the action of another party, the defendant.

Exclude:

- Subrogation claims where lawsuit is filed by the company against the tortfeasor.
- Non-lawsuit legal activity or litigation filed by an insurer, including, but not limited to: request to compel an independent medical examination, an examination under oath, **interpleader actions**, and declaratory judgment actions filed **or brought** by an insurer.
- **Arbitrations, mediation, appraisal, or any other form of dispute resolution not brought in a court of law.**

Calculation Clarification:

- ~~Lawsuits should be reported on the same basis as claims. One lawsuit should be reported for each / claimant / coverage combination, regardless of the number of actual suits filed.~~
- ~~One lawsuit with two claimants would be reported as two lawsuits as any awards/payments made would be made to the claimants individually.~~
- ~~One lawsuit filed seeking damages for multiple coverages should be reported as one lawsuit for each applicable coverage.~~
- ~~Lawsuits should be reported in the state in which the claim was reported on this statement.~~

For purposes of reporting lawsuits for Homeowner products:

- Include only lawsuits brought by an applicant for insurance, a policyholder or claimant as a plaintiff against the reporting insurer as a defendant.
- Include all lawsuits, whether or not a hearing or proceeding before the court occurred.
- With the exception of class action lawsuits, report a lawsuit with two or more complainants as one lawsuit.

Property & Casualty Market Conduct Annual Statement

Homeowner Data Call & Definitions

Digital Claims Edits other than Interrogatories Adopted by D Committee and MCAS Blanks WG in 2021
Lawsuit & Digital Claims Interrogatory Edits Adopted by MCAS Blanks (D) Working Group May 26, 2022
Lawsuit & Digital Claims Interrogatory Edits Adopted by Market Regulation and Consumer Affairs (D) Committee, July 15, 2022
Proposed Additions in Blue Text/Proposed Deletions in Red Text

- With the exception of class action lawsuits, report a lawsuit in the jurisdiction in which the policy was issued.
- Report claim related lawsuits broken out by coverage as outlined in the schedule.
- Report non-claim related lawsuits in aggregate as outlined in the schedule.

Treatment of Class Action Lawsuits:

- Report the opening and closing of a class action lawsuit once in each state in which a potential class member resides.
- Include an explanatory note with your submission state the number of class action lawsuits included in the data and the general cause of the action.

Lawsuits Closed During the Period with Consideration for the Consumer—A lawsuit closed during the reporting period in which a court order, jury verdict, or settlement resulted in payment, benefits, or other thing of value, i.e., consideration, to the claimant in an amount greater than offered by the reporting insurer before the lawsuit was brought.

Liability Insurance – Coverage for all sums that the insured becomes legally obligated to pay because of bodily injury or property damage, and sometimes other torts to which an insurance policy applies.

Loss Of Use – Coverage for additional living expenses incurred by the insured or fair rental value when the insured dwelling becomes uninhabitable as the result of an insured loss or when access to the dwelling is barred by civil authority.

Median Days to Final Payment – The median value for all claims closed with payment during the period.

Calculation for losses with one final payment date during the reporting period:

- Date the loss was reported to the company to the date of final payment.

Calculation for losses with multiple final payment dates during the reporting period:

- Date the request for supplemental payment received to the date of final payment (for each different final payment date.)

Exclude:

- Subrogation payments.

Calculation Clarification / Example:

- To determine the Median Days to Final Payment you must first determine the number of days it took to settle each claim. This is the difference between the date the loss was reported to the company, or the date the request for supplemental payment was received, to the date of final payment. The Median Days to Final Payment is the median value of the number of days it took to settle all claims closed with payment during the period.

Lawsuit & Digital Claims Interrogatory Edits Adopted by MCAS Blanks (D) Working Group May 26, 2022
Lawsuit & Digital Claims Interrogatory Edits Adopted by Market Regulation and Consumer Affairs (D) Committee, July 15, 2022
Proposed Additions in Blue Text/Proposed Deletions in Red Text*

Median - A median is the middle value in a distribution arranged in numerical order (either lowest to highest or highest to lowest). If the distribution contains an odd number of elements, the median is the value above and below which lie an equal number of values. If the distribution contains an even number of elements, the median is the average of the two middle values. It is not the arithmetic mean (average) of all of the values.

Consider the following simple example of the number of days it took to settle each of the following seven claims:

Claim	Nbr 1	Nbr 2	Nbr 3	Nbr 4	Nbr 5	Nbr 6	Nbr 7
Days to Settle	2	4	4	5	6	8	20

In this situation, the Median Days to Final Payment would be 5 because it is the middle value. There are exactly 3 values below the median (2, 4, & 4) and 3 values above the median (6, 8, & 20). If the data set had included an even number of values, then the median would be the average of the two middle values as demonstrated below.

Claim	Nbr 1	Nbr 2	Nbr 3	Nbr 4	Nbr 5	Nbr 6
Days to Settle	2	4	5	6	8	20

$$\text{Median Days to Final Payment} = (5 + 6)/2 = 5.5$$

The median should be consistent with the paid claim counts reported in the closing time intervals.

Example: A carrier reports the following closing times for paid claims.

Closing Time # of Claims

< 30	22
31-60	13
61-90	18
91-180	11
181-365	12
>365	15

The sum of the claims reported across each closing time interval is 91, so that the median is the 46th claim. This claim falls into the closing time interval "61-90 days." Any reported median that falls outside of this range (i.e. less than 61 or greater than 90) will indicate a data error.

Proposed Additions in Blue Text/Proposed Deletions in Red Text*

Medical Payments Coverage – Provides coverage for medical expenses resulting from injuries sustained by a claimant regardless of liability.

NAIC Company Code – The five-digit code assigned by the NAIC to all U.S. domiciled companies which filed a Financial Annual Statement with the NAIC.

NAIC Group Code – The code assigned by the NAIC to identify those companies that are a part of a given holding company structure. A zero indicates that the company is not part of a holding company.

New Business Policy Written – A newly written agreement that puts insurance coverage into effect during the reporting period.

Exclude:

- 'Re-written' policies unless there was a lapse in coverage.

Non-Renewals – A policy for which the insurer elected not to renew the coverage for circumstances allowed under the "non-renewal" clause of the policy.

Include:

- All company-initiated non-renewals of the policies where the non-renewal effective date is during the reporting period.

Exclude:

- Policies where a renewal offer was made and the policyholder did not accept the offer.
- Instances where the policyholder requested that the policy not be renewed.

Calculation Clarification:

- The number of nonrenewals should be reported on a policy basis regardless of the number of dwellings insured under the policy.

Other Structures – Structures on the residence premises (1) separated from the dwelling by a clear space or (2) connect to the dwelling by a fence, wall, wire, or other form of connection but not otherwise attached.

Personal Property Damage Coverage – Provides coverage for damage to dwelling contents or other covered personal property caused by an insured peril.

Personally Occupied – A dwelling in which the person owning the policy personally occupies the dwelling and lives there.

Property Damage Coverage – Provides coverage for damage to the dwelling and/or other insured structures caused by an insured peril.

Policy In-force – A policy in which the coverage is in effect as of the end of the reporting period.

Tenant/Renters/Condo Policies – Policies that provide coverage for the personal property of tenants, renters, condominium and cooperative unit owners. Include policies typically written on the HO-4 and HO-6 policy forms.

Coverages

Coverages	Reported also at the Digital Claim Handling Process Level of Detail*
Collision	X
Comprehensive/Other Than Collision	X
Bodily Injury	
Property Damage	X
Uninsured Motorists and Underinsured Motorists (UMBI)	
Uninsured Motorists and Underinsured Motorists (UMPD)	X
Medical Payments	
Combined Single Limits	
Personal Injury Protection	

*** Includes Digital Claims, Hybrid Claims and Non-Digital Claims (Applies only to claims related data elements)**

Additionally, an "All" breakout will be included for the reporting of Median Days to Final Payment.

Schedule 2—Private Passenger Auto Claims Activity, Counts Reported by Claimant, by Coverage

Report the number of reserves/lines/features opened for each coverage part per claim. For example, if one claim results in a reserve/line/feature opened for two bodily injury claimants (one property damage claimant, one collision claim for the insured, and one medical payment claim for the insured), it would be reported as follows: Collision – 1, Bodily Injury – 2; Property Damage – 1; and Medical Payments – 1. The number of days to final payment (if payment is made) would be calculated separately for each claimant.

ID	Description
2-28	Number of claims open at the beginning of the period
2-29	Number of claims opened during the period
2-30	Number of claims closed during the period, with payment
2-31	Number of claims closed during the period, without payment.
2-32	Number of claims closed during the period, without payment, because the amount claimed is below the insured's deductible.
2-33	Number of claims remaining open at the end of the period

Proposed Additions in Blue Text/Proposed Deletions in Red Text*

2-34	Median days to final payment
2-35	Number of claims closed with payment within 0-30 days
2-36	Number of claims closed with payment within 31-60 days
2-37	Number of claims closed with payment within 61-90 days
2-38	Number of claims closed with payment within 91-180 days
2-39	Number of claims closed with payment within 181-365 days
2-40	Number of claims closed with payment beyond 365 days
2-41	Number of claims closed without payment within 0-30 days
2-42	Number of claims closed without payment within 31-60 days
2-43	Number of claims closed without payment within 61-90 days
2-44	Number of claims closed without payment within 91-180 days
2-45	Number of claims closed without payment within 181-365 days
2-46	Number of claims closed without payment beyond 365 days
2-47	Number of lawsuits open at beginning of the period
2-48	Number of lawsuits opened during the period
2-49	Number of lawsuits closed during the period
2-50	Number of lawsuits open at end of period
2-51	Number of lawsuits closed with consideration for the consumer.

Schedule 3—Private Passenger Auto Underwriting

ID	Description
3-52	Number of autos which have policies in-force at the end of the period
3-53	Number of policies in-force at the end of the period
3-54	Number of new business policies written during the period
3-55	Dollar amount of direct premium written during the period
3-56	Number of Company-Initiated non-renewals during the period
3-57	Number of cancellations for non-pay or non-sufficient funds
3-58	Number of cancellations at the insured's request
3-59	Number of Company-Initiated cancellations that occur in the first 59 days after effective date, excluding rewrites to an affiliated company
3-60	Number of Company-Initiated cancellations that occur 60 to 90 days after effective date, excluding rewrites to an affiliated company

3-62	Number of complaints received directly from any person or entity other than the DOI

Schedule 4—Private Passenger Auto Attestation

By completing the attestation information, those named understand, agree and certify on behalf of the named company that:

1. They are authorized to submit the Market Conduct Annual Statement on behalf of the named company and to bind the company to the statements in this attestation;
2. They are knowledgeable of the information required to be provided in the Market Conduct Annual Statement filed by this company and have reviewed this filing;
3. To the best of their knowledge and belief, this filing represents a full and accurate statement of the information required to be provided in the Market Conduct Annual Statement pursuant to the applicable instructions; and
4. They are aware that the state insurance department(s) receiving the data may initiate regulatory action as authorized by law in a specific jurisdiction if the data submitted in the MCAS is inaccurate, incomplete, or found to be materially false, misleading or omissive.
5. They affirm that the company is able to accurately trace the data as reported to its source within the company and if necessary, recreate the MCAS results as reported in this filing.

NOTE: The company must provide the name for at least two individuals who are able to attest that the criteria listed above have been met, and attest to the overall accuracy of the MCAS filing. Both attestors should have participated in the review and validation of the filing. We recommend that one person be the individual with operational responsibility for the source data such as a responsible individual from claims, underwriting or compliance. We recommend that the second person should be a responsible IT person that participated in the creation of the data in the filing.

ID	Description
4-63	First Attestor Information (First Name, Middle Name, Last Name, Suffix, Title)
4-64	Second Attestor Information (First Name, Middle Name, Last Name, Suffix, Title)
4-65	Overall Comments for the Period

Proposed Additions in Blue Text/Proposed Deletions in Red Text*

Definitions:

In determining what business to report for a particular state, unless otherwise indicated in these instructions, all companies should follow the same methodology/definitions used to file the Financial Annual Statement (FAS) and its corresponding state pages. Exclude lender-placed or creditor-placed policies.

Data should be reported for both private passenger automobiles and motorcycles. Exclude antique vehicles and primarily off-road vehicles such as dune buggies or three-wheel ATVs.

Cancellations – Includes all cancellations of the policies where the cancellation effective date is during the reporting year. The number of cancellations should be reported on a policy basis regardless of the number of automobiles insured under the policy.

Report cancellations separately for:

- Policies cancelled for non-payment of premium or non-sufficient funds
 - These should be reported every time a policy cancels for the above reasons (i.e., if a policy cancels for non-pay three times in a policy period, and is reinstated each time; each cancellation should be counted).
- Policies cancelled at the insured's request
- Policies cancelled for underwriting reasons.

Exclude:

- Policies cancelled for 're-write' purposes where there is no lapse in coverage.

Cancellations within the first 59 days – Company-initiated cancellations for new business where the notice of cancellation was issued within the first 59 days after the original effective date of the policy.

- The calculation of the number of days is from the original inception date of the policy, not the renewal date.
- This time frame should be used regardless of individual state requirements related to the 'underwriting' period for new business.
- The notice of cancellation is the date the cancellation notice was mailed to the insured.

SharePoint/NAIC Support Staff Hub/Member Meetings/2022 Summer National Meeting/Att 6 MCAS DataCallPPADigitalClaimsLawsuits.pdf

Lawsuit & Digital Claims Interrogatory Edits Adopted by Market Regulation and Consumer Affairs (D) Committee, July 15, 2022
Proposed Additions in Blue Text/Proposed Deletions in Red Text*

Cancellations from 60 to 90 days – Company-initiated cancellations where the notice of cancellation was issued 60 to 90 days after the original effective date of the policy.

- The calculation of the number of days is from the original inception date of the policy, not the renewal date.
- This time frame should be used regardless of individual state requirements related to the ‘underwriting’ period for new business.
- The notice of cancellation is the date the cancellation notice was mailed to the insured.

Cancellations greater than 90 days – Company-initiated cancellations where the notice of cancellation was issued more than 90 days after the original effective date of the policy.

- The calculation of the number of days is from the original inception date of the policy, not the renewal date.
- This time frame should be used regardless of individual state requirements related to the ‘underwriting’ period for new business.
- The notice of cancellation is the date the cancellation notice was mailed to the insured.

Claim - A request or demand for payment of a loss that may be included within the terms of coverage of an insurance policy. Each claimant/insured reporting a loss is counted separately.

Include:

- Both first- and third-party claims.

Exclude:

- An event reported for “information only”.
- An inquiry of coverage if a claim has not actually been presented (opened) for payment.
- A potential claimant if that individual has not made a claim nor had a claim made on his or her behalf.

Claims Closed With Payment – Claims closed with payment where the claim was closed during the reporting period regardless of the date of loss or when the claim was received. The number of days to closure, however, should be measured as the

Proposed Additions in Blue Text/Proposed Deletions in Red Text*

difference between the date of the final payment and the date the claim was reported or between the date of the final payment and the date the request for supplemental payment was received. See also "Date of Final Payment".

Exclude:

- Claims where payment was made for company loss adjustment expenses if no payment was made to an insured/claimant.
- Claims that are closed because the amount claimed is below the insured's deductible.

Clarifications:

- If a claim is reopened for the sole purpose of refunding the insured's deductible, do not count it as a paid claim.
- For claims where the net payment is \$0 due to subrogation recoveries, report the number of claims in which any amount was paid to the insured; do not net the payment with subrogation recoveries when counting the number of paid claims.

Calculation Clarification:

- For each coverage identifier, the sum of the claims settled with payment across each closing time interval should equal the total number of claims closed with payment during the reporting period.

Handling Additional Payment on Previously Reported Claim/Subsequent Supplemental Payment for claims closed with payment during the reporting period:

- If a claim is reopened for a subsequent supplemental payment, count the reopened claim as a new claim. Calculate a separate aging on the supplemental payment from the time the request for supplemental payment was received to the date the final payment was made.

Claims Closed Without Payment – Claims closed with no payment made to an insured or third party. The number of days to closure is the difference between the date the claim was closed and the date the claim was reported and/or reopened. See also "Date of Final Payment".

Include:

- All claims that were closed during the reporting period regardless of the date of loss or when the claim was received.
- Claims where no payment was made to an insured/claimant even though payment was made for company loss adjustment expenses.

Proposed Additions in Blue Text/Proposed Deletions in Red Text*

- A demand for payment for which it was determined that no relevant policy was in-force at the time of the loss if a claim file was set up and the loss was investigated.
- Claims that are closed because the amount claimed is below the insured's deductible.

Complaint – any written communication that expresses dissatisfaction with a specific person or entity subject to regulation under the state's insurance laws. An oral communication, which is subsequently converted to a written form in order to be analyzed and acted upon, will meet the definition of a complaint for this purpose.

Include:

- Any complaint regardless of the subject of the complaint (claims, underwriting, marketing, etc.)
- Complaints received from third parties.

Coverage - Collision Insurance – Coverage to provide protection against physical contact of an automobile with another inanimate object resulting in damage to the insured automobile.

Clarification:

- Rental/transportation/tow expenses which are paid as a result or part of a collision claim should not be counted as separate claims.

Coverage - Comprehensive/Other than Collision Insurance – Coverage providing protection in the event of physical damage (other than collision), including theft of the insured automobile.

Clarification:

- Rental/transportation/tow expenses which are paid as a result or part of a comprehensive/other than collision claim should not be counted as separate claims.

Coverage - Bodily Injury – Physical damage to one's person. The purpose of liability (casualty) insurance is to cover bodily injury to a third party resulting from the negligent acts and omissions of an insured.

Coverage - Property Damage Liability Insurance – Coverage in the event that the negligent acts or omissions of an insured result in damage or destruction to another's property.

Lawsuit & Digital Claims Interrogatory Edits Adopted by Market Regulation and Consumer Affairs (D) Committee, July 15, 2022
Proposed Additions in Blue Text/Proposed Deletions in Red Text*

Include:

- 'Property Damage Rental' coverage (i.e. amounts paid for a third party claimant's rental car).

Coverage - UMBI – Includes both Uninsured Motorist Coverage and Underinsured Motorists Coverage for bodily injury claims.

- **Underinsured Motorist Coverage (UIM)** – Provides coverage for bodily injury sustained by an insured who is involved in an accident caused by an at-fault driver who does not have sufficient liability insurance to pay for the damages.
- **Uninsured Motorist Coverage (UM)** – Provides coverage for bodily injury sustained by an insured involved in an accident caused by an at-fault driver who does not have liability insurance.

Coverage - UMPD – Includes both Uninsured Motorist Property Damage Coverage and Underinsured Motorist Property Damage Coverage.

- **Underinsured Motorist Property Damage Coverage** – Provides coverage for property damage to covered property caused by an at-fault driver who does not have sufficient liability insurance to pay for the damages.
- **Uninsured Motorist Property Damage Coverage** – Provides coverage for property damage to covered property caused by an at-fault driver who does not have liability insurance.

Coverage - Medical Payments Coverage – First party coverage for injuries incurred in a motor vehicle accident.

Coverage - Combined Single Limit – Bodily injury liability and property damage liability expressed as a single sum of coverage.

Coverage - Personal Injury Protection (PIP) – A first party benefit. coverage to pay basic expenses for an insured and his/her family in states with no fault automobile insurance laws. No-fault laws generally require drivers to carry personal injury protection coverage to pay for basic medical needs of the insured, such as medical expenses, in the event of an accident. For the purposes of this project, all PIP coverages (wage, funeral, death, medical, etc) that would correspond to first party coverages in the applicable participating states should be included.

Lawsuit & Digital Claims Interrogatory Edits Adopted by Market Regulation and Consumer Affairs (D) Committee, July 15, 2022
Proposed Additions in Blue Text/Proposed Deletions in Red Text*

Date of Final Payment – The date final payment was issued to the insured/claimant.

Calculation Clarification:

- If partial payments were made on the claim, the claim would be considered closed with payment if the final payment was made during the reporting period regardless of the date of loss or when the claims was received.
- Report a claim as “closed with payment” or “closed without payment” if it is closed in the company’s claims system during the reporting period (even if the final payment was issued in a prior reporting period.)
- If a claim remains open at the end of the reporting period (even though a final payment has been issued) it should be reported as open. Only when the claim is closed in the company’s claims system, would you report the days to final payment.

Example:

- A claim is open on 11/1/00 and final payment is made on 12/1/00. The claim is left open until 2/1/01 to allow time for supplemental requests.
 - The claim would be reported as open in the “00” MCAS submission and closed in the “01” MCAS submission.
 - The number of days to final payment would be calculated as 30 days and reported in the “01” MCAS submission.

Date the Claim was Reported – The date an insured or claimant first reported his or her loss to either the company or insurance agent.

Digital Claim Handling Process Level of Detail Breakdown:

Digital Claim – A claim involving a claim settlement determination which was accepted by the insured/claimant without adjustment whereby the entire claim was handled without human intervention on the part of the insurance company in the loss appraisal process, settlement determination, and/or in the production of the initial loss settlement offer. Digital claims utilize only digital information to establish the extent of damage and to produce a loss settlement determination through the application of one or more automated loss algorithms applied to digital information. No human inspection or appraisal of the damaged property is conducted by the insurance company, independent adjuster, or other person relied upon by the insurance company during the life cycle of the claim.

Property & Casualty Market Conduct Annual Statement

Private Passenger Auto Data Call & Definitions

Digital Claims Edits other than Interrogatories Adopted by D Committee and MCAS Blanks WG in 2021
Lawsuit & Digital Claims Interrogatory Edits Adopted by MCAS Blanks (D) Working Group May 26, 2022
Lawsuit & Digital Claims Interrogatory Edits Adopted by Market Regulation and Consumer Affairs (D) Committee, July 15, 2022
Proposed Additions in Blue Text/Proposed Deletions in Red Text

Examples of digital claim information include, but are not limited to, photos taken by a claimant or insured, photos taken by a plane or drone, and/or data provided by in-vehicle or in-property sensors.

Hybrid Claim – A claim whereby the initial loss settlement determination began as a digital claim, however, at some point in the claim life cycle required the use of human resources in the loss appraisal process, settlement determination, and/or in the production of the initial or subsequent loss settlement offer.

Non-Digital Claim – means any claim other than a Digital Claim or Hybrid Claim.

Direct Written Premium - The total amount of direct written premium for all policies covered by the market conduct annual statement (new and renewal) written during the reporting period.

Calculation Clarification:

- Premium amounts should be determined in the same manner as used for the financial annual statement.
- If premium is refunded or additional premium is written during the reporting period (regardless of the applicable policy effective date), the net effect should be reported.
- If there is a difference of 20% or more between the Direct Written Premium reported for market conduct annual statement and the Direct Written Premium reported on the financial annual statement, provide an explanation for the difference when filing the market conduct annual statement in order to avoid inquiries from the regulator receiving the market conduct annual statement filing.
- Reporting shall not include premiums received from or losses paid to other carriers on account of reinsurance assumed by the reporting carrier, nor, shall any deductions be made by the reporting carrier for premiums added to or for losses recovered from other carriers on account of reinsurance ceded.

Lawsuit – ~~A court proceeding to recover a right to a claim, including lawsuits for arbitration cases.~~ An action brought in a court of law in which one party, the plaintiff, claims to have incurred a loss as a result of the action of another party, the defendant.

Property & Casualty Market Conduct Annual Statement

Private Passenger Auto Data Call & Definitions

*Digital Claims Edits other than Interrogatories Adopted by D Committee and MCAS Blanks WG in 2021
Lawsuit & Digital Claims Interrogatory Edits Adopted by MCAS Blanks (D) Working Group May 26, 2022
Lawsuit & Digital Claims Interrogatory Edits Adopted by Market Regulation and Consumer Affairs (D) Committee, July 15, 2022
Proposed Additions in Blue Text/Proposed Deletions in Red Text*

Exclude:

- Subrogation claims where lawsuit is filed by the company against the tortfeasor.
- Non-lawsuit legal activity or litigation filed by an insurer, including, but not limited to: request to compel an independent medical examination, an examination under oath, **interpleader actions**, and declaratory judgment actions filed **or brought** by an insurer.

Calculation Clarification:

- ~~• Lawsuits should be reported on the same basis as claims. One lawsuit should be reported for each claimant / coverage combination, regardless of the number of actual lawsuits filed.~~
- ~~• One lawsuit with two claimants would be reported as two lawsuits as any awards/payments made would be made to the claimants individually.~~
- ~~• One lawsuit filed seeking damages for multiple coverages should be reported as one lawsuit for each applicable coverage. If the lawsuit is seeking damages for bodily injury and property damage, one lawsuit should be reported for each of the two coverages.~~
- ~~• Lawsuits should be reported in the state in which the claim is reported on this statement.~~

For purposes of reporting lawsuits for Private Passenger Auto products:

- Include only lawsuits brought by an applicant for insurance, a policyholder or claimant as a plaintiff against the reporting insurer as a defendant.
- Include all lawsuits, whether or not a hearing or proceeding before the court occurred.
- With the exception of class action lawsuits, report a lawsuit with two or more complainants as one lawsuit.
- With the exception of class action lawsuits, report a lawsuit in the jurisdiction in which the policy was issued.
- Report claim related lawsuits broken out by coverage as outlined in the schedule.
- Report non-claim related lawsuits in aggregate as outlined in the schedule.

Treatment of class action lawsuits:

- Report the opening and closing of a class action lawsuit once in each state in which a potential class member resides.
- Include an explanatory note with your submission stating the number of class action lawsuits included in the data and the general cause of action.

Lawsuits Closed During the Period with Consideration for the Consumer—A lawsuit closed during the reporting period in which a court order, jury verdict, or

Property & Casualty Market Conduct Annual Statement

*Digital Claims Edits other than Interrogatories Adopted by D Committee and MCAS Blanks WG in 2021
Lawsuit & Digital Claims Interrogatory Edits Adopted by MCAS Blanks (D) Working Group May 26, 2022
Lawsuit & Digital Claims Interrogatory Edits Adopted by Market Regulation and Consumer Affairs (D) Committee, July 15, 2022
Proposed Additions in Blue Text/Proposed Deletions in Red Text*

settlement resulted in payment, benefits, or other thing of value, i.e., consideration, to the claimant in an amount greater than offered by the reporting insurer before the lawsuit was brought.

Median Days to Final Payment – The median value for all claims closed with payment during the period.

Calculation for losses with one final payment date during the reporting period:

- Date the loss was reported to the company to the date of final payment.

Calculation for losses with multiple final payment dates during the reporting period:

- Date the request for supplemental payment received to the date of final payment (for each different final payment date.)

Exclude:

- Subrogation payments should not be included.

Calculation Clarification / Example:

- To determine the Median Days to Final Payment you must first determine the number of days it took to settle each claim. This is the difference between the date the loss was reported to the company, or the date the request for supplemental payment was received, to the date of final payment. The Median Days to Final Payment is the median value of the number of days it took to settle all claims closed with payment during the period.

Median - A median is the middle value in a distribution arranged in numerical order (either lowest to highest or highest to lowest). If the distribution contains an odd number of elements, the median is the value above and below which lie an equal number of values. If the distribution contains an even number of elements, the median is the average of the two middle values. It is not the arithmetic mean (average) of all of the values.

- Consider the following simple example of the number of days it took to settle each of the following seven claims:

Claim	Nbr 1	Nbr 2	Nbr 3	Nbr 4	Nbr 5	Nbr 6	Nbr 7
Days to Settle	2	4	4	5	6	8	20

Property & Casualty Market Conduct Annual Statement

Private Passenger Auto Data Call & Definitions

*Digital Claims Edits other than Interrogatories Adopted by D Committee and MCAS Blanks WG in 2021
Lawsuit & Digital Claims Interrogatory Edits Adopted by MCAS Blanks (D) Working Group May 26, 2022
Lawsuit & Digital Claims Interrogatory Edits Adopted by Market Regulation and Consumer Affairs (D) Committee, July 15, 2022
Proposed Additions in Blue Text/Proposed Deletions in Red Text*

In this situation, the Median Days to Final Payment would be 5 because it is the middle value. There are exactly 3 values below the median (2, 4, & 4) and 3 values above the median (6, 8, & 20). If the data set had included an even number of values, then the median would be the average of the two middle values as demonstrated below.

Claim	Nbr 1	Nbr 2	Nbr 3	Nbr 4	Nbr 5	Nbr 6
Days to Settle	2	4	5	6	8	20

$$\text{Median Days to Final Payment} = (5 + 6)/2 = 5.5$$

The median should be consistent with the paid claim counts reported in the closing time intervals.

Example: A carrier reports the following closing times for paid claims.

Closing Time	# of Claims
< 30	22
31-60	13
61-90	18
91-180	11
181-365	12
>365	15

The sum of the claims reported across each closing time interval is 91, so that the median is the 46th claim. This claim falls into the closing time interval "61-90 days." Any reported median that falls outside of this range (i.e., less than 61 or greater than 90) will indicate a data error.

NAIC Company Code – The five-digit code assigned by the NAIC to all U.S. domiciled companies which filed a Financial Annual Statement with the NAIC.

NAIC Group Code – The code assigned by the NAIC to identify those companies that are a part of a given holding company structure. A zero indicates that the company is not part of a holding company.

New Business Policy Written – A newly written agreement that puts insurance coverage into effect during the reporting period.

Proposed Additions in Blue Text/Proposed Deletions in Red Text*

Exclude:

- Renewals or 're-written' policies unless there was a lapse in coverage.

Non-Renewals – A policy for which the insurer elected not to renew the coverage for circumstances allowed under the "non-renewal" clause of the policy.

Include:

- All company-initiated non-renewals of the policies where the non-renewal effective date is during the reporting period.

Exclude:

- Policies where a renewal offer was made and the policyholder did not accept the offer.
- Instances where the policyholder requested that the policy not be renewed.

Calculation Clarification:

- The number of non-renewals should be reported on a policy basis regardless of the number of autos insured under the policy.

Policy In-force – A policy in which the coverage is in effect as of the end of the reporting period.

Private Passenger Auto Insurance – Those policies issued on automobiles owned or leased by an individual or by husband and wife resident in the same household that are reported on lines 19.1, 19.2, and 21.1 of the state page of the financial annual statement.

Include:

- This covers four-wheel vehicles including station wagons, vans, or pick-up trucks with a gross vehicle weight up to 10,000 pounds or less and not customarily used in the occupation, profession, or business of the insured.
- Vehicles as defined above that are reported on Lines 19.1, 19.2, and 21.1 of the state page of the financial annual statement which meet the definition of private passenger automobiles.
- Motorcycles
- Policies where the insured's vehicle is titled privately to the insured but is used by the insured for work should be included, unless the coverage is written on a commercial auto form.

Proposed Additions in Blue Text/Proposed Deletions in Red Text*

- Policies written on a volunteer basis and those written through a residual market mechanism such as assigned risk pools should be included.
- Policies written on RV's and motor homes are included as they are licensed vehicles that fall under the various states' Motor Vehicle Responsibility laws.

Exclude:

- Policies written on antiques, collectibles, all-terrain vehicles, snowmobiles, trailers, dune buggies.
- Miscellaneous vehicles written on Inland Marine policies.
- Other vehicles classified by ISO as miscellaneous that do not fall under the various states' Motor Vehicle Responsibility laws.
- 'Fleet' policies are generally considered to be a commercial policy and would not be included unless the premium for these policies is being reported as 'private passenger auto' insurance on lines 19.1, 19.2 or 21.1 of the state page of the financial annual statement.
- Non-owned vehicle insurance policies.
- Lender-placed or creditor-placed policies.
- Mobile/Manufactured homes intended for use as a dwelling regardless of where [or what line] on the Statutory Annual Statement state page associated premium is reported.

Telematics and Usage-Based Data – Data which is collected through devices installed in a vehicle, through mobile applications, or other method. These devices then transmit the data in real time back to insurers. Examples of usage-based data collected via telematics includes - but is not limited to - miles driven, time of day, where the vehicle is driven (Global Positioning System or GPS), rapid acceleration, hard braking, hard cornering and air bag deployment.

Schedule 1A—Life Interrogatories

ID	Description	Comments
----	-------------	----------

Interrogatories General

1A-01	Individual Life Cash Value – Does the company have data to report for this product type?	Yes/No
1A-02	Individual Life Non-Cash Value – Does the company have data to report for this product type?	Yes/No
1A-03	Is there a reason that the reported Individual Life Cash Value information may identify the company as an outlier or be substantially different from previously reported data (such as assuming, selling or closing blocks of business; shifting market strategies; underwriting changes, etc.)	Yes/No
1A-04	If yes, add additional comments	Comment
1A-05	Is there a reason that the reported Individual Life Non-Cash Value information may identify the company as an outlier or be substantially different from previously reported data (such as assuming, selling or closing blocks of business; shifting market strategies; underwriting changes, etc.)	Yes/No
1A-06	If yes, add additional comments	Comment
1A-07	Does the company use third party administrators (TPAs) for purposes of supporting the individual life business being reported?	Yes/No
1A-08	If yes, provide the names and functions of each TPA.	Comment
1A-09	Did the company use MCAS accelerated underwriting during the reporting period? If yes, complete the MCAS Accelerated Underwriting interrogatories.	Yes/No

Interrogatories MCAS Accelerated Underwriting

1A-10	Did the company use MCAS accelerated underwriting for 1-Cash Value, 2-Non-Cash Value, or 3-Both Cash Value and Non-Cash Value products	1/2/3
1A-11	Did the company utilize Application Data as inputs in its MCAS accelerated underwriting algorithm (excluding application data used only for purposes of identifying a consumer to obtain third-party data) for 1-Cash Value, 2-Non-Cash Value, 3-Both Cash Value and Non-Cash Value products or 4-Not used?	1/2/3/4
1A-12	Did the company utilize Medical Data in its MCAS accelerated underwriting for 1-Cash Value, 2-Non-Cash Value, 3-Both Cash Value and Non-Cash Value products or 4-Not used?	1/2/3/4
1A-13	If 1, 2 or 3, list the data categories and sources of data	Comment

Market Conduct Annual Statement
Life & Annuities Data Call & Definitions
(Adopted by the MCAS Blanks (D) Working Group 5/26/2022)

Proposed Additions in Blue Text

In determining what business to report for a particular state, all companies should follow the same methodology/definitions used to file the Financial Annual Statement (FAS) and its corresponding state pages and in accordance with each applicable state's regulations.

Definitions:

MCAS Accelerated Underwriting - For this MCAS, data should be reported as Accelerated Underwriting when artificial intelligence and/or machine learning which utilizes, in whole or in part, Other Non-medical Third-party Data and/or FCRA Compliant Non-medical Third-party Data in the underwriting of life insurance; including when used in combination with Application Data or Medical Data.

MCAS Accelerated Underwriting is a subset of Life insurance Accelerated Underwriting as defined in a 2022 NAIC educational paper on the topic. That broader definition is:

Accelerated Underwriting¹ - Accelerated underwriting is the use of big data, artificial intelligence, and machine learning to underwrite life insurance in an expedited manner. The process generally uses predictive models and machine learning algorithms to analyze applicant data, which may include the use of nontraditional, non-medical data, provided either by the applicant directly or obtained through external sources. The process is typically used to replace all or part of traditional underwriting in life insurance and to allow some applications to have certain medical requirements waived, such as paramedical exams and fluid collection.

Data utilized in accelerated underwriting algorithms:

- **Application data**: Information provided by or on behalf of the consumer in response to questions on the application for insurance, including any supplemental application forms, including medical information provided on the application.
- **Medical data**: Medical information related to the consumer and collected from third parties with the authorization of the consumer, such as but not limited to health records and prescription records.
- **FCRA Compliant non-medical third-party data**: Non-medical data related to the consumer that is provided by a consumer reporting agency in a consumer report that is subject to the Fair Credit Reporting Act (FCRA) requirements and protections. Examples – 1) category of data is a motor vehicle report, and the source of the data is a state department of motor vehicles or a third-party vendor, 2) category of data is consumer credit information and the source of the data is Experian or TransUnion.

¹ Source: Accelerated Underwriting (AU) Educational Report by the NAIC Accelerated Underwriting (A) Working Group, 2022

Market Conduct Annual Statement Life & Annuities Data Call & Definitions

(Adopted by the MCAS Blanks (D) Working Group 5/26/2022)

Proposed Additions in Blue Text

- **Other non-medical third-party data:** Any non-medical data not reported in the three categories listed above. Examples – 1) category of non-medical third-party data is social media and the source of those data is Facebook or Carpe Data, 2) category is facial analytics and the source is a video interview application used by insurer.

Annuity – A contract under which an insurance company promises to make a series of periodic payments to a named individual in exchange for a premium or a series of premiums. Data is being requested for individual annuities only; data for group annuity contracts are not being requested.

Annuity Considerations – Funds deposited to or used to purchase annuity contracts issued by the company. For the purpose of this statement, annuity considerations should be determined in the same manner used for the state pages of the company's financial annual statement. Do not report "Other Considerations" or "Deposit-Type Contract" considerations. MCAS requires that you report only allocated considerations on contracts that have a mortality or morbidity risk.

Cash Value Product – A life insurance policy that generates a cash value element. Term life policies with cash value are considered cash value products.

Claim – A request or demand for payment of a loss that may be included within the terms of coverage of an insurance policy. Claims with multiple beneficiaries should be counted as one claim. If a single insured dies and has multiple policies (for individual life products), a claim should be reported for each of the insured's policies (for example, if an insured had 3 individual life policies (2 cash value products and one non-cash value product), 3 claims would be reported (2 claims under schedule 1B ICVP and 1 claim under schedule 1B INCVP.)

It does not include events that were reported for "information only" or an inquiry of coverage since a claim has not actually been presented (opened) for payment.

Claim Closed with Payment – A claim where the final decision was payment of the claim.

Complaint – any written communication that expresses dissatisfaction with a specific person or entity subject to regulation under the state's insurance laws. An oral communication, which is subsequently converted to a written form in order to be analyzed and acted upon, will meet the definition of a complaint for this purpose.

Include:

- Any complaint regardless of the subject of the complaint (claims, underwriting, marketing, etc.)
- Complaints received from third parties

Contestability Period – The period of time before a policy's incontestability clause becomes effective. During this period, a company may contest a claim based upon material

Market Conduct Annual Statement
Life & Annuities Data Call & Definitions
(Adopted by the MCAS Blanks (D) Working Group 5/26/2022)

Proposed Additions in Blue Text

misrepresentation or concealment during the policy application process. The contestability period is usually 2 years.

- Do not report claims on guaranteed issue life policies
- Do not report claims that are contested after the incontestability clause is in effect.

Conversion – The process by which a policyholder exercises his/her right under the policy contract to exchange a policy without submitting evidence of insurability. In most cases this involves exchanging a term policy for a permanent policy (e.g., whole life insurance, universal life, variable.)

Corporate Owned Life Insurance – Insurance on the life of an individual, paid for by the company, with the company being a beneficiary under the policy. Corporate Owned Life Insurance policies are included in the scope of this statement and should be reported in the applicable schedule.

Date Claim Received – The date the company, or a third party acting on the company's behalf, is notified of the claim.

Date of Due Proof of Loss – The date the company received the necessary proof of loss on which to base a claim determination.

Denied Claim - A claim where a demand for payment was made but payment was not made under the contract.

Direct Written Premium – The actual amount of direct premiums written during the reporting period and should be determined in the same manner used for the financial annual statement. Data for subject business reported by the company on the financial annual statement should be reported for the purposes of this project regardless of any 1) reinsurance agreements or 2) arrangements to administer the business that may exist with another insurer. (See also: "Life Insurance Premium" and "Annuity Considerations")

External Replacement - An external replacement is when the policy and/or annuity to be replaced was issued by another company.

External Replacement of Affiliated Company Policies – An external replacement of an affiliated company policy is when the policy and/or annuity to be replaced was issued by a company affiliated to the MCAS reporting company.

External Replacement of Unaffiliated Company Policies – An external replacement of an unaffiliated company policy is when the policy and/or annuity to be replaced was issued by a company not affiliated to the MCAS reporting company.

Face Amount – Sum of insurance provided by a policy at death or maturity. In determining the face amount to be reported, companies should follow the same methodology/definitions used to file the financial annual statement and its corresponding state pages. For example, the

Market Conduct Annual Statement
Life & Annuities Data Call & Definitions
(Adopted by the MCAS Blanks (D) Working Group 5/26/2022)

Proposed Additions in Blue Text

face amount would include the basic policy plus any riders or amounts for policies with increasing death benefits if these amounts in addition to the basic policy are reported on the company's financial annual statement.

Fixed Annuity – An annuity under which the insurer guarantees that at least a defined amount of monthly annuity benefit will be provided for each dollar applied to purchasing the annuity.

Free Look – A set number of days provided in an insurance or annuity contract that allows time for the purchaser to review the contract provisions with the right to return the contract for a full refund of all monies paid. Report the number of policies or contracts that were returned by the owner under the free look provision during the period, regardless of the original issuance date. Count any policy returned under the Free Look provision even if an alternative policy was ultimately purchased by the insured.

Immediate Annuity – An annuity (either fixed or variable) that begins its payment stream to the policyholder within 12 months after a single premium is paid. Immediate annuities are included within the scope of this statement and should be reported as a new immediate contract issued when issued during the reporting period. In addition, immediate annuities still in force at the end of the period should be included as well.

Individual Indexed Fixed Annuity – A fixed annuity whose accumulation or policy value is, in whole or in part, linked to an index or indices and offers principal protection. Indexed fixed annuities include equity indexed annuities or fixed indexed annuities that offer principal protection through a 0% floor feature.

Individual Indexed Variable Annuity – A variable annuity whose accumulation or policy value is, in whole or in part, linked to an index or indices and may offer some principal protection. Variable indexed annuities include buffer annuities or registered index-linked annuity that offer some principal protection but do not provide a guaranty against loss of principal.

Internal Replacement - An internal replacement is when the policy and/or annuity to be replaced was also issued by your company.

Issued During the Period - Report the number of policies that have an issue date within the reporting period.

- When reporting the policies/contracts that are broken out by the age of the insured or annuitant
 - for joint policies/contracts, use the age of the oldest insured or annuitant for determining the age category
- Internal and external replacements should be reported as new policies or contracts issued during the reporting period as well as reported in the number of internal and external replacements.

Market Conduct Annual Statement
Life & Annuities Data Call & Definitions
(Adopted by the MCAS Blanks (D) Working Group 5/26/2022)

Proposed Additions in Blue Text

Lawsuit—An action brought in a court of law in which one party, the plaintiff, claims to have incurred a loss as a result of the action of another party, the defendant.

For purposes of reporting lawsuits for Life & Annuities products:

- Include only lawsuits brought by an applicant for insurance, a policyholder or a beneficiary as a plaintiff against the reporting insurer or its agent as a defendant;
- Include all lawsuits, whether or not a hearing or proceeding before the court occurred;
- Do not include arbitrations of any sort;
- If one lawsuit seeks damages under two or more policies or contracts, count the number of policies or contracts involved as the number of lawsuits. For example, if one lawsuit seeks damages under three policies or contracts, count the action as three lawsuits;
- If one lawsuit has two or more complainants, report the number of complainants as the number of lawsuits. For example, if one lawsuit has two complainants, report two lawsuits. If the lawsuit is a class action, see instructions for treatment of class action lawsuits;
- Report a lawsuit in the jurisdiction in which the policy or contract was issued with the exception of class action lawsuits;
- Treatment of class action lawsuits: Report the opening and closing of a class action lawsuit once in each state in which a potential class member resides.
- Include an explanatory note with your submission stating the number of class action lawsuits included in the data and the general cause of action.

Lawsuits Closed During the Period with Consideration for the Consumer—A lawsuit closed during the reporting period in which a court order, jury verdict, or settlement resulted in payment, benefits, or other thing of value, i.e., consideration, to the applicant, policyholder, or beneficiary in an amount greater than offered by the reporting insurer before the lawsuit was brought.

Life Insurance Premiums – Funds used to purchase life insurance products issued by the company. Exclude Group Life and Credit Life premiums. For the purpose of this statement, life insurance premiums should be determined in the same manner used for the state pages of the company's financial annual statement.

NAIC Company Code – The five-digit code assigned by the NAIC to all U.S. domiciled companies which file a Financial Annual Statement with the NAIC.

NAIC Group Code – The code assigned by the NAIC to identify those companies that are a part of a given holding company structure. A zero indicates that the company is not part of an insurance holding company.

Non-Cash Value Product – A life insurance policy that does not contain a cash value element. Do not include life insurance covering only Accidental Death and Dismemberment (AD&D.)

Market Conduct Annual Statement**Life & Annuities Data Call & Definitions****(Adopted by the MCAS Blanks (D) Working Group 5/26/2022)***Proposed Additions in Blue Text*

Policies/Contracts Applied For – Applications for life insurance or annuities that are submitted to the company which have or will result in a formal offer of an insurance or annuity contract or a formal declination of the application by the company. Applications that are declined by a broker-dealer or producer and never reviewed by the company are not included in this count.

Replacement Policy – A policy and/or annuity contract application received by your company that is intended to replace an existing policy and/or annuity contract according to each state's definition of a replacement. This may include both external and internal replacements according to each state's replacement law.

Include:

- loan purchases, if the original policy is surrendered,
- surrenders, if a replacement policy is issued in conjunction with the surrender
- 1035 exchanges

Do not include:

- policy conversions
- exchanges of a group policy for an individual policy

Resisted Claim – A claim is considered resisted when it is in dispute and not resolved on the financial statement date for the reporting period. Where the company is holding up payment for sufficient evidence or where a beneficiary has made a claim and then withdraws it, such items should be considered as in the course of settlement.

Surrendered Policy/Contract – A life insurance policy or annuity contract terminated at the request of the policy owner. It does not include life insurance policies or annuity contracts not taken or cancelled during the free look period. For annuities, systematic withdrawals (the withdrawal of a certain amount on a predetermined periodic basis for deferred annuities) and partial withdrawals should not be reported as "surrenders" for this statement.

Term Life Insurance – Life insurance that provides a death benefit if the insured dies during the specified period.

Universal Life Insurance – A form of whole life insurance that is characterized by flexible premiums, flexible face amounts and flexible death benefit amounts and its unbundling of the pricing factor.

Variable Annuity – An annuity under which the amount of the contract's accumulated value and the amount of the monthly annuity benefit payment fluctuate in accordance with the performance of a separate account.

Market Conduct Annual Statement
Life & Annuities Data Call & Definitions
(Adopted by the MCAS Blanks (D) Working Group 5/26/2022)

Proposed Additions in Blue Text

Variable Life Insurance – A form of whole life insurance under which the death benefit and the cash value of the policy fluctuate according to the investment performance of a separate account.

Variable Universal Life Insurance – A form of whole life insurance that combines the premium and death benefit flexibility of universal life insurance with the investment flexibility and risk of variable life insurance.

Withdrawal – For annuity contracts, see Surrendered Policy/Contract.

Whole Life Insurance – Life insurance that provides lifetime insurance coverage. Whole life insurance policies generally build cash value and cover a person for as long as he or she lives if premiums are paid as required. It would include life insurance policies that start accumulating cash value once the insured reaches a certain age as specified in the terms of the policy.

Adopted by the Financial Stability (E) Task Force and Macroeconomic (E) Working Group, June 27, 2022.

Regulatory Considerations Applicable (But Not Exclusive) to Private Equity (PE) Owned Insurers

A summary of currently identified regulatory considerations follows with no consideration of priority or importance ([green underlined font](#) indicates current or completed work by another NAIC committee group). Most of these considerations are not limited to PE owned insurers and are applicable to any insurers demonstrating the respective activities. A summary of the regulatory process has been added to this document since it is being used by individuals less familiar with the state insurance regulatory system, and the [results of regulator discussions on how to move forward have been added to specific considerations in blue font](#). The proposed regulator responses are exposed for a 45-day comment period.

State insurance regulators monitor the solvency of each legal entity insurer, including assessing risks from the broader holding company when an insurer is part of a group, making use of routinely required disclosures, both public, such as the statutory financial statements, and confidential, such as the Risk-Based Capital (RBC) supplemental filing and Holding Company form filings. Regulators also use many analysis and examination tools and procedures for each insurer and/or insurance group. Regulatory responses to the analysis and examination work depend upon the results of those reviews. One specific area of solvency monitoring work focuses on potential acquisitions of a US legal entity insurer, involving a Form A filing. In 2013, guidance was added to the NAIC Financial Analysis Handbook for Form A reviews when a private equity owner was involved, although these considerations are not limited to PE acquisitions. The guidance provides examples of stipulations, both limited time and continuing, regulators could use when approving the acquisition to address solvency concerns, as well as for use in ongoing solvency monitoring. Examples follow:

Limited Time Stipulations:

- Requiring RBC to be maintained at a specified amount above company action level/trend test level. Because capital serves as a buffer that insurers use to absorb unexpected losses and financial shocks, this would better protect policyholders.
- Requiring quarterly RBC reports rather than annual reports as otherwise required by state law.
- Prohibiting any dividends, even ordinary.
- Requiring a capital maintenance agreement or prefunded trust account.
- Enhancing the scrutiny of operations, dividends, investments, and reinsurance by requiring material changes in plans of operation to be filed with the commissioner (including revised projections), which, at a minimum, would include affiliated/related party investments, dividends, or reinsurance transactions to be approved prior to such change.
- Requiring a plan to be submitted by the group that allows all affiliated agreements and affiliated investments to be reviewed, despite being below any materiality thresholds otherwise required by state law. A review of agreements between the insurer and affiliated entities may be particularly helpful to verify there are no cost-sharing agreements that are abusive to policyholder funds assessment.

Continuing Stipulations:

- Requiring prior commissioner approval of material arms-length, non-affiliated reinsurance treaties or risk-sharing agreements.

- Requiring notification within 30 days of any change in directors, executive officers or managers, or individuals in similar capacities of controlling entities, and biographical affidavits and such other information as shall reasonably be required by the commissioner.
- Requiring filing of additional information regarding the corporate structure, controlling individuals, and other operations of the company.
- Requiring the filing of any offering memoranda, private placement memoranda, any investor disclosure statements or any other investor solicitation materials that were used related to the acquisition of control or the funding of such acquisition.
- Requiring disclosure of equity holders (both economic and voting) in all intermediate holding companies from the insurance company up to the ultimate controlling person or individual but considering the burden on the acquiring party against the benefit to be received by the disclosure.
- Requiring the filing of audit reports/financial statements of each equity holder of all intermediate holding companies but considering the burden on the acquiring party against the benefit to be received by the disclosure.
- Requiring the filing of personal financial statements for each controlling person or entity of the insurance company and the intermediate holding companies up to the ultimate controlling person or company. Controlling person could include for example, a person who has a management agreement with an intermediate holding company.

Among many other concepts, regulators are considering the need for any additional stipulations, if there are some stipulations that should be required instead of used subjectively, and use of some stipulations beyond the Form A acquisition process (e.g., for insurers acquired in the past).

RRC Comments “In a Form A transaction” (7 bullet points) – Suggest including these in the referrals to the NAIC Group Solvency Issues (E) Working Group and the NAIC Risk-Focused Surveillance (E) Working Group for consideration when addressing Consideration numbers 1, 2, 4 and 5.

1. Regulators may not be obtaining clear pictures of risk due to holding companies structuring contractual agreements in a manner to avoid regulatory disclosures and requirements. Additionally, affiliated/related party agreements impacting the insurer’s risks may be structured to avoid disclosure (for example, by not including the insurer as a party to the agreement).

Regulator discussion results:

- Refer this item to the NAIC Group Solvency Issues (E) Working Group. Items discussed:
 - o Instead of requiring for all Form A acquisitions to provide additional disclosures, structure an optional disclosure requirement that can be used when unresolved regulatory concerns exist with the acquisition. For example:
 - Disclosures to allow regulators to assess the goal of the potential owner in acquiring the insurer, how the potential owner will be paid and in what amounts, and the ability of the potential owner to provide capital support as needed.
 - Copies of disclosures provided to the potential owner’s investors.
 - o Provide training as needed to states with less experience reviewing complex Form A transactions and refer those states to more experienced states for live help.

- These options include highlighting the need to use external expertise for complex transactions, especially to understand non-U.S. affiliations and when assessing multiple complex Form A applications, and at the expense of the Form A applicant.

AIC Comment (recommended 2 items) – Suggest including this recommendation in the referral to the NAIC Group Solvency Issues (E) Working Group for its work on Consideration #1.

- Recommendation: The Working Group should assess, among other items: (i) the need to provide regulatory certainty *vis a vis* when and on what basis additional disclosures could be required; and (ii) whether the additional disclosures would extend approval timelines. We believe such items are critical to insurers being able to access the capital markets effectively and efficiently.
2. Control is presumed to exist where ownership is $\geq 10\%$, but control and conflict of interest considerations may exist with less than 10% ownership. For example, a party may exercise a controlling influence over an insurer through Board and management representation or contractual arrangements, including non-customary minority shareholder rights or covenants, investment management agreement (IMA) provisions such as onerous or costly IMA termination provisions, or excessive control or discretion given over the investment strategy and its implementation. Asset-management services may need to be distinguished from ownership when assessing and considering controls and conflicts.

Regulator discussion results:

- Refer this item to the NAIC Group Solvency Issues (E) Working Group. Regulators recognized the integral connection of the first two considerations. Items discussed:
 - o An emphasis on training and providing detailed examples to address the complexity and creativity involved in some of these Form A agreements and holding company structures.
 - o It is not practical to get copies of operating agreements from every entity in a group to assess control impacts to the insurers. Consider ways of better targeting the pertinent agreements to assess, including a potential list of questions about less than 10% owners for use when considering Form A applications and/or ongoing analysis.
 - o Consider if Form B (Insurance Holding Company System Annual Registration Statement) disclosure requirements should be modified to address these considerations.

AIC Comment (2 primary concerns) – Suggest asking the AIC to follow the work of the NAIC Group Solvency Issues (E) Working Group on Consideration #2 and make comments on specific recommendations if needed.

- Concerns: The 10% presumption of control needs to remain; and contractual terms contained in service agreements that are negotiated on an arm's length basis are not sufficient to convey the power to direct or cause the direction of an insurer, so long as they are subject to the ultimate supervision and control by the insurer.
3. The material terms of the IMA and whether they are arm's length or include conflicts of interest—including the amount and types of investment management fees paid by the insurer, the termination provisions (how difficult or costly it would be for the insurer to terminate the IMA) and the degree of discretion or control of the investment manager over investment guidelines, allocation, and decisions.

Regulator discussion results:

- Refer this item to the NAIC Risk-Focused Surveillance (E) Working Group. Regulators recognized similar dynamics to the first two considerations, but this Working Group was selected because it is already currently focused on a project involving affiliated agreements and Form D filings. Items discussed:
 - o Consider training and examples, such as unique termination clauses and use of sub-advisors with the potential for additive fees, and strategies to address these.
 - This included addressing pushback on obtaining sub-advisor agreements as Form D disclosures and some optional disclosures for the Form A.
 - o Given the increasing prevalence of bespoke agreements, does it make sense to tie this work in to the work of the NAIC Valuation of Securities (E) Task Force and/or the NAIC Securities Valuation Office? If yes, how best to do so?
 - o Surplus Notes and appropriate interest rates given their special regulatory treatment, including whether floating rates are appropriate; follow any Statutory Accounting Principles (E) Working Group projects related to this topic and provide comments needed.

RRC Comments “With respect to an Investment Management Agreement (IMA)” (3 bullet points) - Suggest including these in the referral to the NAIC Risk-Focused Surveillance (E) Working Group for Consideration #3.

AIC Comments on “Conflict of Interest, Fees, Termination” (3 individual comments) – Suggest including these comments in the referral to the NAIC Risk-Focused Surveillance (E) Working Group for its work on Consideration #3.

4. Owners of insurers, regardless of type and structure, may be focused on short-term results which may not be in alignment with the long-term nature of liabilities in life products. For example, investment management fees, when not fair and reasonable, paid to an affiliate of the owner of an insurer may effectively act as a form of unauthorized dividend in addition to reducing the insurer’s overall investment returns. Similarly, owners of insurers may not be willing to transfer capital to a troubled insurer.
 - a. Life Actuarial (A) Task Force (LATF) work addresses this – helping to ensure the long-term life liabilities (reserves) and future fees to be paid out of the insurer are supported by appropriately modeled assets.

Regulator discussion results:

- In addition to LATF’s work, refer this item to the NAIC Risk-Focused Surveillance (E) Working Group, as it is already looking at some of this work related to affiliated agreements and fees. Items discussed:
 - o Capital maintenance agreements, suggesting guidance for the appropriate entities to provide them and considering ways to make them stronger.
5. Operational, governance and market conduct practices being impacted by the different priorities and level of insurance experience possessed by entrants into the insurance market without prior insurance experience, including, but not limited to, PE owners. For example, a reliance on TPAs due to the acquiring firm’s lack of expertise may not be sufficient to administer the business. Such practices could lead to lapse, early surrender, and/or exchanges of contracts with in-the-money guarantees and other important policyholder coverage and benefits.

- a. The NAIC Financial Analysis Handbook includes guidance specific to Form A consideration and post approval analysis processes regarding PE owners of insurers (developed previously by the Private Equity Issues (E) Working Group).

Regulator discussion results:

- Regulators considered referring this consideration to the NAIC Risk-Focused Surveillance (E) Working Group but opted to keep developing more specific suggestions for now. Items discussed:
 - o Consider optional Form A disclosures and guidance for less experienced states; review EU conduct of business language and consider if similar concepts would help target the optional use.
 - o Consider more detailed guidance for financial examinations.
 - o Besides just inexperience, the consideration also includes intentional actions that ignore known concerns to achieve owner's results; might need to consider Market Conduct group(s).
6. No uniform or widely accepted definition of PE and challenges in maintaining a complete list of insurers' material relationships with PE firms. (UCAA (National Treatment WG) dealt with some items related to PE.) This definition may not be required as the considerations included in this document are applicable across insurance ownership types.

Regulator discussion results:

- Regulators do not believe a PE definition is needed, as the considerations are activity based and apply beyond PE owners.
7. The lack of identification of related party-originated investments (including structured securities). This may create potential conflicts of interests and excessive and/or hidden fees in the portfolio structure, as assets created and managed by affiliates may include fees at different levels of the value chain. For example, a CLO which is managed or structured by a related party.
 - a. An agenda item and blanks proposal are being re-exposed by SAPWG. Desire for 2022 year-end reporting to include disclosures identifying related-party issuance/acquisition.

Regulator discussion results:

- Regulators are comfortable the SAPWG's work is sufficient as a first step since it involves code disclosures to identify various related party issues. They also recognize that existing and/or referred work at the Risk-Focused Surveillance (E) Working Group may address some items in this consideration. Once regulators work with these SAPWG disclosures and other regulatory enhancement, further regulatory guidance may be considered as needed.
8. Though the blanks include affiliated investment disclosures, it is not easy to identify underlying affiliated investments and/or collateral within structured security investments. Additionally, transactions may be excluded from affiliated reporting due to nuanced technicalities. Regulatory disclosures may be required to identify underlying related party investments and/or collateral within structured security investments. This would include, for example, loans in a CLO issued by a corporation owned by a related party.
 - a. An agenda item and blanks proposal are being re-exposed by SAPWG. The concept being used for investment schedule disclosures is the use of code indicators to identify the role of

the related party in the investment, e.g., a code to identify direct credit exposure as well as codes for relationships in securitizations or similar investments.

Regulator discussion results:

- Like the previous consideration, regulators are looking forward to using these code disclosures to help target areas for further review. However, specific to CLO/structured security considerations, regulators support a referral to the Examination Oversight (E) Task Force. Specific items discussed include:
 - o Since investors in CLOs obtain monthly collateral reports, regulators should consider asking for such reports when concerns exist regarding a company’s potential exposure to affiliated entities within their CLO holdings.
 - o Regulators would like to have more information regarding the underlying portfolio companies affiliated with a CLO manager to help quantify potential exposure between affiliates and related parties.
 - o Regulators request NAIC staff to consider their ability to provide tools and/or reports to help regulators target CLOs/structured securities to consider more closely.

RRC Comments on “collateralized loan obligations (CLOs)” (2 bullets) – Suggest including these in the referrals to the NAIC Examination Oversight (E) Task Force and the NAIC Risk-Focused Surveillance (E) Working Group for Consideration numbers 7, 8 and 9, but also sending to the NAIC Statutory Accounting Principles (E) Working Group for its existing work related to these Considerations.

9. Broader considerations exist around asset manager affiliates (not just PE owners) and disclaimers of affiliation avoiding current affiliate investment disclosures. A new Schedule Y, Pt 3, has been adopted and is in effect for year-end 2021. This schedule will identify all entities with greater than 10% ownership – regardless of any disclaimer of affiliation - and whether there is a disclaimer of control/disclaimer of affiliation. It will also identify the ultimate controlling party.
 - a. Additionally, SAPWG is developing a proposal to revamp Schedule D reporting, with primary concepts to use principles to determine what reflects a qualifying bond and to identify different types of investments more clearly. For example, D1 may include issuer credits and traditional ABS, while a sub-schedule of D1 could be used for additional disclosures for equity-based issues, balloon payment issues, etc. This is a much longer-term project, 2024 or beyond.

Regulator discussion results:

- Regulators recognize the new Schedule Y, Part 3, will give them more insights for owners of greater than 10%, but it does not provide insights for owners of less than 10%. However, regulators also recognize that existing and/or referral work of the Risk-Focused Surveillance (E) Working Group may help with some of this dynamic. Additionally, since the SAPWG 2022 code project and its longer-term Schedule D revamp project will help provide further disclosures that will assist with this consideration, regulators are comfortable waiting to see if further regulatory guidance is needed after using the resulting disclosures and other enhancements from these projects.
 - o Specific to owners of less than 10%, regulators discussed the April 19, 2022, Insurance Circular Letter No. 5 (2022) sent by the New York Department of Financial Services to all New York domiciled insurers and other interested parties. This letter highlights that avoiding the levels deemed presumption of control, e.g., greater than 10% ownership, does not create a safe harbor from a control determination and the related regulatory

requirements. The circular letter was distributed to all MWG members and interested regulators.

10. The material increases in privately structured securities (both by affiliated and non-affiliated asset managers), which introduce other sources of risk or increase traditional credit risk, such as complexity risk and illiquidity risk, and involve a lack of transparency. (The NAIC Capital Markets Bureau continues to monitor this and issue regular reports, but much of the work is complex and time-intensive with a lot of manual research required. The NAIC Securities Valuation Office will begin receiving private rating rationale reports in 2022; these will offer some transparency into these private securities.)
 - a. LATF’s exposed AG includes disclosure requirements for these risks as well as how the insurer is modeling the risks.
 - b. SVO staff have proposed to VOSTF a blanks proposal to add market data fields (e.g., market yields) for private securities. If VOSTF approves, a referral will be made to the Blanks WG.

Regulator discussion results:

- Regulators focused on the need to assess whether the risks of these investments are adequately included in insurers’ results and whether the insurer has the appropriate governance and controls for these investments. Regulators discussed the potential need for analysis and examination guidance on these qualifications.
- To assist regulators in identifying concerns in these investments, regulators expressed support for the VOSTF proposal to obtain market yields to allow a comparison with the NAIC Designation. Once such data is available, regulators ask NAIC staff to develop a tool or report to automate this type of initial screening. Also, regulators again recognized the SAPWG Schedule D revamp work will help in identifying other items for initial screening.
- The regulators discussed LATF’s exposed AG, noting the Actuarial Memorandum disclosures that would be required for these privately structured securities along with the actuarial review work, and recognizing how those would be useful for analysts and examiners when reviewing these investments. Additionally, the Valuation and Analysis (E) Working Group would be able to serve as a resource for some of these insights for states without in house actuaries.
- As a result of the above discussions, regulators agreed to a referral to the Examination Oversight (E) Task Force to address the disclosures that will be available from LATF’s exposed AG. They agreed to wait for any further work or referral until they have an opportunity to work with the results of the VOSTF proposal and the SAPWG Schedule D revamp project.

RRC Comments on “privately structured securities” (2 bullets, 1 with 2 sub-bullets) – Suggest including these in the referral to the NAIC Examination Oversight (E) Task Force for Consideration #10 but also sending to the NAIC Valuation of Securities (E) Task Force for its existing work related to this Consideration.

AIC Comment on “Privately Structured Securities” (6 bullets) – Suggest asking the AIC to follow the work of the NAIC Examination Oversight (E) Task Force and the NAIC Valuation of Securities (E) Task Force and provide comments on specific recommendations if needed.

RRC Comment on the work by the NAIC Life Actuarial (A) Task Force (LATF) – Suggest adopting this recommendation as an addition to the Regulatory Discussion results and sending the referral.

- Recommendation: Since reserves are not intended to capture tail risk, refer this item to the NAIC RBC Investment Risk and Evaluation (E) Working Group and monitor the Working Group’s progress.

11. The level of reliance on rating agency ratings and their appropriateness for regulatory purposes (e.g., accuracy, consistency, comparability, applicability, interchangeability, and transparency).
- a. VOSTF has previously addressed and will continue to address this issue. A small ad hoc group is forming (key representatives from NAIC staff, regulators, and industry) to develop a framework for assessing rating agency reviews. This will be a multi-year project, will include discussions with rating agencies, and will include the inconsistent meanings of ratings and terms.

Regulator discussion results:

- Regulators agreed to monitor the work of the ad hoc group in lieu of any specific recommendations at this time. Recognizing this will likely be a multi-year project, regulators reserve the right to raise specific concerns that may arise as the various NAIC committee groups work to address this list of considerations.

12. The trend of life insurers in pension risk transfer (PRT) business and supporting such business with the more complex investments outlined above. ([Enhanced reporting in 2021 Separate Accounts blank](#) will specifically identify assets backing PRT liabilities.) Considerations have also been raised regarding the RBC treatment of PRT business.
- a. [LATF has exposed an Actuarial Guideline](#) to achieve a primary goal of ensuring claims-paying ability even if the complex assets (often private equity-related) did not perform as the company expects, and a secondary goal to require stress testing and best practices related to valuation of non-publicly traded assets (note – LATF’s considerations are not limited to PRT). [Comment period for the 2nd exposure draft ends on May 2.](#)

Regulator discussion results:

- Regulators focused on the need to have disclosures on the risks to the General Account from the Separate Account PRT business – for guarantees but also reporting/tracking when the Separate Account is not able to support its own liabilities. Regulators noted the need to address the differences between buy in PRT transactions and buy out.
 - Regulators are comfortable LATF is addressing the reserve considerations. To address the disclosure considerations, regulators support sending a referral to the Statutory Accounting Principles (E) Working Group since regulators suggested it be an item in the Notes to Financial Statements. (Regulators noted it might help to discuss such disclosure concepts with LATF’s Valuation Manual 22 (A) Working Group.)
 - While the exposed AG is not limited to PRT, and general disclosures may be helpful, regulators recognized additional and/or more specific disclosures may be needed for PRT business.
- b. Review applicability of Department of Labor protections resulting for pension beneficiaries in a PRT transaction.

Regulator discussion results:

- Regulators discussed concerns regarding potential differences between the pension benefit and the group annuity benefit in the PRT transaction.

- Regulators directed NAIC staff to further research this item for the MWG to address in the near future, including potential discussions with Department of Labor representatives.
- c. Review state guaranty associations' coverage for group annuity certificate holders (pension beneficiaries) in receivership compared to Pension Benefit Guaranty Corporation (PBGC) protection.
- i. NOLHGA provided 2016 study of state guaranty fund system vs. PBGC.

Regulator discussion results:

- Regulators recognized the difficulty in comparing the state guaranty system to the Pension Benefit Guarantee Corporation, as detailed in the NOLHGA study. However, they agreed policyholders should appreciate the benefit of having solvency regulators actively monitoring and working with the insurance companies in an attempt to prevent the need for any guaranty fund usage, as standard corporations holding pension liabilities have significantly less regulatory oversight.
 - Regulators found the NOLHGA study responsive to this consideration, thus they suggested no further action.
- d. "Considerations have also been raised regarding the RBC treatment of PRT business."
- Regulator discussion results:**
- Regulators recognized the work of the Longevity Risk Transfer (LRT) Subgroup of the Life Risk-Based Capital (E) Working Group covers PRT business. A new LRT charge was included in the 2021 Life Risk-Based Capital (LRBC) formula. Regulators agreed the results of this new charge should be monitored.
 - While regulators agreed to follow the work of the LRT Subgroup, they suggested no further action at this time.

13. Insurers' use of offshore reinsurers (including captives) and complex affiliated sidecar vehicles to maximize capital efficiency, reduce reserves, increase investment risk, and introduce complexities into the group structure.

- a. LATF's exposed AG was modified to require the company to provide commentary on reinsurance collectability and counterparty risk in the asset adequacy analysis memorandum. The original concept of requiring life insurers to model the business itself even if it uses these mechanisms to share/transfer risk was deferred to allow time to consider and address concerns over potential violations with EU/UK covered agreements and the 2019 revisions to NAIC Models 785 and 786.

Regulator discussion results:

- Regulators held candid conversations about the need to understand why insurers are using these types of offshore reinsurers. If there are problems in the U.S. regulatory system that are driving insurers to utilize offshore reinsurers (e.g., "excess" reserves), we should know of those problems so we can consider if there are appropriate changes to make.
- If there are other drivers, per the common theme in the regulators' review of this list of considerations, there isn't a presumption that the use of these transactions is categorically bad. Rather, there is a need to understand the economic realities of the transactions so the regulators can effectively perform their solvency monitoring responsibilities.

- Regulators discussed the potential concept of additional Holding Company Act requirements if these are affiliated reinsurers, disclosing the insurer benefits (reserves, capital, etc.).
- Regulators deferred specifying action on this item at this time, instead noting the desire to have meetings with industry representatives using these transactions and regulators from some of the offshore jurisdictions to gain more insights.

Northwestern Mutual Comment (2 cautions) – Suggest including these cautions as part of the MWG’s future discussions and work for this Consideration.

- Caution: Reinsurance transactions can and often do serve a valuable function by reallocating risk. However, offshore reinsurance can also result in lower total reserves and capital, reduced state regulatory oversight, and diminished stakeholder transparency from what would be required by the statutory accounting and risk-based capital requirements the NAIC has established to protect policyholders in the United States.
 - Caution: Without progress and action on the item pertaining to offshore reinsurance, the Working Group’s progress on other MWG Considerations could further incentivize even more utilization of offshore reinsurance transactions and undercut the NAIC’s efforts to close other solvency regulatory gaps domestically. In the long run, a system that encourages companies to transfer business to a related offshore entity in order to alter their reserves and capital from uniform standards diminishes the strength of reserve and capital regulation in the United States. If capital standards are deemed to be too conservative in the US, they should be addressed transparently and uniformly through the NAIC and not through the alternate means of offshore reinsurance.
- **Additional regulator discussion result:**
 - Similar to the result of discussions for the 13th consideration, regulators expressed a desire to meet with various industry representatives to discuss the incentives behind private equity ownership of insurers and conversely the concerns other industry members may have with such ownership. Regulators believe the insights from these conversations will benefit their ability to monitor and, when necessary, contribute to the work occurring in the various NAIC committee groups regarding these considerations.

Adopted by the Executive (EX) Committee and Plenary, Aug. 13, 2022

Adopted by the Financial Condition (E) Committee, July 21, 2022

Adopted by the Mutual Recognition of Jurisdictions (E) Working Group, June 29, 2022

NAIC List of Jurisdictions that Recognize and Accept the Group Capital Calculation

Reciprocal Jurisdictions (Model #440, Section 4L(2)(c))

Jurisdiction	Group-Wide Supervisor	Effective Date	Model #440, Section 4L(2)(e) Determination Explanatory Note
Member States of the European Union	Respective Member State Supervisory Authorities	January 1, 2022	
United Kingdom (UK)	Prudential Regulation Authority of the Bank of England (PRA)	January 1, 2022	
Bermuda	Bermuda Monetary Authority (BMA)	January 1, 2022	
Japan	Financial Services Agency (FSA)	January 1, 2022	
Switzerland	Financial Market Supervisory Authority (FINMA)	January 1, 2022	

Recognize and Accept Jurisdictions (Model #440, Section 4L(2)(d))

Jurisdiction	Group-Wide Supervisor	Effective Date	Model #440, Section 4L(2)(e) Determination Explanatory Note
None currently			

Group Capital Calculation. On December 9, 2020, the NAIC adopted revisions to the *Insurance Holding Company System Regulatory Act* (#440) and *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions* (#450). These revisions implement the Group Capital Calculation (GCC) filing requirements for insurance groups at the level of the ultimate controlling person for the purposes of evaluating solvency at the group level. The revisions specifically provide that the requirement to file the NAIC's GCC applies to U.S.-based groups, while a group headquartered outside the U.S. is exempt from the GCC (subject to limited exceptions detailed in the [Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation](#)) if its groupwide supervisor "recognizes and accepts" the GCC for U.S. groups doing business in that jurisdiction.

List of Jurisdictions that Recognize and Accept the GCC. The Mutual Recognition of Jurisdictions (E) Working Group will evaluate non-U.S. jurisdictions in accordance with the "Recognize and Accept" Process. A list of "Recognize and Accept" Jurisdictions is published through the NAIC committee process. Sections 21D and 21E of Model #450 provide a general framework for how the process to identify "Recognize and Accept" Jurisdictions will work and specifically contemplates the development of a list of such jurisdictions through the NAIC Committee Process.

NAIC Listing Process. Section 4L(2) of Model #440 provides two ways a non-U.S. jurisdiction may meet the standards for its insurance groups to be exempt from the GCC:

- (a) If the jurisdiction has been determined to be a Reciprocal Jurisdiction for purposes of credit for reinsurance, which includes a requirement that the jurisdiction "recognizes the U.S. state regulatory approach to group supervision and group capital" (Model #440, Section 4L(2)(c)); or
- (b) If the jurisdiction has otherwise been determined to recognize and accept the GCC by procedures specified in regulation.

Evaluation of Reciprocal Jurisdictions. Under Section 4L(2)(c) of Model #440, Reciprocal Jurisdictions that recognize the U.S. state regulatory approach to group supervision and group capital are exempt from the GCC. Because a "recognize and accept" evaluation by the Mutual Recognition of Jurisdictions (E) Working Group is already part of the Reciprocal Jurisdiction review process, all Reciprocal Jurisdictions designated by the NAIC through that review process are also automatically designated as "Recognize and Accept" Jurisdictions. Likewise, in view of the terms of the EU and UK Covered Agreements, all EU Member States and the UK are automatically designated "Recognize and Accept" Jurisdictions. If there is a material change to the terms of the U.S.-EU or U.S.-UK Covered Agreement, or if the United States enters into a new covered agreement with one or more non-U.S. jurisdictions, the Mutual Recognition of Jurisdictions (E) Working Group will consider, and will consult with FIO and USTR regarding, whether and how the applicability of the procedures in this document may apply.

Prudential Oversight and Solvency Monitoring. Section 4L(2)(e) of Model #440 directs a lead state commissioner to require the group capital calculation for U.S. operations of any non-U.S. based insurance holding company system based in a “Recognize and Accept” Jurisdiction if, after any necessary consultation with other supervisors or officials, the commissioner deems such a “subgroup” calculation to be appropriate for prudential oversight and solvency monitoring purposes or for ensuring the competitiveness of the insurance marketplace. Section 21E(1) of Model #450 provides that to assist with such a determination, the “Recognize and Accept” List will also identify whether a listed jurisdiction requires a group capital filing for any U.S. based insurance group’s operations in that jurisdiction. The NAIC will identify such jurisdictions on the “Recognize and Accept” List, and may include an explanatory note in cases where a simple “Yes” or “No” response does not adequately describe the jurisdiction’s requirements. States may rely on this List when making determinations under Section 4L(2)(e) of Model #440.

The specific details of the GCC Recognize and Accept process can be found in the [Process for Evaluating Jurisdictions that Recognize and Accept the Group Capital Calculation.](#)

Date: 07/29/22

State Implementation Reporting of NAIC-Adopted Model Laws and Regulations

Executive (EX) Committee

- Amendments to the *Unfair Trade Practices Act (#880)*—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2021 Spring National Meeting. Nine jurisdictions have enacted the revisions to this model.

Life Insurance and Annuities (A) Committee

- Amendments to the *Annuity Disclosure Model Regulation (#245)*—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2021 Summer National Meeting. NAIC staff are not aware of any activity regarding this model.
- Amendments to the *Suitability in Annuity Transactions Model Regulation (#275)*—These revisions were adopted by the Executive (EX) Committee and Plenary during the February 13, 2020, conference call. 27 jurisdictions have enacted the revisions to the model.
- Amendments to the *Standard Nonforfeiture Law for Individual Deferred Annuities (#805)*—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2020 Fall National Meeting. 16 jurisdictions have adopted the revisions to this model.

Health Insurance and Managed Care (B) Committee

- Amendments to the *Health Maintenance Organization Model Act (#430)*—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2020 Fall National Meeting. Five jurisdictions have enacted this model.
- Amendments to the *Insurance Holding Company System Regulatory Act (#440)*—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2020 Fall National Meeting. 22 jurisdictions have adopted the revisions to this model.
- Amendments to the *Insurance Holding Company System Model Regulation with Reporting Forms and Instructions (#450)*—These revisions were adopted by the Executive (EX) Committee and Plenary at the 2020 Fall National Meeting. Six jurisdictions have adopted the revisions to this model.

Property and Casualty Insurance (C) Committee

- Adoption of the *Real Property Lender-Placed Insurance Model Act (#631)*—This model was adopted by the Executive (EX) Committee and Plenary at the 2021 Spring National Meeting. NAIC staff are not aware of any activity regarding this model.

Financial Condition (E) Committee

- Amendments to the *Credit for Reinsurance Model Law (#785)*—These revisions were adopted by the Executive (EX) Committee and Plenary during the June 26, 2019, conference call. 52 jurisdictions have enacted this model.
- Amendments to the *Credit for Reinsurance Model Regulation (#786)*—These revisions were adopted by the Executive (EX) Committee and Plenary during its June 26, 2019, conference call. 48 jurisdictions have enacted this model.

Executive (EX) Committee
Portland, Oregon
August 11, 2022

The Executive (EX) Committee met in Portland, OR, Aug. 11, 2022. The following Committee members participated: Dean L. Cameron, Chair (ID); Chlora Lindley-Myers, Vice Chair (MO); Andrew N. Mais, Vice President (CT); Jon Godfread, Secretary-Treasurer (ND); David Altmaier, Most Recent Past President (FL); Lori K. Wing-Heier (AK); Michael Conway (CO); Trinidad Navarro (DE); Doug Ommen (IA); James J. Donelon (LA); Gary D. Anderson (MA); Kathleen A. Birrane (MD); Anita G. Fox (MI); Glen Mulready (OK); Andrew R. Stolfi (OR); Carter Lawrence (TN); and Scott A. White (VA).

1. Adopted the Aug. 10 Report of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee

Director Cameron reported the Executive (EX) Committee met Aug. 10 in joint sessions with the Internal Administration (EX1) Subcommittee. The meeting was held in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) and paragraph 6 (consultations with NAIC staff members related to NAIC technical guidance) of the NAIC Policy Statement on Open Meetings.

During this meeting, the Committee and Subcommittee took the following action: 1) adopted its June 21 and Spring National Meeting minutes; and 2) the Committee's April 13 minutes.

The Committee and Subcommittee also: 1) adopted the report of the Audit Committee, which met Aug. 3 and May 16 and took the following action: a) discussed potential revenue changes for the 2023 budget; b) received the June 30 financial update; c) selected a new financial audit firm; d) discussed grant and zone financials, including potential changes for 2023 member grant and zone funding; e) heard an update on the ERP project; f) affirmed the 2023 Audit Committee charter; g) heard an update on the 2023 budget calendar; h) received the 2021/2022 Service Organization Control (SOC) 1 and SOC 2 audit reports; and i) approved the Target Reserve Policy.

The Committee and Subcommittee also: 1) adopted the report of the Internal Administration (EX1) Subcommittee, which met July 7 and took the following action: a) received the March 31 Long-Term Investment Portfolio report; and b) received the March 31 Defined Benefit Portfolio report.

The Committee and Subcommittee also: 1) approved the Member Services Staffing Fiscal; 2) approved the ERP Fiscal; 3) heard the chief executive officer/chief operating officer (CEO/COO) report; 4) heard an update on the *State Connected* strategic plan; 5) received an update on the proposed 2023 NAIC budget; 6) heard an update on the use of NAIC designations by foreign jurisdictions; 7) heard a cybersecurity report; and 8) heard a diversity, equity, and inclusion (DE&I) report.

Commissioner Altmaier made a motion, seconded by Commissioner Mais, to adopt the Aug. 10 report of the joint meeting of the Executive (EX) Committee and the Internal Administration (EX1) Subcommittee. The motion passed unanimously.

2. Adopted its June 21 Interim Meeting Report

Commissioner Altmaier made a motion, seconded by Director Wing-Heier, to adopt the Executive (EX) Committee's June 21 interim meeting report (Attachment One). The motion passed unanimously.

3. Adopted the Reports of its Task Forces

Commissioner Altmaier made a motion, seconded by Commissioner Godfreed, to adopt the reports of the: 1) Climate and Resiliency (EX) Task Force; 2) Government Relations (EX) Leadership Council; 3) Long-Term Care Insurance (EX) Task Force; and 4) Special (EX) Committee on Race and Insurance (Attachment Two). The motion passed unanimously.

4. Adopted a Request for NAIC Model Law Development Regarding Model #540

Commissioner White reported that on July 21, the Financial Condition (E) Committee adopted a Request for NAIC Model Law Development to amend the *Property and Casualty Insurance Guaranty Association Model Act* (#540). This request was originally proposed by the Restructuring Mechanisms (E) Working Group, which is charged with developing a white paper related to insurance business transfers (IBTs) and corporate divisions (CDs).

During that Working Group's discussion, it was identified that Model #540 needs to be amended with regard to how policyholders retain guaranty fund coverage for IBT and CD transactions. The Working Group forwarded the request to the Receivership and Insolvency (E) Task Force, which discussed the proposal and sent it to the Financial Condition (E) Committee for its consideration.

Commissioner White made a motion, seconded by Commissioner Donelon, to adopt the Request for NAIC Model Law Development to develop amendments to Model #540 (Attachment Three). The motion passed unanimously.

5. Adopted a Request for NAIC Model Law Development to Draft the New Insurance Consumer Privacy Protection Model Law

Commissioner Birrane reported that the Privacy Protections (H) Working Group adopted the Request for NAIC Model Law Development to replace the *NAIC Insurance Information and Privacy Protection Model Act* (#670) and the *Privacy of Consumer Financial and Health Information Regulation* (#672) with one new model during its Aug. 2 meeting, with Nebraska opposing. The Innovation, Cybersecurity, and Technology (H) Committee adopted the request during its Aug. 10 meeting.

Commissioner Birrane made a motion, seconded by Commissioner Godfreed, to draft the new Insurance Consumer Privacy Protection Model Law (Attachment Four). The motion passed unanimously.

6. Adopted the Revisions to the NAIC Consumer Participation Plan of Operation

Commissioner Conway reported that the Consumer Board of Trustees adopted the Plan of Operation for the Consumer Participation Program during the Spring National Meeting. Revisions were made to Section 2.F. and Section 2.J.

The revisions to Section 2.F. would expand the pool of potential consumer board members to include unfunded consumer representatives. It would also require consumer board members to have served as a consumer representative for at least two years, rather than one year.

The revisions to Section 2.J. would allow no change to the Plan of Operation to be taken by the Board without prior disclosure to and opportunity for comment by current consumer representatives of the proposed changes.

Commissioner Conway made a motion, seconded by Director Wing-Heier, to adopt the revisions to the NAIC Consumer Participation Plan of Operation (Attachment Five). The motion passed unanimously.

7. Received a Status Report on the NAIC *State Ahead* Strategic Plan Implementation

Director Cameron provided an update on NAIC *State Ahead* implementation efforts. *State Ahead* is a three-year strategic plan for the organization intended to further advance the products, services, and support the NAIC provides to state insurance regulators in order to better meet the changing regulatory landscape. Overall, NAIC staff continue to make good progress on the many *State Ahead* projects (Attachment Six). Planning has begun at the member level for the next iteration of the strategic plan.

8. Received a Report of Model Law Development Efforts

Director Cameron presented a written report on the progress of ongoing model law development efforts (Attachment Seven).

9. Heard a Report from the NIPR Board of Directors

Superintendent Dwyer reported that the National Insurance Producer Registry (NIPR) Board of Directors met Aug. 9. NIPR has continued to have a strong financial performance for the first half of the year. Revenue at the end of June was 9.5% above budget.

NIPR continues to implement the Contact Change Request service for business entities, which allows industry to update – in one place through NIPR – email, telephone, and address changes required by states. To date, NIPR has 32 state insurance departments using the service. This service provides an electronic solution for the states and industry, reducing time and cost for industry and state insurance regulators.

NIPR will participate in the NAIC Insurance Summit held in Kansas City, MO. The Producer Licensing Track will include sessions on producer licensing education, an adjuster licensing roundtable, an update on NIPR initiatives, and a regulator/industry DE&I session relating to the distribution of insurance.

10. Heard a Report from the Compact

Commissioner Birrane reported that the Interstate Insurance Product Regulation Commission (Compact) will meet Aug. 12.

The Compact had a successful year in 2021, receiving more than 1,500 product filing submissions and collecting and remitting more than \$3.66 million in state filing fees. Throughout 2021, the Compact conducted a thorough form and actuarial review in an average of 27 days. The Compact ended 2021 with a positive net revenue of almost \$800,000.

For the first six months of 2022, the filing activity has not been as robust as companies implement the prior filings, although it is expected to pick up in the second half of the year.

Through the end of June, the Compact received more than 450 submissions and collected and remitted \$1.5 million in state filing fees, with an average review time of 25 days.

Commissioner Birrane reported that the Compact distributed a Value of Services to all Compacting states showing the value each state receives, not only in retaining all applicable state filing fees but, more importantly, the value of the operational services the organization performs for each state. For most states, the value of Compact membership is between \$1.5 million and \$2 million each year.

On July 13, the Compact officers hosted a roundtable session in New York City, NY, bringing together nearly 50 attendees, including 12 commissioners, three state legislators, a consumer representative, industry association representatives, and representatives from 12 companies. During the roundtable, participants shared perspectives on the Compact and discussed, in breakout groups, the strengths, challenges, and next bold ideas for the organization. The feedback was positive and the Compact is planning another roundtable in Omaha, NE, scheduled for Oct. 26.

Commissioner Birrane noted that during its Aug. 12 meeting, the Compact will consider adoption of Position Statement 1-2022, which addresses the 2020 Colorado Supreme Court ruling on a matter involving a provision in a Compact-approved insurance policy that was consistent with the Compact's Uniform Standards but conflicted with a state statute. By adopting the Position Statement, the Compact will have an official position that it received a form of congressional consent from Congress in 2006 when a federal law was enacted consenting to the District of Columbia joining the Compact and delegating the powers thereunder to the Compact.

Commissioner Birrane gave special recognition to the National Council of Insurance Legislators (NCOIL) and the National Conference of State Legislatures (NCSL), which both passed resolutions at their respective summer meetings reaffirming their support of the Compact. NAIC members worked closely with members of these legislative organizations in the development and implementation of the Compact, with both endorsing the legislation in 2004. As part of their respective resolutions, each organization indicated its support for adoption of the Position Statement by the Compact.

The Compact will continue discussions and pursue changes to its procedures to provide flexibility for states to raise specific concerns regarding a Uniform Standard and meaningful conflict with state law.

The Governance Committee will be recommending changes to the suicide exclusion provision in the life Uniform Standards to address the conflict that was the subject of the Colorado opinion.

The Audit Committee will vote to select the Compact's independent audit firm for the next three to five years.

The Compact will conduct a public hearing on rulemaking around expanding the use of Compact-approved products beyond employer-employee groups. The Rulemaking Committee has developed a framework and proposed operating procedure to ensure companies are following state laws with respect to the types of groups, including non-employer groups, that can sell group products approved by the Compact.

Having no further business, the Executive (EX) Committee adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/2022 Summer National Meeting/8-EXCmte

Draft: 8/3/22

EXECUTIVE (EX) COMMITTEE

June 21, 2022

Summary Report

The Executive (EX) Committee met June 21, 2022, in regulator-to-regulator session, pursuant to paragraph 4 (internal or administrative matters of the NAIC or any NAIC member) of the NAIC Policy Statement on Open Meetings. During this meeting, the Committee:

1. Received an update on the NAIC's 2022 financials and an overview of preliminary work on the 2023 budget.
2. Approved the Catastrophe Modeling Center of Excellence (COE) Fiscal Impact Statement.
3. Approved the Variable Annuity Model Office Fiscal Impact Statement.
4. Received an update on the Enterprise Resource Planning (ERP) project.

SharePoint/NAIC Support Staff Hub/Member Meetings/2022 Summer National Meeting/Att 1 InterimMtgRpt.docx

Draft: 8/10/22

REPORT OF THE EXECUTIVE (EX) COMMITTEE TASK FORCES

Climate and Resiliency (EX) Task Force—The Climate and Resiliency (EX) Task Force met Aug. 11 and took the following action: 1) adopted its March 21 minutes, which included the following action: a) adopted a proposal for the Center for Insurance Policy and Research (CIPR) to create a Catastrophe Model Center of Excellence (COE); and b) adopted the revised Climate Risk Disclosure Survey for states to use voluntarily at their discretion; 2) heard a presentation from Zurich North America and Resilient Cities Network on their partnership to improve community resilience; 3) heard a presentation from Munich Reinsurance America on solutions to improve community flood mitigation; and 4) heard a federal update.

Government Relations (EX) Leadership Council—The Government Relations (EX) Leadership Council did not meet at the Summer National Meeting. The Leadership Council meets weekly in regulator-to-regulator session, pursuant to paragraph 8 (consideration of strategic planning issues) of the NAIC Policy Statement on Open Meetings, to discuss federal legislative and regulatory developments affecting insurance regulation.

Long-Term Care Insurance (EX) Task Force—The Long-Term Care Insurance (EX) Task Force will meet Aug. 12 and anticipates the following action: 1) adopting its Spring National Meeting minutes; 2) receiving a report on the implementation of the Long-Term Care Insurance Multistate Rate Review Framework (LTCI MSA Framework), which is expected to be implemented by September; 3) hearing a report on industry trends and factors affecting reserve levels; 4) hearing a report on the LTCI Multistate Actuarial (MSA) Associate Program; and 5) hearing a presentation on a CIPR research project on reduced benefit options (RBOs) and discussing potential future research in this area. At the Spring National Meeting, in addition to previously reported actions, the Task Force disbanded the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup.

Special (EX) Committee on Race and Insurance—The Special (EX) Committee on Race and Insurance will meet Aug. 11 and anticipates the following action: 1) adopting its Spring National Meeting minutes; and 2) receiving reports from its five workstream; 3) hearing an update on the State Diversity Leaders Forum; 4) hearing a presentation on diversity from the District of Columbia Department of Insurance, Banking and Securities, and 5) hearing an update on the Collaboration Forum on algorithmic bias.

- Workstream One of the Special Committee has been researching the level of diversity and inclusion within the insurance sector and developing recommendations on action steps state insurance regulators and companies can take. The Workstream met in regulator-to-regulator session in May to begin discussing draft recommendations that reflect discussions with stakeholders and state insurance regulators. The Workstream plans to meet after the Summer National Meeting to continue its work on completing these recommendations.
- Workstream Two of the Special Committee distributed the zone-level best practices survey responses during the Commissioners' Mid-Year Roundtable. Workstream Two's recent work continues to be facilitated by Evelyn Boswell, NAIC Director of Diversity, Equity & Inclusion (DE&I), through the Member Diversity, Equity & Inclusion Forum. The best practices survey responses have been made available to Forum members as they share best practices and discuss promoting diversity in their respective insurance departments. The Member Diversity, Equity & Inclusion Forum last met in July, where Philip Barlow, Associate Commissioner for Insurance at the District of Columbia Department of Insurance, Securities and Banking, shared how the Department is expanding DE&I outreach through various community partnerships.

- Workstream Three of the Special Committee is focused on property/casualty (P/C) insurance issues. The Workstream has been engaged with the Collaboration Forum addressing how bias within digital decisional systems and complex predictive models driven by artificial intelligence (AI)/machine learning (ML) can result in unfair discrimination. The Collaboration Forum serves as the platform in identifying and addressing foundational issues to develop a common framework that can inform the work product of Workstream Three. Leadership of Workstream Three has been actively involved with the Collaboration Forum and plans to leverage the foundational education related to algorithmic bias in order to consider regulatory approaches to addressing unfair discrimination in the P/C insurance market. The Workstream plans to first consider potential bias within the marketing of insurance products. The Workstream is planning a session at the NAIC's Insurance Summit in September to hear from insurers and experts on insurance marketing and advertising.
- Workstream Four of the Special Committee is focused on life insurance. The Workstream met June 10 and heard a presentation from the Financial Alliance for Racial Equity (FARE). The Workstream continues to focus on its charge to “continue research and analysis related to insurance access and affordability issues, including the marketing, distribution, and access to life insurance products in minority communities, including the role that financial literacy plays.” The Workstream plans to meet following the Summer National Meeting to hear additional presentations to inform its work.
- Workstream Five of the Special Committee has been meeting monthly since the Spring National Meeting. During these meetings, the Workstream has heard from various stakeholders, such as consumer groups, academics, and industry related to these issues with a focus on benefit design and consumer empowerment. The Workstream's next meeting is Aug. 23, during which it will hear from presenters on issues related to barriers to care with respect to plan benefit design.

SharePoint/NAIC Support Staff Hub/Member Meetings/2022 Summer National Meeting/Att 2 TF CombinedRpt.docx

Adopted by the Executive (EX) Committee, 8/11/22

Adopted by the Financial Condition (E) Committee, 7/21/22

REQUEST FOR NAIC MODEL LAW DEVELOPMENT

This form is intended to gather information to support the development of a new model law or amendment to an existing model law. Prior to development of a new or amended model law, approval of the respective Parent Committee and the NAIC's Executive Committee is required. The NAIC's Executive Committee will consider whether the request fits the criteria for model law development. Please complete all questions and provide as much detail as necessary to help in this determination.

Please check whether this is: **New Model Law** or **Amendment to Existing Model**

1. Name of group to be responsible for drafting the model:

Receivership Law (E) Working Group of the Receivership and Insolvency (E) Task Force to complete the drafting. Referred by the Restructuring Mechanisms (E) Working Group.

2. NAIC staff support contact information:

Jane Koenigsman
jkoenigsman@naic.org
816-783-8145

Dan Daveline
ddaveline@naic.org
816-783-8134

3. Please provide a brief description of the proposed new model or the amendment(s) to the existing model. If you are proposing a new model, please also provide a proposed title. If an existing model law, please provide the title, attach a current version to this form and reference the section(s) proposed to be amended.

- ***Property and Casualty Insurance Guaranty Association Model Act (#540)***

In 2019, the Financial Condition (E) Committee formed the Restructuring Mechanisms (E) Working Group who was charged with the following:

1. Evaluate and prepare a white paper that:
 - a. Addresses the perceived need for restructuring statutes and the issues those statutes are designed to remedy. Also, consider alternatives that insurers are currently employing to achieve similar results.
 - b. Summarizes the existing state restructuring statutes.
 - c. Addresses the legal issues posed by an order of a court (or approval by an insurance department) in one state affecting the policyholders of other states.
 - d. Considers the impact that a restructuring might have on guaranty associations and policyholders that had guaranty fund protection prior to the restructuring.
 - e. Identifies and addresses the legal issues associated with restructuring using a protected cell.

Background for Proposed Change

This proposed change is being precipitated by discussions within the NAICs Restructuring Mechanisms (E) Working Group initiative, which is focused on documenting in the form of a White Paper, the various issues related to insurance business transfers (IBT) and corporate division (CD) transactions. The number of states adopting laws that permit either of these transactions is still relatively low; however, one of the most significant issues that has been discussed during the meetings of the Working Group is the need for policyholders subject to such transactions to retain guaranty fund coverage. Representatives of the National Conference of Insurance Guaranty Funds (NCIGF) have suggested that an amendment to a state's guaranty fund act, or other related law, is necessary to address this issue. They have specifically suggested that the NAIC update the Property and Casualty Insurance Guaranty Association Model Act,

and they have developed specific language to address this issue. An amendment will better enable those states that have incorporated #540 into their laws to update their laws for this important issue, to ensure policyholders in all states retain their coverage. Because guaranty association coverage follows the state of licensure rather than the state of domicile, adequately addressing these concerns is necessary regardless of the type of transfer and regardless of how few states adopt changes to their laws to allow IBT and CD transactions.

Scope of the Proposed Revisions to Model 540

The scope of the request is limited to addressing the issue of continuity of guaranty fund coverage when a policy is transferred from one insurer to another. The request is therefore to the specific proposal to revise the definition of “Covered Claim” within #540, or other language determined to be appropriate to address the need for continuity of protection. The following is the additional language (underlined language) that has been proposed to be added to Section 5, Definitions, within #540.

H. “Covered claim” means the following:

- (a) The claimant or insured is a resident of this State at the time of the insured event, provided that for entities other than an individual, the residence of a claimant, insured or policyholder is the State in which its principal place of business is located at the time of the insured event; or
- (b) The claim is a first party claim for damage to property with a permanent location in this State.
- (c) Notwithstanding any other provision in this Act, an insurance policy issued by a member insurer and later allocated, transferred, assumed by or otherwise made the sole responsibility of another insurer, pursuant to a state statute providing for the division of an insurance company or the statutory assumption or transfer of designated policies and under which there is no remaining obligation to the transferring entity (commonly known as “Division” or “Insurance Business Transfer” statutes), shall be considered to have been issued by a member insurer which is an Insolvent Insurer for the purposes of this Act in the event that the insurer to which the policy has been allocated, transferred, assumed or otherwise made the sole responsibility of is placed in liquidation.
- (d) An insurance policy that was issued by a non-member insurer and later allocated, transferred, assumed by or otherwise made the sole responsibility of a member insurer under a state statute described in subsection (a) shall not be considered to have been issued by a member insurer for the purposes of this Act.

4. Does the model law meet the Model Law Criteria? Yes or No (Check one)

(If answering no to any of these questions, please reevaluate charge and proceed accordingly to address issues).

a. Does the subject of the model law necessitate a national standard and require uniformity amongst all states? Yes or No (Check one)

If yes, please explain why:

This proposed change is needed to ensure policyholders in all states retain their guaranty fund coverage, which is necessary regardless of how few states adopted changes to their laws to allow IBT and CD transactions.

It should be noted that with respect to guaranty fund coverage for life and health insurance, the National Organization of Life and Health Insurance Guaranty Associations (NOLHGA) is suggesting a different approach to address the same issue in the life and health context. NOLHGA’s proposal centers around the need for such transaction to require the assuming or resulting insurer to be licensed in all states where the issuing insurer was licensed or ever was licensed to retain the needed coverage for policyholders.

b. Does Committee believe NAIC members should devote significant regulator and Association resources to educate, communicate and support this model law?

Yes or No (Check one)

5. What is the likelihood that your Committee will be able to draft and adopt the model law within one year from the date of Executive Committee approval?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary:

6. What is the likelihood that a minimum two-thirds majority of NAIC members would ultimately vote to adopt the proposed model law?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary: See previous discussion.

7. What is the likelihood that state legislatures will adopt the model law in a uniform manner within three years of adoption by the NAIC?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary:

At this juncture, the changes in concepts being considered are simple and because they have the potential to reduce expenses incurred by receivership estates, we believe such changes will be widely supported by all parties.

8. Is this model law referenced in the NAIC Accreditation Standards? If so, does the standard require the model law to be adopted in a substantially similar manner?

Not referenced in Accreditation Standards.

9. Is this model law in response to or impacted by federal laws or regulations? If yes, please explain.

No.

Adopted by the Executive (EX) Committee – 8/11/22

Adopted by the Innovation, Cybersecurity, and Technology (H) Committee – 8/10/22

Adopted by the Privacy Protections (H) Working Group – 8/2/22

REQUEST FOR NAIC MODEL LAW DEVELOPMENT

This form is intended to gather information to support the development of a new model law or amendment to an existing model law. Prior to development of a new or amended model law, approval of the respective parent committee and the NAIC's Executive (EX) Committee is required. The NAIC's Executive (EX) Committee will consider whether the request fits the criteria for model law development. Please complete all questions and provide as much detail, as necessary, to help in this determination.

Please check whether this is: New Model Law or Amendment to Existing Model

1. Name of group to be responsible for drafting the model:

Privacy Protections (H) Working Group

2. NAIC staff support contact information:

Lois E. Alexander
Market Regulation Manager II lalexander@naic.org
816-783-8517

3. Please provide a brief description of the proposed new model or the amendment(s) to the existing model. If you are proposing a new model, please also provide a proposed title. If an existing model law, please provide the title, attach a current version to this form, and reference the section(s) proposed to be amended.

Proposed Title: *Insurance Consumer Privacy Protection Model Law*

The NAIC's models addressing data privacy—*NAIC Insurance Information and Privacy Protection Model Act* (#670) and *Privacy of Consumer Financial and Health Information Regulation* (#672)—were adopted several decades ago. After studying this issue over the past two years, the Privacy Protections (H) Working Group has determined that a new model law is necessary to enhance the consumer protections and the corresponding obligations of entities licensed by the insurance department to reflect the extensive innovations that have been made in communications and technology over these decades.

4. Does the model law meet the Model Law Criteria? Yes or No (Check one)

(If answering no to any of these questions, please reevaluate charge and proceed accordingly to address issues).

a. Does the subject of the model law necessitate a national standard and require uniformity amongst all states? Yes or No (Check one)

If yes, please explain why:

Access to consumer data by insurance companies, insurance producers, and their third-party vendors has multiplied exponentially via the internet, telematics, and other data tracking technology. This, in turn, has increased the use of complex algorithms, including machine learning (ML) and artificial intelligence (AI). State insurance regulators applying current model law and regulation requirements to consumer privacy notifications have encountered questions about the extent of consumer ownership and control of the use of such consumer data by the insurance industry. Consumers are faced with opt-in/opt-out decisions that leave questions as to whether they may have given away their rights to control their personal data, much of which insure do not even need to determine insurability and risk.

b. Does Committee believe NAIC members should devote significant regulator and Association resources to educate, communicate and support this model law?

Yes or No (Check one)

5. What is the likelihood that your Committee will be able to draft and adopt the model law within one year from the date of Executive (EX) Committee approval?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary: The Privacy Protections (H) Working Group has a work plan in place that is posted on the Working Group’s web page and drafting groups committed to drafting and adopting revisions to Models #670 and Model #672 by the 2023 Summer National Meeting.

6. What is the likelihood that a minimum two-thirds majority of NAIC members would ultimately vote to adopt the proposed model law?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary: NAIC members are aware of the need for a new model law to enhance consumer privacy protections via notifications and education to consumers regarding standards for licensees and their third-party vendors responsibilities regarding collection, use, and disclosure of consumers’ information.

7. What is the likelihood that state legislatures will adopt the model law in a uniform manner within three years of adoption by the NAIC?

1 2 3 4 5 (Check one)

High Likelihood

Low Likelihood

Explanation, if necessary:

8. Is this model law referenced in the NAIC Accreditation Standards? If so, does the standard require the model law to be adopted in a substantially similar manner?

It is not.

9. Is this model law in response to or impacted by federal laws or regulations? If yes, please explain.

The federal Gramm-Leach-Bliley Act (GLBA), enacted in 1999, imposed privacy and security standards on financial institutions and directed state insurance commissioners to adopt certain data privacy and data security regulations. Model #672 is the regulation adopted in response to the GLBA. The new model will include GLBA data privacy standards and replace Model #672.

2021 Redline RevOne – May 28, 2021

**Reflects Edits Adopted by the NAIC/Consumer Board of Trustees on April 7, 2019
Adopted by NAIC/Executive (EX) Committee on June 25, 2019.**

**PLAN OF OPERATION
NAIC CONSUMER PARTICIPATION PROGRAM**

April 11, 2017

The National Association of Insurance Commissioners (NAIC) is the U.S. standard-setting and regulatory support organization created and governed by the chief insurance regulators from the 50 states, the District of Columbia and five U.S. territories. Through the NAIC, state insurance regulators establish standards and best practices, conduct peer review, and coordinate their regulatory oversight. NAIC staff supports these efforts and represents the collective views of state regulators domestically and internationally. NAIC members, together with the central resources of the NAIC, form the national system of state-based insurance regulation in the U.S.

The mission of the NAIC is to assist state insurance regulators, individually and collectively, in serving the public interest and achieving the following fundamental insurance regulatory goals in a responsive, efficient and cost-effective manner, consistent with the wishes of its members:

*Protect the public interest;
Promote competitive markets;
Facilitate the fair and equitable treatment of insurance consumers;
Promote the reliability, solvency and financial solidity of insurance institutions; and
Support and improve state regulation of insurance.*

To promote consumer representation and participation in the NAIC, the Consumer Participation Program was established by the NAIC.

Section 1. Mission

The mission of the NAIC Consumer Participation Program is to assist the NAIC in its efforts to support state insurance regulation by providing consumer views on insurance regulatory issues.

Section 2. NAIC Consumer Participation Board of Trustees

- A. The NAIC Consumer Participation Board of Trustees (Board) shall consist of 12 members: six NAIC members and six funded consumer representative members.
- B. The current president of the NAIC, or his or her designee shall serve as Chairperson of the Board.
- C. The NAIC Executive Committee shall annually appoint the NAIC members of the Board at the beginning of each year.
- D. Board appointments of the six NAIC members shall be confirmed by the NAIC Executive Committee during the first quarter of the year.
- E. The term of service for the six NAIC members of the Board shall be one year, which shall begin on January 1 and conclude on December 31.
- F. Each December, the six NAIC members serving on the current Board shall appoint to the board six ~~funded~~ consumer representatives, chosen from those who will serve in the upcoming year ~~to serve on the Board in the following year~~. The consumer representatives selected to serve on the Board shall have served for at least one-two years as a NAIC-funded consumer representative.

- G. Consumer Members of the Board shall serve staggered, two-year terms with three different consumer members of the Board rotating on and off the Board annually; however, each must submit a recertification form for the second year of their term. NAIC members of the Board will review second-year recertification forms to determine if there is a reason a consumer representative should not continue to serve on the Board. If no reason is determined, the designated consumer representatives shall serve the second year of his or her two-year term.
- H. Consumer representatives shall be asked to indicate their interest to serve on the Board when they apply to be funded consumer representatives.
- I. The Board may meet in person or via teleconference to conduct its business.
- J. Meetings of the Board are not public meetings and matters discussed are to be kept confidential unless publicly disclosed by the Chairperson of the Board. However, no change to the Plan of Operation may be taken by the Board without prior disclosure to and opportunity for comment by current consumer representatives of the proposed changes.
- K. A consumer representative Board member may be removed by a majority vote of the Board (four of the six NAIC members and four of the six consumer representative members) whenever, in their judgment, the best interests of the Board would be served thereby. Prior to the vote, the consumer representative Board member under consideration for removal will be afforded an opportunity to address the Board and present justification for retention of his or her Board seat and /or to answer any questions of the Board members.
- L. If a vacancy occurs on the Board prior to October 1 due to the resignation or removal of a Board member, a new Board member shall be appointed to serve out the remainder of the term. If the open position is that of an NAIC Member, a replacement shall be appointed by the NAIC Officers. If the open position is that of a funded Consumer Representative, a replacement shall be appointed by the NAIC Members of the Board. No replacement will be appointed for a vacancy on the Board that occurs on or after October 1.

Section 3. Duties of the Board

- A. The Board shall administer the Consumer Participation Program:
 - 1. By the end of the calendar year prior to the new term, the current Board shall select the NAIC funded and unfunded consumer representatives to serve in the next calendar year.
 - 2. The Board may also remove a designated consumer representative by a majority vote of the Board (four of the six NAIC members and four of the six consumer members) whenever the representative no longer meets the consumer representative qualifications; or, whenever in its judgment, the best interests of the Consumer Participation Program would be served, thereby. Prior to the vote, the designated consumer representative under consideration for removal will be afforded an opportunity to address the Board and present justification for retention of his or her designation and/or to answer any questions of the NAIC Board members.
 - 3. At the last national meeting of each year, the Chairperson of the NAIC Consumer Participation Board of Trustees shall provide the NAIC Executive (EX) Committee with an annual report summarizing the Board's activities for the year, as well as the consumer participation in the Program.

Section 4. Consumer Representatives

- A. Consumer representatives must possess a commitment to and experience with consumer advocacy regarding insurance regulatory issues.
- B. Applicants may apply to be designated funded or unfunded consumer representatives.

Section 5. Consumer Representative Application Process

- A. By August 31 of each year, a link for web access to the blank consumer representative applications shall be posted on the NAIC website along with: 1) a statement that the NAIC encourages those individuals and consumer advocacy groups with a commitment to and experience with consumer advocacy regarding insurance regulatory issues; 2) a statement describing the NAIC and its services to the state insurance departments; 3) a schedule of the NAIC meetings for the following year and their locations; 4) a list of the NAIC committees and their memberships; 5) an explanation that the role of the consumer representatives at NAIC meetings is to serve as a liaison to the consumer advocacy community and to offer the consumer perspective; and 6) the following statement:

The NAIC provides an equal opportunity for all applicants and does not discriminate based on: race, creed, color, sex, sexual orientation, gender identity or expression, religion, age, national origin or ancestry, handicap or disability, marital status, pregnancy, genetic information, veteran or military status or any other status protected by law.

- B. Prospective consumer representatives are required to submit fully completed applications to the NAIC by October 31. (Partial or late applications will not be considered.) To be considered a fully completed application, the applicant must:
1. Submit a copy of his or her organization's by-laws, if available, reflecting the organization's mission to represent consumer interests and promote consumer protection, if the applicant is applying as a representative of a consumer organization.
 2. Submit a completed and signed application with all required attachments.
 3. Submit a signed NAIC Conflict of Interest Statement to disclose conflicts, if any, and acknowledge the NAIC's expectation that he or she will notify the Board of any potential conflict of interest as soon as one arises during the year. The Board will determine if a conflict exists and what action may be required on a case-by-case basis.

Section 6. Consumer Representative Qualifications

- A. Applicants for the position of NAIC consumer representative shall:
1. Demonstrate a commitment to and experience with consumer advocacy regarding insurance regulatory issues;
 2. Demonstrate an expertise in insurance regulatory issues;
 3. Demonstrate an ability to effectively advocate for consumers in a collegial, respectful and professional manner;
 4. Commit to attending regular NAIC meetings absent exceptional circumstances, and commit to participating on NAIC conference calls, including calls among consumer representatives; and
 5. Only be considered for reappointment if he or she attends NAIC meetings and participates in NAIC meetings and NAIC calls.
- B. Applicants for a funded representative position must describe in detail the applicant's need for NAIC funding, including his or her current source of funding. If he or she is applying as a consumer representative of an organization, he or she must submit the organization's most current annual budget.
- C. At the completion of the selection process, successful applicants will be notified of his or her appointment as either a funded or unfunded consumer representative.
- D. The current Board will determine if unsuccessful applicants for funded positions may be considered for unfunded positions.

Section 7. Reimbursement of Expenses

NAIC funded consumers shall submit expense reports itemizing the costs of attending NAIC meetings according to the NAIC Funded Consumer Representative Guidelines for Reimbursement of Expenses located on the NAIC Consumer Participation web site.

Unfunded consumer representatives will not receive reimbursement for travel expenses from the NAIC but are eligible for other benefits, including waiver of the NAIC national meeting registration fees.

Section 8. Designated Consumer Representative Term

Designated consumer representatives are appointed by NAIC and consumer members of the Board and shall serve two-year terms; however, each must submit a recertification form for the second year of the term.

NAIC and consumer members of the Board will review recertification forms to determine if there is a reason a designated consumer representative should not continue to serve. If no reason is determined, the designated consumer representatives shall serve the second year of his or her two-year term.

Section 9. Representatives Chosen to Represent an Organization

A consumer representative chosen to represent an organization will be expected to resign their position if the representative ceases to be affiliated with the organization or if the organization ceases to exist.

Such a representative may apply to be an individual, independent consumer representative during the next annual application period.

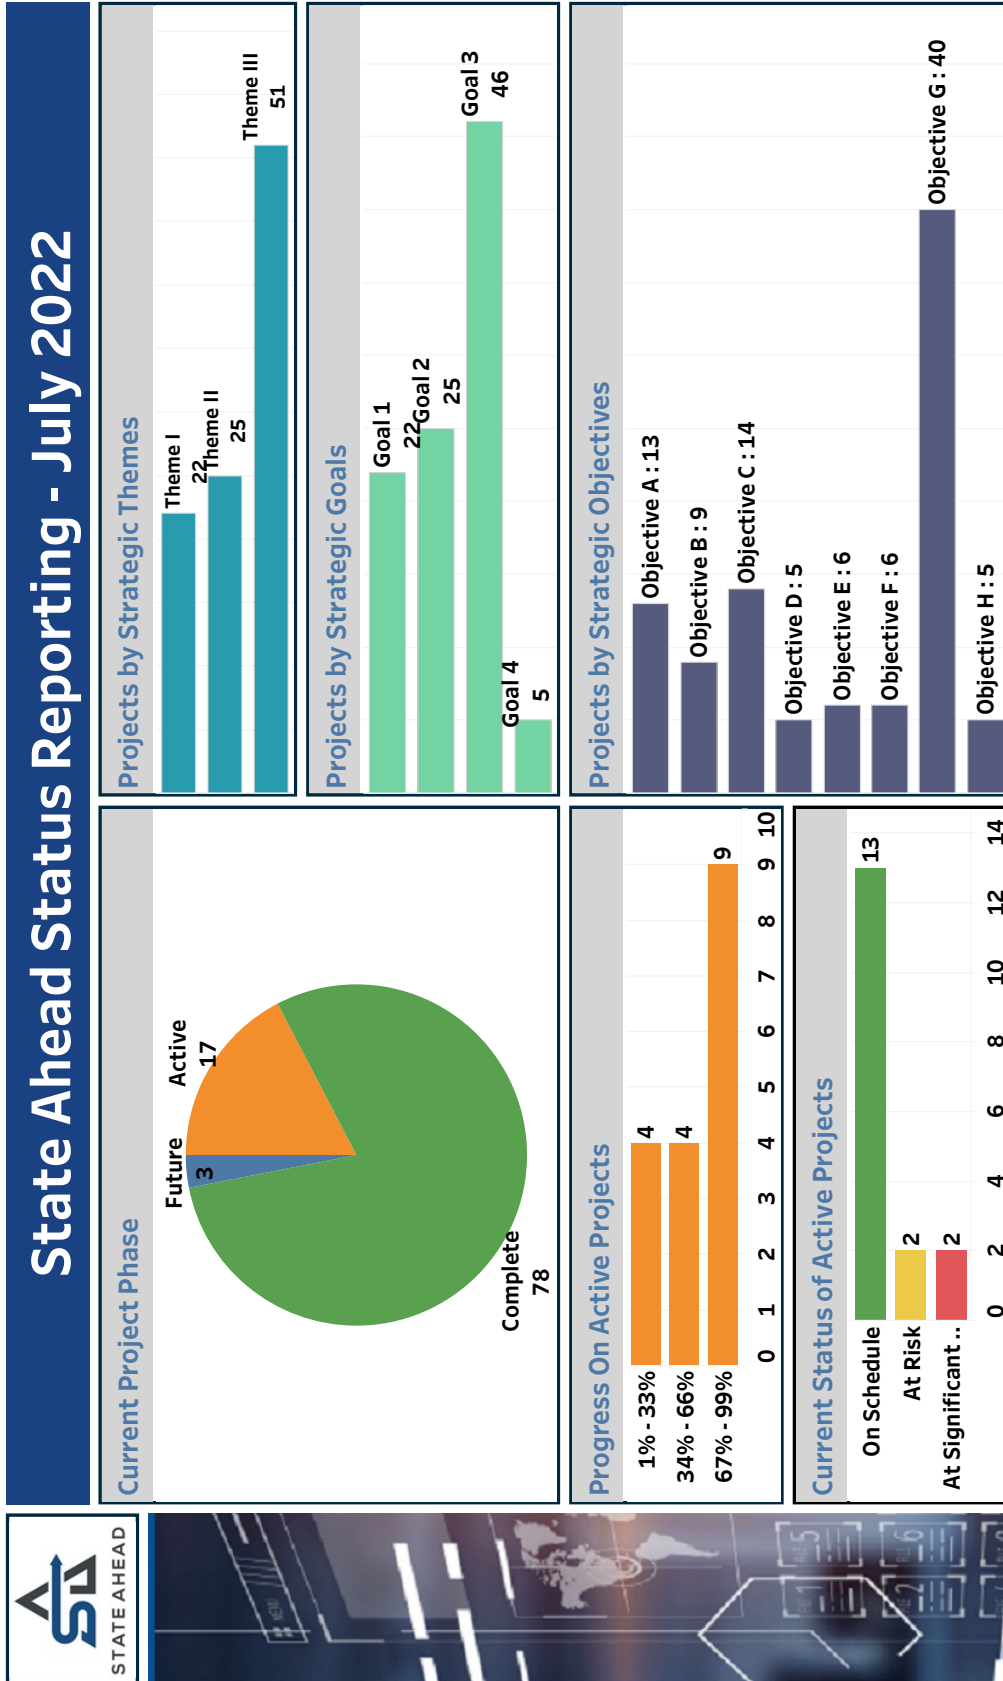

Section 10. Further Information

Information about the NAIC Consumer Participation Program (application deadline, selection criteria, etc.) and complete listings of the current NAIC Funded and Unfunded Consumer Representatives can be found on the NAIC website.

Section 11. NAIC/Consumer Liaison Committee

- A. The purpose of the NAIC Consumer Liaison Committee is to assist the NAIC in its mission to support state insurance regulation by providing consumer views on insurance regulatory issues. The Liaison Committee provides a forum for ongoing dialogue between NAIC members and NAIC consumer representatives.
- B. To promote participation at NAIC meetings, the agenda of the NAIC Consumer Liaison Committee shall be set and distributed no later than 21 days prior to the next NAIC national meeting by the Chairperson of the NAIC Consumer Liaison Committee in consultation with one of the six consumer members of the Consumer Participation Board of Trustees. Any amendments made to this agenda are subject to the approval of the Chairperson of the NAIC Consumer Liaison Committee.

Draft: 8/3/22

Model Law Development Report

Amendments to the *Model Regulation to Implement the Accident and Sickness Insurance Minimum Standards Model Act (#171)*—Amendments to Model #171 are required for consistency with the federal Affordable Care Act (ACA). Therefore, they did not require approval of a Request for NAIC Model Law Development by the Executive (EX) Committee. At the 2015 Fall National Meeting, the Regulatory Framework (B) Task Force discussed the proposed revisions to this model. The Task Force met Feb. 11, 2016, and appointed the Accident and Sickness Insurance Minimum Standards (B) Subgroup to work on revisions to this model. The Subgroup has been meeting on a regular basis since the 2016 Spring National Meeting, and it plans to continue meeting until it completes its work. During its meetings, the Subgroup has discussed several issues, including its approach for revising the model's disability income insurance coverage provisions, and it decided preliminarily to review the Interstate Insurance Product Regulation Commission's (Compact's) approach.

After pausing its work due to the ACA's potential repeal, replacement, or modification—and the possible impact on the provisions of this model, as well as the Subgroup's preliminary proposed revisions to the model—the Subgroup began meeting again in May 2018. Revisions to the *Supplementary and Short-Term Health Insurance Minimum Standards Model Act (#170)* were adopted by the full NAIC membership at the 2019 Spring National Meeting. The Subgroup has been meeting to consider revisions to Model #171 for consistency with the revised Model #170 since the 2019 Summer National Meeting discussion on comments received on Sections 1–5 of Model #171. In December 2019, the Subgroup set a public comment period ending Feb. 7, 2020, to receive comments on Sections 6–7 of Model #171. Due to the COVID-19 health emergency, the Subgroup has not scheduled any meetings. Any future meetings will depend on when a new co-chair is appointed and the duration of the COVID-19 health emergency. As requested, the Subgroup received comments from stakeholders on Sections 6–7 of Model #171. A new Subgroup co-chair has been appointed. The Subgroup met June 7, 2021, to discuss the status of the proposed revisions to Model #171 and its next steps. The Subgroup decided to establish a new public comment period ending July 2, 2021, to receive comments on Sections 1–7 of Model #171. The Subgroup did not meet at the 2021 Fall National Meeting. Since the 2021 Summer National Meeting, the Subgroup has been meeting to discuss possible revisions to Model #171 based on the comments received by the July 2, 2021, public comment deadline. The Subgroup recently finished its work on revisions in Section 7 of Model #171 related to indemnity products and disability income protection products. Over the next few months, the Subgroup plans to meet to continue its discussions of revisions to provisions in Section 7 of Model #171.

Amendments to the *Mortgage Guaranty Insurance Model Act (#630)*—The Executive (EX) Committee approved a Request for NAIC Model Law Development for amendments to Model #630 at the 2013 Summer National Meeting. The Mortgage Guaranty Insurance (E) Working Group has developed proposed changes to the model, which have been exposed for comment, and subsequent changes have been made to address the comments. However, for some time, the Working Group was focused on the development of a capital model, which is currently incorporated as a requirement in the model, but further changes are expected to be made to that model before adoption can occur. The Working Group received an extension from the Financial Condition (E) Committee until the 2023 Spring National Meeting.

Amendments to the *Nonadmitted Insurance Model Act (#870)*—The Executive (EX) Committee approved a Request for NAIC Model Law Development for amendments to Model #870 at the 2021 Spring National Meeting. The amendments will modernize the model and bring it into alignment with the federal Nonadmitted and Reinsurance Reform Act (NRRRA). The Surplus Lines (C) Task Force met Aug. 5, 2021, and appointed a drafting group to work on the revisions to Model #870. The drafting group met four times in 2021: Sept. 28, Oct. 20, Nov. 4, and

Dec. 1. The drafting group also met in regulator-to-regulator session on Jan. 10, 2022, and May 3, 2022, to discuss a couple of specific issues and administrative tasks. The Surplus Lines (C) Task Force exposed Model #870 on May 23, 2022, for a 60-day public comment period that ended on July 21, 2022. The drafting group reconvened the week of July 31, 2022, to discuss the comments received.

New Model: Pet Insurance Model Act—The Executive (EX) Committee approved a Request for NAIC Model Law Development at the 2019 Summer National Meeting. The Pet Insurance (C) Working Group held numerous meetings to draft the model law to define a regulatory structure for pet insurance and address issues such as producer licensing, policy terms, coverages, claims handling, premium taxes, disclosures, arbitration, and preexisting conditions. The Working Group adopted the Pet Insurance Model Act on July 21, 2022, and the Property and Casualty Insurance (C) Committee adopted the Model on Aug. 1, 2022. The Pet Insurance Model Act will be considered by the Executive (EX) Committee and Plenary at the 2022 Summer National Meeting.

 Assessment (ORSA) Implementation (E) Subgroup (Attachment Three) 4-29

Draft: 8/17/22

Climate and Resiliency (EX) Task Force
Portland, Oregon
August 11, 2022

The Climate and Resiliency (EX) Task Force met in Portland, OR, Aug. 11, 2022. The following Task Force members participated: Ricardo Lara, Co-Chair, Mike Peterson, and Bryant Henley (CA); David Altmaier, Co-Chair, and Christina Huff (FL); Colin M. Hayashida, Co-Vice Chair, represented by Martha Im (HI); James J. Donelon, Co-Vice Chair, and Tom Travis, (LA); Kathleen A. Birrane, Co-Vice Chair, and Alex Barowsky (MD); Barbara D. Richardson, Co-Vice Chair (NV); Andrew R. Stolfi, Co-Vice Chair, represented by Aeron Teverbaugh and Brian Fordham (OR); Elizabeth Kelleher Dwyer, Co-Vice Chair, and Beth Vollucci (RI); Lori K. Wing-Heier represented by Sian Ng-Ashcraft (AK); Mark Fowler and Brian Powell (AL); Alan McClain (AR); Michael Conway represented by Peg Brown (CO); Andrew N. Mais, Wanchin Chou, and George Bradner (CT); Karima M. Woods represented by Sharon Shipp (DC); Doug Ommen represented by Travis Grassel (IA); Dana Popish Severinghaus and C.J. Metcalf (IL); Sharon P. Clark (KY); Timothy N. Schott represented by Sandra Darby (ME); Anita G. Fox represented by Chad Arnold (MI); Grace Arnold represented by Peter Brickwedde (MN); Chlora Lindley-Myers represented by Cynthia Amann (MO); Edward M. Deleon Guerrero (MP); Mike Chaney and Andy Case (MS); Troy Downing represented by Bob Biskupiak (MT); Mike Causey represented by Tracy Biehn and Angela Hatchell (NC); Jon Godfread represented by Chris Aufenthie and John Arnold (ND); Eric Dunning and Connie Van Slyke (NE); Adrienne A. Harris represented by Harriette Resnick (NY); Judith L. French, Tom Botsko and Lori Barron (OH); Michael Humphreys represented by Melissa Greiner (PA); Alexander S. Adams Vega (PR); Michael Wise (SC); Carter Lawrence represented by Bill Huddleston and Stephanie Cope (TN); Scott A. White (VA); Tregenza A. Roach represented by Cheryl Charleswell and Glendina Matthews (VI); Kevin Gaffney and Rosemary Raszka (VT); Mike Kreidler (WA); Nathan Houdek (WI); and Jeff Rude (WY). Also participating were: Weston Trexler (ID); Anna Krylova (NM); Tracy Klausmeier (UT); and Tomasz Serbinowski (UT).

1. Adopted its Spring National Meeting Minutes

Commissioner Donelon made a motion, seconded by Ms. Clark, to adopt the Task Force’s April 6 minutes (see *NAIC Proceedings – Spring 2022, Climate and Resiliency (EX) Task Force*). The motion passed unanimously.

2. Received Reports from its Workstreams

a. Solvency Workstream

Commissioner Birrane said the Solvency Workstream developed three referrals. The referrals—to the Financial Analysis Solvency Tools (E) Working Group (Attachment One), the Financial Examiners Handbook (E) Technical Group (Attachment Two), and the Own Risk and Solvency Assessment (ORSA) Implementation (E) Subgroup (Attachment Three)—provide high-level principles for the groups to consider and develop as appropriate for inclusion in relevant financial solvency regulation manuals. The referrals will be taken up by the groups following the Summer National Meeting, where they will be discussed by the members before determining how to implement any revisions.

b. Innovation Workstream

Commissioner Altmaier said the Innovation Workstream met May 16 to hear from Zurich North America regarding a commercial builder’s risk policy that includes a weather-based parametric feature.

The Workstream also met July 27 to hear a presentation from representatives with AXA; Guy Carpenter; and Raincoat, the parametric technology solution provider. Presenters described the Mexican Tripartite Project, created through a public-private partnership including the Insurance Development Forum to design a parametric insurance solution for climate-vulnerable farmers in Mexico, supported by investments in long-term risk finance and insurance market development.

c. Technology Workstream

Commissioner Donelon said the Technology Workstream met June 9 to hear a presentation from Harold Brooks (National Oceanic and Atmospheric Administration—NOAA) on how the NOAA uses predictive software to identify upcoming weather events, particularly severe convective storms. He also shared the results of the NOAA's research and findings regarding early warning systems used to warn people ahead of storms so they have adequate time to take shelter.

d. Pre-Disaster Mitigation Workstream

Commissioner Richardson said the Pre-Disaster Mitigation Workstream has met several times since the Spring National Meeting. During its meeting in May, which is wildfire awareness month, Lenya Quinn-Davidson (Northern California Prescribed Fire Council) spoke about vegetation management through prescribed fire, including opportunities, challenges, and regional differences with implementation throughout the country.

Commissioner Richardson said the Workstream met again on June 3 to hear a presentation from the U.S. Forest Service (USFS). The State and Private Forestry (S&PF) organization of the U.S. Department of Agriculture (USDA) works with states, tribes, communities, and non-industrial private landowners to provide technical and financial assistance to landowners and resource managers. Federal funding and resources are available to support fuel reduction and prescribed fire. She said the Workstream co-hosted a trip with the Center for Insurance Policy and Research (CIPR) to Richburg, SC, to tour the Insurance Institute for Business & Home Safety (IBHS). Ms. Richardson said Roy Wright (IBHS) and his team showed the state insurance regulators the great work at the IBHS facility to study mitigation science. The state insurance regulators in attendance spent a day and a half going between the lab and the classroom, where they discussed how fraud and misconceptions about property insurance are the two leading causes of consumer complaints after catastrophic events. They discussed opportunities to work collaboratively to address consumer complaints through outreach and education. State departments produce consumer information to combat fraud, increase consumers' understanding of insurance coverage, and incentivize risk mitigation. State insurance regulators will continue to collaborate with the IBHS to share a consistent message with consumers and promote awareness to a broader audience.

e. Climate Risk Disclosure Workstream

Superintendent Dwyer said the Climate Risk Disclosure Workstream has not met since the Spring National Meeting. However, it hosted two events to assist insurers required to submit the new climate risk disclosure survey. The Principles for Responsible Investment (PRI) presented the first session on June 9. Ceres and the United Nations Environment Programme Finance Initiative (UNEP FI) presented the second event on July 27. Ceres will conduct four additional events on the topic leading up to the Nov. 30 submission deadline.

3. Heard a Panel Presentation Regarding Wildfire Mitigation

Mr. Wright (IBHS) said IBHS has a full-scale testing facility in Richburg, SC, allowing IBHS staff to test the impact of various perils on the built environment. He said the environment needs wildfire, but when it intrudes on the built environment, it becomes a disaster.

At IBHS, engineers and staff are testing the impact of ember accumulation, length of flame, and radiant heat on building materials and landscape design to determine methods for reducing the risk of future loss. Ninety percent of emissions are from embers landing on a building; a much smaller proportion of fires begin due to radiant heat. Through the research at IBHS, it has identified multiple actions property owners can take to lower the risk of loss and make the property more resilient to wildfire. All actions should be done in tandem, including using a Class A fire-rated roof, adding mesh to vents, and clearing away all combustible materials within 5 feet of the property. These actions done in tandem ensure that fire breaks are sufficient to reduce conflagration of the fire. Mr. Wright said that in California, 99.2% of homes already have a Class A fire-rated roof. These actions are the integral components of reducing fire risk, but there are additional actions property owners can take to further reduce the risk of loss. These include using combustible siding; enclosing eaves and under bay windows; using fire-resistant decking materials, windows, and doors; covering gutters; and moving outbuildings at least 30 feet from the main building.

With other perils such as tornadoes, floods, and hail, property damage occurs individually. However, in the case of wildfire, the resilience of neighboring structures and the community matters. Wildfires are unique due to the conflagration of loss; if one structure burns, the risk of loss for adjacent structures increases exponentially. If there are natural firebreaks around the perimeter of the community, if communities work together to reduce the brush and eliminate fuels to stop fire from spreading, they have better odds of limiting the path of destruction. If 80% to 90% of the homes in the neighborhood meet the standards outlined in the IBHS Wildfire Prepared Home program, it will improve the community's likelihood of avoiding devastation from wildfire.

Amy Bach (United Policyholders—UP) said UP has been guiding consumers to help them understand their insurance policies and advocating for fair sales and claims practices for 31 years. She said after seeing market disruptions take place following deadly wildfires in several western states, UP began working on its Roadmap to Recovery. The Roadmap to Recovery program was designed to work with consumers and state insurance regulators to resolve insurance coverage and claim issues. The Roadmap to Preparedness program is designed to encourage consumers to be prepared for disasters by mitigating risks where possible, insuring properties to value, shopping for coverage, and maintaining an inventory of belongings. Ms. Bach said that extreme weather events are affecting the property/casualty (P/C) market by increasing claims and losses and reducing the availability and affordability of coverage. She said that while knowledge is critical to resolving some of the coverage issues, there are concerns that more knowledge may also have negative effects on existing properties deemed to be higher risk than others. Mitigation is critical, and understanding the components of risk reduction is essential to reducing the risk and improving the affordability and availability of insurance.

Ms. Bach said UP formed the Wildfire Risk Reduction and Asset Protection Project (WRAP) to convene a group of public and private stakeholders around a central purpose of reducing wildfire risk and restoring the insurance market in California. She said her organization is focused on building incentives to reward mitigation action through premium discounts, better risk scores, non-renewal protection, and safer homes and communities. This is all happening through grant programs and regulatory action taken by state insurance departments. These collaborative efforts have resulted in significant increases in funding for wildfire risk reduction, new resources to promote mitigation and preparedness, research on wildfire risk reduction methodologies, and insurer incentives for risk reduction—including mitigation discounts and protection from non-renewals and cancelled policies.

Mr. Peterson said in 2019, Commissioner Lara began hosting town hall meetings to speak with local constituents about the impact of wildfire for state residents. He said the primary question from consumers was: How do we make sure this never happens to us again? The California Department of Insurance (DOI) went to work developing relationships with the state agencies responsible for fire protection and suppression. The California DOI formed a partnership with Gov. Gavin Newsom's administration, including the Governor's Office of Emergency Services (CalOES), the California Department of Forestry and Fire Protection (CAL FIRE), the Office of Planning and Research, and the California Public Utilities Commission (CPUC). The groups convened on a regular basis for a year

and then launched their Safer from Wildfires framework in February 2022. Over that time, the organizations evaluated methodologies found in multiple research studies, including the *Application of Wildfire Mitigation to Insured Property Exposure* developed by the CIPR, among others. They compared the wildfire risk reduction methodologies among the various research and compiled a list of key actions to reduce the risk of wildfire: 1) having a Class A-rated roof; 2) providing 5 feet of defensible hardscape around the perimeter of the home; 3) having 6 inches of noncombustible material at the base of the home; 4) upgrading windows and vents to prevent embers from entering any openings; 5) closing the eaves; 6) choosing noncombustible gutters and downspouts; 7) clear and maintain underdeck area and enclose low-elevation decks; 8) maintain yard clear of debris; and 9) replace combustible fencing within 5 feet of the home. The partnership with other state agencies coalesced around three pillars: collecting data, communicating with the public and continuing to work collaboratively.

Karen Collins (American Property Casualty Insurance Association—APCIA) said California has experienced multiple years of heavy losses due to wildfire. Since 2017, insured losses have totaled more than \$40 billion, the majority due to losses from wildfire in California, which had eight of the 10 costliest wildfire events worldwide during that same period. According to a study from Milliman, wildfire losses incurred in 2017 and 2018 cost the insurance industry 20 years of accumulated profit and remains unprofitable today. The risk in the market continues to grow as land-use policies allow properties to be built in the wildland urban interface, drought conditions worsen, and the heat continues to deteriorate the arid environment.

Ms. Collins said insurers are also facing legislative and regulatory pressure, which is increasing their cost to do business in the state and restricting their ability to limit or reduce exposure. She said insurers have been focused on mitigation as the only way to meaningfully reduce future losses and improve market conditions. The industry fully supports the IBHS Wildfire Prepared Home and community programs. They are advocating at the state and federal level for mitigation resources, including better building codes, mapping and modeling for early fire detection, and active communication and suppression of wildfires. Ms. Collins said ACIA's CEO, David Sampson, was recently appointed to the federal Wildland Fire Mitigation and Management Commission, which was established as a result of the federal Infrastructure Investment and Jobs Act. She said the APCIA is focused on promoting consumer risk awareness and collaboration with other stakeholders to amplify the message of mitigation and preparedness. Ms. Collins said rate adequacy is a top concern for insurers, and she requested flexibility from state insurance regulators as insurers continue to encounter challenges with catastrophic losses, a difficult reinsurance market, and increasing inflationary pressures driving up costs.

Mr. Brickwedde asked Mr. Wright about IBHS research to study parallels between wildfire and wind damage due to severe convective storm, as Minnesota is a state with risk from both perils. Mr. Wright said the physics of how wind and fire interact with structures is fundamentally the same. Both move in a circular pattern fatiguing the building as it hits the structure. The mitigation features, however, vary by peril. When wind hits a structure, it dissipates, but when fire hits a structure, it amplifies.

Mr. Brickwedde asked the APCIA how insurers can share claims data with regulatory agencies so they can build the information necessary to develop a mitigation campaign in the most cost-effective way. Dave Snyder (APCIA) said insurers are still concerned about data privacy and protection, but through the work of the newly established Catastrophe Modeling Center of Excellence (COE) may be the best path forward to make progress in this area.

Mr. Chou asked how the research conducted by IBHS would be reflected in future building codes. Mr. Wright said following Hurricane Andrew, Florida led the way in advancing building codes, which was imperative for reducing the risk of future loss. He said California code is heading in a similar direction, and IBHS is working on studies to determine measures to be implemented into new construction to reduce the risk of wildfire.

Commissioner Kreidler asked the APCIA how the industry could collaborate with the NAIC and state insurance regulators to develop the data around disaster-related losses and opportunities for future mitigation. Mr. Snyder

said the COE would be a good place to start and invited a follow-up discussion on data needs and capacity building. He said to build on that mitigation work and spread the message, the type of collaboration highlighted today is critical to develop a streamlined, consistent message and work across local communities, agencies, and organizations.

Commissioner Lara said additional components of mitigation include funding and land-use planning. He said we need to understand the risks from natural hazards and use insurance as a tool to drive people to make better, safer decisions about where and how to build.

4. Heard a Presentation Regarding Ceres' Work on Climate Risk Disclosures

Steven Rothstein (Ceres) said Ceres held a virtual presentation on July 27, hosted by the NAIC, to assist insurers required to submit a climate risk disclosure survey to the 15 participating states. This was the first of a series of webinars that will be hosted leading up to the Nov. 30 filing deadline. The next session will be held on Sept. 14 and will be a 90-minute presentation followed by 30 minutes for questions. Ceres will also have three peer support sessions for insurers to ask questions and interact with California DOI staff regarding the survey response submission process. Mr. Rothstein said the Financial Stability Board (FSB) has developed multiple resources to support the Taskforce on Climate-Related Financial Disclosure (TCFD) framework, and because the state climate risk disclosure survey aligns to the TCFD, those resources could be used by insurers filling it out this year.

Mr. Rothstein said Ceres is preparing two reports with the Wharton Risk Management and Decision Processes Center on the impact of severe climate events on low- and moderate-income families, as well as policy and product recommendations to reduce the impact. Ceres is also conducting an analysis of the 28 TCFD reports received in 2021 through the climate risk disclosure survey requirement. Ceres has contracted with a company to use artificial intelligence (AI) to pull out content from the insurer reports and begin to develop a list of common industry practices regarding climate risk management, governance, strategy, and metrics and targets. Mr. Rothstein said Ceres is working with the California DOI to analyze the investment portfolios of its licensed insurers and that Ceres welcomes additional suggestions for projects of interest to state insurance departments.

5. Heard a Federal Update

Brooke Stringer (NAIC) said the U.S. House of Representatives recently passed the Wildfire Response and Drought Resiliency Act (H.R. 5118), which was introduced by Rep. Maxine Waters (D-CA). The bill requires the Federal Emergency Management Agency (FEMA) and the Government Accountability Office (GAO) to conduct studies assessing the danger that wildfires pose to communities and how the homeowners insurance market is responding to the growing threat. The report would also assess the state insurance regulatory response to wildfire loss events and subsequent market reaction. She said even if the bill does not pass the Senate and become law, Rep. Waters can request that the GAO study these issues anyway. Ms. Stringer said the Senate recently passed the Inflation Reduction Act (H.R. 5376), which includes significant climate investment and is slated to pass the House of Representatives on Aug. 12. While the Act does not include insurance-specific provisions, it does have significant climate-related impacts, including implications for clean energy and resiliency funding.

Having no further business, the Climate and Resiliency (EX) Task Force adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/Executive (EX) Committee/CRTF/ClimateTFSumMin.docx

MEMORANDUM

TO: Judy Weaver, Chair of the Financial Analysis Solvency Tools (E) Working Group
 FROM: Commissioner Birrane, Co-Chair of the Climate Resiliency (EX) Task Force leading the Solvency Workstream
 DATE: May 23, 2022
 RE: Referral on Proposed Climate Risk Enhancements

The NAIC’s Climate Resiliency (EX) Task Force is charged with evaluating financial regulatory approaches to climate risk and resiliency in coordination with other relevant committees, task forces and working groups, including those under the Financial Condition (E) Committee. As part of its efforts to address this charge, the Task Force designated a Solvency Workstream to explore potential enhancements to existing solvency monitoring processes in this area.

During 2021, the Solvency Workstream held a series of public panels on various climate solvency related topics which included among other things, a high-level summary of existing regulatory tools in the space. Near the end of 2021, the Solvency Workstream released a series of questions intended to solicit input on potential enhancements to the existing regulatory tools. As a result of comments received, and general support for enhancements to the NAIC’s Financial Analysis Handbook, the workstream suggests the Working Group consider modifications to incorporate particular concepts as it pertains to climate risk. Specifically, the Workstream suggests the Working Group consider modifications to incorporate procedures for utilizing the Property Casualty RBC Cat reporting data, any investment stress scenario results available from the NAIC Capital Markets Bureau, and Climate Risk Exposure Survey results (if available) in conducting ongoing financial analysis.

The proposed enhancements are presented as high-level principles for the Technical Group to consider and develop as appropriate for inclusion in the Handbook. If there are any questions regarding the proposed referral, please feel free to contact me or NAIC staff (Dan Daveline at ddaveline@naic.org) for clarification. Thank you for your consideration of this request.

MEMORANDUM

TO: Susan Bernard, Chair of the Financial Examiners Handbook (E) Technical Group

FROM: Commissioner Birrane, Co-Chair of the Climate Resiliency (EX) Task Force leading the Solvency Workstream

DATE: May 23, 2022

RE: Referral on Proposed Climate Risk Enhancements

The NAIC's Climate Resiliency (EX) Task Force is charged with evaluating financial regulatory approaches to climate risk and resiliency in coordination with other relevant committees, task forces and working groups, including those under the Financial Condition (E) Committee. As part of its efforts to address this charge, the Task Force designated a Solvency Workstream to explore potential enhancements to existing solvency monitoring processes in this area.

During 2021, the Solvency Workstream held a series of public panels on various climate solvency related topics which included among other things, a high-level summary of existing regulatory tools in the space. Near the end of 2021, the Solvency Workstream released a series of questions intended to solicit input on potential enhancements to the existing regulatory tools. As a result of comments received, and a general support for enhancements to the NAIC's *Financial Condition Examiners Handbook*, the following list of proposed enhancements to the NAIC's *Financial Condition Examiners Handbook* is being referred to the Technical Group to consider.

Financial Condition Examiners Handbook

Planning Phase of the Examination:

- Exhibit B – Exam Planning Questionnaire: Consider updating the information requested at the onset of an exam to gain an understanding of the insurer's exposure to and management of climate change risks
- Exhibit Y – Examination Interviews: Consider additional sample interview questions related to climate change risks for the various "C-Level" executive and board member positions
- Implement a means to ensure that climate-related risks are considered as part of every financial condition examination, which may be achieved through the addition of "Climate Change" as a new critical risk category in Exhibit DD

Fieldwork Phase of the Examination:

- Investments Repository: Consider enhancements to repository risks to encourage consideration of both energy transition and physical risks on an insurer's investment portfolio and strategy (generally related to all lines of insurance)
- Underwriting Repository: Consider enhancements to existing repository risks to encourage consideration of both energy transition and physical risks in underwriting processes, as well as a new risk focused on the medium and longer-term impacts of climate change on the insurer's prospective underwriting and business strategy (generally related to Property and Casualty lines of insurance)
- Reinsurance Assuming Repository (Only Applicable to Assuming Reinsurers): Consider enhancements to repository risks to address the extent to which reinsurers are measuring and monitoring their exposure to climate change risks and using that information to set risk exposure limits and make retrocession decisions
- Reinsurance Ceding Repository: Consider enhancements to repository risks to address how the insurer has integrated climate change assumptions into its catastrophic modelling processes and how the results of modelling are used in making reinsurance coverage decisions

The proposed enhancements are presented as high-level principles for the Technical Group to consider and develop as appropriate for inclusion in the Handbook. In addition to these high-level principles, attached are comments received from the New York Department of Financial Services, American Property Casualty Insurance Association, American Council of Life Insurers and Public Citizen. If there are any questions regarding the proposed referral, please feel free to contact me or NAIC staff (Dan Daveline at ddaveline@naic.org) for clarification. Thank you for your consideration of this request.

MEMORANDUM

TO: Kathy Belfi and Mike Yanacheak, Co-Chairs of the ORSA Implementation (E) Subgroup

FROM: Commissioner Birrane, Co-Chair of the Climate Resiliency (EX) Task Force leading the Solvency Workstream

DATE: May 23, 2022

RE: Referral on Proposed Climate Risk Enhancements

The NAIC's Climate Resiliency (EX) Task Force is charged with evaluating financial regulatory approaches to climate risk and resiliency in coordination with other relevant committees, task forces and working groups, including those under the Financial Condition (E) Committee. As part of its efforts to address this charge, the Task Force designated a Solvency Workstream to explore potential enhancements to existing solvency monitoring processes in this area.

During 2021, the Solvency Workstream held a series of public panels on various climate solvency related topics which included among other things, a high-level summary of existing regulatory tools in the space. Near the end of 2021, the Solvency Workstream released a series of questions intended to solicit input on potential enhancements to the existing regulatory tools. As a result of comments received, and a general support for enhancements to the NAIC's *ORSA Guidance Manual*, the following list of proposed enhancements to the existing guidance is being referred to the Subgroup to consider.

ORSA Guidance Manual

- Provide guidance indicating that the insurer should include a description of how climate change risk is addressed through the risk management framework (e.g., driver for credit, market, underwriting risks)
- Provide guidance indicating that if climate change has the potential to materially impact the insurer's asset portfolio, the exposure of assets to transition/physical risks should be presented, discussed, and assessed in a quantitative and qualitative manner, noting that a qualitative assessment may be appropriate if quantitative methods are not well established
- Provide guidance indicating that if climate change has the potential to materially impact the insurer's insurance liabilities, the exposure of liabilities to transition/physical risks should be presented, discussed, and assessed in a quantitative and qualitative manner, noting that a qualitative assessment may be appropriate if quantitative methods are not well established
 - Clarify that the assessment of the impact to the insurer's near-term asset portfolio and insurance liabilities should be performed over the time horizon covered in the ORSA (i.e., current business plan)
- Provide guidance encouraging qualitative discussion of the material medium and long-term impacts of climate change risk on the company's near-term risk appetite, asset management, underwriting, and business strategy, as well as efforts to limit the impact on near-term solvency (e.g., diversification efforts, use of enhanced modelling in ratemaking and underwriting, increased incentives for policyholder mitigation efforts)

The proposed enhancements are presented as high-level principles for the Subgroup to consider and develop as appropriate for inclusion in the Guidance Manual. In so doing, the Subgroup might consider whether additional guidance or considerations regarding ORSA materiality concepts are necessary. If there are any questions regarding the proposed referral, please feel free to contact me or NAIC staff (Dan Daveline at ddaveline@naic.org) for clarification. Thank you for your consideration of this request.

 Summary Information on CIPR Research: Common Benefit Reduction Options (Attachment Three)..... 4-58

Draft: 8/29/22

Long-Term Care Insurance (EX) Task Force
Portland, Oregon
August 12, 2022

The Long-Term Care Insurance (EX) Task Force met in Portland, OR, Aug. 12, 2022. The following Task Force members participated: Scott A. White, Chair (VA); Michael Conway, Vice Chair (CO); Lori K. Wing-Heier (AK); Mark Fowler (AL); Evan G. Daniels represented by Erin Klug (AZ); Ricardo Lara represented by Susan Bernard (CA); Andrew N. Mais represented by Paul Lombardo (CT); Karima M. Woods represented by Philip Barlow (DC); Trinidad Navarro (DE); David Altmaier represented by John Reilly (FL); Colin M. Hayashida (HI); Doug Ommen (IA); Dean L. Cameron (ID); Amy L. Beard represented by Scott Shover (IN); Vicki Schmidt (KS); Sharon P. Clark (KY); James J. Donelon (LA); Gary D. Anderson (MA); Kathleen A. Birrane represented by Brad Bovin (MD); Timothy N. Schott (ME); Anita G. Fox represented by Karen Dennis (MI); Grace Arnold and Fred Andersen (MN); Chlora Lindley-Myers represented by Cynthia Amann (MO); Mike Chaney represented by Bob Willams (MS); Troy Downing (MT); Mike Causey represented by Jackie Obusek (NC); Eric Dunning (NE); Marlene Caride (NJ); Barbara D. Richardson (NV); Judith L. French (OH); Glen Mulready (OK); Michael Humphreys (PA); Elizabeth Kelleher Dwyer (RI); Michael Wise (SC); Larry D. Deiter represented (SD); Carter Lawrence represented by Brian Hoffmeister (TN); Cassie Brown represented by Chris Herrick (TX); Jon Pike (UT); Kevin Gaffney (VT); Mike Kreidler (WA); Nathan Houdek (WI); Allan L. McVey (WV); and Jeff Rude (WY).

1. Adopted its Spring National Meeting Minutes

Commissioner Conway made a motion, seconded by Commissioner Rude, to adopt the Task Force's April 6 minutes (see *NAIC Proceedings – Spring 2022, Long-Term Care Insurance (EX) Task Force*). The motion passed unanimously.

2. Received a Report on Implementation Plans for the LTCI MSA Framework

Commissioner Conway said the implementation of the long-term care insurance (LTCI) multistate actuarial (MSA) process has been focused on staff-level tasks that are important for making the MSA available for insurers and states to participate in. NAIC staff have nearly finalized the filing instructions for insurers who are interested in using the MSA process. A website will be available in September that will house items from the Long-Term Care Insurance Multistate Rate Review Framework (LTCI MSA Framework), including the insurer certification, the information checklist, and other directions for submitting a rate request and contact information for starting an MSA submission. He said the MSA process will use the NAIC's System for Electronic Rates & Forms Filing (SERFF) application. MSA rate requests will be separated within SERFF by the assigned filing number. He said the Interstate Insurance Product Regulation Commission (Compact) staff will be assisting in an administrative role, like their role during the Pilot Project. They will be a point of contact for insurers that are submitting an MSA rate request and will assist in administrating the request within SERFF. He said process instructions and procedures for the MSA Team and the Compact staff focusing on the intake of rate requests are also being developed to aid MSA Team members. This documentation will be further developed over time as the MSA Team gains more experience with MSA reviews.

Commissioner Conway said the Long-Term Care Insurance Multistate Rate Review (EX) Subgroup and the Task Force will need to continue considering how to promote the MSA process to both insurers and state insurance regulators to encourage participation in the program. This participation will be critical to the future success of this program and to achieving the goals of this Task Force. Commissioner White said he will continue to have dialogue with Task Force members to participate in the MSA process when filings are received.

3. Heard an Update on LTCI Industry Trends

Mr. Andersen said the Valuation Analysis (E) Working Group has an ongoing project to reviews insurers' *Actuarial Guideline LI—The Application of Asset Adequacy Testing to Long-Term Care Insurance Reserves* (AG 51) filings to focus on reserves and solvency. The Working Group is monitoring the following key factors:

- Cost-of-care inflation trends, especially in blocks of policies with 5% inflation protected benefits, where it becomes a source of uncertainty and vulnerability for the insurance company.
- Attitudes toward different statuses of care that may affect per-day insurance claim costs going forward.
- The impact of COVID-19 trends going into the future.
- General morbidity, including uncertainty of frequency of claims and length of claims.
- Ensuring consistency between an insurer's assumptions in reserves and assumption in rates.
- Private equity and complex assets of life insurers with LTCI blocks.

Commissioner White asked if rising interest rates are helping insurers after the impacts of the low interest rate environment. Mr. Andersen said he estimates on average that 10% of life insurers' assets turn over each year. If interest rates continue to increase and one assumes for this year probably 90% of the insurers' assets were purchased during the low interest rate environment and 10% in the improved environment, and one assumes if the same trend continues, then in three to five years, one would see a significant helpful impact.

4. Received a Report on the MSA Associate Program

Mr. Andersen said the MSA Associate Program was developed in recognition of the need to increase overall regulatory expertise related to long-term care (LTC) financial risks. He said there are more than a dozen members in the program. The program members are analyzing risks that affect both reserves and rates. As submissions to the MSA process are received, several program members have offered to be involved in the review process to be an immediate resource and to train them on the more complex activities. He said he anticipates the program members will meet again in the upcoming quarter.

Commissioner Donelon asked how many states were on the MSA Team and if the MSA Associate Program is intended to replenish that workforce. Mr. Andersen said the MSA Team is currently comprised of Connecticut, Minnesota, Texas, and Utah. Mr. Andersen said there are multiple purposes that are included in the MSA Framework, including mentorship and the sharing of ideas and expertise.

Commissioner Donelon asked how many submissions were reviewed as part of the pilot program and if states had to agree to receive it. Mr. Andersen said there were four submissions, and all states had access to it. He said during the pilot, the addition of a webinar with state insurance departments was an improvement to the process that allowed for more communication with all states and gives states the opportunity to review the draft recommendation and offer feedback before the recommendation was finalized. Commissioner White the webinars will continue.

Commissioner Donelon asked of the four pilot program submissions, if the MSA recommendation was submitted to the state. Mr. Andersen said because the legal view on the report evolved during the pilot program, only the last two participating insurers received a copy of the MSA Advisory Report. Currently, the company will receive a copy of the MSA Advisory Report. This will give the company flexibility to highlight that its rate request was reviewed by the MSA and to possibly adjust the amount of the requested rate increase.

Commissioner Donelon asked about the take-up of state participation and acceptance of the MSA recommendation. Commissioner Conway said this has been an evolutionary process both in its development through the pilot program and from the standpoint of states' use of the recommendation. He said he is continuing

to see the evolution of this and want to encourage as much participation amongst the states as possible. He encouraged state insurance regulators to share any issues with states' willingness to participate in the program. He said he has seen more states understand the process and use the MSA recommendation.

Commissioner Donelon said he is open to the MSA process. He asked what is meant by participation, i.e., using the recommendation, being in the MSA Associate Program, or being part of the review. Commissioner Conway said participation refers to the use of the MSA recommendation, although this is part of the evolution. States use the recommendation in different ways. State insurance departments will always have the authority for the final approval. He said states will each go through their process as they deem appropriate, but the MSA recommendation is helping to inform the review of the state insurance department.

Commissioner White said to the extent it is desired that all states on the Task Force participate in a discussion about a recommendation, that is not occurring yet. However, he said that is not the states' fault with the pilot program. In one case, some states did not participate due to the timing of past approvals and the ineligibility for a rate increase at the time the MSA review was completed. Commissioner White said some insurers have said it does not make sense to submit a rate proposal to the MSA process if states are not going to participate. He said insurers have been asked what "participation" means. Insurers are not sure and would like to engage on this question. Commissioner White said states are not bound by the MSA recommendation but asked Task Force members to think about what their state insurance department would be comfortable with in terms of participation. He said further discussion will be held, likely in the Long-Term Care Insurance Multistate Rate Review (EX) Subgroup.

5. Heard a Presentation on CIPR Research

Commissioner White said the NAIC Center for Insurance Policy and Research (CIPR) conducted a research project With the help of two of the NAIC's consumer representatives, Brenda J. Cude (University of Georgia) and Bonnie Burns (California Health Advocates—CHA). The research included interviews of financial planners who had been asked by their LTCI consumers to help them understand and make decisions when they receive rate increase notices that included reduced benefit options (RBOs).

Ms. Cude and Ms. Burns presented the slides on the CIPR research (Attachment One) and their summary information (Attachment Two and Attachment Three). In addition to presenting the information as stated in the summary attachment, Ms. Cude and Ms. Burns added the following comments during their presentation:

- Ms. Cude said by way of background, many LTCI policyholders, especially those who have had policies for quite some time, have experienced significant rate increase and often multiple rate increases, which typically come with the opportunity to choose one or more RBOs. Ms. Crude said the product of the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup that is most relevant is the RBO Consumer Notices Checklist for state insurance regulators to use in reviewing premium increase communication to consumers.
- Ms. Cude explained that they interviewed financial planners, not consumers. She explained that in addition to the limitations of the CIPR research included Attachment One and Attachment Two, the research is not representative of all LTCI policyholders as financial planner clients likely have more resources than other consumers in general. She said the research could not establish cause and effect, so they could not determine if states that have used the RBO Consumer Notices Checklist had any influence on what the financial planners saw in their work with their clients.
- Commissioner Donelon asked for an explanation of the average policyholder age of 75 in the study, which differs from, for example, the Senior Health Insurance Company of Pennsylvania, whose average age of

premium paying policyholders is 86. Ms. Cude said the age of 75 in the presentation was from a report that indicated 75 was the average age of the most rate increase block, and it was not specific to the CIPR research.

- Ms. Cude said that policyholders had paid the same premium for years while other bills increased, which reinforced their expectation that these premiums were not going to change, and then they did change.
- Ms. Burns said she has personally counseled more than 200 people on RBOs, and what the financial planners reported as the reaction of policyholder is consistent with the reactions she saw regardless of age or the period they held the policy. She said consumer notices are often 13 pages long with only one page grid with the options listed. Consumers are confused about what the options are and how to deal with the choice, and that the options presented are the only options available to reduce the premium cost.
- Ms. Burns said consumer services numbers are not presented to the consumer in a way that is not related to the fact that consumers can call the company and talk about other ways to reduce their premium. The language in the consumer notice needs to be simplified and specific so consumers understand they can call the company about how to make other choices.
- Ms. Burns said with regard to states' Senior Health Insurance Program (SHIP) agencies, two-thirds of SHIPs are not housed in the department of insurance (DOI) and do not have a relationship with the DOI, and they have little information about LTCL. She said that through her training and development of resources for the SHIP Resource Center, they have deficient information about LTCL and need a better relationship with DOIs and cross-training.
- Ms. Burns gave an example with regard to the use of smart disclosures designed for policyholders that help policyholders figure out which option is better based on consideration of individual aspects such as their gender, marital status, age, and financial condition. For example, she said it would not be appropriate for a younger policyholder to drop inflation protection. She said a married couple with identical coverage may determine they do not need identical coverage based on their age and gender. They may need less coverage for the male and more coverage for the female, to balance the premium for both.

Ms. Cude said there will be a CIPR research report on this project. She said that she and Ms. Burns have some thoughts on revisions to the RBO Consumer Notices Checklist that they will share with the Task Force. She said they hoped to also do research directly with consumers.

Commissioner White said the research indicated financial planners routinely advise clients not to accept the RBO because the benefits are such a great value in terms of the premium they are paying. For policyholders who have the inflation protection or benefits of, for example, \$800,000, they may or may not need that benefit. He said some insurers are asking for the third or fourth round of increases, and these may be significant. He said the rate of policyholders taking the RBO is increasing.

Commissioner White reminded state insurance regulators of the work of the Long-Term Care Insurance Reduced Benefit Options (EX) Subgroup. The three work products focused on RBOs are intended to help states with their regulatory review of RBOs and consumer notices. These include the RBO Principles Document, which is focused on guidance for state insurance regulators in evaluating RBO offerings and to products focused on RBO Consumer Notices, the RBO Consumer Notices Principles Document, and the RBO Consumer Notices Checklist. All are available on the Task Force's web page. Some of the issues consumers are facing could be benefited from state insurance departments' use of this guidance and the checklist. Commissioner White encouraged state insurance regulators to incorporate the checklist and the guidance into their review of consumer notices.

Commissioner White said a key question in how the Task Force moves forward is if there is more that state insurance departments can do to help the communication flow between insurers and the LTCI policyholder who receives rate and RBO notices. The goal of any further research is to gather information that can help this Task Force make decisions on whether the work that has been accomplished so far is making a difference, and if not, what more can be done. This could start with getting feedback from the state insurance regulators. NAIC staff could conduct a survey to states to ask about their use of the RBO guidance and checklists, whether they are seeing any improvements in the notices that they are reviewing within their departments, and what kind of feedback they are giving to their insurers that improve these communications.

Commissioner White said that feedback may help inform more focused research conducted by the CIPR that reaches out directly to consumers to get some quantitative feedback on how certain recommended changes in consumer communications would impact consumer responses.

Jeff Czajkowski (NAIC) gave an example of additional research. He said the RBO Consumer Notices Checklist has different components, and it is uncertain how effective any one of those would be in consumer decisions. He suggested an experimental setting where a certain number of respondents could be provided information, something from the checklist, while other respondents are not provided the same information. Then the CIPR tests how the respondents' choices differed. As the CIPR moves through testing different components, it can see which components work and which ones do not. Mr. Czajkowski said this is a type of test used in behavioral economics. He said it would be helpful to hear from the Task Force what components to test.

Commissioner White said the timing of this research is long-term and requires resources. At the earliest, it could possibly start in 2023 and since research takes time to complete, ultimately it could be completed over a couple years. The first step would be for NAIC staff to give some consideration to what would be included in a survey and when an appropriate time would be to send that survey, given states may just be starting to use the RBO checklist and guidance.

Commissioner Wing-Heier asked for an explanation of the two-year timeline and how relevant would it be after two years. Mr. Czajkowski said the testing would be a series of tests. Assuming staff resources are available, an individual experiment could be researched in a three- to six-month time frame. The research would be an iterative process. He said the CIPR can only test so much at one point in time to be careful of treatment vs. controls. The two-year time frame is a series of experiments.

Birny Birnbaum (Center for Economic Justice—CEJ) said one piece of research should be to determine why consumers are taking an RBO, e.g., because it is a better deal for that consumer. If most consumers are saying it is a better deal, that has different implications than if 95% of consumers say they cannot afford the rate increase under any circumstance. He said that while the research described is relevant, important, and may be useful, the age of the policyholders and how long they have held their policy has a dramatic impact on the responses, the decision making and the ability to make decisions. He said as the Task Force thinks about different studies, consider whether that that can be expanded and inferred to any population or whether it is unique to the sample being tested. Mr. Czajkowski said that because the experiment would be a hypothetical situation, the CIPR can place people in any one of those settings that the Task Force wants to test. the CIPR would include in the introduction to the experiment the context in which they are making the decision. For example, the CIPR would tell them they are an 86-year-old person in a certain income and living situation. There are drawbacks to hypothetical situations, but because it is hypothetical, the CIPR can include controls. This is standard practice in behavioral economics.

Having no further business, the Long-Term Care Insurance (EX) Task Force adjourned.

Long-Term Care Insurance Rate Increases and Reduced Benefit Options: Insights from Interviews with Financial Planners

An NAIC Center for Insurance Research and Policy Research Project

Brenda J. Cude, NAIC Consumer Representative

Bonnie Burns, NAIC Consumer Representative

(Significant contributions to research design, data collection and analysis by Lisa Groshong)
August 2022

Introduction

- Project of the Center for Insurance Policy and Research
- Goal to increase understanding of long-term care insurance (LTCI) policyholders' experience with rate increases and reduced benefit options (RBOs)
- Motivated by lack of understanding about how consumers perceive and make these choices

NAIC’s Reduced Benefit Options Subgroup

- Charge: To identify options to provide consumers with choices regarding modifications to LTCI contract benefits where policies are no longer affordable due to rate increases
- Created resources for state insurance regulators
 - Reduced Benefit Options Principles and Communication Principles documents
 - Checklist for Premium Increase Communication
 - Issues Related to LTC Wellness Benefits

What We Did

- Interviews in October and December 2021 and January 2022 with 14 financial planners
 - All had worked with clients with LTCI policies who had been notified of a rate increase
 - Recruited through the Financial Planning Association
 - Most were Certified Financial Planners with 20 or more years of experience in financial planning
 - Represented diverse geographic locations and both urban and rural settings

The Research

- Focus was on standalone long-term care insurance products, not hybrid policies or partnership policies
- Qualitative research so results do not represent all financial planners

Primary Findings

- LTCI policyholders experiencing rate increases were:
 - Middle-class consumers of modest means when they bought policies
 - Have less education and income than today's purchasers
 - Average age is about 75
 - Like many Americans, are less financially literate than they should be

Primary Findings

- The planners described their clients' reactions to a rate increase as typically emotional – frustration and anger
 - Have paid the same premium for years
 - Have little recall of policy benefits

Primary Findings

- Financial planners' reactions to rate increases
- Companies should have absorbed more of cost
- Regulators should have done more
- Rate increases were to be expected as the product was underpriced

Primary Findings

- Some financial planners were concerned the rate increase notices
 - Created a false sense of urgency
 - Used wording that was an enticement to opt-out of the policy
 - Presented RBOs as though those were the only options to reduce premiums, not examples
 - Wondered if the options presented were in the company's best interest or the client's best interest

Primary Findings

- All financial planners interviewed:
- Acknowledged the importance of analyzing decisions in view of client’s unique personal situation
- Recommended clients pay the higher premium and not change the policy
- *But* many policyholders don’t have the income to pay a higher premium. Financial planners’ clients have higher incomes and wealth than others

Primary Findings

- If a financial planner recommends an RBO, it usually is to:
 - Drop inflation protection (especially if the client is older)
 - or
 - Reduce the daily benefit

Major Takeaways

- LTCI policyholders' reactions are emotional and policyholders are confused
 - Without counsel, an emotional decision or one based on confusion is unlikely to be a good one – and the policyholder might not even make a decision
- RBOs are often presented as the consumers' only choices instead of as examples of ways they might change their coverage

Major Takeaways

- Sources of expert help are limited
- Typically the insurance agent who sold the policy isn't available, and
- Other professionals can't get policyholder information from the insurance company

Solutions

- Rate increase letters that provide a clear **example** of an option and how premium is affected. For instance: *You have options to reduce your new premium. Here is one example.*

If you're comfortable changing your benefits from lifetime coverage to six years of benefits your new premium will be lower. The rest of your benefits will stay the same.	
Your premium today for unlimited benefits	Your premium for 6 years of benefits
\$9,000 annually	\$7,000 annually

Solutions

- Here is another example....
- *You can call customer service at 800-000-0000 to ask about other changes you can make to reduce the new premium.*

Solutions

- **Expand the scope of advisors to help consumers who receive LTCI increase notices**
 - **Require insurers to allow consumers to authorize release of policy-specific information to their chosen advisor**
- **Consider ways for Departments of Insurance to establish relationships and lines of communication with Senior Health Insurance Program (SHIP) agencies**
 - **Partner to provide training and standby technical assistance to SHIP counselors**

Solutions

- Consider a smart disclosure that, with inputs, could tailor the range of options to those most relevant to the individual's situation

Next Steps

- Completion of a CIPR report on the project
- Research to seek input directly from consumers

Disclaimer: This presentation reflects the opinions of CIPR and is the product of impartial research. It is not intended to represent the positions or opinions of the NAIC or its members, nor are any of its contents an official position of the NAIC or any of its members or staff. **August 2022 Presentation to NAIC's Long-Term Care Insurance (LTCI) (EX) Task Force
Long-Term Care Insurance Rate Increases and Reduced Benefit Options: Insights from
Interviews with Financial Planners**

An NAIC Center for Insurance Research and Policy Research Project¹

Brenda J. Cude, NAIC Consumer Representative
Bonnie Burns, NAIC Consumer Representative

- **Introduction**
 - Project of NAIC's Center for Insurance Policy and Research
 - Goal to increase understanding of long-term care insurance (LTCI) policyholders' experience with rate increases and reduced benefit options (RBOs)
 - Sought to fill a research gap as there is very little understanding about how consumers perceive and make these choices
- **NAIC's Reduced Benefit Options Subgroup**
 - Charge: To identify options to provide consumers with choices regarding modifications to LTCI contract benefits where policies are no longer affordable due to rate increases
 - Produced [resources](#) for state insurance regulators
 - Reduced Benefit Options Principles document
 - Reduced Benefit Options Communication Principles document
 - Checklist for Premium Increase Communication
 - Issues Related to LTC Wellness Benefits
- **Background**
 - Many owners of traditional LTCI policies have received rate increase notices, and sometimes more than one. The rate increases often are substantial
 - Policyholders usually can change one or more of the policy benefits to offset the rate increase, at least in part
- **What We Did**
 - 14 interviews with financial planners who have worked with clients who had LTCI policies and had been notified of a rate increase; interviews conducted in October and December 2021 and January 2022
 - Recruited through the Financial Planning Association
 - Most were Certified Financial Planners with 20 or more years of experience in financial planning
 - Represented diverse geographic locations and both urban and rural settings
 - Reviewed transcripts of interviews to identify major themes (primary findings)

¹ Significant contributions to research design, data collection and analysis by Lisa Groshong, formerly CIPR Communication Research Scientist.

- Qualitative research, so not a representative sample of financial planners and cannot generalize findings to all financial planners
- Focus was on standalone long-term care insurance products, not hybrid policies or partnership policies
- **Primary Findings**
 - LTCI policyholders experiencing rate increases were:
 - Middle-class consumers of modest means when they bought policies
 - Have less education and income than today's purchasers.
 - Average age is about 75
 - The planners described their clients' reactions to a rate increase as typically emotional – frustration and anger
 - Have paid the same premium for years
 - Have little recall of policy benefits
 - Like many Americans, are less financially literate than they should be
 - Financial planners' reactions to rate increases
 - Companies should have absorbed more of the cost
 - Regulators should have done more
 - Rate increases were to be expected as the product was underpriced
 - Some financial planners were concerned the rate increase notices
 - Created a false sense of urgency
 - Used wording that was an enticement to opt-out of the policy
 - Presented RBOs as though those were the only options to reduce premiums, not examples
 - Wondered if the options presented were in the company's best interest *or* the client's best interest
 - All financial planners interviewed
 - Acknowledged the importance of analyzing the decisions in view of the client's unique personal situation
 - Recommended their clients pay the higher premium and not change the policy
 - *But* many policyholders don't have the income to pay a higher premium. Financial planners' clients have higher incomes and wealth than others
 - If a financial planner recommends a RBO, it usually is to drop inflation protection (especially if the client is older) or reduce the daily benefit
- **Major Takeaways**
 - LTCI policyholders' reactions are emotional and policyholders are confused. Without counsel, an emotional decision or one based on confusion is unlikely to be a good one – and they might not even make a decision.
 - RBOs are often presented as the consumers' only choices instead of as examples of ways they might change their coverage.
 - Sources of expert help are limited. Typically the insurance agent who sold the policy isn't available and other professionals can't get information from the insurance company.

- **Solutions**

- Rate increase letters that provide a clear example of an option and how premium is affected. For instance: *You have options to reduce your new premium. Here is one example.*

<i>If you're comfortable changing your benefits from lifetime coverage to six years of benefits your new premium will be lower. The rest of your benefits will stay the same.</i>	
<i>Your premium today for unlimited benefits</i>	<i>Your premium for 6 years of benefits</i>
<i>\$9,000 annually</i>	<i>\$7,000 annually</i>

Here is another example.....

You can call customer service at 800-000-0000 to ask about other changes you can make to reduce the new premium.

- Expand the scope of advisors to help consumers who receive LTCI increase notices
 - ✓ Require insurers to allow consumers to authorize release of policy-specific information to their chosen advisor
 - ✓ Consider ways Departments of Insurance can establish relationships and lines of communication with Senior Health Insurance Program (SHIP) agencies. Partner to provide training and standby technical assistance to SHIP counselors
 - ✓ Consider a smart disclosure that, with inputs, could tailor the range of options to those most relevant to the individual's situation

- **Next steps**

- Publication of a CIPR report about project
- Research to seek input directly from consumers

Counseling Policyholders on Options to Reduce Premium Increases

Policyholders of long-term care insurance policies may receive a notice from their insurance company when the company will be imposing a premium increase. That notice may include a number of options that can offset some or all of the premium increase by reducing some of the policy benefits. Some notices with offers to reduce benefits may be triggered by the settlement of a class action lawsuit that also includes a change in premium, others may be triggered when an insurance company becomes insolvent and a state guaranty association takes over administration of the failed company.

Each option offered needs to be carefully considered by each policyholder based on their specific needs, their age, their marital status, their current health, the cost of care in their area, and their financial circumstances. Most policyholders, or their families, are likely to need help determining the value and the impact of one or more of the offered options. Policyholders may be given only a couple of options to choose from while others may have as many as 4 or 5 options to consider. Occasionally an option may include a cash benefit. It's possible that a policyholder might combine two or more of the options offered to them to achieve the greatest premium reduction, but a careful review of each option and its consequences should be made first.

When assisting a policyholder or a family member with decisions about reducing benefits to lower premiums it's important to consider their age, gender, marital status, financial situation, their future care needs and local costs of care, and whether additional premium increases are likely in the future. Some notices contain information about future premium increases while others don't.

For spouses it's important to consider the impact of these options later if one spouse dies and the other spouse will live on a reduced income insufficient to maintain coverage. In some cases one spouse may need to maintain more benefits than the other because one spouse is older than the other or is in worse health than the other spouse. It's important to remember that spouses may need different amounts of coverage depending on age, health, and future risk of needing care.

For Partnership products it's important to know any state minimum benefit requirements to ensure that the daily benefit amount, the policy maximum benefit amount or years of coverage, and any inflation protection are not reduced below the levels required to maintain Partnership status to qualify for asset protection in that state. A notice may include a warning about choosing to reduce benefits or inflation protection below Partnership requirements, but if that warning is not included policyholders should check with the state Partnership program before making any benefit or inflation protection changes to their coverage.

Bonnie Burns, Consultant © 2022 (v 4.0 7-22)

Common Benefit Reduction Options

Reduce Or Eliminate Inflation Protection: In this option a policyholder is given the choice to reduce their inflation protection benefit, or to eliminate it entirely, in return for a reduction in the premium. (An inflation protection benefit increases the policy's daily benefit amount to protect against increases in the cost of care.) While it may make sense at some older ages to reduce or eliminate an inflation protection benefit, it's important to know **if** the daily benefit amount will revert to the dollar amount at the time the policy was purchased. If a policyholder opts to reduce the inflation protection benefit, they might lose all the inflation adjustments that have accrued since they bought the policy. The option to reduce or eliminate inflation protection should only be chosen when the daily benefit amount remains at the current inflated amount.

Reduce The Daily Benefit Amount: A policyholder is offered the option to reduce the dollar amount of their daily benefit in return for some reduction in the new premium. Careful consideration must be given to the amount of the reduced daily benefit relative to the current cost of care. It's also important to consider that reducing the daily benefit might limit the ability to make any additional reductions in the future. For instance, a policyholder may not be able to offset future premium increases by reducing the daily benefit again if that benefit is already lower than the current cost of care.

Reduce The Duration Of Benefits: A policyholder is offered the right to reduce the number of years that the policy will pay benefits. A policyholder with only 2 or 3 years of coverage may not be able to reduce their coverage any further. Reducing the benefit from lifetime coverage to a fixed number of years may substantially reduce the premium for younger policyholders but the reduction may be much less for those who are older. Policyholders will need to weigh the consequences of fewer years of benefits and the total dollar amount of benefits against any reduction in premium that they are offered

Paid-Up Policy: A policyholder may be offered a paid-up policy with no need to make any future premium payments. This option keeps the policy in force, but limits the total dollar amount of benefits to the amount of premiums that have already been paid since the policy was purchased, or to an amount stipulated in the notice. The amount of care that can be provided by the paid-up dollar amount should be weighed against the ability of a policyholder to maintain coverage and continue to pay the subsequent premium. A paid up policy means that only the amount of total benefits is changed. The contractual terms of the policy don't change; if the benefits are used they will operate under the terms of the policy.

Cash Benefit: A policyholder may be offered a specific cash amount for their benefits. A cash benefit may be offered in return for surrendering the policy and all its benefits or it might be offered along with a reduction of existing benefits and conversion to a paid-up policy. Cash benefits may be thousands of dollars and be very attractive to a policyholder.

Bonnie Burns, Consultant © 2022 (v 4.0 7-22)

While the prospect of a large cash payment may be momentarily attractive, the policyholder may be giving up all future benefits for long-term care. Or a policyholder might be choosing a cash benefit in addition to reduced paid-up coverage with no future premium payments required. If a person is currently eligible for public benefits, or might soon be eligible, the receipt of a large cash payment could affect eligibility for those public benefits. A policyholder should seek advice from a trusted financial advisor to fully understand any potential tax implications of choosing cash benefit. Some notices may contain a warning about seeking tax advice others may not.

Policyholders can always contact their company to ask questions about any offered options, and to seek other changes that might be more beneficial. For instance a policyholder offered a lower premium to drop a 5% inflation protection benefit might be able to afford the premium for a 3% inflation benefit even though it might cost more than dropping the benefit completely. Someone with lifetime benefits might be able to afford a premium for 4 years of coverage instead of the 3 year benefit offered to reduce a premium increase.

It's important to remember that any offers to reduce premium increases, or to make any other changes to their long-term care contracts should always be supported in writing. Any documents sent to policyholders should be retained and attached to their existing policy. And every policyholder should have a designated third party to be notified if premiums are late or not paid. A designated third party can be added to a policy at any time by contacting the company and making that addition.

SPECIAL (EX) COMMITTEE ON RACE AND INSURANCE

Special (EX) Committee on Race and Insurance Aug. 11, 2022, Minutes 4-62

Draft: 8/25/22

Special (EX) Committee on Race and Insurance
Portland, Oregon
August 11, 2022

The Special (EX) Committee on Race and Insurance met in Portland, OR, Aug. 11, 2022. The following Special Committee members participated: Dean L. Cameron, Co-Chair (ID); Chlora Lindley-Myers, Co-Chair (MO); Andrew N. Mais, Co-Vice Chair (CT); Jon Godfread, Co-Vice Chair (ND); Lori K. Wing-Heier (AK); Mark Fowler (AL); Alan McClain (AR); Peni Itula Sapini Teo (AS); Evan G. Daniels (AZ); Ricardo Lara (CA); Michael Conway (CO); Karima M. Woods (DC); Trinidad Navarro (DE); David Altmaier (FL); Colin M. Hayashida (HI); Doug Ommen (IA); Dana Popish Severinghaus (IL); Vicki Schmidt (KS); Sharon P. Clark (KY); James J. Donelon (LA); Gary D. Anderson (MA); Kathleen A. Birrane (MD); Timothy N. Schott (ME); Anita G. Fox (MI); Grace Arnold (MN); Edward M. Deleon Guerrero (MP); Troy Downing (MT); Mike Causey (NC); Eric Dunning (NE); Marlene Caride (NJ); Barbara D. Richardson (NV); Adrienne A. Harris (NY); Judith L. French (OH); Glen Mulready (OK); Andrew R. Stolfi (OR); Michael Humphreys (PA); Elizabeth Kelleher Dwyer (RI); Michael Wise (SC); Larry D. Deiter (SD); Carter Lawrence (TN); Cassie Brown (TX); Jon Pike (UT); Scott A. White (VA); Tregenza A. Roach (VI); Kevin Gaffney (VT); Mike Kreidler (WA); Nathan Houdek (WI); Allan L. McVey (WV); and Jeff Rude (WY). Also participating was: Philip Barlow (DC).

1. Adopted its Spring National Meeting Minutes

Director Wing-Heier made a motion, seconded by Commissioner Mais, to adopt the Special Committee's April 6 minutes (see *NAIC Proceedings – Spring 2022, Special (EX) Committee on Race and Insurance*). The motion passed unanimously.

2. Received a Status Report on Workstream One

Director Lindley-Myers began by highlighting the continued work being done to identify barriers to access to insurance careers and insurance products and the challenging efforts towards identifying and removing any unfair discrimination.

Commissioner Ommen welcomed Commissioner Woods as the new Workstream One co-chair. He reported that the Workstream has been researching the level of diversity and inclusion within the industry and developing recommendations on action steps state insurance regulators and companies can take.

The Workstream met in May in regulator-to-regulator session to begin discussing draft recommendations that reflect discussions with stakeholders and state insurance regulators over the past two years. The Workstream's focus is on producing recommendations that reflect a broad consensus among its members.

The Workstream also acknowledges and supports the commitment and initiatives by industry to increase diversity, equity, and inclusion (DE&I) in their organizations, and looks forward to continued engagement as it finalizes its recommendations.

The Workstream is planning to meet after the Summer National Meeting to work on completing these recommendations to fulfill its mission of providing some deliverables and action items to be taken.

3. Received a Status Report on Workstream Two

Commissioner Mulready reported that Workstream Two is focused on DE&I within the NAIC and state insurance departments. During the Commissioners' Mid-Year Roundtable, the zone level best practices survey was

distributed to NAIC members and made available to state insurance regulators through the Member Diversity Leaders Forum. The Forum is facilitated by Evelyn Boswell (NAIC), Director of Diversity, Equity, and Inclusion.

Ms. Boswell reported that the Member Diversity Leaders Forum designed by the recommendations of the Workstream has a mission to create a communication forum for best practices in DE&I in which each state insurance department: 1) has access to education, guidance, and collaboration with stakeholders; 2) can share and learn ideas to incorporate in their organizations; 3) offer feedback for regulatory training coursework that will be provided by the NAIC; and 4) enable the NAIC and its regulated entities to fulfill their missions to the fullest extent.

Ms. Boswell reported that the Member Diversity Leaders Forum meets quarterly where members can share best practices from their insurance departments with the group. The NAIC launched the Member Diversity Leaders SharePoint site in the second quarter, and the member diversity leaders are reviewing DE&I coursework designed for state insurance regulators to be ready to share by the fourth quarter. Member diversity leaders were invited to the N.A.I.C.U. Exchange in February in recognition of Black History Month to model how the NAIC does lunch and learns. Member diversity leaders were invited to come to Kansas City for the NAIC's 2nd DE&I Conference held in June 2022. Twenty-three state insurance regulators and five commissioners attended for a full day of DE&I training.

Ms. Boswell also noted that a member diversity leader is selected each quarter to share accomplishments from their department. In April, Ron Henderson (LA) shared the duties of the Division of Diversity & Opportunity and their assistance to minority groups in obtaining opportunities in the insurance industry, the development of programs that seek to address the needs and concerns of women and minority producers, and the establishment in cooperation with insurance companies of educational and informational services to foster greater awareness and preparation for opportunities available in the insurance industry. He shared how the InVest Program was implemented at Southern University, and every semester, there is a Careers in Insurance Seminar where Commissioner Donelon has been the speaker on several occasions.

Ms. Boswell reported that the District of Columbia's Department of Insurance, Securities, and Banking presented to the Member Diversity Leaders Forum on July 25. Mr. Barlow shared about the District of Columbia Department's Gallaudet University Department of Risk Management & Insurance internship program, the Financial Services Academy, and Mayor Marion S. Barry Summer Youth Employment Program Insurance Cohort. Starting in 2016, there have been a total of nine Gallaudet interns accepted through the program. Each year when Gallaudet interns are brought on, the Department hosts a deaf awareness workshop for staff to learn about realistic attitudes toward and expectations of deaf and hard of hearing people, learn about accommodations for deaf and hard of hearing individuals, and discuss communication strategies and skills for integrating deaf and hard of hearing employees into the workplace. Interns shadow Department staff and develop an insurance-related project that involves research and presentation. The Department will expand the program by offering internships to Gallaudet students through the Financial Services Academy.

Mr. Barlow talked more about the Department's Financial Services Academy, which is a broad program consisting of five programs, including the Summer Youth Employment Program. The Financial Services Academy is a public-private partnership designed as a year-round program for underrepresented students in high school, college, and post-graduate programs to train for careers in the financial services industry. Commissioner Woods added that several staff employed by the Department started through the Mayor Marion S. Barry Summer Youth Employment Program.

Commissioner Woods reported on the Department's efforts looking into the use of certain underwriting factors, such as credit scores, education, and occupation in personal lines. The Department engaged O'Neil Risk Consulting & Algorithmic Auditing (ORCAA) to assist with the Department's review. A public hearing was held on June 29

followed by a commissioner's request for comment on the proposed areas of review for unintentional bias with a deadline of Aug. 22. The work is ongoing; therefore, the Department, along with ORCAA, is working on a data call to collect information to be analyzed by ORCAA with the results to be presented to the Department for their determination if there is, in fact, unintentional bias.

4. Received a Status Report on Workstream Three

Director Wing-Heier reported that Workstream Three is focused on property/casualty (P/C) issues. Though the Workstream has not met since the Spring National Meeting, the Workstream has decided to focus its time and resources on being actively involved with the work of the Collaboration Forum on Algorithmic Bias. The Workstream believes this work will be critical to meeting a couple of the Special Committee's most important charges: 1) "coordinating with other groups in looking at predictive modeling, price algorithms, and artificial intelligence" (Charge B of the Special Committee); and 2) "researching and analyzing insurance, legal and regulatory approaches to addressing unfair discrimination, disparate treatment, proxy discrimination and disparate impact" (Charge F of the Special Committee).

In leading the Workstream, state insurance regulators have struggled to understand artificial intelligence (AI)/machine learning (ML) and how it has been used to possibly create bias in algorithms. State insurance regulators need the education and expertise to understand these issues before policies can be implemented that protect consumers. The Collaboration Forum will help provide the education and framework needed for the Workstream to look more deeply at issues of unfair discrimination, particularly as it relates to algorithms and AI/ML. The Workstream will take this foundation and use it to look at potential algorithmic bias in marketing, underwriting, rating, and claims processing. The Workstream will look at marketing first as the Special Committee looks at how to evaluate complex models and identify and mitigate bias. To begin that work, the Workstream is planning a session at the NAIC Insurance Summit in September, where a panel of insurance experts and state insurance regulators will discuss the use of marketing and advertising in personal lines insurance and how it relates to access for diverse populations.

5. Received a Status Report on Workstream Four

Commissioner Caride reported that Workstream Four, which focuses on life insurance, held an open meeting on June 10. The Workstream heard a presentation from the Financial Alliance for Racial Equity (FARE). The Workstream will hold another open meeting sometime in September or early October to hear additional presentations focusing on life insurance access and affordability issues in minority communities.

The Workstream hopes to hear more from the agent community, and it is interested in learning more about their experiences and steps they may be taking around the issues of access and affordability in minority communities. The Workstream members would like to hear of other organizations they should be talking to and any success stories or progress being made.

6. Received a Status Report on Workstream Five

Commissioner Arnold provided the report for Workstream Five, which focused on health insurance, and highlighted the Workstream's work to date and plans for the next few months.

The Workstream has held the first two meetings in a series of four meetings it plans to hold this year. The first meeting on June 30 focused on provider network composition and the following questions: 1) what are the most common deficiencies in provider networks for plan enrollees of color; and 2) what can state insurance regulators do to improve that.

The Workstream heard from two NAIC consumer representatives who discussed cultural competency in provider networks. Their presentations focused on what it means for a network to have sufficient cultural competency, why it matters, common provider network deficiencies, and the implications of not having sufficient cultural competency in a network.

During this meeting, the Workstream also heard from the Colorado Department of Insurance (DOI) on its work through the Colorado Option to improve racial health equity for consumers purchasing health insurance in the individual and small group markets. The presentation addressed three key questions: 1) why did Colorado pursue regulations on culturally responsive provider networks; 2) what information did Colorado consider in the development of its regulations; and 3) what additional state agencies or entities should state insurance regulators partner with to coordinate and develop this work.

The presentation also described how Colorado plans to achieve its goal of improving racial health equity by establishing standardized health benefit plans; designing these plans to improve racial health equity; and requiring these plans to have a provider network that is culturally responsive and, to the extent possible, reflects the diversity of the community that it serves in terms of race, ethnicity, gender identity, and sexual orientation. The presentation discussed next steps Colorado plans to take to assess its progress towards achieving its goal, including: 1) robust data analysis to determine carrier compliance and opportunities for improvements; and 2) exploring existing structures that could be leveraged such as the National Committee for Quality Assurance's (NCQA's) Health Equity Accreditation.

The Workstream's second meeting on July 26 focused on barriers to care with respect to providers and the following questions: 1) what problems do plan enrollees encounter in attempting to access in-network benefits; and 2) what can state insurance regulators do to correct that.

The Workstream heard a presentation from Quest Analytics on emerging ideas and approaches state insurance regulators might consider to close the health equity gap when developing plan network adequacy requirements. Instead of a more traditional approach to determining network adequacy, such as time and distance standards based on population density and county type, the presenter suggested that states might want to look at time and distance standards based on provider characteristic types critical to meet health equity needs. As another way to close the health equity gap, the presenter suggested that state insurance regulators consider requiring plans to demonstrate that the network is not unduly burdensome to consumers in terms of travel time and distance based on provider characteristic types and not provider types, which is the current approach.

The Workstream also heard a presentation from an NAIC consumer representative discussing barriers people of color and other historically underrepresented populations encounter when trying to obtain treatment from network providers, particularly for those who have plans with narrow networks. The American Medical Association (AMA) presented on the work it is doing with respect to provider directories and the associated challenges, including the accuracy of such directories. The AMA also discussed the collaborative work it is doing around the collection, maintenance, and use of race and ethnicity data. Lastly, the AMA talked about issues and challenges associated with the inclusion of race and ethnicity information in provider directories. The Blue Cross and Blue Shield Association (BCBSA) and one of its member plans discussed challenges and efforts to mitigate race-based barriers to insurance. The AMA also discussed ways state insurance regulators can increase access to culturally competent care.

The Workstream's next meeting is Aug. 23. It will focus on barriers to care related to benefit design. Speakers have been asked to discuss in what ways the structure of available benefits sometimes uniquely disadvantages communities of color and what actions state insurance regulators can take to remedy such benefit designs.

Mila Kofman (DC Health Link) will discuss how the DC Health Link has identified barriers to care for communities of color and how state insurance regulators can promote the use of benefit plan design to reduce such barriers to high-value care. A representative from the American Academy of Actuaries' (Academy's) Health Equity Work Group plans to update the Workstream on its work examining how benefit design features that control access to providers disproportionately disadvantage communities of color and how state insurance regulators can take action.

The Workstream's last meeting focusing on benefit design is Sept. 20. During this meeting, the Workstream will focus on innovations in benefit design and hear from speakers on what new benefits could be added to health plans or modifications made to existing benefits that could improve access to care and health outcomes for communities of color and what state insurance regulators can do to promote them.

Following these meetings, the Workstream plans to hold a series of meetings focusing on effective consumer education and engagement, as well as mechanisms to understand barriers at the community level. The Workstream is currently in the process of finalizing those meeting agendas.

Having no further business, the Special (EX) Committee on Race and Insurance adjourned.

Life Insurance and Annuities (A) Committee
Portland, Oregon
August 11, 2022

The Life Insurance and Annuities (A) Committee met in Portland, OR, Aug. 11, 2022. The following Committee members participated: Judith L. French, Chair (OH); Carter Lawrence, Vice Chair (TN); Mark Fowler (AL); Karima M. Woods represented by Philip Barlow (DC); Colin M Hayashida represented by Patrick P. Lo (HI); Doug Ommen (IA); Vicki Schmidt (KS); James J. Donelon (LA); Marlene Caride (NJ); Barbara D. Richardson (NV); Cassie Brown represented by Chris Herrick and Mike Boerner (TX); Scott A. White (VA); and Nathan Houdek and Richard Wicka (WI). Also participating was: Grace Arnold and Fred Andersen (MN).

1. Adopted its July 20 Minutes

Director French said the Committee met July 20 and took the following action: 1) adopted its Spring National Meeting minutes; 2) adopted nine *Valuation Manual* amendments; 3) adopted *Actuarial Guideline LIII—Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves* (AG 53); 4) heard a presentation on life insurance updates to the NAIC website; and 5) received an update on the survey into the use of artificial intelligence (AI) and machine learning (ML) in life insurance being developed by the Big Data and Artificial Intelligence (H) Working Group.

Commissioner Lawrence made a motion, seconded by Commissioner Ommen, to adopt the Committee's July 20 minutes (Attachment One). The motion passed unanimously.

2. Received an Update from the Accelerated Underwriting (A) Working Group

Commissioner Arnold gave an update on the Accelerated Underwriting (A) Working Group. She reminded the Working Group that the Committee adopted the Working Group's educational report on accelerated underwriting (AU) in life insurance at the Spring National Meeting. She said one of the realizations to come out of the educational report was the need for specific guidance for state insurance regulators with respect to AU in life insurance. She said since the Spring National Meeting, an ad hoc group of six or so state insurance regulators has been meeting bi-weekly to discuss, plan, and put pen to paper on regulatory guidance for state insurance regulators.

Commissioner Arnold explained that the ad hoc group has identified market conduct as one of the areas where additional guidance for state insurance regulators about AU in life insurance would be helpful. She said the ad hoc group quickly realized that collaboration with other NAIC groups is going to be critical. She said the Working Group plans to coordinate with the Market Conduct Examination Guidelines (D) Working Group, which oversees the *Market Regulation Handbook*, as well as with the Innovation, Cybersecurity, and Technology (H) Committee and the Big Data and Artificial Intelligence (H) Working Group and its workstreams. She Arnold said the Accelerated Underwriting (A) Working Group recognizes that market conduct is not the only area where regulatory guidance will be helpful, and it remains committed to considering additional guidance and working with NAIC groups in other areas in the future.

Commissioner Arnold said the Working Group hopes to hold an open call in late September or early October.

Birny Birnbaum (Center for Economic Justice—CEJ) said the AU educational paper identified several potential consumer protection issues. He said he would like to highlight a few of those issues that he hopes the Working Group will address in the regulatory guidance it is working on. He raised the issue of the filing of predictive models,

like is done with credit-based property/casualty (P/C) models. He said he hoped that the Working Group would develop a model for life predictive models, and he reminded the Life Insurance and Annuities (A) Committee of a presentation made in January 2020 to the Working Group anticipating that an NAIC model on life predictive models would be coming soon.

Mr. Birnbaum made a number of suggestions for the Working Group to consider when it is developing its recommended regulatory guidance: 1) explore and test whether the use of consumer credit information in AU is reliable and fair in terms of both the actuarial and protected class bases for unfair discrimination; and 2) explore and test whether the use of consumer biometric information, including facial and body analytics, is reliable and fair in terms of the actuarial and protected class bases for unfair discrimination.

Mr. Birnbaum suggested that the regulatory guidance should require AU applications that utilize consumer credit information to follow the same state laws and regulations governing other uses or prohibitions of consumer credit information. He said the regulatory guidance should require life insurers using AU models to follow basic consumer protections, including: 1) obtaining consent to collect, use, and disclose a consumer's information; 2) limiting the use of a consumer's information to specified and relevant purposes; 3) providing notice to consumers of any and all unfavorable actions, including access to the information relied upon in making any unfavorable decision; and 4) providing consumers with the opportunity to correct incorrect information and have any unfavorable action reconsidered.

Commissioner Arnold said she appreciates Mr. Birnbaum's suggestions, and she explained that many of these important issues Mr. Birnbaum raises are being addressed in other NAIC groups, including the Innovation, Cybersecurity, and Technology (H) Committee and the Big Data and Artificial Intelligence (H) Working Group and its workstreams. Mr. Birnbaum said he appreciates the need for the various NAIC groups looking at this issue to collaborate, and he said a list of the groups and related activities would be helpful.

3. Adopted the Report of the Annuity Suitability (A) Working Group

Commissioner Ommen said the Annuity Suitability (A) Working Group met July 25. He said during this meeting, the Working Group adopted its May 26 and May 3 minutes. He explained that earlier this year, the Working Group received some proposed frequently asked questions (FAQ) on the safe harbor provision in the revised *Suitability in Annuity Transactions Model Regulation* (#275). He said the Working Group agreed to include additional FAQ on the safe harbor provision in the FAQ document the Working Group adopted last May, and the Life Insurance and Annuities (A) Committee adopted it last July.

Commissioner Ommen said the Working Group discussed the proposed FAQ, and the comments received on them during its May 3 and May 26 meetings. During its May 26 meeting, the Working Group decided to form an ad hoc small drafting group to review the suggested FAQ in more detail and consider potential revisions. He said the ad hoc small drafting group met twice. During these meetings, they discussed the proposed FAQ and developed comments on them for discussion during the Working Group's July 25 meeting.

Commissioner Ommen said the Working Group walked through the ad hoc small drafting group's comments question-by-question during the July 25 meeting. He said after discussion and receiving comments from stakeholders, the Working Group decided to move forward with redrafting and restructuring the FAQ based on its discussion. He said the ad hoc small drafting group plans to take the lead on this work.

Commissioner Ommen said 27 states have adopted the revisions to Model #275, and there are six more states currently considering them. He said consistency and uniformity across the market is important, and he encouraged states who have not adopted the revisions to consider doing so. He said there is a lot of assistance available from the NAIC and other states.

Commissioner Donelon made a motion, seconded by Commissioner Caride, to adopt the report of the Annuity Suitability (A) Working Group, including its July 25 minutes (Attachment Two). The motion passed unanimously.

4. Adopted the Report of the Life Actuarial (A) Task Force

Pat Allison (NAIC) gave the Life Actuarial (A) Task Force report. She said the Task Force met Aug. 8–9, 2022. She said there are a few items she wants to highlight for the Committee. She said the Task Force adopted amendment proposal 2020-12, which revises hedge modeling when future hedging strategies are not clearly defined. She said this amendment established a consistent definition of clearly defined hedging strategy for use in both VM-20, Requirements for Principle-Based Reserved for Life Products, and VM-21, Requirements for Principle-Based Reserves for Variable Annuities. She said it also added some definitions to VM-01, Definitions for Terms in Requirements, to define future hedging strategy and hedging transactions. She explained that it also includes a provision that the companies reflect all future hedging strategies in their modeling. She said there are also changes to VM-31, PBR Actuarial Report Requirements for Business Subject to a Principle-Based Valuation, regarding these new terms and requirements for additional disclosures from companies.

Ms. Allison also gave an update on the transition from the London Interbank Offered Rate (LIBOR) to the Secured Overnight Financing Rate (SOFR) in the procedure for setting swap spreads. She reminded the Committee that the Task Force adopted amendment proposal 2022-04, which addresses the LIBOR transition to the SOFR for 2023 and later. She said work addressing the transition for the remainder of 2022 is progressing, and the NAIC anticipates having three vendors in place to publish SOFR swap spreads on the NAIC website by the end of September.

Mr. Andersen gave an update on the Indexed Universal Life (IUL) Illustration (A) Subgroup. He said there have been issues with IUL illustrations over the past eight years. He reminded the Committee of the adoption of *Actuarial Guideline XLIX-A—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest to Policies Sold On or After December 14, 2020* (AG 49-A), which was a revision to *Actuarial Guideline XLIX—The Application of the Life Illustrations Model Regulation to Policies With Index-Based Interest* (AG 49) in response to certain activity to ensure that the illustrations were accurate and not too misleading or optimistic.

Mr. Andersen said new issues have arisen, and the Task Force is considering how to address them. They are considering whether additional modifications should be made to the actuarial guidelines to address these newer concerns. He said there is an exposure period for feedback on four possible ways to address the issues that have come up, ranging from doing nothing to taking drastic action. One of the options gaining Task Force member support involves making a more immediate fix to the actuarial guidelines, but in recognition of the fact that issues are likely to continue necessitating future changes, perhaps limited, targeted revisions to the *Life Insurance Illustrations Model Regulation* (#582) should be considered. Mr. Andersen said the Task Force extended the exposure regarding options to address the current illustration concerns and included a request for comment regarding such limited, targeted revisions to Model #582 that may help to reduce or eliminate the need for addressing issues through an actuarial guideline. He said he expects comments to be submitted over the next few weeks; then, there is likely to be a more formal communication to the Committee about any recommendations. Commissioner Ommen said he would support an effort to look at Model #582.

Mr. Birnbaum said most stakeholders endorsed a fix to AG 49A to address the latest actions by insurers to game the guideline, but there was also broad recognition by many of the need to address illustration issues more broadly. He said the fundamental problem is a flawed illustration infrastructure that drives insurers towards so-called innovations after each iteration of AG 49. He said without addressing the problems with the illustration framework—projecting future returns using constant annual crediting rates, loan arbitrage, data-mined indices with made up histories, no sequence of return risk, etc.—the state insurance regulators will be coming back again and again as insurers game each new iteration of the actuarial guideline. He said none of this even addresses the

disparities between illustration guidelines between indexed annuities and indexed life insurance, despite the similarities in product features nor the disparities in illustration guidelines across life insurance products.

Mr. Birnbaum said the actuaries are limited in two important ways: 1) they are limited by Model #582 because it was designed 30 years ago before indexed products existed, and it is woefully out of date; and 2) actuaries are not experts in consumer financial disclosures. He said illustrations are a consumer disclosure, and the technical expertise needed is not that of an actuary but of experts in consumer financial disclosure. He said asking the actuaries to fix problems with IUL illustrations would be like asking the Life Insurance Online Guide (A) Working Group to develop reserving requirements for indexed life insurance. He said he urges the Committee to establish a charge to examine and re-engineer life insurance and annuity illustrations for effective consumer disclosure and consistency of principles across similar products.

Commissioner White made a motion, seconded by Acting Commissioner Fowler, to adopt the report of the Life Actuarial (A) Task Force. The motion passed unanimously.

5. Discussed the Life Insurance Online Guide (A) Working Group

Director French reminded the Committee that during its July 20 call, it heard a presentation from NAIC Communications Director, Laura Kane, about the updates the Communications Division made to the life insurance material on the NAIC website. She said that Ms. Kane identified some content, based on a review of other insurance department websites, that might make sense to add to the NAIC website, including a comparison chart from the Texas Department of Insurance (DOI) website and information about common riders. She also mentioned that the Communications Division is planning to translate the buyer's guides on the website into Spanish.

Director French reminded the Committee that Ms. Kane said the Communications Division would need assistance from subject matter experts (SMEs) to assist with these recommended revisions. She said this work is consistent with the Life Insurance Online Guide (A) Working Group's charge to "Develop an online resource on life insurance, including the evaluation of existing content on the NAIC website, to be published digitally for the benefit of the public."

Mr. Herrick said he would be happy to assist with the development of content for the website based on the chart on the Texas DOI website. Commissioner Schmidt also agreed to help. Director French said any other states willing to volunteer should reach out to Jennifer Cook (NAIC).

6. Discussed Enhanced Cash Value Products

Director French reminded attendees that she mentioned the enhanced cash surrender value offer issue during the Committee's July 20 call. She explained that the National Council of Insurance Legislators (NCOIL) has raised the issue of enhanced cash surrender value offers being made on universal life insurance policies and the application of the "smoothness" requirement in the *Standard Nonforfeiture Law for Life Insurance* (#808). She said NCOIL issued a resolution during its last meeting, and the American Council of Life Insurers (ACLI) wrote a letter in opposition to that resolution.

Director French said to properly discuss this issue in the Committee, it is important to gather as much information as possible about this issue. She said the NAIC Legal team has agreed to look into the history of universal life and its application to Model #808. She said a survey of state insurance departments is also planned to get a better understanding of the prevalence of these enhanced cash surrender value offers, what they look like, and to whom they apply. She said the plan is to have information to share on this issue and have a discussion in September.

Having no further business, the Life Insurance and Annuities (A) Committee adjourned.

Draft: 8/2/22

Life Insurance and Annuities (A) Committee
Virtual Meeting
July 20, 2022

The Life Insurance and Annuities (A) Committee met July 20, 2022. The following Committee members participated: Judith L. French, Chair (OH); Carter Lawrence, Vice Chair (TN); Mark Fowler (AL); Karima M. Woods represented by Philip Barlow (DC); Doug Ommen represented by Matthew Cunningham and Kim Cross (IA); Vicki Schmidt (KS); James L. Donelon (LA); Marlene Caride (NJ); Adrienne A. Harris represented by Bill Carmello and Mark McLeod (NY); Cassie Brown represented by Mike Boerner (TX); and Scott A. White (VA). Also participating were: Fred Andersen (MN); and Kevin Gaffney (VT).

1. Adopted its Spring National Meeting Minutes

Commissioner Donelon made a motion, seconded by Commissioner Schmidt, to adopt the Committee's April 7 minutes (see *NAIC Proceedings – Spring 2022, Life Insurance and Annuities (A) Committee*). The motion passed unanimously.

2. Adopted 2023 Valuation Manual Amendments

Mr. Boerner explained that there are nine *Valuation Manual* amendments for consideration by the Committee. He explained that the amendments are largely technical and range from clarifications to more substantive technical amendments like amendment proposal form (APF) 2020-12 related to hedging. Mr. Boerner said he wants to spend a little more time on APF 2022-04, which was recently adopted by the Life Actuarial (A) Task Force and addresses the transition from the London Interbank Offered Rate (LIBOR) to the Secured Overnight Financing Rate (SOFR) in the procedure for setting swap spreads.

Pat Allison (NAIC) explained that LIBOR will cease to be published by mid-2023. She said the *Valuation Manual* currently has a specific reference to LIBOR swap spreads, and a table of LIBOR swap spreads is currently published on the NAIC website. Those swap spreads are prescribed in VM-20, Requirements for Principle-Based Reserves for Life Products. She said APF 2022-04 accomplished several things: 1) it names SOFR as the official replacement for LIBOR; and 2) it provides the methodology that NAIC staff will use to set both short-term and long-term swap spreads. The approach requires NAIC staff to gather SOFR data from at least two nationally recognized sources and average them together. The NAIC is currently working with three different data providers to get the data. There will be some contract work with those data providers that should be completed within the next couple of months. The APF 2022-04 handles 2023 and future years since it would go into effect in the 2023 *Valuation Manual*. There is the consideration of how to handle the transition to SOFR for the remainder of 2022. There is language in the *Valuation Manual* that states that once the NAIC determines that LIBOR is no longer effective, it will recommend a replacement, which will become effective upon adoption by Life Actuarial (A) Task Force; adoption by the Life Insurance and Annuities (A) Committee is not required. She explained that the use of SOFR is becoming quite widespread, and NAIC staff have drafted a memorandum to the Task Force recommending the move to SOFR in 2022. All that remains to put that in place is to complete the contract work with the data providers. Then the date of transition can be added to the memorandum and brought to the Task Force for adoption. Ms. Allison said that everything should be in place to make the transition in the next couple of months from LIBOR to SOFR.

Mr. Boerner made a motion, seconded by Commissioner White, to adopt the 2023 *Valuation Manual* amendments (see *NAIC Proceedings – Summer 2022, Executive (EX) Committee and Plenary, Attachment One*). The motion passed unanimously.

3. Adopted the AAT Guideline

Mr. Andersen explained that the asset adequacy testing (AAT) guideline was adopted by the Life Actuarial (A) Task Force on June 16 and is part of a coordinated NAIC effort regarding the oversight of the increase in private equity and complex assets in the life insurance industry. He explained that this guideline was developed and adopted by the Life Actuarial (A) Task Force on June 16 and focuses on aspects related to reserve adequacy. The purpose of this guideline is to help ensure life insurers involved in complex assets will be able to pay claims even if those assets do not perform as expected.

Mr. Andersen explained that once the guideline is adopted by the NAIC, beginning next April, state insurance regulators will receive additional documentation and analysis related to private equity and complex assets supporting business including annuities, pension risk transfers (PRTs), and other life insurer business. He said the additional information will include: 1) analysis of the risks of the complex assets; 2) details underlying the assumptions on how those assets will perform; 3) expectations on the sophistication of the company models matching the complexity of the assets; and 4) assurance that any counterparty risks related to reinsurance are considered and documented. He said the Valuation Analysis (E) Working Group will act as a resource to assist states in the reviews of the filings associated with the guideline.

Commissioner White said that this is an important part of the work being done by groups at the NAIC reporting to both the Life Insurance and Annuities (A) Committee and the Financial Condition (E) Committee. He said they are looking at not only private equity, but also activity-based regulatory considerations, capital charges in the reporting, and potential under-reserving issues.

Commissioner Schmidt made a motion, seconded by Mr. Boerner to adopt the AAT guideline (see *NAIC Proceedings – Summer 2022, Executive (EX) Committee and Plenary, Attachment Two*). The motion passed unanimously.

4. Heard a Presentation on NAIC Website Updates

Laura Kane (NAIC) reviewed several life insurance updates that have been made to the NAIC website. She explained that the title of the page was updated to include both life insurance and annuities, and the corresponding landing page was also updated to include information on annuities. She said additional information was added to provide greater context around the purpose of these products. She said some new frequently asked questions (FAQ) were added, and an overview of life settlements based on an NAIC approved guide was also added. In addition to linking to the *Life Insurance Buyer's Guide*, there are also links to the buyer's guides for deferred annuities and fixed deferred annuities. She said the Communications team worked with NAIC funded consumer representative and readability expert Brenda J. Cude (University of Georgia) to improve the readability level and increase the accessibility of the insurance pages.

Ms. Kane discussed information on other states' websites that might be good to include on the NAIC website. One example is a chart from the Texas Department of Insurance's (DOI's) website. The Texas chart compares term life insurance, whole life insurance and universal life insurance by premium, how long the policy lasts, what the policy pays, and advantages and disadvantages of each policy type. She also said that other state insurance departments include information about commonly seen riders. She said the Communications team would need some assistance

to create this content on the website. Director French asked whether this is something the Life Insurance Online Guide (A) Working Group might be able to assist with. She asked for any state insurance regulators who might be interested in assisting with this project to contact Jennifer Cook (NAIC). Commissioner Gaffney said that there is a Vermont chart that may be useful in this effort.

Ms. Kane also said another update that the Communications team is working on is translating the consumer guides into Spanish. They have been relying on the Puerto Rico Insurance Department staff to check the translation but would welcome assistance from additional states. Director French asked for state insurance regulators to contact Ms. Cook if they have anyone on staff who could help with reviewing publications for accuracy after they have been translated into Spanish.

Birny Birnbaum (Center for Economic Justice—CEJ) asked Ms. Kane if the NAIC website has been consumer tested to see how effective the information is in educating consumers. Ms. Kane said that the website has not been consumer tested, but she thinks that consumer testing may be part of a more comprehensive overhaul of the entire website. Director French agreed that making sure that things are accessible to consumers is important.

5. Heard an Update on the Survey into the Use of AI and ML in Life Insurance

Commissioner Gaffney explained that there are four workstreams under the Big Data and Artificial Intelligence (H) Working Group, chaired by Superintendent Elizabeth Kelleher Dwyer. He explained that he is leading up Workstream One, which is the group working on a survey looking into the use of artificial intelligence (AI) and machine learning (ML) in life insurance.

Commissioner Gaffney explained that 13 states (Colorado, Connecticut, Illinois, Iowa, Louisiana, Minnesota, Nebraska, North Dakota, Oregon, Pennsylvania, Rhode Island, Virginia, and Wisconsin) are collaborating to develop and administer the survey to life insurance companies meeting certain criteria. He said there four criteria for including companies in the survey: 1) companies must have written more than \$250 in premium on all individual policies in 2021; 2) term writers must have issued policies on more than 10,000 lives; 3) a state market share analysis must show that the 13 states are adequately represented by the selected companies; and 4) there must be representation by InsurTech in the selected companies. InsurTech companies are not required to meet the \$250 million premium threshold.

Commissioner Gaffney explained that the goal of the survey is to understand how life insurance companies are deploying AI and ML technologies in the following operational areas: pricing and underwriting, marketing, and loss prevention. He said the survey also seeks to understand the design of governance structures companies have in place to ensure they are using AI/ML ethically, that governance structure mitigates harm to insureds, and that there are sufficient controls in place to protect the models from inappropriate intrusions. He said the survey also attempts to understand the minimum and maximum face amount thresholds at which companies deploy AI/ML technologies.

Commissioner Gaffney said the general design of the survey is to: 1) understand whether life companies are using AI/ML in certain functions, or plan to be in the future, as discussed below; 2) have companies identify the AI/ML models they are using in certain operational areas; 3) have companies disclose whether their AI/ML models are developed internally, externally, or hybrid development; 4) have companies disclose what data elements, internal or third-party, the company is leveraging in their AI/ML models; and 5) understand the accuracy and predictive value of the AI/ML data in respect of mortality and morbidity.

Commissioner Gaffney reviewed the goals of each section of the survey. He explained that the pricing and underwriting section of the survey focuses on AI/ML being deployed in the following 11 areas: 1) setting

assumptions; 2) speed and accuracy; 3) specialty products for certain conditions, such as diabetes; 4) automated premium rates; 5) automated approval; 6) automated denial; 7) underwriting tier determination; 8) company placement; 9) input into non-automated approval decision; 10) input into non-automated denial decision; and 11) automate processing through the agency channels. He explained that the survey allows for up to three specialty diseases and considers automated approval and denial of policies to fall in the category of accelerated underwriting. The survey also allows companies to elaborate on other underwriting-related functions.

Commissioner Gaffney explained that the marketing section of the survey focuses on AI/ML being deployed in seven areas: 1) geographic marketing; 2) targeted online advertising; 3) identification of recipients of mail or phone advertising; 4) provision of offers to existing customers; 5) identification of potential customer groups; 6) demand modeling; and 7) direct online sales. The survey also allows companies to elaborate on other marketing-related functions.

Commissioner Gaffney said that the loss prevention section of the survey focuses on AI/ML being deployed in the following six areas: 1) wearable devices; 2) wellness initiatives; 3) discount medical programs; 4) smoking and accelerated underwriting; 5) wellness programs; and 6) disease detection. He said the survey also allows companies to elaborate on other loss prevention-related functions.

Commissioner Gaffney said that the survey reflects 10 data element categories: 1) credit-based insurance score; 2) financial credit score; 3) other type of non-credit “score”; 4) public records; 5) demographic; 6) telematics type data; 7) driving behavior; 8) biometrics; 9) medical; and 10) online media. He said the survey also allows companies to elaborate on other nontraditional data elements and to provide examples. Each data element category is defined in the survey instructions with supporting examples.

Commissioner Gaffney explained that the governance section of the survey attempts to understand the governance framework companies have in place to ensure their AI/ML model is being used ethically and not causing harm to consumers. Among the governance concerns the survey attempts to address are: 1) restrictions imposed by third parties would prevent insurers from disclosing data or AI/ML materials to state insurance regulators; 2) company compliance with the NAIC AI Principles, including: a) fairness and ethics considerations; b) accountability for data algorithms’ compliance with laws, as well as intended and unintended impacts; c) appropriate resources and knowledge involved to ensure compliance with laws, including those related to unfair discrimination; d) ensure transparency with appropriate disclosures, including notice to consumers specific to data being used and methods for appeal and recourse related to inaccurate data; and e) AI systems are secure, safe and robust, including decision traceability and security and privacy risk protections; 3) adoption of an existing standard or guidance regarding a governance framework, either developed internally or by a third party. If by a third party, the survey requests companies to disclose the third party; 4) consumer awareness and disclosure of the use of third-party data and algorithms in pricing, underwriting, marketing, and loss prevention. Commissioner Gaffney said the survey asks whether companies disclose any adverse findings of the consumer uncovered by the AI or ML model to the consumer; and 5) monitoring of the results of AI or ML models and the amount of human intelligence influencing the AI/ML results.

Commissioner Gaffney said that initial kick-off calls have been conducted to describe the purpose and design of the survey with specific companies, and feedback has already started coming in. He said the survey will be modified based on the feedback. He said the hope was to send the survey out by mid-August, but given resource issues and other ongoing surveys, the timeline may get pushed back. Director French said she looks forward to the information gleaned from the survey and asked Commissioner Gaffney to keep the Committee updated as things progress.

6. Discussed Other Matters

Director French raised the issue of enhanced cash surrender options that has come up in National Conference of Insurance Legislators (NCOIL) meetings over the past several months. She explained that the issue involves the offers of enhanced cash surrender for certain universal life policies and the application of the *Standard Nonforfeiture Law for Life Insurance* (#808). She said NCOIL issued a resolution, and the American Council of Life Insurers (ACLI) issued a letter in opposition to the NCOIL resolution. She said there would be additional discussion of this issue at the Life Insurance and Annuities (A) Committee in the future. She said to contact Ms. Cook for additional information on this topic.

Having no further business, the Life Insurance and Annuities (A) Committee adjourned.

SharePoint/NAIC Support Staff Hub/Committee Support/ACmte/Summer National Meeting/ACmtemin 7-20-22 min final.docx

Draft: 8/1/22

Annuity Suitability (A) Working Group
Virtual Meeting
July 25, 2022

The Annuity Suitability (A) Working Group of the Life Insurance and Annuities (A) Committee met July 25, 2022. The following Working Group members participated: Doug Ommen, Chair (IA); Tate Flott, Vice Chair (KS); Jimmy Gunn (AL); Jodi Lerner (CA); Jessica Luff (DE); Karl Fromm (ID); Renee Campbell (MI); Denise Lamy (NH); Daniel Bradford (OH); Matt Gendron (RI); Brian Hoffmeister (TN); and Richard Wicka (WI).

1. Adopted its May 26 and May 3 Minutes

The Working Group met May 26 and May 3. During these meetings, the Working Group took the following action: 1) discussed adding new frequently asked questions (FAQ) on the safe harbor/comparable standards provision in the revised *Suitability in Annuity Transactions Model Regulation (#275)* to the adopted FAQ guidance document; and 2) discussed comments received on these potential new FAQs.

Mr. Gendron made a motion, seconded by Mr. Hoffmeister, to adopt the Working Group's May 26 (Attachment Two-A) and May 3 (Attachment Two-B) minutes. The motion passed unanimously.

2. Discussed Draft Safe Harbor/Comparable Standards Provision FAQ

Commissioner Ommen said that as discussed during the Working Group's May 26 meeting, following that meeting, an ad hoc small drafting group consisting of a few Working Group members met twice to review the draft frequently asked questions (FAQ) on the safe harbor/comparable standards provision in the revised Model #275, which added a best interest standard of conduct for insurers and producers. As a result of those meetings, NAIC staff prepared a comment chart (Attachment Two-C) reflecting the comments received on the draft FAQ, including the ad hoc small drafting group's comments. He said the purpose of this meeting is for the Working Group to walk through the comment chart question-by-question focusing on the ad hoc small drafting group's comments.

Beginning with the first question, Commissioner Ommen explained the ad hoc small drafting group's comments about the necessity of this FAQ. Jason Berkowitz (Insured Retirement Institute—IRI) said the Joint Trades' approach for this FAQ and some of the subsequent FAQ was to provide the states looking to adopt the revised model background and basic information about the safe harbor provision—what it is and how it works. The Working Group discussed its concerns with this approach, including providing FAQ answers mirroring the language in the revised model. The Working Group also discussed the complexity of determining whether a comparable standard meets the revised model's requirements and the importance of understanding the requirements of that comparable standard. Mr. Berkowitz discussed potential new approaches to restructuring the FAQ and answers to address the ad hoc small drafting group's concerns. He acknowledged that the first question and some of the subsequent FAQ were not critical from the Joint Trades' perspective. He reiterated that these FAQ were intended to provide background information to those states looking to adopt the revised model that might not have been involved in the drafting process to understand the purpose of the safe harbor provision. He said some of the later FAQ are more critical because they are intended to provide some clarity and clear up any possible confusion concerning some aspects of the safe harbor provision.

Birny Birnbaum (Center for Economic Justice—CEJ) said the CEJ believes the FAQ should serve as either an educational tool for those states looking to adopt the revised model or, particularly for the safe harbor provision, as interpretive guidance for those states that have adopted the revised model because the safe harbor provision

seems to be more ambiguous than other provisions in the revised model. He suggested the FAQ should be simple and clear. He provided examples of FAQ the CEJ believes would be useful.

The Working Group discussed whether it should restructure the FAQ and what should be in the FAQ, particularly whether the safe harbor provision applies to non-variable annuities and what is expected of a financial professional and entities supervising such professionals seeking to use the safe harbor provision. The Working Group continued walking through the draft FAQ and discussing the ad hoc small drafting group's comments.

Wes Bissett (Independent Insurance Agents and Brokers of America—IIABA) expressed support for the Working Group's plan to restructure the FAQ. He suggested that in restructuring the FAQ and answers, the Working Group should focus on the actual text of the revised model and not intent. Mr. Birnbaum suggested that it could be important for the Working Group to include in the FAQ guidance and clarity on whether the comparable standard must in fact be a comparable standard for purposes of the safe harbor provision given the issue of whether federal laws and regulations, and the comparable standards derived from such federal laws and regulations, apply to recommendations and sales of non-variable annuities.

After it completed its review, with the ad hoc small drafting group taking the lead, the Working Group decided to move forward with redrafting and restructuring the FAQ based on its discussion.

Having no further business, the Annuity Suitability (A) Working Group adjourned.

Draft: 7/5/22

Annuity Suitability (A) Working Group
Virtual Meeting
May 26, 2022

The Annuity Suitability (A) Working Group of the Life Insurance and Annuities (A) Committee met May 26, 2022. The following Working Group members participated: Doug Ommen, Chair (IA); Tate Flott, Vice Chair (KS); Yada Horace (AL); Jodi Lerner (CA); Jessica Luff (DE); Karl Fromm (ID); Renee Campbell (MI); Maureen Belanger (NH); Daniel Bradford and Michelle Brugh Rafeld (OH); Matt Gendron (RI); Stephanie Cope (TN); and Richard Wicka (WI).

1. Discussed Comments Received on Chair Draft Safe Harbor/Comparable Standards Provision FAQ

Commissioner Ommen said the purpose of this meeting is for the Working Group to discuss the comments received by the May 23 public comment deadline on the chair's draft frequently asked questions (FAQ) on the safe harbor/comparable standards provision in the revised *Suitability in Annuity Transactions Model Regulation* (#275), which added a best interest standard of conduct for insurers and producers. He said the Working Group received comments from the XY Planning Network and the Independent Insurance Agents & Brokers of America (IIABA). He said the Working Group also would discuss the Joint Trades' comments submitted earlier.

The Working Group walked through the chair draft FAQ question-by-question (Attachment Two-A1). Commissioner Ommen asked for any comments in addition to the written comments received on the first FAQ, which concerns the application of the safe harbor to certain types of recommendations or sales. Birny Birnbaum (Center for Economic Justice—CEJ) asked for clarification on what is meant by “types of recommendations and sales” in the first draft FAQ. He said that based on the question's wording, it seems to imply that there is a difference in the types of recommendations and sales the safe harbor applies to as opposed to the types of recommendations and sales Model #275 applies to. He suggested that the Working Group might want to leave the question out as it is currently written or rewrite it to make it clear on what distinguishes the safe harbor provision from the other provisions of Model #275. Commissioner Ommen noted that the Joint Trades provided a short answer mirroring the language in Section 6E. He said the XY Planning Network suggests a more extensive answer, including discussing the comparable standards.

Commissioner Ommen asked for additional comments on the second FAQ, which asks when a producer would be considered as acting as a financial professional for purposes of the safe harbor provision. Wes Bissett (IIABA) said the IIABA did not comment on this question. He said that the Joint Trades suggested the FAQ answer repeats what is in Model #275, which he is not sure is helpful. He said a possible answer to this FAQ could be to clarify that the safe harbor applies to a financial professional licensed and acting in that capacity for that annuity transaction. Duane Thompson (XY Planning Network) discussed the XY Planning Network's suggested answer to the FAQ. The Working Group discussed the FAQ question and potential answers to it, particularly with respect to when a producer who is licensed as a broker-dealer or investment advisor could also be subject to a fiduciary duty with respect to a particular annuity transaction. Commissioner Ommen asked Mr. Bissett to submit additional comments on this FAQ, including a suggested answer reflecting his comments.

The Working Group discussed the next FAQ on what comparable standards meet the criteria for the safe harbor. Commissioner Ommen pointed out the comments from the Joint Trades and XY Planning Network. Mr. Bissett said the IIABA would be concerned if the Working Group included the last sentence of the Joint Trades' suggested answer to the FAQ because it suggests a representative of a broker-dealer who complies with the U.S. Securities and Exchange Commission's (SEC) Regulation Best Interest (Reg BI) in recommending a fixed or fixed-indexed

annuity could be covered under the safe harbor. The IIABA does not believe that is the case. Commissioner Ommen asked Mr. Bissett to provide language to the Working Group in support of his comments.

The Working Group discussed the next FAQ concerning any additional requirements in Model #275 a financial professional would have to satisfy if the financial provision has made a sale or recommendation of an annuity in full compliance with a comparable standard. Commissioner Ommen asked if there were any comments in addition to the Joint Trades and the XY Planning Network comments on this FAQ. There were no additional comments.

The Working Group discussed the next FAQ asking if there are specific conditions an insurer must meet for the safe harbor to apply. Commissioner Ommen asked if there were any additional comments on the FAQ in addition to the Joint Trades and the XY Planning Network comments. Mr. Bissett suggested clarifying the FAQ. He also suggested that the Working Group consider adding another FAQ, which the IIABA had included in comments it submitted previously: “Does the safe harbor exempt insurers from any of the supervisory or other requirements established under the model?” The Working Group discussed the intent of the FAQ and whether the answer to the FAQ is intended to solicit what an insurer needs to do to be able to use the safe harbor. After additional discussion, Commissioner Ommen asked interested parties to re-review this FAQ and their suggested answers to it to determine if the FAQ needs restructuring to provide more context or, as Mr. Bissett suggests, adding another FAQ to clarify its intent.

The Working Group discussed the next FAQ on whether insurers have any other obligations under Model #275 with respect to producers relying on the safe harbor. Commissioner Ommen said the IIABA, the Joint Trades, and the XY Planning Network submitted comments. Mr. Bissett said the IIABA would like clarification on what is meant by “other” obligations and whether the FAQ was referencing other obligations outside of the Model #275 requirements. Commissioner Ommen suggested that this question might be redundant and as such, the Working Group might consider striking it.

The Working Group discussed the next FAQ on whether insurers must obtain documentation from a financial professional or the entity supervising the financial professional to determine if the professional’s or the entity’s policies and procedures support a comparable standard for purposes of the safe harbor provision. Commissioner Ommen said the XY Planning Network had submitted a suggested response to this FAQ. He asked for additional comments. There were no additional comments.

The Working Group discussed the next FAQ concerning requirements for insurers to conduct regular audits or otherwise verify that the financial professional or entity supervising the financial professional is complying with the comparable standard. Commissioner Ommen said the XY Planning Network had submitted a suggested response to this FAQ. He asked for additional comments. There were no additional comments.

The next proposed FAQ concerns whether an insurer must require a financial professional or an entity supervising the financial professional to use the insurer’s specific suitability form. The Working Group discussed the FAQ. Commissioner Ommen asked if the Joint Trades expected to submit a suggested answer to this FAQ. Jim Szostek (American Council of Life Insurers—ACLI) said he anticipates the Joint Trades would discuss the FAQ and submit a suggested answer to it.

The Working Group discussed the next suggested FAQ, which asks whether Section 6E(2) of the model allows an insurer without supporting documentation to rely on a financial professional’s statement, or the statement from an entity supervising the financial professional, that an annuity recommendation complies with a comparable standard. Commissioner Ommen said this is something the Iowa Department of Insurance (DOI) has seen over the years with an insurer receiving a certification of compliance and given this, he would suggest the answer to the FAQ would be “no.” He said the Working Group would like to receive comments from interested parties on what

an insurer would expect a financial professional or an entity supervising a financial professional to submit to support the financial professional's or the entity's assertion that the annuity recommendation complies with the applicable comparable standard.

The Working Group discussed the last proposed FAQ, which asks whether the record-keeping obligations under the revised model apply when the safe harbor is invoked. The Working Group discussed the application of the comparable standard when the comparable standard does not have a similar requirement, such as the revised model's record-keeping and document requirement. Commissioner Ommen said he believes that this FAQ is another FAQ that relates to the scope and reach of the safe harbor and touches on previous questions as to what is a "comparable standard" if the comparable standard does not include requirements in the revised model, such as its documentation requirements. He said the Working Group would like to receive comments from interested parties on any potential answer to this FAQ, particularly on the safe harbor provision's reach. For example, does the safe harbor provision apply only to the revised model's Section 6 provisions, or does it extend to the training and/or recordkeeping requirements? Mr. Bissett pointed out the IIBA's previous comments on this issue.

The Working Group discussed its next steps. After discussion, the Working Group decided to form an ad hoc drafting group to redraft the suggested FAQs to reflect its discussion during this meeting.

Having no further business, the Annuity Suitability (A) Working Group adjourned.

CHAIR DRAFT OF PROPOSED SAFE HARBOR PROVISION FAQs

Draft: 5/12/22

Comments are being requested on this document on or before Monday, May 23. Comments should be sent to Jolie Matthews by email only to jmatthews@naic.org.

SAFE HARBOR/COMPARABLE STANDARDS PROVISION

QXX. What types of recommendations or sales does the safe harbor provision (contained in Section 6E of the revised model) apply to?

AXX.

QXX. When would a producer be considered to be acting as a financial professional for purposes of the safe harbor provision?

AXX.

QXX. What comparable standards meet the criteria for the safe harbor?

AXX.

QXX. If a financial professional makes a recommendation or sale of an annuity in full compliance with a comparable standard, does the financial professional also have to satisfy all of the specific requirements of the revised model?

AXX.

QXX. Are there specific conditions an insurer must meet for the safe harbor to apply?

AXX.

QXX. Do insurers have any other obligations under the revised model with respect to producers seeking to rely on the safe harbor?

AXX.

QXX. Are insurers required to obtain documentation from the financial professional or entity supervising the financial professional to determine that the professional's or entity's policies and procedures support a comparable standard?

AXX.

QXX. Are insurers required to conduct regular audits, or otherwise verify, that the financial professional or entity supervising the financial professional is complying with the comparable standard?

AXX.

QXX. Do insurers have to require a financial professional or the entity supervising the financial professional to utilize the specific insurer's suitability form?

AXX.

QXX. Does Section 6E(2) allow an insurer to simply rely upon a statement by the financial professional or entity supervising the financial statement that the annuity recommendation complies with a comparable standard?

AXX.

QXX. Do the record-keeping obligations of the revised model apply when the safe harbor provision is invoked? Is the insurer required to maintain a copy of the consumer's financial information and annuity application or may it rely upon the entity supervising the financial professional?

AXX.

SharePoint/NAIC Support Staff Hub/Member Meetings/A Cmte/Annuity Suitability WG/Safe Harbor Chair Draft FAQs 5-12-22.docx

Draft: 5/23/22

Annuity Suitability (A) Working Group
Virtual Meeting
May 3, 2022

The Annuity Suitability (A) Working Group of the Life Insurance and Annuities (A) Committee met May 3, 2022. The following Working Group members participated: Doug Ommen, Chair (IA); Tate Flott, Vice Chair (KS); Jimmy Gunn (AL); Jodi Lerner (CA); Jessica Luff (DE); Karl Fromm (ID); Renee Campbell (MI); Derek Wallman (NE); Denise Lamy (NH); Daniel Bradford and Michelle Brugh Rafeld (OH); Matt Gendron (RI); Brian Hoffmeister (TN); and Richard Wicka (WI).

1. Discussed Adding New FAQ on the Safe Harbor/Comparable Standards Provision

Commissioner Ommen said the purpose of this meeting is for the Working Group to discuss whether to add new frequently asked questions (FAQ) on the safe harbor/comparable standards provisions in the revised *Suitability in Annuity Transactions Model Regulation* (#275), which added a best interest standard of conduct for insurers and producers. He said included in the notice for today's meeting were comments the Working Group received from the Joint Trades suggesting new FAQ on the safe harbor/comparable standards provision in Model #275 and additional guidance on the producer training provisions.

Commissioner Ommen asked for comments on moving forward with adding new FAQ on the safe harbor/comparable standards provision and including additional guidance on the producer training provisions. He also suggested using the Joint Trades' suggested safe harbor/comparable standards provision FAQ as a starting point. The Working Group members expressed support for moving forward on those topics.

Commissioner Ommen discussed the possibility of creating ad hoc drafting groups to work on the new safe harbor/comparable standards provision FAQ and revisions to the current FAQ on producer training and have the Working Group use the drafts created by these ad hoc drafting groups to begin its discussions.

Wes Bissett (Independent Insurance Agents & Brokers of America—IIABA) said the IIABA supports adding new FAQ to the FAQ guidance document on the safe harbor/comparable standards provision. He said the IIABA had submitted suggested FAQ on that provision last year during the Working Group's discussions on the FAQ guidance document. He offered to resubmit those comments to the Working Group for its consideration. Mr. Bissett also said the IIABA would be concerned with the Working Group using the Joint Trades' suggested safe harbor/comparable standards provision FAQ as a basis for beginning its work before any discussion of or public comments were received on them. He said this suggests the Working Group supports the FAQ, particularly the FAQ answers on which the IIABA has concerns.

Commissioner Ommen assured Mr. Bissett that in suggesting the Working Group use the Joint Trades' FAQ as a starting point, it was not his intention to lead anyone into thinking the Working Group supported it prior to any discussion or receiving comments on it. He said he anticipates the Working Group thoroughly discussing the Joint Trades' FAQ and other comments received during its May 26 meeting. He also asked Mr. Bissett to resubmit the IIABA's earlier comments on this topic. Jason Berkowitz (Insured Retirement Institute—IRI), speaking on behalf of the Joint Trades, said the Joint Trades FAQ reflect their interpretation of the safe harbor/comparable standards provision in Model #275. He also reminded the Working Group about its deliberative process in developing the 2020 revisions during which not all stakeholder suggested revisions were accepted. In revising the FAQ document, he urged the Working Group not to permit the discussion to devolve into rehashing those issues again. He said

the Joint Trades would like the Working Group to focus on the NAIC's interpretation of the safe harbor/comparable standards provision and how it should be applied.

Mr. Berkowitz also pointed out that as part of the Joint Trades' suggested FAQs, the Joint Trades included a one-page chart clarifying the producer training provisions. The chart outlines common scenarios with respect to when a producer would need to complete the four-hour training or the one-hour training. Mr. Bissett suggested from a regulatory perspective, the Working Group revisit FAQ #4 in the current FAQ document to specifically clarify whether the four obligations outlined in Section 6A are the only elements a producer or insurer needs to satisfy to meet the best interest standard of care. He said such clarity is essential for a court to determine what duty a producer may owe to a client. He cited a Massachusetts case, which centered on whether a producer has a fiduciary duty to a client, as evidence of why such clarification is needed. Commissioner Ommen asked Mr. Bissett to submit any case citations he may have to support his suggestion.

Commissioner Ommen said that based on the discussion, he would prepare a chair draft of suggested safe harbor/comparable standards FAQ. NAIC staff will circulate the draft for public comment. He encouraged stakeholders to submit comments, including additional suggested FAQ and answers to those FAQ. He said the Working Group would discuss any comments received during its May 26 meeting. Without objection, the Working Group also agreed to include the Joint Trades' producer training chart in the revised FAQ for future discussion.

Having no further business, the Annuity Suitability (A) Working Group adjourned.

Comments on Chair Draft Safe Harbor/Comparable Standards Provision FAQs

<p>Q1. What types of recommendations or sales does the safe harbor provision (contained in Section 6E of the revised model) apply to?</p>	
<p>Small Drafting Group Comments</p>	<p><i>What is the purpose of this question and the Joint Trades’ answer repeating what is in the model regulation? Drop the question because it is unnecessary? Should a question be added at the end of the FAQs to reflect the XY Planning Network answer to this FAQ, such as “Does compliance with this regulation meet all the requirements for a fiduciary?”</i></p>
<p>Joint Trades</p>	<p>QXX. What types of recommendations or sales does the safe harbor provision (contained in Section 6E of the revised model) apply to?</p> <p>AXX. The safe harbor provision applies to all recommendations and sales of annuities made by financial professionals in compliance with business rules, controls and procedures that satisfy a comparable standard even if such standard would not otherwise apply to the product or recommendation.</p>
<p>XY Planning Network</p>	<p>QXX. What types of recommendations or sales does the safe harbor provision (contained in Section 6E of the revised model) apply to?</p> <p>AXX. The safe harbor provision in Section 6E of the revised model would allow a producer licensed under other applicable federal or state laws to rely on the safe harbor in making a recommendation or executing an annuities transaction. If the producer is also licensed as an investment adviser representative (IAR) and the consumer in question is an existing financial planning or advisory client, the producer should be aware of recent guidance by the U.S. Securities and Exchange Commission (SEC) that their fiduciary relationship with the client applies to the entire client relationship. Thus the fiduciary duty under the Investment Advisers Act of 1940 (and similar state adviser statutes) would apply to an annuity transaction sold outside of the advisory account because the producer’s fiduciary capacity would extend to all areas of the client relationship including product transactions. The safe harbor would be available if the producer/IAR fully complied with all rules and regulations of the federal or state adviser statute.</p> <p>Similarly, the Section 6E safe harbor would be available to the producer if the recommendation involved a retirement account subject to ERISA or the Internal Revenue Code and the producer was deemed to be a Sec. 3(21) fiduciary to the account holder.</p> <p>A producer who is also affiliated with a broker-dealer should be aware that a fiduciary relationship may also apply under the common law in certain states, notwithstanding that this regulation disclaims fiduciary capacity for purposes of meeting the rule’s compliance requirements. As such, if a court holds that a relationship of trust and confidence exists between the</p>

	<p>producer/broker and the customer, or case law holds that a securities broker is a fiduciary, then the producer/broker may be subject to fiduciary accountability for any annuity recommendations or transactions.</p> <p>A producer who is also affiliated with both a broker-dealer AND a registered investment adviser (RIA) should be aware that, as mentioned above with respect to SEC guidance, the fiduciary duty of the IAR would apply to all areas of the client relationship. The IAR’s capacity as a fiduciary under state law may also extend to other services provided, such as the sale of annuities.</p>
	<p>Q2. When would a producer be considered to be acting as a financial professional for purposes of the safe harbor provision?</p>
<p><i>Small Drafting Group Comments</i></p>	<p><i>What is the purpose of this question and the Joint Trades’ answer repeating what is in the model regulation? Drop the question because unnecessary or reword the question? Is this question really asking: “When does the safe harbor provision apply or not apply?” or is it asking: “For financial professionals, what would constitute compliance with business rules controls and procedures for purposes of the safe harbor provision?”</i></p>
<p>Joint Trades</p>	<p>QXX. When would a producer be considered to be acting as a financial professional for purposes of the safe harbor provision?</p> <p>AXX. A producer would be considered a financial professional for purposes of the safe harbor provision if they are acting as:</p> <ol style="list-style-type: none"> 1) A broker-dealer registered under federal [or state] securities laws or a registered representative of a broker-dealer; 2) An investment adviser registered under federal [or state] securities laws or an investment adviser representative associated with the federal [or state] registered investment adviser; or 3) A plan fiduciary under Section 3(21) of the Employee Retirement Income Security Act of 1974 (ERISA) or fiduciary under Section 4975(e)(3) of the Internal Revenue Code (IRC) or any amendments or successor statutes thereto.
<p>XY Planning Network</p>	<p>QXX. When would a producer be considered to be acting as a financial professional for purposes of the safe harbor provision?</p> <p>AXX. The producer would be considered acting as a ‘financial professional’ under Sec. 6E(4) of the revised model rule and thereby subject to the other comparable standard (i.e., applicable law) at the time the recommendation was made.</p>
	<p>Q3. What comparable standards meet the criteria for the safe harbor?</p>
<p><i>Small Drafting Group Comments</i></p>	<p><i>What is the purpose of this question? Should this question be redrafted to describe the provisions (business rules) that must be in a comparable standard to satisfy the best interest requirements under the revised model?</i></p>

<p>Joint Trades</p>	<p>QXX. What comparable standards meet the criteria for the safe harbor?</p> <p>AXX. The NAIC considers conduct standards adopted by federal regulators under federal securities laws, ERISA, and the IRC to be comparable standards to Model #275. The revised model includes a drafting note indicating states may wish to consider state securities laws as a comparable standard as well. The revised model also makes clear that the safe harbor will apply even if the comparable standard would not otherwise apply to the product or recommendation at issue. For example, a registered representative of a broker-dealer who complies with the requirements of the SEC’s Regulation Best Interest when recommending a fixed or fixed indexed annuity (which are not securities under federal securities laws) would be covered by the safe harbor even though Regulation Best Interest does not directly apply to those products.</p>
<p>XY Planning Network</p>	<p>QXX. What comparable standards meet the criteria for the safe harbor?</p> <p>AXX. The comparable standards in the safe harbor are Regulation Best Interest (and any subsequent amendments) as promulgated by the U.S. Securities and Exchange Commission; under the antifraud provisions of Section 206 of the Investment Advisers Act of 1940, similar state statutes (including states that have adopted NASAA’s Unethical Business Practices of Investment Advisers <i>et al.</i>, as amended), and the applicable fiduciary duty obligations thereto; and with prohibited transaction exemptions (PTEs) and applicable fiduciary duties under ERISA and the Internal Revenue Code.</p>
<p>Q4. If a financial professional makes a recommendation or sale of an annuity in full compliance with a comparable standard, does the financial professional also have to satisfy all of the specific requirements of the revised model?</p>	<p>QXX. If a financial professional makes a recommendation or sale of an annuity in full compliance with a comparable standard, does the financial professional also have to satisfy all of the specific requirements of the revised model?</p>
<p>Small Drafting Group Comments</p>	<p><i>What does “full compliance” mean? Suggest rewriting the question to refer to business rules, such as: “If a financial professional falls under the safe harbor provision by complying with a comparable standard, does the financial professional have to comply with other provisions of the revised model, such as the one-hour and four-hour training requirements and product-specific training requirements? To determine whether a financial professional meets the requirements of the safe harbor provision through compliance with a comparable standard depends on the business rules in the comparable standard that meet the intent of the best interest standard in the revised model.”</i></p>
<p>Joint Trades</p>	<p>QXX. If a financial professional makes a recommendation or sale of an annuity in full compliance with a comparable standard, does the financial professional also have to satisfy all of the specific requirements of the revised model?</p> <p>AXX. No, a financial professional who fully satisfies the requirements of a comparable standard is considered to have met their obligations under the revised model, and does not need to also comply with any additional obligations imposed by the revised model. However, actual compliance with the applicable comparable standard is required; state insurance departments retain the authority to examine and investigate the conduct of a financial professional who is relying on the safe harbor to ensure</p>

	<p>compliance with the applicable comparable standard and can take enforcement action against a producer who fails to fully comply with that comparable standard when recommending or selling an annuity.</p>
XY Planning Network	<p>QXX. If a financial professional makes a recommendation or sale of an annuity in full compliance with a comparable standard, does the financial professional also have to satisfy all of the specific requirements of the revised model?</p> <p>AXX. If a consumer complaint is brought to the attention of the state insurance commissioner, depending on the facts and circumstances of the disputed transaction the commissioner may investigate and enforce the provisions of this regulation.</p>
Q5. Are there specific conditions an insurer must meet for the safe harbor to apply?	
Small Drafting Group Comments	<p><i>Suggest combining this question with the question below (Q6.), such as “Are there specific conditions and obligations an insurer must meet with respect to dually licensed producers seeking to rely on the safe harbor?” Also, suggest combining the answers from the two questions. Also, the Joint Trades suggested answer needs to be clarified on what “relevant” conduct is being contemplated. Is “relevant” conduct intended to mean conduct “to ensure compliance with the business rules developed for compliance with the revised model”?</i></p>
Joint Trades	<p>QXX. Are there specific conditions an insurer must meet for the safe harbor to apply?</p> <p>AXX. Yes, a financial professional will only be able to rely on the safe harbor if the insurer whose product is being recommended or sold:</p> <ol style="list-style-type: none"> 1) Monitors the relevant conduct of the financial professional or the entity responsible for supervising the financial professional; and 2) Provides the entity responsible for supervising the financial professional with information and reports that will assist that entity with its supervision efforts.
XY Planning Network	<p>QXX. Are there specific conditions an insurer must meet for the safe harbor to apply?</p> <p>AXX. As noted in Sec. 6C(2)(i) of the regulation, the insurer shall provide a written report to senior management that details a review, with appropriate testing, to determine the effectiveness of the insurer’s policies and procedures with respect to annuity recommendations and transactions. By extension, these conditions would necessarily require that the producers under its supervision furnish documentation demonstrating compliance with the comparable standard, including a written determination why the annuity recommendation was in the best interest of the consumer.</p>

	<p>Q6. Do insurers have any other obligations under the revised model with respect to producers seeking to rely on the safe harbor?</p>
<p>Small Drafting Group Comments</p>	<p><i>This question seems to be very similar to Q5. Suggest deleting it and combining it with Q5.</i></p> <p>IIABA</p> <p>QXX. Do insurers have any other obligations under the revised model with respect to producers seeking to rely on the safe harbor?</p> <p><i>Recommended Answer</i> – Yes. The safe harbor expressly applies to the recommendations and sales activities of certain producers, and, regardless of whether one of its producers relies on the safe harbor, insurers remain responsible for complying with the supervisory requirements of Section 6(C), the prohibitions of Section 6(D), the enforcement provisions of Section 8, and the recordkeeping obligations of Section 9. While insurers are ultimately responsible for a producer’s actions and compliance with the regulation, they are permitted by Section 6(C)(3) to enter into arrangements and contracts with other parties for the performance of supervisory functions.</p>
<p>Joint Trades</p>	<p>QXX. Do insurers have any other obligations under the revised model with respect to producers seeking to rely on the safe harbor?</p> <p>AXX. Yes, insurers remain subject to the obligation under Section 6C(1) to “not issue an annuity recommended to a consumer unless there is a reasonable basis to believe the annuity would effectively address the particular consumer’s financial situation, insurance needs and financial objectives based on the consumer’s consumer profile information.” However, insurers may base their analysis on information received from either the financial professional or the entity supervising the financial professional and are not otherwise required to also perform all of the specific supervisory functions outlined in Section 6C(2) as long as the financial professional’s conduct is being supervised (whether by the insurer or by another entity with responsibility for supervision of the financial professional) in accordance with the relevant comparable standard.</p>
<p>XY Planning Network</p>	<p>QXX. Do insurers have any other obligations under the revised model with respect to producers seeking to rely on the safe harbor?</p> <p>This question is redundant to the one immediately above and unnecessary.</p>
	<p>Q7. Are insurers required to obtain documentation from the financial professional or entity supervising the financial professional to determine that the professional’s or entity’s policies and procedures support a comparable standard?</p>

<p>Small Drafting Group Comments</p>	<p>Is the XY Planning Network answer to this question appropriate for one of the previous questions?</p> <p>Should this question and Questions 8-11 be redrafted to outline an insurer's responsibilities under the safe harbor provision based on the insurer's transactional obligation and the insurer's supervision obligation? Should there be a list of what an insurer should be doing with respect to the safe harbor as part of its monitoring obligation?</p>
<p>XY Planning Network</p>	<p>QXX. Are insurers required to obtain documentation from the financial professional or entity supervising the financial professional to determine that the professional's or entity's policies and procedures support a comparable standard?</p> <p>AXX. Yes. Unlike the regulation, which doesn't require analysis or consideration of products or investment strategies outside the authority or license of the producer, Regulation Best Interest, certain PTEs under ERISA or the federal tax code, and under an IAR's fiduciary duty, generally require documentation of reasonable alternatives considered by the agent in addition to the final recommendation. Consistent with the supervisory requirements of the Section 6E safe harbor, the insurer should establish policies and procedures that are appropriate in maintaining oversight of annuity transactions under this regulation. As such, written documentation confirming that a reasonable alternative(s) was considered under the comparable standard, and that the final recommendation was in the best interest of the client should be available to the insurer upon request.</p>
<p>Q8. Are insurers required to conduct regular audits, or otherwise verify, that the financial professional or entity supervising the financial professional is complying with the comparable standard?</p>	<p>QXX. Are insurers required to conduct regular audits, or otherwise verify, that the financial professional or entity supervising the financial professional is complying with the comparable standard?</p> <p>AXX. Under Section 6C(2)(i) of the regulation, insurers are required to conduct periodic audits by random sampling of annuity transactions of producers subject to the insurer's supervisory authority.</p>
<p>Q9. Do insurers have to require a financial professional or the entity supervising the financial professional to utilize the specific insurer's suitability form?</p>	<p>QXX. Do insurers have to require a financial professional or the entity supervising the financial professional to utilize the specific insurer's suitability form?</p>

	<p>AXX. Insurers may require a financial professional to utilize the specific insurer’s suitability form as necessary and in addition to any requirements under the comparable standard subject to the Section 6E safe harbor.</p>
<p>Q10. Does Section 6E(2) allow an insurer to simply rely upon a statement by the financial professional or entity supervising the financial statement that the annuity recommendation complies with a comparable standard?</p>	<p>QXX. Does Section 6E(2) allow an insurer to simply rely upon a statement by the financial professional or entity supervising the financial statement that the annuity recommendation complies with a comparable standard?</p> <p>A. No. As discussed in QXX (regarding the Sec. 6C(2)(i) requirement to provide a written report to senior management with respect to compliance), the insurer should obtain documentation from the financial professional demonstrating compliance with the comparable standard. For example, if the producer is also an IAR relying on the Advisers Act safe harbor, the insurer could ask for random copies of disclosures and analyses related to the annuity recommendation. A statement alone by the financial professional that he or she complied with the comparable standard would not satisfy the supervisory obligations of the insurer.</p>
<p>Q11. Do the record-keeping obligations of the revised model apply when the safe harbor provision is invoked? Is the insurer required to maintain a copy of the consumer’s financial information and annuity application or may it rely upon the entity supervising the financial professional?</p>	<p>QXX. Do the record-keeping obligations of the revised model apply when the safe harbor provision is invoked?</p> <p><i>Recommended Answer</i> – Yes. The safe harbor creates an exemption from certain of the model’s affirmative requirements, but it does not affect the application of the recordkeeping, training, enforcement, and similar provisions.</p>
<p>IIABA</p>	<p>QXX. Do the record-keeping obligations of the revised model apply when the safe harbor provision is invoked? Is the insurer required to maintain a copy of the consumer’s financial information and annuity application or may it rely upon the entity supervising the financial professional?</p> <p>AXX. An insurer is not required to maintain a copy of the consumer’s personally identifiable financial information inasmuch as a financial professional who is a fiduciary under federal or state securities laws may violate his or her confidentiality obligations to the client. This prohibition on access to certain client data is especially significant since the IAR’s fiduciary duty applies to the entire client relationship. However, the insurer should obtain any general suitability information as needed</p>
<p>XY Planning Network</p>	<p>QXX. Do the record-keeping obligations of the revised model apply when the safe harbor provision is invoked? Is the insurer required to maintain a copy of the consumer’s financial information and annuity application or may it rely upon the entity supervising the financial professional?</p> <p>AXX. An insurer is not required to maintain a copy of the consumer’s personally identifiable financial information inasmuch as a financial professional who is a fiduciary under federal or state securities laws may violate his or her confidentiality obligations to the client. This prohibition on access to certain client data is especially significant since the IAR’s fiduciary duty applies to the entire client relationship. However, the insurer should obtain any general suitability information as needed</p>

	<p>(such as the client’s age, investment experience, time horizon, and specific financial goals related to the annuity recommendation) in order to evaluate compliance with the safe harbor under Section 6E of this regulation.</p>
<p>Suggested Additional FAQs</p>	
<p>IIABA</p>	<p>Q__ Must producers that qualify for and rely on the safe harbor comply with the “requirements” that are established by the model?</p> <p>A__ No. There are differences and distinctions between the obligations established under the model and the duties imposed by the “comparable standards” identified in Section 6(E)(5). The model may in some ways apply more robust consumer protections upon producers that recommend annuities than the “comparable standards.” States that are concerned with establishing uniformity in annuity transactions (and the market conduct regulatory implications of not doing so) and applying consistent obligations on producers who make such recommendations may wish to consider narrowing the scope of the safe harbor and/or expressly applying certain elements of the model to those producers who seek to rely on it.</p> <p>Q__ Does the safe harbor provision relieve a producer or insurer from any applicable duty imposed by Section 6(D) (related to prohibited practices), Section 8) (related to regulatory enforcement authority and penalties), and Section 9 (related to recordkeeping).</p> <p>A__ No. The safe harbor creates an exemption from certain of the model’s affirmative “requirements,” but it does not affect the application of these provisions.</p> <p>Q__ When may a broker-dealer or registered representative rely on the safe harbor?</p> <p>A__ The definition of “comparable standards” in Section 6(E)(5) provides that broker-dealers and registered representatives may only rely on the safe harbor when they comply with “applicable SEC and FINRA rules pertaining to best interest obligations and supervision of annuity recommendations and sales” (emphasis added). In other words, broker-dealers and registered representatives may only take advantage of the safe harbor when a SEC or FINRA rule <i>applies</i> on its own to a particular annuity recommendation. The safe harbor is not limited to investment advisors and plan fiduciaries or fiduciaries in the same way.</p> <p>Q__ Does the safe harbor exempt insurers from any of the supervisory or other requirements established by the model?</p> <p>A__ No. The safe harbor expressly applies to the recommendations and sales activities of certain producers, and, regardless of whether one of its producers relies on the safe harbor, insurers remain responsible for complying with the supervisory requirements of Section 6(C), the prohibitions of Section 6(D), the enforcement provisions of Section 8, and the recordkeeping obligations of Section 9. While insurers are ultimately responsible for a producer’s actions and compliance with the regulation, they are permitted to enter into arrangements and contracts with other parties for the performance of supervisory functions.</p>

	<p>Q__. Does the safe harbor provision have any effect on licensing or other regulatory requirements?</p> <p>A__. No. Any person selling, soliciting, or negotiating annuities, including any financial professional relying or intending to rely on the safe harbor, must be licensed as an insurance producer. The safe harbor only affects requirements established by the model itself and has no effect on the application of other requirements and obligations.</p>
<p>Suggested Revisions to Existing FAQs</p>	
<p><u>BEST INTEREST STANDARD OF CONDUCT</u></p>	
	<p>Q4. What is the best interest standard of conduct and how would a producer or insurer satisfy it?</p> <p>A4. To satisfy the best interest obligation, a producer or an insurer must satisfy four obligations: 1) care; 2) disclosure; 3) conflict of interest; and 4) documentation.</p> <p>To satisfy the four obligations, when making a recommendation, producers must:</p> <ul style="list-style-type: none"> • Know the consumer’s financial situation, insurance needs and financial objectives; • Understand the available recommendation options; • Have a reasonable basis to believe the recommended option effectively addresses the consumer’s financial situation, insurance needs and financial objectives; • Communicate the basis of the recommendation to the consumer; • Disclose their role in the transaction, their compensation, and any material conflicts of interest; and • Document, in writing, any recommendation and the justification for such recommendation.
<p>IIABA</p>	<p>Q4. What is the best interest standard of conduct and how would a producer or insurer satisfy it?</p> <p>A4. The best interest obligation is comprised of four separate obligations: 1) care; 2) disclosure; 3) conflict of interest; and 4) documentation.</p> <p>To satisfy the four obligations, when making a recommendation, producers must:</p> <ul style="list-style-type: none"> • Know the consumer’s financial situation, insurance needs and financial objectives; • Understand the available recommendation options;

Life Actuarial (A) Task Force
Portland, Oregon
August 8–9, 2022

The Life Actuarial (A) Task Force met Aug. 8–9, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Mark Fowler represented by Jennifer Li (AL); Ricardo Lara represented by Ted Chang, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Bruce Sartain and Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and Ben Slutsker (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Michael Muldoon (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. Adopted its July 21, July 7, June 30, June 23, June 16, June 9, June 2, May 26, May 19, May 12, May 5, and April 14 Minutes, and the Report of the Variable Annuities Capital and Reserve (E/A) Subgroup

The Task Force met July 21, July 7, June 30, June 23, June 16, June 9, June 2, May 26, May 19, May 12, May 5, and April 14. During these meetings the Task Force took the following action: 1) exposed economic scenario generator (ESG) files for field testing; 2) exposed an NAIC staff recommendation for transitioning from the London Interbank Offered Rate (LIBOR) to the Secured Overnight Financing Rate (SOFR) for the remainder of 2022; 3) exposed the joint American Academy of Actuaries (Academy) Life Experience Committee and Society of Actuaries (SOA) Preferred Mortality Project Oversight Group (POG) recommendation for historical mortality improvement (HMI) and future mortality improvement (FMI); 4) adopted its Spring National Meeting minutes; 5) adopted amendment proposal 2020-12, which revises hedge modeling when future hedging strategies are not clearly defined; 6) adopted amendment proposal 2022-04, which proposes updates to the VM-20, Requirements for Principle-Based Reserves for Life Products, that prescribes swap spreads guidance considering the LIBOR transition to the SOFR for 2023 and later; 7) adopted amendment proposal 2022-05, which modifies VM-51, Experience Reporting Formats, by adding a dividend plan code and a COVID-19 indicator and changing a field identifier; 8) adopted *Actuarial Guideline LIII—Application of the Valuation Manual for Testing the Adequacy of Life Insurer Reserves* (AG 53).

The Task Force reviewed the report of the Variable Annuities Capital and Reserve (E/A) Subgroup.

Mr. Yanacheak made a motion, seconded by Mr. Chou, to adopt the Task Force’s July 21 (Attachment One), July 7 (Attachment Two), June 30 (Attachment Three), June 23 (Attachment Four), June 16 (Attachment Five), June 9 (Attachment Six), June 2 (Attachment Seven), May 26 (Attachment Eight), May 19 (Attachment Nine), May 12 (Attachment Ten), May 5 (Attachment Eleven), and April 14 (Attachment Twelve) minutes, and the report of the Variable Annuities Capital and Reserve (E/A) Subgroup (Attachment Thirteen). The motion passed unanimously.

2. Adopted the Report of the Experience Reporting (A) Subgroup

Mr. Andersen said the Subgroup is charged with exploring the need for mandatory experience reporting requirements. He said the Subgroup has established criteria for determining whether mandatory reporting of experience makes sense. He said VM-50, Experience Reporting Requirements, and VM-51 currently mandate the reporting of life insurance mortality data. He said the Subgroup is considering collecting policyholder behavior for

variable annuity guarantees and dynamic lapse data for fixed deferred annuities. Mr. Andersen questioned whether the rise in short-term interest rates may lead to an increase in disintermediation risk. He encouraged companies to track their dynamic lapse experience.

Mr. Andersen made a motion, seconded by Mr. Weber, to adopt the verbal report of the Experience Reporting (A) Subgroup. The motion passed unanimously.

3. Adopted the Report of the Index-Linked Variable Annuity (A) Subgroup

Mr. Weber presented a slide deck (Attachment Fourteen) that provided an overview of the market need for index-linked variable annuities (ILVAs) and updated the Task Force on the status of the Subgroup's exposed ILVA actuarial guideline. He said the guideline is intended to provide guidance on how an ILVA product can be designed such that it can be considered a variable product. He said the public comment period for the guideline ends on Aug. 23.

Mr. Weber made a motion, seconded by Mr. Serbinowski, to adopt the report of the Index-Linked Variable Annuity (A) Subgroup, including its July 13 (Attachment Fifteen), May 18 (Attachment Sixteen), and May 17 (Attachment Seventeen) minutes. The motion passed unanimously.

4. Adopted the Report of the VM-22 (A) Subgroup

Mr. Slutsker said the comments on the proposed VM-22 framework have been separated into four tiers, with the first tier being the highest priority based on its impact on the reserve. He said tiers one and two have been addressed. He said the Subgroup is now discussing tier three comments. He said that the proposed framework will be re-exposed after it has been revised to reflect all responses.

Mr. Slutsker said the Subgroup report highlights notable items that have been addressed. He said that concurrent with the next exposure for public comment, the Subgroup will consider the standard projection amount (SPA). He said the Subgroup has decided to recommend an SPA to the Task Force but has not determined whether the SPA should be a minimum requirement or a disclosure item. He said the Subgroup is targeting Spring 2023 to begin a field test. He said the target date for implementation of the revised framework is likely Jan. 1, 2025.

Mr. Slutsker made a motion, seconded by Ms. Eom, to adopt the report of the Valuation Manual (VM)-22 (A) Subgroup (Attachment Eighteen), including its July 19 (Attachment Nineteen), July 13 (Attachment Twenty), June 29 (Attachment Twenty-One), June 14, (Attachment Twenty-Two) June 1, (Attachment Twenty-Three), May 11 (Attachment Twenty-Four), April 27 (Attachment Twenty-Five), and April 13 (Attachment Twenty-Six) minutes. The motion passed unanimously.

5. Adopted the Report of the IUL Illustration (A) Subgroup and Re-Exposed the Potential Options for Addressing the AG 49-A Volatility-Controlled Indices Issue

Mr. Andersen said the public comment period for the Indexed Universal Life (IUL) Illustration (A) Subgroup exposure of potential options (Attachment Twenty-Seven) for addressing *Actuarial Guideline XLIX-A—The Application of the Life Illustrations Model Regulation to Policies with Index-Based Interest Sold on Or After December 14, 2020* (AG 49-A) related issues ended on July 26, with the intent of discussing comments at this meeting. He said the primary issue to be addressed is the illustration of uncapped volatility-controlled indices more favorably than traditional IUL with capped Standard & Poor's (S&P's) 500 indices.

Donna Megregian (Academy) presented the Academy comment letter (Attachment Twenty-Eight), which offered several questions for Task Force consideration. Austin Bichler (Allianz Life) presented the Allianz comment letter

(Attachment Twenty-Nine), which points to its February comment letter (Attachment Thirty). He said the company has extensive experience with products that offer volatility-controlled indices. He said the comment letter points out the value the products provide to consumers. He said Allianz supports a holistic approach that is principle-based. Brian Lessing (Equitable) said the Equitable comment letter (Attachment Thirty-One) recommends that if the Task Force chooses to extensively revise AG-49A, it should consider Equitable's 2020 proposal (Attachment Thirty-Two). Mr. Andersen said the comment letter (Attachment Thirty-Three) from Bobby Samuelson (The Life Product Review) and Sheryl Moore (Moore Market Intelligence) said there are options, other than those listed in the exposure, that could be quickly implemented to effectively address the immediate concerns.

Seth Detert (Securian Financial) said the Securian comment letter (Attachment Thirty-Four) reiterated its earlier comments (Attachment Thirty-Five) that AG 49-A achieved its goal of addressing the disparities in illustrations of products with multipliers and buy-up accounts. He said Securian is supportive of addressing the volatility-controlled indices issue with a quick fix to AG 49-A, such as applying the current 145% limit on benchmark index accounts (BIAs) to all accounts. He provided a spreadsheet (Attachment Thirty-Six) showing the impact of the 145% limit on various product designs.

Chris Conrad (Transamerica) said the Transamerica comment letter (Attachment Thirty-Seven) supports the quick-fix option. He said Transamerica will also support the long-term holistic approach requiring the overhauling of illustrations. Ryan Richey (Western & Southern Life) said the Western & Southern comment letter (Attachment Thirty-Eight) discusses its concern with the illustrations that combine a volatility-controlled index with a fixed interest rate bonus. He said Western & Southern supports the quick-fix option but would also support the long-term comprehensive option.

Birny Birnbaum (Center for Economic Justice—CEJ) said the illustration infrastructure is flawed, and its framework needs to be revised. He said the illustration issue is a consumer disclosure issue that should be addressed by those with disclosure expertise. He asked the Task Force to petition the Life Insurance and Annuities (A) Committee to examine and re-engineer life insurance and annuity illustrations. Brian Bayerle (American Council of Life Insurers—ACLI) said the solution that the Task Force chooses should be principle-based. Several Task Force members concurred that a comprehensive approach is necessary and suggested requesting that the Committee consider opening the *Life Insurance Illustrations Model Regulation* (#582).

Mr. Andersen made a motion, seconded by Mr. Yanacheak, to adopt the verbal report of the IUL Illustration (A) Subgroup, including its July 18 minutes (Attachment Thirty-Nine), and to re-expose the potential options for addressing the AG 49-A volatility-controlled indices issue, including consideration of limited, targeted revisions to Model #582 that may help to reduce or eliminate the need for addressing future IUL illustration issues through an actuarial guideline, for a 21-day public comment period ending Sept. 6. The motion passed unanimously.

6. Discussed the AAT Actuarial Guideline Templates

Mr. Andersen said AG 53 will be considered for adoption by the Executive (EX) Committee and Plenary during its Aug. 13 meeting. He said asset adequacy testing (AAT) templates (Attachment Forty) have been developed to capture the numerical aspects of the guideline requirements. He said the templates align with the sections of the guideline. He noted that the templates are currently exposed for a public comment period ending Aug. 19.

7. Discussed the Academy Framework for Developing, Evaluating, and Implementing ESGs

Jason Kehrberg (Academy) presented the Academy framework for developing, evaluating, and implementing ESGs (Attachment Forty-One). He stressed the importance of understanding ESG models, calibrations, and assumptions as the Task Force implements the Conning ESG. Hal Pedersen (Academy) said the presentation will communicate a process for developing and maintaining ESGs, using stylized facts and acceptance criteria. He noted that the

model purpose should be clear, the financial variables should be defined using relevant and credible data, and stylized facts specific to the model must be developed to establish and prioritize the model properties. He pointed out that if a class of models is unable to capture a vital stylized fact, then that model class should not be developed.

Tony Dardis (Academy) presented slides (Attachment Forty-Two) on ESG model governance, which is defined as the processes for ongoing scenario generation and delivery. He said members of the Academy who are involved in the production of the scenarios should consider what actuarial standards of practice (ASOPs) may apply. He identified ASOP No. 56, Modeling, as a particularly relevant standard and viewed the *Model Governance Practice Note* as a useful reference.

Mr. Yanacheak asked if companies using their own proprietary ESGs are subject to the same criteria laid out by the Academy. Mr. Dardis said if proprietary ESGs are permitted, companies would be required to follow the ASOPs and Academy practice notes. Mr. Boerner asked if there are clear acceptance criteria and stylized facts published for the current Academy Interest Rate Generator (AIRG). Mr. Kehrberg agreed to check.

8. Heard an Update on the ESG Field Test

Scott O'Neal (NAIC) gave an update on the ESG field test (Attachment Forty-Three). He said the ESG field test results for the equity model, Treasury model, and corporate model are expected at the end of August. He noted that the Treasury model is testing two calibrations, and the equity model is testing three calibrations. He gave an overview of the required and optional field test runs that are based on various calibrations and economic time frames.

Mr. O'Neal shared that 42 legal entities representing 29 insurance groups are participating in the field test. He said there is sufficient participation across the field tests and reserve/capital frameworks to allow for full aggregation of data. He said the NAIC will receive close to 600 data templates from participants. He cautioned that detailed data by life insurance product may not be available. He listed the field test objectives and the expected results. Mr. Slutsker asked if there is a concern about getting sufficient data related to exclusion testing. Mr. O'Neal said that may be an issue because he expects only the companies that expect to pass the exclusion test to run the exclusion test during the field test.

Mr. O'Neal said the NAIC has entered into a legal agreement with the Texas Department of Insurance (TDI) that allows the NAIC to request and collect field test results under the authority of the Texas insurance commissioner. The NAIC will be able to confidentially share company field test results with state insurance regulators and publicly share aggregated data.

Oliver Wyman has been hired to build an annuity model office for variable annuities (VAs) and ILVAs. The in-force VA model office will contain guaranteed minimum death benefits (GMDBs) and guaranteed living benefits (GLBs) with various levels of richness and various levels of in-the-moneyness at valuation. The new-business ILVA model office will include a buffer crediting strategy with buffer levels varying from 5% to 10%. The results of the model office can be used to confirm, understand, and extend the participant field test results. Mr. Carmello said that the New York Department of Financial Services (DFS) is seeing buffer levels from 10% to 30%. Mr. O'Neal said that information can be shared with Oliver Wyman for its consideration. He reviewed the timeline, noting that the dates are likely to be extended due to the volume of data that will need to be compiled.

9. Exposed the 2023 GRET

Tony Phipps (SOA) discussed the 2023 Generally Recognized Expense Tables (GRET) presentation (Attachment Forty-Four). He said there are no material changes in the process as compared to past years. He said the methodology limits percentage changes in expense factors to 10% to minimize large jumps from one year to the

next. He noted a 6.9% increase in the face amount of exposure and an increase in the number of companies in the study from 375 to 382. The Task Force requested that the SOA explore the possibility of better differentiating the “Other” distribution category.

Mr. Yanacheak made a motion, seconded by Mr. Andersen, to expose the 2023 GRET recommendation (Attachment Forty-Five) for a 21-day public comment period ending Aug. 29. The motion passed unanimously.

10. Heard an Update on SOA Research and Education

Dale Hall (SOA) gave a presentation (Attachment Forty-Six) on SOA research. He highlighted a soon-to-be-released report on company use of mortality improvement in life insurance and annuity pricing, and financial projections. The report captures data from 35 companies and covers experience through 2021. He said that company mortality improvement factors were lower in 2021 than they were in 2018.

Mr. Hall shared data from a survey of 59 experts from the actuarial, medical, and demographic professions on the impact of COVID-19 on future mortality. He noted that excess population mortality is expected to be higher than excess mortality for the insured, annuitant, and pension plan populations.

Mr. Hall shared a list of other SOA reports, including those on group annuity mortality, maternal mortality, individual life COVID-19 claims, and group life COVID-19 mortality.

11. Heard an Update on the Future Mortality Improvement Scale Development

Marianne Purushotham (Joint Academy Mortality Improvements Life Work Group [MILWG] and SOA Mortality and Longevity Oversight Advisory Council [MLOAC]) said recent changes were made to the FMI and HMI scales in response to the feedback received from the Task Force. She said the new recommendation (Attachment Forty-Seven) fully reflects the impact of COVID-19 in 2020 as an interim approach for this year. She said the approach will be revisited as more data is collected. She said the approach results in a small mortality deterioration for HMI. She said the overall FMI methodology has not changed, but an additional temporary COVID-19 margin has been applied. She stressed that companies should consider their own mortality experience and make appropriate additional adjustments. Ms. Purushotham said that model office simulations are being run to determine the reserve impact of reflecting the impact of COVID-19 on FMI by adding the temporary COVID-19 margin. She expects that the additional margin will result in a 1%–3% increase in the reserve.

Mr. Boston questioned the transition from the HMI graph showing mortality deterioration to the FMI graph showing mortality improvement over the period of one year. Ms. Purushotham said both the HMI deterioration and the FMI improvement are small, so the jump is not that large. She agreed to review the data supporting the graphs. Mr. Chupp said companies do not have to use the HMI. He said they can use their own mortality experience to the extent it is credible. He said it does not seem appropriate that a company with mortality experience better than industry experience generated by applying HMI to the valuation basic table (VBT) should be allowed to use its own experience as the starting point for the application of FMI. Ms. Hemphill suggested that the Task Force indicate its expectation that company experience should be no more aggressive than the HMI. Ms. Purushotham reminded the Task Force that the HMI and FMI are a package that is designed to work as a tandem. Mr. Slutsker asked whether the indication suggested by Ms. Hemphill would require a *Valuation Manual* change. Reggie Mazyck (NAIC) said a *Valuation Manual* amendment will be necessary if the Task Force desires to require company compliance. Ms. Hemphill said that last year, the Task Force provided guidance that companies consider the impact on COVID-19 on its mortality experience. She said the Task Force could provide similar actuarial guidance related to the pairing of HMI and FMI in the instructions for this year’s mortality improvement recommendation. Mr. Mazyck agreed that providing such actuarial guidance is permissible. He noted that a *Valuation Manual* amendment will be necessary to make the guidance a requirement. Mr. Carmello said his

preference is for an FMI equal to zero. Mr. Reedy said the current model office is focused on universal life with secondary guarantees (ULSG). He questioned whether a term insurance model office should also be run. Mr. O’Neal said a term model is available. Mr. Boerner asked Mr. O’Neal to run the term and ULSG models for assuming the FMI is zero. Ms. Purushotham said she will discuss the Task Force considerations with the MILWG and MLOAC.

12. Heard a Presentation on the Industry Experience Studies Partnership

Mr. Hall presented slides (Attachment Forty-Eight) on the SOA and Life Insurance Marketing Research Association (LIMRA) industry experience studies partnership. He said the collaboration allows the SOA to provide more detailed industry information by combining LIMRA’s ability to gather lots of data and information, and the SOA’s expertise in actuarial analysis. Ms. Purushotham shared the structure and costs of the packages offered by the partnership. She said payout annuities and fixed indexed annuities studies are expected to be completed later this year.

13. Heard an Update on the Recent Activities of the Academy LPC

Ben Slutsker (Academy Life Practice Council—LPC) gave a presentation (Attachment Forty-Nine) on the LPC’s recent activities. He highlighted the Academy accomplishments, such as the recent Academy webinars on non-guaranteed elements and reinsurance. He mentioned that the Academy annual meeting in November will include LPC breakout sessions. He said recent Academy activities include ESG stylized facts and acceptance criteria, proposing an amendment facilitating the transition from LIBOR to SOFR, and presenting the Life Risk-Based Capital (E) Working Group with recommendations for updated C-2 mortality factors. He noted that the LPC has published a discussion brief on the effect of COVID-19 on life insurance mortality improvement. He said the Academy is also engaged in efforts related to VM-22 and providing input on the ESG field study.

14. Heard a Presentation from the Academy on ESG Equity Stylized Facts

Mr. Kehrberg presented stylized facts (Attachment Fifty) developed by the Academy for the ESG equity model. He said that a comprehensive set of qualitative stylized facts is a key prerequisite for model selection and the development of acceptance criteria. Mr. Carmello asked if stylized facts are based only on market observances or if they can also encompass plausible scenarios that have not yet been experienced. Mr. Kehrberg said plausible scenarios can also be included in the development of stylized facts. Mr. Weber asked if the stylized facts and the acceptance criteria will always be aligned. Mr. Kehrberg said that stylized facts will not always be a “yes” or “no.” He said judgment and prioritization will be involved. He said that acceptance criteria tend to be more a more binary measure. Mr. O’Neal said the Task Force has discussed the set of stylized facts for all the ESG modules and acceptance criteria for the Conning Treasury module. Mr. Boerner asked Mr. Kehrberg to consider how the stylized facts being proposed by the Academy can be reconciled with those the NAIC ESG Drafting Group has developed. Mr. Kehrberg said that the Academy stylized facts are closely aligned with those of the Drafting Group. Mr. Kehrberg said the prioritization of stylized facts should be based on the model’s purpose. He discussed several important considerations for equity stylized facts and presented a list of equity stylized facts. Mr. Yanacheak asked whether other stylized facts were considered. Henry Yim (Academy) said a stylized fact related to equities and credit spreads was omitted from the equity list but will be addressed when the credit module is discussed. Mr. Kehrberg said that stylized facts are considered when recalibrating or selecting a model.

Link Richardson (Academy) discussed the selected stylized facts in detail. Mr. Chupp asked if another stylized fact should be correlation in the tails between different equity indices. Mr. Kehrberg said that correlation in the tails is more related to a short time horizon, while this presentation is focused on a long time horizon. He said he will ask the Academy team to consider Mr. Chupp’s question. Mr. Sartain asked if the bullet points below the stylized facts are also stylized facts. Mr. Kehrberg said the bullets are supports for the stylized facts.

Mr. Richardson discussed the stylized fact related to initial market conditions. He said the initial market condition should not have an impact on the long-term distribution of returns. The Task Force asked the Academy to consider a position median to the constant expected equity risk premium (ERP) and the constant mean equity return position. Mr. Richardson and Mr. Yim presented the remaining stylized facts. Mr. Kehrberg said the Academy plans to present other sessions on stylized facts for interest rates and credit. Mr. Boerner said the presentation will be posted on the industry tab of the NAIC website.

15. Heard an Update on the Academy Council on Professionalism and Education

Lisa Slotznick (Committee on Qualifications—COQ) said the COQ issued a final amended qualification standard in late 2021 and updated the frequently asked questions (FAQ) document on the Academy website. She said the new requirements based on completion of the actuarial credential, rather than on current memberships in an organization, are applicable for upcoming actuaries, not for those who have already qualified. She said the requirement for one hour of Bias continuing education (CE) per year will be required for all seeking qualification.

Darrell Knapp (Actuarial Standards Board—ASB) said the ASB is revising the scope of the ASOPs to identify the tasks to be done within a specific subject. He said the ASB has begun using templates to promote continuity across ASOPs, particularly in the language. He said other focuses are clarifications of what is meant by reliance and the differences between documentation and disclosure. He noted that ASOPs on actuarial communication and risk classification are being worked on. Shawna Ackerman (Actuarial Board for Counseling and Discipline—ABCD) said the ABCD had 25 life area requests for guidance last year.

Having no further business, the Life Actuarial (A) Task Force adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/A CMTE/LATF/Summer 2022/Summer Natl Mtg/LATF 2022 Summer Meeting Minutes.docx

Draft: 8/1/22

Life Actuarial (A) Task Force
Virtual Meeting
July 21, 2022

The Life Actuarial (A) Task Force met July 21, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Mark Fowler represented by Jennifer Li (AL); Ricardo Lara represented by Ted Chang, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and Ben Slutsker (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Kevin Clarkson (NJ); Adrienne A. Harris represented by Bill Carmello and Michael Cebula (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); and Michael Humphreys represented by Steve Boston (PA).

1. Heard a Presentation on the Experience Reporting Data Dictionary

Angela McNabb (NAIC) said that questions received from companies during the experience data collection process indicated that VM-51, Experience Reporting Formats, can be vague or lend itself to multiple interpretations of how to populate certain fields. She said, given the company input, that it was prudent to provide a data dictionary (Attachment One-A) for companies to follow. She said the data dictionary will be posted on the industry tab. She noted that the data dictionary is not intended to supersede the authority of the *Valuation Manual*.

2. Heard an Update on the LIBOR to SOFR Transition

Pat Allison (NAIC) said the NAIC is working with three data providers to obtain Secured Overnight Financing Rate (SOFR) data. She said contractual matters are in the process of being resolved. She noted that the Life Insurance and Annuities (A) Committee adopted amendment proposal 2022-04, which requires the use of SOFR data in the calculation of U.S. Treasury swap spreads used in principle-based reserving (PBR) effective Jan. 1, 2023. She said the next step is handling the transition to SOFR data for the remainder of 2022. She said the transition date will be set once the contracts are in place.

3. Heard an Update on the AAT Templates

Mr. Andersen said a draft of the templates supporting the asset adequacy testing (AAT) guideline is being worked on. He said the draft should be ready for exposure prior to the Summer National Meeting. He said the plan is to have the Task Force adopt the templates in September, so they are available for company use for year-end.

Having no further business, the Life Actuarial (A) Task Force adjourned.

Data Item # 47 (State of Domicile) 20#

PURPOSE AND SCOPE

- This VM-51 Data Dictionary is intended to aid companies submitting life insurance mortality experience data to the NAIC pursuant to VM-51 of the NAIC Valuation Manual. It provides descriptions and reporting instructions for each data field shown in VM-51 Appendix 4, in the 2022 version of the Valuation Manual.
- VM-51 Section 2.D defines “reporting year” and “observation year”, and there is a lag. For the 2022 reporting year, data for the 2020 observation year will be submitted. Submissions must be based on the requirements in the 2022 version of the Valuation Manual.
- The Valuation Manual is subject to change from year to year since amendments may be adopted. This data dictionary is only applicable for the 2022 reporting year. NAIC staff plans to provide an updated data dictionary prior to the kick-off of data collection for each reporting year.
- The VM-51 Data Dictionary is not (currently) part of the Valuation Manual and does not supersede any provision of the Valuation Manual. If there is a conflict between the Valuation Manual and the VM-51 Data Dictionary, the terms of the Valuation Manual take precedence, and companies are required to follow the guidance provided in the Valuation Manual. However, there has been noted certain instances where the guidance provided by the Valuation Manual may vary from actual company practices, and this Data Dictionary provides guidance on how companies may comply with the requirements of the Valuation Manual under these circumstances. Companies may rely upon the guidance provided in this VM-51 Data Dictionary in submitting the life insurance mortality experience to the NAIC unless otherwise notified by the Experience Reporting Agent.

GENERAL INSTRUCTIONS

- Data elements that describe the policy segment at issue should remain consistent from one reporting year to the next. For example: Issue Date, Issue Age, Date of Birth, etc. for a specified policy segment should not change. These types of fields are identified below as “Consistent Year Over Year.”
- All monetary values should be rounded to the nearest dollar.
- Currently, the VM-51 mortality experience data file excludes coverage for spouse and/or children under family policies or riders.
- Data items #1 - #5 form the unique key for a given record. If multiple records have the same values in these 5 fields, they will be flagged as a duplicate and will be rejected.

Data Item #1

Name: Submitting Company ID

Maximum Length: 9

Format: Left Justified

Consistent Year over Year

Description: This field should contain the NAIC company code of the company submitting the data file.

Reporting Instructions:

- If a company is reporting their own data, then data items #1 and #2 must be the same.
- There can only be one Submitting Company ID per data file.
- If a reinsurer or other third-party administrator is submitting data on behalf of the direct writer, this must be the code for the reinsurer / third party.
- If the reinsurer / third-party is submitting on behalf of more than one direct writing company, all data being reported must be in one file (data item #2 will distinguish between the different direct writers).
- If the reporting company has an NAIC company code, then that number must be used. If the reporting company does not have an NAIC company code, then the company's Federal Employer Identification Number (FEIN) should be used.

Data Item #2

Name: NAIC Company Code of the Direct Writer of Business

Length: 5

Consistent Year over Year

Description: This field is the NAIC assigned company code of the company that wrote the business being reported.

Reporting Instructions:

- In the case of assumption reinsurance where the assuming company is legally responsible for all benefits and claims paid, the assuming company is considered to be the direct writer. The direct writer is the company that reports the business in their Annual Statement.
- If a company is reporting their own data, then data items #1 and #2 must be the same.

Data Item # 3

Name: Observation Year

Length: 4

Description: The observation year is the calendar year of the experience data that is being reported.

Reporting Instructions:

- The observation year is different from the reporting year. For the 2022 reporting year, the observation year is 2020.
- The reporting year is the calendar year that the company submits the experience data. The observation year will be prior to the reporting calendar year as defined in VM-51 Section 2.D. VM-51 identifies the observation year as two years prior to the reporting year.
- There can only be one observation year per data file.

Data Item # 4

Name: Policy Number

Maximum Length: 20

Consistent Year over Year

Format: Left Justified

Description: This field is a unique number that identifies a specific policy.

Reporting Instructions:

- The policy number may be the actual policy number used internally. However, companies are encouraged to encrypt the policy number for privacy reasons.
- If the policy number is encrypted, then the same encryption process must be used each year so that the policy number is the same for each reporting year.

Data Item # 5

Name: Segment Number

Maximum Length: 3

Format: Left Justified

Consistent Year over Year

Description: This field identifies a specific coverage level within the policy.

Reporting Instructions:

- A given policy may have one segment or several.
- The base coverage for single life policies must always be distinguished as segment 1.
- Additional segments should be added for term riders, additional amounts of insurance purchased after original issue, and coverage purchased through dividend options.
- Note that additional amounts of insurance should be reported in a separate policy segment. They should not be added to the base coverage or reported in a new policy number.
- In the case where a policy exercised a Non-Forfeiture Option, the original policy data (if available) should be renumbered to a later segment number (we recommend adding 100 to the original segment number) and identified as terminated. The coverage resulting from the non-forfeiture election should be in a separate record and must be identified as segment 1.
- Special Consideration for Joint Life policies:
In the case of joint-life policies, the lives should be in segment 1 and segment 2. In the case of second to die, when the first insured dies, that segment should be identified as a death but without a death benefit. The following reporting year, that segment should no longer be in the data file. The segment number for the remaining insured should stay the same for year over year consistency validations.

Data Item # 6

Name: State of Issue

Length: 2

Consistent Year over Year

Description: State in which the policy was issued.

Reporting Instructions:

- Use standard two-letter state abbreviation codes.
- Acceptable values are as follows:
AK, AL, AR, AZ, CA, CO, CT, DC, DE, FL, GA, HI, IA, ID, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NM, NV, NY, OH, OK, OR, PA, RI, SC, SD, TN, TX, UT, VA, VI, VT, WA, WI, WV, WY, AS, GU, MP, PR, NA, OT

Data Item # 7

Name: Gender

Length: 1

Consistent Year over Year

Description: Gender as identified on the policy.

Reporting Instructions:

- Acceptable values are as follows:
0 = Unknown or unable to subdivide
1 = Male
2 = Female
3 = Unisex – Unknown or unable to identify
4 = Unisex – Male
5 = Unisex – Female
- Values 4 or 5 may be used when the policy is issued as unisex but the gender is known.

Data Item # 8

Name: Date of Birth

Length: 8

Format: YYYYMMDD

Consistent Year over Year

Description: Date of Birth for the insured covered in each policy segment.

Reporting instructions:

- This field must be populated.
- The date of birth is used to check the reasonableness of issue age based on calculations using date of birth, age basis, and issue date.

Data Item # 9

Name: Age Basis

Length: 1

Consistent Year over Year

Description: The age basis used to determine issue age for this policy.

Reporting Instructions:

- Acceptable values are as follows:
0 = Age Nearest Birthday
1 = Age Last Birthday
2 = Age Next Birthday

Data Item # 10

Name: Issue Age

Maximum Length: 3

Format: Left Justified

Consistent Year over Year

Description: Age of insured at issue for each segment as identified in the policy contract.**Data Item # 11**

Name: Issue Date

Length: 8

Format: YYYYMMDD

Consistent Year over Year

Description: Date of issue for each policy segment.

Reporting Instructions:

- If the segment number is not 1, this date may be different from the original issue date of the policy contract.
- Special Consideration for Coverages Purchased with Dividends (PUA or OYT): These coverages may be rolled together into one segment or identified separately for each issue date. If the coverages are being rolled together, the issue date should be the date the first of these coverages was issued (generally, one year after the issue date of the policy). If that date is unavailable, then the policy issue date may be used.

Data Item # 12

Name: Smoker Status

Length: 1

Description: This field represents the current smoker status of the coverage.

Reporting Instructions:

- Acceptable values are as follows:
 - 0 = Unknown
 - 1 = No tobacco usage
 - 2 = Nonsmoker
 - 3 = Cigarette smoker
 - 4 = Tobacco user
- If the company cannot distinguish between 1 and 2, then 2 should be used.
- If the company cannot distinguish between 3 and 4, then 4 should be used.
- The smoker status populated in this field should be the smoker status upon which the premium amount is based. Since some companies re-underwrite policies in certain situations after issue (e.g., changing smoker status from smoker to nonsmoker), this field may not always be consistent from one reporting year to the next.
- For the 2021 reporting year, VM-51 described this field as smoker status at issue, so the requirements have changed for the 2022 reporting year.

Data Item # 13

Name: Preferred Class Structure Indicator

Length: 1

Consistent Year over Year

Description: This field is used to indicate whether the policy segment was issued as a product with one or more preferred classes. This class structure has at least one preferred class and a residual standard class.

Reporting Instructions:

- Acceptable values are as follows:
 - 0 = If no reliable information on multiple preferred and standard classes is available or if the policy segment was issued substandard or if there were no multiple preferred and standard classes available for this policy segment or if preferred information is unknown.
 - 1 = If this policy was issued in one of the available multiple preferred and standard classes for this policy segment.
- The minimum number of classes in a preferred class structure is 2. For nonsmokers, these would be preferred nonsmoker and standard nonsmoker. For smokers, these would be preferred smoker and standard smoker.
- Standard (residual) smokers and nonsmokers should have a preferred class structure indicator of 1 if the policy was issued in one of the company's available multiple preferred and standard classes.
- VM-51 indicates that records coded as substandard should have a preferred class structure indicator of 0. This is a situation where the guidance provided by the Valuation Manual may vary from actual company practices, since some companies have a practice of issuing a flat extra on an otherwise preferred individual. In this situation, the NAIC will accept a preferred class structure indicator of 1 and a substandard code of 1.
 - Example: As a result of medical underwriting, the insured falls into a preferred risk class, however this individual has a hobby of flying a private plane. The company may choose to add a flat extra due to the risky avocation.

Data Item # 14

Name: Number of Classes in Nonsmoker Preferred Class Structure

Length: 1

Consistent Year over Year

Description: If the company is offering multiple nonsmoker preferred and standard classes for this product, enter the number of classes available at the time of issue.

Reporting Instructions:

- The number of classes in a preferred class structure must be at least 2 (preferred and standard) and can be as many as 9.
- For this data item, "nonsmoker" implies either "Nonsmoker" or "No Tobacco Usage."
- If the Preferred Class Structure Indicator (Item #13) is 0, this field should be blank.
- If Smoker Status (Item #12) indicates Unknown (0), Cigarette Smoker (3), or Tobacco User (4) then this field should be blank.

Data Item # 15

Name: Nonsmoker Preferred Class

Length: 1

Consistent Year over Year

Description: If this policy segment was issued as one of multiple nonsmoker preferred and standard classes, then identify which preferred or standard class was assigned to the policy segment.

Reporting Instructions:

- Classes are numbered 1 through 9 with 1 being the best preferred class. This number cannot be greater than the number identified in Data Item #14.
- For this data item, “nonsmoker” implies either “Nonsmoker” or “No Tobacco Usage.”
- If the Preferred Class Structure Indicator (Item #13) is 0 then this field should be blank.
- If Smoker Status (Item #12) indicates Unknown (0), Cigarette Smoker (3), or Tobacco User (4) then this field should be blank.

Data Item # 16

Name: Number of classes in Smoker Preferred Class Structure

Length: 1

Consistent Year over Year

Description: If the company is offering multiple smoker preferred and standard classes for this product, enter the number of classes available at the time of issue.

Reporting Instructions:

- The number of classes in a preferred class structure must be at least 2 (preferred and standard) and can be as many as 9.
- For this data item, “smoker” implies either “Cigarette smoker” or “Tobacco User.”
- If the Preferred Class Structure Indicator (Item #13) is 0 then this field should be blank.
- If Smoker Status (Data Item #12) indicates Unknown (0), No tobacco usage (1), or Nonsmoker (2) then this field should be blank.

Data Item # 17

Name: Smoker Preferred Class

Length: 1

Consistent Year over Year

Description: If this policy segment was issued as one of multiple smoker preferred and standard classes, then identify which preferred class.

Reporting Instructions:

- Classes are numbered 1 through 9 with 1 being the best preferred class. This number cannot be greater than the number identified in Data Item #16.
- For this data item, “smoker” implies either “Cigarette smoker” or “Tobacco User.”
- If the Preferred Class Structure Indicator (Item #13) is 0 then this field should be blank.
- If Smoker Status (Item #12) indicates Unknown (0), No tobacco usage (1), or Nonsmoker (2) then this field should be blank.

Data Item #18

Name: Type of Underwriting Requirements

Length: 2

Consistent Year over Year

Description: Indicate the type of underwriting that was performed at the issue of this policy segment.

Reporting Instructions:

- Acceptable values are as follows:
 - 01 = Underwritten but unknown whether fluid was collected
 - 02 = Underwritten with no fluid collection (this would include accelerated underwriting)
 - 03 = Underwritten with fluid collected
 - 06 = Term Conversion
 - 07 = Group Conversion
 - 09 = Not Underwritten
 - 99 = Unknown or Unable to Subdivide
- In the case of coverage purchased with dividends (PUA & OYT) the underwriting type should be the same as the base policy.
- This field **must contain leading zeros** where applicable.
- Please note the following types of business are currently excluded from this data collection: Simplified issue, guaranteed issue, worksite, individually solicited group life, direct response, final expense, pre-need, home service, and COLI/BOLI/CHOLI.

Data Item # 19

Name: Substandard Indicator

Length: 1

Consistent Year over Year

Description: This field identifies whether the policy segment was issued as substandard.

Reporting Instructions:

- Acceptable values are as follows:
 - 0 = Policy segment is not substandard
 - 1 = Policy segment is substandard
 - 2 = Policy segment is uninsurable
- Per VM-51 Section 2.E, submission of substandard policy segments is optional.
- If substandard coverages are included in the data file, they must be identified as substandard or uninsurable.
- If substandard coverages are excluded from the data file, they will need to be identified in the reconciliation between the data file and the company's Annual Statement data.

Data Item # 20

Name: Plan

Length: 3

Consistent Year over Year (Except in the case of Extended Term or Reduced Paid Up)

Description: This field is used to identify the type of coverage represented by each policy segment.

Reporting Instructions:

- There is an extensive list of plans to choose from (see file layout for defined values).
- All values **must contain a leading zero** where appropriate.
- If none of the pre-defined plans is appropriate, the company can define a custom plan code. If a custom plan code is used, the questionnaire in VM-51 Appendix 3 (Additional Plan Code Form) must be filled out and submitted via the company's FTP site.
- In the event the policy segment was issued with a secondary guarantee that is now expired or no longer in force, the plan should reflect how the policy segment was originally issued.
- Please note that the 2022 VM-51 specifically excludes spouse and/or children covered under family policies or riders.
- The NAIC has defined two new plan codes to identify coverages purchased with dividends. These plan codes are expected to be adopted for the 2023 *Valuation Manual*. We are asking companies to use the new plan codes on a voluntary basis for the 2022 data collection. *196 – Paid Up Additions; 197 – One Year Term.*

Data Item # 21

Name: In-force Indicator

Length: 1

Description: This field identifies whether the policy segment was in-force at the end of the calendar year of observation.

Reporting Instructions:

- Acceptable values are as follows:
 - 0 = Policy segment was not in force
 - 1 = Policy segment was in force

Data Item # 22

Name: Face Amount of Insurance at Issue

Maximum Length: 12

Format: Round to nearest dollar

Consistent Year over Year

Description: This field is the original face amount of each policy segment at the time of issue **of that segment.**

Reporting Instructions:

- For plans where the death benefit provides payment of cash value in addition to the face amount (e.g., UL option B), do not include the cash value.
- In the event the face amount at issue is unavailable (due to acquisition, legacy system, etc.) the face amount at beginning of year should be used.
- Special Consideration for Coverages Purchased with Dividends (PUA or OYT):
 - These coverages may be rolled together into one segment or identified separately for each year.
 - If the coverages are being rolled together, the face amount at issue should be the face amount that was issued for the first of these coverages.
 - If the first face amount issued is unavailable, the face amount at beginning of year may be used.

Data Item # 23

Name: Face Amount of Insurance at the Beginning of Observation Year

Maximum Length: 12

Format: Round to nearest dollar

Description: This field represents the face amount of the policy segment on January 1 of the observation year.

Reporting Instructions:

- If the policy was issued during the observation year, this field should be blank.
- For plans where the death benefit provides payment of cash value in addition to the face amount (e.g., UL option B), do not include the cash value.
- Do not include extra amounts attributable to 7702 corridors.

Data Item # 24

Name: Face Amount of Insurance at the End of the Observation Year

Maximum Length: 12

Format: Round to nearest dollar

Description: If the policy segment is in force at December 31st of the observation year then this field represents the face amount of the policy segment on that date. If the policy segment is terminated, then this represents the face amount of the policy segment at termination.

Reporting Instructions:

- If the face amount of the policy segment at termination is unavailable, this field may be left blank.
- For plans where the death benefit provides payment of cash value in addition to the face amount (e.g., UL option B), do not include the cash value.
- Do not include extra amounts attributable to 7702 corridors.

Data Item # 25

Name: Death Claim Amount

Maximum Length: 12

Format: Round to nearest dollar

Description: If the policy segment is terminated and the cause of termination is death or death due to Covid-19, this field represents the face amount that was paid out as death benefit.

Reporting Instructions:

- If the policy segment is in force, this field should be blank.
- If the policy segment is terminated but the cause of termination is not death, this field should be blank.
- For plans where the death benefit provides payment of cash value in addition to the face amount (e.g., UL option B), do not include the cash value.
- Do not include extra amounts attributable to 7702 corridors.
- Special Consideration for Joint Life Policies:

- For first to die policies, code both insureds as terminated due to death (or death due to covid-19).
- For first to die policies, enter the death claim amount only on the insured who died. If the company cannot determine which insured died, then code the death claim amount on segment 1 only.
- For second to die policies, in the event both insureds died in the same year, only populate the death claim amount on the second insured to die.

Data Item # 26

Name: Termination Reported Date

Length: 8

Format: YYYYMMDD

Description: If the policy segment is terminated, this represents the date the company was notified of the termination.

Reporting Instructions:

- If the policy segment is in force, this field should be blank.
- If the cause of termination is lapse due to non-payment of premium, enter the last premium paid to date.

Data Item # 27

Name: Actual Termination Date

Length: 8

Format: YYYYMMDD

Description: This field represents the date coverage ended.

Reporting Instructions:

- If the policy segment is in force, this field should be blank.
- If the policy segment is terminated and the cause of termination is death or death due to COVID-19, this represents the date of death.
- If the cause of termination is lapse due to non-payment of premium, enter the last premium paid to date.

Data Item # 28

Name: Cause of Termination

Length: 2

Description: This field indicates the reason coverage terminated.

Reporting Instructions:

- Acceptable values are as follows:
 - 00 = Termination cause unknown
 - 01 = Reduced paid-up
 - 02 = Extended term
 - 03 = Voluntary termination (unable to distinguish between 01, 02, 07, 09, 10, 11, 13)
 - 04 = Death
 - 05 = Death Due to COVID-19*
 - 07 = 1035 exchange

09 = Term conversion – unknown whether attained age or original age
 10 = Term conversion – attained age
 11 = Term conversion – original age
 12 = Coverage expired or contract reached end of mortality table
 13 = Surrendered for full cash value
 14 = Lapse (other than to Reduced Paid Up or Extended Term)
 15 = Termination via payment of a discounted face amount while still alive, pursuant to an accelerated death benefit provision

* The NAIC has identified a new cause of death to capture deaths due to Covid-19. This new cause of death is expected to be adopted for the 2023 *Valuation Manual*. We are asking companies to use this new cause of death on a voluntary basis for the 2022 data collection.

- If the policy segment is in force, this field should be blank.
- If the policy segment is terminated, indicate the cause of termination from the list of acceptable values.
- Note: this field **must contain leading zeros** where applicable.
- Special Consideration for term riders attached to permanent plans:
 In the case where the base coverage is surrendered for cash value, the term rider should be coded as a lapse. Similarly, if the base coverage terminates due to death and the rider is on a different insured, the rider should be coded as a lapse.

Data Item # 29

Name: Annualized Premium at Issue

Maximum Length: 10

Format: Round to nearest dollar

Consistent Year over Year

Description: This field represents the annualized premium as of the policy issue date.

Reporting Instructions:

- In the case of single premium policies, enter the single premium.
- For all other modes this field is calculated as the modal or billed premium at issue multiplied by the number of modes in the year.
- This field should only be populated on the base segment of the policy except in the case of some specific level term segments.
- For segments with plan codes 021 – 027, 041 – 045, or 211 – 271, populate this premium even if it is not the base segment.
- The billed premium should include any policy fees and modal loads.
- The amount populated on the base segment should be the total premium for the policy less the premium for any term segment identified separately.

Data Item # 30

Name: Annualized Premium at the Beginning of Observation Year

Maximum Length: 10

Format: Round to nearest dollar

Description: This field represents the annualized premium as of the beginning of the observation year.

Reporting Instructions:

- This field is calculated as the modal or billed premium at the beginning of the observation year multiplied by the number of modes in the year.
- This field should only be populated on the base segment of the policy except in the case of some specific level term segments.
- For segments with plan codes 021 – 027, 041 – 045, or 211 – 271, populate this premium even if it is not the base segment.
- The billed premium should include any policy fees and modal loads.
- The amount populated on the base segment should be the total premium for the policy less the premium for any term segment identified separately.
- If the policy segment was issued in the observation year, this field should be blank.

Data Item # 31

Name: Annualized Premium at the End of Observation, if available. Otherwise Annualized Premium as of Year/Actual Termination Date

Maximum Length: 10

Format: Round to nearest dollar

Description: If the policy is in-force, this field represents the annualized premium as of the end of the observation year. If the policy is terminated, this field represents the annualized premium as of the actual termination date.

Reporting Instructions:

- This field is calculated as the modal or billed premium multiplied by the number of modes in the year.
- This field should only be populated on the base segment of the policy except in the case of some specific level term segments.
- For segments with plan codes 021 – 027, 041 – 045, or 211 – 271, populate this premium even if it is not the base segment.
- The billed premium should include any policy fees and modal loads.
- The amount populated on the base segment should be the total premium for the policy less the premium for any term segment identified separately.

Data Item # 32

Name: Premium Mode

Length: 2

Description: This field represents the frequency of premium payments.

Reporting Instructions:

- Acceptable values are as follows:
 - 01 = Annual
 - 02 = Semiannual
 - 03 = Quarterly
 - 04 = Monthly Bill Sent

- 05 = Monthly Automatic Payment
- 06 = Semimonthly
- 07 = Biweekly
- 08 = Weekly
- 09 = Single Premium
- 10 = Other / Unknown

- This field **must contain a leading zero** where applicable.

Data items 33 – 46 are only to be populated if the policy segment is ULSG (plan codes 071 – 078) or VLSG (plan codes 090 – 096) and only for the base segment of the policy. These fields should be left blank if unknown.

Data Item # 33

Name: Cumulative Premium Collected as of the Beginning of Observation Year

Maximum Length: 10

Format: Round to nearest dollar

Description: This field is the cumulative premium collected since issue as of the beginning of the observation year. For policy segments issued in the observation year, this field should be blank.

Data Item # 34

Name: Cumulative Premium Collected as of the End of Observation Year if available. Otherwise Cumulative Premium collected as of Actual Termination Date

Maximum Length: 10

Format: Round to nearest dollar

Description: If the policy segment is in force, this field is the cumulative premium collected since issue as of the end of the observation year. If the policy segment is terminated, this field is the cumulative premium collected since issue as of the actual termination date.

Data Item # 35

Name: ULSG / VLSG Premium Type

Length: 2

Description: This field represents the type of premium that is supporting the secondary guarantee on this policy segment.

Reporting Instructions:

- Acceptable values are as follows:
 - 00 = Unknown
 - 01 = Single Premium
 - 02 = ULSG / VLSG whole life level premium
 - 03 = Lower premium (term like)
 - 04 = Other

Data Item # 36

Name: Type of Secondary Guarantee

Length: 2

Consistent Year over Year

Description: This field represents the type of secondary guarantee on this policy segment.

Reporting Instructions:

- Acceptable values are as follows:
 - 00 = Unknown
 - 01 = Cumulative Premium without Interest (Single Tier)
 - 02 = Cumulative Premium without interest (Multiple Tier)
 - 03 = Cumulative Premium without Interest (Other)
 - 04 = Cumulative Premium with Interest (Single Tier)
 - 05 = Cumulative Premium with interest (Multiple Tier)
 - 06 = Cumulative Premium with Interest (Other)
 - 11 = Shadow Account (Single Tier)
 - 12 = Shadow Account (Multiple Tier)
 - 13 = Shadow Account (Other)
 - 21 = Both Cumulative Premium without Interest and Shadow Account
 - 22 = Both Cumulative Premium with Interest and Shadow Account
 - 23 = Other, not involving either Cumulative Premium or Shadow Account
- This field **must contain a leading zero** where applicable.

Data Item # 37

Name: Cumulative Minimum Premium as of the Beginning of Observation Year

Maximum Length: 10

Format: Round to nearest dollar

Description: For policy segments with a cumulative minimum premium secondary guarantee, this field is the cumulative minimum premium including applicable interest for all policy years as of the beginning of the observation year.

Reporting Instructions:

- For policy segments where the secondary guarantee is unknown or is a shadow account, this field should be blank.
- If the policy segment was issued during the observation year, this field should be blank.

Data Item # 38

Name: Cumulative Minimum Premium as of the End of Observation Year / Actual Termination Date

Maximum Length: 10

Format: Round to nearest dollar

Description: For policy segments with a cumulative premium secondary guarantee, this field is the cumulative minimum premium including applicable interest for all policy years as of the end of the observation year.

Reporting Instructions:

- For policy segments where the secondary guarantee is unknown or is a shadow account, this field should be blank.

- For in force policy segments, this field is the cumulative minimum premium for all policy years as of the end of the observation year.
- For terminated policy segments with, this field is the cumulative minimum premium for all policy years as of the actual termination date.

Data Item # 39

Name: Shadow Account Amount at the Beginning of Observation Year

Maximum Length: 10

Format: Round to nearest dollar

Description: For policy segments with a shadow account, this field is the value of the shadow account as of the beginning of the observation year.

Reporting Instructions:

- For policy segments where the secondary guarantee is unknown or is a cumulative premium guarantee, this field should be blank.
- The value of the shadow account can be positive, zero, or negative.
- If the policy segment was issued during the observation year, the field should be blank.

Data Item # 40

Name: Shadow Account Amount at the End of Observation Year / Actual Termination Date

Maximum Length: 10

Format: Round to nearest dollar

Description: For policy segments with a shadow account, this field is the value of the shadow account as of the end of the observation year.

Reporting Instructions:

- For policy segments where the secondary guarantee is unknown or is a cumulative premium guarantee, this field should be blank.
- For in-force policy segments, this field is the value of the shadow account as of the end of the observation year.
- For terminated policy segments, this field is the value of the shadow account as of the actual termination date.
- The value of the shadow account can be positive, zero, or negative.

Data Item # 41

Name: Account Value at the Beginning of Observation Year

Maximum Length: 10

Format: Round to nearest dollar

Description: This field is the policy account value, gross of any loan, at the beginning of the observation year.

Reporting Instructions:

- The policy account value can be positive, zero, or negative.
- For policy segments issued during the observation year, this field should be blank.

Data Item # 42

Name: Account Value at the end of Observation Year / Actual Termination Date

Maximum Length: 10

Format: Round to nearest dollar

Description: This field is the policy account value, gross of any loan, at the end of the observation year.

Reporting Instructions:

- For in force policy segments, this field is the policy account value at the end of the observation year.
- For terminated policy segments, this field is the policy account value at the actual termination date.
- The policy account value can be positive, zero, or negative.

Data Item # 43

Name: Amount of Surrender Charge at the Beginning of Observation Year

Maximum Length: 10

Format: Round to nearest dollar

Description: This field is the policy surrender charge value at the beginning of the observation year.

Reporting Instructions:

- For policy segments issued during the observation year, this field should be blank.

Data Item # 44

Name: Amount of Surrender Charge at the End of Observation Year / Actual Termination Date

Maximum Length: 10

Format: Round to nearest dollar

Description: This field is the policy surrender charge value at the end of the observation year.

Reporting Instructions:

- For in force policy segments, this field is the policy surrender charge value at the end of the observation year.
- For terminated policy segments, this field is the policy surrender charge value at the actual termination date.

Data Item # 45

Name: Operative Secondary Guarantee at the Beginning of Observation year

Length: 2

Description: This field identifies whether a secondary guarantee is in effect for a policy at the beginning of the observation year.

Reporting Instructions:

- Acceptable values are as follows:
 - 00 = Unknown whether the secondary guarantee is in effect
 - 01 = Secondary guarantee is not in effect
 - 02 = Secondary guarantee is in effect
 - 03 = All secondary guarantees have expired
- The term "in effect" is defined as whether the policy is being supported by the secondary guarantee (i.e. the policy would have lapsed without the secondary guarantee).
- For policies issued in the observation year, this field should be blank.

Data Item # 46

Name: Operative Secondary Guarantee at the End of Observation Year / Actual Termination Date

Length: 2

Description: This field identifies whether a secondary guarantee is in effect for a policy at the end of the observation year.

Reporting Instructions:

- Acceptable values are as follows:
 - 00 = Unknown whether the secondary guarantee is in effect
 - 01 = Secondary guarantee is not in effect
 - 02 = Secondary guarantee is in effect
 - 03 = All secondary guarantees have expired
- For terminated policy segments that were issued with a secondary guarantee, this field represents whether that secondary guarantee was in effect as of the actual termination date.
- The term “in effect” is defined as whether the policy is/was being supported by the secondary guarantee (i.e. the policy would have lapsed without the secondary guarantee).

Data Item # 47

Name: State of Domicile

Length: 2

Description: This field represents the **resident state of the policy owner**.

Reporting Instructions:

- Use standard two-letter state abbreviation codes.
- Acceptable values are as follows:
 - AK, AL, AR, AZ, CA, CO, CT, DC, DE, FL, GA, HI, IA, ID, IL, IN, KS, KY, LA, MA, MD, ME, MI, MN, MO, MS, MT, NC, ND, NE, NH, NJ, NM, NV, NY, OH, OK, OR, PA, RI, SC, SD, TN, TX, UT, VA, VI, VT, WA, WI, WV, WY, AS, GU, MP, PR, NA, OT
- If the policy owner resides outside the US then this field should be blank.

Draft: 7/28/22

Life Actuarial (A) Task Force
Virtual Meeting
July 7, 2022

The Life Actuarial (A) Task Force met July 7, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Mark Fowler represented by Jennifer Li (AL); Ricardo Lara represented by Ted Chang, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and Ben Slutsker (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Kevin Clarkson (NJ); Adrienne A. Harris represented by Bill Carmello and Michael Cebula (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); and Michael Humphreys represented by Steve Boston (PA).

1. Exposed the 2022 HMI/FMI Scale Development Recommendation

Marianne Purushotham (Society of Actuaries [SOA] Preferred Mortality Project Oversight Group [POG]) presented the 2022 Historical Mortality Improvement (HMI)/Future Mortality Improvement (FMI) Scale Development Recommendations. She said the recommendations include: 1) how to reflect the impacts of COVID-19 on the HMI and the FMI; 2) the FMI scale margin; and 3) the HMI and FMI smoothing methods. She said the POG worked closely with other industry groups to determine consistent principles and guidance for developing valuation mortality. She said the groups agreed that the valuation mortality should reflect the expected recurring, ongoing mortality level over the full reserve projection period. She said the POG also sought perspectives on the impact of COVID-19 from other organizations from across the globe with similar interests. She said the POG also considered principles specific to life insurance, including the understanding that there is an explicit margin built into the recommendation because insured population mortality is lower than the general population mortality used as the basis for the development of the mortality improvement recommendation.

Ms. Purushotham said the recommendation for the HMI uses the standard method carried over from previous years but assumes zero improvement in 2020 over 2019. She said the recommendation results in a 1.4% valuation mortality increase in 2021 and a 0.4% valuation mortality increase in 2022. She said the recommendation for the loaded FMI recommendation includes a 25% margin for uncertainty, to which a temporary margin for COVID-19 is added. The COVID-19 margin starts at 25% and grades to zero over five years. It was noted that the recommended approach for smoothing the HMI and FMI rate is the same as was used in previous years.

Ms. Purushotham said a model office was used to estimate the reserve impact of the HMI and FMI recommendations on universal life with secondary guarantees (ULSG) test policies. She said the model office showed the recommendations result in a 2.7% decrease in the deterministic reserve. Mr. Reedy asked why the decrease differed from the 10% decrease shown in the June 23 mortality improvement presentation. Ms. Purushotham said the baseline for the current presentation includes the 2021 HMI recommendation—2022 is the first year for an FMI recommendation—while the baseline for the June 23 mortality improvement presentation does not include the 2021 HMI. Mr. Cebula expressed concern that the recommendation results in a decrease in the deterministic reserve at a time when there is a new cause of death for which long-term effects are unknown. Ms. Purushotham said the decrease reflects the best estimate of mortality over the projection period. She said the best estimate not only reflects COVID-19 but also reflects positive effects from medical advancements.

Mr. Yanacheak made a motion, seconded by Mr. Clarkson, to expose the mortality improvement recommendations (Attachment Two-A) for a 21-day public comment period ending July 27. The motion passed unanimously.

Having no further business, the Life Actuarial (A) Task Force adjourned.

Items to be addressed in 2022 scale recommendation

Develop HMI and FMI scales for use in 2022 valuation year.

The 2022 recommendations include:

- ▣ Reflecting COVID-19 impacts for HMI and FMI
- ▣ FMI margin
- ▣ HMI and FMI scale smoothing methods

Mortality/MI Industry Group - COVID-19 Impact

- ▣ Group representing members of the American Academy of Actuaries (“Academy”), the Society of Actuaries, and members of the National Association of Insurance Commissioners (NAIC), Life Actuarial (A) Task Force (LATF)
- ▣ Convened in January 2022
- ▣ Focused on developing set of consistent principles to be considered in reflecting the impact of COVID-19 in mortality and longevity valuation work.

Industry Group Principles

Valuation mortality assumption should represent:

“the expected recurring, ongoing mortality level” over the full period of the reserve projection

Therefore, the basic mortality/MI assumption

- Should not reflect the shock of the pandemic on mortality
- Should reflect expected ongoing impacts (assuming a longer term perspective)

Principles Consistent With International Views on Mortality Projection and Impact of COVID-19

- Social Security Administration 2022 Trustees Report
 - “Projected death rates for years after 2023 are unchanged from the levels that would have been projected in the absence of the pandemic, under the assumption that increased deaths from the residual effects of living through the pandemic (both physiological and psychological) will be roughly offset by decreased deaths that instead happened sooner (during the pandemic).”
- Continuous Mortality Investigation (CMI) Mortality Projections Committee
 - “If we gave full weight to 2020 data ... the reduction in life expectancy would have been in excess of what most users of the model would consider reasonable.”
 - CMI_2021 incorporates mortality data to 31 December 2021
 - 2020 and 2021 data is given 0% weight in the Core version – Consistent with approach for CMI_2020 supported by consultation – Data for 2020 and 2021 is unlikely to be indicative of future trends – Using 100% weight for 2020 and 2021 data would lead to excessive falls in life expectancy
- Mortality projections for Social Security Programs in Canada (Actuarial Studies No. 22 and 23)

Additional Considerations

- Insured population mortality materially lower than general population mortality
 - Insured population generally in higher socioeconomic category than general population
 - Lower mortality and higher mortality improvement seen in higher socioeconomic categories (implicit margin in our recommendations)
- MI improvement scale annual updates should not create reserve volatility
- Individual companies should consider their own business and make appropriate additional adjustments

HMI Recommendation: Apply Standard Methodology With Discounted 2020 Impact (Assume Zero Improvement for 2020)

- ❑ Does not include shock pandemic impact
- ❑ Assumption that in the absence of COVID-19, there would be continued improvement at lower levels (consistent with international current views)
- ❑ This will continue to be evaluated as data becomes available each year

HMI 2022 Recommended Scale

HMI 2022 Recommendation

% Increase in Valuation Mortality Rates (2021 and 2022)

Valuation mortality rates increased by 1.4% in 2021 and will increase by an additional 0.4% in 2022 for most ages.

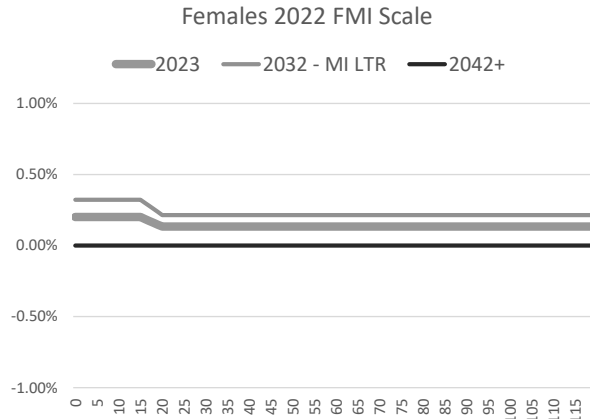

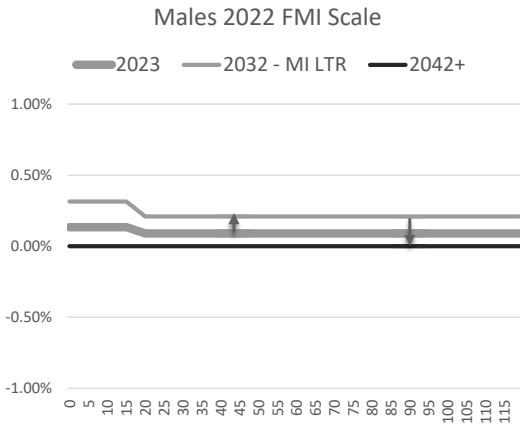

FMI Recommendation:

Apply approved methodology with additional temporary COVID-19 margin

- Basic FMI
 - Grade from recent HMI to long-term (LT) MI level based on SSA Alt 2 (2022 Trustees Report)
- Loaded FMI
 - Includes 25% margin for uncertainty around future trend
 - Plus additional margin for 5 years for uncertainty around COVID-19 ongoing impacts
 - Will be revisited each year as data becomes available

FMI 2022 Recommended Scale (with margins)

Approach for Margin for MI rates

- ▣ General Margin
 - Reduce improvement by 25 %
 - Increase deterioration by 25 %
- ▣ COVID-19 Margin
 - 25% grading down to zero over 5 years

Approach for Smoothing (HMI and FMI)

- By age
- Use same approach for 2022 as past years
 - ▣ Ages 0-15 = 1.5 x adult average improvement/deterioration
 - ▣ Ages 16-20 = Grade to adult average
 - ▣ Ages 21-84 = Assumed adult average
 - ▣ Ages 85-94 = Grade to ultimate level of at 95
 - ▣ Ages 95+ = 0.1%

Reserve Impact - NAIC Model Office

- Universal Life with Secondary Guarantees (ULSG) focus—long-duration product, larger potential for reserve reduction
 - ▣ Model office and assumptions same as used in the yearly renewable term (YRT) representative model analysis
 - ▣ Lifetime shadow account secondary guarantee
 - ▣ No reinsurance in the model
- Combined model office

Component	Values
Issue ages	Decennial issue ages 30 – 70
Gender	Male Female
Risk classes	Preferred non-tobacco Standard non-tobacco Standard tobacco
Face bands	Low (\$250,000) High (\$1,000,000)

Reserve Impact Results

	\$\\$ Deterministic Reserve	% chg in starting reserve
Baseline: HMI: 2021 HMI recommendation FMI: no FMI	1,895,591	
Illustrative Only: HMI: include full COVID shock impact FMI: no FMI	2,029,821	+ 7.1%
HMI: include 2020 with 0 trend, removes pandemic shock FMI: no FMI	1,923,953	+1.5%
2022 HMI and FMI Recommendation: HMI: include 2020 with 0 trend, removes pandemic shock FMI: grade to LTR with margin for general uncertainty <u>plus</u> margin for uncertainty in COVID impact	1,843,976	-2.7%

2023 Plan

- ❑ Revisit historical component calculation method in light of recent and expected experience
- ❑ Insured vs. general population MI recommendation
- ❑ Revisit smoothing across narrower age bands and margin structure

Appendix

NAIC Model Office: Background Information

FMI - Reserve Impact Estimates NAIC Model Office

- Universal Life with Secondary Guarantees (ULSG) focus—long-duration product, larger potential for reserve reduction
 - ▣ Model office and assumptions same as used in the YRT representative model analysis
 - ▣ Lifetime shadow account secondary guarantee
 - ▣ No reinsurance in the model

- Combined model office

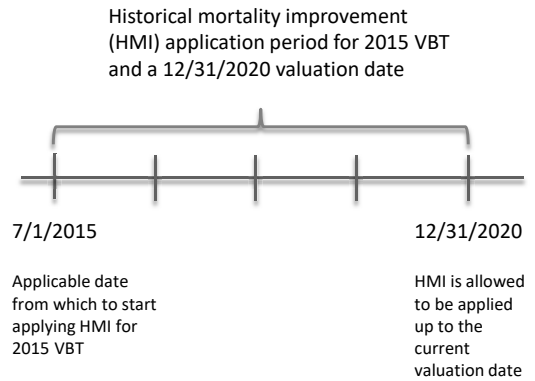

Component	Values
Issue ages	Decennial issue ages 30 – 70
Gender	Male Female
Risk classes	Preferred non-tobacco Standard non-tobacco Standard tobacco
Face bands	Low (\$250,000) High (\$1,000,000)

Reserve Impact Estimates

Future Mortality Improvement Assumption Model Implementation

- The 2021 and prior versions of VM-20 prohibited including FMI in the calculation of deterministic and stochastic reserves, while allowing the mortality assumption to be improved up to the valuation date using a historical mortality improvement (HMI) assumption developed by the MILWG
- An **“exact” approach** to including FMI in the calculation of deterministic and stochastic reserves would utilize the MILWG’s HMI assumption to bring the mortality table up to the valuation date and then apply the separate FMI assumptions beyond the valuation date

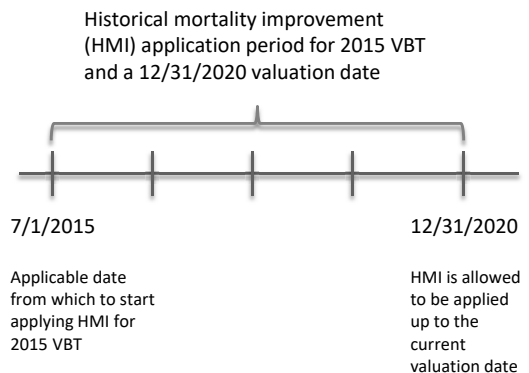

Reserve Impact Estimates

Future Mortality Improvement Assumption Model Implementation

A modeling simplification was employed that utilized the new MILWG FMI assumption as both HMI and FMI in the deterministic reserve projection.

This simplification allows for the impact of including FMI in current and future deterministic reserve calculations to be quantified.

Reserve Impact Estimates

ULSG Model Office Results

- Baseline reserves—no FMI
- Best estimate—reserves with FMI at best estimate level
- Margin 25%—FMI at best estimate level with 25% reduction across all gender/ages
- Margin 35%—FMI at best estimate level with 35% reduction across all gender/ages

Draft: 7/28/22

Life Actuarial (A) Task Force
Virtual Meeting
June 30, 2022

The Life Actuarial (A) Task Force met June 30, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ted Chang, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and Ben Slutsker (MN); Chlora Lindley-Myers represented by William Leung (MO); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); and Michael Humphreys represented by Steve Boston (PA).

1. Adopted Amendment Proposal 2022-04

Pat Allison (NAIC) said amendment proposal 2022-04 (Attachment Three-A) addresses the transition from the London Interbank Offered Rate (LIBOR) to the Secured Overnight Financing Rate (SOFR) to calculate short-term and long-term swap rates that will be prescribed for principle-based reserving (PBR) valuations in 2023 and later. She noted that the NAIC staff recommendation for addressing the LIBOR to SOFR transition for the remainder of 2022 will be discussed on a later call. She said amendment proposal 2022-04 offers two options for addressing short-term and two options for long-term swap spreads. She said that in each case option A allows the swap data to come from a single nationally recognized source, and option B requires the averaging of data from at least two nationally recognized sources.

Ms. Allison said option A for current swap spreads requires the companies to obtain the current swap spreads from a nationally recognized source. She said small companies that may not have the resources to obtain the data would be able to request the data from the NAIC. Option B for current swap spreads calls for NAIC staff to obtain the swap rates and subtract the corresponding U.S. Treasury rates to obtain current swap spreads and publish the spreads on the NAIC website. She said option A for long-term swap spreads allows the NAIC to obtain data from a single source, apply the required method, and publish the rates. Option B requires averaging of long-term swap data from at least two nationally recognized sources, applying the required method, and publishing the rates.

Alan Routhenstein (American Academy of Actuaries—Academy) said the Academy comment letter (Attachment Three-B) expresses its preference for option A. He said the Academy believes the results from using option A will not significantly differ from those obtained using option B. Ms. Allison said the Academy's conclusion is consistent with the observations from NAIC research. She said for long-term swaps, NAIC staff recommend going with option B to ensure the supplier data that is posted on the NAIC website cannot be reverse engineered. She said NAIC staff are indifferent to whether option A or option B is used for current swap spreads.

Ms. Allison said the exposure asked for comments on whether the word “companies” in the option A language proposed for Appendix 2.F of VM-20, Requirements for Principle-Based Reserves for Life Products, should be replaced with the phrase “the appointed actuary.” Mr. Routhenstein said the Academy recommends using the phrase “the company,” which is consistently used throughout the *Valuation Manual*. Ms. Allison said a letter from Linda Lankowski (Risk & Regulatory Consulting LLC) supports the Academy recommendation. Mr. Carmello

expressed his preference for option B for both the current and long-term swaps. Mr. Routhenstein said the Academy is comfortable with going with option B for both.

Mr. Carmello made a motion, seconded by Ms. Eom, to adopt amendment proposal 2022-04 using option B for both the current and long-term swaps and the term “the company” in Appendix 2.F of VM-20. The motion was passed unanimously.

2. Discussed the ACLI Alternative Equity Calibration

Brian Bayerle (American Council of Life Insurers—ACLI) presented the alternative equity calibration (Attachment Three-C) that the ACLI recommends be included as optional run #6 in the economic scenario generator (ESG) field test. He noted that the ACLI alternative calibration is like the Conning H2 calibration approach. Mr. Boerner asked if the calibration is ready to be converted to field test scenarios. Mr. Bayerle said the calibration has been posted to the ESG SharePoint site, reviewed by Conning, and is ready for scenario conversion. Dan Finn (Conning) said the scenarios should be available in a week. Mr. Chupp asked if setting the short rate multiplier parameter to zero, as noted on slide 3, means there is no linkage to U.S. Treasury rates. Mr. Bayerle confirmed that the zero indicates that the equity rates are independent of the U.S. Treasury rates.

Having no further business, the Life Actuarial (A) Task Force adjourned.

Life Actuarial (A) Task Force
June 9, 2022
Updated Exposure of APF 2022-04

Swap Spreads and London Inter-Bank Offered Rate (LIBOR)
Transition to the Secured Overnight Financing Rate (SOFR)

This exposure of APF 2022-04 provides two options for moving forward with the transition to SOFR. Option A is applicable if the availability of SOFR data is limited to a single data source. Option B is applicable if SOFR data is available from multiple data sources.

Parties are also asked to opine on whether the APF should use the word “companies” or the term “appointed actuary” in option A for VM-20 Appendix 2.F.

Note this revised APF is complemented by a May 26, 2022 memo from NAIC staff to LATF on a recommended replacement to LIBOR swap spreads effective [TBD, potentially June 30, 2022].

Please send comments to Reggie Mazyck @ RMazyck@NAIC.Org by close of business on June 21, 2022.

Dates: Received	Reviewed by Staff	Distributed	Considered
03/08/22	RM	03/08/22	03/10/22
Notes: APF 2022-04 exposed on 6/9			

**Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
 Amendment Proposal Form**

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:

Alan Routhenstein, on behalf of the American Academy of Actuaries’ Life Reserves Work Group, Annuity Reserves and Capital Work Group, and Variable Annuity Reserves and Capital Work Group

Pat Allison, NAIC staff

Title of the Issue:

Swap Spreads and London Inter-Bank Offered Rate (LIBOR) transition to the Secured Overnight Financing Rate (SOFR) - Updated VM-20 prescribed swap spreads guidance in light of the LIBOR transition to SOFR.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-20 Section 9.F.8.d, VM-20 Appendix 2.F, VM-20 Appendix 2.G
 January 1, 2022 NAIC *Valuation Manual*

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

Proposed edits to VM-20 for LIBOR transition to SOFR are shown in the attached Appendix

4. State the reason for the proposed amendment? (You may do this through an attachment.)
 - a. Bank regulators and a group of swap market participants have agreed that for interbank interest rate swaps executed after 2021, the floating rate needs to be based on an index other than LIBOR.
 - b. During 2021 the swap market evolved such that the definition of a standard n-year interest rate swap changed in January 2022 to be a SOFR swap (for which the floating rate is based on SOFR) from the historical LIBOR swap (for which the floating rate is LIBOR).
 - c. As a result, VM-20 instructions for how the NAIC will calculate and publish swap spreads needs to be updated for:
 - i. Current Benchmark swap spreads (as of each month end); and
 - ii. Long-Term Benchmark swap spreads (as of each quarter end)
 - d. The associated presentation provides further background and rationale for this proposal.

NAIC Staff Comments:

W:\National Meetings\2015\...\TF\LHA\

Appendix

Proposed amendments to VM-20 for APF 2022-04 on Swap Spreads and LIBOR transition to SOFR

VM-20 Section 9.F.8.d Procedure for Setting Prescribed Gross Asset Spreads.....:

- d. Interest rate swap spreads over Treasuries shall be prescribed by the NAIC for use throughout the cash-flow model wherever appropriate for transactions and operations including, but not limited to, purchase, sale, settlement, cash flows of derivative positions and reset of floating rate investments. A current and long-term swap spread curve shall be prescribed for year one and years four and after, respectively, with yearly grading in between. ~~The three month and six month points on the swap spread curves shall be the market observable values for these tenors. Currently, this shall be the corresponding London Interbank Offered Rate (LIBOR) spreads over Treasuries. When the NAIC determines LIBOR is no longer effective, the NAIC shall recommend a replacement to the Life Actuarial (A) Task Force which shall be effective upon adoption by the Task Force.~~
- i. The current prescribed swap spread curve shall be the Secured Overnight Financing Rate (SOFR) swap curve.
 - ii. The long term SOFR swap spread curve, given that the SOFR swap market did not emerge before late 2021 and that SOFR is an index for which there is no official data before April 2, 2018, shall be calculated based on 15 year moving averages of prescribed estimates of historical SOFR swap spreads for valuation dates prior to June 30, 2037.

Guidance Note: Actuarial judgment may be required in the use of prescribed swap spreads (for example, in the case where companies have a financial instrument with floating rate payments based on an index that is not prescribed by the NAIC [e.g., 1-month SOFR or 3-month LIBOR]).

VM-20 Appendix 2.F Current Benchmark Swap Spreads:

Option A – For use if the NAIC does not publish current benchmark swap spreads. Replace Section F with the language shown below.

F. Current Benchmark Swap Spreads

For tenors of 3 months, 6 months, and one year through 30 years, companies (the appointed actuary) shall use swap spread data determined as of the last business day of the month by maturity from a nationally recognized provider of this data.

Option B – For use if the NAIC publishes current benchmark swap spreads based on at least two data sources.

F. Current Benchmark Swap Spreads

1. For tenors of 3 months, 6 months, and one year ~~to~~ through 30 years, extract swap spread data determined as of the last business day of the month by maturity from at least two nationally recognized providers of this data. ~~For Bank of America data, If the data source provides swap rates rather than swap spreads, convert the swap rate for each maturity to a swap spread by subtracting the corresponding maturity Treasury yield from the swap rate. For JP Morgan, the swap spread is provided for each maturity.~~
2. Average the ~~Bank of America swap spread with the JP Morgan swap spreads~~ from the data sources by maturity determined as of the last business day of the month.
3. Publish the Current Benchmark Swap Spreads by maturity in a table.

[Drafting Note: The tables will be labeled to indicate they contain SOFR swap spreads.]

Guidance Note: 3-month and 6-month SOFR swap rates are defined herein as the fixed rate one party pays at the end of three months or six months in exchange for receiving at such time 3-month SOFR or 6-month SOFR, calculated on a compounded in arrears basis.

VM-20 Appendix 2.G Long-Term Benchmark Swap Spreads:**G. Long-Term Benchmark Swap Spreads _____****Option A**

1. Extract daily swap spread data over the prescribed observation period (rolling 15-year period) ending on the last business day of the quarter from a nationally recognized provider of this data. ~~For Bank of America data, If the data source provides swap rates rather than swap spreads, convert the daily swap rate for each maturity to a swap spread by subtracting the corresponding maturity Treasury yield from the swap rate.~~

Option B

1. Extract daily swap spread data over the prescribed observation period (rolling 15-year period) ending on the last business day of the quarter from at least two nationally recognized providers of this data. ~~For Bank of America data, If the data source provides swap rates rather than swap spreads, convert the daily swap rate for each maturity to a swap spread by subtracting the corresponding maturity~~

Treasury yield from the swap rate. ~~For JP Morgan, the daily swap spread is provided for each maturity.~~

2. For a valuation date during or after 2023 and before 2037, calculate SOFR swap spreads as follows for each business day on or after the effective date of the adoption by the Life Actuarial (A) Task Force of SOFR swap spreads as the replacement for swap spreads previously prescribed:
 - a. For each maturity “m” = 0.25, 0.5, 1 ... 30 years, and business day “u”:

$$\text{SOFR swap spread}(m,u) = \text{SOFR swap rate}(m,u) - \text{Treasury yield}(m,u).$$
3. For a valuation date during or after 2023 and before 2037, for each business day before the effective date of the adoption by the Life Actuarial (A) Task Force of SOFR swap spreads as the replacement for swap spreads previously prescribed, utilize Bloomberg’s 2021-03-05 published USD Spread Adjustments as follows:
 - a. For each maturity “m” = 3 or 6 months, and business day “u”:
 - i. SOFR swap spread(3 months,u) = LIBOR swap spread(3 months,u) - 0.26161% (the USD 3-month Spread Adjustment)
 - ii. SOFR swap spread(6 months,u) = LIBOR swap spread(6 months,u) - 0.42826% (the USD 6-month Spread Adjustment)
 - b. For each maturity “m” = 1 ... 30 years, and business day “u”:

$$\text{SOFR swap spread}(m,u) = \text{LIBOR swap spread}(m,u) - 0.26161\% \text{ (the USD 3-month Spread Adjustment)}$$
4. For a valuation date during or after 2037, calculate SOFR swap spreads as follows for each business day:
 - a. For each maturity “m” = 0.25, 0.5, 1 ... 30 years, and business day “u”:

$$\text{SOFR swap spread}(m,u) = \text{SOFR swap rate}(m,u) - \text{Treasury yield}(m,u).$$

Option A

Delete item 5 below. It would not apply, since data would come from one source.

Option B

Keep item 5 below, since data would come from more than one source and averaging would apply.

- ~~4.5.2. Average the daily Bank of America swap spread data from the data sources with the daily JP Morgan swap spread data by maturity over the prescribed observation (rolling 15-year period).~~
6. ~~3-~~ Calculate the Long-Term Benchmark Swap Spreads as the 85% conditional mean for each of the 32 maturity categories (three-month, six-month, one-year, two-year, ... 30-year) using the same business trading days as were used in the 85% conditional mean for long-term bonds spreads.
7. ~~4-~~ Publish the Long-Term Benchmark Swap Spreads in a table. Among tables published on the NAIC website (See Subsection H), ~~a-~~ Table J shows Long-Term Benchmark Swap Spreads.

AMERICAN ACADEMY of ACTUARIES

Objective. Independent. Effective.™

June 21, 2022

Mr. Michael Boerner
Chair, Life Actuarial (A) Task Force (LATF)
National Association of Insurance Commissioners (NAIC)

Re: LATF’s June 9, 2022, exposure of a revised version of APF 2022-04 on swap spreads and LIBOR transition to SOFR (the “APF”), and a related memo (the “Memo”) from NAIC staff

Dear Mr. Boerner,

The Life Reserves Work Group, Annuity Reserves and Capital Work Group, and Variable Annuity Reserves and Capital Work Group of the American Academy of Actuaries¹ (the “Academy”) appreciates the opportunity to provide comments on the APF and Memo. The Academy is thankful to LATF and NAIC staff as well for the May 26 exposure of earlier versions of the APF and of the Memo, for the March 10 exposure of an even earlier version of the APF drafted by the Academy and an accompanying Academy presentation deck, and for considering Academy member views expressed in our June 7 comment letter and in May through an informal drafting group discussion and follow-up emails.

The Academy is supportive of the exposed documents. We have the following comments on the two topics in the exposure for which LATF solicited feedback.

On Option A vs. Option B:

The Academy recommends Option A as it is easier to implement, and we do not expect Option A to result in materially different SOFR swap spreads used by companies than may result from Option B.

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

On “companies” vs. “appointed actuary” in Option A:

The Academy recommends that in the APF, “the company” is the preferred phrase, rather than “companies” or “the appointed actuary,” and that in the Memo, “The company” is the preferred phrase. Our rationale for this recommendation is consistency with numerous uses of this phrase and the absence of references to “appointed actuary” throughout Section 7 of VM-20. We note that the phrase “qualified actuary” is another alternative to consider, though for this context we believe that “the company” is most appropriate.

~ ~ ~

The Academy appreciates the efforts of LATF and NAIC staff on the APF and Memo. If you have any questions or would like further dialogue on the above topics, please contact Amanda Barry-Moilanen, life policy analyst, at barrymoilanen@actuary.org.

Sincerely,

Alan Routhenstein, MAAA, FSA
Member, Life Valuation Committee
American Academy of Actuaries

Economic Scenario Field Test Run #6: ACLI Equity Calibration for GEMS

June 30, 2022

Objective

- Test an alternative equity calibration in GEMS that
 - Reflects relevant economic data, theory, and relationships with plausibly severe (worse than history) tails
 - Exhibits different equity scenario behavior as market conditions, particularly interest rates, change
 - Similar to the Conning “H2” calibration approach adopted for the baseline field test runs, with the benefit of maintaining distribution properties across different initial and projected market conditions in a simple and effective way.
 - Can be updated in a transparent, repeatable manner if calibration targets or acceptance criteria change
 - Provides additional information for establishing the parameters of the second field test

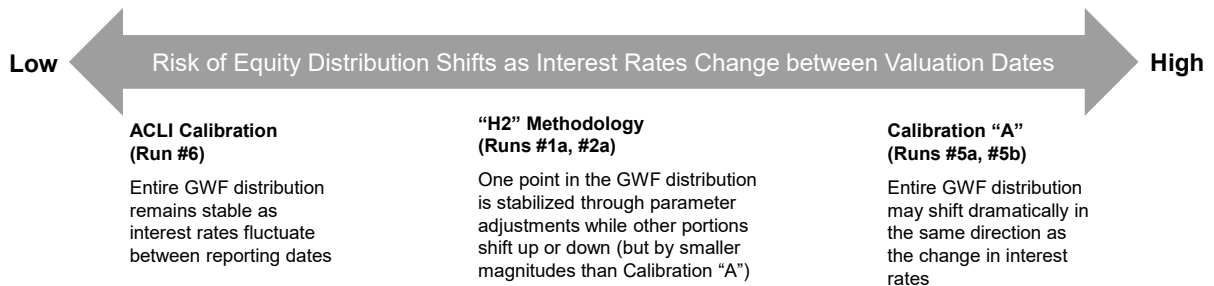

Calibration Approach

- Calibrate total returns for each of the 4 native GEMS US equity indices to historical data using generalized maximum likelihood estimation and other standard statistical methods
 - Sets GEMS short rate multiplier input parameter to 0
 - Preserves all other GEMS structural features, including jumps
- Make a limited set of defined adjustments (can be refined to meet acceptance criteria):
 - Adjust the Large Cap (S&P) drift parameter to align with regulators' previously specified 8.75% target annualized average for the average 30-year GWF (corresponds to ~7.4% geometric mean annual return) for the pre-2020 calibration criteria and AIRG
 - Adjust a volatility parameter of the other indices to align with historical volatility relationships with the S&P
 - Adjust the drift parameter for other indices to align Sharpe ratios with the S&P
- Slides 9-10 show the parameters of the calibration
- GEMS dividend process parameters and international fund derivations are unchanged

Behavior in Interest Rate Sensitivity Runs

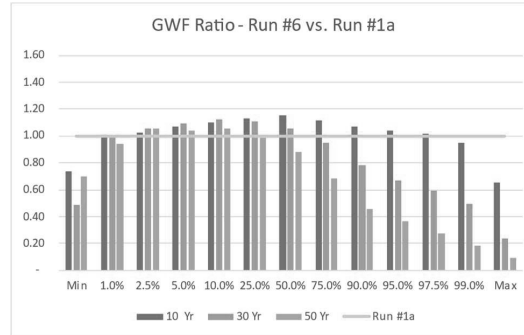

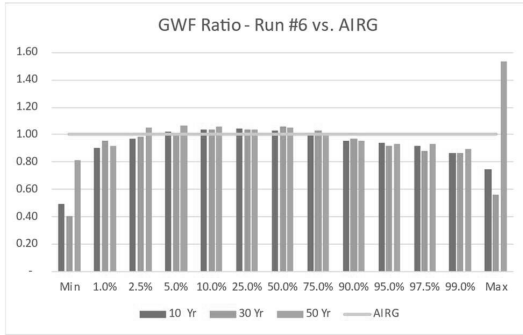

- ACLI Run #6 helps explore a range of equity distribution behaviors for the field test

See slide 17 for Field Test GWF distributions

Large Cap (S&P) Total Return Gross Wealth Factors

- Distributions are relatively similar to AIRG and GEMS Run #1a, however improves on the right tail in GEMS Run #1a that significantly exceeds AIRG at longer time horizons

Note: All Run #6 statistics were produced by a model that approximates the GEMS equity model based on publicly available information. Actual GEMS output may differ somewhat.

- Run #6 calibrated to historical data (with adjustments to align volatility relationships and Sharpe ratios with the S&P) appears to be more favorable than AIRG and Run #1a but could be adjusted based on updated acceptance criteria or feedback.
- Run #6 preserves more of the differentiation across indices seen in the AIRG and history than the Run #1a adjustments for non-S&P indices (See slide 15-16)

Note: All Run #6 statistics were produced by a model that approximates the GEMS equity model based on publicly available information. Actual GEMS output may differ somewhat.

Model parameters calibrated to monthly historical data using generalized maximum likelihood estimation (MLE):

- Large Cap: S&P total return index from 3/1957 to 12/2020, based on data provided by Link Richardson from a combination of sources
- Mid Cap: Willshire Mid Cap from 8/1978 to 12/2020, sourced from FRED
- Small Cap: Willshire Small Cap from 8/1978 to 12/2020, sourced from FRED
- Aggressive: NASDAQ Composite from 3/1971 to 12/2020, sourced from FRED

Adjustments / Targeting

- Large Cap drift coefficient, mu0, adjusted by -0.02954 to align with the 8.75% annualized average of the average 30-year GWF specified by regulators for the original AIRG and calibration criteria
- Mid, Small, and US Aggressive alpha parameter adjusted to align with the historical volatility relationships to Large Cap returns (see below)
- Mid, Small and US Aggressive mu0 adjusted to align with the Sharpe Ratio of 30.0% implied in the Large Cap scenarios, assuming a risk-free rate of 3%.

Correlation matrix based on historical data from 8/1978 to 12/2020:

- Variance/Return, or skew, correlation for each individual index based on each specific MLE
- Cross index Variance/Variance explicitly calculated using filtered historical Heston variance based on calibrated parameters
- Cross-skew correlation computed based on same filtered variances as above, but scaled to align with MLE-based correlation coefficients
- Cross index Return/Return explicitly calculated based on historical data

99.5%	0.12	0.14	0.15	0.16
100.0%	0.13	0.17	0.20	0.22

Large Cap volatility of 14.5% reflects longer historical data (from 1957 to 2020) used in calibration, slightly lower than 15.2% observed between 1978 and 2020.

- Field Test Run #6 GEMS equity scenarios and AIRG are reasonably well aligned with historical distributions and produce tail outcomes beyond the observed range.
- Right tail AIRG returns seem somewhat extreme

- Reference equity models were calibrated to S&P return from 1957 to 2020, and centered at 8.75% NAIC target return for comparison purposes
- 8.75% NAIC target is based on the annualized average of the 30-year wealth factor and is equivalent to a 7.4% geometric average due to volatility/conconvexity of the GWF distribution. For reference, historical geometric average return for S&P Total Returns from 1957 to 2020 is 10.7%.
- All models assume constant mean return (no explicit short rate component in the equity return)
- The Run #6 GEMS calibration produces reasonable GWFs that are positioned within the neighborhood of outcomes defined by RSLN2/SLV/Heston and Base AIRG models (see slide 5)

- 8.75% NAIC target is based on the annualized average of the 30-year wealth factor and is equivalent to a 7.4% geometric average due to volatility/convexity of the GWF distribution. For reference, historical geometric average return for S&P Total Returns from 1957 to 2020 is 10.7%.
- All models assume constant mean return (no explicit short rate component in the equity return)
- The Run #6 GEMS calibration produces reasonable GWFs that are more conservative than the RSLN2/SLV/Heston and Base AIRG models calibrated directly to S&P data.

Compared to GEMS 1a parameters, ACLI developed calibration indicates:

- Higher mean reversion of the Heston variance process (beta parameter)
- Lower frequency of jumps and larger / more severe jumps
- More negative skew/correlation between equity return and variance
- Higher volatility of variance (sigma parameter) and more intuitive relationship across indices, especially for non-Large Cap indices

Note: GEMS 1a ("H2") parameterization includes a constant mean ERP with the short rate fully reflected in the equity return (multiplier = 1). The ACLI calibration does not include the short rate dependency (multiplier = 0).

With higher initial rates (e.g., Fed raises rates), A produces equity levels that are significantly higher across the board (e.g., ~40%+ higher over 30+ years).

Under A, equity parameters are not adjusted

Draft: 7/19/22

Life Actuarial (A) Task Force
Virtual Meeting
June 23, 2022

The Life Actuarial (A) Task Force met June 23, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Mark Fowler represented by Jennifer Li (AL); Ricardo Lara represented by Ted Chang, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and Ben Slutsker (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. Heard an Update on Mortality Improvement

Cynthia Edwalds (Society of Actuaries [SOA] Preferred Mortality Project Oversight Group [POG]) presented an update on the future mortality improvement scale development (Attachment Four-A). The update focused on the approach used to address the impact of COVID-19 on the mortality improvement scale. She said four scenarios were considered for addressing COVID-19 in the 10-year historical mortality improvement (HMI) scale observation period. She said the selected scenario reused the 2019 data in place of the 2020 data to eliminate the impact of COVID-19 deaths.

Ms. Edwalds said the methodology for determining the future mortality improvement (FMI) scale calls for a 25% reduction applied to the best estimate mortality improvement assumption. She said the COVID-19 impact on FMI will be reflected by further reducing the best estimate mortality assumption by a percentage that will grade off after five years. She noted that if the best estimate mortality assumption shows mortality deterioration, the margin is to be applied in a manner that results in greater deterioration. She shared model office results comparing the reserves based on the 2015 Valuation Basic Table (VBT) without mortality improvement to reserves calculated using the recommended HMI and FMI approach, as well as other scenarios. She said the reserve calculation using the recommended approach results in a 10% decrease from the 2015 VBT reserve. She said the Task Force will discuss the margin, the smoothing technique, and the final recommendation during its July 7 meeting. Mr. Carmello said the FMI should be set to zero until there is a better understanding of the long-term COVID-19 impacts. Mr. Cebula said the impacts of COVID-19 should be fully recognized in determination of mortality improvement. Mr. Reedy agreed that instead of reusing the 2019 data, the actual data for 2020 should be used for HMI. Ms. Edwalds said including the 2020 data will result in higher mortality for 2023 than was experienced in 2015. Cynthia MacDonald (POG) noted that the recommended approach does result in mortality dis-improvement for 2023. She said that by using the 2019 data for 2020, the approach assumes neither mortality improvement nor mortality dis-improvement.

Donna Claire (American Academy of Actuaries—Academy) shared a presentation (Attachment Four-B) listing the pros and cons of ignoring the impacts of COVID-19 on mortality improvement and delineating regulatory considerations for the Task Force to think about. She supplied a list (Attachment Four-C) of resources that Task Force members can use to gather information on COVID-19 mortality in life insurance and the general population.

2. Discussed the ESG Acceptance Criteria

Jason Kehrberg (Academy) gave a presentation (Attachment Four-D) following up on the June 16 exchange with the Task Force on the proposed schedule for the Academy discussions with the Task Force on developing stylized facts and acceptance criteria for evaluating stochastic sets of economic scenarios produced by the economic scenario generator (ESG).

Having no further business, the Life Actuarial (A) Task Force adjourned.

Life Actuarial Task Force (LATF) Meeting—June 23, 2022

Agenda

- Items to be addressed in the 2022 scale recommendation
- UPDATE: COVID-19 approach
- Next steps/discussion

Items to be addressed in 2022 scale recommendation

Develop Historical Mortality Improvement (HMI) and FMI Future Mortality Improvement (FMI) scales for use in 2022 valuation year.

The 2022 scales will address the following:

- ▣ Reflecting COVID-19 impacts
- ▣ Review of margin development
- ▣ Review of smoothing method

COVID-19 Impact— FMI/HMI Model Scenarios

Scenario Label	Historical MI—Scenarios being assessed	Description/Notes
HMI-0	No HMI	used with FMI-0 to determine baseline for comparison
HMI-1	10-year historical average ending in 2020	includes full deterioration effect of 2020 COVID-19 (most conservative line on slide 4)
HMI-2	10-year historical average ending in 2019	exclude 2020 COVID-19 shock (most optimistic line on slide 4)
HMI-3	9-year historical average ending in 2019	exclude 2020 COVID-19 shock (intermediate)
HMI-4	10-year historical average ending in 2020	exclude 2020 COVID-19 shock by assuming zero improvement from 2019 to 2020 (intermediate)
Future MI—Scenarios being assessed		Description
FMI-0	No FMI	used with HMI-0 to determine baseline for comparison
FMI-1	Basic FMI scale = Use grading to Long Term (LT) average based on SSA Alt 2 with margin approach #1 (recommended method)	Loaded Mortality Improvement (MI) scale = Basic FMI with explicit margin for uncertainty around the future trend (= 25% reduction of Basic FMI rates in all years)
FMI-2	Basic FMI scale = Use grading to LT average based on SSA Alt 2 with margin approach #2	Loaded MI scale = FMI Basic with explicit margin for uncertainty in future trend (= 25% reduction of Basic FMI rates in all years) <u>and</u> <i>an additional explicit margin for uncertainty around the COVID-19 medium-/long-term impacts that grades off over time.</i> Additional COVID-19 explicit margin: 50% margin in 2023 grades to margin of 25% over 5 years.

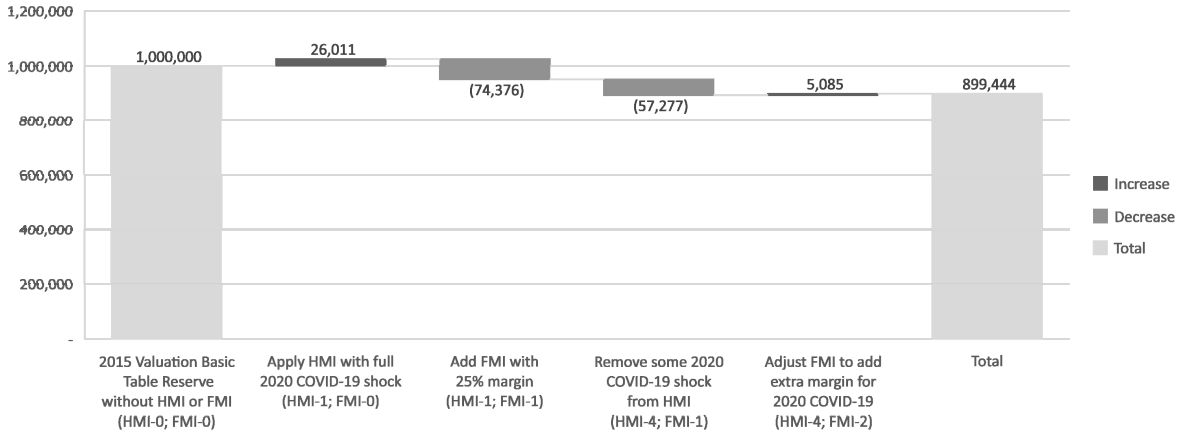

Reserve Impact - NAIC Model Office

- Universal Life with Secondary Guarantees (ULSG) focus—long-duration product, larger potential for reserve reduction
 - ▣ Model office and assumptions same as used in the yearly renewable term (YRT) representative model analysis
 - ▣ Lifetime shadow account secondary guarantee
 - ▣ No reinsurance in the model
- Combined model office

Component	Values
Issue ages	Decennial issue ages 30 – 70
Gender	Male Female
Risk classes	Preferred non-tobacco Standard non-tobacco Standard tobacco
Face bands	Low (\$250,000) High (\$1,000,000)

Appendix 1

RECAP:

Slides from LATF UPDATE #1 6/2/22

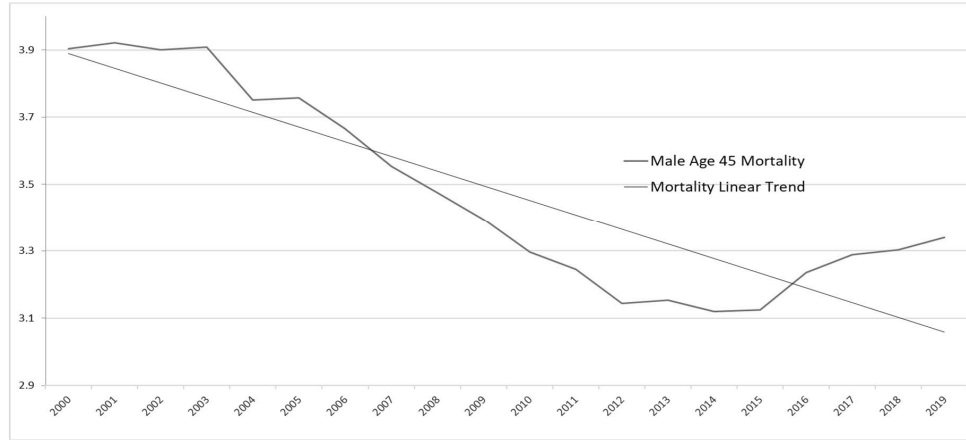

Approach to COVID-19 impact

- Quantification of COVID-19 impact
 - Data sources
 - Short- vs. medium- vs. longer-term impacts
 - Return to previously projected mortality level over time or residual excess mortality
 - Insured vs. general population considerations
 - Direct adjustment to MI rates or reflected in additional margins
- Implicit margins in MI scale development
 - Data source—general population data unadjusted for insured population differences (largest source of margin)
 - Starting MI level (HMI)
 - Long-term rate (FMI)
 - Limit on FMI assumption (20 years)

COVID-19 Impact—Modeling Scenarios

Historical MI—Scenarios being assessed	Description
1. 10-year historical average ending in 2020	including full deterioration for 2020 (most conservative)
2. 10-year historical average ending in 2019	exclude COVID-19 shock impact in 2020 (most optimistic)
3. 9-year historical average ending in 2019	exclude COVID-19 shock impact in 2020 (alternate)
4. 10-year historical average ending in 2020 (assuming no improvement from 2019 to 2020)	muted impact of 2020 (intermediate)

Future MI—Scenarios being assessed	Description
1. Basic FMI scale = Use grading to LT average based on SSA Alt 2 (recommended method)	Loaded MI scale = Basic plus explicit margin for uncertainty around the future trend (= 25% reduction of Basic FMI rates in all years)
2. Basic FMI scale = Use grading to LT average based on SSA Alt 2 (recommended method)	Loaded MI scale = Basic plus explicit margin for uncertainty in future trend (= 25% reduction of Basic FMI rates in all years) <u>and</u> an additional explicit margin for uncertainty around the COVID-19 medium-/long-term impacts that grades off over time. Additional COVID-19 explicit margin—options for model testing: 1. 50% margin grades to normal margin of 25% over 5 years. 2. Decrease mortality improvement by 1% in year 1 grading linearly down to 0% in year 5.

2022 MI scale development timeline (VM-20) Updated May 2022

Milestones	Target Date
1. Receive 2020 data from the Centers for Medicare and Medicaid Services (CMS). SOA creates preliminary mortality estimates for 2020.	2/28/2022 (completed)
2. Identify options for reflecting COVID-19 impact on HMI and FMI scale recommendations including margin.	4/28/2022 (completed)
3. Assess reserve impact of COVID-19 adjustment recommendation—run National Association of Insurance Commissioners (NAIC) model office under several scenarios.	5/15/2022 (in progress)
4. Determine smoothing method for FMI and HMI scales.	6/15/2022 (in progress)
5. Receive SSA Trustees Report—Intermediate Projections for 2022.	Est. 6/15/2022
7. Finalize recommendation for reflecting COVID-19 based on NAIC model office results.	7/1/2022
8. Present to LATF for approval for exposure (LATF call in early July). <i>Assumes 60-day exposure period.</i>	7/15/2022
9. Update SSA mortality estimates for 2020 from SOA (final SOA estimates).	8/15/2022
10. Respond to exposure comments obtain LATF approval of 2022 HMI and FMI.	9/15/2022
11. Publish 2022 HMI and FMI scales on SOA website.	9/30/2022

Reserve Impact Estimates

Future Mortality Improvement Assumption Model Implementation

- The 2021 and prior versions of VM-20 prohibited including FMI in the calculation of deterministic and stochastic reserves, while allowing the mortality assumption to be improved up to the valuation date using a historical mortality improvement (HMI) assumption developed by the MILWG
- An **“exact” approach** to including FMI in the calculation of deterministic and stochastic reserves would utilize the MILWG’s HMI assumption to bring the mortality table up to the valuation date and then apply the separate FMI assumptions beyond the valuation date

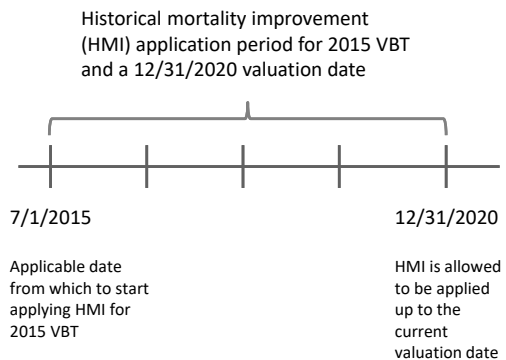

Reserve Impact Estimates

Future Mortality Improvement Assumption Model Implementation

A modeling simplification was employed that utilized the new MILWG FMI assumption as both HMI and FMI in the deterministic reserve projection.

This simplification allows for the impact of including FMI in current and future deterministic reserve calculations to be quantified.

Reserve Impact Estimates

ULSG Model Office Results

- ❑ Baseline reserves—no FMI
- ❑ Best estimate—reserves with FMI at best estimate level
- ❑ Margin 25%—FMI at best estimate level with 25% reduction across all gender/ages
- ❑ Margin 35%—FMI at best estimate level with 35% reduction across all gender/ages

Reflection of COVID-19 in Life Insurance Mortality Improvement

Life Actuarial Task Force (LATF) Meeting—May 26, 2022

Overview

- ❑ The American Academy of Actuaries' Life Experience Committee discussed how pandemics, and specifically COVID-19, would be reflected in projects such as asset adequacy testing and principle-based reserves (PBR) testing
- ❑ The committee's conclusion was that we will not find the perfect answer, but it would be helpful to develop a list of considerations that may be taken into account when developing mortality improvement assumptions

General Questions

- Does COVID-19 impact the mortality improvement assumption for PBR up to the date of valuation?
- Does COVID-19 impact the mortality improvement assumption for asset adequacy testing?
- Does COVID-19 impact the future mortality improvement assumption for PBR?
- Does COVID-19 impact the future mortality improvement assumption for asset adequacy testing?
- When considering COVID-19, should decreases in the mortality improvement be considered for annuity/long-term care insurance (LTCI) mortality?

AMERICAN ACADEMY of ACTUARIES

Objective. Independent. Effective.™

© 2022 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

What Should Be Considered a COVID-19 Death?

At issue: If one is trying to determine excess deaths due to COVID-19,

- Does the determination include all deaths where COVID-19 was a factor in the death?
- Are COVID-19 deaths only those where it is listed as the primary cause of death?
- How does one determine COVID-19 deaths when some states do not list cause of death?

AMERICAN ACADEMY of ACTUARIES

Objective. Independent. Effective.™

© 2022 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

In Actuarial Work for PBR and Asset Adequacy Testing, Should Past COVID-19 Deaths Be Ignored for Mortality Improvement to date of Valuation?

- | Yes | No |
|---|--|
| <ol style="list-style-type: none"> 1. Rare event covered by surplus/RBC 2. May have front-loaded deaths that would have occurred soon, so it is a positive for future mortality | <ol style="list-style-type: none"> 1. Methodology originally established for PBR mortality improvement to date of valuation included all deaths 2. Ignoring it would be the equivalent of ignoring stock market corrections 3. If future mortality is expected to be better, it should be reflected in future mortality improvement numbers instead |

Factors That Can Impact Future Mortality Improvements

- | Positives | Negatives |
|--|--|
| <ol style="list-style-type: none"> 1. May have front-loaded deaths that would have occurred soon, so it is a positive for future mortality 2. Population mortality is generally improving, albeit at slower rates absent COVID-19; e.g., for cancer 3. Increased use of self-testing and telemedicine has increased access to medical care for many | <ol style="list-style-type: none"> 1. Long COVID 2. Mental health impact of COVID including suicides and drug use 3. Mortality rates on certain diseases like heart disease, diabetes, liver disease and hypertension not improving recently 4. Delay in care may lead to extra deaths 5. There are still additional waves of virus |

Considerations re: Future Mortality Rates

- Mortality improvement varies by socioeconomic variables. An actuary could review these and determine which quintile/decile best matches their company's block of business
- The larger provisions for adverse deviation (PADs) used on the mortality improvement assumption, the more uncertainty there is in the assumption
- Margins used in mortality improvement rates for PBR testing and asset adequacy do not have to be the same, but differences should be justified
- No studies yet done on offsets, e.g., annuity vs life insurance

AMERICAN ACADEMY of ACTUARIES

Objective. Independent. Effective.™
© 2022 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

Considerations re: Future Mortality Rates—Cont'd

- To date, the negative impact of COVID-19 on long-term care insurance (LTCI) mortality improvement has not been studied: the positive impact of front-loaded deaths may be offset with claimants experiencing long COVID
- Expected mortality improvements vary by age groups
- Consider differences in pandemic versus endemic phases of COVID

AMERICAN ACADEMY of ACTUARIES

Objective. Independent. Effective.™
© 2022 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

Regulatory Considerations

- No single answer works for all
- May want to consider setting an established range of acceptable mortality improvement rates that could be allowed

Information Resources on COVID-19 in Life Insurance Mortality
American Academy of Actuaries
Life Experience Committee
June 15, 2022

The American Academy of Actuaries¹ Life Experience Committee is discussing how pandemics, and specifically COVID-19, should be reflected in certain projects, such as asset adequacy testing and principle-based reserves (PBR) testing. The committee determined that it would be helpful to provide a list of resources of information for actuaries working in life insurance.

Studies of COVID-19 on Mortality

1. “[Population Mortality Observations Updated with 2020 Experience](#)” published by the Society of Actuaries (SOA) Research Institute in January 2022. This paper discusses population mortality by age groups and quintiles of socioeconomic data. It shows the mortality by cause of death, and mortality improvement impact with and without COVID-19.
2. “[Mortality by Socioeconomic Category in the United States](#)” published by the SOA Research Institute in February 2022. This paper discusses population mortality by socioeconomic category. The data period ends with 2019, so this study does not cover COVID-19 deaths, but it shows the impact of socioeconomic factors on life expectancies.
3. “[2022 Cause of Death Report](#)” published by the SOA in April 2022. This paper consolidates the causes of death from the 31 available companies in the study into three main categories plus unknown cause of death. Each of those three main categories were split into four or eight subcategories. Summary tables are provided.
4. “[Estimating excess mortality due to the COVID-19 pandemic: a systematic analysis of COVID-19-related mortality, 2020–21](#)”—This article gives a geographic estimate of excess mortality by state for the USA and also for other countries around the world. This analysis could help companies that are heavily weighted in certain geographies to adjust industry-level experience to make it more appropriate to their blocks of business.

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

5. “Evaluation of individual and ensemble probabilistic forecasts of COVID-19 mortality in the United States”—This article discusses the COVID-19 forecasting models and their predictive performance. The article suggests that using a combination of models is better than a single model. This piece would be useful currently for predicting COVID-19 effects that may be ongoing. It would also be useful should another pandemic arise.
6. U.S. Individual Life COVID-19 Reported Claims Analysis —This site tracks insurance claims. There is a lag—e.g., on May 16, 2022, the latest report was published in February 2022, and was based on data through September 2021.

Underwriting/Product Issues

7. “Dire Diagnosis” by Hank George, published in the September/October 2020 *Contingencies* magazine. An article published relatively early in the pandemic, it discusses items to consider in underwriting during a pandemic.
8. “Disruption of Life Insurance Profitability in the Aftermath of the COVID-19 Pandemic”— This article provides a broad overview of the effects of COVID-19 on profitability of life insurance and annuities. It’s helpful for someone getting up to speed on the possible pricing effects of the COVID-19 pandemic.

Impact on Long-Term Care Insurance

9. “COVID-19 Impact on Long-Term Care Insurance Report 2020 Survey” published by the SOA in 2021. This paper discusses the results of a survey of 14 long-term care insurance carriers to show the impact of COVID-19 on mortality, morbidity, and lapse across various characteristics.

Modeling of COVID-19 Impact

10. “The COVID Connection” by Annmarie Geddes Baribeau, published in the May/June 2022 *Contingencies* magazine. This article on COVID-19’s impact suggests that insurers look into more sophisticated catastrophic modeling.

Useful Websites

11. https://www.cdc.gov/nchs/nvss/vsrr/covid19/excess_deaths.htm: This Centers for Disease Control and Prevention (CDC) webpage is updated weekly and tracks excess deaths associated with COVID-19.

A proposed discussion schedule for the National Association of Insurance Commissioners (NAIC) Life Actuarial (A) Task Force and Life Risk-Based Capital (E) (LRBC) Working Group to develop acceptance criteria for stochastic sets of economic scenarios

A presentation by the Economic Scenario Generator Work Group (ESGWG) of the American Academy of Actuaries

actuary.org

© 2022 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

Jason Kehrberg, MAAA, FSA

June 23, 2022

Background

- The planning work for phase one of the field test on the NAIC’s Economic Scenario Generator (ESG) is now complete and the field test is now underway.
- With that work complete the ESGWG appreciates the opportunity to propose a discussion schedule for LATF and LRBC to develop a robust and comprehensive set of “acceptance criteria” to replace the rougher “boundary guidance” currently being used to evaluate stochastic sets of economic scenarios.
- Developing such a set of quantitative acceptance criteria, and the qualitative “stylized facts” they are based on will provide for an industry-standard framework for evaluating and implementing ESGs and the stochastic sets of economic scenarios they produce.
 - For example, see <https://www.soa.org/resources/research-reports/2016/2016-economic-scenario-generators/>

Definitions

- Stylized facts and acceptance criteria are two important concepts in the field of ESGs
 - ▣ Stylized facts are qualitative statements about the economic variables being simulated (e.g., equity returns are more often positive than negative)
 - ▣ Acceptance criteria are quantitative in nature and used to validate stochastic sets of economic scenarios prior to use (e.g., the mean equity return over 30 years should be between 8% and 9%)

Goals and regulatory benefit

- The goal of the proposed schedule is to:
 - ▣ Facilitate discussions on stylized facts and acceptance criteria for the three risk factors being modeled by the ESG (i.e., interest rates, equity returns, and corporate credit spreads)
 - ▣ Develop, expose, and adopt qualitative stylized facts
 - ▣ Develop, expose, and adopt quantitative acceptance criteria
- The adopted stylized facts and acceptance criteria are then used as a framework for further evaluation and implementation of ESGs and the stochastic sets of economic scenarios they produce

How are stylized facts and acceptance criteria developed and agreed upon?

- The first session in the proposed schedule will provide an overview of standard processes for developing stylized facts and acceptance criteria
- In subsequent sessions the ESGWG can provide input on proposing stylized facts for consideration and discussion
- Once agreed upon, the ESGWG can provide input on turning those qualitative stylized facts into a related set of quantitative acceptance criteria for consideration by regulators

Proposed schedule

Session	Duration (hours)	Topic
1	1.5	Overview - A process for implementing and evaluating ESG scenario sets
2	1.5	Equity Model - Stylized facts (1 of 2)
3	1.5	Equity Model - Stylized facts (2 of 2)
4	1.5	Corporate Credit Model - Stylized facts and acceptance criteria (1 of 1)
5	1.5	Corporate Credit Model - AAA simplified corporate credit model (1 of 1)
6	1.5	Equity Model - Acceptance criteria (1 of 1)
7	1.5	Interest Rate Model - Stylized facts and acceptance criteria (1 of 2)
8	1.5	Interest Rate Model - Stylized facts and acceptance criteria (2 of 2)
9	1.0	Interest Rate Model - ACLI alternative interest rate model (1 of 1)
10	1.0	Interest Rate Model - Other interest rate models (1 of 1)

Timing and next steps

- The ESGWG proposes starting the proposed discussions sometime in July and wrapping them up, and having the resulting framework for scenario set evaluation, by the end of September
 - This will allow for a framework in time for a phase two ESG field test
- The ESGWG looks forward to discussing the proposed schedule and next steps with regulators on future LATF/LRBC WG calls

Draft: 7/18/22

Life Actuarial (A) Task Force
Virtual Meeting
June 16, 2022

The Life Actuarial (A) Task Force met June 16, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Mark Fowler represented by Jennifer Li (AL); Ricardo Lara represented by Ted Chang, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and Ben Slutsker (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. Adopted AG AAT

Mr. Andersen said verbal comments on the actuarial guideline on asset adequacy testing (AG AAT) mentioned that attempting to categorize some Schedule BA assets as equity or non-equity may not be appropriate and could affect the relevant documentation required for those assets. He opined that Section 4 of the actuarial guideline requests the minimum amount of documentation. He said state insurance regulators would want the documentation on Schedule BA assets, unless the assets have conservative return assumptions. He said the subsections of Section 5 that cover sensitivity and attribution analysis state that judgment and best efforts apply to situations where a special type of asset does not fit neatly into an equity or non-equity categorization. He said the comment letter from National Guardian Life (Attachment Five-A) suggests excluding certain public corporate bonds from the requirements of Section 4.A.ii through Section 5 and excluding selected companies from the scope of the actuarial guideline. He said a decision was made earlier to exclude those types of assets from the requirements of Section 4.A.ii through Section 5 but include them in the requirements of Section 4.A.i. He said that in a situation where a company has corporate bonds that are assumed to earn high yields, state insurance regulators would want to have that information. He concluded that companies with those types of assets should be included in the scope of the actuarial guideline.

Mr. Andersen said the remaining decision relates to the inclusion of the word “materially” in Section 4.B.ii. He shared a list of pros and cons for including the word. Mr. Carmello voiced his support for eliminating the word. He said it is problematic when companies are liberal in their interpretation of what is material. He also noted that retaining the word takes away some but not all regulatory judgment. Ms. Eom and several others agreed. Mr. Serbinowski said the word “materially” should be retained. Brian Bayerle (American Council of Life Insurers—ACLI) said the ACLI comment letter (Attachment Five-B) is supportive of retaining the word. He said whether the word is removed or retained, there is still room for regulatory judgment. Mr. Yanacheak said it may be more beneficial to remove the word “favorable,” as it is open to broader interpretation than the word “materially.” He asked how “favorable” is defined in the context of asset adequacy. Mr. Andersen said a possible example is a company for which the results of 975 of its 1,000 stochastic scenarios are either neutral or unfavorable and the results of the remaining 25 scenarios are favorable, but those 25 scenarios are not included in the conditional tail expectation (CTE) results. He said that in that example, the 25 scenarios should not be considered to have a favorable result on the asset adequacy reserve. The Task Force agreed by voice vote, with several members dissenting, to remove the word “materially” from Section 4.B.ii.

Mr. Andersen made a motion, seconded by Mr. Yanacheak, to adopt AG AAT (Attachment Five-C), after removing the word “materially.” The motion passed unanimously.

2. Received an Update on the ESG Field Test

Scott O’Neal (NAIC) said two documents (Attachment Five-D and Attachment Five-E) were distributed to participants on the June 15 economic scenario generator (ESG) field test call. He reminded the Task Force that the field test began on June 1. He said NAIC staff continue to work with field test participants to answer questions and resolve issues. He said that except for run #6, all field test scenarios are posted on the Conning website.

3. Discussed ESG Acceptance Criteria

Jason Kehrberg (American Academy of Actuaries—Academy) gave a preview of an Academy proposal for developing stylized facts (qualitative statements about the economic variables being simulated by the ESG model) and acceptance criteria for evaluating stochastic sets of economic scenarios produced by the ESG. The preview lists dates and topics for the discussion sessions that will provide a decision framework that state insurance regulators can use to determine next steps for scenario evaluation in a manner consistent with actuarial standards of practice for using models and setting assumptions. He said the discussion sessions would be a mix of educational sessions and interactive discussions. He noted that one of the goals is to transform the loose boundary guidance developed by the ESG Field Test Drafting Group into more robust and comprehensive stylized facts and acceptance criteria that will perform well under a variety of economic conditions. The sessions will be open to Task Force and Life Risk-Based Capital (E) Working Group members, interested state insurance regulators, and interested parties.

Having no further business, the Life Actuarial (A) Task Force adjourned.

Memorandum

To: Reggie Mazyck, NAIC, and LATF Life Actuarial (A) Task Force Members

From: Scott Michels, VP & Appointed Actuary, National Guardian Life

Re: AGT AAT 5th Exposure comments

Date: June 10, 2022

I have reviewed the most recent changes and am supportive of most elements of this Actuarial Guideline for Asset Adequacy Testing. I do have one concern, regarding the definition of Projected High Net Yield Assets, in paragraph 3.F.iii and its lack of application to the Scope paragraph 2.B. My specific concern is centered around the fact that certain assets are included in the calculation for scope in 2.B, but then are excluded from the majority of the rest of the guidance (4.A.ii through 5). I feel there will likely be situations where this difference would cause additional work with very little value added for smaller companies and their regulators. I've provided one hypothetical example:

2.B. Scope Calculation:

A company has actuarial reserves of \$2 Billion

That company has \$110 Million of Projected High Net Yield Assets.

$\$110 \text{ M} / \$2 \text{ Billion} = 5.5\%$, so is included in the scope of this AG.

3.F.iii. Exemption for 4.A.ii through 5.

\$90 Million of the Projected High Net Yield Assets are from Public, non-convertible, fix-rate corporate bonds with no callability.

So, only $\$20 \text{ M} / \2 Billion or 1% of the assets would be required to apply the majority of these requirements.

I believe this is a potentially realistic situation for smaller companies when the current spreads are higher than the long-term spreads on their assets. I'm proposing to help those companies avoid the additional, non-value added work, by modifying the wording on 3.F.iii to be as follows (red font are my changes):

The following asset types can be excluded from both the scope of the guideline in 2.B. and the scope of requirements in sections 4.A.ii through 5:

- (a) Cash or cash equivalents,
- (b) Treasuries and agency bonds, and
- (c) Public non-convertible, fixed-rate corporate bonds with no or immaterial callability.

Thank you for the opportunity to provide feedback in this matter. Please let me know if you have any questions on this recommendation.

Brian Bayerle
Senior Actuary

June 14, 2022

Mr. Mike Boerner
Chair, NAIC Life Actuarial Task Force (LATF)

Mr. Fred Andersen
Chief Life Actuary, Minnesota Department of Commerce

Re: June 2nd Exposure of Actuarial Guideline Asset Adequacy Testing

Dear Messrs. Boerner and Andersen:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on the June 9th (Fifth) exposure of Actuarial Guideline (AG) on Asset Adequacy Testing (AAT, collectively Guideline).

ACLI is appreciative of the hard work of the regulators in this important and time-intensive effort. ACLI is confident that implementation of this Guideline will demonstrate the professionalism of Appointed Actuaries throughout the industry.

We look forward to work with LATF as regulators develop the template and template instructions accompanying the Guideline. Further, we look forward to engaging with LATF in the monitoring of the effectiveness of the Guideline and potential incorporation into VM-30 or sunseting of the various aspects of the Guideline.

Thank you.

A handwritten signature in black ink, appearing to read 'Reggie Mazyck', is written over a light blue horizontal line.

cc: Reggie Mazyck, NAIC; Ben Slutsker, Minnesota Department of Commerce

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

Adopted by the Life Actuarial (A) Task Force June 16, 2022

Actuarial Guideline AAT

APPLICATION OF THE VALUATION MANUAL FOR TESTING THE ADEQUACY OF LIFE INSURER RESERVES

Background

The *NAIC Valuation Manual (VM-30)* contains actuarial opinion and supporting actuarial memorandum requirements, including requirements for asset adequacy analysis. Regulators have observed a lack of uniform practice in the implementation of asset adequacy analysis. The variety of practice in incorporating the risk of complex assets into testing does not provide regulators comfort as to reserve adequacy. Examples of complex assets are structured securities, including asset-backed securities and collateralized loan obligations, as well as assets originated by the company or affiliated or contracted entity. An initial increase of this activity has been noted in support of general account annuity blocks; however, recent activity was noted in other life insurer blocks.

This Guideline is intended to provide uniform guidance and clarification of requirements for the appropriate support of certain assumptions for asset adequacy analysis performed by life insurers. In particular, this Guideline:

- (1) Helps identify reserve adequacy and claims-paying ability in moderately adverse conditions, including conditions negatively impacting cash flows from complex assets;
- (2) Clarifies elements to consider in establishing margins on asset-related assumptions;
- (3) Ensures recognition that higher expected gross returns from assets are, to some extent, associated with higher risk, and that assumptions fit reasonably within the risk-return spectrum;
- (4) Requires sensitivity testing regarding complex assets supporting life insurer business;
- (5) Identifies expectations in practice regarding the valuation of complex assets within asset adequacy analysis;
- (6) Reflects that while complex assets tend to have higher uncertainty regarding timing and amount of cash flows than more traditional investments, because complex assets are difficult to classify, and the regulatory concern is regarding the projected net yields and cash flows from those assets, the focus of the analysis requirements will be on assets categorized as high-yielding; and
- (7) Requires additional documentation of investment fee income relationships with affiliated entities or entities close to the company.

Text

1. Effective Date

This Guideline shall be effective for asset adequacy analysis of the reserves reported in the December 31, 2022 Annual Statement and for the asset adequacy analysis of the reserves reported in all subsequent Annual Statements.

Guidance note: It is anticipated that the requirements contained in this Guideline will be incorporated into VM-30 at a future date, effective for a future valuation year. Requirements in the Guideline will cease to apply to annual statutory financial statements when the corresponding or replacement VM-30 requirements become effective.

2. Scope

This Guideline shall apply to all life insurers with:

- A. Over \$5 billion of general account actuarial reserves (from Exhibits 5, 6, 7, and 8 of the Annual Statement) and non-unitized separate account assets or
- B. Over \$100 million of general account actuarial reserves (from Exhibits 5, 6, 7, and 8 of the Annual Statement) and non-unitized separate account assets and over 5% of supporting assets (selected for asset adequacy analysis) in the category of Projected High Net Yield Assets, as defined in Section 3.F.

Actuarial reserve amounts are included in the amounts in A and B whether directly written or assumed through reinsurance and are determined before any reinsurance ceded credit.

The Guideline applies to assets supporting liabilities tested in the asset adequacy analysis except it does not apply to unitized separate account assets or policy/contract loans.

3. Definitions

- A. Equity-like Instruments. Assets that include the following:
 - i. Any assets that, for purposes of risk-based capital C-1 reporting, are in the category of common stock, i.e., have a 30% or higher risk-based capital charge.
 - ii. Any assets that are captured on Schedule A or Schedule BA of the Annual Statement.
 - iii. Bond funds.
- B. Fair Value. The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date, consistent with methodology of fair value, as reported in the Annual Statement.
- C. Net Market Spread. For each asset grouping, shall mean the spread over comparable Treasury bonds that equates the fair value as of the valuation date with modeled cash flows, less the default assumption used in asset adequacy analysis.

Market conventions and other approximations are acceptable for the purposes of this definition.
- D. Investment Grade Net Spread Benchmark. The applicable spread found in Appendix I using the weighted average life (WAL) of the associated non-Equity-like Instrument.
- E. Guideline Excess Spread. The net spread derived by subtracting the Investment Grade Net Spread Benchmark from the Net Market Spread for non-Equity-like Instruments. Investment expenses shall be excluded from this calculation.
- F. Projected High Net Yield Assets. Currently held or reinvestment assets that are either:
 - i. An Equity-like Instrument assumed to have higher value at projection year 10 or later than under an assumption of annual total returns, before the deduction of investment expenses, of 4% for the first 10 projection years after the valuation date followed by 5% for projection year 11 and after. Aggregation shall be done at a level of granularity that is consistent with or more granular than how the assets are grouped, i.e., compressed, in the asset adequacy analysis model, or
 - ii. Assets other than Equity-like Instruments where the assumed Guideline Excess Spread is higher than zero. In addition:
 - (a) Aggregation of the comparison between the assumed Net Market Spread from each asset and the Investment Grade Net Spread Benchmark shall be done at a level of granularity that is consistent with or more granular than how the assets are grouped, i.e., compressed, in the asset adequacy analysis model.

- (b) For applicable assets that do not have an explicit WAL or term to maturity, the Appointed Actuary shall disclose the method used to determine the appropriate WAL used for comparing to the Investment Grade Net Spread Benchmark.
 - (c) For purposes of the comparison between the assumed Net Market Spread from each asset and the Investment Grade Net Spread Benchmark, investment expenses shall be excluded.
- iii. The following asset types can be excluded from the scope of requirements in sections 4.A.ii through 5:
- (a) Cash or cash equivalents,
 - (b) Treasuries and agency bonds, and
 - (c) Public non-convertible, fixed-rate corporate bonds with no or immaterial callability.
4. Asset Adequacy Considerations and Documentation Expectations

A. Net return and risk documentation.

- i. For all assets, either currently held or in assumed reinvestments, provide:
 - (a) Identification of the assumed gross asset yield and the key components (for example, default and investment expenses) deducted to arrive at the assumed net asset yield.
 - (b) Explanation of any future reinvestment strategy assumptions that materially differ from current practices.
 - ii. For Projected High Net Yield Assets, either currently held or in assumed reinvestments, provide:
 - (a) A detailed explanation describing the relationship between the expected gross returns from these assets and the risk. It shall also include, for the aspect of any higher expected gross returns not assumed to be associated with higher risk, an explanation of how overperforming assets with expected returns lying outside the risk-return spectrum can be assumed to persist and be available for reinvestments throughout the projection period in moderately adverse conditions.
 - (b) Commentary on how assumptions on assets with risk factors leading to substantial volatility of returns, as identified through sensitivity testing or other means, contain an appropriate margin to reflect the uncertainty in the timing and amounts of asset cash flows.
 - (c) Identification of the extent to which Projected High Net Yield Assets are supporting major product categories, e.g., individual fixed annuities and pension risk transfers.
 - (d) Explanation of rationale for materially changing or not changing complex-asset-based assumptions from the prior year's analysis.
- B. Model rigor.** Where significant risks associated with complex, Projected High Net Yield Assets are not adequately captured with traditional modeling techniques, more rigorous modeling of those risks should occur.
- i. Where necessary to adequately reflect the risk:
 - (a) Multi-scenario testing of those risks specific to complex assets should be performed. For example, investments that may provide a higher expected return in part due to limited

information, niche skill sets, or other factors may require unique scenarios (for instance to adequately capture credit or liquidity risk) to fully encompass potential sources of loss.

- (b) Asset cash flows should be appropriately projected to reflect anticipated liquidity under adverse conditions. If such model aspects are not developed, sufficient additional conservatism to reflect this risk shall be applied.
 - (c) To the extent that the process for modeling or otherwise evaluating the risks is complex, and the potential for disconnect between reality and modeling increases, an additional margin to assumption(s) should be applied. Any such margin shall be applied in the direction of asset adequacy analysis results being less favorable.
 - (d) The full distribution of risk associated with complex assets should be considered.
- ii. An Appointed Actuary may use simplifications, approximations, and modeling efficiency techniques if the Appointed Actuary can demonstrate that the use of such techniques does not make asset adequacy analysis results more favorable. These techniques may be less appropriate if the amount of complex, high-yielding assets becomes a higher percentage of total assets.

Guidance note: Actuarial Standards of Practice (ASOPs), including ASOP No. 7 and No. 56 contain additional guidance on the use of models in the analysis of cash flows.

- C. **Fair Value determination.** In asset adequacy analysis, when an asset is projected to be available for sale, a Fair Value of that asset is established, based on the projected market conditions. Fair Value should only be determined internally (by the insurance or investment management company) when the market-based value of the asset or similar asset cannot be obtained or expected to be obtained in a projected scenario.
 - i. When the Fair Value of a material portion of supporting assets is determined internally, the actuarial memorandum shall contain a step-by-step description of the approach used to calculate the Fair Value of such assets.
 - ii. Provide the total Fair Value of assets that have values determined internally.
 - iii. When the Fair Value of a material portion of assets is determined internally, a sensitivity test should be performed (and the impact on asset adequacy analysis results presented) assuming a haircut to internally derived Fair Values that the Appointed Actuary deems reasonable given the commensurate level of anticipated uncertainty.
- D. **Non-publicly traded assets.** For non-publicly traded assets originated by the company, within the company's group, or within an entity closely tied to a company's group (inclusive of the company's investment manager), provide the following:
 - i. Documentation of practices to help ensure accurate valuation of those assets.
 - ii. The total Fair Value of such assets.
 - iii. To the extent the contractual agreement affects the investment income revenue streams included in the asset adequacy analysis, disclose in detail applicable contractual agreements and revenue sharing, e.g., performance fees, between the entity responsible for providing investment or other types of services and the insurer.

Also, assumed net cash flows from assets should be net of all explicit or implicit fees or expenses, such as origination fees, as well as reflective of other asset-related risks including credit risk, illiquidity risk, and other market risks.

- E. **Investments expenses (fees).** Assumed investment expenses, whether paid to an external asset manager or to internal investment management staff, as well as additional expenses that are directly attributable to the specific investments, should be commensurate with the expected expenses in light of the complexity of the assets.
- F. **Reinsurance modeling.** Related to reinsurance, relevant communications and disclosures, for instance commentary on collectability and counterparty risk, should be presented in the memorandum.

Guidance note: Section 4.F is consistent with the standard laid out in ASOP No. 11 – Reinsurance Involving Life Insurance, Annuities, or Health Benefit Plans in Financial Reports.

- G. **Borrowing.** Please identify if any borrowing is modeled besides to address very short-term liquidity needs. Also, verify borrowing and reinvestment rates to ensure that projections are not materially benefiting from arbitrage advantages.
5. Sensitivity Tests and Attribution Analysis related to Assumptions on Projected High Net Yield Assets

A. Sensitivity testing

- i. Perform and disclose, separately for (a) and (b), the asset adequacy analysis results from the following sensitivity tests:

- (a) For reinvestment assets other than Equity-like Instruments, assume the Net Market Spreads (before deduction of investment expenses) for Projected High Net Yield Assets do not exceed the Investment Grade Net Spread Benchmark and apply the test to a baseline of a level Treasury rate scenario.

For the purposes of limiting the Net Market Spreads at the Investment Grade Net Spread Benchmark, Projected High Net Yield Assets may be aggregated together but shall not include any assets that are not Projected High Net Yield Assets.

- (b) For reinvestment assets that are Equity-like Instruments, assume annual total returns, before the deduction of investment expenses, of 4% for the first 10 projection years after the valuation date followed by 5% for projection year 11 and after.

- ii. Strict technical compliance for each asset may not be practical for reasons such as model limitations. Professional judgment should be applied to produce sensitivity testing results that are consistent with the spirit of the test. A variety of alternative methods may be acceptable. Appropriate explanation and justification should be provided for the method that was employed.
- iii. Sensitivity testing for the purpose of this Guideline does not reflect commentary on moderately adverse conditions, but the volatility and impact demonstrated from the testing should be contemplated in Section 4.A.ii.(b) considerations.

- B. For Projected High Net Yield Assets for non-Equity-like Instruments either currently held or in assumed reinvestments, perform and disclose the following attribution analysis steps at the asset type level associated with the templates in Section 6:

- i. State the assumed Guideline Excess Spread.

- ii. Estimate the proportion of the Guideline Excess Spread attributable to the following factors:
 - (a) Credit risk
 - (b) Illiquidity risk
 - (c) Deviations of current spreads from long-term spreads defined in Appendix 1
 - (d) Volatility and other risks (identify and describe these risks in detail)
- iii. Provide commentary on the results of Section 5.B.ii. Also, where judgment is applied, provide supporting rationale of how the expected return in excess of the Investment Grade Net Spread Benchmark is estimated.

Guidance note: a best-efforts approach is expected for the year-end 2022 attribution analysis

6. Reporting, Review, and Templates

Guidance note: The NAIC Valuation Analysis (E) Working Group (VAWG) shall serve as a resource in the targeted review of asset adequacy analysis related to modeling of business supported with Projected High Net Yield Assets. VAWG shall provide periodic reports identifying outliers and concerns regarding the analysis to help inform regulators on the effectiveness of the Guideline in meeting the seven objectives stated in the Background section.

- A. The documentation, sensitivity test results, and attribution analysis referenced above are to be incorporated as a separate, easily identifiable section of the actuarial memorandum required by VM-30 or as a standalone document, with a due date of April 1 following the applicable valuation date. The domiciliary commissioner may approve a later due date for companies seeking a hardship extension. The separate section or standalone document shall be available to other state insurance commissioners in which the company is licensed upon request to the company. The confidentiality and information provisions in state adoptions of NAIC Model 820 regarding the actuarial memorandum are applicable to the separate section or standalone document required by this Guideline.
- B. Sample templates (to be adopted by the Life Actuarial Task Force):
 - i. Asset types – will be categorized when the templates are completed.
 - ii. Template for the asset summary.
 - iii. Template for components of net asset yield for various asset classes, with separate tables to be provided for initial assets and reinvestment assets.
 - iv. Template for sensitivity test aspects for Projected High Net Yield Assets that are fixed-income.
 - v. Template for sensitivity test results for Projected High Net Yield Assets.
 - vi. Template for attribution analysis, with separate tables to be provided for initial assets and reinvestment assets for Projected High Net Yield Assets.

Appendix I – Investment Grade Net Spread Benchmark

WAL (Weighted Avg Life)	Investment Grade Net Spread Benchmark (in bps)
1-10	170
11-20	175
21-30	185

Agenda

1. Updates to Website and Documentation
2. Outstanding Items
3. Field Test Results Submission Process
4. ESG Field Test Run Survey
5. Questions

Updates to Website and Documentation

- ESG Field Test Instructions
 - Section II.A Summary of Field Test Runs - In the field test run table in the Test #3 box, added "Baseline" as a descriptor for the equity model to clarify the details of the scenario set
 - Section II.A Summary of Field Test Runs - In single asterisk under table, expanded on the instructions relating to adjusting the inforce for the 12/31/19 + 200 BP Treasury yield curve adjustments
 - Section II.I Fund Mapping - Updated the link for the Basic Data Columns file to reflect an update to the file to provide information on additional columns that were added. The additional columns provide one-to-one fund mappings for the Aggressive Equity, Diversified Fixed Income, and Diversified Balanced Allocation.
- VM-21 Field Test Template
 - Updated the instructions tab to note that participants that use the direct iteration method only need to provide time zero reserve and capital values
- Website Updates
 - Added fan chart statistical reports for 10k scenario set and subsets for each field test run
 - Added new "Basic Data Columns" file that describes the returns in the scenario files to NAIC ESG June 2022 Field Test: General Documents
 - Added SERT scenarios
 - Added 9/30 scenario sets, associated statistical reports, and SERT scenarios

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

Outstanding Items

- Q&A Document
- Additional Field Test Scenario Set Statistics
- Realized and/or Implied Volatility Scenario Level Data
- Equity Parameters Document

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

Field Test Result Submission Process

- The NAIC is entering into a legal agreement with the Texas Department of Insurance to directly request and collect field test results under the regulatory authority of the Texas Insurance Commissioner. This agreement will maintain confidentiality of the field test results pursuant to Texas confidentiality laws while also streamlining the collection of the data.
- Under the agreement, the NAIC will be able to confidentially share field test results with state regulators, NAIC Committees, Task Forces, and Working Groups - including the Valuation Analysis Working Group. The NAIC will also be able to share aggregated field test results at public meetings.
- Secure File Transfer Protocol (FTP) sites will be set up for each legal entity and login credentials will be provided to participants to submit results.
- Additional communications will be sent out to field test participants providing instructions and other resources to facilitate the submission of field test results to the NAIC.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

Life Actuarial (A) Task Force
Virtual Meeting
June 9, 2022

The Life Actuarial (A) Task Force met June 9, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Mark Fowler represented by Jennifer Li (AL); Ricardo Lara represented by Ted Chang, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen and Ben Slutsker (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Judith L. French represented by Peter Weber (OH); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. Discussed Comments on AG AAT

Mr. Andersen shared the comment letter (Attachment Six-A) submitted by the American Council of Life Insurers (ACLI) on the Actuarial Guideline on Asset Adequacy Testing (AG AAT) (Attachment Six-B). He said some of the ACLI suggestions were noncontroversial and, therefore, were easily accepted. Mr. Tsang suggested clarifying the definition of “net market spread” by saying that the spread should be determined using comparable Treasury bonds. Mr. Chang asked if the term “immaterial callability” in Section 3.F.iii(c) is considered based upon its financial effect on the company or is it a reference to the size of the asset. Brian Bayerle (ACLI) suggested the word “immaterial” with respect to the callability of a bond is used to reference bonds with little to no remaining call periods. He suggested striking the reference to non-callable bonds from Section 3.F.iii(c).

Mr. Andersen said the ACLI comment letter suggested adding the word “materially” to Section 4.B.ii. Mr. Bayerle said that suggestion is intended to parallel with the existing language in VM-20, Requirements for Principle-Based Reserves for Life Products. Mr. Chang said that VM-20 measures materiality in reference to the size of the reserve. He said Section 4.B.ii does not seem to have a comparable reference. Mr. Bayerle said that the reference measure is the asset adequacy reserve. Mr. Andersen said a revised version of the guideline will be exposed shortly.

2. Re-Exposed APF 2022-04 and the NAIC Staff Recommendation Memorandum

Pat Allison (NAIC) discussed the American Academy of Actuaries (Academy) comment letter (Attachment Six-C) on amendment proposal 2022-04 and the NAIC staff recommendation memorandum. She said the recommendation memorandum has been revised to incorporate some changes suggested in the Academy letter. She said the recommendation memorandum proposes two options for determining current benchmark swap spreads. Option A allows companies to calculate current benchmark swap spreads by independently obtaining the Secured Overnight Financing Rate (SOFR) swap spread data from a nationally recognized source to cover the possibility that the NAIC is unable to obtain the SOFR data from more than one source. Option B calls for the NAIC to continue to provide current benchmark swap spreads, assuming NAIC staff can contract with at least two data sources for SOFR swap rates.

Ms. Allison said that the NAIC staff recommendation memorandum also proposes two options for determining long-term swap spreads. She said long-term option A has the NAIC providing long-term swap spreads based on

rates from a single data source, while under option B the NAIC will continue averaging the data from at least two data sources. Regardless of which option is selected, the NAIC will continue to publish the long-term swap data.

Ms. Allison said that in response to revisions suggested by the Academy (Attachment Six-D), the amendment proposal was changed to add the phrase “for valuation dates prior to June 30, 2037” to the paragraph in Section 9.F.8.d.ii of VM-20. She said a guidance note that mirrors the language in the NAIC staff recommendation memorandum was also added, along with a guidance note providing a definition of three-month and six-month SOFR swap rates. She specifically pointed to the changes related to option A and option B language provided in the amendment proposal. She noted that other clarifying changes suggested by the Academy (Attachment Six-E) were made to the NAIC staff recommendation memorandum. Alan Routhenstein (Academy) asked if the word “companies” in the paragraph proposed for Appendix 2.F should be replaced with the term “the appointed actuary.” Mr. Boerner said the question of which term to use will be noted in the exposure.

Mr. Leung made a motion, seconded by Mr. Chupp, to expose the NAIC staff recommendation memorandum (Attachment Six-F) and amendment proposal 2022-04 (Attachment Six-G), including the question of replacing “companies” with “the appointed actuary,” for a 12-day public comment period ending June 21. The motion passed unanimously.

3. Adopted Amendment Proposal 2020-12

Mr. Slutsker said amendment proposal 2020-12 was crafted over a two-year period. He said it now focuses on targeting the modeling of hedges when there are future hedging programs. Mr. Bayerle said earlier ACLI comment letters provided recommendations for enhancing the quality of the amendment proposal. He said the Task Force decided to defer some of the recommendations. He said the amendment proposal also does not address other issues, such as index credits. He said the current ACLI comment letter (Attachment Six-H) shows the ACLI’s willingness to work with the Task Force to address the remaining issues by the end of the year.

Mr. Slutsker made a motion, seconded by Mr. Chupp, to adopt amendment proposal 2020-12 (Attachment Six-I). The motion passed unanimously.

4. Heard an Update on the Experience Reporting Data Collection

Ms. Allison gave an update (Attachment Six-J) on the mortality data collected for the 2018 and 2019 observation years. She said the data will be used to develop industry experience tables and to help state insurance regulators monitor principle-based reserves. She said an aggregated data submission file was sent to the Society of Actuaries (SOA) on May 31. She said NAIC staff will be contacting companies that had incomplete submissions to have them address the missing items. She said the communication will include the companies’ domestic regulators. She said companies will also be provided responses on reviews of their field distributions in preparation for the upcoming data submission. She provided an overview of the data acceptance statistics and named several improvements that are being made to the data collection process.

5. Heard an Update on the ESG Field Test

Scott O’Neal (NAIC) said the economic scenario generator (ESG) field test started on June 1. He said more field test scenario information is continually being added to the Conning website. He mentioned that questions received from field test participants have been added to the question-and-answer (Q&A) document.

Having no further business, the Life Actuarial (A) Task Force adjourned.

Brian Bayerle
Senior Actuary

June 8, 2022

Mr. Mike Boerner
Chair, NAIC Life Actuarial Task Force (LATF)

Mr. Fred Andersen
Chief Life Actuary, Minnesota Department of Commerce

Re: June 2nd Exposure of Actuarial Guideline Asset Adequacy Testing

Dear Messrs. Boerner and Andersen:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on the June 2nd (Fourth) exposure of Actuarial Guideline (AG) on Asset Adequacy Testing (AAT, collectively Guideline). We have the following feedback on the Guideline by section of the document, with an accompanying redlined version (AG AAT - 4th Exposure - ACLI Markup):

- It may be more streamlined to put “best efforts” into an earlier part of the Guideline rather than at the end of Section 5 since it logically applies to most of the requirements of the Guideline.
- The Appointed Actuary, not the company, is providing the actuarial opinion, so suggest changing references from “company” to “Appointed Actuary” throughout.
- Guidance Note after 1. Effective Date: Given the expectation that these requirements will be revisited before potential incorporation into VM-30, we suggest clarifying the Guidance Note to avoid suggesting aspects of the Guideline are still effective even if other aspects are incorporated into VM-30.
- 3.G: Call provisions are very common in corporate bonds and are well-understood by market participants and regulators. The risk of achieving a low yield should be captured in low interest rate scenarios in the model when a bond is called away and the proceeds must be reinvested in a lower interest rate environment. For this reason, we suggest that regulators consider striking “non-callable” from the requirements. At a minimum, this item could include a materiality qualifier, e.g., “public fixed-rate corporate bonds with immaterial callability and convertibility.”
- Section 4.B.ii: Suggest adding “materially” to “more favorable” to avoid cases where simplifications could lead to a small difference in results.
- 4.E: Suggest striking “in light of the complexity of the assets” since it is irrelevant to the expected expenses associated with the assets.

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

Actuarial Guideline AAT – 4th Exposure**APPLICATION OF THE VALUATION MANUAL FOR TESTING THE ADEQUACY OF LIFE INSURER RESERVES****Background**

The *NAIC Valuation Manual (VM-30)* contains actuarial opinion and supporting actuarial memorandum requirements, including requirements for asset adequacy analysis. Regulators have observed a lack of uniform practice in the implementation of asset adequacy analysis. The variety of practice in incorporating the risk of complex assets into testing does not provide regulators comfort as to reserve adequacy. Examples of complex assets are structured securities, including asset-backed securities and collateralized loan obligations, as well as assets originated by the company or affiliated or contracted entity. An initial increase of this activity has been noted in support of general account annuity blocks; however, recent activity was noted in other life insurer blocks.

This Guideline is intended to provide uniform guidance and clarification of requirements for the appropriate support of certain assumptions for asset adequacy analysis performed by life insurers. In particular, this Guideline:

- (1) Helps identify reserve adequacy and claims-paying ability in moderately adverse conditions, including conditions negatively impacting cash flows from complex assets;
- (2) Clarifies elements to consider in establishing margins on asset-related assumptions;
- (3) Ensures recognition that higher expected gross returns from assets are, to some extent, associated with higher risk, and that assumptions fit reasonably within the risk-return spectrum;
- (4) Requires sensitivity testing regarding complex assets supporting life insurer business;
- (5) Identifies expectations in practice regarding the valuation of complex assets within asset adequacy analysis;
- (6) Reflects that while complex assets tend to have higher uncertainty regarding timing and amount of cash flows than more traditional investments, because complex assets are difficult to classify, and the regulatory concern is regarding the projected net yields and cash flows from those assets, the focus of the analysis requirements will be on assets categorized as high-yielding; and
- (7) Requires additional documentation of investment fee income relationships with affiliated entities or entities close to the company.

Text

1. Effective Date

This Guideline shall be effective for asset adequacy analysis of the reserves reported in the December 31, 2022 Annual Statement and for the asset adequacy analysis of the reserves reported in all subsequent Annual Statements.

Guidance note: It is anticipated that the requirements contained in this Guideline will be incorporated into VM-30 at a future date, effective for a future valuation year. This Guideline will cease to apply to annual statutory financial statements when the corresponding VM-30 requirements become effective.

2. Scope

This Guideline shall apply to all life insurers with:

- A. Over \$5 billion of general account actuarial reserves (from Exhibits 5, 6, 7, and 8 of the Annual Statement) and non-unitized separate account assets or
- B. Over \$100 million of general account actuarial reserves (from Exhibits 5, 6, 7, and 8 of the Annual Statement) and non-unitized separate account assets and over 5% of supporting assets (selected for asset adequacy analysis) in the category of Projected High Net Yield Assets, as defined in Section 3.F.

Actuarial reserve amounts are included in the amounts in A and B whether directly written or assumed through reinsurance and are determined before any reinsurance ceded credit.

The Guideline applies to assets supporting liabilities tested in the asset adequacy analysis except it does not apply to unitized separate account assets or policy/contract loans.

3. Definitions

- A. Equity-like Instruments. Assets that include the following:
 - i. Any assets that, for purposes of risk-based capital C-1 reporting, is in the category of common stock, i.e., has a 30% or higher risk-based capital charge.
 - ii. Any assets that are captured on Schedule A or Schedule BA of the Annual Statement.
 - iii. Bond funds.
- B. Fair Value. The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date, consistent with methodology of fair value, as reported in the Annual Statement.
- C. Net Market Spread. For each asset grouping, shall mean the spread over Treasury bonds that equates an asset's fair value as of the valuation date with its modeled cash flows, less the default assumption used in asset adequacy analysis.

Market conventions and other approximations are acceptable for the purposes of this definition.
- D. Investment Grade Net Spread Benchmark. The applicable spread found in Appendix I using the weighted average life (WAL) of the associated non-Equity-like Instrument.
- E. Guideline Excess Spread. The net spread derived by subtracting the Investment Grade Net Spread Benchmark from the Net Market Spread for non-Equity-like Instruments. Investment expenses shall be excluded from this calculation.
- F. Projected High Net Yield Assets. Currently held or reinvestment assets that are either:
 - i. An Equity-like Instrument assumed to have higher value at projection year 10 or later than under an assumption of annual total returns, before the deduction of investment expenses, of 4% for the first 10 projection years after the valuation date followed by 5% for projection year 11 and after. Aggregation shall be done at a level of granularity that is consistent with or more granular than how the assets are grouped, i.e., compressed, in the asset adequacy analysis model, or
 - ii. Assets other than Equity-like Instruments where the assumed Guideline Excess Spread is higher than zero. In addition:

- (a) Aggregation of the comparison between the assumed Net Market Spread from each asset and the Investment Grade Net Spread Benchmark shall be done at a level of granularity that is consistent with or more granular than how the assets are grouped, i.e., compressed, in the asset adequacy analysis model.
- (b) For applicable assets that do not have an explicit WAL or term to maturity, the company shall disclose the method used to determine the appropriate WAL used for comparing to the Investment Grade Net Spread Benchmark.
- (c) For purposes of the comparison between the assumed Net Market Spread from each asset and the Investment Grade Net Spread Benchmark, investment expenses shall be excluded.

iii. The following asset types can be excluded from the scope of requirements in sections 4.A.ii through 5:

- (a) Cash or cash equivalents,
- (b) Treasuries and agency bonds, and
- (c) Public non-callable, non-convertible, fixed-rate corporate bonds.

4. Asset Adequacy Considerations and Documentation Expectations

A. Net return and risk documentation.

i. For all assets, either currently held or in assumed reinvestments, provide:

- (a) Identification of the assumed gross asset yield and the key components (for example, default and investment expenses) deducted to arrive at the assumed net asset yield.
- (b) Explanation of any future reinvestment strategy assumptions that materially differ from current practices.

ii. For Projected High Net Yield Assets, either currently held or in assumed reinvestments, provide:

- (a) A detailed explanation describing the relationship between the expected gross returns from these assets and the risk. It shall also include, for the aspect of any higher expected gross returns not assumed to be associated with higher risk, an explanation of how overperforming assets with expected returns lying outside the risk-return spectrum can be assumed to persist and be available for reinvestments throughout the projection period in moderately adverse conditions.
- (b) Commentary on how assumptions on assets with risk factors leading to substantial volatility of returns, as identified through sensitivity testing or other means, contain an appropriate margin to reflect the uncertainty in the timing and amounts of asset cash flows.
- (c) Identification of the extent to which Projected High Net Yield Assets are supporting major product categories, e.g., individual fixed annuities and pension risk transfers.
- (d) Explanation of rationale for materially changing or not changing complex-asset-based assumptions from the prior year's analysis.

B. **Model rigor.** Where significant risks associated with complex, Projected High Net Yield Assets are not adequately captured with traditional modeling techniques associated with simple assets like corporate bonds, more rigorous modeling of those risks should occur.

- i. Where necessary to adequately reflect the risk:
 - (a) Multi-scenario testing of those risks specific to complex assets should be performed. For example, investments that may provide a higher expected return in part due to limited information, niche skill sets, or other factors may require unique scenarios (for instance to adequately capture credit or liquidity risk) to fully encompass potential sources of loss.
 - (b) Asset cash flows should be appropriately projected to reflect anticipated liquidity under adverse conditions. If such model aspects are not developed, sufficient additional conservatism to reflect this risk shall be applied.
 - (c) To the extent that the process for modeling or otherwise evaluating the risks is complex, and the potential for disconnect between reality and modeling increases, an additional margin to assumption(s) should be applied. Any such margin shall be applied in the direction of asset adequacy analysis results being less favorable.
 - (d) The full distribution of risk associated with complex assets should be considered.
- ii. A company may use simplifications, approximations, and modeling efficiency techniques if the company can demonstrate that the use of such techniques does not make asset adequacy analysis results more favorable. These techniques may be less appropriate if the amount of complex, high-yielding assets becomes a higher percentage of total assets.

Guidance note: Actuarial Standards of Practice (ASOPs), including ASOP No. 7 and No. 56 contain additional guidance on the use of models in the analysis of cash flows.

- C. **Fair Value determination.** In asset adequacy analysis, when an asset is projected to be available for sale, a Fair Value of that asset is established, based on market information. Fair Value should only be determined internally (by the insurance or investment management company) when the market-based value of the asset or similar asset cannot be obtained.
 - i. When the Fair Value of a material portion of supporting assets is determined internally, the actuarial memorandum shall contain a step-by-step description of the approach used to calculate the Fair Value of such assets.
 - ii. Provide the total Fair Value of assets that have values determined internally.
 - iii. When the Fair Value of a material portion of assets is determined internally, a sensitivity test should be performed (and the impact on asset adequacy analysis results presented) assuming a haircut to internally derived Fair Values that the company deems reasonable given the commensurate level of anticipated uncertainty.
- D. **Non-publicly traded assets.** For non-publicly traded assets originated by the company, within the company's group, or within an entity closely tied to a company's group (inclusive of the company's investment manager), provide the following:
 - i. Documentation of practices to help ensure accurate valuation of those assets.
 - ii. The total Fair Value of such assets.
 - iii. To the extent the contractual agreement affects the investment income revenue streams included in the asset adequacy analysis, disclose in detail applicable contractual agreements and revenue sharing, e.g.,

performance fees, between the entity responsible for providing investment or other types of services and the insurer.

Also, assumed net cash flows from assets should be net of all explicit or implicit fees or expenses, such as origination fees, as well as reflective of other asset-related risks including credit risk, illiquidity risk, and other market risks.

- E. **Investments expenses (fees).** Assumed investment expenses, whether paid to an external asset manager or to internal investment management staff, as well as additional expenses that are directly attributable to the specific investments, should be commensurate with the expected expenses in light of the complexity of the assets.
- F. **Reinsurance modeling.** Related to reinsurance, relevant communications and disclosures, for instance commentary on collectability and counterparty risk, should be presented in the memorandum.

~~**Guidance note:** Section 4.F is consistent with the standard laid out in ASOP No. 11 – Reinsurance Involving Life Insurance, Annuities, or Health Benefit Plans in Financial Reports.~~

- G. **Borrowing.** Please identify if any borrowing is modeled besides to address very short-term liquidity needs. Also, verify borrowing and reinvestment rates to ensure that projections are not materially benefiting from arbitrage advantages.
5. Sensitivity Tests and Attribution Analysis related to Assumptions on Projected High Net Yield Assets

A. Sensitivity testing

- i. Perform and disclose, separately for (a) and (b), the asset adequacy analysis results from the following sensitivity tests:
- (a) For reinvestment assets other than Equity-like Instruments, assume the Net Market Spreads (before deduction of investment expenses) for Projected High Net Yield Assets do not exceed the Investment Grade Net Spread Benchmark and apply the test to a baseline of a level Treasury rate scenario.
- For the purposes of limiting the Net Market Spreads at the Investment Grade Net Spread Benchmark, Projected High Net Yield Assets may be aggregated together but shall not include any assets that are not Projected High Net Yield Assets.
- (b) For reinvestment assets that are Equity-like Instruments, assume annual total returns, before the deduction of investment expenses, of 4% for the first 10 projection years after the valuation date followed by 5% for projection year 11 and after.
- ii. Strict technical compliance for each asset may not be practical for reasons such as model limitations. Professional judgment should be applied to produce sensitivity testing results that are consistent with the spirit of the test. A variety of alternative methods may be acceptable. Appropriate explanation and justification should be provided for the method that was employed.
- iii. Sensitivity testing for the purpose of this Guideline does not reflect commentary on moderately adverse conditions, but the volatility and impact demonstrated from the testing should be contemplated in Section 4.A.ii.(b) considerations.

- B. For Projected High Net Yield Assets for non-Equity-like Instruments either currently held or in assumed reinvestments, perform and disclose the following attribution analysis steps at the asset type level associated with the templates in Section 6:

- i. State the assumed Guideline Excess Spread.
- ii. Estimate the proportion of the Guideline Excess Spread attributable to the following factors:
 - (a) Credit risk
 - (b) Illiquidity risk
 - (c) Deviations of current spreads from long-term spreads defined in Appendix 1
 - (d) Volatility and other risks (identify and describe these risks in detail)
- iii. Provide commentary on the results of Section 5.B.ii. Also, where judgment is applied, provide supporting rationale of how the expected return in excess of the Investment Grade Net Spread Benchmark is estimated.

Guidance note: a best-efforts approach is expected for the year-end 2022 attribution analysis

6. Reporting, Review, and Templates

Guidance note: The NAIC Valuation Analysis (E) Working Group (VAWG) shall serve as a resource in the targeted review of asset adequacy analysis related to modeling of business supported with Projected High Net Yield Assets. VAWG shall provide periodic reports identifying outliers and concerns regarding the analysis to help inform regulators on the effectiveness of the Guideline in meeting the seven objectives stated in the Background section.

- A. The documentation, sensitivity test results, and attribution analysis referenced above are to be incorporated as a separate, easily identifiable section of the actuarial memorandum required by VM-30 or as a standalone document, with a due date of April 1 following the applicable valuation date. The domiciliary commissioner may approve a later due date for companies seeking a hardship extension. The separate section or standalone document shall be available to other state insurance commissioners in which the company is licensed upon request to the company. The confidentiality and information provisions in state adoptions of NAIC Model 820 regarding the actuarial memorandum are applicable to the separate section or standalone document required by this Guideline.
- B. Sample templates (to be adopted by the Life Actuarial Task Force):
 - i. Asset types – will be categorized when the templates are completed
 - ii. Template for the asset summary.
 - iii. Template for components of net asset yield for various asset classes, with separate tables to be provided for initial assets and reinvestment assets.
 - iv. Template for sensitivity test aspects for Projected High Net Yield fixed-income assets.
 - v. Template for sensitivity test results for Projected High Net Yield Assets.
 - vii. Template for attribution analysis, with separate tables to be provided for initial assets and reinvestment assets for Projected High Net Yield Assets.

AMERICAN ACADEMY of ACTUARIES

Objective. Independent. Effective.™

June 7, 2022

Mr. Michael Boerner,
Chair, Life Actuarial (A) Task Force (LATF)
National Association of Insurance Commissioners (NAIC)

Re: LATF's May 26, 2022, exposure of a revised version of APF 2022-04 on Swap Spreads and LIBOR transition to SOFR (the "APF"), and a related memo (the "Memo") from NAIC staff

Dear Mr. Boerner,

The Life Reserves Work Group, Annuity Reserves and Capital Work Group, and Variable Annuity Reserves and Capital Work Group of the American Academy of Actuaries¹ (the "Academy") appreciates the opportunity to provide comments on the APF and Memo. The Academy is thankful to LATF and NAIC staff as well for the March 10 exposure of an earlier version of the APF drafted by the Academy and an accompanying Academy presentation deck, and for considering Academy member views earlier in May through an informal drafting group discussion and follow-up emails.

The Academy is supportive of the exposed documents, though we have the following comments on actuarial judgment and suggested refinements to the documents to improve clarity.

Although the APF and Memo depart from the Academy's March recommendation that the NAIC continue to publish LIBOR swap spreads for as long as the NAIC can obtain supporting data from two data providers, the Academy is supportive of the approach taken in the May 26 exposures as it allows for appropriate actuarial judgment. More specifically, on or after the Memo effective date (e.g., possibly June 30, 2022) if an insurer has an asset, liability or other financial instrument subject to principles-based valuation that has a floating rate based on LIBOR, LIBOR swap rates or LIBOR swap spreads, such floating rate will no longer be prescribed under VM-20 and thus will need to be estimated by the qualified actuary via the use of actuarial judgment. The Academy believes that the expertise to perform such estimation is well within

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

the professional experience of many actuaries working with annuity or interest sensitive life blocks, yet anticipate that a variety of reasonable approaches might be used for estimation.

The Academy’s comments on the APF and the Memo appear in the margin of refined versions of these documents, which are attached. In summary:

- The APF includes five self-explanatory comments that begin with “To improve clarity”, one self-explanatory comment that begins with “To improve concision”, and one comment that suggests for parallel construction the inclusion of a new Guidance Note (verbatim from the Memo, that begins with “Actuarial judgment may be required”).
- The Memo includes two self-explanatory comments that begin with “To improve clarity”, and one self-explanatory comment that begins with “To improve concision”.

The Academy appreciates the efforts of LATF and NAIC staff on the APF and Memo. If you have any questions or would like further dialogue on the above topics, please contact Amanda Barry-Moilanen, Life Policy Analyst, at barrymoilanen@actuary.org.

Sincerely,

Alan Routhenstein, MAAA, FSA
Member, Life Valuation Committee
American Academy of Actuaries

Life Actuarial (A) Task Force
Updated Exposure of APF 2022-04

Swap Spreads and London Inter-Bank Offered Rate (LIBOR)
Transition to the Secured Overnight Financing Rate (SOFR)

Note this revised APF is complemented by a May 26, 2022 memo from NAIC staff to LATF on a recommended replacement to LIBOR swap spreads effective [TBD, potentially June 30, 2022].

Please send comments to Reggie Mazyck @ RMazyck@NAIC.Org by close of business on June 1, 2022.

Notes: APF 2022-04			

**Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
 Amendment Proposal Form**

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:

Alan Routhenstein, on behalf of the American Academy of Actuaries’ Life Reserves Work Group, Annuity Reserves and Capital Work Group, and Variable Annuity Reserves and Capital Work Group

Pat Allison, NAIC staff

Title of the Issue:

Swap Spreads and London Inter-Bank Offered Rate (LIBOR) transition to the Secured Overnight Financing Rate (SOFR) - Updated VM-20 prescribed swap spreads guidance in light of the LIBOR transition to SOFR.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-20 Section 9.F.8.d, VM-20 Appendix 2.F, VM-20 Appendix 2.G
 January 1, 2022 NAIC *Valuation Manual*

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

Proposed edits to VM-20 for LIBOR transition to SOFR are shown in the attached Appendix

4. State the reason for the proposed amendment? (You may do this through an attachment.)
 - a. Bank regulators and a group of swap market participants have agreed that for interbank interest rate swaps executed after 2021, the floating rate needs to be based on an index other than LIBOR.
 - b. During 2021 the swap market evolved such that the definition of a standard n-year interest rate swap changed in January 2022 to be a SOFR swap (for which the floating rate is based on SOFR) from the historical LIBOR swap (for which the floating rate is LIBOR).
 - c. As a result, VM-20 instructions for how the NAIC will calculate and publish swap spreads needs to be updated for:
 - i. Current Benchmark swap spreads (as of each month end); and
 - ii. Long-Term Benchmark swap spreads (as of each quarter end)
 - d. The associated presentation provides further background and rationale for this proposal.

NAIC Staff Comments:

W:\National Meetings\2015\...TF\LHA\

Appendix

Proposed amendments to VM-20 for APF 2022-04 on Swap Spreads and LIBOR transition to SOFR

VM-20 Section 9.F.8.d Procedure for Setting Prescribed Gross Asset Spreads.....:

d. Interest rate swap spreads over Treasuries shall be prescribed by the NAIC for use throughout the cash-flow model wherever appropriate for transactions and operations including, but not limited to, purchase, sale, settlement, cash flows of derivative positions and reset of floating rate investments. A current and long-term swap spread curve shall be prescribed for year one and years four and after, respectively, with yearly grading in between. ~~The three month and six month points on the swap spread curves shall be the market-observable values for these tenors. Currently, this shall be the corresponding London Interbank Offered Rate (LIBOR) spreads over Treasuries. When the NAIC determines LIBOR is no longer effective, the NAIC shall recommend a replacement to the Life Actuarial (A) Task Force which shall be effective upon adoption by the Task Force.~~

- i. The current prescribed swap spread curve shall be the Secured Overnight Financing Rate (SOFR) swap curve.
- ii. The long term SOFR swap spread curve, given that the SOFR swap market did not emerge before late 2021 and that SOFR is an index for which there is no official data before April 2, 2018, shall be calculated based on 15 year moving averages of prescribed estimates of historical current SOFR swap spreads.

Commented [A1]: To improve clarity, after "shall" insert "for valuation dates prior to June 30, 2037"

Commented [A2]: Insert a [Guidance Note: Actuarial judgment may be required in the use of prescribed swap spreads (for example, in the case where companies have a financial instrument with floating rate payments based on an index that is not prescribed by the NAIC (e.g., 1-month SOFR or 3-month LIBOR)).]

VM-20 Appendix 2.F Current Benchmark Swap Spreads:

F. Current Benchmark Swap Spreads

1. For tenors of 3 months, 6 months, and one year to 30 years, extract swap spread data determined as of the last business day of the month by maturity from at least two reputable data sources. For Bank of America data, if the data source provides swap rates rather than swap spreads, convert the swap rate for each maturity to a swap spread by subtracting the corresponding maturity Treasury yield from the swap rate. For JP Morgan, the swap spread is provided for each maturity.
2. Average the Bank of America swap spread with the JP Morgan swap spreads from the data sources by maturity determined as of the last business day of the month.
3. Publish the Current Benchmark Swap Spreads by maturity in a table.

Commented [A3]: To improve clarity, reinstate this Drafting Note from the 2022-03-10 exposure, and replace "Drafting Note" with "Guidance Note": **[Guidance Note:** 3-month and 6-month SOFR swap rates are defined herein as the fixed rate one party pays at the end of three months or six months in exchange for receiving at such time 3-month SOFR or 6-month SOFR, calculated on a compounded in arrears basis.]

[Drafting Note: The tables will be labeled to indicate they contain SOFR swap spreads.]

VM-20 Appendix 2.G Long-Term Benchmark Swap Spreads:

G. Long-Term Benchmark Swap Spreads

1. Extract daily swap spread data over the prescribed observation period (rolling 15-year period) ending on the last business day of the quarter from at least two reputable data sources. For Bank of America data, if the data source provides swap rates rather than swap spreads, convert the daily swap rate for each maturity to a swap spread by subtracting the corresponding maturity Treasury yield from the swap rate. For JP Morgan, the daily swap spread is provided for each maturity.
2. Starting in 2023 and before 2037, calculate SOFR swap spreads as follows for each business day "u" on or after the effective date of the adoption by the Life Actuarial (A) Task Force of SOFR swap spreads as the replacement for swap spreads previously prescribed:
 - a. For each maturity "m" = 0.25, 0.5, 1 ... 30 years, and business day "u":

$$\text{SOFR swap spread}(m,u) = \text{SOFR swap rate}(m,u) - \text{Treasury yield}(m,u).$$
3. For each business day before the effective date of the adoption by the Life Actuarial (A) Task Force of SOFR swap spreads as the replacement for swap spreads previously prescribed, utilize Bloomberg's 2021-03-05 published USD Spread Adjustments as follows:
 - a. For each maturity "m" = 3 or 6 months, and business day "u":
 - i. $\text{SOFR swap spread}(3 \text{ months},u) = \text{LIBOR swap spread}(3 \text{ months},u) - 0.26161\%$
(the USD 3-month Spread Adjustment)
 - ii. $\text{SOFR swap spread}(6 \text{ months},u) = \text{LIBOR swap spread}(6 \text{ months},u) - 0.42826\%$
(the USD 6-month Spread Adjustment)
 - b. For each maturity "m" = 1 ... 30 years, and business day "u":

$$\text{SOFR swap spread}(m,u) = \text{LIBOR swap spread}(m,u) - 0.26161\% \text{ (the USD 3-month Spread Adjustment)}$$
4. During and after 2037, calculate SOFR swap spreads as follows for each maturity "m" = 0.25, 0.5, 1 ... 30 years:

$$\text{SOFR swap spread}(m,u) = \text{SOFR swap rate}(m,u) - \text{Treasury yield}(m,u).$$

Commented [A4]: To improve clarity, delete "Starting in" and insert "For a valuation date during or after"

Commented [A5]: To improve concision, delete "u" here because it is defined in 2.a below

Commented [A6]: To improve clarity, after "For" insert "a valuation date during or after 2023 and before 2037, for"

Commented [A7]: To improve clarity,
- delete "During and" and insert "For a valuation date during or"
- refine the latter two-thirds of this paragraph, starting with "for each maturity" to replicate 2a above, including the insertion after "30 years" of the following:
, and business day "u"

- ~~4.5.2. Average the daily Bank of America swap spread data from the data sources with the daily JP Morgan swap spread data by maturity over the prescribed observation (rolling 15-year period).~~
6. ~~3.~~ Calculate the Long-Term Benchmark Swap Spreads as the 85% conditional mean for each of the 32 maturity categories (three-month, six-month, one-year, two-year, ... 30-year) using the same business trading days as were used in the 85% conditional mean for long-term bonds spreads.
7. ~~4.~~ Publish the Long-Term Benchmark Swap Spreads in a table. Among tables published on the NAIC website (See Subsection H)~~),~~ ~~Table J~~ shows Long-Term Benchmark Swap Spreads.

MEMORANDUM

TO: Life Actuarial (A) Task Force
 FROM: Pat Allison, NAIC Staff
 DATE: May 26, 2022
 RE: Recommended replacement related to APF 2022-04 Swap Spreads and LIBOR transition to SOFR

Background

The purpose of this memo is to recommend: 1) Secured Overnight Financing Rate (SOFR) swap spreads as the replacement for LIBOR swap spreads upon adoption by LATF, and 2) The approach to be used in calculating current and long-term swap spread curves from the date of this adoption through the remainder of 2022. These recommendations are consistent with APF 2022-04 (which would be effective for the 2023 *Valuation Manual*), which identifies the SOFR as the replacement for LIBOR, and 2) the VM-20 Section 9.F.8.d Procedure for Setting Prescribed Gross Asset Spreads, cited below:

A current and long-term swap spread curve shall be prescribed for year one and years four and after, respectively, with yearly grading in between. The three-month and six-month points on the swap spread curves shall be the market-observable values for these tenors. Currently, this shall be the corresponding London Interbank Offered Rate (LIBOR) spreads over Treasuries. When the NAIC determines LIBOR is no longer effective, the NAIC shall recommend a replacement to the Life Actuarial (A) Task Force which shall be effective upon adoption by the Task Force.

The last sentence above notes that the NAIC shall recommend “a replacement”, which indicates an intent to replace the prescribed current and long-term swap spread curves with a single replacement, as opposed to continuing the use of LIBOR beyond the adoption date.

Commented [AR1]: To improve clarity, delete "use" (which might be misinterpreted) and insert "NAIC's prescription"

Determination that LIBOR is no longer effective

An American Academy of Actuaries’ extrapolation of data published on April 13 by the International Swaps and Derivatives Association (ISDA) Clarus Financial Technology¹ shows that SOFR-based transactions are growing in popularity and can be expected to reach in July or August a two-thirds majority of newly executed USD interest rate derivatives (based on a risk-based DV01 metric). A

¹ See “The Percentage of DV01” chart accessible via “The Charts” link within this ISDA-Clarus 2022-04-13 publication: <https://www.clarusfi.com/latest-data-shows-sofr-trading-soaring/>

 www.naic.org

Bloomberg February 9 article² states that over two-thirds of newly executed USD interest rate swaps in January 2022 were SOFR swaps (with the floating rate based on SOFR) rather than LIBOR swaps (with the floating rate based on LIBOR). Based on the information provided in these publications, NAIC staff has determined that LIBOR is no longer effective.

Actuarial judgment may be required in the use of prescribed swap spreads (for example, in the case where companies have a combination of SOFR and LIBOR-based swaps). VM-20 Section 9.F.8.d states, in part “Interest rate swap spreads over Treasuries shall be prescribed by the NAIC for use throughout the cash-flow model *wherever appropriate* for transactions and operations...” (emphasis added).

Commented [AR2]: To improve clarity, delete "a combination of SOFR and LIBOR-based swaps" and insert "a financial instrument with floating rate payments based on an index that is not prescribed by the NAIC (e.g., 1-month SOFR or 3-month LIBOR)"

Recommended Replacement for Current Benchmark Swap Spreads

Effective [TBD, potentially June 30, 2022] and through December 31, 2022, NAIC staff recommends that for each month-end date, LIBOR swap spreads shall be replaced with SOFR swap spreads³:

- o 3-month LIBOR spread should be replaced with 3m SOFR swap⁴ spread
- o 6-month LIBOR spread should be replaced with 6m SOFR swap spread
- o 1-year swap spread should be replaced with 1y SOFR swap spread
- o ...
- o 30-year swap spread should be replaced with 30y SOFR swap spread

Recommended Replacement for Long-Term Benchmark Swap Spreads

Effective on the adoption date by the Life Actuarial (A) Task Force of SOFR swap spreads as the replacement for swap spreads previously prescribed and through December 31, 2022, NAIC staff recommends the following approach for the calculation of long-term benchmark swap spreads, consistent with APF 2022-04:

1. Extract daily swap spread data over the prescribed observation period (rolling 15-year period) ending on the last business day of the quarter from at least two reputable data sources. If the data source provides swap rates rather than swap spreads, convert the daily swap rate for each maturity to a swap spread by subtracting the corresponding maturity Treasury yield from the swap rate.
2. Calculate SOFR swap spreads as follows for each business day ^{“u”} on or after the effective date of the adoption by the Life Actuarial (A) Task Force of SOFR swap spreads as the replacement for swap spreads previously prescribed:
 - a. For each maturity “m” = 0.25, 0.5, 1 ... 30 years, and business day “u”:

$$\text{SOFR swap spread}(m,u) = \text{SOFR swap rate}(m,u) - \text{Treasury yield}(m,u).$$
3. Calculate SOFR swap spreads as follows for each business day before the effective date of the adoption by the Life Actuarial (A) Task Force of SOFR swap spreads as the replacement for swap spreads previously prescribed, utilizing Bloomberg’s 2021-03-05 published USD Spread Adjustments:
 - a. For each maturity “m” = 3 or 6 months, and business day “u”,

Commented [AR3]: To improve concision, delete "u" here because it is defined in 2.a below

² See "Growth in SOFR Swaps Volume" within this 2022-02-09 Bloomberg article: <https://www.bloomberg.com/professional/blog/sofr-liquidity-eclipses-libor/>
³ During 2021 the swap market evolved such that the definition of a standard n-year interest rate swap changed in January 2022 to be a SOFR swap from the LIBOR swap.
⁴ 3-month and 6-month SOFR swap rates are defined herein as the fixed rate one party pays at the end of three months or six months in exchange for receiving at such time 3-month SOFR or 6-month SOFR, calculated on a compounded in arrears basis.

- i. $\text{SOFR swap spread}(3 \text{ months}, u) = \text{LIBOR swap spread}(3 \text{ months}, u) - 0.26161\%$ (the USD 3-month Spread Adjustment)
 - ii. $\text{SOFR swap spread}(6 \text{ months}, u) = \text{LIBOR swap spread}(6 \text{ months}, u) - 0.42826\%$ (the USD 6-month Spread Adjustment)
 - b. For each maturity “m” = 1 ... 30 years, and business day “u”:
 $\text{SOFR swap spread}(m, u) = \text{LIBOR swap spread}(m, u) - 0.26161\%$ (the USD 3-month Spread Adjustment)
3. Average the swap spread data from the data sources by maturity over the prescribed observation (rolling 15-year period).
 4. Calculate the Long-Term Benchmark Swap Spreads as the 85% conditional mean for each of the 32 maturity categories (three-month, six-month, one-year, two-year, ... 30-year) using the same business trading days as were used in the 85% conditional mean for long-term bonds spreads.
 5. Publish the Long-Term Benchmark Swap Spreads in a table. Among tables published on the NAIC website (See Subsection H), Table J shows Long-Term Benchmark Swap Spreads.

In Table J, NAIC staff shall clarify that from the adoption date forward, current and long-term benchmark swap spreads are SOFR swap spreads.

MEMORANDUM

TO: Life Actuarial (A) Task Force

FROM: Pat Allison, NAIC Staff

DATE: May 26, 2022

RE: Recommended replacement related to APF 2022-04 Swap Spreads and LIBOR transition to SOFR

Background

The purpose of this memo is to recommend: 1) Secured Overnight Financing Rate (SOFR) swap spreads as the replacement for LIBOR swap spreads upon adoption by LATF, and 2) The approach to be used in calculating current and long-term swap spread curves from the date of this adoption through the remainder of 2022. These recommendations are consistent with APF 2022-04 (which would be effective for the 2023 *Valuation Manual*), which identifies the SOFR as the replacement for LIBOR, and the VM-20 Section 9.F.8.d Procedure for Setting Prescribed Gross Asset Spreads, cited below:

A current and long-term swap spread curve shall be prescribed for year one and years four and after, respectively, with yearly grading in between. The three-month and six-month points on the swap spread curves shall be the market-observable values for these tenors. Currently, this shall be the corresponding London Interbank Offered Rate (LIBOR) spreads over Treasuries. When the NAIC determines LIBOR is no longer effective, the NAIC shall recommend a replacement to the Life Actuarial (A) Task Force which shall be effective upon adoption by the Task Force.

The last sentence above notes that the NAIC shall recommend “a replacement”, which indicates an intent to replace the prescribed current and long-term swap spread curves with a single replacement, as opposed to continuing the NAIC’s prescription of LIBOR beyond the adoption date.

Determination that LIBOR is no longer effective

An American Academy of Actuaries’ extrapolation of data published on April 13 by the International Swaps and Derivatives Association (ISDA) Clarus Financial Technology¹ shows that SOFR-based transactions are growing in popularity and can be expected to reach in July or August a two-thirds majority of newly executed USD interest rate derivatives (based on a risk-based DV01 metric). A Bloomberg February 9 article² states that over two-thirds of newly executed USD interest rate swaps in

¹ See “The Percentage of DV01” chart accessible via “The Charts” link within this ISDA-Clarus 2022-04-13 publication: <https://www.clarusft.com/latest-data-shows-sofr-trading-soaring/>

www.naic.org

January 2022 were SOFR swaps (with the floating rate based on SOFR) rather than LIBOR swaps (with the floating rate based on LIBOR). Based on the information provided in these publications, NAIC staff has determined that LIBOR is no longer effective.

Actuarial judgment may be required in the use of prescribed swap spreads (for example, in the case where companies have a combination of SOFR and LIBOR-based swaps). VM-20 Section 9.F.8.d states, in part “Interest rate swap spreads over Treasuries shall be prescribed by the NAIC for use throughout the cash-flow model *wherever appropriate* for transactions and operations...” (emphasis added).

Recommended Replacement for Current Benchmark Swap Spreads

Effective [TBD, potentially June 30, 2022] and through December 31, 2022, NAIC staff recommends that for each month-end date, LIBOR swap spreads shall be replaced with SOFR swap spreads³:

- 3-month LIBOR spread should be replaced with 3m SOFR swap⁴ spread
- 6-month LIBOR spread should be replaced with 6m SOFR swap spread
- 1-year swap spread should be replaced with 1y SOFR swap spread
- ...
- 30-year swap spread should be replaced with 30y SOFR swap spread

Recommended Replacement for Long-Term Benchmark Swap Spreads

Effective on the adoption date by the Life Actuarial (A) Task Force of SOFR swap spreads as the replacement for swap spreads previously prescribed and through December 31, 2022, NAIC staff recommends the following approach for the calculation of long-term benchmark swap spreads, consistent with APF 2022-04:

1. Extract daily swap spread data over the prescribed observation period (rolling 15-year period) ending on the last business day of the quarter from at least two reputable data sources. If the data source provides swap rates rather than swap spreads, convert the daily swap rate for each maturity to a swap spread by subtracting the corresponding maturity Treasury yield from the swap rate.
2. Calculate SOFR swap spreads as follows for each business day “u” on or after the effective date of the adoption by the Life Actuarial (A) Task Force of SOFR swap spreads as the replacement for swap spreads previously prescribed:
 - a. For each maturity “m” = 0.25, 0.5, 1 ... 30 years, and business day “u”:
SOFR swap spread(m,u) = SOFR swap rate(m,u) - Treasury yield(m,u).
3. Calculate SOFR swap spreads as follows for each business day before the effective date of the adoption by the Life Actuarial (A) Task Force of SOFR swap spreads as the replacement for swap spreads previously prescribed, utilizing Bloomberg’s 2021-03-05 published USD Spread Adjustments:
 - a. For each maturity “m” = 3 or 6 months, and business day “u”,
 - i. SOFR swap spread(3 months,u) = LIBOR swap spread(3 months,u) - 0.26161% (the USD 3-month Spread Adjustment)
 - ii. SOFR swap spread(6 months,u) = LIBOR swap spread(6 months,u) - 0.42826% (the USD 6-month Spread Adjustment)

³ During 2021 the swap market evolved such that the definition of a standard n-year interest rate swap changed in January 2022 to be a SOFR swap from the LIBOR swap.

⁴ 3-month and 6-month SOFR swap rates are defined herein as the fixed rate one party pays at the end of three months or six months in exchange for receiving at such time 3-month SOFR or 6-month SOFR, calculated on a compounded in arrears basis.

- b. For each maturity “m” = 1 ... 30 years, and business day “u”:
SOFR swap spread(m,u) = LIBOR swap spread(m,u) - 0.26161% (the USD 3-month Spread Adjustment)
4. Average the swap spread data from the data sources by maturity over the prescribed observation (rolling 15-year period).
 5. Calculate the Long-Term Benchmark Swap Spreads as the 85% conditional mean for each of the 32 maturity categories (three-month, six-month, one-year, two-year, ... 30-year) using the same business trading days as were used in the 85% conditional mean for long-term bonds spreads.
 6. Publish the Long-Term Benchmark Swap Spreads in a table. Among tables published on the NAIC website (See Subsection H), Table J shows Long-Term Benchmark Swap Spreads

In Table J, NAIC staff shall clarify that from the adoption date forward, current and long-term benchmark swap spreads are SOFR swap spreads. [Drafting Note: The tables will be labeled to indicate they contain SOFR swap spreads.]

Life Actuarial (A) Task Force
Updated Exposure of APF 2022-04

Swap Spreads and London Inter-Bank Offered Rate (LIBOR)
Transition to the Secured Overnight Financing Rate (SOFR)

Note this revised APF is complemented by a May 26, 2022 memo from NAIC staff to LATF on a recommended replacement to LIBOR swap spreads effective [TBD, potentially June 30, 2022].

Please send comments to Reggie Mazyck @ RMazyck@NAIC.Org by close of business on June [], 2022.

**Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
 Amendment Proposal Form**

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:

Alan Routhenstein, on behalf of the American Academy of Actuaries’ Life Reserves Work Group, Annuity Reserves and Capital Work Group, and Variable Annuity Reserves and Capital Work Group

Pat Allison, NAIC staff

Title of the Issue:

Swap Spreads and London Inter-Bank Offered Rate (LIBOR) transition to the Secured Overnight Financing Rate (SOFR) - Updated VM-20 prescribed swap spreads guidance in light of the LIBOR transition to SOFR.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-20 Section 9.F.8.d, VM-20 Appendix 2.F, VM-20 Appendix 2.G
 January 1, 2022 NAIC *Valuation Manual*

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

Proposed edits to VM-20 for LIBOR transition to SOFR are shown in the attached Appendix

4. State the reason for the proposed amendment? (You may do this through an attachment.)

- a. Bank regulators and a group of swap market participants have agreed that for interbank interest rate swaps executed after 2021, the floating rate needs to be based on an index other than LIBOR.
- b. During 2021 the swap market evolved such that the definition of a standard n-year interest rate swap changed in January 2022 to be a SOFR swap (for which the floating rate is based on SOFR) from the historical LIBOR swap (for which the floating rate is LIBOR).
- c. As a result, VM-20 instructions for how the NAIC will calculate and publish swap spreads needs to be updated for:
 - i. Current Benchmark swap spreads (as of each month end); and
 - ii. Long-Term Benchmark swap spreads (as of each quarter end)
- d. The associated presentation provides further background and rationale for this proposal.

NAIC Staff Comments:

W:\National Meetings\2015\...TF\LHA\

Appendix

Proposed amendments to VM-20 for APF 2022-04 on Swap Spreads and LIBOR transition to SOFR

VM-20 Section 9.F.8.d Procedure for Setting Prescribed Gross Asset Spreads.....:

- d. Interest rate swap spreads over Treasuries shall be prescribed by the NAIC for use throughout the cash-flow model wherever appropriate for transactions and operations including, but not limited to, purchase, sale, settlement, cash flows of derivative positions and reset of floating rate investments. A current and long-term swap spread curve shall be prescribed for year one and years four and after, respectively, with yearly grading in between.
 - i. The current prescribed swap spread curve shall be the Secured Overnight Financing Rate (SOFR) swap curve.
 - ii. The long term SOFR swap spread curve, given that the SOFR swap market did not emerge before late 2021 and that SOFR is an index for which there is no official data before April 2, 2018, shall be calculated based on 15 year moving averages of prescribed estimates of historical SOFR swap spreads.

VM-20 Appendix 2.F Current Benchmark Swap Spreads:

F. Current Benchmark Swap Spreads

1. For tenors of 3 months, 6 months, and one year to 30 years, extract swap spread data determined as of the last business day of the month by maturity from at least two reputable data sources. If the data source provides swap rates rather than swap spreads, convert the swap rate for each maturity to a swap spread by subtracting the corresponding maturity Treasury yield from the swap rate.
2. Average the swap spreads from the data sources by maturity determined as of the last business day of the month.
3. Publish the Current Benchmark Swap Spreads by maturity in a table.

[Drafting Note: The tables will be labeled to indicate they contain SOFR swap spreads.]

VM-20 Appendix 2.G Long-Term Benchmark Swap Spreads:

G. Long-Term Benchmark Swap Spreads

1. Extract daily swap spread data over the prescribed observation period (rolling 15-year period) ending on the last business day of the quarter from at least two reputable data sources. If the data source

provides swap rates rather than swap spreads, convert the daily swap rate for each maturity to a swap spread by subtracting the corresponding maturity Treasury yield from the swap rate.

2. Starting in 2023 and before 2037, calculate SOFR swap spreads as follows for each business day “u” on or after the effective date of the adoption by the Life Actuarial (A) Task Force of SOFR swap spreads as the replacement for swap spreads previously prescribed:

- a. For each maturity “m” = 0.25, 0.5, 1 ... 30 years, and business day “u”:

$$\text{SOFR swap spread}(m,u) = \text{SOFR swap rate}(m,u) - \text{Treasury yield}(m,u).$$

3. For each business day before the effective date of the adoption by the Life Actuarial (A) Task Force of SOFR swap spreads as the replacement for swap spreads previously prescribed, utilize Bloomberg’s 2021-03-05 published USD Spread Adjustments as follows:

- a. For each maturity “m” = 3 or 6 months, and business day “u”:

- i. $\text{SOFR swap spread}(3 \text{ months},u) = \text{LIBOR swap spread}(3 \text{ months},u) - 0.26161\%$
(the USD 3-month Spread Adjustment)

- ii. $\text{SOFR swap spread}(6 \text{ months},u) = \text{LIBOR swap spread}(6 \text{ months},u) - 0.42826\%$
(the USD 6-month Spread Adjustment)

- b. For each maturity “m” = 1 ... 30 years, and business day “u”:

$$\text{SOFR swap spread}(m,u) = \text{LIBOR swap spread}(m,u) - 0.26161\% \text{ (the USD 3-month Spread Adjustment)}$$

4. During and after 2037, calculate SOFR swap spreads as follows for each maturity “m” = 0.25, 0.5, 1 ... 30 years:

$$\text{SOFR swap spread}(m,u) = \text{SOFR swap rate}(m,u) - \text{Treasury yield}(m,u).$$

5. Average the swap spread data from the data sources by maturity over the prescribed observation (rolling 15-year period).
6. Calculate the Long-Term Benchmark Swap Spreads as the 85% conditional mean for each of the 32 maturity categories (three-month, six-month, one-year, two-year, ... 30-year) using the same business trading days as were used in the 85% conditional mean for long-term bonds spreads.
7. Publish the Long-Term Benchmark Swap Spreads in a table. Among tables published on the NAIC website (See Subsection H), Table J shows Long-Term Benchmark Swap Spreads.

Mike Boerner
Chair, NAIC Life Actuarial Task Force (LATF)

Re: May 2022 Re-Exposure of APF 2020-12

Dear Mr. Boerner:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit feedback on APF 2020-12 which was re-exposed by LATF during their meeting on May 26, 2022.

ACLI believes that additional work to APF 2020-12 is needed to address a number of key issues, including topics such as an immateriality exemption. It is our hope that we can continue to work alongside regulators to develop improvements for such a future APF.

Thank you for your consideration.

Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force Amendment Proposal Form*

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:

Hedging Drafting Group of LATF

Title of the Issue:

Reflect all future hedging strategies in VM-20 and VM-21. Revise hedge modeling to increase E factor (VM-21) or residual risk (VM-20) when future hedging strategies are not clearly defined.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-01, VM-20 Section 6.A.1.b, VM-20 Section 7.E.1.g, VM-20 Section 7.K, VM-20 Section 7.L, VM-21 Section 1.D.2, VM-21 Section 4.A.4, VM-21 Section 4.D.4.b, VM-21 Section 6.B.3.a.ii, VM-21 Section 6.B.3.b.ii, VM-21 Section 6.B.5, VM-21 Section 9, VM-31 Section 3.C.5, VM-31 Section 3.D.6.f, VM-31 Section 3.D.14.a and 3.D.14.b, VM-31 Section 3.E.5, VM-31 Section 3.F.8, VM-31 Section 3.F.12.c, VM-31 Section 3.F.16.a and Section 3.F.16.b

January 1, 2022 NAIC Valuation Manual

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)

1. Consistent definition of CDHS for use in VM-20 and VM-21.
2. Add a definition for “future hedging strategy,” consistent with the definition for CDHS and the current VM-01 definition of “derivative program”, which VM-01 notes includes hedging programs.
3. Add a definition for “hedging transactions,” taken from the APPM but modified slightly to be consistent with Valuation Manual terminology.
4. Reflect all of a company’s future hedging strategies, but reflect the additional error (VM-21) or residual risk (VM-20) that is presented by a future hedging strategy not being clearly defined.
5. Remove optionality for liquidating currently held hedges if the company does not have a future hedging strategy. Language has been added for consideration to keep this optionality for the adjusted run for a company that does have a future hedging strategy (which would not be modeled in the adjusted run), as the drafting group is interested in additional input on this item. A reporting item to disclose the impact of any such liquidation is added, to provide additional regulator comfort if this optionality is included in the final adopted edits.
6. New hedging strategies (those without at least 12 months experience or 3 months of experience and robust mock testing) have an E factor of 1.0 for VM-21, unless they are new hedging strategies backing a newly introduced or newly acquired product or block of business, which may have an E factor as low as 0.3. Moreover, with prior domestic regulator approval, which should mitigate regulator concerns that strategy changes implemented just before year end may allow for manipulation of results, robust

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

mock testing is sufficient to allow an E factor lower than 1.0. Note that the current draft VM-22 only allows modeling hedges after they have been in place for 6 months, and we would recommend that be revised to be in line with these changes. When only CDHS were modeled in VM-21, new hedging strategies with no experience had E factors as low as 0.5 even without meaningful analysis. This treatment was much too lenient for new hedging strategies.

* This form is not intended for minor corrections, such as formatting, grammar, cross–references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

VM-01

- The term “clearly defined hedging strategy” (CDHS) means a strategy undertaken by a company to manage risks through the future purchase or sale of hedging instruments and the opening and closing of hedging positions for which the following attributes are clearly documented that meet the criteria specified in the applicable reserve requirement section of the Valuation Manual:
 - a. The specific risks being hedged (e.g., cash flow, fee income, policy interest credits, delta, rho, vega, etc.).
 - b. The hedging objectives.
 - c. The material risks that are not hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.).
 - d. The financial instruments used to hedge the risks.
 - e. The hedging strategy’s trading rules, including the permitted tolerances from hedging objectives.
 - f. The metrics, criteria, and frequency for measuring hedging effectiveness.
 - g. The conditions under which hedging will not take place and for how long the lack of hedging can persist.
 - h. The group or area, including whether internal or external, responsible for implementing the hedging strategy.
 - i. Areas where basis, gap or assumption risk related to the hedging strategy have been identified.
 - j. The circumstances under which hedging strategy will not be effective in hedging the risks.

The hedge strategy may be dynamic, static or a combination thereof.

Guidance Note: For purposes of the CDHS documented attributes, “effectiveness” need not be measured in a manner as defined in <i>SSAP No. 86—Derivatives</i> in the AP&P Manual.

- The term “future hedging strategy” is a derivative program undertaken by a company to manage risks through one or more future hedging transactions, including the future purchase or sale of hedging instruments and the opening and closing of hedging positions.

A future hedging strategy may be dynamic, static or a combination thereof. A strategy involving the offsetting of the risks associated with products falling under the scope of different requirements within the *Valuation Manual* (e.g., VM-20, VM-21, or VM-22) does not qualify as a future hedging strategy.

- The term “hedging transaction” means a derivative(s) transaction which is entered into and maintained to reduce:
 - a. The risk of a change in the fair value, the value on a statutory, GAAP, or other basis, or cash flow of assets and liabilities which the company has acquired or incurred or has a firm commitment to acquire or incur or for which the company has a forecasted acquisition or incurrence; or
 - b. The currency exchange rate risk or the degree of foreign currency exposure in assets and liabilities which the company has acquired or incurred or has a firm commitment to acquire or incur or for which the company has forecasted acquisition or incurrence.

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

VM-20 Section 6.A.1.b

A company may not exclude a group of policies for which there is one or more future hedging strategies supporting the policies~~clearly defined hedging strategies~~ from SR requirements, except in the case where all future hedging strategies supporting the policies~~clearly defined hedging strategies~~ are solely associated with product features that are determined to not be material under Section 7.B.1 due to low utilization.

VM-20 Section 7.E.1.g

Notwithstanding the above requirements, the modeled reserve shall be the higher of that produced by the modeled company investment strategy and that produced by substituting an alternative investment strategy in which the fixed income reinvestment assets have the same weighted average life (WAL) as the reinvestment assets in the modeled company investment strategy and are all public non-callable corporate bonds with gross asset spreads, asset default costs and investment expenses by projection year that are consistent with a credit quality blend of 50% PBR credit rating 6 (A2/A) and 50% PBR credit rating 3 (Aa2/AA).

Policy loans, equities and derivative instruments associated with the execution of a ~~clearly defined hedging strategy~~future hedging strategies supporting the policies (in compliance with ~~Section 7.L~~) are not affected by this requirement.

VM-20 Section 7.K

K. Modeling of Derivative Programs

1. When determining the DR and the SR, the company shall include in the projections the appropriate costs and benefits of derivative instruments that are currently held by the company in support of the policies subject to these requirements. The company shall also include the appropriate costs and benefits of anticipated future derivative instrument transactions associated with the execution of a ~~future hedging strategies supporting the policies~~clearly defined hedging strategy, as well as the appropriate costs and benefits of anticipated future derivative instrument transactions associated with non-hedging derivative programs (e.g., replication, income generation) undertaken as part of the investment strategy supporting the policies, provided they are normally modeled as part of the company’s risk assessment and evaluation processes.

Guidance Note: The requirements stated here for handling hedging strategies are essentially consistent with those included in the CTE methodology of VM 21 and the five principles spelled out there. The prohibition in these modeled reserve requirements against projecting future hedging transactions other than those associated with a clearly defined hedging strategy is intended to address initial concerns expressed by various parties that reserves could be unduly reduced by reflection of programs whose future execution and performance may have greater uncertainty. The prohibition appears, however, to be in conflict with Principle 2 listed in VM 21. Companies may actually execute and reflect in their risk assessment and evaluation processes hedging strategies similar in many ways to clearly defined hedging strategies but lack sufficient clarity in one or more of the qualification criteria. By excluding the associated derivative instruments, the investment strategy that is modeled may also not reflect the investment strategy the company actually uses. Further, because the future hedging transactions may be a net cost to the company in some scenarios and a net benefit in other scenarios, the exclusion of such transactions can result in a modeled reserve that is either lower or higher than it would have been if the transactions were not excluded. The direction of such impact on the reserves could also change from period to period as the actual and projected paths of economic conditions change. A more graded approach to recognition of non-qualifying hedging strategies

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

~~may be more theoretically consistent with Principle 2. It is recommended that as greater experience is gained by actuaries and state insurance regulators with the principle based approach and as industry hedging programs mature, the various requirements of this section be reviewed.~~

2. For each derivative program that is modeled, the company shall reflect the company's established investment policy and procedures for that program; project expected program performance along each scenario; and recognize all benefits, residual risks and associated frictional costs. The residual risks include, but are not limited to: basis, gap, price, parameter estimation and variation in assumptions (mortality, persistency, withdrawal, etc.). Frictional costs include, but are not limited to: transaction, margin (opportunity costs associated with margin requirements) and administration. For future hedging strategies supporting the policies~~clearly defined hedging strategies~~, the company may not assume that residual risks and frictional costs have a value of zero, unless the company demonstrates in the PBR Actuarial Report that "zero" is an appropriate expectation. VM-21 Section 1.B Principle 5 applies as a general principle for the modeling of future hedging strategies.
3. In circumstances where one or more material risk factors related to a derivative program are not fully captured within the cash-flow model used to calculate CTE 70, the company shall reflect such risk factors by increasing the SR as described in Section 5.E.
4. In circumstances where documentation outlining the future hedging strategies is incomplete, the company shall reflect the future hedging strategies not being clearly defined by increasing the SR as described in Section 5.E. To support no increase to the SR, there should be very robust documentation outlining each future hedging strategy. In particular, the SR shall be at least as great as the SR that would result if a future hedging strategy were not reflected in the SR, if the documentation is materially incomplete for any of the individual CDHS attributes (a) through (j), as listed in VM-01.

Any increases required to the SR to reflect that documentation is not available to support that the future hedging strategies are clearly defined shall be in addition to increases to the SR pursuant to Section 7.K.3 above.

Guidance Note: Section 5.E requires that the company "Determine any additional amount needed to capture any material risk included in the scope of these requirements but not already reflected in the cash-flow models using an appropriate and supportable method and supporting rationale." In the case of a derivative program that is a future hedging strategy, Section 7.K.3 requires such an increase for disconnects between the hedge modeling and the future hedging strategy, while Section 7.K.4 requires such an increase for disconnects between the loosely defined future hedging strategy and what may actually take place.

VM-20 Section 7.L (Remove entire Section 7.L)

L. Clearly Defined Hedging Strategy

1. A clearly defined hedging strategy must identify:
 - a. The specific risks being hedged (e.g., cash flow, policy interest credits, delta, rho, vega, etc.).
 - b. The hedge objectives.

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

- e. The risks that are not hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.).
- d. The financial instruments used to hedge the risks.
- e. The hedge trading rules, including the permitted tolerances from hedging objectives.
- f. The metrics for measuring hedging effectiveness.
- g. The criteria used to measure hedging effectiveness.
- h. The frequency of measuring hedging effectiveness.
- i. The conditions under which hedging will not take place.
- j. The person or persons responsible for implementing the hedging strategy.
- k. Areas where basis, gap or assumption risk related to the hedging strategy have been identified.
- l. The circumstances under which hedging strategy will not be effective in hedging the risks.

Hedging strategies involving the offsetting of the risks associated with other products outside of the scope of these requirements is not a clearly defined hedging strategy.

Guidance Note: For purposes of the above criteria, “effectiveness” need not be measured in a manner as defined in *SSAP No. 86 – Derivatives* in the AP&P Manual.

VM-21 Section 1.D.2 (Delete entire definition and renumber subsequent sections VM-21 Section 1.D.3 and VM-21 Section 1.D.4)

The term “clearly defined hedging strategy” (CDHS) is defined in VM 01. In order to be designated as a CDHS, the strategy must meet the principles outlined in Section 1.B (particularly Principle 5) and shall, at a minimum, identify:

- a. The specific risks being hedged (e.g., delta, rho, vega, etc.).
- a. The hedge objectives.
- b. The risks not being hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.).
- e. The financial instruments that will be used to hedge the risks.
- d. The hedge trading rules, including the permitted tolerances from hedging objectives.
- e. The metric(s) for measuring hedging effectiveness.
- f. The criteria that will be used to measure hedging effectiveness.
- g. The frequency of measuring hedging effectiveness.
- h. The conditions under which hedging will not take place.
- i. The person or persons responsible for implementing the hedging strategy.

Guidance Note: It is important to note that strategies involving the offsetting of the risks associated with VA guarantees with other products outside of the scope of these requirements (e.g., equity-indexed annuities) do not currently qualify as a clearly defined hedging strategy under these requirements.

VM-21 Section 4.A.4

Modeling of Hedges

- a. For a company that does not have a CDHS future hedging strategy supporting the contracts:

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

- i. The company shall not consider the cash flows from any future hedge purchases or any rebalancing of existing hedge assets in its modeling, since they are not included in the company's investment strategy supporting the contracts.
 - ii. Existing hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the starting assets. ~~The hedge assets may then be considered in one of two ways:~~
 - ii. ~~- a) Include the asset cash flows from any contractual payments and maturity values in the projection model; or
 - b) No hedge positions — in which case the hedge positions held on the valuation date are replaced with cash and/or other general account assets in an amount equal to the aggregate market value of these hedge positions.~~

Guidance Note: ~~If the hedge positions held on the valuation date are replaced with cash, then as with any other cash, such amounts may then be invested following the company's investment strategy.~~

~~A company may switch from method a) to method b) at any time, but it may only change from b) to a) with the approval of the domiciliary commissioner.~~
- b. For a company with ~~a one or more CDHS future hedging strategies supporting the contracts,~~ the detailed requirements for the modeling of hedges are defined in Section 9. The following paragraphs are a high-level summary and do not supersede the detailed requirements.
 - i. The appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the projections used in the determination of the SR.
 - ii. The projections shall take into account the appropriate costs and benefits of hedge positions expected to be held in the future through the execution of the CDHS future hedging strategies supporting the contracts. Because models do not always accurately portray the results of hedge programs, the company shall, through back-testing and other means, assess the accuracy of the hedge modeling. The company shall determine a SR as the weighted average of two CTE values; first, a CTE70 (“best efforts”) representing the company’s projection of all of the hedge cash flows, including future hedge purchases, and a second CTE70 (“adjusted”) which shall use only hedge assets held by the company on the valuation date and no future hedge purchases. These are discussed in greater detail in Section 9. The SR shall be the weighted average of the two CTE70 values, where the weights reflect the error factor ~~(E)~~ determined following the guidance of Section 9.C.4.
 - iii. The company is responsible for verifying compliance with CDHS requirements and any other all requirements in Section 9 for all hedging instruments included in the projections.
 - iv. The use of products not falling under the scope of these requirements (e.g., equity-indexed annuities) as a hedge shall not be recognized in the determination of accumulated deficiencies.

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

VM-21 Section 4.D.4.b

Notwithstanding the above requirements, the SR shall be the higher of that produced by the modeled company investment strategy and that produced by substituting an alternative investment strategy in which the fixed income reinvestment assets have the same weighted average life (WAL) as the reinvestment assets in the modeled company investment strategy and are all public non-callable corporate bonds with gross asset spreads, asset default costs, and investment expenses by projection year that are consistent with a credit quality blend of 50% PBR credit rating 6 (A2/A) and 50% PBR credit rating 3 (Aa2/AA).

Policy loans, equities and derivative instruments associated with the execution of ~~a future hedging strategies supporting the contracts~~clearly defined hedging strategy are not affected by this requirement.

VM-21 Section 6.B.3.a.ii – Footnote (Footnote at Bottom of Page 21-23)

Throughout this Section 6, references to CTE70 (adjusted) shall also mean the SR for a company that does not have a future hedging strategy supporting the contracts ~~CDHS~~ as discussed in Section 4.A.4.a.

VM-21 Section 6.B.3.b.ii

Calculate the Prescribed Projections Amount as the CTE70 (adjusted) using the same method as that outlined in Section 9.C (which is the same as SR following Section 4.A.4.a for a company that does not have a future hedging strategy supporting the contracts ~~CDHS~~) but substituting the assumptions prescribed by Section 6.C. The calculation of this Prescribed Projections Amount also requires that the scenario reserve for any given scenario be equal to or in excess of the cash surrender value in aggregate on the valuation date for the group of contracts modeled in the projection.

VM-21 Section 6.B.5

Cash flows associated with hedging shall be projected in the same manner as that used in the calculation of the CTE70 (adjusted) as discussed in Section 9.C or Section 4.A.4.a for a company without a future hedging strategy supporting the contracts ~~CDHS~~.

VM-21 Section 9

Section 9: Modeling of Hedges under a ~~CDHS~~ Future Hedging Strategy

A. Initial Considerations

1. Subject to Section 9.C.2, the appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the calculation of the SR, determined in accordance with Section 3.D and Section 4.D.
2. If the company is following ~~a one or more future hedging strategies supporting the contracts~~ CDHS, in accordance with an investment policy adopted by the board of directors, or a committee of board members, the company shall take into account the costs and benefits of hedge positions expected to be held by the company in the future along each scenario based on the execution of the hedging strategy, and it is eligible

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

to reduce the amount of the SR using projections otherwise calculated. The investment policy must clearly articulate the company's hedging objectives, including the metrics that drive rebalancing/trading. This specification could include maximum tolerable values for investment losses, earnings, volatility, exposure, etc. in either absolute or relative terms over one or more investment horizons vis-à-vis the chance of occurrence. Company management is responsible for developing, documenting, executing and evaluating the investment strategy, including the hedging strategy, used to implement the investment policy.

3. For this purpose, the investment assets refer to all the assets, including derivatives supporting covered products and guarantees. This also is referred to as the investment portfolio. The investment strategy is the set of all asset holdings at all points in time in all scenarios. The hedging portfolio, which also is referred to as the hedging assets, is a subset of the investment assets. The hedging strategy is the hedging asset holdings at all points in time in all scenarios. There is no attempt to distinguish what is the hedging portfolio and what is the investment portfolio in this section. Nor is the distinction between investment strategy and hedging strategy formally made here. Where necessary to give effect to the intent of this section, the requirements applicable to the hedging portfolio or the hedging strategy are to apply to the overall investment portfolio and investment strategy.
4. This particularly applies to restrictions on the reasonableness or acceptability of the models that make up the stochastic cash-flow model used to perform the projections, since these restrictions are inherently restrictions on the joint modeling of the hedging and non-hedging portfolio. To give effect to these requirements, they must apply to the overall investment strategy and investment portfolio.
- ~~5. Before either a new or revised hedging strategy can be used to reduce the amount of the SR otherwise calculated, the hedging strategy should be in place (i.e., effectively implemented by the company) for at least three months. The company may meet the time requirement by having evaluated the effective implementation of the hedging strategy for at least three months without actually having executed the trades indicated by the hedging strategy (e.g., mock testing or by having effectively implemented the strategy with annuity products for at least three months).~~

B. Modeling Approaches

1. The analysis of the impact of the hedging strategy on cash flows is typically performed using either one of two types of methods as described below. Although a hedging strategy normally would be expected to reduce risk provisions, the nature of the hedging strategy and the costs to implement the strategy may result in an increase in the amount of the SR otherwise calculated. Particular attention should be given to VM-21 Section 1.B Principle 5 for the modeling of future hedging strategies.
2. The fundamental characteristic of the first type of method, referred to as the “explicit method,” is that hedging positions and their resulting cash flows are included in the stochastic cash-flow model used to determine the scenario reserve, as discussed in Section 3.D, for each scenario.
3. The fundamental characteristic of the second type of method, referred to as the “implicit method,” is that the effectiveness of the current hedging strategy on future cash flows is evaluated, in part or in whole, outside of the stochastic cash-flow model. There are multiple ways that this type of modeling can be implemented. In this case, the reduction to the SR otherwise calculated should be commensurate with the degree of effectiveness of the hedging strategy in reducing accumulated deficiencies otherwise calculated.
4. Regardless of the methodology used by the company, the ultimate effect of the current hedging strategy (including currently held hedge positions) on the SR needs to recognize all risks, associated costs,

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

imperfections in the hedges and hedging mismatch tolerances associated with the hedging strategy. The risks include, but are not limited to: basis, gap, price, parameter estimation and variation in assumptions (mortality, persistency, withdrawal, annuitization, etc.). Costs include, but are not limited to: transaction, margin (opportunity costs associated with margin requirements) and administration. In addition, the reduction to the SR attributable to the hedging strategy may need to be limited due to the uncertainty associated with the company’s ability to implement the hedging strategy in a timely and effective manner. The level of operational uncertainty varies indirectly with the amount of time that the new or revised strategy has been in effect or mock tested.

Guidance Note: No hedging strategy is perfect. A given hedging strategy may eliminate or reduce some but not all risks, transform some risks into others, introduce new risks, or have other imperfections. For example, a delta-only hedging strategy does not adequately hedge the risks measured by the “Greeks” other than delta. Another example is that financial indices underlying typical hedging instruments typically do not perform exactly like the separate account funds, and hence the use of hedging instruments has the potential for introducing basis risk

- 5.—A safe harbor approach is permitted for CDHS reflection of future hedging strategies supporting the contracts for those companies whose modeled hedge assets comprise only linear instruments not sensitive to implied volatility. For companies with option-based hedge strategies, electing this approach would require representing the option-based portion of the strategy as a delta-rho two-Greek hedge program. The normally modeled option portfolio would be replaced with a set of linear instruments that have the same first-order Greeks as the original option portfolio.

C. Calculation of SR (Reported)

1. The company shall calculate CTE70 (best efforts)—the results obtained when the CTE70 is based on incorporating the future hedging strategies supporting the contracts ~~CDHS~~ (including both currently held and future hedge positions) into the stochastic cash-flow model on a best efforts basis, including all of the factors and assumptions needed to execute the future hedging strategies supporting the contracts ~~CDHS~~ (e.g., stochastic implied volatility). The determination of CTE70 (best efforts) may utilize either explicit or implicit modeling techniques.
2. The company shall calculate a CTE70 (adjusted) by recalculating the CTE70 assuming the company has no future hedging strategies supporting the contracts ~~CDHS~~, therefore following the requirements of Section 4.A.4.a.

However, for a company with a future hedging strategy supporting the contracts, existing hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements may be considered in one of two ways for the CTE70 (adjusted):

- a) Include the asset cash flows from any contractual payments and maturity values in the projection model; or
- b) No hedge positions – in which case the hedge positions held on the valuation date are replaced with cash and/or other general account assets in an amount equal to the aggregate market value of these hedge positions.

Guidance Note: If the hedge positions held on the valuation date are replaced with cash, then as with any other cash, such amounts may then be invested following the company’s investment strategy.

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

A company may switch from method a) to method b) at any time, but it may only change from b) to a) with the approval of the domiciliary commissioner.

3. Because most models will include at least some approximations or idealistic assumptions, CTE70 (best efforts) may overstate the impact of the hedging strategy. To compensate for potential overstatement of the impact of the hedging strategy, the value for the SR is given by:

$$SR = CTE70 \text{ (best efforts)} + E \times \max[0, CTE70 \text{ (adjusted)} - CTE70 \text{ (best efforts)}]$$

4. The company shall specify a value for E (the “error factor”) in the range from 5% to 100% to reflect the company’s view of the potential error resulting from the level of sophistication of the stochastic cash-flow model and its ability to properly reflect the parameters of the hedging strategy (i.e., the Greeks being covered by the strategy), as well as the associated costs, risks and benefits. The greater the ability of the stochastic model to capture all risks and uncertainties, the lower the value of E . The value of E may be as low as 5% only if the model used to determine the CTE70 (best efforts) effectively reflects all of the parameters used in the hedging strategy. If certain economic risks are not hedged, yet the model does not generate scenarios that sufficiently capture those risks, E must be in the higher end of the range, reflecting the greater likelihood of error. Likewise, simplistic hedge cash-flow models shall assume a higher likelihood of error.
5. The company shall conduct a formal back-test, based on an analysis of at least the most recent 12 months, to assess how well the model is able to replicate the hedging strategy in a way that supports the determination of the value used for E .
6. Such a back-test shall involve one of the following analyses:
- a. For companies that model hedge cash flows directly (“explicit method”), replace the stochastic scenarios used in calculating the CTE70 (best efforts) with a single scenario that represents the market path that actually manifested over the selected back-testing period and compare the projected hedge asset gains and losses against the actual hedge asset gains and losses – both realized and unrealized – observed over the same time period. For this calculation, the model assumptions may be replaced with parameters that reflect actual experience during the back-testing period. In order to isolate the comparison between the modeled hedge strategy and actual hedge results for this calculation, the projected liabilities should accurately reflect the actual liabilities throughout the back-testing period; therefore, adjustments that facilitate this accuracy (e.g. reflecting actual experience instead of model assumptions, including new business, etc.) are permissible.

To support the choice of a low value of E , the company should ascertain that the projected hedge asset gains and losses are within close range of 100% (e.g., 80–125%) of the actual hedge asset gains and losses. The company may also support the choice of a low value of E by achieving a high R-squared (e.g., 0.80 or higher) when using a regression analysis technique.

b. For companies that model hedge cash flows implicitly by quantifying the cost and benefit of hedging using the fair value of the hedged item (an “implicit method” or “cost of reinsurance method”), calculate the delta, rho and vega coverage ratios in each month over the selected back-testing period in the following manner:

- i. Determine the hedge asset gains and losses—both realized and unrealized—incurred over the month attributable to equity, interest rate, and implied volatility movements.
- ii. Determine the change in the fair value of the hedged item over the month attributable to equity, interest rate, and implied volatility movements. The hedged item should be defined in a manner that reflects the proportion of risks hedged (e.g., if a company elects to hedge 50% of a contract’s

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

market risks, it should quantify the fair value of the hedged item as 50% of the fair value of the contract).

iii. Calculate the delta coverage ratio as the ratio between (i) and (ii) attributable to equity movements.

iv. Calculate the rho coverage ratio as the ratio between (i) and (ii) attributable to interest rate movements.

v. Calculate the vega coverage ratio as the ratio between (i) and (ii) attributable to implied volatility movements.

vi. To support the company's choice of a low value of E, the company should be able to demonstrate that the delta and rho coverage ratios are both within close range of 100 % (e.g., 80–125%) consistently across the back-testing period.

vii. In addition, the company should be able to demonstrate that the vega coverage ratio is within close range of 100 % in order to use the prevailing implied volatility levels as of the valuation date in quantifying the fair value of the hedged item for the purpose of calculating CTE70 (best efforts). Otherwise, the company shall quantify the fair value of the hedged item for the purpose of calculating CTE70 (best efforts) in a manner consistent with the realized volatility of the scenarios captured in the CTE (best efforts).

c. Companies that do not model hedge cash flows explicitly, but that also do not use the implicit method as outlined in Section 9.C.6.b above, shall conduct the formal back-test in a manner that allows the company to clearly illustrate the appropriateness of the selected method for reflecting the cost and benefit of hedging, as well as the value used for E.

~~6.—~~7. A company that does not have 12 months of experience to date shall set E to a value that reflects the amount of experience available, and the degree and nature of any change to the hedge program. For a material change in strategy, with less than 12 months of experience and without robust mock testing, E should be 1.0. For a material change in strategy, with ~~no~~ less than 3 months of history, E should be at least 0.501.0. However, when a material change in hedging strategy with less than 3 months history is the introduction of hedging for a newly introduced product or newly acquired block of business and is supplemented by robust mock testing, E should instead be at least 0.3. Moreover, with prior approval from the domestic regulator, material changes in hedge strategy with less than 3 months history but with robust mock testing may have error factors less than 1.0, though still subject to the minimum error factor specified in Section 9.C.4 and with an appropriate prudent estimate to account for additional uncertainty in anticipated hedging experience beyond that of a robust hedging program already in existence. However, E may also be lower than 0.501.0 if some reliable experience is available and/or if the change in strategy is a minor refinement rather than a substantial material change in strategy, though still subject to the minimum error factor specified in Section 9.C.4 and with an appropriate prudent estimate to account for any additional uncertainty associated with the refinement.

Guidance Note: The following examples are provided as guidance for determining the E factor when there has been a change to the hedge program. These examples are not intended to be exhaustive, and a company must support the determination of whether a hedge methodology change is material based on a review of the company's specific change in methodology.

•—

•—The error factor should be temporarily large (e.g., $\geq 50100\%$) for substantial material changes in hedge methodology (e.g., moving from a fair-value based strategy to a stop-loss strategy) without robust mock

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

~~testing where the company has not been able to provide a meaningful simulation of hedge performance based on the new strategy.~~

- ~~• An increase in the error factor may not always be needed for minor refinements to the hedge strategy (e.g., moving from swaps to Treasury futures).~~
 - ~~• A temporary moderate increase (e.g., 15–30%) in error factor should be used for substantial modifications to hedge programs or CDHS modeling where meaningful simulation has not been created (e.g., adding second order hedging, such as gamma or rate convexity).~~
 - ~~• No increase in the error factor may be used for incremental modifications to the hedge strategy (e.g., adding death benefits to a program that previously covered only living benefits, or moving from swaps to Treasury Department futures).~~
8. The company shall set the value of E reflecting the extent to which the hedging program is clearly defined. To support a value of E below 1.0, there should be very robust documentation outlining all future hedging strategies. To the extent that documentation outlining any of the future hedging strategies is incomplete, the value of E shall be increased. In particular, the value of E shall be 1.0 if documentation is materially incomplete for any of the individual CDHS attributes (a) through (j), as listed in VM-01.

Any increases required to the value of E to reflect that documentation is not available to support that the future hedging strategies are clearly defined shall be in addition to increases to the value of E to reflect a lack of historical experience or to reflect the back-testing results, subject to an overall ceiling of 1.0 for E.

Guidance Note: Companies must use judgment both in determining an E factor and in applying this requirement in the case where there are multiple future hedging strategies, particularly where some may be CDHS and some may not be CDHS. In this case, the SR should be ensured to be no less than the CTE(70) reflecting the future hedging strategies that are CDHS and not reflecting those that are not CDHS. Companies with multiple future hedging strategies with very different levels of effectiveness or with multiple future hedging strategies that include both CDHS and non-CDHS should discuss with their domestic regulator.

D. Additional Considerations for CTE70 (best efforts)

If the company is following ~~a one or more future hedging strategies supporting the contracts~~CDHS, the fair value of the portfolio of contracts falling within the scope of these requirements shall be computed and compared to the CTE70 (best efforts) and CTE70 (adjusted). If the CTE70 (best efforts) is below both the fair value and CTE70 (adjusted), the company should be prepared to explain why that result is reasonable.

For the purposes of this analysis, the SR and fair value calculations shall be done without requiring the scenario reserve for any given scenario to be equal to or in excess of the cash surrender value in aggregate for the group of contracts modeled in the projection.

E. Specific Considerations and Requirements

1. As part of the process of choosing a methodology and assumptions for estimating the future effectiveness of the current hedging strategy (including currently held hedge positions) for purposes of reducing the SR, the company should review actual historical hedging effectiveness. The company shall evaluate the appropriateness of the assumptions on future trading, transaction costs, other elements of the model, the strategy, the mix of business and other items that are likely to result in materially adverse results. This includes an analysis of model assumptions that, when combined with the reliance on the hedging strategy, are likely to result in adverse results relative to those modeled. The parameters and assumptions shall be

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

adjusted (based on testing contingent on the strategy used and other assumptions) to levels that fully reflect the risk based on historical ranges and foreseeable future ranges of the assumptions and parameters. If this is not possible by parameter adjustment, the model shall be modified to reflect them at either anticipated experience or adverse estimates of the parameters.

2. A discontinuous hedging strategy is a hedging strategy where the relationships between the sensitivities to equity markets and interest rates (commonly referred to as the Greeks) associated with the guaranteed contract holder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets are subject to material discontinuities. This includes, but is not limited to, a hedging strategy where material hedging assets will be obtained when the variable annuity account balances reach a predetermined level in relationship to the guarantees. Any hedging strategy, including a delta hedging strategy, can be a discontinuous hedging strategy if implementation of the strategy permits material discontinuities between the sensitivities to equity markets and interest rates associated with the guaranteed contract holder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets. There may be scenarios that are particularly costly to discontinuous hedging strategies, especially where those result in large discontinuous changes in sensitivities (Greeks) associated with the hedging assets. Where discontinuous hedging strategies contribute materially to a reduction in the SR, the company must evaluate the interaction of future trigger definitions and the discontinuous hedging strategy, in addition to the items mentioned in the previous paragraph. This includes an analysis of model assumptions that, when combined with the reliance on the discontinuous hedging strategy, may result in adverse results relative to those modeled.
3. A strategy that has a strong dependence on acquiring hedging assets at specific times that depend on specific values of an index or other market indicators may not be implemented as precisely as planned.
4. The combination of elements of the stochastic cash-flow model—including the initial actual market asset prices, prices for trading at future dates, transaction costs and other assumptions—should be analyzed by the company as to whether the stochastic cash-flow model permits hedging strategies that make money in some scenarios without losing a reasonable amount in some other scenarios. This includes, but is not limited to:
 - a. Hedging strategies with no initial investment that never lose money in any scenario and in some scenarios make money.
 - b. Hedging strategies that, with a given amount of initial money, never make less than accumulation at the one-period risk-free rates in any scenario but make more than this in one or more scenarios.
5. If the stochastic cash-flow model allows for such situations, the company should be satisfied that the results do not materially rely directly or indirectly on the use of such strategies. If the results do materially rely directly or indirectly on the use of such strategies, the strategies may not be used to reduce the SR otherwise calculated.
6. In addition to the above, the method used to determine prices of financial instruments for trading in scenarios should be compared to actual initial market prices. In addition to comparisons to initial market prices, there should be testing of the pricing models that are used to determine subsequent prices when scenarios involve trading financial instruments. This testing should consider historical relationships. For example, if a method is used where recent volatility in the scenario is one of the determinants of prices for trading in that scenario, then that model should approximate actual historic prices in similar circumstances in history.
- 6.7. The company may also consider historical experience for similar current or past hedging programs on similar products to support the error factor determined for the projection.

VM-31 Section 3.C.5

Assets and Risk Management – A brief description of the asset portfolio, and the approach used to model risk management strategies, such as hedging, and other derivative programs, including a description of any ~~clearly defined hedging strategies~~ future hedging strategies supporting the policies, and any material changes to the hedging strategies from the prior year.

VM-31 Section 3.D.6.f

Risk Management – Detailed description of model risk management strategies, such as hedging and other derivative programs, including any future hedging strategies supporting the policies ~~clearly defined hedging strategies~~ and any adjustments to the SR pursuant to VM-20 Section 7.K.3 and VM-20 Section 7.K.4, specific to the groups of policies covered in this sub-report and not discussed in the Life Summary Section 3.C.5. Documentation of any future hedging strategies should include documentation addressing each of the CDHS documentation attributes.

VM-31 Section 3.D.14.a and 3.D.14.b

- a. Investment Officer on Investments – A certification from a duly authorized investment officer that the modeled company investment strategy, including any future hedging strategies supporting the policies, is representative of and consistent with the company’s investment policy and that documentation of the CDHS attributes for any future hedging strategies supporting the policies are accurate.
- b. Qualified Actuary on Investments – A certification by a qualified actuary, not necessarily the same qualified actuary that has been assigned responsibility for the PBR Actuarial Report or this sub-report, that the modeling of any future hedging strategies supporting the policies is consistent with the company’s actual future hedging strategies and clearly defined hedging strategies was performed in accordance with VM-20 and in compliance with all applicable ASOPs, and the alternative investment strategy as defined in VM-20 Section 7.E.1.g reflects the prescribed mix of assets with the same WAL as the reinvestment assets in the company investment strategy.

VM-31 Section 3.E.5

Assets and Risk Management – A brief description of the general account asset portfolio, and the approach used to model risk management strategies, such as hedging and other derivative programs, including a description of any future hedging strategies supporting the contracts ~~clearly defined hedging strategies~~, and any material changes to the hedging ~~strategy~~ strategies from the prior year.

VM-31 Section 3.F.8

Hedging and Risk Management – The following information regarding the hedging and risk management assumptions used by the company in performing a principle-based valuation under VM-21:

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

- a. Strategies – Detailed description of risk management strategies, such as hedging and other derivative programs, including any future hedging strategies supporting the contractsCDHS, specific to the groups of contracts covered in this sub-report.
 - i. Descriptions of basis risk, gap risk, price risk and assumption risk.
 - ii. Methods and criteria for estimating the a priori effectiveness of the strategy.
 - iii. Results of any reviews of actual historical hedging effectiveness.
- b. CDHS – Documentation addressing each of the CDHS documentation attributes for any future hedging strategies supporting the contractshedging strategy that meets the requirements to be a CDHS.
- c. Strategy Changes – Discussion of any changes to the hedging strategy during the past 12 months, including identification of the change, reasons for the change, and the implementation date of the change.
- d. Hedge Modeling – Description of how the hedge strategy was incorporated into modeling, including:
 - i. Differences in timing between model and actual strategy implementation.
 - ii. For a company that does not have a future hedging strategy supporting the contractsCDHS, ~~disclosure of the method used to consider confirmation that currently held hedge assets were included in the starting assets, either (1) including the asset cash flows in the projection model; or (2) replacing the hedge positions with cash and/or other general account assets in an amount equal to the market value of the hedge positions, as discussed in VM 21 Section 4.A.4.a.~~
 - iii. Evaluations of the appropriateness of the assumptions on future trading, transaction costs, other elements of the model, the strategy, and other items that are likely to result in materially adverse results.
 - iii-iv. Discussion of the projection horizon for the future hedge strategy as modeled and a comparison to the timeline for any anticipated future changes in the company’s hedge strategy.
 - iv-v. If residual risks and frictional costs are assumed to have a value of zero, a demonstration that a value of zero is an appropriate expectation.
 - v-vi. Any discontinuous hedging strategies modeled, and where such discontinuous hedging strategies contribute materially to a reduction in the SR, any evaluations of the interaction of future trigger definitions and the discontinuous hedging strategy, including any analyses of model assumptions that, when combined with the reliance on the discontinuous hedging strategy, may result in adverse results relative to those modeled.
 - vi-vii. Disclosure of any situations where the modeled hedging strategies make money in some scenarios without losing a reasonable amount in some other scenarios, and an explanation of why the situations are not material for determining the CTE 70 (best efforts).
 - vii-viii. Results of any testing of the method used to determine prices of financial instruments for trading in scenarios against actual initial market prices, including how the testing considered historical relationships. If there are substantial discrepancies, disclosure of the substantial discrepancies and documentation as to why the model-based prices are appropriate for determining the SR.
 - viii-ix. Any model adjustments made when calculating CTE 70 (adjusted), in particular, any liquidation or substitution of assets for currently held hedges. If there is liquidation or substitution of assets for currently held hedges, disclosure of the impact on the adjusted run.
- e. Error Factor (E) and Back-Testing – Description of E, the error factor, and formal back-tests performed, including:
 - i. The value of E, and the approach and rationale for the value of E used in the reserve calculation.
 - ii. For companies that model hedge cash flows using the explicit method, as described in VM-21 Section 9.C.6.a, and have 12 months of experience, an analysis of at least the most recent 12 months of experience and the results of a back-test showing that the model is able to replicate the hedging results experienced in a way that justifies the value used for E. Include at least a ratio of the actual

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

- change in market value of the hedges to the modeled change in market value of the hedges at least quarterly.
- iii. For companies that model hedge cash flows using the implicit method, and have 12 months of experience, as described in VM-21 Section 9.C.6.b, the results of a back-test in which (a) actual hedge asset gains and losses are compared against (b) proportional fair value movements in hedged liability, including:
 - a) Delta, rho and vega coverage ratios in each month over the back-testing period, which may be presented in a chart or graph.
 - b) The implied volatility level used to quantify the fair value of the hedged item, as well as the methodology undertaken to determine the appropriate level used.
 - iv. For companies that do not model hedge cash flows using either the explicit method or the implicit method, as described in VM-21 Section 9.C.6.c, and have 12 months of experience, the results of the formal back-test conducted to validate the appropriateness of the selected method and value used for E.
 - v. For companies that do not have 12 months of experience, the basis for the value of E that is chosen based on the guidance provided in VM-21 Section 9.C.7, considering the actual history available, mock testing performed, and the degree and nature of any changes made to the hedge strategy.
 - ~~v~~.vi. The basis for the magnitude of adjustment or lack of adjustment for the value of E chosen based on the robustness of the documentation outlining the future hedging strategy.
 - f. Safe Harbor for Future Hedging Strategies ~~CDHS~~ – If electing the safe harbor approach for a future hedging strategy supporting the contracts ~~CDHS~~, as discussed in VM-21 Section 9.C.8, a description of the linear instruments used to model the option portfolio.
 - g. Hedge Model Results – Disclosure of whether the calculated CTE 70 (best efforts) is below both the fair value and CTE 70 (adjusted), and if so, justification for why that result is reasonable, as discussed in VM-21 Section 9.D.

VM-31 Section 3.F.12.c

CTEPA – If using the CTEPA method, a summary including:

- i. Disclosure (in tabular form) of the scenario reserves using the same method and assumptions as those used by the company to calculate CTE 70 (adjusted) as outlined in VM-21 Section 9.C (or the SR following VM-21 Section 4.A.4.a for a company that does not have a future hedging strategy supporting the contracts ~~CDHS~~), as well as the corresponding scenarios reserves substituting the assumptions prescribed by VM-21 Section 6.C.
- ii. Summary of results from a cumulative decrement projection along the scenario whose reserve value is closest to the CTE 70 (adjusted), as outlined in VM-21 Section 9.C (or the SR following VM-21 Section 4.A.4.a for a company that does not have a future hedging strategy supporting the contracts ~~CDHS~~), under the assumptions outlined in VM-21 Section 6.C. Such a cumulative decrement projection shall include, at the end of each projection year, the projected proportion (expressed as a percent of the total projected account value) of persisting contracts as well as the allocation of projected decrements across death, full surrender, account value depletion, elective annuitization, and other benefit election.
- iii. Summary of results from a cumulative decrement projection, identical to (ii) above, but replacing all assumptions outlined in VM-21 Section 6.C with the corresponding assumptions used in calculating the SR.

11/16/20	RM		
Notes: APF 2020-12			

VM-31 Section 3.F.16.a and Section 3.F.16.b

- a. Investment Officer on Investments – A certification from a duly authorized investment officer that the modeled asset investment strategy, including any future hedging strategies supporting the contractsCDHS, is consistent with the company’s current investment strategy except where the modeled reinvestment strategy may have been substituted with the alternative investment strategy, and ~~also any CDHS meets the~~that documentation of the requirements of a CDHS attributes for any future hedging strategies supporting the contracts are accurate.

- b. Qualified Actuary on Investments – A certification by a qualified actuary, not necessarily the same qualified actuary that has been assigned responsibility for the PBR Actuarial Report or this sub-report, that the modeling of any future hedging strategies supporting the contracts~~clearly defined hedging strategies is~~ consistent with the company’s actual future hedging strategies and was performed in accordance with VM-21 and in compliance with all applicable ASOPs.

Update on Mortality Experience Data Collection

Pat Allison, FSA, MAAA
Angela McNabb, ASA, MAAA
June 9, 2022

Agenda

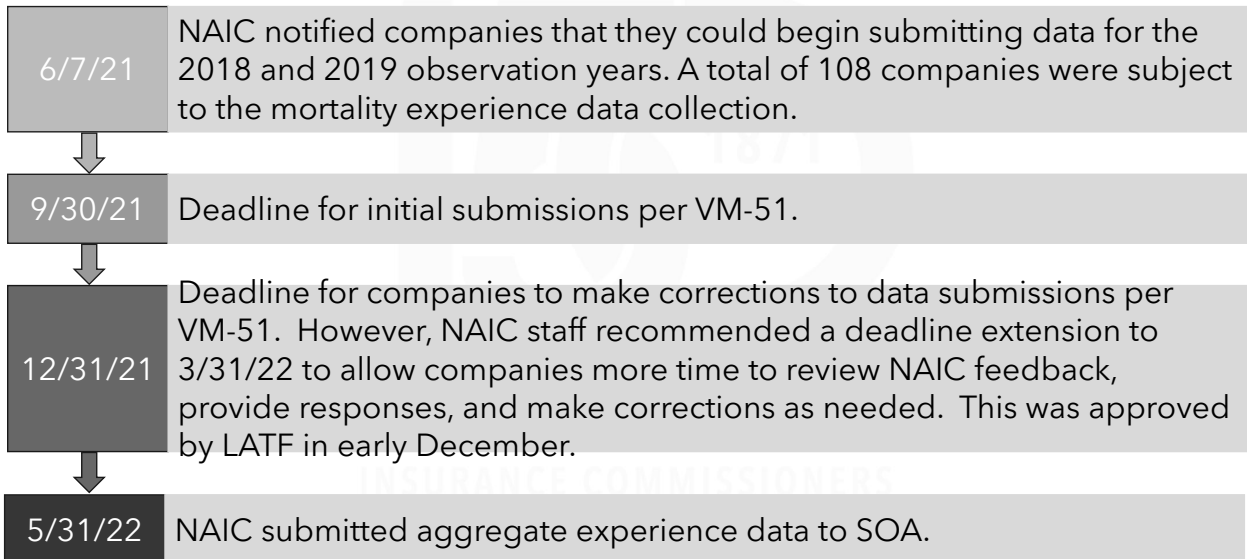

- Background
- Timeline
- Review Process
- Submission Requirements and Status
- Results
- 2022 Data Collection Improvements and Training

NAIC MORTALITY EXPERIENCE DATA COLLECTION Background

- The *Valuation Manual* (VM-50 & VM-51) requires that selected companies submit mortality experience data files for individual ordinary life business. Certain types of business are excluded (simplified issue, worksite, final expense, etc.). This data collection will take place annually.
- The first of these data collections had been scheduled for 2020, however, due to the pandemic it was delayed to 2021. The 2021 collection included data from observation years 2018 and 2019. The deadline to submit final files was March 31, 2022.
- VM-50 Section 1.B outlines the purpose of data collection, which includes development of industry experience tables and assisting regulators in monitoring company’s principle-based reserves.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

2021 Experience Data Collection Timeline

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

NAIC MORTALITY EXPERIENCE DATA COLLECTION Review Process

- The *Valuation Manual* identifies the NAIC as the Experience Reporting Agent. The NAIC has the task of collecting, validating and aggregating the data prior to submitting it to the SOA.
- The NAIC has developed a multi-stage validation process.
 - Submitted data files are first run through a rules-based validation program which checks for invalid values and invalid combinations of fields (e.g.: date of birth before issue date).
 - Data files are then subject to a field distribution review. This identifies unusual distribution patterns in the data (e.g.: no terminations, unreasonable ratio of males to females, etc.).
 - Feedback is provided to the submitting company at each step of the process. Companies are then required to correct critical data exceptions and resubmit their data.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

NAIC MORTALITY EXPERIENCE DATA COLLECTION Submission Requirements

- A complete data submission must include all the following:
 - Data files for observation years 2018 and 2019 submitted using the NAIC's Regulatory Data Collection system (RDC).
 - A reconciliation of the data file to the company's Annual Statement (Exhibit of Life).
 - A control totals summary.
 - VM-51 Appendix 1 - 3 Questionnaires (Appendix 3 questionnaire is only required for companies defining custom plan codes).
 - Responses to questions/exceptions of a critical nature.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

NAIC MORTALITY EXPERIENCE DATA COLLECTION

Submission Status

- NAIC actuarial staff is continuing to follow-up with companies that have incomplete submissions. Outstanding items for some companies include:
 - Control totals, reconciliations and/or questionnaires.
 - Responses to items noted as critical in the field distribution review.
- Field distribution reviews for final submissions is ongoing.
 - Companies will be given feedback which they should consider when preparing for the 2022 data collection. Those that have reviewed NAIC feedback have typically identified changes that need to be made to their data.
 - Responses to questions in the field distribution review are required. This information helps NAIC staff understand the company's distribution of data and avoid asking the same questions year after year.
 - A/E ratios will be provided to companies soon.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

NAIC MORTALITY EXPERIENCE DATA COLLECTION

Results

- Final data submissions were greatly improved compared to initial submissions (i.e. 3/31/22 versus 9/30/21 submissions).
- A total of 108 companies participated in the data collection, of which 105 were included in the aggregate file for the SOA. A few companies had many data exceptions and as a result were excluded.
- A total of approximately 97 million records (from 108 companies) were collected for each of the two observation years. Of these, approximately 91 million records were accepted for each observation year (94% of submitted records). Some records were rejected based on data exceptions identified during the validation process.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

NAIC MORTALITY EXPERIENCE DATA COLLECTION Results - Aggregate File

- The aggregate file for the SOA was delivered on May 31st.
- VM-51 Appendix 4 fields 28 - 46 are not included in the aggregate file (e.g. premium, UL/VL secondary guarantee info, etc.).
 - NAIC feedback sent to companies included validation results for all fields.
 - There were numerous data exceptions for fields 28 - 46. For the 2021 data collection, the NAIC asked companies to focus on making corrections to fields 1 - 27. Data acceptance criteria for the aggregate file was based only on fields 1 - 27.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

2022 NAIC MORTALITY EXPERIENCE DATA COLLECTION (Observation Year 2020) Improvements

- NAIC staff will be implementing improvements for the 2022 data collection. Some of these improvements include:
 - Companies will have the option to download data exceptions from RDC.
 - A Data Dictionary will be provided to give companies additional guidance.
 - NAIC staff is further automating the review process to provide feedback to companies faster.
 - NAIC staff is reviewing the rules-based data validations and their severity.

NATIONAL ASSOCIATION OF INSURANCE COMMISSIONERS

NAIC MORTALITY EXPERIENCE DATA COLLECTION 2022 Company Training

- Kick-Off meeting/training will be conducted on June 15th. Topics will include:
 - Discussion of planned improvements to the process.
 - Obtain feedback from companies regarding additional improvements.
 - File layout changes.
 - Optional information to be collected.
- Additional training is planned for later in June to go over changes to reporting when a Third-Party Administrator is involved.

Draft: 7/14/22

Life Actuarial (A) Task Force
Virtual Meeting
June 2, 2022

The Life Actuarial (A) Task Force met June 2, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Mark Fowler represented by Jennifer Li (AL); Ricardo Lara represented by Ted Chang, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Ben Slutsker (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. Discussed Comments on AG AAT

Colin Masterson (American Council of Life Insurers—ACLI) said the ACLI comment letter (Attachment Seven-A) recommends additional edits to the proposed actuarial guideline (AG) on asset adequacy testing (AAT) (Attachment Seven-B) and asks for a short re-exposure of the AG AAT. Mr. Slutsker said that the question of which asset classes to exempt from sensitivity testing, attribution analysis, and other requirements of Section 4 will be addressed first, after which there will be discussion on the remaining ACLI comments. He said that cash, U.S. Treasury bonds and agency bonds are currently the only asset classes exempted. He said the Task Force could add public corporate bonds and floaters to the list of exempted asset classes. He said another option is to include real estate, direct mortgage loans, and mortgage passthroughs in addition to public corporate bonds and floaters as exempted asset classes. Mr. Slutsker requested a vote on the various options. The Task Force voted to add nonconvertible/noncallable public corporate bonds to the list of noncomplex assets to be exempted. In a second vote, the Task Force agreed to exclude convertible/callable public corporate bonds and floating rate instruments from the list of noncomplex assets. In a third vote, the Task Force agreed to exclude direct mortgage loans from the list of noncomplex assets. There was no objection to excluding real estate and mortgage passthroughs from the list of complex assets.

Mr. Slutsker said the ACLI suggested striking requirement #6 on page 1 of the guideline. He recommended that instead of striking it, the requirement could be revised to clarify its intention by possibly having the company provide the rationale for updating some of the underlying assumptions related to complex assets. He said the revision will be included in the next exposure of the guideline.

Mr. Slutsker said comment letters mentioned the difficulty of meeting the Dec. 31, 2022, implementation date. He asked the Task Force to consider a May 1, 2023, implementation date, with an option for companies to request more time from their domestic regulator if needed. Mr. Leung said a May 1 implementation date will make it difficult for state insurance regulators to review the required information and suggest additional revisions to the guideline. The Task Force voted to change the implementation date to April 1 for year-end 2022 submissions, with a possibility of an extension beyond April 1 in the case of hardship.

Mr. Slutsker said the ACLI comment letter recommended excluding policy loans from the scope of the guideline. He said the guideline was intended to exclude policy loans. He suggested accepting the revision proposed by the ACLI. There was no objection from Task Force members.

Mr. Slutsker identified the definition of “net market spread” in Section 3.C, and the discussion of the tail expectation in Section 4.B.i.(d) as items to be highlighted to solicit comments on the next exposure. He also said that paragraph 5.B.iii, which refers to the “Guideline Excess Spread,” will be stricken; commentary on the attribution analysis will be requested instead.

2. Heard an Update on HMI/FMI

Marianne Purushotham (Society of Actuaries [SOA] Preferred Mortality Project Oversight Group [POG]) presented slides (Attachment Seven-C) showing the present state and the direction of the 2022 mortality improvement recommendation to be considered by the Task Force. She said historical mortality improvement (HMI) and the future mortality improvement (FMI) scales will be developed for 2022. The scales will address: 1) how COVID-19 impacts are reflected in the mortality improvement scales; 2) margin development for the FMI; and 3) whether a modification to the smoothing method is necessary. She noted that there are already implicit margins in both the HMI and FMI scales due to the use of general population data that is unadjusted for the insured population differences. She said four mortality HMI scenarios and two FMI are undergoing model office testing. She said the final recommendation should be ready by the first week of July.

Donna Claire (American Academy of Actuaries [Academy] Life Experience Committee) discussed some general questions (Attachment Seven-D) related to the COVID-19 impact on mortality improvement for Task Force consideration.

Having no further business, the Life Actuarial (A) Task Force adjourned.

SharePoint/NAIC Support Staff Hub/Member Meetings/2022 NAIC Meetings/Summer National Meeting/Committee Meetings/LIFE INS and ANNUITIES (A) COMMITTEE/Life Actuarial (A) TF/LATF Calls/6 2/June 2 Minutes.docx

Brian Bayerle
Senior Actuary

May 31, 2022

Mr. Mike Boerner
Chair, NAIC Life Actuarial Task Force (LATF)

Mr. Fred Andersen
Chief Life Actuary, Minnesota Department of Commerce

Re: May Exposure of Actuarial Guideline Asset Adequacy Testing

Dear Messrs. Boerner and Andersen:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on the May 19th (Third) exposure of Actuarial Guideline (AG) on Asset Adequacy Testing (AAT, collectively Guideline).

We have substantive feedback for this draft of the Guideline, so we request a short re-exposure of about a week so we can collectively work together to avoid serious unintended consequences. In particular, we have serious concerns around well-understood asset classes being considered “complex” in this Guideline; we believe this could lead to problematic issues that could be avoided by deferral and further discussion outside of this process.

We have the following feedback on the Guideline by section of the document, with an accompanying redlined version (AG AAT - 3rd Exposure - May 2022 - ACLI Markup.pdf):

General:

- Adherence to relevant Actuarial Standards of Practice is already expected of all practicing actuaries, so we suggest moving all ASOP references to guidance notes within the Guideline.

Background:

- We suggest striking item 6 in the Background Section and Section 4.E in their entirety. First, these items pertain to “complex assets,” the meaning of which is quite broad within the AG, such as including “vanilla” investments such as non-investment grade bonds and equities. Second, it involves “research and monitoring,” which is not within the expertise of the appointed actuary. Thus, the scope of this provision is quite broad and the

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI’s member companies are dedicated to protecting consumers’ financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI’s 280 member companies represent 94 percent of industry assets in the United States.

acli.com

voluminous information provided by entities is unlikely to provide significant regulatory value.

Section 2 Scope:

- Clearly policy loans should be removed from the scope of the Guideline.

Section 3 Definitions:

- 3.A: Definition of “Fair Value” should be modified as current definition does not reflect fair value when asset is sold in projection.
- 3.C: Definition of “Net Market Spread” can be simplified given that the use of this term is to determine which asset groups get more disclosure.
- 3.F.i: For consistency with 3.F.ii, suggest additional clarity around aggregation.
- 3.G: ACLI supports expansion of asset classes within the definition of “Non-complex Assets.” Corporate bonds are already described in 4.B as “simple assets,” and logically fit into this category. Excluding these from the definition may categorize a significant portion of these assets as “high net yield” depending on the current benchmark spreads. ACLI urges several targeted asset classes to be included in the definition of the Non-complex assets in addition to corporate bonds: real estate, direct mortgage loans, and mortgage pass-through securities. Each of these classes have well-established, credible experience with significant industry and regulatory expertise around the use, modeling, and assumptions regarding these assets.

Further, there are significant implications for not including these classes in the definition: there would need to be a considerable investment of company resources in a limited amount of time to assess the significant operational challenges of implementation (e.g., understanding implications for real estate and other asset classes if subject to disclosure on non-publicly traded assets). We are open to discussing additional disclosures around these items in the future, but there is simply not enough time to develop appropriate regulatory guidance for these asset classes. In these discussions, we would seek to understand the new fact pattern that has emerged as to why these classes have generated a concern and to have a constructive dialogue on the best way to address such concerns.

- 3.G (continued): It would be clearer to specify which sections are not applicable rather than using “through” language which could be ambiguous.

Section 4 Asset Adequacy Considerations and Documentation Expectations

- 4.A.i.(b): We suggest edits as reinvestment assumptions are always approximate, and it doesn’t make sense for them to be based on experience.
- 4.A.ii.(a): The extent of the relationship between risk and return is difficult to characterize, so suggest revising text.
- 4.A.ii.(b): We suggest edits as the term “asset-related factor” is neither defined nor used elsewhere.
- 4.B: Suggest clarification of high yielding-complex assets in text. Low yielding, complex assets likely would not benefit from the proposed disclosures.
- 4.B.i: The current structuring implies that illiquidity margins [4.B.i.(b)] and complexity margins [4.B.i.(c)] are subsumed under multi-scenario testing [4.B.i], while in reality the practices can be applied separately and independently. Suggest restructuring this section.
- Suggest striking 4.B.i.(d) in its entirety. The text is a statement rather than guidance. Additionally, The “moderately adverse” standard for AAT specifically excludes extreme tail

scenarios and thus shouldn't be in scope for AAT guidance. CTE measures necessarily include extreme scenarios beyond moderately adverse.

- 4.C.iv. The current structure implies that non-publicly traded assets originated by the company are the same as assets with internally determined fair values. To avoid this inference, a new section D is suggested in place of 4.C.iv.
- 4.D (original): Assumed investment expenses should be linked to actual expectations for expenses rather than the complexity of the assets; suggest changing “complexity of assets” to “expected expenses.”
- 4.E (original): Same comment as above in item 6 in the Background Section.

Section 5 Sensitivity Tests and Attribution Analysis related to Assumptions on Projected High Net Yield Assets:

- 5.A.i: Strike “For the year-end 2022 and subsequent VM-30 actuarial memoranda,” from the text. This text is not necessary for the guideline.
- 5.A.i.(b): Add reinvestment assets in the equity section for consistency with regulator consensus: “For reinvestment assets in Equity-like Instruments.”
- 5.A.iii (new): Add text in this section to state that the sensitivities are not intended to define “moderately adverse” for the purposes of the Actuarial Opinion.
- 5.B.ii.(c): Clarify what long-term spreads are intended; we believe it is the spreads listed in Appendix I but would like clarification on this item.
- 5.B.iii: We suggest striking 5.B.iii in its entirety. The text presumes that factors contributing to the Guideline Excess Spread are not assumed to be contributing to additional losses. Yet Section 4.A.ii essentially requires that factors contributing to a Guideline Excess Spread include a margin or an explanation must be provided on how overperforming assets can be assumed to continue to outperform. Since this presumption is not necessarily true and the scope of assets is narrower than in Section 4.A.ii, we suggest eliminating this provision.
- 5.B.iv (original): The lack of context around “expected excess return” could be confusing, so we suggest revising the text.
- Guidance Note after 5.B.iv (original): Strike “(as opposed to perfection)” from the note.

Section 6 Reporting, Review, and Templates:

- 6.A: The required due date should be May 1st. The Guideline requires significant effort for companies and may not be feasible to provide earlier due to other competing requirements (including Q1 reporting). Additionally, several states do not require the Memorandum until after March 1st. Additionally, we would suggest a hardship allowance at the approval of the domestic regulator if May 1st were not an attainable submission date for some companies.
- 6.A (continued): The confidentiality and sharing provisions should not vary between a submission within the actuarial memorandum and a standalone document. They should also not deviate from existing state laws (noting that VM-30 does not contain confidentiality language).
- 6.B: VAWG cannot be subject to an Actuarial Guideline, so suggest moving to a guidance note at the start of this section.
- 6.C (original): Related to the question below, are the asset types being used for anything besides the template? If not, then the heading in C should eliminate the reference to “memorandum section aspects.”
- 6.C.i (original): We are seeking clarification of the categorization of asset classes in this section. Is the intent for companies to report under these groupings, which are inconsistent with how they are grouped elsewhere in the draft? For example, “Equity-like Instrument,” real estate and Schedule BA assets have separate categories in the asset types list, however, the current definition of Equity-like Instruments includes real estate and Schedule

BA assets. If the categorizing could be different than this list, would suggest striking the detailed list from this section.

Other topics:

- It isn't clear how the instructions and spreadsheet accommodate situations where yields, spreads, fees, defaults, etc. change over time.
- How would one determine if an asset is a Projected High Net Yield Asset if the AAT modeled returns vary by scenario?

ACLI is appreciative of your consideration of our comments and looks forward to a future discussion.

Thank you for your consideration,

A handwritten signature in cursive script, appearing to read "B Slutsker".

Actuarial Guideline AAT – 3rd Exposure**APPLICATION OF THE VALUATION MANUAL FOR TESTING THE ADEQUACY OF LIFE INSURER RESERVES****Background**

The *NAIC Valuation Manual (VM-30)* contains actuarial opinion and supporting actuarial memorandum requirements, including requirements for asset adequacy analysis. Regulators have observed a lack of uniform practice in the implementation of asset adequacy analysis. The variety of practice in incorporating the risk of complex assets into testing does not provide regulators comfort as to reserve adequacy. Examples of complex assets are structured securities, including asset-backed securities and collateralized loan obligations, as well as assets originated by the company or affiliated or contracted entity. An initial increase of this activity has been noted in support of general account annuity blocks; however, recent activity was noted in other life insurer blocks.

This Guideline is intended to provide uniform guidance and clarification of requirements for the appropriate support of certain assumptions for asset adequacy analysis performed by life insurers. In particular, this Guideline:

- (1) Helps identify reserve adequacy and claims-paying ability in moderately adverse conditions, including conditions negatively impacting cash flows from complex assets;
- (2) Clarifies elements to consider in establishing margins on asset-related assumptions;
- (3) Ensures recognition that higher expected gross returns from assets are, to some extent, associated with higher risk, and that assumptions fit reasonably within the risk-return spectrum;
- (4) Requires sensitivity testing regarding complex assets supporting life insurer business;
- (5) Identifies expectations in practice regarding the valuation of complex assets within asset adequacy analysis;
- (6) Establishes a process for researching and monitoring the risks associated with complex assets;
- (7) Reflects that while complex assets tend to have higher uncertainty regarding timing and amount of cash flows than more traditional investments, because complex assets are difficult to classify, and the regulatory concern is regarding the projected net yields and cash flows from those assets, the focus of the analysis requirements will be on assets categorized as high-yielding; and
- (8) Requires additional documentation of investment fee income relationships with affiliated entities or entities close to the company.

Text

1. Effective Date

This Guideline shall be effective for asset adequacy analysis of the reserves reported in the December 31, 2022 Annual Statement and for the asset adequacy analysis of the reserves reported in all subsequent Annual Statements.

Note: It is anticipated that the requirements contained in this Guideline will be incorporated into VM-30 at a future date, effective for a future valuation year. This Guideline will cease to apply to annual statutory financial statements when the corresponding VM-30 requirements become effective.

2. Scope

This Guideline shall apply to all life insurers with:

- A. Over \$5 billion of general account actuarial reserves (from Exhibits 5, 6, 7, and 8 of the annual statement) and non-unitized separate account assets or
- B. Over \$100 million of general account actuarial reserves (from Exhibits 5, 6, 7, and 8 of the annual statement) and non-unitized separate account assets and over 5% of supporting assets (selected for asset adequacy analysis) in the category of Projected High Net Yield Assets, as defined in Section 3.F.

{Drafting note – proposed language would be appreciated on the company scope; this exposure reflects a lower floor in 2B and that in Sections 4-5, only 4.a.i. applies to assets that are also not Projected High Net Yield Assets}

Actuarial reserve amounts are included in the amounts in A and B whether directly written or assumed through reinsurance and are determined before any reinsurance ceded credit.

The Guideline applies to assets supporting liabilities tested in the asset adequacy analysis except it does not apply to unitized separate account assets.

3. Definitions

- A. Equity-like Instrument. Assets that include the following:
 - i. Any assets that, for purposes of risk-based capital C-1 reporting, is in the category of common stock, i.e., has a 30% or higher risk-based capital charge.
 - ii. Any asset that is captured on Schedule A or Schedule BA of the Annual Statement.
 - iii. Bond funds.
- B. Fair Value. The price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date as reported in the Annual Statement.
- C. Net Market Spread. For each asset, shall mean the average spread over zero coupon Treasury bonds that equates a bond's fair value as of the valuation date with its modeled cash flows across an arbitrage free set of stochastic interest rate scenarios, less the default assumption used in asset adequacy analysis.

For floating rate bonds, the Net Market Spread shall be calculated as the equivalent spread over Treasuries if the bonds were swapped to a fixed rate, less the default cost assumption used in asset adequacy analysis.

Market conventions and other approximations are acceptable for the purposes of this definition.
- D. Investment Grade Net Spread Benchmark. The applicable spread found in Appendix I using the weighted average life (WAL) of the associated non-Equity-like Instrument.
- E. Guideline Excess Spread. The net spread derived by subtracting the Investment Grade Net Spread Benchmark from the Net Market Spread for non-Equity-like Instruments. Investment expenses shall be excluded from this calculation.
- F. Projected High Net Yield Assets. Currently held or reinvestment assets that are either:

- i. An Equity-like Instrument assumed to have higher value at projection year 10 or later than under an assumption of annual total returns, before the deduction of investment expenses, of 4% for the first 10 projection years after the valuation date followed by 5% for projection year 11 and after, or
- ii. Assets other than Equity-like Instruments where the assumed Guideline Excess Spread is higher than zero. In addition:
 - (a) Aggregation of the comparison between the assumed Net Market Spread from each asset and the Investment Grade Net Spread Benchmark shall be done at a level of granularity that is consistent with or more granular than how the assets are grouped, i.e., compressed, in the asset adequacy analysis model.
 - (b) For applicable assets that do not have an explicit WAL or term to maturity, the company shall disclose the method used to determine the appropriate WAL used for comparing to the Investment Grade Net Spread Benchmark.
 - (c) For purposes of the comparison between assumed Net Market Spread from each asset and the Investment Grade Net Spread Benchmark, investment expenses shall be excluded.

G. Non-complex Assets. Assets including the following:

- i. Cash or cash equivalents and
- ii. Treasuries and agency bonds.

{Drafting note: comments are welcome on the inclusion or exclusion of public corporate bonds and floaters}

Non-complex Assets are excluded from the scope of requirements in sections 4.B through 5.

4. Asset Adequacy Considerations and Documentation Expectations

A. **Net return and risk documentation.**

- i. For all assets, either currently held or in assumed reinvestments, provide:
 - (a) Identification of the assumed gross asset yield and the key components (for example, default and investment expenses) deducted to arrive at the assumed net asset yield.
 - (b) Explanation of any future reinvestment strategy assumptions that differ from current practices and experience.
- ii. For Projected High Net Yield Assets, either currently held or in assumed reinvestments, provide:
 - (a) A detailed explanation describing the extent to which higher expected gross returns from these assets are associated with higher risk. It shall also include, for the aspect of any higher expected gross returns not assumed to be associated with higher risk, an explanation of how overperforming assets with expected returns lying outside the risk-return spectrum can be assumed to persist and be available for reinvestments throughout the projection period in moderately adverse conditions.
 - (b) Commentary on how asset-related factors identified as being volatile and impactful through sensitivity testing or other means contain an appropriate margin to reflect this volatility and impact.

- (c) Identification of the extent to which Projected High Net Yield Assets are supporting major product categories, e.g., individual fixed annuities and pension risk transfers.
- B. **Model rigor.** Where significant risks associated with complex assets are not adequately captured with traditional modeling techniques associated with simple assets like corporate bonds, more rigorous modeling of those risks should occur.
 - i. Where necessary to adequately reflect the risk, multi-scenario testing of those risks specific to complex assets should be performed.
 - (a) For example, investments that may provide a higher expected return in part due to limited information, niche skill sets, or other factors may require unique scenarios (for instance to adequately capture credit or liquidity risk) to fully encompass potential sources of loss.
 - (b) Asset cash flows should be appropriately projected to reflect anticipated liquidity under adverse conditions. If such model aspects are not developed, sufficient additional conservatism to reflect this risk shall be applied.
 - (c) To the extent that the process for modeling or otherwise evaluating the risks is complex, and the potential for disconnect between reality and modeling increases, an additional margin to assumption(s) should be applied. Any such margin shall be applied in the direction of asset adequacy analysis results being less favorable.
 - (d) Note that a robust conditional tail expectation calculation considering all key risks specific to complex assets would likely show that tail losses (from low probability, high impact events) affect asset adequacy results.
 - ii. A company may use simplifications, approximations, and modeling efficiency techniques if the company can demonstrate that the use of such techniques does not make asset adequacy analysis results more favorable. These techniques may be less appropriate if the amount of complex, high-yielding assets becomes a higher percentage of total assets.
 - iii. Actuarial Standards of Practice (ASOPs), including ASOP No. 7 and No. 56 contain additional guidance on the use of models in the analysis of cash flows.
- C. **Fair Value determination.** In asset adequacy analysis, when an asset is projected to be available for sale, a Fair Value of that asset is established, based on market information. Fair Value should only be determined internally (by the insurance or investment management company) when the market-based value of the asset or similar asset cannot be obtained.
 - i. When the Fair Value of a material portion of supporting assets is determined internally, the actuarial memorandum shall contain a step-by-step description of the approach used to calculate the Fair Value of such assets.
 - ii. Provide the total Fair Value of assets that have values determined internally.
 - iii. When the Fair Value of a material portion of assets is determined internally, a sensitivity test should be performed (and the impact on asset adequacy analysis results presented) assuming a haircut to internally derived Fair Values that the company deems reasonable given the commensurate level of anticipated uncertainty.
 - iv. With respect to non-publicly traded assets originated by the company, within the company's group, or within an entity closely tied to a company's group (inclusive of the company's investment manager), practices to help ensure accurate valuation of those assets should be documented in the actuarial

memorandum. Also, provide the total Fair Value of such assets and disclose in detail how the following are appropriately reflected in the net cash flows:

- (a) Contractual agreements in place between such entities.
- (b) Any measures taken to ensure that the valuation of such assets is appropriate and accurate.
- (c) Revenue sharing, e.g., performance fees, between the entity responsible for providing investment or other types of services and the insurer, if applicable.

Also, assumed net cash flows from assets should be net of all explicit or implicit fees or expenses, such as origination fees, as well as reflective of other asset-related risks including credit risk, illiquidity risk, and other market risks.

- D. **Investments expenses (fees).** Assumed investment expenses, whether paid to an external asset manager or to internal investment management staff, as well as additional expenses that are directly attributable to the specific investments, should be commensurate with the complexity of the assets.
 - E. **Trends.** The actuarial memorandum should contain a detailed description of research and monitoring related to trends impacting risks associated with the insurer's complex assets or industry-wide or market-wide assets of similar type.
 - F. **Reinsurance modeling.** Related to reinsurance, relevant communications and disclosures from ASOP No. 11, for instance commentary on collectability and counterparty risk, should be presented in the memorandum.
 - G. **Borrowing.** Please identify if any borrowing is modeled besides to address very short-term liquidity needs. Also, verify borrowing and reinvestment rates to ensure that projections are not materially benefiting from arbitrage advantages.
5. Sensitivity Tests and Attribution Analysis related to Assumptions on Projected High Net Yield Assets
- A. Sensitivity testing
 - i. For the year-end 2022 and subsequent VM-30 actuarial memoranda, perform and disclose, separately for (a) and (b), the asset adequacy analysis results from the following sensitivity tests:
 - (a) For reinvestment assets other than Equity-like Instruments, assume the Net Market Spreads (before deduction of investment expenses) for Projected High Net Yield Assets do not exceed the Investment Grade Net Spread Benchmark and apply the test to a baseline of a level Treasury rate scenario.

For the purposes of limiting the Net Market Spreads at the Investment Grade Net Spread Benchmark, Projected High Net Yield Assets may be aggregated together but shall not include any assets that are not Projected High Net Yield Assets.
 - (b) For Equity-like Instruments, assume annual total returns, before the deduction of investment expenses, of 4% for the first 10 projection years after the valuation date followed by 5% for projection year 11 and after.
 - ii. Strict technical compliance for each asset may not be practical for reasons such as model limitations. Professional judgment should be applied to produce sensitivity testing results that are consistent with the spirit of the test. A variety of alternative methods may be acceptable. Appropriate explanation and justification should be provided for the method that was employed.
 - B. For Projected High Net Yield Assets for non-Equity-like Instruments either currently held or in assumed

reinvestments, perform and disclose the following attribution analysis steps at the asset type level defined in Section 6.c.i.:

- i. State the assumed Guideline Excess Spread.
- ii. Estimate the proportion of the Guideline Excess Spread attributable to the following factors:
 - (a) Credit risk
 - (b) Illiquidity risk
 - (c) Deviations of current spreads from long-term spreads
 - (d) Volatility and other risks (identify and describe these risks in detail)
- iii. For each of the factors contributing to the Guideline Excess Spread, explain why the factor is not assumed to contribute to additional losses (tail or otherwise) related to the risks.
- iv. Where appropriate, apply judgment and provide commentary on the supporting rationale of how the expected excess return is estimated across the various risk components.

{Guidance note: a best-efforts approach (as opposed to perfection) is expected for the year-end 2022 attribution analysis}

6. Reporting, Review, and Templates

- A. The documentation, sensitivity test results, and attribution analysis referenced above are to be incorporated as a separate, easily identifiable section of the actuarial memorandum required by VM-30 or as a standalone document, with a due date to be established between March 1 and May 1 following the applicable valuation date. The separate section or standalone document shall be available to other state insurance commissioners in which the company is licensed upon request to the company. The confidentiality provisions in VM-30 regarding the actuarial memorandum are applicable to the separate section or standalone document required by this Guideline.
- B. The NAIC Valuation Analysis (E) Working Group (VAWG) shall serve as a resource in the targeted review of asset adequacy analysis related to modeling of business supported with Projected High Net Yield Assets. VAWG shall provide periodic reports identifying outliers and concerns regarding the analysis to help inform regulators on the effectiveness of the Guideline in meeting the eight objectives stated in the Background section.
- C. Sample memorandum section aspects / templates (to be completed) –
 - i. Asset types
 - (a) Treasuries and Agencies
 - (b) Public Corporate Bonds
 - (c) Convertible Bonds
 - (d) Floating Rate Notes
 - (e) Municipal Bonds
 - (f) Other Private Bonds
 - (g) Preferred Stock
 - (h) Agency Mortgage-Backed Securities or Collateralized Mortgage Obligations
 - (i) Non-Agency Commercial Mortgage-Backed Securities
 - (j) Non-Agency Residential Mortgage-Backed Securities
 - (k) Collateralized Loan Obligations
 - (l) Other Asset Backed Securities
 - (m) Equities or Equity-Like Instruments

- (n) Real Estate
 - (o) Mortgage Loans (Commercial and Residential)
 - (p) Schedule BA Assets
 - (q) Derivative Instruments linked to Equity-Like Assets
 - (r) Other Derivative Instruments
 - (s) Other - Not Covered Above³
- ii. Template for the asset summary.
 - iii. Template for components of net asset yield for various asset classes, with separate tables to be provided for initial assets and reinvestment assets.
 - iv. Template for sensitivity test aspects for fixed-income securities.
 - v. Template for sensitivity test results.
 - vii. Template for attribution analysis, with separate tables to be provided for initial assets and reinvestment assets.

Appendix I – Investment Grade Net Spread Benchmark

WAL (Weighted Avg Life)	Investment Grade Net Spread Benchmark (in bps)
1-10	170
11-20	175
21-30	185

Future Mortality Improvement Scale Development (VM-20) LATF Update #1

Mortality Improvements Life Work Group (MILWG), the Academy's Life Experience Committee and the SOA's Preferred Mortality Project Oversight Group ("Joint Committee")

Life Actuarial Task Force (LATF) Meeting—May 2022

Agenda

- Items to be addressed in the 2022 scale recommendation
- COVID-19 approach
- Update on scale development timeline
- Next steps/discussion

© 2022 American Academy of Actuaries. All rights reserved.

Items to be addressed in 2022 scale recommendation

Develop HMI (historical mortality improvement) and FMI (future mortality improvement) scales for use in 2022 valuation year.

The 2022 scales will address the following:

- ▣ Reflecting COVID-19 impacts
- ▣ Margin development
- ▣ Modification to smoothing method

Approach to COVID-19 impact

- ▣ Quantification of COVID-19 impact
 - ▣ Data sources
 - ▣ Short- vs. medium- vs. longer-term impacts
 - ▣ Return to previously projected mortality level over time or residual excess mortality
 - ▣ Insured vs. general population considerations
 - ▣ Direct adjustment to MI rates or reflected in additional margins
- ▣ Implicit margins in MI scale development
 - ▣ Data source—general population data unadjusted for insured population differences (largest source of margin)
 - ▣ Starting MI level (HMI)
 - ▣ Long-term rate (FMI)
 - ▣ Limit on FMI assumption (20 years)

COVID-19 Impact—Modeling Scenarios

Historical MI—Scenarios being assessed	Description
1. 10-year historical average ending in 2020	including full deterioration for 2020 (most conservative)
2. 10-year historical average ending in 2019	exclude COVID-19 shock impact in 2020 (most optimistic)
3. 9-year historical average ending in 2019	exclude COVID-19 shock impact in 2020 (alternate)
4. 10-year CH [2]10 average ending in 2020 (assuming no improvement from 2019 to 2020)	muted impact of 2020 (intermediate)
Future MI—Scenarios being assessed	Description
1. Basic FMI scale = Use grading to LT average based on SSA Alt 2 (recommended method)	Loaded MI scale = Basic plus explicit margin for uncertainty around the future trend (= 25% reduction of Basic FMI rates in all years)
2. Basic FMI scale = Use grading to LT average based on SSA Alt 2 (recommended method)	Loaded MI scale = Basic plus explicit margin for uncertainty in future trend (= 25% reduction of Basic FMI rates in all years) <u>and an additional explicit margin for uncertainty around the COVID-19 medium-/long-term impacts that grades off over time.</u> Additional COVID-19 explicit margin—options for model testing: 1. 50% margin grades to normal margin of 25% over 5 years. 2. Decrease mortality improvement by 1% in year 1 grading linearly down to 0% in year 5.

CH [2]10 added hyphens
 Craig Hanna, 5/11/2022

2022 MI scale development timeline (VM-20)

Updated May 2022

Milestones	Target Date
1. Receive 2020 data from the Centers for Medicare and Medicaid Services (CMS). SOA creates preliminary mortality estimates for 2020.	2/28/2022 (completed)
2. Define options for reflecting COVID-19 impact on HMI and FMI scale recommendations including margin.	4/28/2022 (completed)
3. Assess reserve impact of COVID-19 adjustment recommendation—run National Association of Insurance Commissioners (NAIC) model office under several scenarios.	6/1/2022 (in progress)
4. Determine smoothing method for FMI and HMI scales.	6/1/2022
5. Finalize recommendation for reflecting COVID-19 based on NAIC model office results.	7/1/2022
6. Present to LATF for exposure. <i>Assumes 60-day exposure period.</i>	7/15/2022
7. Receive SSA mortality estimates for 2020 from SOA (final SOA estimates).	8/15/2022
8. Receive SSA Trustees Report—Intermediate Projections for 2022.	8/15/2022
10. Respond to exposure comments obtain LATF approval of 2022 HMI and FMI.	9/15/2022
11. Publish 2022 HMI and FMI scales on SOA website.	9/30/2022

Life Actuarial Task Force (LATF) Meeting—May 26, 2022

Overview

- ❑ The American Academy of Actuaries' Life Experience Committee discussed how pandemics, and specifically COVID-19, would be reflected in projects such as asset adequacy testing and principle-based reserves (PBR) testing
- ❑ The committee's conclusion was that we will not find the perfect answer, but it would be helpful to develop a list of considerations that may be taken into account when developing mortality improvement assumptions

© 2022 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

General Questions

- Does COVID-19 impact the mortality improvement assumption for PBR up to the date of valuation?
- Does COVID-19 impact the mortality improvement assumption for asset adequacy testing?
- Does COVID-19 impact the future mortality improvement assumption for PBR?
- Does COVID-19 impact the future mortality improvement assumption for asset adequacy testing?
- When considering COVID-19, should decreases in the mortality improvement be considered for annuity/long-term care insurance (LTCI) mortality?

AMERICAN ACADEMY of ACTUARIES

Objective. Independent. Effective.™© 2022 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

What Should Be Considered a COVID-19 Death?

At issue: If one is trying to determine excess deaths due to COVID-19,

- Does the determination include all deaths where COVID-19 was a factor in the death?
- Are COVID-19 deaths only those where it is listed as the primary cause of death?
- How does one determine COVID-19 deaths when some states do not list cause of death?

AMERICAN ACADEMY of ACTUARIES

Objective. Independent. Effective.™© 2022 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

In Actuarial Work for PBR and Asset Adequacy Testing, Should Past COVID-19 Deaths Be Ignored for Mortality Improvement to date of Valuation?

Yes

1. Rare event covered by surplus/RBC
2. May have front-loaded deaths that would have occurred soon, so it is a positive for future mortality

No

1. Methodology originally established for PBR mortality improvement to date of valuation included all deaths
2. Ignoring it would be the equivalent of ignoring stock market corrections
3. If future mortality is expected to be better, it should be reflected in future mortality improvement numbers instead

AMERICAN ACADEMY OF ACTUARIES

Objective. Independent. Effective.™

© 2022 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

Factors That Can Impact Future Mortality Improvements

Positives

1. May have front-loaded deaths that would have occurred soon, so it is a positive for future mortality
2. Population mortality is generally improving, albeit at slower rates absent COVID-19; e.g., for cancer
3. Increased use of self-testing and telemedicine has increased access to medical care for many

Negatives

1. Long COVID
2. Mental health impact of COVID including suicides and drug use
3. Mortality rates on certain diseases like heart disease, diabetes, liver disease and hypertension not improving recently
4. Delay in care may lead to extra deaths
5. There are still additional waves of virus

AMERICAN ACADEMY OF ACTUARIES

Objective. Independent. Effective.™

May not be reproduced without express permission.

Considerations re: Future Mortality Rates

- Mortality improvement varies by socioeconomic variables. An actuary could review these and determine which quintile/decile best matches their company's block of business
- The larger provisions for adverse deviation (PADs) used on the mortality improvement assumption, the more uncertainty there is in the assumption
- Margins used in mortality improvement rates for PBR testing and asset adequacy do not have to be the same, but differences should be justified
- No studies yet done on offsets, e.g., annuity vs life insurance

AMERICAN ACADEMY of ACTUARIES

Objective. Independent. Effective.™© 2022 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

Considerations re: Future Mortality Rates—Cont'd

- To date, the negative impact of COVID-19 on long-term care insurance (LTCI) mortality improvement has not been studied: the positive impact of front-loaded deaths may be offset with claimants experiencing long COVID
- Expected mortality improvements vary by age groups
- Consider differences in pandemic versus endemic phases of COVID

AMERICAN ACADEMY of ACTUARIES

Objective. Independent. Effective.™© 2022 American Academy of Actuaries. All rights reserved.
May not be reproduced without express permission.

Regulatory Considerations

- No single answer works for all
- May want to consider setting an established range of acceptable mortality improvement rates that could be allowed

Thank You

- Questions?
- For more information, please contact the Academy's life policy analyst, Amanda Barry-Moilanen, at barrymoilanen@actuary.org.

Draft: 7/7/22

Life Actuarial (A) Task Force
Virtual Meeting
May 26, 2022

The Life Actuarial (A) Task Force met May 26, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ben Bock, Ted Chang, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen (MN); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Judith L. French represented by Peter Weber (OH); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. Re-Exposed Amendment Proposal 2022-04

Pat Allison (NAIC) said the London Interbank Offered Rate (LIBOR) will be published through June 2023. She said the designated replacement for LIBOR is the Secured Overnight Financing Rate (SOFR). She said amendment proposal 2022-04, exposed for public comment through April 22, was drafted by the American Academy of Actuaries (Academy) to propose the *Valuation Manual* changes needed to effect the change from LIBOR to SOFR beginning in 2022 and carrying through to future years. Informal comments to the Academy from Rachel Hemphill (Texas Department of Insurance [DOI]) suggested removing references to years prior to 2022 and addressing the changes for 2022 with an NAIC staff memorandum instead of making a *Valuation Manual* change. Ms. Allison said her informal comments to the Academy recommended that the redlining be redone to show the proposed changes against existing *Valuation Manual* language. The formal comments (Attachment Eight-A) provided by the American Council of Life Insurers (ACLI) requested that the NAIC publish both LIBOR-based and SOFR-based spreads for 2022.

Ms. Allison discussed the NAIC staff memorandum (Attachment Eight-B) recommending a process for developing swap rates to be used for the remainder of 2022. She said the memorandum is consistent with the approach proposed in amendment proposal 2022-04 and with Section 9.F.8.d of VM-20, Requirements for Principle-Based Reserves for Life Products. She noted that the wording of Section 9.F.8.d allows for the publication of rates based on one source, which would preclude the NAIC from publishing both LIBOR-based rates and SOFR-based rates. She said the memorandum includes information that verifies that LIBOR is no longer effective. She noted that one of the two data providers used by the NAIC began providing SOFR rates instead of LIBOR in December 2021. Companies that have transactions based on LIBOR must use actuarial judgment to appropriately apply SOFR rates.

Ms. Allison said she revised amendment proposal 2022-04, authored by Alan Routhenstein (Academy), so that it is applicable only to the years 2023 and later. Mr. Carmello suggested removing the word “current” from the phrase “historical current SOFR spreads” from the revision proposed for Section 9.F.8.d.ii of VM-20

Mr. Weber made a motion, seconded by Mr. Chupp, to re-expose amendment proposal 2022-04 (Attachment Eight-C), including the change suggested by Mr. Carmello, and expose the NAIC staff memorandum both for a 13-day public comment period ending June 7. The motion passed unanimously.

2. Re-Exposed Amendment Proposal 2020-12

Brian Bayerle (ACLI) said the ACLI comment letter (Attachment Eight-D) proposes a few changes, including restoring the reference to immaterial hedging strategies, which seems to have been inadvertently dropped from an earlier version. He said the ACLI is recommending deferring the effective date to Jan. 1, 2024, or providing a 1-year deferral of aspects of the proposal.

Mr. Reedy noted that the amendment proposal was edited to add the following phrase to Section 9.E of VM-21, Requirements for Principle-Based Reserves for Variable Annuities: “The company may also consider historical experience for similar current or past hedging programs on similar products to support the error factor determined for the projection.”

Mr. Slutsker made a motion, seconded by Mr. Chupp, to re-expose amendment 2020-12 (Attachment Eight-E) for a 7-day public comment period ending June 1. The motion passed unanimously.

3. Heard an Update on the ESG Field Test

Scott O’Neal (NAIC) said the economic scenario generator field test includes an equity model, a Treasury model, and a corporate model. He gave a brief overview of the field test instructions (Attachment Eight-F), including what is to be tested for each model, and the required and optional field test runs. Mr. Bayerle suggested several clarifying edits for Mr. O’Neal’s consideration. Link Richardson (Academy) said test #7 should be revised to use a 3.25 mean reversion parameter with the Academy Interest Rate Generator (AIRG).

4. Discussed VM-20 and C3 Phase I Alternative Discounting Methodology

Mr. O’Neal said VM-20 stochastic reserves and C-3 Phase I use a discount method based on applying a 105% factor to the 1-year U.S. Treasury rate. He said that due to the inclusion of negative interest rates in the field test, the method must be adjusted to avoid making a negative interest rate even more negative. He said the proposed solution is to have companies provide undiscounted values for scenarios and projection periods with negative interest rates. NAIC staff will later apply the proper discounting method, using a 95% discounting factor to negative rates.

5. Discussed Comments on ESG Field Test Specifications, Instructions, and Templates

Mr. Bayerle shared the ACLI comments (Attachment Eight-G), which provided a few suggestions, including having more varied scenario sets to see how the generator will move under a number of conditions.

Mark Tenney (Mathematical Finance Company) commented (Attachment Eight-H) that the original parameterization of the Conning model should be included in the field test. He said the original parameterization helps to explain the excessive risk premium in the current market.

Having no further business, the Life Actuarial (A) Task Force adjourned.

Re: APF 2022-04

Dear Mr. Boerner:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit comments on APF 2022-04. ACLI supports this necessary effort to accommodate the eventual cessation of LIBOR.

We have several suggestions around the APF and the publishing of rates:

- It would be beneficial to produce both LIBOR and SOFR based spreads for 2022. We anticipate majority of in-force derivatives will still be on LIBOR until transition in 2023. Ideally, both rates could be published until 7/1/2023 provided data is available.
- Due to some of the operational changes that may be presented for both NAIC preparing the tables and for companies to implement them, it may be preferable to implement approach 2.A outlined in the Academy deck allowing for actuarial judgment.
- ACLI supports using a single spread adjustment instead of date-specific adjustments. This approach is straightforward operationally and does not produce a materially different result.
- We agree with the recommendation to defer day count conventions for a future APF.

Thank you for your consideration of our comments.

A handwritten signature in black ink, appearing to read 'B Bayerle', is positioned above the distribution list.

MEMORANDUM

TO: Life Actuarial (A) Task Force

FROM: Pat Allison, NAIC Staff

DATE: May 26, 2022

RE: Recommended replacement related to APF 2022-04 Swap Spreads and LIBOR transition to SOFR

Background

The purpose of this memo is to recommend: 1) Secured Overnight Financing Rate (SOFR) swap spreads as the replacement for LIBOR swap spreads upon adoption by LATF, and 2) The approach to be used in calculating current and long-term swap spread curves from the date of this adoption through the remainder of 2022. These recommendations are consistent with APF 2022-04 (which would be effective for the 2023 *Valuation Manual*), which identifies the SOFR as the replacement for LIBOR, and the VM-20 Section 9.F.8.d Procedure for Setting Prescribed Gross Asset Spreads, cited below:

A current and long-term swap spread curve shall be prescribed for year one and years four and after, respectively, with yearly grading in between. The three-month and six-month points on the swap spread curves shall be the market-observable values for these tenors. Currently, this shall be the corresponding London Interbank Offered Rate (LIBOR) spreads over Treasuries. When the NAIC determines LIBOR is no longer effective, the NAIC shall recommend a replacement to the Life Actuarial (A) Task Force which shall be effective upon adoption by the Task Force.

The last sentence above notes that the NAIC shall recommend “a replacement”, which indicates an intent to replace the prescribed current and long-term swap spread curves with a single replacement, as opposed to continuing the NAIC’s prescription of LIBOR beyond the adoption date.

Determination that LIBOR is no longer effective

An American Academy of Actuaries’ extrapolation of data published on April 13 by the International Swaps and Derivatives Association (ISDA) Clarus Financial Technology¹ shows that SOFR-based transactions are growing in popularity and can be expected to reach in July or August a two-thirds majority of newly executed USD interest rate derivatives (based on a risk-based DV01 metric). A Bloomberg February 9 article² states that over two-thirds of newly executed USD interest rate swaps in

¹ See “The Percentage of DV01” chart accessible via “The Charts” link within this ISDA-Clarus 2022-04-13 publication: <https://www.clarusft.com/latest-data-shows-sofr-trading-soaring/>

p | 212 398 9000

www.naic.org

January 2022 were SOFR swaps (with the floating rate based on SOFR) rather than LIBOR swaps (with the floating rate based on LIBOR). Based on the information provided in these publications, NAIC staff has determined that LIBOR is no longer effective.

Actuarial judgment may be required in the use of prescribed swap spreads (for example, in the case where companies have a combination of SOFR and LIBOR-based swaps). VM-20 Section 9.F.8.d states, in part “Interest rate swap spreads over Treasuries shall be prescribed by the NAIC for use throughout the cash-flow model *wherever appropriate* for transactions and operations...” (emphasis added).

Recommended Replacement for Current Benchmark Swap Spreads

Effective [TBD, potentially June 30, 2022] and through December 31, 2022, NAIC staff recommends that for each month-end date, LIBOR swap spreads shall be replaced with SOFR swap spreads³:

- 3-month LIBOR spread should be replaced with 3m SOFR swap⁴ spread
- 6-month LIBOR spread should be replaced with 6m SOFR swap spread
- 1-year swap spread should be replaced with 1y SOFR swap spread
- ...
- 30-year swap spread should be replaced with 30y SOFR swap spread

Recommended Replacement for Long-Term Benchmark Swap Spreads

Effective on the adoption date by the Life Actuarial (A) Task Force of SOFR swap spreads as the replacement for swap spreads previously prescribed and through December 31, 2022, NAIC staff recommends the following approach for the calculation of long-term benchmark swap spreads, consistent with APF 2022-04:

1. Extract daily swap spread data over the prescribed observation period (rolling 15-year period) ending on the last business day of the quarter from at least two reputable data sources. If the data source provides swap rates rather than swap spreads, convert the daily swap rate for each maturity to a swap spread by subtracting the corresponding maturity Treasury yield from the swap rate.
2. Calculate SOFR swap spreads as follows for each business day “u” on or after the effective date of the adoption by the Life Actuarial (A) Task Force of SOFR swap spreads as the replacement for swap spreads previously prescribed:
 - a. For each maturity “m” = 0.25, 0.5, 1 ... 30 years, and business day “u”:
SOFR swap spread(m,u) = SOFR swap rate(m,u) - Treasury yield(m,u).
3. Calculate SOFR swap spreads as follows for each business day before the effective date of the adoption by the Life Actuarial (A) Task Force of SOFR swap spreads as the replacement for swap spreads previously prescribed, utilizing Bloomberg’s 2021-03-05 published USD Spread Adjustments:
 - a. For each maturity “m” = 3 or 6 months, and business day “u”,
 - i. SOFR swap spread(3 months,u) = LIBOR swap spread(3 months,u) - 0.26161% (the USD 3-month Spread Adjustment)
 - ii. SOFR swap spread(6 months,u) = LIBOR swap spread(6 months,u) - 0.42826% (the USD 6-month Spread Adjustment)

³ During 2021 the swap market evolved such that the definition of a standard n-year interest rate swap changed in January 2022 to be a SOFR swap from the LIBOR swap.

⁴ 3-month and 6-month SOFR swap rates are defined herein as the fixed rate one party pays at the end of three months or six months in exchange for receiving at such time 3-month SOFR or 6-month SOFR, calculated on a compounded in arrears basis.

- b. For each maturity “m” = 1 ... 30 years, and business day “u”:
SOFR swap spread(m,u) = LIBOR swap spread(m,u) - 0.26161% (the USD 3-month Spread Adjustment)
4. Average the swap spread data from the data sources by maturity over the prescribed observation (rolling 15-year period).
 5. Calculate the Long-Term Benchmark Swap Spreads as the 85% conditional mean for each of the 32 maturity categories (three-month, six-month, one-year, two-year, ... 30-year) using the same business trading days as were used in the 85% conditional mean for long-term bonds spreads.
 6. Publish the Long-Term Benchmark Swap Spreads in a table. Among tables published on the NAIC website (See Subsection H), Table J shows Long-Term Benchmark Swap Spreads

In Table J, NAIC staff shall clarify that from the adoption date forward, current and long-term benchmark swap spreads are SOFR swap spreads. [Drafting Note: The tables will be labeled to indicate they contain SOFR swap spreads.

Life Actuarial (A) Task Force
Updated Exposure of APF 2022-04

Swap Spreads and London Inter-Bank Offered Rate (LIBOR)
Transition to the Secured Overnight Financing Rate (SOFR)

Note this revised APF is complemented by a May 26, 2022 memo from NAIC staff to LATF on a recommended replacement to LIBOR swap spreads effective [TBD, potentially June 30, 2022].

Please send comments to Reggie Mazyck @ RMazyck@NAIC.Org by close of business on June [], 2022.

**Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
 Amendment Proposal Form**

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

Identification:

Alan Routhenstein, on behalf of the American Academy of Actuaries’ Life Reserves Work Group, Annuity Reserves and Capital Work Group, and Variable Annuity Reserves and Capital Work Group

Pat Allison, NAIC staff

Title of the Issue:

Swap Spreads and London Inter-Bank Offered Rate (LIBOR) transition to the Secured Overnight Financing Rate (SOFR) - Updated VM-20 prescribed swap spreads guidance in light of the LIBOR transition to SOFR.

2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

VM-20 Section 9.F.8.d, VM-20 Appendix 2.F, VM-20 Appendix 2.G
 January 1, 2022 NAIC *Valuation Manual*

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

Proposed edits to VM-20 for LIBOR transition to SOFR are shown in the attached Appendix

4. State the reason for the proposed amendment? (You may do this through an attachment.)

- a. Bank regulators and a group of swap market participants have agreed that for interbank interest rate swaps executed after 2021, the floating rate needs to be based on an index other than LIBOR.
- b. During 2021 the swap market evolved such that the definition of a standard n-year interest rate swap changed in January 2022 to be a SOFR swap (for which the floating rate is based on SOFR) from the historical LIBOR swap (for which the floating rate is LIBOR).
- c. As a result, VM-20 instructions for how the NAIC will calculate and publish swap spreads needs to be updated for:
 - i. Current Benchmark swap spreads (as of each month end); and
 - ii. Long-Term Benchmark swap spreads (as of each quarter end)
- d. The associated presentation provides further background and rationale for this proposal.

NAIC Staff Comments:

W:\National Meetings\2015\...TF\LHA\

Appendix

Proposed amendments to VM-20 for APF 2022-04 on Swap Spreads and LIBOR transition to SOFR

VM-20 Section 9.F.8.d Procedure for Setting Prescribed Gross Asset Spreads.....:

- d. Interest rate swap spreads over Treasuries shall be prescribed by the NAIC for use throughout the cash-flow model wherever appropriate for transactions and operations including, but not limited to, purchase, sale, settlement, cash flows of derivative positions and reset of floating rate investments. A current and long-term swap spread curve shall be prescribed for year one and years four and after, respectively, with yearly grading in between.
 - i. The current prescribed swap spread curve shall be the Secured Overnight Financing Rate (SOFR) swap curve.
 - ii. The long term SOFR swap spread curve, given that the SOFR swap market did not emerge before late 2021 and that SOFR is an index for which there is no official data before April 2, 2018, shall be calculated based on 15 year moving averages of prescribed estimates of historical SOFR swap spreads.

VM-20 Appendix 2.F Current Benchmark Swap Spreads:

F. Current Benchmark Swap Spreads

1. For tenors of 3 months, 6 months, and one year to 30 years, extract swap spread data determined as of the last business day of the month by maturity from at least two reputable data sources. If the data source provides swap rates rather than swap spreads, convert the swap rate for each maturity to a swap spread by subtracting the corresponding maturity Treasury yield from the swap rate.
2. Average the swap spreads from the data sources by maturity determined as of the last business day of the month.
3. Publish the Current Benchmark Swap Spreads by maturity in a table.

[Drafting Note: The tables will be labeled to indicate they contain SOFR swap spreads.]

VM-20 Appendix 2.G Long-Term Benchmark Swap Spreads:

G. Long-Term Benchmark Swap Spreads

1. Extract daily swap spread data over the prescribed observation period (rolling 15-year period) ending on the last business day of the quarter from at least two reputable data sources. If the data source

provides swap rates rather than swap spreads, convert the daily swap rate for each maturity to a swap spread by subtracting the corresponding maturity Treasury yield from the swap rate.

2. Starting in 2023 and before 2037, calculate SOFR swap spreads as follows for each business day “u” on or after the effective date of the adoption by the Life Actuarial (A) Task Force of SOFR swap spreads as the replacement for swap spreads previously prescribed:

- a. For each maturity “m” = 0.25, 0.5, 1 ... 30 years, and business day “u”:

$$\text{SOFR swap spread}(m,u) = \text{SOFR swap rate}(m,u) - \text{Treasury yield}(m,u).$$

3. For each business day before the effective date of the adoption by the Life Actuarial (A) Task Force of SOFR swap spreads as the replacement for swap spreads previously prescribed, utilize Bloomberg’s 2021-03-05 published USD Spread Adjustments as follows:

- a. For each maturity “m” = 3 or 6 months, and business day “u”:

- i. $\text{SOFR swap spread}(3 \text{ months},u) = \text{LIBOR swap spread}(3 \text{ months},u) - 0.26161\%$
(the USD 3-month Spread Adjustment)

- ii. $\text{SOFR swap spread}(6 \text{ months},u) = \text{LIBOR swap spread}(6 \text{ months},u) - 0.42826\%$
(the USD 6-month Spread Adjustment)

- b. For each maturity “m” = 1 ... 30 years, and business day “u”:

$$\text{SOFR swap spread}(m,u) = \text{LIBOR swap spread}(m,u) - 0.26161\% \text{ (the USD 3-month Spread Adjustment)}$$

4. During and after 2037, calculate SOFR swap spreads as follows for each maturity “m” = 0.25, 0.5, 1 ... 30 years:

$$\text{SOFR swap spread}(m,u) = \text{SOFR swap rate}(m,u) - \text{Treasury yield}(m,u).$$

5. Average the swap spread data from the data sources by maturity over the prescribed observation (rolling 15-year period).
6. Calculate the Long-Term Benchmark Swap Spreads as the 85% conditional mean for each of the 32 maturity categories (three-month, six-month, one-year, two-year, ... 30-year) using the same business trading days as were used in the 85% conditional mean for long-term bonds spreads.
7. Publish the Long-Term Benchmark Swap Spreads in a table. Among tables published on the NAIC website (See Subsection H), Table J shows Long-Term Benchmark Swap Spreads.

Senior Actuary

May 3, 2022

Mike Boerner
Chair, NAIC Life Actuarial Task Force (LATF)

Re: March Exposure of APF 2020-12

Dear Mr. Boerner:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit comments on the 3/31 re-exposure of APF 2020-12 (the APF).

ACLI is appreciative of LATF for the continued effort to improve the APF. We believe this draft is a significant step forward to address the regulator concern around modeling of hedges while reducing the potential unintended consequences of the proposal. ACLI has several suggestions to improve upon the APF for the next and hopefully final exposure.

Addressing the inadvertent exclusion of immaterial hedging strategies

In at least one prior draft of the APF, explicit language was included to address immaterial hedging strategies. The APF currently does not contain this language. Based on the verbal comments on the 3/31 call, we believe this was an unintentional omission during redrafting. We support excluding immaterial hedging strategies from the requirements of the APF and have provided a markup of the language in Appendix A.

Improvements in text regarding new and changed hedging strategies in VM-21 Section 9.C.7

ACLI is suggesting a redrafting of this section for completeness and to promote consistent application. Our review of the exposure indicated (1) new hedging strategies were not explicitly addressed, (2) current VM-21 references to experience from a hedging strategy on similar annuity products had been omitted, and (3) there was no explicit instruction to use the results of mock testing in establishing the E factor. Moreover, given that the construct involves multiple layers of nested conditions, we felt that restructuring these provisions in an outline form would be beneficial.

We have provided a revised VM-21 Section 9.C.7 (Appendix B) that reflects all of the above improvements.

Editorial consistency for E-Factors

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

acli.com

Through the Valuation Manual, there is an inconsistency with E-Factors, and are sometimes numeric and sometimes percentages. We would suggest revising this consistently, which is inherently an editorial change.

Implementation Date

We respectfully request a January 1, 2024 effective date or an optional 1-year deferral of aspects of the proposal if approved by the domestic regulator. If the former request is not feasible, we would propose an exception under the definition of “future hedging strategy” that, at the option of the company and with domestic regulator approval, hedging strategies that were not CDHS’s under the 2022 Valuation Manual do not need to be considered future hedging strategies, however limit this request to 2023 Valuation Manual only (this could perhaps be addressed via a drafting note).

Companies that have hedge programs but not a CDHS, particularly those using the option found in VM-21 Section 4.A.4.a.ii.b, may need significant time and effort to integrate their hedge programs into statutory valuation modeling systems. Along with the large work effort needed to code the hedges into the software, significant additional time will be needed to vet the robustness and integrity of the model and to understand the impact and volatility of results. Many hedge programs are currently designed for and monitored under multiple metrics and we believe that a 2023 implementation will not allow sufficient time for coding plus critical review work to be effectively completed. A rushed implementation could unnecessarily expose companies to potential unexpected financial results, reporting errors, or both. The adoption of VM-21 was thoughtfully preceded by a long period of investigation, testing, and refinement. Rapidly changing a fundamental aspect of VM-21 without adequate lead time could be highly disruptive.

Thank you for your consideration.

cc: Reggie Mazyck, NAIC

Appendix A: Markup to exclude immaterial hedging strategies

VM-20 Section 2.H

The company shall establish, for the DR and SR, a standard containing the criteria for determining whether an assumption, risk factor, future hedging strategy, or other element of the principle-based valuation has a material impact on the size of the reserve. This standard shall be applied when identifying material risks under VM-20 Section 9.B.1. Such a standard shall also apply to the NPR with respect to VM-20 Section 2.G and when determining whether a future hedging strategy must be modeled.

VM-20 Section 6.A.1.b

A company may not exclude a group of policies for which there is one or more future hedging strategies supporting the policies from SR requirements, except in the case where all future hedging strategies supporting the policies are solely associated with product features that are determined to not be material under Section 7.B.1 due to low utilization or when all future hedging strategies are not required to be modeled as per 7.K.2.

VM-20 Section 7.K

K. Modeling of Derivative Programs

1. When determining the DR and the SR, the company shall include in the projections the appropriate costs and benefits of derivative instruments that are currently held by the company in support of the policies subject to these requirements. The company shall also include the appropriate costs and benefits of anticipated future derivative instrument transactions associated with the execution of future hedging strategies supporting the policies, as well as the appropriate costs and benefits of anticipated future derivative instrument transactions associated with non-hedging derivative programs (e.g., replication, income generation) undertaken as part of the investment strategy supporting the policies, provided they are normally modeled as part of the company's risk assessment and evaluation processes.
2. Notwithstanding the above requirements, a company may elect to not model a future hedging strategy if it can demonstrate that not modeling such a strategy does not understate the reserve by a material amount as defined in Section 2.H.

VM-21 1.E

Materiality

The company shall establish a standard containing the criteria for determining whether an assumption, risk factor, future hedging strategy, or other element of the principle-based valuation has a material impact on the size of the reserve or TAR. This standard shall be applied when identifying material risks and whether a future hedging strategy must be modeled.

VM-21 Section 4.A.4

Modeling of Hedges

- a. For a company that does not have a future hedging strategy supporting the contracts:
 - i. The company shall not consider the cash flows from any future hedge purchases or any rebalancing of existing hedge assets in its modeling, since they are not included in the company's investment strategy supporting the contracts.
 - ii. Existing hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the starting assets.
- b. For a company with one or more future hedging strategies supporting the contracts, the detailed requirements for the modeling of hedges are defined in Section 9. The following paragraphs are a high-level summary and do not supersede the detailed requirements.
 - i. The appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the projections used in the determination of the SR.
 - ii. The projections shall take into account the appropriate costs and benefits of hedge positions expected to be held in the future through the execution of the future hedging strategies supporting the contracts. Because models do not always accurately portray the results of hedge programs, the company shall, through back-testing and other means, assess the accuracy of the hedge modeling. The company shall determine a SR as the weighted average of two CTE70 values; first, a CTE70 ("best efforts") representing the company's projection of all of the hedge cash flows, including future hedge purchases, and a second CTE70 ("adjusted") which shall use only hedge assets held by the company on the valuation date and no future hedge purchases. These are discussed in greater detail in Section 9. The SR shall be the weighted average of the two CTE70 values, where the weights reflect the error factor (E) I determined following the guidance of Section 9.C.4.
 - iii. The company is responsible for verifying compliance with all requirements in Section 9 for all hedging instruments included in the projections.
 - iv. The use of products not falling under the scope of these requirements (e.g., equity-indexed annuities) as a hedge shall not be recognized in the determination of accumulated deficiencies.
 - v. Notwithstanding the above requirements, a company may elect to not model a future hedging strategy when determining the SR if it can demonstrate that not modeling such a strategy does not understate TAR by a material amount as defined in Section 1.E.

VM-31 Section 3.D.11.k

Non-modeled Future Hedging Strategies due to Immateriality – A description of each future hedging strategy that is not modeled due to immateriality, and a statement that the required VM-20 Section 7.K.2 demonstration is available upon request and shows that not modeling the future hedging strategy does not understate the reserve by a material amount.

VM-31 Section 3.F.2.f

Non-modeled Future Hedging Strategies due to Immateriality – A description of each future hedging strategy that is not modeled due to immateriality, and a statement that the required VM-21 Section 4.A.4.b.v demonstration is available upon request and shows that not modeling the future hedging strategy does not understate TAR by a material amount.

Appendix B: Revised language for new and materially changed hedging strategies

(Note: The additions for completeness are highlighted in green.)

VM-21 Section 9.C.7

7. When there is a new hedging strategy or a change to an existing hedging strategy, the E factor shall be set based on the materiality of the change, the amount of experience under the new or changed strategy, the existence of robust mock testing, and various principles and limits, as follows:
- a. For a new or materially changed hedging strategy with less than 12 months of experience, the E factor shall be determined on the following basis.
 - i. When the new or materially changed hedging has less than 12 months of experience but not less than 3 months of experience
 1. If there is robust mock testing, the E factor should reflect the amount of experience available, the results of mock testing, and the limits of Section 9.C.4. For new strategies, the E factor should also reflect any historical experience with the strategy on similar products. For materially changed strategies, the E factor should also reflect the degree and nature of change, as applicable; the results of mock testing; the limits of Section 9.C.4; and a margin to including a margin to reflect uncertainty in future hedge effectiveness based on the degree and nature of change, as applicable.
 2. Otherwise, the E factor shall be 1.0.
 - ii. When the new or materially changed hedging strategy has less than 3 months of experience
 1. If the hedging is associated with a new product or newly acquired block and there is robust mock testing, the E factor should reflect the amount of experience available, the results of mock testing, and the limits of Section 9.C.4. For new strategies, the E factor should also reflect any historical experience with the strategy on similar products. For materially changed strategies, the E factor should also reflect the degree and nature of change, as applicable; the results of mock testing; the limits of Section 9.C.4; and a margin to including a margin to reflect uncertainty in future hedge effectiveness based on the degree and nature of change, as applicable. For both new and materially changed strategies, the E factor shall also be subject to a floor of 0.3 unless prior approval is obtained from a domestic regulator to use a lower E factor.
 2. Otherwise, the E factor shall be 1.0 unless prior approval is obtained from a domestic regulator use a lower E factor, in which case the E factor approved by the domestic regulator should reflect the above considerations and limits.
 - b. For a minor refinement within a hedging strategy, the E factor may need to reflect a margin to reflect any additional uncertainty associated with the refinement.

3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

See attached.

4. State the reason for the proposed amendment? (You may do this through an attachment.)
 1. Consistent definition of CDHS for use in VM-20 and VM-21.
 2. Add a definition for “future hedging strategy,” consistent with the definition for CDHS and the current VM-01 definition of “derivative program”, which VM-01 notes includes hedging programs.
 3. Add a definition for “hedging transactions,” taken from the APPM but modified slightly to be consistent with Valuation Manual terminology.
 4. Reflect all of a company’s future hedging strategies, but reflect the additional error (VM-21) or residual risk (VM-20) that is presented by a future hedging strategy not being clearly defined.
 5. Remove optionality for liquidating currently held hedges if the company does not have a future hedging strategy. Language has been added for consideration to keep this optionality for the adjusted run for a company that does have a future hedging strategy (which would not be modeled in the adjusted run), as the drafting group is interested in additional input on this item. A reporting item to disclose the impact of any such liquidation is added, to provide additional regulator comfort if this optionality is included in the final adopted edits.
 6. New hedging strategies (those without at least 12 months experience or 3 months of experience and robust mock testing) have an E factor of 1.0 for VM-21, unless they are new hedging strategies backing a newly introduced or newly acquired product or block of business, which may have an E factor as low as 0.3. Moreover, with prior domestic regulator approval, which should mitigate regulator concerns that strategy changes implemented just before year end may allow for manipulation of results, robust

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

mock testing is sufficient to allow an E factor lower than 1.0. Note that the current draft VM-22 only allows modeling hedges after they have been in place for 6 months, and we would recommend that be revised to be in line with these changes. When only CDHS were modeled in VM-21, new hedging strategies with no experience had E factors as low as 0.5 even without meaningful analysis. This treatment was much too lenient for new hedging strategies.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

VM-01

- The term “clearly defined hedging strategy” (CDHS) means a future hedging strategy for which the following attributes are clearly documented:
 - a. The specific risks being hedged (e.g., cash flow, fee income, policy interest credits, delta, rho, vega, etc.).
 - b. The hedging objectives.
 - c. The material risks that are not hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.).
 - d. The financial instruments used to hedge the risks.
 - e. The hedging strategy’s trading rules, including the permitted tolerances from hedging objectives.
 - f. The metrics, criteria, and frequency for measuring hedging effectiveness.
 - g. The conditions under which hedging will not take place and for how long the lack of hedging can persist.
 - h. The group or area, including whether internal or external, responsible for implementing the hedging strategy.
 - i. Areas where basis, gap or assumption risk related to the hedging strategy have been identified.
 - j. The circumstances under which hedging strategy will not be effective in hedging the risks.

Guidance Note: For purposes of the CDHS documented attributes, “effectiveness” need not be measured in a manner as defined in *SSAP No. 86—Derivatives* in the AP&P Manual.

- The term “future hedging strategy” is a derivative program undertaken by a company to manage risks through one or more future hedging transactions, including the future purchase or sale of hedging instruments and the opening and closing of hedging positions.

A future hedging strategy may be dynamic, static or a combination thereof. A strategy involving the offsetting of the risks associated with products falling under the scope of different requirements within the *Valuation Manual* (e.g., VM-20, VM-21, or VM-22) does not qualify as a future hedging strategy.

- The term “hedging transaction” means a derivative(s) transaction which is entered into and maintained to reduce:
 - a. The risk of a change in the fair value, the value on a statutory, GAAP, or other basis, or cash flow of assets and liabilities which the company has acquired or incurred or has a firm commitment to acquire or incur or for which the company has a forecasted acquisition or incurrence; or
 - b. The currency exchange rate risk or the degree of foreign currency exposure in assets and liabilities which the company has acquired or incurred or has a firm commitment to acquire or incur or for which the company has forecasted acquisition or incurrence.

11/16/20	RM		
Notes: APF 2020-12			

VM-20 Section 6.A.1.b

A company may not exclude a group of policies for which there is one or more future hedging strategies supporting the policies from SR requirements, except in the case where all future hedging strategies supporting the policies are solely associated with product features that are determined to not be material under Section 7.B.1 due to low utilization.

VM-20 Section 7.E.1.g

Notwithstanding the above requirements, the modeled reserve shall be the higher of that produced by the modeled company investment strategy and that produced by substituting an alternative investment strategy in which the fixed income reinvestment assets have the same weighted average life (WAL) as the reinvestment assets in the modeled company investment strategy and are all public non-callable corporate bonds with gross asset spreads, asset default costs and investment expenses by projection year that are consistent with a credit quality blend of 50% PBR credit rating 6 (A2/A) and 50% PBR credit rating 3 (Aa2/AA).

Policy loans, equities and derivative instruments associated with the execution of future hedging strategies supporting the policies are not affected by this requirement.

VM-20 Section 7.K

K. Modeling of Derivative Programs

1. When determining the DR and the SR, the company shall include in the projections the appropriate costs and benefits of derivative instruments that are currently held by the company in support of the policies subject to these requirements. The company shall also include the appropriate costs and benefits of anticipated future derivative instrument transactions associated with the execution of future hedging strategies supporting the policies, as well as the appropriate costs and benefits of anticipated future derivative instrument transactions associated with non-hedging derivative programs (e.g., replication, income generation) undertaken as part of the investment strategy supporting the policies, provided they are normally modeled as part of the company's risk assessment and evaluation processes.
2. For each derivative program that is modeled, the company shall reflect the company's established investment policy and procedures for that program; project expected program performance along each scenario; and recognize all benefits, residual risks and associated frictional costs. The residual risks include, but are not limited to: basis, gap, price, parameter estimation and variation in assumptions (mortality, persistency, withdrawal, etc.). Frictional costs include, but are not limited to: transaction, margin (opportunity costs associated with margin requirements) and administration. For future hedging strategies supporting the policies, the company may not assume that residual risks and frictional costs have a value of zero, unless the company demonstrates in the PBR Actuarial Report that "zero" is an appropriate expectation. VM-21 Section 1.B Principle 5 applies as a general principle for the modeling of future hedging strategies.
3. In circumstances where one or more material risk factors related to a derivative program are not fully captured within the cash-flow model used to calculate CTE 70, the company shall reflect such risk factors by increasing the SR as described in Section 5.E.

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

4. In circumstances where documentation outlining the future hedging strategies is incomplete, the company shall reflect the future hedging strategies not being clearly defined by increasing the SR as described in Section 5.E. To support no increase to the SR, there should be very robust documentation outlining each future hedging strategy. In particular, the SR shall be at least as great as the SR that would result if a future hedging strategy were not reflected in the SR, if the documentation is materially incomplete for any of the individual CDHS attributes (a) through (j), as listed in VM-01.

Any increases required to the SR to reflect that documentation is not available to support that the future hedging strategies are clearly defined shall be in addition to increases to the SR pursuant to Section 7.K.3 above.

Guidance Note: Section 5.E requires that the company “Determine any additional amount needed to capture any material risk included in the scope of these requirements but not already reflected in the cash-flow models using an appropriate and supportable method and supporting rationale.” In the case of a derivative program that is a future hedging strategy, Section 7.K.3 requires such an increase for disconnects between the hedge modeling and the future hedging strategy, while Section 7.K.4 requires such an increase for disconnects between the loosely defined future hedging strategy and what may actually take place.

VM-20 Section 7.L (Remove entire Section 7.L)

VM-21 Section 1.D.2 (Delete entire definition and renumber subsequent sections VM-21 Section 1.D.3 and VM-21 Section 1.D.4)

VM-21 Section 4.A.4

Modeling of Hedges

- a. For a company that does not have a future hedging strategy supporting the contracts:
 - i. The company shall not consider the cash flows from any future hedge purchases or any rebalancing of existing hedge assets in its modeling, since they are not included in the company’s investment strategy supporting the contracts.
 - ii. Existing hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the starting assets.
- b. For a company with one or more future hedging strategies supporting the contracts, the detailed requirements for the modeling of hedges are defined in Section 9. The following paragraphs are a high-level summary and do not supersede the detailed requirements.

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

- i. The appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the projections used in the determination of the SR.
- ii. The projections shall take into account the appropriate costs and benefits of hedge positions expected to be held in the future through the execution of the future hedging strategies supporting the contracts. Because models do not always accurately portray the results of hedge programs, the company shall, through back-testing and other means, assess the accuracy of the hedge modeling. The company shall determine a SR as the weighted average of two CTE values; first, a CTE70 (“best efforts”) representing the company’s projection of all of the hedge cash flows, including future hedge purchases, and a second CTE70 (“adjusted”) which shall use only hedge assets held by the company on the valuation date and no future hedge purchases. These are discussed in greater detail in Section 9. The SR shall be the weighted average of the two CTE70 values, where the weights reflect the error factor I determined following the guidance of Section 9.C.4.
- iii. The company is responsible for verifying compliance with all requirements in Section 9 for all hedging instruments included in the projections.
- iv. The use of products not falling under the scope of these requirements (e.g., equity-indexed annuities) as a hedge shall not be recognized in the determination of accumulated deficiencies.

VM-21 Section 4.D.4.b

Notwithstanding the above requirements, the SR shall be the higher of that produced by the modeled company investment strategy and that produced by substituting an alternative investment strategy in which the fixed income reinvestment assets have the same weighted average life (WAL) as the reinvestment assets in the modeled company investment strategy and are all public non-callable corporate bonds with gross asset spreads, asset default costs, and investment expenses by projection year that are consistent with a credit quality blend of 50% PBR credit rating 6 (A2/A) and 50% PBR credit rating 3 (Aa2/AA).

Policy loans, equities and derivative instruments associated with the execution of future hedging strategies supporting the contracts are not affected by this requirement.

VM-21 Section 6.B.3.a.ii – Footnote (Footnote at Bottom of Page 21-23)

Throughout this Section 6, references to CTE70 (adjusted) shall also mean the SR for a company that does not have a future hedging strategy supporting the contracts as discussed in Section 4.A.4.a.

VM-21 Section 6.B.3.b.ii

Calculate the Prescribed Projections Amount as the CTE70 (adjusted) using the same method as that outlined in Section 9.C (which is the same as SR following Section 4.A.4.a for a company that does not have a future hedging strategy supporting the contracts) but substituting the assumptions prescribed by Section 6.C. The calculation of this Prescribed Projections Amount also requires that the scenario reserve for any given scenario be equal to or in excess of the cash surrender value in aggregate on the valuation date for the group of contracts modeled in the projection.

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

VM-21 Section 6.B.5

Cash flows associated with hedging shall be projected in the same manner as that used in the calculation of the CTE70 (adjusted) as discussed in Section 9.C or Section 4.A.4.a for a company without a future hedging strategy supporting the contracts.

VM-21 Section 9

Section 9: Modeling of Hedges under a Future Hedging Strategy

A. Initial Considerations

1. Subject to Section 9.C.2, the appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements shall be included in the calculation of the SR, determined in accordance with Section 3.D and Section 4.D.
2. If the company is following one or more future hedging strategies supporting the contracts, in accordance with an investment policy adopted by the board of directors, or a committee of board members, the company shall take into account the costs and benefits of hedge positions expected to be held by the company in the future along each scenario based on the execution of the hedging strategy, and it is eligible to reduce the amount of the SR using projections otherwise calculated. The investment policy must clearly articulate the company’s hedging objectives, including the metrics that drive rebalancing/trading. This specification could include maximum tolerable values for investment losses, earnings, volatility, exposure, etc. in either absolute or relative terms over one or more investment horizons vis-à-vis the chance of occurrence. Company management is responsible for developing, documenting, executing and evaluating the investment strategy, including the hedging strategy, used to implement the investment policy.
3. For this purpose, the investment assets refer to all the assets, including derivatives supporting covered products and guarantees. This also is referred to as the investment portfolio. The investment strategy is the set of all asset holdings at all points in time in all scenarios. The hedging portfolio, which also is referred to as the hedging assets, is a subset of the investment assets. The hedging strategy is the hedging asset holdings at all points in time in all scenarios. There is no attempt to distinguish what is the hedging portfolio and what is the investment portfolio in this section. Nor is the distinction between investment strategy and hedging strategy formally made here. Where necessary to give effect to the intent of this section, the requirements applicable to the hedging portfolio or the hedging strategy are to apply to the overall investment portfolio and investment strategy.
4. This particularly applies to restrictions on the reasonableness or acceptability of the models that make up the stochastic cash-flow model used to perform the projections, since these restrictions are inherently restrictions on the joint modeling of the hedging and non-hedging portfolio. To give effect to these requirements, they must apply to the overall investment strategy and investment portfolio.

B. Modeling Approaches

1. The analysis of the impact of the hedging strategy on cash flows is typically performed using either one of two types of methods as described below. Although a hedging strategy normally would be expected to reduce risk provisions, the nature of the hedging strategy and the costs to implement the strategy may result

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

in an increase in the amount of the SR otherwise calculated. Particular attention should be given to VM-21 Section 1.B Principle 5 for the modeling of future hedging strategies.

2. The fundamental characteristic of the first type of method, referred to as the “explicit method,” is that hedging positions and their resulting cash flows are included in the stochastic cash-flow model used to determine the scenario reserve, as discussed in Section 3.D, for each scenario.
3. The fundamental characteristic of the second type of method, referred to as the “implicit method,” is that the effectiveness of the current hedging strategy on future cash flows is evaluated, in part or in whole, outside of the stochastic cash-flow model. There are multiple ways that this type of modeling can be implemented. In this case, the reduction to the SR otherwise calculated should be commensurate with the degree of effectiveness of the hedging strategy in reducing accumulated deficiencies otherwise calculated.
4. Regardless of the methodology used by the company, the ultimate effect of the current hedging strategy (including currently held hedge positions) on the SR needs to recognize all risks, associated costs, imperfections in the hedges and hedging mismatch tolerances associated with the hedging strategy. The risks include, but are not limited to: basis, gap, price, parameter estimation and variation in assumptions (mortality, persistency, withdrawal, annuitization, etc.). Costs include, but are not limited to: transaction, margin (opportunity costs associated with margin requirements) and administration. In addition, the reduction to the SR attributable to the hedging strategy may need to be limited due to the uncertainty associated with the company’s ability to implement the hedging strategy in a timely and effective manner. The level of operational uncertainty varies indirectly with the amount of time that the new or revised strategy has been in effect or mock tested.

Guidance Note: No hedging strategy is perfect. A given hedging strategy may eliminate or reduce some but not all risks, transform some risks into others, introduce new risks, or have other imperfections. For example, a delta-only hedging strategy does not adequately hedge the risks measured by the “Greeks” other than delta. Another example is that financial indices underlying typical hedging instruments typically do not perform exactly like the separate account funds, and hence the use of hedging instruments has the potential for introducing basis risk

A safe harbor approach is permitted for reflection of future hedging strategies supporting the contracts for those companies whose modeled hedge assets comprise only linear instruments not sensitive to implied volatility. For companies with option-based hedge strategies, electing this approach would require representing the option-based portion of the strategy as a delta-rho two-Greek hedge program. The normally modeled option portfolio would be replaced with a set of linear instruments that have the same first-order Greeks as the original option portfolio. Calculation of SR (Reported)

1. The company shall calculate CTE70 (best efforts)—the results obtained when the CTE70 is based on incorporating the future hedging strategies supporting the contracts (including both currently held and future hedge positions) into the stochastic cash-flow model on a best efforts basis, including all of the factors and assumptions needed to execute the future hedging strategies supporting the contracts (e.g., stochastic implied volatility). The determination of CTE70 (best efforts) may utilize either explicit or implicit modeling techniques.
2. The company shall calculate a CTE70 (adjusted) by recalculating the CTE70 assuming the company has no future hedging strategies supporting the contracts, therefore following the requirements of Section 4.A.4.a.

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

However, for a company with a future hedging strategy supporting the contracts, existing hedging instruments that are currently held by the company in support of the contracts falling under the scope of these requirements may be considered in one of two ways for the CTE70 (adjusted):

- a) Include the asset cash flows from any contractual payments and maturity values in the projection model; or
- b) No hedge positions – in which case the hedge positions held on the valuation date are replaced with cash and/or other general account assets in an amount equal to the aggregate market value of these hedge positions.

Guidance Note: If the hedge positions held on the valuation date are replaced with cash, then as with any other cash, such amounts may then be invested following the company’s investment strategy.

A company may switch from method a) to method b) at any time, but it may only change from b) to a) with the approval of the domiciliary commissioner.

3. Because most models will include at least some approximations or idealistic assumptions, CTE70 (best efforts) may overstate the impact of the hedging strategy. To compensate for potential overstatement of the impact of the hedging strategy, the value for the SR is given by:

$$SR = CTE70 \text{ (best efforts)} + E \times \max[0, CTE70 \text{ (adjusted)} - CTE70 \text{ (best efforts)}]$$
4. The company shall specify a value for *E* (the “error factor”) in the range from 5% to 100% to reflect the company’s view of the potential error resulting from the level of sophistication of the stochastic cash-flow model and its ability to properly reflect the parameters of the hedging strategy (i.e., the Greeks being covered by the strategy), as well as the associated costs, risks and benefits. The greater the ability of the stochastic model to capture all risks and uncertainties, the lower the value of *E*. The value of *E* may be as low as 5% only if the model used to determine the CTE70 (best efforts) effectively reflects all of the parameters used in the hedging strategy. If certain economic risks are not hedged, yet the model does not generate scenarios that sufficiently capture those risks, *E* must be in the higher end of the range, reflecting the greater likelihood of error. Likewise, simplistic hedge cash-flow models shall assume a higher likelihood of error.
5. The company shall conduct a formal back-test, based on an analysis of at least the most recent 12 months, to assess how well the model is able to replicate the hedging strategy in a way that supports the determination of the value used for *E*.
6. Such a back-test shall involve one of the following analyses:
 - a. For companies that model hedge cash flows directly (“explicit method”), replace the stochastic scenarios used in calculating the CTE70 (best efforts) with a single scenario that represents the market path that actually manifested over the selected back-testing period and compare the projected hedge asset gains and losses against the actual hedge asset gains and losses – both realized and unrealized – observed over the same time period. For this calculation, the model assumptions may be replaced with parameters that reflect actual experience during the back-testing period. In order to isolate the comparison between the modeled hedge strategy and actual hedge results for this calculation, the projected liabilities should accurately reflect the actual liabilities throughout the back-testing period; therefore, adjustments that facilitate this accuracy (e.g. reflecting actual experience instead of model assumptions, including new business, etc.) are permissible.

To support the choice of a low value of *E*, the company should ascertain that the projected hedge asset gains and losses are within close range of 100% (e.g., 80–125%) of the actual hedge asset gains and losses. The

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

company may also support the choice of a low value of E by achieving a high R-squared (e.g., 0.80 or higher) when using a regression analysis technique.

b. For companies that model hedge cash flows implicitly by quantifying the cost and benefit of hedging using the fair value of the hedged item (an “implicit method” or “cost of reinsurance method”), calculate the delta, rho and vega coverage ratios in each month over the selected back-testing period in the following manner:

i. Determine the hedge asset gains and losses—both realized and unrealized—incurred over the month attributable to equity, interest rate, and implied volatility movements.

ii. Determine the change in the fair value of the hedged item over the month attributable to equity, interest rate, and implied volatility movements. The hedged item should be defined in a manner that reflects the proportion of risks hedged (e.g., if a company elects to hedge 50% of a contract’s market risks, it should quantify the fair value of the hedged item as 50% of the fair value of the contract).

iii. Calculate the delta coverage ratio as the ratio between (i) and (ii) attributable to equity movements.

iv. Calculate the rho coverage ratio as the ratio between (i) and (ii) attributable to interest rate movements.

v. Calculate the vega coverage ratio as the ratio between (i) and (ii) attributable to implied volatility movements.

vi. To support the company’s choice of a low value of E, the company should be able to demonstrate that the delta and rho coverage ratios are both within close range of 100 % (e.g., 80–125%) consistently across the back-testing period.

vii. In addition, the company should be able to demonstrate that the vega coverage ratio is within close range of 100 % in order to use the prevailing implied volatility levels as of the valuation date in quantifying the fair value of the hedged item for the purpose of calculating CTE70 (best efforts). Otherwise, the company shall quantify the fair value of the hedged item for the purpose of calculating CTE70 (best efforts) in a manner consistent with the realized volatility of the scenarios captured in the CTE (best efforts).

c. Companies that do not model hedge cash flows explicitly, but that also do not use the implicit method as outlined in Section 9.C.6.b above, shall conduct the formal back-test in a manner that allows the company to clearly illustrate the appropriateness of the selected method for reflecting the cost and benefit of hedging, as well as the value used for E.

7. A company that does not have 12 months of experience to date shall set E to a value that reflects the amount of experience available, and the degree and nature of any change to the hedge program. For a material change in strategy, with less than 12 months of experience and without robust mock testing, E should be 1.0. For a material change in strategy, with less than 3 months of history, E should be 1.0. However, when a material change in hedging strategy with less than 3 months history is the introduction of hedging for a newly introduced product or newly acquired block of business and is supplemented by robust mock testing, E should instead be at least 0.3. Moreover, with prior approval from the domestic regulator, material changes in hedge strategy with less than 3 months history but with robust mock testing may have error factors less than 1.0, though still subject to the minimum error factor specified in Section 9.C.4 and with an

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

appropriate prudent estimate to account for additional uncertainty in anticipated hedging experience beyond that of a robust hedging program already in existence. E may also be lower than 1.0 if the change in strategy is a minor refinement rather than a material change in strategy, though still subject to the minimum error factor specified in Section 9.C.4 and with an appropriate prudent estimate to account for any additional uncertainty associated with the refinement.

The following examples are provided as guidance for determining the E factor when there has been a change to the hedge program. These examples are not intended to be exhaustive, and a company must support the determination of whether a hedge methodology change is material based on a review of the company’s specific change in methodology.

- The error factor should be temporarily 100% for material changes in hedge methodology (e.g., moving from a fair-value based strategy to a stop-loss strategy) without robust mock testing.
 - An increase in the error factor may not always be needed for minor refinements to the hedge strategy (e.g., moving from swaps to Treasury futures).
8. The company shall set the value of E reflecting the extent to which the hedging program is clearly defined. To support a value of E below 1.0, there should be very robust documentation outlining all future hedging strategies. To the extent that documentation outlining any of the future hedging strategies is incomplete, the value of E shall be increased. In particular, the value of E shall be 1.0 if documentation is materially incomplete for any of the individual CDHS attributes (a) through (j), as listed in VM-01.

Any increases required to the value of E to reflect that documentation is not available to support that the future hedging strategies are clearly defined shall be in addition to increases to the value of E to reflect a lack of historical experience or to reflect the back-testing results, subject to an overall ceiling of 1.0 for E.

Guidance Note: Companies must use judgment both in determining an E factor and in applying this requirement in the case where there are multiple future hedging strategies, particularly where some may be CDHS and some may not be CDHS. In this case, the SR should be ensured to be no less than the CTE(70) reflecting the future hedging strategies that are CDHS and not reflecting those that are not CDHS. Companies with multiple future hedging strategies with very different levels of effectiveness or with multiple future hedging strategies that include both CDHS and non-CDHS should discuss with their domestic regulator.

D. Additional Considerations for CTE70 (best efforts)

If the company is following one or more future hedging strategies supporting the contracts, the fair value of the portfolio of contracts falling within the scope of these requirements shall be computed and compared to the CTE70 (best efforts) and CTE70 (adjusted). If the CTE70 (best efforts) is below both the fair value and CTE70 (adjusted), the company should be prepared to explain why that result is reasonable.

For the purposes of this analysis, the SR and fair value calculations shall be done without requiring the scenario reserve for any given scenario to be equal to or in excess of the cash surrender value in aggregate for the group of contracts modeled in the projection.

E. Specific Considerations and Requirements

1. As part of the process of choosing a methodology and assumptions for estimating the future effectiveness of the current hedging strategy (including currently held hedge positions) for purposes of reducing the SR, the company should review actual historical hedging effectiveness. The company shall evaluate the appropriateness of the assumptions on future trading, transaction costs, other elements of the model, the strategy, the mix of business and other items that are likely to result in materially adverse results. This

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

includes an analysis of model assumptions that, when combined with the reliance on the hedging strategy, are likely to result in adverse results relative to those modeled. The parameters and assumptions shall be adjusted (based on testing contingent on the strategy used and other assumptions) to levels that fully reflect the risk based on historical ranges and foreseeable future ranges of the assumptions and parameters. If this is not possible by parameter adjustment, the model shall be modified to reflect them at either anticipated experience or adverse estimates of the parameters.

2. A discontinuous hedging strategy is a hedging strategy where the relationships between the sensitivities to equity markets and interest rates (commonly referred to as the Greeks) associated with the guaranteed contract holder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets are subject to material discontinuities. This includes, but is not limited to, a hedging strategy where material hedging assets will be obtained when the variable annuity account balances reach a predetermined level in relationship to the guarantees. Any hedging strategy, including a delta hedging strategy, can be a discontinuous hedging strategy if implementation of the strategy permits material discontinuities between the sensitivities to equity markets and interest rates associated with the guaranteed contract holder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets. There may be scenarios that are particularly costly to discontinuous hedging strategies, especially where those result in large discontinuous changes in sensitivities (Greeks) associated with the hedging assets. Where discontinuous hedging strategies contribute materially to a reduction in the SR, the company must evaluate the interaction of future trigger definitions and the discontinuous hedging strategy, in addition to the items mentioned in the previous paragraph. This includes an analysis of model assumptions that, when combined with the reliance on the discontinuous hedging strategy, may result in adverse results relative to those modeled.
3. A strategy that has a strong dependence on acquiring hedging assets at specific times that depend on specific values of an index or other market indicators may not be implemented as precisely as planned.
4. The combination of elements of the stochastic cash-flow model—including the initial actual market asset prices, prices for trading at future dates, transaction costs and other assumptions—should be analyzed by the company as to whether the stochastic cash-flow model permits hedging strategies that make money in some scenarios without losing a reasonable amount in some other scenarios. This includes, but is not limited to:
 - a. Hedging strategies with no initial investment that never lose money in any scenario and in some scenarios make money.
 - b. Hedging strategies that, with a given amount of initial money, never make less than accumulation at the one-period risk-free rates in any scenario but make more than this in one or more scenarios.
5. If the stochastic cash-flow model allows for such situations, the company should be satisfied that the results do not materially rely directly or indirectly on the use of such strategies. If the results do materially rely directly or indirectly on the use of such strategies, the strategies may not be used to reduce the SR otherwise calculated.
6. In addition to the above, the method used to determine prices of financial instruments for trading in scenarios should be compared to actual initial market prices. In addition to comparisons to initial market prices, there should be testing of the pricing models that are used to determine subsequent prices when scenarios involve trading financial instruments. This testing should consider historical relationships. For example, if a method is used where recent volatility in the scenario is one of the determinants of prices for trading in that scenario, then that model should approximate actual historic prices in similar circumstances in history.
7. The company may also consider historical experience for similar current or past hedging programs on similar products to support the error factor determined for the projection.

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

VM-31 Section 3.C.5

Assets and Risk Management – A brief description of the asset portfolio, and the approach used to model risk management strategies, such as hedging, and other derivative programs, including a description of any future hedging strategies supporting the policies, and any material changes to the hedging strategies from the prior year.

VM-31 Section 3.D.6.f

Risk Management – Detailed description of model risk management strategies, such as hedging and other derivative programs, including any future hedging strategies supporting the policies and any adjustments to the SR pursuant to VM-20 Section 7.K3 and VM-20 Section 7.K.4, specific to the groups of policies covered in this sub-report and not discussed in the Life Summary Section 3.C.5. Documentation of any future hedging strategies should include documentation addressing each of the CDHS documentation attributes.

VM-31 Section 3.D.14.a and 3.D.14.b

- a. Investment Officer on Investments – A certification from a duly authorized investment officer that the modeled company investment strategy, including any future hedging strategies supporting the policies, is representative of and consistent with the company’s investment policy and that documentation of the CDHS attributes for any future hedging strategies supporting the policies are accurate.
- b. Qualified Actuary on Investments – A certification by a qualified actuary, not necessarily the same qualified actuary that has been assigned responsibility for the PBR Actuarial Report or this sub-report, that the modeling of any future hedging strategies supporting the policies is consistent with the company’s actual future hedging strategies and was performed in accordance with VM-20 and in compliance with all applicable ASOPs, and the alternative investment strategy as defined in VM-20 Section 7.E.1.g reflects the prescribed mix of assets with the same WAL as the reinvestment assets in the company investment strategy.

VM-31 Section 3.E.5

Assets and Risk Management – A brief description of the general account asset portfolio, and the approach used to model risk management strategies, such as hedging and other derivative programs, including a description of any future hedging strategies supporting the contracts, and any material changes to the hedging strategies from the prior year.

VM-31 Section 3.F.8

Hedging and Risk Management – The following information regarding the hedging and risk management assumptions used by the company in performing a principle-based valuation under VM-21:

- a. Strategies – Detailed description of risk management strategies, such as hedging and other derivative programs, including any future hedging strategies supporting the contracts, specific to the groups of contracts covered in this sub-report.

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

- i. Descriptions of basis risk, gap risk, price risk and assumption risk.
 - ii. Methods and criteria for estimating the a priori effectiveness of the strategy.
 - iii. Results of any reviews of actual historical hedging effectiveness.
- b. CDHS – Documentation addressing each of the CDHS documentation attributes for any future hedging strategies supporting the contracts.
- c. Strategy Changes – Discussion of any changes to the hedging strategy during the past 12 months, including identification of the change, reasons for the change, and the implementation date of the change.
- d. Hedge Modeling – Description of how the hedge strategy was incorporated into modeling, including:
- i. Differences in timing between model and actual strategy implementation.
 - ii. For a company that does not have a future hedging strategy supporting the contracts, confirmation that currently held hedge assets were included in the starting assets.
 - iii. Evaluations of the appropriateness of the assumptions on future trading, transaction costs, other elements of the model, the strategy, and other items that are likely to result in materially adverse results.
 - iv. Discussion of the projection horizon for the future hedge strategy as modeled and a comparison to the timeline for any anticipated future changes in the company’s hedge strategy.
 - v. If residual risks and frictional costs are assumed to have a value of zero, a demonstration that a value of zero is an appropriate expectation.
 - vi. Any discontinuous hedging strategies modeled, and where such discontinuous hedging strategies contribute materially to a reduction in the SR, any evaluations of the interaction of future trigger definitions and the discontinuous hedging strategy, including any analyses of model assumptions that, when combined with the reliance on the discontinuous hedging strategy, may result in adverse results relative to those modeled.
 - vii. Disclosure of any situations where the modeled hedging strategies make money in some scenarios without losing a reasonable amount in some other scenarios, and an explanation of why the situations are not material for determining the CTE 70 (best efforts).
 - viii. Results of any testing of the method used to determine prices of financial instruments for trading in scenarios against actual initial market prices, including how the testing considered historical relationships. If there are substantial discrepancies, disclosure of the substantial discrepancies and documentation as to why the model-based prices are appropriate for determining the SR.
 - ix. Any model adjustments made when calculating CTE 70 (adjusted), in particular, any liquidation or substitution of assets for currently held hedges. If there is liquidation or substitution of assets for currently held hedges, disclosure of the impact on the adjusted run.
- e. Error Factor (E) and Back-Testing – Description of *E*, the error factor, and formal back-tests performed, including:
- i. The value of *E*, and the approach and rationale for the value of *E* used in the reserve calculation.
 - ii. For companies that model hedge cash flows using the explicit method, as described in VM-21 Section 9.C.6.a, and have 12 months of experience, an analysis of at least the most recent 12 months of experience and the results of a back-test showing that the model is able to replicate the hedging results experienced in a way that justifies the value used for *E*. Include at least a ratio of the actual change in market value of the hedges to the modeled change in market value of the hedges at least quarterly.
 - iii. For companies that model hedge cash flows using the implicit method, and have 12 months of experience, as described in VM-21 Section 9.C.6.b, the results of a back-test in which (a) actual hedge asset gains and losses are compared against (b) proportional fair value movements in hedged liability, including:

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

- a) Delta, rho and vega coverage ratios in each month over the back-testing period, which may be presented in a chart or graph.
 - b) The implied volatility level used to quantify the fair value of the hedged item, as well as the methodology undertaken to determine the appropriate level used.
 - iv. For companies that do not model hedge cash flows using either the explicit method or the implicit method, as described in VM-21 Section 9.C.6.c, and have 12 months of experience, the results of the formal back-test conducted to validate the appropriateness of the selected method and value used for E.
 - v. For companies that do not have 12 months of experience, the basis for the value of E that is chosen based on the guidance provided in VM-21 Section 9.C.7, considering the actual history available, mock testing performed, and the degree and nature of any changes made to the hedge strategy.
 - vi. The basis for the magnitude of adjustment or lack of adjustment for the value of E chosen based on the robustness of the documentation outlining the future hedging strategy.
- f. Safe Harbor for Future Hedging Strategies – If electing the safe harbor approach for a future hedging strategy supporting the contracts, as discussed in VM-21 Section 9.C.8, a description of the linear instruments used to model the option portfolio.
- g. Hedge Model Results – Disclosure of whether the calculated CTE 70 (best efforts) is below both the fair value and CTE 70 (adjusted), and if so, justification for why that result is reasonable, as discussed in VM-21 Section 9.D.

VM-31 Section 3.F.12.c

CTEPA – If using the CTEPA method, a summary including:

- i. Disclosure (in tabular form) of the scenario reserves using the same method and assumptions as those used by the company to calculate CTE 70 (adjusted) as outlined in VM-21 Section 9.C (or the SR following VM-21 Section 4.A.4.a for a company that does not have a future hedging strategy supporting the contracts), as well as the corresponding scenarios reserves substituting the assumptions prescribed by VM-21 Section 6.C.
- ii. Summary of results from a cumulative decrement projection along the scenario whose reserve value is closest to the CTE 70 (adjusted), as outlined in VM-21 Section 9.C (or the SR following VM-21 Section 4.A.4.a for a company that does not have a future hedging strategy supporting the contracts), under the assumptions outlined in VM-21 Section 6.C. Such a cumulative decrement projection shall include, at the end of each projection year, the projected proportion (expressed as a percent of the total projected account value) of persisting contracts as well as the allocation of projected decrements across death, full surrender, account value depletion, elective annuitization, and other benefit election.
- iii. Summary of results from a cumulative decrement projection, identical to (ii) above, but replacing all assumptions outlined in VM-21 Section 6.C with the corresponding assumptions used in calculating the SR.

VM-31 Section 3.F.16.a and Section 3.F.16.b

- a. Investment Officer on Investments – A certification from a duly authorized investment officer that the modeled asset investment strategy, including any future hedging strategies supporting the contracts, is consistent with the company’s current investment strategy except where the modeled reinvestment strategy

Dates: Received	Reviewed by Staff	Distributed	Considered
11/16/20	RM		
Notes: APF 2020-12			

may have been substituted with the alternative investment strategy, and that documentation of the CDHS attributes for any future hedging strategies supporting the contracts are accurate.

- b. Qualified Actuary on Investments – A certification by a qualified actuary, not necessarily the same qualified actuary that has been assigned responsibility for the PBR Actuarial Report or this sub-report, that the modeling of any future hedging strategies supporting the contracts is consistent with the company’s actual future hedging strategies and was performed in accordance with VM-21 and in compliance with all applicable ASOPs.

DRAFT

TO: Company Field Test Contact
FROM: Mike Boerner, Texas Department of Insurance
Chair of the Life Actuarial (A) Task Force
DATE: TBD
RE: Economic Scenario Generator (ESG) Field Test Instructions, Results Templates, and Qualitative Survey

The Texas Department of Insurance is reaching out to all companies participating in the ESG field test to be conducted from June through August. Thank you for participating in the field test. Please follow the field test instructions contained in Appendix A, and use the templates provided to submit your results. Also, please complete the Qualitative Survey contained in Appendix B as applicable for the product types tested.

Confidentiality

This information is being requested under both the authority of the general examination authority of the Texas Department of Insurance pursuant to Tex. Ins. Code §§ 401.051, *et seq.*, and the Standard Valuation Law, Tex. Ins. Code §§ 425.051, *et seq.*, and is considered to be confidential under these provisions. These provisions also permit the Texas Department of Insurance to share this confidential information with other state regulators and the NAIC, including the Life Actuarial (A) Task Force (LATF), the Life RBC (E) Working Group, the Valuation Analysis (E) Working Group (VAWG), and NAIC staff. Your company specific information will remain confidential pursuant to these statutory provisions.

Additional Instructions

Prior to 6/1/22, please confirm receipt of this email.

If you have questions regarding the field test instructions or templates, please contact Scott O’Neal at soneal@naic.org.

Your field test results are requested by 8/31/2022. The subject line should start with the company’s NAIC number, followed by “ESG Field Test”. Email your response to: Actuarialdivision@tdi.texas.gov, and CC Rachel.Hemphill@tdi.texas.gov and Yujie.Huang@tdi.texas.gov.

Thanks,

Mike

I. Introduction

A. Background

Work is in progress to develop a new ESG to be prescribed for use in calculations of life and annuity Statutory reserves according to the *Valuation Manual* (e.g. VM-20, VM-21) and capital under the NAIC RBC requirements (e.g. C3 Phase 1, C3 Phase 2). Based on preliminary AAA model office testing, the implementation of a new ESG may materially increase life and annuity reserves and capital. The purpose of the ESG field test is to assess the impacts for different product types, gain a better understanding of the drivers of reserve and capital differences, and determine potential ESG modifications that may be desirable for a second field test tentatively planned for early 2023.

This document should be read in conjunction with the document titled “Economic Scenario Generator (ESG) Reserves and Capital Field Test Specifications”. Some of the information from that document is repeated here, but with greater detail.

B. Communication of Field Test Results

NAIC staff will compile aggregated results in a report that will not contain any company-specific or other company-identifiable information. Assuming that companies have completed the field test by the end of August, the compilation of results is expected to be completed by the end of September, 2022. Joint LATF/LRBC WG open meetings will then be held to discuss aggregate field test results, and to determine whether ESG modifications should be made based on the results of the field test.

C. Next Steps

1. After the June field test begins, there may be additional optional runs requested (e.g. an alternative equity model calibration from the ACLI)
2. A second field test is expected to be conducted in early 2023. This field test may include:
 - Calibration changes for the Treasury, Equity, and Corporate Bond models desired by regulators.
 - Testing of alternative simplified models. For example, the Academy is currently developing a simplified Corporate Bond model. The ACLI is also developing an alternative model.
 - Any structural changes to the Conning Treasury, Equity, and Corporate Bond models desired by regulators after a review of results from the first field test. Structural ESG changes will require a programming effort, and the amount of time needed to complete this will depend on the nature of the changes. Examples of structural changes would include any modification to the linkage between the Treasury model and the Equity model, and implementation of an alternative simplified Corporate model.
3. Prior to ESG implementation, related *Valuation Manual* and RBC instruction changes will be drafted for consideration and adoption.

II. General Field Test Instructions

A. Summary of Field Test Runs

The runs needed for the field test are summarized in the table below. The Baseline #1 results already exist; they should match the values from year-end 2021 statutory reporting. The Baseline #1 and Baseline #2 results should reflect the ESG the company used for statutory reporting, whether it was a version of the Academy ESG or a proprietary ESG. Similarly, the Baseline runs should reflect the models companies used for year-end reporting, whether they were as of 12/31/21 or 9/30/21. For companies that typically produce results as of 9/30 (e.g. for C3 Phase I), 9/30 scenarios will be provided Tests 1a, 1b, 5a, and 6.

The table below lists the elements of the field test and identifies them as either “required” or “optional”. Required results are considered most important to the success of the field test. It is hoped that participating companies will provide results for these items, and as many of the optional items as possible. However, it is recognized that companies may not have the capacity to produce everything due to resource constraints. If this is the case, it is preferable that companies provide partial results rather than not participate in the field test at all. Further technical details behind the ESG calibration are provided in the PowerPoint embedded below.

Alternative Run
Discussion.pptx

Field Test Runs**	Scenario Sets	Inforce Assets and Liabilities	Priority	Required or Optional
Baseline #1 Already exists; no new runs needed.	Scenario set(s) the company used for 12/31/21 statutory reporting of reserves and RBC	As of 12/31/21	N/A	Required
Baseline #2	ESG the company used for 12/31/21 statutory reporting of reserves and RBC, but modified to produce scenario sets with a 12/31/19 yield curve modified using a 200 BP increase across all maturities	As of 12/31/21 with appropriate adjustments to inforce*	10	Optional
Test #1a	GEMS Baseline Equity and Corporate model scenarios as of 12/31/21, and Conning Treasury model calibration with generalized fractional floor as of 12/31/21	As of 12/31/21	1	Required
Test #1b	Same as Test #1a, but with Alternative Treasury model calibration with shadow floor as of 12/31/21	As of 12/31/21	2	Required
Test #2a Sensitivity Test with Higher Interest Rates	Same as Test #1a, but with Equity, Corporate, and Treasury models with a 12/31/19 starting yield curve modified using a 200 BP increase across all maturities	As of 12/31/21 with appropriate adjustments to inforce*	3	Required
Test #2b Sensitivity Test with Higher Interest Rates	Same as Test #1b, but with Equity, Corporate, and Treasury models with a 12/31/19 starting yield curve using a 200 BP increase across all maturities	As of 12/31/21 with appropriate adjustments to inforce*	4	Required
Test #3: Attribution Analysis Run	Conning Treasury model calibration with generalized fractional floor as of 12/31/21, GEMS Corporate model as of 12/31/21, and GEMS Equity model corresponding to a	As of 12/31/21	7	Optional

	12/31/19 yield curve with a 200 BP increase across all maturities			
Test #4: Attribution Analysis Run	Same as Test #3, but using Alternative Treasury model calibration with shadow floor as of 12/31/21	As of 12/31/21	8	Optional
Test #5a: Conning Original Equity Calibration	Same as #1a, but with Conning’s original Equity model calibration that had significantly lower Gross Wealth Factor’s than the AIRG Equity.	As of 12/31/21	5	Required
Test #5b: Conning Original Equity Calibration	Same as #2a, but with Conning’s original Equity model calibration that had significantly lower Gross Wealth Factor’s than the AIRG Equity.	As of 12/31/21 with appropriate adjustments to enforce*	6	Required
Test #6: ACLI Alternative Equity Calibration	Same as #1a, but with the ACLI’s Alternative Equity Calibration	As of 12/31/21	9	Optional
Test #7: C3 Phase I Specific Attribution	12/31/21 scenarios from the prescribed C3 Phase I generator modified to set the Mean Reversion Parameter to 3.25%	As of 12/31/21	11	Optional

*More information on adjustments to be added later

**After the June field test begins, there may be additional optional runs requested (e.g. an alternative equity model calibration from the ACLI)

B. Framework Specific Required and Optional Quantitative Results

The table below illustrates the framework specific results that are required to be produced as part of the field test along with optional components that companies may elect to provide.

Field Test Element	Required for VM-21 and C3 Phase II	Required for VM-20	Required for C3 Phase 1	Optional
Post reinsurance ceded results	X	X	X	
Pre-reinsurance ceded results				X
Stochastic Reserve	X	X		
Scenario Reserves, before cash surrender value floor	X	X		
Scenario Reserves, after cash surrender value floor	X	X		
CTE70 Best Efforts	X			
CTE70 Adjusted	X			
Additional Standard Projection Amount	X			
CTE98 (for C3 Phase II)	X			
Deterministic Reserve		X		
NPR		X		

Results from each of the 16 SERT Scenarios, and SERT ratio		X		For VM-21 and C3P1
--	--	---	--	--------------------

C. Number of Scenarios

For each product type to be tested, the number of scenarios used for field testing should match the number the company used for statutory reporting on 12/31/21. The number of scenarios used may vary by product type, as long as it is consistent with the number used for statutory reporting. For example, if 1,000 scenarios were run for variable annuity reserves reported as of 12/31/21, then 1,000 scenarios should be run as of that valuation date for the field test. Similarly, if 200 scenarios were run for life insurance reserves reported as of 12/31/21, then 200 scenarios should be run for the field test as of that valuation date. If it is not possible for participants to run at least as many scenarios for the field test runs corresponding to the relevant 12/31/21 valuation, participants may elect to complete the field test runs using less scenarios. If participants use a different number of scenarios between the baseline and field test runs, this should be explained in the survey questions.

D. Scenario Sets

1. Scenario files – The scenario sets to be used for the field test, along with descriptions of the file formats, will be available for download at <https://naic.conning.com/scenariofiles>. Statistical summaries of the projections will also be provided, along with the parameters used for the ESG.
2. Scenario subsets - A full scenario file containing 10,000 scenarios will be provided for each model run to be tested. Scenario subsets of 1,000, 500, 200, and 40 scenarios will also be available.
3. Monthly Timestep – all scenario files will be provided using a monthly projection timestep
4. Additional scenario sets – The following additional scenarios are available:
 - 16 Stochastic Exclusion Ratio Test (SERT) scenarios
 - TBD - Company-Specific Market Path (CSMP) scenarios

E. Projection Period

Each scenario file contains monthly projections for 100 years. For each product type to be tested, the length of the projection period used for field testing should match the projection period the company used for statutory reporting as of 12/31/21.

F. Negative Interest Rates

The two ESG Treasury models used for the field test include scenarios with negative interest rates, so companies will need to consider whether any modeling or assumption changes are needed to handle this. It is recommended that companies read and consider the information in the paper below:

[Potential Modeling Challenges in a Negative Interest Rate Environment](#)

Author: Zohair Motiwalla, FSA, MAAA
 Principal and Consulting Actuary, Milliman

For purposes of the field test, companies may make assumption changes as appropriate to reflect negative interest rates, but this is not required given the amount of time this may take. The Qualitative Survey asks companies to provide details on whether assumption changes were made, and the nature of the changes. It also asks companies to comment on any changes anticipated to be made when the new ESG is adopted.

G. Model Simplifications

If the company is not able to provide model results that match reported values, the company may run a representative model or inforce population. The company should then either adjust the final results to align with their reported amount, or alternatively, they should adjust their reported amount to align with the representative business that is being field tested.

H. Hedging (as applicable)

The hedging strategy the company used as of 12/31/21 for statutory reporting should be used for the field test runs.

I. Fund Mapping (as applicable)

The company’s fund mapping used as of 12/31/21 for statutory reporting should be used for the field test to allow for a more direct comparison of results from the Academy ESG (or proprietary ESG) vs. the GEMS ESG. Although the GEMS ESG contains additional equity and bond fund returns for a more refined mapping of funds, these should not be used for the field test. However, if certain company circumstances (e.g. company reports using a proprietary ESG) exist where it is not practical or possible to use the same fund mapping, companies may use judgement to determine an appropriate fund mapping for the field test. Please see the survey question related to the fund mapping to provide more information.

The tables below show the equity and bond returns available from the Academy ESG and the comparable returns offered in the GEMS equity and corporate bond models. For the field test, companies should use the appropriate GEMS returns that correspond to their fund mapping as of each valuation date.

Further information on fund mapping can be found in the results templates

AAA ESG Returns	Market Proxy Used to Produce AAA ESG Returns*	Field Test GEMS® Fund Mapping**
Diversified Large Capitalized U.S. Equity	S&P500 Total Return Index	Large Cap
Diversified International Equity	MSCI-EAFE \$USD Total Return Index	International Diversified Equity
Intermediate Risk Equity	U.S. Small Capitalization Index	Small Cap
Aggressive Equity**	25% Emerging Markets, 12.5% NASDAQ, 62.5% Hang Seng***	2/3 Aggressive Foreign Equity, 1/3 Aggressive US Equity
Money Market	3 Month Treasury returns	Money Market
U.S. Intermediate Term Government Bonds	U.S. Intermediate Term Government Bonds	Int Govt Bonds
U.S. Long Term Corporate Bonds	U.S. Long Term Corporate Bonds	Long Inv Corp Bonds
Diversified Fixed Income	65% ITGVT + 35% LTCORP	65% Int Govt Bonds, 35% Long Inv Corp Bonds
Diversified Balanced Allocation	60% Diversified Equity + 40% Fixed Income	60% Large Cap, 26% Int Govt Bonds, 14% Long Inv Corp Bonds

*Source: AAA LCAS C3 Phase II RBC for Variable Annuities: Pre-Packaged Scenarios January 2006

** See [Basic Data Columns](#) for more information on the returns available in the GEMS® scenario files

***The Academy Equity Model Aggressive Equity proxy is not meant to suggest a representative asset profile for this class but used merely to build an historic index with high volatility and sufficient history.

III. Additional Instructions for VM-21

A. Model Assumptions

Models should utilize company and/or prescribed assumptions relevant to VM-21 for 12/31/21 statutory reporting unless otherwise specified. All components of the modeling other than the scenarios should remain the same between reported and field test runs (e.g., the same investment strategy, liability assumptions, CDHS modeling, etc.).

B. Aggregation

Business should be aggregated according to the requirements under VM-21, consistent with how this was done for statutory reporting on 12/31/21. For example, if RILAs were aggregated with variable annuities for statutory reporting, they should be aggregated for the field test.

IV. Additional Instructions for VM-20

A. Model Assumptions

Models should utilize company and/or prescribed assumptions relevant to VM-20 for 12/31/21 statutory reporting unless otherwise specified. All components of the modeling other than the scenarios should remain the same between reported and field test runs (e.g., the same investment strategy, liability assumptions, CDHS modeling, etc.).

B. Exclusion Tests

1. Deterministic Exclusion Test - This is not applicable for purposes of the field test and should not be performed.
2. Stochastic Exclusion Ratio Test – The SERT should be performed unless the company has not built out that functionality in their models. The results may help determine whether the SERT still performs as intended using the new ESG.

C. Stochastic Reserve Calculation

1. The Stochastic Reserve should be calculated unless the company has not built out that functionality in their models.
2. Participants will be asked to provide the annual projected accumulation of deficiencies by scenario for each year included in the projection. When the NAIC is reviewing the results, they will implement an alternative discounting methodology that applies a 95% factor to the 1-year UST when negative. The alternatively discounted scenario level results will be compared against the company provided results using the prescribed discounting methodology and aggregate results will be shared publicly.

V. Additional Instructions for C-3 Phase I

A. Methodology

1. Companies should use the current C-3 Phase I methodology for the field test, with the exception noted in Section B below. A future VM-22 field test will include both the new ESG and new C-3 Phase I methodology.
2. Participants will be asked to provide the annual projected surplus values by scenario for each year included in the projection. When the NAIC is reviewing the results, they will implement an

alternative discounting methodology that applies a 95% factor to the 1-year UST when negative. The alternatively discounted scenario level results will be compared against the company provided results using the prescribed discounting methodology and aggregate results will be shared publicly.

B. Number of Scenarios

For Tests 1a – Test 4 (see the table in Section II.A), companies should run a minimum of 200 scenarios.

VI. Attribution Analysis

Attribution analyses are included in the field test in the following runs:

- Test #3 and #4
 - Test #3 serves to identify the ESG model drivers (Equity, or Treasury and Corporate) for the reserve/capital changes between Test #1a and #2a. Test #4 serves a similar purpose to attribute the change in results between Test #1b and #2b.
- Test #7: C3 Phase I Specific Attribution
 - This test will evaluate the impact of lowering the mean reversion parameter (MRP) in the currently prescribed C3 Phase I generator to be consistent to the MRP used in the ESG prescribed in VM-20. The results of this test will serve as an interim point of comparison between the baseline and field test runs.

VII. Reporting of Field Test Results

A. Results Templates

Companies should provide quantitative field test results using the Excel templates that have been developed for this purpose. Instructions are included in the templates. The spreadsheet tabs may be copied as needed within the workbook to reflect any additional products/models not included.

B. Qualitative Survey

Companies are asked to complete the Qualitative Survey contained in Appendix B to the extent possible for the product types tested.

C. NAIC Aggregation of Company Results

NAIC staff will be aggregating quantitative results across companies and producing a variety of metrics using SAS. For ease of aggregation, please do not add rows or columns to the results templates.

Field test participants' responses to the Qualitative Survey will also be aggregated where appropriate.

Appendix B

Economic Scenario Generator (ESG) Field Test Qualitative Survey

All companies are asked to provide responses to the survey questions below to the extent possible for the types of results submitted. The responses will aid in understanding how each company performed their modeling, and potential drivers of reserve and RBC differences by product type. The responses will also be used to identify potential ESG modifications that may be desirable for a second field test tentatively planned for early 2023.

I. VM-21 and C3 Phase II

1. Which valuation date was used for Baseline #1 (i.e. for year-end statutory reporting)?
 12/31/21 9/30/21
2. How many scenarios were used for Baseline and field test runs?
 10,000 1,000 500 Other (please describe)
3. Baseline #1 should match what was reported in the Variable Annuities Supplement for Individual and Group business. Is this the case? Yes No If No, please explain (e.g., describe any subsets of contracts that were excluded or added for the Baseline, describe any simplifications used).
4. Was a proprietary ESG used to determine values for the Baseline runs? Yes No
5. Did the company make any changes to assumptions or modeling approach for the field test runs because the ESG produces negative interest rates?
 - a. If so, please describe the changes that were made.
 - b. If not, please describe the changes anticipated to be made when the new ESG is adopted.
6. Were any other changes to assumptions or modeling made for the field test runs? Yes No If Yes, please explain.
7. Did you use an implicit method or explicit method to model hedging?
 Implicit method Explicit method Did not model hedging Other If Other, please explain.
8. If your company uses an implicit methodology to quantify the impacts of hedging, have you reassessed whether it is still appropriate in light of the field test scenario sets?
9. Did the new ESG impact hedge effectiveness? If so, can you tell what is driving this?
10. Where possible, please explain the change between the field test runs and the Baseline runs for the Post-Reinsurance-Ceded Reserve for Guaranteed Benefits, and optionally for Pre-Reinsurance-Ceded Reserve for Guaranteed Benefits. As part of your response, please address each of the following questions.
 - a. What were the drivers of the change?

- b. How did the drivers interplay to result in the overall change? Were they additive, compounding, offsetting, etc.?
 - c. How did the VA product guarantees affect the Baseline and field test results differently? In what way did the product guarantees contribute to the change in results?
 - d. When comparing the field test runs to the Baseline, how did the sensitivities to equities vs. interest rates drive the magnitude of the change in results? In other words, how sensitive was the company's portfolio to the change in the interest rate scenarios? Or, if the reserve amount is driven more by the equity levels, how would you characterize that relationship or dependence?
 - e. Did the impact of hedging differ between the baseline and the Field Test? If so, in what way?
11. Where possible, please explain the change between the field test runs and the Baseline for the **Risk-Based Capital**. Please address the following as part of your response.
- a. Compare the impacts of the field test scenarios on the CTE 70 vs. CTE 98 tail metrics. Discuss the interplay and resulting impact on Risk-Based Capital.
 - b. Are there distinct drivers that create different movements in the 30% vs. 2% tail?
 - c. Are the impacts of hedging different when calculating the reserve vs. risk-based capital? Why or why not?
12. Does your company use the specific tax recognition or a macro-tax adjustment to determine post-tax capital amounts?
13. If the fund mapping for the field test scenarios had to change from what was included in the ESG used for reporting, please describe the new fund mapping and why it was necessary.

II. VM-20

1. Which valuation date was used for the Baseline run (i.e. for year-end statutory reporting)?
12/31/21 9/30/21
2. How many scenarios were used for the Baseline and field test runs?
10,000 1,000 500 200 40 Differs by product type
Specify the details if selected "Differs by product type": _____
3. The Baseline should match what was reported in the VM-20 Reserves Supplement. Is this the case?
Yes No If No, please explain (e.g., describe any subsets of contracts that were excluded or added for the Baseline, describe any simplifications used).
4. Was a proprietary ESG used for calculating the baseline? Yes No
5. Did the company make any changes to assumptions or modeling approach because the ESG produces negative interest rates?
a. If so, please describe the changes that were made.
b. If not, please describe the changes anticipated to be made when the new ESG is adopted.
6. Were any other changes to assumptions or modeling made for the field test runs? Yes No If Yes, please explain.
7. Did your dominant PBR reserve change?

8. If the fund mapping for the field test scenarios had to change from what was included in the ESG used for reporting, please describe the new fund mapping and why it was necessary.

III. C3 Phase I

1. Which valuation date was used for the Baseline (i.e. for year-end statutory reporting)?
 12/31/21 9/30/21
2. How many scenarios were used for the Baseline run?
 50 12 Other (please describe)
3. How many scenarios were used for field test runs?
 200 Other (please provide the number)

IV. All Products

1. All amounts populated in the templates should be shown in dollars. Is this the case? Yes No
 If No, what units did you use?
2. If the inforce files were adjusted for the field test runs, please describe the changes that were made.
3. To what extent did the field test runs capture the potential impact of the scenarios on results? Were there areas that could not be tested/assessed (e.g., due to the need for additional scenario sets, new or existing simplifications)?
4. What additional information / analysis or scenario refinements would your company recommend?
5. Please provide any additional perspectives and information that could be relevant in the post-field test assessment. This information could include observations, unexpected results, insights and desirable properties from alternative models/scenarios, etc. To allow for aggregation of company responses to this question, please categorize each of your comments as relating to "capital/reserves," "product specific issues," "attribution," or "other issues".
6. Would your company need to create a more refined mapping to equity and bond funds given the expanded set of returns offered by the GEMS ESG? If yes, please provide a quantitative or qualitative explanation of how it might impact your results.
7. If your company elected to run a representative set of models or inforce, please describe any adjustments made to account for the difference between the representative models or inforce and the reported values. Also please provide an explanation as to why the models or inforce that was used in field testing is expected to be representative.
8. If a different number of scenarios was used for field test results as compared to the number of scenarios used in reporting, please provide information on which results are impacted.
9. Does your company use the specific tax recognition or a macro-tax adjustment to determine post-tax capital amounts?

Chair, NAIC Life Actuarial (A) Task Force (LATF)

Philip Barlow
Chair, NAIC Life Risk-Based Capital (E) Working Group (Life RBC)

Re: ESG Field Study Exposures

Dear Messrs. Boerner and Barlow:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit comments on the ESG Field Testing exposures (Exposures). We have the following comments:

User Group

ACLI suggests a participant user group start as soon as possible to assist with technical questions related to the field test. Some of the questions may be scenario related, but many others may be clarification of the modeling runs or consistent ways for companies to address actuarial (liability) model limitations (e.g., AXIS, Prophet, Poly). A number of very technical and practical questions have come up already, e.g., several items which are specific to certain aspects of VM-20. We believe that regular participant calls (both group calls and calls with individual companies) should start as soon as possible and continue throughout the field test, coordinated by the NAIC. This will help to provide a forum for raising and resolving questions quickly to enable companies to participate effectively in the field test.

Feedback by Section:

Confidentiality

We'd like to better understand the role of the domestic regulator and other regulators in receiving and reviewing results. We would recommend that domestic regulators be directly involved in receiving and reviewing their companies' submissions. In addition, we would like clarification about who will be handling the iterative results discussions that are common in field testing.

Section I.A. Background

We believe the document would be stronger if the field test were positioned as neutral rather than appearing to presuppose a specific outcome. For this reason, we suggest that the comment in Section I.A. be edited to read:

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

acli.com

“Based on preliminary AAA model office testing, the implementation of the new ESG may materially increase life and annuity reserves and capital. The purpose of the ESG field test is to assess the impacts and appropriateness for....”.

Section II. A. Summary of Field Test Runs

Some companies may have resource constraints that prevent the completion of all requested runs, we would encourage regulators accepting whatever results companies are able to provide to get the most company participation in the field study.

Section II. B. Required and Optional Quantitative Results

Part of the purpose of field test is to identify any anomalous behavior in the scenario sets. While 12/31/2019 is higher than 12/31/2021, we think a more severe test would be appropriate. We would suggest for runs 2a, 2b, 3, and 4, to increase the 12/31/2019 yield curve by 200bps.

We support making the SERT a required VM-20 test but note that VM-20 allows companies to run the SERT tests within 12 months of the valuation date, meaning that not all companies will have used a 12/31/2021 model for 2021 year-end testing. We would request providing the necessary off-cycle scenario sets or other guidance around how to approach off-cycle SERT runs.

Section II. C. Number of Scenarios

ACLI suggests that companies be allowed to use a smaller subset of scenarios than were used for reporting, as long as they are representative of the larger set and are used consistently across all field test runs, in order to reduce runtime and resource strain. While we recognize this may introduce some concern about convergence of any given set of results, the comparability of the results across the various requested sensitivities should remain applicable, allowing the generators to be adequately evaluated. In addition, the revised Baseline results using the smaller scenario set can be compared to report results to provide an indication of the impact of the smaller set.

Section II. D. Scenario Sets

In addition to providing the scenario files, parameters, and distribution statistics, we also recommend providing the actual, targeted (based on the flooring methodology), and fitted initial yield curves.

We also recommend providing scenario statistics for each of the scenario subsets to understand potential operational implications of scenario differences on use of subsets. (e.g., whether the new scenarios may require the use of larger subsets in order to capture extreme scenarios that impact on reserve / capital CTEs).

Section II.I. Fund Mapping

We agree with maintaining maximum alignment with the model used to produce reported results in order to isolate the impact of the new scenario generator. However, fund mapping is a model input that is often tailored to the scenario generator being evaluated, and we recommend allowing this input to be updated with an accompanying survey question disclosing the approach and rationale for the update. For example, some companies may be using a proprietary generator that produces index returns that are not available in the new scenario sets and a fund remapping could be necessary to align projected fund returns with the new scenario information, and disallowing this could create model misalignment with the scenarios, resulting in less helpful field test results.

Appendix Economic Scenario Generator (ESG) Field Test Qualitative Survey IV. All products

To understand the range of results, it might be necessary to collect more information about inforce characteristics (e.g., product / benefit mix, ITM of guarantees / current vs. guaranteed rate differences, age of the business, etc.) and hedging strategy (e.g., targets, modeling). We would also like to understand any analysis planned to provide more insight into the range of results.

Requests for additional data:

We would like to request additional scenario sets which could be used to better understand the proposed ESG and calibrations and perhaps suggest areas for further testing and analysis. These scenario sets could be made available during the field test.

- Year-end 2020 scenarios since interest rate targets have been expressed based on 12/31/2021 conditions.
- Unfloored scenarios corresponding to Runs #1a and #2a to better understand underlying interest rate model dynamics
- Scenario sets for different dates (e.g.,) and controlled sensitivities (e.g., parallel +/-[50] bps rate shock, non-parallel and/or key rate duration-type shocks, initial volatility shock, MRP change) to better understand how scenarios will behave as market conditions change.
- Providing all scenario sets, whether required or optional, sooner rather than later would be much appreciated as resources begin to become scarce in 3Q due to preparation for year-end.

We appreciate the consideration of our comments. Thank you.

National Association of Insurance Commissioners

Re: Economic Scenario Generators

Dear Mr. Mike Boerner and Mr. Philip Barlow,

Please accept this comment on the NAIC LATF Economic Scenario Generator field tests.

Sincerely yours,

Mark S. Tenney

Mr. William Carmello said the original parameterization of the vendor, Conning, should be part of at least the first field test. This was in the context of equities, but can apply to interest rates as well. I support this recommendation. The original set before any contact with the NAIC has value. The set or sets that were then revised based on interaction with LATF but before the shadow rate models are also of value.

Although heavily criticized, these scenarios are important to understand. Steeper negative interest rate scenarios and much lower equity return scenarios where the wealth ratios are substantially below one are important to study and include in risk management from a regulator point of view.

<https://voxeu.org/article/negative-interest-rate-policy-post-covid-19-world>

<https://voxeu.org/article/swedish-experience-negative-central-bank-rates#:~:text=The%20Swedish%20Riksbank%20was%20the,lowered%20it%20to%20%2Do.10%25.>

These scenarios can be used to make arrangements with banking and securities regulators so that insurance companies are able to borrow at negative interest rates if those occur. Even if rates are negative and an insurance company owns a bank, it is not automatic it can borrow at negative interest rates from the Federal Reserve. This is because of tiering.

The Narrow Bank applied for receiving interest on excess reserves but was turned down by the banking regulators. This was an application of tiering in the US already. Tiering is used already in negative interest rate countries. Some bank reserves are charged a negative rate but not all. Alternatively, some can borrow at negative rates but not all. Or they can borrow at a negative rate but not as negative a rate as others. Paul Kupiec of AEI has criticized the banking regulators for playing favorites and not having an equal access to tiering rates from the Federal Reserve.

A bad tier day for insurance companies could mean bank regulators saying no to borrowing at negative rates through banks they own or through other banks. Bank regulators and the SEC could also interpret existing rules to make it hard or harder for insurance companies to use corporate bonds as collateral for negative interest rate loans from banks or in the repo market.

The NAIC ESG scenarios with negative rates and low equity returns can be used now to head off such bad regulatory rulings. They can be used now to get some favorable regulatory action in advance from banking regulators and possibly the SEC for insurance companies if negative rates happen. There is extensive interest in negative interest rate among economists and central banks. This includes developing mechanisms to prevent arbitrage by hoarding paper currency. They are going fast to get somewhere on this.

The equity premium puzzle is the name given to equity return premiums being too high for conventional economic theory to support. One possibility discussed widely is that equity premiums will drop to what traditional economic theory says they should be. In this case, downward scenarios can involve very substantial losses.

One formula for the equity risk premium based on standard economic theory is illustrated numerically. See Theory of Financial Decision Making, Jonathan Ingersoll. See formula 22 page 275 and formula 25 page 276.

Assume gamma is $1/2$, a measure of risk aversion. Assume the ratio of risky wealth is $1/2$. Assume a stock market annual log volatility of $.2$. In that case, the equity risk premium is $1/2 * 1/2 * .2 * .2 = .01$. A more typical annual volatility is $.15$ or $.16$. This would result in a lower value.

What do we add the $.01$ to? The inflation rate target plus r-star. The inflation target in the US has been 2

percent, but experience prior to the current episode is 1 percent. R-star is now considered to be likely negative, say -1 percent. If we take the 1 percent inflation and add minus one for rstar, we get a nominal short rate target of 0. Adding the equity risk premium of .01, gives us an expected nominal equity return of .01 i.e. 1 percent per year.

Using an annual standard deviation of .2, then over 25 years, we get a standard deviation of square root of 25 times .2 or 5 times .2. So 1. The mean over 25 years is .25. Two standard deviations down would be .25 - 2 = -1.75. This would be .17 or a wealth ratio of 17 percent of the starting value. This is including reinvesting dividends.

If we used .15 for the standard deviation, then over 25 years we still get .75 for the standard deviation. Suppose for that period we used an equity expected return of 4 percent per year. Then we get $25 * .04$ or 1.0. If we now have 3 standard deviations down, we get $.04 * 25 - 3 * .75$. Taking the exponential of that we get .28. This is the wealth ratio including reinvested dividends.

<https://www.credit-suisse.com/about-us-news/en/articles/media-releases/credit-suisse-global-investment-returns-yearbook-2022-202202.html#:~:text=Over%20the%20last%2012%20years,bonds%20by%203.2%25%20per%20year.>

Projecting the US to continue to have its high realized equity returns is to take one of the best periods of the best countries and extend it into the future. The 21st century is unlikely to be as favorable to the US relative to the rest of the world as the 20th century was. So to continue to project the US in the 20th century as normal is not something a prudent regulator should do.

Credit Suisse is using a 3.5 percent equity risk premium. So .035 annually. If the nominal target is zero, then the .035 is the total equity expected return. Prudent regulators should be looking at a number close to this. If the inflation target was 2 percent and rstar was minus one, this would give a total return of .045 expected. Regulators should consider the real possibility that equity risk premiums move substantially in the direction of traditional economic theory, i.e. become substantially lower.

6 percent nominal expected return for equities from some reasonable perspectives could be the upper bound for regulators to count on for long horizons. The nominal target for the short term interest rate should have an upper bound of 2 percent is also sensible. Zero as the short term nominal target is a reasonable value. That would then give an equity expected return of no more than 4 percent. That includes dividends. The total expected equity return could be as low as one percent. This is using a low equity risk premium based on standard utility functions and a zero percent nominal target yield. Although this number seems ridiculous to some, it does have a basis in economic theory.

<https://www.nbim.no/contentassets/2b92009ffa9440f98eec8f32a0996ca2/discussion-note-1-16---equity-risk-premium.pdf>

" The average World Equity Risk Premium (ERP) based on data from 1970 to 2015 is 6.4 percent. Adjusting the average for repricing over the period lowers the average to 3.9 percent. "

" The expected World ERP from the discount models may be closer to 4 percent if expectations of interest rate normalisation are taken into account. "

" Estimates from cross-sectional and time-series models also suggest an expected World ERP of 3 to 4 percent. "

<https://www.cfainstitute.org/-/media/documents/book/rlit-review/2017/rflrv12n11.pdf> <https://blogs.cfainstitute.org/investor/2022/04/08/equity-risk-premium-forum-dont-bet-against-a-bubble/>

<https://ourworldindata.org/grapher/world-gdp-over-the-last-two-millennia?yScale=log>

A 10 percent annual growth rate for 100 years gives a log return of $.1 * 100 = 10$. The exponential of this is 22026. We can check this number and make it more intuitive with the rule of 72. In 7 years at 10 percent, money doubles. So in 100 years there are $7 * 14 = 98$ years, so 14 doublings. The doublings go 2, 4, 8, 16, 32 for the first 5. 32 squared is around 1000. That leaves 4 more doublings, 16 so we get to 16,000 which is roughly the 22,026.

Higher returns need large consumption out of wealth to justify them. Particularly with environmental exhaustion showing up everywhere.

<https://wir2022.wid.world/>

https://wir2022.wid.world/www-site/uploads/2022/03/0098-21_WIL_RIM_RAPPORT_A4.pdf

(Watch out a4 at that link won't print well on US sized paper.)

If a single billionaire leaves his money in the market and avoids taxes, then in 100 years it is worth 22 trillion dollars. Billionaire wealth of 1 trillion that accumulated at 10 percent for 100 years would then reach 22000 times 1 trillion or 22 quadrillion.

The last 100 years or 500 years is not the normal growth pattern for humans or for the environment. It isn't possible to sustain such growth. At some point, the laws of physics, chemistry, and biology rule out such growth.

A corporation doesn't have to pay death taxes and is not required to pay out any dividends. So a C corp that invests in stocks on buy and hold can earn at least 2/3 of the equity return and more likely close to it. So 1 billion in a C corp that just invests would grow at close to these ratios. A total of 1 trillion in corporations growing on such terms would then explode to enormous levels. Levels impossible to achieve in practice. Ten percent annual return on the wealth of the wealthiest people or corporations is not sustainable.

Monarchs of countries like Saudi Arabia don't have to pay inheritance tax presumably. There are rich people around the world who don't have to pay inheritance tax in their country. So if they put away some billions in the US stock market just grow it accumulates to absurd levels.

<https://taxsummaries.pwc.com/saudi-arabia/individual/other-taxes#:~:text=There%20are%20no%20inheritance%2C%20estate,gift%20taxes%20in%20Saudi%20Arabia.>

"There are no inheritance, estate, or gift taxes in Saudi Arabia."

So a single billionaire in Saudi Arabia who puts a billion in the US market to accumulate at 10 percent, would see his money worth 20 trillion dollars or so in a century. Presumably, they would pay some US dividend tax.

<https://fiscaldata.treasury.gov/datasets/debt-to-the-penny/debt-to-the-penny>

Debt of the US government currently held by the public is about 24 trillion. So in a century, a single Saudi billionaire would have that much money in the US stock market.

The World Bank has figures on the growth rate of US GDP per capita in real terms.

<https://data.worldbank.org/indicator/NY.GDP.PCAP.KD.ZG?locations=US>

This fluctuates and is currently negative. But even at 1 percent per year it is far below a 10 percent stock market return. With inflation averaging 1 percent before the recent spike these numbers would suggest a divergence of GDP per capita and stock market value from a century of 10 percent stock market growth. Currently, total factor productivity in the US has a zero growth rate.

If we look at the last 2000 years or 10,000 years, human societies that build up huge wealth then collapse. So the growth of the last 100 years might imply that negative returns are more likely. The higher the unsustainable peak, the greater the probability of negative returns from that high peak. It may be that this negative scenario is already showing up in interest rates. These may be a better canary in the coal mine than are equity returns.

If the US stock market is doing well because it is a refuge for investors in a world that is doing badly, then how far can that go? The American Economics Association had a panel of several former chief economists of the World Bank a few years ago. They painted a stark picture of crisis for the developing world. If the US is a giant Switzerland for a world swimming in a sea of problems, then how long can that giant Switzerland's stock market keep going up at 10 percent a year?

If humans are at a bubble stage of growth, it is plausible that short term relatively safer country government interest rates would turn negative first. If we think of the bubble as worst in the developing world and spreading, then negative short term government rates in the safest countries turning negative first is a plausible early stage of the bubble bursting. In a rising storm at sea, the last boat still afloat might project itself to rise at 10 feet a year for the next century. But it might also be prudent to make sure everyone on board has their life preserver on. Which translates into using low expected equity returns for regulated insurance.

Draft: 7/7/22

Life Actuarial (A) Task Force
Virtual Meeting
May 19, 2022

The Life Actuarial (A) Task Force met May 19, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ben Bock, Ted Chang, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. Discussed Actuarial Guideline AAT

Mr. Andersen reviewed the March 31 exposure (Attachment Nine-A) of the Actuarial Guideline on asset adequacy testing (AAT) and summarized the comments received from Transamerica (Attachment Nine-B), the American Academy of Actuaries (Academy) (Attachment Nine-C), the American Council of Life Insurers (ACLI) dated May 2 (Attachment Nine-D), the ACLI comment dated May 16 (Attachment Nine-E) focusing on sensitivity testing, and three comment letters from the Utah Department of Insurance (DOI) on behalf of companies domiciled in Utah (Attachments Nine-F, Nine-G, and Nine-H). He said the scope of the guideline will be expanded to ensure that companies with pension risk transfer (PRT) assets, sometimes held in non-unitized separate accounts, are included. He recommended that the Task Force not accept the Transamerica comment asking that companies not be scoped in solely because they have more than \$5 billion in general account reserves. He said the guideline is structured so that companies that meet the size criteria, but have no high yielding assets, should be able to make that case to their state insurance regulator. He noted that the Academy concern related to the need to scope in medium-sized companies that currently have no high-yield assets but are projecting future high-yield investments is too challenging to address in the proposed guideline. Mr. Yanacheak said that from a risk perspective, he is more concerned about the smaller, less sophisticated companies that may attempt to mimic the asset management practices of larger companies. He said the focus of the guideline should be more on risk. Mr. Chang suggested removing the \$500 million criteria from Section 2.B. Brian Bayerle (ACLI) said the scope criteria is too broad and should be tailored to identify the companies that are problematic. Leonard Mangini (Academy) suggested an approach similar to the principle-based reserving (PBR) company-wide exemption, where the company could be exempted by its domiciliary commissioner if certain criteria are met.

Mr. Andersen said commenters suggested that the determination of the investment grade net yield benchmark be changed from a book value approach to a market value approach, where assets are compared against the current market values and U.S. Treasury rates to determine whether to consider them high-yielding assets. Commenters said the book value approach is inefficient and difficult to implement. Task Force members agreed to the change. They also agreed to exclude unitized separate accounts from the scope of the AG.

Mr. Andersen said that, for all assets supporting reserves, Section 4.A.iii requires the company to show the components that are deducted from the gross yield to get to the net yield. Mr. Leung said the requirement should apply to all companies but noted that it would require a change in the scope of the guideline. Mr. Mangini said using an exemption approach could require that all companies provide the component information.

Mr. Andersen said most comments were related to sensitivity testing. He said the ACLI recommended grouping the reinvestment assets at the level they are grouped for asset adequacy testing. He said there are concerns that grouping in that manner would allow assets with high yields to be offset by assets with lower yields. He asked Task Force members to consider three options: 1) continue to disallow grouping; 2) allow some grouping at the level assets are modeled for AAT; and 3) allow grouping only within the universe of high-yield assets. The Task Force agreed to allow grouping only within the universe of high-yield assets.

Mr. Andersen said the ACLI proposed testing multiple benchmark spreads to allow state insurance regulators to gather more information and better understand the risk. He said the concept will be included in the guideline, but companies will have the option of using a single benchmark spread. He emphasized that the test is not intended to be a stress test but rather to help identify outliers. He suggested that for reinvestments, the drop and recovery test does not work well. He suggested eliminating the 10% drop from the equity sensitivity test. He proposed the rates used in the recovery test be 4% for the first 10 years and 5% thereafter. He noted that the change opens the door for more assets that are not common stocks, nor have fixed asset components, to be considered equity-like instruments.

The Task Force agreed that attribution analysis can be completed by reinvestment category, instead of asset by asset. Mr. Andersen said industry companies plan to use a best-efforts approach in the first year of compliance with the guideline, with a goal of refining the analysis over time. Mr. Bayerle suggested adding a guidance note to that effect.

Mr. Andersen said the guideline will be edited to include the revisions agreed to by the Task Force. The revised guideline was re-exposed on May 20 for a public comment period ending May 31.

2. Discussed the Field Test Runs

Scott O'Neal (NAIC) gave a brief overview of the field test specifications (Attachment Nine-I) before reviewing the field test instructions (Attachment Nine-J). He delineated the runs that are required and the runs that are optional. Mr. Boerner noted that Baseline run #2 will use the Dec. 31, 2019, U.S. Treasury yield curve increased by 200 basis points (bps) across all maturities. Mr. O'Neal said that run #5 has been changed from an optional run to a required run. He said the field test participants will be asked to indicate which optional runs they plan to execute. Jason Kehrberg (Academy) said that to understand the impact of holding the mean reversion parameter (MRP) constant from one date to another, test #5 must be run on two dates. He said running on two dates will also provide insights on the equity/Treasury linkage. William Wilton (SBCGlobal) asked if adding 200 bps to the Dec. 31, 2019, yield curve for run #2a and run #2b requires companies to reprice their asset portfolio for that date. Mr. O'Neal said companies already have the capabilities for testing sensitivities. He said that process could be used for run #2a and run #2b. Link Richardson (Academy) said the use of Sept. 30 models was previously discussed but does not appear among field test runs. He said going from the 6.55 MRP for C-3 Phase I to the current scenario as an interim step before shifting to the Conning scenarios was also previously discussed but is omitted from the field test run. Mr. O'Neal said the field test scenarios allow companies to use Sept. 30 data if applicable. He said the shifting of the MRP was deferred to the VM-22 field test. Mr. Boerner said the discussions of the shifting MRP and the potential for an additional run #5 with a different date will be taken back to the field test drafting group. No Task Force member objected to the proposed field test runs, with the required runs listed first in priority order, followed by the optional runs in priority order.

Having no further business, the Life Actuarial (A) Task Force adjourned.

4/4/2022

Actuarial Guideline AAT – 2nd Exposure**APPLICATION OF THE VALUATION MANUAL FOR TESTING THE ADEQUACY OF LIFE INSURER RESERVES****Background**

The *NAIC Valuation Manual (VM-30)* contains actuarial opinion and supporting actuarial memorandum requirements, including requirements for asset adequacy analysis. Regulators have observed a lack of uniform practice in the implementation of asset adequacy analysis. The variety of practice in incorporating the risk of complex assets into testing does not provide regulators comfort as to reserve adequacy. Examples of complex assets are structured securities, including asset-backed securities and collateralized loan obligations, as well as assets originated by the company or affiliated or contracted entity. An initial increase of this activity has been noted in support of general account annuity blocks; however, recent activity was noted in other life insurer blocks.

This Guideline is intended to provide uniform guidance and clarification of requirements for the appropriate support of certain assumptions for asset adequacy analysis performed by life insurers. In particular, this Guideline:

- (1) Helps identify reserve adequacy and claims-paying ability in moderately adverse conditions, including conditions negatively impacting cash flows from complex assets;
- (2) Clarifies how margins for uncertainty are established such that the greater the uncertainty the larger the margin and resulting reserve;
- (3) Ensures recognition that higher expected gross returns from assets are, to some extent, associated with higher risk, and that assumptions fit reasonably within the risk-return spectrum;
- (4) Requires sensitivity testing regarding complex assets currently supporting or assumed to provide future support for life insurer business;
- (5) Identifies expectations in practice regarding the valuation of complex assets;
- (6) Establishes a process for researching and monitoring the risks associated with complex assets;
- (7) Reflects that while complex assets tend to have higher uncertainty regarding timing and amount of cash flows than in more traditional investments, because complex assets are difficult to classify, and the regulatory concern is regarding the projected net yields and cash flows from those assets, the focus of the Guideline will be on assets deemed to be high-yield assets; and
- (8) Requires additional documentation of investment fee income relationships with affiliated entities or entities close to the company.

Note: It is anticipated that the requirements contained in this Guideline will be incorporated into the *NAIC Valuation Manual (VM-30)* at a future date, effective for a future valuation year. This Guideline will cease to apply to annual statutory financial statements at the time the corresponding VM-30 requirements become effective.

Text

1. Effective Date

This Guideline shall be effective for reserves reported in the December 31, 2022 and subsequent annual statutory financial statements.

2. Scope

This Guideline shall apply to all life insurers with:

- A. Over \$5 billion of general account actuarial reserves (from Exhibits 5, 6, 7, and 8 of the annual statement) or
- B. Over \$500 million of general account actuarial reserves (from Exhibits 5, 6, 7, and 8 of the annual statement) and over 5% of supporting assets (selected for asset adequacy analysis) in the category of Projected High Net Yield Assets, as defined in Section 3.C.

Actuarial reserve amounts are included in the amounts in A and B whether directly written or assumed through reinsurance and are determined before any reinsurance ceded credit.

3. Definitions

- A. Equity-like Instrument. Any asset that, for purposes of risk-based capital C-1 reporting, is in the category of common stock, i.e., has a 30% or higher risk-based capital charge as of year-end 2021.
- B. Investment Grade Net Yield Benchmark. For assets that are not Equity-like Instruments, a net yield calculated as i + ii – iii:
 - i. For current assets, the Treasury rate at the asset purchase date for the time to maturity associated with the asset; for reinvestment assets, the Treasury rate related to the projected interest rate scenario at the projected asset purchase date for the time to maturity associated with the asset.
 - ii. The spread found in Table F for existing assets and Table H for reinvestment assets, found in the VM-20 / VM-21 / VM-22 Tables tab on the principle-based reserve page of the NAIC website (NAIC website), using PBR Credit Rating 9 and the weighted average life of the associated asset.
 - iii. The default cost found in Table A on the NAIC website, using PBR Credit Rating 10 and the weighted average life of the associated asset.
- C. Projected High Net Yield Assets. Assets where assumed, future net yields (net of default risk and other risk impacting timing and amount of cash flows) are higher than the Investment Grade Net Yield Benchmark. Included are currently held assets and reinvestment assets, excluding Equity-like Instruments.
 - i. Aggregation of the comparison between assumed net yields from each asset and the Investment Grade Net Yield Benchmark shall be done at a level of granularity that is consistent with or more granular than how the assets are grouped, i.e., compressed, in the asset adequacy analysis model.
 - ii. For applicable assets that do not have an explicit weighted average life or term to maturity, the company shall disclose the method used to determine the appropriate weighted average life used for comparing to the Investment Grade Net Yield Benchmark.
 - iii. For purposes of the comparison between assumed net yields from each asset and the Investment Grade Net Yield Benchmark, investment expenses shall be excluded.

4. Asset Adequacy Considerations and Documentation Expectations

- A. **Net return and risk documentation.** For Projected High Net Yield Assets, either currently held or in assumed reinvestments, provide:

- i. A detailed explanation describing the extent to which higher expected gross returns from these assets are associated with higher risk. It shall also include, for the aspect of any higher expected gross returns not assumed to be associated with higher risk, an explanation of how overperforming assets with expected returns lying outside the risk-return spectrum can be assumed to persist and be available for reinvestments throughout the projection period in moderately adverse conditions.
 - ii. Commentary on how there is consistency with the Standard Valuation Law concept which dictates margins for uncertainty should be established such that the greater the uncertainty, the larger the margin and resulting reserve, including explanation of how asset-related factors identified as being volatile and impactful through sensitivity testing or other means contain an appropriate margin to reflect this volatility and impact.
 - iii. Identification of the assumed gross asset yield and the key components (for example, default and investment expenses) deducted to arrive at the assumed net asset yield.
 - iv. Explanation of any future reinvestment strategy assumptions that differ from current practices and experience.
- B. **Model rigor.** Where significant risks associated with a complex asset are not adequately captured with traditional modeling techniques associated with simple assets like corporate bonds, more rigorous modeling of those risks should occur.
- i. Where necessary to adequately reflect the risk, multi-scenario testing of those risks specific to complex assets should be performed.
 - (a) For example, investments that may provide a higher expected return in part due to limited information, niche skill sets, or other factors may require unique scenarios (for instance to adequately capture credit or liquidity risk) to fully encompass potential sources of loss.
 - (b) Asset cash flows should be appropriately projected to reflect anticipated liquidity in a stressed market. If current models do not support analysis of this type of risk, then new model aspects should be developed; otherwise, if such model aspects are not developed, sufficient additional conservatism to reflect this risk shall be applied.
 - (c) To the extent that the process for modeling or otherwise evaluating the risks is complex, and the potential for disconnect between reality and modeling increases, an additional margin to assumption(s) should be applied. Any such margin shall be applied in the direction of asset adequacy analysis results being less favorable.
 - ii. Note that a robust conditional tail expectation calculation considering all key risks specific to complex assets would likely show that tail losses (from low probability, high impact events) affect asset adequacy results.
 - iii. A company may use simplifications, approximations, and modeling efficiency techniques if the company can demonstrate that the use of such techniques does not make asset adequacy analysis results more favorable. These techniques may be less appropriate if the amount of complex, high-yielding assets becomes a higher percentage of total assets.
 - iv. Actuarial Standards of Practice (ASOPs), including ASOP No. 7 and No. 56 contain additional guidance on the use of models in the analysis of cash flows.
- C. **Fair value determination.** In asset adequacy analysis, when an asset is projected to be available for sale, a fair value of that asset is established. Per fair value methodology, fair value should represent the price at which the security

could be sold, based on market information. Fair value should only be determined internally (by the insurance or investment management company) when the market-based value of the asset or similar asset cannot be obtained.

- i. When the fair value of a material portion of supporting assets is determined internally, the company shall provide a step-by-step description of the approach used to calculate the fair value of such assets.
- ii. Provide the total value of assets that have values determined internally.
- iii. When the fair value of a material portion of assets is determined internally, a sensitivity test should be performed (and the impact on asset adequacy analysis results presented) assuming a haircut to internally derived fair values that the company deems reasonable given the commensurate level of anticipated uncertainty.

- D. **Privately-originated assets.** With respect to privately-originated assets, such as assets originated by the company, within the company's group, or within an entity closely tied to a company's group (inclusive of the company's investment manager), practices to help ensure accurate valuation of those assets should be documented in the actuarial memorandum. Also, assumed net cash flows from assets should be net of all explicit or implicit fees or expenses, such as origination fees, as well as reflective of other asset-related risks including credit risk, illiquidity risk, and other market risks.

In particular, related to privately-originated assets, provide the total value of such assets and disclose and detail how the following are appropriately reflected in the net cash flows:

- i. Contractual agreements in place between such entities.
- ii. Any measures related to the valuation of such privately-originated assets resulting from practices to ensure that the valuation is appropriate and accurate.
- iii. Revenue sharing, e.g., performance fees, between the entity responsible for providing investment or other types of services and the insurer, if applicable.

- E. **Investments expenses (fees).** Assumed investment expenses, whether paid to an external asset manager or to internal investment management staff, as well as additional expenses that are directly attributable to the specific investments, should be commensurate with the complexity of the assets.

- F. **Trends.** The actuarial memorandum should contain a detailed description of research and monitoring conducted related to trends impacting risks associated with the insurer's complex assets or industry-wide or market-wide assets of similar type.

- G. **Reinsurance modeling.** Related to reinsurance, relevant communications and disclosures from ASOP No. 11, for instance commentary on collectability and counterparty risk, should be presented in the memorandum.

- H. **Borrowing.** Please identify if any borrowing is modeled besides to address very short-term liquidity needs. Also, please verify borrowing and reinvestment rates to ensure that projections are not materially benefiting from arbitrage advantages.

5. Sensitivity Tests and Attribution Analysis related to Assumptions on Projected High Net Yield Assets

A. Sensitivity testing

- i. For the year-end 2022 and subsequent VM-30 actuarial memoranda, perform and disclose the asset adequacy analysis results from the following sensitivity test.

(a) For the sensitivity test for assets other than Equity-like Instruments (as defined in Section

- 3), assume individual asset (or asset group when there is asset compression) net yields for projected reinvestment assets do not exceed the Investment Grade Net Yield Benchmark. For Equity-like Instruments, the sensitivity test should assume an initial drop in value of 10%, followed by 5.5% annual returns.
- ii. Strict technical compliance for each asset may not be practical for reasons including model limitations. Professional judgment should be applied to produce sensitivity testing results that are consistent with the spirit of the test. A variety of alternative methods may be acceptable. Appropriate explanation and justification should be provided for the method that was employed.
 - iii. The NAIC Valuation Analysis (E) Working Group (VAWG) shall serve as a resource in the targeted review of asset adequacy analysis related to modeling of business supported with Projected High Net Yield Assets. VAWG shall provide periodic reports identifying outliers and concerns regarding the analysis to help inform regulators on the effectiveness of the Guideline in meeting the eight objectives stated in the Background section.
- B. For assets other than Equity-like Instruments (as defined in Section 3), perform an attribution analysis for any current assets or projected reinvestment assets assumed to produce net returns in excess of the Investment Grade Net Yield Benchmark, as follows:
- i. State the assumed excess net return, e.g., 1.2% if the assumed annual net return is 5.7% and the Investment Grade Net Yield Benchmark is 4.5%.
 - ii. Please estimate the proportion of the assumed excess net returns attributable to the following factors:
 - (a) Credit risk (in excess of credit risk on corporate bonds with PBR Credit Rating 9, if not already reflected in the default assumption)
 - (b) Illiquidity risk
 - (c) Volatility and other risks (please identify and describe these risks in detail)
 - iii. For each of the factors contributing to assumed net returns in excess of the Investment Grade Net Yield Benchmark, please explain why the factor is not assumed to contribute to additional losses (tail or otherwise) related to the risks.
 - iv. Where appropriate, apply judgment and provide commentary on the supporting rationale of how the expected excess return is estimated across the various risk components.

Mr. Mike Boerner
Chair, NAIC Life Actuarial Task Force (LATF)

Mr. Fred Andersen
Chief Life Actuary, Minnesota Department of Commerce

via email to Reggie Mazyck rmazyck@naic.org

Re: March Exposure of Actuarial Guideline Asset Adequacy Testing

Dear Messrs. Boerner and Andersen:

The Transamerica Companies welcome the opportunity to comment on the March 31st exposure of Actuarial Guideline on Asset Adequacy Testing (Guideline). We support efforts to address unduly aggressive AAT asset modeling practices. Our comments are limited to the scope of companies subject to the Guideline.

According to Section 2 of the exposure, the Actuarial Guideline is applicable to all life insurers with:

- A. *Over \$5 billion of general account actuarial reserves (from Exhibits 5, 6, 7, and 8 of the annual statement) [emphasis added] or*
- B. *Over \$500 million of general account actuarial reserves (from Exhibits 5, 6, 7, and 8 of the annual statement) and over 5% of supporting assets (selected for asset adequacy analysis) in the category of Projected High Net Yield Assets, as defined in Section 3.C.*

We have a concern that Section 2.A scopes in all life insurers with over \$5 billion of reserves, regardless of whether they make *material use* of Projected High Net Yield Assets in AAT. In the extreme, the Guideline would subject a large insurer that models a single, small Projected High Net Yield Asset to a variety of company-wide reporting, documentation, and sensitivity requirements.

To address this anomaly, we recommend **eliminating Section 2.A, leaving Section 2.B to define the scope**. Using Section 2.B alone creates a risk focused approach, as it addresses the *material use* of certain assets within AAT. Moreover, using Section 2.B alone would align the Guideline with Actuarial Guideline 51. AG51 applies extra AAT requirements only to insurers with more than 10,000 in-force long-term care policies, not to all large insurers regardless of the size of their LTC blocks.

We understand that regulators want sufficient industry information to identify assumption outliers. We suggest this still would be possible if the Guideline were applicable only to those insurers that make *material use* of Projected Net High Yield Assets.

Lastly, if the scope were limited to Section 2.B, companies with more than \$500 million of assets will still need to assess their AAT asset mix in relation to the 5% materiality threshold. We can support a requirement to provide a materiality demonstration to regulators. Considering the potential transitory nature of the Guideline, however, we are unsure whether this can be placed within the Guideline, whether this should be within VM-31, or whether it is best left to domestic regulators to request a demonstration, at least for now.

We hope the Task Force finds our comments helpful.

AMERICAN ACADEMY *of* ACTUARIES

May 2, 2022

Mr. Mike Boerner,
Chair
Life Actuarial (A) Task Force (LATF)
National Association of Insurance Commissioners (NAIC)

Re: Comments on the Revised Exposure Draft Actuarial Guideline on Asset Adequacy Testing

Dear Mr. Boerner,

The Asset Modeling and Reporting Task Force of the American Academy of Actuaries (“the task force”) is pleased to provide the following comments on the revised exposure draft actuarial guideline (AG) on asset adequacy testing (AAT) that was exposed during LATF’s March 31 meeting.

The task force supports many of the changes made in the revised exposure draft—e.g., the changes made to the treatment of equity and reinsurance, and keeping the sensitivity test a disclosure beyond year-end 2022. However, the task force has concerns that the BBB threshold for the scope definition and sensitivity test may miss some complex but highly rated structured securities, such as collateralized loan obligations (CLOs). The task force notes that the NAIC’s Statutory Accounting Principles Working Group (SAPWG) has a simultaneous exposure to add additional columns of information to Schedule D, including Option Adjusted Spread (OAS), duration, etc. LATF may want to consider whether any of this additional information can supplement credit rating as an additional principle-based basis for identifying complex, high-net-yield assets.

The revised exposure draft maintains the requirement for Committee on Uniform Securities Identification Procedures (CUSIP)-level attribution analysis of excess returns on projected high-net-yield assets. As expressed in our [prior comment letter](#), the task force questions the value of this attribution analysis given the relatively high amount of both judgment and effort that would be involved. The task force suggests considering a materiality trigger for such analysis such as only requiring it if the sensitivity in Section 5.A produces materially different results from the baseline. The task force also suggests considering additional guidance and/or safe havens for the attribution analysis, such as setting the portion of the excess spread due to defaults equal to the spread-related default factor from VM-20; i.e., equal to one-quarter of the difference between prescribed current and ultimate spreads, capped (floored) at double the positive (negative) baseline default factor. For the portion of the excess spread due to liquidity, the task force recommends considering whether guidance on an acceptable procedure could be provided, perhaps based on determining comparable assets at different points on the liquidity spectrum.

Section 2.B of the revised exposure draft states the AG is applicable for medium-sized life insurers (i.e., general account actuarial reserves between \$500 million and \$5 billion) with over 5% of supporting assets (selected for asset adequacy analysis) in the category of projected high net yield assets. In addition to considering assets on the valuation date, the task force suggests regulators contemplate whether Section 2.B should also consider the impact of reinvestments, which could materially increase the percentage of projected high net yield assets over the course of the projection.

Thank you for your consideration of these comments. Please contact Amanda Barry-Moilanen (barrymoilanen@actuary.org), the Academy's life policy analyst, with any questions.

Sincerely,

Jason Kehrberg, MAAA, FSA
Chairperson
Asset Modeling and Reporting Task Force
American Academy of Actuaries

Re: March Exposure of Actuarial Guideline Asset Adequacy Testing

Dear Messrs. Boerner and Andersen:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on the March 31st exposure of Actuarial Guideline on Asset Adequacy Testing (AAT, collectively Guideline). Our comments will be limited to scope of the assets and calculation of the benchmark yield, and additional comments will be provided on Sensitivity Testing at a future date.

Scope of the assets:

We recommend removing the following asset types from the scope of the Guideline:

- Insulated Separate Accounts
- “Vanilla” Bonds (default risk is primary risk, and cashflows are predictable)
- Direct Mortgage Loans (Commercial, Agricultural, Residential)
- Real Estate
- Mortgage Pass-Through Securities (not complex Mortgage-Backed Securities)

Calculation of benchmark yield:

We recommend the following:

- Benchmark requirements should not be applied seriatim, but rather at the level of the reinvestment categories; otherwise, you could double count extra default charges (e.g., if higher yielding assets receive an additional haircut, lower yielding assets not receiving the haircut will still receive the average default cost which would be overstated);
- There could also be double counting of default charges for securities where certain risks are modeled directly in the cash flows. For example, if a callable bond is called in a decreasing interest rate scenario, then that risk is already accounted for.

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

acll.com

- Summary attribution on inforce assets by reinvestment categories, and allow companies to determine how to apply against the benchmark (if not aligned, do something reasonable and provide rationale in the Memorandum);
- Apply PBR CR 10 consistently in the requirements.

Approach:

- Use a market yield approach (if market yield not available, use a reasonable approach and provide rationale in the Memorandum); for inforce assets, use Treasury rates as of the valuation date not as of the purchase date;
- We believe a long-term spread should still be used as the benchmark whether the market yield approach uses purchase date or valuation date. The use of current spreads in the benchmark calculation would create a lot of volatility, bringing assets in and out of scope as market conditions change. Since the attribution would be more theoretically correct to use current spreads, we suggest the following addition in Section 5.B.ii: “(d) Deviations of current spreads from long-term spreads.”
- For floating rate assets, treasury rate to be based on tenor to reset investment income (e.g., if the investment income is reset quarterly based on the 90-day Treasury plus a fixed specified spread, use 90-day rate) rather than time to maturity;
 - We would support the NY Special Considerations spread capping methodology to address our concerns related to WAL for floating rate assets. The next is 2021 NY Special Considerations Letter, Item 7, Page 9:
 “For this purpose, net yield pick-up is defined as the yield pick-up versus comparable investments that are generally regarded as “risk free” with respect to default risk (e.g., U.S. Treasuries) minus default provision based on current market values. For floating rate assets, the comparable U.S. Treasury is that with a time to maturity equal to the time until the next reset date for the floating rate asset. For fixed and floating rate notes the weighted average life is defined as the weighted average number of years until 100% of the outstanding principal is expected to be repaid, rounded to the nearest whole number but not less than 1. For assets that mature after 30 years, the weighted average life for determining the net yield pick-up shall be 30.”
- The requirements should be internally consistent; to the extent the Appointed Actuary identifies something is not, provide rationale on how addressed in the Memorandum.

Other:

- Does not apply to RBC C3 testing.

ACLI will contemplate additional recommendations and edits to these considerations on the benchmark yield.

ACLI is appreciative of your consideration of our comments and looks forward to a future discussion.

Thank you for your consideration,

cc: Reggie Mazyck, NAIC

Mr. Fred Andersen
Chief Life Actuary, Minnesota Department of Commerce

Re: March Exposure of Actuarial Guideline Asset Adequacy Testing

Dear Messrs. Boerner and Andersen:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit the following comments on the March 31st exposure of Actuarial Guideline on Asset Adequacy Testing (AAT, collectively Guideline). Our comments will elaborate on some prior comments but will generally focus on the sensitivity testing.

Scope of the assets:

Reiterating our prior letter, we recommend removing the following asset types from the scope of the Guideline:

- Insulated Separate Accounts
- “Vanilla” Bonds (default risk is primary risk, and cashflows are predictable)
- Direct Mortgage Loans (Commercial, Agricultural, Residential)
- Real Estate
- Mortgage Pass-Through Securities (not complex Mortgage-Backed Securities)

We wanted to elaborate on the rationale for this reduction in scope. The stated asset classes and their associated risks are well understood by both companies and regulators. Further, inclusion of such assets takes attention away from the assets of concern to regulators and creates significant work for companies that does not appear to provide any insights to regulators.

Sensitivity Testing:

While the Guideline addresses important concerns, industry believes some materials (potentially sensitivities, attribution, and template) should be allowed to be provided after the Opinion is submitted. Preparing these materials will take significant time, and it should not interfere with the normal process of development and submission of the Opinion. Allowing additional time to provide

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

acli.com

these materials will hopefully improve the quality of what is submitted and foster dynamic conversations between the domestic regulator and their companies.

Regarding the sensitivity tests, we believe that common stock, real estate (were it to be in scope) and other equity-oriented assets should be sensitivity tested separately from Bonds. ACLI supports applicability to reinvested assets only and apply only the level scenario for fixed income; this approach would reduce the complexity of the sensitivity and still allow for meaningful insights into the concerns around these assets.

ACLI also would support exemption from the sensitivity test for companies that have demonstrated adequate sufficiency in a more conservative scenario (e.g., the equity sensitivity if performing the CA equity scenario).

We have the following comments regarding the sensitivities, separated between bond and non-bond sensitivities:

Bond sensitivities:

- ACLI would support a NY-style benchmark spread approach applicable for reinvestment assets rather than a benchmark yield approach. Such an approach is operationally easier.
- ACLI suggests 3 consistent sensitivities across companies – benchmark spread, benchmark spread [+50], benchmark spread [+150].
- Perform the capping of future reinvestment yields at the level of aggregation used in the asset adequacy analysis model (rather than applying seriatim).

Non-bond sensitivities:

- ACLI suggests a simple equity sensitivity, which ACLI is still contemplating and will provide suggestions at a future date.

Attribution Analysis:

- Attribution is an open and challenging investment problem: how to attribute excess yield into different components. As far as we know, there is no agreed and defensible approach, either from academia or Wall Street, to achieve such attribution. The components of excess yield could include real (credit convexity) or perceived (new asset classes) credit risks, liquidity risk, product complexity, operational risk (uncertainty on future realized CFs vs initial expectations), etc. Even if we use some subjective way to do certain attribution, it is unclear how the final work product would be used.
- 2022 attributions may be more qualitative vs quantitative in nature; credit may be easier to quantify; other components (illiquidity, complexity, etc.) may need to be qualitative. 2022 requirements should let companies decide how to best do the attribution, acknowledging this approach would not have consistency between companies.
- We recommend revisiting the attribution analysis after the first year and periodically thereafter in order to confirm that it is providing regulatory value. In any case, year 1 should be on a “best efforts” basis as this will be a challenging exercise.

Template:

- It would be beneficial to develop instructions to assist in the population of the template. Specifically, the instructions should address definitions (and how to separate equity-like assets from Schedule BA assets)
- Our preference would be that the template only include those assets that are in scope and have yields in excess of the benchmark. Companies could provide a column (by categories) showing all assets; a column showing the assets included in the analysis; and a column

that is a subset of the assets included in the analysis column with the assets in scope of the Guideline.

- ‘Asset Summary’: “Amount” maybe more appropriate than “count”. Asset Counts might double count due to how assets are allocated to portfolios. Is there a standardized mapping around “asset type” from the blue books? Otherwise, allocation may be arbitrary. This could potentially be addressed in instructions.
- “Asset Yields – Initial Assets”: Suggest removing max gross/net yield since mostly will reflect the rate environment when things were purchased vs. any risk signaling. Further, some companies may have loss assumptions at the collateral level rather than bond level, which may create situations in which investments appear to have “0 defaults”.
- “Asset Yields – Reinvestments”: It is not clear why this should have the same level of specificity as initial assets. We would suggest, if there is a “cap spread” concept, simplifying this approach to be more similar to how it’s generally done today (a blended rate from VM-20/VM-21 spreads).
- “Sensitivity Test”: “Amount” may be more appropriate than “count”. This approach may not properly capture the rate environment in which the business being backed was written (e.g. it is more punitive for high yields stemming from high interest rate environment). Codifying this approach may lead to non-economically justified investment behaviors.
- “Attribution Initial Assets”: The current version seems reliant on how assets were bucketed. If we want to have market vs market approach, the key categories to focus on are 1) credit risk, 2) illiquidity risk, and 3) prepayment risk.
- “Attribution – Reinvestment Assets”: Not clear why this should have the same level of specificity as initial assets.

ACLI is appreciative of your consideration of our comments and looks forward to a future discussion.

Thank you for your consideration,

cc: Reggie Mazyck, NAIC

Utah Insurance Department received the following comments on the second exposure draft of the proposed guideline from one of the insurers domiciled in the state.

Section 4B

The guideline requires more rigorous modeling of “significant risks associated with a complex asset [that] are not adequately captured with traditional modeling techniques associated with simple assets like corporate bonds.” Complex assets are not defined. It would be helpful to provide some examples of “significant risks” that would necessitate this more rigorous modeling and the source of those risks (in terms of asset structure/characteristics).

Subsection 4B.i

More specific examples would be helpful.

What is meant by reflecting “anticipated liquidity in a stressed market”? Is this referring to a potential loss/haircut if the asset needs to be sold quickly in a stressed market?

Subsection 5A.(i)

This type of sensitivity test will cause issues for any company that offers fixed annuities with crediting rates in excess of the coupon rate on a BBB corporate bond. For smaller companies and companies with lower ratings, the cost of liabilities (e.g., crediting rate plus annualized commission plus variable expenses) may exceed the coupon rate on a BBB corporate bond, which would certainly result in negative surplus values under this sensitivity.

Section 5B

Completing this attribution analysis for each individual asset will be extremely onerous, especially for smaller companies with less actuarial resources. Some form of aggregation by asset category should be acceptable.

Subsection 5B.ii

It would be helpful to provide some methods of quantifying illiquidity risk. If an asset is deemed to be illiquid, what is preferable way to model it? The model could assume longer time required to sell, or a haircut to value otherwise. Would that be acceptable?

It would be helpful to define volatility risk and provide examples of “other risks”. Is volatility referring to volatility of asset cash flows with respect to interest rates, or to some other economic factors? If the latter, an example would be useful.

Subject: Additional comments on the second exposure draft of AG AAT

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Reggie, I'd like to pass along the following additional comments I have received on the second exposure draft of AG AAT.

1. The definition of the Complex Asset is too broad. It should be refined. For example, it could be defined as “Complex Assets” are assets that are included in Schedule DB of the Blue Book or similarly complex assets.
2. The definition of the Investment Grade Net Yield for existing assets uses current spreads from Table F. This does not appear to make sense. For existing assets, with purchase dates which may be far in the past, the long term spreads are much more relevant than the current spreads. So long term spreads from Table H should be used for the existing assets.
3. The definition of the Investment Grade Net Yield for reinvestment assets uses long term spreads from Table H. It would appear to make more sense to grade the applicable spread based on how much in the future the reinvestment asset is to be purchased. Grading should be from the current spreads in Table F for assets purchased shortly after the valuation date, to the long term spreads in Table H for assets purchased many years after the valuation date.

Sincerely,

–
Tomasz Serbinowski
, Actuary
Utah Insurance Department
4315 S. 2700 West, Ste. 2300 | Salt Lake City, UT 84129
P: 801-957-9324 | tserbinowski@utah.gov

Utah Insurance Department received the following comments on the second exposure draft of the proposed guideline from one of the insurers domiciled in the state.

Overall comments:

As stated previously, the purpose of the proposed guideline is to incorporate appropriate risks of complex assets. While we agree that complex assets are difficult to classify, the simplification to target high-yield assets would group together any asset whose assumed return is greater than an investment grade bond. For example, why would we assume that a stable real estate investment with a high yield has the same risk profile as a collateralized loan obligation asset.

Asset Adequacy Testing (Cash Flow Testing) is performed so that an actuary can determine whether or not the reserves and related actuarial items, when considered in light of the assets held by the company with respect to such reserves and related actuarial items including, but not limited to, the investment earnings on the assets, and the considerations anticipated to be received and retained under the policies and contracts, make adequate provision, according to presently accepted ASOPs, for the anticipated cash flows required by the contractual obligations and related expenses of the company.

The proposed guideline in the 1st exposure draft produced results far away from a reasonable modeling of the assets held by the company and their associated investment earnings and in these (almost all) instances would render the proposed test useless towards the actuary forming an opinion in this regard and should be ignored as being irrelevant and perhaps far more than moderately adverse. The actuary would still be in the current position of using other tests to form their opinions, except having spent some valuable resources to conduct the proposed test.

The company has reviewed and modeled the effect of the 2nd exposure draft of the proposed regulation and found that it is not as severe as the first because the cap on investment returns only applies to reinvestment assets. However, the company still believes that a better sensitivity test for the riskiness of the assets held by the company would be to use the assets held by the company and test default costs that are higher than in the base assumptions, say 150% of those, which we already do.

The company would be agreeable with running this as a sensitivity test, as it seems to be a reasonable stress test of the reinvestment assumptions; however, the company opposes this procedure becoming the basis for all future testing.

Suggested Improvements:

There appears to be an error in 3. B. ii, regarding the Investment Grade Net Yield Benchmark. It should be Table H, Long-term spreads for existing assets, and Table F, Current spreads grading to Table H, Long-term spreads for reinvestment assets. The reason being that long-term spreads are much more relevant to the actual spreads at the asset purchase dates which may be far in the past, whereas current spreads are more relevant to what is available for immediate asset purchases, and long-term spreads being more relevant to asset purchases longer in the future. At most times tables F and H should be close, but when they differ the current spreads will only be reasonable for periods of time near the current time.

Also, the definition of “Complex Asset” is too broad brush. It should be refined. For example, “Complex Assets” are assets that are included in Schedule DB of the Blue Book or similarly complex assets.

DRAFT

Economic Scenario Generator (ESG) Reserves and Capital Field Test Specifications

Primary Contact:
Scott O’Neal, FSA, MAAA (soneal@naic.org)

Section I: Overview

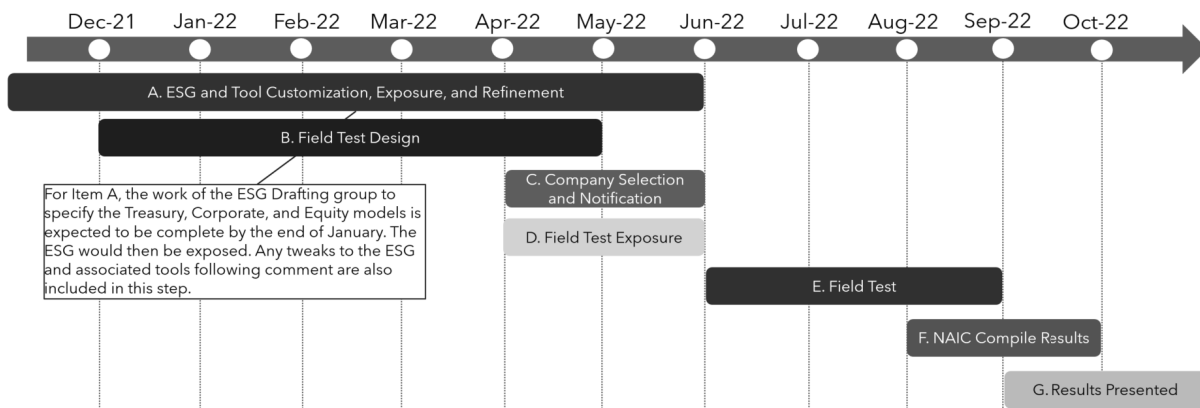

A. Objectives

The ESG Field Test should be able to address the following questions:

<p>1. Reserve and Capital Impact</p>	<ul style="list-style-type: none"> • How does the new ESG impact industry reserves and capital in different economic environments? • How do reserve and capital impacts vary by product type? • What is the impact of the changes to each ESG model (i.e. interest rate model, equity model, corporate model)? <p>The impact will be determined by comparing reserves and capital calculated using the field test ESG scenario sets against results that were determined using currently prescribed or allowed ESGs used in Annual Statement and/or RBC reporting.</p>
<p>2. Range of Results</p>	<ul style="list-style-type: none"> • What is the range of reserve and capital impacts across companies (e.g. percentage increase/decrease)? • Which particular companies and product types have the highest and lowest impacts, and why?
<p>3. Metrics</p>	<ul style="list-style-type: none"> • Which particular interest rate and equity scenarios cause the greatest stress? • How do results compare for CTE70 vs. CTE98? Calculate different CTE levels (e.g., CTE70, CTE98, CTE90) to compare to existing requirements. • How do the metrics perform with different scenario set sizes?
<p>4. Stability Over Time</p>	<ul style="list-style-type: none"> • How do the reserve and capital results change across scenarios produced for different economic environments?
<p>5. Exclusion Testing and Reserve Components</p>	<ul style="list-style-type: none"> • Does the new ESG change the likelihood of the SR being the dominant reserve? • Do the exclusion tests still perform as intended? • Does the VM-20 DR scenario still capture risk appropriately? <p>Note: Companies that currently pass the stochastic exclusion test will not have a stochastic reserve model.</p>
<p>6. Hedging Impact</p>	<ul style="list-style-type: none"> • Does the new ESG impact hedge effectiveness? If so, what feature is driving this (e.g. the new ESG produces additional yield curve shapes, such as humps)?

7. Sensitivity Tests and Attribution	<ul style="list-style-type: none"> Do baseline results and/or sensitivity tests indicate that the field-tested ESG calibration needs to be modified? What are the drivers of reserve and capital changes as determined from attribution analysis?
---	---

B. Tentative Timeline

Note: Dotted lines represent the beginning of the month.

C. Structure

- NAIC to collaborate with the American Academy of Actuaries’ ESG Field Testing Subgroup and American Council of Life Insurer’s ESG Field testing group to design the NAIC ESG Field test. Field test recommendations will be brought to a joint meeting of the Life Actuarial (A) Task Force and the Life RBC (E) Working Group.
- Field Test Participants
 - The NAIC has solicited volunteer companies to participate in the ESG field testing.
 - Further analysis needs to be completed to assess product coverage.
 - Additional participants may be requested if desired by regulators.
- The NAIC will work with state regulators to coordinate the following:
 - Communicating with field test participants and providing ESG Field Test instructions and result templates.
 - Collecting, aggregating, and summarizing company results

D. Reserve and Capital Frameworks Covered

VM-20	<ul style="list-style-type: none"> All individual life insurance policies issued on or after the operative date of VM-20, or issued during the transition period, if elected by the company. Smaller insurance companies may obtain an exemption from VM-20 calculations.
--------------	--

	<ul style="list-style-type: none"> Stochastic reserves, Deterministic reserves, and stochastic exclusion ratio test (SERT) values will need to be field tested
VM-21/C3 Phase II	<ul style="list-style-type: none"> Variable deferred or immediate annuity contracts whether or not they have GMDBs or VAGLBs, group annuity contracts containing GMDBs or VAGLBs, and policies or contracts with guarantees similar in nature to GMDBs or VAGLBs where there is no other explicit reserve requirement Stochastic Reserves and the Additional Standard Projection Amount will need to be field tested. Different CTE levels will need to be tested for reserves and capital
C3 Phase I	<ul style="list-style-type: none"> Include certain annuities (with the exception of indexed annuities) and single premium life insurance for C3 Phase I testing. Reported C3 Phase I capital will be compared against results produced using the field test scenario sets. Participants that are testing products according to the C3 Phase I methodology will be asked to use a choose a scenario set with at least 200 scenarios for the ESG field test candidates rather than scenario sets with 50 or 12 scenarios as used in reported C3 Phase I results.
VM-22 (Out of Scope)	<ul style="list-style-type: none"> VM-22 methodology changes will be deferred to the VM-22 field test, and therefore VM-22 calculations are out of scope for this field test.

E. Survey Questions

In addition to providing quantitative results, field test participants will also be asked to respond to a series of survey questions. These questions will be designed to help further understand the companies field test results or help provide additional insight beyond what the quantitative results will show. Survey questions are contained in the Field Test Instructions document.

Section II: Assumption and Model Specifications

A. Population

- Use the actual inforce assets and liabilities corresponding to the 12/31/21 valuation date. For model runs that adjust the starting conditions from the 12/31/21 environment, make adjustments to the inforce assets and liabilities as appropriate. The types of adjustments will be detailed in the Field Test Instructions document. .
- To the extent that it is not possible for a company to run all relevant statutory reserve and capital models for the field test, a company may elect to run a representative set of their models or inforce. Companies should then either adjust the final results to

align with their reported reserve and/or capital amounts, or alternatively, they should adjust their reported amounts to align with the representative business that is being field tested.

B. Reserve/Capital Model Type

- Models should be capable of projecting asset and liability cashflows across numerous stochastic scenarios according to the requirements of the respective reserve or capital framework.

C. Asset/Liability Assumptions

- Utilize company and/or prescribed assumptions relevant to each respective reserve or capital framework.

D. ESG Models and Scenarios

Model	Field Test Recommendation
Treasury	1. Field test two Treasury model candidates
	a. Conning Calibration and Generalized Fractional Floor (“Non-shadow”)
	b. Alternative Calibration and Shadow Floor (“Shadow”)
Equity	2. Equity Utilize the existing GEMS® equity model with equity-Treasury linkage based on the short Treasury rate for field testing. The following calibrations will be tested:
	a. A baseline calibration that has been modified for increased alignment with the gross wealth factors produced by the AIRG Equity model
	b. The original Conning equity model calibration that had significantly lower gross wealth factors than the AIRG Equity model
	c. An alternative calibration developed by the ACLI
Corporate	3. Include GEMS® corporate model in initial field testing with the calibration updated for consistency with other generated returns on a risk/reward basis

- Field test participants will be provided scenario sets from the new ESG for field testing via the <https://naic.conning.com/scenariofiles> website.
- Parameters for the ESG and statistical summaries will be released alongside the scenarios
- 10,000 scenarios will be provided along with 1,000, 500, 200, and 40 scenario subsets. The subsets will be produced using the existing AAA Scenario Picking Tool methodology (see “Resources” section below for more information)

- As part of the field test, participants will be asked to compare results using the scenario sets from the new ESG to results that were determined using currently prescribed or allowed ESGs used in Annual Statement and/or RBC reporting. Field test participants will be responsible for obtaining scenario sets used for their reported results.
- Participants should run the same number of scenarios corresponding to their reported numbers for each respective reserve or capital model, with the exception of C3 Phase I which has alternative instructions. Any discrepancies between the number of scenarios used in the reported as compared to the field test should be addressed in a qualitative survey question. .
- Participants will also be asked to run the 16 SERT scenarios. This step will be optional for VM-21 and C3 Phase I, but required where companies already have the SERT implemented in their VM-20 models. This will be used to facilitate the results analysis. Since the SERT scenarios cover a range of interest rate and equity combinations, the results could be used to help explain and validate the stochastic results.
 - Reasoning: When evaluating results from stochastic scenarios, one challenge is how to identify the drivers of reserve/capital change. Individual stochastic scenarios can be hard to describe, but the SERT scenarios were designed to capture changing economic environments that are easy to explain.

E. Summary of Field Test Runs

The field test runs are described in the Field Test Instructions document.

F. Metrics/Output

- Reserve/Capital Framework specific results
 - VM-20
 - Stochastic reserve
 - Deterministic reserve
 - Stochastic Exclusion Ratio Test results
 - VM-21
 - Stochastic reserve
 - VM-21 CTE70 Best Efforts and CTE 70 Adjusted
 - Additional Standard Projection Amount
 - TBD: Company-Specific Market Path (CSMP) scenarios
 - C3 Phase II
 - Total Asset Requirement
 - C3 Charge
 - C3 Phase I
 - Reserves that were cash flow tested for asset adequacy
 - The C3 Phase I results should be summarized by applying the weights in the table below to the respective percentiles.

----- Percentile Weighting ----->

92 92.5 93 93.5 94 94.5 95 95.5 96 96.5 97 97.5 98
.02 .04 .06 .08 .10 .12 .16 .12 .10 .08 .06 .04 .02

- Reinsurance
 - Companies should provide results on a post-reinsurance basis. Optionally, companies may provide results on a pre-reinsurance basis in addition to providing on a post-reinsurance basis.
- Participants will also be asked to provide scenario level results by projection timestep according to the respective reserve or capital framework. For example, companies will be asked to provide the present value of accumulated deficiencies at time zero and future timesteps for the VM-20 stochastic reserve calculation.

G. Aggregation

- Field test participants are allowed to aggregate business according to the requirements of each respective reserve or capital framework. For example, participants electing to include whole life insurance and term insurance in their testing may aggregate within the established VM-20 Reserving Categories, but not across the categories.

H. Fund Mapping

- The GEMS ESG contains additional equity and bond fund returns that would allow for a more refined mapping of funds. Companies shall use their fund mapping as of 12/31/21 rather than create a more refined fund mapping. A survey question will ask participants to qualitatively or quantitatively address how their results would be impacted by including a more refined fund mapping.

Section III: Attribution Analysis

Note: We are seeking comment on how attribution analyses could be incorporated into the ESG Field Test along with recommendations for particular areas of focus.

Section IV: Resources

- A. AIRG used for C-3 Phase I
 - Life Risk-Based Capital (E) Working Group
- B. AIRG used for C-3 Phase II, VM-20, and VM-21
 - Society of Actuaries Resource Page for Economic Scenario Generators
- C. Proposed SERT Scenario Methodology

- D. Proposed Scenario Subset Selection Methodology
- E. ESG Landing Page (source for NAIC scenarios, documentation, etc.)

DRAFT

TO: Company Field Test Contact

FROM: Mike Boerner, Texas Department of Insurance
Chair of the Life Actuarial (A) Task Force

DATE: TBD

RE: Economic Scenario Generator (ESG) Field Test Instructions, Results Templates, and Qualitative Survey

The Texas Department of Insurance is reaching out to all companies participating in the ESG field test to be conducted from June through August. Thank you for participating in the field test. Please follow the field test instructions contained in Appendix A, and use the templates provided to submit your results. Also, please complete the Qualitative Survey contained in Appendix B as applicable for the product types tested.

Confidentiality

This information is being requested under both the authority of the general examination authority of the Texas Department of Insurance pursuant to Tex. Ins. Code §§ 401.051, *et seq.*, and the Standard Valuation Law, Tex. Ins. Code §§ 425.051, *et seq.*, and is considered to be confidential under these provisions. These provisions also permit the Texas Department of Insurance to share this confidential information with other state regulators and the NAIC, including the Life Actuarial (A) Task Force (LATF), the Life RBC (E) Working Group, the Valuation Analysis (E) Working Group (VAWG), and NAIC staff. Your company specific information will remain confidential pursuant to these statutory provisions.

Additional Instructions

Prior to 6/1/22, please confirm receipt of this email.

If you have questions regarding the field test instructions or templates, please contact Scott O’Neal at soneal@naic.org.

Your field test results are requested by 8/31/2022. The subject line should start with the company’s NAIC number, followed by “ESG Field Test”. Email your response to: Actuarialdivision@tdi.texas.gov, and CC Rachel.Hemphill@tdi.texas.gov and Yujie.Huang@tdi.texas.gov.

Thanks,

Mike

I. Introduction

A. Background

Work is in progress to develop a new ESG to be prescribed for use in calculations of life and annuity Statutory reserves according to the *Valuation Manual* (e.g. VM-20, VM-21) and capital under the NAIC RBC requirements (e.g. C3 Phase 1, C3 Phase 2). Based on preliminary AAA model office testing, the implementation of a new ESG may materially increase life and annuity reserves and capital. The purpose of the ESG field test is to assess the impacts for different product types, gain a better understanding of the drivers of reserve and capital differences, and determine potential ESG modifications that may be desirable for a second field test tentatively planned for early 2023.

This document should be read in conjunction with the document titled “Economic Scenario Generator (ESG) Reserves and Capital Field Test Specifications”. Some of the information from that document is repeated here, but with greater detail.

B. Communication of Field Test Results

NAIC staff will compile aggregated results in a report that will not contain any company-specific or other company-identifiable information. Assuming that companies have completed the field test by the end of August, the compilation of results is expected to be completed by the end of September, 2022. Joint LATF/LRBC WG open meetings will then be held to discuss aggregate field test results, and to determine whether ESG modifications should be made based on the results of the field test.

C. Next Steps

1. After the June field test begins, there may be additional optional runs requested (e.g. an alternative equity model calibration from the ACLI)
2. A second field test is expected to be conducted in early 2023. This field test may include:
 - Calibration changes for the Treasury, Equity, and Corporate Bond models desired by regulators.
 - Testing of alternative simplified models. For example, the Academy is currently developing a simplified Corporate Bond model. The ACLI is also developing an alternative model.
 - Any structural changes to the Conning Treasury, Equity, and Corporate Bond models desired by regulators after a review of results from the first field test. Structural ESG changes will require a programming effort, and the amount of time needed to complete this will depend on the nature of the changes. Examples of structural changes would include any modification to the linkage between the Treasury model and the Equity model, and implementation of an alternative simplified Corporate model.
3. Prior to ESG implementation, related *Valuation Manual* and RBC instruction changes will be drafted for consideration and adoption.

II. General Field Test Instructions

A. Summary of Field Test Runs

The runs needed for the field test are summarized in the table below. The Baseline #1 results already exist; they should match the values from year-end 2021 statutory reporting. The Baseline #1 and Baseline #2 results should reflect the ESG the company used for statutory reporting, whether it was a version of the Academy ESG or a proprietary ESG. Similarly, the Baseline runs should reflect the models companies used for year-end reporting, whether they were as of 12/31/21 or 9/30/21. For companies that typically produce results as of 9/30 (e.g. for C3 Phase I), 9/30 scenarios will be provided for the Baseline #2, and Tests 1a and 1b.

The table below lists the elements of the field test and identifies them as either “required” or “optional”. Required results are considered most important to the success of the field test. It is hoped that participating companies will provide results for these items, and as many of the optional items as possible. However, it is recognized that companies may not have the capacity to produce everything due to resource constraints. If this is the case, it is preferable that companies provide partial results rather than not participate in the field test at all. Further technical details behind the ESG calibration are provided in the powerpoint embedded below.

Alternative Run Discussion.pptx

Field Test Runs**	Scenario Sets	Inforce Assets and Liabilities	Priority	Required or Optional
Baseline #1 Already exists; no new runs needed.	Scenario set(s) the company used for 12/31/21 statutory reporting of reserves and RBC	As of 12/31/21	N/A	Required
Baseline #2	ESG the company used for 12/31/21 statutory reporting of reserves and RBC, but modified to produce scenario sets with 12/31/19 starting conditions	As of 12/31/21 with appropriate adjustments to inforce*	9	Optional
Test #1a	GEMS Baseline Equity and Corporate model scenarios as of 12/31/21, and Conning Treasury model calibration with generalized fractional floor as of 12/31/21	As of 12/31/21	1	Required
Test #1b	Same as Test #1a, but with Alternative Treasury model calibration with shadow floor as of 12/31/21	As of 12/31/21	2	Required
Test #2a Sensitivity Test with Higher Interest Rates	Same as Test #1a, but with Equity, Corporate, and Treasury models with a 12/31/19 starting yield curve modified using a 200 BP increase across all maturities	As of 12/31/21 with appropriate adjustments to inforce*	3	Required
Test #2b Sensitivity Test with Higher Interest Rates	Same as Test #1b, but with Equity, Corporate, and Treasury models with a 12/31/19 starting yield curve using a 200 BP increase across all maturities	As of 12/31/21 with appropriate adjustments to inforce*	4	Required
Test #3: Attribution Analysis Run	Conning Treasury model calibration with generalized fractional floor as of 12/31/21, GEMS Corporate model as of 12/31/21, and GEMS Equity model corresponding to a	As of 12/31/21	5	Optional

	12/31/19 yield curve with a 200 BP increase across all maturities			
Test #4: Attribution Analysis Run	Same as Test #3, but using Alternative Treasury model calibration with shadow floor as of 12/31/21	As of 12/31/21	6	Optional
Test #5: Conning Original Equity Calibration	Same as #1a, but with Conning's original Equity model calibration that had significantly lower Gross Wealth Factor's than the AIRG Equity.	As of 12/31/21	7	Required
Test #6: ACLI Alternative Equity Calibration	Same as #1a, but with the ACLI's Alternative Equity Calibration	As of 12/31/21	8	Optional

*More information on adjustments to be added later

**After the June field test begins, there may be additional optional runs requested (e.g. an alternative equity model calibration from the ACLI)

B. Framework Specific Required and Optional Quantitative Results

The table below illustrates the framework specific results that are required to be produced as part of the field test along with optional components that companies may elect to provide.

Field Test Element	Required for VM-21 and C3 Phase II	Required for VM-20	Required for C3 Phase 1	Optional
Post reinsurance ceded results	X	X	X	
Pre-reinsurance ceded results				X
Stochastic Reserve	X	X		
Scenario Reserves, before cash surrender value floor	X	X		
Scenario Reserves, after cash surrender value floor	X	X		
CTE70 Best Efforts	X			
CTE70 Adjusted	X			
Additional Standard Projection Amount	X			
CTE98 (for C3 Phase II)	X			
Deterministic Reserve		X		
NPR		X		
Results from each of the 16 SERT Scenarios, and SERT ratio		X		For VM-21 and C3P1

C. Number of Scenarios

For each product type to be tested, the number of scenarios used for field testing should match the number the company used for statutory reporting on 12/31/21. The number of scenarios used may

vary by product type, as long as it is consistent with the number used for statutory reporting. For example, if 1,000 scenarios were run for variable annuity reserves reported as of 12/31/21, then 1,000 scenarios should be run as of that valuation date for the field test. Similarly, if 200 scenarios were run for life insurance reserves reported as of 12/31/21, then 200 scenarios should be run for the field test as of that valuation date.

D. Scenario Sets

1. Scenario files – The scenario sets to be used for the field test, along with descriptions of the file formats, will be available for download at <https://naic.conning.com/scenariofiles>. Statistical summaries of the projections will also be provided, along with the parameters used for the ESG.
2. Scenario subsets - A full scenario file containing 10,000 scenarios will be provided for each model run to be tested. Scenario subsets of 1,000, 500, 200, and 40 scenarios will also be available.
3. Monthly Timestep – all scenario files will be provided using a monthly projection timestep
4. Additional scenario sets – The following additional scenarios are available:
 - 16 Stochastic Exclusion Ratio Test (SERT) scenarios
 - TBD - Company-Specific Market Path (CSMP) scenarios

E. Projection Period

Each scenario file contains monthly projections for 100 years. For each product type to be tested, the projection period used for field testing should match the projection period the company used for statutory reporting as of 12/31/21.

F. Negative Interest Rates

The two ESG Treasury models used for the field test include scenarios with negative interest rates, so companies will need to consider whether any modeling or assumption changes are needed to handle this. It is recommended that companies read and consider the information in the paper below:

Potential Modeling Challenges in a Negative Interest Rate Environment

Author: Zohair Motiwalla, FSA, MAAA
Principal and Consulting Actuary, Milliman

For purposes of the field test, companies may make assumption changes as appropriate to reflect negative interest rates, but this is not required given the amount of time this may take. The Qualitative Survey asks companies to provide details on whether assumption changes were made, and the nature of the changes. It also asks companies to comment on any changes anticipated to be made when the new ESG is adopted.

G. Model Simplifications

If the company is not able to provide model results that match reported values, the company may run a representative model or inforce population. The company should then either adjust the final results to align with their reported amount, or alternatively, they should adjust their reported amount to align with the representative business that is being field tested.

H. Hedging (as applicable)

The hedging strategy the company used as of 12/31/21 for statutory reporting should be used for the field test runs.

i. Fund Mapping (as applicable)

The company's fund mapping used as of 12/31/21 for statutory reporting should be used for the field test to allow for a more direct comparison of results from the Academy ESG (or proprietary ESG) vs. the GEMS ESG. Although the GEMS ESG contains additional equity and bond fund returns for a more refined mapping of funds, these should not be used for the field test. However, if certain company circumstances (e.g. company reports using a proprietary ESG) exist where it is not practical or possible to use the same fund mapping, companies may use judgement to determine an appropriate fund mapping for the field test. Please see the survey question related to the fund mapping to provide more information.

The tables below show the equity and bond returns available from the Academy ESG and the comparable returns offered in the GEMS equity and corporate bond models. For the field test, companies should use the appropriate GEMS returns that correspond to their fund mapping as of each valuation date.

Further information on fund mapping can be found in the results templates

AAA ESG Returns	Market Proxy Used to Produce AAA ESG Returns*	Field Test GEMS® Fund Mapping**
Diversified Large Capitalized U.S. Equity	S&P500 Total Return Index	Large Cap
Diversified International Equity	MSCI-EAFE \$USD Total Return Index	International Diversified Equity
Intermediate Risk Equity	U.S. Small Capitalization Index	Small Cap
Aggressive Equity**	25% Emerging Markets, 12.5% NASDAQ, 62.5% Hang Seng***	2/3 Aggressive Foreign Equity, 1/3 Aggressive US Equity
Money Market	3 Month Treasury returns	Money Market
U.S. Intermediate Term Government Bonds	U.S. Intermediate Term Government Bonds	Int Govt Bonds
U.S. Long Term Corporate Bonds	U.S. Long Term Corporate Bonds	Long Inv Corp Bonds
Diversified Fixed Income	65% ITGVT + 35% LTCORP	65% Int Govt Bonds, 35% Long Inv Corp Bonds
Diversified Balanced Allocation	60% Diversified Equity + 40% Fixed Income	60% Large Cap, 26% Int Govt Bonds, 14% Long Inv Corp Bonds

** See [Basic Data Columns](#) for more information on the returns available in the GEMS® scenario files

***The Academy Equity Model Aggressive Equity proxy is not meant to suggest a representative asset profile for this class but used merely to build an historic index with high volatility and sufficient history.

III. Additional Instructions for VM-21

A. Model Assumptions

Models should utilize company and/or prescribed assumptions relevant to VM-21 for 12/31/21 statutory reporting unless otherwise specified. All components of the modeling other than the scenarios should remain the same between reported and field test runs (e.g., the same investment strategy, liability assumptions, CDHS modeling, etc.).

B. Aggregation

Business should be aggregated according to the requirements under VM-21, consistent with how this was done for statutory reporting on 12/31/21. For example, if RILAs were aggregated with variable annuities for statutory reporting, they should be aggregated for the field test.

IV. Additional Instructions for VM-20

A. Model Assumptions

Models should utilize company and/or prescribed assumptions relevant to VM-20 for 12/31/21 statutory reporting unless otherwise specified. All components of the modeling other than the scenarios should remain the same between reported and field test runs (e.g., the same investment strategy, liability assumptions, CDHS modeling, etc.).

B. Exclusion Tests

1. Deterministic Exclusion Test - This is not applicable for purposes of the field test and should not be performed.
2. Stochastic Exclusion Ratio Test – The SERT should be performed unless the company has not built out that functionality in their models. The results may help determine whether the SERT still performs as intended using the new ESG.

C. Stochastic Reserve Calculation

The Stochastic Reserve should be calculated unless the company has not built out that functionality in their models.

V. Additional Instructions for C-3 Phase I

A. Methodology

Companies should use the current C-3 Phase I methodology for the field test, with the exception noted in Section B below. A future VM-22 field test will include both the new ESG and new C-3 Phase I methodology.

B. Number of Scenarios

For Tests 1a – Test 4 (see the table in Section II.A), companies should run a minimum of 200 scenarios.

VI. Attribution Analysis

TBD – Details to be added to this document when provided by the Academy

VII. Reporting of Field Test Results

A. Results Templates

Companies should provide quantitative field test results using the Excel templates that have been developed for this purpose. Instructions are included in the templates. The spreadsheet tabs may be copied as needed within the workbook to reflect any additional products/models not included.

.

B. Qualitative Survey

Companies are asked to complete the Qualitative Survey contained in Appendix B to the extent possible for the product types tested.

C. NAIC Aggregation of Company Results

NAIC staff will be aggregating quantitative results across companies and producing a variety of metrics using SAS. For ease of aggregation, please do not add rows or columns to the results templates.

Field test participants' responses to the Qualitative Survey will also be aggregated where appropriate.

Appendix B

Economic Scenario Generator (ESG) Field Test Qualitative Survey

All companies are asked to provide responses to the survey questions below to the extent possible for the types of results submitted. The responses will aid in understanding how each company performed their modeling, and potential drivers of reserve and RBC differences by product type. The responses will also be used to identify potential ESG modifications that may be desirable for a second field test tentatively planned for early 2023.

I. VM-21 and C3 Phase II

1. Which valuation date was used for Baseline #1 (i.e. for year-end statutory reporting)?
12/31/21 9/30/21
2. How many scenarios were used for Baseline and field test runs?
10,000 1,000 500 Other (please describe)
3. Baseline #1 should match what was reported in the Variable Annuities Supplement for Individual and Group business. Is this the case? Yes No If No, please explain (e.g., describe any subsets of contracts that were excluded or added for the Baseline, describe any simplifications used).
4. Was a proprietary ESG used to determine values for the Baseline runs? Yes No
5. Did the company make any changes to assumptions or modeling approach for the field test runs because the ESG produces negative interest rates?
 - a. If so, please describe the changes that were made.
 - b. If not, please describe the changes anticipated to be made when the new ESG is adopted.
6. Were any other changes to assumptions or modeling made for the field test runs? Yes No If Yes, please explain.
7. Did you use an implicit method or explicit method to model hedging?
Implicit method Explicit method Did not model hedging Other If Other, please explain.
8. If your company uses an implicit methodology to quantify the impacts of hedging, have you reassessed whether it is still appropriate in light of the field test scenario sets?
9. Did the new ESG impact hedge effectiveness? If so, can you tell what is driving this?
10. Where possible, please explain the change between the field test runs and the Baseline runs for the Post-Reinsurance-Ceded Reserve for Guaranteed Benefits, and optionally for Pre-Reinsurance-Ceded Reserve for Guaranteed Benefits. As part of your response, please address each of the following questions.

- a. What were the drivers of the change?
 - b. How did the drivers interplay to result in the overall change? Were they additive, compounding, offsetting, etc.?
 - c. How did the VA product guarantees affect the Baseline and field test results differently? In what way did the product guarantees contribute to the change in results?
 - d. When comparing the field test runs to the Baseline, how did the sensitivities to equities vs. interest rates drive the magnitude of the change in results? In other words, how sensitive was the company's portfolio to the change in the interest rate scenarios? Or, if the reserve amount is driven more by the equity levels, how would you characterize that relationship or dependence?
 - e. Did the impact of hedging differ between the baseline and the Field Test? If so, in what way?
11. Where possible, please explain the change between the field test runs and the Baseline for the **Risk-Based Capital**. Please address the following as part of your response.
- a. Compare the impacts of the field test scenarios on the CTE 70 vs. CTE 98 tail metrics. Discuss the interplay and resulting impact on Risk-Based Capital.
 - b. Are there distinct drivers that create different movements in the 30% vs. 2% tail?
 - c. Are the impacts of hedging different when calculating the reserve vs. risk-based capital? Why or why not?
12. Does your company use the specific tax recognition or a macro-tax adjustment to determine post-tax capital amounts?
13. If the fund mapping for the field test scenarios had to change from what was included in the ESG used for reporting, please describe the new fund mapping and why it was necessary.

II. VM-20

1. Which valuation date was used for the Baseline run (i.e. for year-end statutory reporting)?
12/31/21 9/30/21
2. How many scenarios were used for the Baseline and field test runs?
10,000 1,000 500 200 40 Differs by product type
 Specify the details if selected "Differs by product type": _____
3. The Baseline should match what was reported in the VM-20 Reserves Supplement. Is this the case?
Yes No If No, please explain (e.g., describe any subsets of contracts that were excluded or added for the Baseline, describe any simplifications used).
4. Was a proprietary ESG used for calculating the baseline? Yes No
5. Did the company make any changes to assumptions or modeling approach because the ESG produces negative interest rates?
 - a. If so, please describe the changes that were made.
 - b. If not, please describe the changes anticipated to be made when the new ESG is adopted.
6. Were any other changes to assumptions or modeling made for the field test runs? Yes No If Yes, please explain.

7. Did your dominant PBR reserve change?
8. If the fund mapping for the field test scenarios had to change from what was included in the ESG used for reporting, please describe the new fund mapping and why it was necessary.

III. C3 Phase I

1. Which valuation date was used for the Baseline (i.e. for year-end statutory reporting)?
12/31/21 9/30/21
2. How many scenarios were used for the Baseline run?
50 12 Other (please describe)
3. How many scenarios were used for field test runs?
200 Other (please provide the number)

IV. All Products

1. All amounts populated in the templates should be shown in dollars. Is this the case? Yes No
If No, what units did you use?
2. If the inforce files were adjusted for the field test runs, please describe the changes that were made.
3. To what extent did the field test runs capture the potential impact of the scenarios on results? Were there areas that could not be tested/assessed (e.g., due to the need for additional scenario sets, new or existing simplifications)?
4. What additional information / analysis or scenario refinements would your company recommend?
5. Please provide any additional perspectives and information that could be relevant in the post-field test assessment. This information could include observations, unexpected results, insights and desirable properties from alternative models/scenarios, etc. To allow for aggregation of company responses to this question, please categorize each of your comments as relating to "capital/reserves," "product specific issues," "attribution," or "other issues".
6. Would your company need to create a more refined mapping to equity and bond funds given the expanded set of returns offered by the GEMS ESG? If yes, please provide a quantitative or qualitative explanation of how it might impact your results.
7. If your company elected to run a representative set of models or inforce, please describe any adjustments made to account for the difference between the representative models or inforce and the reported values. Also please provide an explanation as to why the models or inforce that was used in field testing is expected to be representative.
8. If a different number of scenarios was used for field test results as compared to the number of scenarios used in reporting, please provide information on which results are impacted.
9. Does your company use the specific tax recognition or a macro-tax adjustment to determine post-tax capital amounts?

Draft: 6/29/22

Life Actuarial (A) Task Force
Virtual Meeting
May 12, 2022

The Life Actuarial (A) Task Force met May 12, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ben Bock, Ted Chang, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. Heard an Update on the LIBOR to SOFR Transition

Pat Allison (NAIC) provided an overview of the current process for calculating the swap spreads prescribed in the *Valuation Manual*. She said the swap spreads are the average of London Interbank Offered Rates (LIBOR) generated from two data sources; i.e., J.P. Morgan and Bank of America. She said LIBOR will be published through June 2023. The replacement for LIBOR is the Secured Overnight Financing Rate (SOFR). She said the NAIC was recently informed by one of the data sources that it has been basing the swap spread data sent to the NAIC on the SOFR since Dec. 31, 2021. Consequently, since that time, swaps published for all tenors, except the three-month and six-month, have been inadvertently based on an average of LIBOR-based rates and SOFR-based rates, which is contrary to the intent of the *Valuation Manual*.

Ms. Allison proposed that NAIC staff inform all parties, via email and posting a statement on the NAIC website, of the inclusion of the SOFR in the published swap spreads. She said NAIC staff will pursue discussions with the data sources to ask if they can provide both LIBOR and SOFR-based swap rates. She said getting both sets of rates will allow the NAIC to separately publish rates based on both rates for as long as the LIBOR swap spreads are available. Mr. Carmello asked if companies would be required to use one or the other. Ms. Allison said that issue needs to be discussed with the Task Force, but the current thinking is that companies would have the discretion to use the rates that best represent the portfolio supporting their reserves. Task Force members posed no objections to the plan for communicating to companies.

2. Discussed ESG Field Test Specifications, Instructions, and Templates

Scott O'Neal (NAIC) said the public comment period for the field test specifications, field test instructions, and field test template ended May 10. He said no formal comments were received, but the American Academy of Actuaries (Academy) and the American Council of Life Insurers (ACLI) provided feedback during a recent Economic Scenario Generator (ESG) Field Test Planning Group meeting. He said based on the feedback, each of the field test documents was revised as shown by the redlined attachments. Mr. Carmello said run #5 in Section II.A of the field test instructions should be a mandatory run. Mr. Boerner said the document will be re-exposed.

The Task Force exposed the field test specifications (Attachment Ten-A), field test instructions (with run #5 mandatory) (Attachment Ten-B), and field test template (Attachment Ten-C) for a public comment period ending May 17.

3. Discussed the Academy ESG Field Test C-3 Phase I Template

Link Richardson (Academy) said the Academy C-3 Spreadsheet cover letter describes the C-3 Phase 1 spreadsheet. He said the spreadsheet is an extension of the one used in the 2015 C-3 Phase 1 field test. He said the updated version allows for the running of 1,000 scenarios instead of 200 scenarios, which was allowed by the 2015 version and accommodates conditional tail expectation (CTE)-70 and CTE-98. He said the Academy is providing the spreadsheet to the NAIC for use in the ESG field test.

The Task Force exposed the Academy ESG field test C-3 Phase 1 cover letter (Attachment Ten-D) and template (Attachment Ten-E) for a public comment period ending May 17.

4. Discussed the Equity Model Parameters

Mr. O’Neal reviewed the table of gross wealth factors (Attachment Ten-F), comparing the results of the Conning and ACLI calibrations to the results of the Academy Interest Rate Generator (AIRG). He said the NAIC staff recommended calibration is shown in column (H2). He said sensitivities will also be run for the Conning equity baseline calibration in column (A) and the ACLI alternative calibration in column (J).

Brian Bayerle (ACLI) discussed the ACLI proposed alternative equity calibration. He said the distribution of gross wealth factors across multiple projection horizons has been a traditional criterion for equity valuations in the U.S. and Canada. He said given the nature of life and annuity liabilities, looking at single year returns is not as useful or relevant as looking at gross wealth factors. He referred to a slide in the ACLI presentation (Attachment Ten-G) that compares the results from the Conning baseline calibration to the results of the AIRG calibration. He pointed out that there are significant differences in both the right and left tails of the distribution. He said the Conning baseline calibration significantly increases reserves and the total asset requirement (TAR). He posited that the differences are due mostly to unintended side effects in the Conning model, as opposed to underlying model changes. He said there do not seem to be any intentional changes proposed by state insurance regulators, such as the “low for long” requirement, that are causing the differences. He added that Conning has other options at its disposal for adjusting the model. He suggested that Conning make more of its documentation publicly available.

Mr. Bayerle said it will be important for the Task Force to have a substantive discussion on the Standard & Poor’s (S&P’s) equity scenario properties and behavior to develop comprehensive targets and acceptance criteria. He said the ACLI alternative equity calibration produces results that are intuitive and interpretable and reflects historical attributes better than the Conning H2 calibration. He advocated for the inclusion of the ACLI calibration in the field test.

5. Adopted Amendment Proposal 2022-05

Angela McNabb (NAIC) said amendment proposal 2022-05 adds plan codes, corrects language, and implements a code for death claims due to COVID-19. She said the COVID-19 code was added in response to a request from the Society of Actuaries (SOA). Mr. Bayerle said the ACLI supports most of the changes but suggests that the amendment should clarify whether the COVID-19 code would be used only when COVID-19 is the primary cause of death or if it is meant for use when COVID-19 is a contributing cause of death. He noted that due to the medical judgment involved, obtaining accurate cause of death information can be difficult. He said COVID-19 deaths may be undercounted if companies do not require death certificates for smaller policies. Cindy MacDonald (SOA) said the SOA understands that the data collected on COVID-19 deaths may not be perfect, but it will help with the analysis of data from sources other than the NAIC that is currently being worked. Ms. Allison said rather than putting the specifics of identifying COVID-19 deaths in the amendment proposal, the specifics will be provided in

the data dictionary NAIC staff are developing. Ms. McNabb said the intent will also be conveyed through the company training planned for June.

Mr. Chupp made a motion, seconded by Mr. Leung, to adopt amendment proposal 2022-05 (Attachment Ten-H). The motion passed unanimously.

6. Discussed Mortality Improvement

Marianne Purushotham (SOA Preferred Mortality Project Oversight Group) said the 2022 mortality improvement recommendation (Attachment Ten-I) comprises a historical mortality improvement recommendation and a future mortality improvement recommendation. She said the study is based on general population mortality. She said applying socioeconomic class data to the general population mortality will help get closer to an estimate for insured population mortality. She said it is recognized that starting with population mortality provides an additional margin. She said the SOA Preferred Mortality Project Oversight Group is looking at margins and direct adjustments as ways to incorporate the impact of COVID-19. She said a series of model office scenarios are being run to get an estimate of the impact of COVID-19 on future mortality. She said information will be shared with the Task Force to help as it considers approval of the historical and future mortality proposals.

Having no further business, the Life Actuarial (A) Task Force adjourned.

DRAFT

Economic Scenario Generator (ESG) Reserves and Capital Field Test Specifications

Primary Contact:
Scott O’Neal, FSA, MAAA (soneal@naic.org)

Section I: Overview

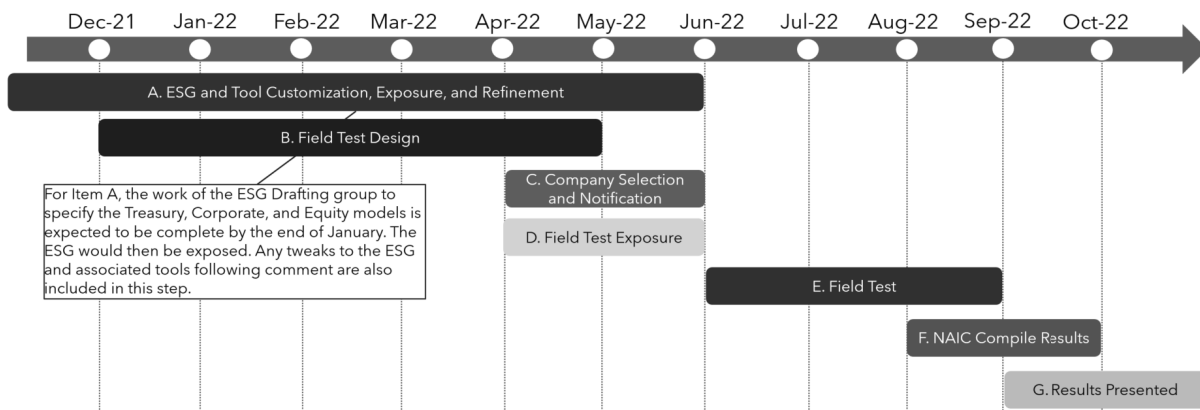

A. Objectives

The ESG Field Test should be able to address the following questions:

<p>1. Reserve and Capital Impact</p>	<ul style="list-style-type: none"> • How does the new ESG impact industry reserves and capital in different economic environments? • How do reserve and capital impacts vary by product type? • What is the impact of the changes to each ESG model (i.e. interest rate model, equity model, corporate model)? <p>The impact will be determined by comparing reserves and capital calculated using the field test ESG scenario sets against results that were determined using currently prescribed or allowed ESGs used in Annual Statement and/or RBC reporting.</p>
<p>2. Range of Results</p>	<ul style="list-style-type: none"> • What is the range of reserve and capital impacts across companies (e.g. percentage increase/decrease)? • Which particular companies and product types have the highest and lowest impacts, and why?
<p>3. Metrics</p>	<ul style="list-style-type: none"> • Which particular interest rate and equity scenarios cause the greatest stress? • How do results compare for CTE70 vs. CTE98? Calculate different CTE levels (e.g., CTE70, CTE98, CTE90) to compare to existing requirements. • How do the metrics perform with different scenario set sizes?
<p>4. Stability Over Time</p>	<ul style="list-style-type: none"> • How do the reserve and capital results change across scenarios produced for different economic environments?
<p>5. Exclusion Testing and Reserve Components</p>	<ul style="list-style-type: none"> • Does the new ESG change the likelihood of the SR being the dominant reserve? • Do the exclusion tests still perform as intended? • Does the VM-20 DR scenario still capture risk appropriately? <p>Note: Companies that currently pass the stochastic exclusion test will not have a stochastic reserve model.</p>
<p>6. Hedging Impact</p>	<ul style="list-style-type: none"> • Does the new ESG impact hedge effectiveness? If so, what feature is driving this (e.g. the new ESG produces additional yield curve shapes, such as humps)?

7. Sensitivity Tests and Attribution	<ul style="list-style-type: none"> Do baseline results and/or sensitivity tests indicate that the field-tested ESG calibration needs to be modified? What are the drivers of reserve and capital changes as determined from attribution analysis?
---	---

B. Tentative Timeline

Note: Dotted lines represent the beginning of the month.

C. Structure

- NAIC to collaborate with the American Academy of Actuaries’ ESG Field Testing Subgroup and American Council of Life Insurer’s ESG Field testing group to design the NAIC ESG Field test. Field test recommendations will be brought to a joint meeting of the Life Actuarial (A) Task Force and the Life RBC (E) Working Group.
- Field Test Participants
 - The NAIC has solicited volunteer companies to participate in the ESG field testing.
 - Further analysis needs to be completed to assess product coverage.
 - Additional participants may be requested if desired by regulators.
- The NAIC will work with state regulators to coordinate the following:
 - Communicating with field test participants and providing ESG Field Test instructions and result templates.
 - Collecting, aggregating, and summarizing company results

D. Reserve and Capital Frameworks Covered

VM-20	<ul style="list-style-type: none"> All individual life insurance policies issued on or after the operative date of VM-20, or issued during the transition period, if elected by the company. Smaller insurance companies may obtain an exemption from VM-20 calculations.
--------------	--

	<ul style="list-style-type: none"> Stochastic reserves, Deterministic reserves, and stochastic exclusion ratio test (SERT) values will need to be field tested
VM-21/C3 Phase II	<ul style="list-style-type: none"> Variable deferred or immediate annuity contracts whether or not they have GMDBs or VAGLBs, group annuity contracts containing GMDBs or VAGLBs, and policies or contracts with guarantees similar in nature to GMDBs or VAGLBs where there is no other explicit reserve requirement Stochastic Reserves and the Additional Standard Projection Amount will need to be field tested. Different CTE levels will need to be tested for reserves and capital
C3 Phase I	<ul style="list-style-type: none"> Include certain annuities (with the exception of indexed annuities) and single premium life insurance for C3 Phase I testing. Reported C3 Phase I capital will be compared against results produced using the field test scenario sets. Participants that are testing products according to the C3 Phase I methodology will be asked to use a choose a scenario set with at least 200 scenarios for the ESG field test candidates rather than scenario sets with 50 or 12 scenarios as used in reported C3 Phase I results.
VM-22 (Out of Scope)	<ul style="list-style-type: none"> VM-22 methodology changes will be deferred to the VM-22 field test, and therefore VM-22 calculations are out of scope for this field test.

E. Survey Questions

In addition to providing quantitative results, field test participants will also be asked to respond to a series of survey questions. These questions will be designed to help further understand the companies field test results or help provide additional insight beyond what the quantitative results will show. Survey questions are contained in the Field Test Instructions document.

Section II: Assumption and Model Specifications

A. Population

- Use the actual inforce assets and liabilities corresponding to the 12/31/21 valuation date. For model runs that adjust the starting conditions from the 12/31/21 environment, make adjustments to the inforce assets and liabilities as appropriate. The types of adjustments will be detailed in the Field Test Instructions document. .
- To the extent that it is not possible for a company to run all relevant statutory reserve and capital models for the field test, a company may elect to run a representative set of their models or inforce. Companies should then either adjust the final results to

align with their reported reserve and/or capital amounts, or alternatively, they should adjust their reported amounts to align with the representative business that is being field tested.

B. Reserve/Capital Model Type

- Models should be capable of projecting asset and liability cashflows across numerous stochastic scenarios according to the requirements of the respective reserve or capital framework.

C. Asset/Liability Assumptions

- Utilize company and/or prescribed assumptions relevant to each respective reserve or capital framework.

D. ESG Models and Scenarios

Model	Field Test Recommendation
Treasury	1. Field test two Treasury model candidates
	a. Conning Calibration and Generalized Fractional Floor (“Non-shadow”)
	b. Alternative Calibration and Shadow Floor (“Shadow”)
Equity	2. Equity Utilize the existing GEMS® equity model with equity-Treasury linkage based on the short Treasury rate for field testing. The following calibrations will be tested:
	a. A baseline calibration that has been modified for increased alignment with the gross wealth factors produced by the AIRG Equity model
	b. The original Conning equity model calibration that had significantly lower gross wealth factors than the AIRG Equity model
	c. An alternative calibration developed by the ACLI
Corporate	3. Include GEMS® corporate model in initial field testing with the calibration updated for consistency with other generated returns on a risk/reward basis

- Field test participants will be provided scenario sets from the new ESG for field testing via the <https://naic.conning.com/scenariofiles> website.
- Parameters for the ESG and statistical summaries will be released alongside the scenarios
- 10,000 scenarios will be provided along with 1,000, 500, 200, and 40 scenario subsets. The subsets will be produced using the existing AAA Scenario Picking Tool methodology (see “Resources” section below for more information)

- As part of the field test, participants will be asked to compare results using the scenario sets from the new ESG to results that were determined using currently prescribed or allowed ESGs used in Annual Statement and/or RBC reporting. Field test participants will be responsible for obtaining scenario sets used for their reported results.
- Participants should run the same number of scenarios corresponding to their reported numbers for each respective reserve or capital model, with the exception of C3 Phase I which has alternative instructions. Any discrepancies between the number of scenarios used in the reported as compared to the field test should be addressed in a qualitative survey question. .
- Participants will also be asked to run the 16 SERT scenarios. This step will be optional for VM-21 and C3 Phase I, but required where companies already have the SERT implemented in their VM-20 models. This will be used to facilitate the results analysis. Since the SERT scenarios cover a range of interest rate and equity combinations, the results could be used to help explain and validate the stochastic results.
 - Reasoning: When evaluating results from stochastic scenarios, one challenge is how to identify the drivers of reserve/capital change. Individual stochastic scenarios can be hard to describe, but the SERT scenarios were designed to capture changing economic environments that are easy to explain.

E. Summary of Field Test Runs

The field test runs are described in the Field Test Instructions document.

F. Metrics/Output

- Reserve/Capital Framework specific results
 - VM-20
 - Stochastic reserve
 - Deterministic reserve
 - Stochastic Exclusion Ratio Test results
 - VM-21
 - Stochastic reserve
 - VM-21 CTE70 Best Efforts and CTE 70 Adjusted
 - Additional Standard Projection Amount
 - TBD: Company-Specific Market Path (CSMP) scenarios
 - C3 Phase II
 - Total Asset Requirement
 - C3 Charge
 - C3 Phase I
 - Reserves that were cash flow tested for asset adequacy
 - The C3 Phase I results should be summarized by applying the weights in the table below to the respective percentiles.

----- Percentile Weighting ----->

92	92.5	93	93.5	94	94.5	95	95.5	96	96.5	97	97.5	98
.02	.04	.06	.08	.10	.12	.16	.12	.10	.08	.06	.04	.02

- Reinsurance
 - Companies should provide results on a post-reinsurance basis. Optionally, companies may provide results on a pre-reinsurance basis in addition to providing on a post-reinsurance basis.
- Participants will also be asked to provide scenario level results by projection timestep according to the respective reserve or capital framework. For example, companies will be asked to provide the present value of accumulated deficiencies at time zero and future timesteps for the VM-20 stochastic reserve calculation.

G. Aggregation

- Field test participants are allowed to aggregate business according to the requirements of each respective reserve or capital framework. For example, participants electing to include whole life insurance and term insurance in their testing may aggregate within the established VM-20 Reserving Categories, but not across the categories.

H. Fund Mapping

- The GEMS ESG contains additional equity and bond fund returns that would allow for a more refined mapping of funds. Companies shall use their fund mapping as of 12/31/21 rather than create a more refined fund mapping. A survey question will ask participants to qualitatively or quantitatively address how their results would be impacted by including a more refined fund mapping.

Section III: Attribution Analysis

Note: We are seeking comment on how attribution analyses could be incorporated into the ESG Field Test along with recommendations for particular areas of focus.

Section IV: Resources

- A. AIRG used for C-3 Phase I
 - Life Risk-Based Capital (E) Working Group
- B. AIRG used for C-3 Phase II, VM-20, and VM-21
 - Society of Actuaries Resource Page for Economic Scenario Generators
- C. Proposed SERT Scenario Methodology

- D. Proposed Scenario Subset Selection Methodology
- E. ESG Landing Page (source for NAIC scenarios, documentation, etc.)

DRAFT

TO: Company Field Test Contact
FROM: Mike Boerner, Texas Department of Insurance
Chair of the Life Actuarial (A) Task Force
DATE: TBD
RE: Economic Scenario Generator (ESG) Field Test Instructions, Results Templates, and Qualitative Survey

The Texas Department of Insurance is reaching out to all companies participating in the ESG field test to be conducted from June through August. Thank you for participating in the field test. Please follow the field test instructions contained in Appendix A, and use the templates provided to submit your results. Also, please complete the Qualitative Survey contained in Appendix B as applicable for the product types tested.

Confidentiality

This information is being requested under both the authority of the general examination authority of the Texas Department of Insurance pursuant to Tex. Ins. Code §§ 401.051, *et seq.*, and the Standard Valuation Law, Tex. Ins. Code §§ 425.051, *et seq.*, and is considered to be confidential under these provisions. These provisions also permit the Texas Department of Insurance to share this confidential information with other state regulators and the NAIC, including the Life Actuarial (A) Task Force (LATF), the Life RBC (E) Working Group, the Valuation Analysis (E) Working Group (VAWG), and NAIC staff. Your company specific information will remain confidential pursuant to these statutory provisions.

Additional Instructions

Prior to 6/1/22, please confirm receipt of this email.

If you have questions regarding the field test instructions or templates, please contact Scott O’Neal at soneal@naic.org.

Your field test results are requested by 8/31/2022. The subject line should start with the company’s NAIC number, followed by “ESG Field Test”. Email your response to: Actuarialdivision@tdi.texas.gov, and CC Rachel.Hemphill@tdi.texas.gov and Yujie.Huang@tdi.texas.gov.

Thanks,

Mike

 - A. Results Templates..... 8
 - B. Qualitative Survey 9
 - C. NAIC Aggregation of Company Results 9

I. Introduction

A. Background

Work is in progress to develop a new ESG to be prescribed for use in calculations of life and annuity Statutory reserves according to the *Valuation Manual* (e.g. VM-20, VM-21) and capital under the NAIC RBC requirements (e.g. C3 Phase 1, C3 Phase 2). Implementation of a new ESG is expected to materially increase life and annuity reserves and capital. The purpose of the ESG field test is to assess the impacts for different product types, gain a better understanding of the drivers of reserve and capital differences, and determine potential ESG modifications that may be desirable for a second field test tentatively planned for early 2023.

This document should be read in conjunction with the document titled “Economic Scenario Generator (ESG) Reserves and Capital Field Test Specifications”. Some of the information from that document is repeated here, but with greater detail.

B. Communication of Field Test Results

NAIC staff will compile aggregated results in a report that will not contain any company-specific or other company-identifiable information. Assuming that companies have completed the field test by the end of August, the compilation of results is expected to be completed by the end of September, 2022. Joint LATF/LRBC WG open meetings will then be held to discuss aggregate field test results, and to determine whether ESG modifications should be made based on the results of the field test.

C. Next Steps

1. After the June field test begins, there may be additional optional runs requested (e.g. an alternative equity model calibration from the ACLI)
2. A second field test is expected to be conducted in early 2023. This field test may include:
 - Calibration changes for the Treasury, Equity, and Corporate Bond models desired by regulators.
 - Testing of alternative simplified models. For example, the Academy is currently developing a simplified Corporate Bond model. The ACLI is also developing an alternative model.
 - Any structural changes to the Conning Treasury, Equity, and Corporate Bond models desired by regulators after a review of results from the first field test. Structural ESG changes will require a programming effort, and the amount of time needed to complete this will depend on the nature of the changes. Examples of structural changes would include any modification to the linkage between the Treasury model and the Equity model, and implementation of an alternative simplified Corporate model.
3. Prior to ESG implementation, related *Valuation Manual* and RBC instruction changes will be drafted for consideration and adoption.

II. General Field Test Instructions

A. Summary of Field Test Runs

The runs needed for the field test are summarized in the table below. The Baseline #1 results already exist; they should match the values from year-end 2021 statutory reporting. The Baseline #1 and Baseline #2 results should reflect the ESG the company used for statutory reporting, whether it was a version of the Academy ESG or a proprietary ESG. Similarly, the Baseline runs should reflect the models companies used for year-end reporting, whether they were as of 12/31/21 or 9/30/21. For companies that typically produce results as of 9/30 (e.g. for C3 Phase I), 9/30 scenarios will be provided for the Baseline #2, and Tests 1a and 1b.

Field Test Runs**	Scenario Sets	Inforce Assets and Liabilities	Priority
<u>Baseline #1</u> Already exists; no new runs needed.	Scenario set(s) the company used for 12/31/21 statutory reporting of reserves and RBC	As of 12/31/21	N/A, companies should already have
Baseline #2	ESG the company used for 12/31/21 statutory reporting of reserves and RBC, but modified to produce scenario sets with 12/31/19 starting conditions	As of 12/31/21 with appropriate adjustments to inforce*	9
Test #1a	GEMS Equity and Corporate model scenarios as of 12/31/21, and Conning Treasury model calibration with generalized fractional floor as of 12/31/21	As of 12/31/21	1
Test #1b	Same as Test #1a, but with Alternative Treasury model calibration with shadow floor as of 12/31/21	As of 12/31/21	2
Test #2a Sensitivity Test with Higher Interest Rates	Same as Test #1a, but with Equity, Corporate, and Treasury models with 12/31/19 starting conditions	As of 12/31/21 with appropriate adjustments to inforce*	3
Test #2b Sensitivity Test with Higher Interest Rates	Same as Test #1b, but with Equity, Corporate, and Treasury models with 12/31/19 starting conditions	As of 12/31/21 with appropriate adjustments to inforce*	4
Test #3: Attribution Analysis Run	Conning Treasury model calibration with generalized fractional floor as of 12/31/21, GEMS Corporate model as of 12/31/21, and GEMS Equity model as of 12/31/19	As of 12/31/21	5
Test #4: Attribution Analysis Run	Same as Test #3, but using Alternative Treasury model calibration with shadow floor as of 12/31/21	As of 12/31/21	6
Test #5: Conning Original Equity Calibration	Same as #1a, but with Conning's original Equity model calibration that had significantly lower Gross Wealth Factor's than the AIRG Equity.	As of 12/31/21	7
Test #6: ACLI Alternative Equity Calibration	Same as #1a, but with the ACLI's Alternative Equity Calibration	As of 12/31/21	8

*More information on adjustments to be added later

**After the June field test begins, there may be additional optional runs requested (e.g. an alternative equity model calibration from the ACLI)

B. Required and Optional Quantitative Results

The table below lists the elements of the field test and identifies them as either “required” or “optional”. Required results are considered most important to the success of the field test. It is hoped that participating companies will provide results for these items, and as many of the optional items as possible. However, it is recognized that companies may not have the capacity to produce everything due to resource constraints. If this is the case, it is preferable that companies provide partial results rather than not participate in the field test at all.

Field Test Element	Required for VM-21 and C3 Phase II	Required for VM-20	Required for C3 Phase 1	Optional
Baseline 1, Tests 1a and 1b, Tests 2a and 2b, and Test 5 (see table above)	X	X	X	
Baseline 2				X
Tests 3 – 4 and 6 (see table above)				X
Post reinsurance ceded results	X	X	X	
Pre-reinsurance ceded results				X
Stochastic Reserve	X	X		
Scenario Reserves, before cash surrender value floor	X	X		
Scenario Reserves, after cash surrender value floor	X	X		
CTE70 Best Efforts	X			
CTE70 Adjusted	X			
Additional Standard Projection Amount	X			
CTE98 (for C3 Phase II)	X			
Deterministic Reserve		X		
NPR		X		
Results from each of the 16 SERT Scenarios, and SERT ratio		X		For VM-21 and C3P1

C. Number of Scenarios

For each product type to be tested, the number of scenarios used for field testing should match the number the company used for statutory reporting on 12/31/21. The number of scenarios used may vary by product type, as long as it is consistent with the number used for statutory reporting. For example, if 1,000 scenarios were run for variable annuity reserves reported as of 12/31/21, then 1,000 scenarios should be run as of that valuation date for the field test. Similarly, if 200 scenarios were run for life insurance reserves reported as of 12/31/21, then 200 scenarios should be run for the field test as of that valuation date.

D. Scenario Sets

1. Scenario files – The scenario sets to be used for the field test, along with descriptions of the file formats, will be available for download at <https://naic.conning.com/scenariofiles>. Statistical summaries of the projections will also be provided, along with the parameters used for the ESG.
2. Scenario subsets - A full scenario file containing 10,000 scenarios will be provided for each model run to be tested. Scenario subsets of 1,000, 500, 200, and 40 scenarios will also be available.
3. Monthly Timestep – all scenario files will be provided using a monthly projection timestep
4. Additional scenario sets – The following additional scenarios are available:
 - 16 Stochastic Exclusion Ratio Test (SERT) scenarios
 - TBD - Company-Specific Market Path (CSMP) scenarios

E. Projection Period

Each scenario file contains monthly projections for 100 years. For each product type to be tested, the projection period used for field testing should match the projection period the company used for statutory reporting as of 12/31/21.

F. Negative Interest Rates

The two ESG Treasury models used for the field test include scenarios with negative interest rates, so companies will need to consider whether any modeling or assumption changes are needed to handle this. It is recommended that companies read and consider the information in the paper below:

[Potential Modeling Challenges in a Negative Interest Rate Environment](#)

Author: Zohair Motiwalla, FSA, MAAA
Principal and Consulting Actuary, Milliman

For purposes of the field test, companies may make assumption changes as appropriate to reflect negative interest rates, but this is not required given the amount of time this may take. The Qualitative Survey asks companies to provide details on whether assumption changes were made, and the nature of the changes. It also asks companies to comment on any changes anticipated to be made when the new ESG is adopted.

G. Model Simplifications

If the company is not able to provide model results that match reported values, the company may run a representative model or inforce population. The company should then either adjust the final results to align with their reported amount, or alternatively, they should adjust their reported amount to align with the representative business that is being field tested.

H. Hedging (as applicable)

The hedging strategy the company used as of 12/31/21 for statutory reporting should be used for the field test runs.

I. Fund Mapping (as applicable)

The company's fund mapping used as of 12/31/21 for statutory reporting should be used for the field test to allow for a more direct comparison of results from the Academy ESG (or proprietary ESG) vs. the GEMS ESG. Although the GEMS ESG contains additional equity and bond fund returns for a more refined mapping of funds, these should not be used for the field test.

The tables below show the equity and bond returns available from the Academy ESG and the comparable returns offered in the GEMS equity and corporate bond models. For the field test, companies should use the appropriate GEMS returns that correspond to their fund mapping as of each valuation date.

Further information on fund mapping can be found in the results templates

AAA ESG Returns	Market Proxy Used to Produce AAA ESG Returns*	Field Test GEMS® Fund Mapping**
Diversified Large Capitalized U.S. Equity	S&P500 Total Return Index	Large Cap
Diversified International Equity	MSCI-EAFE \$USD Total Return Index	International Diversified Equity
Intermediate Risk Equity	U.S. Small Capitalization Index	Small Cap
Aggressive Equity**	25% Emerging Markets, 12.5% NASDAQ, 62.5% Hang Seng***	2/3 Aggressive Foreign Equity, 1/3 Aggressive US Equity
Money Market	3 Month Treasury returns	Money Market
U.S. Intermediate Term Government Bonds	U.S. Intermediate Term Government Bonds	Int Govt Bonds
U.S. Long Term Corporate Bonds	U.S. Long Term Corporate Bonds	Long Inv Corp Bonds
Diversified Fixed Income	65% ITGVT + 35% LTCORP	65% Int Govt Bonds, 35% Long Inv Corp Bonds
Diversified Balanced Allocation	60% Diversified Equity + 40% Fixed Income	60% Large Cap, 26% Int Govt Bonds, 14% Long Inv Corp Bonds

*Source: AAA LCAS C3 Phase II RBC for Variable Annuities: Pre-Packaged Scenarios January 2006

** See [Basic Data Columns](#) for more information on the returns available in the GEMS® scenario files

***The Academy Equity Model Aggressive Equity proxy is not meant to suggest a representative asset profile for this class but used merely to build an historic index with high volatility and sufficient history.

III. Additional Instructions for VM-21

A. Model Assumptions

Models should utilize company and/or prescribed assumptions relevant to VM-21 for 12/31/21 statutory reporting unless otherwise specified. All components of the modeling other than the scenarios should remain the same between reported and field test runs (e.g., the same investment strategy, liability assumptions, CDHS modeling, etc.).

B. Aggregation

Business should be aggregated according to the requirements under VM-21, consistent with how this was done for statutory reporting on 12/31/21. For example, if RILAs were aggregated with variable annuities for statutory reporting, they should be aggregated for the field test.

IV. Additional Instructions for VM-20

A. Model Assumptions

Models should utilize company and/or prescribed assumptions relevant to VM-20 for 12/31/21 statutory reporting unless otherwise specified. All components of the modeling other than the scenarios should remain the same between reported and field test runs (e.g., the same investment strategy, liability assumptions, CDHS modeling, etc.).

B. Exclusion Tests

1. Deterministic Exclusion Test - This is not applicable for purposes of the field test and should not be performed.
2. Stochastic Exclusion Ratio Test – The SERT should be performed unless the company has not built out that functionality in their models. The results may help determine whether the SERT still performs as intended using the new ESG.

C. Stochastic Reserve Calculation

1. The Stochastic Reserve should be calculated unless the company has not built out that functionality in their models.
2. VM-20 stochastic reserve discount rate – VM-20 Section 7.H.4 states that “The company shall use the path of one-year Treasury interest rates in effect at the beginning of each projection year multiplied by 1.05 for each model segment within each scenario as the discount rates in the stochastic reserve calculations.” However, for purposes of the field test, companies should multiply the one-year Treasury rate by 1.05 whenever the one-year Treasury rate is greater than zero, and multiply the one-year Treasury rate by 0.95 whenever the one-year Treasury rate is zero or negative. This adjustment is being made because the new ESG will produce negative interest rates, and this was not the case when VM=20 Section 7.H.4 was drafted.

V. Additional Instructions for C-3 Phase I

A. Methodology

Companies should use the current C-3 Phase I methodology for the field test, with the exception noted in Section B below. A future VM-22 field test will include both the new ESG and new C-3 Phase I methodology.

B. Number of Scenarios

For Tests 1a – Test 4 (see the table in Section II.A), companies should run a minimum of 200 scenarios.

VI. Attribution Analysis

TBD – Details to be added to this document when provided by the Academy

VII. Reporting of Field Test Results

A. Results Templates

Companies should provide quantitative field test results using the Excel templates that have been developed for this purpose. Instructions are included in the templates. The spreadsheet tabs may be copied as needed within the workbook to reflect any additional products/models not included.

TBD – An additional template is under review and will be added when provided by the Academy.

B. Qualitative Survey

Companies are asked to complete the Qualitative Survey contained in Appendix B to the extent possible for the product types tested.

C. NAIC Aggregation of Company Results

NAIC staff will be aggregating quantitative results across companies and producing a variety of metrics using SAS. For ease of aggregation, please do not add rows or columns to the results templates.

Field test participants' responses to the Qualitative Survey will also be aggregated where appropriate.

Appendix B**Economic Scenario Generator (ESG) Field Test
Qualitative Survey**

All companies are asked to provide responses to the survey questions below to the extent possible for the types of results submitted. The responses will aid in understanding how each company performed their modeling, and potential drivers of reserve and RBC differences by product type. The responses will also be used to identify potential ESG modifications that may be desirable for a second field test tentatively planned for early 2023.

I. VM-21 and C3 Phase II

1. Which valuation date was used for Baseline #1 (i.e. for year-end statutory reporting)?
 12/31/21 9/30/21
2. How many scenarios were used for Baseline and field test runs?
 10,000 1,000 500 Other (please describe)
3. Baseline #1 should match what was reported in the Variable Annuities Supplement for Individual and Group business. Is this the case? Yes No If No, please explain (e.g., describe any subsets of contracts that were excluded or added for the Baseline, describe any simplifications used).
4. Was a proprietary ESG used to determine values for the Baseline runs? Yes No
5. Did the company make any changes to assumptions or modeling approach for the field test runs because the ESG produces negative interest rates?
 - a. If so, please describe the changes that were made.
 - b. If not, please describe the changes anticipated to be made when the new ESG is adopted.
6. Were any other changes to assumptions or modeling made for the field test runs? Yes No If Yes, please explain.
7. Did you use an implicit method or explicit method to model hedging?
 Implicit method Explicit method Did not model hedging Other If Other, please explain.
8. If your company uses an implicit methodology to quantify the impacts of hedging, have you reassessed whether it is still appropriate in light of the field test scenario sets?
9. Did the new ESG impact hedge effectiveness? If so, can you tell what is driving this?
10. Where possible, please explain the change between the field test runs and the Baseline runs for the Post-Reinsurance-Ceded Reserve for Guaranteed Benefits, and optionally for Pre-Reinsurance-Ceded Reserve for Guaranteed Benefits. As part of your response, please address each of the following questions.

- a. What were the drivers of the change?
 - b. How did the drivers interplay to result in the overall change? Were they additive, compounding, offsetting, etc.?
 - c. How did the VA product guarantees affect the Baseline and field test results differently? In what way did the product guarantees contribute to the change in results?
 - d. When comparing the field test runs to the Baseline, how did the sensitivities to equities vs. interest rates drive the magnitude of the change in results? In other words, how sensitive was the company's portfolio to the change in the interest rate scenarios? Or, if the reserve amount is driven more by the equity levels, how would you characterize that relationship or dependence?
 - e. Did the impact of hedging differ between the baseline and the Field Test? If so, in what way?
11. Where possible, please explain the change between the field test runs and the Baseline for the **Risk-Based Capital**. Please address the following as part of your response.
- a. Compare the impacts of the field test scenarios on the CTE 70 vs. CTE 98 tail metrics. Discuss the interplay and resulting impact on Risk-Based Capital.
 - b. Are there distinct drivers that create different movements in the 30% vs. 2% tail?
 - c. Are the impacts of hedging different when calculating the reserve vs. risk-based capital? Why or why not?

II. VM-20

1. Which valuation date was used for the Baseline run (i.e. for year-end statutory reporting)?
12/31/21 9/30/21
2. How many scenarios were used for the Baseline and field test runs?
10,000 1,000 500 200 40 Differs by product type
Specify the details if selected "Differs by product type": _____
3. The Baseline should match what was reported in the VM-20 Reserves Supplement. Is this the case?
Yes No If No, please explain (e.g., describe any subsets of contracts that were excluded or added for the Baseline, describe any simplifications used).
4. Was a proprietary ESG used for calculating the baseline? Yes No
5. Did the company make any changes to assumptions or modeling approach because the ESG produces negative interest rates?
 - a. If so, please describe the changes that were made.
 - b. If not, please describe the changes anticipated to be made when the new ESG is adopted.
6. Were any other changes to assumptions or modeling made for the field test runs? Yes No If Yes, please explain.
7. Did your dominant PBR reserve change?

III. C3 Phase I

1. Which valuation date was used for the Baseline (i.e. for year-end statutory reporting)?
12/31/21 9/30/21
2. How many scenarios were used for the Baseline run?
50 12 Other (please describe)
3. How many scenarios were used for field test runs?
200 Other (please provide the number)

IV. All Products

1. All amounts populated in the templates should be shown in dollars. Is this the case? Yes No
If No, what units did you use?
2. If the inforce files were adjusted for the field test runs, please describe the changes that were made.
3. To what extent did the field test runs capture the potential impact of the scenarios on results? Were there areas that could not be tested/assessed (e.g., due to the need for additional scenario sets, new or existing simplifications)?
4. What additional information / analysis or scenario refinements would your company recommend?
5. Please provide any additional perspectives and information that could be relevant in the post-field test assessment. This information could include observations, unexpected results, insights and desirable properties from alternative models/scenarios, etc. To allow for aggregation of company responses to this question, please categorize each of your comments as relating to "capital/reserves," "product specific issues," "attribution," or "other issues".
6. Would your company need to create a more refined mapping to equity and bond funds given the expanded set of returns offered by the GEMS ESG? If yes, please provide a quantitative or qualitative explanation of how it might impact your results.
7. If your company elected to run a representative set of models or inforce, please describe any adjustments made to account for the difference between the representative models or inforce and the reported values. Also please provide an explanation as to why the models or inforce that was used in field testing is expected to be representative.
8. If a different number of scenarios was used for field test results as compared to the number of scenarios used in reporting, please provide information on which results are impacted.
- 9.

AMERICAN ACADEMY of ACTUARIES

Objective. Independent. Effective.™

May 10, 2022

Mr. Philip Barlow
Chair, National Association of Insurance Commissioners (NAIC)
Life Risk-Based Capital (E) Working Group (“LRBC WG”)

Mr. Michael Boerner
Chair, NAIC
Life Actuarial (A) Task Force (“LATF”)

Dear Philip and Mike:

This cover letter describes an accompanying updated spreadsheet that the American Academy of Actuaries¹ (Academy) Economic Scenario Generator Work Group Field Test Subgroup has developed.

The spreadsheet is primarily an extension of the one used in the 2015 C-3 Phase 1 field test. That field test spreadsheet had been expanded to accommodate 200 scenarios, in addition to the standard 50 scenarios used in C-3 Phase 1, and to calculate a conditional tail expectation (CTE) 90 metric, in addition to the C-3 Phase 1 metric that spans the 92nd through 98th percentiles, with the heaviest weight at the 95th percentile. As you know, the CTE 90 metric was the metric in use for C-3 Phase 2 back in 2015.

The new spreadsheet has been further extended to accommodate 1,000 scenarios and 100 projection years, and to calculate additional CTE metrics, namely CTE 70 and CTE 98. While the spreadsheet originated in a C-3 Phase 1 framework, it might be used with some other frameworks if the relevant surplus positions and semiannual interest rates for discounting are loaded into the spreadsheet. This would not be the case for the Direct Iteration approach for VM-21 and C-3 Phase 2. If Direct Iteration is used, regulators may wish to gather a single result for each scenario, in place of a stream of surplus positions and corresponding discount rates.

The new spreadsheet also includes some additional documentation. Though the spreadsheet has been peer reviewed, it is provided on an “as is” basis with no warranty or guarantees of completeness, accuracy, reliability, or usefulness. Use of this spreadsheet is at the user’s own risk. We assume no responsibility or liability for any errors or omissions. Under no circumstance shall the Academy or its volunteers be liable for any damages arising out of your access to or use of the spreadsheet, whether or not the damages were foreseeable and whether or not the Academy was advised of the possibility of such damages.

Sincerely,

Link Richardson, MAAA, FSA, CERA
Chairperson, ESG Field Test Subgroup
American Academy of Actuaries

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

Summary

- Based on preliminary research, pre-2020 calibration criteria and AIRG returns appear to be a reasonable reference point, and improving the alignment of cumulative wealth factors may improve the interpretability of field test results.
 - Updated acceptance criteria should be developed concurrently to the field test.
- Comparing GEMS equity calibrations to AAA returns using cumulative wealth factors:
 - Significant increase in severity of down and up outcomes over the long term (see slide 3)
 - Even with use of jump diffusion, GEMS does not produce more severe tails over the short term (see slide 5)
- Historical calibration suggests higher mean reversion of variance, and lower frequency of jumps, both of which would help mitigate extreme outcomes over the long term.
 - Higher mean reversion of variance is present regardless of modeled jumps process
 - Reducing the frequency of jumps has meaningful improvement to MLE log-likelihood, and suggests more of the monthly equity return can be explained using stochastic variance process
 - Proposed ACLI GEMS calibration would produce more reasonable distribution and align with current Academy scenarios (as well as other standard models calibrated to history) in the low tails
- Rate/ERP relationship in GEMS drives substantial impact on long term wealth factors especially in high tail scenarios.
 - See Slide 4 for details.
 - Further modifications to modeled ERP/rate relationship, such as targeting constant return/inverse rate-ERP might help produce more reasonable and stable distribution of outcomes but are not in scope for this alternative GEMS calibration.

Calibration and Parameters

ACLI Alternative GEMS calibration considerations:

- Model parameters calibrated to historical data
- mu1 risk premium coefficient was set to 1.5, as a calibration constraint, to help mitigate long term tails
- Jump size parameters (mu_jump and sigma_jump) were set equal to GEMS original
 - mu0 parameter was set to target 9.5% mean cumulative wealth ratio over 30 years
 - More severe than historical data
 - Similar to GEMS G/H sensitivities

- GEMS model parameters were calibrated to historical monthly ERP (S&P price return less monthly return on 3m Treasury rate) from 3/1957 to 12/2020, using generalized MLE.

- Historical calibration points to:
 - Higher mean reversion of variance, or higher beta parameter
 - Lower frequency of jumps – lower lambda_jump parameter

- ACLI Alternative Calibration produces low tails that are closer to AIRG, due to higher mean reversion of variance and lower frequency of jumps
- Both, GEMS H, and ACLI wealth factors include GFF treasury rates as portion of the return, and were modeled under best-efforts interpretation of GEMS equity model
- Much higher wealth factors in upper tails vs AIRG are due to the treasury rate component of the return

GEMS Constant ERP Rate Linkage Widens Long Term Wealth Factor Tails

Short Term Equity Returns

- Academy equity returns are more disperse and produce more severe high and low wealth factors compared to GEMS
- GEMS use of jump diffusion under proposed parameterization does not translate into more sever tails over the short term

 Amendment Proposal Form***

1. Identify yourself, your affiliation and a very brief description (title) of the issue.
 Angela McNabb & Pat Allison – NAIC staff support. Changes to VM-51 Appendix 1 & Appendix 4.
2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:
 January 1, 2023 version of the Valuation Manual – VM-51 Appendix 1 and Appendix 4
3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)
 See attached
4. State the reason for the proposed amendment? (You may do this through an attachment.)
 1. Additional insurance purchased with dividends do not currently have a distinct plan code. This is needed to perform more complete analysis of the data.
 2. Society of Actuaries would like to have a COVID-19 indicator. We are adding a new termination code to specify death due to COVID-19.
 3. The field previously identified as “State of Domicile” is being changed to “Owner’s State of Residence” to eliminate confusion.
 4. The questionnaire in Appendix 1 incorrectly identifies some values as dates to be filled in.

Note: These changes do not impact the layout of the data file.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Appendix 1: Preferred Class Structure Questionnaire

PREFERRED CLASS STRUCTURE QUESTIONNAIRE

Fill out this preferred class structure questionnaire based on companywide summaries, such as underwriting guideline manuals, compilations of issue instructions or other documentation.

*The purpose of this preferred class structure questionnaire is to gather information on different preferred class structures. This questionnaire varies between nonsmoker/non-tobacco and smoker/tobacco users and provides for variations by issue year, face amount and plan. If the company has the standard Relative Risk Score (RR Score) information available, the company should map its set of preferred class structure to sets of RR Scores. **Except for new preferred class structures or new sets of RR Scores applied to existing preferred class structure(s), the response to the questionnaire should remain the same from year to year.***

If a company has determined sets of RR Scores for its preferred class structures, it should provide separate preferred class structure responses for each set of RR Scores applied to a preferred class structure. If a company has not determined sets of RR Scores for its preferred class structures, it should fill out this questionnaire with its preferred class structures and update the preferred class structure questionnaire at such future time that sets of RR Scores for the preferred class structures are determined. When sets of RR Scores are used, there is to be a one-to-one correspondence between a preferred class structure and a set of RR Scores.

The information given in this questionnaire will be used both to map a set of RR Scores to policy level data and as a check on the policy-level data submission. Submit this questionnaire along with the initial data submission to the Experience Reporting Agent.

Each preferred class structure must include at least two classes (e.g., one preferred class and one standard class). Make as many copies of this preferred class structure questionnaire as necessary for your individual life business and submit in addition to policy-level detail information.

Company	NAIC Company Code
---------	-------------------

Name	Date

Life Actuarial Task Force (LATF) Meeting—May 2022

Agenda

- Items to be addressed in the 2022 scale recommendation
- COVID-19 approach
- Update on scale development timeline
- Next steps/discussion

Items to be addressed in 2022 scale recommendation

Develop HMI (historical mortality improvement) and FMI (future mortality improvement) scales for use in 2022 valuation year.

The 2022 scales will address the following:

- ▣ Reflecting COVID-19 impacts
- ▣ Margin development
- ▣ Modification to smoothing method

© 2022 Society of Actuaries. All rights reserved.
 May not be reproduced without express permission.

AMERICAN ACADEMY of ACTUARIES

Objective. Independent. Effective.™
 © 2022 American Academy of Actuaries. All rights reserved.
 May not be reproduced without express permission.

Approach to COVID-19 impact

- ▣ Quantification of COVID-19 impact
 - ▣ Data sources
 - ▣ Short- vs. medium- vs. longer-term impacts
 - ▣ Return to previously projected mortality level over time or residual excess mortality
 - ▣ Insured vs. general population considerations
 - ▣ Direct adjustment to MI rates or reflected in additional margins
- ▣ Implicit margins in MI scale development
 - ▣ Data source—general population data unadjusted for insured population differences (largest source of margin)
 - ▣ Starting MI level (HMI)
 - ▣ Long-term rate (FMI)
 - ▣ Limit on FMI assumption (20 years)

COVID-19 Impact—Modeling Scenarios

Historical MI—Scenarios being assessed	Description
1. 10-year historical average ending in 2020	including full deterioration for 2020 (most conservative)
2. 10-year historical average ending in 2019	exclude COVID-19 shock impact in 2020 (most optimistic)
3. 9-year historical average ending in 2019	exclude COVID-19 shock impact in 2020 (alternate)
4. 10-year historical average ending in 2020 (assuming no improvement from 2019 to 2020)	muted impact of 2020 (intermediate)

Future MI—Scenarios being assessed	Description
1. Basic FMI scale = Use grading to LT average based on SSA Alt 2 (recommended method)	Loaded MI scale = Basic plus explicit margin for uncertainty around the future trend (= 25% reduction of Basic FMI rates in all years)
2. Basic FMI scale = Use grading to LT average based on SSA Alt 2 (recommended method)	Loaded MI scale = Basic plus explicit margin for uncertainty in future trend (= 25% reduction of Basic FMI rates in all years) <u>and an additional explicit margin for uncertainty around the COVID-19 medium-/long-term impacts that grades off over time.</u> Additional COVID-19 explicit margin—options for model testing: 1. 50% margin grades to normal margin of 25% over 5 years. 2. Decrease mortality improvement by 1% in year 1 grading linearly down to 0% in year 5.

CH [2]10 added hyphens
 Craig Hanna, 5/11/2022

2022 MI scale development timeline (VM-20)

Updated May 2022

Milestones	Target Date
1. Receive 2020 data from the Centers for Medicare and Medicaid Services (CMS). SOA creates preliminary mortality estimates for 2020.	2/28/2022 (completed)
2. Define options for reflecting COVID-19 impact on HMI and FMI scale recommendations including margin.	4/28/2022 (completed)
3. Assess reserve impact of COVID-19 adjustment recommendation—run National Association of Insurance Commissioners (NAIC) model office under several scenarios.	6/1/2022 (in progress)
4. Determine smoothing method for FMI and HMI scales.	6/1/2022
5. Finalize recommendation for reflecting COVID-19 based on NAIC model office results.	7/1/2022
6. Present to LATF for exposure. <i>Assumes 60-day exposure period.</i>	7/15/2022
7. Receive SSA mortality estimates for 2020 from SOA (final SOA estimates).	8/15/2022
8. Receive SSA Trustees Report—Intermediate Projections for 2022.	8/15/2022
10. Respond to exposure comments obtain LATF approval of 2022 HMI and FMI.	9/15/2022
11. Publish 2022 HMI and FMI scales on SOA website.	9/30/2022

Life Actuarial (A) Task Force
Virtual Meeting
May 5, 2022

The Life Actuarial (A) Task Force met May 5, 2022. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ben Bock, Ted Chang, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT).

1. Exposed Amendment Proposal 2022-05

Angela McNabb (NAIC) said amendment proposal 2022-05 proposes the following modifications to VM-51, Experience Reporting Formats: 1) adding distinct plan codes for dividend additions; 2) adding a termination code to specify deaths due to COVID-19; 3) changing the “State of Domicile” field to “Owner’s State of Residence” to eliminate confusion; and 4) revising the questionnaire in Appendix 1 to correctly identify some values currently listed as dates to be filled in. She said companies will be asked to voluntarily use the proposed codes for the 2022 data submission. She added that if adopted for the 2023 *Valuation Manual*, the proposed amendment will make the codes mandatory for the 2023 data submission. Mr. Chupp asked whether there may be confusion if COVID-19 is a secondary cause of death. Ms. McNabb said a data dictionary is being developed to serve as guidance for companies. She said it will indicate that there should be no distinction based on whether COVID-19 is a primary or secondary cause of death. Ms. Fenwick said not all New York domiciled companies are capturing COVID-19 as a cause of death.

Mr. Leung made a motion, seconded by Mr. Weber, to deem amendment proposal 2022-05 non-substantive. The motion passed unanimously.

Mr. Weber made a motion, seconded by Mr. Leung, to expose amendment proposal 2022-05 (Attachment Eleven-A) for a seven-day public comment period. The motion passed unanimously.

2. Exposed ESG Field Test Files

Scott O’Neal (NAIC) gave a presentation (Attachment Eleven-B) on company participation in the economic scenario generator (ESG) field test scheduled for June. He showed the number of participants for each of the 13 products being tested. He said while product level detail for some products will not be shown due to low levels of participation, he is happy with the number of companies choosing to participate. Mr. Weber asked what products make up the “Other Annuities” category. Mr. O’Neal said some companies indicated that they put registered index-linked annuities (RILAs) in the “Other Annuities” category, and some companies included RILAs in the “Indexed Annuities” category.

Pat Allison (NAIC) discussed the field test instructions document (Attachment Eleven-C). She said comments received from the American Council of Life Insurers (ACLI) (Attachment Eleven-D) and William Wilton (unaffiliated)

(Attachment Eleven-E) on the exposure of the specifications document were incorporated into the field test instructions document. She noted that Appendix B of the document will be a qualitative survey. She said the general examination authority of the Texas Department of Insurance (TDI) will be used to request the information. She said using the TDI authority will ensure that the confidentiality of the information is maintained. The information will be shared with NAIC staff, who will compile and aggregate the information. Ms. Allison provided an overview of each section of the field test instructions document.

Brian Bayerle (ACLI) suggested adding a run of an equity scenario produced by the American Academy of Actuaries (Academy) Interest Rate Generator (AIRG) in addition to the Conning equity model to assist in developing more attribution information. Ms. Allison said the suggestion could be discussed in the Field Test Planning Group meeting. Mr. Bayerle also suggested adding a survey question related to company availability for a second field test in February 2023.

The ESG field test instructions document and the field test template (Attachment Eleven-F) were exposed for a public comment period ending May 10.

3. Discussed Calibration of the Conning Equity Model

Mr. O’Neal said the ESG Planning Group has compared gross wealth factors produced using the Conning equity model with those produced using the AIRG equity model. He noted that the Conning model produced more conservative results. He said a series of sensitivities have been run to isolate key differences in the models and foster a better understanding of the disparities in the models’ results. He said adjustments were made to the Conning model to generate results that are closer to the AIRG results. Those adjustments included lowering the volatility parameter, increasing the expected returns parameter, aligning the median returns, aligning the serial correlations, and removing the jump process.

Mr. Boerner referred to an earlier ACLI discussion of having an alternative equity model that could be used instead of the Conning model. He said there is not enough time to work on an alternative model. He said he would prefer to see the field test results of the Conning model. Mr. Bayerle said the ACLI is proposing alternative equity calibrations, not an alternative equity model. He said the ACLI is asking that the Conning model be run using the ACLI alternative calibrations instead of the Conning calibrations. He said the goal is to produce a more reasonable field test. Mr. Boerner said the Task Force will continue to discuss the issue during its next call.

Having no further business, the Life Actuarial (A) Task Force adjourned.

**Life Actuarial (A) Task Force/ Health Actuarial (B) Task Force
 Amendment Proposal Form***

1. Identify yourself, your affiliation and a very brief description (title) of the issue.

 Angela McNabb & Pat Allison – NAIC staff support. Changes to VM-51 Appendix 1 & Appendix 4.
2. Identify the document, including the date if the document is “released for comment,” and the location in the document where the amendment is proposed:

 January 1, 2023 version of the Valuation Manual – VM-51 Appendix 1 and Appendix 4
3. Show what changes are needed by providing a red-line version of the original verbiage with deletions and identify the verbiage to be deleted, inserted or changed by providing a red-line (turn on “track changes” in Word®) version of the verbiage. (You may do this through an attachment.)

 See attached
4. State the reason for the proposed amendment? (You may do this through an attachment.)
 1. Additional insurance purchased with dividends do not currently have a distinct plan code. This is needed to perform more complete analysis of the data.
 2. Society of Actuaries would like to have a COVID-19 indicator. We are adding a new termination code to specify death due to COVID-19.
 3. The field previously identified as “State of Domicile” is being changed to “Owner’s State of Residence” to eliminate confusion.
 4. The questionnaire in Appendix 1 incorrectly identifies some values as dates to be filled in.

Note: These changes do not impact the layout of the data file.

* This form is not intended for minor corrections, such as formatting, grammar, cross-references or spelling. Those types of changes do not require action by the entire group and may be submitted via letter or email to the NAIC staff support person for the NAIC group where the document originated.

Appendix 1: Preferred Class Structure Questionnaire

PREFERRED CLASS STRUCTURE QUESTIONNAIRE

Fill out this preferred class structure questionnaire based on companywide summaries, such as underwriting guideline manuals, compilations of issue instructions or other documentation.

*The purpose of this preferred class structure questionnaire is to gather information on different preferred class structures. This questionnaire varies between nonsmoker/non-tobacco and smoker/tobacco users and provides for variations by issue year, face amount and plan. If the company has the standard Relative Risk Score (RR Score) information available, the company should map its set of preferred class structure to sets of RR Scores. **Except for new preferred class structures or new sets of RR Scores applied to existing preferred class structure(s), the response to the questionnaire should remain the same from year to year.***

If a company has determined sets of RR Scores for its preferred class structures, it should provide separate preferred class structure responses for each set of RR Scores applied to a preferred class structure. If a company has not determined sets of RR Scores for its preferred class structures, it should fill out this questionnaire with its preferred class structures and update the preferred class structure questionnaire at such future time that sets of RR Scores for the preferred class structures are determined. When sets of RR Scores are used, there is to be a one-to-one correspondence between a preferred class structure and a set of RR Scores.

The information given in this questionnaire will be used both to map a set of RR Scores to policy level data and as a check on the policy-level data submission. Submit this questionnaire along with the initial data submission to the Experience Reporting Agent.

Each preferred class structure must include at least two classes (e.g., one preferred class and one standard class). Make as many copies of this preferred class structure questionnaire as necessary for your individual life business and submit in addition to policy-level detail information.

Company	NAIC Company Code

DRAFT

TO: Company Field Test Contact
FROM: Mike Boerner, Texas Department of Insurance
Chair of the Life Actuarial (A) Task Force
DATE: TBD
RE: Economic Scenario Generator (ESG) Field Test Instructions, Results Templates, and Qualitative Survey

The Texas Department of Insurance is reaching out to all companies participating in the ESG field test to be conducted from June through August. Thank you for participating in the field test. Please follow the field test instructions contained in Appendix A, and use the templates provided to submit your results. Also, please complete the Qualitative Survey contained in Appendix B as applicable for the product types tested.

Confidentiality

This information is being requested under both the authority of the general examination authority of the Texas Department of Insurance pursuant to Tex. Ins. Code §§ 401.051, *et seq.*, and the Standard Valuation Law, Tex. Ins. Code §§ 425.051, *et seq.*, and is considered to be confidential under these provisions. These provisions also permit the Texas Department of Insurance to share this confidential information with other state regulators and the NAIC, including the Life Actuarial (A) Task Force (LATF), the Life RBC (E) Working Group, the Valuation Analysis (E) Working Group (VAWG), and NAIC staff. Your company specific information will remain confidential pursuant to these statutory provisions.

Additional Instructions

Prior to 6/1/22, please confirm receipt of this email.

If you have questions regarding the field test instructions or templates, please contact Scott O’Neal at soneal@naic.org.

Your field test results are requested by 8/31/2022. The subject line should start with the company’s NAIC number, followed by “ESG Field Test”. Email your response to: Actuarialdivision@tdi.texas.gov, and CC Rachel.Hemphill@tdi.texas.gov and Yujie.Huang@tdi.texas.gov.

Thanks,

Mike

I. Introduction

A. Background

Work is in progress to develop a new ESG to be prescribed for use in calculations of life and annuity Statutory reserves according to the *Valuation Manual* (e.g. VM-20, VM-21) and capital under the NAIC RBC requirements (e.g. C3 Phase 1, C3 Phase 2). Implementation of a new ESG is expected to materially increase life and annuity reserves and capital. The purpose of the ESG field test is to assess the impacts for different product types, gain a better understanding of the drivers of reserve and capital differences, and determine potential ESG modifications that may be desirable for a second field test tentatively planned for early 2023.

This document should be read in conjunction with the document titled “Economic Scenario Generator (ESG) Reserves and Capital Field Test Specifications”. Some of the information from that document is repeated here, but with greater detail.

B. Communication of Field Test Results

NAIC staff will compile aggregated results in a report that will not contain any company-specific or other company-identifiable information. Assuming that companies have completed the field test by the end of August, the compilation of results is expected to be completed by the end of September, 2022. Joint LATF/LRBC WG open meetings will then be held to discuss aggregate field test results, and to determine whether ESG modifications should be made based on the results of the field test.

C. Next Steps

1. After the June field test begins, there may be additional optional runs requested (e.g. an alternative equity model calibration from the ACLI)
2. A second field test is expected to be conducted in early 2023. This field test may include:
 - Calibration changes for the Treasury, Equity, and Corporate Bond models desired by regulators.
 - Testing of alternative simplified models. For example, the Academy is currently developing a simplified Corporate Bond model. The ACLI is also developing an alternative model.
 - Any structural changes to the Conning Treasury, Equity, and Corporate Bond models desired by regulators after a review of results from the first field test. Structural ESG changes will require a programming effort, and the amount of time needed to complete this will depend on the nature of the changes. Examples of structural changes would include any modification to the linkage between the Treasury model and the Equity model, and implementation of an alternative simplified Corporate model.
3. Prior to ESG implementation, related *Valuation Manual* and RBC instruction changes will be drafted for consideration and adoption.

II. General Field Test Instructions

A. Summary of Field Test Runs

The runs needed for the field test are summarized in the table below. The Baseline #1 results already exist; they should match the values from year-end 2021 statutory reporting. The Baseline #1 and Baseline #2 results should reflect the ESG the company used for statutory reporting, whether it was a version of the Academy ESG or a proprietary ESG. Similarly, the Baseline runs should reflect the models companies used for year-end reporting, whether they were as of 12/31/21 or 9/30/21. For companies that typically produce results as of 9/30 (e.g. for C3 Phase I), 9/30 scenarios will be provided for the Baseline #2, and Tests 1a and 1b.

Field Test Runs**	Scenario Sets	Inforce Assets and Liabilities
<u>Baseline #1</u> Already exists; no new runs needed.	Scenario set(s) the company used for 12/31/21 statutory reporting of reserves and RBC	As of 12/31/21
Baseline #2	ESG the company used for 12/31/21 statutory reporting of reserves and RBC, but modified to produce scenario sets with 12/31/19 starting conditions	As of 12/31/21 with appropriate adjustments to inforce*
Test #1a	GEMS Equity and Corporate model scenarios as of 12/31/21, and Conning Treasury model calibration with generalized fractional floor as of 12/31/21	As of 12/31/21
Test #1b	Same as Test #1a, but with Alternative Treasury model calibration with shadow floor as of 12/31/21	As of 12/31/21
Test #2a Sensitivity Test with Higher Interest Rates	Same as Test #1a, but with Equity, Corporate, and Treasury models with 12/31/19 starting conditions	As of 12/31/21 with appropriate adjustments to inforce*
Test #2b Sensitivity Test with Higher Interest Rates	Same as Test #1b, but with Equity, Corporate, and Treasury models with 12/31/19 starting conditions	As of 12/31/21 with appropriate adjustments to inforce*
Test #3: Attribution Analysis Run	Conning Treasury model calibration with generalized fractional floor as of 12/31/21, GEMS Corporate model as of 12/31/21, and GEMS Equity model as of 12/31/19	As of 12/31/21 with appropriate adjustments to inforce*
Test #4: Attribution Analysis Run	Same as Test #3, but using Alternative Treasury model calibration with shadow floor as of 12/31/21	As of 12/31/21 with appropriate adjustments to inforce*

*More information on adjustments to be added later

**After the June field test begins, there may be additional optional runs requested (e.g. an alternative equity model calibration from the ACLI)

B. Required and Optional Quantitative Results

The table below lists the elements of the field test and identifies them as either “required” or “optional”. Required results are considered most important to the success of the field test. It is hoped that participating companies will provide results for these items, and as many of the optional items as possible. However, it is recognized that companies may not have the capacity to produce everything due to resource constraints. If this is the case, it is preferable that companies provide partial results rather than not participate in the field test at all.

Field Test Element	Required for VM-21 and C3 Phase II	Required for VM-20	Required for C3 Phase 1	Optional
Baselines 1 and 2, Tests 1a and 1b, Tests 2a and 2b (see table above)	X	X	X	
Tests 3 and 4 (see table above)				X
Post reinsurance ceded results	X	X	X	
Pre-reinsurance ceded results				X
Stochastic Reserve	X	X		
Scenario Reserves, before cash surrender value floor	X	X		
Scenario Reserves, after cash surrender value floor	X	X		
CTE70 Best Efforts	X			
CTE70 Adjusted	X			
Additional Standard Projection Amount	X			
CTE98 (for C3 Phase II)	X			
Deterministic Reserve		X		
NPR		X		
Results from each of the 16 SERT Scenarios, and SERT ratio		X		For VM-21 and C3P1

C. Number of Scenarios

For each product type to be tested, the number of scenarios used for field testing should match the number the company used for statutory reporting on 12/31/21. The number of scenarios used may vary by product type, as long as it is consistent with the number used for statutory reporting. For example, if 1,000 scenarios were run for variable annuity reserves reported as of 12/31/21, then 1,000 scenarios should be run as of that valuation date for the field test. Similarly, if 200 scenarios were run for life insurance reserves reported as of 12/31/21, then 200 scenarios should be run for the field test as of that valuation date.

D. Scenario Sets

1. Scenario files – The scenario sets to be used for the field test, along with descriptions of the file formats, will be available for download at <https://naic.conning.com/scenariofiles>. Statistical summaries of the projections will also be provided, along with the parameters used for the ESG.
2. Scenario subsets - A full scenario file containing 10,000 scenarios will be provided for each model run to be tested. Scenario subsets of 1,000, 500, 200, and 40 scenarios will also be available.
3. Additional scenario sets – The following additional scenarios are available:
 - 16 Stochastic Exclusion Ratio Test (SERT) scenarios
 - TBD - Company-Specific Market Path (CSMP) scenarios

E. Projection Period

Each scenario file contains monthly projections for 100 years. For each product type to be tested, the projection period used for field testing should match the projection period the company used for statutory reporting as of 12/31/21.

F. Negative Interest Rates

The two ESG Treasury models used for the field test include scenarios with negative interest rates, so companies will need to consider whether any modeling or assumption changes are needed to handle this. It is recommended that companies read and consider the information in the paper below:

Potential Modeling Challenges in a Negative Interest Rate Environment

Author: Zohair Motiwalla, FSA, MAAA
Principal and Consulting Actuary, Milliman

For purposes of the field test, companies may make assumption changes as appropriate to reflect negative interest rates, but this is not required given the amount of time this may take. The Qualitative Survey asks companies to provide details on whether assumption changes were made, and the nature of the changes. It also asks companies to comment on any changes anticipated to be made when the new ESG is adopted.

G. Model Simplifications

If the company is not able to provide model results that match reported values, the company may run a representative model or inforce population. The company should then either adjust the final results to align with their reported amount, or alternatively, they should adjust their reported amount to align with the representative business that is being field tested.

H. Hedging (as applicable)

The hedging strategy the company used as of 12/31/21 for statutory reporting should be used for the field test runs.

I. Fund Mapping (as applicable)

The company's fund mapping used as of 12/31/21 for statutory reporting should be used for the field test to allow for a more direct comparison of results from the Academy ESG (or proprietary ESG) vs. the GEMS ESG. Although the GEMS ESG contains additional equity and bond fund returns for a more refined mapping of funds, these should not be used for the field test.

The tables below show the equity and bond returns available from the Academy ESG and the comparable returns offered in the GEMS equity and corporate bond models. For the field test, companies should use the appropriate GEMS returns that correspond to their fund mapping as of each valuation date.

Further information on fund mapping can be found in the results templates

Equity Scenarios: AAA ESG compared to GEMS®

AAA ESG Returns*	Market Proxy Used to Produce AAA ESG Returns*	Corresponding GEMS Returns
Diversified Large Capitalized U.S. Equity	S&P500 Total Return Index	S&P 500
Diversified International Equity	MSCI-EAFE \$USD Total Return Index	MSCI EAFE
Intermediate Risk Equity	U.S. Small Capitalization Index	Russell 2000
Aggressive Equity**	25% Emerging Markets, 12.5% NASDAQ, 62.5% Hang Seng	MSCI Emerging Market, NASDAQ

Additional GEMS® Returns: Russell Midcap (Diversified Midcap U.S. Equity)

The AAA ESG Model produces total returns.

GEMS® returns will be split between income and price, which can be combined to get total returns. Dividends are linked to the 10 -Year Treasury yield and are negatively correlated with S&P price movements. Dividends do not affect total returns.

*Source: AAALCAS C3 Phase II RBC for Variable Annuities: Pre-Packaged Scenarios January 2006

**The Academy Equity Model Aggressive Equity proxy is not meant to suggest a representative asset profile for this class but used merely to build an historic index with high volatility and sufficient history.

Bond Fund Scenarios: AAA ESG compared to GEMS®

AAA ESG Returns*	Market Proxy used to produce AAA ESG Returns*	Corresponding GEMS® Returns
Money Market	3 Month Treasury returns	Money Market
U.S. Intermediate Term Government Bonds	U.S. Intermediate Term Government Bonds	U.S. Intermediate Term Government Bonds
U.S. Long Term Corporate Bonds	U.S. Long Term Corporate Bonds	U.S. Long Term Investment Grade Corporate Bonds
Diversified Fixed Income	65% ITGVT + 35% LTCORP	GEMS® produces corresponding components
Diversified Balanced Allocation	60% Diversified Equity + 40% Fixed Income	GEMS® produces corresponding components

Additional GEMS® Returns: U.S. Short - and Long -Term Government Bonds, Short - and Intermediate -Term U.S. Investment Grade, High Yield Corporates

III. Additional Instructions for VM-21

A. Model Assumptions

Models should utilize company and/or prescribed assumptions relevant to VM-21 for 12/31/21 statutory reporting unless otherwise specified. All components of the modeling other than the scenarios should remain the same between reported and field test runs (e.g., the same investment strategy, liability assumptions, CDHS modeling, etc.).

B. Aggregation

Business should be aggregated according to the requirements under VM-21, consistent with how this was done for statutory reporting on 12/31/21. For example, if RILAs were aggregated with variable annuities for statutory reporting, they should be aggregated for the field test.

IV. Additional Instructions for VM-20

A. Model Assumptions

Models should utilize company and/or prescribed assumptions relevant to VM-20 for 12/31/21 statutory reporting unless otherwise specified. All components of the modeling other than the scenarios should remain the same between reported and field test runs (e.g., the same investment strategy, liability assumptions, CDHS modeling, etc.).

B. Exclusion Tests

1. Deterministic Exclusion Test - This is not applicable for purposes of the field test and should not be performed.
2. Stochastic Exclusion Ratio Test – The SERT should be performed unless the company has not built out that functionality in their models. The results may help determine whether the SERT still performs as intended using the new ESG.

C. Stochastic Reserve Calculation

1. The Stochastic Reserve should be calculated unless the company has not built out that functionality in their models.
2. VM-20 stochastic reserve discount rate – VM-20 Section 7.H.4 states that “The company shall use the path of one-year Treasury interest rates in effect at the beginning of each projection year multiplied by 1.05 for each model segment within each scenario as the discount rates in the stochastic reserve calculations.” However, for purposes of the field test, companies should multiply the one-year Treasury rate by 1.05 whenever the one-year Treasury rate is greater than zero, and multiply the one-year Treasury rate by 0.95 whenever the one-year Treasury rate is zero or negative. This adjustment is being made because the new ESG will produce negative interest rates, and this was not the case when VM=20 Section 7.H.4 was drafted.

V. Additional Instructions for C-3 Phase I

A. Methodology

Companies should use the current C-3 Phase I methodology for the field test, with the exception noted in Section B below. A future VM-22 field test will include both the new ESG and new C-3 Phase I methodology.

B. Number of Scenarios

For Tests 1a – Test 4 (see the table in Section II.A), companies should run a minimum of 200 scenarios.

VI. Attribution Analysis

TBD – Details to be added to this document when provided by the Academy

VII. Reporting of Field Test Results

A. Results Templates

Companies should provide quantitative field test results using the Excel templates that have been developed for this purpose. Instructions are included in the templates. The spreadsheet tabs may be copied as needed within the workbook to reflect any additional products/models not included.

TBD – An additional template is under review and will be added when provided by the Academy.

B. Qualitative Survey

Companies are asked to complete the Qualitative Survey contained in Appendix B to the extent possible for the product types tested.

C. NAIC Aggregation of Company Results

NAIC staff will be aggregating quantitative results across companies and producing a variety of metrics using SAS. For ease of aggregation, please do not add rows or columns to the results templates.

Field test participants' responses to the Qualitative Survey will also be aggregated where appropriate.

Appendix B

Economic Scenario Generator (ESG) Field Test Qualitative Survey

All companies are asked to provide responses to the survey questions below to the extent possible for the types of results submitted. The responses will aid in understanding how each company performed their modeling, and potential drivers of reserve and RBC differences by product type. The responses will also be used to identify potential ESG modifications that may be desirable for a second field test tentatively planned for early 2023.

I. VM-21 and C3 Phase II

1. Which valuation date was used for Baseline #1 (i.e. for year-end statutory reporting)?
 12/31/21 9/30/21
2. How many scenarios were used for Baseline and field test runs?
 10,000 1,000 500 Other (please describe)
3. Baseline #1 should match what was reported in the Variable Annuities Supplement for Individual and Group business. Is this the case? Yes No If No, please explain (e.g., describe any subsets of contracts that were excluded or added for the Baseline, describe any simplifications used).
4. Was a proprietary ESG used to determine values for the Baseline runs? Yes No
5. Did the company make any changes to assumptions or modeling approach for the field test runs because the ESG produces negative interest rates?
 - a. If so, please describe the changes that were made.
 - b. If not, please describe the changes anticipated to be made when the new ESG is adopted.
6. Were any other changes to assumptions or modeling made for the field test runs? Yes No If Yes, please explain.
7. Did you use an implicit method or explicit method to model hedging?
 Implicit method Explicit method Did not model hedging Other If Other, please explain.
8. If your company uses an implicit methodology to quantify the impacts of hedging, have you reassessed whether it is still appropriate in light of the field test scenario sets?
9. Did the new ESG impact hedge effectiveness? If so, can you tell what is driving this?
10. Where possible, please explain the change between the field test runs and the Baseline runs for the Post-Reinsurance-Ceded Reserve for Guaranteed Benefits, and optionally for Pre-Reinsurance-Ceded Reserve for Guaranteed Benefits. As part of your response, please address each of the following questions.

- a. What were the drivers of the change?
 - b. How did the drivers interplay to result in the overall change? Were they additive, compounding, offsetting, etc.?
 - c. How did the VA product guarantees affect the Baseline and field test results differently? In what way did the product guarantees contribute to the change in results?
 - d. When comparing the field test runs to the Baseline, how did the sensitivities to equities vs. interest rates drive the magnitude of the change in results? In other words, how sensitive was the company's portfolio to the change in the interest rate scenarios? Or, if the reserve amount is driven more by the equity levels, how would you characterize that relationship or dependence?
 - e. Did the impact of hedging differ between the baseline and the Field Test? If so, in what way?
11. Where possible, please explain the change between the field test runs and the Baseline for the **Risk-Based Capital**. Please address the following as part of your response.
- a. Compare the impacts of the field test scenarios on the CTE 70 vs. CTE 98 tail metrics. Discuss the interplay and resulting impact on Risk-Based Capital.
 - b. Are there distinct drivers that create different movements in the 30% vs. 2% tail?
 - c. Are the impacts of hedging different when calculating the reserve vs. risk-based capital? Why or why not?

II. VM-20

1. Which valuation date was used for the Baseline run (i.e. for year-end statutory reporting)?
12/31/21 9/30/21
2. How many scenarios were used for the Baseline and field test runs?
10,000 1,000 500 200 40 Differs by product type
Specify the details if selected "Differs by product type": _____
3. The Baseline should match what was reported in the VM-20 Reserves Supplement. Is this the case?
Yes No If No, please explain (e.g., describe any subsets of contracts that were excluded or added for the Baseline, describe any simplifications used).
4. Was a proprietary ESG used for calculating the baseline? Yes No
5. Did the company make any changes to assumptions or modeling approach because the ESG produces negative interest rates?
 - a. If so, please describe the changes that were made.
 - b. If not, please describe the changes anticipated to be made when the new ESG is adopted.
6. Were any other changes to assumptions or modeling made for the field test runs? Yes No If Yes, please explain.
7. Did your dominant PBR reserve change?

III. C3 Phase I

1. Which valuation date was used for the Baseline (i.e. for year-end statutory reporting)?
12/31/21 9/30/21
2. How many scenarios were used for the Baseline run?
50 12 Other (please describe)
3. How many scenarios were used for field test runs?
200 Other (please provide the number)

IV. All Products

1. All amounts populated in the templates should be shown in dollars. Is this the case? Yes No
If No, what units did you use?
2. If the inforce files were adjusted for the field test runs, please describe the changes that were made.
3. To what extent did the field test runs capture the potential impact of the scenarios on results? Were there areas that could not be tested/assessed (e.g., due to the need for additional scenario sets, new or existing simplifications)?
4. What additional information / analysis or scenario refinements would your company recommend?
5. Please provide any additional perspectives and information that could be relevant in the post-field test assessment. This information could include observations, unexpected results, insights and desirable properties from alternative models/scenarios, etc.

To allow for aggregation of company responses to this question, please categorize each of your comments as relating to "capital/reserves," "product specific issues," "attribution," or "other issues".

Philip Barlow
Chair, NAIC Life Risk-Based Capital (E) Working Group (Life RBC)

Re: ESG Field Study Specifications

Dear Messrs. Boerner and Barlow:

The American Council of Life Insurers (ACLI) appreciates the opportunity to submit comments on the exposed ESG Field Testing Specifications (Specifications). We have the following suggestions:

Section I

- A.1. Reserve and Capital Impact / A.2. Range of Results: To better measure the new ESG impact on reserves and capital and to capture the actual range of results, we suggest providing reserves and capital results both with floors (consistent with reporting) and without floors (such as CSV). This approach more fully reveals the impact from the change in the generator than provided by the floored results alone.
- A.5. Exclusion Testing and Reserve Components: We would like to request that Conning provide the breakdown and formulas used to create the SERT scenarios from a full scenario set. Particularly, we would like to see how Conning creates the variables (Treasury rates, Equity, and Bond Fund returns) based on the percentiles of the 1- and 20-year treasury rates and the equity performance.
- A.5. Exclusion Testing and Reserve Components: Optional field to show the NPR as a benchmark to compare against the other reserves.
- E. Survey questions: We believe there should be a free form question for the survey for companies to provide additional perspectives and information that could be relevant in the post-field test assessment. This information could include observations, unexpected results, etc. In order to group, these could be categorized as “capital/reserves,” “product-specific issues,” “attribution,” and “other issues. Free form questions also allow for insights from alternative models/scenarios and allow identification of good properties in other models/scenarios for future iterations.
- E. Survey Questions: Additional survey question of “did your dominant PBR reserve change?”. Also:

American Council of Life Insurers | 101 Constitution Ave, NW, Suite 700 | Washington, DC 20001-2133

The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

acli.com

- To what extent did the field test runs capture the potential impact of the scenarios on results? Were there areas that could not be tested / assessed (e.g., due to the need for additional scenario sets, new or existing simplifications)?
- What additional information / analysis or scenario refinements would your company recommend?
- F. Valuation Dates: The selected valuation dates may not be effective for understanding the impact of GEMS's formulaic equity/rate relationship since the short-term rates that drive the relationship are very similar at year-end 2020 and 2021 and only modestly higher on March 31, 2022. Other valuation dates (e.g., year-end 2019) or sensitivities based on shocks from the baseline valuation date would be needed to fully understand the impact of using this relationship.

Section II

- D. ESG Models and Scenarios: ACLI would suggest prioritizing one of the valuation dates for testing the two proposed treasury models. For other valuation date(s), prioritizing one of the two proposed Treasury models to reduce the expected work for companies. We would defer to Conning as to which of the floors (generalized fractional floor or shadow floor) would be preferable for field testing.
- E. Metrics / Output: We would like to better understand how the NAIC intends to evaluate the total impact of the new ESG, i.e., combined impact of changes in reserve and capital levels. Similar to VA Reform, we believe there should be a methodology developed to assess the combined impact on reserves and capital.

Section III

- We support inclusion of attribution and sensitivity tests in field testing but would prioritize the baseline results first. There should be a structure for the attribution, and we would like additional time to develop a recommendation around that approach. One suggested attribution analysis individual sensitivities for each initial market condition (e.g., +/- 50 bps parallel interest rate shock, key rate duration shocks, initial volatility shocks) and long term assumption that will be subject to automatic updates (e.g., interest rate MRP) as of the baseline valuation date so companies can better understand how the scenarios will behave. We also recommend the generation of a wider set of valuation date scenarios. Analysis of the scenario sets will provide insights into ESG behavior, and while companies are unlikely to be able to do full field testing runs, selective runs (e.g., using subsets of the business or illustrative models) may be possible. Other testing could include testing when guarantees are at different levels of moneyness and/or evolve over time (e.g., ORSA projection). (Given time constraints, these additional scenario sets could be discussed and generated concurrent to the field test and made available sometime during the testing.)

Other

- The results template should be released for exposure as soon as it is available.
- How is confidentiality being handled for the field study? Will companies be submitting to their domestic regulator?

We appreciate the consideration of our comments. Thank you.

Re: ESG Field Test Specifications

I appreciate the opportunity to provide comments and some additional thoughts on the Economic Scenario Generator (ESG) Reserves and Capital Field Test Specifications. The implementation of a new generator potentially has a significant impact on consumers, companies and the industry and we should make sure we do all the analysis necessary to fully understand its impact on companies and the products they will be able to offer to consumers.

Section 1: A. 3 Metrics

3. Metrics	<ul style="list-style-type: none"> • Which particular interest rate and equity scenarios cause the greatest stress? • How do results compare for CTE70 vs. CTE98? Calculate different CTE levels (e.g., CTE70, CTE98, CTE90) to compare to existing requirements. • How do the metrics perform with different scenario set sizes?
-------------------	--

What is envisioned for “different scenario set sizes”? Is this to test the number of scenarios for convergence or is it to test the adequacy / inadequacy of the scenario picking tool?

Section II: D. ESG Models and Scenarios, 3rd bullet

- 10,000 scenarios will be provided along with 1,000, 500, 200, and 40 scenario subsets

Section II: E. ESG Models and Scenarios, 7th bullet

- Field test participants may choose the number of scenarios included in their calculation of reserves or capital for each line of business, with the exception of C3 Phase I where runs will be subject to a minimum of 200 scenarios.

Are the scenario subsets based on the scenario-picker tool? Is the scenario picker tool still based on the 20-year Treasury? If so, are we getting what we want? If the objective of the field test is to validate the generator, are we diluting the analysis with artificial variability and precision due to the scenario picker? It would seem that for a field test you would want consistency among companies using different scenario set sizes. The companies that are running 10,000 scenarios could easily report results if the 200, 500 or 1000 scenario subsets were sequentially the first x

scenarios of the 10,000. I see minimal value with a 40-scenario subset in meeting the field test objectives.

For VM-21, are the scenario subsets appropriate? Will the scenario subsets for VM-21 be based on the 20-year Treasury and not equity markets?

In my opinion, the use of any scenario reduction techniques should be left to the company to validate and not be part of this ESG field test. Once the parameterization of the scenario generator is established, we can test if the scenario picker is still acceptable for use as permitted in Section 7.G.2.c. of VM-20.

3. Metrics	<ul style="list-style-type: none"> • Which particular interest rate and equity scenarios cause the greatest stress? • How do results compare for CTE70 vs. CTE98? Calculate different CTE levels (e.g., CTE70, CTE98, CTE90) to compare to existing requirements. • How do the metrics perform with different scenario set sizes?
-------------------	--

Do we want to capture more than just the CTE metrics? Do we want to have a “picture” of the distribution in the tail? Would percentile metrics for some of the key components add additional value? For example, percentiles 65 – 95 at 5% increments with 1% increments from 95% to 100%? One of the underlying questions may be is CTE still the best metric to quantify reserves and capital? Are we concerned about the average loss in the tail or should we be focused on the level of reserves or capital required to be x% confident that they are sufficient? Should reserves be determined based on negative interest rate scenarios? Is an 80th percentile value a better representative of an appropriate reserve for moderately adverse conditions? Collecting more data than just the CTE may provide insight into the numerous questions about the tail that will likely arise.

For example, sample metrics to collect may include:

	Component (e.g. Scenario Reserve)			
	Scenario Set			
Metric	1-200	1-500	1-1000	1-10000
Percentile				
65				
70				
75				
80				
85				
90				
95				
96				
97				
98				
99				
100				
CTE 70				
CTE 90				
CTE 98				

Section II: E. Metrics/Output 1st bullet, 4th sub-bullet:

- C3 Phase I
 - Reserves that were cash flow tested for asset adequacy
 - The C3 Phase I results should be summarized by applying the weights in the table below to the respective percentiles.

----- Percentile Weighting -----													
92	92.5	93	93.5	94	94.5	95	95.5	96	96.5	97	97.5	98	
.02	.04	.06	.08	.10	.12	.16	.12	.10	.08	.06	.04	.02	

For C3 Phase I, it would seem that the current scenario subset (generally 50) and the full 200 scenario set should be run. This would facilitate the attribution analysis that may be ultimately desired.

1. 50 Scenario – weighted 95th percentile (C3P1 Generator)
2. 200 Scenarios – weighted 95th percentile, 95th %-ile, & CTE90 (C3P1 Generator)
3. 200 Scenarios – 95th %-ile, & CTE90 with VM prescribed scenario generator
4. 200 Scenarios – 95th %-ile, & CTE90 with Treasury model - “Non-shadow”
5. 200 Scenarios – 95th %-ile, & CTE90 with Treasury model - “Shadow”
6. >200 Scenarios – 95th %-ile, & CTE90 with Treasury model - “Non-shadow”
7. >200 Scenarios – 95th %-ile, & CTE90 with Treasury model - “Shadow”

The 50 scenario set is currently used by many companies for their C3 Phase I calculation. The 200 scenario set will highlight the use of the full distribution, as opposed to a scenario subset designed to capture the tail, and also highlight the potential impact of a movement to a CTE metric. The VM prescribed economic scenario generator will illustrate the impact the current AIRG would have on the current methodology. The last 4 scenario sets would highlight the impact a new scenario generator would have on the results that would otherwise be produced, including the impact of running more than 200 scenarios.

I thank you for the opportunity to provide these comments and thoughts on this exposure.

Sincerely,

A handwritten signature in cursive script, appearing to read "William H. Wilton".

William H. Wilton, FSA, MAAA

DRAFT ESG FIELD TEST TEMPLATES

General Instructions for Completion of Templates

- 1 For companies that are part of a group of companies, submit a separate set of templates for each legal entity.
- 2 Complete only the templates that are applicable for the business being field tested. Leave the other templates blank if they are not applicable.
- 3 Do not change the templates by adding rows or columns. A consistent format will allow faster aggregation of results across all participating companies.
- 4 Copy tabs as needed to provide results for each of the company's models. For example, if for statutory reporting the company reports two sets of Term results, copy the VM-20 Term Reserves tab to provide results for each model.
- 5 Provide all results in dollars.
- 6 All input cells are shown in blue.
- 7 The baseline runs are labeled Baseline #1 and Baseline #2, the field test runs are labeled as Test #1a, Test #1b, Test #2a, Test #2b, Test #3, and Test #4. Please refer to the instructions document for a description of each run.
- 8 The templates are listed below. Please follow the instructions provided for each template.

Template Spreadsheet Tab

- 1 Company Info
- 2 Guaranteed Benefit Distribution
- 3 Fund Mapping
- 4 VM-21 Reserve Summary
- 5 VM-21 & CAP2 CTE
- 6 CAP2 RBC
- 7 CAP2 Tax Scenarios
- 8 VM-21 Scenario Vx before CV floor
- 9 VM-21 Scenario Vx after CV floor
- 10 VM-20 Term Reserves
- 11 VM-20 ULISG Reserves
- 12 VM-20 Other Reserves
- 13 VM-20 Scenario Vx before CV floor
- 14 VM-20 Scenario Vx after CV floor
- 15 VM-20 Term SEFT
- 16 VM-20 ULISG SEFT
- 17 VM-20 Other SEFT

Instructions

Enter the company name and NAIC company code. The information will automatically populate in the other template tabs. For products offering guaranteed benefits, provide an approximate distribution of business based on account value. This is intended to be a high-level summary with less detail than the VA Supplement. Also provide the account value split between Separate Accounts and General Accounts. For Variable Annuities and any other products that have fund mapping, provide an approximate distribution by fund. Duplicate this tab as needed for each product type (e.g., VA, VUL).

This template provides information similar to the VA Supplement. Individual and Group should be combined. This template includes selected items from the table found in VM-31 Section 3.E.3. Pre-reinsurance ceded values are optional. Results should be shown on a Pre-Tax basis.

If the company uses the Macro Tax Adjustment, leave this template blank, but please confirm that there was a single set of scenario reserves used to calculate both reserves and RBC for each field test run.

If the company uses the Specific Tax Recognition, please provide the two separate sets of scenario reserves for the scenarios used. Populate the scenario reserve and PVAD by projection month for each scenario before applying the cash surrender value floor. Do not rank order the scenarios; keep them in the same order provided in the full scenario set or the subset used for the field test. The template is set up to handle 10,000 scenarios for 100 projection years. If less scenarios or a shorter projection period is used, leave the unused rows and columns blank.

Populate the scenario reserve and PVAD by projection month for each scenario after applying the cash surrender value floor. Do not rank order the scenarios; keep them in the same order provided in the full scenario set or the subset used for the field test. The template is set up to handle 10,000 scenarios for 100 projection years. If less scenarios or a shorter projection period is used, leave the unused rows and columns blank.

Populate the NPR, DR, and SR for each Baseline and Field Test run. Note that the NPR for the Field Test runs should match the Baseline #1 result since the NPR results do not vary with changes to the ESG scenarios. Duplicate this tab as needed for each VM-20 model.

Populate the NPR, DR, and SR for each Baseline and Field Test run. Note that the NPR for the Field Test runs should match the Baseline #1 result since the NPR results do not vary with changes to the ESG scenarios. Duplicate this tab as needed for each VM-20 model.

Populate the scenario reserve and PVAD by projection month for each scenario after applying the cash surrender value floor. Do not rank order the scenarios; keep them in the same order provided in the full scenario set or the subset used for the field test. The template is set up to handle 10,000 scenarios for 100 projection years. If less scenarios or a shorter projection period is used, leave the unused rows and columns blank. Duplicate this tab as needed for each VM-20 model.

Populate the scenario reserve and PVAD by projection month for each scenario after applying the cash surrender value floor. Do not rank order the scenarios; keep them in the same order provided in the full scenario set or the subset used for the field test. The template is set up to handle 10,000 scenarios for 100 projection years. If less scenarios or a shorter projection period is used, leave the unused rows and columns blank. Duplicate this tab as needed for each VM-20 model.

Complete the table. Duplicate this tab as needed for each VM-20 model.

Complete the table. Duplicate this tab as needed for each VM-20 model.

Draft: 5/10/22

Life Actuarial (A) Task Force and the
Life Risk-Based Capital (E) Working Group
Virtual Meeting
April 14, 2022

The Life Actuarial (A) Task Force met April 14, 2022, in joint session with the Life Risk-Based Capital (E) Working Group of the Capital Adequacy (E) Task Force. The following Task Force members participated: Cassie Brown, Chair, represented by Mike Boerner and Rachel Hemphill (TX); Scott A. White, Vice Chair, represented by Craig Chupp (VA); Jim L. Ridling represented by Jennifer Li (AL); Ricardo Lara represented by Ben Bock, Ted Chang, Ahmad Kamil, and Thomas Reedy (CA); Michael Conway represented by Eric Unger (CO); Andrew N. Mais represented by Wanchin Chou (CT); Trinidad Navarro represented by Charles Santana (DE); Doug Ommen represented by Mike Yanacheak (IA); Dana Popish Severinghaus represented by Vincent Tsang (IL); Vicki Schmidt represented by Nicole Boyd (KS); Grace Arnold represented by Fred Andersen (MN); Chlora Lindley-Myers represented by William Leung (MO); Eric Dunning represented by Derek Wallman (NE); Marlene Caride represented by Seong-min Eom (NJ); Adrienne A. Harris represented by Bill Carmello and Amanda Fenwick (NY); Judith L. French represented by Peter Weber (OH); Glen Mulready represented by Andrew Schallhorn (OK); Michael Humphreys represented by Steve Boston (PA); and Jon Pike represented by Tomasz Serbinowski (UT). The following Working Group members participated: Philip Barlow, Chair (DC); Jennifer Li (AL); Thomas Reedy (CA); Wanchin Chou (CT); Mike Yanacheak (IA); Vincent Tsang (IL); Fred Andersen (MN); William Leung (MO); Derek Wallman (NE); Seong-min Eom (NJ); Bill Carmello (NY); Andrew Schallhorn (OK); Mike Boerner and Rachel Hemphill (TX); and Tomasz Serbinowski (UT).

1. Exposed the Field Test Specification Document

Colin Masterson (American Council of Life Insurers—ACLI) said the ACLI is withdrawing its request to have its economic scenario generator (ESG) included as part of the June field test. He said the ACLI supports NAIC efforts to replace the American Academy of Actuaries (Academy) ESG. He said the ACLI comment letter (Attachment Twelve-A) lists its concerns with the GEMS equity model and recommends modifications to the GEMS calibration for implementation in the field test. Pat Allison (NAIC) said a field test planning group meets weekly. She said the ACLI request for a different calibration of the equity model to get a more reasonable distribution of equity scenarios will be discussed during the planning group's next meeting. She said Conning has made changes that improve the equity returns. Those changes and the impacts they have on growth wealth factors will be released today for Academy and ACLI feedback. Ms. Allison said the ACLI recommendation to use a single set of interest scenarios could reduce the workload of companies participating in the field test.

Jason Kehrberg (Academy) expressed the Academy's support of the field test, evidenced by its participation on the field test planning group. He said the Academy's alternate calibration and its shadow rate floor are slated for inclusion in the first round of the field test. He said further discussion of the GEMS equity/Treasury link is necessary. He said he expects the field test to provide a better understanding of the effects of the link on pro-cyclical volatility. Mr. Kehrberg said the Academy supports consideration of its alternative/simplified corporate model but understands that it may not be included in the June field test. He suggested that additional reference models would be useful. He said the Academy is working on robust stylized facts and related acceptance criteria. Ms. Allison said the alternative/simplified corporate model will more than likely not be included in the June field test.

Elizabeth Braswell (Lincoln Financial Group—Lincoln) said the Lincoln comment letter (Attachment Twelve-B) conveys its support for the development of a new ESG that incorporates long periods of low interest rates and

higher rates. She expressed concern with the number of negative interest rates produced by the unfloored GEMS model. She noted that the floor mitigates the negative rates but said she remains concerned that the majority of rates are affected by the floor and that the frequency and severity of negative rates still appear elevated after the floor is applied. She pointed out that using flooring in the model potentially introduces other distortions. Ms. Braswell said the equity model appears to change the calibration criteria and moves away from the previous return and growth wealth factor targets. She questioned the justification for the equity model changes. She said the long-term gross equities' growth rate should be disconnected from the interest rate targets. Ms. Allison said the Lincoln comment letter stated that the Conning model was designed to serve the property/casualty (P/C) insurance industry. She said that the request for proposal (RFP) process required companies to provide the number of life insurance and annuity companies using their ESG and to provide at least three references. She said Conning has a large number of life and annuity companies using their ESG for risk management and asset allocation long-term projections.

Steven Tizzoni (Equitable) said Equitable supports using the Conning model. He said the Equitable comment letter (Attachment Twelve-C) notes that the ACLI rate model has favorable properties, satisfies the Task Force view of "low for long," and is more similar to the existing ESG and suggests it could be included in a second field test, if one becomes necessary. He said the comments recommend that the absolute number of "low for long" scenarios should increase when rates are dropping and decrease when rates are rising. He conveyed Equitable's support for the Conning equity/Treasury linkage.

Mark Tenny (Unaffiliated) gave a presentation (Attachment Twelve-D) on negative interest rates. He said academicians and economists believe negative interest rates are not sufficiently represented in insurance company portfolios.

Jack Cheyne (Moody's Analytics) said the Moody's Analytics comment letter (Attachment Twelve-E) commends the Task Force for developing and using acceptance criteria in the model validation process. He encouraged the Task Force to refrain from making post processing or ad hoc adjustments to the model to meet the acceptance criteria. He said such adjustments can disrupt the fundamental properties of the model and affect the consistency of the scenario outputs.

Scott O'Neal (NAIC) discussed a new request for field test participation (Attachment Twelve-F) and an associated pre-field test survey (Attachment Twelve-G). He said the initial field test participation request was distributed last year. He said the new request allows companies that agreed to participate last year an opportunity to indicate that they are still interested in participating. He said the pre-field test survey helped to obtain more information that can be used to enhance the design of the field test and its components. He noted that the pre-field test survey is not limited to participating companies; non-participating companies can also assist by indicating their willingness to provide qualitative information. Responses to the field test participation request are due by April 28.

Mr. O'Neal discussed the field test specification document (Attachment Twelve-H). He said the document provides a high-level definition of the ESG field test. He said the expected start date of the field test is June 1. He said that the ESG calibration for the field test is being refined and that field test tools are being finalized. He noted that the proposed statutory reserve framework for non-variable annuities is not in scope for the June field test.

The field test specification document was exposed for a 14-day public comment period ending April 29.

Having no further business, the Life Actuarial (A) Task Force and Life Risk-Based Capital (E) Working Group adjourned.

Comments on Economic Scenario Generator Progress

February 17, 2022

ACLI Principles of ESG Effort

- NAIC prescribed scenario generator should be “fit for purpose” and produce a reasonable baseline set of economic scenarios.
- There should be a balance between complexity, transparency, ease of use, and stability of scenario generator parameters.
- Scenarios should reflect “history plus”: a reflection of economic dynamics from relevant history as well as an appropriate distribution of worse-than-history tail events, particularly around low-for-long interest rate conditions.

Concerns Surrounding the Models

- 1) General concerns
 - “Fit for Purpose”
 - Potential volatility
- 2) Treasury Model
 - Negative Interest Rates
 - Curve Shapes
- 3) Equity Model
 - Linkage to Interest Rates
 - Incomplete Recalibration of Equity Model Parameters
- 4) Corporate Model
 - Conning Simplified Model Limitations
 - Transparency

Treasury Model

Treasury Model – Negative Interest Rates

- GEMS-type models are known for producing excessively frequent and severe negative interest rates, particularly in low-rate environments.
- GEMS is producing an unreasonable number of negative interest rates.
 - Before including a floor, more than half the rates were negative in the near-term and up to 30% of rates were negative in the steady-state as of 12/31/20.
- Further, the model (without a floor) is producing rates near -9%.
- Floors are generally used to address outliers. ACLI has serious reservations about a floor that overrides rates at some point in nearly every scenario and will have significant implications elsewhere.

Treasury Model – Negative Interest Rates (Unfloored)

- Direct flooring approaches are likely to affect all scenarios and override up to half of the rates in a given month.
- Approaches that start with a "shadow" rate curve would generate even more negative scenarios to floor.
- The choice of floor is likely to be a key driver of rate levels used to calculate reserves and capital.

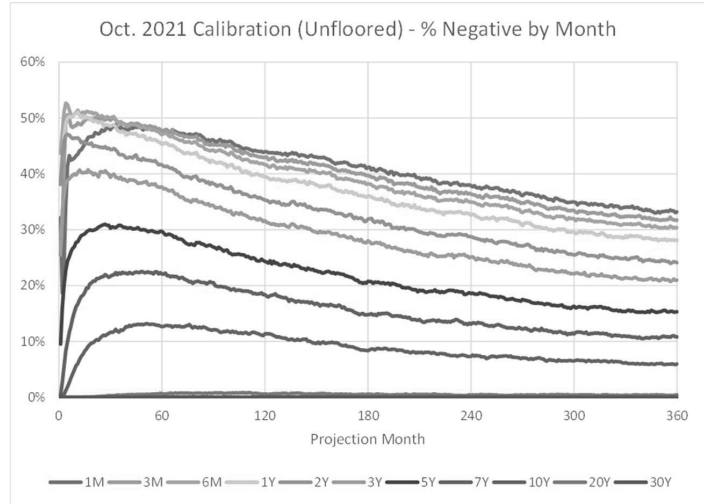

360 month minimum	1M	3M	6M	1Y	2Y	3Y	5Y	7Y	10Y	20Y	30Y

Max neg months	360	360	360	360	360	360	357	352	347	115	-

Treasury Model – Negative Interest Rates

- In the unfloored scenarios, about 50% of rates are negative in the initial months and 30% of rates are negative in the steady state.
- In the subset of available Conning floored scenarios, up to 60% of rates are negative in the initial months, 30% of rates are negative in the early years, and 20% of rates are negative in the steady state.

Treasury Model – Yield Curve Shapes

- Curve shapes, including frequency and severity of inversions, are inconsistent with historical dynamics and economics.
- This is problematic as it could:
 - Create significant non-economic costs to companies whose investment and hedging strategies are sound in real world applications but might generate significant reserves due to the differences.
 - Incent ALM mismatches.

Treasury Model – Yield Curve Shapes

- The frequency of yield curve inversions generally varies by rate levels. Controlling for rate level differences, inversions may be roughly twice as frequent in the 10/2021 scenarios as in historical data.
- Conning floored results show similar inversion frequencies.

Inversions: 10Y vs. 2Y		(Rate buckets are for the 2Y UST)

Worst inversions are ~3 to 5+ times larger than history

Median inversions are more than double historical relationships

Equity Model

Equity Model – Concerns with the Linkage to Interest Rates

- Conning assumes a constant mean relationship between equities and interest rates in each individual month (i.e., Expected equity return = Expected short-term interest rate + a random component).
 - This simplification is not supported by historical data or economic research.

- This simplification results in counterintuitive results and creates:
 1. “Mark to Model” relationships that can result in artificial volatility
 2. Procyclical results
 3. Scenario distributions that vary in their level of conservatism/aggressiveness from reporting period to period

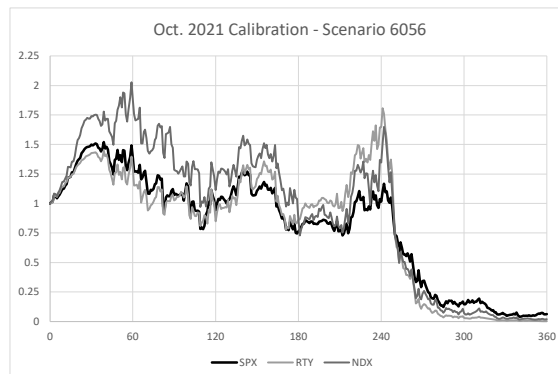

Equity Model – Concerns with the Incomplete Recalibration of Equity Model Parameters

- Interest rates are a key input in Conning’s equity model.
 - Current interest rate models under consideration have significant differences vs. Conning’s standard calibration.
- Defaulting to Conning’s calibration for other parameters (after changing the underpinnings of the model) has led to an unsupported ~45% decrease in median 30-year cumulative equity returns (and more extreme decreases in lower percentiles) based on 12/31/20 conditions.
- Conning’s incomplete recalibration also includes scenarios where broad equity indices become worthless.

Equity Model – Concerns with the Incomplete Recalibration of Equity Model Parameters

- While theoretically possible, projecting that equity indices become essentially worthless in some scenarios is extreme for reserve and capital projections and may cause operational issues (e.g., scenario selection).

Scen	Cumulative Return - 30 years
6056	
SPX	-93.7%
RTY	-99.7%
NDX	-98.1%

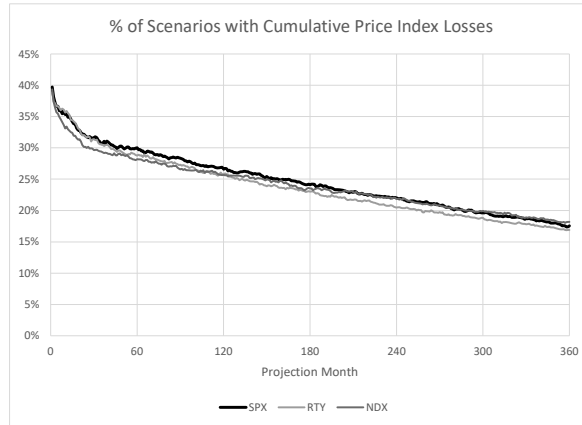

Equity Model – Concerns with the Incomplete Recalibration of Equity Model Parameters

- The S&P 500 (price index) has negative returns over 30 years in ~18% scenarios even though this has never been observed in history, even using data since 1928.

Longest Negative cumulative return period

Index	Duration	
	Months	Years
S&P 500	164	13.67
Russell	140	11.67
Mid	108	9.00
Nasdaq	193	16.08
EAFE	149	12.42

Corporate Model

Corporate Model – Concerns

- Limited substantive documentation is currently available for the GEMS corporate model, and there are structural issues with the Conning proposed simplified model (including contradictions with prescribed VM credit assumptions and credit market dynamics and excessive cumulative credit related returns).
- Experts have offered a transparent and understandable alternative that appears to track closely with the GEMS corporate model.
- Since we are unaware of a meaningful implementation limitation on such a model, we would favor the transparent approach.

Recommendations

- Develop appropriate acceptance criteria (including contemplation of reference models) to facilitate an industry field study for maximal return on effort. Current criteria are not sufficient to assess economic scenarios, including potential non-economic behavior.
- Engage in a substantive discussion of model limitations and consider structural modifications (interest rates, corporate) and calibration refinements (equity) in the existing model form once more robust criteria are established.
- If continued analysis suggests untenable characteristics of the model remain, we believe it is critical that LATF begin contemplating alternatives.

Appendix: Equity Result Comparison YE2019 to YE2020

- 141 bp decrease in initial overnight rates ~10% lower price index levels though 30 years (= -0.4% annualized)
 - Patterns are similar for total return accumulation factors and for other indices.
 - Differences in the extreme tails may be from differences in the # of scenarios with multiple large jumps (e.g., ±20% or 25%).

Philip Barlow

Chair, NAIC Life Risk-Based Capital (E) Working Group (Life RBC)

RE: Recommended Models for ESG Field Testing

Dear Mr. Boerner & Mr. Barlow:

Lincoln Financial Group (Lincoln) appreciates the opportunity to comment on the presentation for Recommended Models for ESG Field Testing. We support the NAIC effort to replace the American Academy of Actuaries Interest Rate Generator (AIRG) with one that is fit-for-purpose for US statutory reserves and capital. Our views are closely aligned with the ACLI. In particular, we continue to have significant concerns about:

- The appropriateness of the scenarios being generated by Conning's model (GEMs) driven by the current calibration methodology
- The scope of the field test being too narrow if it is limited solely to output from different variations of the Conning model. Including the ACLI alternative model in the field test is critical to meeting the project's goals, as its inclusion provides helpful insights toward refining the Conning model and addressing the notable concerns identified below.

A wide variety of ESG models exist, and each model is designed for a specific purpose. The Conning model was originally designed to serve the Property/Casualty industry, which has a short-term view, unlike the Life/Annuity industry, which is long-term and path-dependent in nature. Certain aspects of the Conning model and calibration process do not appear to be well suited for the Life/Annuity industry, so it is important that we correctly identify the issues and work collectively to find appropriate solutions. Our primary focus is consistent with the NAIC goal of ensuring that the new ESG model be fit for the intended purpose and produce reasonable scenarios.

Key Concerns with models currently proposed to be used in Field Testing

We encourage the development of an ESG that addresses the shortcomings in the current model, particularly by reflecting more "low-for-long" and high interest rates without going so far that it becomes disconnected from relevant historical experience and sound economic theory.

Lincoln Financial Group is the marketing name for Lincoln National Corporation and its affiliates. Affiliates are separately responsible for their own financial and contractual obligations.

March 31, 2022

As seen in the Academy's model office results, drastic changes in the scenarios can have dramatic impacts on the industry's reserve and capital requirements. Ideally, we would support developing a model that both reflects additional low-for-long rates while maintaining the reasonableness of the scenario set, which we believe has been accomplished with the ACLI alternative model. We continue to have significant concerns as to the reasonableness of the scenarios being produced by Conning's model (GEMs) as currently calibrated, given the below significant shortcomings:

Interest Rates

We are concerned about the tendency of the Conning model to produce excessively frequent and severe negative rates, distorted terms premiums, frequent and severe yield curve inversions, extreme high rates, etc. For example, as noted in the ACLI's Comments on ESG for the Feb 17, 2022, LATF meeting, over the first 30 years of the projection:

- 98% of unfloored scenarios produce at least 1 month of negative 1-year UST rates
- 73% of unfloored scenarios produce at least 5 years of negative 1-year UST rates
- 50% of unfloored scenarios produce at least 10 years of negative 1-year UST rates

This has never occurred in history. We are comfortable including a reasonable number of negative rates, but the frequency and severity needs to be reasonable in light of historical experience.

We appreciate regulators including a floor in order to mitigate the frequency and severity of negative rates, but we have concerns both that the floor affects the majority of the distribution and that the frequency and severity of negative rates still appears elevated after flooring. In addition, a model requiring significant flooring has the potential to introduce other distortions and introducing floors to such an extreme degree has the potential to introduce unintended and material impacts.

Equities

We are concerned that the Conning model appears to be changing calibration criteria and moving away from previous cumulative return / Gross Wealth Factor (GWF) targets, which were grounded in relevant history and used for AIRG. Unlike the interest rate scenarios' lack of low rates, we do not see the need for significant change on the equity side and believe the proposed changes are unjustified. In addition, we are not aware of any basis for the addition of low-for-long rate scenarios to result in significantly more severe low equity performance distributions. We believe the long-term equity growth rate should be disconnected from the interest rate targets. Specifically,

- The Conning equity model should be calibrated to align relatively closely with the GWFs used in AIRG (although more frequent recalibrations are likely needed to maintain that relationship). GWFs are more appropriate for this purpose than any single year results given the long-term, path dependent nature of liabilities.
- We do not believe that it is appropriate to allow the equity calibration points to move up / down based on changes in risk free rates due to the potential for a significant increase in procyclicality and artificial volatility. This is supported by historical evidence that the Equity Risk Premium (ERP) tends to move inversely to changes in Treasury rates, particularly in the deep tails as noted in the ERP materials ACLI shared with the ESG Drafting Group.

March 31, 2022

- If the Conning model cannot maintain calibration points based on GWFs aligned with the prior approach used for the AIRG, then another approach that aligns with history / academic theory should be used, i.e. using a constant mean return similar to the current generator (ERP moves inversely to changes in risk-free rate) versus a constant ERP. For example, in 2020, the risk-free rate dropped more than 1%. Under Conning’s constant ERP approach, this would have reduced the average cumulative equity return more than 20% over a 20-year horizon.

The current version of GEMS has equity returns that are much more severe than what was deemed conservative when used by the AIRG, which will introduce excessive conservatism into the reserve and capital projections. GEMS distribution of annualized returns become more distorted relative to history the longer the time horizon. For example, the worst 30-year period in US history yielded a GWF of more than 800%, which is better than half of the scenarios produced by GEMS under both the Conning calibration proposals.

Year 30 GWF Percentile	GEMS Calibration	GEMS Recalibrated to Target Lower AIRG Volatility	AIRG
1%	39.1%	55.3%	122.7%
5%	95.9%	118.7%	229.9%
25%	295.1%	317.7%	523.9%
50%	588.2%	610.3%	897.0%

- Regarding the inclusion of the Great Depression, we reiterate the comments from ACLI in their March 2018 Comment Letter to the VAIWG on the relevance of including S&P return data prior 1954 in the calibration. Specifically, the modernization of the legal, financial, and regulatory architecture, evolution of macro-prudential responses to economic and financial crises (implementation of expansionary fiscal and monetary policies in response to shocks), and expansion of the S&P index makes data from this time period much less relevant to use for calibrating the ESG for this purpose
- A robust ESG should have some scenarios that go well beyond historical experience (e.g. negative total returns / GWF over 30Y), but with less frequency and severity than is currently proposed by the Conning model. Such scenarios should comprise a much smaller portion of the distribution, i.e. a portion of the scenarios driving capital, and scenarios where US equity indices lose almost all their value in the worst case is too severe. We also question the appropriate calibration of the proposed jump process, given the extreme tails produced by the Conning model.

Corporate Model

We support refinements to align the scenarios from this model more closely with historical dynamics and VM-20 rates / spreads, but we believe it is important to have transparent model.

Stochastic Exclusion Ratio (SERT) and Deterministic Reserve (DR)

We believe further study is needed on these items. The scenario behavior could change if the prior methodology or the methodology proposed in January 2021 is applied to a scenario distribution with marked differently characteristics, e.g. dispersion, volatility, low for long, etc. in way that causes these scenarios to no longer be aligned with the original intent. We support revisiting the methodology for the Stochastic Exclusion Ratio (SERT) and Deterministic Reserve (DR) scenarios given the change in ESG

March 31, 2022

to ensure that the scenario properties still align with the original intention / risks they are intended to capture.

We support the inclusion of the ACLI model to make the field test more informative

We support holding a field test this summer to gain a better understanding of how the new ESG could affect companies blocks of business. However, to maximize the value of such a time and resource intensive effort, we also urge the NAIC to include both the Conning model and an alternative model developed by the ACLI as a part of this exercise to maximize the information obtained in the initial iteration. We believe that the inclusion of the ACLI alternative model will be beneficial to everyone in this process because it will provide an alternative model/scenario set with different trade-offs than the Conning model for analysis to facilitate meeting the project's goals.

Further, in order to bring this process more in line with actuarial best practices on the selection of an economic scenario generator, we strongly support the following ACLI-suggested steps:

- As part of the field test, regulators develop a comprehensive set of properties and acceptance criteria across different economic conditions. We would appreciate the opportunity to work with regulators to develop such metrics.
- After the field test, regulators have a comprehensive and clearly defined assessment process, including final acceptance criteria across all 3 model forms, quantitative assessments of the impacts, and qualitative assessments based on the survey.

This is essential to ensure timely implementation of scenarios that appropriately reflect risks and avoid non-economic requirements or artificial volatility. Inappropriately onerous, exaggerated, and procyclical risk measurement would ultimately hurt consumers by reducing industry's ability to provide valuable guaranteed benefits. Including the ACLI alternative model reduces the likelihood of needing additional field test(s), leading to further delay.

We remain committed to helping the NAIC develop and implement an improved ESG and thank you for your time and consideration of our comments. We are happy to discuss them in more detail.

Regards,

Elizabeth Ann Braswell

EQUITABLE

DATE: April 11, 2022

FROM: Steve Tizzoni, Head of Actuarial Regulatory Affairs

SUBJECT: Economic Scenario Generator (ESG) Field Test Exposure

Equitable appreciates the opportunity to comment on the recommended models for the Economic Scenario Generator (ESG) field test. Below are our views on the exposure.

Treasury Model: Recommend testing ACLI Treasury Model as well as GEMS. Equitable supports the NAIC’s desire to test multiple treasury models, as the models each have advantages and disadvantages. As noted in the exposure, the GEMS model presents technical challenges, including the large number of severe negative interest rates and the large frequency and severity of inversions (even in the steady state). The ESG Drafting Group has developed two separate methodologies¹ to mitigate these challenges. While we are optimistic that field testing will prove at least one of these model calibrations will result in a viable interest rate generator, the risk to this outcome merits including the ACLI treasury model in the field test. The analysis presented by the ACLI shows that this model ameliorates certain technical concerns with the GEMS model while still satisfying key regulator criteria (e.g., the number of low-for-long scenarios). Additionally, the ACLI treasury model structurally differs from the two Conning models and closely resembles the current Academy generator, which allows the model to be easily understood and serve as a useful comparative basis relative to the Conning models.

Because adding another model to the field test creates more data to analyze, we suggest a slight extension to the field test to allow more time for insurers to perform analysis on each model. While this would add a small amount of time to the current field test, including the ACLI treasury model further protects against the risk of not having an acceptable interest rate model at the conclusion of field testing, an outcome which could create more significant delays in the ESG project timeline. Alternatively, if regulator preference is to perform more analysis on the ACLI treasury model before potential inclusion in field testing, we would support further discussion of this model in advance of inclusion in a potential second round of field testing.

Equity Model: Support GEMS Constant ERP Approach. Modify ACLI Model to include an equity / interest rate linkage (if testing alternative models): Equitable continues to support a structural linkage between interest rates and equity returns via an equity risk premium. The constant equity risk premium (ERP) approach, as utilized in the GEMS model, reflects the fact that a rational investor would demand expected equity returns in excess of those offered by risk-

¹ Conning Calibration with Generalized Fractional Floor (“GFF”) and Alternative Calibration with Shadow Floor.

² Measuring the prevalence of Low-for-Long scenarios on an absolute basis means comparing the geometric average long term UST rate for each scenario relative to a fixed benchmark, such as 1% or 1.5%, rather than the long term UST rate on a particular valuation date as was done for the 12/31/20 acceptance criteria.

free assets to compensate for bearing such risk. Additionally, this approach is consistent with industry fair value principles and promotes sound risk management, as it increases alignment between liability and hedging instrument valuation.

The ACLI reference model as currently formulated does not have any equity / interest rate linkage. If the NAIC selects the ACLI interest rate model, we would seek to refine the equity component of that model to reflect an equity / interest rate linkage closer to what is in the Conning models currently. Our understanding is that implementing the equity / interest rate linkage requires a very modest code change. We would not support utilizing the ACLI reference model without such adjustments.

Finally, we understand that the NAIC intends to test several different starting conditions as part of the field test. We think this is paramount, as it is necessary to understand (1) how the model behaves across time and (2) industry balance sheet impacts under various starting conditions. As the NAIC works to develop acceptance criteria for time periods other than 12/31/20, one other key consideration to share is that we would expect that under lower starting interest rate environments, scenario sets would exhibit more low-for-long scenarios on an absolute basis². Likewise, under higher starting interest rate environments, scenario sets would exhibit less, but still a meaningful amount, of low-for-long scenarios.

* * * * *

Equitable appreciates the opportunity to comment on this exposed proposal. We are available to discuss our comments further as desired.

Sincerely,

Stephen M. Tizzoni, FSA, MAAA

Head of Actuarial Methodology and Regulatory Affairs, Equitable

¹ Conning Calibration with Generalized Fractional Floor (“GFF”) and Alternative Calibration with Shadow Floor.

² Measuring the prevalence of Low-for-Long scenarios on an absolute basis means comparing the geometric average long term UST rate for each scenario relative to a fixed benchmark, such as 1% or 1.5%, rather than the long term UST rate on a particular valuation date as was done for the 12/31/20 acceptance criteria.

Negative Interest Rates Currency Mechanism Design

Comment on Economic Scenario Generators
to the Life Annuity Task Force of
The National Association of Insurance Commissioners
Mark S. Tenney
Mathematical Finance Company

Mechanism Design Currency Choices

- Central Bank Digital Cash (CBDC)
- Pegged exchange rate from paper currency to bank accounts
- Floating exchange rate paper currency to bank accounts
- Above options with a floor of par

Central Bank Digital Cash

- Paper money is withdrawn or limited in supply. Possibly slowly going down in amount.
- Digital cash is simply credited the same rate as bank reserves at the central bank.
- This can be positive or negative.
- In this scheme, digital cash is always par.
- It is just like a bank account with the central bank.

Pegged Exchange Rate

- The exchange rate from paper currency to bank account dollars is multiplied by $1 + \text{daily interest rate on bank reserves at central bank}$.
- If this is started out when rates are positive, the index will build above par.
- This helps low income people who use cash more. This stimulates the economy and helps reduce inequality.
- Inequality itself is one cause of low for long.

Peg Rate Floored at Par

- The pegged rate can't go below par.
- So one dollar of cash always gets at least one dollar of bank account dollars.
- If the exchange rate falls to par, the central bank can jump the exchange rate up to 1.10 to 1.25 to give it room to have negative rates.
- 1.25 Would give it 5 years of minus 5 percent.
- The jump is itself a stimulus that also helps the poor the most, which gives the most stimulus as well.

Floating exchange rate

- The bank does not have to give you any paper money if it doesn't want.
- No more runs on the bank.
- The bank will sell or buy paper money at whatever price it wants.
- The central bank adjusts the supply of both paper dollars and bank reserves at the central bank.
- No one else, not banks, not people can change the supply of paper dollars or of bank reserves at the central bank.

Determinants of Floating Exchange Rate

- Supply and demand for paper money.
- The interest rate credited on bank reserves at the central bank.
- There is no explicit interest on paper money.
- The central bank can adjust the supplies to maintain any level or trend of the exchange rate.

No arbitrage of negative rates

- If a hedge fund with a billion dollars at the bank asks for its money in paper, the bank just says no.
- Or the bank says, hold on, I have to ask the central bank if it will give me a billion dollars in paper for you.
- Sorry, the central bank said no.
- Paper dollars for lemon stands, yes, for billion dollar hedge funds, no.

Could the Fed start negative rates now?

- Always a tricky question.
- If it just stopped printing money when it wants negative rates, and told banks they don't have to give out paper money, the answer might be yes.

Could a judge stop it?

- A judge could possibly order a bank to give out paper dollars.
- But what if it ran out?
- Could a judge order the Federal Reserve to print paper dollars?
- Less likely.

Without new paper dollars, arbitrage difficult

- Without new paper dollars from the central bank, it is hard for a hedge fund to get rolling.
- Everyone will want to keep their paper dollars if bank accounts get negative rates but paper dollars don't.
- So the Fed could possibly start deep negative rates just by stop printing more paper dollars and charging negative rates or fees on bank reserves at the Fed.

Call it a fee

- The Federal Reserve can simply charge banks fees for reserves at the central bank.
- Banks can only sell or lend reserves at the central bank to each other. They can't change the total by themselves.
- So the Fed could charge fees on bank reserves at the Fed and stop printing money.
- It might be difficult for a judge to order the Fed to not reduce the balance of reserves of banks at the Fed by a fee.

Why negative rates?

- Bernanke says the Fed needs room of 5 percent (maybe 6) below the inflation target for nominal rates.
- If the inflation target were zero, that would mean 5 below zero or -5.
- This is to stimulate the economy.
- Bernanke AEA Presidential Address
- <https://www.brookings.edu/blog/ben-bernanke/2020/01/04/the-new-tools-of-monetary-policy/>

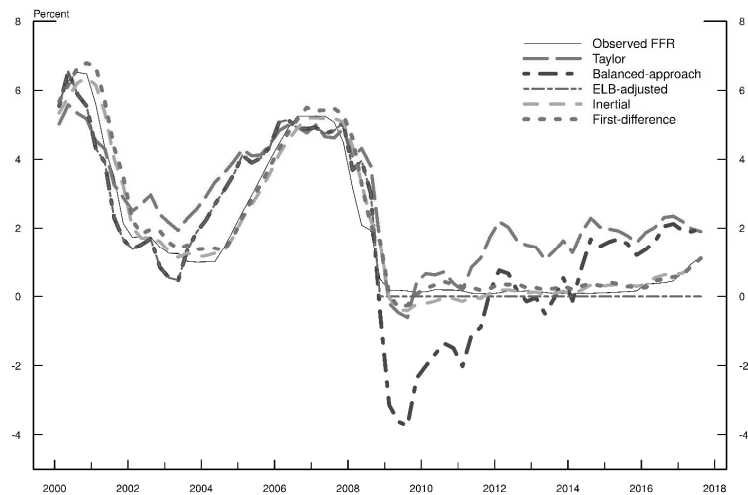

Zero Lower Bound

- Nominal rates are at zero.
- But actual output is below potential output.
- Even if inflation is only zero, the Balanced Rule and sometimes the original Taylor Rule require negative rates.
- The balanced rule moves rates down one for one with each percentage point actual GDP is below potential GDP.

Policy Rules

- The central bank rate on bank reserves is one point lower for each percentage point actual GDP is below potential GDP. (Balanced Rule)
- The central bank rate is 1.5 points lower for each point inflation is below its target.
- If inflation is at zero and the target is 2 percent, 2 - 3 gives -1 percent.
- If the output gap is -5, the total is -6 percent as the nominal rate the Fed charges bank reserves at the Fed.

Federal Reserve Policy Rules 2000s

Assumptions for Federal Reserve Chart

- Rstar is 2 percent.
- Inflation Target is 2 percent.
- <https://www.federalreserve.gov/monetarypolicy/policy-rules-and-how-policymakers-use-them.htm>
- Assumptions in detail here.
- <https://www.federalreserve.gov/monetarypolicy/principles-for-the-conduct-of-monetary-policy.htm>

Current Assumptions

- What about now?
- Current Estimates of Rstar range from 1 to -2.
- <https://thehill.com/opinion/finance/560710-near-zero-interest-rates-can-go-lower-the-question-is-should-they/>
- At rstar of -1, the Taylor and Balance rule shift down by -3.
- This would produce a negative rate for the 2009 to 2018 period for both the Taylor Rule and Balanced Rule.
- The Balanced Rule would have had an extreme negative rate of -7.
- The Taylor Rule minimum would be -3.5.

Unfloored CIR

- The unfloored CIR model would give negative rate scenarios that are reflective of 2008 to 2018 and even later.
- It is calibrated closer to the current view of Rstar as negative.

Recommend include unfloored CIR in tests

- Unfloored CIR would help to see what the post 2008 episode would be like with a more recent value of rstar.
- The Total Factor Productivity (TFP) growth rate adjusted for capacity utilization is also lower and is estimated to about zero currently.
- This is consistent with the lower Rstar.

Blanchard AEA Presidential Address

- The Blanchard American Economics Association should be a source of calibrating the model.
- The Blanchard Rule is that the median maturity government bond yield is less than the nominal growth rate of GDP.
- If the population growth rate is zero, and Rstar and TFP have zero to negative growth rates, and the inflation rate is below 2 percent, then the nominal GDP growth rate will be below 2 percent.
- So the nominal GDP growth rate could be 1 or even 0 percent.
- So the nominal interest rate at 7 years might be -1 as its target.
- <https://www.piie.com/commentary/speeches-papers/public-debt-and-low-interest-rates>

Life companies could borrow at negative rates

- Borrow directly from the Fed at the prevailing negative rate.
- Borrow from the Fed through a bank subsidiary.
- Borrow from an arms length bank at negative rates using corporate bonds as collateral.

Possible problems

- Fed unwilling or unable to lend directly to insurance companies.
- Bank liquidity coverage ratio might require work arounds for using corporate bonds as collateral. Or the Fed could adjust the rule.
- Treasury bond funds might be able to swap with insurance companies. But this might require an SEC rule change.

Field Test borrowing at negative rates

- The field test should include one model with deeper negative rates like the unfloored CIR.
- This should test the results with borrowing at the negative rate for all cash needs of the companies during the negative rate period.
- They would not sell any bonds to fund cash needs while rates were negative.
- The results could be presented to the Fed, FDIC, SEC, Treasury FSOC, and Congress to get any needed rule changes in advance.

Subject: Comments and Feedback on the "Recommended Models for ESG Field Testing"

Moody's Analytics appreciates the opportunity to provide comments on the Treasury Model, Equity Model and Corporate Model candidates under consideration for field testing in June 2022 as described in "Recommended-Models-for-ESG-field-testing_031722.pdf".

This note provides comments and feedback on the proposed models that will form part of the NAIC field test in June 2022. In particular we present the following main comments for consideration:

- » The NAIC has proposed adjustment to the underlying Cox-Ingersoll-Ross (CIR) methodology to address limitations of this model and calibration approach. These adjustments include the "Generalized Fractional Floor" or the "Alternative Calibration and Shadow Floor", to allow the modeling to meet the required acceptance criteria as defined by the NAIC and regulators.
- » In our experience, these types of 'ad-hoc' adjustments to mathematical models are not common practice among insurers. It is our view that such adjustments are undesirable as, in effect, they alter the model structure in a way that is not transparent. A simple model with well-understood limitations is generally preferable to a model which is more complex, but not fully understood.
- » Additionally, we do not believe that such an approach is required. There are alternative short rate models that can meet the NAIC's calibration criteria without the need for ad-hoc modeling adjustments to the stochastic model.
- » The choice of Treasury model (and in particular these adjustments proposed to the CIR model) will have an impact on the capital and reserves held by Insurers. The NAIC could consider including a wider selection of model/calibrations in the field test to gain a deeper understanding of the impact of model/calibration choices on these key results.
- » If the NAIC is considering a model-adjustment to introduce a floor and move away from a standard 3-Factor CIR model, then it is important to note that these model adjustments may affect some of the model's fundamental characteristics. A full validation of the key model output and properties should be considered, for example:
 - What level of arbitrage do these adjustments introduce?
 - Does this have a fundamental impact on reserves or capital?
 - How do these adjustments impact the stability of the model and the stability of the reserves and capital?
- » The level and frequency of negative long maturity rates may have a strong impact on reserving calculations, particularly when firms are using long-term bond portfolios to back their liabilities with a guaranteed level of return. The NAIC could consider carefully the calibration criteria with respect to 10, 20 or 30 maturity rates distribution and may benefit from looking at alternative calibrations with different severities of long maturity negative rates as part of the field test. We have observed that this part of the model and calibration has been under increased scrutiny by insurers following the large downward shocks to the Treasury yield curve which were seen between December 2019 and March 2020. Over this period both the short-term rates and long-term rates dropped by over 100 basis points. It is important to ensure that the model captures realistic dynamics for the level of variation in long term rates when the reserves and capital are sensitive to these assumptions.

- » The link between the equity model and the Treasury model is a common feature in many stochastic modeling frameworks used by insurers globally. Many insurers adopt a very similar approach to that outlined by the NAIC, but some institutions consider more complex stochastic models and may extend the model to include a dynamic equity risk premium. This dynamic equity risk premium reacts to whether the equity market is over/under priced. It is important to note that there is not an academic consensus on either a single modeling approach or an assumption-set governing these dynamics of the equity risk premium. The literature in this area can be quite broad and varied.
- » We would recommend that the NAIC choose a Credit Modeling approach that is transparent and supported by clear documentation on the model, assumptions, calibration approach and validation. If this is not possible with the currently proposed corporate model, then we would encourage the NAIC to consider other modeling approaches even if some of these related to simpler models.

The following sections provide feedback and more detailed commentary around these key considerations.

Interest Rate Modeling – Treasury Rates

Globally we observe that insurers and regulators consider a range of different arbitrage free pricing models depending on the specific stochastic calculations and applications they are tackling. For example, firms may choose different models with specific characteristics/properties when considering (1) risk-neutral valuation of complex insurance liabilities, (2) 1-year single timestep capital calculation or (3) multi-timestep capital/reserving calculations.

In each instance, firms will generally consider the following steps:

1. Identify the key features and calibration criteria that are relevant to the desired calculations. The calibration criteria can be a mix of qualitative and quantitative requirements on the modeling outcomes.
2. Select a model that has the desired features and the flexibility to be calibrated to meet the specified criteria.

This may lead to insurers considering a range of models and making a choice based on model performance. In general, insurers look to ensure:

- » The models are well understood, and their implementation is based upon standard approaches and academically recognized techniques.
- » The models and calibrations are stable and robust to changes in the input market conditions/assumptions. This ensures that the final capital/reserving/liability-values are stable and do not fluctuate or vary over time due to modeling/calibration artifacts.
- » The models are transparent and open to challenge and feedback from auditors/validators both internally and externally.

This approach aligns very closely with the approach taken by the NAIC and the calibration criteria specified by the NAIC is an excellent example of this - where some qualitative and quantitative criteria covering the following elements are considered:

- » Low for Long Interest Rates
- » Prevalence of High Rates, Upper Bounds on Treasury Rates
- » Lower Bounds on negative rates
- » Initial Yield Curve Fit, Yield Curve Shape in Projection and steady state yield curve shapes

In addition, to these criteria we typically see insurers looking to constrain and express a quantitative view on the **volatility** and **dispersion** of both short maturity and long maturity interest rates along with **correlation targets** for the movement of interest rates of different maturities.

There are a range of textbook pricing models that could be used to meet these criteria. The relative performance of these models will depend on the model implementation and the calibration approach. We understand, from the analysis produced so far by the NAIC, that the 3-Factor CIR model implementation that the NAIC has considered is not flexible enough to meet all of these criteria even though a range of different calibration approaches have been considered. This has led the NAIC to consider adjustments to this model to allow it to meet the needed criteria. These adjustments include the “Generalized Fractional Floor” or the “Alternative Calibration and Shadow Floor”, due to the fundamental limitations of the underlying Cox-Ingersoll-Ross (CIR) methodology forcing artificial adjustments to meet the required acceptance criteria as defined by the NAIC and regulators.

In our experience, insurers generally avoid making significant post-processing adjustments to meet calibration criteria. In many instances the post processing adjustment can fundamentally change the nature of the interest rate model. This can mean that some of the key model dynamics can break down e.g. the model is no longer arbitrage free or the distributions may not be stable from one valuation date to the next. When adjusting a model it is important to consider that the adjusted “model” may be fundamentally different from the original textbook model. This puts the onus on a robust validation of the new model’s properties, stability and behavior to ensure that the model owner fully understands the impact and performance of the model. In particular, it is important to quantitatively assess the key areas below.

- » What level of arbitrage do the adjustments introduce? This can have implications for projected returns on Treasury bonds over different horizons. By adjusting the model there is a risk that these changes to the yield curve will lead to strategies where unrealistic or inconsistent returns are produced by the model for certain bond portfolios/strategies.
- » Do the adjustments have a fundamental impact on reserves or capital?
- » How do the adjustments impact the stability of the model and the stability of the reserves and capital?

ALTERNATIVE MODEL CHOICES

It is important to note that alternative models (variations of the arbitrage free pricing models like the CIR model) can meet the NAIC’s specified calibration criteria without the need for ad hoc model adjustments.

These alternative models could be considered for inclusion in the Field Test or the NAIC could consider allowing insurers to use alternative models as long as they meet the NAIC’s prioritized acceptance criteria. This could have the following added benefits.

- » The NAIC are only required to maintain calibration criteria on a regular basis rather than a full suite of models, calibrations and scenarios. The NAIC could naturally continue to offer a standard set of scenarios for firms who wished to use the NAIC prescribed models.
- » Validation is still simple for each state regulator as insurers would be required to provide summary statistics attesting to compliance with criteria.
- » Insurers can leverage existing toolkits, automated processes etc. to produce reserves and capital in an efficient way.

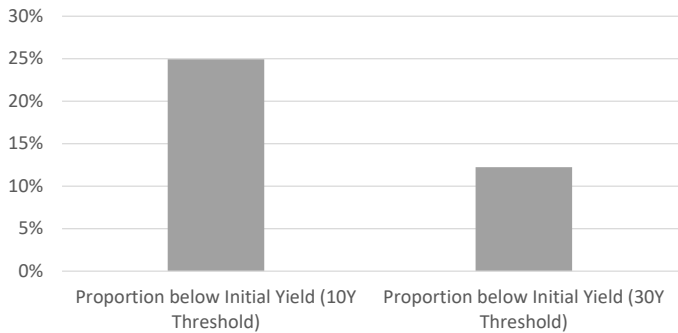

This type of approach to stochastic modeling regulation is common in many other countries and avoids insurers being constrained to models that may have significant limitations in the scope of applicability.

One example of a model that can meet the criteria specified by the NAIC without any model adjustment is the Displaced 2-Factor Black Karasinski (D2FBK) model. This model is widely used by the insurance industry for multi-timestep real-world projections, and its calibration flexibility and stability mean this model can be used for a wide range of applications.

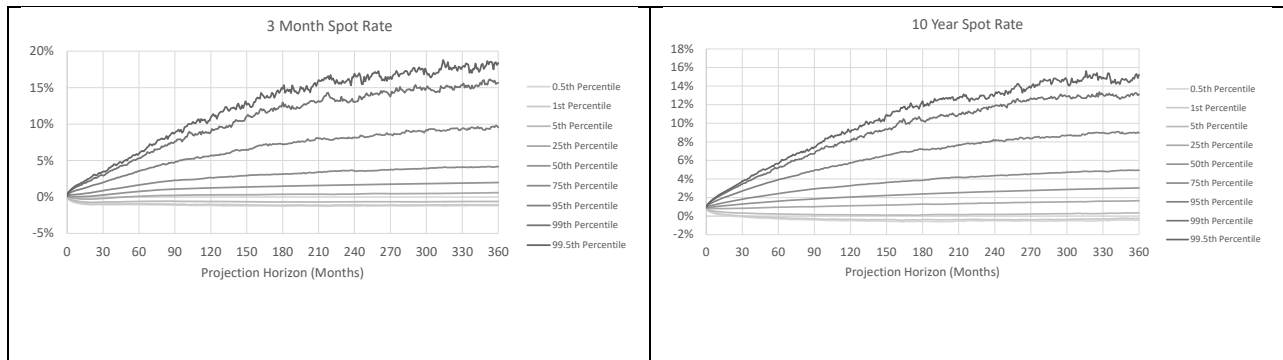

This model goes beyond the traditional log-normal Black Karasinski model that was limited to strictly positive rates. The implementation of the D2FBK model that we have considered addresses these limitations through the inclusion of a displacement factor which changes the shape of the distribution (limiting the probability of very high rates) and ensures the model captures negative interest rates in a controlled and integrated manner with the models pricing dynamics. Shifting the distribution from strictly log normal addressed some of the limitations of the log normal models while maintaining the benefits of the 2FBK model, such as more realistic yield curves, reasonable calibration analytics, and flexible term premium modeling. This D2FBK model provides for negative interest rates and at the same time it provides more realistic rate distributions in the low-rate environment, which are the fundamental calibrations defined by the NAIC.

The D2FBK model can be easily parameterized in its current form to meet the success criteria set out by the NAIC for interest rate modeling without the need to alter the structure of the model or sacrifice other important characteristics of the model output. These include the stability of the distribution of rates across different calibration dates, the ability of the model to project realistic risk/return profiles of government bonds and the ability of the model to accurately capture target average paths for the projection of different points on the yield curve.

The table below illustrates the flexibility of the D2FBK model by illustrating an end-Dec 2020 calibration. This highlights that the calibration criteria specified by the NAIC can be comfortably met by this type of interest rate model without the need for ad hoc adaptations to the model structure.

<p>'Low for Long': At least 10% of Scenarios should have a 10-year geometric average of the 20-year UST that is below the initial rate and at least 5% of Scenarios should have a 30-year geometric average of the 20-year UST that is below the initial rate.</p>	<p>Moody's Comment: The chart below shows the proportion of 20-year treasury rates that are below the initial 20-year rate when we consider a geometric average over a 10 year and 30 year time horizon.</p> <p>It is important to note that these metrics are strongly dependent on the choice of calibration approach for the volatility and dispersion of long term interest rates in any model. The validations below are based on calibrations to a global data set, however by choosing a more US-centric data set as a basis for the calibration will lead to validation statistics close to the 10% and 5% thresholds the NAIC have specified.</p> <p>PASS</p>						
 <table border="1"> <caption>Proportion below Initial Yield</caption> <thead> <tr> <th>Threshold</th> <th>Proportion</th> </tr> </thead> <tbody> <tr> <td>Proportion below Initial Yield (10Y Threshold)</td> <td>~25%</td> </tr> <tr> <td>Proportion below Initial Yield (30Y Threshold)</td> <td>~12%</td> </tr> </tbody> </table>		Threshold	Proportion	Proportion below Initial Yield (10Y Threshold)	~25%	Proportion below Initial Yield (30Y Threshold)	~12%
Threshold	Proportion						
Proportion below Initial Yield (10Y Threshold)	~25%						
Proportion below Initial Yield (30Y Threshold)	~12%						

<p>'Prevalence of High Rates': (a) The scenario set should reasonably reflect history with some allowance for more extreme and low interest rate environments.</p> <p>(b) Upper Bound</p> <p>(i) 20% is \geq99th percentile 3M yield fan chart, and no more than 5% of scenarios have 3M yields that go above 20% in the first 30 years.</p> <p>(ii) 20% is \geq99th percentile 10Y yield fan chart, and no more than 5% of scenarios have 10Y yields that go above 20% in the first 30 years.</p>	<p>Moody's Comment: (a) The distributional targets (volatility and dispersion) for both short maturity and long maturity rates are set using available historical data from around 30 economies covering periods of high and low/negative rates. PASS</p> <p>(b) (i) See charts below for 3-month Spot Rate percentile distribution covering the 0.5th to the 99.5th percentiles. PASS</p> <p>(b) (ii) See charts below for 10-year Spot Rate percentile distribution covering the 0.5th to the 99.5th percentiles. PASS</p>
---	--

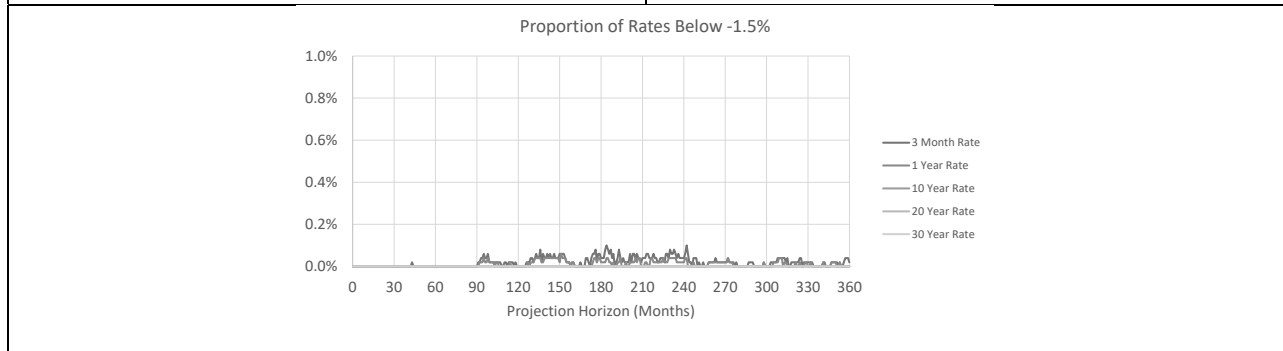

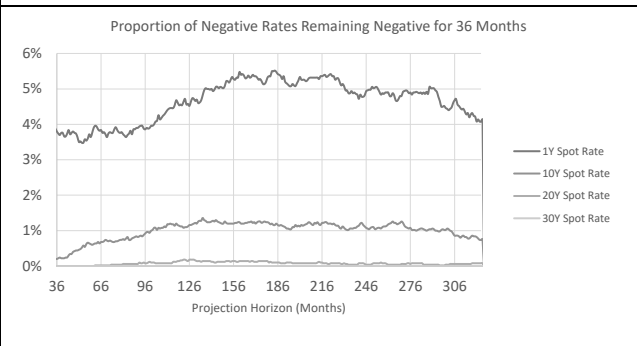

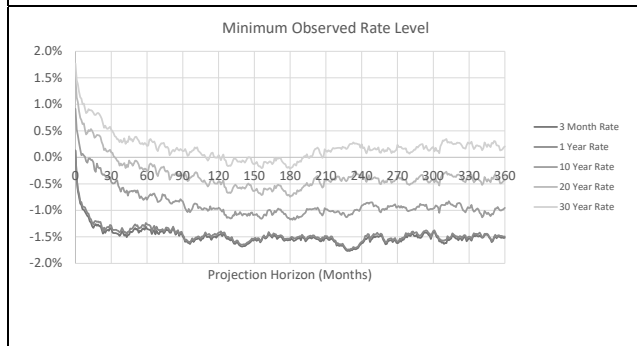

'Lower Bound on Negative Rates, Arbitrage-Free Considerations

- (a) All maturities could experience negative rates
- (b) Interest rates may remain negative for multi-year time periods.
- (c) Rates should generally not be lower than -1.5%

Moody's Comment:

- (a) As can be seen in the chart below, the minimum observed interest rate for all maturities 1 to 20 years is negative. With the 30 year maturity rates very close to zero. **PASS**
- (b) The chart below highlights the proportion of negative rates that are persistently negative for at least 36 months. **PASS**
- (c) The chart below highlights that only a very small proportion of rates < 0.1% are below -1.5% **PASS**

<p><u>Initial Yield Curve, Yield Curve Shapes and the Steady-State Yield Curve:</u></p> <ul style="list-style-type: none"> (a) Review initial actual vs.fitted spot curve differences (b) The frequency of yield curve shapes in early durations should be reasonable considering the shape of the starting yield curve. (c) The steady state curve has normal shape (not inverted for short maturities, longer vs shorter maturities, or between long maturities.) 	<p>Moody's Comment:</p> <p>(a) The model uses the spot rate curve as a direct input and hence the model exactly replicates any specified spot curve. PASS</p> <p>(b) The average path of modelled rates of different maturities is targeted such that the market-implied path of rates is closely followed over the first few years of the projection. This results in yield curves shapes at short time horizons that are strongly informed by the shape of the initial market yield curve. The chart below highlights the level of inversions observed in the model for a strongly inverted initial curve and an upward sloping curve over different time horizons. PASS</p> <p>(c) The initial and long-term steady state curve are shown below. The steady curve has an upward sloping shape PASS</p>

The D2FBK model illustrated here is just one example of a model that is well suited to the calibration criteria that the NAIC have specified. However, it is important to note that there may be other models that are able to meet the criteria without the need for an adjustment/flooring mechanism that disrupts the original model dynamics.

The NAIC could consider allowing some flexibility in the choice of model that insurers are allowed to use in these calculations. Such flexibility may enable insurers who are currently using stochastic models to have continuity in their modeling and calibration approach (provide they meet the NAIC specified criteria). This has the added benefit of enabling insurers to use the same interest rate model for different applications within the same company (e.g. pricing, business planning, strategic asset allocation exercises, 1-year VaR solvency calculations etc.). The alternative would require insurers to use a simple model for the reserves and capital calculation. However, the limitations of the model would prevent them using it for other business decisions due to the unrealistic dynamics or assumptions. We believe that the NAIC could consider allowing insurers to choose their own interest rate model for inclusion in the forthcoming field test providing it meets all of the specified calibration/validation criteria.

Additional interest Rate Model Validation Criteria

The NAIC has focused on some of the key validation criteria around the performance of the rate distribution and dynamics. If the NAIC is looking to adjust the CIR model to constrain the floor it is important to broaden the validation of the model to cover a wider set of outputs. This will help ensure the model is behaving coherently when the rates are used to calculate asset returns for government bond strategies.

The following additional validation tests would allow the NAIC to demonstrate the robustness of the asset returns and help provide insight into the impact of the model changes on the arbitrage-free properties of the model.

- » **Martingale Tests** – Scenario sets can be produced where the risk premiums (term premiums) in the model are set to zero. An asset martingale test can be performed on bond portfolio strategies of different maturities (e.g. 1, 3, 5, 10, 15, 20, 25, 30-year maturities, with either zero-coupon or bond-at-par coupon assumptions). It should be observed that all portfolios return the same as the risk-free rate on average.
- » **Asset Return Tests** – This would cover the validation of the expected return and volatility of asset portfolios of 1, 3, 5, 10, 15, 20, 25, 30-year maturity bond portfolios. This allows the NAIC to assess the relative behavior and stability of expected returns and volatilities from one valuation date to the next.

In addition to these tests the stability of the model outcomes could be impacted by the introduction of a floor. The NAIC could benefit from assessing the stability of the distributions, asset returns and ultimately the capital and reserves under different input assumptions or initial conditions. For example, the NAIC could gain confidence in the robust nature of the model by considering the following validation examples.

- » Assessment and comparison the distributions, asset returns and modeling outcomes (capital and reserves) on **multiple valuation dates and under stresses to the initial conditions**:
 - Extreme high and low historical yield curve from across the globe (Germany, Switzerland, Japan, South Africa, etc...)
 - Ad hoc stresses to the initial conditions of the model e.g. plus/minus 50 or 100 basis points to the initial curves.

We appreciate the range of possible validation criteria can be extensive, but it would add clarity to the model performance and impact of the flooring adjustment if the NAIC could present validation analysis of this nature.

Equity Modeling

The equity modeling approach proposed by the NAIC – where the equity returns are based on a constant equity risk premium in excess of a risk free (short term Treasury rate) coupled with a stochastic process for excess returns - is similar to the modeling approaches considered by many insurers globally. This approach is relatively straight forward and allows insurers to set a clear assumption on the equity risk premium and to incorporate this into the modeling in a direct and transparent manner.

Where firms are looking to go beyond this modeling approach, we have seen insurers look to incorporate a dynamic equity risk premium that accounts for the over (or under) pricing of the equity market. For example, this dynamic equity risk premium would vary through the projections i.e. in each scenario where the equity price grows strongly the equity risk premium reduces and when the equity market falls sharply the equity risk premium increases. This provides a few added benefits to the modeling:

- » The total average return in equity is no longer a function of interest rates and a constant risk premium. In addition to these two components the risk premium will change depending on a dynamic risk premium component which is linked to a view on whether the market is over/under priced.
- » The average risk premium over the first few years of the projection can change from one valuation period to the next leading to a more direct conditional view on the performance of equities relative to fixed income assets. The short-term risk premium can go up or down depending on the market conditions.
- » The dynamic equity risk premium approach will narrow the extreme tails of the cumulative return distributions (both on the upside and the downside) as the extreme scenarios where markets grow will be associated with a lower subsequent equity risk premium and scenarios where the market falls will be associated with a higher equity risk premium.

Naturally the challenges with the dynamic equity risk premium approach relate to the choice of model and mechanism to set the level of over/under pricing in the equity market. In addition, the assumption and calibration of the model may require some expert judgement (rather than a purely data driven approach) as there is not an academic consensus on a single modeling approach or assumption set governing these dynamics of the equity risk premium. The literature in this area can be quite broad and varied.

In general, the most appropriate approach to equity risk premium modeling is dependent on the nature of the insurance product and the specifics of the risk/capital/reserving calculations. We have seen a mix of the constant risk premium and dynamic equity risk premium approach used by institutions globally.

Credit Modeling

The credit modeling documentation shared last year by the NAIC alluded to a complex model with several different model structures (e.g. spread, defaults, rating transitions etc...) that appeared more complex (both in terms of model dynamics and calibration) than the interest rate and equity models.

In general, we would advocate for as much transparency as possible, and the importance of this transparency increases when using more complex models which may embed strong and material assumptions.

If it is not possible for the NAIC to share further documentation on the corporate model that is under consideration, then we would suggest the NAIC consider adopting an alternative more streamlined corporate model. It should be noted that the current AIRG Generator corporate fund model (that includes a simple credit return adjustment) could be used in conjunction with the NAIC's new interest rate and equity model choices.

In addition, the current scenario set requirements are based on producing fund returns for a set of corporate bond funds – rather than the need for a full stochastic projection of spreads, transition and defaults. The key requirements could be focused on ensuring that

- » The model captures an appropriate level of conditionality on current market conditions, i.e. it captures current spread levels and hence return levels for the funds
- » The model is successful in quantifying a reasonable level of asset return volatility and correlation of other risk factors which may not necessitate a complex modeling approach.

For certain applications having granular information about the movement of spreads, transitions and defaults at individual bond/sector/country level can be critical for quantifying asset risk and diversification across ratings and maturities. However, this might not be a key requirement if the focus is solely on asset return modeling for a small number of corporate bond portfolios.

We are aware that the ESG Drafting Group is considering other modeling options and we value any options that support full transparency on the model, calibration methods, assumptions and validation performance of the corporate model.

Summary

We have discussed the NAIC's proposed approach to interest rate and equity modeling, along with the corporate bond model, and would highlight the following suggestions for consideration by the NAIC.

- » We respectfully request consideration for using alternative Treasury model representations in the field study that meet the NAIC calibration requirements. This could be achieved by allowing insurers to use additional scenario sets as part of the field test based on alternative models that meet the NAICs calibration criteria. Alternatively, the NAIC could consider providing additional static sets of scenarios for each of the field testing valuation dates covering alternative model choices. This may help demonstrate to regulators that defining a prescribed set of Treasury model acceptance criteria may be considered, rather than prescribing any single Treasury model that may have some limitations.
- » Furthermore, we would highlight the benefits to the NAIC of broadening the validation assessment criteria of the scenarios to include assessment of the impact of the calibration/model choice on bond portfolio asset returns that are derived from the Treasury model scenarios.
- » In addition, we would strongly encourage the NAIC to choose a model for corporate bond returns that is transparent, documented and well understood rather than an approach that is provided with no documentation on the model, calibration methods, assumption or validations of the key model features.

We greatly appreciate the opportunity to engage with the NAIC and regulators in this initiative and we are hopeful the comments and insights we have shared can be used to support the upcoming Field Test and the ESG Working Group's activities.

Sincerely,

Jack Cheyne PhD
Senior Director - Scenario Generator Product Management,
Moody's Analytics

NAIC Economic Scenario Generator (ESG) Field Test Participation Request

Background

An ESG Field Test is being planned to begin in early June 2022. The models proposed to be included in the field test are as follows:

Model	Field Test Recommendation
Treasury	1. Field test two Treasury model candidates
	a. Conning Calibration and Generalized Fractional Floor (“Non-shadow”)
	b. Alternative Calibration and Shadow Floor (“Shadow”)
Equity	2. Equity Utilize the existing GEMS® equity model with equity-Treasury linkage based on the short Treasury rate for field testing. Additionally, apply the following calibration updates:
	a. Update the equity model calibration to account for changes made to the Treasury model
	b. Apply a Sharpe-ratio approach with a 5% corridor to set the expected returns for the international equity indices
Corporate	3. Include GEMS® corporate model in initial field testing with the calibration updated for consistency with other generated returns on a risk/reward basis

Scenarios will be provided as of three valuation dates: 12/31/20, 12/31/21, and 3/31/22.

Companies testing all models with all three valuation dates would have 6 sets of results. In addition, there may be various sensitivity tests. For draft field test specifications, see the Economic Scenario Generator (ESG) Reserves and Capital Field Test Specifications document.

Participation in the Field Test

Companies wishing to participate in the field test should contact Scott O’Neal by April 28, 2022 at soneal@naic.org and provide the following information:

- Company name
- NAIC company code
- Names and email addresses of company contacts
- Responses to Pre-Field Test Survey – see “NAIC Economic Scenario Generator (ESG) Pre-Field Test Survey”

Note: Since the new ESG may have a material impact on reserves and capital, it is necessary to have broad industry participation in the field test. NAIC staff will monitor the level of participation. If it is insufficient, regulators may contact companies to request their participation. All companies participating in the field test will be contacted by a regulator from a state in which they are licensed with details on field test requirements and a request to provide field test results to NAIC staff.

Communication of Field Test Results

NAIC staff will compile aggregated results in a report that will not contain any company-specific or other company-identifiable information. Joint LATF/LRBC WG open meetings will be held to discuss 1) aggregate field test results, 2) whether any calibration or parameter changes are needed based on the results, and 3) potential VM and RBC instruction impacts, e.g. phase-in language.

NAIC Economic Scenario Generator (ESG) Pre-Field Test Survey

Background:

An ESG Field Test is being planned to begin in early June 2022. The models proposed to be included in the field test are as follows:

Model	Field Test Recommendation
Treasury	1. Field test two Treasury model candidates
	a. Conning Calibration and Generalized Fractional Floor (“Non-shadow”)
	b. Alternative Calibration and Shadow Floor (“Shadow”)
Equity	2. Equity Utilize the existing GEMS® equity model with equity-Treasury linkage based on the short Treasury rate for field testing. Additionally, apply the following calibration updates:
	a. Update the equity model calibration to account for changes made to the Treasury model
	b. Apply a Sharpe-ratio approach with a 5% corridor to set the expected returns for the international equity indices
Corporate	3. Include GEMS® corporate model in initial field testing with the calibration updated for consistency with other generated returns on a risk/reward basis

Scenarios will be provided as of three valuation dates: 12/31/20, 12/31/21, and 3/31/22.

Companies testing all models with all three valuation dates would have 6 sets of results. In addition, there may be various sensitivity tests. For draft field test specifications, see “Economic Scenario Generator (ESG) Reserves and Capital Field Test Specifications”.

For companies planning to participate in the ESG Field Test:

1. Please indicate with an “X” all calculations you plan to submit for the product types shown in the table below.

Product Type	VM-20			VM-21 Reserves	C-3 Phase II	C-3 Phase I
	SR	DR	SERT			
Whole Life						
Term Life						
Indexed Life						
Universal Life						
Universal Life with Secondary						

Guarantees						
Variable Life						
Variable Universal Life						
Fixed Annuities						
Indexed Annuities						
Variable Annuities with Guarantees						
Variable Annuities without Guarantees						
Life Contingent Payout (Immediate and Annuityizations)						
Other Annuities						

2. Results will be requested on a post-reinsurance-ceded basis. Can the company also provide pre-reinsurance-ceded results? __Yes / __No.
3. How many scenario sets would your company be willing to run?
4. For C3 Phase I, how many scenarios does your company currently run?
5. For stochastic reserves and/or C3 Phase II, what is the largest number of scenarios your company would be willing to run per scenario set? Pick one.
 - a. 10,000
 - b. 1,000
 - c. 500
 - d. 200
 - e. 40
 - f. Varies by product. If so, please specify: _____
6. Which of the following Treasury file formats could your company run? Select all that apply.
 - a. Conning single file format (as exposed)
 - b. AIRG single file format
 - c. AIRG multiple file format
 - d. Other, please specify: _____
7. Would your company be able to run the Conning file format (as exposed) for Equities and Corporate Bonds? __Yes / __No. If No, please explain what format adjustments would be needed.
8. Would your company be willing to respond to a qualitative survey in addition to producing quantitative results? __Yes / __No.
9. Do you use hedging for any life and/or annuity products? __Yes / __No. If Yes, does the company explicitly model the hedge program or implicitly capture the impacts of hedging?
10. For reserve and capital calculations does your company currently use the prescribed AIRG, a modified version of the AIRG, or some other proprietary ESG?

11. Would your company be willing to complete additional runs to support attribution analysis? For example, additional scenario sets could be provided that would help to isolate the impact from changes to a single model component (e.g. Treasury model).

For companies not planning to participate in the ESG Field Test:

1. Do you use hedging for any life and/or annuity products? __Yes / __No. If Yes, does the company explicitly model the hedge program or implicitly capture the impacts of hedging?
2. For reserve and capital calculations does your company currently use the prescribed AIRG, a modified version of the AIRG, or some other proprietary ESG?
3. Would your company be willing to respond to other qualitative survey questions?
4. Are there any specific changes that could be made to the field test that would allow your company to participate?

DRAFT

Economic Scenario Generator (ESG) Reserves and Capital Field Test Specifications

Primary Contact:
Scott O’Neal, FSA, MAAA (soneal@naic.org)

Section I: Overview

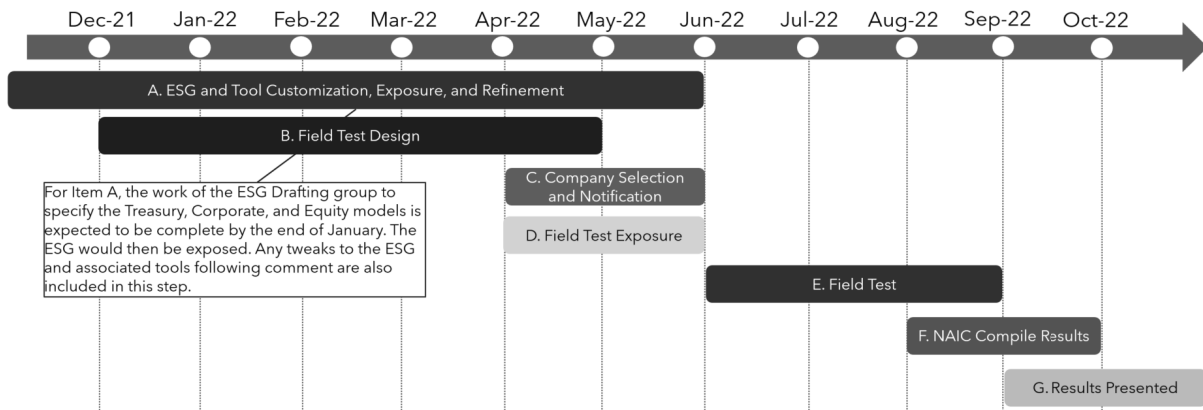

A. Objectives

The ESG Field Test should be able to address the following questions:

<p>1. Reserve and Capital Impact</p>	<ul style="list-style-type: none"> • How does the new ESG impact industry reserves and capital in different economic environments? • How do reserve and capital impacts vary by product type? • What is the impact of the changes to each ESG model (i.e. interest rate model, equity model, corporate model)? <p>The impact will be determined by comparing reserves and capital calculated using the field test ESG scenario sets against results that were determined using currently prescribed or allowed ESGs used in Annual Statement and/or RBC reporting.</p>
<p>2. Range of Results</p>	<ul style="list-style-type: none"> • What is the range of reserve and capital impacts across companies (e.g. percentage increase/decrease)? • Which particular companies and product types have the highest and lowest impacts, and why?
<p>3. Metrics</p>	<ul style="list-style-type: none"> • Which particular interest rate and equity scenarios cause the greatest stress? • How do results compare for CTE70 vs. CTE98? Calculate different CTE levels (e.g., CTE70, CTE98, CTE90) to compare to existing requirements. • How do the metrics perform with different scenario set sizes?
<p>4. Stability Over Time</p>	<ul style="list-style-type: none"> • How do the reserve and capital results change across scenarios produced at different valuation dates?
<p>5. Exclusion Testing and Reserve Components</p>	<ul style="list-style-type: none"> • Does the new ESG change the likelihood of the SR being the dominant reserve? • Do the exclusion tests still perform as intended? • Does the VM-20 DR scenario still capture risk appropriately? <p>Note: Companies that currently pass the stochastic exclusion test will not have a stochastic reserve model.</p>
<p>6. Hedging Impact</p>	<ul style="list-style-type: none"> • Does the new ESG impact hedge effectiveness? If so, what feature is driving this (e.g. the new ESG produces additional yield curve shapes, such as humps)?

7. Sensitivity Tests and Attribution	<ul style="list-style-type: none"> Do baseline results and/or sensitivity tests indicate that the field-tested ESG calibration needs to be modified? What are the drivers of reserve and capital changes as determined from attribution analysis?
---	---

B. Tentative Timeline

Note: Dotted lines represent the beginning of the month.

C. Structure

- NAIC to collaborate with the American Academy of Actuaries’ ESG Field Testing Subgroup and American Council of Life Insurer’s ESG Field testing group to design the NAIC ESG Field test. Field test recommendations will be brought to a joint meeting of the Life Actuarial (A) Task Force and the Life RBC (E) Working Group.
- Field Test Participants
 - The NAIC has solicited volunteer companies to participate in the ESG field testing.
 - Further analysis needs to be completed to assess product coverage.
 - Additional participants may be requested if desired by regulators.
- The NAIC will also coordinate the following:
 - Communicating with field test participants and providing ESG Field Test instructions and result templates.
 - Collecting, aggregating, and summarizing company results

D. Reserve and Capital Frameworks Covered

VM-20	<ul style="list-style-type: none"> All individual life insurance policies issued on or after the operative date of VM-20, or issued during the transition period, if elected by the company. Smaller insurance companies may obtain an exemption from VM-20 calculations.
--------------	--

	<ul style="list-style-type: none"> • Stochastic reserves, Deterministic reserves, and stochastic exclusion ratio test (SERT) values will need to be field tested
VM-21/C3 Phase II	<ul style="list-style-type: none"> • Variable deferred or immediate annuity contracts whether or not they have GMDBs or VAGLBs, group annuity contracts containing GMDBs or VAGLBs, and policies or contracts with guarantees similar in nature to GMDBs or VAGLBs where there is no other explicit reserve requirement • Stochastic Reserves and the Additional Standard Projection Amount will need to be field tested. Different CTE levels will need to be tested for reserves and capital
VM-22/C3 Phase I	<ul style="list-style-type: none"> • Include certain annuities (with the exception of indexed annuities) and single premium life insurance for C3 Phase I testing. • Reported C3 Phase I capital will be compared against results produced using the field test scenario sets. Participants that are testing products according to the C3 Phase I methodology will be asked to use a choose a scenario set with at least 200 scenarios for the ESG field test candidates rather than scenario sets with 50 or 12 scenarios as used in reported C3 Phase I results. • VM-22 methodology changes will be deferred to the VM-22 field test, and therefore VM-22 calculations are out of scope for this field test.

E. Survey Questions

1. Do you use an implicit method or explicit method to model hedging?
2. If your company uses an implicit methodology to quantify the impacts of hedging, have you reassessed whether this implicit method is still appropriate in light of the field test scenario sets?
3. If hedges are modeled directly, how has the hedge effectiveness changed? Please provide comments to explain the change.
4. Were overall results consistent with expectations? If not, what is driving the difference?
5. Did your company use actual inforce and asset data as of each respective valuation date or use adjusted inforce and asset data? Please describe adjustments if made to all or some of the inforce and/or asset data.
6. If your company elected to run certain models as of a 9/30/XX date, please describe which set of results were produced using 9/30/XX dates.
7. Would your company need to create a more refined mapping to equity and bond funds given the expanded set of returns offered by the GEMS ESG? If yes, please provide a quantitative or qualitative explanation of how it might impact your results.
8. Do you have any modeling simplifications or assumptions that may no longer be appropriate to use alongside the field test scenarios? Examples could include a

modeling simplification of your company's actual investment strategy or a dynamic lapse formula that may be impacted by the incorporation of negative Treasury rates. If so, please provide details on the simplifications and their expected impact on field test results.

9. If your company elected to run a representative set of models or inforce, please describe any adjustments made to account for the difference between the representative models or inforce and the reported values. Also please provide an explanation as to why the models or inforce that was used in field testing is expected to be representative.
10. If a different number of scenarios was used for field test results as compared to the number of scenarios used in reporting, please provide information on which results are impacted.

F. Valuation Date

- Field test participants will be required to run their models using scenario files as of 12/31/20 and 12/31/21. Optionally, participants may elect to also to run their models as of 3/31/22.
- The valuation dates were selected for the following reasons:
 - To select dates recent enough that participants will still have access to run the respective inforce and models that were utilized in reported results, and
 - To test the model under different economic conditions.
- For companies that model certain lines of business only once a year and as of 9/30, scenario sets for 9/30/2020 and 9/30/2021 will be provided.

Section II: Assumption and Model Specifications

A. Population

- Use the actual inforce population corresponding to chosen valuation date. Alternatively, if actual inforce is not available for all valuation dates, use actual inforce as of 12/31/21 and make adjustments as appropriate.
- To the extent that it is not possible for a company to run all relevant statutory reserve and capital models for the field test, a company may elect to run a representative set of their models or inforce. Companies should then either adjust the final results to align with their reported reserve and/or capital amounts, or alternatively, they should adjust their reported amounts to align with the representative business that is being field tested.

B. Reserve/Capital Model Type

- Models should be capable of projecting asset and liability cashflows across numerous stochastic scenarios according to the requirements of the respective reserve or capital framework.

C. Asset/Liability Assumptions

- Utilize company and/or prescribed assumptions relevant to each respective reserve or capital framework.
- All components of the modeling other than the scenarios should remain the same between reported and field test runs (e.g., the same investment strategy, liability assumptions, CDHS modeling, etc.).

D. ESG Models and Scenarios

Model	Field Test Recommendation
Treasury	1. Field test two Treasury model candidates
	a. Conning Calibration and Generalized Fractional Floor (“Non-shadow”)
	b. Alternative Calibration and Shadow Floor (“Shadow”)
Equity	2. Equity Utilize the existing GEMS® equity model with equity-Treasury linkage based on the short Treasury rate for field testing. Additionally, apply the following calibration updates:
	a. Update the equity model calibration to account for changes made to the Treasury model
	b. Apply a Sharpe-ratio approach with a 5% corridor to set the expected returns for the international equity indices
Corporate	3. Include GEMS® corporate model in initial field testing with the calibration updated for consistency with other generated returns on a risk/reward basis

- Field test participants will be provided scenario sets from the new ESG for field testing via the <https://naic.conning.com/scenariofiles> website.
- Parameters for the ESG and statistical summaries will be released alongside the scenarios
- 10,000 scenarios will be provided along with 1,000, 500, 200, and 40 scenario subsets
- As part of the field test, participants will be asked to compare results using the scenario sets from the new ESG to results that were determined using currently prescribed or allowed ESGs used in Annual Statement and/or RBC reporting. Field test participants will be responsible for obtaining scenario sets used for their reported results.
- Participants should run the same number of scenarios corresponding to their reported numbers for each respective reserve or capital model, with the exception of C3 Phase I which has alternative instructions. If there is a discrepancy between the

number of scenarios used in reported as compared to the field test, please address this in the survey questions.

- Optionally, participants will also be asked to run the 16 SERT scenarios. This will be used to facilitate the results analysis. Since the SERT scenarios cover a range of interest rate and equity combinations, the results could be used to help explain and validate the stochastic results.
 - Reasoning: When evaluating results from stochastic scenarios, one challenge is how to identify the drivers of reserve/capital change. Individual stochastic scenarios can be hard to describe, but the SERT scenarios were designed to capture changing economic environments that are easy to explain.
- Field test participants may choose the number of scenarios included in their calculation of reserves or capital for each line of business, with the exception of C3 Phase I where runs will be subject to a minimum of 200 scenarios.

E. Metrics/Output

- Reserve/Capital Framework specific results
 - VM-20
 - Stochastic reserve
 - Deterministic reserve
 - Stochastic Exclusion Ratio Test results
 - VM-21
 - Stochastic reserve
 - VM-21 CTE70 Best Efforts and CTE 70 Adjusted
 - Additional Standard Projection Amount
 - Company-Specific Market Path (CSMP) scenarios will be provided for testing
 - C3 Phase II
 - Total Asset Requirement
 - C3 Charge
 - C3 Phase I
 - Reserves that were cash flow tested for asset adequacy
 - The C3 Phase I results should be summarized by applying the weights in the table below to the respective percentiles.

-----	Percentile	Weighting	-----
92	92.5	93	93.5
94	94.5	95	95.5
96	96.5	97	97.5
98			
.02	.04	.06	.08
.10	.12	.16	.12
.10	.08	.06	.04
.02			
- Reinsurance
 - Companies should provide results on a post-reinsurance basis. Optionally, companies may provide results on a pre-reinsurance basis in addition to providing on a post-reinsurance basis.
- Provide the following metrics at time zero for all frameworks
 - CTE70, CTE90, CTE98

- Optional Step: Calculate results according to the VM-20 Stochastic Exclusion Ratio Test (SERT) scenarios for all products, regardless of framework
- Participants will also be asked to provide scenario level results by projection timestep according to the respective reserve or capital framework. For example, companies will be asked to provide the present value of accumulated deficiencies at time zero and future timesteps for the VM-20 stochastic reserve calculation.

F. Aggregation

- Field test participants are allowed to aggregate business according to the requirements of each respective reserve or capital framework. For example, participants electing to include whole life insurance and term insurance in their testing may aggregate within the established VM-20 Reserving Categories, but not across the categories.

G. Fund Mapping

- The GEMS ESG contains additional equity and bond fund returns that would allow for a more refined mapping of funds. Companies shall use their existing fund mapping rather than create a more refined fund mapping. A survey question will ask participants to qualitatively or quantitatively address how their results would be impacted by including a more refined fund mapping.

Section III: Attribution Analysis

Note: We are seeking comment on how attribution analyses could be incorporated into the ESG Field Test along with recommendations for particular areas of focus.

Section IV: Resources

- A. AIRG used for C-3 Phase I
 - Life Risk-Based Capital (E) Working Group
- B. AIRG used for C-3 Phase II, VM-20, and VM-21
 - Society of Actuaries Resource Page for Economic Scenario Generators
- C. Proposed SERT Scenario Methodology
- D. Proposed Scenario Subset Selection Methodology
- E. ESG Landing Page (source for NAIC scenarios, documentation, etc.)

August 8, 2022

From: Pete Weber, Chair
The Variable Annuities Capital and Reserve (E/A) Subgroup

To: Mike Boerner, Chair
The Life Actuarial (A) Task Force

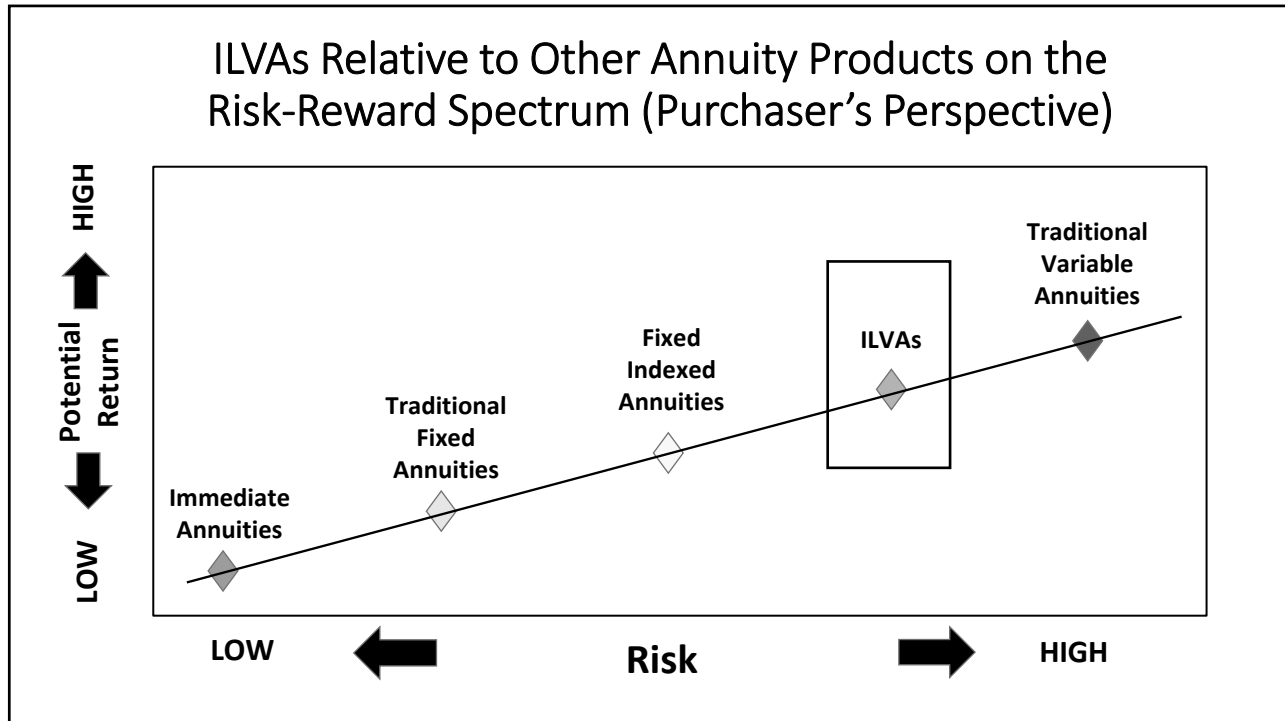

Subject: The Report of the Variable Annuities Capital and Reserve (E/A) Subgroup (VACR SG) to the Life Actuarial (A) Task Force

The VACR SG has not met recently. In the Spring, the Chair made a request to the Society of Actuaries to expand the work they are currently carrying out for the VM-22 Standard Projection Amount Mortality Drafting Group to include variable annuities. That work is ongoing.

Another item to note is regarding the LATF 2022 charge regarding the VM-21 Standard Projection Amount:

“Evaluate and provide recommendations regarding the VM-21/AG 43 Standard Projection Amount, which may include continuing as a required floor or providing as disclosure. This evaluation is to be completed prior to year-end 2023.”

LATF may wish to consider extending the completion date of this charge given that the question has not been considered since the new VA framework was adopted in 2018. Other LATF projects, particularly the development and implementation of a new Economic Scenario Generator, may impact the direction LATF takes to address this charge.

Exposed Actuarial Guideline Provides Guidance for Interpreting ILVAs as “Variable

- Model 805 – Standard Nonforfeiture Law for Deferred Annuities
“This Act shall not apply to any ... variable annuity ...”
- Model 250 – Variable Annuity Model Regulation
“Variable annuity” ... means a policy or contract that provides for annuity benefits that vary according to the investment experience of a separate account or accounts ...”

A variable annuity is excluded from nonforfeiture protections because the contract benefits vary with the performance of a separate account – both upside and downside. The daily market value of the assets supporting the contract are available to the contract holder.

Purpose of the Actuarial Guideline

- Annuity contract designs that claim exemption as “variable” need to reflect the investment experience of the assets supporting the contract
- Variable Annuity contracts are exempted from nonforfeiture requirements because they experience both the downside risk and upside reward inherent in such contracts
- Goal is to avoid designs where when the index goes down over the interim, the contract holder is stuck with the losses and when the index goes up, they do not receive the upside reward
- The actuarial guideline provides guidance for how ILVA products can be considered variable and avoid that situation

Structure of the Guideline

Principles

1. Interim Values defined in the contract provide equity between the contract holder and the insurance company
2. Interim Values are consistent with the value of the Hypothetical Portfolio over the Index Strategy Term.

Equity in the Guideline is between the contract’s interim value and the value of a “Hypothetical Portfolio” of supporting assets.

Draft: 7/27/22

Index-Linked Variable Annuity (A) Subgroup
Virtual Meeting
July 13, 2022

The Index-Linked Variable Annuity (A) Subgroup of the Life Actuarial (A) Task Force met July 13, 2022. The following Subgroup members participated: Peter Weber, Chair (OH); Tomasz Serbinowski, Vice Chair (UT); Sarvjit Samra (CA); Vincent Tsang (IL); Derek Wallman (NE); Kevin Clarkson (NJ); Bill Carmello (NY); Rachel Hemphill and Mengting Kim (TX); Craig Chupp (VA); and David Hippen (WA).

1. Discussed the Comments on the Proposed ILVA Actuarial Guideline

Mr. Weber said the third draft of the proposed actuarial guideline (Attachment Fifteen-A) was exposed on June 7 with a public comment period that ended July 5. He said the comments received from industry can be categorized as those that are seeking clarification or modification of the treatment of market value adjustments (MVAs) and those that are not concerned with the MVA. He said the CUNA Mutual comment letter (Attachment Fifteen-B) supports the exposed MVA changes and seeks clarification on the treatment of MVAs. He said the Insurance Retirement Institute (IRI) comment letter (Attachment Fifteen-C) supports the American Council of Life Insurers (ACLI) comment letter (Attachment Fifteen-D) and the accompanying ACLI redline version of the proposed guideline (Attachment Fifteen-E). He said the American Academy of Actuaries (Academy) comment letter (Attachment Fifteen-F) was accompanied by a redline version of the proposed guideline (Attachment Fifteen-G) that incorporates the Academy's recommendations. Beth Keith (Academy) discussed the non-MVA related Academy comments. Mr. Weber said he agrees with the non-MVA changes, except for the reference to "other models" in the Scope section. He said that wording is too broad and could unintentionally exempt products from the guideline. Mr. Serbinowski said he is not comfortable with the Academy suggestion to change the actuarial certification to reference the hypothetical portfolio instead of the derivative asset proxy. He said he prefers adding references to elements of the fixed asset proxy separately if they are needed.

Mr. Serbinowski said the fundamental issues related to MVAs stem from the term of the bond to which the MVA is applied. He said if the MVA is applied at the fixed asset level, where the asset is tied to an index strategy, the term of the MVA should match the term of the index strategy. He said applying the MVA at the product level could lead to the MVA being tied to one of several product features, such as the surrender charge period. David Hanzlik (CUNA Mutual) said the CUNA Mutual comment letter asks for the language of the proposed actuarial guideline to be revised to accommodate product level MVAs. Steve Wolfrath (Ameriprise Financial) suggested that the Subgroup consider using a blend that allows the MVA to be applied at either the asset level or the product level. He said the industry is asking to be able to reflect the rate movements in the assets it has purchased to support the policy. He said it is important that industry and state insurance regulators are philosophically aligned on that issue. Mr. Clarkson said there seems to be a consensus that the MVA applies only to fixed assets. He said the issue needs to be clarified in the guideline. Mr. Carmello said whatever is developed should be consistent with the *Modified Guaranteed Annuity Model Regulation* (#255). He said the New York regulation bases the term of the MVA on the length of the premium. He said each premium for a flexible premium product is treated as a single premium with a separate duration. He said a blend of the premium durations is used to determine the term of the MVA.

Mr. Serbinowski proposed redefining the fixed asset proxy so the duration of the asset is commensurate with what the actual assets the company might be holding. He said in the new definition, the initial value of the asset would be equal to the strategy base minus the option value, and the asset value at the end of the term would be equal to the strategy base. Mr. Carmello said he does not support any proposal where the term of the MVA is not

equal to the length of the cap or participation rate guarantee. Mr. Wolfrath said Mr. Serbinowski's proposal will work philosophically but may be difficult to implement.

Having no further business, the Index-Linked Variable Annuity (A) Subgroup adjourned.

[https://NAICSupportStaffHub/Member Meetings/2022 NAIC Meetings/Spring National Meeting/Committee Meetings/LIFE INS and ANNUITIES \(A\) COMMITTEE/Life Actuarial \(A\) TF/ILVA/07 13/July 13 Minutes.docx](https://NAICSupportStaffHub/Member%20Meetings/2022%20NAIC%20Meetings/Spring%20National%20Meeting/Committee%20Meetings/LIFE%20INS%20and%20ANNUITIES%20(A)%20COMMITTEE/Life%20Actuarial%20(A)%20TF/ILVA/07%2013/July%2013%20Minutes.docx)

**Actuarial Guideline ILVA
Nonforfeiture Requirements for Index Linked
Variable Annuity Products Supported by
Non-Unitized Accounts**

Background

The purpose of this guideline is to specify the conditions under which an Index-Linked Variable Annuity (ILVA) is consistent with the definition of a variable annuity and exempt from Model 805 and specify nonforfeiture requirements consistent with variable annuities.

A number of insurers have developed and are issuing annuity products with credits based on the performance of an index with caps on returns, participation rates, spreads or margins, or other crediting elements. The current products include a risk of loss throughout the life of the contract and, ~~which~~ include limitations on the loss such as a floor or a buffer. These products are not unitized and do not invest directly in the assets whose performance forms the basis for the credits. However, unlike traditional non-variable indexed annuities, these annuities may reflect negative index returns.

There is no established terminology for these annuity products. These products go by several names, including structured annuities, registered index-linked annuities (RILA), or index-linked variable annuities, among others. This guideline refers to these products as index-linked variable annuities (ILVA).

Variable annuities are exempted from the scope of NAIC Model 805, *Standard Nonforfeiture Law for Individual Deferred Annuities*, however, NAIC Model 805 does not define the term "variable annuity".

NAIC Model 250, *Variable Annuity Model Regulation*, defines variable annuities as “contracts that provide for annuity benefits that vary according to the investment experience of a separate account” Section 7B of NAIC Model 250 provides that "to the extent that a variable annuity contract provides benefits that do not vary in accordance with the investment performance of a separate account" the contract shall satisfy the requirements of the NAIC Model 805.

The application of the NAIC Model 250 to a traditional variable annuity with unitized values is straightforward. The unitized feature provides an automatic linkage between annuity values and the investment experience of a separate account. Daily values (market values of the separate account assets) are the basis of all the benefits, including surrender values.

The fact that ILVA products are not unitized means they do not have values determined directly by the market prices of the underlying assets. Therefore, this guideline sets forth principles and requirements for determining values, including death benefit, withdrawal amount, annuitization amount or surrender values, such that an ILVA is considered a

variable annuity and thereby exempt from Model 805. An ILVA that does not comply with the principles and requirements of this guideline is not considered a variable annuity and therefore is subject to Model 805.

Drafting Note: This guideline interprets the term “variable annuity” for purposes of exemption from Model 805. It is not intended to modify the definition of a variable annuity under Model 250 or other Model Regulations.

Scope

This guideline applies to any index-linked annuity exempt from the NAIC Model 805 on the basis that it is a variable annuity ~~provided through non-unitized separate account(s)~~ and includes index-linked crediting features that are built into policies or contracts (with or without unitized subaccounts) or added to such by rider, endorsement, or amendment.

This guideline does not apply to an annuity contract or a subaccount of an annuity contract that is subject to the requirements of NAIC Model 805, Standard Nonforfeiture Law for Individual Deferred Annuities.

Principles

This guideline is based on the following principles:

- ~~1. There exists a package of derivative assets that replicates the index credits provided by an index strategy at the end of an index term. The value of the package of derivative assets can be determined daily using assumptions consistent with observable market values.~~
- ~~2.1.~~ Interim Values defined in the contract provide equity to both the contract holder and the company
- ~~3.2.~~ Interim Values are consistent with the value of the Hypothetical Portfolio over the ~~index term~~ Index Strategy Term.

Definitions

“Derivative Asset Proxy” means a package of hypothetical derivative assets established at the beginning of an Index Strategy Term that is designed to replicate credits provided by an Index Strategy at the end of an Index Strategy Term.

“Fixed Income Asset Proxy” is a hypothetical fixed income asset.

“Hypothetical Portfolio” means a hypothetical portfolio composed of a Fixed Income Asset Proxy and a Derivative Asset Proxy.

~~“Interim Value” mean the Strategy Value at any time other than the start date and end date of an Index Term.~~

“Index” means a benchmark designed to track the performance of a defined portfolio of securities.

“Index Strategy” means a method used to determine index credits with specified index or indices and cap, buffer, participation rate, spread, margin or other index crediting elements.

“Index Strategy Base” means the notional amount used to determine index credits that does not change throughout the Index Strategy Term except for withdrawals, transfers, deposits, and any explicit charges.

“Index Strategy Term” means the period of time from the term start date to the term end date over which an index changes and the index credit is determined.

“Interim Value” means the Strategy Value at any time other than the start date and end date of an Index Strategy Term.

“Strategy Value” means the value, attributable to an Index Strategy, used in determining values including death benefit, withdrawal amount, annuitization amount or surrender values.

“Trading Cost” means the additional cost of liquidating the derivative assets in the Derivative Asset Proxy or actual derivative assets supporting the Index Strategy that is not accounted for in the Derivative Asset Proxy calculation.

Text

The Index Strategy Base must equal the Strategy Value at ~~at~~ the Index Strategy Term start date.

The value of the Fixed Income Asset Proxy:

- a. At the beginning of the Index Strategy Term equals the Index Strategy Base less the Derivative Asset Proxy value;
- ~~b. At the end of the Index Term equals the Index Strategy Base; and~~
- b. Earns interest at a level rate that results in the Fixed Income Asset Proxy equal to the Index Strategy Base at the end of the Index Strategy Term; and
- c. May include market value adjustments that reflect changes in the value of the Fixed Income Asset Proxy or actual fixed income assets supporting the Index Strategy due to interest rate or credit spread movements.

The value of the Derivative Asset Proxy is determined assuming a package of derivative assets that replicates the index credit provided by an index strategy at the end of an Index Strategy Term. The value of the package of derivative assets is determined daily.

Assumptions used to value the Derivative Asset Proxy including yields, implied volatility, risk-free rate, and dividend yield must be consistent with the observable market prices of derivative assets, whenever possible.

~~The value of the Hypothetical Portfolio at any time is the sum of the Fixed Income Asset Proxy value and the Derivative Asset Proxy value. Interim Values must be materially consistent with the value of the Hypothetical Portfolio over the Index Strategy Term less a provision for the cost attributable to ~~of~~ reasonably expected or actual Trading Costs at the time the Interim Value is calculated, ~~unwinding the hedge positions, not to exceed 10 bps.~~~~

~~Contracts in the scope of this guideline must provide Interim Values that are consistent with the value of the Hypothetical Portfolio over the index term.~~

If a contract provides Interim Values determined using a methodology other than a Hypothetical Portfolio methodology as described in this guideline, the company must demonstrate that the contractually defined Interim Values will be materially consistent over the entire Index Strategy Term with the Interim Values that would be produced using the Hypothetical Portfolio methodology for each combination of Index Strategy and Index Strategy Term under a reasonable number of realistic economic scenarios.

~~Drafting Note: Acceptable economic scenarios over which consistency should to be demonstrated is yet to be determined. Considerations are... [generated using the Academy Interest Rate Generator AIRG?] and/or [defined deterministic scenarios including shocks that trigger to Index Strategy parameters including but not limited to caps, floors and buffers].~~

The company must provide an actuarial memorandum with each ILVA product filing that includes the following:

1. Actuarial certifications that:

- a. Interim Values defined in the contract provide equity to both the contract holder and the company;
- b. the assumptions used to value the Derivative Asset Proxy including yields, implied volatility, risk-free rate, dividend yield, and other parameters required to value the derivatives are consistent with the observable market prices of derivative assets over the Index Strategy Term, whenever possible;
- c. the contractually defined Interim Values are materially consistent with the Interim Values that would be produced using the Hypothetical Portfolio methodology for each combination of Index Strategy and Index Strategy Term over the Index Strategy Term less a provision for the Trading Costs at the time the Interim Value is calculated ~~cost attributable to reasonably expected or actual costs at the time of unwinding any of the derivative assets in the Derivative Asset Proxy or actual derivative assets supporting the Index Strategy.~~

- d. any Trading ~~unwinding~~ Costs represent reasonably expected or actual costs at time the Interim Value is calculated.~~of unwinding derivative assets in the Derivative Asset Proxy or the actual derivative assets supporting the Index Strategy.~~
2. If the Interim Values are determined using a methodology other than the Hypothetical Portfolio methodology described in this guideline, the actuary shall describe the testing performed to verify that the values are materially consistent with the Hypothetical Portfolio methodology. The actuary should define any parameters or assumptions used in determining material consistency and provide a summary of the results of the testing.
3. The company (or actuary) must describe theDescriptions of
 a. Fixed Income Asset Proxy including any market value adjustment;
 b. Derivative Asset Proxy including any Trading Costs ~~cost of unwinding~~;
 c. ~~and the~~All formulas, methodologies and assumptions used to calculate ~~its~~these values at any timefor each Index Strategy and Index Strategy Term as well as the sources for all assumptions.

ILVA account or subaccount nonforfeiture benefits must comply with Section 7 of Model 250 with net investment return consistent with the requirements for determining Interim Values in this guideline.

~~The company (or actuary) must describe the Derivative Asset Proxy and the assumptions used to calculate its value at any time.~~

Mr. Peter Weber, Chair
Mr. Tomasz Serbinowski, Vice Chair
Index-Linked Variable Annuity (A) Subgroup
National Association of Insurance Commissioners
1100 Walnut Street Ste 1500
Kansas City, MO 64106

Dear: Messrs. Weber and Serbinowski

On behalf of the companies of CUNA Mutual Group (CUNA Mutual), we are pleased to provide comments to the National Association of Insurance Commissioner's (NAIC) Index-Linked Variable Annuity (A) Subgroup (Subgroup) on the draft *Actuarial Guideline ILVA: Nonforfeiture Requirements for Index Linked Variable Annuity Products Supported by Non-Unitized Accounts* (Actuarial Guideline). CUNA Mutual is the nation's leading provider of financial products and services to credit unions and credit union members. Through our companies, we serve as an insurer, a retirement plan services provider, a broker dealer, and a registered investment advisor. We make available various insurance and investment products to credit unions, millions of credit union members, and middle-income consumers across the United States. As part of the cooperative movement, we embrace the credit union philosophy of "people helping people" and believe a brighter financial future should be accessible to everyone.

As outlined in our comment letter dated January 27, 2022, CUNA Mutual supports the Subgroup's efforts to develop a uniform standard for Index-Linked Variable Annuity (ILVA) interim values which we hope will result in increased consumer access to ILVA products and protections. CUNA Mutual has been serving consumers in the ILVA space for over eight years and our experience shows ILVAs are an incredibly impactful tool in helping middle market customers create guaranteed retirement income. We take pride in helping those who make a modest income. It is in the spirit of supporting our customers that we offer these comments.

We appreciate the Subgroup's shift to a more principles-based document as well as efforts to incorporate comments from CUNA Mutual and others into the currently exposed draft Actuarial Guideline. The changes bring the Actuarial Guideline closer to a final product that accomplishes regulators' stated goals while ensuring workability for ILVA products. Despite good progress, CUNA Mutual suggests changes are still needed before the draft Actuarial Guideline is made final and voted on by Subgroup members.

08/31/22

Clarity Needed for Market Value Adjustments

The current draft Actuarial Guideline could be interpreted to require that interest rate market value adjustments (MVAs) are *only* allowed as part of the Fixed Income Asset Proxy. The Fixed Income Asset Proxy, as described in part (b) on page three, requires the Fixed Income Asset Proxy to equal the Index Strategy Base at the end of the Index Strategy Term. CUNA Mutual believes this can be read to restrict contract-level MVA application because such an MVA would make satisfying part (b) impossible.

To provide an example of our concern: a contract may have one-year Index Strategy Terms, but a six-year MVA term. We do not believe the Subgroup intends to prevent designs such as the one described here, but the current draft Actuarial Guideline language casts doubt. If limiting MVA terms *is* part of the Subgroup's intent, requiring the MVA term to be one year (as in our example) may cause an insurer to shorten its investment strategy to match the MVA term. Shorter assets generally generate lower yields, so such a limitation will ultimately reduce policyholder benefits and limit product innovation.

As currently written, the Actuarial Guideline only mentions MVAs as part of the Fixed Income Asset Proxy value, which could lead a reader to interpret the guideline to disallow contract-level MVAs. We recommend the Subgroup modify the Actuarial Guideline language to clearly permit more general applications of MVA.

CUNA Mutual Supports Industry Comments

In addition to this concern, CUNA Mutual endorses comments submitted by the American Council of Life Insurers and Committee of Annuity Insurers (Industry) related to the Subgroup's third exposure. Specifically, CUNA Mutual agrees with Industry's suggested clarifications to the language regarding Section 7. CUNA Mutual agrees that MVAs should be considered part of ILVA interim values to determine non-forfeiture benefits or included within the net investment return referenced in that section.

In closing, CUNA Mutual appreciates the Subgroup's consideration of these comments and engagement with interested stakeholders as regulators make progress toward a final Actuarial Guideline. Like others in the industry, we work hard each day to bring financial products and services to the people who need them most. ILVAs are fundamentally spread based products and insurer practices regarding how underlying assets are held vary. We believe any Actuarial Guideline promulgated by the Subgroup should enable these critical aspects of the product to ensure their viability for middle market consumers who are increasingly choosing ILVAs as a source of guaranteed retirement income.

Please reach out with any questions or if we can offer additional information to support these comments.

Sincerely,

David L. Hanzlik
VP, Annuity & Retirement Solutions

NAIC Index-Linked Variable Annuity Subgroup
Peter Weber, Chair & Tomasz Serbinowski, Vice-Chair

Re: Actuarial Guideline ILVA: Nonforfeiture Requirements for Index Linked Variable Annuity Products Supported by Non-Unitized Accounts (“Third Exposure”)

Dear Mr. Weber and Mr. Serbinowski:

On behalf of our members, the Insured Retirement Institute, Inc. (“IRI”)¹ appreciates the opportunity to comment on the Third Exposure put forth by the Index-Linked Variable Annuity Subgroup (“Subgroup”). We appreciate the work of the Subgroup and believe that this Exposure has been significantly improved upon in moving towards a more principles-based approach; however, we are recommending some final changes to ensure that the Third Exposure is workable for our members.

IRI received and reviewed the comments on the Exposure by the American Council of Life Insurers (“ACLI”) and the Committee of Annuity Insurers (“CAI”), dated July 1, 2022. With ACLI and CAI’s permission, IRI shared this letter with our membership.

Following review by our members, IRI supports ACLI and CAI’s comments with respect to its requests and recommendations regarding the Third Exposure, including the mark-up of the Third Exposure that is being put forth for consideration.

Overall, our members support the allowance of different approaches to determining values as this leads to product innovation and supports consumer choice when selecting a product that best achieves their financial goals. We appreciate that this third draft of the Actuarial Guideline takes this into account by being more principles-based, but we do support the final changes and recommendations put forth by ACLI and CAI in their mark-up of the Exposure. As such, we respectfully request that the Subgroup consider the recommendations put forth in ACLI’s and CAI’s comment letter.

On behalf of IRI and our members, thank you again for the opportunity to provide these comments. We would be happy to discuss further with you and look forward to continued collaboration and partnership with the Subgroup.

¹ IRI is the leading association for the entire supply chain of insured retirement strategies, including life insurers, asset managers, and distributors such as broker-dealers, banks, and marketing organizations. IRI members account for more than 95 percent of annuity assets in the U.S., the top 10 distributors of annuities ranked by assets under management and are represented by financial professionals serving millions of Americans. IRI champions retirement security for all through leadership in advocacy, awareness, research, and the advancement of digital solutions within a collaborative industry community.

Sincerely,

Sarah E. Wood

LATF Index-Linked Variable Annuity (ILVA) (A) Subgroup

RE: ILVA Subgroup Exposure of Actuarial Guideline ILVA: Nonforfeiture Requirements for Index Linked Variable Annuity Products Supported by Non-Unitized Accounts

Dear Messrs. Weber and Serbinowski:

The American Council of Life Insurers (ACLI)¹ and the Committee of Annuity Insurers (CAI)² appreciate the opportunity to submit comments to the ILVA Subgroup on the third Exposure of *Actuarial Guideline ILVA: Nonforfeiture Requirements for Index Linked Variable Annuity Products Supported by Non-Unitized Accounts* (Third Exposure).

As you know, we submitted extensive comments on January 27 on the Subgroup's original exposure of a proposed ILVA Actuarial Guideline (AG) and again on May 2nd in response to the Revised AG exposed on April 1st. We appreciated the immediate impressions and feedback you provided on our comments when we met virtually on May 3rd and the time we were given on the May 17th ILVA Subgroup call to present our recommended changes and receive additional regulator feedback. Subsequently, on the May 18 ILVA Subgroup call, there was regulator support for a less prescriptive approach.

We are gratified to see that the Subgroup incorporated most of our comments, at least conceptually, in the more principles-based approach reflected in the Third Exposure. Some of the critical changes bringing us closer to a workable final product include:

¹ The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

² The Committee of Annuity Insurers is a coalition of life insurance companies that issue annuities. It was formed in 1981 to address legislative and regulatory issues relevant to the annuity industry and to participate in the development of public policy with respect to securities, state regulatory and tax issues affecting annuities. The CAI's current 30 member companies represent approximately 80% of the annuity business in the United States.

- The change in the definition of “Fixed Income Asset Proxy” to permit market value adjustments (“MVAs”) (as noted below, this does not address MVAs where the duration of the investments differs from the index strategy terms).
- The elimination of prescriptive unwind costs and the related addition of a definition of “Trading Cost” to encompass the additional cost of liquidating the derivative assets in the Derivative Asset Proxy
- The addition of revised language specifying that Interim Values must be “materially” consistent with the value of the Hypothetical portfolio over the Index Strategy Term.

The ACLI and the CAI would, however, urge the Subgroup to consider several important additional modifications to the Third Exposure so that it appropriately addresses significant risk management requirements and aligns with the flexibility needed for market valuation. Our recommended revisions, reflected in the attached mark-up of the Third Exposure, provide suggested language related to the application of MVAs, alternatives to protect the confidentiality of proprietary information in the actuarial memorandum, and revised language to clarify the applicability of Section 7 of Model 250 to RILAs.

More particularly, our principal revisions are found in the Text of the Third Exposure as follows:

- Fixed assets held by insurers may be invested based on Index Strategy Term length, surrender charge length or other lengths. In order to provide appropriate equity between insurers and contract holders, it is important that insurers be able to apply MVAs either as part of the Interim Value computation, at the contract level, or some combination of the two. This would allow the MVAs to be aligned with the insurer’s investment strategy. Therefore, in the early part of the Text we have added a provision that expressly acknowledges these different scenarios. With this added provision, the subsequent language, specifying that the value of the Fixed Income Proxy may include an MVA, can be abbreviated. We are seeking this adjustment because, in the current draft, the Fixed Income Asset Proxy is tied to the length of the index term. A reader might assume that the MVA term length therefore must also equal the Index Strategy Term length.
- We have added language that would explicitly allow for standard market consistent valuation techniques other than Black-Scholes because some options cannot be valued with a closed-form solution like Black-Scholes.
- We have specified that an actuarial certification must be included with each RILA product filing
- We have proposed two alternatives to protect the confidentiality of proprietary information required by the addendum to the actuarial memorandum
- We have also added language to clarify the applicability of Section 7 of Model 250 to ILVA Index Strategies. We continue to be concerned that regulators who were not involved in the development of the AG may misinterpret Section 7B of Model 250 to require that ILVA Strategy Values comply with Model 805 unless those Strategy values vary according to the investment experience of a separate account. Therefore, we believe that ILVA Strategy Values should be exempted from Section 7B. This exemption will not affect Section 7B applicability to certain accounts such as a non-registered fixed account offered as part of an index-linked variable

annuity contract. The AG also needs to clarify that MVAs, however imposed, are considered part of aggregate ILVA Strategy Values specifically for determining non-forfeiture benefits and the appropriateness of the contract's surrender charges and other loads.

The ACLI and the CAI appreciate the opportunity to comment on the Third Exposure and we urge continued discussion and collaboration to finalize an AG that satisfies our shared view of equity to both contract holders and insurers in the design and administration of ILVA products. Respectfully submitted,

Actuarial Guideline ILVA
Nonforfeiture Requirements for Index Linked
Variable Annuity Products Supported by
Non-Unitized Accounts

Background

The purpose of this guideline is to specify the conditions under which an Index-Linked Variable Annuity (ILVA) is consistent with the definition of a variable annuity and exempt from Model 805 and specify nonforfeiture requirements consistent with variable annuities.

A number of insurers have developed and are issuing annuity products with credits based on the performance of an index with caps on returns, participation rates, spreads or margins, or other crediting elements. The current products include a risk of loss throughout the life of the contract and include limitations on the loss such as a floor or a buffer. These products are not unitized and do not invest directly in the assets whose performance forms the basis for the credits. However, unlike traditional non-variable indexed annuities, these annuities may reflect negative index returns.

There is no established terminology for these annuity products. These products go by several names, including structured annuities, registered index-linked annuities (RILA), or index-linked variable annuities, among others. This guideline refers to these products as index-linked variable annuities (ILVA).

Variable annuities are exempted from the scope of NAIC Model 805, *Standard Nonforfeiture Law for Individual Deferred Annuities*, however, -NAIC Model 805 does not define the term "variable annuity".

NAIC Model 250, *Variable Annuity Model Regulation*, defines variable annuities as "contracts that provide for annuity benefits that vary according to the investment experience of a separate account" Section 7B of NAIC Model 250 provides that "to the extent that a variable annuity contract provides benefits that do not vary in accordance with the investment performance of a separate account" the contract shall satisfy the requirements of the NAIC Model 805.

The application of the NAIC Model 250 to a traditional variable annuity with unitized values is straightforward. The unitized feature provides an automatic linkage between annuity values and the investment experience of a separate account. Daily values (market values of the separate account assets) are the basis of all the benefits, including surrender values.

The fact that ILVA products are not unitized means they do not have values determined directly by the market prices of the underlying assets. Therefore, this guideline sets forth principles and requirements for determining values, including death benefit, withdrawal amount, annuitization amount or surrender values, such that an ILVA is considered a

variable annuity and thereby exempt from Model 805. An ILVA that does not comply with the principles and requirements of this guideline is not considered a variable annuity and therefore is subject to Model 805.

Drafting Note: This guideline interprets the term “variable annuity” for purposes of exemption from Model 805. It is not intended to modify the definition of a variable annuity under Model 250 or other Model Regulations.

Scope

This guideline applies to any index-linked annuity exempt from the NAIC Model 805 on the basis that it is a variable annuity and includes index-linked crediting features that are built into policies or contracts (with or without unitized subaccounts) or added to such by rider, endorsement, or amendment.

This guideline does not apply to an annuity contract or a subaccount of an annuity contract that is subject to the requirements of NAIC Model 805, Standard Nonforfeiture Law for Individual Deferred Annuities.

Principles

This guideline is based on the following principles:

1. Interim Values and any market value adjustments defined in the contract provide equity to both the contract holder and the company
2. Interim Values are consistent with the value of the Hypothetical Portfolio over the Index Strategy Term.

Definitions

“Derivative Asset Proxy” means a package of hypothetical derivative assets established at the beginning of an Index Strategy Term that is designed to replicate credits provided by an Index Strategy at the end of an Index Strategy Term.

“Fixed Income Asset Proxy” is a hypothetical fixed income asset.

“Hypothetical Portfolio” means a hypothetical portfolio composed of a Fixed Income Asset Proxy and a Derivative Asset Proxy.

“Index” means a benchmark designed to track the performance of a defined portfolio of securities.

“Index Strategy” means a method used to determine index credits with specified index or indices and cap, buffer, participation rate, spread, margin or other index crediting elements.

“Index Strategy Base” means the notional amount used to determine index credits that does not change throughout the Index Strategy Term except for withdrawals, transfers, deposits, and any explicit charges.

“Index Strategy Term” means the period of time from the term start date to the term end date over which an index changes and the index credit is determined.

“Interim Value” means the Strategy Value at any time other than the start date and end date of an Index Strategy Term.

“Strategy Value” means the value, attributable to an Index Strategy, used in determining values including death benefit, withdrawal amount, annuitization amount or surrender values.

“Trading Cost” means the additional cost of liquidating the derivative assets in the Derivative Asset Proxy or actual derivative assets supporting the Index Strategy that is not accounted for in the Derivative Asset Proxy calculation.

Text

The Index Strategy Base must equal the Strategy Value at the Index Strategy Term start date.

Market value adjustments that reflect changes in the value of hypothetical fixed income assets due to interest rate and/or credit spread movements are allowed. Market value adjustments may be applied as part of the Interim Value calculation (as outlined below) or at the contract level (applicable to Strategy Values subject to this guideline) or some combination thereof as long as the aggregate market value adjustments provide equity between the contract holder and the company.

The value of the Fixed Income Asset Proxy:

- a. At the beginning of the Index Strategy Term equals the Index Strategy Base less the Derivative Asset Proxy value;
- b. Earns interest at a rate that results in the Fixed Income Asset Proxy equal to the Index Strategy Base at the end of the Index Strategy Term; and
- b.c. May include market value adjustments. ~~that reflect changes in the value of the Fixed Income Asset Proxy due to interest rate or credit spread movements.~~

The value of the Derivative Asset Proxy is determined assuming a package of derivative assets that replicates the index credit provided by an ~~i~~Index ~~s~~Strategy at the end of an Index Strategy Term. The value of the package of derivative assets is determined ~~daily on~~ each day that Interim Values are calculated. Assumptions used to value the Derivative Asset Proxy including yields, implied volatility, risk-free rate, and dividend yield must be consistent with the observable market prices of derivative assets, whenever possible.

Interim Values must be materially consistent with the value of the Hypothetical Portfolio over the Index Strategy Term less a provision for the cost attributable to reasonably expected or actual Trading Costs at the time the Interim Value is calculated.

If a contract provides Interim Values determined using a methodology other than a Hypothetical Portfolio methodology as described in this guideline, the company must demonstrate that the contractually defined Interim Values will be materially consistent over the ~~entire~~ Index Strategy Term with the Interim Values that would be produced using the Hypothetical Portfolio methodology for each combination of Index Strategy and Index Strategy Term under a reasonable number of realistic economic scenarios.

Commented [A1]: Removed this language (entire) as it is inconsistent with the rest of the AG and the industry does not view the testing of materially consistent to be a daily requirement.

Actuarial certifications ~~must be included with each ILVA product filing that includes the following:~~

- a. ~~Interim Values defined in the contract provide equity to both the contract holder and the company.~~
- b. ~~¶The assumptions used to value the Derivative Asset Proxy including yields, implied volatility, risk-free rate, dividend yield, and other parameters required to value the derivatives are consistent with the observable market prices of derivative assets over the Index Strategy Term, whenever possible. Valuation techniques include the standard Black-Scholes method, Monte-Carlo Simulation techniques, and other market consistent option valuation techniques for more complex options.~~
- c. ~~¶The contractually defined Interim Values are materially consistent with the Interim Values that would be produced using the Hypothetical Portfolio methodology for each combination of Index Strategy and Index Strategy Term over the Index Strategy Term less a provision for the Trading Costs at the time the Interim Value is calculated.~~
- d. ~~¶Any Trading Costs represent reasonably expected or actual costs at time the Interim Value is calculated.~~

The company must ~~also provide a proprietary and confidential appendix to the actuarial memorandum with each ILVA product filing that includes the following:~~

~~The company will supply upon request a proprietary and confidential appendix to the actuarial memorandum prepared at the time of product filing that includes the following:~~

1. If the Interim Values are determined using a methodology other than the Hypothetical Portfolio methodology described in this guideline, the actuary shall describe the testing performed to verify that the values are materially consistent with the Hypothetical Portfolio methodology. The actuary should define any parameters or assumptions used in determining material consistency and provide a summary of the results of the testing.

Commented [A2]: Two alternatives from the industry. We will look for feedback from the NAIC. Need to confirm that states can accept confidential Act Memo.

~~2. Descriptions of:~~

- a. Fixed Income Asset Proxy ~~including any market value adjustment~~;
- b. Derivative Asset Proxy ~~including any Trading Costs~~;
- c. Any market value adjustments and Trading Costs; and
- a.d. All formulas, methodologies and assumptions used to calculate these values for each Index Strategy and Index Strategy Term as well as the sources for all assumptions.

ILVA ~~account or subaccount~~ nonforfeiture benefits for Index Strategies subject to this guideline must comply with Section 7 of Model 250 (excluding Section 7.B) with net investment return consistent with the requirements for determining Interim Values and market value adjustments in this guideline to confirm that the level of surrender charges and other loads are appropriate.

Commented [A3]: We feel that this language adds confusion. Any subaccounts subject to Model Reg 805 (Fixed or FIA) are excluded in the Scope section. We consider these Index Strategies rather than accounts or subaccounts.

AMERICAN ACADEMY *of* ACTUARIES

Objective. Independent. Effective.™

July 5, 2022

Mr. Peter Weber
Chair, Index-Linked Variable Annuity (A) Subgroup
National Association of Insurance Commissioners (NAIC)

Re: Exposure 3.1 of the Proposed Actuarial Guideline ILVA, Nonforfeiture Requirements for Index Linked Variable Annuity Products Supported by Non-Unitized Accounts

Dear Mr. Weber,

On behalf of the American Academy of Actuaries¹ Index-Linked Variable Annuity Work Group (the “work group”), I appreciate the opportunity to provide comments on the proposed actuarial guideline.

Attached is a red line version, from the clean version (all NAIC changes accepted) of the 3.1 Exposure draft. Our comments in the redline version address the following concerns:

1. Provide additional clarification to differentiate ILVA from FIA;
2. MVAs may apply at the product level, therefore we suggest moving the allowance for an MVA from the Fixed Income Asset Proxy to the Interim Value calculation as shown in the redline; and
3. To improve clarity.

Sincerely,

Beth Keith, MAAA, FSA
Chairperson, Index-Linked Variable Annuities Work Group
American Academy of Actuaries

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

**Actuarial Guideline ILVA
 Nonforfeiture Requirements for Index Linked
 Variable Annuity Products Supported by
 Non-Unitized Accounts**

Background

The purpose of this guideline is to specify the conditions under which an Index-Linked Variable Annuity (ILVA) is consistent with the definition of a variable annuity and exempt from Model 805 and specify nonforfeiture requirements consistent with variable annuities.

A number of insurers have developed and are issuing annuity products with credits based on the performance of an index with caps on returns, participation rates, spreads or margins, or other crediting elements. ~~The current products that include a risk of loss negative index returns subject to throughout the life of the contract and, which include limitations on the loss, such as a floor or a buffer.~~ These products are not unitized and do not invest directly in the assets whose performance forms the basis for the credits. However, unlike traditional non variable indexed annuities, these annuities may reflect negative index returns.

Commented [Bk1]: We suggest the rewording to these two sentences because the first sentence as exposed also describes FIAs.

There is no established terminology for these annuity products. These products go by several names, including structured annuities, registered index-linked annuities (RILA), or index-linked variable annuities, among others. This guideline refers to these products as index-linked variable annuities (ILVA).

Variable annuities are exempted from the scope of NAIC Model 805, *Standard Nonforfeiture Law for Individual Deferred Annuities*; however, NAIC Model 805 does not define the term "variable annuity".

NAIC Model 250, *Variable Annuity Model Regulation*, defines variable annuities as "contracts that provide for annuity benefits that vary according to the investment experience of a separate account." Section 7B of NAIC Model 250 provides that "to the extent that a variable annuity contract provides benefits that do not vary in accordance with the investment performance of a separate account" the contract shall satisfy the requirements of the NAIC Model 805.

The application of the NAIC Model 250 to a traditional variable annuity with unitized values is straightforward. The unitized feature provides an automatic linkage between annuity values and the investment experience of a separate account. Daily values (market values of the separate account assets) are the basis of all the benefits, including surrender values.

The fact that ILVA ~~accounts products~~ are not unitized means they do not have values determined directly by the market prices of the underlying assets. Therefore, this guideline sets forth principles and requirements for determining values, including death

Commented [Bk2]: We recommend referring to ILVA accounts vs. products because ILVA (Index-Linked variable Annuity) accounts may be offered within a VA product.

benefit, withdrawal amount, annuitization amount or surrender values, such that an ILVA is considered a variable annuity and thereby exempt from Model 805. An ILVA that does not comply with the principles and requirements of this guideline is not considered a variable annuity and therefore is subject to Model 805.

Drafting Note: This guideline interprets the term “variable annuity” for purposes of exemption from Model 805. It is not intended to modify the definition of a variable annuity under Model 250 or other Model Regulations.

Scope

This guideline applies to any index-linked annuity exempt from the NAIC Model 805 on the basis that it is a variable annuity and includes index-linked crediting ~~features-accounts~~ that are built into policies or contracts (with or without unitized subaccounts) or added to such by rider, endorsement, or amendment.

This guideline does not apply to an annuity contract or a subaccount of an annuity contract that is subject to the requirements of NAIC Model 805, Standard Nonforfeiture Law for Individual Deferred Annuities or other Model laws.

Commented [Bk3]: There are additional model laws that this guideline does not apply to.

Principles

This guideline is based on the following principles:

1. Interim Values defined in the contract provide equity ~~between to both~~ the contract holder and the insurance company.
2. Interim Values are consistent with the value of the Hypothetical Portfolio over the Index Strategy Term.

Definitions

“Derivative Asset Proxy” means a package of hypothetical derivative assets established at the beginning of an Index Strategy Term that is designed to replicate credits provided by an Index Strategy at the end of an Index Strategy Term.

“Fixed Income Asset Proxy” is a hypothetical fixed income asset.

“Hypothetical Portfolio” means a hypothetical portfolio composed of a Fixed Income Asset Proxy and a Derivative Asset Proxy.

“Index” means a benchmark designed to track the performance of a defined portfolio of securities.

“Index Strategy” means a method used to determine index credits with specified index or indices and cap, buffer, participation rate, spread, margin or other index crediting elements.

“Index Strategy Base” means the notional amount used to determine index credits that does not change throughout the Index Strategy Term except for withdrawals, transfers, deposits, loans and any explicit charges.

“Index Strategy Term” means the period of time from the term start date to the term end date over which an index changes and the index credit is determined.

“Interim Value” means the Strategy Value at any time other than the start date and end date of an Index Strategy Term.

“Strategy Value” means the value, attributable to an Index Strategy, used in determining ~~values including~~ death benefit, withdrawal amount, annuitization amount or surrender values.

“Trading Cost” means the additional cost of liquidating the derivative assets in the Derivative Asset Proxy or actual derivative assets supporting the Index Strategy that is not accounted for in the Derivative Asset Proxy calculation.

Text

The Index Strategy Base must equal the Strategy Value at the Index Strategy Term start date.

The value of the Fixed Income Asset Proxy:

- a. At the beginning of the Index Strategy Term equals the Index Strategy Base less the Derivative Asset Proxy value; and
- b. Earns interest at a rate that results in the Fixed Income Asset Proxy equal to the Index Strategy Base at the end of the Index Strategy Term; and
- b. ~~May include market value adjustments that reflect changes in the value of the Fixed Income Asset Proxy or actual fixed income assets supporting the Index Strategy due to interest rate or credit spread movements;~~

~~The value of the Derivative Asset Proxy is determined assuming a package of derivative assets that replicates the index credit provided by an index strategy at the end of an Index Strategy Term. The value of the package of derivative assets is determined daily. Assumptions used to value the Derivative Asset Proxy including yields, implied volatilities, risk-free rates, and dividend yields, must be consistent with the observable market prices of derivative assets, whenever possible.~~

Commented [Bk4]: MVAs may exist at the product level, so we suggest moving the allowance for an MVA from the Fixed Income Asset Proxy to the Interim Value calculation as shown below in the redline.

Commented [Bk5]: We note this is already stated in the definition of Derivative Asset Proxy.

Commented [Bk6]: Yields, other than risk-free rates and dividend yields, are not used to value a derivative asset proxy.

Interim Values must be materially consistent with the value of the Hypothetical Portfolio over the Index Strategy Term less a provision for the cost attributable to reasonably expected or actual Trading Costs at the time the Interim Value is calculated. Interim

Values may also include market value adjustments that reflect changes in the value of the fixed income assets supporting the Index Strategy due to interest rate or credit spread movements.

If a contract provides Interim Values determined using a methodology other than a Hypothetical Portfolio methodology as described in this guideline, the company must demonstrate that the contractually defined Interim Values will be materially consistent over the entire Index Strategy Term with the Interim Values that would be produced using the Hypothetical Portfolio methodology for each combination of Index Strategy and Index Strategy Term under a reasonable number of realistic economic scenarios that include index changes that test crediting constraints.

The company must provide an actuarial memorandum with each ILVA product filing that includes the following:

1. Actuarial certifications that:
 - a. Interim Values defined in the contract provide equity ~~between to both~~ the contract holder and the insurance company;
 - b. the assumptions used to value the Hypothetical Portfolio ~~Derivative Asset Proxy~~ including yields, implied volatility~~ies~~, risk-free rates, dividend yields, and other parameters required to value the derivatives are consistent with the observable market prices of derivative assets over the Index Strategy Term, whenever possible;
 - c. the contractually defined Interim Values are materially consistent with the Interim Values that would be produced using the Hypothetical Portfolio methodology for each combination of Index Strategy and Index Strategy Term over the Index Strategy Term less a provision for the Trading Costs at the time the Interim Value is calculated;
 - d. any Trading Costs represent reasonably expected or actual costs at the time the Interim Value is calculated.
2. If the Interim Values are determined using a methodology other than the Hypothetical Portfolio methodology described in this guideline, the actuary shall describe the testing performed to verify that the values are materially consistent with the Hypothetical Portfolio methodology. The actuary should define any parameters or assumptions used in determining material consistency and provide a summary of the results of the testing.
3. Descriptions of
 - a. Fixed Income Asset Proxy including any market value adjustment;
 - b. Derivative Asset Proxy including any Trading Costs;
 - c. All formulas, methodologies and assumptions used to calculate these values for each Index Strategy and Index Strategy Term as well as the sources for all assumptions.

Commented [Bk7]: We believe it would be more comprehensive to include assumptions used for the entire Hypothetical Portfolio, not just the Derivative Asset Proxy. If changed to Hypothetical Portfolio, it would be appropriate to keep "yields" in this sentence. Otherwise, we would recommend deleting "yields."

ILVA account or subaccount nonforfeiture benefits must comply with Section 7 of Model 250 with net investment returns consistent with the requirements for determining Interim Values in this guideline.

Draft: 7/27/22

Index-Linked Variable Annuity (A) Subgroup
Virtual Meeting
May 18, 2022

The Index-Linked Variable Annuity (A) Subgroup of the Life Actuarial (A) Task Force met May 18, 2022. The following Subgroup members participated: Peter Weber, Chair (OH); Tomasz Serbinowski, Vice Chair (UT); Sarjit Samra (CA); Vincent Tsang (IL); Derek Wallman (NE); Kevin Clarkson (NJ); Bill Carmello and Michael Cebula (NY); Mike Boerner and Maribel Castillo (TX); Craig Chupp (VA); and David Hippen (WA).

1. Discussed the Proposed ILVA Actuarial Guideline

Mr. Weber said he has learned there are many complex issues associated with index-linked variable annuities (ILVAs) to address. He said the concept that variable products should provide values that are consistent with the supporting assets makes sense. He said applying the concept on a practical level has introduced several variables that have proven to be a challenge. He asked Subgroup members if it might be better to draft guidance to states instead of bright-line, prescriptive requirements. Mr. Hippen said there is merit to the approach. He questioned whether the Interstate Insurance Production Regulation Commission (Compact) would have issues with the standard conflicting with the filing standards set by individual states. Mr. Weber said he would expect that the more innovative product designs would not meet the Compact requirements and would be limited to filing only with the states. Mr. Carmello said while uniformity is important, it is possible that using a principle-based approach for ILVA in the interim may be the best solution. Mr. Tsang said the proposed actuarial guideline should be able to provide a uniform minimum standard. Mr. Clarkson said a minimum standard is necessary to help state insurance regulators identify outliers. Mr. Serbinowski said the Utah Department of Insurance (DOI) has allowed the marketing of several ILVA contracts. He said over the last two years, as the products have been more closely scrutinized, companies have revised their product designs so that the current designs are closer to the product standard proposed in method 1 of the ACLI's original proposal. Mr. Carmello, Mr. Serbinowski, and Mr. Hippen agreed that the last exposure of the actuarial guideline (see the May 17 Subgroup minutes) was acceptable. Mr. Weber said if the Subgroup continues with the development of the actuarial guideline, several of the comments submitted by the ACLI could be incorporated prior to re-exposure. He said the new draft will be more conceptual with some of the prescriptive language, such as the hard limit on unwinding costs, being removed. He noted that clarification of the certification could be added to the draft. Katie Campbell (Compact) said the guideline could be used as the basis for a Compact standard.

Having no further business, the Index-Linked Variable Annuity (A) Subgroup adjourned.

Draft: 7/27/22

Index-Linked Variable Annuity (A) Subgroup
Virtual Meeting
May 17, 2022

The Index-Linked Variable Annuity (A) Subgroup of the Life Actuarial (A) Task Force met May 17, 2022. The following Subgroup members participated: Peter Weber, Chair (OH); Tomasz Serbinowski, Vice Chair (UT); Sarvjit Samra (CA); Vincent Tsang (IL); Derek Wallman (NE); Kevin Clarkson (NJ); Bill Carmello (NY); Mike Boerner and Maribel Castillo (TX); Craig Chupp (VA); and David Hippen (WA).

1. Heard a Presentation on Interim Nonforfeiture Values

Mr. Weber said the current exposure of the index-linked variable annuity (ILVA) actuarial guideline (Attachment Seventeen-A) allows for any approach that produces interim values that are materially consistent with the hypothetical portfolio approach. Brian Bayerle (American Council of Life Insurers—ACLI) said the joint ACLI/Committee of Annuity Insurers (CAI) comment letter (Attachment Seventeen-B) states that the interim value framework must be consistent with the core design principles used to create the ILVA product and account for the market realities. He said the comments focus on four areas of concern: 1) the fixed income asset proxy; 2) unwinding the derivative asset proxy; 3) the definition of materially consistent; and 4) the clarification of ILVA nonforfeiture benefit compliance with Section 7 of the *Variable Annuity Model Regulation* (#250). Ryan Berends (Athene) said for the fixed income proxy, it is critical that the guideline address market value adjustments (MVAs) related to interest rate risks. He said the MVAs were mentioned in the initial exposure of the guideline but were subsequently dropped. Jonathan Clymer (Prudential) said the industry is concerned with the use of a prescriptive rate of 10 basis points (bps) for the cost of unwinding the derivative asset proxy because a single value will not capture the actual range of results and is inappropriate for longer term and more complex strategies. Mr. Berends said the ACLI/CAI comment letter provides an example of “materially consistent.” He suggested that a test for material consistency be applied only at the time of policy filing.

Mr. Tsang said the MVA is usually related to the cash surrender value. He said he would prefer having the MVA defined in the contract rather than in the actuarial guideline. Mr. Weber said the MVA is defined in ILVA contracts. Mr. Berends said the MVA should be spelled out in the actuarial guideline to avoid the question of whether the MVA is allowable for the ILVA policy. Mr. Tsang suggested referencing the MVA in both the contract and the actuarial guideline, with the actuarial guideline saying the MVA is as defined in the contract. He also said the unwinding cost should be included in the surrender charge. Mr. Weber suggested detailing the unwinding cost in the actuarial certification.

Mr. Tsang said the drafting note defining material consistency suggests a 5% level of tolerance for the difference between the hypothetical portfolio and the expected value of contractually defined interim values. He said 1% would be a more appropriate tolerance. Stephen Turer (Equitable) said a 1% tolerance is thin compared to the risk the companies are taking. Mr. Carmello said he agrees that a 1% tolerance is appropriate. Mr. Tsang asked the companies to provide data showing that a 1% tolerance is not sufficient.

Sarah Wood (Insured retirement Institute—IRI) said the IRI comment letter (Attachment Seventeen-C) supports the position of the ACLI. Mr. Weber said a lot of the CompEdge comments (Attachment Seventeen-D) are not aligned with the Subgroup’s charge and would be better placed with some other group within the NAIC.

Beth Keith (American Academy of Actuaries—Academy) said the Academy comments (Attachment Seventeen-E) are high level and suggest that more product descriptions are necessary. She asked if the material consistency

tolerance should be symmetrical, addressing both the upside and the downside. Mr. Weber said it is designed to cover both.

Having no further business, the Index-Linked Variable Annuity (A) Subgroup adjourned.

[https://NAICSupportStaffHub/Member Meetings/2022 NAIC Meetings/Spring National Meeting/Committee Meetings/LIFE INS and ANNUITIES \(A\) COMMITTEE/Life Actuarial \(A\) TF/ILVA/05 17/May 17 Minutes.docx](https://NAICSupportStaffHub/Member%20Meetings/2022%20NAIC%20Meetings/Spring%20National%20Meeting/Committee%20Meetings/LIFE%20INS%20and%20ANNUITIES%20(A)%20COMMITTEE/Life%20Actuarial%20(A)%20TF/ILVA/05%2017/May%2017%20Minutes.docx)

**Actuarial Guideline ILVA
Nonforfeiture Requirements for Index Linked
Variable Annuity Products Supported by
Non-Unitized Accounts**

Background

The purpose of this guideline is to specify the conditions under which an Index-Linked Variable Annuity (ILVA) is consistent with the definition of a variable annuity and exempt from Model 805 and specify nonforfeiture requirements consistent with variable annuities.

A number of insurers have developed and are issuing annuity products with credits based on the performance of an index with caps on returns, participation rates, spreads or margins, or other crediting elements, which include limitations on loss such as a floor or a buffer. These products are not unitized and do not invest directly in the assets whose performance forms the basis for the credits. However, unlike traditional non-variable indexed annuities, these annuities may reflect negative index returns.

There is no established terminology for these annuity products. These products go by several names, including structured annuities, registered index-linked annuities (RILA), or index-linked variable annuities, among others. This guideline refers to these products as index-linked variable annuities (ILVA).

Variable annuities are exempted from the scope of NAIC Model 805, *Standard Nonforfeiture Law for Individual Deferred Annuities*, however, NAIC Model 805 does not define the term "variable annuity".

NAIC Model 250, *Variable Annuity Model Regulation*, defines variable annuities as "contracts that provide for annuity benefits that vary according to the investment experience of a separate account" Section 7B of NAIC Model 250 provides that "to the extent that a variable annuity contract provides benefits that do not vary in accordance with the investment performance of a separate account" the contract shall satisfy the requirements of the NAIC Model 805.

The application of the NAIC Model 250 to a traditional variable annuity with unitized values is straightforward. The unitized feature provides an automatic linkage between annuity values and the investment experience of a separate account. Daily values (market values of the separate account assets) are the basis of all the benefits, including surrender values.

The fact that ILVA products are not unitized means they do not have values determined directly by the market prices of the underlying assets. Therefore, this guideline sets forth principles and requirements for determining values, including death benefit, withdrawal amount, annuitization amount or surrender values, such that an ILVA is considered a variable annuity and thereby exempt from Model 805. An ILVA that does not comply

with the principles and requirements of this guideline is not considered a variable annuity and therefore is subject to Model 805.

Drafting Note: This guideline interprets the term “variable annuity” for purposes of exemption from Model 805. It is not intended to modify the definition of a variable annuity under Model 250.

Scope

This guideline applies to any index-linked annuity exempt from the NAIC Model 805 on the basis that it is a variable annuity provided through non-unitized separate account(s) and includes index-linked crediting features that are built into policies or contracts (with or without unitized subaccounts) or added to such by rider, endorsement, or amendment.

This guideline does not apply to an annuity contract or a subaccount of an annuity contract that is subject to the requirements of NAIC Model 805, Standard Nonforfeiture Law for Individual Deferred Annuities.

Principles

This guideline is based on the following principles:

1. There exists a package of derivative assets that replicates the index credits provided by an index strategy at the end of an index term.
2. The value of the package of derivative assets can be determined daily using assumptions consistent with observable market values.
3. Interim Values defined in the contract provide equity to both the contract holder and the company where the Interim Values are consistent with the value of the Hypothetical Portfolio over the index term.

Definitions

“Derivative Asset Proxy” means a package of hypothetical derivative assets designed to replicate credits provided by an Index Strategy at the end of an Index Term.

“Fixed Income Asset Proxy” is a hypothetical fixed income asset.

“Hypothetical Portfolio” means a hypothetical portfolio composed of a Fixed Income Asset Proxy and a Derivative Asset Proxy.

“Interim Value” mean the Strategy Value at any time other than the start date and end date of an Index Term.

“Index Strategy” means a method used to determine index credits with specified index or indices and cap, buffer, participation rate, spread, margin or other index crediting elements.

“Index Strategy Base” means the notional amount used to determine index credits that does not change throughout the Index Term except for withdrawals, transfers, deposits, and explicit charges.

“Index Strategy Term” means the period of time from the term start date to the term end date over which an index change and index credit is determined.

“Strategy Value” means the value, attributable to an Index Strategy, used in determining values including death benefit, withdrawal amount, annuitization amount or surrender values.

Text

Index Strategy Base must equal the Strategy Value at an Index Term start date.

The value of the Fixed-Income Asset Proxy:

- a. At the beginning of the Index Term equals the Index Strategy Base less Derivative Asset Proxy value;
- b. At the end of the Index Term equals the Index Strategy Base; and
- c. Earns interest at a level rate.

The value of the Hypothetical Portfolio at any time is the sum of the Fixed-Income Asset Proxy value and the Derivative Asset Proxy value less a provision for the cost of unwinding the hedge positions not to exceed 10 bps.

Contracts in the scope of this guideline must provide Interim Values that are consistent with the value of the Hypothetical Portfolio over the index term.

If a contract provides Interim Values determined using a methodology other than a Hypothetical Portfolio methodology as described in this guideline, the company must demonstrate that the contractually defined Interim Values will be materially consistent with the Interim Values that would be produced using the Hypothetical Portfolio methodology for each combination of Index Strategy and Index Strategy Term under a reasonable number of economic scenarios.

Drafting Note: Acceptable economic scenarios over which consistency should be demonstrated is yet to be determined. Considerations are... [generated using the Academy Interest Rate Generator AIRG?] and/or [defined deterministic scenarios including shocks that trigger to Index Strategy parameters including but not limited to caps, floors and buffers].

The company must provide an actuary’s certification that the provisions of this guideline are being met.

Assumptions used to value the Derivative Asset Proxy including yields, implied volatility, risk-free rate, and dividend yield must be consistent with the observable market prices of derivative assets, whenever possible.

ILVA nonforfeiture benefits must comply with Section 7 of Model 250 with net investment return consistent with the requirements for determining Interim Values in this guideline.

The company (or actuary) must describe the Derivative Asset Proxy and the assumptions used to calculate its value at any time.

Effective Date

Mr. Peter Weber, Chair
Mr. Tomasz Serbinowski, Vice Chair
National Association of Insurance Commissioners
LATF Index-Linked Variable Annuity (ILVA) (A) Subgroup

RE: ILVA Subgroup Exposure of Actuarial Guideline ILVA: Nonforfeiture Requirements for Index Linked Variable Annuity Products Supported by Non-Unitized Accounts

Dear Messrs. Weber and Serbinowski:

The American Council of Life Insurers (ACLI)¹ and the Committee of Annuity Insurers (CAI)² appreciate the opportunity to submit comments to the ILVA Subgroup on the Chair's exposure of *Actuarial Guideline ILVA: Nonforfeiture Requirements for Index Linked Variable Annuity Products Supported by Non-Unitized Accounts* (Exposure).

As you know, we provided extensive comments on the Subgroup's original exposure of a proposed ILVA Actuarial Guideline (AG). Our comments stemmed from several key realities, particularly that registered index-linked annuity (RILA) or ILVA products are fundamentally spread-based products and that insurers employ a variety of practices with respect to where assets supporting these products are maintained. For these and other reasons, we noted the inherent challenges associated with developing an AG based on the definition of variable annuity in in the NAIC's *Variable Annuity Model Regulation* (Model 250), and we emphasized that critical changes needed to be made to the original exposure in order to make it workable.

Therefore, we are gratified that the Exposure takes a different approach and specifies conditions for exemption as a variable annuity from the NAIC's *Standard Nonforfeiture Law for Individual Deferred Annuities* (Model 805) and that it does not attempt to modify or interpret the definition of a variable annuity under Model 250. We believe issuing an AG with principles and requirements for determining interim values such that a RILA is considered a variable annuity and therefore exempt from Model 805 makes sense.

¹ The American Council of Life Insurers (ACLI) is the leading trade association driving public policy and advocacy on behalf of the life insurance industry. 90 million American families rely on the life insurance industry for financial protection and retirement security. ACLI's member companies are dedicated to protecting consumers' financial wellbeing through life insurance, annuities, retirement plans, long-term care insurance, disability income insurance, reinsurance, and dental, vision and other supplemental benefits. ACLI's 280 member companies represent 94 percent of industry assets in the United States.

² The Committee of Annuity Insurers is a coalition of life insurance companies that issue annuities. It was formed in 1981 to address legislative and regulatory issues relevant to the annuity industry and to participate in the development of public policy with respect to securities, state regulatory and tax issues affecting annuities. The CAI's current 30 member companies represent approximately 80% of the annuity business in the United States.

However, as we emphasized in our earlier comments, for an AG to be workable, it is critical that the interim value framework set forth therein both be consistent with the core design principles used to create RILAs and that it takes into account market realities. While the Exposure is more principles based, and in that regard, less restrictive than the original exposure, there are aspects of it that continue to be too restrictive and therefore would not meet some of the Subgroup’s own objectives, including encompassing products currently in the market and fostering product innovation.

Accordingly, the ACLI and the CAI urge the Subgroup to make certain modifications to the Exposure. These revisions are necessary so that the AG appropriately addresses important risk management requirements and aligns with the flexibility needed related to market valuation and trading dynamics. Our recommended revisions are reflected in the attached mark-up of the Exposure. In addition to addressing the points just noted, our revisions shown in the attached mark-up provide suggested guidance for how to apply the concept of “materially consistent” and clarify the applicability of Section 7 of Model 250 to RILAs.

More particularly, our principal revisions are found in the following provisions:

Principles:

We have added language to the second principle to ensure the value of derivative assets will be based on assumptions that are consistent with market valuation dynamics. In addition, a fourth principle has been added to clarify that market value adjustments can be applied at a contractual or interim value level to reflect changes in the market values of fixed income assets. This is necessary because ILVAs are fundamentally spread based products with asset liability matching risks such as disintermediation that insurers need to mitigate.

Fixed Income Asset Proxy:

Our revisions broaden the definition so that it: (a) allows for various amortization approaches that can be aligned with the underlying asset market values; (b) accommodates market value adjustments referenced under the principles; and (c) specifies discounting techniques that will be described in the actuarial certification. We believe this aligns with a market-based valuation.

Derivative Asset Proxy:

Our revisions replace the prescribed unwind cost of “10 bps” with a provision for reasonable costs to align with marketplace trading conditions, as the unwind cost can be significant in volatile markets particularly for complex payoff structures. Our revisions further introduce a broadened definition to allow for more tailored, risk-sensitive unwind risk provisions that will be described in the actuarial certification.

An example of acceptable “materially consistent” demonstration:

In the Drafting Note of our mark-up, we provide an example of how to demonstrate materially consistent based on average results over a stochastic scenario set that is within 5% of the results produced using the Hypothetical Portfolio. Our mark-up recognizes that companies may choose whether to use stochastic or deterministic approaches that will be described in the actuarial certification.

ILVA nonforfeiture benefit compliance with Section 7 of Model 250:

So as to avoid any unintended confusions, we have added language clarifying that complying with Section 7.B. of Model 250 is not required, and that market value adjustments are included in net investment return for purposes of demonstrating Section 7 compliance.

We would also note that the net investment return used to demonstrate Section 7 compliance should be net of asset-based charges and therefore would include any explicit fees as well as any market value adjustments. Therefore, the 7% in Model 250 would be grossed up for variable annuity asset-based charges and then reduced for the aforementioned items or utilize average returns by index and then reduce for the aforementioned items.

The ACLI and the CAI appreciate the opportunity to comment on the Exposure and we urge continued discussion and collaboration to develop an AG that satisfies our shared objective - and well stated principle - of equity to both contract holders and insurers in the design and administration of RILA products. Further, the ACLI and CAI appreciate the NAIC's stated desire to minimize any market disruption that could occur as a result of this AG. In that spirit, we are hopeful that the NAIC will continue to work with the ACLI and CAI on transition timing that appropriately reflects the practical realities of implementation as the AG is finalized.

Respectfully submitted,

AMERICAN COUNCIL OF LIFE INSURERS (ACLI)

**Proposed Actuarial Guideline on ILVAs
from the
American Council of Life Insurers (ACLI) and Committee of Annuity Insurers (CAI)
(May 2, 2022)**

**Actuarial Guideline ILVA
Nonforfeiture Requirements for Index Linked
Variable Annuity Products Supported by
Non-Unitized Accounts**

Background

The purpose of this guideline is to specify the conditions under which an Index-Linked Variable Annuity (ILVA) is consistent with the definition of a variable annuity and exempt from Model 805 and specify nonforfeiture requirements consistent with variable annuities.

A number of insurers have developed and are issuing annuity products with credits based on the performance of an index with caps on returns, participation rates, spreads or margins, or other crediting elements, which include limitations on loss such as a floor or a buffer. These products are not unitized and do not invest directly in the assets whose performance forms the basis for the credits. However, unlike traditional non-variable indexed annuities, these annuities may reflect negative index returns.

There is no established terminology for these annuity products. These products go by several names, including structured annuities, registered index-linked annuities (RILA), or index-linked variable annuities, among others. This guideline refers to these products as index-linked variable annuities (ILVA).

Variable annuities are exempted from the scope of NAIC Model 805, *Standard Nonforfeiture Law for Individual Deferred Annuities*, however, -NAIC Model 805 does not define the term "variable annuity".

NAIC Model 250, *Variable Annuity Model Regulation*, defines variable annuities as "contracts that provide for annuity benefits that vary according to the investment experience of a separate account" Section 7B of NAIC Model 250 provides that "to the extent that a variable annuity contract provides benefits that do not vary in accordance with the investment performance of a separate account" the contract shall satisfy the requirements of the NAIC Model 805.

The application of the NAIC Model 250 to a traditional variable annuity with unitized values is straightforward. The unitized feature provides an automatic linkage between annuity values and the investment experience of a separate account. Daily values (market values of the separate account assets) are the basis of all the benefits, including surrender values.

The fact that ILVA products are not unitized means they do not have values determined directly by the market prices of the underlying assets. Therefore, this guideline sets forth

ACLI and CAI Proposed AG on ILVAs (Redline)

principles and requirements for determining values, including death benefit, withdrawal amount, annuitization amount or surrender values, such that an ILVA is considered a variable annuity and thereby exempt from Model 805. An ILVA that does not comply with the principles and requirements of this guideline is not considered a variable annuity and therefore is subject to Model 805.

Drafting Note: This guideline interprets the term “variable annuity” for purposes of exemption from Model 805. It is not intended to modify or interpret the definition of a variable annuity under Model 250 or other Model Regulations.

Scope

This guideline applies to any index-linked annuity exempt from the NAIC Model 805 on the basis that it is a variable annuity provided through non-unitized separate account(s) and includes index-linked crediting features that are built into policies or contracts (with or without unitized subaccounts) or added to such by rider, endorsement, or amendment.

This guideline does not apply to an annuity contract or a subaccount of an annuity contract that is subject to the requirements of NAIC Model 805, Standard Nonforfeiture Law for Individual Deferred Annuities.

Principles

This guideline is based on the following principles:

1. There exists a package of derivative assets that replicates the index credits provided by an index strategy at the end of an index term.
2. The value of the package of derivative assets can be determined ~~daily~~ using assumptions consistent with observable market ~~values~~ inputs and parameters, whenever possible.
3. Interim Values defined in the contract provide equity to both the contract holder and the company where the Interim Values are consistent with the value of the Hypothetical Portfolio over the index term.
4. Market Value Adjustments that reflect changes in the value of hypothetical fixed income assets due to interest rate and/or credit spread movements are allowed. They may be applied in the Interim Value calculation or at the contract level.

Definitions

“Derivative Asset Proxy” means a package of hypothetical derivative assets designed to replicate credits provided by an Index Strategy at the end of an Index Term.

“Discount Rate” means the rate used to calculate the value of the Fixed Income Asset Proxy during the Index Strategy Term. This rate may be a simple or compound rate, may be expressed as a risk-free rate plus a spread, or may be an implied rate used to amortize the initial Derivative Asset Proxy value over the Index Strategy Term as described in the actuarial certification.

“Fixed Income Asset Proxy” is a hypothetical fixed income asset.

“Hypothetical Portfolio” means a hypothetical portfolio composed of a Fixed Income Asset Proxy and a Derivative Asset Proxy.

“Interim Value” mean the Strategy Value at any time other than the start date and end date of an Index Term.

“Index Strategy” means a method used to determine index credits with specified index-or indices or observable benchmarks and cap, buffer, participation rate, spread, margin or other index crediting elements.

“Index Strategy Base” means the notional amount used to determine index credits that does not change throughout the Index Term except for withdrawals, transfers, deposits, and any explicit charges.

“Index Strategy Term” means the period of time from the term start date to the term end date over which an index change and index credit is determined. A term may end due to product and/or crediting features (e.g., a specified end date, a “lock-in” feature, etc.)

“Strategy Value” means the value, attributable to an Index Strategy, used in determining values including death benefit, withdrawal amount, annuitization amount or surrender values.

Text

Index Strategy Base must equal the Strategy Value at an Index Term start date.

The value of the Fixed-Income Asset Proxy:

- a. At the beginning of the Index Strategy Term equals the Index Strategy Base less the Derivative Asset Proxy value; and
- b. At any point in time between the Index Strategy Term start date and the end of the Index Strategy Term, is determined by discounting the Index Strategy Base for the remainder of the Index Strategy Term at the Discount Rate. This may also be subject to a Market Value Adjustment as outlined in Principle 4; and
- ~~b.c. At the end of the Index Strategy Term equals the Index Strategy Base; and,~~
a. ~~Earns interest at a level rate.~~

The value of the Hypothetical Portfolio at any time is the sum of the Fixed-Income Asset Proxy value and the Derivative Asset Proxy value less a provision ~~for the cost of unwinding the hedge positions not to exceed 10 bps.~~ designed to address the reasonable cost of unwinding the Derivative Asset Proxy. Such a provision may be either applied to all circumstances or take the form of a more targeted adjustment applicable only in specific circumstances in which the risk of unwinding Derivative Asset Proxy may be heightened as described in the actuarial certification.

Contracts in the scope of this guideline must provide Interim Values that are consistent with the value of the Hypothetical Portfolio over the ~~index term~~ Index Strategy Term.

If a contract provides Interim Values determined using a methodology other than a Hypothetical Portfolio methodology as described in this guideline, the company must demonstrate that the contractually defined Interim Values will be materially consistent with the Interim Values that would be produced using the Hypothetical Portfolio methodology for each combination of Index Strategy and Index Strategy Term. The company may choose to demonstrate under a reasonable number of ~~economic~~ stochastic economic scenarios or a set of deterministic scenarios.

Drafting Note: ~~Acceptable~~ One example of an acceptable demonstration of materially consistent would show that at intermediate points during the Index Strategy Term, the expected value of Interim Values produced using the Hypothetical Portfolio minus the expected value of contractually defined Interim Values is at most 5% of the Index Strategy Base. The expected value will be defined as the average of the Interim Values over the set of economic scenarios over which consistency should to be demonstrated is yet to. Acceptable stochastic economic scenarios may be determined. Considerations are from the Academy Interest Rate Generator and/or defined any other reasonable real-world economic scenario generator where the generator and any key additional assumptions used to value the Derivative Asset Proxy are described in the actuarial certification. If deterministic scenarios are used, these may include shocks that trigger Index Strategy parameters including but not limited to caps, floors, and buffers.

~~The~~ At the time of filing, the company must provide an actuary's certification that the provisions of this guideline are being met.

Assumptions used to value the Derivative Asset Proxy including yields, implied volatility, risk-free rate, ~~and dividend yield, and other parameters required for the valuation method of the derivatives~~ must be consistent with the observable market prices of derivative assets, whenever possible.

ILVA nonforfeiture benefits must comply with Section 7 of Model 250 (other than Section 7.B) with net investment return (reflecting any Market Value Adjustment and any explicit fees) consistent with the requirements for determining Interim Values in this guideline.

The company (or actuary) must describe the Fixed Income Asset Proxy and the Derivative Asset Proxy and with the assumptions used to calculate its value these values at any time (including the reasonable cost of unwinding the Derivative Asset Proxy).

Effective Date

ACLI and CAI Proposed AG on ILVAs
(Clean)

**Proposed Actuarial Guideline on ILVAs
from the
American Council of Life Insurers (ACLI) and Committee of Annuity Insurers (CAI)
(May 2, 2022)**

**Actuarial Guideline ILVA
Nonforfeiture Requirements for Index Linked
Variable Annuity Products Supported by
Non-Unitized Accounts**

Background

The purpose of this guideline is to specify the conditions under which an Index-Linked Variable Annuity (ILVA) is consistent with the definition of a variable annuity and exempt from Model 805 and specify nonforfeiture requirements consistent with variable annuities.

A number of insurers have developed and are issuing annuity products with credits based on the performance of an index with caps on returns, participation rates, spreads or margins, or other crediting elements, which include limitations on loss such as a floor or a buffer. These products are not unitized and do not invest directly in the assets whose performance forms the basis for the credits. However, unlike traditional non-variable indexed annuities, these annuities may reflect negative index returns.

There is no established terminology for these annuity products. These products go by several names, including structured annuities, registered index-linked annuities (RILA), or index-linked variable annuities, among others. This guideline refers to these products as index-linked variable annuities (ILVA).

Variable annuities are exempted from the scope of NAIC Model 805, *Standard Nonforfeiture Law for Individual Deferred Annuities*, however, NAIC Model 805 does not define the term "variable annuity".

NAIC Model 250, *Variable Annuity Model Regulation*, defines variable annuities as "contracts that provide for annuity benefits that vary according to the investment experience of a separate account" Section 7B of NAIC Model 250 provides that "to the extent that a variable annuity contract provides benefits that do not vary in accordance with the investment performance of a separate account" the contract shall satisfy the requirements of the NAIC Model 805.

The application of the NAIC Model 250 to a traditional variable annuity with unitized values is straightforward. The unitized feature provides an automatic linkage between annuity values and the investment experience of a separate account. Daily values (market values of the separate account assets) are the basis of all the benefits, including surrender values.

The fact that ILVA products are not unitized means they do not have values determined directly by the market prices of the underlying assets. Therefore, this guideline sets forth

principles and requirements for determining values, including death benefit, withdrawal amount, annuitization amount or surrender values, such that an ILVA is considered a variable annuity and thereby exempt from Model 805. An ILVA that does not comply with the principles and requirements of this guideline is not considered a variable annuity and therefore is subject to Model 805.

Drafting Note: This guideline interprets the term “variable annuity” for purposes of exemption from Model 805. It is not intended to modify or interpret the definition of a variable annuity under Model 250 or other Model Regulations.

Scope

This guideline applies to any index-linked annuity exempt from the NAIC Model 805 on the basis that it is a variable annuity provided through non-unitized separate account(s) and includes index-linked crediting features that are built into policies or contracts (with or without unitized subaccounts) or added to such by rider, endorsement, or amendment.

This guideline does not apply to an annuity contract or a subaccount of an annuity contract that is subject to the requirements of NAIC Model 805, Standard Nonforfeiture Law for Individual Deferred Annuities.

Principles

This guideline is based on the following principles:

1. There exists a package of derivative assets that replicates the index credits provided by an index strategy at the end of an index term.
2. The value of the package of derivative assets can be determined using assumptions consistent with observable market inputs and parameters, whenever possible.
3. Interim Values defined in the contract provide equity to both the contract holder and the company where the Interim Values are consistent with the value of the Hypothetical Portfolio over the index term.
4. Market Value Adjustments that reflect changes in the value of hypothetical fixed income assets due to interest rate and/or credit spread movements are allowed. They may be applied in the Interim Value calculation or at the contract level.

Definitions

“Derivative Asset Proxy” means a package of hypothetical derivative assets designed to replicate credits provided by an Index Strategy at the end of an Index Term.

“Discount Rate” means the rate used to calculate the value of the Fixed Income Asset Proxy during the Index Strategy Term. This rate may be a simple or compound rate, may be expressed as a risk-free rate plus a spread or may be an implied rate used to amortize the initial Derivative Asset Proxy value over the Index Strategy Term as described in the actuarial certification.

“Fixed Income Asset Proxy” is a hypothetical fixed income asset.

“Hypothetical Portfolio” means a hypothetical portfolio composed of a Fixed Income Asset Proxy and a Derivative Asset Proxy.

“Interim Value” mean the Strategy Value at any time other than the start date and end date of an Index Term.

“Index Strategy” means a method used to determine index credits with specified index-or indices or observable benchmarks and cap, buffer, participation rate, spread, margin or other index crediting elements.

“Index Strategy Base” means the notional amount used to determine index credits that does not change throughout the Index Term except for withdrawals, transfers, deposits, and any explicit charges.

“Index Strategy Term” means the period of time from the term start date to the term end date over which an index change and index credit is determined. A term may end due to product and/or crediting features (e.g., a specified end date, a “lock-in” feature, etc.)

“Strategy Value” means the value, attributable to an Index Strategy, used in determining values including death benefit, withdrawal amount, annuitization amount or surrender values.

Text

Index Strategy Base must equal the Strategy Value at an Index Term start date.

The value of the Fixed Income Asset Proxy:

- a. At the beginning of the Index Strategy Term equals the Index Strategy Base less the Derivative Asset Proxy value; and
- b. At any point in time between the Index Strategy Term start date and the end of the Index Strategy Term, is determined by discounting the Index Strategy Base for the remainder of the Index Strategy Term at the Discount Rate. This may also be subject to a Market Value Adjustment as outlined in Principle 4; and
- c. At the end of the Index Strategy Term equals the Index Strategy Base.

The value of the Hypothetical Portfolio at any time is the sum of the Fixed Income Asset Proxy value and the Derivative Asset Proxy value less a provision designed to address the reasonable cost of unwinding the Derivative Asset Proxy. Such a provision may be either applied to all circumstances or take the form of a more targeted adjustment applicable only in specific circumstances in which the risk of unwinding Derivative Asset Proxy may be heightened as described in the actuarial certification.

Contracts in the scope of this guideline must provide Interim Values that are consistent with the value of the Hypothetical Portfolio over the Index Strategy Term.

If a contract provides Interim Values determined using a methodology other than a Hypothetical Portfolio methodology as described in this guideline, the company must demonstrate that the contractually defined Interim Values will be materially consistent with the Interim Values that would be produced using the Hypothetical Portfolio methodology for each combination of Index Strategy and Index Strategy Term. The company may choose to demonstrate under a reasonable number of stochastic economic scenarios or a set of deterministic scenarios.

Drafting Note: One example of an acceptable demonstration of materially consistent would show that at intermediate points during the Index Strategy Term, the expected value of Interim Values produced using the Hypothetical Portfolio minus the expected value of contractually defined Interim Values is at most 5% of the Index Strategy Base. The expected value will be defined as the average of the Interim Values over the set of economic scenarios. NAIC Index-Linked Variable Annuity Subgroup
Peter Weber, Chair & Tomasz Serbinowski, Vice-Chair

Re: Actuarial Guideline ILVA: Nonforfeiture Requirements for Index Linked Variable Annuity Products Supported by Non-Unitized Accounts (“Exposure”)

Dear Mr. Weber and Mr. Serbinowski:

On behalf of our members, the Insured Retirement Institute, Inc. (“IRI”)¹ appreciates the opportunity to comment on the Exposure put forth by the Index-Linked Variable Annuity Subgroup (“Subgroup”). We appreciate the work of the Subgroup and believe that this Exposure has been significantly improved upon; however, we are recommending some additional edits and feedback to ensure that the Exposure encompasses products currently in the market and does not impede product innovation.

IRI received and reviewed the comments on the Exposure by the American Council of Life Insurers (“ACLI”) and the Committee of Annuity Insurers (“CAI”), dated May 2, 2022. With ACLI and CAI’s permission, IRI shared this letter with our membership.

Following discussion with our members, IRI supports ACLI and CAI’s comments with respect to its requests and recommendations regarding the Exposure, including the mark-up of the Exposure that is being put forth for consideration.

Overall, our members support the allowance of different approaches to determining values as this leads to product innovation and supports consumer choice when selecting a product that best achieves their financial goals. We appreciate that this second draft of the Actuarial Guideline takes this into account by being more principles-based, but we do support the changes and recommendations put forth by ACLI and CAI in their mark-up of the Exposure. As such, we respectfully request that the Subgroup consider the recommendations put forth in ACLI’s and CAI’s comment letter.

On behalf of IRI and our members, thank you again for the opportunity to provide these comments. We would be happy to discuss further with you and look forward to continued collaboration and partnership with the Subgroup.

¹ IRI is the leading association for the entire supply chain of insured retirement strategies, including life insurers, asset managers, and distributors such as broker-dealers, banks, and marketing organizations. IRI members account for more than 95 percent of annuity assets in the U.S., the top 10 distributors of annuities ranked by assets under management and are represented by financial professionals serving millions of Americans. IRI champions retirement security for all through leadership in advocacy, awareness, research, and the advancement of digital solutions within a collaborative industry community.

May 2, 2022

Sincerely,

Sarah E. Wood

RE: Comments on the Exposure of **Actuarial Guideline ILVA - Nonforfeiture Requirements for Index Linked Variable Annuity Products Supported by Non-Unitized Accounts (PAG2)**

Mr. Weber,

As a commenter not employed by a life insurer, or affiliated with a regulatory body, or a trade association, I am very grateful for your consideration of my comments. Having no actuarial training I ask that you please excuse the general nature of my assertions. I would like to present a responsible marketer's perspective. By way of background, as President of CompEdge Financial, I have held a life insurance license since 1982, have supervised Broker/Dealer Branch Office regulated by FINRA, served over 10 years as the President and Chief Compliance Officer of a SEC-registered Registered Investment Adviser firm, and operate an Independent Marketing Organization.

The establishment of a protocol to report interim values within ILVA's is an important task and I appreciate the comments thus far. My concern is that the difficulty in creating the methodology, and the disagreement to date, centers not on what is fair to the buying public but what is easiest and least transparent for the carriers.

While respecting the narrow scope of this subgroup it is important to consider broader contexts to facilitate decision making.

Defined-Outcome Product Background

Historically, the objective of a structured investment is to combine non-correlated assets in such a way that they form a defined set of possible outcomes at the date of purchase. Holding various long and short positions in index options is a traditional method of accomplishing this goal. The result is a portfolio designed to exist for a limited period of time in markets where a buy/hold equity strategy presents unacceptable downside risk – an alternative strategy. Often these accounts create a scheme where regardless of market activity the client is not subject to first-dollar losses down to a designed percentage, or a buffer. Typically, private investors and professionals use nearly 100% of the available seed cash in the strategy (minus 1-3% set aside

for expenses and profit). This ensures interim values of the account are easily discernable in real time in the trust or fund based on the market prices of the options employed.

Insurers saw the opportunity to accomplish similar defined outcomes with a slightly different option strategy. Their strategy allows them to create a buffer/cap product while not allocating all the premium to the strategy. In fact, many of the buffer/cap options seen now can be accomplished with no net premium spent on behalf of the client at all.

When done in an annuity chassis, minimal holdings in option positions are held in a separate account while well over 90% of the premium is available for use in the General Account for the carrier's investment in long-term assets, to pay concessions to Broker/Dealers, and provide company profits. This is essentially an interest-free loan of the client's annuity premium to the insurer as collateral should the buffer ever fail, and someone must clean up the mess. There is a cost to this alternative to the investor as it is not possible to achieve the same upside cap available otherwise without the carrier allocating a significant portion of those funds to enhance caps.

Oversight of Distribution Partners

Because these products are registered, their distribution falls to Broker/Dealers and their Registered Representatives. B/D's have attempted to insert themselves in the revenue stream of Fixed Indexed Annuity sales for a decade. FINRA requires the B/D to supervise all the RR's recommendations but, as fixed products, the independent RR is free to sell FIAs through any number of other outlets. All attempts to address this have failed. ILVA's give B/D's a successful new revenue stream with all the flavor of an FIA yet registered for distribution only through B/D's.

The SEC Regulation Best Interest (RegBI) details the duties of B/D's and their supervised representatives. RegBI stipulates they must available alternatives to a recommendation, and to consider all relevant costs and limitations. The lack of transparency in the assets held in ILVA's makes fulfilling this duty impossible. It is the only SEC-registered product sold by prospectus that does not detail where every dollar of the client's money goes.

A new term might help identify and compare the true value of each carrier's product. How much money is the carrier allocating to the buffer strategy? A buffer strategy can be accomplished in any brokerage account with no net cost. In other words, the premiums both spent and received on options to produce the strategy can net each other out. This would provide a low upside cap, however. To be competitive carriers must offer higher caps and would have to subsidize the strategy with earnings they would rather bank in the General Account. If we are going to use hypothetical values elsewhere, can we create a concept called the "Option Budget Allocation" expressed as a percentage of the client's premium or annuity value used to enhance caps? My observation has been that this is roughly equal to the percentage the carrier is crediting in the product's fixed account. If so, contract holders are

incurring large opportunity costs on their premium while only receiving an economic benefit in the neighborhood of 1%/year on their capital.

Carriers insist ILVA's are spread products and their expenses cannot be quantified. However, they are quick to point out the "spread" concept is not to be confused with the traditional use of the word in an index strategy where the spread percentage is clearly stated. The best of both worlds. Some accountability is needed here.

FINRA is charged with ensuring B/Ds are complying with the SEC's RegBI and have long-standing requirements that RR's avoid misstatements or omissions of material facts. The marketing departments of ILVA providers do not seem to respect the difficulty advisors have in fulfilling these obligations given the materials provided for sales and the talking points of their wholesalers. Let's examine some of those possible omissions and misrepresentations:

- 1) With few honorable exceptions, carriers claim that they "absorb" all losses from the original principal to the bottom of the buffer. In fact, there is no insurance element to that event whatsoever. Clearly carriers are not risking surplus equal to 10, 15, or 25% of annuity values. There is simply no economic activity as no option is in play in the buffer zone.
- 2) Sales brochures talk about the upside of the index but fail to prominently mention it is only the price movement of the index being credited and dividends are not included. A fair comparison of outcomes in all markets that included dividends in client brochures would allow more informed decisions.
- 3) Most insurers offer a 6-year term for each strategy. That is simply too long a term to make any sort of market judgement and the options market reflects that. A 6-year bucket with a 300% cap is virtually uncapped, like an S&P 500 ETF. However, the value of a 10% buffer in an ILVA would be covered by compounded dividends over 6 years in an Index ETF without a buffer. An outright purchase of an S&P 500 ETF will have the same risk characteristics - no ILVA value add.
- 4) "No Fees" - Many carriers prominently and repeatedly claim to charge no fees in their materials. While there may be no additional out-of-pocket fee this is dangerously misleading. As discussed, the opportunity cost of not investing elsewhere is substantial. If there are no fees, where is the discussion on how the company profits? The implication is that they are free. At the time of sale B/Ds require RRs to complete forms detailing the fees, policy charges, surrender charges, and investment expense percentages on every variable annuity sold. Variable annuities carriers simply must provide that information to protect their distributors. Expenses should be detailed.
- 5) With no discernable insurance element to a variable tax-deferred product FINRA has held that they are not suitable for funding IRA's or other qualified rollovers since tax-deferral is already present and the underlying investment can be obtained with

lower expenses. Minimal death benefit options and poor living benefit riders may not be enough to overcome this logic.

- 6) An available alternative to an ILVA is any UIT employing a similar buffer. For any given buffer the caps on UIT's tend to exceed the ILVA. There are notable exceptions. Carriers that do charge a fee to enhance caps or participation rates can outperform with active recommendations by the RR and an astute client.

Interim Value Calculation Debate

Back to the topic at hand which centers on how to calculate interim account values for a contract holder when their contract assets are split between a separate account containing assets with daily pricing and the carrier's general account with no divisible interest or earmarked asset allocated to the contract. I believe the conclusions to be drawn from the terminology created thus far are not helpful¹. I concur with several of the previous commenters that variable annuity Model 250 should govern, and not by amendments to the Model but rather with amendments to the products. This interim value debate is created by non-adherence to the time-tested traditional structure of variable annuities.

If ILVA's must persist in their current form I would advocate for a simple prorata earnout of the buffer, floor, and cap without regard to Market Value Adjustment's on hypothetical assets or the market price of the underlying hypothetical options. If a withdrawal is needed halfway

1

Interim Values Defined

As noted in PAG2, the terminology required to address ILVA features is currently lacking and these efforts to standardize and codify such terminology are admirable. The Proposed Actuarial Guideline 2 defines the Interim Value as follows:

"Interim Value" mean the Strategy Value at any time other than the start date and end date of an Index Term. (Index Term is not defined but I will assume it means the period described as the "Index Strategy Term")

So, we must look to the Strategy Value – "Strategy Value" means the value, attributable to an Index Strategy, used in determining values including death benefit, withdrawal amount, annuitization amount or surrender values.

If the Interim Value we seek is equal to the Strategy Value on days other than the beginning and ending of an Index Strategy Term then these definitions give us nothing upon which to perform the math.

Later in PAG2, one of the three principles of the guideline states:

3. Interim Values defined in the contract provide equity to both the contract holder and the company where the Interim Values are consistent with the value of the Hypothetical Portfolio over the index term.

Here is the clue that the Interim Values are to be consistent with, presumably equal to, the value of a Hypothetical Portfolio. The Hypothetical Portfolio is also defined as:

"Hypothetical Portfolio" means a hypothetical portfolio composed of a Fixed Income Asset Proxy and a Derivative Asset Proxy.

Therefore, the Strategy Value at times other than the beginning or ending date of the Index Strategy Term is the current Hypothetical Portfolio Value which is the sum of the Derivative Asset Proxy Value, a hypothetical, and the Fixed Income Asset Proxy Value, a value also based on a hypothetical Fixed Income Asset. I understand this language is the result of comments on the previously proposed guideline expressing concerns that using a real asset could produce varying results. Transparency is not the long suit here.

through an index period, a client would expect to receive half the downside protection available, and half the cap purchased. Asking the consumer to be blind to daily values over many years, only to be priced to the market and current interest rates at the time of a needed withdrawal is not equitable.

Solution

I feel ILVA's should be required to strictly adhere to the traditional form of a variable annuity. Such a structure would serve the investing public, create full and fair disclosure of all risks and holdings, and help standardize terms for a basis of competitive comparison, and solve the interim valuation debate. It would also allow for the addition of several other subaccounts to assist in navigating the markets. ILVA's employ short-term alternative strategies as their sole funding option. This is leading to excessive allocations to the product as an accumulation vehicle in a strategy most professionals agree should not exceed 15% of an investor's portfolio.

Include all premiums in the separate account (and relevant subaccounts), only allowing dollars to flow to the carrier's general account according to the well-defined expenses and amounts detailed in the prospectus.

The Interim Value discussion is important but is largely irrelevant until the more glaring fatal flaws are addressed.

Respectfully,

Burt A. Snover, CLU, ChFC President

AMERICAN ACADEMY of ACTUARIES

Objective. Independent. Effective.™

May 2, 2022

Mr. Peter Weber
Chair, Index-Linked Variable Annuity (A) Subgroup
National Association of Insurance Commissioners (NAIC)

Re: Exposure 2 of the Proposed Actuarial Guideline ILVA, Nonforfeiture Requirements for Index Linked Variable Annuity Products Supported by Non-Unitized Accounts

Dear Mr. Weber,

On behalf of the American Academy of Actuaries¹ Index-Linked Variable Annuity Work Group (the “work group”), I appreciate the opportunity to provide comments on the proposed actuarial guideline.

This is a complex topic with relationship to several product components such as filing requirements, Interstate Insurance Compact standards, disclosures, illustrations, marketing, and valuation that may need to be addressed separately. We offer the following conceptual comments for your consideration:

1. We suggest additional clarification in the scope of the proposed actuarial guideline that differentiates index-linked variable annuities (ILVAs) from variable annuities (VAs) and fixed-index annuities (FIAs). We note that ILVAs generally have the following characteristics:
 - a. Index-based crediting;
 - b. Risk of loss throughout the life of the contract;
 - c. No absolute floor applied to the Interim Value for withdrawals, surrender values, death benefits, or annuitized values;
 - d. Funding using a separate account, the general account, or both; and
 - e. Non-unitized structures.
2. We suggest that the guideline be based on two principles:
 - Interim Values provide equity to both the contract owner and the life insurance company; and
 - Interim Values are consistent with the market value of a Hypothetical Portfolio over the index term.

¹ The American Academy of Actuaries is a 19,500-member professional association whose mission is to serve the public and the U.S. actuarial profession. For more than 50 years, the Academy has assisted public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

The other proposed principles in the draft relate to the derivative assets and their value. Thus, these principles are assumptions that need to be considered, but do not rise to the level of guiding principles for the guideline. Therefore, we suggest these other proposed principles be deleted.

3. A principal of consistency, in the generic sense, will allow each company to define consistency for its product. This may not be interpreted identically by each state regulator.
4. We suggest clarification on the demonstration of consistency. Is the intent to be symmetrical or to provide downside protection?
5. We suggest more clarification on the intended timing of the demonstration of consistency—in other words, is the demonstration to be performed solely on the basis of assumptions at issue? At the time of product filing? On a periodic basis? Etc.

We additionally propose the undermentioned specific language changes in the following sections:

Definitions:

We suggest adding “static” to the definition of “Derivative Asset Proxy” to help promote consistency in the application of the actuarial guideline:

“Derivative Asset Proxy” means a package of hypothetical static derivative assets designed to replicate credits provided by an Index Strategy at the end of an Index Term.

Text:

We suggest simplifying the description of Interim Value because Hypothetical Portfolio has previously been defined, defining the base to apply the hedge position, and combining the concepts of the two paragraphs into one:

Contracts in the scope of this guideline must provide Interim Values that are consistent with the value of the Hypothetical Portfolio over the index term, less a provision for the cost of unwinding the hedge positions not to exceed 10 bps of the Index Strategy Base.

Our work group appreciates the efforts of the Index-Linked Variable Annuity (A) Subgroup on this proposed actuarial guideline. If you have any questions or would like further dialogue on the above topics, please contact Amanda Barry-Moilanen, life policy analyst, at barrymoilanen@actuary.org.

Sincerely,

Beth Keith, MAAA, FSA
Chairperson, Index-Linked Variable Annuities Work Group
American Academy of Actuaries

August 8, 2022

From: Ben Slutsker, Chair
The VM-22 (A) Subgroup

To: Mike Boerner, Chair
The Life Actuarial (A) Task Force

Subject: The Report of the VM-22 (A) Subgroup to the Life Actuarial (A) Task Force

The VM-22 (A) Subgroup has been meeting roughly every other week since the beginning of April. The focus of calls thus far have been addressing comments from multiple interested parties and regulators on the July 2021-exposed draft of VM-22 principles-based requirements.

The Subgroup's process of reviewing feedback on the VM-22 exposure has been to divide up the comments into four tiers. The first tier contains the highest priority issues, and each subsequent tier is incrementally less substantive. Thus far, the Subgroup has worked through all tier 1 and tier 2 comments, and is in the midst of discussing tier 3 comments. Upon the resolution of remaining tier 3 comments, the VM-22 document will be re-exposed with modifications to reflect the agreed upon changes, as well as edits to address tier 4 comments. Among the items the Subgroup has addressed, notable ones include:

- **Aggregation** – Follow “Option 1” for payout and accumulation reserving category language (i.e., defining the payout reserving category consistent with the current scope of VM-22), which will then be used to restrict stochastic reserve aggregation between payout and accumulation annuities
- **Small Company Exemption** – Develop a small company exemption, akin to the Life PBR Exemption that exists for VM-20
- **Exclusion Test** – Allow SPIAs below a certain durational threshold to automatically pass the exclusion test, prohibit pension risk transfers from the certification method exclusion test, limit aggregation for contracts with significantly different risk profiles, and restrict future premiums from denominator of the ratio test
- **Mortality** – Permit only prescribed tables to be used for pension risk transfer and longevity reinsurance mortality upon limited or no experience (i.e., restrict company-selected third party tables from being used)
- **Longevity Reinsurance** – The Subgroup has exposed a proposal to treat longevity reinsurance as a third reserving category, along with language that would limit loading on recurring gross premiums from being reflected in the stochastic reserve

After the VM-22 language is re-exposed, the Subgroup will transition to addressing the development of the standard projection amount. The Subgroup has decided to recommend a standard projection

amount to the Life Actuarial Task Force but has not decided on whether to recommend such as a disclosure-only item or as a minimum floor. There are currently two NAIC drafting groups: one led by Seong-min Eom (NJ) working on development of mortality assumptions and another led by Vincent Tsang (IL) working on policyholder behavior assumptions. Representatives from the SOA, Academy, and industry participate on these drafting group calls and the SOA Individual Annuity Experience Committee is assisting with assumption development. The goal will be to target a draft of the Standard Projection Amount to discuss during Subgroup calls in the Fall.

The Subgroup is also targeting a VM-22 field test to begin in Spring 2023, which will be led jointly by the Academy, ACLI, and NAIC. This timing may result in an effective date of 1/1/2025 (with a three year transition period for implementation), but the timeline will be revisited as progress in the Subgroup continues to develop.

Draft: 8/2/22

Valuation Manual (VM)-22 (A) Subgroup
Virtual Meeting
July 19, 2022

The VM-22 (A) Subgroup of the Life Actuarial (A) Task Force met July 19, 2022. The following Subgroup members participated: Ben Slutsker, Chair (MN); Ahmad Kamil, Elaine Lam, and Thomas Reedy (CA); Lei Rao-Knight (CT); Mike Yanacheak (IA); Nicole Boyd (KS); William Leung (MO); Bill Carmello and Amanda Fenwick (NY); Mike Boerner, Rachel Hemphill, and Yujie Huang (TX); and Craig Chupp (VA).

1. Reviewed the VM-22 Project Timeline

Mr. Slutsker reviewed the VM-22 project timeline (Attachment Nineteen-A). He said the target effective date is January 2025.

2. Discussed Tier Three Comments in the VM-22 Draft

Mr. Slutsker said the Subgroup will continue to review tier three comments on the proposed VM-22 framework (Attachment Nineteen-B). Ms. Hemphill agreed to defer discussion of the Texas Department of Insurance (TDI) comment on the appropriateness of risk-based capital (RBC) factors, as it is more related to RBC requirements than reserve requirements.

The TDI commented that the use of the term “VM-22 PBR requirements” needs to be clarified. Mr. Slutsker said that the confusion stems from adding the proposed principle-based reserving (PBR) requirements for non-variable annuities to the existing VM-22, Statutory Maximum Valuation Interest Rates for Income Annuities. He said the TDI comment questions whether the proposed PBR requirements should be a new chapter “VM-23.” Mr. Chupp suggested that a Subgroup name change may be necessary if the PBR requirements become “VM-23.” He said it may be easier to change the existing VM-22 to VM-23. Mr. Bayerle said that making the change may be awkward because it may cause a product that passes an exclusion test to jump between chapters. Ms. Lam asked if adding to VM-22 an appendix that specifically houses the rates might avoid the need for a new chapter. Mr. Bayerle asked if adding an appendix to the *Valuation Manual* that houses interest rates for other chapters, including VM-20, Requirements for Principle-Based Reserves for Life Products, might be the best solution. Mr. Slutsker said that the idea sounds viable, but more research is needed.

In response to an American Council of Life Insurers (ACLI) comment requesting more guidance on pre-reinsurance reserves in Section 3, Mr. Slutsker pointed to additional guidance provided in Section 5. Mr. Bayerle agreed to look at Section 5 to see if its guidance answers the ACLI concerns.

Mr. Slutsker agreed with the TDI comment that in Section 3.D.2, the term “scenario reserve” should be replaced with “deterministic reserve” (DR). Mr. Bayerle said that changing the term to DR addresses his concern about the use of the term “deterministic certification option.”

The Subgroup agreed to: 1) change the title of Section 3.E from “Exclusion Test” to “Stochastic Exclusion Test”; 2) delete the guidance note in Section 3.E.1; 3) add Section 3.H for consistency with VM-21, Requirements for Principle-Based Reserves for Variable Annuities; and 4) add a drafting note suggesting that the Life Actuarial (A) Task Force review the consistency of the language requiring periodic review of the prudent estimate assumption to ensure it is consistent across chapters and whether the word “periodically” should be replaced with “every three years.”

Mr. Slutsker said a comment suggested using stochastic mortality in the stochastic reserve calculation for longevity reinsurance. Sheldon Summers (Claire Thinking) said the language in Section 8.C.2 of VM-20 that when a prudent estimate does not appropriately capture the risk, the risk factor should be stochastically modeled to determine the impact. He said that language should be included in Section 4 of the proposed VM-22 framework.

Having no further business, the VM-22 (A) Subgroup adjourned.

 - Subsection 6: Riders and Supplemental Benefits8479

Commented [X3]: Note that part of the 2022 VM updates was to replace all instances of "stochastic reserve" with "SR" other than the initial definition in VM-01.

Commented [VM224R3]: Edit to be reflected in next exposure

Section 1: Background

A. Purpose

Sections 1 through 13 of these requirements establish the minimum reserve valuation standard for non-variable annuity contracts as defined in Section 2.A and issued on or after 1/1/2024. Section 14 of these requirements establish the maximum valuation rate for payout annuities for contracts issued on or after 1/1/2018. For all contracts encompassed by the Scope, these requirements constitute the Commissioners Annuity Reserve Valuation Method (CARVM) and, for certain contracts and certificates, the Commissioners Reserve Valuation Method (CRVM).

Guidance Note: CRVM requirements apply to some group pension contracts.

Guidance Note:
Relationship to RBC Requirements
These requirements anticipate that the projections described herein are used for the determination of RBC for all of the contracts falling within the scope of these requirements. These requirements and the RBC requirements for the topics covered within Sections 4.A through 4.E are identical. However, while the projections described in these requirements are performed on a basis that ignores federal income tax, a company may elect to conduct the projections for calculating the RBC requirements by including projected federal income tax in the cash flows and reducing the discount interest rates used to reflect the effect of federal income tax as described in the RBC requirements. A company that has elected to calculate RBC requirements in this manner may not switch back to using a calculation that ignores the effect of federal income tax without approval from the domiciliary commissioner.

Commented [X5]: The proposal suggests VM-22 is not operative until 1/1/2024, which contradicts Section 13 and existing requirements. We would suggest rewording this to clarify that Section 13 is effective after 12/31/2017. Further, we would suggest consistency in labeling of dates (either all text or all numeric).

Commented [VM226R5]: Edits to address this comment will be reflected in next exposure

Commented [CD7]: might be clearer to refer to "Section 2.A" here

Commented [VM228R7]: No objections from the Subgroup to an approach that is broader and focuses on Section 2.A. ACU will follow-up with proposed revisions to the scope section

Commented [X9]: The statement only addresses "contracts". Recommend adding "and certificates". Need to do a holistic review if where "and certificates" may be needed.

Commented [VM2210R9]: Edits to address this comment will be reflected in next exposure

Commented [VM2212R11]: Will discuss after ACU proposes specific draft wording

B. Principles

The projection methodology used to calculate the stochastic reserve SR is based on the following set of principles. These principles should be followed when interpreting and applying the methodology in these requirements and analyzing the resulting reserves.

Guidance Note: The principles should be considered in their entirety, and it is required that companies meet these principles with respect to those contracts that fall within the scope of these requirements and are in force as of the valuation date to which these requirements are applied.

Principle 1: The objective of the approach used to determine the stochastic reserve SR is to quantify the amount of statutory reserves needed by the company to be able to meet contractual obligations in light of the risks to which the company is exposed with an element of conservatism consistent with statutory reporting objectives.

Principle 2: The calculation of the stochastic reserve SR is based on the results derived from an analysis of asset and liability cash flows produced by the application of a stochastic cash-

Commented [X13]: We would support consistent application of principles across all chapters as currently VM-20 does not have a like set of principles. We believe this could involve a broader discussion of the assorted product requirements in the VM. As a shorter-term fix, we would recommend generalizing the principles where appropriate and moving these to "Section I-Introduction" or "VM-0" and equally applying to VM-21.

Commented [VM2214R13]: Discussed with Subgroup. Members are open and interested to a common principles chapter, but decided to hold off on developing for now.

Commented [CD15]: for consistency, will this edit be considered for VM-21 as well?

Commented [VM2216R15]: VM-22 Subgroup will initially focus on VM-22. Consistency with other VM chapters can be explored after development of initial Subgroup recommendation for VM-22.

flow model to equity return and interest rate scenarios. For each scenario, the greatest present value of accumulated deficiency is calculated. The analysis reflects prudent estimate assumptions for deterministic variables and is performed in aggregate (subject to limitations related to contractual provisions and reserving categories) to allow the natural offset of risks within a given scenario. The methodology uses a projected total cash flow analysis by including all projected income, benefit, and expense items related to the business in the model and sets the stochastic reserve SR at a degree of confidence using the CTE measure applied to the set of scenario specific greatest present values of accumulated deficiencies that is deemed to be reasonably conservative over the span of economic cycles.

Guidance Note: Examples where full aggregation between contracts may not be possible include experience rated group contracts and the operation of reinsurance treaties.

Principle 3: The implementation of a model involves decisions about the experience assumptions and the modeling techniques to be used in measuring the risks to which the company is exposed. Generally, assumptions are to be based on the conservative end of the confidence interval. The choice of a conservative estimate for each assumption may result in a distorted measure of the total risk. Conceptually, the choice of assumptions and the modeling decisions should be made so that the final result approximates what would be obtained for the stochastic reserve SR at the required CTE level if it were possible to calculate results over the joint distribution of all future outcomes. In applying this concept to the actual calculation of the stochastic reserve SR, the company should be guided by evolving practice and expanding knowledge base in the measurement and management of risk.

Guidance Note: The intent of Principle 3 is to describe the conceptual framework for setting assumptions. Section 10 provides the requirements and guidance for setting contract holder behavior assumptions and includes alternatives to this framework if the company is unable to fully apply this principle. More guidance and requirements for setting assumptions in general are provided in Section 12.

Principle 4: While a stochastic cash-flow model attempts to include all real-world risks relevant to the objective of the stochastic cash-flow model and relationships among the risks, it will still contain limitations because it is only a model. The calculation of the stochastic reserve SR is based on the results derived from the application of the stochastic cash-flow model to scenarios, while the actual statutory reserve needs of the company arise from the risks to which the company is (or will be) exposed in reality. Any disconnect between the model and reality should be reflected in setting prudent estimate assumptions to the extent not addressed by other means.

Principle 5: Neither a cash-flow scenario model ~~nor a method based on factors calibrated to the results of a cash-flow scenario model~~ can completely quantify a company’s exposure to risk. A model attempts to represent reality but will always remain an approximation thereto and, hence, uncertainty in future experience is an important consideration when determining the stochastic reserve SR. Therefore, the use of assumptions, methods, models, risk management strategies (e.g., hedging), derivative instruments, structured investments or any other risk transfer arrangements (such as reinsurance) that serve solely to reduce the calculated stochastic reserve SR without also reducing risk on scenarios similar to those used

Commented [X17]: We support this principle but note that later sections appear to contradict this principle. For example, the statement “The analysis reflects prudent estimate assumptions for deterministic variables and is performed in aggregate (subject to limitations related to contractual provisions) to allow the natural offset of risks within a given scenario.” contradicts with the introduction of additional reserve categories and other limitations (such as model segment restrictions).

Commented [VM2218R17]: Discuss adding “and reserving categories” to the parenthetical statement to avoid contradiction.

Commented [X19]: Principle 2: Recommend reinstating Guidance Note in Principle 2 to be consistent with VM-21.

Commented [VM2220R19]: No objections from Subgroup members to reinstating this guidance note.

Commented [X21]: We suggest deleting the sentence “Generally, assumptions are...” since it does not provide guidance. We also suggest tightening the remainder of the text for clarity.

Commented [VM2222R21]: Subgroup in favor of retaining language

Commented [X23]: ~~More general assumption guidance~~

Commented [VM2224R23]: Subgroup agreed with this comment. Edits to address this comment will be reflected in next exposure.

Commented [X25]: Principle 5 has the statement “nor a method based on factors calibrated to the results of a cash flow scenario model” which is intended for the Alternative Methodology in VM-21. The statement should be deleted from VM-22.

Commented [VM2226R25]: Edits to address this comment will be reflected in next exposure

Commented [X27]: We recommend deleting the third sentence (starting with “Therefore, the use of assumptions...”) because this lacks historical context and is covered by the final sentence.

Commented [VM2228R27]: Subgroup in favor of retaining language

in the actual cash-flow modeling are inconsistent with these principles. The use of assumptions and risk management strategies should be appropriate to the business and not merely constructed to exploit “foreknowledge” of the components of the required methodology.

C. Risks Reflected and Risks Not Reflected

1. The risks reflected in the calculation of reserves under these requirements arise from actual or potential events or activities that are both:
 - a. Directly related to the contracts falling under the scope of these requirements or their supporting assets; and
 - b. Capable of materially affecting the reserve.

2. Categories and examples of risks reflected in the reserve calculations include, but are not necessarily limited to:
 - a. Asset risks
 - i. Credit risks (e.g., default or rating downgrades).
 - ii. Commercial mortgage loan roll-over rates (roll-over of bullet loans).
 - iii. Uncertainty in the timing or duration of asset cash flows (e.g., shortening (prepayment risk) and lengthening (extension risk)).
 - iv. Performance of equities, real estate, and Schedule BA assets.
 - v. Call risk on callable assets.
 - vi. Separate account fund performance.

 - vii. Risk associated with hedge instrument (includes basis, gap, price, parameter estimation risks, and variation in assumptions).
 - viii. Currency risk.

- b. Liability risks
 - i. Reinsurer default, impairment, or rating downgrade known to have occurred before or on the valuation date.
 - ii. Mortality/longevity, persistency/lapse, partial withdrawal, and premium payment risks.

Drafting Note: Feedback welcome on whether to remove reference to separate accounts in VM-22. Whether references to separate accounts are retained or removed, consider making the treatment of such references consistent throughout VM-22.

Commented [X29]: consistent with our comments on 10, we would support consistent application of risks reflected across all chapters, rather than embedding the language in each chapter. Were this to be retained in VM-22, we would suggest maintaining consistency with VM-22 to avoid any confusion.

Commented [VM2230R29]: The Subgroup is open to a common chapter with all risks identified for different PBR frameworks, but decided to hold off on developing for now.

Commented [CD31]: VM-21 has "... and Risks Not Reflected" in this section header, which should be retained here since the section on risks not reflected is still in here.

Commented [VM2232R31]: Subgroup in favor of changing section header, as subsection 3 will be removed, but "risks not reflected" is still applicable to subsection 4

Commented [CD33]: Can a non-variable annuity have a separate account fund? I am not aware of any such annuity, that is not a variable annuity. Furthermore, all references to separate accounts and fund performance were deleted from this draft. Thus, we should consider deleting this item from the list.

Commented [VM2234R33]: Decided to retain for now, but add a drafting note to solicit feedback and mention the draft should be consistent throughout (as CA pointed out that the comment was regarding being internally consistent within the VM-22 draft).

- iii. Utilization risk associated with guaranteed living benefits.
 - iv. Anticipated mortality trends based on observed patterns of mortality improvement or deterioration, where permitted.
 - v. Annuitization risks.
 - vi. Additional premium dump-ins or deposits (high interest rate guarantees in low interest rate environments).
 - vii. Applicable expense risks, including fluctuation in maintenance expenses directly attributable to the business, future commission expenses, and expense inflation/growth.
- c. Combination risks
- i. Risks modeled in the company’s risk assessment processes that are related to the contracts, as described above.
 - ii. Disintermediation risk (including such risk related to payment of surrender or partial withdrawal benefits).
 - iii. Risks associated with revenue-sharing income.
- b. The risks not necessarily reflected in the calculation of reserves under these requirements are:
- a. Those not associated with the policies or contracts being valued, or their supporting assets.
 - b. Determined to not be capable of materially affecting the reserve.
- 3.4. Categories and examples of risks not reflected in the reserve calculations include, but are not necessarily limited to:
- a. Asset risks
 - i. Liquidity risks associated with a sudden and significant levels of withdrawals and surrenders, “run on the bank.”
 - b. Liability risks
 - i. Reinsurer default, impairment or rating downgrade occurring after the valuation date.
 - ii. Catastrophic events (e.g., epidemics or terrorist events).
 - iii. Major breakthroughs in life extension technology that have not yet fundamentally altered recently observed mortality experience.
 - iv. Significant future reserve increases as an unfavorable scenario is realized.
 - c. General business risks

- Commented [CD35]: Is there a distinction between “dump-ins” and “deposits”? Why are both words needed? Also, if it’s determined that both words are needed, should this same change be made in VM-21?
- Commented [VM2236R35]: Edits to address this comment will be reflected in next exposure
- Commented [X37]: Recommend change to “fluctuation in” maintenance expenses for clarity.
- Commented [VM2238R37]: Edits to address this comment will be reflected in next exposure
- Commented [CD39]: should this same change also be made to VM-21?
- Commented [VM2240R39]: Potential VM-21 will be examined separately from this Subgroup at a later point
- Commented [X41]: We recommend removing the bullet “Risks modeled in the company’s risk assessment processes that are related to the contracts, as described above” as this is unclear and probably extraneous.
- Commented [VM2242R41]: Subgroup in favor of retaining language.
- Commented [X43]: We recommend removing this section. With the specific RBC language removed, the section loses meaning: “a” is unnecessary and “b” is redundant with other sections of the VM which allow for materiality considerations (language in VM-20 is likely better for this purpose and should be used consistently).
- Commented [VM2244R43]: Subgroup agrees with removing this section.
- Commented [CD45]: Suggest eliminated “policies or”, since customarily, annuities are “contracts”
- Commented [VM2246R45]: Edits to address this comment will be reflected in next exposure
- Commented [CD47]: This is not in VM-21, and my suggestion would be to delete this
- Commented [VM2248R47]: Subgroup agrees with ... [1]
- Commented [X49]: Proposed revision is not appropr ... [2]
- Commented [VM2250R49]: Subgroup agrees with ... [3]
- Commented [CD51]: should this same change also ... [4]
- Commented [VM2252R51]: Edits to address this ... [5]
- Commented [X53]: The revised language “sudden ... [6]
- Commented [VM2254R53]: Subgroup in favor of ... [7]
- Commented [X55]: We recommend deleting the w ... [8]
- Commented [VM2256R55]: Edits to address this ... [9]
- Commented [X57]: We recommend removing the ... [10]
- Commented [VM2258R57]: Subgroup in favor re ... [11]

- i. Deterioration of reputation.
- ii. Future changes in anticipated experience (reparameterization in the case of stochastic processes), which would be triggered if and when adverse modeled outcomes were to actually occur.
- iii. Poor management performance.
- iv. The expense risks associated with fluctuating amounts of new business.
- v. Risks associated with future economic viability of the company.
- vi. Moral hazards.
- vii. Fraud and theft.
- viii. Operational.
- ix. Litigation.

D. [Specific Definitions for VM-22]

Buffer Annuity

Interchangeable term for Registered Index-Linked Annuity (RILA). See definition for Registered Index-Linked Annuity below.

• **Deferred Income Annuity (DIA)**

An annuity which guarantees a periodic payment for the life of the annuitant or a term certain and payments begin ~~one year~~ 13 months or later after (or from) the issue date if the contract holder survives to a predetermined future age.

• **Fixed Indexed Annuity (FIA)**

An annuity with an account value where the contract holder has the option for a portion or all of the account value to grow at a rate linked to a n external index, subject to certain limits, typically with guaranteed principal.

• **Flexible Premium Deferred Annuity (FPDA)**

An annuity with an account value established with a premium amount but allows for additional deposits to be paid into the annuity over time, resulting in an increase to the account value. The contract also has a guaranteed interest rate during the accumulation phase and has guaranteed mortality and interest rates applicable at the time of conversion to the payout phase.

• **Funding Agreement**

A contract issued to an institutional investor (domestic and international non-qualified fixed income investors) that provides fixed or floating interest rate guarantees.

Commented [X61]: It seems the definitions included in this section are largely only used for the purpose of establishing the Scope in Section 2. Since this is intended to be a principles-based methodology, recommend a strong definition of "Fixed Annuity" instead of specific products underneath this business. The first paragraph in A. Scope seems to provide this with specific references which are out of scope. If changing the scope section, we would suggest deleting the various product definitions if not used elsewhere; if these definitions are potentially applied beyond VM-22, we would suggest moving any necessary definitions to VM-01.

Commented [VM2262R61]: No objections from the Subgroup to an approach that is broader and focuses less on definitions. ACLI will follow-up with proposed revisions to the scope section

Commented [CD63]: The format of this Definitions section is inconsistent with other parts of the VM. In VM-01 and VM-21, each defined term is numbered, and is defined in this format (for example):
1. The term "buffer annuity" is interchangeable with the term "registered index-linked annuity (RILA)", as defined in Section 1.D.?

Commented [VM2264R63]: Edits to address this comment will be reflected in next exposure

Commented [X65]: The term Buffer Annuity is not interchangeable to Registered Index-Linked Annuity (RILA) since Buffer Annuity is a subset of RILA. RILA can have different downside protections such as "Buffer" or "F... [14]

Commented [VM2266R65]: Edits to address this comment will be reflected in next exposure

Commented [X67]: Suggest aligning the cut off to 13 months for alignment consistent with Actuarial Guideline IX, rather than the 1 year that currently is in the VM-22 ... [15]

Commented [VM2268R67]: Edits to address this comment will be reflected in next exposure

Commented [X69]: The wording "after (or from)" the issue date used in the DIA and SPIA definitions is confusing. Recommend keeping it simple as "from" the issue date.

Commented [VM2270R69]: Edits to address this comment will be reflected in next exposure

Commented [X71]: Is "typically" intended to be a requirement in the definition? That is, to qualify as FIA does there need to be guaranteed principle?

Commented [VM2272R71]: Edits to address this comment will be reflected in next exposure

Commented [CD73]: insert: "subject to certain limits."

Commented [VM2274R73]: Edits to address this comment will be reflected in next exposure

Commented [X75]: The definition of FIA describes the account value as typically with guaranteed principal. ... [16]

Commented [VM2276R75]: Edits to address this comment will be reflected in next exposure

- Guaranteed Investment Contract (GIC)**
Insurance contract typically issued to a retirement plan (defined contribution) under which the insurer accepts a deposit (or series of deposits) from the purchaser and guarantees to pay a specified interest rate on the funds deposited during a specified period of time.
- Index Credit Hedge Margin**
A margin capturing the risk of inefficiencies in the company’s hedging program supporting index credits. This includes basis risk, persistency risk, and the risk associated with modeling decisions and simplifications. It also includes any uncertainty of costs associated with managing the hedging program and changes due to investment and management decisions.
- Index Credit**
Any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to contract policy values that is linked to an index or indices. Amounts credited to the contract policy resulting from a floor on an index account are included.
- Index Crediting Strategy**
The strategy defined in a contract to determine index credits for a contract. ~~This refers to~~ For example, this may refer to underlying index, index parameters, date, timing, performance triggers, and other elements of the crediting method.
- Index Parameter**
Cap, floor, participation rate, spreads, or other features describing how the contract utilizes the index.
- Longevity Reinsurance**
An agreement, typically a reinsurance arrangement covering one or more group or individual annuity contracts, under which an insurance company assumes the longevity risk associated with periodic payments made to specified annuitants under one or more immediate or deferred payout annuity contracts. A common example is participants in one or more underlying retirement plans.
- Typically, the reinsurer pays a portion of the actual benefits due to the underlying annuitants (or, in some cases, a pre-agreed amount per annuitant), while the ceding insurance company retains the assets supporting the reinsured annuity payments and pays periodic, ongoing premiums to the reinsurer over the expected lifetime of benefits paid to the specified annuitants. Such agreements may contain net settlement provisions such that only one party makes ongoing cash payments in a particular period. Under these agreements, longevity risk may be transferred on either a permanent basis or for a prespecified period of time, and these agreements may or may not permit early termination.
- Agreements which are not treated as reinsurance under Statement of Statutory Accounting Principles (SSAP) No. 61R are not included in this definition. In particular,

Commented [CD77]: should be "contract"

Commented [VM2278R77]: Edits to address this comment will be reflected in next exposure

Commented [CD79]: should be "contract"

Commented [VM2280R79]: Edits to address this comment will be reflected in next exposure

Commented [X81]: We would suggest adding performance trigger to the list, along with other potential crediting methods; alternatively, the definition could specify that the crediting methods listed are examples only.

Commented [VM2282R81]: Edits to address this comment will be reflected in next exposure

Commented [X83]: The definition states that agreements which are not treated as reinsurance under Statement of Statutory Accounting Principles (SSAP) No. 61R are not included in this definition". Why is this the case and does this imply that longevity swaps are not within the scope of VM-22? Recommend adding to the out of scope list in "2.A. Scope" if that is the case. Clarification would also be helpful on what guidance should be used for these agreements if out of scope for VM-22. Further, we would suggest removing "typically" from the definition.

Commented [VM2284R83]: Academy will follow-up with proposed revisions to the definition of Longevity Reinsurance.

Commented [VM2285]: New Jersey comment letter, due to future premiums, longevity reinsurance may generate negative reserves, which can be used to eliminate or reduce other immediate annuity reserves. Suggest using net premium methodology, solving for a k-factor at issue to solve for $PV(\text{premiums}) = PV(\text{benefits})$.

Commented [VM2286R85]: VM-22 Subgroup has exposed a proposal from NJ to address this issue.

contracts under which payments are made based on the aggregate mortality experience of a population of lives which are not covered by an underlying group or individual annuity contract (e.g., mortality index-based longevity swaps) are not included in this definition.

• **Market Value Adjustment (MVA) Annuity**

An annuity with an account value where withdrawals and full surrenders are subject to adjustments based on interest rates or index returns at the time of withdrawal/surrender. There could be ceilings and floors on the amount of the market-value adjustment.

• **Modified Guaranteed Annuity (MGA)**

A type of market-value adjusted annuity contract where the underlying assets are most commonly held in an insurance company separate account and the value of which are guaranteed if held for specified periods of time. The contract contains nonforfeiture values and death benefits that are based upon a market-value adjustment formula if held for shorter periods.

• **Multiple-Year Guaranteed Annuity (MYGA)**

A type of ~~fixed-non-vari~~ annuity that provides a pre-determined and contractually guaranteed interest rate for specified periods of time, after which there is typically an annual reset or renewal of a multiple year guarantee period.

• **Pension Risk Transfer (PRT) Annuity**

An annuity, typically a group contract or reinsurance agreement, issued by an insurance company providing periodic payments to annuitants receiving immediate or deferred benefits from one or more retirement plans. Typically, the insurance company holds the assets supporting the benefits, which may be held in the general or separate account, and retains not only longevity risk but also asset risks (e.g., credit risk and reinvestment risk).

• **Registered Index-Linked Annuity (RILA)**

An annuity with an account value where the contract holder has the option for a portion or all of the account value to grow at a rate linked to an external index, similar to a Fixed Indexed Annuity, but with downside risk exposure that may not guarantee full principal repayment. These contracts may include a cap on upside returns, and may also include a floor on downside returns which may be below zero percent.

• **Single Premium Immediate Annuity (SPIA)**

An annuity purchased with a single premium amount which guarantees a periodic payment for the life of the annuitant or a term certain and payments begin within 13 months one year after (or from) the issuance ~~issue date~~.

• **Single Premium Deferred Annuity (SPDA)**

An annuity with an account value established with a single premium amount that grows with a guaranteed interest rate during the accumulation phase and has guaranteed mortality and interest rates applicable at the time of conversion to the payout phase. May also

Commented [X87]: We recommend editing the definition as follows "A type of market-value adjusted annuity contract where the underlying assets are most commonly held in an insurance company separate account..."

Commented [VM2288R87]: Edits to address this comment will be reflected in next exposure

Commented [X89]: To clarify definition of MGA, recommend adding "death benefits"

Commented [VM2290R89]: Edits to address this comment will be reflected in next exposure

Commented [CD91]: should this be "Multi-Year" instead of "Multiple Year"? The former is the more commonly used term for MYGA

Commented [VM2292R91]: Edits to address this comment will be reflected in next exposure

Commented [CD93]: "fixed annuity" is not defined. Is it better to change all instances of "fixed annuity" to "non-variable annuity" to be consistent with the terminology introduced in Section 1.A (and to be aligned with the actual VM-22 chapter name)? An alternative could be to add a definition for "fixed annuity", with the definition of it being a "non-variable annuity"

Commented [VM2294R93]: Subgroup in favor of the term "non-variable annuity" instead of "fixed annuity". Changes are made consistently throughout the VM-22 draft.

Commented [CD95]: ok to keep this as "multiple year"

Commented [VM2296R95]: Edits to address this comment will be reflected in next exposure

Commented [X97]: Is "typically" intended to be a requirement in the definition? That is, to qualify as PRT must the insurance company have the asset risk? Consistent with the comment on Longevity Reinsurance ... [17]

Commented [VM2298R97]: Academy will review this comment as part of revisiting the longevity reinsurance ... [18]

Commented [X99]: It is unclear to us why RILA is defined in VM-22 when it is being used to exclude the product ... [19]

Commented [VM22100R99]: ACLI already following up on a proposal to address the scope and definitions, v ... [20]

Commented [X101]: If need to address Buffer Annuity (not sure this is needed), can add here as a subset of RILA.

Commented [VM22102R101]: Edits to remove "Buffer Annuity" will be reflected in next exposure

Commented [X103]: Suggest aligning the cut off to 13 months for alignment consistent with Actuarial Guide ... [21]

Commented [VM22104R103]: Edits to address this comment will be reflected in next exposure

Commented [X105]: The wording "after (or from)" the issue date used in the DIA and SPIA definitions is co ... [22]

Commented [VM22106R105]: Edits to address this comment will be reflected in next exposure

include cases where the premium is accepted for a limited amount of time early in the contract life, such as only in the first duration.

- **Stable Value Contract**

A contract that provides limited investment guarantees, typically preserving principal while crediting steady, positive returns and protecting against losses or declines in yield. Underlying asset portfolios typically consist of fixed income securities, which may sit in the insurer’s general account, a separate account, or in a third-party trust. These contracts often support defined contribution or defined benefit retirement plan liabilities.

- **Structured Settlement Contract (SSC)**

A contract that provides periodic benefits and is purchased with a single premium amount stemming from various types of claims pertaining to court settlements or out-of-court settlements from tort actions arising from accidents, medical malpractice, and other causes. ~~Adverse mortality is typically expected for these contracts.~~

Commented [X107]: Suggest striking sentence “Adverse mortality is typically expected for these contracts.” from definition. Additionally, it is possible that there may be non-standard settlements.

Commented [VM22108R107]: Edits to address this comment will be reflected in next exposure

- **Synthetic Guaranteed Investment Contract (Synthetic GIC)**

Contract that simulates the performance of a traditional GIC through a wrapper, swap, or other financial instruments, with the main difference being that the assets are owned by the ~~contract policyholder~~ or plan trust.

Commented [CD109]: suggest spelling out GIC first, followed by the acronym

Commented [VM22110R109]: Edits to address this comment will be reflected in next exposure

Commented [CD111]: should be “contract holder”

- **Term Certain Payout Annuity**

A contract issued, which offers guaranteed periodic payments for a specified period of time, not contingent upon mortality or morbidity of the annuitant.

Commented [VM22112R111]: Edits to address this comment will be reflected in next exposure

- **Two-Tiered Annuity**

A deferred annuity with two tiers of account values. One, with a higher accumulation interest rate, is only available for annuitization or death. The other typically contains a lower accumulation interest rate, and is only available upon surrender.

~~The term “cash surrender value” means, for the purposes of these requirements, the amount available to the contract holder upon surrender of the contract. Generally, it is equal to the account value less any applicable surrender charges, where the surrender charge reflects the availability of any free partial surrender options. However, for contracts where all or a portion of the amount available to the contract holder upon surrender is subject to a market value adjustment, the cash surrender value shall reflect the market value adjustment consistent with the required treatment of the underlying assets. That is, the cash surrender value shall reflect any market value adjustments where the underlying assets are reported at market value, but it shall not reflect any market value adjustments where the underlying assets are reported at book value.~~

Commented [CD113]: this definition still applies, should we keep it?

Commented [VM22114R113]: Comment retracted in light of “Cash Surrender Value” definition being included in VM-01

~~The term “guaranteed minimum death benefit” (GMDB) means a provision (or provisions) for a guaranteed benefit payable on the death of a contract holder, annuitant, participant or insured where the amount payable is either (i) a minimum amount; or (ii) exceeds the minimum amount and is:~~

~~is increased by an amount that may be either specified by or computed from other policy or contract values; and~~

Commented [CD115]: this definition still applies, should we keep it?

Commented [VM22116R115]: Subgroup recommends moving this definition to VM-01, which is now included at the end of the draft document.

~~has the potential to produce a contractual total amount payable on such death that exceeds the account value, or~~

~~in the case of an annuity providing income payments, guarantees payment upon such death of an amount payable on death in addition to the continuation of any guaranteed income payments.~~

E. Materiality

The company shall establish a standard containing the criteria for determining whether an assumption, risk factor, or other element of the principle-based valuation has a material impact on the size of the reserve. This standard shall be applied when identifying material risks.

Section 2: Scope and Effective Date

A. Scope

Subject to the requirements of this Sections 1 to 13 of VM-22 are annuity contracts, certificates and contract features, whether group or individual, including both life contingent and term-certain-only, directly written or assumed through reinsurance issued on or after 1/1/2024, [with the exception of contracts or benefits listed below.]

Products out of scope include:

1. ~~Contracts or benefits that are subject to VM 21 (such as variable annuities, RILAs, buffer annuities, and structured annuities)~~
2. ~~GICs~~
3. ~~Synthetic GICs~~
4. ~~Stable Value Contracts~~
5. ~~Funding Agreements~~

Products in scope of VM-22 include non-variable fixed annuities which consist of, but are not limited to, the following list:

- **Account Value Based Annuities**
 1. Deferred Annuities (SPDA & FPDA)
 2. Multi-Year Guarantee Annuities (MYGA)
 3. Fixed Indexed Annuities (FIA)
 4. Market Value Adjustments (MVA)
 5. Two-tiered Annuities
 6. Guarantees/Benefits/Riders on Non-Variable Fixed Annuity Contracts
- **Payout Annuities**
 1. Single Premium Immediate Annuities (SPIA)
 2. Deferred Income Annuities (DIA)
 3. Term Certain Payout Annuities
 4. Pension Risk Transfer Annuities (PRT)
 5. Structured Settlement Contracts (SSC)
 6. Longevity Reinsurance
